

APPLIED MATHEMATICAL PROGRAMMING USING ALGEBRAIC SYSTEMS

Preface	0-1
CHAPTER I: INTRODUCTION	1-1
1.1 Practical Problem Analysis	1-1
1.2 Mathematical Programming Approach	1-1
1.3 Mathematical Programming in Use	1-2
1.3.1 Generating Problem Insight	1-3
1.3.2 Numerical Mathematical Programming	1-4
1.3.3 Algorithmic Development	1-5
1.4 Book Plan	1-5
CHAPTER II: LINEAR PROGRAMMING	2-1
2.1 The Basic LP Problem	2-1
2.2 Basic LP Example	2-2
2.3 Other Forms of the LP Problem	2-4
2.4 Assumptions of LP	2-4
2.4.1 Objective Function Appropriateness	2-5
2.4.2 Decision Variable Appropriateness	2-5
2.4.3 Constraint Appropriateness	2-5
2.4.4 Proportionality	2-6
2.4.5 Additivity	2-7
2.4.6 Divisibility	2-7
2.4.7 Certainty	2-8
CHAPTER III SOLUTION OF LP PROBLEMS: A MATRIX ALGEBRA APPROACH	3-1
3.1 Matrix Formulation of the Linear Programming Problem	3-1
3.2 Solving LP's by Matrix Algebra	3-2
3.2.1 The Simplex Algorithm	3-7
3.2.2 Example	3-8
3.3 Solutions and Their Interpretation	3-11
3.3.1 General Solution Interpretation	3-11
3.3.2 Examples of Solution Interpretation	3-13
3.3.3 Finding Limits of Interpretation	3-15
3.3.3.1 Ranging Right-Hand-Sides	3-15
3.3.3.2 Ranging Objective Function Coefficients	3-17
3.3.3.3 Changes in the Technical Coefficient Matrix	3-19
3.3.4 Finding the Solution	3-21
3.3.5 Alternative Optimal and Degenerate Cases	3-23
3.3.6 Finding Shadow Prices for Bounds on Variables	3-24
3.4 Further Details on the Simplex Method	3-26
3.4.1 Updating the Basis Inverse	3-26

3.4.2 Advanced Bases	3-27
3.4.3 Finding an Initial Feasible Basis	3-28
3.4.3.1 BIG M Method	3-30
3.4.3.2 Phase I/Phase II Method	3-31
3.4.4 The Real LP Solution Method	3-32
3.5 References	3-34
CHAPTER IV: DUALITY IN LINEAR PROGRAMMING	4-41
4.1 Basic Duality	4-41
4.2 Primal-Dual Solution Inter-Relationships	4-44
4.2.1 Objective Function Interrelationships	4-44
4.2.2 Constructing Dual Solutions	4-45
4.2.3 Complementary Slackness	4-46
4.2.4 Zero Profits	4-47
4.2.5 Finding the Dual Solution Information	4-47
4.3 Duality Under Other Model Forms	4-48
4.4 The Character of Dual Solutions	4-52
4.5 Degeneracy and Shadow Prices	4-52
4.6 Primal Columns are Dual Constraints	4-54
4.7 References	4-55
CHAPTER V: LINEAR PROGRAMMING MODELING	5-1
5.1 Introduction to Algebraic Modeling	5-1
5.1.1 Defining Indices and GAMS Sets	5-2
5.1.2 Writing Equations	5-3
5.1.2.1 Unindexed Equations	5-3
5.1.2.2 Indexed Equations	5-4
5.1.3 Data Definitions	5-5
5.1.4 Entering Data Through Calculation	5-7
5.1.5 Specification of Variables	5-8
5.1.6 Equations	5-8
5.1.7 Writing Model Equations	5-9
5.1.7.1 Objective Function Equations	5-9
5.1.2.2 Constraint Equations	5-10
5.1.8 Specifying Bounds	5-11
5.1.9 Forming and Solving a Model	5-11
5.1.10 Report Writing	5-12
5.1.11 Additional GAMS Topics	5-12
5.2 Example and GAMS Implementation	5-15
5.2.2 Model Solution	5-18
5.2.3 Comments	5-18
5.3 The Transportation Problem	5-19
5.3.1 Example	5-22
5.3.2 Comments	5-24
5.4 Diet/Feed Mix/Blending Problem	5-26

