

# Climate Change Program: Align with a Net Zero Future

Delivered by Executive Education

With the climate transition progressing at pace, can your organisation afford not to be at the forefront leading change?

Our customisable Climate Change Program will equip you with the knowledge, capabilities and tools to understand your organisation's role in a low-carbon future and help you navigate change while meeting corporate expectations.

This program is designed by leading UQ Business School academics and the Executive Education team who have a strong history of delivering customised learning experiences for industry and the public sector. Our academics are renowned for their world-leading research on climate change, establishing methodologies to measure action and interventions to drive change.

We will work closely with you to understand your business and any knowledge gaps. Program content is then tailored to your organisation's context, objectives, time and budget to ensure it purposely and effectively addresses your needs.

## Program design options

- Complete 1 or 2 of our available climate risk courses. Each course is designed to run over 2 full days, but alternative delivery models are available.
- Add on workshops to further enrich learning. Board-level workshops are also available.
- We can structure a custom program to meet your specific needs.

We recommend combining the 2 courses with additional workshops to allow for a more in-depth program and a deep dive into key issue areas.

## Climate Change Program courses

Content in each course will be tailored to your organisation's unique context.

### 1. Climate Change Foundations

Develop a foundational understanding of climate change as it pertains to your sector and operation through these 4 modules:

- Module 1: An introduction to climate change
- Module 2: Physical impacts of climate change
- Module 3: Transition impacts of climate change
- Module 4: Net zero pathways

### 2. Climate Disclosure and Management

Learn about evolving climate reporting demands and how to apply best transparent disclosure and climate management practices. With a growing focus on corporate climate actions and issues such as greenwashing, this is highly relevant to many organisations.

- Module 1: An introduction to climate reporting
- Module 2: Implications for your business beyond the operational to strategic change
- Module 3: Climate disclosures – a stakeholder perspective
- Module 4: Global best practices in climate transparency and management

## Workshop add-ons

- Developing Paris Aligned Targets
- Climate Scenario Development
- Exploring Corporate Strategy in a Climate-Changed Future
- Climate Litigation Risk
- Climate Communication
- Executive Decisions on Climate Risk

## Board-level add-on workshops

- Climate Background Briefing
- Regular Quarterly Climate Briefing
- Ethics and Climate Leadership
- Keynote for Executive Strategy Day
- Legal Risk of Climate Change to Directors
- Climate Communication.

## How you'll learn

- Courses can be taught face-to-face or through a blended learning approach.
- Each course is designed to run over 2 full days, but alternative delivery models are available. Duration for additional workshops are between 2 hours to a half-day.

## Climate Change Program Director

Belinda Wade is an Industry Professor at UQ Business School with over 20 years of experience in sustainability and climate change across the Australian electricity market, higher education and consulting sectors.
