This course is designed as a disorientation of the State. Rather than seeing the State as a fixed, absolute entity that exists on a separate plane of existence, this course analyzes the state as an effect-producing abstraction that arises in contested circulations of meaningful signs. Viewing the state as a material abstraction (a complex sign) rather than as an absolute entity, we turn to theories of differentiation in circulation and movement. We attempt to answer the questions: What is movement? What moves? And what does movement create, break down, and change? Thinking about the implications of such questions, we will consider the extent to which differentiations in movement carve out units of governance, how the differences produced in those units might generate change, and how forms of difference might partially escape and alter such movement (or not).

ANTH 2400. Museums and Material Culture.

This seminar discusses anthropological approaches to material culture in museum contexts, by developing themes, selecting objects, and preparing a preliminary script for an exhibition in Manning Hall. This year, “Humans and Nature.” (ANTH 2400 is followed by ANTH 2410. Students can enroll in each course independently). Instructor permission required.

ANTH 2410. Exhibitions in Museums.

The goal of this seminar is to implement in Manning Hall an exhibition script developed in ANTH 2400, on “Humans and Nature” (see that course). Topics discussed and put into practice include: representation of cultures modern museum displays; thematic development; interpretation, handling, and mounting of objects in contextually rich and engaging museum environments; conservation; audience assessment.

ANTH 2420. Museums in Their Communities.

This seminar examines in detail the internal workings of museums (of anthropology, art, history, science, etc) and their place in their communities. Accessions, collections management, conservations, education, exhibition, marketing, research, and museum management are among the topics discussed.

ANTH 2450. Exchange Scholar Program.**ANTH 2500A. Problems in Archaeology: Archaeology of Colonialism.**

Explores the theoretical discourses shaping anthropological approaches and defining archaeological projects on culture contact and colonialism. Attention will be given to examining colonial encounters between Europeans and indigenous peoples as ongoing processes rather than particular historical moments, and to looking at recent efforts at decolonizing archaeological practice.

ANTH 2500B. Problems in Archaeology: The Archaeology of Empires.

Empires have been among the most influential political and social formations in global history. This seminar will explore general literature on imperial genesis, consolidation and decline, as well as considering the specific and unique contributions archaeology and art history can offer to the understanding of empire. A variety of case studies will be explored, with selections depending on student interest.

ANTH 2500C. GIS and Remote Sensing in Archaeology.

This course will train advanced students in the laboratory methods needed for the successful application of GIS and remote sensing technologies in archaeology. We will conduct an exhaustive literature review of spatial research in archaeology to place GIS and remote sensing within a broader conceptual framework. Each student will design their own geodatabase that they will be able to build upon in future research.

ANTH 2501. Principles of Archaeology.

Examines theoretical and methodological issues in anthropological archaeology. Attention is given to past concerns, current debates, and future directions of archaeology in the social sciences.

ANTH 2510. Circumpolar Archaeology.

A specialized course dealing with advanced problems in Arctic archaeology. Although primarily oriented toward the northern specialist, the seminar is designed to present, by example, methodological and analytic problems that are applicable to most archaeological areas and to hunting, fishing, and gathering societies.

ANTH 2515. Material Matters.

In the past decade there has been a growing interest in the study of material culture as an explicitly interdisciplinary endeavor involving the fields of anthropology, archaeology, art history, literary theory, museum studies, and philosophy, among many others. These perspectives exhibit a range of approaches to interrogating how people make things, how things make people, how objects mediate social relationships, and how inanimate objects can be argued as having a form of agency. This graduate seminar is designed to encourage reflection upon material culture and its influence in shaping our lives.

ANTH 2520. Mesoamerican Archaeology and Ethnohistory.

Seminar focusing on current issues in the archaeology and history of Mesoamerica, including Mexico and Northern Central America. Draws on rich resources at Brown, including the John Carter Brown Library.

ANTH 2530. Archaeology of Tribes and States.

Explores concepts of complexity and inequality and how these have been used to study the origins and development of complex society. Categories such as tribes, chiefdoms, the state, etc. are evaluated as conceptual tools for understanding the rise of civilizations and early state formation, as well as transformations in later historical contexts.

ANTH 2540. Historical Archaeology: From Colony to City.

Examines historical archaeology as a complex field of inquiry that engages multiple sources of evidence and incorporates a wide range of theoretical and methodological approaches. The seminar will consider the range of evidence available to historical archaeologists, and draw on examples from colonies and cities around the world to explore how the richness and diversity of the evidence is used.

ANTH 2541. Ethnohistory.

Seminar topic: "Comparative Ethnohistory of the Americas." Examines Indian/European encounters and interactions in North America and Latin America. Explores the conjunction of anthropology and history, combining both theoretical orientations from and methodology of the two disciplines, with particular emphasis on the problems posed by comparative analyses.

ANTH 2550. Archaeological Research Methods, Theory and Practicum.

The seminar is designed to help the student develop good research and analytical skills in archaeology. By focusing on research design, analytic techniques, the relationship between theory and methodology, and the development of research proposal and/or reports, we shall examine how both scientific and humanistic theoretical concerns can be sources of meaningful archaeological questions, and how these questions can be transformed into viable research problems.

ANTH 2560. Lived Bodies, Dead Bodies: The Archaeology of Human Remains.

Bioarchaeology is the study of human remains from archaeological contexts. We will survey the "state of the art" in bioarchaeology, while exploring its relevance and application to the archaeology of complex societies. We will survey a range of bioarchaeological methods and applications, including paleopathology, stable isotope analysis, population affinity/ancient DNA, perimortem trauma, and body modification. In turn, we will explore how bioarchaeology can be used to approach a wide range of archaeological problems relative to complex societies, including subsistence, economy, migration, urbanism, social inequality, conflict and warfare, and identity. S/NC.

ANTH 2590. Space, Power, and Politics.

This course critically examines the politics of space and landscape from an interdisciplinary perspective. After reading key texts in political philosophy and cultural geography, we explore themes in recent scholarship including the spatial production of sovereignty, capital, and political subjectivity and the evolving role of digital cartography in public culture and politics. Case studies are drawn from archaeology, art history, ethnography, cultural geography, and history.

ANTH 2800. Linguistic Theory and Practice.

An introduction to theoretical and methodological issues in the study of language and social life. We begin by examining semiotic approaches to language. We turn to classical research on language as a structured system - covering such topics as phonology and grammatical categories - but we focus on the implications of such work for broader social scientific and humanistic research. We then consider areas of active contemporary research, including cognition and linguistic relativity, meaning and semantics, pronouns and deixis, deference and register, speech acts and performativity, interaction, verbal art and poetics, reported speech, performance, and linguistic ideology.

ANTH 2810. Performance Theory.

Explores the concept of performance as used in several social science and humanities disciplines: linguistics, anthropology, folklore, ethnomusicology, and theater. Also addresses practical problems of conducting research on performance forms. Seminar.

ANTH 2900. Teaching Practicum.

No description available.

ANTH 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ANTH 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ANTH 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Applied Mathematics

The Division of Applied Mathematics at Brown University is one of the most prominent departments at Brown, and is also one of the oldest and strongest of its type in the country. The Division of Applied Mathematics is a world renowned center of research activity in a wide spectrum of traditional and modern mathematics. It explores the connections between mathematics and its applications at both the research and educational levels. The principal areas of research activities are ordinary, functional, and partial differential equations; stochastic control theory; applied probability, statistics and stochastic systems theory; neuroscience and computational molecular biology; numerical analysis and scientific computation; scientific machine learning; and the mechanics of solids, materials science and fluids. The effort in virtually all research ranges from applied and algorithmic problems to the study of fundamental mathematical questions. The Division emphasizes applied mathematics as a unifying theme. To facilitate cooperation among faculty and students, some research programs are partly organized around interdepartmental research centers. These centers facilitate funding and

cooperative research in order to maintain the highest level of research and education in the Division. It is this breadth and the discovery from mutual collaboration which marks the great strength and uniqueness of the Division of Applied Mathematics at Brown.

For additional information, please visit the department's website: <https://www.brown.edu/academics/applied-mathematics/>

Applied Mathematics Concentration Requirements

Applied Mathematics has a profound impact on our daily lives. Whether it is search engines, climate modeling, weather forecasts, artificial intelligence, secure online shopping, brain imaging, or movie recommendations, none of these would work the way they do without algorithms and tools from the mathematical sciences. More generally, Applied Mathematics is an inherently interdisciplinary subject, covering problems arising in all areas of science, technology, and engineering. Our courses provide a broad qualitative and quantitative background for use in these fields.

Applied Mathematics appeals to people with a variety of different interests, ranging from those with a desire to obtain a good quantitative background for use in some future career, to those who wish to have a better understanding of the basic mathematical aspects of other fields, or to those who are interested in the fundamental mathematical techniques and approaches in themselves. The program stresses but is not limited to scientific computing, differential equations, probability, and statistics, which are areas of mathematics that are used most often in applications in science, society, and industry. Our curriculum is flexible enough to meet the goals and interests of a very wide range of students.

Students take courses in applied mathematics for many reasons, not necessarily with an applied mathematics concentration in mind. The value of learning about applied mathematics goes beyond a career opportunity. It provides an education in the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life.

We offer four concentrations for undergraduates: Applied Mathematics (A.B. & Sc.B.), Applied Mathematics-Biology (Sc.B.), Applied Mathematics-Computer Science (Sc.B.), Applied Mathematics-Economics (A.B. & Sc.B.). This page describes the concentration in Applied Mathematics.

The concentration in Applied Mathematics is the most flexible of all of our concentrations. Students are required to build a foundation in calculus, linear algebra, differential equations, and basic computer programming. Beyond these foundations, there is a great deal of flexibility as to which areas of mathematics and which areas of applications are pursued. Both the A.B. and the Sc.B. allow students to earn concentration credit by taking advanced courses in almost any of the STEM (Science, Technology, Engineering, Mathematics) disciplines. The purpose is to encourage students to develop expertise in both mathematics and an applied area that might be amenable to mathematical investigation.

Standard program for the A.B. degree.

Prerequisites - the equivalent of two semesters of single-variable calculus

Single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, single-variable calculus consists of MATH 0090 followed by one of MATH 0100, MATH 0170, or MATH 0190.

Requirements - 10 courses¹

MATH 0180	Multivariable Calculus ²	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra ²	1
or MATH 0540	Linear Algebra With Theory	
APMA 0355	Applied Ordinary Differential Equations with Theory ³	1

APMA 0365	Applied Partial Differential Equations I with Theory ⁴	1
One approved course on computer programming. ⁵		1
Three 1000-level or higher APMA courses. ⁶		3
One 1000-level or higher APMA or MATH course. ⁶		1
One 1000-level or higher course in a STEM discipline that demonstrates depth in an area amenable to mathematical investigation and that is approved by the concentration advisor. ⁷		1
Total Credits		10

¹ A required course may be replaced by a more advanced course with concentration advisor approval. No course may be used to satisfy multiple concentration requirements. Transfer credits and courses receiving placement credit notation can satisfy concentration credit as long as they appear on the Brown internal transcript. Pursuing honors will require 12 courses – these 10 plus two additional semesters of independent study courses for the honors research project. For students with multiple concentrations, calculus, linear algebra, and at most two additional courses can be used for concentration credit in the other concentration(s).

² APMA 0260 can substitute for the multivariable calculus and/or the linear algebra requirements. If it is used as a substitute for both requirements, then students must take one additional approved 1000-level APMA or MATH course not used elsewhere for concentration credit that adheres to the restrictions in footnote 6.

³ MATH 1110 may be used in place of APMA 0355. If MATH 1110 is used, then the concentration must include at least four 1000-level or higher APMA courses that adhere to the restrictions in footnote 6. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0330 or APMA 0350 as a substitute for APMA 0355. Students matriculating in Fall 2025 or later who wish to use APMA 0330 or APMA 0350 must also complete the APMA 0355 online bridgework course and pass the in-person bridgework exam that is offered once per semester.

⁴ MATH 1120 may be used in place of APMA 0365. If MATH 1120 is used, then the concentration must include at least four 1000-level or higher APMA courses that adhere to the restrictions in footnote 6. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0340 or APMA 0360 as a substitute for APMA 0365. Students matriculating in Fall 2025 or later who wish to use APMA 0340 or APMA 0360 must also complete the APMA 0365 online bridgework course and pass the in-person bridgework exam that is offered once per semester.

⁵ Concentrators are encouraged to complete the computing requirement before the end of their sophomore year. The following courses are automatically approved: APMA 0160, APMA 0200, CSCI 0111, CSCI 0112, CSCI 0150, CSCI 0170, CSCI 0190, CSCI 0200, CPSY 0950, EEPS 0250.

⁶ APMA 1650 cannot be used to satisfy this requirement for students matriculating in Fall 2025 or later, unless they also complete the APMA 1655 online bridgework course and pass the in-person bridgework exam that is offered once per semester. APMA 1910, APMA 1920, MATH 1090, MATH 1910 and research/independent study courses cannot be used. At most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001 and at most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit.

⁷ STEM = Science, Technology, Engineering, Mathematics. Most upper-level courses in APMA, CSCI, ECON, ENGN, MATH, or any of the sciences will be approved, including APMA 1650, APMA 1910, APMA 1920, MATH 1090, MATH 1910. Upper-level courses in other areas may also be approved if the connection to applied mathematics is clear. Concentration advisors may approve a group of lower-level courses as a substitute for a single upper-level course if the group collectively demonstrates depth in a STEM area. Lower-level APMA, CSCI, and MATH courses and independent study/research courses cannot be used. At most one of APMA 1910, MATH 1090, MATH 1910, at most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001, and at most

one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Concentrators (A.B. or Sc.B.) that demonstrate excellence in grades and in undergraduate research can be awarded departmental honors. Complete guidelines, requirements, and deadlines for honors are published on the department website (<https://appliedmath.brown.edu/academics/undergraduate-program/honors/>). The first deadline is at the beginning of the student's senior year (i.e., the start of the penultimate semester). The main requirements include:

- Earning grades of A or S-with-distinction in at least 70% of the courses used for concentration credit, excluding calculus and linear algebra, by the end of the penultimate semester.
- Completion of an in-depth, original research project in a STEM discipline carried out under the guidance of a Brown-affiliated faculty advisor and documented with the completion of two semesters of independent study courses under the advisor's supervision.
- Completion of an honors thesis describing this research project that also demonstrates the use of mathematical methodology in the project. The honors thesis must be approved by the student's thesis advisor and a second reader, at least one of which must be faculty member in the Division of Applied Mathematics.

Standard program for the Sc.B. degree.

Prerequisites - the equivalent of two semesters of single-variable calculus

Single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, single-variable calculus consists of MATH 0090 followed by one of MATH 0100, MATH 0170, or MATH 0190.

Requirements - 16 courses¹

MATH 0180	Multivariable Calculus ²	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra ²	1
or MATH 0540	Linear Algebra With Theory	
APMA 0355	Applied Ordinary Differential Equations with Theory ³	1
APMA 0365	Applied Partial Differential Equations I with Theory ⁴	1
One approved course on computer programming. ⁵		1
Four 1000-level or higher APMA courses. ⁶		4
Two 1000-level or higher APMA or MATH courses. ⁶		2
Four 1000-level or higher courses in one or more STEM disciplines that demonstrate depth in areas amenable to mathematical investigation and that are approved by the concentration advisor. ⁷		4
One approved capstone, senior seminar, or research-related course. ⁸		1
Total Credits		16

¹ A required course may be replaced by a more advanced course with concentration advisor approval. No course may be used to satisfy multiple concentration requirements. Transfer credits and courses receiving placement credit notation can satisfy concentration credit as long as they appear on the Brown internal transcript. Pursuing

honors will require 17 courses – these 16 along with two semesters of independent study courses for the honors research project, one of which can be used to satisfy the capstone concentration requirement. For students with multiple concentrations: calculus, linear algebra, one intro CSCI course, and at most two additional courses can be used for concentration credit in the other concentration(s).

- APMA 0260 can substitute for the multivariable calculus and/or the linear algebra requirements. If it is used as a substitute for both requirements, then students must take one additional approved 1000-level APMA or MATH course not used elsewhere for concentration credit that adheres to the restrictions in footnote 6.
- MATH 1110 may be used in place of APMA 0355. If MATH 1110 is used, then the concentration must include at least five 1000-level or higher APMA courses that adhere to the restrictions in footnote 6. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0330 or APMA 0350 as a substitute for APMA 0355. Students matriculating in Fall 2025 or later who wish to use APMA 0330 or APMA 0350 must also complete the APMA 0355 online bridgework course and pass the in-person bridgework exam that is offered once per semester.
- MATH 1120 may be used in place of APMA 0365. If MATH 1120 is used, then the concentration must include at least five 1000-level or higher APMA courses that adhere to the restrictions in footnote 6. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0340 or APMA 0360 as a substitute for APMA 0365. Students matriculating in Fall 2025 or later who wish to use APMA 0340 or APMA 0360 must also complete the APMA 0365 online bridgework course and pass the in-person bridgework exam that is offered once per semester.
- Concentrators are encouraged to complete the computing requirement before the end of their sophomore year. The following courses are automatically approved: APMA 0160, APMA 0200, CSCI 0111, CSCI 0112, CSCI 0150, CSCI 0170, CSCI 0190, CSCI 0200, CPSY 0950, EEPS 0250.
- APMA 1650 cannot be used to satisfy this requirement for students matriculating in Fall 2025 or later, unless they also complete the APMA 1655 online bridgework course and pass the in-person bridgework exam that is offered once per semester. APMA 1910, APMA 1920, MATH 1090, MATH 1910 and research/independent study courses cannot be used. At most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001 and at most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit.
- STEM = Science, Technology, Engineering, Mathematics. Most upper-level courses in APMA, CSCI, ECON, ENGN, MATH, or any of the sciences will be approved, including APMA 1650, APMA 1910, APMA 1920, MATH 1090, MATH 1910. Upper-level courses in other areas may also be approved if the connection to applied mathematics is clear. Concentration advisors may approve a group of lower-level courses as a substitute for a single upper-level course if the group collectively demonstrates depth in a STEM area. Lower-level APMA, CSCI, and MATH courses and independent study/research courses cannot be used. At most one of APMA 1910, MATH 1090, MATH 1910, at most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001, and at most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit.
- The following options can be used to satisfy this requirement:
 - A pre-approved capstone course: currently APMA 1360, APMA 193*/194* (where * is any combination of numbers and letters; these are the APMA senior seminars).
 - A directed research/independent study course from the APMA 1970/APMA 1971 series that is used for undergraduate research. For students pursuing honors in APMA, one of the two required semesters of independent study courses can be used.
 - A directed research/independent study course in a related discipline (i.e. STEM disciplines, ENVS, PHP, etc.) that is used for undergraduate research if the project is relevant to the student's learning goals in the concentration and with approval from the concentration advisor.
 - An upper-level course related to the concentration (usually a 1000-level or higher APMA or MATH course) in addition to a research experience equivalent in scope and scale to work the student would pursue in an Applied Math research-related independent study course. Examples include UTRAs, LINK awards, REUs, research programs

at other institutions, the APMA Directed Reading Program, etc. This requires approval from the concentration advisor and appropriate documentation that should be uploaded to ASK.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Concentrators (A.B. or Sc.B.) that demonstrate excellence in grades and in undergraduate research can be awarded departmental honors. Complete guidelines, requirements, and deadlines for honors are published on the department website (<https://appliedmath.brown.edu/academics/undergraduate-program/honors/>). The first deadline is at the beginning of the student's senior year (i.e., the start of the penultimate semester). The main requirements include:

- Earning grades of A or S-with-distinction in at least 70% of the courses used for concentration credit, excluding calculus and linear algebra, by the end of the penultimate semester.
- Completion of an in-depth, original research project in a STEM discipline carried out under the guidance of a Brown-affiliated faculty advisor and documented with the completion of two semesters of independent study courses under the advisor's supervision.
- Completion of an honors thesis describing this research project that also demonstrates the use of mathematical methodology in the project. The honors thesis must be approved by the student's thesis advisor and a second reader, at least one of which must be faculty member in the Division of Applied Mathematics.

Applied Mathematics-Biology Concentration Requirements

Biology, the science of all life and living matter, is an incredibly diverse discipline offering students the opportunity to learn about topics ranging from the fundamental chemical reactions that fuel all living organisms to the population dynamics of entire ecosystems all the way to the question of how our brains give rise to the complexities of human cognition and experience. Applied mathematics is an increasingly important component of modern biological investigation. Modern technologies have enabled the creation of vast new biological data sets that often require sophisticated mathematical and statistical models for interpretation and analysis. Advances in computing have similarly enabled the simulation of biological phenomena at increasingly fine levels of detail. Entire subfields, such as bioinformatics and computational neuroscience, have developed around these new paradigms of biological investigation. The foundations of these new fields are inherently mathematical, with a focus on probability, statistical inference, and systems dynamics.

The Applied Mathematics – Biology concentration allows students to develop complementary expertise in biology and applied mathematics. Students will focus their advanced biological coursework in an area of particular interest to them. The applied math requirements emphasize those areas of mathematics that have found widespread use throughout all of the biological sciences. The program culminates in a senior capstone experience that enables students to participate in creative research collaborations with faculty.

Standard program for the Sc.B. degree

Prerequisites – the equivalent of two semesters of single-variable calculus

Single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, single-variable calculus consists of MATH 0090 followed by one of MATH 0100, MATH 0170, or MATH 0190.

Requirements – 16 courses¹

Mathematical Requirements – 7 courses		
MATH 0180	Multivariable Calculus ²	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra ²	1
or MATH 0540	Linear Algebra With Theory	
APMA 0355	Applied Ordinary Differential Equations with Theory ³	1
APMA 0365	Applied Partial Differential Equations I with Theory ⁴	1
APMA 1655	Introduction to Probability and Statistics with Theory ⁵	1
APMA 1070	Quantitative Models of Biological Systems	1
APMA 1080	Inference in Genomics and Molecular Biology	1
or NEUR 2110	Statistical Neuroscience	
Scientific Requirements – 7 courses		
One approved course (or course grouping) covering Newtonian mechanics. ⁶		1
CHEM 0330	Equilibrium, Rate, and Structure	1
BIOL 0200	The Foundation of Living Systems ⁷	1
Two BIOL or NEUR courses. ⁸		2
Two 1000-level or higher BIOL or NEUR courses from the same Biology track. ^{8,9}		2
Additional Requirements – 2 courses		
One approved course in the mathematical, biological, or computational sciences. ¹⁰		1
One approved capstone, senior seminar, or research-related course in the mathematical or biological sciences. ¹¹		1
Total Credits		16

¹ A required course may be replaced by a more advanced course with concentration advisor approval. No course may be used to satisfy multiple concentration requirements. Transfer credits and courses receiving placement credit notation can satisfy concentration credit as long as they appear on the Brown internal transcript. Pursuing honors will require 17 courses – these 16 along with two semesters of independent study courses for the honors research project, one of which can be used to satisfy the capstone concentration requirement. For students with multiple concentrations: calculus, linear algebra, one intro CSCI course, and at most two additional courses can be used for concentration credit in the other concentration(s).

² APMA 0260 can substitute for the multivariable calculus and/or the linear algebra requirements. If it is used as a substitute for both requirements, then students must take one additional approved 1000-level APMA or MATH course not used elsewhere for concentration credit that adheres to the restrictions in footnote 10 and these additional restrictions: APMA 1910, APMA 1920, MATH 1090, MATH 1910 and research/independent study courses cannot be used.

³ MATH 1110 may be used in place of APMA 0355. If MATH 1110 is used, then the concentration must include at least three 1000-level APMA courses that adhere to the restrictions in footnote 10. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0330 or APMA 0350 as a substitute for APMA 0355. Students matriculating in Fall 2025 or later who wish to use APMA 0330 or APMA 0350 must also complete the APMA 0355 online bridgework course and pass the in-person bridgework exam that is offered once per semester.

⁴ MATH 1120 may be used in place of APMA 0365. If MATH 1120 is used, then the concentration must include at least three 1000-level APMA courses that adhere to the restrictions in footnote 10. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0340 or APMA 0360 as a substitute for APMA 0365. Students matriculating in Fall 2025 or later who wish to use APMA 0340 or APMA 0360 must also complete the APMA 0365 online bridgework

course and pass the in-person bridgework exam that is offered once per semester.

- 5 Students matriculating prior to Fall 2025 can use APMA 1650 as a substitute for APMA 1655. Students matriculating in Fall 2025 or later who wish to use APMA 1650 must also complete the APMA 1655 online bridgework course and pass the in-person bridgework exam that is offered once per semester.
- 6 PHYS 0050 or PHYS 0070 are recommended. The following course(s) are automatically approved: PHYS 0030, PHYS 0050, PHYS 0070, ENGN 0040 + (one of PHYS 0040, PHYS 0060, a score of 3 or higher on any AP Physics, a score of 4 or higher on IB-HL Physics). When considering alternative course(s) a key criterion is whether both statics and dynamics are covered.
- 7 A BIOL placement test score of 30 or higher may be used in place of BIOL 0200. The placement test score can be found in ASK, in the advising detail view, under the test scores section. This will reduce by 1 credit the number of credits needed to complete the concentration.
- 8 Mixing BIOL and NEUR courses is fine. Students are encouraged to take at least one laboratory or fieldwork course.
- 9 The tracks (tracks, not areas) are listed at this link to the Biology Bulletin page (<https://bulletin.brown.edu/the-college/concentrations/biol/>) at the end of the Biology ScB requirements. The physical sciences track is not allowed. If the biomedical informatics track is used, then one of the courses must be BIOL 1565. Substitutions or the use of 2000-level courses requires approval of the Director of Undergraduate Studies in Biology.
- 10 1000-level courses in APMA, BIOL, CSCI, MATH, NEUR are automatically approved, including APMA 1910, APMA 1920. Research/independent study courses cannot be used. At most one of APMA 1910, MATH 1090, MATH 1910, at most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001, and at most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit. Concentrators are strongly encouraged to use this requirement to develop their computer programming skills and to do so before the end of sophomore semester. Many upper-level APMA courses, including APMA 1080, require exposure to programming as a prerequisite. The following courses are automatically approved for this purpose: APMA 0160, APMA 0200, CSCI 0111, CSCI 0150, CSCI 0170, CSCI 0190, CSCI 0200, CPSY 0950, EEPS 0250.
- 11 The following options can be used to satisfy this requirement
 - (a) A pre-approved course that satisfies the APMA Sc.B. capstone requirement: currently APMA 1360, APMA 193*/194* (where * is any combination of numbers and letters; these are the APMA senior seminars).
 - (b) A pre-approved course that satisfies the Biology A.B. capstone requirement: currently BIOL 1100, BIOL 1140, BIOL 1150, BIOL 1250, BIOL 1330, BIOL 1515, BIOL 1525, BIOL 1555, BIOL 1565, BIOL 1575, BIOL 1600, BIOL 1820, BIOL 1970. Courses over the 2000 level may be used with approval of the Director of Undergraduate Studies in Biology.
 - (c) A directed research/independent study course from the APMA 1970/APMA 1971, BIOL 1950/BIOL 1960, or NEUR 1970 series that is used for undergraduate research. For students pursuing honors in APMA-Bio, one of the two required semesters of independent study courses can be used.
 - (d) A directed research/independent study course in a related discipline (i.e. STEM disciplines, ENVS, PHP, etc.) that is used for undergraduate research if the project is relevant to the student's learning goals in the concentration and with approval from the concentration advisor.
 - (e) An upper-level course related to the concentration (usually a 1000-level or higher APMA or BIOL course) in addition to a research experience equivalent in scope and scale to work the student would pursue in an Applied Math or Biology research-related independent study course. Examples include UTRAs, LINK awards, REUs, research programs at other institutions, the APMA Directed Reading Program, etc. This requires approval from the concentration advisor and appropriate documentation that should be uploaded to ASK.
 - (f) Other equivalent opportunities not listed, with approval from the concentration advisor. Documentation should be uploaded to ASK.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Concentrators that demonstrate excellence in grades and in undergraduate research can be awarded departmental honors. Honors students with primary advisors in Applied Math should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Applied Math concentrators (<https://bulletin.brown.edu/the-college/concentrations/apma/>) and as published on the APMA departmental website (<https://appliedmath.brown.edu/academics/undergraduate-program/honors/>). Honors students with primary advisors in Biomed should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Biology concentrators (<https://bulletin.brown.edu/the-college/concentrations/biol/>) and as published on the Biology departmental website (<https://bue.brown.edu/academics/honors/>). Students wishing to do honors research with a non-APMA or Biomed advisor should contact the Directors of Undergraduate Studies in APMA and Biology to discuss options.

Applied Mathematics-Computer Science Concentration Requirements

The Sc.B. concentration in Applied Math-Computer Science provides a foundation of basic concepts and methodology of mathematical analysis and computation and prepares students for advanced work in applied mathematics, computer science, and data science. Concentrators must complete courses in mathematics, applied math, computer science, and an approved English writing course. While the concentration in Applied Math-Computer Science allows students to develop the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life, students who have completed the concentration have pursued graduate study, computer consulting and information industries, and scientific and statistical analysis careers in industry or government. This degree offers a standard track and a professional track.

Standard Program for the Sc.B. degree.

Prerequisites – the equivalent of two semesters of single-variable calculus

A second semester of single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, the second semester of calculus is taught in one of MATH 0100, MATH 0170, or MATH 0190.

Requirements – 17 courses ¹

Mathematical Requirements – 8 courses

MATH 0180	Multivariable Calculus ²	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra ²	1
or MATH 0540	Linear Algebra With Theory	
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science	
or APMA 1170	Introduction to Computational Linear Algebra	
APMA 0355	Applied Ordinary Differential Equations with Theory ³	1
APMA 0365	Applied Partial Differential Equations I with Theory ⁴	1
APMA 1160	An Introduction to Numerical Optimization	1
or APMA 1170	Introduction to Computational Linear Algebra	
or APMA 1180	Introduction to Numerical Solution of Differential Equations	

or APMA 1690	Computational Probability and Statistics	
or APMA 1740	Recent Applications of Probability and Statistics	
Two approved 1000-level or higher APMA courses.	^{5,6}	2
One 1000-level or higher APMA or MATH course	^{5,6}	1
Computer Science Requirements – 8 courses		
Select one of the following introductory course sequences:		2
CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms	
CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms	
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms	
CSCI 0190 and one CSCI course numbered 0200 or higher		
Select one foundational course in each of three of the following four clusters:		3
1. Algorithms/Theory		
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction	
2. AI/Machine Learning/Data Science		
CSCI 0410	Foundations of AI and Machine Learning	
3. Systems		
CSCI 0300	Fundamentals of Computer Systems ⁸	
or CSCI 0320	Introduction to Software Engineering	
or CSCI 0330	Introduction to Computer Systems	
4. Probability		
APMA 1655	Introduction to Probability and Statistics with Theory ^{6,9}	
or APMA 1650	Introduction to Probability and Statistics with Calculus	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
or MATH 1210	Probability	
or MATH 1610	Probability	
Three approved 1000-level ¹⁰ or higher CSCI courses, which must be technical CS courses.		3
Additional Requirements – 1 course		1
One approved capstone in computer science or applied mathematics taken in the student's senior year. ¹¹		
Total Credits		17

¹ A required course may be replaced by a more advanced course with concentration advisor approval. No course may be used to satisfy more than one of the required 17 concentration credits. Transfer credits and courses receiving placement credit notation can satisfy concentration credit as long as they appear on the Brown internal transcript. At most 3 post-matriculation transfer credits (such as study abroad courses or summer courses at another institution) can be used for concentration credit. Pursuing honors will require 18 courses – these 17 along with two semesters of independent study courses for the honors research project, one of which can be used to satisfy the capstone concentration requirement. For students with multiple concentrations: calculus, linear algebra, one intro CSCI course, and at most two additional courses can be used for concentration credit in the other concentration(s).

² APMA 0260 can substitute for the multivariable calculus and/or the linear algebra requirements. If it is used as a substitute for both requirements, then students must take one additional approved 1000-level APMA or MATH course not used elsewhere for concentration credit. Footnotes 5 and 6 apply.

³ MATH 1110 may be used in place of APMA 0355. If MATH 1110 is used, then the concentration must include at least four 1000-level APMA

courses (not including APMA 1910, 1920 or research/independent study courses; footnote 5 applies). These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0330 or APMA 0350 as a substitute for APMA 0355. Students matriculating in Fall 2025 or later who wish to use APMA 0330 or APMA 0350 must also complete the APMA 0355 online bridgework course and pass the in-person bridgework exam that is offered once per semester. MATH 1120 may be used in place of APMA 0365. If MATH 1120 is used, then the concentration must include at least four 1000-level APMA courses (not including APMA 1910, 1920 or research/independent study courses). These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0340 or APMA 0360 as a substitute for APMA 0365. Students matriculating in Fall 2025 or later who wish to use APMA 0340 or APMA 0360 must also complete the APMA 0365 online bridgework course and pass the in-person bridgework exam that is offered once per semester.

⁵ APMA 1650 cannot be used to satisfy this requirement for students matriculating in Fall 2025 or later, unless they also complete the APMA 1655 online bridgework course and pass the in-person bridgework exam that is offered once per semester. APMA 1910, 1920, MATH 1090, 1910 and research/independent study courses are not allowed. At most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001 can be used for concentration credit.

⁶ At most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit.

⁷ Students wishing to go directly from CSCI 0111 to CSCI 0200 will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200.

⁸ At most one of CSCI 0300, CSCI 0330 can be used for concentration credit.

⁹ APMA 1655 is recommended. Higher-level courses in probability can satisfy this requirement with concentration advisor approval. The following courses are automatically approved: APMA 1080, APMA 1200, APMA 1660, APMA 1690, APMA 1710, APMA 1740/ APMA 2610, APMA 2630, APMA 2640.

¹⁰ Non-CSCI courses and CS art/ humanities/policy courses cannot be used for concentration credit even if they are allowed as part of a pure CS concentration. This list is maintained in the CS concentration handbook at this link (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>). At most one of the electives can be an independent study course (such as CSCI 1970, CSCI 1973). At most one of CSCI 0410, CSCI 1410, CSCI 1411 can be used for concentration credit. EEPS 1340 is a non-CSCI course that can be used as a CSCI elective, but at most one of EEPS 1340 and CSCI 1951A can be used for concentration credit.

¹¹ Completing a capstone during the junior year might be allowed in exceptional cases for which completion during the senior year is impossible, such as the student's faculty research mentor not being on campus during the student's senior year, but this requires prior approval from the concentration advisor and the Director of Undergraduate Studies in CS. The following options can be used to satisfy this requirement:

(a) A pre-approved course that satisfies the APMA Sc.B. capstone requirement: currently APMA 1360, APMA 193*/194* (where * is any combination of numbers and letters; these are the APMA senior seminars).

(b) Completion of a CS capstone as described in the CS Concentration Handbook at this link (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>). Usually, this involves taking one of the approved CS capstone courses at this link (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-requirements-2020/capstone/>) and registering the capstone with the instructor of the course and with the CS department using the form linked at the top of the CS capstone courses page. Depending on the course it may require the completion of an additional project.

(c) A directed research/independent study course from the APMA 1970/1971 or CSCI 1970/1973 series that is used for undergraduate research. For students pursuing honors in APMA-CS, one of the two required semesters of independent study courses can be used.

(d) A directed research/independent study course in a related discipline (i.e. STEM disciplines, ENVS, PHP, etc.) that is used for undergraduate

research if the project is relevant to the student's learning goals in the concentration and with approval from the concentration advisor.

(e) An upper-level course related to the concentration (usually a 1000-level or higher APMA, CSCI, or MATH course) in addition to a research experience equivalent in scope and scale to work the student would pursue in an Applied Math and Computer Science research-related independent study course. Examples include UTRAs, LINK awards, REUs, research programs at other institutions, the APMA Directed Reading Program, etc. This requires approval from the concentration advisor and appropriate documentation that should be uploaded to ASK. The research experience must be completed during the student's senior year or the summer before the student's senior year. Exceptions require prior approval from the concentration advisor and the Director of Undergraduate Studies in CS.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Concentrators that demonstrate excellence in grades and in undergraduate research can be awarded departmental honors. Honors students with primary advisors in Applied Math should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Applied Math concentrators (<https://bulletin.brown.edu/the-college/concentrations/apma/>) and as published on the APMA departmental website (<https://appliedmath.brown.edu/academics/undergraduate-program/honors/>). Honors students with primary advisors in Computer Science should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Computer Science concentrators (<https://bulletin.brown.edu/the-college/concentrations/comp/>) and as published on the CS departmental website (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/honors/>). Students wishing to do honors research with a non-APMA or CS advisor should contact the Directors of Undergraduate Studies in APMA and CS to discuss options.

Applied Mathematics-Economics Concentration Requirements

The Applied Mathematics-Economics concentration is designed to reflect the mathematical and statistical nature of modern economic theory and empirical research. If you are interested in declaring a concentration in Applied Mathematics-Economics, please refer to this page (<https://economics.brown.edu/academics/undergraduate/concentrations/declaring/>) for more information regarding the process.

Requirements for the Bachelor of Arts

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians

Course Requirements:

Applied Mathematics Requirements

APMA 0355	Applied Ordinary Differential Equations with Theory	1

APMA 0365	Applied Partial Differential Equations I with Theory	1
Select one of the following:		1
APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	
Select one of the following:		1
APMA 1200	Operations Research: Probabilistic Models	
or APMA 1210	Operations Research: Deterministic Models	
APMA 1655	Introduction to Probability and Statistics with Theory ¹	1
One 1000-level or higher APMA course (except APMA1910, APMA1920, and research/independent study)		1
Economics Requirements:		3
ECON 1130	Intermediate Microeconomics (Mathematical) ²	
ECON 1210	Intermediate Macroeconomics	
ECON 1630	Mathematical Econometrics I	
Two 1000-level courses from the "mathematical-economics" group: ³		2
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
One 1000-level course from the "data methods" group: ³		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	

ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
One additional 1000-level economics course. ⁴		1
Total Credits		13

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra

² Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

³ No course may be used to simultaneously satisfy the "mathematical economics," and "data methods" requirements.

⁴ Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Applied Math-Economics concentrators who wish to pursue honors must find a primary faculty thesis advisor in either Economics or Applied Math. They will be held to the Honors requirements of their advisor's department. Joint concentrators in Applied Mathematics-Economics with an Economics thesis advisor should follow the requirements published here (<https://economics.brown.edu/academics/undergraduate/honors-and-capstones/thesis/>), while concentrators with an Applied Math thesis advisor should follow the requirements published here (<https://www.brown.edu/academics/applied-mathematics/undergraduate-program/honors/>).

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradproftrack/>

Requirements for the Bachelor of Science

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory

Course Requirements:

Applied Mathematics Requirements

APMA 0355	Applied Ordinary Differential Equations with Theory	1
APMA 0365	Applied Partial Differential Equations I with Theory	
Select one of the following:		1
APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	
CSCI 0190	Accelerated Introduction to Computer Science	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
Select one of the following:		1
APMA 1200	Operations Research: Probabilistic Models	
or APMA 1210	Operations Research: Deterministic Models	
APMA 1655	Introduction to Probability and Statistics with Theory ¹	1
Two 1000-level or higher APMA or MATH courses with at least one in APMA (except APMA1910, APMA1920, MATH1090, MATH1910 and research/independent study). At most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001 and at most one of APMA 1650, APMA 1655, MATH 1210, MATH 1610 can be used for concentration credit		2
Economics Requirements:		
ECON 1130	Intermediate Microeconomics (Mathematical) ²	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Three 1000-level courses from the "mathematical-economics" group: ³		3
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
One 1000-level course from the "data methods" group: ³		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	

ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
Two additional 1000-level economics courses ⁴		2
Total Credits		15

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra.

² Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

³ No course may be used to simultaneously satisfy the "mathematical economics" and "data methods" requirements.

⁴ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Applied Math-Economics concentrators who wish to pursue honors must find a primary faculty thesis advisor in either Economics or Applied Math. They will be held to the Honors requirements of their advisor's department. Joint concentrators in Applied Mathematics-Economics with an Economics thesis advisor should follow the requirements published here (<https://economics.brown.edu/academics/undergraduate/honors-and-capstones/thesis/>), while concentrators with an Applied Math thesis advisor should follow the requirements published here (<https://www.brown.edu/academics/applied-mathematics/undergraduate-program/honors/>).

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Standard program for the A.B. degree (Mathematical Finance track):

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra

or APMA 0260 Linear Algebra and Multivariable Calculus for Applied Mathematicians

APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory

Course Requirements: 13 Courses: 6 Applied Math and 7 Economics

Applied Mathematics Requirements

APMA 0355	Applied Ordinary Differential Equations with Theory	1

and

APMA 0365	Applied Partial Differential Equations I with Theory	1

Select one of the following: 1

APMA 0160	Introduction to Scientific Computing (preferred)

APMA 0200	Introduction to Modeling

CSCI 0111	Computing Foundations: Data

CSCI 0150	Introduction to Object-Oriented Programming and Computer Science

CSCI 0170	Computer Science: An Integrated Introduction

CSCI 0190	Accelerated Introduction to Computer Science

APMA 1200	Operations Research: Probabilistic Models	1

APMA 1655	Introduction to Probability and Statistics with Theory ¹	1

Select one of the following: 1

APMA 1160	An Introduction to Numerical Optimization

APMA 1180	Introduction to Numerical Solution of Differential Equations

APMA 1210	Operations Research: Deterministic Models

APMA 1330	Applied Partial Differential Equations II

APMA 1360	Applied Dynamical Systems

APMA 1660	Statistical Inference II

APMA 1670	Statistical Analysis of Time Series

APMA 1680	Nonparametric Statistics

APMA 1690	Computational Probability and Statistics

APMA 1710	Information Theory

APMA 1720	Monte Carlo Simulation with Applications to Finance (preferred)

APMA 1740	Recent Applications of Probability and Statistics

APMA 1860	Graphs and Networks

MATH 1010	Analysis: Functions of One Variable

APMA 193X, 194X	Senior Seminar series, depending on topic ⁴

Economics Requirements:

ECON 1130	Intermediate Microeconomics (Mathematical) ³	1

ECON 1210	Intermediate Macroeconomics	1

ECON 1630	Mathematical Econometrics I	1

Select two 1000-level courses from the "financial economics" group: ² 2

ECON 1710	Investments I

ECON 1720	Corporate Finance

ECON 1730	Venture Capital, Private Equity, and Entrepreneurship

ECON 1750	Investments II

ECON 1760	Financial Institutions	
ECON 1770	Crisis Economics	
ECON 1780	Advanced Topics in Corporate Finance	
ECON 1830	Behavioral Finance	
Select one 1000-level course from the "mathematical economics" group: ²		1
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
Select one 1000-level course from the "data methods" group: ²		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
Total Credits		13

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam

that is offered once per semester, and have taken multivariable calculus and linear algebra

² No course may be used to simultaneously satisfy any two or more of the "financial economics," "mathematical economics," and "data methods" requirements.

³ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

⁴ Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Standard program for the Sc.B. degree (Mathematical Finance track):

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory

Course Requirements: 16 courses: 7 Applied Math and 9 Economics

Applied Mathematics requirements:

APMA 0355	Applied Ordinary Differential Equations with Theory	1

and

APMA 0365	Applied Partial Differential Equations I with Theory	1

Select one of the following: 1

APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	
APMA 1200	Operations Research: Probabilistic Models	1
APMA 1655	Introduction to Probability and Statistics with Theory ¹	1

Select two of the following: 2

APMA 1160	An Introduction to Numerical Optimization	
APMA 1180	Introduction to Numerical Solution of Differential Equations	
APMA 1210	Operations Research: Deterministic Models	
APMA 1330	Applied Partial Differential Equations II	
APMA 1360	Applied Dynamical Systems	
APMA 1660	Statistical Inference II	
APMA 1670	Statistical Analysis of Time Series	
APMA 1680	Nonparametric Statistics	

APMA 1690	Computational Probability and Statistics	
APMA 1710	Information Theory	
APMA 1720	Monte Carlo Simulation with Applications to Finance (preferred)	
APMA 1740	Recent Applications of Probability and Statistics	
APMA 1860	Graphs and Networks	
MATH 1010	Analysis: Functions of One Variable	
APMA 193X, 194X	Senior Seminar series, depending on topic	4

Economics Requirements:

ECON 1130	Intermediate Microeconomics (Mathematical)	3	1
ECON 1210	Intermediate Macroeconomics	1	1
ECON 1630	Mathematical Econometrics I	1	1
Select three 1000-level courses from the "financial economics" group:		3	2

ECON 1710	Investments I	
ECON 1720	Corporate Finance	
ECON 1730	Venture Capital, Private Equity, and Entrepreneurship	
ECON 1750	Investments II	
ECON 1760	Financial Institutions	
ECON 1770	Crisis Economics	
ECON 1780	Advanced Topics in Corporate Finance	
ECON 1830	Behavioral Finance	

Select two 1000-level courses from the "mathematical economics" group: ² 2

ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	

Select one 1000-level course from the "data methods" group: ² 1

ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1345	Climate Change and the Commons	
ECON 1340	Economics of Global Warming	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	

ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	

Total Credits **16**

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Applied Mathematics Graduate Program

The department of Applied Mathematics offers graduate programs leading to the Master of Science (Sc.M.) degree and the Doctor of Philosophy (Ph.D.) degree.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/applied-mathematics> (<http://www.brown.edu/academics/gradschool/programs/applied-mathematics/>)

Courses

APMA 0070. Introduction to Applied Complex Variables.

Applications of complex analysis that do not require calculus as a prerequisite. Topics include algebra of complex numbers, plane geometry by means of complex coordinates, complex exponentials, and logarithms and their relation to trigonometry, polynomials, and roots of polynomials, conformal mappings, rational functions and their applications, finite Fourier series and the FFT, iterations and fractals. Uses MATLAB, which has easy and comprehensive complex variable capabilities.

APMA 0090. Introduction to Mathematical Modeling.

We will explore issues of mathematical modeling and analysis. Five to six self-contained topics will be discussed and developed. The course will include seminars in which modeling issues are discussed, lectures to provide mathematical background, and computational experiments. Required mathematical background is knowledge of one-variable calculus, and no prior computing experience will be assumed.

APMA 0100. Elementary Probability for Applications.

This course serves as an introduction to probability and stochastic processes with applications to practical problems. It will cover basic probability and stochastic processes such as basic concepts of probability and conditional probability, simple random walk, Markov chains, continuous distributions, Brownian motion and option pricing. Enrollment limited to 19 first year students.

APMA 0110. What's the big deal with Data Science?

This seminar serves as a practical introduction to the interdisciplinary field of data science. Over the course of the semester, students will be exposed to the diversity of questions that data science can address by reading current scholarly works from leading researchers. Through hands-on labs and experiences, students will gain facility with computational and visualization techniques for uncovering meaning from large numerical and text-based data sets. Ultimately, students will gain fluency with data science vocabulary and ideas. There are no prerequisites for this course.

APMA 0111. Data Science and Social Justice.

This first-year seminar explores the impact of data and algorithms on equity and justice. Data analysis and visualization can help identify inequities and advocate for social justice. At the same time, data-based algorithms can institutionalize and rationalize unfair practices and injustices. In this course, we will engage with fundamental questions about the role of data to work towards social justice. We will gain introductory data science skills, discuss algorithmic bias, equity, and fairness, and work with real-world data sets and algorithms to examine inequities in health, policing, prisons, and welfare. Everybody is welcome - no prerequisites are needed.

APMA 0120. Mathematics of Finance.

The current volatility in international financial markets makes it imperative for us to become competent in financial calculations early in our liberal arts and scientific career paths. This course is designed to prepare the student with those elements of mathematics of finance appropriate for the calculations necessary in financial transactions.

APMA 0160. Introduction to Scientific Computing.

For students in any discipline that may involve numerical computations. Includes instruction for programming in MATLAB. Applications discussed include solution of linear equations (with vectors and matrices) and nonlinear equations (by bisection, iteration, and Newton's method), interpolation, and curve-fitting, difference equations, iterated maps, numerical differentiation and integration, and differential equations. Prerequisites: MATH 0100 or equivalent.

APMA 0180. Modeling the World with Mathematics: An Introduction for Non-Mathematicians.

Mathematics is the foundation of our technological society and most of its powerful ideas are quite accessible. This course will explain some of these using historical texts and Excel. Topics include the predictive power of 'differential equations' from the planets to epidemics, oscillations and music, chaotic systems, randomness and the atomic bomb. Prerequisite: some knowledge of calculus.

APMA 0200. Introduction to Modeling.

This course provides an introduction to the mathematical modeling of selected biological, chemical, engineering, and physical processes, and the use of computational tools that facilitate the modeling. The goal is to illustrate the typical way in which applied mathematicians approach practical applications: understanding the underlying problem, creating a model, analyzing the model using mathematical techniques, and interpreting the findings in terms of the original problem. Single-variable calculus is the only requirement; techniques from differential equations, linear algebra, numerical methods, probability, statistics, and MATLAB programming will be introduced in class. Prerequisites: MATH 0100 or equivalent.

APMA 0260. Linear Algebra and Multivariable Calculus for Applied Mathematicians.

This one-semester course provides an integrated introduction to multivariable calculus and linear algebra. Students will develop a strong foundation in mathematical concepts and techniques essential for the applied mathematics concentration.

APMA 0330. Methods of Applied Mathematics I.

This course will cover mathematical techniques involving ordinary differential equations used in the analysis of physical, biological, and economic phenomena. The course emphasizes the use of established methods in applications rather than rigorous foundation. Topics include: first and second order differential equations, an introduction to numerical methods, series solutions, and Laplace transformations. Prerequisites: MATH 0100 or equivalent.

APMA 0340. Methods of Applied Mathematics II.

This course will cover mathematical techniques involving ordinary and partial differential equations and statistics used in the analysis of physical, biological, and economic phenomena. The course emphasizes the use of established methods rather than rigorous foundations. Topics include: applications of linear algebra to systems of equations; numerical methods; nonlinear problems and stability; introduction to partial differential equations; introduction to statistics. Prerequisites: APMA 0330 or equivalent.

APMA 0350. Applied Ordinary Differential Equations.

This course provides a comprehensive introduction to ordinary differential equations and their applications. During the course, we will see how applied mathematicians use ordinary differential equations to solve practical applications, from understanding the underlying problem, creating a differential-equations model, solving it using analytical, numerical, or qualitative methods, and interpreting the findings in terms of the original problem. This course is geared towards methods for solving ordinary differential equations rather than the underlying theoretical foundations. Prerequisites: MATH 0100 or equivalent; knowledge of matrix-vector operations, determinants, and linear systems. Linear algebra is strongly recommended as a prerequisite or corequisite.

APMA 0355. Applied Ordinary Differential Equations with Theory.

This course provides a comprehensive introduction to ordinary differential equations, their applications, and their theoretical underpinnings. During the course, we will see how applied mathematicians use ordinary differential equations to solve practical applications, from understanding the underlying problem, creating a differential-equations model, solving it using analytical, numerical, or qualitative methods, and interpreting the findings in terms of the original problem. We will also learn about the underlying rigorous theoretical foundations of differential equations and the mathematical formalism used to establish this theory. Prerequisites: Multivariable calculus; Linear algebra.

APMA 0360. Applied Partial Differential Equations I.

This course provides an introduction to partial differential equations and their applications, with an emphasis on techniques for solving PDEs rather than theory. We will learn how to use partial differential equations to solve problems that arise in practical applications by formulating questions about a real-world problem, creating a partial differential equation model that can help answer these questions, solving the resulting system using analytical, numerical, and qualitative methods, and interpreting the results in terms of the original application. Topics include the four fundamental PDEs (transport, wave, heat, and Laplace equations), solution techniques (Fourier transform, energy methods, separation of variables, maximum principles), and example applications. Prerequisites: Multivariable calculus; APMA 0350 or equivalent.

APMA 0365. Applied Partial Differential Equations I with Theory.

This course provides a rigorous introduction to partial differential equations and their applications. Emphasis will be placed on the theoretical foundations of partial differential equations and the mathematical formalism used to establish this theory. We will learn how to use partial differential equations to solve problems that arise in practical applications by formulating questions about a real-world problem, creating a partial differential equation model that can help answer these questions, solving the resulting system using analytical, numerical, and qualitative methods, and interpreting the results in terms of the original application. Topics include the four fundamental PDEs (transport, wave, heat, and Laplace equations), solution techniques (Fourier transform, energy methods, separation of variables, maximum principles), and example applications. Prerequisites: Multivariable calculus; Linear algebra; APMA 0355 or equivalent.

APMA 0410. Mathematical Methods in the Brain Sciences.

Basic mathematical methods commonly used in the neural and cognitive sciences. Topics include: introduction to probability and statistics, emphasizing hypothesis testing and modern nonparametric methods; introduction to differential equations and systems of differential equations, emphasizing qualitative behavior and simple phase-plane analysis. Examples from neuroscience, cognitive science, and other sciences. Prerequisite: MATH 0100 or equivalent.

APMA 0650. Introduction to Probability and Statistics.

A first course in probability and statistics without calculus. Topics include data fluency, probability spaces, discrete and continuous random variables, expected values, law of large numbers, central limit theorem, point estimation, confidence intervals, hypothesis testing, measures of association, linear regression. Examples and applications from the popular press and the life, social and physical sciences.

APMA 1000. Introduction to Mathematical Proofs.

This course serves as an introduction to mathematical writing, with a focus on building practical skills for proof writing. The central theme of the course is constructing, analyzing, and understanding mathematical arguments. The course will cover the fundamental proof techniques, including direct proofs, contradiction, contrapositive, existence and uniqueness, induction, and epsilon-delta.

APMA 1070. Quantitative Models of Biological Systems.

Quantitative dynamic models help understand problems in biology and there has been rapid progress in recent years. This course provides an introduction to the concepts and techniques, with applications to population dynamics, infectious diseases, enzyme kinetics, and cellular biology. Additional topics covered will vary. Mathematical techniques will be discussed as they arise in the context of biological problems. Prerequisites: Multivariable calculus; Linear algebra; APMA 0355 or equivalent.

APMA 1080. Inference in Genomics and Molecular Biology.

This course is an introduction to the probabilistic and statistical models that have found widespread use in genomics and molecular biology. The emphasis is on foundational models and ideas rather than practical application. Likely topics include Markov chains, hidden Markov models, directed graphical models, mixture models, linear regression, regularization, dimensionality reduction, clustering, Bayesian inference, and multiple hypothesis testing. Examples will focus on the connection to genomics and molecular biology, but all of these tools have found widespread use in a variety of disciplines. Mathematical and computational exercises will reinforce the topics presented in lecture. Prerequisites: Multivariable calculus; Linear algebra; Computer programming; APMA 1655 or equivalent.

APMA 1160. An Introduction to Numerical Optimization.

This course provides a thorough introduction to numerical methods and algorithms for solving non-linear continuous optimization problems. A particular attention will be given to the mathematical underpinnings to understand the theoretical properties of the optimization problems and the algorithms designed to solve them. Topics will include: line search methods, trust-region methods, nonlinear conjugate gradient methods, an introduction to constrained optimization (Karush-Kuhn-Tucker conditions, mini-maximization, saddle-points of Lagrangians). Some applications in signal and image processing will be explored. Prerequisites: Multivariable calculus; Linear algebra; Computer programming. APMA 1170 or equivalent is recommended.

APMA 1170. Introduction to Computational Linear Algebra.

Focuses on fundamental algorithms in computational linear algebra with relevance to all science concentrators. Basic linear algebra and matrix decompositions (Cholesky, LU, QR, etc.), round-off errors and numerical analysis of errors and convergence. Iterative methods and conjugate gradient techniques. Computation of eigenvalues and eigenvectors, and an introduction to least squares methods. Prerequisites: Multivariable calculus; Linear algebra. Experience with a programming language is strongly recommended.

APMA 1180. Introduction to Numerical Solution of Differential Equations.

Fundamental numerical techniques for solving ordinary and partial differential equations. Overview of techniques for approximation and integration of functions. Development of multi-step and multi-stage methods, error analysis, step-size control for ordinary differential equations. Solution of two-point boundary value problems, introduction to methods for solving linear partial differential equations. Students will be required to use MATLAB (or other computer languages) to implement the mathematical algorithms under consideration: experience with a programming language is therefore strongly recommended. Prerequisites: Multivariable calculus; Linear algebra; APMA 0355 or equivalent; APMA 0365 or equivalent.

APMA 1190. Finite Volume Method for CFD: A Survey.

This course will provide students with an overview of the subjects necessary to perform robust simulations of computational fluid dynamics (CFD) problems. After an initial overview of the finite volume method and fluid mechanics, students will use the finite volume library OpenFOAM to explore the different components that make up a modern CFD code (discretization, linear algebra, timestepping, boundary conditions, splitting schemes, and multiphysics) and learn how to navigate a production scale software library.

APMA 1200. Operations Research: Probabilistic Models.

APMA 1200 serves as an introduction to stochastic processes and stochastic optimization. After a review of basic probability theory, including conditional probability and conditional expectations, topics covered will include discrete-time Markov chains, exponential distributions, Poisson processes and continuous-time Markov chains, elementary queueing theory, martingales, Markov decision processes and dynamic programming. If time permits topics selected from filtering of hidden Markov chains, renewal processes, and Brownian motion could be included. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 (or equivalent).

APMA 1210. Operations Research: Deterministic Models.

An introduction to the basic mathematical ideas and computational methods of optimizing allocation of effort or resources, with or without constraints. Linear programming, network models, dynamic programming, and integer programming. Prerequisites: Multivariable calculus; Linear algebra; Computer programming.

APMA 1260. Introduction to the Mechanics of Solids and Fluids.

An introduction to the dynamics of fluid flow and deforming elastic solids for students in the physical or mathematical sciences. Topics in fluid mechanics include statics, simple viscous flows, inviscid flows, potential flow, linear water waves, and acoustics. Topics in solid mechanics include elastic/plastic deformation, strain and stress, simple elastostatics, and elastic waves with reference to seismology. Offered in alternate years.

APMA 1330. Applied Partial Differential Equations II.

Review of vector calculus and curvilinear coordinates. Partial differential equations. Heat conduction and diffusion equations, the wave equation, Laplace and Poisson equations. Separation of variables, special functions, Fourier series and power series solution of differential equations. Sturm-Liouville problem and eigenfunction expansions. Prerequisites: Multivariable calculus; Linear algebra; APMA 0365 or equivalent.

APMA 1340. Methods of Applied Mathematics III, IV.

See Methods Of Applied Mathematics III, IV (APMA 1330) for course description.

APMA 1360. Applied Dynamical Systems.

This course gives an overview of the theory and applications of dynamical systems modeled by differential equations and maps. We will discuss changes of the dynamics when parameters are varied, investigate periodic and homoclinic solutions that arise in applications, and study the impact of additional structures such as time reversibility and conserved quantities on the dynamics. We will also study systems with complicated "chaotic" dynamics that possess attracting sets which do not have an integer dimension. Applications to chemical reactions, climate, epidemiology, and phase transitions will be discussed. Prerequisites: Multivariable calculus; Linear algebra; APMA 0355 or equivalent.

APMA 1650. Introduction to Probability and Statistics with Calculus.

A first course in calculus-based probability and statistics. Topics include data fluency, probability spaces, discrete and continuous random variables, expected values, law of large numbers, central limit theorem, point estimation, confidence intervals, hypothesis testing, measures of association, linear regression. Examples and applications from the popular press and the life, social and physical sciences. Prerequisites: MATH 0100 or equivalent.

APMA 1655. Introduction to Probability and Statistics with Theory.

A first course in calculus-based probability and statistics. Topics include data fluency, probability spaces, discrete and continuous random variables, expected values, law of large numbers, central limit theorem, point estimation, confidence intervals, hypothesis testing, measures of association, linear regression, and example applications. This course introduces students to the mathematical theory and formalism needed for upper-level undergraduate courses in probability and statistics. Prerequisites: Multivariable calculus; Linear algebra.

APMA 1660. Statistical Inference II.