5.4.1 Example	5-29
5.4.2 Comments	5-30
5.5 Joint Products	5-31
5.5.1 Example	5-34
5.5.2 Comments	5-36
5.6 Comments on GAMS and Algebraic Modeling	5-37
5.6.1 Why Use Algebraic Modeling?	5-37
5.6.2 Why Use GAMS to Support Modeling?	5-38
References	5-42
CHAPTER VI: TOWARD PROPER MODELING	6-1
6.1 Structural Component Identification	6-1
6.1.1 Development of Model Constraints	6-1
6.1.2 Avoiding Improper Constraint Specifications	6-2
6.1.3 Variable Identification	6-3
6.1.4 Objective Function	6-4
6.1.5 Development of Model Structure	6-4
6.2 The Proper Usage of Variables and Constraints	6-5
6.2.1 Improper and Proper Handling of Joint Products	6-6
6.2.2 Alternatives for the Use of a Product	6-7
6.2.3 Improper Specification of Multiple Factor Relationships	6-7
6.2.4 Erroneous Imperfect Substitution	6-8
6.3 Simple Structural Checking	6-8
6.3.1 Homogeneity of Units	6-8
6.3.2 Numerical Model Analysis	6-9
6.4 Data Development	6-10
6.4.1 Time Frame	6-10
6.4.2 Uncertainty	6-10
6.4.3 Data Sources	6-10
6.4.4 Calculation Methods	6-11
6.4.5 Consistency	6-11
6.4.6 Specification of Individual Components	6-11
6.4.6.1 Objective Function Coefficients	6-11
6.4.6.2 Right-hand Side Coefficients	6-12
6.4.6.3 Technical Coefficients	6-12
6.5 Purposeful Modeling	6-13
6.5.1 Model Structure	6-13
6.5.2 Report Writing	6-15
References	6-16
CHAPTER VII: MORE LINEAR PROGRAMMING MODELING	7-1
7.1 Assembly Problem	7-1
7.1.1 Example	7-4
7.1.2 Comments	7-4
7.2 Disassembly Problems	7-5

7.2.1 Example	7-7
7.2.2 Comments	7-8
7.3 Assembly-Disassembly	7-8
7.3.1 Example	7-10
7.3.2 Comments	7-12
7.4 Sequencing Problems	7-14
7.4.1 Example 1	7-20
7.4.2 Example 2	7-21
7.4.3 Comments	7-23
7.5 Storage Problems	7-24
7.5.1 Example	7-27
7.5.2 Comments	7-28
7.6 Input Output Analysis	7-29
7.6.1 Example	7-33
7.6.2 Comments	7-33
7.7 Block Diagonal	7-33
7.7.1 Example	7-35
7.7.2 Comments	7-37
7.8 Concluding Comments	7-38
References	7-41

CHAPTER VIII: MULTI-YEAR DYNAMICS AND LINEAR PROGRAMMING 8-1

8.1 Dynamics Background	8-1
8.1.1 Should Dynamics be Explicit?	8-1
8.1.2 How Long	8-2
8.1.3 Time Interval Representation	8-2
8.1.4 Initial and Terminal Conditions	8-3
8.1.5 Enterprise Life	8-4
8.1.6 Time Preference	8-4
8.1.7 Risk	8-4
8.2 Dynamic Linear Programming	8-4
8.2.1 Disequilibrium - Known Life	8-5
8.2.1.1 Example	8-6
8.2.2 Disequilibrium - Unknown Life	8-7
8.2.2.1 Example	8-8
8.2.2.2 Comments	8-9
8.2.3 Equilibrium - Known Life	8-9
8.2.3.1 Example 1	8-11
8.2.3.2 Example 2	8-11
8.2.3.3 Comments	8-13
8.2.4 Equilibrium - Unknown Life	8-13
8.2.4.1 Example	8-14
8.2.5 Overall Comments on Dynamic Linear Programming	8-14
8.3 Recursive Programming	8-15

8.3.1 Example	8-16
8.3.2 Comments on Recursive Programming	8-17
References	8-19

CHAPTER IX: LINEAR PROGRAMMING MODELING:

