

**APPLIED MATHEMATICAL PROGRAMMING
USING ALGEBRAIC SYSTEMS**

by

Bruce A. McCarl

Thomas H. Spreen

- I: INTRODUCTION**
- PART I. THE BASIC MATHEMATICAL PROBLEM -- LINEAR PROGRAMMING**
- II: THE LINEAR PROGRAMMING PROBLEM**
- III: MATRIX ALGEBRA SOLUTION OF LP PROBLEMS**
- IV: LP DUALITY**
- V. ALGEBRAIC LP MODELING, DUALITY AND SOLUTION INTERPRETATION**
- VI: TOWARD PROPER MODELING**
- VII. ADDITIONAL LP MODELS**
- VIII: MULTI-YEAR DYNAMICS AND LP**
- IX: LP MODELING: NONLINEARITIES AND APPROXIMATION**
- X: MODELING SUMMARY**

PART II. RELAXATION OF LINEAR PROGRAMMING ASSUMPTIONS

- XI: MULTI-OBJECTIVE PROGRAMMING**
- XII: GENERAL NONLINEAR PROGRAMMING**
- XIII: PRICE ENDOGENOUS MODELING**
- XIV: RISK MODELING**
- XV: RELAXING CONTINUITY ASSUMPTIONS - INTEGER PROGRAMMING**
- XVI: APPLIED INTEGER PROGRAMMING**

PART III. USE OF MATHEMATICAL PROGRAMMING MODELS

- XVII: FIXING IMPROPERLY WORKING MODELS**
- XVIII: VALIDATION OF PROGRAMMING MODELS**
- XIX: GETTING THE MOST FROM A MODELING SYSTEM**

APPENDIX I: USING SUMMATION NOTATION

APPENDIX II: RUNNING GAMS ON A PC