APMA 1660 is designed as a sequel to APMA 1655 to form one of the alternative tracks for an integrated year's course in mathematical statistics. The main topic is linear models in statistics. Specific topics include likelihood-ratio tests, nonparametric tests, introduction to statistical computing, matrix approach to simple-linear and multiple regression, analysis of variance, and design of experiments. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 or equivalent.

APMA 1670. Statistical Analysis of Time Series.

Time series analysis is an important branch of mathematical statistics with many applications to signal processing, econometrics, geology, etc. The course emphasizes methods for analysis in the frequency domain, in particular, estimation of the spectrum of time-series, but time domain methods are also covered. Prerequisites: elementary probability and statistics on the level of APMA 1650-1660.

APMA 1680. Nonparametric Statistics.

A systematic treatment of distribution-free alternatives to classical statistical tests. These nonparametric tests make minimum assumptions about distributions governing the generation of observations, yet are of nearly equal power to the classical alternatives. Prerequisite: APMA 1650 or equivalent. Offered in alternate years.

APMA 1690. Computational Probability and Statistics.

Examination of probability theory and mathematical statistics from the perspective of computing. Topics selected from random number generation, Monte Carlo methods, limit theorems, stochastic dependence, Bayesian networks, dimensionality reduction. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 or equivalent; Programming experience is recommended.

APMA 1700. The Mathematics of Insurance.

The course consists of two parts: the first treats life contingencies, i.e. the construction of models for individual life insurance contracts. The second treats the Collective Theory of Risk, which constructs mathematical models for the insurance company and its portfolio of policies as a whole. Suitable also for students proceeding to the Institute of Actuaries examinations. Prerequisites: Probability Theory to the level of APMA 1650 or MATH 1610.

APMA 1710. Information Theory.

Information theory is the study of the fundamental limits of information transmission and storage. This course, intended primarily for advanced undergraduates and beginning graduate students, offers a broad introduction to information theory and its applications: Entropy and information, lossless data compression, communication in the presence of noise, channel capacity, channel coding, source-channel separation, lossy data compression. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 or equivalent.

APMA 1720. Monte Carlo Simulation with Applications to Finance.

The course will cover the basics of Monte Carlo and its applications to financial engineering: generating random variables and simulating stochastic processes; analysis of simulated data; variance reduction techniques; binomial trees and option pricing; Black-Scholes formula; portfolio optimization; interest rate models. The course will use MATLAB as the standard simulation tool. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 or equivalent.

APMA 1740. Recent Applications of Probability and Statistics.

This course develops the mathematical foundations of modern applications of statistics to the computational, cognitive, engineering, and neural sciences. The course is rigorous, but the emphasis is on application. Topics include: Gibbs ensembles and their relation to maximum entropy, large deviations, exponential models, and information theory; statistical estimation and classification; graphical models, dynamic programming, MCMC, parameter estimation, and the EM algorithm. Graduate version: 2610; Undergraduate version: 1740. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 or equivalent; programming experience; strong mathematics background. APMA 1200 or APMA 1690 or similar courses recommended. MATH 1010 or equivalent is recommended for APMA 2610.

APMA 1850. Introduction to High Performance Parallel Computing.

No description available.

APMA 1860. Graphs and Networks.

Selected topics about the mathematics of graphs and networks with an emphasis on random graph models and the dynamics of processes operating on these graphs. Topics include: empirical properties of biological, social, and technological networks (small-world effects, scale-free properties, transitivity, community structure); mathematical and statistical models of random graphs and their properties (Bernoulli random graphs, preferential attachment models, stochastic block models, phase transitions); dynamical processes on graphs and networks (percolation, cascades, epidemics, queuing, synchronization). Prerequisites: Multivariable calculus; Linear algebra; APMA 0355 or equivalent; APMA 1655 or equivalent; programming experience. APMA 1200 or APMA 1690 or similar courses recommended.

APMA 1880. Advanced Matrix Theory.

Canonical forms of orthogonal, Hermitian and normal matrices: Rayleigh quotients. Norms, eigenvalues, matrix equations, generalized inverses. Banded, sparse, non-negative and circulant matrices. Prerequisite: APMA 0340 or 0360, or MATH 0520 or 0540, or permission of the instructor.

APMA 1910. Race and Gender in the Scientific Community.

This course examines the (1) disparities in representation in the scientific community, (2) issues facing different groups in the sciences, and (3) paths towards a more inclusive scientific environment. We will delve into the current statistics on racial and gender demographics in the sciences and explore their background through texts dealing with the history, philosophy, and sociology of science. We will also explore the specific problems faced by underrepresented and well-represented racial minorities, women, and LGBTQ community members. The course is reading intensive and discussion based.

APMA 1930A. Actuarial Mathematics.

A seminar considering selected topics from two fields: (1) life contingencies-the study of the valuation of life insurance contracts; and (2) collective risk theory, which is concerned with the random process that generates claims for a portfolio of policies. Topics are chosen from *Actuarial Mathematics*, 2nd ed., by Bowers, Gerber, Hickman, Jones, and Nesbitt. Prerequisite: knowledge of probability theory to the level of APMA 1650 or MATH 1610. Particularly appropriate for students planning to take the examinations of the Society of Actuaries.

APMA 1930B. Computational Probability and Statistics.

Examination of probability theory and mathematical statistics from the perspective of computing. Topics selected from: random number generation, Monte Carlo methods, limit theorems, stochastic dependence, Bayesian networks, probabilistic grammars.

APMA 1930C. Information Theory.

Information theory is the mathematical study of the fundamental limits of information transmission (or coding) and storage (or compression). This course offers a broad introduction to information theory and its real-world applications. A subset of the following is covered: entropy and information; the asymptotic equipartition property; theoretical limits of lossless data compression and practical algorithms; communication in the presence of noise-channel coding, channel capacity; source-channel separation; Gaussian channels; Lossy data compression.

APMA 1930D. Mixing and Transport in Dynamical Systems.

Mixing and transport are important in several areas of applied science, including fluid mechanics, atmospheric science, chemistry, and particle dynamics. In many cases, mixing seems highly complicated and unpredictable. We use the modern theory of dynamical systems to understand and predict mixing and transport from the differential equations describing the physical process in question. Prerequisites: APMA 0330, 0340; or APMA 0350, 0360.

APMA 1930E. Ocean Dynamics.

Works through the popular book by Henry Stommel entitled *A View of the Sea*. Introduces the appropriate mathematics to match the physical concepts introduced in the book.

APMA 1930G. The Mathematics of Sports.

Topics to be discussed will range from the determination of who won the match, through biomechanics, free-fall of flexible bodies and aerodynamics, to the flight of ski jumpers and similar unnatural phenomena. Prerequisite: APMA 0340 or equivalent, or permission of the instructor.

APMA 1930H. Scaling and Self-Similarity.

The themes of scaling and self-similarity provide the simplest, and yet the most fruitful description of complicated forms in nature such as the branching of trees, the structure of human lungs, rugged natural landscapes, and turbulent fluid flows. This seminar is an investigation of some of these phenomena in a self-contained setting requiring little more mathematical background than high school algebra.

Topics to be covered: Dimensional analysis; empirical laws in biology, geosciences, and physics and the interplay between scaling and function; an introduction to fractals; social networks and the "small world" phenomenon.

APMA 1930I. Random Matrix Theory.

In the past few years, random matrices have become extremely important in a variety of fields such as computer science, physics and statistics. They are also of basic importance in various areas of mathematics. This class will serve as an introduction to this area. The focus is on the basic matrix ensembles and their limiting distributions, but several applications will be considered. Prerequisites: MATH 0200 or 0350; and MATH 0520 or 0540; and APMA 0350, 0360, 1650, and 1660. APMA 1170 and MATH 1010 are recommended, but not required.

APMA 1930J. Mathematics of Random Networks.

An intro to the emerging field of random networks and a glimpse of some of the latest developments. Random networks arise in a variety of applications including statistics, communications, physics, biology and social networks. They are studied using methods from a variety of disciplines ranging from probability, graph theory and statistical physics to nonlinear dynamical systems. Describes elements of these theories and shows how they can be used to gain practical insight into various aspects of these networks including their structure, design, distributed control and self-organizing properties. Prerequisites: Advanced calculus, basic knowledge of probability. Enrollment limited to 40.

APMA 1930M. Applied Asymptotic Analysis.

Many problems in applied mathematics and physics are nonlinear and are intractable to solve using elementary methods. In this course we will systematically develop techniques for obtaining quantitative information from nonlinear systems by exploiting small scale parameters. Topics will include: regular and singular perturbations, boundary layer theory, multiscale and averaging methods and asymptotic expansions of integrals. Along the way, we will discuss many applications including nonlinear waves, coupled oscillators, nonlinear optics, fluid dynamics and pattern formation.

APMA 1930P. Mathematics and Climate.

Mathematical models play a critical role in projecting and understanding climate processes. This course will discuss techniques for application of theoretical models, computational experiments, and data analysis in climate science, including oceanic, atmospheric, and ecological phenomena. Intended for students in applied mathematics and other concentrations with quantitative skills who are interested in applying their knowledge to mathematical modeling and climate problems. No previous coursework in climate science is required. Physical science concepts and mathematical techniques will be introduced throughout the course. Students will develop collaborative or individual projects later in the semester. Prerequisites: APMA 0360, or APMA 0340, or written permission; APMA 1650 is recommended. Course has undergraduate version (APMA 1930P) and graduate version (APMA 2822P). The graduate version will engage more deeply with mathematical aspects of constructing models and performing mathematical modeling research.

APMA 1930Q. Mathematical Models of Cortical Dynamics.

A Senior Applied Mathematics seminar on brain modeling, emphasizing: stochastic aspects of cortical dynamics; mean-field approaches to the analysis of large networks; models of spike-timing-dependent plasticity; the emergence of network motifs and their role in cortical function. Open to Neuroscience and CLPS students with adequate mathematical and computational preparation. Background in neuroscience desirable but not required.

APMA 1930U. Introduction to Stochastic Differential Equations.

This seminar course serves as an introduction to stochastic differential equations at the senior undergraduate level. Topics covered include Brownian motion and white noise, stochastic integrals, the Itô calculus, existence and uniqueness of solutions to Itô stochastic differential equations, and the Feynman-Kac formula. More advanced topics, such as fractional Brownian motion, Lévy processes, and stochastic control theory, may be addressed depending on the interests of the class and time restrictions.

APMA 1930W. Probabilities in Quantum Mechanics.

We will start from scratch. We will be rigorous, while making a careful accounting of the (surprisingly few) conceptual assumptions that lead inexorably to consequences that are almost impossible to believe. With an eye on some of the most startling and vexing of these, we will construct a minimum mathematical foundation sufficient to explore: the abrupt transition from the weird quantum to the familiar classical world; the uncertainty principles; teleportation; Bell's theorem and the Einstein-Bohr debates; quantum erasure; the Conway-Kochen "free-will theorem"; (unbreakable) quantum encryption, and, an introduction to quantum computing.

APMA 1930X. Probability, Optimization, and Stochastic Calculus.

This senior seminar will explore various topics in probability, including stochastic processes, stochastic optimization including optimal stopping and optimal stochastic control, Brownian motion, stochastic calculus, connection to partial differential equations, and some of their applications. The class format will involve both lectures and class discussions. Calculus based undergraduate probability, such as APMA 1650/1655 or MATH 1210/1610, is required. Minimal experience in MATLAB is recommended, but not required.

APMA 1931A. Convexity: Convex Analysis, Geometry and Optimization.

Convexity lies at the heart of modern mathematics, extending its influence into analysis, geometry, and optimization. This course will explore various topics related to convexity, drawn from a wide range of fields yet unified by common analytical and geometric techniques. As a senior seminar course, our aim is not to cover one specific subject exhaustively, but rather to introduce diverse concepts that provide a broader understanding of the methods involved in addressing both theoretical and applied mathematical questions related to convexity. The course will broadly cover: --Convex Sets: Separation properties, Supporting Hyperplanes, Volume, Surface area, Minkowski Problem, Isoperimetric Inequality, Steiner's formula, Caratheodory's theorem, Duality. --Convex Functions: Derivatives, Rademacher's theorem, Helly's Theorem, Minmax principles, Duality, and Cyclic monotonicity. --Convex Optimization: Optimality conditions, Duality, Gradient methods, Subgradients, Newton's method, and relevant applications.

APMA 1931B. Foundations of Machine Learning.

This course offers a principled exploration of the foundational ideas and theoretical underpinnings of machine learning. Students will examine key learning theory concepts—such as empirical risk minimization, bias–variance tradeoff, computational complexity, and cross-validation—and study classical supervised and unsupervised methods, including linear regression, kernel methods, and principal component analysis. The course will also introduce important algorithmic paradigms like stochastic gradient descent and neural networks.

APMA 1940A. Coding and Information Theory.

In a host of applications, from satellite communication to compact disc technology, the storage, retrieval, and transmission of digital data relies upon the theory of coding and information for efficient and error-free performance. This course is about choosing representations that minimize the amount of data (compression) and the probability of an error in data handling (error-correcting codes). Prerequisite: A knowledge of basic probability theory at the level of APMA 1650 or MATH 1610.

APMA 1940B. Information and Coding Theory.

Originally developed by C.E. Shannon in the 1940s for describing bounds on information rates across telecommunication channels, information and coding theory is now employed in a large number of disciplines for modeling and analysis of problems that are statistical in nature. This course provides a general introduction to the field. Main topics include entropy, error correcting codes, source coding, data compression. Of special interest will be the connection to problems in pattern recognition. Includes a number of projects relevant to neuroscience, cognitive and linguistic sciences, and computer vision. Prerequisites: High school algebra, calculus. MATLAB or other computer experience helpful. Prior exposure to probability theory/statistics helpful.

APMA 1940C. Introduction to Mathematics of Fluids.

Equations that arise from the description of fluid motion are born in physics, yet are interesting from a more mathematical point of view as well. Selected topics from fluid dynamics introduce various problems and techniques in the analysis of partial differential equations. Possible topics include stability, existence and uniqueness of solutions, variational problems, and active scalar equations. No prior knowledge of fluid dynamics is necessary.

APMA 1940D. Iterative Methods.

Large, sparse systems of equations arise in many areas of mathematical application and in this course we explore the popular numerical solution techniques being used to efficiently solve these problems. Throughout the course we will study preconditioning strategies, Krylov subspace acceleration methods, and other projection methods. In particular, we will develop a working knowledge of the Conjugate Gradient and Minimum Residual (and Generalized Minimum Residual) algorithms. Multigrid and Domain Decomposition Methods will also be studied as well as parallel implementation, if time permits.

APMA 1940E. Mathematical Biology.

This course is designed for undergraduate students in mathematics who have an interest in the life sciences. No biological experience is necessary, as we begin by a review of the relevant topics. We then examine a number of case studies where mathematical tools have been successfully applied to biological systems. Mathematical subjects include differential equations, topology and geometry.

APMA 1940F. Mathematics of Physical Plasmas.

Plasmas can be big, as in the solar wind, or small, as in fluorescent bulbs. Both kinds are described by the same mathematics. Similar mathematics describes semiconducting materials, the movement of galaxies, and the re-entry of satellites. We consider how all of these physical systems are described by certain partial differential equations. Then we invoke the power of mathematics. The course is primarily mathematical. Prerequisites: APMA 0340 or 0360, MATH 0180 or 0200 or 0350, and PHYS 0060 or PHYS 0080 or ENGN 0510.

APMA 1940G. Multigrid Methods.

Multigrid methods are a very active area of research in Applied Mathematics. An introduction to these techniques will expose the student to cutting-edge mathematics and perhaps pique further interest in the field of scientific computation.

APMA 1940H. Numerical Linear Algebra.

This course will deal with advanced concepts in numerical linear algebra. Among the topics covered: Singular Value Decompositions (SVD) QR factorization, Conditioning and Stability and Iterative Methods.

APMA 1940I. The Mathematics of Finance.

The mathematics of speculation as reflected in the securities and commodities markets. Particular emphasis placed on the evaluation of risk and its role in decision-making under uncertainty. Prerequisite: basic probability.

APMA 1940J. The Mathematics of Speculation.

The course will deal with the mathematics of speculation as reflected in the securities and commodities markets. Particular emphasis will be placed on the evaluation of risk and its role in decision making under uncertainty. Prerequisite: basic probability.

APMA 1940K. Fluid Dynamics and Physical Oceanography.

Introduction to fluid dynamics as applied to the mathematical modeling and simulation of ocean dynamics and near-shore processes. Oceanography topics include: overview of atmospheric and thermal forcing of the oceans, ocean circulation, effects of topography and Earth's rotation, wind-driven currents in upper ocean, coastal upwelling, the Gulf Stream, tidal flows, wave propagation, tsunamis.

APMA 1940L. Mathematical Models in Biophysics.

Development mathematical descriptions of biological systems aid in understanding cell function and physiology. The course will explore a range of topics including: biomechanics of blood flow in arteries and capillaries, motile cells and chemotaxis, cell signaling and quorum sensing, and additional topics. Formulating and using numerical simulations will be a further component. Students will develop individual projects. Prerequisites: APMA 0360, or APMA 0340, or written permission.

APMA 1940M. The History of Mathematics.

The course will not be a systematic survey but will focus on specific topics in the history of mathematics such as Archimedes and integration. Oresme and graphing, Newton and infinitesimals, simple harmonic motion, the discovery of 'Fourier' series, the Monte Carlo method, reading and analyzing the original texts. A basic knowledge of calculus will be assumed.

APMA 1940N. Introduction to Mathematical Models in Computational Biology.

This course is designed to introduce students to the use of mathematical models in biology as well as some more recent topics in computational biology. Mathematical techniques will involve difference equations and dynamical systems theory, ordinary differential equations and some partial differential equations. These techniques will be applied in the study of many biological applications such as: (i) Difference Equations: population dynamics, red blood cell production, population genetics; (ii) Ordinary Differential Equations: predator/prey models, Lotka/Volterra model, modeling the evolution of the genome, heart beat model/cycle, transmission dynamics of HIV and gonorrhea; (iii) Partial Differential Equations: tumor growth, modeling evolution of the genome, pattern formation. Prerequisites: APMA 0330 and 0340.

APMA 1940O. Approaches to Problem Solving in Applied Mathematics.

The aim of the course is to illustrate through the examination of unsolved (but elementary) problems the ways in which professional applied mathematicians approach the solution of such questions. Ideas considered include: choosing the "simplest" nontrivial example; generalization; and specification. Ways to think outside convention. Some knowledge of probability and linear algebra helpful.

Suggested reading.

"How to solve it", G. Polya

"Nonplussed", Julian Havil

APMA 1940P. Biodynamics of Block Flow and Cell Locomotion.

APMA 1940Q. Filtering Theory.

Filtering (estimation of a "state process" from noisy data) is an important area of modern statistics. It is of central importance in navigation, signal and image processing, control theory and other areas of engineering and science. Filtering is one of the exemplary areas where the application of modern mathematics and statistics leads to substantial advances in engineering. This course will provide a student with the working knowledge sufficient for cutting edge research in the field of nonlinear filtering and its practical applications. Topics will include: hidden Markov models, Kalman and Wiener filters, optimal nonlinear filtering, elements of Ito calculus and Wiener chaos, Zakai and Kushner equations, spectral separating filters and wavelet based filters, numerical implementation of filters. We will consider numerous applications of filtering to speech recognition, analysis of financial data, target tracking and image processing. No prior knowledge in the field is required but a good understanding of the basic Probability Theory (APMA1200 or APMA2630) is important.

APMA 1940R. Linear and Nonlinear Waves.

From sound and light waves to water waves and traffic jams, wave phenomena are everywhere around us. In this seminar, we will discuss linear and nonlinear waves as well as the propagation of wave packets. Among the tools we shall use and learn about are numerical simulations in Matlab and analytical techniques from ordinary and partial differential equations. We will also explore applications in nonlinear optics and to traffic flow problems. Prerequisites: MATH 0180 and either APMA 0330-0340 or APMA 0350-0360. No background in partial differential equations is required.

APMA 1940Y. Wavelets and Applications.

The aim of the course is to introduce you to: the relatively new and interdisciplinary area of wavelets; the efficient and elegant algorithms to which they give rise including the wavelet transform; and the mathematical tools that can be used to gain a rigorous understanding of wavelets. We will also cover some of the applications of these tools including the compression of video streams, approximation of solution of partial differential equations, and signal analysis.

APMA 1941D. Pattern Theory.

This course is an introduction to some probabilistic models and numerical algorithms that model some aspects of human cognition. The class begins with stochastic models of language introduced by Shannon and develops related models for speech and vision. The classes stresses mathematical foundations, in particular the role of information theory in developing Bayesian models and the increasing importance of dynamics in several algorithms, especially in optimization and deep learning. Student assessment will be based on computational projects that implement the principles discussed in lecture.

APMA 1941I. Enumerative Combinatorics.

A senior seminar on formal techniques in enumeration—that is, the study of counting things. Topics include elementary counting techniques, including the principle of inclusion-exclusion, along with more sophisticated techniques, such as generating functions and Polya theory. This will be an active learning course; our text will consist of a sequence of problems to be solved, and we will spend a significant portion of class time working in small groups on those problems. Students will also give presentations to the class.

APMA 1941J. Topics in High-Dimensional Probability.

This course covers a selection of topics in high-dimensional probability, the study of random objects, such as vectors or matrices, that take value in a high-dimensional space. We will cover classical concentration inequalities, such as Hoeffding and Chernoff inequalities, functional inequalities, such as the Poincare and log-Sobolev inequalities, as well as subgaussian and subexponential distributions. Students will have the opportunity to learn about further topics in high-dimensional probability by preparing a presentation on a topic of their choice as well as writing a report on the same topic; opportunities for instructor guidance will be given. Prerequisites: undergraduate probability, linear algebra, differential equations. MATH 1010 is recommended.

APMA 1970. Independent Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

APMA 1971. Independent Study - WRIT.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. This course should be taken in place of APMA 1970 if it is to be used to satisfy the WRIT requirement.

APMA 2050. Mathematical Methods of Applied Science.

Introduces science and engineering graduate students to a variety of fundamental mathematical methods. Topics include linear algebra, complex variables, Fourier series, Fourier and Laplace transforms and their applications, ordinary differential equations, tensors, curvilinear coordinates, partial differential equations, and calculus of variations.

APMA 2060. Mathematical Methods of Applied Science.

Introduces science and engineering graduate students to a variety of fundamental mathematical methods. Topics include linear algebra, complex variables, Fourier series, Fourier and Laplace transforms and their applications, ordinary differential equations, tensors, curvilinear coordinates, partial differential equations, and calculus of variations.

APMA 2070. Deep Learning for Scientists & Engineers.

This course introduces concepts and implementation of deep learning techniques for computational science and engineering problems to first or second year graduate students. This course entails various methods, including theory and implementation of deep learning techniques to solve a broad range of problems using scientific machine learning. Lectures and tutorials on Python, Tensorflow and PyTorch are also included. Students will understand the underlying theory and mathematics of deep learning; analyze and synthesize data in order to model physical, chemical, biological, and engineering systems; and apply physics-informed neural networks and neural operators to model and simulate multiphysics systems. Undergraduate students who want to enroll in this course should request an override through Courses@Brown.

APMA 2080. Inference in Genomics and Molecular Biology.

Massive quantities of fundamental biological and geological sequence data have emerged. The goal of this course is to enable students to construct and apply probabilistic models to draw inferences from sequence data on problems novel to them. Statistical topics: Bayesian inferences; estimation; hypothesis testing and false discovery rates; statistical decision theory; change point algorithm; hidden Markov models; Kalman filters; and significances in high dimensions. Prerequisites: APMA 1650 or equivalent; APMA 0160 or CSCI 0111 or equivalent.

APMA 2110. Real Analysis.

Provides the basis of real analysis which is fundamental to many of the other courses in the program: metric spaces, measure theory, and the theory of integration and differentiation.

APMA 2120. Hilbert Spaces and Their Applications.

A continuation of APMA 2110: metric spaces, Banach spaces, Hilbert spaces, the spectrum of bounded operators on Banach and Hilbert spaces, compact operators, applications to integral and differential equations.

APMA 2130. Methods of Applied Mathematics: Partial Differential Equations.

Solution methods and basic theory for first and second order partial differential equations. Geometrical interpretation and solution of linear and nonlinear first order equations by characteristics; formation of caustics and propagation of discontinuities. Classification of second order equations and issues of well-posed problems. Green's functions and maximum principles for elliptic systems. Characteristic methods and discontinuous solutions for hyperbolic systems.

APMA 2140. Methods of Applied Mathematics: Integral Equations.

Integral equations. Fredholm and Volterra theory, expansions in orthogonal functions, theory of Hilbert-Schmidt. Singular integral equations, method of Wiener-Hopf. Calculus of variations and direct methods.

APMA 2160. Methods of Applied Mathematics: Asymptotics.

Calculus of asymptotic expansions, evaluation of integrals. Solution of linear ordinary differential equations in the complex plane, WKB method, special functions.

APMA 2170. Functional Analysis and Applications.

Topics vary according to interest of instructor and class.

APMA 2190. Nonlinear Dynamical Systems I.

Basic theory of ordinary differential equations, flows, and maps. Two-dimensional systems. Linear systems. Hamiltonian and integrable systems. Lyapunov functions and stability. Invariant manifolds, including stable, unstable, and center manifolds. Bifurcation theory and normal forms. Nonlinear oscillations and the method of averaging. Chaotic motion, including horseshoe maps and the Melnikov method. Applications in the physical and biological sciences.

APMA 2200. Nonlinear Dynamical Systems: Theory and Applications.

Basic theory of ordinary differential equations, flows, and maps. Two-dimensional systems. Linear systems. Hamiltonian and integrable systems. Lyapunov functions and stability. Invariant manifolds, including stable, unstable, and center manifolds. Bifurcation theory and normal forms. Nonlinear oscillations and the method of averaging. Chaotic motion, including horseshoe maps and the Melnikov method. Applications in the physical and biological sciences.

APMA 2210. Topics in Nonlinear Dynamical Systems.

Topics to be covered in this course may vary depending on the audiences. One of the goals that is planned for this course is to discuss the boundary layers and/or the boundary value problems that appear and play a very important role in the kinetic theory of gases; in particular, in the theory of the Boltzmann equations. Students are encouraged to attend and participate in the kinetic theory program offered by the ICERM institute in the Fall 2011 semester. This course may be taken twice for credit.

APMA 2230. Partial Differential Equations I.

The theory of the classical partial differential equations, as well as the method of characteristics and general first order theory. Basic analytic tools include the Fourier transform, the theory of distributions, Sobolev spaces, and techniques of harmonic and functional analysis. More general linear and nonlinear elliptic, hyperbolic, and parabolic equations and properties of their solutions, with examples drawn from physics, differential geometry, and the applied sciences. Generally, semester II of this course concentrates in depth on several special topics chosen by the instructor.

APMA 2240. Partial Differential Equations II.

The theory of the classical partial differential equations, as well as the method of characteristics and general first order theory. Basic analytic tools include the Fourier transform, the theory of distributions, Sobolev spaces, and techniques of harmonic and functional analysis. More general linear and nonlinear elliptic, hyperbolic, and parabolic equations and properties of their solutions, with examples drawn from physics, differential geometry, and the applied sciences. Generally, semester II of this course concentrates in depth on several special topics chosen by the instructor.

APMA 2260. Introduction to Stochastic Control Theory.

The course serves as an introduction to the theory of stochastic control and dynamic programming technique. Optimal stopping, total expected (discounted) cost problems, and long-run average cost problems will be discussed in discrete time setting. The last part of the course deals with continuous time deterministic control and game problems. The course requires some familiarity with the probability theory.

APMA 2410. Fluid Dynamics I.

Formulation of the basic conservation laws for a viscous, heat conducting, compressible fluid. Molecular basis for thermodynamic and transport properties. Kinematics of vorticity and its transport and diffusion. Introduction to potential flow theory. Viscous flow theory; the application of dimensional analysis and scaling to obtain low and high Reynolds number limits.

APMA 2420. Fluid Mechanics II.

Introduction to concepts basic to current fluid mechanics research: hydrodynamic stability, the concept of average fluid mechanics, introduction to turbulence and to multiphase flow, wave motion, and topics in inviscid and compressible flow.

APMA 2450. Exchange Scholar Program.**APMA 2470. Topics in Fluid Dynamics.**

Initial review of topics selected from flow stability, turbulence, turbulent mixing, surface tension effects, and thermal convection. Followed by focussed attention on the dynamics of dispersed two-phase flow and complex fluids.

APMA 2480. Topics in Fluid Dynamics.

No description available.

APMA 2550. Numerical Solution of Partial Differential Equations I.

Finite difference methods for solving time-dependent initial value problems of partial differential equations. Fundamental concepts of consistency, accuracy, stability and convergence of finite difference methods will be covered. Associated well-posedness theory for linear time-dependent PDEs will also be covered. Some knowledge of computer programming expected.

APMA 2560. Numerical Solution of Partial Differential Equations II.

An introduction to weighted residual methods, specifically spectral, finite element and spectral element methods. Topics include a review of variational calculus, the Rayleigh-Ritz method, approximation properties of spectral and finite element methods, and solution techniques. Homework will include both theoretical and computational problems.

APMA 2570A. Numerical Solution of Partial Differential Equations III.

We will cover spectral methods for partial differential equations. Algorithm formulation, analysis, and efficient implementation issues will be addressed. Prerequisite: APMA 2550 or equivalent knowledge in numerical methods.

APMA 2570B. Numerical Solution of Partial Differential Equations III.

We will cover finite element methods for ordinary differential equations and for elliptic, parabolic and hyperbolic partial differential equations. Algorithm development, analysis, and computer implementation issues will be addressed. In particular, we will discuss in depth the discontinuous Galerkin finite element method. Prerequisite: APMA 2550 or equivalent knowledge in numerical methods.

APMA 2580A. Computational Fluid Dynamics.

The course will focus primarily on finite difference methods for viscous incompressible flows. Other topics will include multiscale methods, e.g. molecular dynamics, dissipative particle dynamics and lattice Boltzmann methods. We will start with the mathematical nature of the Navier-Stokes equations and their simplified models, learn about high-order explicit and implicit methods, time stepping, and fast solvers. We will then cover advection-diffusion equations and various forms of the Navier-Stokes equations in primitive variables and in vorticity/streamfunction formulations. In addition to the homeworks the students are required to develop a Navier-Stokes solver as a final project.

APMA 2580B. Computational Fluid Dynamics for Compressible Flows.

An introduction to computational fluid dynamics with emphasis on compressible flows. We will cover finite difference, finite volume and finite element methods for compressible Euler and Navier-Stokes equations and for general hyperbolic conservation laws. Background material in hyperbolic partial differential equations will also be covered. Algorithm development, analysis, implementation and application issues will be addressed. Prerequisite: APMA 2550 or equivalent knowledge in numerical methods.

APMA 2580C. Optimization.

This course provides a solid presentation of modern convex analysis and convex optimization algorithms for large scale problems. Topics include: Ekeland's variational principle, subdifferential calculus, duality and Fenchel-Legendre transform, projection on a closed convex set, proximal operators and Moreau's regularization, accelerated and optimal first-order methods, Hopf/Lax-Oleinik representation formulas for Hamilton-Jacobi equations. The course will provide the mathematical and algorithmic underpinnings. It will also explore some applications in signal and image processing, optimal control and machine learning.

APMA 2610. Recent Applications of Probability and Statistics.

This course develops the mathematical foundations of modern applications of statistics to the computational, cognitive, engineering, and neural sciences. The course is rigorous, but the emphasis is on application. Topics include: Gibbs ensembles and their relation to maximum entropy, large deviations, exponential models and information theory; statistical estimation and classification; graphical models, dynamic programming, MCMC, parameter estimation, and the EM algorithm. Graduate version: 2610; Undergraduate version: 1740. Prerequisites: Multivariable calculus; Linear algebra; APMA 1655 or equivalent, programming experience, strong mathematics background. APMA 1200 or APMA 1690 or similar courses recommended. MATH 1010 or equivalent is recommended for APMA 2610.

APMA 2630. Theory of Probability I.

Part one of a two semester course that provides an introduction to probability theory based on measure theory. The first semester (APMA 2630) covers the following topics: countable state Markov chains, review of real analysis and metric spaces, probability spaces, random variables and measurable functions, Borel-Cantelli lemmas, weak and strong laws of large numbers, conditional expectation and beginning of discrete time martingale theory. Prerequisites—undergraduate probability and analysis, co-requisite—graduate real analysis.

APMA 2640. Theory of Probability II.

Part two of a two semester course that provides an introduction to probability theory based on measure theory. Standard topics covered in the second-semester (APMA 2640) include the following: discrete time martingale theory, weak convergence (also called convergence in distribution) and the central limit theorem, and a study of Brownian motion. Optional topics include the ergodic theorem and large deviation theory. Prerequisites—undergraduate probability and analysis, co-requisite—graduate real analysis.

APMA 2660. Stochastic Processes.

Review of the theory of stochastic differential equations and reflected SDEs, and of the ergodic and stability theory of these processes. Introduction to the theory of weak convergence of probability measures and processes. Concentrates on applications to the probabilistic modeling, control, and approximation of modern communications and queuing networks; emphasizes the basic methods, which are fundamental tools throughout applications of probability.

APMA 2670. Mathematical Statistics I.

The course covers advanced modern methods for high dimensional parametric statistical learning theory. Topics include: (1) Maximum likelihood and Bayesian parameter and set estimation for both iid data and Graphical Models; (2) Linear regression including ridge regression, lasso, principal components, and study of issues such as model selection and overparametrization; (3) Linear classification including Bayesian classification, discriminant analysis, Fisher discriminant analysis, flexible discriminant analysis, support vector machines, and perceptron; (4) Classical and Bayesian hypothesis testing; (5) Coherent presentation of Markov Graphical Models, Hidden Graphical models, and computational algorithms for optimization and simulation such as Markov Chain Monte, Dynamic Programming, and Bootstrap; (6) Infinite data asymptotics for inference and phase transitions for Markov Graphical Models. Prerequisite: APMA 2630 or equivalent.

APMA 2680. Mathematical Statistics II.

The course presents modern methods and tools for nonparametric statistical learning theory. Topics include: (1) Kernel methods for density estimation and regression, analysis of overfitting/underfitting, undersmoothing/oversmoothing, model selection via cross validation; (2) Penalty methods for regression based on Reproducing Kernel Hilbert Spaces; (3) Classification and regression trees; (4) Aggregating classifiers including BAGGING, Random forest, and Boosting; (5) Projection pursuit and neural network approximations for regression and classification; (6) Deep learning including convolution networks and neural network transformers; (7) Rademacher complexity, VC-dimension, Covering number, and concentration inequalities; (8) Application of concentration inequalities to high-probability bounds for regression and classification; (9) Model selection via structural risk minimization. Prerequisites: APMA 2670

APMA 2720. Information Theory.

Information theory and its relationship with probability, statistics, and data compression. Entropy. The Shannon-McMillan-Breiman theorem. Shannon's source coding theorems. Statistical inference; hypothesis testing; model selection; the minimum description length principle. Information-theoretic proofs of limit theorems in probability: Law of large numbers, central limit theorem, large deviations, Markov chain convergence, Poisson approximation, Hewitt-Savage 0-1 law. Prerequisites: APMA 2630, 1710.

APMA 2810A. Computational Biology.

Provides an up-to-date presentation of the main problems and algorithms in bioinformatics. Emphasis is given to statistical/ probabilistic methods for various molecular biology tasks, including: comparison of genomes of different species, finding genes and motifs, understanding transcription control mechanisms, analyzing microarray data for gene clustering, and predicting RNA structure.

APMA 2810B. Computational Molecular Biology.

Provides an up-to-date presentation of problems and algorithms in bioinformatics, beginning with an introduction to biochemistry and molecular genetics. Topics include: proteins and nucleic acids, the genetic code, the central dogma, the genome, gene expression, metabolic transformations, and experimental methods (gel electrophoresis, X-ray crystallography, NMR). Also, algorithms for DNA sequence alignment, database search tools (BLAST), and DNA sequencing.

APMA 2810C. Elements of High Performance Scientific Computing.

No description available.

APMA 2810D. Elements of High Performance Scientific Computing II.

No description available.

APMA 2810E. Far Field Boundary Conditions for Hyperbolic Equations.

No description available.

APMA 2810F. Introduction to Non-linear Optics.

No description available.

APMA 2810G. Large Deviations.

No description available.

APMA 2810H. Math of Finance.

No description available.

APMA 2810I. Mathematical Models and Numerical Analysis in Computational Quantum Chemistry.

We shall present on some models in the quantum chemistry field (Thomas Fermi and related, Hartree Fock, Kohn Sham) the basic tools of functional analysis for the study of their solutions. Then some of the discretization methods and iterative algorithms to solve these problems will be presented and analyzed. Some of the open problems that flourish in this field will also be presented all along the lectures.

APMA 2810J. Mathematical Techniques for Neural Modeling.

No description available.

APMA 2810K. Methods of Algebraic Geometry in Control Theory I.

Develops the ideas of algebraic geometry in the context of control theory. The first semester examines scalar linear systems and affine algebraic geometry while the second semester addresses multivariable linear systems and projective algebraic geometry.

APMA 2810L. Numerical Solution of Hyperbolic PDE's.

No description available.

APMA 2810M. Some Topics in Kinetic Theory.

Nonlinear instabilities as well as boundary effects in a collisionless plasmas; Stable galaxy configurations; A nonlinear energy method in the Boltzmann theory will also be introduced. Self-contained solutions to specific concrete problems. Focus on ideas but not on technical aspects. Open problems and possible future research directions will then be discussed so that students can gain a broader perspective. Prerequisite: One semester of PDE (graduate level) is required.

APMA 2810N. Topics in Nonlinear PDEs.

Aspects of the theory on nonlinear evolution equations, which includes kinetic theory, nonlinear wave equations, variational problems, and dynamical stability.

APMA 2810O. Stochastic Differential Equations.

This course develops the theory and some applications of stochastic differential equations. Topics include: stochastic integral with respect to Brownian motion, existence and uniqueness for solutions of SDEs, Markov property of solutions, sample path properties, Girsanov's Theorem, weak existence and uniqueness, and connections with partial differential equations. Possible additional topics include stochastic stability, reflected diffusions, numerical approximation, and stochastic control. Prerequisite: APMA 2630 and 2640.

APMA 2810P. Perturbation Methods.

Basic concepts of asymptotic approximations with examples with examples such as evaluation of integrals and functions. Regular and singular perturbation problems for differential equations arising in fluid mechanics, wave propagation or nonlinear oscillators. Methods include matched asymptotic expansions and multiple scales. Methods and results will be discussed in the context of applications to physical problems.

APMA 2810Q. Discontinuous Galerkin Methods.

In this seminar course we will cover the algorithm formulation, stability analysis and error estimates, and implementation and applications of discontinuous Galerkin finite element methods for solving hyperbolic conservation laws, convection diffusion equations, dispersive wave equations, and other linear and nonlinear partial differential equations. Prerequisite: APMA 2550.

APMA 2810R. Computational Biology Methods for Gene/Protein Networks and Structural Proteomics.

The course presents computational and statistical methods for gene and protein networks and structural proteomics; it emphasizes: (1) Probabilistic models for gene regulatory networks via microarray, chromatin immunoprecipitation, and cis-regulatory data; (2) Signal transduction pathways via tandem mass spectrometry data; (3) Molecular Modeling for ligand-receptor coupling and docking. The course is recommended for graduate students.

APMA 2810S. Topics in Control.

No description available.

APMA 2810T. Nonlinear Partial Differential Equations.

This course introduces techniques useful for solving many nonlinear partial differential equations, with emphasis on elliptic problems. PDE from a variety of applications will be discussed. Contact the instructor about prerequisites.

APMA 2810U. Topics in Differential Equations.

No description available.

APMA 2810V. Topics in Partial Differential Equations.

The course will cover an introduction of the L_p theory of second order elliptic and parabolic equations, finite difference approximations of elliptic and parabolic equations, and some recent developments in the Navier-Stokes equations and quasi-geostrophic equations. Some knowledge of real analysis will be expected.

APMA 2810W. Advanced Topics in High Order Numerical Methods for Convection Dominated Problems.

This is an advanced seminar course. We will cover several topics in high order numerical methods for convection dominated problems, including methods for solving Boltzman type equations, methods for solving unsteady and steady Hamilton-Jacobi equations, and methods for solving moment models in semi-conductor device simulations. Prerequisite: APMA 2550 or equivalent knowledge of numerical analysis.

APMA 2810X. Introduction to the Theory of Large Deviations.

The theory of large deviations attempts to estimate the probability of rare events and identify the most likely way they happen. The course will begin with a review of the general framework, standard techniques (change-of-measure, PDE, weak convergence, etc.), and basic examples (e.g., Sanov's and Cramer's Theorems). We then will cover the Wentzell-Freidlin theory. The last part of the course will be one or two related topics, possibly drawn from (but not limited to) risk-sensitive control and Monte Carlo methods. Prerequisites: APMA 2630 and 2640.

APMA 2810Y. Discrete high-D Inferences in Genomics.

Genomics is revolutionizing biology and biomedicine and generated a mass of clearly relevant high-D data along with many important high-D discrete inference problems. Topics: special characteristics of discrete high-D inference including Bayesian posterior inference; point estimation; interval estimation; hypothesis tests; model selection; and statistical decision theory.

APMA 2810Z. An Introduction to the Theory of Large Deviations.

The theory of large deviations attempts to estimate the probability of rare events and identify the most likely way they happen. The course will begin with a review of the general framework, standard techniques (change-of-measure, subadditivity, etc.), and elementary examples (e.g., Sanov's and Cramer's Theorems). We then will cover large deviations for diffusion processes and the Wentzel-Freidlin theory. The last part of the course will be one or two related topics, possibly drawn from (but not limited to) risk-sensitive control; weak convergence methods; Hamilton-Jacobi-Bellman equations; Monte Carlo methods. Prerequisites: APMA 2630 and 2640.

APMA 2811A. Directed Methods in Control and System Theory.

Various general techniques have been developed for control and system problems. Many of the methods are indirect. For example, control problems are reduced to a problem involving a differential equation (such as the partial differential equation of Dynamic Programming) or to a system of differential equations (such as the canonical system of the Maximum Principle). Since these indirect methods are not always effective alternative approaches are necessary. In particular, direct methods are of interest.

We deal with two general classes, namely: 1.) Integration Methods; and, 2.) Representation Methods. Integration methods deal with the integration of function space differential equations. Perhaps the most familiar is the so-called Gradient Method or curve of steepest descent approach. Representation methods utilize approximation in function spaces and include both deterministic and stochastic finite element methods. Our concentration will be on the theoretical development and less on specific numerical procedures. The material on representation methods for Levy processes is new.

APMA 2811B. Computational Methods for Signaling Pathways and Protein Interactions.

The course will provide presentation of the biology and mathematical models/algorithms for a variety of topics, including: (1) The analysis and interpretation of tandem mass spectrometry data for protein identification and determination of signaling pathways, (2) Identification of Phosphorylation sites and motifs and structural aspects of protein docking problems. Prerequisites: The course is recommended for graduate students. It will be self-contained; students will be able to fill in knowledge by reading material to be indicated by the instructor.

APMA 2811C. Stochastic Partial Differential Equations.

SPDEs is an interdisciplinary area at the crossroads of stochastic processes and partial differential equations (PDEs). The topics of the course include: genesis of SPDEs in real life applications, mathematical foundations and analysis of SPDEs, numerical and computational aspects of SPDEs, applications of SPDEs to fluid dynamics, population biology, hidden Markov models, etc. Prerequisites: familiarity with stochastic calculus and PDEs (graduate level).

APMA 2811D. Asymptotic Problems For Differential Equations And Stochastic Processes.

Topics that will be covered include: WKB method: zeroth and first orders; turning points; Perturbation theory: regular perturbation, singular perturbation and boundary layers; Homogenization methods for ODE's, elliptic and parabolic PDE's; Homogenization for SDE's, diffusion processes in periodic and random media; Averaging principle for ODE's and SDE's. Applications will be discussed in class and in homework problems.

APMA 2811E. A Posteriori Estimates for Finite Element Methods.

This course gives an introduction to the basic concepts of a posteriori estimates of finite element methods. After an overview of different techniques the main focus will be shed on residual based estimates where as a starting point the Laplace operator is analyzed. Effectivity and reliability of the error estimator will be proven. In a second part of the course, students will either study research articles and present them or implement the error estimates for some specific problem and present their numerical results. Recommended prerequisites: basic knowledge in finite elements, APMA 2550, 2560, 2570.

APMA 2811F. Numerical Solution of Ordinary Differential Equations: IVP Problems and PDE Related Issues.

The purpose of the course is to lay the foundation for the development and analysis of numerical methods for solving systems of ordinary differential equations. With a dual emphasis on analysis and efficient implementations, we shall develop the theory for multistage methods (Runge-Kutta type) and multi-step methods (Adams/BDF methods). We shall also discuss efficient implementation strategies using Newton-type methods and hybrid techniques such as Rosenbruck methods. The discussion includes definitions of different notions of stability, stiffness and stability regions, global/local error estimation, and error control. Time permitting, we shall also discuss more specialized topics such as symplectic integration methods and parallel-in-time methods. A key component of the course shall be the discussion of problems and methods designed with the discretization of ODE systems originating from PDE's in mind. Topics include splitting methods, methods for differential-algebraic equations (DAE), deferred correction methods, and order reduction problems for IBVP, TVD and IMEX methods. Part of the class will consist of student presentations on more advanced topics, summarizing properties and known results based on reading journal papers.

APMA 2811G. Topics in Averaging and Metastability with Applications.

Topics that will be covered include: the averaging principle for stochastic dynamical systems and in particular for Hamiltonian systems; metastability and stochastic resonance. We will also discuss applications in class and in homework problems. In particular we will consider metastability issues arising in chemistry and biology, e.g. in the dynamical behavior of proteins. The course will be largely self contained, but a course in graduate probability theory and/or stochastic calculus will definitely help.

APMA 2811I. An Introduction to Turbulence Modeling.

Turbulence is the last mystery of classical physics. It surrounds us everywhere – in the air, in the ocean, in pipes carrying fluids and even in human body arteries. The course helps to understand what makes modeling the turbulence so difficult and challenging. The course covers the following issues: The nature of turbulence, characteristics of turbulence and classical constants of turbulence; Turbulent scales; Navier-Stokes equations, Reynolds stresses and Reynolds-Averaged Navier-Stokes (RANS) equations; RANS turbulence models: algebraic models, one-equation models, two-equation models; Low-Reynolds number turbulence models; Renormalization Group (RNG) turbulence model; Large-Eddy Simulation (LES); Students will be provided with user-friendly computer codes to run different benchmark cases. The final grade is based on two take home projects - computing or published papers analysis, optionally.

APMA 2811K. Computational/Statistical Methods for Signaling Pathways and Protein Interactions.

The course will cover the main mathematical/computational models/algorithms for a variety of tasks in proteomics and structural proteomics, including: (1) The analysis and interpretation of tandem mass spectrometry data for protein identification and determination of signaling pathways, (2) Identification of Phosphorylation sites and motifs, and (3) structural aspects of protein docking problems on the basis of NMR data. Open to graduate students only.

APMA 2811L. Topics in Homogenization: Theory and Computation.

Topics that will be covered include: Homogenization methods for ODE's, for elliptic and parabolic PDE's and for stochastic differential Equations (SDE's) in both periodic and random media; Averaging principle for ODE's and SDE's. Both theoretical and computational aspects will be studied. Applications will be discussed in class and in homework problems. Prerequisites: Some background in PDE's and probability will be helpful, even though the class will be largely self contained.

APMA 2811O. Dynamics and Stochastics.

This course provides a synthesis of mathematical problems at the interface between stochastic problems and dynamical systems that arise in systems biology. For instance, in some biological systems some species may be modeled stochastically while other species can be modeled using deterministic dynamics. Topics will include an introduction to biological networks, multiscale analysis, analysis of network structure, among other topics. Prerequisites: probability theory (APMA 2630/2640, concurrent enrollment in APMA 2640 is acceptable).

APMA 2811Q. Calculus of Variations.

An introduction to modern techniques in the calculus of variations. Topics covered will include: existence of solutions and the direct method, Euler-Lagrange equations and necessary and sufficient conditions, one-dimensional problems, multidimensional nonconvex problems, relaxation and quasiconvexity, Young's measures, and singular perturbations. The emphasis of the course will be equal parts theory and applications with numerous examples drawn from topics in nonlinear elasticity, pattern formation, wrinkling thin elastic sheets, martensitic phase transitions, minimal surfaces, differential geometry and optimal control.

APMA 2811S. Lévy Processes.

Lévy processes are the continuous-time analogues of random walks, and include Brownian motion, compound Poisson processes, and square-integrable pure-jump martingales with many small jumps. In this course we will develop the basic theory of general Lévy processes and subordinators, and discuss topics including local time, excursions, and fluctuations. Time permitting we will finish with selected applications which are of mutual interest to the instructor and students enrolled in the class. Prerequisite: APMA 2640 or equivalent.

APMA 2811X. Finite Element Exterior Calculus.

In this course we will cover finite elements for the Hodge Laplacian. We start in three dimensions and discuss the Nedelec finite element spaces for H^1 , $H(\text{curl})$ and $H(\text{div})$ and discuss the corresponding de Rham complex. We discuss how they can be applied to the Stokes problem and electro-magnetic problems. We then generalize these spaces to higher dimensions and show how to use them to approximate the Hodge Laplacian. We will mostly follow the review paper: [Finite Element Exterior Calculus: from Hodge Theory to Numerical Stability].

APMA 2811Z. Stochastic Partial Differential Equations: Theory and Numerics.

This course introduces basic theory and numerics of stochastic partial differential equations (SPDEs). Topics include Brownian motion and stochastic calculus in Hilbert spaces, classification of SPDEs and solutions, stochastic elliptic, hyperbolic and parabolic equations, regularity of solutions, linear and nonlinear equations, analytic and numerical methods for SPDEs. Topics of particular interest will also be discussed upon agreements between the instructor and audience. All three courses APMA 2630, APMA 2640, APMA 2550 are background recommended but not required.

APMA 2812A. An Introduction to Stochastic Control.

This is a course on the optimal control of random processes. The first part of the course will focus on discrete time and the optimal control of Markov chains (also called Markov Decision Theory in the context of Reinforcement Learning). Various optimality criteria are introduced and questions of existence of solutions to the corresponding Bellman equation and characterization of optimal controls are addressed. Applications from finance, engineering and optimal stopping will be developed, as well as methods for numerical solution of the Bellman equation. We then consider problems in continuous time, and the difficulties that occur when there is no classical sense solution to the corresponding Bellman equation. If time permits, other applications areas and models with partial observations may be considered. Prerequisites: APMA 2630/2640.

APMA 2812B. An Introduction to SPDE's.

An introduction to the basic theory of Stochastic PDE's. Topics will likely include (time permitting) Gaussian measure theory, stochastic integration, stochastic convolutions, stochastic evolution equations in Hilbert spaces, Ito's formula, local well-posedness for semi-linear SPDE with additive noise, weak Martingale solutions to 3D Navier-Stokes, Markov processes on Polish spaces, the Krylov-Bogolyubov theorem, the Doob-Khasminskii theorem, and Bismut-Elworthy-Li formula for a class of non-degenerate SPDE. The presentation will be largely self contained, but will assume some basic knowledge in measure theory, functional analysis, and probability theory. Some familiarity with SDE and PDE is also very helpful, but not required.

APMA 2812E. Semidefinite and Combinatorial Optimization..

The course provides an introduction to basic mathematical theory and computational methods for semidefinite optimization with a particular focus on polynomial optimization problems. Topics include: duality, semialgebraic sets, polynomial optimization, sum of squares, spectrahedron, semidefinite relaxation, combinatorial optimization. Prerequisites: Math 0520, 0540, or equivalent, basic programming skills. Math 1530 is recommended.

APMA 2812G. Combinatorial Theory.

An introduction to combinatorial theory at the graduate level. Areas to be covered may include: posets and lattice theory, enumeration and generating functions, matroids and simplicial complexes, followed by selected topics in the field.

APMA 2812J. Stochastic Differential Equations with Applications.

Half the course will be an introduction to stochastic differential equations and methods for their analysis. The second half will consider some applications, including representations for nonlinear problems, particle systems, and sampling methods.

APMA 2820A. A Tutorial on Particle Methods.

No description available.

APMA 2820B. Advanced Topics in Information Theory.

Explores classical and recent results in information theory. Topics chosen from: multi-terminal/network information theory; communication under channel uncertainty; side information problems (channel, source, and the duality between them); identification via channels; and multi-antenna fading channels. Prerequisite: APMA 1710 or basic knowledge of information theory.

APMA 2820C. Computational Electromagnetics.

No description available.

APMA 2820D. Conventional, Real and Quantum Computing with Applications to Factoring and Root Finding.

No description available.

APMA 2820E. Geophysical Fluid Dynamics.

No description available.

APMA 2820F. Information Theory and Networks.

No description available.

APMA 2820G. Information Theory, Statistics and Probability.

No description available.

APMA 2820H. Kinetic Theory.

We will focus on two main topics in mathematical study of the kinetic theory: (1) The new goal method to study the trend to Maxwellians; (2) various hydrodynamical (fluids) limits to Euler and Navier-Stokes equations. Main emphasis will be on the ideas behind proofs, but not on technical details.

APMA 2820I. Multiscale Methods and Computer Vision.

Course will address some basic multiscale computational methods such as: multigrid solvers for physical systems, including both geometric and algebraic multigrid, fast integral transforms of various kinds (including a fast Radon transform), and fast inverse integral transforms. Basic problems in computer vision such as global contour detection and their completion over gaps, image segmentation for textural images and perceptual grouping tasks in general will be explained in more details.

APMA 2820J. Numerical Linear Algebra.

Solving large systems of linear equations: The course will use the text of Treftan and BAO that includes all the modern concepts of solving linear equations.

APMA 2820K. Numerical Solution of Ordinary Differential Equations.

We discuss the construction and general theory of multistep and multistage methods for numerically solving systems of ODE's, including stiff and nonlinear problems. Different notions to stability and error estimation and control. As time permits we shall discuss more advanced topics such as order reduction, general linear and additive methods, symplectic methods, and methods for DAE. Prerequisites: APMA 2190 and APMA 2550 or equivalent. Some programming experience is expected.

APMA 2820L. Random Processes in Mechanics.

No description available.

APMA 2820M. Singularities in Elliptic Problems and their Treatment by High-Order Finite Element Methods.

Singular solutions for elliptic problems (elasticity and heat transfer) are discussed. These may arise around corners in 2-D and along edges and vertices in 3-D domains. Derivation of singular solutions, characterized by eigenpairs and generalized stress/flux intensity factors (GSIF/GFIFs) are a major engineering importance (because of failure initiation and propagation). High-order FE methods are introduced, and special algorithms for extracting eigenpairs and GSIF/GFIFs are studied (Steklov, dual-function, ERR method, and others).

APMA 2820N. Topics in Scientific Computing.

No description available.

APMA 2820O. The Mathematics of Shape with Applications to Computer Vision.

Methods of representing shape, the geometry of the space of shapes, warping and matching of shapes, and some applications to problems in computer vision and medical imaging. Prerequisite: See instructor for prerequisites.

APMA 2820P. Foundations in Statistical Inference in Molecular Biology.

In molecular biology, inferences in high dimensions with missing data are common. A conceptual framework for Bayesian and frequentist inferences in this setting including: sequence alignment, RNA secondary structure prediction, database search, and functional genomics. Statistical topics: parameter estimation, hypothesis testing, and characterization of posterior spaces. Core course in proposed PhD program in computational molecular biology.

APMA 2820Q. Topics in Kinetic Theory.

This course will introduce current mathematical study for Boltzmann equation and Vlasov equation. We will study large time behavior and hydrodynamic limits for Boltzmann theory and instabilities in the Vlasov theory. Graduate PDE course is required.

APMA 2820R. Structure Theory of Control Systems.

The course deals with the following problems: given a family of control systems S and a family of control systems S' , when does there exist an appropriate embedding of S into S' ? Most of the course will deal with the families of linear control systems. Knowledge of control theory and mathematical sophistication are required.

APMA 2820S. Topics in Differential Equations.

A sequel to APMA 2210 concentrating on similar material.

APMA 2820T. Foundations in Statistical Inference in Molecular Biology.

In molecular biology, inferences in high dimensions with missing data are common. A conceptual framework for Bayesian and frequentist inferences in this setting including: sequence alignment. RNA secondary structure prediction, database search, and tiled arrays. Statistical topics: parameter estimation, hypothesis testing, recursions, and characterization of posterior spaces. Core course in proposed PhD program in computational molecular biology.

APMA 2820U. Structure Theory of Control Systems.

The course deals with the following problems: given a family of control systems S and a family of control systems S' , when does there exist an appropriate embedding of S into S' ? Most of the course will deal with the families of linear control systems. Knowledge of control theory and mathematical sophistication are required.

APMA 2820V. Progress in the Theory of Shock Waves.

Course begins with self-contained introduction to theory of "hyperbolic conservation laws", that is quasilinear first order systems of partial differential equations whose solutions spontaneously develop singularities that propagate as shock waves. A number of recent developments will be discussed. Aim is to familiarize the students with current status of the theory as well as with the expanding areas of applications of the subject.

APMA 2820W. An Introduction to the Theory of Large Deviations.

The theory of large deviations attempts to estimate the probability of rare events and identify the most likely way they happen. The course will begin with a review of the general framework, standard techniques (change-of-measure, subadditivity, etc.), and elementary examples (e.g., Sanov's and Cramer's Theorems). We then will cover large deviations for diffusion processes and the Wentzel-Freidlin theory. The last part of the course will be one or two related topics, possibly drawn from (but not limited to) risk-sensitive control; weak convergence methods; Hamilton-Jacobi-Bellman equations; Monte Carlo methods. Prerequisites: APMA 2630 and 2640.

APMA 2820X. Boundary Conditions for Hyperbolic Systems: Numerical and Far Field.**APMA 2820Y. Approaches to Problem Solving in Applied Mathematics.**

TBA

APMA 2820Z. Topics in Discontinuous Galerkin Methods.

We will cover discontinuous Galerkin methods for time-dependent and steady state problems. Stability and error estimates of different discontinuous Galerkin methods will be discussed. In particular, we will discuss in depth the local discontinuous Galerkin method. Prerequisite: APMA 2550 or equivalent knowledge of numerical analysis.

APMA 2821A. Parallel Scientific Computing: Algorithms and Tools.

No description available.

APMA 2821B. To Be Determined.**APMA 2821C. Topics in Partial Differential Equations.**

The course will start by reviewing the theory of elliptic and parabolic equations in Holder spaces. Then we will discuss several topics in nonlinear elliptic and parabolic equations, for instance, the Navier-Stokes equation and Monge-Ampere type equations. This course is a sequel to APMA 2810V, but APMA 2810V is not a prerequisite.

APMA 2821D. Random Processes and Random Variables.**APMA 2821E. Topics in Variational Methods.**

This course consists of two parts: a general introduction to variational methods in PDE, and a more focused foray into some special topics. For the former we will cover the direct method in the calculus of variations, various notions of convexity, Noether's theorem, minimax methods, index theory, and gamma-convergence. For the latter we will focus on several specific problems of recent interest, with emphasis on the Ginzburg-Landau energy functional.

APMA 2821F. Computational Linear Algebra.

The course will cover basic and advanced algorithms for solution of linear and nonlinear systems as well as eigenvalue problems.

APMA 2821H. Introduction to High Performance Computing: Tools and Algorithms.

This course will cover fundamental concepts of parallel computing: shared and distributed memory models; metrics for performance measuring; roof-line model for analysis of computational kernels, prediction and improving their performance on different processors; code optimization. We will analyze algorithms maximizing data reuse, and memory bandwidth utilization. Prior experience in coding is a plus. One course meeting will take place at IBM/Research, students will interact with experts in areas of HPC, visualization, social media and more. There will be bi-weekly homework assignments and a final project. Students are encouraged to suggest final project relevant to their research and level of expertise.

APMA 2821I. Formulation and Approximation of Linear and Non-linear Problems of Solid Mechanics.