NONLINEARITIES AND APPROXIMATION	9-1
9.1 Transformations	9-1
9.1.1 Minimization of the Sum of Absolute Deviations	9-1
9.1.1.1 Example	9-4
9.1.1.2 Comments	9-6
9.1.2 Minimization of Largest Absolute Deviation	9-6
9.1.2.1 Example	9-7
9.1.2.2 Comments	9-8
9.1.3 Optimizing a Fraction	9-8
9.1.3.1 Example	9-10
9.1.3.2 Comments	9-11
9.2 Approximations	9-12
9.2.1 Grid Point Approximations	9-12
9.2.1.2 Functions with Separable Variables	9-12
9.2.1.1.1 Example 1.	9-14
9.2.1.1.2 Example 2: Separable Terms in the Constraints ...	9-15
9.2.1.2 Gridpoints and Gridpoint Refinements	9-16
9.2.1.3 Gridpoint Approximation of Functions of Multiple Variables	
.....	9-16
9.2.1.3.1 Homogeneous of Degree 1	9-17
9.2.1.3.2 Homogeneous of Degree Less Than One	9-19
9.2.1.3.3 Comments	9-21
9.2.2 Iterative Approximations	9-21
9.2.3 Other Approximations	9-23
References	9-24

CHAPTER X: MODELING SUMMARY

10.1 Types of Constraints and Variables in Linear Programming Models	10-1
10.1.1 Types of Constraints	10-1
10.1.1.1 Resource Limitations	10-1
10.1.1.2 Minimum Requirements	10-2
10.1.1.3 Supply and Demand Balance	10-2
10.1.1.4 Ratio Control	10-3
10.1.1.5 Bounds	10-5
10.1.1.6 Accounting Relations	10-5
10.1.1.7 Deviation Constraints	10-5
10.1.1.8 Approximation or Convexity Constraints	10-6
10.1.2 Types of Variables	10-6
10.1.2.1 Production Variables	10-6
10.1.2.2 Sales Variables	10-7

10.1.2.3 Purchase Variables	10-7
10.1.2.4 Transformation Variables	10-7
10.1.2.5 Slack Variables	10-7
10.1.2.6 Surplus Variables	10-8
10.1.2.7 Artificial Variables	10-8
10.1.2.8 Step Variables	10-8
10.1.2.9 Deviation Variables	10-8
10.1.2.10 Accounting Variables	10-8
10.2 "Violations" of the Algorithmic Assumptions	10-9
10.2.1 Nonproportional Example	10-9
10.2.2 Non-Additive Example	10-10
10.2.3 Uncertainty Examples	10-11
10.2.4 Noncontinuous Example	10-12
References	10-13
CHAPTER XI: MULTI-OBJECTIVE PROGRAMMING	11-1
11.1 Formulations	11-3
11.1.1 Lexicographic Utility - Target Values	11-3
11.1.2 Utility Tradeoff Model	11-5
11.1.3 Unknown Utility Function	11-7
11.2 Example	11-7
11.3 Choice Among Formulations	11-10
11.4 Developing Utility Functions	11-12
11.5 Shadow Prices	11-13
11.5.1 Examples	11-15
References	11-18
CHAPTER XII: NONLINEAR OPTIMIZATION CONDITIONS	12-1
12.1 Optimality Conditions	12-1
12.1.1 Unconstrained Optimization	12-1
12.1.1.1 Univariate	12-2
12.1.1.2 Multivariate functions	12-2
12.1.2 Global Optima-Concavity and Convexity	12-3
12.1.3 Constrained Optimization	12-5
12.1.3.1 Equality Constraints - The Lagrangian	12-5
12.1.3.1.1 Second Order Conditions - Constraint Qualifications: Convexity and Concavity	12-8
12.1.3.1.2 Interpretation of Lagrange Multipliers	12-9
12.1.3.2 Inequality Constraints - Kuhn Tucker Theory	12-12
12.1.3.2.1 <u>Example 1</u>	12-14
12.1.3.2.2 <u>Example 2</u>	12-15
12.1.4 Usage of Optimality Conditions	12-15
12.2 Notes on Solution of Nonlinear Programming Models	12-16
12.3 Expressing Nonlinear Programs in Conjunction with GAMS	12-17
References	12-19