Presents the formulation and approximation by the Finite Element Method (FEM) of linear and non-linear problems of Solid Mechanics. The formulation of problems is based on the Virtual Work Principle (VWP). Increasing complexity problems will be considered such as simple bar under traction, beams, plates, plane problems and solids with linear and hyperelastic materials. All problems are formulated using the same sequence of presentation which includes kinematics, strain measure, rigid body deformation, internal work, external work, VWP and constitutive equations. The approximation of the given problems is based on the High-order FEM. Examples will be presented using a Matlab code.

APMA 2821J. Some Topics in Kinetic Theory.

In this advanced topic course, we will go over several aspects of recent mathematical work on kinetic theory. Graduate level PDE is required.

APMA 2821K. Probabilistic and Statistical Models for Graphs and Networks.

Many modern data sets involve observations about a network of interacting components. Probabilistic and statistical models for graphs and networks play a central role in understanding these data sets. This is an area of active research across many disciplines. Students will read and discuss primary research papers and complete a final project.

APMA 2821L. Introduction to Malliavin Calculus.

The Malliavin calculus is a stochastic calculus for random variables on Gaussian probability spaces, in particular the classical Wiener space. It was originally introduced in the 1970s by the French mathematician Paul Malliavin as a probabilistic approach to the regularity theory of second-order deterministic partial differential equations. Since its introduction, Malliavin's calculus has been extended beyond its original scope and has found applications in many branches of stochastic analysis; e.g. filtering and optimal control, mathematical finance, numerical methods for stochastic differential equations. This course will introduce, starting in a simple setting, the basic concepts and operations of the Malliavin calculus, which will then be applied to the study of regularity of stochastic differential equations and their associated partial differential equations. In addition, applications from optimal control and finance, including the Clark-Ocone formula and its connection with hedging, will be presented.

APMA 2821M. Some Mathematical Problems in Materials Science.

We will study a variety of mathematical models for problems in materials science. Mainly we will consider models of phase transformation, static and dynamic. Some of the topics to be treated are: (1) models of phase transformation; (2) gradient flows; (3) kinetic theories of domain growth; (4) stochastic models; (5) free boundary problems. A working familiarity with partial differential equations is required.

APMA 2821N. Numerical Solution of Ordinary Differential Equations: IVP Problems and PDE Related Issues.

The course seeks to lay the foundation for the development and analysis of numerical methods for solving systems of ordinary differential equations. With a dual emphasis on analysis and efficient implementations, we shall develop the theory for multistage methods (Runge-Kutta type) and multi-step methods (Adams/BDF methods). The discussion includes definitions of different notions of stability, stiffness and stability regions, global/local error estimation, and error control. We also discuss more specialized topics such as symplectic integration methods, parallel-in-time methods, include splitting methods, methods for differential-algebraic equations (DAE), deferred correction methods, and order reduction problems for IBVP, TVD and IMEX methods.

APMA 2821O. Topics in Posteriori Error Estimations: Finite Element and Reduced Basis Methods.

The course will contain two related parts. An introduction of different types of a posteriori error estimations for various finite element methods, certified reduced basis method, where a posteriori error estimations play an important role. Emphasize both the theory and implementation. Related Matlab programs. Residual-type, local-problem type, and recovery-type error estimators for conforming, mixed, non-conforming, and discontinuous galerkin finite element methods for different types of equations. Reduced basis methods, offline-online procedure, greedy algorithm, error estimator, empirical interpolation method, and successive constraint method will be discussed. Goal-Oriented primal-dual approach for both FEM and RBM will be covered. Objective: To learn various theoretical and practical results of adaptive finite element methods and reduced basis methods.

APMA 2821P. Topics in the Atomistic-to-Continuum Coupling Methods for Material Science.

Atomistic-to-continuum coupling methods (a/c methods) have been proposed to increase the computational efficiency of atomistic computations involving the interaction between local crystal defects with long-range elastic fields. This course provides an introduction to the fundamentals required to understand modeling and computer simulation of material behavior. This course will first briefly review material from continuum mechanics, materials science including crystals and defects and then move on to advanced topics in development and analysis of a/c coupling methods both in static and dynamic cases. I will also select topics from statistical mechanics and temporal multiscale accelerated molecular dynamics methods (hyperdynamics, parallel replica dynamics).

APMA 2821R. Topics in the Atomistic-to-Continuum Coupling Methods for Material Science.

Atomistic-to-continuum coupling methods (a/c methods) have been proposed to increase the computational efficiency of atomistic computations involving the interaction between local crystal defects with long-range elastic fields.

This is an advanced topics course for graduate students. Provides an introduction to the fundamentals required to understand modeling and computer simulation of material behavior. First briefly review material from continuum mechanics, materials science including crystals and defects and then move on to advanced topics in development and analysis of a/c coupling methods both in static and dynamic cases. select topics from statistical mechanics and temporal multiscale accelerated molecular dynamics methods (hyperdynamics, parallel replica dynamics).

APMA 2821T. Theory of Large Deviations.

The theory of large deviations is concerned with the probabilities of very rare events. There are many applications where a rare event can have a significant impact (think of the lottery) and it is of interest to know when and how these events occur. The course will begin with a review of the general framework, standard techniques, and elementary examples (e.g., Cramer's and Sanov's Theorems) before proceeding with general theory and applications. If time permits, the course will end with a study of large deviations for diffusion processes.

APMA 2821U. Kinetic Theory.

Topics in kinetic theory, particularly concerning Boltzmann equations and related but simpler models (e.g. the Kac model). Key issues include the mathematical derivation of the Boltzmann equation, the Cauchy problem, Boltzmann's H-theorem, and hydrodynamic limits yielding the equations of fluid mechanics. We will be most interested in rigorous results, but will not turn away from formal calculations when these are the only things available. A probabilistic viewpoint will be emphasized. In addition to these "traditional" topics, we will also introduce the Smoluchowski coagulation equation and a similar equation, and some microscopic models described by these in the kinetic limit or exactly. Students should have PDE background equivalent to or exceeding MATH 2370/APMA 2230. Familiarity with probability will be helpful, but we will review this according to the audience's needs.

APMA 2821V. Neural Dynamics: Theory and Modeling.

Our thoughts and actions are mediated by the dynamic activity of the brain's neurons. This course will use mathematics and computational modeling as a tool to study neural dynamics at the level of signal neurons and in more complicated networks. We will focus on relevance to modern day neuroscience problems with a goal of linking dynamics to function. Topics will include biophysically detailed and reduced representations of neurons, bifurcation and phase plane analysis of neural activity, neural rhythms and coupled oscillator theory. Audience: advanced undergraduate or graduate students. Prerequisite: APMA 0350-0360 and Matlab programming course. Instructor permission required.

APMA 2822B. Introduction to Parallel Computing on Heterogeneous (CPU+GPU) Systems.

This course we will learn fundamental aspects of parallel computing on heterogeneous systems composed of multi-core CPUs and GPUs. This course will contain lectures and hands-on parts. We will cover the following topics: shared memory and distributed memory programming models, parallelization strategies and nested parallelism. We will also learn techniques for managing memory and data on systems with heterogeneous memories (DDR for CPUs and HBM for GPUs); parallelization strategies using OpenMP and MPI; programming GPUs using OpenMP4.5 directives and CUDA. We will focus on programming strategies and application performance. Grading will be based on homework assignments, and final project.

APMA 2822G. Topics in Optimal Transport, High Dimensional Probability and Generative Modeling.

Probability flows play an important role in the theory and applications of high-dimensional probability. The idea is to start with an easy probability measure (say a Gaussian) and gradually deform it into a complicated probability measure of interest. These types of techniques are useful in studying properties of probability measures (e.g., functional inequalities), in studying the problem of optimal transport, and in generative modeling via techniques such as flow matching and diffusion models. The course will cover topics such as the basics of probability flows, (entropic) optimal transport, basics of stochastic differential equations, and the applications of these tools to generative modeling.

APMA 2980. Research in Applied Mathematics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

APMA 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

APMA XLIST. Courses of Interest to Students Majoring in Applied Mathematics.

Brown Arts Institute

The Brown Arts Institute is a university-wide research enterprise and catalyst for the arts at Brown that creates new work and supports, amplifies, and adds new dimensions to the creative practices of Brown's arts departments, faculty, students, and community. Through year-round programming, research-focused courses, initiatives, collaborations, and partnerships, along with rigorous artistic and academic programs, BAI commissions and presents new work on campus, across Providence, Rhode Island, and beyond, from students, faculty, and on-campus arts

groups, as well as in collaboration with forward-focused visiting artists and other performing arts organizations. Learn more at arts.brown.edu (<http://arts.brown.edu>).

Courses

ARTS 1000. The Arts Workshop: I'm So Alone-Art of Surveilled Bodies Amidst a Global Epidemiological Cluster#@%\$.

Since COVID-19, enforcement of "social distancing" has become a state mandate. The resultant choreographies of "social distancing" have catalyzed a confluence of gestures, disciplining technologies, discriminatory health practices, and state power; a braid of urgent concern for scholars and artists, and the subject of this interdisciplinary arts workshop. Offered by Brown Arts Initiative, the workshop is open to graduate students, undergraduate students, and faculty by application. Full course credit is available for those interested. Participants will consider their respective creative practices in light of COVID-19 and emerging systems of computational recognition, broader trends with technologies of the body, and surveillance.

ARTS 1001. Arts Writing: New Forms of Cultural Critique.

In this course we will develop our critical skills and find our unique voice for multimedia arts criticism and storytelling rooted in a collective pursuit of liberation. We will study both contemporary arts journalism and cultural theory to assess the urgent needs and issues in the arts and society at large, and address them accordingly. We will be doing a good deal of reading, watching, listening, interviewing, writing, recording, and collaborating. This is where all your skills come in: photography, graphic design, web building, podcasting, playlisting, filming, interviewing, and of course writing. We will create a multimedia project documenting our work, and that of the artists we engage with. Through this process we will reimagine an inclusive, radical practice in culture, one that bridges the classroom and the world.

ARTS 1002. Arts Writing Workshop.

In this course, we will make space for constructive, community-led conversations about art -- and responses through thoughtful writing. How do we map out the conditions of art making? Who gets to impact culture, how, and why? How do we craft responses to art that move culture forward? And how does this writing benefit our lives, and communities? We will hone our cultural criticism skills in a series of workshops that will result in the making of a multimedia zine. This safe, collaborative space will help us reimagine the ways in which art connects us to those around us - and ignite new dynamics of care. This class is open to community members, for whom readings are not mandatory, and who can participate in producing the zine in any capacity.

ARTS 1003. Arts Leadership.

Arts Leadership is an undergraduate course introducing students to the building blocks of effective arts leadership, management, and succession planning with a focus on building practical skills while reflecting on the future of arts leadership. This course is intended for students currently acting in a leadership role for a student arts organization and encourages students to use upcoming group events and programs as the basis for assignments and final projects. Students planning to step into leadership roles may participate in the course with a current leader to develop organizational structure and succession plans.

ARTS 1004. Race and the Making of Art.

In this course, we will begin by examining how race is constructed, systematized, codified, commodified, and disseminated across various spaces in society through the study of several key scholarly and theoretical works. We will then use that lens to explore how different artists from multiple disciplines (poetry, visual art, music, and performance) have engaged issues of race in their work to both affirm individual and collective racial identities and trouble the ways those identities have been represented and understood. Each student will create creative or critical works reflecting their own intersections with these topics.

ARTS 1005. New Forms of Theatre: Traditional Storytelling to Storyweaving.

This course examines Native American theatre from origins of traditional storytelling to politics of race involved in Native theatre today and is best suited for students exploring how to become theatre makers. First, we examine traditional storytelling from creation stories in literature and theatre. Second, we study interactions with Europeans with the Doctrine of Discovery, Native American boarding schools systems, outlawing of traditional culture and how Native culture survived in these systems in wild west shows, sideshows and snake oil shows. Topics will be explored through a Native lens via movies, commercials, television and will examine the theatre movement that responded. Finally, students will directly engage with course content through weekly embodied practice. The weekly course structure will include one class meeting focused on seminar/lecture/discussion, with the second meeting focused on writing and movement based in Spiderwoman methodology.

ARTS 1006. Playing The Villain On Camera.

This class will explore playing the villain on camera. We will focus on three archetypes of the villain as outlined in USC Professor Joe Hacker's seminal work "Auditioning for the Camera": 1. The psychopathic individual. 2. Those driven by an inclination to create chaos, and 3. Those who get caught up in an illicit scheme to get something (money, power, revenge, love). Each of these archetypes will be explored in class, then filmed, and will be delivered to each student. Your professor is a working professional film, television, and theater actor, and students will additionally explore the "first day of shooting" using these villain pieces: you will be guided through the process of filming these pieces in a professional setting.

ARTS 1007. Performance Practice Workshop.

Looking at performance as an act of transmission rather than a transaction or production, this class will consider the differing ways we relate to other bodies moving through space. Students will be guided through the process by which Okwui Okpokwasili and Peter Born create performance work. Utilizing writing exercises, song making practices, and structured/improvisational movement as research tools into what our bodies may carry from ancestors we no longer locate on a map or in a history book. Reading the writings of other practitioners whose work expresses foundational tenets of Okwui and Peter's practice will be discussed alongside active movement exercises. With a focus on collaboration and engagement, we will investigate how performance can be a way of practicing new relations to one another. The course will culminate with students creating and performing their own projects with class participation.

ARTS 1008. Heart as Vector: Thinking Across the Arts with Shahzia Sikander.

This course thinks across the arts with the remarkable artist Shahzia Sikander. Over three decades, Sikander has produced compelling objects that practically and theoretically transcend borders and probe contested histories. Sikander is internationally renowned for a pioneering, multi-media practice that takes classical Indo-Persian miniature painting as its point of departure, and inflects it with contemporary South Asian, American, Feminist, and Muslim perspectives. Sikander's work stands in opposition to the idea of homogenous and authentic national cultures; instead, Sikander asks that we understand terms such as "tradition," "culture" and "identity" as unstable, abstract, and constantly evolving. This course considers different aspects of Sikander's practice, from her training in Indo-Persian painting to her work with poets, dancers, and composers. We'll engage closely with South Asian paintings, and a range of texts, including works by Aruna D'Souza, Gayatri Gopinath, and Saidiya Hartman.

ARTS 1009. Black Music Performance.

The history of black music is a rich and diverse tapestry, spanning centuries and continents. In this course, students will explore the history of black music through a variety of lenses, including its social and cultural context, its technical and stylistic innovations, and its impact on contemporary music. Students will also have the opportunity to develop their ensemble instrumental skills through workshops and performance opportunities.

ARTS 1010. Script to Screen (LITR 1110U).

Interested students must register for LITR 1110U.

ARTS 1010E. Advanced Screenwriting (LITR 1010E)..

Interested students must register for LITR 1010E.

ARTS 1011. Acting for the Camera.

"Acting for the Camera" curriculum is divided into three parts depending on experience: 1. Auditioning for the Camera, 2. Acting for the Camera, 3. Playing the Villain on Camera. Part 2, "Acting," will be our focus: Multiple scripts, including episodes of "Homeland," "Mad Men," and "Ted Lasso" will be part of the curriculum in addition to scripts from the following genres: comedies, drama, single and multi-camera TV (sitcoms), superhero franchises, horror, etc. This work should complement and enhance previous acting studies and help you move to an understanding of the nuanced shift actors need to make when they are acting for the camera. Kate Burton teaches ARTS 1006, "Playing the Villain on Camera," and TAPS 1500R, "Auditioning for the Camera." These courses (and any camera courses taught by Richard Waterhouse in TAPS) provide a foundation for studying camera acting.

ARTS 1012. Body as Medium: Queer Lineages of Duration, Resonance, and Excess.

Body as Medium: Queer Lineages of Duration, Resonance, and Excess will experiment with form: the university "seminar" and durational performance. This class, jointly offered by the departments of Modern Culture and Media (MCM) and Theatre Arts and Performance Studies (TAPS), will be led by Fall 2024 BAI Associate Professor of Practice Julie Tolentino, whose artistic practice extends across performance-installation, movement, sculpture, video, and sound. Over several decades, Tolentino created an archive of interdisciplinary artworks rooted in the rich lineages of AIDS activism, underground nightlife, and queer rituals of mourning and caregiving. We will visit Tolentino's archive as a generative resource for thinking with past and future methodologies, lifeworlds, and (im)material concerns to investigate multi-generational artists' practices. Participants agree to develop, experiment, and perform in public as a form of study and discovery. No previous performance experience is necessary.

ARTS 1013A. Producing Your First Documentary Film In Theory And Practice.

This course is designed to teach students how to produce a long-form (more than 42-minutes' duration) documentary film suitable for television broadcast or distribution via internet channels and/or streaming services. The documentary (working title UNTITLED BROWN TITLE IX SPORTS DOCUMENTARY) is designed to celebrate Brown's female athletes across the university's history, emphasizing female intercollegiate athletes of the past half-century, chronicling stories of their courage, resilience and excellence while illuminating the very essence and uniqueness of the Brown experience. This groundbreaking course is made possible by the generous support of Brown Athletics, led by the Chancellor Samuel M. Menckoff '78 Vice President for Athletics and Recreation, M. Grace Calhoun '92, Ph.D. The film ready for audiences to screen at events commemorating the 50th anniversary of Ivy League Women Sports at the end of the 2024-2025 academic year.

ARTS 1013B. Finalizing Your First Documentary Feature: Content Creation from Script to Screen.

This course is designed to teach students how to post-produce and finally complete a long-form (more than 42-minutes' duration) documentary film suitable for television broadcast or distribution via internet channels and/or streaming services. The documentary (working title UNTITLED BROWN TITLE IX SPORTS DOCUMENTARY), produced and directed by Brown undergraduates during the 2024 Spring and Fall semesters, was commissioned in 2023 to celebrate Brown's female athletes across the university's history, emphasizing female intercollegiate athletes of the past half-century. This unprecedented course, made possible by the generous support of Brown Athletics, led by the Chancellor Samuel M. Menckoff '78 Vice President for Athletics and Recreation, M. Grace Calhoun '92, Ph.D. will premiere at events commemorating the 50th anniversary of Ivy League Women Sports at the end of the 2024-2025 academic year.

ARTS 1015. The Art of Non-Linear Worldforming + Digital Tulpamancy.

This course explores the emergent art of digitally-supported, non-linear worldforming and will be jointly led by William Brittle and Sophia LaCava-Bohanan. As a case study, the course will examine (and participate in the construction of) "Eternal September," an extensive alternate reality of interlocking music, visual art/film, and hypertext being developed by William Brittle with the support of the Brown Arts Institute and various students, faculty members, and visiting artists. The course will be, at its core, exploratory, and will focus on discussion, experimentation, and hands-on artmaking. Students, whether solo or in small groups, will embark on creative journeys by constructing and sharing their own non-linear worldbuilding projects. Weekly class meetings will include seminar discussions, visiting artists, and project development time.

ARTS 1016. Curatorial Praxis: Caring for and Curating Indigenous Contemporary Art.

What does it mean to curate contemporary art, and how is curation an exercise in ethics as much as it is a series of practical tasks and skills? This course is an introduction to curatorial praxis centered in an ethics of care and social transformation inside and beyond museum walls. Students will engage with texts on the practice, theory, and ethics of contemporary curation; investigate curatorial case studies from US and global art exhibitions; and will, more importantly, learn directly from and with the current exhibition inside The Bell, Brown's contemporary art gallery and a program of the Brown Arts Institute. Students will be led through the curatorial process of commissioning a contemporary art exhibition at The Bell, and will make visible contributions to the exhibition and its public programs through a variety of individual and group projects.

ARTS 1020. Ecopoetics in Practice (LITR 1150A).

Interested students must register for LITR 1150A.

ARTS 1030. The Essentials of Arts Journalism.

The summer is the perfect time to explore the rich cultural offerings of Providence and the wider region – from the RISD Museum to DIY spaces, MIT's Poetic Justice Project and the many festivals in Massachusetts. This course is an opportunity to approach this artistic scene with the eye and mind of a critic, interviewing musicians, architects, writers and makers, writing reviews and profiles, and recording short audio and video stories. This practice will help you excel in your work as a student and professional in the arts, the media and entertainment. And it'll be a fun way to know your city and area better, meet new people and bond with fellow students.

ARTS 1100. Anti-Social Reproduction: Art, Activism and the Question of Reproductive Labor (MCM 1701S).

Interested students must register for MCM 1701S.

ARTS 1110. Making Of: Beyond the Fourth Wall, Behind the Scenes, and Inside the Rabbit Hole of Filmmaking.

This class will examine the many ways that movies come together as well as the myriad ways in which they can be pulled apart and put back together by different audiences. Movie-making requires desire, collaboration, improvisation, money, time, and imagination. Sometimes, all it requires is "being there" and a cell phone. Much of what filmmaking demands is hidden in what is seen on screen, but the more we understand about the languages of cinema, the more it's possible to see. Using cinematic history, personal history, and political history as lenses, the class will think together in expansive ways about ethics, process, notions of self, and terms. The class will watch and discuss the films of makers from around the world and across time.

ARTS 1110V. Script to Screen: Scene Work (LITR 1110V)..

Interested students must register for LITR 1110V.

ARTS 1200. Reality Remix - Experimental VR.

This course pursues collaborative experimentation with virtual and augmented reality (AR and VR). The class will work as a team to pursue research (survey of VR/AR experiences, scientific and critical literature review), reconnaissance (identifying VR/AR resources on campus, in Providence and the region), design (VR/AR prototyping). Research findings are documented in a class wiki. The course makes use of Brown Arts Initiative facilities in the Granoff Center where an existing VR laboratory will be expanded through the course of the semester based on student needs. Class culminates in the release the class wiki as a resource for the Brown community.

ARTS 1205. Black Queer Diasporas (MCM 1205F).

Interested students must register for MCM 1205F.

ARTS 1210. Mapping Music in Providence (MUSC 0202U).

Interested students must register for MUSC 0202U.

ARTS 1240. Intro to Rap Songwriting (MUSC 1240R).

Interested students must register for MUSC 1240R.

ARTS 1300. Perception/The Performativity of Neurology (TAPS 1280D).

Interested students must register for TAPS 1280D.

ARTS 1310. Making the 21st Century Musical (TAPS 1251A).

Interested students must register for TAPS 1251A.

ARTS 1330. Way Too Much And Not Nearly Enough: Making Performance in The Post-Post-Dramatic (TAPS 1330A).

Interested students must register for TAPS 1330A.

ARTS 1340. Native American Theatre: from Traditional Storytelling to the Modern Theater Movement (TAPS 1340A).

Interested students must register for TAPS 1340A.

ARTS 1400. Radical Outsiders: Performance Arts Acts of Activism, Communion, Rebellion, Humor, Meditation (VISA 1400).

Interested students must register for VISA 1400.

ARTS 1401. Social Practice: Art in Everyday Life (VISA 1600)..

Interested students must register for VISA 1600.

ARTS 1500R. Auditioning for the Camera (TAPS 1500R)..

Interested students must register for TAPS 1500R.

ARTS 1700. Introduction to iPhone/iPad Moviemaking Using 3-D and 360 VR Comparisons (HMAN 1971S).

Interested students must register for HMAN 1971S.

ARTS 1800. ArtsCrew & The Future of Arts Work.

Introduce students to the principles, techniques, and skills essential to becoming an effective member of the professional arts workforce and to ArtsCrew, an innovative employment service in development here at Brown which will offer access to workforce development opportunities and paid on-campus and community-based project work in a variety of artistic disciplines. Students will be engaged in researching cultural worker employment models, as well as shaping, regularly assessing, and improving the student component of ArtsCrew. In addition to class time, each student will be assigned to an appropriate artistic project on campus across the course of the semester. A total of 180 logged hours, including class time, research assignments, and project work, will be required to pass the class and to enter ArtsCrew as a member eligible for paid work.

ARTS 1910. Artist@Work: William Brittle.

Students who engage with the arts through Artist@Work courses learn through direct encounter the many and varied research and development processes artists use to advance their thinking, enactment, and refinement of in-progress works. As the students accompany the artist moving toward the goal of professional presentation, exhibition, and performance, they enjoy experiencing the real-world considerations, complexities, technicalities, and activities inherent in making large-scale and professionally-produced art works. Through this exposure, and their direct apprenticeship with working artists, students receive the opportunity for lifelong connection and real-world experience.

ARTS 1910A. Artist@Work: Carrie Mae Weems.

Students who engage with the arts through Artist@Work courses learn through direct encounter the many and varied research and development processes artists use to advance their thinking, enactment, and refinement of in-progress works. As the students accompany the artist moving toward the goal of professional presentation, exhibition, and performance, they enjoy experiencing the real-world considerations, complexities, technicalities, and activities inherent in making large-scale and professionally-produced art works. Through this exposure, and their direct apprenticeship with working artists, students receive the opportunity for lifelong connection and real-world experience.

ARTS 1910B. Artist@Work: Arts Education.

Students in Artist@Work: Arts Education will work closely with teaching artists Cassidy Jones and Drew Petersen to develop arts curriculum for Carrie Mae Weems: Varying Shades of Brown, a campus-wide artistic intervention including exhibitions, performances, and a gathering during the Fall 2023 semester. Students will garner insights on the processes and practices of being a teaching artist while gaining first hand experience contributing to the development of Brown Arts Institute's public programs. This course is best suited for students interested in education, arts curriculum, public programming and/or considering a career as a Teaching Artist.

ARTS 1910E. Artist@Work: Building the Artistic Innovators Collective.

This artistic process course introduces students to the work, activities, and creative activity of Brown Arts Institute's Artistic Innovators Collective (AIC), a fluid group of around forty artists from across the globe who regularly engage with Brown in a variety of ways: to push the boundaries of discipline, to teach, to work, to experiment, to safely fail and take risks, to undertake rigorous and long-term exchange with our campus and surrounding communities. For this course, BAI Artistic Director Avery Willis Hoffman invites Visiting Professor of the Practice Emil J. Kang (Mellon Foundation) to help shape and structure the AIC, in conversation and collaboration with the artists themselves. Students in this course will directly engage with AIC artists to discover their specific professional and artistic needs, track projects in progress and future dreaming, and begin to build programmatic structures.

ARTS 1970. Brown Arts Institute Independent Study.

ARTS Independent study offerings create opportunities for students throughout the University to work with Brown Arts Institute faculty to develop courses designed to explore art-related topics of interest with a tailored and focused approach. Once the department and BAI faculty advisor approve, students may register for an independent study or research project. Any student wishing to pursue an independent study or research project must submit a proposal by the first day of the shopping period for the semester in which the proposed project will be conducted. Submit your proposal via this form for official registration approval: <https://forms.gle/x7xeiwWdg2f7zBWSA>

ARTS 2000. Frequencies of Black Life.

As part of an inter-institutional collaboration with the Princeton Collaboratorium for Radical Aesthetics at the Lewis Center for the Arts (LCA) and the Brown Arts Initiative, the proposed graduate seminar will be team-taught by Tina Campt (Art and Archeology/LCA) and Alexander Weheliye (Modern Culture and Media/BAI). The course engages the idea of frequency as a conceptual framework in a range of fields including sound and media studies, Black studies and critical theory, studies of the Anthropocene and social ecology, art history and criticism, and among contemporary artists working in multiple media. Joint in-person sessions of the seminar will be structured around conversations with guest artists and scholars who will present their work at public events and seminar meetings at the host institution.

ARTS 2001. Intertextuality, Interconnectivity: A Performative Sonnet Approach.

In this course, we'll consider how language, poetics, text, identity and performance generate new perspectives of understanding and creating art. We will consider connections and divergences through a sample of innovative approaches to art making, concepts and experiences. We will utilize both poetry and performance theory, especially Speech Act Theory, to frame ideas of Intertextuality and Interconnectivity in the arts.

ARTS 2090E. Black Feminist Sonic Praxes (ARTS 2090E)..

Interested students must register for MUSC 2090E.

ARTS 2221. Accessioning, Archiving, and Antiracism: Critical and Creative Approaches (AMST 2221A).

Interested students must register for AMST 2221A.

ARTS XLIST. Courses of Interest supported by the Brown Arts Institute.**Fall 2025**

ARTS X-List courses provide rigorous academic opportunities for students throughout the University to explore diverse art practices. Courses prioritize direct engagement with artists, creative industries, and interdisciplinary or collaborative approaches. ARTS courses are supported by the Brown Arts Institute in collaboration with the sponsoring department.

Theatre Arts & Performance Studies

TAPS 1500R: Auditioning for the Camera

Business, Entrepreneurship, Organizations (BEO)

The C.V. Starr Program in Business, Entrepreneurship, and Organizations (BEO) was an undergraduate concentration at Brown University from 2007-2021. It's focus was to educate students to be creative and flexible leaders in a number of careers. BEO was sponsored by the departments of Economics and Sociology and the School of Engineering and engaged faculty and students in the study of commercial activity, technical and social entrepreneurship, innovation, and the organizations within which such activity occurs. The College sunsetted the BEO Concentration at the end of the 2020-2021 academic year. Brown undergraduate students who were admitted to the graduating class of 2023 and earlier, who did not complete their course of study and now wish to resume it should contact a Dean in the Office of the Dean of the College (<https://college.brown.edu/>).

Learn more about the curricular pathways to study business at brown here (<https://www.brown.edu/academics/business-entrepreneurship-organizations/beo-concentration-0/>). New to Brown's undergraduate offerings is the Certificate in Entrepreneurship (<https://entrepreneurship.brown.edu/entrepreneurship-certificate/>), offered through the Nelson Center for Entrepreneurship. The Certificate in Entrepreneurship provides curricular structure for undergraduate students who wish to make entrepreneurship and important part of their intellectual journey at Brown.

Students interested in Brown's graduate programs in the field of entrepreneurship and technology management should consider the Program in Innovation Management and Entrepreneurship (PRIME) (<https://prime.brown.edu/>), offered through the School of Engineering. There is also an opportunity for more senior managers to pursue an executive MBA through the IE Brown Executive MBA (<https://emba.brown.edu/>) Program.

Carney Institute for Brain Science

The mission of The Robert J. & Nancy D. Carney Institute for Brain Science (<https://www.brown.edu/academics/brain-science/>) is to promote discovery and innovation in brain science by supporting a diverse community of experimentalists, theorists, engineers, and clinicians. The institute does this by recruiting and retaining world-class faculty, creating an outstanding collaborative training environment, seeding innovative projects, supporting collaborative teams, and raising the visibility and reputation of Carney researchers.

With more than 200 affiliated faculty members in 20 departments and clinical units, the Carney Institute is pursuing research that has real-life, human applications, including: brain-computer interfaces to aid patients with spinal injury and paralysis; innovative advances in computational neuroscience to address behavior and mood disorders; development of bioluminescent molecules to detect and control neuronal activity; development new methods for labeling neural circuits; and research into mechanisms of neurodegeneration as part of efforts to identify therapies for neurodegenerative diseases such as ALS, Alzheimer's,

and Parkinson's disease. Critical to Carney's research efforts are the contributions of hundreds of graduate and undergraduate researchers and postdoctoral fellows.

The Carney Institute recruits and retains world-class faculty, funds innovative projects, establishes and supports state-of-the-art research facilities, and acquires shared equipment. The Institute also provides expertise and personnel to help faculty members garner and administer multi-investigator grants for research, infrastructure, and training, as well as to manage collaborative research projects.

Brain Science Graduate Program

Brown University provides a unique environment in which to pursue interdisciplinary brain science graduate training. Research at Brown emphasizes collaborative theoretical and experimental studies of the brain, from the molecular to the behavioral and cognitive levels. It unites researchers who study the fundamental mechanisms of nervous system function and those who seek to create devices with brain-like functions that can assist people. The faculty is also committed to translating fundamental knowledge into practical applications to the diagnosis and treatment of the devastating effects of disease and trauma of the nervous system. Brown is a leader in brain-related research and offers exceptional training and course work for those interested in pursuing careers in brain science.

The Robert J. & Nancy D. Carney Institute for Brain Science (<http://www.brainscience.brown.edu/>) partners with eight discipline-based graduate programs. Students interested in interdisciplinary brain science training enter through one of these graduate programs.

Carney-affiliated graduate programs include:

- Applied Mathematics Graduate Program (<https://www.brown.edu/academics/applied-mathematics/graduate-program/>)
- Biomedical Engineering Graduate Program (<https://www.brown.edu/academics/biomedical-engineering/academics/graduate-program/>)
- Biostatistics Graduate Program (<https://www.brown.edu/academics/public-health/biostats/academics/doctoral-program/>)
- Cognitive and Psychological Sciences Graduate Programs (<https://copsy.brown.edu/graduate-study/>)
- Computer Science Graduate Program (<http://cs.brown.edu/degrees/>)
- Molecular Biology, Cell Biology, and Biochemistry Graduate Program (<https://www.brown.edu/academics/biology/molecular-cell-biochemistry/graduate/degree-programs/phd-curriculum/>)
- Neuroscience Graduate Program (<http://neuroscience.brown.edu/graduate/>)
- Therapeutic Sciences Graduate Program (<https://www.brown.edu/academics/tsgp/home/>)

Carney offers a number of opportunities for graduate students in any program to stretch beyond their discipline. Carney Institute lunches are held several times per semester and feature broad seminars and informal discussion led by Brown faculty members. Graduate students can also apply for the Carney Institute Graduate Awards. The Institute also coordinates management of NIH institutional training grants that span departments and programs, including training grants in cognitive and computational neuroscience. The Institute also awards seed funding annually to launch new research projects, and graduate students are often involved in or initiate applications for these grants.

Chemistry

The Department of Chemistry maintains pedagogical and research strengths in organic, inorganic, theoretical and experimental physical chemistry, analytical chemistry, chemical biology and nanochemistry. Faculty, post-doctoral fellows, graduate and undergraduate students collaboratively pursue interdisciplinary research within the department, enhanced by the partnerships with colleagues in the medicine, biology, geology, physics and engineering.

For additional information, please visit the department's website: <http://www.brown.edu/academics/chemistry/>

Chemistry Concentration Requirements

The Chemistry concentration offers courses and research opportunities that range from fundamental studies involving the characterization and preparation of synthetic and naturally occurring molecules, to interdisciplinary studies at the interfaces of chemistry with biology, medicine, physics, engineering, and nanoscience. As early as their first year, undergraduates are able to work with faculty members on cutting edge research projects. The Sc.B. degree provides a thorough foundation for further graduate study or for entry-level technical positions in the molecular sciences. Students seeking the Sc.B. may either pursue the standard Chemistry concentration or one of two possible tracks: Chemical Biology or Materials Chemistry. Students may also pursue the A.B. degree in Chemistry, which provides a core education in the discipline.

Standard program for the A.B. degree

CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1
CHEM 0360	Organic Chemistry II	1
CHEM 0500	Inorganic Chemistry	1
CHEM 0600	Preparative Chemistry Lab	.5
CHEM 1140	Physical Chemistry: Quantum Chemistry ¹	1
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics ¹	1
CHEM 1160	Physical Chemistry Laboratory ¹	1
One upper level CHEM elective. ²		1
Total Credits		8.5

¹ Note that the physical chemistry courses (CHEM 1140, CHEM 1150, CHEM 1160) have mathematics and physics prerequisites.

² Upper level chemistry course are any 1000- and 2000- CHEM course. BIOL 0280 is credited as an upper level chemistry elective for chemistry concentration purposes. You should discuss your elective choices with your Concentration Advisor to craft a course of study that is appropriate for your interests.

Honors Requirements for Chemistry

All Chemistry concentrators who have grades of A or S with distinction in a majority of their concentration courses after their seventh semester are eligible for Honors; no separate application is necessary.

The requirements for Honors in Chemistry are:

* Grades of A or S with distinction in a majority of courses taken for the concentration.

* Two semesters of Undergraduate Research CHEM 0980, CHEM 0981 or equivalent. Guidelines and requirements associated with Undergraduate Research are in the Undergraduate Concentration Handbook which can be found at the department website (<http://www.brown.edu/academics/chemistry/undergraduate/>).

* A Senior Thesis in a form approved and recommended by the research advisor. Additional information about thesis guidelines will be provided to seniors by the Director of Undergraduate Studies.

* A Senior Poster presentation at the chemistry department's spring undergraduate poster session.

Standard program for the Sc.B. degree

The Chemistry Department offers three options for the Sc.B. Chemistry Concentration – a straight Chemistry option, a Chemical Biology track and a Materials Chemistry track. These tracks are not separate concentrations – your degree will still be an Sc.B. in Chemistry. The Chemical Biology track is designed for students who have a strong interest in the interface of chemistry with biology. The Materials Chemistry track is designed for students who have a strong interest in the interface of chemistry with nanoscience and materials science. It is recommended that courses in the concentration be taken for a letter grade, and any decision to take

a concentration course S/NC should be made after consultation with a concentration advisor.

Concentrating in Chemistry – Three tracks

The required/recommended courses for the three tracks are given below.

ScB Chemistry:

CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1
CHEM 0360	Organic Chemistry II	1
CHEM 0500	Inorganic Chemistry	1
CHEM 0600	Preparative Chemistry Lab	.5
Two semesters of independent study:		2
CHEM 0980	Undergraduate Research ¹	
or CHEM 0981	Undergraduate Research - Writing Designated	
CHEM 1140	Physical Chemistry: Quantum Chemistry	1
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics	1
CHEM 1160	Physical Chemistry Laboratory	1
MATH 0180 or equivalent ²		1
Two Physics courses, typically 0030/0040 or 0050/0060		2
3	Six electives (at least three must be upper level CHEM courses)	6
Total Credits		18.5

¹ Two semesters of undergraduate research are required for the concentration. Chem0980 and 0981 are courses which may be repeated for credit.

² NOTE: MATH 0180 (<https://bulletin.brown.edu/search/?P=MATH%200180>) has additional prerequisites.

³ Upper level chemistry courses are any 1000- and 2000-level CHEM course. BIOL 0280 is credited as an upper level chemistry elective for the chemistry concentration. Non CHEM electives are typically foundational courses or upper level science/math courses with a significant molecular focus or those that cover tools/techniques that are of utility to a chemist. You should discuss your elective choices with your Concentration Advisor to craft a course of study that is appropriate for your interests.

CHEM 0980/CHEM 0981 should be carried out with a faculty member with an appointment in the Chemistry Department. Research with faculty advisors outside the Chemistry Department is also possible after consultation with a Concentration Advisor.

ScB Chemistry - Chemical Biology Track:

CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1
CHEM 0360	Organic Chemistry II	1
CHEM 0400	Biophysical and Bioinorganic Chemistry	1
or CHEM 0500	Inorganic Chemistry	
CHEM 0600	Preparative Chemistry Lab	.5
Two semesters of independent study:		2
CHEM 0980	Undergraduate Research ¹	
or CHEM 0981	Undergraduate Research - Writing Designated	
CHEM 1140	Physical Chemistry: Quantum Chemistry	1
CHEM 1230	Chemical Biology	1
CHEM 1240	Biochemistry	1
BIOL 0280	Biochemistry	1
MATH 0180 or equivalent ²		1
Two Physics courses, typically 0030/0040 or 0050/0060		2
Select three of the following: ³		3
BIOL 0470	Genetics	
BIOL 0500	Cell and Molecular Biology	

BIOL 0510	Introductory Microbiology	
BIOL 0530	Principles of Immunology	
BIOL 0800	Principles of Physiology	
NEUR 1020	Principles of Neurobiology	
Two other electives ⁴		2
Total Credits		18.5

¹ Two semesters of undergraduate research are required for the concentration. Chem0980 and 0981 are courses which may be repeated for credit.

² NOTE: MATH 0180 (<https://bulletin.brown.edu/search/?P=MATH%200180>) has additional prerequisites.

³ NOTE: Many of the BIOL courses have BIOL 0200 (<https://bulletin.brown.edu/search/?P=BIOL%200200>) as a prerequisite.

⁴ Upper level chemistry courses are any 1000- and 2000-level CHEM course. BIOL 0280 is credited as an upper level chemistry elective for the chemistry concentration. Non CHEM electives are typically foundational courses or upper level science/math courses with a significant molecular focus or those that cover tools/techniques that are of utility to a chemist. You should discuss your elective choices with your Concentration Advisor to craft a course of study that is appropriate for your interests.

CHEM 0980 / CHEM 0981 should be carried out with a faculty member with an appointment in the Chemistry Department. Research with faculty advisors outside the Chemistry Department is also possible after consultation with a Concentration Advisor.

ScB Chemistry - Materials Chemistry Track:

CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1
CHEM 0360	Organic Chemistry II	1
CHEM 0500	Inorganic Chemistry	1
CHEM 0600	Preparative Chemistry Lab	.5
Two semesters of independent study:		2
CHEM 0980	Undergraduate Research ¹	
or CHEM 0981	Undergraduate Research - Writing Designated	
CHEM 1060	Advanced Inorganic Chemistry ²	1
CHEM 1140	Physical Chemistry: Quantum Chemistry	1
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics ²	1
CHEM 1700	Nanoscale Materials: Synthesis and Applications	1
MATH 0180 or equivalent ³		1
Two Physics courses, typically 0030/0040 or 0050/0060 ⁵		2
One of the following courses		1
BIOL 1090	Polymer Science for Biomaterials (or)	
BIOL 1120/	Biomaterials (or)	
BIOL 1140	Tissue Engineering (or)	
ENGN 1470	Composite Materials (or)	
ENGN 1490	Biomaterials (or)	
Four electives, at least two must be upper level CHEM courses. ⁴		4
Total Credits		18.5

¹ Two semesters of undergraduate research are required for the concentration. Chem0980 and 0981 are courses which may be repeated for credit.

² For students with a more Engineering bent, the following substitutions can be made - ENGN 0040 can be substituted for PHYS 0030; ENGN 0410 can be substituted for CHEM 1060; ENGN 0720 for CHEM 1150

³ NOTE: MATH 0180 has additional prerequisites.

⁴ Upper level chemistry courses are any 1000- and 2000-level CHEM course. BIOL 0280 is credited as an upper level chemistry elective

for the chemistry concentration. Non CHEM electives are typically foundational courses or upper level science/math courses with a significant molecular focus or those that cover tools/techniques that are of utility to a chemist. You should discuss your elective choices with your Concentration Advisor to craft a course of study that is appropriate for your interests.

CHEM 0980 /CHEM 0981 should be carried out with a faculty member with an appointment in the Chemistry Department. Research with faculty advisors outside the Chemistry Department is also possible after consultation with a Concentration Advisor.

Honors Requirements for Chemistry

All Chemistry concentrators who have grades of A or S with distinction in a majority of their concentration courses after their seventh semester are eligible for Honors; no separate application is necessary.

The requirements for Honors in Chemistry are:

* Grades of A or S with distinction in a majority of courses taken for the concentration.

* Two semesters of Undergraduate Research CHEM 0980, CHEM 0981 or equivalent. Guidelines and requirements associated with Undergraduate Research are in the Undergraduate Concentration Handbook which can be found at the department website (<http://www.brown.edu/academics/chemistry/undergraduate/>).

* A Senior Thesis in a form approved and recommended by the research advisor. Additional information about thesis guidelines will be provided to seniors by the Director of Undergraduate Studies.

* A Senior Poster presentation at the chemistry department's spring undergraduate poster session.

Biochemistry & Molecular Biology Concentration Requirements

How does life work at the molecular level? This question is at the core of the concentration program Biochemistry and Molecular Biology. In earlier years of this discipline, the focus was on structure and function of proteins, nucleic acids, lipids, carbohydrates and small molecules such as vitamins. Today the logical approach and tools of biochemical science are being expanded to new areas in neuroscience, developmental biology, immunology, pharmacology and synthetic biology (the design of analogs of biological systems). Training in biochemistry begins with a foundation in mathematics, physics, chemistry and biology. Some courses offered in other departments, including engineering, geology and computer science, are also useful. A key component of this program is the year of hands-on research carried out in collaboration with a faculty member here at Brown. Faculty sponsors are drawn from both the Chemistry Department and the Division of Biology and Medicine, and include basic science and clinical faculty.

Standard program for the Sc.B. degree

Students must take twenty courses in biology, chemistry, mathematics, and physics, including the following core requirements, some of these may be fulfilled with AP credits.

Three courses in mathematics including two courses in MATH 0090/0100 or MATH 0170/0180 with a third class in statistics, math, or computer science ¹ 3

Options for statistics courses include: ¹

APMA 0650	Introduction to Probability and Statistics
APMA 1650	Introduction to Probability and Statistics with Calculus
APMA 1655	Introduction to Probability and Statistics with Theory ³
BIOL 0495	Statistical Analysis of Biological Data
CPSY 0900	Statistical Methods
PHP 1501	Essentials of Data Analysis

PHP 1510	Principles of Biostatistics and Data Analysis
Two courses in physics, typically: ¹	2
PHYS 0030	Basic Physics A
or PHYS 0050	Foundations of Mechanics
or ENGN 0040	Engineering Statics and Dynamics
PHYS 0040	Basic Physics B
or PHYS 0060	Foundations of Electromagnetism and Modern Physics
Three courses in physical and organic chemistry:	3
CHEM 0330	Equilibrium, Rate, and Structure
CHEM 0350	Organic Chemistry I
CHEM 0360	Organic Chemistry II
One course in biophysical chemistry:	1
CHEM 0400	Biophysical and Bioinorganic Chemistry
Four courses in biochemistry:	4
BIOL 0280	Biochemistry
BIOL 0285	Inquiry in Biochemistry: From Gene to Protein Function
Plus two of three upper level biochemistry courses:	
BIOL 1270	Advanced Biochemistry
or CHEM 1230	Chemical Biology
or CHEM 1240	Biochemistry
The two semester research requirement may be satisfied by any two of the following. Students should discuss alternative arrangements or special situations directly with their concentration advisor to obtain prior approval.	2
Students should aim to complete this requirement in their junior year at the latest to maximize their ability to find a lab able to host them. Finding a lab involves reaching out to professors directly to inquire about research possibilities in their lab prior to receiving an override code for registration for BIOL1950/1960 or Chem 0980/0980S/0981.	
BIOL 1950	Directed Research/Independent Study
BIOL 1960	Directed Research/Independent Study
CHEM 0980	Undergraduate Research
CHEM 0980S	Undergraduate Research - Writing Designated and Mandatory S/NC
CHEM 0981	Undergraduate Research - Writing Designated
A summer research experience with faculty in Biology or Chemistry at Brown equivalent or greater in scope and scale to work the student would pursue in a Biology or Chemistry independent study course to satisfy one semester of the research requirement.	
Suggested Elective Courses:	
Students are required to take five courses from the chart below or, with approval from a concentration advisor, from any science or mathematics course relevant to biochemistry, cell and molecular biology.	5
Applied Mathematics Electives:	
APMA 0330	Methods of Applied Mathematics I
APMA 0410	Mathematical Methods in the Brain Sciences
APMA 0650	Introduction to Probability and Statistics
Biology Electives:	
BIOL 0030	Principles of Nutrition
BIOL 0150D	Techniques in Regenerative Medicine: Cells, Scaffolds and Staining
BIOL 0170	Biotechnology in Medicine
BIOL 0190R	Phage Hunters
BIOL 0200	The Foundation of Living Systems

BIOL 0380	The Ecology and Evolution of Infectious Disease
BIOL 0415	Microbes in the Environment
BIOL 0440	Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses
BIOL 0470	Genetics
BIOL 0500	Cell and Molecular Biology
BIOL 0510	Introductory Microbiology
BIOL 0530	Principles of Immunology
BIOL 0800	Principles of Physiology
BIOL 1050	Biology of the Eukaryotic Cell
BIOL 1090	Polymer Science for Biomaterials
BIOL 1100	Cell Physiology and Biophysics
BIOL 1110	Topics in Signal Transduction
BIOL 1120	Biomaterials
BIOL 1150	Stem Cell Engineering
BIOL 1200	Protein Biophysics and Structure
BIOL 1210	Synthetic Biological Systems
BIOL 1222A	Current Topics in Functional Genomics
BIOL 1260	Physiological Pharmacology
BIOL 1290	Cancer Biology
BIOL 1300	Biomolecular Interactions: Health, Disease and Drug Design
BIOL 1310	Developmental Biology
BIOL 1330	Biology of Reproduction
BIOL 1520	Innate Immunity
BIOL 1540	Molecular Genetics
BIOL 1560	Virology
BIOL 1600	Development of Vaccines to Infectious Diseases
BIOL 2110	Drug and Gene Delivery
BIOL 2350	The Biology of Aging

Chemistry Electives:

CHEM 0500	Inorganic Chemistry
CHEM 1140	Physical Chemistry: Quantum Chemistry
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics
CHEM 1220	Computational Tools in Biochemistry and Chemical Biology
CHEM 1230	Chemical Biology
CHEM 1240	Biochemistry
CHEM 1450	Advanced Organic Chemistry
CHEM 1560H	Chemical Glycobiology
CHEM 1560N	Organometallic Chemistry
CHEM 2410	Organic Mechanisms
CHEM 2420	Organic Reactions

Computer Science Electives:

CSCI 0080	A First Byte of Computer Science
CSCI 0111	Computing Foundations: Data
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science
CSCI 0160	Introduction to Algorithms and Data Structures
CSCI 0170	Computer Science: An Integrated Introduction
CSCI 0180	Computer Science: An Integrated Introduction
CSCI 0190	Accelerated Introduction to Computer Science
CSCI 1810	Computational Molecular Biology

Engineering Electives:

ENGN 0410	Materials Science

Neuroscience Electives:²

NEUR 0010	The Brain: An Introduction to Neuroscience
NEUR 1020	Principles of Neurobiology
NEUR 1030	Neural Systems
NEUR 1040	Introduction to Neurogenetics
NEUR 1670	Neuropharmacology and Synaptic Transmission
NEUR 1740	The Diseased Brain: Mechanisms of Neurological and Psychiatric Disorders

Physics Electives:

PHYS 0160	Introduction to Relativity, Waves and Quantum Physics

Public Health Electives:

PHP 1501	Essentials of Data Analysis

Total Credits	20

¹ Note that the mathematics and physics requirements may be satisfied by Advanced Placement credit.

² or any NEUR course in Cell, Genetics, Molecular Biology, or Development.

³ Students may opt to enroll in APMA 1655 for more in depth coverage of APMA 1650.

Honors Requirements for Biochemistry

All ScB Biochemistry concentrators are candidates for Honors; no separate application is necessary.

The requirements for Honors in Biochemistry are:

* Students must have a majority of either As or S with distinction grades in concentration courses.

* Two semesters of Independent Study (CHEM 0980, CHEM 0980S, CHEM 0981, BIOL 1950, or BIOL 1960). Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (<http://www.brown.edu/academics/chemistry/undergraduate/>).

* A Thesis in a form approved by the research advisor, and recommended by the research advisor. Additional information about thesis guidelines will be provided by the Concentration Advisor in the first half of the fall semester.

* An oral presentation of the thesis in a fifteen-minute senior talk followed by a five-minute question and answer period.

Chemical Physics Concentration Requirements

Chemical Physics is an interdisciplinary field at the crossroads of chemistry and physics and is administered jointly by the two departments. The concentration provides students with a broad-based understanding in fundamental molecular sciences, as well as a background for graduate studies in physical chemistry, chemical physics, or molecular engineering. Concentrators are required to take twenty courses in chemistry, physics, and mathematics, although approved courses in applied mathematics, biology, computer science, geological sciences, or engineering may be substitutes. Chemical Physics concentrators are also advised to take at least six courses in the humanities and social sciences. Chemical Physics concentrators at all levels (first-year through seniors) are actively involved in research with faculty members in both departments.

Standard program for the Sc.B. degree

Twenty-one semester courses¹ in chemistry, physics, and mathematics, with a minimum of four semester courses in mathematics. The

expectation is that courses required for a concentration in Chemical Physics will be taken for a letter grade. Core courses are:

CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1
CHEM 0500	Inorganic Chemistry	1
CHEM 1140	Physical Chemistry: Quantum Chemistry	1
PHYS 0070	Analytical Mechanics	1
PHYS 0160	Introduction to Relativity, Waves and Quantum Physics	1
PHYS 0470	Electricity and Magnetism	1
Select one of the following laboratory courses:		1
CHEM 1160	Physical Chemistry Laboratory	
PHYS 0560	Experiments in Modern Physics	
PHYS 1560	Modern Physics Laboratory	
Select one course in statistical mechanics:		1
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics	
PHYS 1530	Thermodynamics and Statistical Mechanics	
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
MATH 0520	Linear Algebra	1
Seven courses, primarily at the 1000 or 2000 level, in chemistry or physics.		7
Select two semesters of independent study:		2
PHYS 1990	Senior Conference Course	
CHEM 0980	Undergraduate Research	
Total Credits		21

¹ Other approved courses in applied mathematics, biology, computer science, geological sciences, or engineering may be substituted for some of the twenty-one.
Students are advised to take at least six courses in the humanities and social sciences.

Requirements for Honors

All Chemical Physics concentrators who have grades of A or S with distinction in a majority of their concentration courses will be considered for Honors; no separate application is necessary.

The requirements for Honors in Chemical Physics are:

* Grades of A or S with distinction in a majority of courses taken for the concentration.

* Two semesters of Independent Study (CHEM 0980 or equivalent). Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (<http://www.brown.edu/academics/chemistry/undergraduate/>).

* A Thesis in a form approved and recommended by the research advisor. Additional information about thesis guidelines will be provided to seniors by the Concentration Advisor.

* A Poster presentation at the chemistry department's spring undergraduate poster session.

Chemistry Graduate Program

The Department of Chemistry offers graduate programs leading to the Master of Arts (A.M.); the Master of Science (Sc.M.); a the Doctor of Philosophy (Ph.D.) degree.

Research in Chemistry stretches from the exploration of physical phenomena of individual molecules, to the creation of new molecules, to material science, and indeed to the foundations of life. The Department

of Chemistry reflects this profound importance and diversity by offering excellent research opportunities in areas including organic and inorganic chemistry, chemical biology, analytical chemistry, nanochemistry and theoretical and experimental physical chemistry. In addition, graduate students have the opportunity to participate in interdisciplinary research in molecular biology, chemical engineering and the Institute for Molecular and Nanoscale Innovation. The faculty student ratio is approximately 3:1 with most research groups numbering no more than six graduate students.

For more information on admission and program requirements, please visit the following websites:

<http://www.brown.edu/academics/gradschool/programs/chemistry> (<http://www.brown.edu/academics/gradschool/programs/chemistry/>)

Courses

CHEM 0080A. First Year Seminar- Energy.

An introductory study of the scientific foundation of energy, fundamental physical, chemical, and thermodynamic aspects of common (fossil, nuclear) as well as novel (fuel cells, solar, wind, etc.) energy sources. Concentrates on scientific principles, but includes discussion on resources and reserves, environmental impact, current usage, and future needs. For students of all disciplines who are interested in obtaining an understanding of scientific principles of energy. Enrollment limited to 19 first year students.

CHEM 0080B. Molecular Structures in Chemistry and Biology.

This course will consist of a survey of historical developments and concepts of three dimensional structures of molecules. The course will conclude with a survey of the current state of the art of structure determination and 3D structure motifs for small molecules, nanomaterials and biological macromolecules. This freshman only seminar will be strictly limited to a maximum of 19 students.

CHEM 0080C. Drug Discoveries in the Pharmaceutical Industry.

A Freshman seminar that provides a survey of past and current approaches that enable the discovery and development of therapeutic agents. Topics ranging from target validation to the development of therapeutics (small molecules, biologics, and stem cells) will be discussed. Enrollment limited to 19 first-year students.

CHEM 0080F. Kitchen Chemistry.

Have you ever wondered why olive oil is a liquid but butter is solid? Or why bread and cookies rise when baked? This Kitchen Chemistry course is an experimental approach to chemistry, as seen in cooking. We will examine topics such as trans fats, baking soda as a leavening agent in baking, ripening of fruit, artificial sweeteners, GMOs, and enzymatic and non-enzymatic browning of foods. Edible experiments will be used to discuss the science behind recipes. Enrollment limited to 14 first year students. Instructor permission is required.

CHEM 0090. Kitchen Chemistry.

Kitchen Chemistry is a course that highlights the chemistry underlying food and cooking. We will examine topics such as trans fats, baking soda as a leavening agent in baking, chemical basis for ripening of fruit, pectin as a cellular glue, artificial sweeteners, GMOs, and enzymatic and non-enzymatic browning of foods. In-class demonstrations and edible experiments will be used to discuss the science behind cooking. Content will be discussed using a variety of contexts including primary scientific literature, public policy reports, mainstream media, and food blogs. This class is appropriate for all students interested in chemistry.

CHEM 0100. Introductory Chemistry.

Explores stoichiometry, atomic and molecular structure, chemical bonding, solutions, gases, chemical reactions, equilibria, thermochemistry. S/ NC. Students must complete the Chemistry Placement Test at <https://chemistry.brown.edu/undergraduate/undergraduate-courses/chemistry-placement-exam> in order to register for Chem 0100.

CHEM 0330. Equilibrium, Rate, and Structure.

Explores the electronic structure of atoms and molecules, thermodynamics, solution equilibrium, electrochemistry, chemical kinetics, and reaction mechanisms. To successfully register for this course, please include all three components: lecture, lab, and conference. Students who previously passed 0330 lab may be excused from repeating the lab portion of the course, please register for L11 as your lab section. Required background: CHEM 0100 or AP Chemistry 4 or CHEM Placement Test 8 or IBH Chemistry.

CHEM 0330L. Equilibrium, Rate, and Structure Lab.

Please see course description for CHEM 0330.

CHEM 0332. Equilibrium, Rate and Structure - Tutorial.

The CHEM 0332 tutorial program offers students the opportunity to master the concepts taught in the fall semester CHEM 0330: Equilibrium, Rate and Structure course by focusing on active problem solving. Students who struggle in the fall CHEM 0330 course may be invited to join the tutorial program. Students accepted into the tutorial program begin by reviewing compound and reaction stoichiometry at the beginning of the spring semester. Tutorial students enroll in CHEM 0332 during the spring semester to complete their studies of equilibrium, acid-base equilibria, thermodynamics, atomic and molecular structure and kinetics. Students in the CHEM 0332 tutorial program complete weekly problem sets during the spring semester and participate in two mandatory, regularly scheduled problem sessions during each week of the spring semester.

To qualify for consideration, a student must be on track to pass the laboratory component but is below a passing overall score after the last midterm. Accepted students receive a grade of incomplete for the Fall CHEM 0330 course. Upon successful completion of the CHEM 0332 tutorial program in the spring semester, the INC in Fall CHEM 0330 is replaced by the student's tutorial program grade with the laboratory component imported from the fall course.

CHEM 0350. Organic Chemistry I.

Investigates the constitution and properties of organic compounds, with considerable attention to structural motifs, isomerism and chirality, acid/base chemistry, elementary reaction mechanisms (alkene/alkyne addition, nucleophilic substitutions, eliminations, etc.) and synthetic schemes. You must register for the conference section (C01) AND one lecture section (S01/S02) in order to register for this course. Prerequisite: CHEM 0330

CHEM 0350L. Organic Chemistry I Lab.

Please see course description for CHEM 0350.

CHEM 0360. Organic Chemistry II.

Sequel to CHEM 0350. Investigates the constitution and properties of organic compounds at a fundamental level with an introduction to physical organic, bioorganic, and synthetic organic chemistry. Laboratory work is concerned with the identification and characterization of organic compounds, including modern instrumental methods. Prerequisite: CHEM 0350.

CHEM 0360L. Organic Chemistry II Lab.

Please see course description for CHEM 0360.

CHEM 0400. Biophysical and Bioinorganic Chemistry.

Examines aspects of physical and inorganic chemistry relevant to biochemistry: thermodynamics of hydrophobic and hydrophilic interactions, electrically charged membranes, coordination chemistry, active and passive transport, enzyme kinetics and mechanisms, metal-based drugs, and physical methods. Prerequisite: CHEM 0360. Prerequisite or corequisite: PHYS 0040 or 0060.

CHEM 0500. Inorganic Chemistry.

Examines the chemistry of main group and transition metal elements with treatment of covalent bonding and molecular structure. Emphasis will be placed on the methods of studying inorganic compounds and reactions, as well as their pervasiveness in real-world applications. Students will have the opportunity to develop their scientific writing through a peer-reviewed review paper project connecting inorganic chemistry to a topic of their choice. Prerequisite: CHEM 0360.

CHEM 0600. Preparative Chemistry Lab.

This course is designed to develop advanced skills in chemical synthesis and analysis as preparation for work in a modern synthetic chemistry research environment. Students will perform synthesis of new chemical compounds using advanced techniques including air-free Schlenk and glovebox techniques, microwave synthesis, photocatalytic methods, and others. Students will also learn how to characterize their synthesized compounds using 2D NMR, ESI mass spectrometry, EPR spectroscopy, and other methods. The course consists of 1 hour of lecture per week discussing various techniques and applications and 4 hours of laboratory time. This course counts for 0.5 credits.

CHEM 0980. Undergraduate Research.

Independent research in chemistry mentored by a faculty member. The student will carry out original research in chemistry or chemical education. Students should consult with their faculty mentor to discuss the selection of a research project and setting objectives for the semester. This course may be repeated for credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required.

CHEM 0980S. Undergraduate Research - Writing Designated and Mandatory S/NC.

Independent research in chemistry mentored by a faculty member. The student will carry out original research in chemistry or chemical education. Students should consult with their faculty mentor to discuss the selection of a research project and setting objectives for the semester. Students in this independent undergraduate research course will be expected to work on several scaffolded writing assignments throughout the semester. Students will receive feedback on their writing that they can incorporate into a revised version of the assignment or a future submission. Students who will not be engaged in this level of scientific writing should enroll in the traditional undergraduate research course, CHEM0980. This course may be repeated for credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required. This course is Mandatory S/NC.

CHEM 0981. Undergraduate Research - Writing Designated.

Independent research in chemistry mentored by a faculty member. The student will carry out original research in chemistry or chemical education. Students should consult with their faculty mentor to discuss the selection of a research project and setting objectives for the semester. Students in this independent undergraduate research course will be expected to work on several scaffolded writing assignments throughout the semester. Students will receive feedback on their writing that they can incorporate into a revised version of the assignment or a future submission. Students who will not be engaged in this level of scientific writing should enroll in the traditional undergraduate research course, CHEM 0980. This course may be repeated for credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required.

CHEM 0986. From Molecules to Masterpieces: Chemistry's Influence on Culture and Art.

"From Molecules to Masterpieces: Chemistry's Influence on Culture and Art" delves into the intricate connections between chemistry and art within their historical contexts. This interdisciplinary course offers a fresh perspective, placing emphasis on cultural exploration and underscoring chemistry's profound influence on artistic expressions throughout history. Topics encompass the utilization of color in art, chemical analysis of pigments, art conservation, ceramics, pottery, stained glass, and more. The course content will revolve around cultivating engaging discussions through a series of case studies, providing students with opportunities to engage in hands-on activities and complete insightful writing assignments. By the end of the course, students will have acquired a deep-seated understanding of how chemistry has shaped human creativity, cultural identity, and artistic expression.

CHEM 0999. Chemistry and Art.

"Chemistry and Art" is an interdisciplinary course that explores different chemical concepts and techniques through the lenses of art and art history. The topics covered include paint and painting, stained glass; pottery and porcelains; gemstones and jewelry; color and art conservation. Drawing from early artistic texts, we will take a historically informed approach, connecting medieval stained-glass techniques, early pigmentation sourcing, and Qin dynasty pottery work to modern chemical explanations. Throughout the course, lectures, discussions, hands-on activities, and writing are totally integrated and the chemistry principles and techniques behind art objects and art-making are introduced through a series of case studies.

CHEM 1060. Advanced Inorganic Chemistry.

Covers the physical and chemical properties of transition metal compounds as well as current research topics in inorganic chemistry. Laboratory is designed for the practice of modern inorganic chemistry through the synthesis and spectroscopic characterization of air-sensitive transition metal compounds. Prerequisite: CHEM 0500.

CHEM 1140. Physical Chemistry: Quantum Chemistry.

An introduction to the quantum theory of chemical systems. Elements of quantum mechanics; electronic structure of atoms and molecules; study of molecular structure and behavior by spectroscopy; chemical bonding are all explored. Prerequisites: CHEM 0330; and MATH 0180, 0200 or 0350; and PHYS 0030, PHYS0050, or ENGN 0040; and PHYS 0040 or PHYS 0060; or PHYS 0070 and 0470; or minimum score of WAIVE in 'Graduate Student PreReq'.

CHEM 1150. Physical Chemistry: Thermodynamics and Statistical Mechanics.

Examines the question: Where does chemical equilibrium come from? Focuses on macroscopic perspectives on chemical systems and the molecular origins of macroscopic behavior along with elements of statistical mechanics, the laws of thermodynamics, and the relationships between the two. Prerequisite: CHEM 1140

CHEM 1160. Physical Chemistry Laboratory.

An introduction to modern instrumentation and experimental techniques as applied to physical chemistry. Experiments will emphasize application of the ideas of spectroscopy, kinetics, statistical mechanics, and thermodynamics to systems of chemical and biochemical interest. Prerequisites: CHEM 1140 or permission of the instructor.

CHEM 1170. Environmental Chemistry.

A laboratory course using analytical methods to help in the study and description of several realistic environmental problems. Illustrates scientific methodology and measurement techniques as they apply to these important problems. A problem-solving course employing a kind of environmental chemical detective work. Two laboratory sessions per week. Prerequisites: MATH 0100 or the equivalent, or permission of the instructor. Enrollment limited to 8. Instructor permission required.

CHEM 1220. Computational Tools in Biochemistry and Chemical Biology.

Introduction to computational tools used to analyze protein sequences and structures, DNA sequence analysis, RNA structure, biochemical pathways and the analysis of microarray data. Extensive use of programs such as AMBER, BLAST, PSIBLAST and a discussion of their limitations.

CHEM 1230. Chemical Biology.

This course covers topics at the interface of chemistry and biology and, specifically, the use of chemical tools to probe biological systems. Using examples from the recent literature, we will discuss using the central methods of chemistry, namely the ability to design and synthesize compounds with a particular set of properties, to analyze biological problems. Specific topics include molecular recognition of DNA, artificial enzymes, small molecule sensors, and in vivo imaging of proteins, nucleic acids, and cell-surface carbohydrates. Prerequisites: CHEM 0360 and BIOL 0280.

CHEM 1240. Biochemistry.

Examines the chemical, mechanistic, and structural basis for enzymatic catalysis. Uses examples from the recent literature to examine how the experimental and conceptual tools of chemical synthesis, isotopic labeling, stereochemistry, enzymology, kinetics, and protein structure can be brought to bear to unravel the chemical and physical principles underlying the enormous catalytic acceleration and exquisite structural specificity of enzyme-catalyzed reactions. Prerequisites: CHEM 0360, BIOL 0280.

CHEM 1450. Advanced Organic Chemistry.

Lectures cover topics of current interest in organic reaction mechanisms, synthesis, and structure determination. Prerequisite: CHEM 0360.

CHEM 1560A. Molecular Modeling.

No description available.

CHEM 1560C. Advanced Spectroscopy.

No description available.

CHEM 1560E. Biological Mass Spectrometry.

This seminar course will survey the instrumentation, methods, and applications of modern biological mass spectrometry. Through lecture and interactive discussions, we will explore the fundamentals of mass spectrometry. We will then proceed to cover a series of topics relevant to protein and peptides analysis. The seminar will conclude with an exploration of recent developments in instrumentation or applications of particular interest to the participants. Recommended pre-requisites: CHEM 0360, BIOL 0280, PHYS 0040. Enrollment limited to 20.

CHEM 1560F. Organic Structure Analysis.**CHEM 1560G. Nuclear Magnetic Resonance.**

These special topics courses cover the basics of modern NMR spectroscopy. Topics to be included are as follows: modern Fourier transform methodology, modern NMR instrumentation, and a comprehensive discussion of one and two dimensional experiments that are routinely performed. Topics such as coherence transfer and pulsed field gradients will also be included. Experimental methods covered in detail include COSY, TOCSY, HSQC, HMBC, NOSEY, ROSEY, EXSY and DOSY methodology. This course will not focus on structure determination or spectral interpretation but rather on experimental methodology.

CHEM 1560H. Chemical Glycobiology.

This course examines the chemistry and biology of carbohydrates in living systems. Topics to be covered may include - principles of carbohydrate recognition, enzymes involved in synthesis and modification of carbohydrates, carbohydrates in bacterial/viral and other cellular interactions, glycomics, carbohydrate synthesis. Prerequisites: CHEM 0360 and BIOL 0280. Instructor permission required. Attendance at the first class meeting is required for enrollment.

CHEM 1560I. DNA Damage and Repair.

This course analyzes the chemistry of DNA damaging agents and the molecular mechanisms of DNA replication and DNA repair. We will also analyze the mutagenic and toxic consequences of modifications to DNA structure. Specific topics include the reactions of alkylating agents, ultraviolet radiation, and oxidizing radicals with DNA; additionally, chemotherapeutics that modify DNA will be discussed. Multiple cellular repair pathways will be covered including base excision repair, nucleotide excision repair, mismatch repair, and direct reversal. Prerequisites: CHEM 0350, CHEM 0360, BIOL 0280, BIOL 1270, or by permission.

CHEM 1560J. Topics in Bioinorganic Chemistry.

Covers current topics of bioinorganic chemistry with review of fundamental inorganic and biological chemistry. Topics include metal ion transport and storage, oxygen metabolism, electron transfer, respiration and photosynthesis, metal ion receptors and signaling, hydrolytic chemistry, metallo-neurochemistry, and medicinal bioinorganic chemistry. Students are strongly urged to complete both CHEM 0500 and CHEM 0360 prior to this special topics course.

CHEM 1560K. Computational Chemistry.

Introduction to computational methods for studying chemical systems ranging from the structure of molecules and their chemical bonds to large ensembles of interacting molecules (e.g. in solution). The course will discuss the quantum mechanical and thermodynamic theories behind a variety of important algorithms including Hartree-Fock, density functional theory (DFT), Monte Carlo sampling, and molecular dynamics. Students will learn how to perform calculations using their own simple codes and advanced software packages, as well as how to assess the validity of their simulations using the underlying theories. This course is designed for upper-level undergraduates and graduate students. Specifically, CHEM 1140 (or another course in quantum mechanics) is required. Prior knowledge of basic programming will be very important. Knowledge of basic linear algebra will be helpful, but not required.

CHEM 1560M. Applied Materials Chemistry.

Materials chemistry is the study of the synthesis, structure, properties, and application of solid materials. Our technology-driven world is fueled by advances in materials chemistry with examples of application in areas such as microelectronics, polymers, and energy technology. This course will explain the application of materials chemistry through the materials properties and characterization, detailing how the crystalline and molecular structure of materials can be related to electronic, optical, thermal, and mechanical properties.

CHEM 1560N. Organometallic Chemistry.

Modern organometallic chemistry continues to find unique applications including next generation lighting displays, therapeutics and imaging, energy science, and green chemical synthesis. In this course we will briefly review fundamentals of inorganic chemistry (MO theory, ligand field theory, Pearson's HSAB theory), and then delve into the structure, bonding, synthesis, reactivity, and mechanisms associated with organometallic complexes and their associated applications. Significant emphasis will be placed on effective oral and written communication skills, with frequent peer and instructor feedback provided. Prerequisites: CHEM 0360, CHEM 0500. PLEASE NOTE: This class is WRIT designated for Undergraduates Only. Graduate students should register for CHEM 2310. Undergraduates should register for CHEM 1560N.

CHEM 1560P. Applications of Modern Physical Methods in Synthesis.

The modern synthetic chemist leverages a wide range of physical methods to answer research questions in diverse application areas ranging from renewable energy, medicine, materials, complex molecule synthesis, and others. Students will develop a working knowledge of modern techniques applied to synthesis, learning fundamental principles, experimental limitations, and interpretation of experimental results. Selected techniques may include: Nuclear Magnetic Resonance (NMR), Electron Paramagnetic Resonance (EPR), Fluorimetry, Absorption Spectroscopy (UV-Vis, IR, X-ray), Diffraction (X-ray), Magnetometry, Electrochemistry, and Mass-Spectrometry. Emphasis will be placed on how techniques are relevant in current research areas, and the instrumental capabilities available at Brown University.

CHEM 1560Q. Accelerating Chemical Discovery.

For centuries, chemists have relied upon chemical intuition to guide their chemical discovery. However, with the advent of high-throughput synthesis and characterization techniques and spectroscopies that produce TBs of images, chemists are now being inundated with data. This course will equip you with the tools of data science and computational chemistry so that you can fully leverage your data for discovery. It consists of four key modules: Intro to Data Science, Chemical Discovery (RDKit, chemical databases, and machine learning), Modern Spectroscopy (image recognition and computational chemistry), and Atomistic Simulation (computational catalysis and molecular dynamics simulations) that will challenge you to solve practical chemistry problems via data science and/or simulation. While previous computing knowledge will be an advantage, it will not be required. Recommended prerequisites: CHEM0330/0350/0360, PHYS0030/0040, MATH0100. CHEM1140/1150/2770/2780/2020 would be beneficial, but are not required.

CHEM 1560R. Reimagining the Role of Chemists.

Reimagining the Role of Chemists teaches chemistry in the context of today's issues. This course investigates chemistry's entanglements with colonialism, anti-black racism, and environmental injustice. In the hopes of regrounding chemistry, reorienting its values, and reimagining its future, we engage with diverse histories, perspectives, and impacts that have often been rendered invisible. Together, we will consider how to transition from a false pretense of objectivity to a just and beneficial practice of chemistry.

CHEM 1560S. The Chemistry of Polymeric Organic Materials.

The 21st century has seen the transition of carbon-based polymers from commodity bulk materials to sophisticated and intricately engineered materials with applications in biotechnology, energy harvesting and storage, separations, and sensing schemes. At the heart of these thrusts have been developments in the synthesis of organic polymers and methods for their fabrication into materials and devices. The aim of this course is to build a fundamental knowledge of polymer chemistry and survey their application to functional materials and devices. Topics covered in this course can be broken into three major categories: 1. Synthesis and characterization of polymers; 2. Processing and characterization of polymeric materials; 3. Applications of organic materials to modern challenges.

CHEM 1620B. Spectroscopy.

Prerequisite: CHEM 1140 or equivalent.

CHEM 1620C. Topics in Modern Physical Chemistry.

No description available.

CHEM 1660. Instrumental Analysis with Environmental Applications.

This course covers the principles and practical applications of important analytical chemistry tools used to study environmental problems, including discussions of method selection and statistical treatment of data. Students will strategize and implement a study of a field site. Includes lab sessions with hands-on experience of instrumental analysis using atomic and molecular spectroscopic techniques, separations by gas and liquid chromatography, and electrochemical methods. Prerequisite: CHEM 0330 or GEOL 1370. Enrollment limited to 20. Instructor permission required.

CHEM 1700. Nanoscale Materials: Synthesis and Applications.

Focuses on synthesis, properties, and applications of nanoscale materials. It begins with the introduction to size-dependent properties and to general characterization methods of nanomaterials. It then outlines the synthesis, surface chemistry and self-assembly of nanomaterials. It further reviews catalytic, optical and magnetic properties of nanomaterials. Finally, the course highlights the applications of nanomaterials in information storage, energy conversion, and biomedicine. Prerequisites : CHEM0350, PHYS 0030 or 0050, BIOL0280 recommended.

CHEM 2010. Advanced Thermodynamics.

Fundamental principles of macroscopic equilibrium thermodynamics. The three laws of thermodynamics, the thermodynamic potentials, temperature scales, heat engines and refrigerators, entropy, kinetic theory, and transport phenomena. Applications to solids, fluids, and magnetic systems; Gibbs relations, first and second order phase transitions, thermal radiation, gas expansions.

CHEM 2020. Statistical Mechanics.

Introduction to modern equilibrium statistical mechanics, including the classical and quantum descriptions of ideal gases, the molecular basis of thermodynamics, the concepts of ensembles and fluctuations, and the implications of quantum mechanical indistinguishability. Applications include chemical and phase equilibria, the transition-state theory of chemical reaction rates, and the theory of liquids.

CHEM 2210. Chemical Crystallography.

Introduces the principles of crystallography (plane groups, point groups, space groups, Bravais lattice, crystal classes), crystallographic methods (single-crystal, powder XRD, macromolecular), strategies for data collection, methods for data reduction, and structure interpretation; reviews modern crystal structure databases (CSD, ICSD) and search engines; reviews the historical development of crystallography and the scope, potential and application of X-ray analysis.

CHEM 2310. Organometallic Chemistry.

Modern organometallic chemistry continues to find unique applications including next generation lighting displays, therapeutics and imaging, energy science, and green chemical synthesis. In this course we will briefly review fundamentals of inorganic chemistry (MO theory, ligand field theory, Pearson's HSAB theory), and then delve into the structure, bonding, synthesis, reactivity, and mechanisms associated with organometallic complexes and their associated applications. Significant emphasis will be placed on effective oral and written communication skills, with frequent peer and instructor feedback provided. Prerequisites: CHEM 0360, CHEM 0500. PLEASE NOTE: This class is WRIT designated for Undergraduates Only. Graduate students should register for CHEM 2310. Undergraduates should register for CHEM 1560N.

CHEM 2320. Solid State Chemistry.

This course focuses on descriptive understanding of structures and properties of inorganic materials. It covers symmetry operations in crystals, crystal structure, physical properties of inorganic materials, materials phase diagram and preparation, and solid state electrochemistry for battery, fuel cell and supercapacitor applications. Prerequisites: CHEM 0500 and 1060 or equivalents or written permission. Recommended for seniors and first-year graduate students.

CHEM 2410. Organic Mechanisms.

This course examines methods for determining organic reaction mechanisms. Types of experiments introduced may include kinetics, free energy relationships, isotope effects, molecular orbital theory, spectroscopy, and product distribution analysis. Reactions typically covered include pericyclic reactions, reactive intermediates, organometallic reactions, and substitution/addition/elimination. The course makes extensive use of the primary literature, with a strong emphasis on the development of effective communication strategies. Completion of CHEM0500, and CHEM1140 is strongly recommended.

CHEM 2420. Organic Reactions.

Study of organic reactions and reaction mechanisms. Discussion and analysis of organic transformations. Topics can include arrow pushing strategies and synthetic methods.

CHEM 2430. Synthetic Organic Chemistry.

Practical synthetic methods, strategies, and mechanisms essential for chemists. Discussions will include common pitfalls, how to overcome them, and real-life examples encountered in the lab when carrying out organic synthesis. Topics will also include the construction of pharmaceutical drug candidates or complex natural products, and include the chemistry of anions, cations, concerted reactions, conformational analysis, and stereochemistry

CHEM 2770. Quantum Mechanics.

The course discusses the foundations of quantum mechanics and applications to chemical systems and phenomena. Using a rigorous mathematical treatment and Dirac notation, important time-independent model systems include two-level systems, one- and three-dimensional problems and angular momentum. Elements of time-dependent quantum mechanics focus on wavepacket motions. The semester will close out with a discussion of the spin and symmetry postulates.

CHEM 2780. Quantum Mechanics.

The second semester sequel of Quantum Mechanics covers many body systems and matter-radiation interactions. It starts with a discussion of the symmetry postulates of quantum mechanics, followed by applications to the electronic structure of atoms and molecules, including angular momenta, the nature of chemical bonds, the Born-Oppenheimer approximation and conical intersections as well as molecular vibrations. The semester closes out with a discussion of time-dependent perturbation theory and spectroscopy, including the quantum adiabatic theorem, as well as the theory of electron and x-ray scattering. Prerequisite: CHEM 2770.

CHEM 2810. Departmental Seminars.

No description available.

CHEM 2820. Departmental Seminars.

No description available.

CHEM 2870. Departmental Colloquia.

Open to first year chemistry graduate students only.

CHEM 2880. Departmental Colloquia.

No description available. Open to graduate students only.

CHEM 2920C. Topics in Modern Spectroscopy.

No description available.

CHEM 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CHEM 2980. Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CHEM 2981. Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. CHEM 2981 is mandatory S/NC.

CHEM 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

CHEM XLIST. Courses of Interest to Students wishing to Study Chemistry.

Classics

The study of Classics focuses on the languages, literature, history, culture, and legacy of Greco-Roman antiquity. Brown's Department of Classics has a long and distinguished history, extending from the founding of the University to the present. The department offers courses that contribute to a broad liberal education, and provides specialized training for those students intending to enter graduate school. Courses are offered from beginning to advanced levels in Ancient Greek, Latin, and Sanskrit language and literature, and in Modern Greek. Each semester the department also offers a number of courses that require no knowledge of the ancient languages, in literature, mythology, history, philosophy, and religion.

For additional information, please visit the department's website: <http://www.brown.edu/academics/classics/>

Classics Concentration Requirements

The study of Classics focuses on the languages, literature, history, culture, and legacy of Greco-Roman antiquity. An undergraduate concentration in Classics furnishes students with a broad liberal education, and provides specialized training for those students intending to enter graduate school. Students may choose to study Ancient Greek, Latin, Sanskrit, and/or Modern Greek, and to explore courses in literature, mythology, history, philosophy, and religion. Students may either pursue the standard Classics concentration – the most popular choice – or one of several optional tracks: Greek, Latin, Greek and Latin, South Asian Classics, Sanskrit, Greek and Sanskrit, or Latin and Sanskrit. Concentrators who pursue an honors degree write a senior thesis, typically over the course of two semesters during their senior year.

Beginning with declarations submitted after September 1, 2018, all tracks except "Greek and Latin," "Greek and Sanskrit," and "Latin and Sanskrit" require the satisfactory completion of nine courses as described below. The introductory courses in Greek and Latin may not usually be counted toward a concentration, but those in Sanskrit may be counted toward the concentration requirement in some of the tracks. Students should always consult with the Director of Undergraduate Studies regarding their path toward fulfilling requirements and choosing electives.

Classics

One course in Greek or Latin on the 1000-level or above.	1
Select any two of the four ancient history courses:	2
CLAS 1210	Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC

CLAS 1220	The Fall of Empires and Rise of Kings: Greek History 478 to 323 BC	
or HIST 1200B	The Fall of Empires and Rise of Kings: Greek History to 478 to 323 BCE	
CLAS 1310	Roman History I: The Rise and Fall of an Imperial Republic	
CLAS 1320	Roman History II: The Roman Empire and Its Impact	
or HIST 1201B	Roman History II: The Empire	
Five other courses in classics, including classical archaeology, Greek (excluding GREK 0100, 0200, 0110), Latin (excluding LATN 0100, 0200, 0110), Sanskrit, or related areas to be approved by the concentration advisor. At least three of these five courses must be offered through the Department of Classics.		5
One further course offered by the Department of Classics and designated "Classics and Beyond," OR a DIAP course offered by the Department of Classics.		1
Total Credits		9

¹ Options include, but are not limited to: GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810, LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, LATN 1930B, and with instructor permission for those who are very advanced in Greek or Latin: GREK 2020E, GREK 2110K, and LATN 2080F LATN 2090I.

² Options offered by the Department of Classics include, but are not limited to: CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120G, CLAS 1120Q, CLAS 1120U, CLAS 1145, CLAS 1310, CLAS 1320, CLAS 1750H, GREK 0100, GREK 1110H, GREK 1110B, GREK 1110S, GREK 1150, GREK 1810, LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, LATN 1930B, SANS 0100 and SANS 0200.

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0660, CLAS 0765, CLAS 0855, CLAS 1120G, CLAS 1120U, CLAS 1145, CLAS 1750H, LATN 1110H, and with instructor permission for those who are very advanced in Latin: LATN 2080F and LATN 2090I.

Greek

Four Greek courses on the 1000-level or above, at least one of which is to be:		4
GREK 1810	Greek Literature Survey to 450 BCE	
or GREK 1820	Greek Literature Survey after 450 BCE	
CLAS 1210	Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC	1
CLAS 1220	The Fall of Empires and Rise of Kings: Greek History 478 to 323 BC	1
Two additional courses in classics, including classical archaeology, Greek (excluding GREK 0100, 0200, 0110), Latin (excluding LATN 0100, 0200, 0110), or related areas to be approved by the concentration advisor. At least one of these two courses must be offered through the Department of Classics.		2
One further course offered by the Department of Classics and designated "Classics and Beyond," OR a DIAP course offered by the Department of Classics.		1
Total Credits		9

¹ Options include, but are not limited to: GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810, and with instructor permission for those who are very advanced in Greek: GREK 2020E and GREK 2110K.

² Options offered by the Department of Classics include, but are not limited to:

CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120U, CLAS 1145, CLAS 1310, CLAS 1320, CLAS 1750H, LATN 0300, LATN 0400, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, LATN 1930B, SANS 0100, and SANS 0200

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0660, CLAS 0765, CLAS 0855, CLAS 1120G, CLAS 1120U, CLAS 1145, CLAS 1750H, LATN 1110H, and with instructor permission for those who are very advanced in Latin : LATN 2080F and LATN 2090I.

Latin

Four Latin courses on the 1000-level or above, at least one of which is to be:		4
LATN 1810	Survey of Republican Literature	
or LATN 1820	Survey of Roman Literature II: Empire	
CLAS 1310	Roman History I: The Rise and Fall of an Imperial Republic	1
CLAS 1320	Roman History II: The Roman Empire and Its Impact	1
or HIST 1201B	Roman History II: The Empire	
Two additional courses in classics, including classical archaeology, Greek (excluding GREK 0100, 0200, 0110), Latin (excluding LATN 0100, 0200, 0110), or related areas to be approved by the concentration advisor. At least one of these two courses must be offered through the Department of Classics.		2
One further course offered by the Department of Classics and designated "Classics and Beyond," OR a DIAP course offered by the Department of Classics.		1
Total Credits		9

¹ Options include, but are not limited to: LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, LATN 1930B, and with instructor permission for those who are very advanced in Latin: LATN 2080F and LATN 2090I.

² Options offered by the Department of Classics include, but are not limited to: CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0771, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120G, CLAS 1120Q, CLAS 1120U, CLAS 1145, CLAS 1750H, CLAS 1750U, GREK 0300, GREK 0400, GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810, SANS 0100 and SANS 0200.

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0660, CLAS 0765, CLAS 0855, CLAS 1120G, CLAS 1120U, CLAS 1145, CLAS 1750H, LATN 1110H, and with instructor permission for those who are very advanced in Latin: LATN 2080F and LATN 2090I.

Greek and Latin

Ancient Language A (Either Latin or Ancient Greek) requires four (4) courses on the 1000-level. Typically Ancient Language A will be the one in which a survey course will be taken.		4
Ancient Language B (Either Ancient Greek or Latin, respectively) requires four ancient language courses of which two can be 0300 and 0400 and the other two at 1000-level or above.		4
One of the survey courses in Ancient Language A:		1
LATN 1810	Survey of Republican Literature	
or LATN 1820	Survey of Roman Literature II: Empire	
GREK 1810	Greek Literature Survey to 450 BCE	
or GREK 1820	Greek Literature Survey after 450 BCE	
Any THREE of the FOUR Ancient History courses:		3
CLAS 1210	Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC	
CLAS 1220	The Fall of Empires and Rise of Kings: Greek History 478 to 323 BC	

or HIST 1200B	The Fall of Empires and Rise of Kings: Greek History to 478 to 323 BCE	
CLAS 1310	Roman History I: The Rise and Fall of an Imperial Republic	
CLAS 1320	Roman History II: The Roman Empire and Its Impact	
or HIST 1201B	Roman History II: The Empire	
One further course offered by the Department of Classics and designated "Classics and Beyond," OR a DIAP course offered by the Department of Classics.		1
Total Credits		13

¹ Options offered include, but are not limited to: LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, LATN 1930B, and with instructor permission for those who are very advanced in Latin: LATN 2080F and LATN 2090I.

² Options include, but are not limited to: , GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810 and with instructor permission for those who are very advanced in Greek: GREK 2020E and GREK 2110K.

South Asian Classics

At least one Sanskrit course above Sanskrit 0300 ¹	1
Three of the Sanskrit Classics Courses in Translation ²	3
Four other courses in Classics or related areas (such as Comparative Literature, Religious Studies, South Asian Studies, Early Cultures, etc., including SANS 0100, 0200, 0300) to be approved by the concentration advisor ³	4
One further course offered by the Department of Classics and designated "Classics and Beyond," OR a DIAP course offered by the Department of Classics. ⁴	1
Total Credits	9

¹ Options offered include: SANS 0400, SANS 1080 and SANS 1600.

² Options offered include: CLAS 0855 and CLAS 1145.

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0771, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120G, CLAS 1120Q, CLAS 1120U, CLAS 1145, CLAS 1310, CLAS 1320, CLAS 1750H, CLAS 1750U, GREK 0100, GREK 0110, GREK 0200, GREK 0300, GREK 0400, GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810, LATN 0100, LATN 0110, LATN 0200, LATN 0300, LATN 0400, LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, and LATN 1930B.

⁴ Options offered by the Department of Classics include, but are not limited to: & CLAS 0660, & CLAS 0765, & CLAS 0855, & CLAS 1120G, & CLAS 1120U, & CLAS 1145, & CLAS 1750H, & LATN 1110H, and with instructor permission for those who are very advanced in Latin: & LATN 2080F & and LATN 2090I.

Sanskrit

Two Sanskrit courses at the 1000-level or above ¹	2
Two of the Sanskrit Classics Courses in Translation ²	2
Four other courses in Classics or related areas (such as Comparative Literature, Religious Studies, South Asian Studies, Early Cultures, etc., including SANS 0300 and SANS 0400) to be approved by the concentration advisor ³	4
One further course offered by the Department of Classics and designated "Classics and Beyond," OR a DIAP course offered by the Department of Classics. ⁴	1
Total Credits	9

¹ Options offered include: SANS 1080 and SANS 1600.

² Options offered include: CLAS 0855 and CLAS 1145.

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0771, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120G, CLAS 1120Q, CLAS 1120U, CLAS 1145, CLAS 1310, CLAS 1320, CLAS 1750H, CLAS 1750U, GREK 0100, GREK 0110, GREK 0200, GREK 0300, GREK 0400, GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810, LATN 0100, LATN 0110, LATN 0200, LATN 0300, LATN 0400, LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, and LATN 1930B.

⁴ Options offered by the Department of Classics in 2018/2019 include, but are not limited to: CLAS 0660, CLAS 0765, CLAS 0855, CLAS 1120G, CLAS 1120U, CLAS 1145, CLAS 1750H, LATN 1110H, and with instructor permission for those who are very advanced in Latin: LATN 2080F and LATN 2090I.

Greek and Sanskrit

Four Sanskrit courses at any level ¹	4
Four Greek courses on the 1000-level or above, at least one of which is to be: ²	4
GREK 1810 Greek Literature Survey to 450 BCE or GREK 1820 Greek Literature Survey after 450 BCE	
One of the two Ancient Greek History Courses:	1
Either	
CLAS 1210 Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC	
or	
CLAS 1220 The Fall of Empires and Rise of Kings: Greek History 478 to 323 BC or HIST 1200B The Fall of Empires and Rise of Kings: Greek History to 478 to 323 BCE	
Two additional courses in Classics (including GREK 0300 and GREK 0400) or related areas (such as Comparative Literature, Religious Studies, South Asian Studies, Early Cultures, etc.) to be approved by the concentration advisor. ³	2
One further course offered by the Department of Classics and designated "Classics and Beyond" or a DIAP course offered by the department of Classics.	1
Total Credits	12

¹ Options offered include: SANS 0100, SANS 0200, SANS 0300, SANS 0400, SANS 1080 and SANS 1600.

² Options offered include, but are not limited to: , GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, GREK 1810 and with instructor permission for those who are very advanced in Greek: GREK 2020E and GREK 2110K.

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0771, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120G, CLAS 1120Q, CLAS 1120U, CLAS 1145, CLAS 1310, CLAS 1320, CLAS 1750H, CLAS 1750U, LATN 0100, LATN 0110, LATN 0200, LATN 0300, LATN 0400, LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, and LATN 1930B.

Latin and Sanskrit

Four Sanskrit courses at any level ¹		4
Four Latin courses on the 1000-level or above, at least one of which is to be ²		4
LATN 1810	Survey of Republican Literature	
or LATN 1820	Survey of Roman Literature II: Empire	
One of the two Roman Ancient History courses		1
Either		
CLAS 1310	Roman History I: The Rise and Fall of an Imperial Republic	

Or		
CLAS 1320	Roman History II: The Roman Empire and Its Impact	
or HIST 1201B	Roman History II: The Empire	
Two additional courses in Classics (including LATN 0300 and LATN 0400) or related areas (such as Comparative Literature, Religious Studies, South Asian Studies, Early Cultures, etc.) to be approved by the concentration advisor		2
One further course offered by the Department of Classics and designated "Classics and Beyond" or a DIAP course offered by the department of Classics.		1
Total Credits		12

¹ Options offered include: SANS 0100, SANS 0200, SANS 0300, SANS 0400, SANS 1080 and SANS 1600.

² Options offered include, but are not limited to: LATN 1020D, LATN 1040B, LATN 1060G, LATN 1110F, LATN 1110H, LATN 1110P, LATN 1820, LATN 1930B, and with instructor permission for those who are very advanced in Latin: LATN 2080F and LATN 2090I.

³ Options offered by the Department of Classics include, but are not limited to: CLAS 0150, CLAS 0660, CLAS 0765, CLAS 0771, CLAS 0780, CLAS 0855, CLAS 0900, CLAS 1120G, CLAS 1120Q, CLAS 1120U, CLAS 1145, CLAS 1750H, CLAS 1750U, GREK 0100, GREK 0110, GREK 0200, GREK 0300, GREK 0400, GREK 1110H, GREK 1110B, GREK 1110S, GREK 1111B, GREK 1150, and GREK 1810.

Honors

Students may earn honors in the concentration by presenting a satisfactory thesis, for the preparation of which they will ordinarily enroll in the relevant 1990 courses; these courses may not be used to satisfy the standard requirements for a concentration. In order to qualify, the candidate for honors in the Department of Classics ordinarily will be entering his/her seventh semester of study and must have an "A" average (3.50 or higher on a 4.00 scale) in the concentration.

Classics Graduate Program

The Department of Classics offers graduate study leading to the Doctor of Philosophy (Ph.D.) degree. In addition to the Ph.D. program in Classics, the department offers graduate work in Sanskrit leading to a Ph.D. in Classics and Sanskrit, and with the Department of History, sponsors a joint Ph.D. program in Ancient History. A degree of Master of Arts (A.M.) is available for students already working toward the Ph.D. in cognate programs at Brown.

For more information on admission and program requirements, please visit the following website: <http://www.brown.edu/academics/gradschool/programs/classics> (<http://www.brown.edu/academics/gradschool/programs/classics/>)

Courses

Classics

CLAS 0010. The Ancient Greeks.

From poetry to philosophy, from music to economics to political theory, it is hard to find a subject of study that did not originate with the ancient Greeks, at least in word. Biology? Greek. Physics? Still Greek. Math? Technology? Gym? You guessed it. Since we cannot escape the ancient Greeks, in this class we will be on the lookout for them, reading some of the first classics of world literature and discussing the great ideas behind them. All texts read in English.

CLAS 0020. The Romans.

Statesmen exposed republican conspiracies; historians chronicled imperial intrigue; playwrights "Greeked-it-up" with toga parties; epic poets sang of Rome's rise (and fall); moralizers bemoaned gladiators' beauty habits; and a novelist recounted the adventures of a man turned into an ass. This course tracks the development of literary culture at Rome from its beginnings to the end of the Empire, with an emphasis on the major genres, authors, and works of Roman literature. Intended for all students desiring an introduction to Roman literary culture and its masterpieces. All texts read in English; no previous experience in Roman history or Latin required.

CLAS 0066. Gender and Sexuality in Ancient Greek Literature.

This class will consider representations of gender and sexuality in the literature of Ancient Greece from the Archaic to the Imperial periods, with an eye to comparing and contrasting ancient ideas with more contemporary discourses of gender and sexuality. We will explore how gender and sexuality are constructed in a variety of written genres in antiquity; how and when this literature has impacted modern conceptions of gender and sexuality; and how ancient ideas about gender and sexuality might offer alternative ways of thinking about gender and sexuality today.

Broad topics will include (but will not be limited to) marriage, queerness, sex work, childbirth, abortion, and sexual politics, which will be considered in light of intersecting issues of religion, race, class, ethnicity, and ability. Classes will be discussion and group activity based. THERE ARE NO PREREQUISITES FOR THIS COURSE.

CLAS 0090A. Women and Gender in Ancient Religions (RELS 0090A).

Interested students must register for RELS 0090A.

CLAS 0150. Ancient Greek Philosophy.

The natural philosophy, metaphysics, epistemology, and ethics of the principal figures in ancient philosophy from the Pre-Socratics to Aristotle. Emphasis is given to understanding the problems the philosophers were trying to solve and to assessing the arguments for their various positions. Primary readings are from the original sources in translation. No prerequisites.

CLAS 0180. Indian Civilization through Its Literature.

An examination of various historical, geographical, social, scientific, and literary aspects of Indian civilization through the reading of translations of original works of Indian culture such as the short story collection *Bīhatkathāslokaśamgraha*. Each topic that comes up in the story is explored in greater depth in supplementary material.

CLAS 0210A. Alexander the Great and Alexandria.

No description available.

CLAS 0210B. Death in Ancient Greece.

Examines how ancient Greeks understood, described, and experienced death. Making use of sources in translation, considers how death is anticipated, imagined, feared, and sometimes sought. Also contrasts classical ideas with current experiences in our own society in order to see whether and how our assumptions concerning death are culturally determined. Enrollment limited to 19 first year students.

CLAS 0210E. The Family in the Classical World.

It has been said that the household, not the individual, was the core of classical society. Using primary sources, we examine such questions as parental (and paternal) authority, the status of women, the role of private property, extended kinship, the physical structure of houses, the experience of childhood, etc. Comparisons are drawn with other societies, including our own.

CLAS 0210F. The Meaning of History in the Ancient World.

What is history for? Why do we study the history of the distant past, and what did the people living in the distant past think about their own history? This course investigates the way the histories of ancient Greece and Rome have been told, from ancient times to today, inspiring both contemporary methods of writing academic history and racialized constructions of 'Western Civilization'. We will read works of famous historians like Herodotus, Thucydides, Polybius, Livy, Sallust, and Tacitus, and examine what purposes they pursued in writing history; how later generations have used these narratives, and for what purposes; and how we can or should use them today. All readings in English. For first year students only.

CLAS 0210G. Themes in Ancient Science.

The ideas of ancient scientists are apt to seem both oddly familiar and utterly strange. Examines the major developments in ancient physics, biology, medicine, mathematics, technology, anthropology, and astronomy. Pays particular attention to the tensions between observation and theory, science and society, and the reappearance of ancient notions in modern beliefs.

CLAS 0210H. Thucydides: History and Cultural Context.

Thucydides' history of the Peloponnesian War is a magnificent and profound study of the growth and deterioration of Athenian imperialism. We shall examine his history against the background of concurrent intellectual achievement in drama, philosophy, and rhetoric.

CLAS 0210I. How Women were Seen.

Classical literature offers a wide array of representations of women, from loyal wives like Penelope to murderesses like Medea, from powerful queens like Dido to helpless slaves like the women of Troy after the destruction of their city. Through a selection of poems and prose texts, almost all composed by men, we shall attempt to gain insight into the place of women in the ancient Greek and Roman imagination.

CLAS 0210J. Homer - The 'Big Bang' of Western Literature?

The history of Western Literature seems to begin with a 'Big Bang', the *Iliad* and the *Odyssey*. A primary goal of this First Year Seminar will be to become thoroughly familiar with the many fascinating and highly influential characteristics of the two epics and their plots by means of close reading (in English translation). At the same time, we will examine the key factors which made this 'miraculous beginning' possible. This includes a question that has received much attention in recent scholarship: the influence of literature from the Middle East. Looking in the other direction, Homer's enormous and lasting influence on literature and art will also be discussed. Enrollment limited to 19 first year students.

CLAS 0210L. Who Owns the Classical Past?

This course offers a forum for informed discussion of a variety of difficult questions about access to the classical past, and its modern-day ownership and presentation, seen primarily from the perspective of material culture (archaeology, art, museum displays, etc.). Enrollment limited to 19 first year students.

CLAS 0210M. Seneca: A Philosopher in Politics.

The Stoic philosopher Seneca led a life full of contradictions: a millionaire and a politician, a man who preached the importance of mind over matter but begged for return from exile, and a philosopher compromised by his relationship with the emperor Nero, his pupil and his murderer. At least his end was heroic: ordered to commit suicide in 65 AD, he modeled his death on that of Socrates, discursing calmly about philosophy with his friends as the blood drained out of his veins. In this course we'll read broadly in his writings and try to come up with some answers about this complex and fascinating figure and the philosophy of living for which he stood.

CLAS 0210O. Sport in the Ancient Greek World.

Athletics and sports were as popular and significant in the ancient Greek world as they are today, and so offer an excellent introduction to its archaeology and history. This class will discuss the development of Greek athletics, the nature of individual events, the social implications of athletic professionalism, women and athletics, and the role of sport in Greek education.

CLAS 0210P. Dead and Loving It: The Cult of the Saints in the Eastern Mediterranean.

This course introduces students to the literature, history, and religious life of the late ancient and medieval Mediterranean through the lens of a highly significant socio-cultural phenomenon: the Christian cult of the saints. Students will have the opportunity to engage with a variety of primary source texts in translation, while examining the subject from the perspectives of anthropology, religious studies, material culture, history and literary studies, to approach this rich topic through an interdisciplinary framework. Enrollment limited to 19 first year students.

CLAS 0210S. The Age of Augustus.

The Age of Augustus (44 BCE – 14 CE) was a turning point for ancient Roman politics, art, literature, and religion. In this class, intended to be accessible to those with no background in ancient studies or ancient languages as well as to those with some prior knowledge, we will consider both the political changes that allowed one man to consolidate power and turn Rome from a republic to an empire and the cultural shifts that were taking place at the same time. The course is split equally between history and art/literature/culture. We will read Virgil's *Aeneid* and other major works of Latin literature in translation, consider some of the most canonical works of ancient art and architecture, and place both in the context of broader Roman culture and lived experience. How were the political and cultural changes connected?

CLAS 0210T. Travelers in Greece: from Pausanias to Shirley Valentine.

Ever since Pausanias the *Periegete* wrote his "Description of Greece" in the 2nd century CE, travelers have been inspired both to see the sights of Greece and to narrate their travels. The subject of this course is travel narratives about Greece, and our own journey will lead us to sites throughout the country. Yet we will also be using these narratives as launchpads for exploring the imaginary and imagined power of the Greek landscape: from its ancient status as seat of the gods to its modern appeal as a land of anonymity, relaxation and freedom for the wearied 'westerner'.

CLAS 0210Y. The Philosophy of Classical Indian Yoga.

This course will introduce the history of the ancient Indian texts and ideas that came to provide the philosophical foundations of the classical school of Indian Yoga. We will examine the oldest evidence for yoga in the ancient texts of the Vedas, the Jainas, and the Buddhists. We will watch it take clear shape in the Upanishads and in texts of the Mahābhārata, especially the Bhagavad Gītā. We will conclude the course by reading the classical exposition of Indian Yoga, Patañjali's *Yogasūtras*. This course is a philosophy course, not an introduction to the practice of yoga.

CLAS 0220. Horror in the Ancient and Modern World.

When are little kids creepy? Why are we afraid of clowns? How does culture shape what we find scary? In this course we will analyze literature from ancient Greece and Rome and compare it to modern horror films and short stories in an attempt to answer these questions. Topics will include monsters, witches, and possession. We will cover themes like gender, death, family, and nature.

Class will be primarily discussion-based, with regular writing feedback sessions. No Classics background necessary. WRIT designated. Note that we will be reading, watching, and discussing scenes, images, and concepts that may be disturbing. Content warnings provided.

CLAS 0280. Latin in English/Latinate English.

The influence of Latin not only on the English vocabulary but on English style. Topics include: word building from Latin (and some Greek), Latin words and phrases in English, English lexicography, translations into and from Latin, euphuism, the revolt against Latin elements (Saxonism). Students write essays exemplifying these types of writing.

CLAS 0300. Animals in the Greco-Roman World.

Animals are an important part of any culture. This is especially true for the civilizations of the ancient world, which used animals not only for food and companionship but also for labor power, medicine and entertainment. In this class, we will explore the role of animals in the civilizations of the Greco-Roman world, looking at both practical uses and literary or artistic portrayals. We will focus on ancient beliefs about animals that now seem strange to us (kneeless elephants, self-castrating beavers, venomous mice, etc.), and we will try to explain how those beliefs came to be so widely held.

CLAS 0310. Social Welfare in the Ancient Greek City.

What inequalities existed in the ancient Greek city? This course seeks to identify the different treatment of the inhabitants of the Greek city (polis) and the degree to which the city sought to support the disadvantaged by the redistribution of wealth. Ancient Greek communities taxed activity and property, gathered revenue, and redistributed wealth within the community. The wealthy were often liable to redirect part of the wealth to the community. How well did the redistributive economy of the Greek city work? Who were the winners? Who were the losers? What conclusions can we draw about well-being in the Greek polis?

CLAS 0310R. Revolutionary Classics (or, the classical origins of your Brown education).

When Brown University was founded in 1764 the curriculum was based on classical texts. In early America, the classics of Greek and Roman antiquity – read in the original Greek and Latin – were the foundation of a gentleman's education. This course will explore early ideas and structures of higher learning in America from the springboard of those classical texts. We will read a sizable portion of Brown's earliest curriculum (in English translation), but just as importantly we will seek to set that curriculum in the context of early American intellectual history, from roughly the Colonial to the Antebellum Period.

CLAS 0311. Juno: The Original Diva.

Juno was the queen supreme of Rome's gods, the wife of philandering Jupiter, and the mother of Mars, god of war. It was Queen Juno who guaranteed the constant imperial triumph of Rome --a ruthless conqueror of nations-- and who safeguarded and preserved both marriage and Rome's Republic. This course explores constructions of and attitudes towards divinity, gender, war, conquest, and family. Case studies include the destruction and religious plundering of both Etruscan Veii and Hannibal's Carthage, from the perspectives of both conqueror and conquered. Interdisciplinary in nature, course materials will include literature, art, architecture, archaeology, and comparative religious studies.

CLAS 0320. 21st century Classics.

The changing face of Classics, the study of Greek and Roman culture and literatures, and their receptions, has never been more turbulent than in the early 21st century. Why do we study these cultures, and what do they mean to us? Who is us? This course grapples with these questions of relevance and has been designed with input from Brown undergraduate and graduate students to try to bridge the multiple divides that can separate those who are already engaged in Classical studies from the majority who may never have thought about studying these cultures. This introductory course considers: literature, art, fine arts, history, and culture; embraces historiography and ideology, critical race theory and meets head on the exclusive past with which Classics has been associated.

CLAS 0330. The Odyssey in Literature and Film (COLT 0710Q).

Interested students must register for COLT 0710Q.

CLAS 0350. Ancient Philosophy (PHIL 0350).

Interested students must register for PHIL 0350.

CLAS 0360. Race and Ethnicity in the Ancient Mediterranean.

Were the Greeks and the Romans racist? How were identities constructed in the ancient Mediterranean world? Did the concepts of "race" and "ethnicity" even exist in antiquity? We will explore these questions through the art, archaeology, and literature of the ancient Mediterranean from Homeric times to the end of the Roman Empire. We will also analyze how the perceptions of race and ethnicity in antiquity have shaped conceptions of identity in more modern eras, especially how they contributed to and authorized violent societal structures, such as slavery, colonization, imperialism, and nationalism.

CLAS 0400. Ancient Comedy and its Influence.

This course examines the origins and developments of comedy in ancient Greece (early iambic poetry, Aristophanes, Menander), its later offshoots in Rome (Plautus, Terence), England (Shakespeare), and the continued influence these ancient forms have on comedy today. Secondary readings include ancient and modern thoughts on humor and laughter, and writings on the historical contexts in which these plays were produced.

CLAS 0410. Horror in the Ancient and Modern Worlds.

When are little kids creepy? Why are we afraid of clowns? What makes a story "horror" and how does culture shape what we find scary? In this course we will analyze works of literature from ancient Greece and Rome and compare them with modern horror films and short stories in an attempt to answer these questions. Topics will include monsters, witches, and possession. We will cover themes like gender, death, family, and the relationship between humans and nature.

The class will be primarily discussion-based, with writing feedback sessions throughout the term. No Classics background necessary. WRIT designated. Students should be aware that we will be reading, watching, and discussing scenes, images, and concepts that may be disturbing. Content warnings will be provided on a class-by-class basis.

CLAS 0450. Philo of Alexandria and His World.

Philo, a Hellenized Jew, lived in Alexandria at the moment when Egypt saw the last of the Ptolemies (Cleopatra) and became a province of Rome. Philo developed, for the first time, a sophisticated allegorical interpretation of the Bible (which he read in Greek), that became the basis of Christian exegesis for centuries to come. He led a mission to Rome to defend the Jewish population of Alexandria at a time of conflict with the Greeks. We will read a variety of his works and situate them in the context of Jewish and Classical thought and the world of emerging Christianity. We will discuss issues such as the conjunction and clashes of Jewish and Greek cultures with the power of the Roman Empire, and examine different positions regarding politics, citizenship, the role of the individual in society, the value of human life, and more. Each meeting will consist of a mixture of lecture by the instructor and open discussion. Be ready to bring up questions and/or comments in class. This is a WRIT course and is open to all undergraduate students.

CLAS 0500. Virgil, Augustus, and Rome.

Examines, in translation, the three masterpieces of Virgil, central poet of the golden age of Latin literature. In particular, considers his epic, the *Aeneid*, against the background of the Rome of the emperor Augustus. Subjects for discussion include the relation of poetry and power, the connection between the imagination and historical reality, and the tension between intellectual freedom and the constraints of society.

CLAS 0520. Religion and Magic in Ancient Greece.

Examines the sacred or supernatural realm that pervaded ancient Greek culture, considering both public and private practices. Topics include belief in the gods; aspects of polytheism; sacrifice; pollution; athletic and civic festivals; oracles; mystery cults; death and afterlife; hero cults; religion and gender; curses, spells, and charms; ancient atheism and agnosticism.

CLAS 0529. The Roman Army in Peace and War.

The Roman legionary is often seen as synonymous with the power of the Roman Empire: heavily armored, spear and shield in hand, marching unrelentingly forward against enemies. But the military was more than a menacing State institution, and this class shifts the focus to the lives of the men who filled the ranks, exploring their languages, religions, clothing, equipment, and fighting styles. We will draw upon evidence of all sorts, including archaeological material from fortifications and battlefields, inscriptions on tombstones and other monuments, and iconographic depictions.

CLAS 0530. Ancient Science, Medicine and Magic.

What are the origins of scientific thought? How does it differ from other systems of knowledge, such as magic or myth? In this course, we will examine the cultural and intellectual history of science, medicine and magic in the Ancient World. We will delve into such topics as cosmology, zoology, geography, astrology, Hippocratic medicine, and scientific methodology. Discover how Thales predicted an eclipse, why Aristotle was afraid of seals, and how the Stoics justified their belief in divination. All students welcome.

CLAS 0560. War and Society in the Ancient World.

In a broad survey of ancient societies (from Egypt and Mesopotamia to late antiquity), but with a strong focus on the Greco-Roman world, this course examines the sociology of war in premodern societies: we investigate how in each case warfare and military organization interacted with social, economic, and political structures and how each society dealt with the challenges, gains, and costs of war. Readings in English.

CLAS 0580. Monsters and Marvels: Conceptualizing Difference in the Ancient Mediterranean.

From the Cyclops of Homeric epic to human-animal hybrids to the demons plaguing Saint Anthony in the desert, monsters and marvels haunt the texts of the ancient Mediterranean. This course will explore the thematics of monstrosity across a broad spectrum of literary production spanning roughly two millennia (ca. 1200 BCE-700 CE) to address the fundamental question of how societies determine categories such as the "real" and the "fantastic" and to what purpose such distinctions are made. We will pose questions concerning definitions of monstrosity, the creation of monsters, and their function in defining notions both of community and the individual. Class time will be centered around discussion, and students will learn to analyze ancient sources in their original contexts and to apply the concepts we explore to broader questions of identity formation.

CLAS 0600. The Literary Worlds of Late Antiquity.

We study the manifold literary forms championed in those centuries when Greco-Roman literature was transformed by social, spiritual, and creative forces perhaps unparalleled in the western tradition. Genres to be studied include: history (Gregory of Tours), consolation (Boethius), lyric (Ausonius and Fortunatus), hymnody (Prudentius), epic (Juvencus), apology (Tertullian), the philosophic dialogue (Augustine), the cento (Proba), among others. Close attention will be paid to contextualizing these authors and genres in the Greco-Roman tradition and in their late ancient configurations.

CLAS 0620. Greek Tragedy.

An investigation of many of the surviving plays of the Greek tragedians Aeschylus, Sophocles, and Euripides. Considers the diverse aspects of ancient drama: the context, both religious and sociopolitical; issues of theatrical production, the poetic texture of the plays; and the influence of classical drama on later drama and western thought. Additional readings may include Aristophanes' *Frogs* and *Thesmophoriazousae* and selections from Aristotle's *Poetics*, the earliest criticism of Greek tragedy.

CLAS 0650. War and Society in Ancient Greece.

21st century society can no longer study the worlds of ancient Greece and Rome acritically. Today's culture can be very accepting about the "culture of war" that was such a dominant aspect of the apogee of ancient Greek 'civilization': the 300 Spartans, the Athenian Empire, and the conquest of Persia, are all moments to which some turn in admiration. The exploitation of the martial culture today is a two-edged sword at least. This course explores the realities and cultures of war and warfare in ancient Greece. We will cover a variety of topics including Homer and warfare, Sparta, Persia, Athens' Empire, Philip II and Alexander, violence in the Greek city, martial culture, women and warfare, siege warfare, naval power, memory, and aspects of their legacies in the 21st century. Materials will be provided via the course Canvas site.

CLAS 0660. The World of Byzantium.

In this course we shall explore the world of Byzantium from the founding of New Rome to Ottoman times. Caught between the East and West, the culture of Byzantium inherited the ancient worlds of Greece, Rome, and Jerusalem, nurturing many a modern ideology, conflict, and identity. We explore Byzantium through its history, texts, and art. Surveys of representative periods in Byzantine history will accompany topical investigation of themes including: the foundation and history of Constantinople itself, Iconoclasm, the Crusades, medieval Christianity and Islam, Byzantine court life, concepts of gender, self, and sexuality, book culture and revivals of learning, the development of Byzantine architecture, the Palaiologan "Renaissance," and the continued influence of and attitudes towards the Byzantine inheritance in both Western and Eastern Europe after 1453.

CLAS 0750. Gender and Sexuality in Classical Antiquity.

This course will analyze women in classical Greek and Roman society and literature. Using gender as a critical tool, we will examine Greek and Roman women in various sources, from Homeric epics and public inscriptions to scathing Roman satire. These sources show how the Greeks and Romans defined normative gender categories and how they used these categories as a vehicle for social and political criticism. We will cover both social history and gender discourse, focusing especially on the body and sexuality as a site for power. The limitations imposed by the source materials, both literary and non-literary, will be a topic of discussion throughout, as well as the relation of these ideas to contemporary constructions of gender.

CLAS 0760. Ancient Utopias/Imaginary Places.

Literary depictions of idealized imaginary societies already had a long tradition when Thomas More produced his *Utopia* in 1516. This course explores the ancient Greco-Roman utopian tradition, examining both literary depictions of mythological or fantastic utopias (or dystopias), including representations of societies remote in time ("the Golden Age") or place (e.g., Homer's Phaeacia), and works that critique contemporary values or attempt to describe idealized possible societies (e.g., Plato's *Republic*). These Greco-Roman depictions in turn provided the foundation for the utopian (and dystopian) tradition as it continued through the Medieval age and into modernity, and we will also follow that tradition.

CLAS 0765. Witches and Vixens: Nasty Women in Ancient Greece and Rome.

What do video vixens and Foxy Brown have in common with "Witchy Woman"? These modern metaphors continue a long history of equating female sexual allure with dangers found in/or capable of subverting Nature. This course will use contemporary methodologies to make sense of similar descriptions of women found in Greco-Roman literature: how do the Greeks and Romans express a concern about gender, ethnicity, class, and/or politics using these metaphors? How do these same categories help distinguish what is "natural" from "unnatural"? To what end does this discourse about women and nature affect law, public space, or other aspects of "civilization"?

CLAS 0770. The Tradition of the Philosophical Dialogue.

This course will examine the Greco-Roman tradition of the philosophical dialogue, from its Socratic origins through its adoption by early Christian authors. As we read dialogues by major practitioners including Plato, Cicero, Plutarch and Augustine, we will consider formal features of the dialogue, including setting, characterization, and authorial self-representation; and we will compare treatments of common subjects and themes, including Socrates, the pursuit of truth, good government, and the happy life. We will also discuss issues of performance and the philosophical, pedagogical, and therapeutic advantages of dialogue. All texts will be read in English.

CLAS 0771. Dreaming in the Ancient World.

Dreaming has always been part of our everyday experience. But did the Greeks and Romans dream any differently than we do? How and why did they extract meaning from their nightmares and daydreams? In this course, we will explore the cultural history of dreams and dream interpretation, a curious practice that stands at a fascinating intersection in the history of ideas between psychology, religion, and medicine. Readings (all in translation) include Homer, Herodotus, Plato, Egyptian magical papyri, Babylonian dream diaries, Cicero, Freud, and more. No previous knowledge of the Ancient World required.

CLAS 0780. From Antiquity to the Humanities (via Humanism) and the History of Ideas.

This course looks at the origins of several subjects in the Humanities in order to explain, question, and sometimes challenge the ways in which those subjects are studied or understood today. Consideration of sources for the Humanities today – in the educational practices of classical antiquity, in the 'humanism' of the Renaissance and in the 17th-20th centuries– will throw new light on ideas and categories which are central to western education. Topics include grammar/language, persuasive argument, scholarship; theory/practice of history, literature, poetry, fiction, fantasy, and the novel; relationship between words and images, and connections between studying the Humanities and being human.

CLAS 0800. Religious and Philosophical Thought in Ancient India.

The historical development of the main themes of ancient Indian religious and philosophical thought. Part I: The rise of monism in tension with polytheism, the efficacy of Vedic words and Vedic rites, and early Brahminic cosmology and psychology. Part II: The rise of the non-Brahminic traditions (Jainas, Ājīvikas, and Buddhists) challenging Vedic revelation and everything based upon it (mainly the rites and authority of brahmins). Part III: The ensuing 'conversations' among the completing traditions, conversations that developed new world-views and new methods for effecting human well-being in the cosmos.

CLAS 0810. Film Classics: The Greeks on the Silver Screen (MGRK 0810).

Interested students must register for MGRK 0810.

CLAS 0810A. Alexander the Great and the Alexander Tradition.

This course focuses on a single historical figure, Alexander the Great, using him as a point of departure for exploring a wide range of problems and approaches that typify the field of Classical Studies. How knowledge of Alexander has been used and abused provides a fascinating case study in the formation and continuous reinterpretation of the western Classical tradition.

CLAS 0820. Epics of India.

An introduction to Indian epic literature with reading and analysis of one or more of India's grand and powerful epics, such as the *Mahabharata*, the *Rāmāyana*, the *Cilappadikaram*, and others.

CLAS 0850. Mythology of India.

Reviews major myths from religions of India in order to understand how the peoples of India imagined their relation to the divine world, to nature, and to other human beings. Considers connections between myths and religious practices, social structures, historical events, and psychological and aesthetic dimensions of Indian cultural life. Reading of mythic narratives will be accompanied by analysis from selected theoretical perspectives.

CLAS 0855. The Bhagavad Gītā.

This course will study and discuss the teachings of the Bhagavad Gītā in the context of its literary, theological, and philosophical origins in ancient India. We will read the text itself (in English, not Sanskrit), parts of the epic Mahābhārata in which the Gītā is situated, and collateral texts, such as Upanisads, Indian myths, Buddhist sermons, or even modern novels, that may shed light on why and how this text has exercised such far-reaching influence across the ages, inside India and beyond.