CHAPTER XIII: PRICE ENDOGENOUS MODELING	13-1
13.1 Spatial Equilibrium	13-4
13.2 Multi-Market Case	13-10
13.3 Implicit Supply - Multiple Factors/Products	13-12
13.4 Aggregation	13-16
13.5 A Digression on the Assumptions	13-19
13.6 Imperfect Competition	13-21
13.7 Conclusion	13-25
References	13-26
 CHAPTER XIV: RISK MODELING	 14-1
14.1 Decision Making and Recourse	14-2
14.2 An Aside Discounting Coefficients	14-3
14.3 Stochastic Programming without Recourse	14-3
14.3.1 Objective Function Coefficient Risk	14-3
14.3.1.1 Mean-Variance Analysis	14-4
14.3.1.1.1 Example	14-5
14.3.1.1.2 Markowitz's E-V Formulation	14-7
14.3.1.1.3 Formulation Choice	14-7
14.3.1.1.4 Characteristics of E-V Model Optimal Solutions ..	14-8
14.3.1.1.5 E-V Model Use - Theoretical Concerns	14-9
14.3.1.1.6 Specification of the Risk Aversion Parameter ...	14-10
14.3.1.2 A Linear Approximation - MOTAD	14-10
14.3.1.2.1 Example	14-13
14.3.1.2.2 Comments on MOTAD	14-14
14.3.1.3 Toward A Unified Model	14-16
14.3.1.4 Safety First	14-18
14.3.1.4.1 Example	14-18
14.3.1.4.2 Comments	14-19
14.3.1.5 Target MOTAD	14-19
14.3.1.5.1 Example	14-20
14.3.1.5.2 Comments	14-20
14.3.1.6 DEMP	14-21
14.3.1.6.1 Example	14-21
14.3.1.6.2 Comments	14-22
14.3.1.7 Other Formulations	14-23
14.3.2 Right Hand Side Risk	14-23
14.3.2.1 Chance Constrained Programming	14-23
14.3.2.1.1 Example	14-25
14.3.2.1.2 Comments	14-26
14.3.2.2 A Quadratic Programming Approach	14-26
14.3.3 Technical Coefficient Risk	14-27
14.3.3.1 Merrill's Approach	14-27
14.3.3.2 Wicks and Guise Approach	14-28
14.3.3.2.1 Example	14-29

14.3.3.2.2 Comments	14-30
14.3.4 Multiple Sources of Risk	14-30
14.4 Sequential Risk-Stochastic Programming with Recourse	14-31
14.4.1 Two stage SPR formulation	14-31
14.4.1.1 Example	14-33
14.4.2 Incorporating Risk Aversion	14-35
14.4.2.1 Example	14-36
14.4.3 Extending to Multiple Stages	14-38
14.4.4 Model Discussion	14-39
14.5 General Comments Upon Uncertainty in Modeling	14-40
References	14-43
CHAPTER XV: APPLIED INTEGER PROGRAMMING	15-1
15.1 Why Integer Programming	15-1
15.1.1 Fixed Cost	15-2
15.1.2 Logical Conditions	15-4
15.1.2.1 Either-or-Active Constraints	15-5
15.1.2.2 An Aside: Mutual Exclusivity	15-5
15.1.2.3 Multiple Active Constraints	15-6
15.1.2.4 Conditional Restrictions	15-6
15.1.3 Discrete Levels of Resources	15-7
15.1.4 Distinct Variable Values	15-7
15.1.5 Nonlinear Representations	15-9
15.1.6 Approximation of Nonlinear Functions	15-9
15.2 Feasible Region Characteristics and Solution Difficulties	15-10
15.2.1 Extension to Mixed Integer Feasible Regions	15-12
15.3 Sensitivity Analysis and Integer Programming	15-12
15.4 Solution Approaches to Integer Programming Problems	15-14
15.4.1 Rounding	15-15
15.4.2 Cutting Planes	15-15
15.4.3 Branch and Bound	15-17
15.4.5 Lagrangian Relaxation	15-18
15.4.6 Benders Decomposition	15-19
15.4.7 Heuristics	15-21
15.4.8 Structural Exploitation	15-22
15.4.9 Other Solution Algorithms and Computer Algorithms	15-22
15.5 The Quest for Global Optimality: Non-Convexity	15-22
15.6 Formulation Tricks for Integer Programming - Add More Constraints	15-23
15.7 IP Solutions and GAMS	15-25
References	15-26
CHAPTER XVI: INTEGER PROGRAMMING FORMULATIONS	16-1
16.1 Knapsack - Capital Budgeting Problem	16-1
16.1.1 Example	16-1