CLAS 0900. Greek Mythology.

This course is an introduction to Ancient Greek mythological traditions, as well as to the concept of 'myth' and its relevance and resonance today. Topics include the Olympian gods; 'culture heroes' (e.g. Heracles), Homer and the Trojan Cycle of myths; mythical traditions about the families of Oedipus and Agamemnon; etc. We will be reading ancient hymns, epics, and tragic dramas and other primary source material. Throughout the course, we will be considering questions of identity, migration, belonging, belief, and adaption. We will investigate myth's relationship with literature, visual culture, and religion. We will explore modern adaptations of and engagements with ancient mythology. We will try to come to grips with conceptions of divinity and the imagined relationship—and symbiosis—between gods and mortals.

CLAS 0920. Roman Mythology.

Introduction to Ancient Roman mythological traditions. Far from simply assimilating Greek myths and changing the names of divinities and heroes, the Romans were highly creative in their adaptation of myths from various other cultures. They had a rich store of myths and legends of their own, including dual foundation stories for Rome itself (Aeneas and the Trojans; Romulus and Remus) as well as mytho-historic tales of exemplary heroes and heroines (e.g. Horatius and Lucretia) whose exploits provided models for future Roman generations. Even obviously flesh-and-blood persons (e.g. Regulus, Hannibal, Caesar, Cleopatra) take on mythical status. We'll focus on the ancient material - literature, art, architecture, religious rituals - with a look as well at the rich reception of Roman mythology in later literature and art. We'll consider also the way the Romans themselves understood – and manipulated – their myths.

CLAS 0990. Karma and Free Will: The Self in Indian Philosophy.

Examination of the great Indian epic Mahabharata and related mythology to introduce the context for the most ancient speculations of the Rgveda and the subtle teacher-student dialogues about the self contained in the Bhagavadgita and Upanishads. We will also examine the more systematic Indian philosophical texts and note their resonance in ancient and modern European conceptions of self.

CLAS 0995. India's Classical Performing Arts.

South Asia is home to rich classical traditions in the performing arts – drama, dance, music – which continue into the present. These performative traditions are accompanied by theoretical analyses going back to the Nāṭyaśāstra attributed to the sage Bharata, (2nd c. BCE–6th c. CE). This course introduces students to these traditions and theories to allow for an informed appreciation of South Asia's classical arts. This course will include reading classical texts in translation and experiencing, analyzing, and discussing recorded performances. The final portion of the course will examine the influence of the classical arts on Bollywood film.

CLAS 1010. The Classical World in Film (MGRK 1010).

Interested students must register for MGRK 1010.

CLAS 1070. Narratives of Disability in Greek and Latin Literature.

What is disability? What makes someone disabled, or enabled, now and in the past? How was disability conceptualized in ancient Greek and Latin sources? How do ancient Mediterranean narratives of disability provide insights into disability histories, presents, and futures? What is the relationship between disability, society, politics, power, and oppression? In this course, we take an interdisciplinary approach to the question of how Greek and Latin writing represented complex ideas about embodiment, society, and community. Our course material traverses the intersections between critical disability studies, disability justice movements, ancient literature, and classical studies. We will work together to adapt the course experience to meet the access needs, interests, and unique wisdom of the particular community of students enrolled in the class.

CLAS 1110A. A History of Violence: Art and Injustice Through the Ages.

Artistic expression and violence have crossed paths often through the ages. A remarkable number of masterpieces from around the world tell stories of violence from myth and history, or react to systematic injustice through artistic expression. Stories of war, murder, gender-based violence, racism, colonialism, and many other types of force and coercion people have exercised over each other make up our histories and are documented through art. This course is a survey of the power and aesthetics of such narratives, from the Stone Age to contemporary art. We will learn about different art movements and individual works that address or depict violence. We will also learn about curatorial narratives around social justice issues and how museums are helping communities reckon with histories of violence.

CLAS 1120A. Dreams, Love and Confession.

The Middle Ages are notorious for their love of bizarre locales, hauntings, fear of demons, and superstitions. But the outlook of the medieval world also encouraged a love of hidden and of internal, spiritual space. This world-view attended to dreams, a complex anatomy of human love and confessions. In this course, we will examine the social and literary context of these three modes of communication in the classical and, especially, the medieval period. We will read classical and medieval poetry (Horace, Propertius, Ovid, Lucretius, Cambridge Songs, Alan de Lille, Bernardus Silvestris), late antique dream books (Aelius Aristides), medieval bestiaries and fables, vernacular Romances and lays, and the medieval confessional mode (Augustine, Guibert); we will also examine visual evidence, where possible.

CLAS 1120B. Epic Poetry from Homer to Lucan.

Traces the rich history and manifold varieties of the genre of epic poetry in the literatures of ancient Greece and Rome beginning with Homer's *Iliad* and *Odyssey* (VII c. B.C.) and ending with Lucan's *Civil War* (I. c. A.D.). Masterpieces such as Virgil's *Aeneid* and Ovid's *Metamorphoses* are included. Original sources read in translation.

CLAS 1120D. Myth and Origins of Science.

Examinations of various explanations of the origin of the cosmos, of human beings, and human institutions, with readings from literary, philosophical, and scientific texts. What constitutes a scientific explanation and in what respects ancient science was similar to and different from our own? Authors include Hesiod, Aeschylus, Plato, Aristotle, Hippocratic medical writings and the Presocratic fragments. Read in English translation.

CLAS 1120E. Slavery in the Ancient World.

Examines the institution of slavery in the ancient world, from Mesopotamia and the Near East to the great slave societies of classical Greece and (especially) imperial Rome; comparison of ancient and modern slave systems; modern views of ancient slavery from Adam Smith to Hume to Marx to M.I. Finley. Readings in English.

CLAS 1120G. The Idea of Self.

Literature gestures us toward a certain kind of knowledge not quite psychological, not quite philosophical. We read widely in the classical and medieval traditions in order to gauge the peculiar nature of what this knowledge tells us about experience and the ways in which expressions of selfhood abide or are changed over time. Authors include but are not limited to Sappho, Pindar, Catullus, Horace, Augustine, and Fortunatus.

CLAS 1120H. The Invention of Literature: Literary Theory from Antiquity to the Renaissance.

Literature is a recent concept. We study the prehistory of its invention in Antiquity and the Middle Ages focusing on ideas about authorship, fiction, and practices of reading. The course is based on close reading of primary texts from classical Greco-roman and medieval Byzantine, Latin, and Arabic authors. Beyond theoretical discussions, primary readings include contemporary premodern literary texts.

CLAS 1120J. Essaying the Essay.

This course explores the personal essay as a vehicle for self-expression. Examining self-reflective essays from a variety of cultures and time periods—ancient, modern, East, and West—we trace the theme of friends as dialectical others against whom individuals define themselves. Our investigations will lead us to a provisional definition of the essay genre, keeping in mind its unique placement between fiction and non-fiction, and its relationship with non-Western forms such as the *suibi* and the *xiaopin wen*. First year students need instructor permission to enroll.

CLAS 1120K. Skeptical Traditions East and West.

The skeptical project begins and ends in doubt and the refusal to affirm any belief dogmatically. While these ideas are most frequently associated with the writings of Cicero and Sextus Empiricus, they also appear in early Buddhist and Daoist texts. The course examines several strands of skeptical philosophy as they appear in writings from ancient Greece, Rome, China, and India. It further explores literary enactments, appropriations, and critiques of skepticism evident in the skeptical revival of the European Renaissance and in Zen kōans.

CLAS 1120L. Archaeology of Feasting.

No description available.

CLAS 1120M. Plato.

A close reading of Plato's major dialogues from a philosophical perspective. Topics may include his ethics, politics, metaphysics, epistemology, philosophy of mind, philosophy of language, or aesthetics. Readings are from original sources (in translation) and contemporary secondary literature. Students wishing to read the texts in the original Greek should make arrangements with the instructor.

CLAS 1120N. Games and Spectacles of Ancient Greece and Rome.

Will examine games and spectacles of the ancient Greek and Roman worlds, from the early Olympic contests to the popular chariot races of late antiquity. By using a variety of sources, including archaeological evidence, we will explore not only the historical development of sports in the classical world, but also its ongoing political, social and cultural importance. By seeking to understand both participants and spectators, we also hope to connect the significance of games to other facets of Greco-Roman society, including women and religion. We will not only discuss the limitations of the primary sources, but also make relevant comparisons to the role of sports in contemporary society.

CLAS 1120P. Experiencing the Roman Empire: Life in the Roman Provinces.

This course explores the experiences of people living in the Roman Empire through archaeological and textual evidence, seeking to understand how Roman imperialism shaped the daily life of its residents, from Spain to Mesopotamia and from Scotland to Egypt. We will address themes such as imperialism, identity, globalization, and Romanization as we investigate provincial urbanism, economies, rural settlements, the military, art, and religion from a number of different case studies in order to understand how the Roman Empire both shaped and was shaped by those living within its territory.

CLAS 1120Q. Seven Wonders of the Ancient World.

"Everyone has heard of the Seven Wonders of the World," wrote Philo of Byzantium two millennia ago, and it's still true today. But what's a "Wonder"? And why seven of them? Why make such a list anyway, then or now? This class will use ancient texts, explorers' accounts, and archaeological investigations to travel through several thousand years of history in the Mediterranean and Near Eastern world. We will consider how the Seven Wonders captured past imaginations; the aura of technological achievements; the intersections of history, memory, invention, and myth; and how members of one culture view another culture's monuments.

CLAS 1120R. Social Conflict and Political Factions in the Roman Republic.

Traces the evolution of social conflict and political factions at Rome from the foundation to the dissolution of the Republic (C5-C1 BCE). Roman armies secured a vast empire of territory, raw materials, and manpower governed by the senate and the people of Rome itself. The influx of resources, however, destabilized Rome's constitution and upset political power balances at the city of Rome. How did the Romans—elites and masses—compete amongst themselves for the bounty of empire abroad and confront their own internal conflicts at home? Was concord possible, or were the developments of empire inconsistent with the constitution of the Republic?

CLAS 1120S. Greeks and 'Others' in the Mediterranean.

Activities of Greek adventurers, traders, settlers, and mercenaries—embodied in Plato's famous dictum 'frogs around the pond'—are well-known and the subject of much debate in Classics and Mediterranean Archaeology. This course examines the varied encounters between the Greeks and groups local to different parts of the Mediterranean, usually subsumed under the often unhelpful umbrella term 'others'. In this course, we will examine the most iconic of these encounters, and think how they shaped all actors involved. We will do so by referencing and questioning archaeological, iconographic, and textual evidence. We will also think about how different types of mobility forged connectivity and interregional networks, shaped exchange and trade, and enabled flow of ideas. We will also investigate how intercultural contact affected people's lives and how it changed their views of themselves and others.

CLAS 1120T. Age of Augustus: Topography, Architecture, and Politics.

Augustus Caesar boasted that he had found Rome a city in brick, but left it in marble. This course explores the transformation of Rome from an unadorned village to the capital of an empire. Was Rome's first emperor trying to fashion himself a Hellenistic monarch on the model of Alexander and his successors? Was he simply operating within republican traditions, which had been established through centuries of aristocratic competition at Rome? Our source materials will include ancient works of art and architecture, literary accounts, maps, and critical urban theory.

CLAS 1120U. The American Presidents and the Western Tradition.

We are accustomed to engaging the American presidency as a public office best approached through the prism of government or political science, but this course studies the ways in which the presidents in thought and action are part of a larger continuum of humanistic expression in the western tradition. It is organized around five categories: memory, language, consolation, farewell, and self-reflection. Our work involves reading and viewing/listening to various materials, including videos and original documents. The words we study, both by and about presidents, will be compared to various masterworks of Greco-Roman antiquity and the western Middle Ages.

CLAS 1120V. The Age of Constantine: The Roman Empire in Transition.

The reign of Constantine the Great (306-337) and his dynasty heralded a period of remarkable/rapid change in the Roman Empire. Christianity became the sole imperially sponsored religion; the split between Western and Eastern halves of the Empire gradually became permanent and irrevocable; consequently new ways of thinking and writing about the Roman world, past and future, developed. Focusing on generous selections of primary source material in translation and current scholarship, we will explore the history, literature, and culture of Constantinian Empire in order to highlight the role of Constantine and his successors in the evolution of the late Roman Mediterranean.

CLAS 1120W. Aristotle.

A close study of Aristotle's major works: his method, natural philosophy, psychology, metaphysics, with main emphasis on his ethics. Readings from original sources (in translation) and some contemporary secondary material. The class will combine lectures and discussion and is a writing course.

CLAS 1120X. Ovid's Metamorphoses.

Ovid's epic Metamorphoses, a prime source for ancient mythology from the Renaissance to Disney films, has often been received as a delightful compendium of older myths retold with urbane wit; yet its blithe treatment of horrific mythological events can also unsettle, as when its place in the Columbia University curriculum recently prompted a discussion of "trigger warnings." We will read it in English translation, exploring its capacity to inspire disparate responses. What must we suppress to find the Metamorphoses pleasant or menacing? How does it create its tensions? How do they get projected onto a later culture's assumptions?

CLAS 1121C. Cicero in New Spain.

This course will explore the reception in colonial Mexico of Cicero's oration 'Pro Archia poeta' ("In defense of Archia the Poet"), with particular emphasis on its use in the colonial schools. Some of the related topics which will be tackled are: the role of education in building society, linguistic and national identity, the purpose and power of literature, the possible existence of an intrinsic value of poetry. Class activity will involve reading the oration in its entirety and in English; upon request, extracts in the original Latin can also be included. In parallel, we will examine handwritten primary sources from early modern Mexico, for which a basic training in Latin palaeography will be offered to the students.

CLAS 1130. The Fragility of Life in Ancient Greece.

This interdisciplinary course explores the fragility of life in the Ancient Greek city-state from multiple perspectives: those of state-building, the population stress in the city, the capacity for the family to maintain and sustain itself, to those of the individual: man, woman, and child, whose life experiences left them vulnerable to disease and economic hardship. This course explores Ancient Greek socio-economic history addressing health, disease, fertility and childbirth, migration, mobility, and population and family 'management' as well as topics fundamental to historical demography (mortality, birth rates, and growth) over the longue durée approach (Archaic through Roman Imperial eras).

CLAS 1140. Classical Philosophy of India.

This course introduces the classical traditions of philosophy in India. After presenting a general overview of this discourse and its basic Brahminic, Buddhist, and Jain branches, the course will examine the ideas and debates between various schools on issues of epistemology (the nature of perception, inference, testimony, etc), metaphysics (the nature of the self and ultimate reality, the question of the reality of the world, etc), and ethics (the theory of karma, non-violence and asceticism, and devotion).

CLAS 1145. Goddesses and Women Gurus in South Asian Religious Traditions.

Indian Religions have featured some prominent female figures: fierce goddesses, domestic goddesses, legendary women sages, and historical women poets. These figures can be used to empower female authority and agency, but can also be used to construct normative gender roles that limit societally accepted agency for women. This course will explore the canonical narratives of these prominent female figures and the reception of these narratives in various historical contexts. It will also examine the contemporary reception of these figures, looking both at those who champion the progressive possibilities they represent as well as feminist and subaltern critiques.

CLAS 1160. Love and Devotion, Power and Poverty: India's Literary Classics.

This course will introduce, in English translations, the most powerful examples of the literature of India. The course will introduce students to India's unparalleled literary richness by reading selections of the best poetry, drama, and narrative literature of Indian civilization from any of its many languages (Sanskrit, Tamil, Hindi, Bengali, etc., and English), ancient and modern.

CLAS 1175. High Crimes and Misdemeanors: Impeachment trials and their Rhetoric.

This course explores the history of impeachment trials in Athens, Britain, and the USA. We study some of the early deployments of impeachment (eisangelia in Greek) at Athens, its brief flourish in fourteenth century Britain, and its flowering in the seventeenth and eighteenth centuries. Subsequently we turn to the impeachment of Warren Hastings in 1788-1795 and then to the earliest impeachments in the US. We keep in mind the different time periods and governmental structures (direct democracy, monarchy with parliament, representative democracy) and investigate how legal processes--and their rhetoric--function in each of them.

CLAS 1179. Reception of Latin in Americas.

This course will explore the reception in colonial Mexico of the Ovidian Latin poetry centred on the theme of exile, tackling also related topics such as displacement, nostalgia, geographical discoveries, the encounter with the Other, barbarity, linguistic and national identity. Class activity will involve the close reading of a selection of pieces, literary and not, which we shall intersect with a survey of the historical circumstances that shaped the three colonial centuries of Mexico (from the 16th to the 19th). Departing from this core, we shall follow the several lines of our enquiry along their path from the Old to the New World (and back to the Old) — to eventually end up exploring the possibility that literature itself (as much as other arts) might serve as a viable means to find some comfort for the exilic distress.

CLAS 1181. Encountering Monsters in Comparative Literature (COLT 1815U).

Interested students must register for COLT 1815U.

CLAS 1202. Formation of the Classical Heritage Greeks, Romans, Jews, Christians, and Muslims.

Explores essential social, cultural, and religious foundation blocks of Western Civilization, 400 BCE to 800 CE. We will study how ancient Western individuals and societies confronted oppression and/or dramatic change and developed intellectual and spiritual strategies still in use today. The organizing theme is the eternal struggle between universalism and particularism, including: Greek elitism vs. humanism; Roman imperialism vs. inclusion; Jewish assimilation vs. orthodoxy; Christian fellowship vs. exclusion, and Islamic transcendence vs. imminence. Students should be prepared to examine religious thought from a secular point of view. There is no prerequisite or assumed knowledge of the period.

CLAS 1202A. Formation of the Classical Heritage: Greeks, Romans, Jews, Christians, and Muslims (HIST 1202).

Interested students must register for HIST 1202.

CLAS 1205A. The Long Fall of the Roman Empire (HIST 1205)..

Interested students must register for HIST 1205.

CLAS 1210. Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC.

From the end of the Bronze Age to the end of the Persian Wars is a period of considerable change in the Mediterranean and beyond. The Greek polis challenges the powers of the ancient Near East. Over seven centuries we meet Greek writing, Homeric epic, and the first historian (Herodotus). But the Greek world lay on the edges of the Ancient Near East and this course tries to offer a more balanced approach than the typically Hellenocentric perspective of the standard textbooks. CLAS 1210 addresses cultural, political, social, and economic histories. Literary, epigraphical and archaeological cultures provide the evidence. There are no written exams for this course. No previous knowledge of the ancient world is required.

CLAS 1220. The Fall of Empires and Rise of Kings: Greek History 478 to 323 BC.

The Greek world was transformed in less than 200 years. The rise and fall of Empires (Athens and Persia) and metamorphosis of Macedon into a supreme power under Philip II and Alexander the Great provide the headlines. The course covers an iconic period of history, and explores life-changing events that affected the people of the eastern Mediterranean and the topics that allow us to understand aspects of life and culture of the peoples of the eastern Mediterranean. and through these transformations, offers insights into the common pressures that communities confronted. No prior knowledge of ancient history is required.

CLAS 1230. The Persian Empire and Achaemenid Culture.

CLAS1230 explores the Persian Empire (6th to 4th centuries BCE), its beginnings, development, historiography. We will incorporate Achaemenid culture, and its reception, in a broad spatial and temporal context. The course approaches the ancient world from the perspective of 'the Other'. Taking a Perso-centric view, the course incorporates the multi-disciplinary fields associated with Achaemenid studies since the 1980s. Primary source documents, maps, and readings, will be assembled to provide students with visual, material, and written evidence from the regions of the Persian Empire. Central to this course will be our own engagement with difference/different cultures, and their presentation(s). The majority of the materials will be delivered via the Canvas site. No prior knowledge of antiquity is assumed.

CLAS 1240. Modern Greece in the World (MGRK 1240).

Interested students must register for MGRK 1240.

CLAS 1260. The Roman Reception of Greek Literature.

Reading a number of shorter poems and excerpts in both Greek and Latin, paying particular attention to how Roman writers respond to Greek examples. Readings include Catullus and Sappho, Horace and Pindar, Virgil and Theocritus, and others, with a view to the interactions of meter, genre, and language.

CLAS 1310. Roman History I: The Rise and Fall of an Imperial Republic.

The social and political history of Ancient Rome from its origins to the death of Augustus in 14 CE. Focuses on the social conflicts of the early Republic; the conquest of the Mediterranean and its repercussions; the breakdown of the Republic and the establishment of monarchy. Readings emphasize ancient sources in translation.

CLAS 1320. Roman History II: The Roman Empire and Its Impact.

The social and political history of the Roman Empire (14-565 CE). Focuses on expansion, administration, and Romanization of the empire; crisis of the 3rd century; militarization of society and monarchy; the struggle between paganism and Christianity; the end of the Empire in the West. Special attention given to the role of women, slaves, law, and historiography. Ancient sources in translation.

CLAS 1320X. Roman History II: The Empire (HIST 1201B).

Interested students must register for HIST 1201B.

CLAS 1330. Roman Religion.

Explores the religions of Rome, from the animism of King Numa to the triumph of Christianity. Topics include: concepts of religion and the sacred; sacred law; ritual space and the function of ritual; festivals; divination; magistrates and priests; the imperial cult; death and the afterlife; mystery cults; astrology and magic.

CLAS 1350. Comparative Grammar of Greek and Latin I.

An introduction to the histories of the Greek and Latin languages within the frame of their Indo-European antecedents. Addresses the sound systems of the two languages and applies our knowledge of them to a consideration of the semantics (etymology) of words in the languages. For those who know Greek and Latin well, though no specific prerequisites can be listed. Students of classics and linguistics are the main audiences addressed.

CLAS 1420. Death in the West.

This course explores the history of western attitudes toward death from their origins in the ancient Near East and classical antiquity through the medieval and early modern periods to the modern era. The aim is to trace the evolution of western deathways against the backdrop of an anthropologically and sociologically informed understanding of this universal human experience. Among the issues to be considered are the needs of both individuals and society in proper treatment of the dead; in what ways funerary customs reflect broader cultural and historical developments; and what the implications are of recent and contemporary trends in western funerary practices.

CLAS 1750A. Caesar's Failure and Augustus' Success.

Both Caesar and Augustus reached sole power in the Roman empire by winning civil wars. Both initiated broad reform programs, but Caesar was soon assassinated, while Augustus lived for another 45 years. We will analyze their reforms and examine the causes and historical significance of Caesar's failure and Augustus's success.

CLAS 1750B. Justice.

An inquiry into notions and definitions of justice. Plato's *Republic* is the basic reading. Considers a wide variety of novels, poems, and plays as examples.

CLAS 1750C. Undergraduate Seminar: Emotions.

Were the emotions of the ancient Greeks and Romans identical to our own? When a Greek felt pity, or a Roman was angry, were the causes and the manifestations the same as ours? This senior seminar examines how Greeks and Romans defined the emotions, and checks their descriptions against literary texts. One year of either Greek or Latin required.

CLAS 1750D. Philosophy of Socrates.

In this class we will read and discuss various ancient portraits of Socrates (in Aristophanes' *Clouds*, Plato's *Apology* and *Symposium*, and Xenophon's *Apology*) and several Platonic dialogues representing Socrates in action discussing moral questions, including the *Crito*, *Laches*, *Charmides*, *Lesser Hippias*, *Protagoras*, and *Gorgias*. We will focus on questions about the historical Socrates (as distinct from the portraits), his avowals of ignorance, irony, methods of argument, and interest in definition, as well as the moral questions explored in the dialogues. All readings will be in English translation.

CLAS 1750E. Writing History in the Ancient World.

The Greeks and Romans created the western tradition of historiography as a genre of literature and historical reflection. The seminar will focus on the great historians from Herodotus to Tacitus and examine what purpose they pursued in writing history; investigate the origins of historical writing, and look at forms of historical reflection and writing in other ancient civilizations.

CLAS 1750H. Heroes and Heroism in Graeco - Roman Antiquity and Beyond.

Examines the concept of hero, an ancient Greek word, which had a wide variety of meanings and was employed to designate a series of diverse characters of myth. We will trace the evolution of this idea through a detailed analysis of its uses in Greek and Roman texts, and also contrast its ancient sense with present day conceptions of the hero and heroism. All readings will be in English. The course is open to all undergraduates, but preference will be given to juniors and seniors. Enrollment limited to 25.

CLAS 1750I. Highways and Byways in Antiquity.

This seminar will explore the construction and development of pathways of communication and contact in the ancient (primarily Mediterranean) world. Emphasis will be placed upon major routes (highways) and the state-level powers that instituted and controlled them, but also on more modest roads and paths and the communities they promoted. The scope of the course is thus quite extensive, embracing both terrestrial and maritime roadways, and all forms of activity that took place on and along them (trade, pilgrimage, 'strip development', imperial postal and spy systems, ports, etc.). Some previous study of antiquity is desirable. Please note: CLAS 1750I is being team-taught by Susan Alcock and John Bodel.

CLAS 1750J. Ancient Revenge Dramas.

We shall study revenge tragedies composed in ancient Athens and Rome and also some composed during the Renaissance. We shall examine formal characteristics of the tragedies as well as the conceptual constellations (historical, political, social, theatrical, legal) under which they operated for the three periods; an important question will be whether and how this medium permits us to understand how law and the notion of justice operates in a given society.

CLAS 1750K. Madwomen and Lovers.

Ancient Greeks and Romans were fascinated by the figure of the distressed mythological heroine, and from the Classical period onward their literature showcases women tormented by love (often for a forbidden object), but able to give voice to their desires and dilemmas. We will look at examples from different types of ancient literature (especially drama and epic), focusing on the blend of victimization and self-expression in their portrayal, and on their sometimes surprising role in the literature of love, mythology, and national history.

CLAS 1750L. Erotic Desire in the Premodern Mediterranean.

Erotic desire may be a universal human phenomenon. How we explain, depict, express, or experience desire is, however, not a universal, uniform matter. The premodern Mediterranean (from roughly the fifth century BCE to the fifteenth century CE) gives us a variety of forms of sexual experience and expression. We will study the history of these forms through texts, images, and objects: from Platonic love or eros to Roman tales of romance, from Judeo-Christian mysticism to Islamic literature, from sexual diets to erotic amulets. Enrollment limited to 25.

CLAS 1750N. Marriage in the Ancient World.

Marriage is a historical phenomenon: it assumes various forms and has distinct meanings in different societies, even those that have been regarded as the fountainhead of Western values. This course (a seminar addressed in particular to upper-level undergraduates) investigates this important social institution in ancient Greece and Rome, using a variety of primary documents (literary, historical, epigraphical, etc.) and taking account of modern approaches to the study of marriage, including anthropological, sociological and psychological theories. All sources will be read in English.

CLAS 1750P. Homicide, Revenge, & Marital Disasters: Reception of Greek Drama in Rome, England, & Japan.

(1) We examine theater and its relation to society, particularly, its reflection of legal culture (detections of murderers, adulterers, and young lovers); we also examine law's 'theatricality' ('productions' of trials). (2) We also explore more broadly how dramas were performed, using as comparanda Japanese Noh and Kabuki (in each, for example, we find all-male casting). (3) Attention is also directed toward twentieth century receptions of these plays; we focus largely on Japanese productions, particularly of Yukio Ninagawa, mastermind of Japanese theater who directed numerous Greek tragedies and Shakespearean plays in different venues, absorbing and subverting phenomena of traditional Japanese theater.

CLAS 1750R. Holy Places and Sacred Spaces in Ancient Greece.

For thousands of years, travelers have been astonished at the physical beauty of Ancient Greek sites such as Olympia, Delphi, and Delos. For anyone who visits these numinous sites, it's easy to see why the Greeks believed that the gods loved them, too. In this course we will be exploring the notion of sacred space in Greek, with emphasis on sanctuaries, topography, archaeological phenomenology, and pilgrimage. We will research and discuss sites and sanctuaries from literary, archaeological, and other material and theoretical perspectives; we will also ask what about certain spaces and places leads us to regard them as 'sacred'.

CLAS 1750T. Love and Identity in the Roman Empire.

Sex, pirates, powerful goddesses, and mistaken identities: these are just some of the aspects of the so-called Ancient Novel and its parodies. In this course we will investigate how a few fictional texts from the 1st-3rd centuries A.D. construct their characters' gender and sexuality, and therefore reflect concerns about wisdom, power, and difference within the Roman Empire.

CLAS 1750U. Greek Life: Athens as a College Town Under the Roman Empire.

This course focuses on the role of Athens as one of the most important educational centers of the Roman Empire to examine themes in the cultural history of the Eastern Mediterranean from the 2nd to the 6th century CE. Students traveled from all over the Roman world to study in Athens, celebrity professors competed to attract the biggest classes, and freshmen joining fraternities were subjected to bizarre hazing rituals. Course topics include the Second Sophistic, the educational curriculum, Paganism and Christianity in Late Antiquity, Neoplatonism, and the fate of Athens as an urban center. All readings in English translation.

CLAS 1770. Ancient Law, Society and Jurisprudence.

After a brief survey of modern legal systems (USA, common and civil law systems), we return to Athens and Rome. Topics: sources of law, its evolution, (e.g., feuding societies); procedural law (e.g., how to bring cases); legal reasoning; rhetoric; substantive law (e.g., regarding marriage, religion, homicide). Different approaches are used: historical, comparativist, anthropological, case-law study.

CLAS 1825. Race, The Classics and Democratic Theory (POLS 1825G).

Interested students must register for POLS 1825G.

CLAS 1930A. Introduction to Greek and Latin Meters.

We will survey the major metrical systems of Greek and Roman verse by reading a wide range of short poems and brief extracts. The main concerns will be, first, how to scan poems correctly, and second, how to evaluate metrical and rhythmic choices. Prerequisite: GREK/LATN 0400, or demonstration of equivalent ability in Greek and Latin.

CLAS 1930B. Dying God.

The figure of the dying god (like Adonis, Osiris, or Attis), embodying both beauty and tragedy, has exerted a fascination from ancient times to the present day. His worship was sometimes central to the community, sometimes marginal, yet compelling in its "outsider" status. His myths invited meditations on love and death in various modes from comedy to epic. This course, through the great mythological texts of Greece and Rome as well as modern literature and art, will explore the figure in all its variety, along with Christian adaptations and recent interpretations. There will be writing assignments.

CLAS 1930C. Parasites and Hypocrites.

The course is a study of the many forms of toadying, groveling, feigning friendship, flattery, ass-kissing, and so on, that were such a large of source of concern — and comedy — in antiquity. The anxieties over hypocrisy in a democracy and parasites in client-patron systems will be explored historically, in literary representations, and in their social, political, and economic contexts. Authors to be read include Aristophanes, Plutarch, Lucian, Plautus, Horace, and Petronius.

CLAS 1930E. Economy of Ancient Greece: New Approaches.

What was the material underpinning of Greek Society? How did the production and distribution of resources connect individuals and states and what ancient mentalities and ideologies governed this exchange? New scholarly approaches and new evidence have drastically changed how we understand the ancient economy in recent decades. This course will survey key issues in the ancient economy such as Mediterranean ecology, trade, the invention of coinage, taxation, consumption, agriculture, slavery, and connectivity. In the process, we focus closely on the primary sources, in the form of literacy, archeological, numismatic, and epigraphic evidence, while also considering current scholarly methodologies and controversies.

CLAS 1930F. Women Writing Epic.

This course will introduce students to English translations and adaptations of ancient Greek and Roman epics to consider the contemporary politics of representing and publishing women. These poems chronicle men talking with or fighting each other, all in the hopes of reproducing "great" men. Women often function as backgrounded appendages or, if significant, effect something catastrophic. We will revisit these dynamics and explore how literary genre genders authors and readers in relation to war, citizenship, race, class, sexuality and/or celebrity. How does epic negotiate social identities or formations? What needs to happen for women to write epic? What happens when women write epic? Which kind of women does the publishing industry want/allow to write epic now?

CLAS 1970. Special Topics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CLAS 1990. Conference: Especially for Honors Students.

Section numbers vary by instructor. Please check banner for the correct section number and CRN to use when registering for this course.

CLAS 2000. Proseminar in Classics.

Introduction to standard research methods and tools in major subdisciplines of classical philology and ancient history. Required of entering graduate students. Survey of various subdisciplines in order to become familiar with field and scholarly principles.

CLAS 2010A. Mysteries Documents.

No description available.

CLAS 2010B. Roman Topography.

That actions occur in place is obvious, but how does place define action, and how do actions define place? How does the accretion of meanings assigned to a place through repeated use provide significance to the current actions, affect reinterpretations of past events, and effect future uses? Topography explores not only the history of monuments but also the constellation of meanings shaped by the interaction of monuments with each other in the cultural landscape. Topographical relationships serve as an imprint of a particular community's social, political, economic, and religious behavior within and across space and time. Ancient Roman case studies.

CLAS 2010M. Problems in Old World Archaeology: The Archaeology of Empires.

They were big, they were bad, they were beautiful... Cradles of civilization, wreckers of havoc, empires rank among the most influential political and social formations in global history. This seminar will explore general literature on imperial genesis, consolidation and decline, as well as the specific and unique contributions that archaeology and art history can offer to the understanding of empire.

CLAS 2011. Critical Approaches to Classical Texts: Theory and Methods.

These seminars will examine categories fundamental to the study of ancient literature and historiography, highlighting the relevance of ancient philosophy, rhetoric and poetics to modern critical/theoretical approaches. Topics can include: text, author, context, literature, genre, representation, emulation, narrative, historiography, commentary, reception. Contradictions in the idea of 'classics' can also be considered, in connection with questions of diversity and ethical approaches to Greco-Roman texts. The course aims to draw on participants' needs and experiences to offer firm and constructive guidelines for professional academic writing, eliminating common errors and misconceptions (intentional and biographical fallacies, confusion between allusion and intertextuality, 'topoi and 'tropes'.)

CLAS 2011A. Critical Approaches to Classical Texts: Theory and Methods.

These seminars will examine categories fundamental to the study of ancient literature and historiography, highlighting the relevance of ancient philosophy, rhetoric and poetics to modern critical/theoretical approaches. Topics can include: text, author, context, literature, genre, representation, emulation, narrative, historiography, commentary, reception. Contradictions in the idea of 'classics' can also be considered, in connection with questions of diversity and ethical approaches to Greco-Roman texts. The course aims to draw on participants' needs and experiences to offer firm and constructive guidelines for professional academic writing, eliminating common errors and misconceptions (intentional and biographical fallacies, confusion between allusion and intertextuality, 'topoi and 'tropes'.)

CLAS 2080A. Seminar: Allusion/Intertextuality/Influence.

We will study the full career of allusion (from Homer to hip-hop) to gain a sense of its origins and development, especially in antiquity and late antiquity; to understand allusion functionally, (and to measure the durability of that function across time); and to read extensively in the allusive practices of one ancient author.

CLAS 2080B. Seminar: Social Conflicts in the Roman Republic.

This seminar, open to upperclassmen with experience in Roman history, will analyze the causes, impact, and results of social conflicts in the early (the "struggle of the orders") and late Roman Republic (Tiberius Gracchus, the Catilinarian Conspiracy), and the latter's contribution to the demise of the Republic. Sources in translation.

CLAS 2080C. The Emperor Tiberius.

No description available.

CLAS 2080H. Topics in Roman Republican History.

This seminar will examine some of the major controversies in Roman Republican history, with possible excursions to the archaic and triumviral periods. The focus will be on political and cultural history, and on questions of method and theory. Topics will be partially dictated by student interest. Assessment include student presentations and leading discussions, writing an abstract for a term paper, and a term paper.

CLAS 2100G. The World of Late Antiquity.

Focused on the Mediterranean world between the third and ninth centuries CE, this seminar introduces students to the study of late antiquity and the early middle ages from a multidisciplinary perspective. Class sessions focus on the intensive reading of a small collection of closely-related primary sources in the original language and contextualizing them through a grounding in other disciplines essential to the study of ancient and medieval history, including archaeology, codicology, palaeography, numismatics, and prosopography. Topics vary by semester and may include such themes as the body, emotional and psychological histories, trauma, slavery, violence, "barbarians," or interfaith interaction. Prerequisite: Latin

CLAS 2110A. Graduate Seminar: The Book.

This seminar examines the relationship between ancient literary forms and the media in which they were presented. Specifically, it considers the connections between the ways in which ancient books were published and distributed—in papyrus rolls and bound codices, individually and in groups, privately and commercially—and the cultural conventions of reading and literary appreciation in antiquity. Chronologically the seminar focuses on the late Roman Republic and early Empire (ca. 100 BCE -200 CE), but attention is devoted also to new papyrological evidence for the development of poetry books during the Hellenistic period. A reading knowledge of Greek and Latin is required.

CLAS 2110K. Vision and Visualization in Literature: The Rhetoric of Enargeia.

How does writing make us see? We will study rhetorical concepts of “vivid description” (enargeia, phantasia, evidentia) from ancient Greek and Roman theory and literary practice and follow their reception in later periods and literary traditions, including modern evaluations of their significance (all readings in English). Taking texts from poetry, historiography, philosophy, and elsewhere, we will explore “vividness” particularly in terms of tropes of persona-fashioning (prosōpopoeia) and subject-positioning, with attention to the ethical and ideological implications that that may entail, and explore its relations with such topics as ecphrasis, narratology, and spectacularity.

CLAS 2200. Frogs Round a Pond: Studies in Mediterranean Connectivity.

Holden and Purcell's *The Corrupting Sea* was swiftly established as a landmark study of the ancient Mediterranean with its publication in 2000 and has remained such in the intervening years. The monumental work covers three millennia of human history and highlights the long-standing connectivity of highly fragmented Mediterranean microregions. While drawing on a long and rich tradition of Mediterranean-centered scholarship, it is distinguished by its authors as a study of the human history of the Mediterranean rather than of history in the Mediterranean. This course considers the research traditions out of which this work developed and explores its marked influence on scholarship in the 25 years since its publication.

CLAS 2450. Exchange Scholar Program.**CLAS 2930A. Alexandrian Poetry.**

We will read extensive selections in the original languages from Hellenistic Greek poetry and Latin poetry with Hellenistic influence, with an eye to their historical and cultural context and to their intertextual dimension.

CLAS 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CLAS 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

CLAS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

CLAS XLIST. Courses of Interest to Classics Concentrators.**Greek****GREK 0100. Essentials of the Greek Language.**

This is the first part of a two-semester Ancient Greek course. The purpose of the course is to develop students' ability to read and understand Ancient Greek literary texts and to build firm foundations in terms of grammar, vocabulary and reading skills. Selections from Attic Greek authors. No previous knowledge of Greek is required.

GREK 0110. Intensive Introduction to Ancient Greek.

Intensive, one-semester introduction to Greek. No previous knowledge of Greek is required. This is a double credit course.

GREK 0200. Essentials of the Greek Language.

Second half of a two-semester approach to ancient Greek with special emphasis on developing facility in rapid reading of Greek literature. Selections from Attic Greek authors. Students typically have completed GREK0100, or have the equivalent already.

GREK 0300. Introduction to Greek Literature.

Introduction to Greek literature through intensive reading. Prerequisite: GREK 0200, GREK 0110, or the equivalent. This course focuses on translation and comprehension of Classical Greek prose. The goal is to expand your vocabulary, increase your ease with morphology, and deepen your understanding of syntax as each of these elements of the language interact with each other. The primary text will be Plato's *Apology*, with some additional readings by Xenophon.

GREK 0310. Grammar Review and Composition.

Half-credit course with attention to student's individual needs.

GREK 0400. Introduction to Greek Literature.

Prerequisite: GREK 0300 (or the equivalent). Review of grammar of the Attic dialect through rapid reading of texts by Lysias, Plato, or Xenophon. Emphasis on syntax and style.

GREK 1010. Introduction to Greek Drama.

Both for students who have recently finished GREK 0300 and 0400 and for those who have little or no experience of translating Greek drama. Begins with a brief review of Attic grammar with readings in Plato. Then turns to Greek drama with students reading a play of one of the dramatists and focusing on philological analysis and meters.

GREK 1050A. Aristophanes.

The course is addressed to students with at least a medium-level command of Ancient Greek (that is, they have completed at least two years of study at the college level); previous knowledge of Aristophanic language and poetry is not required. We will be reading in the original language Aristophanes' *Acharnians* and, if there is time, *Wasps*. The first was composed during the Peloponnesian War and the second during a short interval of peace when the law courts appear to have been in operation; both have a good deal of political humor. There will be readings of modern essays on different aspects (language, meter, historical background, theatrical performances, literary interpretations, etc.) of this play and of Aristophanes' production.

GREK 1050B. Euripides.

We will read two plays of Euripides, *Andromache* of ca. 425 and *Orestes* of 408, both dramatizing the aftermath of the Trojan War; as time permits, we will read relevant fragmentary plays and papyrus fragments. We will give a close reading to the two plays and their textual problems, esp. in *Andromache*, and in the case of that play, we will be concerned with its double plot and oft-cited lack of coherence. In both plays, we will also be concerned with their emotional onslaught, mythological fireworks, theatrical dynamics, and the connection to their dramatic locales (in *Phthia* in the earlier one, in *Argos*, in the later) and to the politics of the times, that is, respectively, to the first years of the Peloponnesian War and to the tumultuous politics of the last decade of the fifth century.

GREK 1050C. Sophocles.

An introduction to the study of Athenian tragedy. We shall read closely at least two plays of the Oedipus cycle: *Antigone*, *Oedipus the King*, and *Oedipus at Colonus*. We will give close attention to language, meters, and matters of performance.

GREK 1050D. Homer: *Iliad*.

No description available.

GREK 1060. Herodotus.

How do we read Herodotus' *Histories* in today's post-truth era? Once known as part of the 'Liar School', today's 'Father of History' is better understood as a commentator on cultural difference, an artful story teller, and an astute observer of historical methods. This course focuses on Herodotus Book I and the short stories of Croesus, Cyrus, the rise of the Persian empire, the Greeks in Asia Minor, Athens, and Sparta. This Advanced Greek course is suitable for Undergraduates (including those who have recently completed GREK0400) and Graduates. Assessment is formative and summative; no summatively assessed written examinations.

GREK 1080. Attic Orators, Seeing Slavery in Athenian Lawcourt Speeches.

We study Athenian lawcourt speeches (Greek) that exemplify the way slaves are present in them. Slaves may have approximated at least a third of the population of Athens; their lack of legal status, however, meant they had no right to sue others or to defend themselves—not even, if murdered, to find a post-mortem justice for their deaths. They are visible in disputes and often enmeshed in the very process of trials—as informers against masters who could win awards for so doing or more likely as witnesses who were subjected to torture for their testimony. At other times they are the objects of legal disputes from their ‘workplace’: as bankers sued for appropriating vast sums of money, as managers of shops that change ownership, as prostitutes under contract who are fought over by citizen men.

GREK 1082. Readings in Athenian Oratory.

Readings, in Ancient Greek, of selections from 4th C. BCE Athenian oratory, with emphasis on building and reviewing the grammar and vocabulary of Attic prose. As the speeches demand, thematic topics (historical, linguistic, juridical, etc.) will also be covered. Students should have completed at least four semesters of college-level Ancient Greek or the equivalent before taking the course.

GREK 1100. Advanced Homer: The Odyssey.

It is hard to imagine a more joyful way to acquire excellent control of Homeric Greek than by reading, in its entirety (if possible), Homer's wonderful and captivating work, the *Odyssey*. Though it can be a little time-consuming initially, students quickly become familiar with the syntax and the vocabulary, and find great pleasure in immersing themselves in this thrilling masterpiece.

GREK 1100G. On the Sublime.

What makes great writing great? We will explore this question with the author of “On the Sublime” a treatise thought to be from the first century CE and usually attached to the name “Longinus”. Sappho, Homer, Plato and many others are invited into the discussion as we try to define the power (and occasional shortcomings) of the works they’ve left behind.

GREK 1110B. Plato, Phaedrus.

We will read in Greek Plato's dialogue *Phaedrus* on love and rhetoric. We will attempt to understand the dialogue as a unified whole, discussing such questions as the link between love and the art of persuasion, Plato's denigration of writing, and the relationship between rhetoric and philosophy.

GREK 1110C. Plato: Statesman.

Reading of Plato's *Statesman* in Greek and discussion of the questions: What is special about the Statesman's expertise? How (if at all) does his expertise differ from that of the philosopher? How is the Statesman related to the philosopher-kings in Plato's *Republic*? Discussion of Plato's later philosophical method, a topic central of the *Statesman*.

GREK 1110D. Plato: Symposium.

Readings in Greek Plato's *Symposium*, his beautiful dialogue about love and philosophy.

GREK 1110E. Plutarch.

Reading of selections from Plutarch's works with attention to literary and historical background.

GREK 1110F. Poetry of Gods and Heroes.

Readings in early Greek hymns, creation myths (especially Hesiod's *Theogony*), and short poems about human struggle and values.

GREK 1110G. Selections from Greek Authors: Mysteries.

We shall read documents pertaining to the Eleusinian Mysteries. In the first part of the course, we focus on orations (Andocides 6, “On the Mysteries”; Lysias 6, *Against Anocides for impiety*). In the second part, we read inscriptions (including ‘sacred laws’) pertaining to the Mysteries.

GREK 1110H. The Odyssey.

It is hard to imagine a more joyful way to acquire excellent control of Homeric Greek than by reading, in its entirety (if possible), Homer's wonderful and captivating work, the *Odyssey*. Though it can be a little time-consuming initially, students quickly become familiar with the syntax and the vocabulary, and find great pleasure in immersing themselves in this thrilling masterpiece.

GREK 1110I. Selections from Greek Authors: Thucydides.

Thucydides Book 5: It begins with a corrupt line that seems to tell us that Athens' truce (4.117-19) with the Spartans would continue; it ends with the diplomatic failure of the Melians' conference with the Athenians. In between and inter alia, there are the deaths of Brasidas and Kleon, the story of Thucydides' exile from Athens, and three verbatim or ‘raw’ (?) treaties: the peace of Nikias, the alliance of Athens and Sparta, and the ‘Quadruple Alliance’ (a treaty between Athenians, Argives, Mantineians, and Eleians—to which we shall compare IG 13 83). We shall translate the book with nitty-gritty philological attention; and we shall also be concerned with the overall narrative structure and the way the diplomatic documents fit into the text. Why did Thucydides insert verbatim or ‘raw’ treaties into his history? And are they in fact the real thing?

GREK 1110J. Plato: Theaetetus.

Theaetetus is in many ways Plato's most modern dialogue. The central question is: what is it to know something? Is knowledge some sort of skill? Is it perception? True judgment? Some sort of account together with true judgment? We will read the dialogue in Greek and discuss Plato's fascinating investigation of knowledge.

GREK 1110K. Early Byzantine Literature.

No description available.

GREK 1110L. Aeschylus' Agamemnon.

No description available.

GREK 1110M. Selections from Greek Authors: Plato, Sophist.

No description available.

GREK 1110N. Menander.

Thanks to a series of remarkable discoveries over the last century, we can now read several comedies by Menander. In this course, we shall investigate the nature of New Comedy, its typical plot structures and characters, the conditions of its performance, and its relation to the Hellenistic world in which it was composed.

GREK 1110O. Aristotle: Nichomachean Ethics.

In this class we will read Books I, II, III, and X of Aristotle's *Nicomachean Ethics* and discuss his treatment of the highest human good, moral virtue, the doctrine of the mean, and his theory of action.

GREK 1110P. Sophocles.

This course offers a thorough introduction to Sophocles and Greek tragedy through a careful study of two plays, *Antigone* and *Philoctetes*, as well as a rapid survey of Sophocles' other works. Close attention will be paid to issues of language, poetry, and performance. In addition, through a representative selection of recent scholarship we will explore themes including Sophocles' engagement with culture and politics in fifth-century Athens as well as the reception of his plays in modern and contemporary theater.

GREK 1110Q. Greek Erotic Literature: From Plato to the Medieval Romances.

Survey of desire in Greek writing, with an emphasis on post-classical texts. Exploration of Platonic love, Roman Greek literature on eros, friendship in late antique and medieval rhetoric and letter-writing, erotic epigrams from Imperial to Middle Byzantine times, depictions of the erotic in hagiographical texts, and, finally, the twelfth-century revival of romantic fiction. Four semesters of Greek required.

GREK 1110R. Characters and Characterization in Greek Literature.

We will read passages from a wide range of Greek literature, both verse (epic, drama, lyric, epigram) and prose (history, oratory, biography, the character sketch), as well as ancient criticism, with our attention focused on the representation of character, individuality, and self-hood, especially in relation to genre.

GREK 1110S. Xenophon.

What discourse was there about running the state in Xenophon's work? GREK 1060 reflects on tyranny, democracy, and oligarchy under the critical eye of the Old Oligarch ([Xenophon] Constitution of the Athenians and Xenophon's Hieron, Constitution of the Spartans, and Poroi. This advanced Greek language and literature course enhances participants' knowledge and understanding of Greek, develops an appreciation of important themes and current research into Xenophon and his minor works, and improves the student's capacity to translate and comment on ancient Greek text. Assessment is by a combination of translation, commentary, essay assignments, and examinations.

GREK 1110T. Rhetors and Philosophers: Intellectual Thought and Sophistic Style in the Ancient World.

In a series of notorious dialogues, Plato delineated a distinction between two professions that were to define future intellectual history: philosophy and rhetoric, the science of thinking juxtaposed to the art of speaking. We will study the transformations of this distinction in four exceptional socio-cultural contexts: Classical Athens, Imperial Rome, Late Antique Alexandria, and Medieval Constantinople. We will discuss the basics and varieties of educational curricula (Aristotle's Academy, Second Sophistic, Neoplatonism), the social position and self-definition of ancient intellectual figures, and the ever-fluid boundaries between content and form, thought and style; ultimately, between philosophy and literature.

GREK 1110U. Survey of Post-Classical Greek (2nd-12th century CE).

This course will study the development of post-classical Greek language and literature with an emphasis on three traditions—the Second Sophistic, late antique discourse (4th-5th centuries), and writing in medieval Constantinople (9th-12th centuries)—through a close reading of texts from a variety of styles, authors, and genres. The selections will be tailored to the needs of the participants. Prior knowledge of Greek (an equivalent of 2 years) is required. Prerequisite: GREK 0400 or instructor permission. Enrollment limited to 20.

GREK 1110V. Greek Funeral Orations.

Survey of classical Greek funeral orations; authors to be covered include Thucydides, Plato, Demosthenes, and other fourth century prose writers. The emphasis of the course will be on Greek grammar and techniques of prose translation, though throughout the semester we will also be discussing the nature of ancient Greek commemorative discourses, particularly in classical Athens. Some background on Greek lament and other funerary genres will be provided, and short supplementary texts may range from Homeric excerpts to inscribed epitaphs. Students should already have four semesters of ancient Greek (completion of GREK 0400) or the equivalent.

GREK 1110W. Persians, Others, in Greek Literature.

This Advanced-level Greek course explores the depiction of the 'other' in the long-5th century BCE. The course engages the construction of identity, and issues of race and ethnicity, in relation to the Greek presentation of the Persians in the century after the Second Persian invasion (478 BCE onwards). We will read, in ancient Greek, selections from Aeschylus' Persians, Aristophanes' Acharnians, Ctesias' Persica, Herodotus' Histories, and Xenophon's Cyropaedia. Equipped with the more recent approaches to identity and critical race theory, students will explore the production of categories of ethnicity in ancient Greece and the world beyond the confines of the Mediterranean.

GREK 1110X. Aristotle's Politics.

Aristotle's Politics is a landmark in the history of political thought: the first systematic study of political life. Thinkers from Aquinas to Agamben and Foucault have taken the Politics as the foundation of their own political theories. In this course, we will read Book 1 of the Politics in its entirety, as well as selections from Books 3, 5, 7 and 8. We will address stylistic, philosophical and philological questions raised by the text, as well as reflecting on larger interpretive questions.

GREK 1110Z. Greek Texts in the Postclassical Tradition.

A treasure of unedited or insufficiently edited as well as untranslated or little studied Greek texts exists in the postclassical tradition (especially from the Roman period onward). The course will introduce graduate and qualified undergraduate students into this large body of later Greek literature as well as provide training in the study of manuscripts and the preparation of critical editions, translations, and commentaries. Participation in a joint publication project is possible.

GREK 1111B. Polybius.

This course focuses on Book IV of Polybius' Histories, deals with the late third century BCE, the Roman impact on Hellenistic Kingdoms and Greek communities, and Polybius as writer and historian. The course is addressed to students with at least a medium-level command of Ancient Greek (that is, they have completed at least two years of study at the college level). The course enhances student knowledge of Ancient Greek, develops an appreciation of important themes and recent research into Polybius and his work, and improves the student's capacity to translate Ancient Greek (into English) and comment on ancient Greek text. Assessment is by a combination of translation, commentary, and essay assignments. There is no mid-term or final examination.

GREK 1111C. Late Antique Historiography: Procopius of Caesarea.

This course will consider the writings of Procopius of Caesarea (ca. 500-565) in light of his place in Greek literary history, and his cultural context in the Late Roman Empire of Justinian. Sessions will combine a critical reading of texts in Greek with analysis of the author's historical methods, style, and literary influences. We will study portions of all three of Procopius' surviving works, beginning with The Wars, and continuing with The Secret History and The Buildings.

GREK 1111D. Daphnis and Chloe.

Goethe said that you should read Longus' "Daphnis and Chloe" once a year (in Greek, of course!). So if you haven't read it yet, it's time. One of the first novels ever written, it offers pirates, erotic encounters, and numerous goat-filled landscapes. Discussions include the origins and development of the prose novel, the political and social context of the times, and the beauty of Longus' idyllic narrative.

GREK 1111F. The Greek Chorus.

One of the most striking features of Greek drama is the presence of a chorus whose members dance, sing, and contribute to the dramatic action in ways that puzzle modern audiences. Besides the drama, choruses are also found in other genres: in victory odes for champions of athletic competitions, in hymns to gods and goddesses, and in other forms such as the dithyramb. In this class, we will read a representative selection of choral lyric, from Alcman to Aristophanes, including major figures such as Pindar, Aeschylus, Sophocles, and Euripides.

GREK 1111J. Hippocratic Medicine.

In this class we will read texts from the Hippocratic Corpus on ancient medicine, including the Oath, On Ancient Medicine, Airs, Waters, Places, The Sacred Disease, On the Seed, On the Nature of the Child, and some other texts including Diseases of Women in ancient Greek. Requires basic reading knowledge of ancient Greek

GREK 1140. Introduction to Greek Linguistics.

Examines changes that took place in Greek from the time of its separation from its parent language (Proto-Indo-European) to the dialects of Classical times (5th-4th C.B.C.). This course is also an introduction to the methodology of historical linguistics, concentrating on phonology. Proficiency in ancient Greek is required.

GREK 1150. Greek Prose Composition.

Survey of Greek grammar and an opportunity to reflect on problems of translation. Main goals: to improve the students' command of prose syntax (both in reading and writing), and to develop a keen sensitivity towards issues of translation. A variety of texts written in Attic prose are read and analyzed in class. Students are expected to write two to three compositions a week in good Attic prose. Advanced knowledge of ancient Greek is a prerequisite for this course.

GREK 1260. Plato and Aristotle.

No description available.

GREK 1260A. Plato's Protagoras.

Plato's Protagoras is a literary and philosophical masterpiece representing a great gathering of intellectuals, including Socrates and the sophist Protagoras. The two men try to out-wit each other on such topics as political theory, literary criticism, and education. Major questions throughout the discussion are: What is the role of knowledge in a successful life, and how can we acquire knowledge that leads to success? We will read the dialogue in Greek. Prerequisite: two years of Greek (GREK 0400) or demonstrated equivalent ability.

GREK 1810. Greek Literature Survey to 450 BCE.

Surveys early Greek literature to 450 BCE. Works studied include the *Iliad*, *Odyssey*, the Hesiodic poems, Pindar, Bacchylides, and Aeschylus. Emphasis on literary interpretation, the poetics of oral poetry, and the early history of various literary genres. Extensive readings in the original.

GREK 1820. Greek Literature Survey after 450 BCE.

Surveys Greek literature after 450 BCE. Authors studied include Sophocles, Euripides, Aristophanes, Herodotus, Thucydides, as well as the literature of the fourth century and beyond. Emphasis on literary interpretation and the intellectual currents of the times. Extensive readings in the original.

GREK 1830. Imperial Greek Prose.

How did Greek literature evolve under the Roman Empire? In this course we survey Greek prose literature of the 2nd-4th centuries CE, in particular trends related to what might be called "the Long Second Sophistic." Authors and topics we study include: figures traditionally associated with the Second Sophistic (Dio Chrysostom, Philostratus, Lucian, Aristides), the Greek novel, rhetorical theory and textbooks, biographical literature, travel-writing (Pausanias), Athenian-trained Christian rhetors such as the Cappadocian Fathers, and the concept of *paideia* and its relationship to specialized disciplines such as medicine and logic.

GREK 1910. Special Topics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

GREK 1930A. Euripides.

The plays of Euripides and related works, subject to consultation with students.

GREK 1930B. Greek Epigraphy.

Practical (making and reading squeezes, identifying letters, locating inscriptions, etc.) and analytical aspects of epigraphy will be pursued. The major focus will be legal inscriptions from the Greek world.

GREK 1930C. Introduction to Greek Papyrology.

During the 20th century, papyrology has become the most important source for new literary texts, with three substantial discoveries in the last decade (Simonides, Empedokles, Poseidippos). Provides an introduction to the basic techniques of this comparatively young discipline: material evidence, decipherment, dating, interpretation, restoration, editing, etc. Focus on literary texts, but documentary papyri will also be examined.

GREK 1930D. Rapid Reading in Plutarch.

No description available.

GREK 1990. Conference: Especially for Honors Students.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

GREK 2000A. Aristophanes.

No description available.

GREK 2000B. Greek Epigraphy.

An introduction to the study of Greek epigraphy. We shall examine treaties, laws, decrees and other documents, mostly from Athens but also from other parts of the Greek world. Practical issues (e.g., the actual reading of letters and the identification and dating of documents) and analytic questions (e.g. regarding historical context) will be explored.

GREK 2000C. Seminar: Plutarch.

Rapid reading of selections from Plutarch's *Lives* and from his *Moralia*.

GREK 2000D. Graduate Seminar: On Greek Margins: Introduction to Reading Scholia and other Technical Literature.

No description available.

GREK 2020A. Sophocles.

No description available.

GREK 2020B. Herodotus.

Books 3 to 5.

GREK 2020C. Pindar.

No description available.

GREK 2020D. Thucydides.

Books I and VIII: language, mode of thought, and methodology; how the work was composed, historical problems; supplementary sources: epigraphical, literary.

GREK 2020E. Greek Choral Lyric: Pindar and Bacchylides.

Choral lyric played an essential role in the religious, cultural, and festive life of the Greeks in the fifth century B.C. Both Pindar and Bacchylides were acclaimed as masters of this art, and their compositions were performed in all parts of the Greek world. With proper preparation, we can enjoy in their original language their elevated poetry and appreciate the information it harbors concerning myth, local traditions, economics and power relations of class and gender. We will also consider such topics as the circumstances of their performance, literary sources and allusions, and the poets' own social position.

GREK 2050A. Demosthenes.

No description available.

GREK 2050B. Documents: Religious Cults and Sacred Laws.

In the first half of the course we shall read documents pertaining to the Eleusinian mysteries in Athens, including (a) two orations, Andocides 1 "On the Mysteries," and Lysias 6 "Against Andocides for impiety;" (b) a variety of inscriptions published by Clinton (in Eleusis, The Inscriptions on Stone: Documents of the Sanctuary of the Two Goddesses and Public Documents of the Deme), and (c) the grand inscription of Adnanian (ca. 92 B.C., not Eleusinian but related). In the second half of the course, we shall read inscribed sacred laws from Greece and Asia Minor, from the fifth to the first century B.C.

GREK 2070A. Lucian.

The funniest and most impressive writer of Greek prose during the imperial period (not to mention the alleged inventor of science fiction), it is no wonder that Lucian was a favorite author from the Renaissance to the early 20th century. But he was also regularly reviled -- Martin Luther once thundered at Erasmus, "you ooze Lucian from every pore" (it wasn't a compliment). This class will focus on his philosophical satires and contextualize those satires within the philosophies of the second century CE. Along with primary and secondary readings -- not only from Lucian but also authors like Galen and Sextus Empiricus -- we will discuss the texts, the times, and the nature of Lucian's philosophical skepticism.

GREK 2070B. Seminar: Hellenistic Poetry.

In this seminar we will read in their original Greek version extended portions of three major Alexandrian poets' works: Apollonius of Rhodes, Callimachus, and Theocritus, supplemented by readings in Hellenistic epigrams and other texts as well as secondary literature. We will pay attention to the social, political and literary environment of third century Alexandria, where --under very special conditions-- these works were produced and received for the first time. We shall investigate the nature of the Hellenistic aesthetic, the relation of Hellenistic to archaic and classical poetry, and the way Hellenistic poetry is a reflection of its time and place.

GREK 2100A. Herodotus.

No description available.

GREK 2100B. Making Memory: Simonides, Herodotus, and Greek Identity.

No description available.

GREK 2100C. Drama and the Polis.

No description available.

GREK 2100D. Ancient Literary Criticism.

Survey of ancient literary theory, with an emphasis on Greek sources. Topics to be covered include the representation of poets, the nature of inspiration, the elements of literary style, the moral and ethical uses (and dangers) of poetry, mimesis, the relationship between poetry and citizenship, literature and education, etc. We will read, in Greek, excerpts from (e.g.) Aristophanes' *Frogs*, Plato's writings on poetry, Aristotle's *Poetics*, Plutarch's *How a young man should study poetry*, and pseudo-Longinus' *On the Sublime*. Students will be evaluated on the basis of in-class presentations, two translation exams, and a seminar paper.

GREK 2110A. Homer.

A close reading of the entire *Odyssey*, exploring all aspects of the poem, from its oral composition, language, and style to its background myths and social dimensions. Homer's text will be read in Greek, and extensive secondary sources in several languages will be used.

GREK 2110B. Literary Criticism in Greek Scholia.

No description available.

GREK 2110C. Plato's Republic and its Neoplatonic Reception.

A close reading of Plato's *Republic* together with Proclus' fifth-century CE commentary. The main focus is Plato's discussion of poetry and mimesis (books 2, 3, and 10), his appropriation of myth and dramatic technique (books 7 and 10), and Proclus' attempt at reconciling Plato with Homer, namely Plato's anti-mimetic stance with his overt theatrics and myth-making. Brings together classical writing with its post-classical readings, broaches such topics as the notion of mimesis and the reception of Plato as well as Homer in Antiquity, and introduces students to late antique allegory and what has been termed the birth of the symbol.

GREK 2110D. Greek Epigraphy.

An introduction to the study of Greek epigraphy. We shall examine treaties, laws, decrees and other documents, mostly from Athens but also from other parts of the Greek world. Practical issues (e.g., the actual reading of letters and the identification and dating of documents) and analytic questions (e.g., regarding historical context) will be explored.

GREK 2110E. Aeschines and Demosthenes, "Crowning Speeches".

GREK 2110F. Greek Palaeography and Premodern Book Cultures. Introduction to pre-modern Greek book culture and the study of Greek literary scripts from classical antiquity to the Renaissance. Students become acquainted with the history of books, the context and agents of their production, and the transmission of Greek (classical as well as post-classical) literature. Training is provided in reading and dating different scripts and in editing ancient texts.

GREK 2110G. Identity, Repatriation, and Justice: International Relations Among Greek Cities 700 BCE - 90 BCE.

We study diplomatic documents, mainly in epigraphical sources, from all parts of the Greek world especially from the 5th to 2nd centuries BCE. Alliances, international arbitrations, and decisions of foreign judges will be major concerns; we shall be particularly interested in agreements that are composed after wars or major disputes among citizens (*staseis*) are ended, especially in arrangements that are made to foster harmony between citizens who have remained in a polis with fellow citizens who have returned from exile; and also in arrangements to solve disputes over land ownership and to promote economic growth. Our texts are not only diplomatic instruments (treaties, arbitrations, etc.) but also letters of monarchs and dynasts and honorary decrees. As a final project, students are to prepare a dossier of texts relating to one particular polity, documenting its relations with another city or cities, or to divisions within its own population.

GREK 2110K. Aristotle's Theology in Metaphysics Lambda.

Metaphysics Lambda (Book XII) is a self-contained series of lectures presenting in its first five chapters an overview of Aristotle's natural philosophy and metaphysics (first philosophy) and culminating in its last five chapters in his tantalizing treatment of divine substance and its causal role in the cosmos. Among the questions to be asked: What is first philosophy and how does Lambda—finally developing Aristotle's theology—fit into that larger project? How does God govern the cosmos as an object of love? How should we understand the claims that God thinks himself and that "thinking is thinking of thinking"?

GREK 2120A. Graduate Seminar: Greek Autobiography: From Plato to the Middle Ages.

An exploration of autobiographical narratives written in Greek from classical to Byzantine times, focusing on the relation between changing notions of the self and the development of autobiography as a literary genre. Authors examined: Plato, Demosthenes, Nicolaus of Damascus, Marcus Aurelius, Aelius Aristides, Lucian, Gregory of Nazianzus, Libanius, Synesius, Michael Psellos, Michael Attaleiates, and Anna Comnena.

GREK 2150. Plato's Theaetetus.

See PHIL 2150I for course description.

GREK 2970. Preliminary Exam Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

GREK 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

GREK 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Latin**LATN 0100. Essentials of the Latin Language.**

An intensive two-semester approach to Latin with special emphasis on developing facility in the rapid reading of Latin literature. No previous knowledge of Latin is required.

LATN 0110. Intensive Introduction to Latin.

This course offers a rapid introduction to the Latin language and grammar. As a one-semester introduction to material often covered in two semesters, this course carries two credit hours instead of one. The workload for this course is correspondingly heavy; students may expect an average of ten hours of homework—including memorization, practice, and preparation of vocabulary and grammar—per week. There are no prerequisites for this course.

LATN 0200. Essentials of the Latin Language.

Second course in an intensive two-semester approach to Latin. Special emphasis on developing facility in the rapid reading of Latin literature. No previous knowledge of Latin is required prior to taking this two course sequence.

LATN 0300. Introduction to Latin Literature.

Introduction to Latin literature through intensive reading of major authors in prose and poetry with careful attention to grammar and style. Prerequisite: LATN 0100, 0200 or 0110 (or equivalent).

LATN 0310. Grammar Review and Composition.

Half-credit course with attention to student's individual needs.

LATN 0400. Introduction to Latin Literature.

Introduction to Latin literature through intensive reading of major authors in prose and poetry with careful attention to grammar and style. Prerequisite: LATN 0100, 0200 or 0110 (or equivalent).

LATN 0510A. Latin Mystical Writing.

We read variously in Latin those authors (Cicero, Horace, Augustine, Anselm, Hildegard) who articulate the best traditions of mysticism in the West: a longing for transcendence, alienation, unity through participation with divinity and culture. Prerequisite: A knowledge of Latin at the intermediate level (one or two years).

LATN 0510B. Medieval Latin Lyric.

Open to students with two years of Latin.

LATN 1010. Latin Lyric: Catullus and Horace.

Introduction to Latin lyric poetry through the poems of its finest representatives, Catullus and Horace. Emphasis placed on careful reading of the poems, which will be considered individually, as parts of a collection, and as representatives of the poetry we call lyric. The primary objective of the course is to improve students' ability to read Latin lyric poetry fluently, in terms of meter, grammar, syntax, and literary-critical appreciation. We will also read and discuss a selection of seminal articles on ancient lyric, and students will get experience (and guidance) writing scholarly criticism.

LATN 1015. Horace's Odes.

This course covers Horace's four books of lyric poetry in the original Latin, with attention paid to linguistic and literary details as well as to the poetry's place in the history of Greek and Roman literature and in Roman political and social culture at the moment of transition from Republic to Empire.

LATN 1020A. De Oratore.

No description available.

LATN 1020B. Cicero, Verrines.

Our aims are to understand and translate Cicero's *Against Verres* II.4 ('On the Statues'), and to study its historical, legal, and cultural background—not only the laws that were broken and the legal procedures, rhetorical strategies and performative displays for winning the case (but never 'used' since the speech was never delivered), but also the concept of cultural theft that impels Cicero's argument and that has exerted so great an influence in later centuries. We shall, as time permits, consider the influence of the Verrines on Edmund Burke in his prosecution of Warren Hastings (1787-1794), so much so that accounts of Verres' enormities in Sicily became comparative material for the contemporary trial of Hastings in London newspapers; and also their influence on the first international law code recognizing cultural property (the 'Lieber Code', 1863) as a protected category in war.

LATN 1020C. Cicero's Republic.

As one of the only texts that articulates a "Roman" political philosophy, Cicero's *De Re Publica* is indispensable for students with an interest in Roman history or classical political thought. In this class, we will address the text from both these perspectives; but we will also read it as a work of literature that remakes the genre conventions of the Platonic dialogue for a Roman readership. We will also address the complex relationship between the text of *De Re Publica* and the troubled times in which it was written.

LATN 1020D. Cicero at the End of the Republic: Politics, Letters, and Philosophy.

We study Cicero's writings from the last months of his life, when both his own personal legacy and the fate of the Republic were at stake. During this turbulent period he produced the *Philippics* against his arch-enemy Mark Antony, letters offering an intimate perspective on friendship and family life, and the *De Officiis*, a treatise on ethical duties that became one of the most influential works of moral philosophy ever written. We read the Second *Philippic*, several letters, and most of *De Officiis* Book I in Latin, plus selections of other *Philippics* and all the *De Officiis* in English.

LATN 1040A. Virgil: Eclogues and Georgics.

Virgil, most famous as the poet of the *Aeneid*, began his career with two smaller masterpieces: a collection of ten bucolic poems (*Eclogues*) modeled on the *Idylls* of the Hellenistic poet Theocritus, and a didactic work on agriculture in four books, the *Georgics*, which found its inspiration both in Hellenistic models and in more recent Roman antecedents (including Lucretius' *De Rerum Natura*) and is viewed by many as the poet's finest achievement. We will read selections from both works, concluding with the *epyllion* at the end of *Georgics* Four, which relates the tragic love story of Orpheus and Eurydice.

LATN 1040B. Virgil: Aeneid.

Close reading of selections from all twelve books of Virgil's epic.

LATN 1050. Horace Satires, Epistles and 'Ars Poetica'.

We will read selections from each of these collections of Horace's hexameter poetry, in which we learn much about the poet's life and education, his friendships with Vergil and others, his relationship with his patron Maecenas and eventually with Augustus, and his theories about the "Art of Poetry" as it should best be practiced and appreciated. We will also consider the place of Horace's poems in the development of the satirical and epistolary genres at Rome as well as the influence of these works on the later poetic (and literary-critical) tradition.

LATN 1060A. Latin Prose: Further Readings in Roman Historiography.

No description available.

LATN 1060B. Sallust.

A study of the nature and themes of Roman historical writing through reading one of its major representatives: "Catilinarian Conspiracy" and selections from Sallust's other works. Comparison with other authors writing on the same topics.

LATN 1060C. Sallust and Livy.

Two major Roman historians provide a basis for study of style, intent, veracity, and stature.

LATN 1060D. Sallust, Livy, and Tacitus.

Three major Roman historians provide a basis for study of style, intent, veracity, and stature.

LATN 1060E. Livy.

Close readings of Livy's history of Rome, *From the Foundation of the City*. As we read selections from Books 1, 5, and 21, we will explore several historiographical aspects of Livy's text. We will consider both the historical tradition Livy was adapting and the influence and intrusion of the Augustan regime upon Livy's particular construction of the past. We will pay special attention to the roles played by myth, legend, and history. We will also discuss the text as literature and examine how the historian structures and crafts his work into individual books, sets of books, and a coherent multi-volume whole.

LATN 1060F. Ovid.

Reading of selections from Ovid's poetry, with emphasis placed both on close reading and on the texts' engagement with poetic issues (genre and intertextuality) and with the wider political and cultural issues of Augustan Rome.

LATN 1060G. Tacitus.

Will examine the literary and historical significance of Tacitus' *Annals*. In addition to reading the entire *Annals* in English, we will focus on books 1 and 4 of the Latin text, translating 6-8 pages per week (time permitting, we will also practice some sight-translations from book 14). In an effort to understand Tacitus' place in the ancient historiographical tradition, we will read several secondary sources, many of which respond to (or build on) Ronald Syme's monumental work. Not open to first year students.

LATN 1060H. Conquest: Caesar and Tacitus.

Caesar's account of the Gallic Wars reconstructs his conquests, defeats, and ultimate victory. We will consider the great general's aims and objectives in launching such a major military campaign and in writing a history of these endeavors. Was he simply seeking greater glory for the Roman people? After the midterm, we will turn our critical attention to the life of another Julius: Cn. Iulius Agricola, the Imperial general largely responsible for Rome's conquest of Britain. In this moral biography of his father-in-law, Tacitus mixes panegyric and invective to reveal the less savory aspects of imperialism: Rome's rapacity, corruption, greed, and despotism.

LATN 1060I. Senecan Tragedy.

Close reading and thorough translation of two Senecan revenge tragedies, the *Medea* and *Thyestes*. Emphasis will be on translation of the Latin, but as time permits we will also be discussing the two plays in their mythological, cultural, historical, and performance contexts. Students should already have four semesters of Latin (LATN 0400) or the equivalent.

LATN 1060J. Ovid Heroides.

Ovid's collection of "Heroides" is comprised of fifteen elegiac "letters" from mythological heroines to the lovers who have mistreated or abandoned them, as well as three pairs of letters between heroic lovers and their beloveds. We will read selected Heroides in Latin and the remaining poems in English translation. Emphasis will be placed on close reading of the Latin and on the poems' engagement both with poetic issues (e.g., genre and allusion) and with the wider political, social, and cultural discourses of Augustan Rome.

LATN 1060K. Seneca.

Philosopher, statesman, teacher, husband, and friend, Seneca (the Younger) was respected in his life and revered for his spectacularly Stoic death. This course will introduce students to aspects of Senecan thought, style, and influence while refining general facility with Latin.

LATN 1110A. Apuleius.

No description available.

LATN 1110B. Augustine, *Confessions*.

We will focus on the Christian humanism of Augustine's *Confessions*, reading excerpts from the autobiographical books against the diction found in them owed to Catullus, Cicero, Horace, Lucretius, Ovid, Sallust, and Virgil. The question of why a Christian might make use of such diction will be answered through attention to Augustine's training and his literary aims in writing the *Confessions*.

LATN 1110C. Caesar: *Bellum Gallicum*.

No description available.

LATN 1110D. Civil War Literature.

Reading of Latin works that deal with the reality and experience of civil war, focusing primarily on the civil war of 49-48 B.C.E.: Caesar's *Civil War*, Cicero's letters of the time, Cicero's Caesarian orations, and selections from Suetonius and Lucan. Additional readings in translation.

LATN 1110E. Comedy.

No description available.

LATN 1110F. Fortunatus.

Wide reading in the occasional poetry of the most prolific writer of the early Middle Ages, attending to diction, meter, imagery, allusion, and paying special attention to the (homo- and hetero-) erotic pieces written to the poet's friends.

LATN 1110G. Latin Love Elegy.

Reading of representative selections from each of the Roman elegists: Tibullus, Propertius, and Ovid. Discussion also of the origins and development of love elegy at Rome and exploration of the themes and topoi that define the genre. Follows the poets' negotiations with various discourses and ideologies in Augustan Rome: literary, social, sexual, and political.

LATN 1110H. Literature at the Court of Charlemagne.

We will read widely in the Latin literature of the eighth and ninth centuries, paying attention to genre, meter, patronage, and the shifting uses put to poetry in the decades in which Charlemagne ruled.

LATN 1110I. Lucretius.

Lucretius' *De Rerum Natura*, a long philosophical poem, is both a major source for Epicurean philosophical thought and an example of the ambitious Latin poetry of the late Roman Republic. We will read extensive selections from the poem in Latin. Our aim will be to make a detailed exploration of these sections through close reading of the Latin text and discussion of linguistic, literary, and cultural problems.

LATN 1110J. Petronius.

Close reading of Petronius's comic masterpiece, the *Satyricon*, with emphasis on questions of form, narrative technique, and literary intention.

LATN 1110K. Selections from Latin Authors: Ausonius.

We will read widely in the poetry of Ausonius, aiming for depth and breadth, but focusing especially on those poems that speak to the ways in which the poet transformed or transferred the classical Latin tradition to his successors.

LATN 1110L. Medieval Latin Lyric.

Close reading of a representative sampling of the personal poetry of the Latin Middle Ages, paying attention to what constitutes the lyric mode in the fourth through the twelfth centuries, developments in metrics, the effects of Christianity on vision and voice, the pressures of vernacular traditions, lyric rhetoric.

LATN 1110M. Plautus.

We shall read two or three plays of the comic genius of ancient Rome, with focus on Plautus' language and cultural background.

LATN 1110N. Latin Comedy: Terence.

We shall read several plays of Terence. This course is ideal for freshman who have studied Latin for three or four years in high school and who are taking their first college course and for students returning to Latin after an interval without Latin.

LATN 1110O. Roman Satire.

Survey of the genre of Roman verse satire, with special attention to Horace and Juvenal and additional readings in Lucilius and Persius.

LATN 1110P. Lucan's Civil War.

We will read selected books of Lucan's Civil War (*Bellum Civile*) in Latin and the poem in its entirety in English. Alongside the primary goal of refining our facility with Latin language, we will also become increasingly familiar with and sensitive to Lucan's style, his poem's place within the development of Greco-Roman epic, and the socio-political context(s) of his poem's creation (e.g. Nero and the Pisonian conspiracy). Themes to be discussed may include, but are not limited to, the grotesque, epic's both complimentary and critical relationship to empire, ambition and Roman gender constructs, and the dynamics between art and politics.

LATN 1110R. Catilines: Cicero and Sallust.

Close readings of selections from Cicero's Catilinarians and Sallust's *Bellum Catilinae*. We will explore how two contemporary authors responded to the same historical event: the Catilinarian conspiracy. We will consider not only the differences of genre (political speech v. historical monograph), but also the ways in which each author's involvement affected the content of his presentation. Additionally, we will examine Sallust's and Cicero's distinctive positions on Latin diction and stylistics. Prerequisite: Knowledge of elementary Latin grammar and intermediate Latin reading skills.

LATN 1110S. Catullus.

We will read all the extant poetry of Catullus with an emphasis on close reading of the Latin text and discussion of linguistic, literary, and cultural problems.

LATN 1110T. The Poetry of Praise.

The art of praising powerful men and women comes into Roman poetry from Greek encomium, particularly of the Hellenistic period; it begins in the late Republic, but comes into full flower with Augustus' consolidation of his own rule. Are we dealing with straightforward praise of rulers? With ironic or tendentious critiques? With texts that can perform both functions? We will study examples drawn from a number of Latin authors, mainly Augustan, as well as a few Greek texts in English translation. Enrollment limited to 20. Intermediate Latin (a passing grade in LATN 0300 and/or 0400) or the equivalent, for example in secondary school.

LATN 1110X. Selections from Latin Authors: Ovid, *Ars Amatoria*.

This course will cover Ovid's *Ars Amatoria*, Book One, as well as other selections from Ovid. Our aim will be a detailed exploration of this poetry through close reading of the Latin text and discussion of linguistic, literary, and cultural questions. Quizzes, exams, and a 7 to 10-page term paper will be required.

LATN 1110Y. Latin Epistolography.

Through reading letters from different periods of Roman History, students will become more familiar not only with the ways letters negotiated Roman social, political, and intellectual networks but also how Roman authors drew on epistolary conventions to compose literature in other forms. Authors to be read may include but are not limited to Cicero, Ovid, Pliny the Younger, and Fronto.

LATN 1110Z. Dying in the Republic.

For those who witnessed the bloody violence and brutal butchering of the late Republic, death and dying were everywhere. What did these Romans believe happened to the dead? Was there an afterlife? This course explores two texts (Virgil and Cicero) that deal with visions from and of the spheres beyond the realm of the living. Discussion of supplementary material from other authors, religious studies, and material evidence further develop our notions of what it meant to die in the Republic.

LATN 1120A. Literary Culture in the Latin Middle Ages.

This course will survey the genres relevant to the Latin Middle Ages (beast poetry, hymns, sequences, tropes, miracle and passion plays, prosimetrum) and older forms in their medieval incarnations (epic, lyric, elegy, pastoral). We will also do some work in manuscript production, including the interplay of visual and textural modes. Work in selected medieval vernaculars is possible for students so inclined. We will focus on the tenth through the thirteenth centuries.

LATN 1120B. Poetry at the End of the Roman World.

Edward Gibbon thought the "fame of Ausonius condemned the taste of his age." Study of the taste of Ausonius' age, surveying Latin literature written during and after the so-called fall of Rome. Focus on some masterworks of Silver Latinity as a bridge to our period. Sampling of literature from the 4th, 5th, and 6th centuries. Authors include Prudentius, Ausonius, Paulinus of Nola, Sidonius, Avitus, and Fortunatus.

LATN 1120C. Survey of Late and Medieval Latin.

A study of the masterworks of the Latin language written between 350 C.E. and 1300 C.E., with special emphasis on the 4th, 8th, and 12th centuries. The historical development of Latin literature; changes in Latin grammar, syntax, and morphology; innovations in genre, prosody, and stylistics; and the relationship of writings (manuscripts) to art and music.

LATN 1120D. Alcuin.

Alcuin lived a life of wide variety and accomplishment, not least as an important member of Charlemagne's inner circle and, like many at court, he wrote widely and in multiple genres. From his enormous output this course will focus on the large collections of poetry and letters. We will attend in both gatherings to theme, tone, style, and allusivity and, where appropriate, we will ponder alternate readings in a collection that has not been edited since the late nineteenth century.

LATN 1120E. Writing Lives in Late Antiquity: Jerome and Augustine.

This course will explore the development of new forms of biographical and autobiographical writing in Latin in the fourth and fifth centuries CE. We will focus on two monumental late ancient authors, Jerome and Augustine, and examine the way that these Christian intellectuals conceive of and express ideal lives in a newly Christian Empire. Texts will include selections of Jerome's *Lives of Paul the Monk and Hilarion*, his letters, and Augustine's *Confessions*.

LATN 1120G. Reading Humanist Latin Texts.

The course will explore in depth some important Renaissance or 'early modern' works of Latin literature, many of which have not been translated into English. As well as opening up a new field of Latin writing, the course will extend general knowledge of classical literature by involving some less commonly studied ancient sources. It will also introduce some early imprints, enabling you to consider texts directly in the original form in which they first appeared.

LATN 1120H. Latin Radicals (HMAN 1975V).

Interested students must register for HMAN 1975V.

LATN 1120I. Latin Epic from Mexico.

The Latin epics produced in colonial Mexico contain a wealth of exciting material, and only one, Rafael Landívar's *Rusticatio Mexicana*, has ever been translated into English. The course will introduce this remarkable tradition of writing which began in the 1500s, before focusing on two striking examples from the early eighteenth century: José de Villerías y Roelas' *Guadalupe* (1724), a narrative of the celebrated apparitions of the Virgin of Guadalupe in Mexico in 1531, a decade after the Spanish conquest; and (ii) José Mariano de Iturrigarsa's *Californiad* (1740), an account of the visions and divine prompting that led the Jesuit missionary Salvatierra to seek to convert the indigenous inhabitants of Baja California. This is a 1000 level Latin class: some familiarity with Virgil and experience of reading the *Aeneid* will be a helpful prerequisite.

LATN 1150. Latin Prose Composition.

Review of the basic tenets of Latin syntax, composition, and style. English to Latin translation exercises will shore up composition skills, as we study the stylistic traits of seven Roman authors: Cato, Caesar, Cicero, Sallust, Livy, Seneca, and Tacitus. The course will proceed chronologically according to author. Class time will be spent on translation exercises and review, as well as the identification of the stylistic and syntactic characteristics of the seven authors under study.

LATN 1250. Law and Literature.

No description available.

LATN 1810. Survey of Republican Literature.

Our purposes in this survey of Latin literature are to acquire a comprehensive historical perspective on Latin poetry and prose until the end of the Republic and a sense of its phases and the dynamics of its tradition; and to read different styles of Latin poetry and prose with confidence and ease.

LATN 1820. Survey of Roman Literature II: Empire.

This course will survey the major authors of Latin literature in chronological order from Virgil.

LATN 1930A. Cicero: *De Oratore*.

Close reading of Cicero's *de Oratore*.

LATN 1930B. Ammianus Marcellinus.

In brilliant if idiosyncratic language, Ammianus Marcellinus, last of the major Latin historians, records the exciting and fateful events of his own times, the fourth century A.D., including therein his personal and dramatic involvement in events. We will chiefly read his famous account of the deeds of the emperor Julian ("the Apostate"). The course is intended for advanced students.

LATN 1970. Special Topics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

LATN 1990. Conference: Especially for Honors Students.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

LATN 2000A. Senecan Tragedy.**LATN 2010A. Catullus in Horace.**

No description available.

LATN 2010B. Horace's *Epistles*.

No description available.

LATN 2010C. Ovid, *Metamorphosis*.

No description available.

LATN 2010D. Seminar: Roman Comedy.

We start with a couple of plays of Menander and fragments of New Comedy; we then read representative comedies of Plautus and Terence in depth.

LATN 2010E. Virgil: *Aeneid*.

We will read through the whole of Virgil's *Aeneid* in the original Latin, raising and discussing interpretive questions that can include—but are not limited to—the poem's political dimension and its representation of Roman identity, its relation to Augustan culture and the wider cultures of the ancient Mediterranean, its Greek and Roman models and how it changes them, its narrative and narratological style, and its reception in later cultures, including the *Aeneid*'s influence on European and other imperial discourses and the 20th- and 21st-century contestation of its ideological thrust.

LATN 2010F. Ovid: *Tristia*.

Close examination of the eleven poems that comprise the first book of Ovid's *Tristia*.

LATN 2010G. Roman Agricultural Writers.

No description available.

LATN 2010H. Varro.

Survey of the works of Rome's greatest scholar, the polymath M. Terentius Varro, with focus on *De Re Rustica*, *De Lingua Latina*, *Antiquitates*, and the Menippean satires.

LATN 2010I. Appendix Virgiliana.

We will survey the Latin poetry of the Julio-Claudian period, focusing on collections of pseudonymous texts that have come down under the names of Virgil and others and that include epic, lyric, epigrammatic, elegiac, and other types of poetry, ranging in theme from high-flown panegyrics to raunchy Priapea. Some of these exerted great influence on later writing; some are almost unknown. We will aim for a more nuanced view of Latin poetry and Roman culture between and around the better-studied poetic texts of the period.

LATN 2010J. Terence and Reception in Donatus.

No description available.

LATN 2020F. Seminar: Ammianus Marcellinus.

No description available.

LATN 2030A. The Age of Augustus.

No description available.

LATN 2030G. Augustine: Confessions.

A close reading of selected books of the Confessions against the backdrop of its pagan and Christian sources. Part of the seminar will be devoted to re-constructing the readerly and writerly spaces Augustine inhabits, how those spaces impinge on his engagement of his sources, and what sort of readerly competencies the imply.

LATN 2030H. Graduate Seminar: Caesar, *Bellum Civile*.

No description available.

LATN 2040. Seminar: Roman Literature.

No description available.

LATN 2080A. Late Latin Literary Culture.

No description available.

LATN 2080B. Lucan.

No description available.

LATN 2080C. Late Latin Poetry.

We will read widely and quickly in a selection of poets (Prudentius, Claudian, Sidonius, etc.) but focus our work on the poetry of Fortunatus and Alcuin, paying attention especially to textual issues and the history of scholarship, such as it is, of select poems. Reading knowledge of French required. The seminar will convene for one week at the conference on late Latin poetry to be held in October 2011 on campus. Open to graduate students; advanced undergraduates may enroll with instructor permission.

LATN 2080D. Late Latin Poetry.

We will read selectively in the fourth (Ausonius, Prudentius) and the sixth (Fortunatus) centuries, paying attention to the ancient Latinity informing the compositional habits of these poets, and focusing on the collective writing of a commentary on one book of Fortunatus' collection. There will be regular reports and some guest lecturers.

LATN 2080F. Latin in America.

Exploration of some of the rich and extensive 'neo-Latin' writing from colonial Spanish America, with particular emphasis on poetry and literary prose from sixteenth-century Mexico, much of which has never been studied or translated. Latin satires, epigrams, bucolic poems, literary epistles and dialogues will be examined in relation to their classical models and influences – and in the context of the multicultural environment in which they were produced. As well as opening a new world of Latin, this course will familiarize you with the format of some early modern books and manuscripts, and offer a unique perspective on traditional classical literature

LATN 2080I. Latin Atlantic Epic.

This course will involve study of Latin epics produced in Europe and the Americas (1500-1780) which addressed themes particular to the discovery, conquest and colonisation of the New World.

A range of texts of will be introduced, but the class will probably focus on two or three works in particular over the course of the semester. The historical conditions in which these epics will be considered as well as the poets' classical models and their sources in early modern Latin and vernacular writing.

LATN 2090A. Elegy.

No description available.

LATN 2090B. Lucretius.

In this seminar, we will read Lucretius' *De rerum natura* entire, and discuss it both as a work of Epicurean philosophy and as one of the world's greatest works of didactic poetry and a masterpiece of Latin literature. Background texts will be assigned from time to time.

LATN 2090C. Ovid: Exile Poetry.

No description available.

LATN 2090D. Propertius.

We will concentrate especially on the elegist's third book, which has been viewed both as a work of closure (a farewell to the erotic themes dominant in the earlier books) and as transitional (as the poet moves toward the more overtly Callimachean stance and political themes that will characterize the fourth book). While our primary interest will be literary-critical, including especially the elegist's engagement with his Roman contemporaries, we will also engage seriously with textual criticism, employing Heyworth's *Cynthia* and the new Oxford commentary on Book 3 (in addition to the other major commentaries).

LATN 2090F. Tibullus.

No description available.

LATN 2090G. Epigrams.

No description available.

LATN 2090I. Augustan Literature and Egypt.

This seminar studies Hellenistic influence on Latin poetry and Roman ideology in the period of Rome's slide from a dysfunctional oligarchy to an autocracy. We will focus on how such authors as Virgil, Horace, Propertius, and Ovid assimilate and transform the imperial literature of the Greek East in the time of Augustus' conquest of Egypt, both accommodating a poetics of monarchy and opening up adversarial standpoints within the same discourse. We will also look at earlier and later Latin poetry and prose texts to place this poetry within literary and political history.

LATN 2110. Seminar: Roman Satire.

No description available.

LATN 2111. Horace's Odes and their Reception.

We will read selections from Horace's Odes closely, with attention to the lyric traditions in which they were composed and the lyric traditions which they later helped constitute. In addition to questions of style, meter, voice, and history, we will also examine the commentaries, ancient and modern, which have accompanied readers of the Odes. Although the course is primarily aimed at graduate students in Classics, advanced undergraduates are also welcome to participate, as well as qualified graduate students in other humanities programs.

LATN 2120A. Roman Epigraphy.

A practical introduction to the study of Latin inscriptions, with emphasis on the reading, editing, and interpretation of texts on stone. Class time will be divided between discussion of various categories of texts in the light of the 'epigraphic habit', literacy, and the sociology of reading in antiquity and hands-on experience with editing inscriptions on stone.

LATN 2120B. Tacitus.

Close readings of selections from Tacitus's works, especially the *Agricola*, *Dialogus*, and *Annales*, with emphasis on style, form, and literary intention. Attention will be paid also to Tacitus's political career and the life of a senatorial historian in the age of Trajan.

LATN 2120C. Graduate Seminar: Apuleius.

No description available.

LATN 2970. Preliminary Exam Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

LATN 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

LATN 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Modern Greek**MGRK 0100. Introduction to Modern Greek.**

Designed for students with little or no prior knowledge of Modern Greek. The aim is to introduce students to basic linguistic structures and develop the ability to comprehend and produce text, as well as to speak and understand speech, in a variety of contexts and registers. The course objectives are to enable students to perform a range of tasks, master a minimum core vocabulary and acquire knowledge and understanding of various forms of Greek culture.

MGRK 0110. Intensive Beginning Modern Greek.

This is an hybrid, intensive, double-credit language course that meets three days a week synchronously in a physical / remote classroom, in addition to three classroom days, in an asynchronous online environment. This proficiency and literacy-oriented, integrated-skills course is designed for students with little or no prior knowledge of Modern Greek. It places emphasis on the acquisition of the four language skills, speaking, listening, reading and writing, within a framework that fosters communicative competences, understanding of discourse and critical insights into Modern Greek societies and cultures, within their world contexts. By the end of MGRK0110, students will be able to transition to MGRK0300. In addition to language and culture-specific work, this course will support the development of transferable skills that will enable students to respond with confidence to the demands of undergraduate study.

MGRK 0200. Introduction to Modern Greek.

A continuation of MGRK 0100. New students may place into it, after special arrangement with the instructor. The course continues on an integrative skills approach and aims to develop language skills, within a framework of specific topics and functions. The course objectives are to enable students to perform a range of tasks, master a minimum core vocabulary and acquire knowledge and understanding of various forms of Greek culture.

MGRK 0300. Intermediate Modern Greek.

Develops linguistic and cultural competence and may be taken by anyone who has completed MGRK 0200 or after consultation with the instructor and/or a placement exam. It focuses on further development of the four language skills as well as knowledge and understanding of various aspects of Greek society. It employs a variety of materials, including film, digital stories, internet based sources, music, art, and literature.

MGRK 0400. Intermediate Modern Greek.

A continuation of MGRK 0300. New students may place into it, after special arrangement with the instructor. It aims to enhance language skills within a variety of registers and themes; enable the students to master, use and understand effectively essential linguistic structures; examine a variety of expressive forms within an authentic cultural context.

MGRK 0500. Advanced Modern Greek.

May be taken by students who have completed the previous sequences or by anyone who places successfully into the course. The course places emphasis on the improvement of writing and oral skills, via presentations, collaborative projects, conversations and assignments based on topics and texts, drawn from a variety of sources and cultural forms of expression.

MGRK 0600. Advanced Modern Greek.

A continuation of MGRK 0500. Students who have not taken the previous sequence may take a placement test, after consultation with the instructor. The course aims to promote range, accuracy and fluency and enable students to develop ease and spontaneity with the language. Authentic materials drawn from a range of sources inform the content of the course and include films, literature, media, testimonies, music and internet based sources. The development of transcultural competence will be an essential component of the course.

MGRK 0810. Film Classics: The Greeks on the Silver Screen.

This course examines the adaptation of classical Greek themes and figures in world cinema. Proceeding from classical texts (that will include *The Odyssey*, *The Iliad*, *Oedipus Rex*, *Medea*, *The Oresteia*), analysis of films focuses on the ways such texts are recast to comment upon very different cultural, socioeconomic, and political circumstances. How do such films aspire to be "classic" in their own right? What genres or modes follow such films' epic, or anti-epic, cycles? Considers Hollywood blockbusters (*Ulysses*, *Jason and the Argonauts*, *Troy*, *300*) as well as arthouse fare by Godard, Pasolini, Camus, Merchant, Cacoyannis, Dassin, the Coen brothers, Angelopoulos.

MGRK 0811. Travelers in Greece: from Pausanias to Shirley Valentine (CLAS 0210T).

Interested students must register for CLAS 0210T.

MGRK 1010. The Classical World in Film.

Why do film directors, Hollywood moguls, and TV executives hark back to antiquity? This course introduces spectacular, epic representations of classical literature, myth, and history alongside more understated, tongue-in-cheek—occasionally hyperbolic—adaptations of that world in the present. Explores how narrative, cinematic technique, audience reception, and political context produce desired effects and elicit incisive commentary on modernity, race, ethnicity, gender. Analysis centered around a cluster of classical texts, heroic and mythic figures, and truly "historical" events. No prior knowledge of classical literature required. Films range from silent movies, Hollywood epics, European auteurism, anti-colonial Third Cinema, gladiatorial kitsch, and sci-fi franchise.

MGRK 1210. A Migration Crisis? Displacement, Materiality, and Experience.

In the past few years, we have all experienced, most of us through the media, what has been called a migration crisis. And yet, migration as a phenomenon did not appear in 2015; it is as old as humanity, and displacement and contemporary forced migration have also a long history. In this course, we will examine the historical, material and experiential dimensions of contemporary displacement and migration. Many of the examples will be from Greece but also other parts of Mediterranean and beyond, including from the Mexico-US border. Engaged Scholarship Course.

MGRK 1220. Decolonizing Classical Antiquity: White Nationalism, Colonialism, and Ancient Material Heritage.

Why do the material remnants of classical antiquity still attract public attention and exercise symbolic power? Why have such monuments been "used" by authorities and diverse social groups in the service of often totalitarian agendas? What are the cases where these monuments operate as weapons for resistance? How has colonial, racial, and national modernity shaped the way we understand and experience the materiality of the classical? Finally, how can we decolonize classical antiquity? We will use a diversity of global case studies, including modern Greece and Europe, and a variety of sources, from ethnographically derived performances to digital culture.

MGRK 1230. Mediterranean Fictions: On Debts, Crises, and the Ends of Europe.

Sun-drenched, seductive, and timeless, the Mediterranean is an appealing location from which to ponder Europe's debt to this cradle of western civilization. Recently, an economic debt crisis in Greece and the region stoked fears that a peaceful, unified Europe will come undone or else be rehabilitated. The word 'crisis' itself hinges on a making a crucial decision, often in marking the turning point of a disease. This course examines representations of this moment through literature, film, history—but also in anthropology, journalism, and art—and in relation to other twentieth-century Mediterranean texts that also anticipated seismic shifts on the continent.

MGRK 1240. Modern Greece in the World.

This course introduces the culture, history, and politics of modern Greece. No prerequisites; all texts in English. Putting aside exceptionalist claims rooted in antiquity, the course focuses on critical moments when Greece figures in the frontline of Balkan, European, and global events in the modern period: when, as historian Mark Mazower claims, "democracy's cradle [is] rocking the world." Literary, filmic, and artistic representations of such moments from within and outside Greece will illuminate issues of nationalism, modernization, sovereignty, and postcoloniality. Faculty at Brown from diverse disciplines working on Greece will be invited to address such questions through their own research.

MGRK 1250. Before and After Empire: Material Cultures of the late Ottoman and post-Ottoman World (1700-1950).

In early modernity, The Ottoman Empire ruled over the Middle East, North Africa, and Eastern Europe. Under the pressure of increasing European expansionism as well as nationalist movements, the Empire fragmented and eventually dissolved after World War I, giving rise to a cluster of modern nation states as well as colonial states. This course introduces students to the visual and material cultures of the late Ottoman and post-Ottoman world.

MGRK 1800. In Other Words: Translating Greece.

This is an advanced undergraduate seminar that will offer students the opportunity to build on their linguistic, cultural and critical literacies, by translating from Greek into English. Over the course of the semester we will be thinking critically about texts, their ideological, historical and social coordinates and their embedded discourses of Greekness, community, diglossia, identity and gender, among others. In addition to translating from Greek into English, we will read and discuss essays on translation, in order to consider in an informed way the issues (untranslatability?) and types of decision making associated with the practice of translation.

MGRK 1910. Special Topics in Modern Greek.

No description available.

MGRK 2200. Modern Greek for Classicists and Archaeologists.

This graduate level course promotes the acquisition and further refinement of the necessary translingual and transcultural skills to prepare students in the fields of Classics and Archaeology to carry out research in Greece and Cyprus. In addition, it involves training in linguistic skills that will enable students to study closely a range of texts of relevance to these disciplines. Primary emphasis will be on the development of reading, oral and aural skills using a variety of text and web based materials, of discipline specific content but also in professional and other communicative contexts of cultural currency.

Sanskrit**SANS 0100. Elementary Sanskrit I.**

This introduction to the Sanskrit language does not require prior knowledge of any language other than English. Students learn the Devanāgarī script and modes of transcription, the phonetics of Sanskrit, and an outline of most of its foundational grammar, with a goal of being able to begin reading classical Sanskrit literature in the original. Reading exercises are drawn from ancient narrative texts such as the *Hitopadeśa*, *Devīmāhātmya*, and *Mahābhārata*.

SANS 0200. Elementary Sanskrit II.

This course continues the survey of grammar and the reading exercises of SANS 100. The second half of this course reads selected passages of the *Bhagavad Gītā* and the beginning of the classic story of Nala and Damayantī from the *Mahābhārata*. Prerequisite: SANS 0100.

SANS 0300. Sanskrit Epic Narrative.

Consolidates and extends the knowledge of Sanskrit grammar introduced in first year Sanskrit; acquaints students first-hand with basic themes of ancient Indian culture, and cultivates the reading and interpretive skills necessary to read epic and closely related Sanskrit narrative with comprehension and increased fluency. Prerequisite: SANS 0200.

SANS 0400. Classical Sanskrit Story Literature.

Introduces students to the more challenging Sanskrit of classical story literature and continues to extend the knowledge of Sanskrit grammar introduced in first year Sanskrit and developed in SANS 0300, as well as present basic Indian cultural themes. Prerequisite: SANS 0300.

SANS 1020. Early Sanskrit Philosophy and Religion.

Reading in Sanskrit of selections from the *Upanishads*, *Bhagavad Gītā*, *Dharmasāstras*, etc. Prerequisite: SANS 0200.

SANS 1030. The Bhāgavata Purāṇa: Text and Reception.

The Bhāgavata Purāṇa narrates the stories of Kṛṣṇa and other gods and is rich with philosophical and theological discourse. Though relatively late, it became one of the most prominent religious texts, attracting many formal commentaries from the 13th century into the modern period. In this course, students will apply their knowledge of the foundational grammar of language to interpret the complex, poetic language of the Bhāgavata, and learn the language and idioms of scholastic Sanskrit to access the interpretations of centuries of the Purāṇa's audiences.

SANS 1080. The Critical Episodes of the Mahabharata.

A guided tour of the structure of the *Mahabharata*, "The Great Epic of India," through the reading in Sanskrit of selected critical passages.

SANS 1100. Vedic Sanskrit.

Introduction to reading the *Rig Veda* and later Vedic literature, with particular attention to the grammar of Vedic Sanskrit.

SANS 1400. The Sanskrit Grammatical Tradition.

Introduction to the Sanskrit tradition of *vyākāraṇa* (grammatical derivation and analysis) through reading Pāṇini's *Aśṭādhyāyī* and commentaries upon it.

SANS 1500. Sanskrit Song and Musicology.

The Sanskrit language is a medium of rich traditions of song and musicological literature that inform Carnatic, Hindustani, and other classical music traditions to this day. This course will introduce students who already have a foundation in the Sanskrit language to the distinctive language of technical musicological literature and notation, as well as to the lyrical poetry set to music in these traditions. There is no requirement for students taking this course to have any background in musicology or performance, though students who do have a background in music are welcome to incorporate performance into the final project for the course.

SANS 1600. Sanskrit Poetry and Drama.

Introduction to *kāvya* (classical Sanskrit *belles lettres*)—poetry, drama, and prose narrative—through the reading of authors of the Classical Period as well as works on aesthetics and commentaries upon them.

SANS 1800. Classical Schools of Indian Philosophy.

Introduction to the classical Brahminic *darsanas* (comprehensive, rationalized systems of philosophy and, or, theology dealing with Hermeneutics and Philosophy of Language, Logic, Metaphysics, and Ultimate Beatitude) and to corresponding Buddhist and Jain traditions through reading, in Sanskrit, of selected works. Prerequisite: SANS 0400.

SANS 1910. Advanced Sanskrit.

In-depth study of major poetic, dramatic, epic, philosophical, religious, grammatical, medical, or astronomical texts. Topics depend on the interest of students.

SANS 1970. Independent Study - Special Topics.**SANS 1990. Conference: Especially for Honors Students.**

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor's permission required.

SANS 2100. Theme, Language, and Meter in the Mahābhārata.

This seminar will undertake systematic studies of thematic, linguistic, and metric continua in the text of the written Sanskrit Mahābhārata. We shall alternate between the discussion of important scholarly works of interpretation of the epic, important methodological controversies, and selected case studies focused upon variations in epic language and meter and the tracing of the 'threads' of important epic themes across large stretches of the epic. Prerequisite: three or more years study of Sanskrit. Instructor permission required.

SANS 2970. Sanskrit Preliminary Exam Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

SANS 2980. Sanskrit Reading and Research.

Section numbers will vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

Cognitive and Psychological Sciences

The Department of Cognitive and Psychological Sciences (CoPsy) is dedicated to the interdisciplinary study of the mind, brain and behavior. Its mission is to conduct impactful state-of-the-art research, to teach, and to provide service to society in these areas of scholarship. Our curriculum features a unique, intellectually diverse mix of courses. We place a particular emphasis on methods, critical thinking, and research skills to address questions about the mind, brain, and behavior.

For additional information, please visit the department's website: <https://copsy.brown.edu/>

Cognitive Neuroscience Concentration Requirements

Cognitive neuroscience is the study of higher cognitive functions in humans and their underlying neural bases. It is an integrative area of study drawing primarily from cognitive science, psychology, neuroscience, and linguistics. There are two broad directions that can be taken in this concentration - one is behavioral/experimental and the other is computational/modeling. In both, the goal is to understand the nature of cognition from a neural perspective. The standard concentration for the Sc.B. degree requires courses on the foundations, systems level, and integrative aspects of cognitive neuroscience as well as laboratory and elective courses that fit within a particular theme or category such as general cognition, perception, language development or computational/modeling. Concentrators must also complete a senior seminar course or an independent research course. Students may also participate in the work of the Brown Institute for Brain Science, an interdisciplinary program that unites ninety faculty from eleven departments.

Standard Program for the AB degree

These are the new requirements approved by CCC effective Fall 2024. For existing concentrators graduating in 2024-25, the prior requirements can be found by selecting the Bulletin archive <https://bulletin.brown.edu/archive/2023-24/>

Common Core

Careers in Cognitive Neuroscience and related fields require familiarity with statistics. Therefore, the Cognitive Neuroscience concentration requires a course in Quantitative Methods (CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>)). CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) is a prerequisite for research methods and laboratory courses, so concentrators should plan to take this course by their fourth semester. Students may substitute for CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) a comparable statistics course taught in another department, with the approval of a Cognitive Neuroscience concentration advisor. Consult with a concentration advisor for details. The department does not grant concentration credit for AP Statistics, regardless of score. We strongly recommend fulfilling the statistics requirement as a sophomore.

Another element in the Cognitive Neuroscience concentration is a course on research methods. Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>)) or Research Methods (CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>)) is the preferred course for fulfilling this requirement. This course builds on the introductory statistics course and exposes students to a variety of topics in the psychological sciences: to empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Other CPSY laboratory courses can be used to fulfill the research methods requirement; consult with a Cognitive Neuroscience advisor for lists of

approved courses. The research methods requirement should be fulfilled before senior year.

Foundation

The goal of these requirements is to provide students with the foundational knowledge across Cognitive Neuroscience. Students are expected to have some background in Psychology, in Neuroscience, and in Computation. The requirements below afford students with the opportunity to gain background in each of these foundational areas and cannot be interchanged.

(A) Students are expected to take two courses that provide them with a foundation in cognition/psychology. The goal of taking courses in this category is to consider general principles of Psychological and Cognitive Science towards the study of Cognitive Neuroscience. The courses below are ones that teach fundamental topics related to Cognitive Neuroscience or that provide foundational knowledge that can be applied to neuroscientific principles and techniques. Cognition, Learning, Perception and Cognitive Neuropsychology are emphasized. Students interested in Developmental Cognitive Neuroscience are encouraged to get a background in Cognitive Development (CPSY 0610), while students interested in Social Neuroscience are encouraged to get a background in Social Psychology (CPSY 0700). However, we do not accept both CPSY 0610 and CPSY S0700, as students interested in both of these topics are recommended to concentrate in psychology

(B) Students are expected to take one course that provides them with a foundation in neuroscience. The goal of taking a course in this category is to become familiar with the principles of cognitive neuroscience research and methods in one of the foundational domains.

Please note that CPSY 0400 and CPSY 0450 can be used for either the Foundation in Cognition/Psychology or the Foundation in Neuroscience requirement, but not both. That is, if either of these classes are used for the Foundation in Cognition requirement, students must take NEUR 0010 to satisfy Foundations in Neuroscience requirement; if either CPSY 0400 or CPSY 0450 are used for the Foundation in Neuroscience requirement, students cannot use them (or CPSY 0200) to satisfy the Foundations in Cognition/Psychology requirements.

(C) Because the study of Cognitive Neuroscience can focus on computational explanations for the relation between neural processes and behavior, students are required to take one course in programming or computational modeling.

Electives

The goal of the elective requirement is to construct a curriculum that provides a deeper understanding of Cognitive Neuroscience. Students should take five electives from the CPSY, NEUR, or CSCI departments, of which three must be at the 1000-level. Courses might also come from the APMA, COST or PHP departments (only with permission of concentration advisor). Extra foundation classes can be used as electives. However, students cannot construct a program of study that includes both CPSY 0950 and an introductory CSCI class as part of this requirement. Moreover, students must have at least three electives at the 1000-level. These elective courses must represent a specific coherent program of study, which is discussed with the concentration advisor.

Requirements for the A.B. degree

CPSY 0900	Statistical Methods	1
CPSY 1900 or CPSY 1901	Research Methods And Design Research Methods	1
Two Foundation Courses in Cognition from the following:		2
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0100	Learning and Conditioning	
CPSY 0200	Human Cognition	
or CPSY 0400	Cognitive Neuroscience	
or CPSY 0450	Brain Damage and the Mind	
CPSY 0500	Perception and Mind	
or CPSY 0550	Science of Consciousness	

CPSY 0610	Children's Thinking: The Nature of Cognitive Development	
or CPSY 0700	Social Psychology	
One Foundation Course in Neuroscience from the following:		1
CPSY 0400	Cognitive Neuroscience	
CPSY 0450	Brain Damage and the Mind	
NEUR 0010	The Brain: An Introduction to Neuroscience	
One Foundation Course in Computation from the following:		1
CPSY 0950	Introduction to programming	
CPSY 1291	Computational Methods for Mind, Brain and Behavior	
CPSY 1492	Computational Cognitive Neuroscience	
CPSY 1950	Deep Learning in Brains, Minds and Machines	
Or any introductory CSCI course with a programming component such as:		
CSCI 0111	Computing Foundations: Data	
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
Five Approved Electives:		5
Five courses from the CPSY, NEUR, or CSCI department, of which three must be at the 1000-level		
Capstone: Independent Study (CPSY 1970, CPSY 1980) or approved seminar or lab		1
Total Credits		12

Honors Requirement

The Honors Program in Cognitive Neuroscience gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Cognitive Neuroscience must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a potential faculty mentor prior to semester 7. Candidates for Honors must have completed the Statistics CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) and Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>), Research Methods CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>), or laboratory course) requirements before semester 7. Please refer to the CPSY Honors Program page for detailed information about the specific requirements for the Honors program in Cognitive Neuroscience.

Requirements for the Sc.B. degree

These are the new requirements approved by CCC effective Fall 2024. For existing concentrators graduating in 2024-25, the prior requirements can be found by selecting the Bulletin archive <https://bulletin.brown.edu/archive/2023-24/>

Common Core

Careers in Cognitive Neuroscience and related fields require familiarity with statistics. Therefore, the Cognitive Neuroscience concentration

requires a course in Quantitative Methods (CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>)). CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) is a prerequisite for research methods and laboratory courses, so concentrators should plan to take this course by their fourth semester. Students may substitute for CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) a comparable statistics course taught in another department, with the approval of a Cognitive Neuroscience concentration advisor. Consult with a concentration advisor for details. The department does not grant concentration credit for AP Statistics, regardless of score. We strongly recommend fulfilling the statistics requirement as a sophomore.

Another element in the Cognitive Neuroscience concentration is a course on research methods. Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>)) or Research Methods (CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>)) is the preferred course for fulfilling this requirement. This course builds on the introductory statistics course and exposes students to a variety of topics in the psychological sciences: to empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Other CPSY laboratory courses can be used to fulfill the research methods requirement; consult with a Cognitive Neuroscience advisor for lists of approved courses. The research methods requirement should be fulfilled before senior year.

Foundation

The goal of these requirements is to provide students with the foundational knowledge across Cognitive Neuroscience. Students are expected to have some background in Psychology, in Neuroscience, and in Computation. The requirements below afford students with the opportunity to gain background in each of these foundational areas and cannot be interchanged.

(A) Students are expected to take two courses that provide them with a foundation in cognition/psychology. The goal of taking courses in this category is to consider general principles of Psychological and Cognitive Science towards the study of Cognitive Neuroscience. The courses below are ones that teach fundamental topics related to Cognitive Neuroscience or that provide foundational knowledge that can be applied to neuroscientific principles and techniques. Cognition, Learning, Perception and Cognitive Neuropsychology are emphasized. Students interested in Developmental Cognitive Neuroscience are encouraged to get a background in Cognitive Development (CPSY 0610), while students interested in Social Neuroscience are encouraged to get a background in Social Psychology (CPSY 0700). However, we do not accept both CPSY 0610 and CPSY 0700, as students interested in both of these topics are recommended to concentrate in psychology.

(B) Students are expected to take one course that provides them with a foundation in neuroscience. The goal of taking a course in this category is to become familiar with the principles of cognitive neuroscience research and methods in one of the foundational domains.

Please note that CPSY 0400 and CPSY 0450 can be used for either the Foundation in Cognition/Psychology or the Foundation in Neuroscience requirement, but not both. That is, if either of these classes are used for the Foundation in Cognition requirement, students must take NEUR 0010 to satisfy Foundations in Neuroscience requirement; if either CPSY 0400 or CPSY 0450 of these classes are used for Foundation in Neuroscience, students cannot use them (or CPSY 0200) to satisfy the Foundations in Cognition/Psychology requirements.

(C) Because the study of Cognitive Neuroscience can focus on computational explanations for the relation between neural processes and behavior, students are required to take one course in programming or computational modeling.

Electives

The goal of the elective requirement is to construct a curriculum that provides a deeper understanding of Cognitive Neuroscience. Students should take five electives from the CPSY, NEUR, or CSCI departments, of which three must be at the 1000-level. Courses might also come from the APMA, COST or PHP departments (only with permission of concentration

advisor). Extra foundation classes can be used as electives. However, students cannot construct a program of study that includes both CLPS950 and an introductory CSCI class as part of this requirement. Moreover, students must have at least three electives at the 1000-level. These elective courses must represent a specific coherent program of study, which is discussed with the concentration advisor.

Research Methods

Another element in the Cognitive Neuroscience concentration is a research methods course that builds on the introductory statistics course (which will be a prerequisite) but exposes students to a variety of topics in research of the mind: to empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Alternatively, students may take an approved laboratory course.

ScB Requirements in Cognitive Neuroscience

To satisfy the ScB. requirements in the Cognitive Neuroscience concentration, one must satisfy all the AB requirements as well as take five (5) additional classes in STEM fields related to the concentration. The goal of this requirement is to provide students with a broader background in both the study of psychology and STEM fields in general. At least two (2) of those five classes must be in the CPSY Department. These two courses must be at the 1000-level. We strongly recommend that one of these courses be a laboratory course.

The other three classes can be from the following departments: APMA, BIOL, CSCI, CHEM, CPSY, MATH, NEUR, or PHYS. Courses from other STEM fields might be eligible with permission of the concentration advisor, but such courses must be related to a student's other courses, such as their electives. Courses from CPSY must be at the 1000-level to be considered for the Sc.B (no other department has that requirement). All courses must also be acceptable for the concentration requirements of a concentration administered by that department. For example, if a PHYS course is used to satisfy one of these requirements, it must be acceptable for a concentration in the PHYS department.

CPSY 0900	Statistical Methods	1
CPSY 1900	Research Methods And Design	1
or CPSY 1901	Research Methods	
Two Foundation Courses in Cognition from the following:		2
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0100	Learning and Conditioning	
CPSY 0200	Human Cognition	
or CPSY 0400	Cognitive Neuroscience	
or CPSY 0450	Brain Damage and the Mind	
CPSY 0500	Perception and Mind	
CPSY 0550	Science of Consciousness	
CPSY 0610	Children's Thinking: The Nature of Cognitive Development	
or CPSY 0700	Social Psychology	
One Foundation Course in Neuroscience from the following:		1
CPSY 0400	Cognitive Neuroscience	
CPSY 0450	Brain Damage and the Mind	
NEUR 0010	The Brain: An Introduction to Neuroscience	
One Foundation Course in Computation from the following:		1
CPSY 0950	Introduction to programming	
CPSY 1291	Computational Methods for Mind, Brain and Behavior	
CPSY 1492	Computational Cognitive Neuroscience	
CPSY 1950	Deep Learning in Brains, Minds and Machines	
Or any introductory CSCI course with a programming component such as:		
CSCI 0111	Computing Foundations: Data	

or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
Five Approved Electives:		5
Five courses from the CPSY, NEUR, or CSCI department, of which three must be at the 1000-level		
Five additional STEM courses of which two (2) must be CPSY courses at the 1000-level from the Electives of Capstone offerings (a lab is strongly recommended). Courses from APMA, BIOL, CSCI, CHEM, CPSY, MATH, NEUR, or PHYS will be considered and must be applicable to a concentration in that department.		5
Capstone: Independent Study (CPSY 1970, CPSY 1980) or approved seminar		1
Total Credits		17

Honors Requirement

The Honors Program in Cognitive Neuroscience gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Cognitive Neuroscience must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a potential faculty mentor prior to semester 7. Candidates for Honors must have completed the Statistics CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) and Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>), Research Methods CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>), or laboratory course) requirements before semester 7. Please refer to the CPSY Honors Program page for detailed information about the specific requirements for the Honors program in Cognitive Neuroscience.

Cognitive Science Concentration Requirements

Concentration Requirements

Cognitive science is the interdisciplinary study of the mind. Research in Cognitive Science uses behavioral experimentation, computational modeling, and brain imaging to study mental representations and processes. The study of Cognitive Science involves integrating certain areas of focus within Psychology with methods and topics from other disciplines, such as Computer Science, Neuroscience, Linguistics, Philosophy, Anthropology, and Sociology. The goal of the Cognitive Science concentration is to provide students with the foundational background in those areas of psychological science that are fundamental to the field, as well as exposure to the other disciplines that involve the study of the mind. Students can choose to focus on behavioral experimentation or computational modeling with their choice of core classes, and can focus on a particular avenue of study with their electives.

These are the new requirements approved by CCC effective Fall 2024. For existing concentrators graduating in 2024-25, the prior requirements can be found by selecting the Bulletin archive <https://bulletin.brown.edu/archive/2023-24/>

Common Core

Careers in Cognitive Science and related fields require familiarity with statistics. Therefore, the Psychology concentration requires a course in Quantitative Methods (CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>)). CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) is a prerequisite for research methods and laboratory courses, so concentrators should plan to take this course by their fourth semester. Students may substitute CPSY 0900 (<https://bulletin.brown.edu/>)

search/?P=CPSY%200900) with a comparable statistics course taught in another department with the approval of a Cognitive Science concentration advisor. Consult with a concentration advisor for details. The department does not grant concentration credit for AP Statistics, regardless of score. We strongly recommend fulfilling the statistics requirement as a sophomore.

Another element in the Cognitive Science concentration is a course on research methods. This course could focus on behavioral research methods or computational methods. One of Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>)) or Research Methods (CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>)) is the preferred way of fulfilling this requirement if students are interested in behavioral methods. One of the laboratory courses in computation (CPSY 1291 or CPSY 1492) is the preferred course for fulfilling this requirement if students are more interested in computational methods. These courses expose students to a variety of topics and methods in Cognitive Science. Other laboratory courses can be used to fulfill the research methods requirement; consult with a Cognitive Science advisor for lists of approved courses. The research methods requirement should be fulfilled before senior year.

Foundation

The goal of the foundation courses is to provide students with a background in the relevant areas of psychological science related to Cognitive Science, as well as provide students with exposure to computational training and foundational knowledge in at least one other discipline related to the study of the mind.