16.1.2 Comments	16-2
16.2 Warehouse Location	16-3
16.2.1 Example	16-4
16.2.2 Comments	16-5
16.3 Traveling Salesman Problem	16-5
16.3.1 Example	16-7
16.3.2 Comments	16-7
16.4 Decreasing Costs	16-8
16.4.1 Example	16-10
16.4.2 Comments	16-11
16.5 Machinery Selection	16-11
16.5.1 Example	16-12
16.5.2 Comments	16-12
16.6 Other Formulations	16-12
References	16-14
CHAPTER XVII: FIXING IMPROPERLY WORKING MODELS	17-1
17.1 Unacceptable Solution Conditions	17-1
17.1.1 Solver Failure -- Causes and Prevention	17-1
17.1.2 Unbounded or Infeasible Solutions	17-2
17.1.3 Unsatisfactory Optimal Solutions	17-2
17.2 Techniques for Diagnosing Improper Models	17-3
17.2.1 Simple Structural Checking	17-3
17.2.1.1 Analytical Checking	17-3
17.2.1.2 Numerical Model Analysis	17-5
17.2.2 Apriori Degeneracy Resolution	17-6
17.2.3 Altering Units of Constraints and Variables: Scaling	17-6
17.2.3.1 Scaling-The Basic Procedure	17-7
17.2.3.2 Mathematical Investigation of Scaling	17-9
17.2.3.2.1 Variable Scaling	17-10
17.2.3.2.2 Effects of Constraint Scaling	17-14
17.2.3.2.3 Objective Function and Right-Hand-Side Scaling	17-15
17.2.3.4 Summary	17-16
17.2.3.5 Empirical Example of Scaling	17-17
17.2.4 The Use of Artificial Variables to Diagnose Infeasibility	17-20
17.2.5 Use Unrealistically Large Upper Bounds to Find Causes of Unboundedness	17-23
17.2.6 Budgeting	17-24
17.2.7 Row Summing	17-28
References	17-30
CHAPTER XVIII: VALIDATION OF PROGRAMMING MODELS	18-1
18.1 Background	18-1
18.2 General Approaches to Validation	18-2

18.3 Validation by Construct	18-2
18.4 Validation by Results	18-3
18.4.1 Parameter Outcome Sets	18-4
18.4.2 Validation Experiments	18-4
18.4.2.1 Feasibility Experiment	18-4
18.4.2.2 Quantity Experiment	18-6
18.4.2.3 Price Experiment	18-7
18.4.2.4 Prediction Experiment	18-7
18.4.2.5 Change Experiment	18-7
18.4.2.6 Tracking Experiment	18-8
18.4.2.7 Partial Tests	18-8
18.4.3 Employing a Validation Test	18-8
18.4.4 Evaluation Criteria for Validation	18-10
18.5 What if the Model Does not Validate	18-10
18.6 Comments	18-12
References	18-14
CHAPTER XIX: COMPUTERIZED AIDS FOR PROGRAMMING STUDIES	19-1
19.1 Model Generation Tools	19-1
19.1.1 Potential Functions of a Matrix Generator	19-2
19.1.1.1 Input Preparation	19-2
19.1.1.2 Formulation Manipulation	19-2
19.1.1.3 Documentation	19-2
19.1.1.4 Analysis Facilitation	19-2
19.1.2 When not to use a Matrix Generator	19-3
19.2 Pre-Solution Formulation Analysis Tools	19-3
19.3 Solution Interpretation Aids	19-4
19.3.1 Solution Summarization	19-4
19.3.2 Solution Debugging	19-4
19.3.3 Solution Interpretation	19-4
19.4 Getting the most from GAMS	19-5
19.4.1 Setting Up Data	19-5
19.4.2 Changing Model Structure	19-5
19.4.3 Providing an Advanced Basis	19-6
19.4.4 Report Writing	19-7
19.4.5 Debugging Models	19-9
19.4.6 Conducting a Comparative Model Analysis	19-10
19.4.7 Sensitivity Analysis	19-11
19.4.8 Speeding up GAMS	19-11
19.4.9 Minimizing Model Size	19-12
19.4.10 Avoiding GAMS Failures	19-12
References	19-13
APPENDIX I: USING SUMMATION NOTATION	Appendix I-1
AI.1 Summation Mechanics	Appendix I-1

AI.1.1 Sum of an Item	Appendix I-1
AI.1.2 Multiple Sums	Appendix I-2
AI.1.3 Sum of Two Items	Appendix I-2
AI.2 Summation Notation Rules	Appendix I-2
AI.2.1 For a Scaler Equation	Appendix I-2
AI.2.2 For a Family of Equations	Appendix I-3
AI.3 Defining Subscripts	Appendix I-5
AI.4 Defining and Using Variables	Appendix I-5
AI.5 Equations	Appendix I-6
AI.6 Cautions and Extensions	Appendix I-7
 APPENDIX II: EXECUTING GAMS	 Appendix II-1