(A) Three of these foundational courses will be in the CPSY department, specifically providing students with foundations in the psychological sciences related to Cognitive Science. The goal of the foundational courses in the psychological sciences is to provide students with the background in areas of psychology relevant to the study of the mind. This includes cognition, perception, psycholinguistics, and cognitive neuroscience as well as the possibility to study developmental cognitive science or social cognitive science. No student in cognitive science is expected to know all of these topics; rather, the expectation is that students have exposure to a subset of these fields.

Note however, that we do not accept both CPSY 0610 and CPSY 0700 for the Cognitive Science concentration; students interested in both of these courses are recommended to concentrate in Psychology. Moreover, given the emphasis that some of these courses place on cognitive neuropsychology, one further restriction to these requirements is that students cannot specifically take CPSY 0010, CPSY 0200, and CPSY 0450 to satisfy this foundation requirement. All other combinations are acceptable.

(B) One foundation course must be outside of the CPSY department. The goal of this requirement is to provide students with exposure to fields related to the study of the mind, not in psychology. These courses contribute to a more interdisciplinary approach to the study of the mind.

(C) Because the study of cognitive science has a fundamental relation with computational modeling and understanding the computational model of the mind, it is critical that all cognitive science students be familiar with computation and programming. The goal of this last foundation requirement is to provide students with this knowledge base. Note that if students use CPSY1291 or CPSY1492 to satisfy this requirement, they must use a different course to satisfy the research methods requirement listed above.

Electives

The goal of the elective requirement is to construct a curriculum that provides a deeper understanding of Cognitive Science. Students should take four classes in CPSY, PHIL, NEUR, SOC, ANTH, LING, or CSCI with at least one of these classes coming from the CPSY department at the 1000-level and at least two others at the 1000-level. Permission of concentration advisor required to approve electives. No more than two 1970/1980 credits can count towards electives (or requirements to the concentration in general).

Requirements for the A.B. degree

CPSY 0900	Statistical Methods	1
CPSY 1900 or CPSY 1901	Research Methods And Design Research Methods	1
Three Foundation Courses within CPSY:		3
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0200 or CPSY 0220	Human Cognition Making Decisions	
CPSY 0400 or CPSY 0450	Cognitive Neuroscience Brain Damage and the Mind	
CPSY 0500 or CPSY 0550	Perception and Mind Science of Consciousness	
CPSY 0610 or CPSY 0700	Children's Thinking: The Nature of Cognitive Development Social Psychology	
CPSY 0800	Language and the Mind	
One Foundation Course Outside of CPSY:		1
LING 0100	Introduction to Linguistics	
NEUR 0010	The Brain: An Introduction to Neuroscience	
SOC 0010	Social Forces: An Introduction to Sociology	
Or choose from a set of approved courses in PHIL, ANTH, or SOC		
One Foundation Course in Computation:		1
CPSY 0950	Introduction to programming	
CPSY 1291	Computational Methods for Mind, Brain and Behavior	
CPSY 1492	Computational Cognitive Neuroscience	
CPSY 1950	Deep Learning in Brains, Minds and Machines	
Or any introductory CSCI course with a programming component such as:		
CSCI 0111 or CSCI 0150	Computing Foundations: Data Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170 or CSCI 0190	Computer Science: An Integrated Introduction Accelerated Introduction to Computer Science	
Four Approved Electives related to Cognitive Science, such as:		4
Students should take four courses from CPSY, PHIL, NEUR, SOC, ANTH, LING, or CSCI with at least one of these classes coming from CPSY at 1the 1000-level and at least two others at the 1000-level.		
Capstone: Independent Study (CPSY 1970, CPSY 1980) or approved seminar		1
Total Credits		12

Honors Requirement

The Honors Program in Cognitive Science gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Cognitive Science must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a potential faculty mentor prior to semester 7. Candidates for Honors must have completed the Statistics and Research Methods requirements before semester 7. Please refer to the CPSY Honors

Program page for detailed information about the specific requirements for the Honors program in Cognitive Science.

Requirements for the Sc.B. degree

Cognitive science is the interdisciplinary study of the mind. Research in Cognitive Science uses behavioral experimentation, computational modeling, and brain imaging to study mental representations and processes. The study of Cognitive Science involves integrating certain areas of focus within Psychology with methods and topics from other disciplines, such as Computer Science, Neuroscience, Linguistics, Philosophy, Anthropology, and Sociology. The goal of the Cognitive Science concentration is to provide students with the foundational background in those areas of psychological science that are fundamental to the field, as well as exposure to the other disciplines that involve the study of the mind. Students can choose to focus on behavioral experimentation or computational modeling with their choice of core classes, and can focus on a particular avenue of study with their electives.

These are the new requirements approved by CCC effective Fall 2024. For existing concentrators graduating in 2024-25, the prior requirements can be found by selecting the Bulletin archive <https://bulletin.brown.edu/archive/2023-24/>

Common Core

Careers in Cognitive Science and related fields require familiarity with statistics. Therefore, the Psychology concentration requires a course in Quantitative Methods (CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>)). CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) is a prerequisite for research methods and laboratory courses, so concentrators should plan to take this course by their fourth semester. Students may substitute CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) with a comparable statistics course taught in another department with the approval of a Cognitive Science concentration advisor. Consult with a concentration advisor for details. The department does not grant concentration credit for AP Statistics, regardless of score. We strongly recommend fulfilling the statistics requirement as a sophomore.

Another element in the Cognitive Science concentration is a course on research methods. This course could focus on behavioral research methods or computational methods. One of Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>)) or Research Methods (CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>)) is the preferred way of fulfilling this requirement if students are interested in behavioral methods. One of the laboratory courses in computation (CPSY 1291 or CPSY 1492) is the preferred course for fulfilling this requirement if students are more interested in computational methods. These courses expose students to a variety of topics and methods in Cognitive Science. Other laboratory courses can be used to fulfill the research methods requirement; consult with a Cognitive Science advisor for lists of approved courses. The research methods requirement should be fulfilled before senior year.

Foundation

The goal of the foundation courses is to provide students with a background in the relevant areas of psychological science related to Cognitive Science, as well as provide students with exposure to computational training and foundational knowledge in at least one other discipline related to the study of the mind.

(A) Three of these foundational courses will be in the CPSY department, specifically providing students with foundations in the psychological sciences related to Cognitive Science. The goal of the foundational courses in the psychological sciences is to provide students with the background in areas of psychology relevant to the study of the mind. This includes cognition, perception, psycholinguistics, and cognitive neuroscience as well as the possibility to study developmental cognitive science or social cognitive science. No student in cognitive science is expected to know all of these topics; rather, the expectation is that students have exposure to a subset of these fields.

Note however, that we do not accept both CPSY 0610 and CPSY 0700 for the Cognitive Science concentration; students interested in both of

these courses are recommended to concentrate in Psychology. Moreover, given the emphasis that some of these courses place on cognitive neuropsychology, one further restriction to these requirements is that students cannot specifically take CPSY 0010, CPSY 0200, and CPSY 0450 to satisfy this foundation requirement. All other combinations are acceptable.

(B) One foundation course must be outside of the CPSY department. The goal of this requirement is to provide students with exposure to fields related to the study of the mind, not in psychology. These courses contribute to a more interdisciplinary approach to the study of the mind.

(C) Because the study of cognitive science has a fundamental relation with computational modeling and understanding the computational model of the mind, it is critical that all cognitive science students be familiar with computation and programming. The goal of this last foundation requirement is to provide students with this knowledge base. Note that if students use CPSY1291 or CPSY1492 to satisfy this requirement, they must use a different course to satisfy the research methods requirement listed above.

Electives

The goal of the elective requirement is to construct a curriculum that provides a deeper understanding of Cognitive Science. Students should take four classes in CPSY, PHIL, NEUR, SOC, ANTH, LING, or CSCI with at least one of these classes coming from the CPSY department at the 1000-level and at least two others at the 1000-level. Permission of concentration advisor required to approve electives. No more than two 1970/1980 credits can count towards electives (or requirements to the concentration in general).

Research Methods and Capstone

Another element in the Cognitive Science concentration is a research methods course that builds on the introductory statistics course (which will be a prerequisite) but exposes students to a variety of topics in research of the mind: to empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Concentrators will additionally take either a seminar course or an independent research course to serve as their capstone experience.

ScB Requirements in Cognitive Science

To satisfy an ScB. in the Cognitive Science concentration, one must satisfy all the AB requirements as well as take five (5) additional classes in STEM fields related to the concentration. The goal of this requirement is to provide students with a broader background in both the study of psychology and STEM fields in general. At least two (2) of those five classes must be in the CPSY Department. These two courses must be at the 1000-level. We strongly recommend that one of these courses be an advanced laboratory course (Described above).

The other three classes can be from the following departments: APMA, BIOL, CSCI, CHEM, CPSY, MATH, NEUR, or PHYS. Courses from other fields might be eligible with permission of the concentration advisor, but such courses must be related to a student's other courses, such as their electives. Courses from CPSY must be at the 1000-level to be considered for the Sc.B requirements. All courses must also be acceptable for the concentration requirements of a concentration administered by that department. For example, if a PHYS course is used to satisfy one of these requirements, it must be acceptable for a concentration in the PHYS department.

CPSY 0900	Statistical Methods	1
CPSY 1900 or CPSY 1901	Research Methods And Design Research Methods	1
Three Foundation Courses within CPSY:		3
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0200 or CPSY 0220	Human Cognition Making Decisions	
CPSY 0400	Cognitive Neuroscience	

or CPSY 0450	Brain Damage and the Mind	
CPSY 0500	Perception and Mind	
or CPSY 0550	Science of Consciousness	
CPSY 0610	Children's Thinking: The Nature of Cognitive Development	
or CPSY 0700	Social Psychology	
CPSY 0800	Language and the Mind	
One Foundation Course Outside of CPSY:		1
LING 0100	Introduction to Linguistics	
NEUR 0010	The Brain: An Introduction to Neuroscience	
SOC 0010	Social Forces: An Introduction to Sociology	
Or choose from a set of approved courses in PHIL, ANTH, or SOC		
One Foundation Course in Computation:		1
CPSY 0950	Introduction to programming	
CPSY 1291	Computational Methods for Mind, Brain and Behavior	
CPSY 1492	Computational Cognitive Neuroscience	
CPSY 1950	Deep Learning in Brains, Minds and Machines	
Or any introductory CSCI course with a programming component such as:		
CSCI 0111	Computing Foundations: Data	
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
Four Approved Electives related to Cognitive Science		4
Students should take four courses from CPSY, PHIL, NEUR, SOC, ANTH, LING, or CSCI with at least one of these classes coming from CPSY at 1the 1000-level and at least two others at the 1000-level.		
Five Additional STEM Courses, of which at least two (2) must be PCSY courses at the 1000-level (a lab course is strongly recommended). Courses in APMA, BIOL, CSCI, CHEM, CPSY, MATH, NEUR, or PHYS will be considered and must be applicable to a concentration in that department		5
Capstone: Independent Study (CPSY 1970, CPSY 1980) or approved seminar		1
Total Credits		17

Honors Requirement

The Honors Program in Cognitive Science gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Cognitive Science must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a potential faculty mentor prior to semester 7. Candidates for Honors must have completed the Statistics and Research Methods requirements before semester 7. Please refer to the CPSY Honors Program page for detailed information about the specific requirements for the Honors program in Cognitive Science.

Psychology Concentration Requirements

Psychology is the scientific study of the mind and behavior. Fundamental to the study of psychology is analytic methods and critical thinking about the relation between theory and evidence. Studying psychology allows students to understand human and animal behavior, cognitive, perceptual,

and developmental processes, motivation, identity, and the relations between well-being and society. Studying psychology also allows students insight into clinical applications of psychological science. Students in the concentration are required to take courses in quantitative methods and experimental design, become familiar with a set of foundational topics in the psychological sciences, and participate in seminars and laboratory courses on specialized topics and state-of-the-art experimental techniques. The concentration in psychology can prepare students for careers in research, teaching, clinical practice, business, law, marketing, and education, among many other professions. The general goal of the psychology concentration requirements is to provide students with a broad exposure to the different areas within psychological science, while also allowing students to explore some of those areas deeply.

Careers in Psychology and related fields require familiarity with statistics. Therefore, the Psychology concentration requires a course in Statistics (CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>)). CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) is a prerequisite for research methods and laboratory courses, so concentrators should plan to take this course by their fourth semester.

Students may substitute for CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) a comparable statistics course taught in another department, with the approval of a Psychology concentration advisor. Consult with a concentration advisor for details. The department does not grant concentration credit for AP Statistics, regardless of score. We strongly recommend fulfilling the statistics requirement as a sophomore.

Another element in the Psychology concentration is a course on research methods. Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>)) is the preferred course for fulfilling this requirement. This course builds on the introductory statistics course and exposes students to a variety of topics in the psychological sciences: to qualitative and quantitative methods (e.g., observations, surveys, experiments), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Other CPSY laboratory courses may be used to fulfill the research methods requirement; consult with a Psychology advisor for lists of approved courses. Laboratory or research methods courses in other departments cannot be used to fulfill the research methods requirement. The research methods requirement should be fulfilled before senior year.

Foundation

To provide students with a solid foundation of knowledge in their area of concentration, the Psychology concentration requires five foundation courses, representing core areas of Psychology as a science. Foundation courses are all numbered below the 1000 level. The list of approved foundation courses is posted on the CPSY undergraduate page. CPSY courses above the 1000 level and courses in other departments, at any level, cannot be used to satisfy foundation requirements.

Electives

Concentrators will select four additional courses that examine in greater depth topics of special interest to them. The CPSY courses designed to count as electives will often have foundation courses as prerequisites. Electives can be chosen from laboratory courses, lecture courses, or seminars. At least two electives should be at the 1000 level in the CPSY department. In addition, students may choose up to two courses outside of CPSY (preferably at the 1000 level) as electives. Electives should fit into a coherent intellectual theme, and should be chosen in consultation with a concentration advisor.

Requirements for the A.B. degree

STANDARD PROGRAM FOR THE A.B. DEGREE

Common Core:		
CPSY 0900	Statistical Methods	1
CPSY 1900	Research Methods And Design (or approved laboratory course)	1
Five courses from the following:		5
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0100	Learning and Conditioning	

CPSY 0110	Animal Behavior	
CPSY 0200 or CPSY 0220	Human Cognition Making Decisions	
CPSY 0400 or CPSY 0450	Cognitive Neuroscience Brain Damage and the Mind	
CPSY 0500	Perception and Mind	
CPSY 0610 or CPSY 0620	Children's Thinking: The Nature of Cognitive Development Social and Moral Development	
CPSY 0700	Social Psychology	
CPSY 0702	Introduction to Clinical Psychology	
CPSY 0800	Language and the Mind	
Four approved Electives related to Psychology		4
Capstone: Independent Study (CPSY 1970, CPSY 1980) or approved seminar		1
Total Credits		12

Honors Requirement

The Honors Program in Psychology gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Psychology must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a potential faculty mentor prior to semester 7. Candidates for Honors must have completed the Statistics CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) and Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>) or laboratory course) requirements before semester 7. Please refer to the CPSY Honors Program page for detailed information about the specific requirements for the Honors program in Psychology.

Psychology is the scientific study of the mind and behavior. Fundamental to the study of psychology is analytic methods and critical thinking about the relation between theory and evidence. Studying psychology allows students to understand human and animal behavior, cognitive, perceptual, and developmental processes, motivation, identity, and the relations between well-being and society. Studying psychology also allows students insight into clinical applications of psychological science. Students in the concentration are required to take courses in quantitative methods and experimental design, become familiar with a set of foundational topics in the psychological sciences, and participate in seminars and laboratory courses on specialized topics and state-of-the-art experimental techniques. The concentration in psychology can prepare students for careers in research, teaching, clinical practice, business, law, marketing, and education, among many other professions. The general goal of the psychology concentration requirements is to provide students with a broad exposure to the different areas within psychological science, while also allowing students to explore some of those areas deeply.

Common Core

Careers in Psychology and related fields require familiarity with statistics. Therefore, the Psychology concentration requires a course in Statistics (CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>)). CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) is a prerequisite for research methods and laboratory courses, so concentrators should plan to take this course by their fourth semester.

Students may substitute for CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) a comparable statistics course taught in another department, with the approval of a Psychology concentration advisor. Consult with a concentration advisor for details. The department does not grant concentration credit for AP Statistics, regardless of score. We strongly recommend fulfilling the statistics requirement as a sophomore.

Another element in the Psychology concentration is a course on research methods. Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>)) is the preferred course for fulfilling this requirement. This course builds on the introductory statistics course and exposes students to a variety of topics in the psychological sciences: to qualitative and quantitative methods (e.g., observations, surveys, experiments), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Other CPSY laboratory courses may be used to fulfill the research methods requirement; consult with a Psychology advisor for lists of approved courses. Laboratory or research methods courses in other departments cannot be used to fulfill the research methods requirement. The research methods requirement should be fulfilled before senior year.

Foundation

To provide students with a solid foundation of knowledge in their area of concentration, the Psychology concentration requires five foundation courses, representing core areas of Psychology as a science. Foundation courses are all numbered below the 1000 level. The list of approved foundation courses is posted on the CPSY undergraduate page. CPSY courses above the 1000 level and courses in other departments, at any level, cannot be used to satisfy foundation requirements.

Electives

Concentrators will select four additional courses that examine in greater depth topics of special interest to them. The CPSY courses designed to count as electives will often have foundation courses as prerequisites. Electives can be chosen from laboratory courses, lecture courses, or seminars. At least two electives should be at the 1000 level in the CPSY department. In addition, students may choose up to two courses outside of CPSY (preferably at the 1000 level) as electives. Electives should fit into a coherent intellectual theme, and should be chosen in consultation with a concentration advisor.

Additional ScB Requirements in Psychology

To satisfy an ScB. in the Psychology concentration, one must satisfy all the AB requirements as well as take five (5) additional classes in STEM fields related to the concentration. The goal of this requirement is to provide students with a broader background in both the study of psychology and STEM fields in general. At least two (2) of those five classes must be in the CPSY Department. These two courses must be at the 1000-level. We strongly recommend that one of these courses be a laboratory course.

The other three classes can be from the following departments: APMA, BIOL, CSCI, CHEM, CPSY, MATH, NEUR, or PHYS. Courses from other STEM departments might be eligible with permission of your concentration advisor, but such courses must be related to a student's other courses, such as their electives. All courses must also be acceptable for the concentration requirements of a concentration administered by that department. For example, if a PHYS course is used to satisfy one of these requirements, it must be acceptable for a concentration in the PHYS department.

Requirements Specific for the Sc.B. degree

STANDARD PROGRAM FOR THE Sc.B. DEGREE

Common Core:		
CPSY 0900	Statistical Methods	1
CPSY 1900	Research Methods And Design (or approved laboratory course)	1
Five courses from the following:		5
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0100	Learning and Conditioning	
CPSY 0110	Animal Behavior	
CPSY 0200	Human Cognition	
or CPSY 0220	Making Decisions	
CPSY 0400	Cognitive Neuroscience	
or CPSY 0450	Brain Damage and the Mind	
CPSY 0500	Perception and Mind	

CPSY 0610	Children's Thinking: The Nature of Cognitive Development	
or CPSY 0620	Social and Moral Development	
CPSY 0700	Social Psychology	
CPSY 0702	Introduction to Clinical Psychology	
CPSY 0800	Language and the Mind	
Four approved Electives related to Psychology		4
Capstone: Independent Study (CPSY 1970, CPSY 1980) or approved seminar		1
Five Additional STEM courses: of these, at least two (2) must be CPSY courses, all must be related to Psychology, and all must be applicable to a concentration in that department		5
Total Credits		17

Honors Requirement

The Honors Program in Psychology gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Psychology must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a potential faculty mentor prior to semester 7. Candidates for Honors must have completed the Statistics CPSY 0900 (<https://bulletin.brown.edu/search/?P=CPSY%200900>) and Research Methods and Design (CPSY 1900 (<https://bulletin.brown.edu/search/?P=CPSY%201900>), Research Methods CPSY 1901 (<https://bulletin.brown.edu/search/?P=CPSY%201901>), or laboratory course) requirements before semester 7. Please refer to the CPSY Honors Program page for detailed information about the specific requirements for the Honors program in Psychology.

Behavioral Decision Sciences Concentration Requirements

Leading to a Bachelor of Arts, the study of decision making at Brown covers descriptive questions like how people, institutions, and nations make judgments and decisions; normative questions about rationality, such as what constitutes the best judgments and decisions; and prescriptive questions, such as how the process of decision making can be improved to make actual decisions closer to optimal ones. By virtue of its broad interdisciplinary nature, the study of decision making covers work found in a variety of more traditional disciplines including psychology, cognitive science, economics, philosophy, computer science, and neuroscience. Professors Steven (steven_sloman@brown.edu?subject=Behavioral%20Decision%20Sciences) Sloman and David Levari (david_levari@brown.edu?subject=Behavioral%20Decision%20Sciences) are the concentration advisors. Upon declaring, concentrators are also encouraged to speak with the appropriate area specialist from among those listed here (<https://copsy.brown.edu/undergraduate-study/concentrations/#behavioral-decision-sciences>).

Standard Program for the AB Degree

These are the new requirements approved by CCC effective Fall 2024. For existing concentrators graduating in 2024-25, the prior requirements can be found by selecting the Bulletin archive <https://bulletin.brown.edu/archive/2023-24/>

Foundational Courses:

CPSY 0220	Making Decisions	1
Choose one of the following:		1
CPSY 0200	Human Cognition	
CPSY 0400	Cognitive Neuroscience	
CPSY 0450	Brain Damage and the Mind	
CPSY 0620	Social and Moral Development	

CPSY 0700	Social Psychology	
Choose one from the following:		1
CPSY 0710	The Psychology and Philosophy of Happiness	
CPSY 1280B	Special Topics in Cognition: Collective Cognition and Collective Behavior	
CPSY 1280C	Topics in Cognition: Information and Decision Making	
CPSY 1470	Mechanisms of Motivated Decision Making	
CPSY 1495	Affective Neuroscience	
CPSY 1560	Visually-Guided Action and Cognitive Processes	
CPSY 1680A	Topics in Development: Social Learning	
CPSY 1680H	The Developmental Origins of Cooperation	
CPSY 1730	Psychology in Business and Economics	
CPSY 1750	Blame and Punishment	
CPSY 1760	The Moral Brain	

Distribution Requirements:

Select one Introductory Course from the following:		1
CPSY 0950	Introduction to programming	
ECON 0110	Principles of Economics	
CSCI 0111	Computing Foundations: Data	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	

Select Two Advanced Courses From:		2
CSCI 0410	Foundations of AI and Machine Learning	
CSCI 1420	Machine Learning	
ECON 1090	Introduction to Game Theory	
ECON 1110	Intermediate Microeconomics	
ECON 1130	Intermediate Microeconomics (Mathematical)	
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1200	History of Economic Thought	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1870	Game Theory and Applications to Economics	
PHIL 1610	Decision Theory: Foundations and Applications	
PHIL 1430	Moral Theories	
SOC 1311	Micro-Organizational Theory: Social Behavior in Organizations	
SOC 1315	Macro-Organizational Theory: Organizations in Social Context	

Methods Classes:

Basic Probability and Statistics. Choose One From the Following:		1
CPSY 0900	Statistical Methods	
APMA 1650	Introduction to Probability and Statistics with Calculus	
APMA 1655	Introduction to Probability and Statistics with Theory	
CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
DATA 0200	Data Science Fluency	
ECON 1620	Introduction to Econometrics	

Advanced Methods. Choose one of the following: 1

CPSY 1291	Computational Methods for Mind, Brain and Behavior
CPSY 1492	Computational Cognitive Neuroscience
ECON 1630	Mathematical Econometrics I
ECON 1660	Big Data
LING 1771	Introduction to Corpus Linguistics
SOC 1120	Market and Social Surveys
SOC 1260	Market Research in Public and Private Sectors
CSCI 0111	Computing Foundations: Data
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science
CSCI 0170	Computer Science: An Integrated Introduction
CSCI 0190	Accelerated Introduction to Computer Science
CSCI 0200	Program Design with Data Structures and Algorithms

or any advanced course in Computer Science beyond the introductory set of classes

Choose one of the following Research Methods and Design courses: 1

CPSY 1791	Laboratory in Social Cognition
CPSY 1890	Laboratory in Psycholinguistics
CPSY 1900	Research Methods And Design
CPSY 1901	Research Methods
ECON 1629	Applied Research Methods for Economists
IAPA 1500A	Ethnographic Research Methods
POLS 1600	Political Research Methods
SOC 1020	Methods of Social Research
SOC 1260	Market Research in Public and Private Sectors

Electives: 3

Students will choose three additional courses in consultation with a concentration advisor that will constitute an integrated specialization in some area of decision science. Any advanced course taught at Brown is eligible.

Capstone: 1

CPSY 1960 Senior Seminar in Behavioral Decision Sciences

Total Credits 13

Students will be expected to take no more than 6 courses below the 1000-level within the concentration. Students with multiple concentrations may not apply more than 2 courses from a second concentration to the AB in Behavioral Decision Sciences. Students are responsible for satisfying all prerequisites for courses they plan to take.

Honors

The Honors Program in BDS gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member that they have developed a relationship with. The program also provides the opportunity for senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in BDS must meet all of the requirements of the BDS concentration as described above. Candidates submit their application for the program at the beginning of semester 7. We encourage students to seek out a faculty mentor prior to semester 7 and to complete their methods courses and two of their three electives before semester 7. Please refer to the CPSY Honors Program page for detailed information about the specific requirements for the Honors Program in BDS.

Cognitive and Psychological Sciences Graduate Program

The department of Cognitive and Psychological Sciences is a unique multidisciplinary department that offers Doctor of Philosophy (Ph.D.) degrees in two fields: Cognitive Science and Psychology.

While the department offers transitional Master's degrees en route to the Ph.D., it does not accept applicants into non-Ph.D. programs.

For more information on admission and program requirements, please visit the following website:

<https://graduateprograms.brown.edu/graduate-program/cognitive-science-phd> (<https://graduateprograms.brown.edu/graduate-program/cognitive-science-phd/>)

Courses

CPSY 0010. Mind, Brain and Behavior: An Interdisciplinary Approach.

This course will provide an interdisciplinary approach to the science of the mind through lens of psychology, cognitive science, cognitive neuroscience, behavioral neuroscience, computational modeling and linguistics, as uniquely represented by our department. It will focus on questions that drive the field, current state-of-the-art, and successful techniques and approaches. Questions addressed will include: What is the nature of the human mind? How do we get input from the world? How do we communicate? How do we change as infants and adults through experience? How do we make decisions and judgments? How do minds meet other minds in a social world?

CPSY 0020. Approaches to the Mind: Introduction to Cognitive Science.

Cognitive science is the study of the mind from an interdisciplinary perspective. It focuses on such questions as how do we process information to recognize objects and faces, to know that a cup is not a bowl, to remember and learn, and to speak and understand? How can studying the brain inform us about the mind? This course will examine the above questions and discuss major themes in cognitive science including nature-nurture, categories and representations, and the nature of computations.

CPSY 0050A. Computing as Done in Brains and Computers.

Brains and computers compute in different ways. We will discuss the software and hardware of brains and computers and with introduction to the way brains are organized, the way computers are organized, and why they are good at such different things. We will talk about our current research, the Ersatz Brain Project, an attempt to design a first-class second-class brain. Enrollment limited to 15 first year students.

CPSY 0050B. The Two Visual Systems: Visual Perception and Control of Action.

In a series of theoretical articles, Melvyn Goodale and his collaborators have proposed that separate, but interacting visual systems have evolved for the perception of objects on the one hand and the control of actions directed at those objects on the other hand. This seminar will cover the basic literature addressing this problem with studies involving human and animal studies. Enrollment limited to 19 first year students.

CPSY 0050C. Intentionality and Theories of the Mind.

The purpose of this seminar is to familiarize students with the topic of "theory of mind" – how we understand each other's mental states. In particular, we will focus on how human beings understand other's intentions and beliefs and come to act volitionally. Readings will span developmental, cognitive, social, and cross-cultural psychology as well as neuroscience and philosophy. Emphasis in assignments will be on evaluating and constructing scientific investigations. Reserved for First Year students. Enrollment limited to 19.

CPSY 0050D. Reading Science/Understanding Science.

How is science presented in the modern media? How does this shape the way we think about and understand scientific ideas and the scientific process? Focusing on the brain sciences, we will critically read several award-winning scientific works written for non-specialized audiences, including books by Dawkins, Gould, Pinker, and Sapolsky. We will also consider critiques of these works, as well as related shorter articles intended for wider audiences (e.g., from *Scientific American*). Finally we will examine several examples of "bad neurojournalism" in an attempt to understand what makes good and bad science reporting. No prerequisites; enrollment limited to 19 first year students.

CPSY 0050E. Animal Minds.

This freshman seminar examines what we can learn about the mind of an animal through observations and manipulations of that animal's behavior. Drawing on the work of biologists, ethologists and psychologists in the field and in the lab, we will critically evaluate the evidence that animals have minds and debate the thesis that their minds are qualitatively indistinguishable from our own. Enrollment limited to 19 first year students.

CPSY 0050F. Olfaction and Human Behavior.

In this first year seminar we will explore how our sense of smell is involved in a variety of psychological processes, including: emotion, learning, memory, language and social behavior. Topics such as olfaction in health, technology and marketing will also be critically examined. Students will acquire the basics of olfactory physiology and perception-cognition through course reading, projects and discussions. Enrollment limited to 19 first year students.

CPSY 0050G. Pidgins, Creoles, and the Emergence of Language.

Pidgins and creoles are language systems that arise in situations of contact between groups without a common language. Their study has informed models of language change and has inspired theorizing about the origins of language, in particular the role children play as agents of language creation and language change. In the last twenty years, however, the field has seen significant upheavals, as foundational assumptions have been challenged and in some cases overturned. This course will consider pidgins and creoles within their socio-historical context, with primary emphasis on what pidgins and creoles can tell us about language emergence and language change. Enrollment limited to 19 first year students.

CPSY 0050I. Art and Science of Learning.

The course will emphasize normal adult learning, in comparison with learning of special populations, nonhuman animals, and computers. Topics will include perceptual learning, memorization, search, conditioning in changing environments, and motor learning. The role of types and amount of practice, motivation, and talent in the development of expertise in art, music, dance, science, sports, and games will be examined. Readings will be based on laboratory experiments and case histories of experts in a range of fields. Enrollment limited to 19 first year students.

CPSY 0050J. Psychology of Creativity.

This course is a first year seminar intended to introduce students to the lively world of creativity and the science thereof. Classic and contemporary readings will be discussed covering topics ranging from theory and assessment to applications in education, product design, organizational behavior, the arts, and science itself. Students will also be nudged to become more mindful of the role of creativity in their everyday lives. The course will emphasize class discussion and the production of tangible projects. Enrollment limited to 19 first year students.

CPSY 0050K. Color.

This Brown/RISD seminar will take a multidisciplinary approach to studying color. Each meeting will focus on color from a different perspective, through the lenses of psychology, philosophy, neuroscience, physics, art history, architecture, and design. This seminar will be taught by a team of faculty from the Brown/RISD Color Lab, where each class will be led by a scholar on the topic of the day. The main instructor will be present every week to integrate discussions across topics. The class time will be divided between lectures, discussions, hands-on activities, and local outings (e.g., to the RISD Museum). Instructor override required.

CPSY 0050L. Anthropogenic Activity + Animals.

Human activities that affect animals and their habitats are both widespread and increasing with largely negative impacts. In this first year seminar, we will examine the effects of anthropogenic disturbances on animal behavior through reading and discussion of scientific papers and conversations with expert guests. Topics include anthropogenic feeding on wildlife; noise, light and chemical pollution on aquatic and terrestrial species; recreational land and water use; technological modernization along migration routes; deforestation, hunting, and poaching. Students conduct an independent examination of environmental disturbances on a species from their country of origin or one with special personal relevance. Limited to first years.

CPSY 0050W. Color in the world or what you see is not what you get.

This first-year seminar will explore the science behind rainbows, peacock feathers, and your favorite color. Color is a fundamental characteristic of how we experience the world in a wide variety of ways. Color contributes to how we recognize objects (is that an apple or orange?) and navigate the world (red light or green light?). Color invades how we understand our social world (green with envy or feeling blue?) and how we present ourselves to the world (fashion anyone?). We will explore many different aspects of color, what it is, how we see it, and how we use it.

CPSY 0100. Learning and Conditioning.

Presents classical and contemporary approaches to the study of the prediction and control of behavior. Emphasizes theories and data derived from studies of Pavlovian conditioning and instrumental learning with nonhuman animals, but also considers implications for human behavior (e.g., drug-dependent behaviors, eating disorders, behavior modification and psychopathologies). No prerequisites.

CPSY 0110. Animal Behavior.

The topic of this course is the scientific study of animal behavior, based on the theoretical framework proposed by Nobel Prize winner Niko Tinbergen. This framework addresses four basic questions about behavior: its evolutionary history, its function, its development, and its underlying mechanisms. We will focus on social behaviors, communication, and cognition in a range of animal species.

CPSY 0120. Introduction to Sleep.

This course uses sleep as the focal point for describing complex behavioral phenomena. How is sleep measured and defined? How does sleep differ across species? What accounts for the timing of sleep? How does sleep change with age? What are the behavioral, physiological, and cognitive concomitants of different states of sleep? How can dreaming be understood? What can go wrong with sleep? Recommended prior coursework: CLPS 0001 or NEUR 0010, or an AP course in psychology or physiology.

CPSY 0150. Behavioral Neuroscience: Introduction to Biological Psychiatry.

This course aims to convey fundamental knowledge and understanding of Behavioral Neuroscience with a focus on Biological Psychiatry. Biological Psychiatry represents a multidisciplinary approach towards understanding psychiatric disease with input from the fields of genetics, biochemistry, molecular biology, and neurobiology. The course will begin by introducing principles of Behavioral Neuroscience and then introduce Biological Psychiatry. We will then elucidate some of the more prevalent psychiatric disorders affecting the general population. Subsequent material will cover scientific approaches and techniques commonly used in the field of Biological Psychiatry to investigate the causes, underlying biological mechanisms, and therapeutic interventions relevant for psychiatric disorders.

CPSY 0200. Human Cognition.

Introduction to theoretical issues and empirical findings motivating controversies in human cognition. Basic issues in cognition - including attention, memory, categorization, reasoning, decision making and problem solving will be examined. Emphasis will be on experimental methods and formal theories.

CPSY 0210. Human Thinking and Problem-Solving.

An inter-disciplinary introduction to adult human thinking and reasoning. Covers logical thinking, computational models, reasoning and the scientific method, creativity, intelligence, visual thinking, problem solving in a group setting, and methods of teaching "thinking skills." Students will learn about research findings on these topics and will practice methods for improving their own skills.

CPSY 0220. Making Decisions.

Life is full of decisions. Some decisions are made rationally, others could be improved. This course considers the psychology of human decision-making, the analysis of optimal decision-making, and implications for individual action and social policy. Topics include: chance and preference (e.g., how do consumers weigh attributes when making purchases?); the value of information (e.g., when should physicians order expensive diagnostic tests?); risky choice (e.g., is it rational to play the lottery?).

CPSY 0330. The Grammar of English.

English probably has greater international utility and importance today than any other human language. This no-prerequisites course takes seriously the idea that we should be able to describe its structure accurately. Challenging two hundred years of myths and mistakes, it attempts to offer students a rigorous basis for understanding sentence structure. Enrollment limited to 40.

CPSY 0350. Playing with Words: The Linguistic Principles Behind Word Games and Puzzles.

In this course, we explore the use of language in a domain which is fairly unlike ordinary communication: the use of language in wordplay, alternate languages, games, and puzzles. At one level, understanding aspects of linguistic theory can provide insight into the internal workings of these various forms of wordplay. On another level, wordplay and puzzles often intentionally subvert the grammar and other rules of ordinary language use and therefore can provide a unique lens into typically implicit grammatical knowledge speakers possess and deploy in all domains of language.

CPSY 0400. Cognitive Neuroscience.

This course provides an introduction to the neuroscientific study of cognition. Topics surveyed in the course include the neural bases of perception, attention, memory, language, executive function, emotion, social cognition, and decision making. In covering these topics, the course will draw on evidence from brain imaging (fMRI, EEG, MEG), transcranial magnetic stimulation, electrophysiology, and neuropsychology. The course will also consider how knowledge about the brain constrains our understanding of the mind.

CPSY 0410. Principles of Behavioral Neuroscience.

A lecture course that covers the bodily systems that underlie motivated behavior. Topics include the autonomic nervous system, drugs and behavior, hormones and behavior, reproductive physiology/behavior, homeostasis, biological rhythms, emotions and stress, the neurobiology of mental disorders, and biological perspectives on learning and memory. Does not cover synaptic transmission or sensory processing and perception. Prerequisite: background in psychology, neuroscience, or linguistic/cognitive science including an introductory course (CLPS 0040 (COGS 0720), CLPS 0400 (PSYC 0470), or NEUR 0010).

CPSY 0450. Brain Damage and the Mind.

Brain damage in humans can produce dramatic and highly selective impairments in cognitive functioning. This course provides an overview of the major neuropsychological disorders of perception, language, memory, thought, and action. It emphasizes the development of human information processing models for understanding the cognitive deficits observed in brain-damaged patients and the implications of neuropsychological findings for models of normal cognition.

CPSY 0500. Perception and Mind.

How do the mind and the brain take physical energy such as light or sound and convert it into our perception of the world? This course examines the behavioral and biological bases of human and animal perceptual systems, including vision, audition, smell, taste, and touch. Particular emphasis is placed on high-level perception and how it relates to other cognitive systems.

CPSY 0510. Perception, Illusion, and the Visual Arts.

Visual art can be viewed as an exploration of perceptual questions. This course considers the representation of space and time in painting and film from the viewpoint of the science of visual perception. Topics include Renaissance linear perspective, picture perception across cultures, color, form, shape, abstraction, how film editing constructs events, and why Godzilla looks phony. Slide lectures and visual exercises.

CPSY 0520. Art, Music, and Science: An Introduction to Aesthetics.

Topics include: art and representation; art and the emotions; beauty, form, and aesthetic experience; and the definition of art. We will focus especially on the visual arts, though we will consider examples drawn from music as well. We will be looking throughout to understand how empirical research bears on traditional topics in the philosophy of art, drawing from empirical perception science, evolutionary biology, and cognitive neuroscience. The course will be example driven: We will try out philosophical theories against our lived reactions to many dozens of images of visual art, and against our reactions to a number of music selections.

CPSY 0530. Making Visual Illusions.

Visual illusions are vivid examples of the mistakes our visual systems make. This interdisciplinary course is designed for art and science students with interests in visual perception to explore how and why visual processing sometimes fails. Course work will include hands-on laboratory experiments and art construction exercises. Topics will include color, brightness, and geometric illusions. Enrollment limited to 15.

CPSY 0540. Simulating Reality: The (Curious) History and Science of Immersive Experiences.

Can an experimental approach enhance our critical-historical understanding of immersive experiences? We will look at the history of 3D vision from an interdisciplinary perspective combining the science of perception and the cultural history of technology. Through a series of collaborative activities and team experiments, we will learn how popular, pre-digital optical devices (such as camerae obscurae, magic lanterns, panoramas or stereoscopes) foreshadow contemporary VR, AR, or XR experiences designed for education and entertainment. Among the themes explored: virtual travel, social voyeurism and surveillance, utopian and dystopian imagination.

CPSY 0550. Science of Consciousness.

This course will focus on consciousness related to visual perception, attention, memory, and cognitive control. The learning goal is to understand the neural correlates of consciousness, with an emphasis on visual consciousness. We will examine 1) basic neural mechanisms of perceptual and cognitive processing; 2) philosophical and neuroscientific models of consciousness; 3) the interaction between attention, reward, and memory and visual consciousness; 4) recent advances in research of consciousness by neuroscientific experiments with animals and humans.

CPSY 0600. Developmental Psychology.

Children's behavior and development from infancy through adolescence. Major topics include learning, perception, parent-child attachment, language, intelligence, motivation, emotional development, and peer relations. Major developmental theories, including psychoanalytic, ethological, social learning, and cognitive, are considered as organizers of these phenomena and as a source of testable hypotheses.

CPSY 0610. Children's Thinking: The Nature of Cognitive Development.

An examination of children's thinking and cognitive development from infancy to early elementary school. Considers a range of topics including memory, reasoning, categorization, perception, and children's understanding of concepts such as space, time, number, mind, and biology. Major theories of cognitive development are described and evaluated in light of the available psychological data.

CPSY 0620. Social and Moral Development.

This course examines children's social and moral development from infancy to adolescence. There are no prerequisites. The course is designed for students anywhere from their first to their final semester at Brown. Some of the topics we will consider are children's social cognition, moral reasoning, social learning, attachment, parent-child interaction, prosocial behavior, and the role of culture and SES in development. We will evaluate theories of social and moral development in light of the available psychological data. We will also integrate behavioral work with issues in developmental cognitive neuroscience.

CPSY 0640. Developmental Psychopathology.

A comprehensive introduction to child and adolescent psychological disorders. Focuses on risk, vulnerability, and protective factors in order to probe why some children develop significant psychological problems when others do not. Emphasis on how biological, psychological, and sociocultural factors interactively contribute to the development of psychopathology. Examines effective treatments, as well as educational and social policy implications. Prerequisite: CLPS 0010, 0020, or 0600.

CPSY 0700. Social Psychology.

Examines the theories, findings, and methods of social psychology. Topics include: social cognition (person perception, attitudes), social influence (cultural sources of attitudes, conformity), and social relations (aggression, altruism, prejudice). Students become better informed consumers of empirical research and acquire a new framework for interpreting social behavior. Applications to historic and current events.

CPSY 0701. Personality Theory.

A survey of the major perspectives (psychoanalytic, behavioral, humanistic, existential, trait, and evolutionary) within the theories of personality. Particular emphasis will be placed on those theories that inform clinical practice.

CPSY 0702. Introduction to Clinical Psychology.

This course is designed to provide an introduction to the field of clinical psychology, with a particular emphasis on common mental health symptoms and disorders across the lifespan (i.e. formerly referred to as "abnormal psychology"). We will discuss the defining characteristics of specific disorders (e.g., mood, anxiety, post-traumatic stress, and psychotic disorders), review systems used to define and assess diagnostic criteria (e.g., the DSM-5), consider theories of etiology (causes), and introduce basic methods of therapeutic treatment. This course will draw on historical and contemporary case studies, experimental research, clinical research, and media to illustrate concepts and guide class discussions.

CPSY 0710. The Psychology and Philosophy of Happiness.

The course explores four fundamental questions about happiness: What is happiness—pleasure, life satisfaction, something else? How is happiness achieved—what are the myths and realities about what conduces to happiness? Can happiness be achieved—are we naturally well suited to be happy? Why pursue happiness—is it sufficient, or even necessary, for a good life? The course examines classic contributions from philosophy and psychology, the two disciplines that have studied happiness most extensively. Team-taught by professors from both philosophy and psychology, it invites students to compare and combine both approaches.

CPSY 0720. Thinking About the Social World.

Acting in and understanding the social world require, among other things, the process of abstraction. Abstraction broadens mental horizons, integrates new experiences, and allows communication with other people. In this course we will discuss the different ways in which abstraction has been defined in the literature and look into some surprising implications of abstraction for people's understanding of, and actions in, the social world. This is a mid-level seminar for students with introductory background to psychology, cognitive science, or cognitive neuroscience.

CPSY 0800. Language and the Mind.

Explores fundamental issues in psycholinguistics: what is the nature of language; what are its biological underpinnings; how does the mind process speech, recognize words, parse sentences, comprehend discourse; what do effects of brain injuries on language reveal about the organization of language in the mind? Syntheses of results from multiple modes of analysis – linguistic, psychological, computational, and neurophysiological – are emphasized.

CPSY 0810. The Biology and Evolution of Language.

Human language is made possible by specialized anatomy and brains that can regulate speech production, complex syntax, and acquiring and using thousands of words. This course examines Darwin's theory of evolution and the archaeological and fossil records of human evolution; studies of chimpanzee communication, culture, and language which provide insights on human evolution; the physiology of human speech; and recent studies of the brain bases of human language and thought.

CPSY 0900. Statistical Methods.

A survey of statistical methods used in the behavioral sciences. Topics include graphical data description, probability theory, confidence intervals, principles of hypothesis testing, analysis of variance, correlation, and regression, and techniques for categorical data. Emphasizes application of statistical methods to empirical data.

CPSY 0950. Introduction to programming.

This course provides an introduction to programming and computational thinking. We will use the Matlab programming language as a starting point because it is concise and easy to read. It is also one of the most popular scientific programming languages. We will then transition to Python which has now become the main programming language used in data science. The course is designed for students in psychology, cognitive science, neuroscience, and other non-computer science majors interested in learning to program and, more generally, in developing computational thinking skills. Beyond teaching specific coding skills, this course will support students' development as computational thinkers. Mastering these skills will enable students to more richly understand the cognitive, linguistic, and psychological sciences — and impact society.

CPSY 1080A. Intentionality.

The purpose of this seminar course is to familiarize students with the topic of "theory of mind" - how we understand other's mental states. In particular, we will focus on how children develop an understanding of others intentions and beliefs. While the majority of the reading will be in developmental psychology, cognitive, social, clinical and comparative literatures will also be examined.

CPSY 1080C. Evolution of the Brain Bases of Creativity.

Humans share virtually all of our genes with chimpanzees, yet you are reading this sentence on a device that no chimpanzee could have made. For that matter, your grandparents would have been baffled had they encountered email. Creativity - the drive to think of new concepts, new ways of doing things, and new things - marks us. In this vein, we will read and discuss the findings of new studies that are exploring the neural bases and evolution of human creativity. We will also consider the alternative, that we are ruled by genes that evolved more than 50,000 years ago. Enrollment limited to 40.

CPSY 1090. Research Methods in Psychology.

This upper division laboratory course is designed to provide CLPS concentrators (psychology/cognitive science/cognitive neuroscience) with the tools to comprehend, conduct, and report on psychological research. Students will learn about the central aspects of research, including reviewing literature, formulating hypotheses, designing experiments, collecting/analyzing data, and presenting findings in written and oral reports. Lectures and laboratory exercises will survey a variety of methods to prepare students to design and execute their own research projects. Class time will be divided between lectures, discussion, labs, and student presentations. Prerequisites: CLPS 0010 or CLPS 0020 and CLPS 0900 or APMA 1650. Enrollment limited to 25.

CPSY 1092. Psychological Theory.

An examination of types of explanations used in psychology, with an emphasis on quantitative models of perception, learning, and motivation. Students implement models on a computer and compare theoretical predictions to observed facts. No previous experience with computers assumed; students will learn to implement and develop theories based upon spreadsheets.

CPSY 1100. Animal Cognition.

A seminar focusing on the experimental analysis of animal mental processes such as perception, attention, learning, memory, and decision-making. Some specific topics include navigation, visual search, working memory, time perception and memory, song learning in birds, and concept formation. Prerequisite: advanced lab.

CPSY 1110. Behavior Modification.

Examines basic principles of learning theory as applied to the development and change of human behavior. Topics include: experimental design in clinical research, addictive behavior, fear and anxiety reduction, cognitive behavior modification, self management, child behavior modification, and clinical therapy. Prerequisites: CLPS 0701 (PSYC 0300) or CLPS 1700 (PSYC 1330). Enrollment limited to 50.

CPSY 1120. Physiological Psychology.

Research articles focusing on the neural regulation of behavior are discussed, with an emphasis on experimentation in animal models. Topics vary from year to year but may include the neural and molecular mechanisms regulating social behaviors, the mechanisms and site of action of drugs of abuse, development of neural systems, sensory information processing and genetic analysis of behavior. Prerequisites: CLPS 0410 (PSYC 0750) or NEUR 0010. Enrollment limited to 25.

CPSY 1130. Psychology of Timing.

Topics include temporal perception, memory, and preferences; cognitive, biological, and quantitative theories of timing; biological rhythms; pharmacological influences on time perception and timed performance; altered timing in abnormal states; and timing in sports and music. Enrollment limited to 20.

CPSY 1140. Psychophysiology of Sleep and Dreams.

Overview of sleep, biological timing, dreaming, and sleep disorders. Topics include physiology of NREM and REM sleep, circadian rhythms, determinants and measurement of daytime sleepiness, development and phylogeny, dreaming, and sleep functions. Biological bases and behavioral concomitants of sleep disorders are assessed. Prerequisites: CLPS 0010 (PSYC 0010) and NEUR 0010, or CLPS 0110 (PSYC 0500), or other background in NREM science or physiology. Students who have taken CLPS 0120 (PSYC 0550) should not take this course. Not open to Freshmen or Sophomores.

CPSY 1150. Memory and the Brain.

This flipped course is for undergraduate and beginning graduate students of psychology, cognitive neuroscience, and biology who are interested in biological research on memory. There are three parts: 1) the genesis of modern research on memory, 2) the hippocampus and beyond, and 3) multiple brain memory systems. The course is designed to be accessible to students in a variety of disciplines, but requires background in psychology, cognitive science, or neuroscience. Class will include online lectures, writing assignments, reading primary research articles, and presenting research articles. Prerequisite: CLPS 0010, CLPS 0020, CLPS 0040, CLPS 0200, or NEUR 0010.

CPSY 1160. Evolution and Development of the Brain.

What is unique about the human brain? In this course, we will investigate this question from an evolutionary, comparative perspective. Drawing upon research from many disciplines including psychology, neuroethology, cognitive science, biology, biological anthropology, and neuroscience, we will identify changes in the nervous system that have occurred over phylogeny and over ontogeny to allow the development of complex social behaviors, cognition, language, and consciousness.

CPSY 1180A. Canine Behavior.

Topics covered in this seminar include canine perception, cognition, vocalization, and social behavior. The behavior of wolves and other wild canids is explored to facilitate our understanding of dog behavior. Observational field work is required in addition to regular class meetings. Prerequisites: CPSY 0050E, CPSY 0100, CPSY 0110, CPSY 1191, or CPSY 1192. Not open to first year students.

CPSY 1180B. Animal Languages.

Most animals – fishes, frogs, birds, bats, whales, monkeys, and humans – communicate using sounds. Are these acoustic communication systems complex enough to be considered as animal languages, or is human language unique? We will examine the structure, function, and neural control of animal acoustic communication systems and search for evidence of evolutionary continuities between animal sounds and human language. Topics to be studied include vocal learning and imitation, the evolution of cooperative vocal exchange, syntax in bird and whale songs, and symbolic communication in primates.

CPSY 1181A. Canine Behavior.

This discussion-based online course focuses on the psychology of dogs using primary readings on canine perception, cognition, communication, development, genetics, social behavior, and common behavioral pathologies. Case studies of domestic dogs are used to illustrate the diagnosis and treatment of aggression, fear, anxiety, and obsessive-compulsive disorders. The natural behavior of wolves and other wild canids is explored to facilitate our understanding of the domestic dog. After taking this course, you will be so much closer to knowing a dog!

CPSY 1181C. The Psychology of Pandemics.

Through a psychological lens, we will examine how pandemic-related emotional reactions (e.g. fear, anxiety, distress) and behavioral problems (e.g., nonadherence, avoidance, stigmatization of out-groups) influenced the effects of the pandemic, its disproportionate impacts on various communities both during and after 2020, and how these psychological factors shaped individual and national political shifts, including trends toward radicalization. What can we do to buffer the adverse effects of future pandemics on society and to mitigate the deleterious consequences of pandemics on mental health and sociality? In addition to reading and discussing the scientific literature, students will participate in group and individual authentic research projects, public service announcements, and policy recommendations. Visit our Google course site for more information. Enrollment limited to 18.

CPSY 1190. Techniques in Physiological Psychology.

Laboratory course in behavioral neuroscience for advanced students of psychology or or neuroscience. The goal is to gain "hands on" research experience with a variety of behavioral assays used to assess the effects of genetic mutations on behavior. Over the course of the semester, students will examine the behavioral phenotype of three mouse models of human disease and prepare a manuscript suitable for publication in a scientific journal. Prerequisites: CPSY 0410 or NEUR 0010, and CPSY 0900.

CPSY 1191. Observing Animals: Methods for Animal Behavior Research.

This course is designed for students with a serious interest in animal behavior research. Topics include methods in lab and field research, enrichment programs for captive species and conditioning procedures for managing zoo and shelter animals. Prerequisites: CPSY 0900 or equivalent or instructor permission. Enrollment limited to 18.

CPSY 1192. Experimental Analysis of Animal Behavior and Cognition.

A laboratory course on the prediction, control, and explanation of the behavior of animals in simple environments. Prerequisite: CPSY 0900.

CPSY 1193. Laboratory in Genes and Behavior.

Laboratory course in behavioral neuroscience designed to provide research experience in assessing effects of genetic alterations on behavior. Students examine the behavioral phenotype of a mouse model of human disease. Mice are tested on behavioral batteries to assess, for example cognitive, affective, and sensorimotor behavior. Recent classes tested models of early life stress, Fragile X Mental Retardation, and Alzheimer's Disease. Students will test the mice, analyze the data, and prepare a manuscript suitable for publication in a scientific journal. Prerequisites: CPSY 0410 or NEUR 0010, and CPSY 0900 or instructor permission. Enrollment limited to 10; not open to first-year students

CPSY 1194. Sleep and Chronobiology Research.

Part of a summer immersion experience, this course and research apprenticeship provide a fully textured research and academic experience in human sleep and chronobiology research. The course addresses direct technical instruction for research procedures that enable students to participate in the apprenticeship research projects. In support of the technical skills learning, students are provided background in the physiological, theoretical, and conceptual bases of the methodologies and the research program. This information provides a framework for understanding the methods and the research project's design and rationale. Oral presentation skills and conference attendance planning are also included. Recommended prerequisite: CPSY 0120 is preferred; NEUR 0010 is also acceptable.

Course open only to students admitted to the Sleep and Chronobiology Research Apprenticeship. Must apply here: www.sleepforscience.org/academic/apprenticeship.php (<http://www.sleepforscience.org/academic/apprenticeship.php>)

CLPS 1194 has a commitment from Memorial day through the third week of August.

CPSY 1195. Life Under Water in the Anthropocene.

Aquatic ecosystems are under intense pressure from a variety of anthropogenic stressors. Through lectures, discussion and authentic research projects, this course explores the impact of some of those stressors on the development and behavior of the most vulnerable, the developing young. Topics for Fall 2020 include the impact of anthropogenic stressors on local and global ecosystems; the behavioral biology, embryonic development, and behavior of zebrafish; basic research techniques for studying the development and behavior of zebrafish; and skills needed to conduct authentic scientific research. Students will design, conduct and present an authentic research project using zebrafish. No prior research experience required.

CPSY 1196. Sleep, Circadian Rhythms, and Behavioral Health.

The goal of this course is to engage in an in-depth study of sleep from the context of a specific topic (to be determined). An upper-level seminar, the course is strengthened by discussion and student-led exploration of the topic. Because of the extensive core knowledge base required to begin exploring the area in depth, the class starts with lectures and readings providing an overview of background material, including definitions/vocabulary, measurement, neural systems, regulatory processes, and typical experimental paradigms and measures. As the semester progresses, students will pick specific components of the topic for leading seminar sessions/discussions and preparing a final paper. CPSY 0010 and NEUR 0010 are recommended but not required.

CPSY 1200. Thinking.

An investigation of conceptual structure, judgment, and inferential processes. The focus is on the relation between empirical evidence, theories, and models of cognitive process and structure. Prerequisite: CPSY 0200.

CPSY 1210. Human Memory and Learning.

How does human memory work and why are some things easier to learn and remember than others? This course covers experimental and behavioral studies of human memory including long- and short-term memory for text, pictures, spatial information, and autobiographical events. Emphasis on real-world situations, including education, in which memory and learning play a role. Prerequisite: CPSY 0200.

CPSY 1211. Human and Machine Learning.

How is human memory like a search engine? Is human knowledge like the internet? What can artificial intelligence and machine learning tell us about the mind? How can studying the mind help machine learning? This seminar explores parallels between human cognition and contemporary research in computer science, emphasizing common problems. In addition to the above, topics include simplicity, object recognition, categorization, and causality.

CPSY 1220. Concepts and Categories.

Our knowledge of the world is organized into concepts and categories. What is the basis of this organization? What information is used to make category judgments? How do children acquire concepts and categories? How are our concepts related to the language we speak? This course will examine these questions from an interdisciplinary perspective, combining relevant work in cognitive and developmental psychology, philosophy, linguistics, and computational modeling. Recommended prerequisite: CPSY 0200.

CPSY 1230. Seminar in Decision Making.

No description available.

CPSY 1240. Reasoning and Problem Solving.

How do people reason about informal events in everyday life and more formal subject domains? What are the fallacies that people endorse and how can they be averted? What are some strategies for developing critical reasoning skills? A presentation of theories of human reasoning and problem solving and their applications to educational practice. Prerequisite: CPSY 0200.

CPSY 1241. Causal Reasoning.

This seminar will concern the principles and processes by which people learn causal knowledge and engage in causal inference, including prediction, explanation, and counterfactual reasoning. Some emphasis will be on probabilistic models of causal inference and on the development of causal reasoning in young children. Enrollment limited to 20 juniors, seniors, and graduate students.

CPSY 1250. Human Factors.

The application of knowledge of human characteristics to the design of equipment, facilities, and environments for human use. Research on attention, perception, learning, and decision making will be applied to problems in various areas including: aviation, highway safety, industrial safety, consumer products, human-computer interaction, and aging. Enrollment limited to 25.

CPSY 1271. Cognition in the Classroom: Seminar in the Science of Teaching and Learning.

Most university students believe they are good learners, and most professors believe they teach well, yet the strategies each group employs are often the ones found to be least effective when examined from a scientific standpoint. This seminar examines what the basic scientific research in human cognition, as well as some well-designed applied studies, tell us about effective teaching and learning inside and outside of the classroom. Emphasis will be on K-12 learners and teachers, but with some extensions to college. Pre-Requisites: At least one CPSY course at the 1000-level or above or permission of the instructor.

CPSY 1280A. Moral Reasoning.

A review of research on how people make moral judgments. We will discuss and attempt to integrate diverse perspectives and research on cognition, action, and emotion from cognitive science, cognitive neuroscience, and philosophy.

CPSY 1280B. Special Topics in Cognition: Collective Cognition and Collective Behavior.

Humans, like other social species, move, live, and work together in groups. Although our individual actions may be simple, emergent patterns of collective behavior can be complex, as in ant colonies, bird flocks, and work teams. Similarly, as individual humans, we know little. We overestimate our knowledge and the depth of our arguments. Yet as a society we have achieved great things through a community of knowledge, guided by shared intentionality. This has enabled us to build ships and economies, but also leads to the belief that we know more than we do and can amplify vacuous ideology, misinformation, and conspiracy theories. In this seminar, we will investigate what can be learned from the parallels and divergences between collective behavior and collective cognition. We will draw from literatures in animal behavior, complex systems, psychology, cognitive science, philosophy, and computer science.

CPSY 1280C. Topics in Cognition: Information and Decision Making.

Why do people expose themselves primarily to media that aligns with their prior beliefs? When two people from opposing political parties read the same exact news article, how can they end up with even stronger conflicting opinions? What underlying mechanisms might be driving people's decisions to post specific clickbait on Facebook? Despite the fact that neoclassical economic theory dictates that individuals should seek out a diverse array of information in order to make the best judgments and decisions, there is abundant evidence that they do not. We will explore these types of questions throughout this course as we investigate how people engage with information across three distinct stages: exposure to, consumption of, and sharing of information. Through the readings and discussion, you will be exposed to relevant literatures in decision science, experimental economics, behavioral economics, and social psychology.

CPSY 1290. Laboratory in Cognitive Processes.

Presents the experimental way of thinking by pursuing several topics in an interactive computer-based laboratory. Students run experiments as a class and, by the end of the course, run their own experiment. Focus is on experimental design, procedure, analysis, and reporting. Topics include attention, visual imagery, memory, and reasoning. Prerequisite: CLPS 0900 (COGS/PSYC 0090), and either CLPS 0200 (COGS 0420) or CLPS 0500 (COGS 0440); or permission of the instructor.

CPSY 1291. Computational Methods for Mind, Brain and Behavior.

Provides an introduction to computational modeling of cognition, summarizing traditional approaches and providing experience with state-of-the-art methods. Covers pattern recognition and connectionist networks as well as Bayesian probabilistic models, and illustrates how they have been applied in several key areas in cognitive science, including visual perception and attention, object and face recognition, learning and memory as well as decision-making and reasoning. Focuses on modeling simple laboratory tasks from cognitive psychology. Connections to contemporary research will be emphasized highlighting how computational models may motivate the development of new hypothesis for experiment design in cognitive psychology.

CPSY 1292. Introduction to Programming for the Mind, Brain and Behavior.

This winter session course will provide an introduction to MATLAB programming for students in the life sciences with no prior programming experience. At the end of this course, students will be able to implement MATLAB functions independently to solve many common programming challenges associated with the study of the mind, brain and behavior — from conducting statistical data analyses to basic input/output functions for parsing a file to implementing their own psychophysics experiments. A life-long learning outcome is for students to develop computational thinking skills, a way of solving problems that draws on fundamental concepts borrowed from computer science.

CPSY 1320. The Production, Perception, and Analysis of Speech.

An introduction to the basis of the acoustic analysis of speech, the anatomy and physiology of speech production, and the perception of speech. Discussion and demonstration of quantitative computer-implemented methods for speech analysis. Linguistic and cognitive theories are discussed in relation to the probable neural mechanisms and anatomy that make human speech possible. Lectures, discussion, and laboratory demonstrations.

CPSY 1340. Introduction to Semantics.

An introduction to a variety of issues in linguistic semantics and in the related philosophical literature. Topics include: the nature of semantic representations; the relationship between meaning and the world; truth-conditional and "logical" semantics; word-meaning; the interaction of semantics and pragmatics; presupposition; the interaction of semantics with syntax.

CPSY 1381C. Topics in Phonetics and Phonology: Laboratory Phonology.

This course presents some of the primary methods of experimental phonology and examines basic elements of experimental design. The course will help students read phonology articles and design their own research projects. The first unit introduces laboratory phonology and the connections between phonological theory and experimentation. Subsequent units explore experimental methods for a range of phonological questions, incorporating information from phonetics and psycholinguistics. We will discuss some of the seminal studies as well as more recent literature to establish a framework of key questions, the resources for answering these questions, and factors to consider when designing experiments and interpreting results. Pre-requisites- CLPS 0030. CLPS 1310 strongly recommended.

CPSY 1382. Sounds of the World's Languages.

This course will introduce you to phonetics: the study of the physical aspects of speech. You will learn how to produce, perceive, describe, and transcribe the sounds of the world's languages. You will learn the fundamentals of acoustic and articulatory phonetics to better understand the properties of and mechanisms behind each speech sound. You will also gain practical skills in recording and measuring acoustic data, transcribing data in the International Phonetic Alphabet (IPA), and producing both familiar and foreign sounds in isolation as well as in real and hypothetical words. Prerequisite: LING 0100.

CPSY 1385. Topics in Language Acquisition: Language Acquisition and Cognitive Development.

What is the relationship between how we think and how we speak? This course explores the concurrent development of children's linguistic and cognitive abilities. Topics include the relationship between word meanings and concepts, the structure of the mental lexicon, pragmatic development, and the Whorfian hypothesis (whether speakers of different languages think differently). Students will read and discuss empirical and theoretical articles, and complete a set of writing assignments and problem sets. Prerequisite: CPSY 0610 or equivalent, or permission of the instructor. Appropriate for students interested in developmental/cognitive psychology, linguistics, and applied fields such as speech-language pathology.

CPSY 1387. Topics in Neurolinguistics.

No description available.

CPSY 1389. Discourse Processing.

Over the last decades psycholinguists have converged on a generally accepted framework for describing how humans process language at the sentence level. Much less is understood, however, about processing at the discourse level, where multiple sentences are understood to form a coherent whole. In this course we take an in-depth look at the question of discourse processing. We begin with a review of early models of discourse and narrative structure, turning next to findings from the sentence processing literature which implicate discourse structure. We consider both behavioral and neuro-imaging data in a critical analysis of past and current theories.

CPSY 1400. The Neural Bases of Cognition.

Research using animal models has informed and guided many of the recent advances in our understanding of the brain mechanisms underlying cognition. This seminar course will address related to animal models of human cognition. Students learn how different aspects of the neural bases of cognition are modeled in animals by reviewing the primary research literature. The course is divided into three sections, each addressing a different topic. Topics vary each year, but may include, for example, learning, memory, attention, decision-making, or cognitive impairment associated with neuropathology or aging. Enrollment limited to 20. Not open to first year students.

CPSY 1420. Cognitive Neuropsychology.

This foundation course in cognitive neuropsychology will explore the effects of brain damage on cognitive function. The goals of cognitive neuropsychology are to understand the effects of brain pathology within the context of modern theories of cognition, and to draw inferences about normal or intact cognitive function from patterns of dysfunction observed with brain pathology. Readings will focus on research investigations of brain damaged populations within one or more areas of cognition (e.g., perception, memory, or attention) that address topics of current relevance. Pre-Requisites: CPSY 0010 or CPSY 0200 or CPSY 0400 or NEUR 0010. CPSY 0900 is also strongly recommended.

CPSY 1470. Mechanisms of Motivated Decision Making.

How do we make decisions? This course considers the factors and mechanisms involved in motivated decision making, as informed by cognitive, neuroscientific, and computational modeling approaches. Readings will span a range of populations (e.g., healthy adults, adults with acquired brain damage, monkeys) and methods (e.g., behavioral, genetic, pharmacological and neuroimaging studies, electrophysiological recordings). Computational models will be prominently featured as a means for formalizing decision making theories across multiple levels of analysis, some focusing on high-level cognitive computations and others on neural mechanisms. Prerequisite: CPSY 0010, 1291, 1400, 1491, 1492, or NEUR 0010. Enrollment limited to 20. Not open to first year students.

CPSY 1478. Translational Models of Neuropsychiatric Disorder.

This course will be an upper level seminar course focused on reading and understanding the primary literature related to the use of animals to model human neuropsychiatric disorders. Throughout the course we will discuss the appropriateness, use, and limitations of animal models for studying human pathology. We will discuss a range of topics building from basic concepts of evolution, development, and genetics to the practice of using animals to study aging and memory function, affective pathology, and developmental disorders. Prerequisites: CLPS 0010 or NEUR0010; and preferably at least one of the following: CPSY 1150, CPSY 1480, CPSY 0400, CPSY 0100, CPSY 2100, NEUR 1740; NEUR 1540.

CPSY 1480A. Cognitive Neuroscience of Emotion.

Topics discussed in this course include: visual attention, awareness, emotional perception, and emotional memory. Classes will be structured around the discussion of current papers in the literature. Active participation in class is required, including the presentation of papers from the literature. Enrollment limited to 20.

CPSY 1480B. Cognitive Aging and Dementia.

This seminar examines the cognitive changes associated with normal aging and age-related dementia (e.g., Alzheimer's Disease). Topics covered will include changes in the neurocognitive systems mediating memory, perception, and attention. The course is primarily intended as an advanced seminar for junior and senior concentrators in Psychology, but is also intended for other students interested in aging and the neuropsychology of cognition. Recommended prerequisites: An introductory course in cognitive neuroscience (CPSY 0400, CPSY 0450, CPSY 0200) or permission of the instructor. CPSY 0900 or a comparable Statistics course is strongly recommended. Preference will be given to senior CPSY concentrators.

CPSY 1480C. Cognitive Control Functions of the Prefrontal Cortex.

The prefrontal cortex has long been known to support higher cognitive functions, including working memory, planning, reasoning, and decision making. This seminar offers an in-depth review of recent empirical and theoretical approaches to understanding prefrontal cortex function. This year the course will focus on prefrontal contributions to the cognitive control of declarative memory. Enrollment limited to 20.

CPSY 1480D. Cognitive Neuropsychiatry.

Will provide a broad survey of the field of cognitive neuropsychiatry. The approach taken is based upon the knowledge of brain-behavior-cognition relationship and allows explaining psychiatric phenomena in terms of deficits in normal cognitive mechanisms, as well as drawing conclusions about normal cognitive functioning based on patterns of impaired and intact cognition observed in clinical populations. Topics surveyed include delusions, hallucinations, social-emotional symptoms of schizophrenia, thought and language disorders, conversion disorder, obsessive-compulsive disorder, bipolar disorder, major depression, Parkinson's and Alzheimer's Disease. Prerequisite: CPSY 0400, or instructor permission. Enrollment limited to 25 juniors, seniors and graduate students concentrating in CPSY or LING.

CPSY 1480E. Embodiment and Interoception.

The brain and body are in constant dialogue—an ongoing exchange that shapes how we learn, feel, and adapt to the world. This seminar explores the neural and psychological foundations of embodiment and interoception: the brain's capacity to sense, interpret, and regulate internal bodily states. We will examine the sensory and inferential mechanisms that underlie interoception, its role in emotion, motivation, and reward, and how these processes are altered in clinical conditions. Through readings, discussion, and critical engagement with primary literature, students will develop an integrative understanding of how bodily signals shape the mind—and how the mind, in turn, shapes the body.

CPSY 1480H. Disorders of Memory.

In his 1882 treatise on Diseases of Memory, Ribot wrote that “the disorders and maladies of this faculty, when classified and properly understood, are no longer to be regarded as a collection of amusing anecdotes of only passing interest. They will be found to be regulated by certain laws which constitute the very basis of memory and from which its mechanism is easily laid bare.” In that spirit, this seminar will examine how both organic (e.g., Korsakoff syndrome, herpes encephalitis, semantic dementia) and functional (e.g., fugue, posthypnotic amnesia, multiple personality disorder) amnesias can inform our understanding of human memory.

CPSY 1480I. Memory, Space, and the Hippocampus.

Although the hippocampus is one of the most studied brain structures of the last century, there is still considerable disagreement about its core function. In one view, the hippocampus is essential for forming memories of the unique episodes in our lives. In another, the hippocampus is devoted to spatial navigation, encoding a spatial map of the world and our location in it. Reconciling these viewpoints has posed a significant scientific challenge. This seminar examines differing perspectives on how the hippocampus contributes to cognition and behavior, with the goal of integrating evidence from multiple subfields of psychology and neuroscience.

CPSY 1490. Functional Magnetic Resonance Imaging: Theory and Practice.

This course will train students in the practice and use of functional magnetic resonance imaging (fMRI) as a cognitive neuroscience methodology. Topics covered include MRI physics, the physiological basis of the BOLD signal, experimental design, data collection, statistical analysis, and inference. A practical component of the course includes the opportunity to collect and analyze fMRI data at the Brown MRF. Prerequisites: (CPSY 0400 or NEUR 0010) and CPSY 0900, or instructor permission. Enrollment limited to 20.

CPSY 1491. Neural Modeling Laboratory.

Numerical simulations of cognitively oriented nervous system models. Discussion of parallel, distributed, associative models: construction, simulation, implications, and use. Prerequisites: MATH 0090, 0100, or equivalent; knowledge of a computer language; some background in neuroscience or cognitive science is helpful.

CPSY 1492. Computational Cognitive Neuroscience.

We explore neural network models that bridge the gap between biology and cognition. Begins with basic biological and computational properties of individual neurons and networks of neurons. Examines specialized functions of various brain systems (e.g., parietal cortex, frontal cortex, hippocampus, ganglia) and their involvement in various phenomena, including perception, attention, memory, language and higher-level cognition. Includes a lab component in which students get hands on experience with graphical neural network software, allowing deeper appreciation for how these systems work. Prerequisites: CPSY 0200 or NEUR 0010.

CPSY 1495. Affective Neuroscience.

This course will survey key topics and methods in research on the neuroscience of affect and emotion. It is ideally suited for advanced undergraduates or graduate students who have taken an introductory cognitive neuroscience and/or psychology course. This course will use a variety of behavioral and neuroscientific data to examine the structure of affect/emotion; how affective processes shape cognition and action; how cognition in turn shapes affect; and the nature of variable affective reactions within/across individuals. The course will include in-class presentations, discussions, short lectures, short and long forms of reading responses, and a final research proposal.

CPSY 1500. Perception and Action.

The ecological approach treats perceiving and acting as activities of agent-environment system rather than an isolated "mind," and offers an alternative to the prevailing computational/representational view. Topics include inferential and direct perception, perception of the 3D environment, visual control of action, dynamics of motor coordination, and self-organization of behavior. Lecture and discussion. Prerequisite (any one of the following): CPSY 0010, CPSY 0020, CPSY 0500, or CPSY 0510.

CPSY 1510. Laboratory in Auditory Perception.

This course considers how we sense and comprehend the world through sound. Laboratory sessions focus on basic acoustics and demonstrations of loudness, pitch, and musical timbre. Class discussions explore topics such as pitch perception, speech perception, music cognition, and auditory scene analysis. Students record and analyze original soundscapes, and then conduct their own experiments to analyze listeners' responses to these soundscapes.

CPSY 1520. Computational Vision.

An introduction to computational models of biological vision summarizing traditional approaches and providing experience with state-of-the-art methods. We will sample topics from low- and mid-level vision including fundamental aspects of image, stereo, motion, surface and color processing to high-level vision including object and action recognition as well as scene understanding. Connections to contemporary research in computer vision and computational neuroscience will be emphasized highlighting how computational models may motivate the development of new hypothesis for the design of experiments in visual perception. Prerequisite: comfort with basic linear algebra and at least one introductory course in Computer Science or programming, or instructor permission.

CPSY 1530. 3D Shape Perception.

Our ability to move in the environment, recognize and grasp objects, depends enormously on the capacity that the brain has in organizing the visual stimulation in the perceived 3D layout. 3D objects in the world project on the human retina flat images. How does the brain re-transform these flat images into a 3D representation? Enrollment limited to 40.

CPSY 1540. Perceiving and Acting in 3D.

How does visual stimulation inform the brain about the three-dimensional structure of the world? What information is important for complex organisms, like humans and other primates, to be able to successfully interact with the surrounding environment? In this course we will examine how different sources of visual information such as stereo, contours, texture gradients, shading, and optic flow contribute to the vivid experience of 3D shape by the human visual system. Moreover, connections will be made to the mechanisms that govern goal directed actions, in order to unveil the commonalities between 3D processing for conscious perception and visuomotor mappings.

CPSY 1550. The Psychology of Aversion.

Explores what is aversive to us and why. In particular, the ways in which sensory preception (e.g., smell, taste, vision), cognition, culture, personal experience and neurobiology mediate our avoidance responses will be analyzed. The purpose of avoidance from an evolutionary perspective and how the emotion of disgust is uniquely human will be a theme throughout the course. Topics will range from neuropsychological disorders to our social behavior and morality. Additionally, why we are attracted to stimuli that "should" inspire avoidance (e.g., horror movies, roller coaster rides) will be examined. Students will acquire a broad knowledge of the psychology of aversion through course readings, discussions, projects and active participation. In addition to presentations and discussion, class time activities may include completing questionnaires, watching videos and assessing various sensory stimuli. Prerequisite: CPSY 0010, CPSY 0020, or NEUR 0010.

CPSY 1555. The Sensory and Psychological Science of Food and Eating Behavior.

How do our senses—what we see, hear, smell, feel and taste, influence what, when, and how much we eat? How do our moods, expectations, and the situation we are in influence our feelings of hunger and satiety, and even how we metabolize food? How does what we eat influence our emotions, and how do our moods and personalities influence what we eat? What are the factors that negatively or positively influence our cravings, and how can we control them? How does what we eat affect our moral and social behavior with others, and how might all the ideas covered in this course ("neurogastronomy") be applied towards sustainability? These topics and more will be explored in this seminar course through critical reading, class presentations, writing and research projects, and active discussion.

CPSY 1560. Visually-Guided Action and Cognitive Processes.

One of the main purposes of encoding visual information is to perform visually-guided actions to directly interact with the external world. This seminar will shed light on the behavioral and underlying neural mechanisms involved in integrating perception and cognitive processes, and converting them into action. We will also explore how visuo-motor behavior can provide a useful tool to study a wide range of conscious and unconscious cognitive processes including the current locus of attention, the nature of language representation, spatial representation of number, and high-level decision-making. Prerequisite: CPSY 0010, CPSY 0020, or NEUR 0010.

CPSY 1561. The Nature of Attention.

In daily life, most visual scenes are complex and crowded so that our visual system faces a daunting task of processing an enormous amount of information at any given moment. Thus, attentional mechanisms are necessary to select relevant objects or events and to guide actions. In this course, we will understand behavioral and underlying neural mechanisms involved in visual attention and their interaction with memory, learning, and goal-directed action. We will also study investigations of spared and impaired patterns of attention-based performance following brain injury. Prerequisites: CPSY 0500.

CPSY 1565. The Sense of Smell: Perception, Cognition, Health & Technology.

In this course students will discover the fascinating and unique features of the human sense of smell with a special focus on how the sensory, perceptual, and psychological mechanisms of olfaction are involved in our emotions, thoughts, behavior, health, and the latest innovations and applications in technology. These topics will be addressed in a seminar format with critical reading, class presentations, research idea development, written assignments, and active participation.

CPSY 1570. Perceptual Learning.

This course will focus on perceptual learning and visual plasticity. The goal of this course is to understand the mechanisms of visual perceptual learning and visual and brain plasticity. Perceptual learning is defined as long-term performance improvement as a result of visual experiences. Enrollment limited to 20.

CPSY 1571. Visual Consciousness.

This course will focus on consciousness related to visual perception. The goal of this course is to understand the neural correlates of visual consciousness. 1) We will learn about basic neural mechanisms of visual processing and other brain functions. 2) We will discuss philosophical and neuroscientific models of visual consciousness. 3) We will examine the roles of attention, reward, and memory in visual consciousness. 4) We will evaluate recent neuroscientific experiments with animals and humans and their potential to advance the research of consciousness.

CPSY 1580A. Visually-Guided Action and Cognitive Processes.

One of the main purposes of encoding visual information is to perform visually-guided actions to directly interact with the external world. This seminar will shed light on the behavioral and underlying neural mechanisms involved in integrating perception and cognitive processes, and converting them into action. We will also explore how visuo-motor behavior can provide a useful tool to study a wide range of conscious and unconscious cognitive processes including the current locus of attention, the nature of language representation, spatial representation of number, and high-level decision-making. Prerequisite: CPSY 0010, CPSY 0020, or NEUR 0010. Enrollment limited to 40.

CPSY 1580C. Visualizing Information.

There has been an explosion of interest in how to present information in a visual way rather than as a bunch of boring numbers. Visualizations can be outstanding at conveying information, but there have also been colossal failures. We will explore the good, the bad, and the ugly and harness knowledge of visual perception to understand why some are more successful than others. Someone interested in how to create effective visual displays (posters, infographics) would benefit from this course. Some background in visual perception is recommended such as a CPSY or NEUR course about vision or familiarity with graphic design.

CPSY 1580D. Seminar in Spatial Cognition.

How do we perceive, learn, remember, and interact with space? This seminar explores spatial knowledge in humans, animals, and robots, its sensory and neural basis, and how it is used to navigate and think spatially. We will investigate how desert ants find their way home, Nobel prize-winning 'place' and 'grid' cells, what your cognitive map of campus is really like, differences in spatial ability, and the effects of GPS on human wayfinding.

CPSY 1580E. Perception, Attention, and Consciousness.

This seminar will examine how recent neuroscientific research on perception, attention, and consciousness relates to fundamental questions of mental causation, the mind-body problem, and free will. We will address these important questions at the level of NMDA receptors, synapses, dendrites, neurons, and neuronal circuits. We will also consider the psychological and philosophical implications of having such an architecture realized in our brains.

CPSY 1590. Visualizing Vision.

This course provides hands-on experience in studying vision using computer graphics combined with visual psychophysics. Students will gain a better understanding of how images are formed, how one employs properties of image formation in the experimental study of vision, and how the perception of complex images function in biological systems. Labs will rely on matlab and several computer graphics packages (e.g; Lightwave). Enrollment limited to 20.

CPSY 1591. 3D Vision Laboratory.

How does vision provide the brain with information about the three-dimensional structure of the world? What types of information are essential for complex organisms like human primates to interact effectively with their environment? In this course, students will explore these fundamental questions by conducting original research using state-of-the-art visualization technologies. They will: (1) develop scientifically grounded hypotheses; (2) design and implement rigorous empirical tests; (3) construct experimental setups in a lab equipped with advanced virtual reality systems; and (4) collect and analyze behavioral data to produce a comprehensive scientific report.

CPSY 1610. Cognitive Development.

How do infant and preschoolers learn about the world? We will examine children's understanding of the physical world, psychological kinds, biological entities, number, objects, and space. Students are expected to read and comment on both empirical and theoretical primary source articles, to participate in weekly discussions, and complete a set of writing assignments. Prerequisites: CPSY 0600 or CPSY 0610 or EDUC 0800.

CPSY 1611. Cognitive Development in Infancy.

The acquisition of knowledge during the first year of life. Special attention to the infant's emerging concepts of space, objects, intermodal sensory connections, and speech as well as to such issues as the role of innate knowledge and the nature of the infant's concepts and categories.

CPSY 1620. Developmental Cognitive Neuroscience.

This course will examine fundamental topics in cognitive development from the point of view of the developing brain. Topics of interest will include developing abilities in perception, attention, action, object concepts, memory, learning, planning, language, and social cognition. Typical and atypical brain development will be considered. Prerequisite: One of CPSY 0600, CPSY 0610, EDUC 0800, or permission of the instructor. Enrollment limited to 40.

CPSY 1621. The Developing Brain.

Analysis of brain development, focusing on neural substrates of psychological processes in both animals and humans. Prerequisites: CPSY 0010 or NEUR 0010. Not open to first year students or sophomores. Instructor permission required.

CPSY 1630. Perceptual Development.

No description available.

CPSY 1640. Relationships and Human Development.

Explores formation and maintenance of relationships across childhood and early adulthood, as well as their importance for the development of social-emotional competence. Topics include: early caregiver-child relationships, peer relationships emerging in the school years, relationships with significant adults outside the family, family relationships and functioning, and marital relationships. Also considers approaches to intervention, particularly with respect to peer relationships. Instructor permission required. Enrollment limited to 20 senior or graduate-level Psychology concentrators.

CPSY 1650. Child Language Acquisition.

All normally developing children acquire language, yet there is little agreement about how this takes place. This class explores the course of language acquisition from birth to babbling and first words to the use of complex syntax, discussing philosophical, theoretical, and methodological approaches to the problem. Includes practical experience analyzing child language data. Prerequisite: CPSY 0800 or permission of the instructor.

CPSY 1660. Learning Compositional Language.

Babies come into the world not knowing a word. Within three years, they know enough of their first language to understand the difference between, "your doll is a toy" and "the stove is not a toy". By age five, they can't yet be trusted to look both ways before crossing the road, but their language is close to native adult speakers. How is this possible?

This course looks at how children learn how language expresses meaning; how they go from understanding individual words to putting words together to compose and express complex, meaningful ideas – the development of syntax, semantics, and pragmatics.

CPSY 1680A. Topics in Development: Social Learning.

How do we learn from other people? If a child was raised in the absence of any social interaction, what cognitive structures would s/he have? This course will focus on what and how children learn from others, including concepts like language, rituals, religion, biology. Emphasis will also be on "selective trust" - whether we learn from all informants equally or are rational in how we learn from others. Prerequisite: CPSY 0600, 0610, or 0700. Enrollment limited to 20 juniors and seniors.

CPSY 1680B. Topics in Development - Developmental Disorders.

This course will examine developmental disorders from a developmental cognitive neuroscience perspective. We will examine issues general to studying developmental disorders. What is the role of understanding typical development in examinations of atypical development? What are proper experimental strategies for studying disorder? Readings will focus on the neurobiological substrates of disorder, associated cognitive impairments, and clinical symptoms. We will then focus on specific disorders include Autism, ADHD, Dyslexia, Learning Disabilities etc. Enrollment limited to 20. Prerequisite: CPSY 0600, or 0610.

CPSY 1680C. Topics in Development: Theory of Mind.

How do we understand others' mental states? How do we acquire our knowledge of mental states at all? This course will focus on how human beings acquire knowledge of our own and others' mental states. Emphasis will be placed on integrating empirical data with particular theories of cognitive development.

CPSY 1680F. Topics in Development: The Developmental and Evolutionary Origins of Mind.

Human behavior can sometimes appear strikingly different from other animals: we create complex tools, plan for the future, and have sophisticated cultural traditions and group behaviors. What cognitive processes underlie these behaviors, and to what extent are they shared with other animals or unique to humans (and is that even the right question to ask)? What "counts" as intelligence or as having a mind? To explore these exciting questions, we will examine research and theoretical perspectives from psychology, biology, behavioral ecology and philosophy, and look at diverse aspects of learning and cognition in human and non-human primates along with a sampling of other species. Possible topics include spatial and numerical cognition, physical and causal reasoning, cooperation, communication, social learning and theory of mind, culture, morality, emotions, memory, foresight, and self-control in both human children and non-human animals.

CPSY 1680H. The Developmental Origins of Cooperation.

Cooperation is essential to a thriving and functioning society. Our everyday lives contain examples of strangers making sacrifices for the benefits of others. For instance, humans donate money, blood, or even a kidney to complete strangers in times of need. That beingsaid, it is hard to ignore that many of the problems we face as a society, such as climate change, remain intractable in part because of individuals' lack of willingness to incur monetary costs to benefit others. This class will explore the ways in which humans are and are not cooperative beings. We will do this through a developmental lens with an emphasis on understanding how cooperative impulses can be traced to behaviors in childhood.

CPSY 1680I. Child and Adolescent Mental Health.

This seminar course is designed to provide an in-depth exploration of child and adolescent mental health, through a clinical psychology lens. We will discuss the defining characteristics of childhood disorders (e.g., neurological, behavioral, mood, intellectual and learning disorders), consider theories of etiology (i.e. causes), examine methods of assessment, and introduce theory and methods of therapeutic treatment. We will discuss unique considerations for child populations, exploring developmental factors that influence the expression and management of mental disorders across stages of childhood. This course will draw on case studies (historical and contemporary), clinical research, and media (news and entertainment) to illustrate concepts and guide class discussions. We will also discuss issues related to mental health stigma, ethics, culture, diversity, and biases in the mental health field.

CPSY 1690. Laboratory in Developmental Psychology.

Conceptual and methodological foundations of research design and analysis in developmental psychology, with particular reference to techniques commonly used in studying cognitive development. We will cover general principles of experimental design, measurement and assessment, and strategies of data analysis. Practical and ethical issues involved in conceiving, designing, executing, interpreting, and presenting research will be considered. Recommended prerequisites: CPSY 0610, and CPSY 0900 or equivalent. Enrollment limited to 15.

CPSY 1700. Abnormal Psychology.

The study of anxiety, stress, and neurotic disorders, psychosomatic disorders, deviant social behavior, affective disorders, and schizophrenia. Considers theories of etiology (causes) and methods of therapeutic treatment, case studies, experimental research, and clinical research.

CPSY 1701. Controversial Issues in Mental Health Practice.

Examination of controversies involving scientific, clinical and social practices concerning mental health and illness. Topics will include: classification and diagnosis, biases in psychiatric research and practice, specific conditions (e.g., gender identity disorder, ADHD, depression), treatment issues (e.g., ECT, medicating children with psychiatric drugs), screening for mental illness in public schools, and social-legal issues (e.g., insanity defense, duty to warn, involuntary treatment). Enrollment limited to 20.

CPSY 1703. Forensic Psychology.

This course will examine the intersection between psychology and the law as pertaining to both civil and criminal matters. Students will learn the nature of forensic psychology as it applies to the assessment of criminal defendants, including the insanity defense, fitness to stand trial, offender recidivism, risk of dangerousness assessments, expert testimony, justice for minoritized groups, and psycholegal issues. This course will also review civil legal scenarios involving a psychological component, such as civil commitment, disability, fitness for duty, personal injury, child custody, fitness to parent, etc.

CPSY 1710. Political Psychology.

This seminar explores topics at the intersection of psychology and political science. Topics include political attitudes, perceptions and behaviors. The psychology of ordinary individuals, political leaders, and groups will be studied in contexts where their interests do and do not coincide. As conflicts among these agents are particularly interesting, this course will stress psychological aspects of wars, oppression, and terrorism. Enrollment limited to 20.

CPSY 1720. Human Resilience.

This course explores answers to the question of what enables some individuals to escape the worst psychological consequences of extreme personal disruption caused by a range of human-made and natural disasters. It examines personal accounts, pertinent psychological research, theoretical discussions, and the creative works of catastrophe survivors. Enrollment limited to 20.

CPSY 1730. Psychology in Business and Economics.

The goal of this course is to explore emerging themes at the intersection of psychological science, business, and behavioral economics. Psychologists are primarily interested in detecting limits to human rationality, whereas economics tends to proceed within the rational-actor model. In business, questions arise of how theoretical models and empirical findings related to the practice of managerial decision-making. Investigations of power and the psychological impact of money are relatively recent additions to the suite of research topics. New methodologies, such as neuro-imaging have led to advances not represented in the traditional framework of organizational psychology. Enrollment limited to 20 junior and senior Psychology and Behavioral Decision Making concentrators.

CPSY 1750. Blame and Punishment.

This hybrid lecture/seminar course provides a scientific investigation of two related but distinct forms of human moral regulation: blame and punishment. Students learn about the interdisciplinary literature on moral judgment and moral sanctions, drawing on psychology, cognitive science, behavioral economics, sociology, history, law, and anthropology. Students investigate the cognitive, social, and affective differences between blame and punishment, about their distinct cultural history and institutional dynamics, and about their functional and dysfunctional uses. Students critically examine core research articles on the topics, and they present, discuss, and write about their responses to the work.

CPSY 1760. The Moral Brain.

How do we learn to cooperate, help others in need, and appropriately respond after being treated unfairly? The human mind strives to resolve the competing pressures of self-interest against the greater good. By drawing upon many disciplines including philosophy, social and affective neuroscience, abnormal psychology, law, and experimental economics, this course covers topics from 18th-century philosophy to modern-day neuroscience. We will examine 1) the philosophical and epistemological foundations of moral thought, 2) the influence of emotion and contextual framing on moral action, 3) the psychopathology of immoral choice, and 4) the underlying cognitive and neurobiological processes that guide moral decision-making. Registration for this course will be determined by the faculty on the first day of class. The final class list is determined by 1) some working knowledge in cognitive neuroscience (evidence by taking at least 1 prior class in the

CPSY 1770. Stigma and Prejudice.

This seminar focuses on empirical research ranging across several topics in the psychology of prejudice, stereotyping, discrimination, and social stigma. We will read, interpret, and discuss quantitative research in social psychology (i.e., studies that contain statistics in their results) and the implications of these scholarly contributions to our knowledge of the inner workings of intergroup behavior. This includes understanding individual differences and contexts related to exhibiting prejudicial behaviors (prejudice/bias), the implications of this behavior for targets of discrimination (stigma), and contributions of each of these to how groups and group members interact with one another in society (intergroup relations).

CPSY 1781. Thinking about the Social World.

Understanding and acting in the social world require, among other things, the process of thinking in abstractions. Abstraction broadens mental horizons, integrates new experiences, and allows communication with other people. In this course we will discuss the different ways in which abstraction has been defined in the literature and look into some surprising implications of abstraction for people's understanding of, and actions in, the social world.

CPSY 1783. Nudge: How to Use Social Psychology to Create Social Change.

How can we make people eat healthier food, protect the environment, save money for retirement, or behave ethically? How can we reduce negative behaviors such as police violence and discrimination of underrepresented groups? Using an interdisciplinary approach, this course will introduce how to "nudge"—how to change people's behavior through psychological insights, without forbidding options or changing economic incentives. In particular, we will learn about cognitive and emotional biases in decision-making; then we will focus on "nudging remedies" for these systematic biases in various domains, such as health and wealth; finally, we will actively tackle some problems in an in-class nudging workshop.

CPSY 1790. Personality and Clinical Assessment.

Examines methods used in the study of child and adult personality, including microanalysis of social interactions, observer report, self report, test data, and life outcome data. Standardized personality assessment instruments will be examined in the context of their reliability, predictive and construct validity. Students will design research projects using these methods, collect and analyze data, give oral presentations, and prepare a written report of their research. Prerequisites: CPSY 0701 and CPSY 0900 or equivalent. Enrollment limited to 27.

CPSY 1791. Laboratory in Social Cognition.

Examines principles of experimental design and analysis in the context of classic and contemporary research in social cognition. Students replicate and extend several studies on topics such as person perception, social stereotyping, or judgment and decision making. Students will participate in the design of these studies, gather their own data, analyze them, and report the findings in oral presentations and written reports. Prerequisites: CPSY 0010, CPSY 0700, and CPSY 0900. Enrollment limited to 24.

CPSY 1792. How To Change Human Behavior At Scale.

In this course, students will review and critically assess scientific psychological and cognitive research on how situations dictate humans' mindsets and behaviors. This learning will be geared toward applied work to shift how humans think and behave across entire settings (e.g., schools, institutions, workplaces). Students will be responsible for reading and discussing scientific literature on experiments that test relevant topics. Students will also create a grant proposal for a relevant research project to test a method to change human behavior at scale and give an in-person oral presentation about it to the class.

CPSY 1800. Language Processing.

When you have a thought, how are you able to express it in a sentence? How does hearing a sentence cause you to think a thought? And why is Siri still worse at understanding sentences than a typical 5-year-old? Our focus will be on how words are put together into sentences, and then into narratives -- on syntactic, semantic, pragmatic, and discourse processing. We will consider and try to integrate multiple sources of evidence: formal analyses, computational models, and behavioral and neuropsychological experiments. Prerequisite: one of CPSY 0200, LING 0100, or CPSY 0800.

CPSY 1810. Syntactic Theory and Syntactic Processing.

The interface between work in theoretical syntax and psycholinguistic research on syntactic processing. Consideration of how results in psycholinguistics support various models of human language processing. Recommended prerequisite: CPSY 1330.

CPSY 1820. Language and the Brain.

This course will examine the neural systems underlying language and its parts -- sounds, words, sentences, and meaning. We will examine effects of brain injury on speaking and understanding in individuals with left hemisphere injury, right hemisphere injury, and with the two hemispheres split. We will also study brain plasticity by examining recovery of language in aphasia and the effects on language when there is deprivation to areas of the brain specialized for hearing in the deaf and seeing in the blind. Behavioral, electrophysiological and neuroimaging evidence will be investigated in those with and without brain injury. Prerequisites: one of the following -- CPSY 0010, LING 0100, CPSY 0450, NEUR 0010.

CPSY 1821. Neuroimaging and Language.

Examines neuroimaging approaches to language processing including fMRI, PET, TMS, and ERP. Consideration of the neural systems underlying speaking and understanding. Topics include neural basis of speech, lexical/semantic, and syntactic processing, mirror neurons and language, multisensory integration, meanings of words, literacy, and special populations. Recommended: either NEUR0010, CPSY 0020 or CPSY 0800 and one of the following: CPSY 0400, CPSY 0410, CPSY 1820, CPSY 1822, NEUR1030, NEUR1660, or by permission.

CPSY 1822. Subcortical Brain Bases of Language and Thought.

Recent studies indicate that the neural bases of human language and thought derive from a complex network of circuits within and connecting subcortical and cortical structures. Students prepare to evaluate published papers, noting the relationships that hold between data and theories. Relates neurophysiologic studies to current linguistic and cognitive theories and provides the background for independent research. Prerequisites: CPSY 0810, CPSY 1820, CPSY 1821, or NEUR 0010.

CPSY 1850. Language Processing in Humans and Machines.

Understanding language requires transforming sequences of sounds into words, combining words into meaningful thoughts, and incorporating thoughts into an ongoing discourse. Psychologists and linguists have been trying to reverse-engineer how humans do this so easily, at the speed of conversation. In parallel, computer scientists have been trying to engineer machines to solve the same problems, leading to products like Siri and Alexa. This class will explore how these two kinds of research can help each other, bringing recent insights from machine learning into the study of human language processing, and insights from human processing into the architectures of machine language systems.

CPSY 1860. Logic in Language and Thought.

Does logic only dictate how people ought to reason or can it also describe how human reasoning naturally works? In linguistics, the best theories of how language conveys meaning propose that word meanings have an abstract and formal logical structure. But in psychology, the best theories of people's reasoning argue that it is naturally flawed, biased, and deeply content-dependent rather than formal. In this course, we will explore this tension and work toward resolving it in order to understand whether and how much human reasoning really is inherently logical. We'll draw on existing research across the cognitive sciences, and come up with proposals of our own for what the next research steps might be.

CPSY 1880A. Speech Prosody.

The broad aim of this seminar is to discuss the various ways in which linguistic and paralinguistic meanings can be conveyed by the way that speakers produce their utterances. The topics will include the effect of pitch variation and phrasing on pragmatic meanings and discourse functions, turn-taking strategies, cue phrases and filled pauses, new-given information, or prosody of deceptive speech. Recommended prerequisite: CPSY 0030.

CPSY 1880B. Cognitive Neuroscience of Language Acquisition.

The ability to acquire language is unique to humans. This class explores our language-specific biological endowments. Topics include: Genetics and evolution of language; the brain-basis of acquisition; effects of age on language learning ability; effects of environmental differences (such as growing up blind or deaf) on acquisition; and language in special populations such as autism. Students will read and discuss empirical and theoretical articles, and complete writing assignments and problem sets. Prerequisite: CPSY 0060, 0610, 0800, or EDUC 0800, or instructor permission. Enrollment limited to 20. Not open to first year students.

CPSY 1880D. Topics in Psycholinguistics: Language + Memory.

Memory is an integral part of language comprehension. Research suggests that memory follows various divisions (time, modality, task, etc), and this course examines whether language processing follows the same divisions and to what extent it overlaps qualitatively with memory in different cognitive contexts and timescales. Students will read and discuss research on language comprehension, classic memory tasks, and computational models of memory.

CPSY 1890. Laboratory in Psycholinguistics.

An advanced course in methodological approaches to the study of psycholinguistics. Processes (e.g. with adult lexical access, sentence processing, corpus linguistics, etc.) Recommended prerequisites: CPSY 0800 and CPSY 0900, or equivalent.

CPSY 1891. Research Methods in Physiologic and Acoustic Phonetics.

Introduction to laboratory techniques and the analysis of data relevant to physiologic and acoustic phonetics. Emphasis on the use and interpretation of wave-form and spectrum analysis, electromyography, cineradiography, high-speed motion pictures, computer modeling of oral tract output, and experimental techniques involving the perception of synthetic and natural speech.

CPSY 1900. Research Methods And Design.

This course is designed to provide CPSY concentrators (psychology/cognitive science/cognitive neuroscience) with tools needed to conduct, analyze, and interpret research. Topics include research ethics, hypothesis testing, standard designs (e.g., descriptive, observational, correlational, survey, experimental), and best practices for statistical analyses. The course will include lectures, laboratory exercises, data collection, and presentation of findings in written and oral reports. Prerequisite: CPSY 0900 or equivalent with instructor permission.

CPSY 1901. Research Methods.

This course is designed to provide CLPS concentrators (Cognitive Science/ Cognitive Neuroscience/Psychology) with a variety of tools needed to conduct research: sources of data, standard experimental designs, and research ethics. The course will include lectures, section meetings, data collection, statistical analyses, and written and oral reports. This is a flipped course with content material (lectures) available as videos to be viewed before class meetings. Course includes one 80-min lecture meeting and one 80-min lab section each week, and students are expected to attend both. This course is enrollment capped at 60 students.

CPSY 1950. Deep Learning in Brains, Minds and Machines.

In recent years, a class of machine learning algorithms called deep neural networks have brought about a revolution in the field of artificial intelligence. Deep learning networks have pushed the state of the art on a range of challenging problems that had until now seemed out of reach for machines. At the same time, these neural networks have also led to progress in computational neuroscience with improved models of neural responses in higher visual cortical areas. The goal of this course is to provide an advanced introduction to deep learning from the joint perspective of machine learning and neuroscience.

CPSY 1960. Senior Seminar in Behavioral Decision Sciences.

This is the capstone course for the Behavioral Decision Sciences (BDS) concentration. It entails a research project that serves as a culmination of each student's experience within the concentration. Students should choose a research topic compatible with the three electives that they have taken or will take as part of the concentration. They will benefit from having a faculty advisor for the project. The course entails presentation of your ideas and plans, as well as your final results.

CPSY 1970. Directed Reading in Cognitive and Psychological Sciences.

Independent study or directed research in cognitive science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

CPSY 1980. Directed Research in Cognitive and Psychological Sciences.

Required of all ScB concentrators and Honors students in psychology. Instructor permission required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CPSY 1990. Senior Seminar in Cognitive Science.

Examines general philosophical and theoretical issues that cut across cognitive science. Each student writes a substantial paper on a topic in cognitive science. Required of cognitive science concentrators. Enrollment limited to concentrators in the 7th semester or beyond, and, by permission, to others who have significant course background in cognitive science.

CPSY 2000. Graduate Proseminar.

Introduces students to the CLPS Department and the University; provides a brief history of the disciplines, philosophical foundations, and ethical treatment of human subjects; provides professional training, such as preparation of CV and research statement, practice in grant writing, and foundations in scientific writing and presentation; and supports students' early stages of developing a first-year project.

CPSY 2001. Core Concepts in Cognitive and Psychological Sciences I.

This course is the first of a two-course sequence that provides graduate students with background in the core topics and themes in the cognitive and psychological sciences. Topics include sensory systems, perception, action, evolution and development, phonetics and phonology, attention, learning, memory, and executive function. Students are also introduced to a wide range of approaches and levels of analysis that scientists adopt to study these topics. Weekly topics are addressed in lectures and assigned readings. A separate seminar session involves presentation of current papers by students and discussion with faculty. Open to graduate students only.

CPSY 2002. Core Topics in Cognitive and Psychological Sciences II.

An advanced overview of fundamental issues in philosophy of cognitive science, higher-level cognition (concepts, similarity, reasoning, inference, judgment, and decision-making), higher-level language (syntax, semantics, and pragmatics), cognitive development, and social cognition. Domains will be introduced by classic readings and then followed up discussion on modern and contemporary issues in the seminar portion. All topics will be connected throughout by common themes.

CPSY 2091. Graduate First Year Project Research.

Please check Banner for the correct section number and CRN to use when registering for this course.

CPSY 2092. Graduate First Year Project Research.

Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

CPSY 2095. Practicum in Teaching.

Each student will assist a designated faculty member in teaching a course in cognitive science or related discipline. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

CPSY 2096. Directed Graduate Research.

No description available. Instructor permission required.

CPSY 2100. Core Topics in Animal and Comparative Behavior.

No description available.

CPSY 2101. Graduate Core Module: Perspectives on Perception.

This course engages graduate students in multiple perspectives on perception, the epistemic basis for other cognitive processes. We will consider philosophical issues, evolution and development, sensory ecology, computational vision and deep neural networks, human visual perception, and the visual control of action. Students will be introduced to different approaches and methods that scientists use to study these topics. The module partially fulfills core requirements for the CPSY graduate programs.

CPSY 2102. Graduate Core Module: Memory and Cognitive Control.

This course provides graduate students with background in core topics and themes in the cognitive neuroscience of memory and cognitive control. Topics include attention, learning, working memory, long-term memory, and cognitive control. Students are also introduced to a range of approaches and levels of analysis that scientists adopt to study these topics. The module partially fulfills core requirements for the CPSY graduate programs.

CPSY 2132. Graduate Seminar in Learning.

Advanced topics in animal and human learning. Topics vary from year to year; examples include theories of associative learning, animal cognition, computational models of learning and performance, and neurobiological models of basic associative processes.

CPSY 2180. Duration Discrimination.

No description available.

CPSY 2181. Advanced Topics in Animal and Human Learning.

Topics vary from year to year, examples include theories of associative learning, animal cognition, computational models of learning and performance, and neurobiological models of basic associative processes. Open to graduate students only.

CPSY 2200. Core Topics in Cognition.

No description available.

CPSY 2210. Current Topics in Memory Research.

A graduate seminar addressing selected topics in memory, including theories of normal and pathological memory, animal models of human memory, and the neural substrates of memory. Topics vary from year to year. Permission required for undergraduates.

CPSY 2400. Biological Foundations of the Mind.

The goal of this course is to introduce students to the study of the biological foundations of cognitive science and psychology. We will use readings from neuroanatomy, cell and molecular biology, genetics, evolutionary biology, neuroethology, and behavioral neuroscience to elucidate principles and to understand methods for exploring the neural control of complex behaviors.

CPSY 2410. Auditory Neuroscience.

An in-depth analysis of the neural bases of auditory cognition. Topics to be discussed include object perception, spatial processing, auditory memory, illusions, cocktail party phenomena, and representation of speech signals.

CPSY 2450. Exchange Scholar Program.**CPSY 2455. The Mind Asleep.**

Seminar on selected topics in sleep, incorporating the core disciplines of psychology (Behavioral Neuroscience, Sensation and Perception, Cognitive Processes, and Social). Discussion based classes will examine sleep and affect/mood, dreaming, sleep and learning and memory, sensation/perception processes during sleep, effects of sleep deprivation and sleep disorders.

CPSY 2500. Core Topics in Perception.

No description available. Open to graduate students only.

CPSY 2510. Graduate Seminar in Vision.

Selected topics in vision, including optics of the eye, anatomy of the visual system, photochemistry of vision, psychophysics of color, acuity, models of color vision, and light as a visual stimulus. Specific topics vary.

CPSY 2700. Core Topics in Social Psychology.

A survey of classic and contemporary research in social psychology, including attitude formation and change, person and self perception, stereotyping, and intergroup relations. Open to graduate students only.

CPSY 2750. Seminar in Social Psychology.

No description available.

CPSY 2800. Core Topics in Language.

No description available. Open to graduate students only.

CPSY 2900. Statistical Methods.

A survey of statistical methods used in the behavioral sciences. Topics include graphical data description, probability theory, confidence intervals, principles of hypothesis testing, analysis of variance, correlation, and regression, and techniques for categorical data. Emphasizes application of statistical methods to empirical data.

CPSY 2902. Quantitative Methods in Research.

No description available.

CPSY 2906. Experimental Design.

The course designed for students at the intermediate level or above and will cover t-tests, power analysis, correlation, simple and multiple linear regression, logistic regression, analysis of variance, non-parametric tests, randomization and bootstrapping, among others. Instructor permission required. Open to graduate students only.

CPSY 2908. Multivariate Statistical Techniques.

This course covers the basic multivariate techniques currently used in psychology and related sciences: multiple regression, logistic regression, principal components and factor analysis, multivariate analysis of variance, discriminant function analysis, and log-linear analysis. Students will learn these techniques' conceptual foundations, their proper selection for a given data set, and the interpretation of computer output from statistical analysis packages (primarily SPSS). Enrollment limited to 20 graduate students.

CPSY 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CPSY 2980. Foundations of Advanced Statistics.

This course lays the foundation of graduate-level statistics concepts for all Ph.D. students in the CLPS Department. The course covers the basic multivariate techniques currently used in social and cognitive sciences: multiple regression, factorial and mixed between/within ANOVA, MANOVA, and linear approaches to categorical data analysis. The course does not cover mixed-effects (multi-level) analysis, covariance structure analysis (PCA, FA, SEM), or Bayesian statistics. The minimum prerequisite statistics knowledge assumed for the course will be undergraduate statistics, as covered in CLPS 0900 or comparable courses. Thus, the course assumes knowledge of such basics as point estimates, confidence intervals, normal distributions, hypothesis testing, t tests, univariate linear regression, and one-way ANOVA. Students will have assigned readings, attend lectures, complete weekly homeworks, and write two take-home exams.

CPSY 2981. Advanced Statistics Module I: Categorical Data Analysis.

This course is a half-semester advanced statistics module. The module covers basic and advanced categorical data analysis techniques. It starts with such topics as the binomial test, McNamar's, various uses of the chi-square test, means and correlation tests for rank data. It then reviews log-linear regression, logit, and logistic regression and expands on logistic regression (e.g., Poisson, multinomial). Finally, it introduces linear and generalized mixed-effects models.

CPSY 2982. Advanced Statistics Module II: Applied Bayesian Statistics I.

CPSY 2982 covers basic and advanced topics in Bayesian Statistics. It will include both the theoretical development of the core ideas of Bayesian Statistics, as well as hands-on data analysis on using data and models common in psychology, cognitive science, and social sciences more broadly.

CPSY 2983. Advanced Statistics Module III: Mixed Effects Modeling.

Course Overview: This 7-week module provides a comprehensive introduction to mixed effects modeling, a powerful statistical technique for analyzing data with multiple levels of variability. This course is designed to introduce students to the theoretical underpinnings of mixed effects models and provide opportunity for application and interpretation. Topics include introduction to multilevel structures, multilevel logistic regression, estimation and statistical inference, and causal inference using multilevel models.

CPSY 2984. Advanced Statistics Module IV: Machine Learning.

This graduate module focuses on using advanced machine learning techniques to model nonparametric data with complex, high-dimensional associations commonly found in cognitive and psychological research. The course covers a variety of algorithms and models, including ensemble methods, regularized regression, decision trees, and social network models. Emphasis will be placed on understanding the strengths and limitations of different machine learning approaches in the context of psychological and cognitive phenomena.

CPSY 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Cogut Institute for the Humanities

The Cogut Institute for the Humanities supports collaborative research and curricular innovation across the humanities and in partnership with other divisions and schools of the university. The institute serves as an incubator for research-based, cross-departmental initiatives that reframe approaches to humanistic inquiry and address urgent topics, such as environmental crisis, global justice, and artificial intelligence.

A robust lineup of courses and public events emerging from these initiatives creates a lively space of inquiry and dialogue that draws in faculty, students, alumni, and members of the larger Providence community. Each year, the institute's fellowship program brings together researchers at all levels — faculty members, postdoctoral fellows, and graduate and undergraduate students — to explore work-in-progress in a dynamic workshop setting. The institute also administers the University's Humanities Initiative, which provides for annual faculty programming funds and faculty appointments that combine scholarly, teaching, and disciplinary distinction with collaborative projects within and beyond the humanities. Each semester, the institute's faculty and fellows present unique courses for undergraduate and graduate credit.

The institute offers a Doctoral Certificate in Collaborative Humanities available to students pursuing doctorates in the humanities and the humanistic social sciences. Collaboration is built into the teaching model as well as the requirements for students. Read more: <https://humanities.brown.edu/programs/chi> (<https://humanities.brown.edu/programs/chi/>). As part of its Collaborative Humanities Initiative, the institute also fosters the development of undergraduate team-taught, collaboration-focused courses on a research theme, method, practice, or problem that has relevance across disciplines, divisions, or schools.

The Doctoral Certificate in Digital Humanities, a partnership between the Brown University Library Center for Digital Scholarship and the institute, provides a foundation for digital methods and skills for Ph.D. students in the humanities and humanistic social sciences. Read more: <https://library.brown.edu/create/cds/digital-humanities-doctoral-certificate/>

The institute is home to two centers: the Center for Environmental Humanities at Brown (CEHAB), which fosters the development of relevant courses and pedagogies, and the Center for the Study of the Early Modern World (CSEMW), which administers an interdisciplinary undergraduate concentration.

More about the Cogut Institute: <https://humanities.brown.edu> (<https://humanities.brown.edu/>)

Courses

HMAN 0700A. Simulating Reality: The (Curious) History and Science of Immersive Experiences (ITAL 0701).

Interested students must register for ITAL 0701.

HMAN 0700B. Psychology and Philosophy of Happiness (PHIL 0650).

Interested students must register for PHIL 0650.

HMAN 0800A. The Humanities in Context: Victimization and Voice across the Disciplines.

This seminar investigates the silent language of victims. How can marginalized groups make their voices heard? The notion of subalternity has become crucial for transdisciplinary debates in the humanities. It describes not only a predicament of social, political, and economical oppression, but also one that imposes silence. How to break this silence? The risk is that of producing a representation that enters the dominant discourse while perpetuating the subaltern's exclusion. Following the notion of subalternity from Antonio Gramsci to postcolonial studies and beyond, this seminar explores the conundrum of subaltern's representation, its theoretical implications, and several strategies to address it.

HMAN 0800B. The Art of International Relations.

From the ritual handshakes of country leaders to iconic photographs of migrants and refugees, from the use of music in combat and torture to the mobilization of art to make a better world, aesthetics informs the way international actors present themselves, portray the world, perceive others, and conceive of peace, conflict, and war. At the intersection of the humanities and social sciences, this course explores cultural practices constitutive of the diplomatic stage, international society, transnational networks, globalization, and postcoloniality in the 20th and 21st centuries. These include theatre, literature, music, dance, images, film, television, and social media.

HMAN 0900. Love and Longing across the Indian Subcontinent (COLT 0812Y)..

Interested students must register for COLT 0812Y.

HMAN 0900B. Fake: A History of the Inauthentic.

What is a fake? Are “fake” and “authentic” absolute and antithetical categories? Who gets to decide what is authentic? Greek statues, Chinese bronzes, Maya glyphs—what gets faked and why? Have fakes always existed? Galileo’s moons, a centaur’s skeleton, Buddhas bearing swastikas—are all fakes the same? If not, how are they different? Why do people make fakes? Who wins? Who loses? This course revolves around the history of the inauthentic through a diachronic exploration of art objects and other forms of material culture. We will range widely in time and space, focusing primarily on the pre-modern.

HMAN 0900C. Heritage in the Metropolis: Remembering and Preserving the Urban Past (ARCH 0317).

Interested students must register for ARCH 0317.

HMAN 0900D. Introduction to Indigenous Politics with Pacific Islander Focus (POLS 0920B).

Interested students must register for POLS 0920B.

HMAN 0900E. Encounters: Latin America in Its Literature and Culture (HISP 0730).

Interested students must register for HISP 0730.

HMAN 0900F. The Politics of Gender in the Caribbean Novel (AFRI 0850).

Interested students must register for AFRI 0850.

HMAN 0900G. Mural Painting in Mexico (HIAA 0632).

Interested students must register for HIAA 0632.

HMAN 0900H. Queerness in Caribbean Literature (AFRI 0850).

Interested students must register for AFRI 0850.

HMAN 0900I. Medieval Gender (ENGL 0300M).

Interested students must register for ENGL 0300M.

HMAN 0900J. Diplomats, Drunkards, Anarchists: Competing Visions of the Future in Japan’s Global Past (EAST 0411).

Interested students must register for EAST 0411.

HMAN 0900K. Suffering and Compassion (ANTH 0350).

Interested students must register for ANTH 0350.

HMAN 0900L. Caribe Queer (HISP 0750W).

Interested students must register for HISP 0750W.

HMAN 0900N. Indigenous Canada (HIST 0591).

Interested students must register for HIST 0591.

HMAN 0900P. Indigenous Education (HIST 0691).

Interested students must register for HIST 0691.

HMAN 0900Q. The Chisolm Massacre: Reconstruction and the Politics of Violence.

This humanities seminar takes a broad and varied look at Reconstruction, the United States’ first great experiment in racial justice. It situates this post–Civil War effort to remake the former Confederacy and integrate the formerly enslaved as American citizens, and the white supremacist backlash to it, by exploring broader discussions of American political and racial violence and the political history of the Reconstruction era (1863–1877) and its aftermath. The seminar foregrounds case studies of Mississippi communities riven by Ku Klux Klan terrorism, race riots, and vigilante murders, especially an incident called “the Chisolm Massacre” (1877). The course also examines the memory of Reconstruction and its portrayal in popular culture, from D.W. Griffith’s film *Birth of a Nation* (1915) through Steven Spielberg’s *Lincoln* (2012), for example.

HMAN 0900R. Home and Away: South Asian Literature in the Global Diaspora (COLT 0711U).

Interested students must register for COLT 0711U.

HMAN 0900S. From Turtle Island to Abya Yala: Art of the Indigenous Americas (HIAA 0076).

Interested students must register for HIAA 0076.

HMAN 1000A. The Cogut Institute for the Humanities Research Seminar.

This yearlong seminar involves reading and discussing in-progress research by the annual fellows of the Cogut Institute for the Humanities, an interdisciplinary group of faculty, postdoctoral fellows, graduate students, and undergraduates engaged in extended research on a major project or honors thesis. Students read a wide range of works-in-progress, prepare questions and participate in seminar discussions, serve as first questioners for specific sessions assigned to them in advance, and present their own work twice during the year. Students are required to complete both semesters (HMAN 1000A in the fall and HMAN 1000B in the spring) to receive credit. Admission to the course requires that students have received the Cogut Institute Undergraduate Fellowship for the year in which they enroll. More information about the fellowship and application process may be found at <https://humanities.brown.edu/apply/undergraduate-fellowship>.

HMAN 1000B. The Cogut Institute for the Humanities Research Seminar.

This yearlong seminar involves reading and discussing in-progress research by the annual fellows of the Cogut Institute for the Humanities, an interdisciplinary group of faculty, postdoctoral fellows, graduate students, and undergraduates engaged in extended research on a major project or honors thesis. Students read a wide range of works-in-progress, prepare questions and participate in seminar discussions, serve as first questioners for specific sessions assigned to them in advance, and present their own work twice during the year. Students are required to complete both semesters (HMAN 1000A in the fall and HMAN 1000B in the spring) to receive credit. Admission to the course requires that students have received the Cogut Institute Undergraduate Fellowship for the year in which they enroll. More information about the fellowship and application process may be found at <https://humanities.brown.edu/apply/undergraduate-fellowship>.

HMAN 1200. Making Choices: Ethics at the Frontier of Global Science (UNIV 1200).

Interested students must register for UNIV 1200.

HMAN 1300A. Decolonizing Data: Approaches from Caribbean Digital Humanities and Beyond.

What does it mean to decolonize methods of data collection, construction, analysis, ownership, and sharing in the digital humanities? To what extent is decolonization possible within existing institutional frameworks and digital technologies? This course will approach humanities "data" broadly as quantitative as well as archival, textual, and cultural, and explore innovative approaches to decolonizing data in Caribbean digital humanities projects and critical DH. Through hands-on workshops, theoretical readings, and evaluation of projects such as the Early Caribbean Digital Archive and Algorithmic Justice League, the course will interrogate questions of data ethics in the colonial archive, data justice, digital practices of care, and community-centered archiving. Students will find or create a dataset and develop a data management, preservation, and sharing plan that puts into practice decolonizing methodologies. No prerequisites or experience with coding, data, or digital technology required.

HMAN 1301. The Sounds of Science: Nonfiction Audio Storytelling (STS 1700E).

Interested students must register for STS 1700E.

HMAN 1305. Medical Humanities: Critical Perspectives on Illness, Healing, and Culture (ANTH 1305).

Interested students must register for ANTH 1305.

HMAN 1400A. Loss, Political Activism, and Public Feelings: Between Fact and Affect (HIST 1972I).

Interested students must register for HIST 1972I.

HMAN 1400F. The City in Strife: Mapping Segregations, Inequality, Insurrection (HIST 1954H or SOC 1954H).

Interested students must register for HIST 1954H or SOC 1954H.

HMAN 1400G. History of Artificial Intelligence (HIST 1825J).

Interested students must register for HIST 1825J.

HMAN 1400H. Transnational Feminist Knowledge Production & Practices: Perspectives from East & West Asia-EAST1706.

Interested students must register for EAST 1706.

HMAN 1970A. Religion, Secularization, and the International.

For the past several decades (but especially since 2001), internationalists have been increasingly preoccupied by the perceived "return of religion." Religion is often proclaimed to pose the single greatest threat to a liberal legal/political order and, less often, to be the greatest hope for that order. We will explore genealogies of the three key terms at stake in this conundrum – "religion," "secularization," and "the international." We begin from the proposition that none of these terms refer to ahistorical essences, but have been subject to continual theoretical/practical contestation/reconfiguration. We focus on that contestation as it has emerged in "modernity." Enrollment limited to 20 juniors, seniors, and graduate students.

HMAN 1970B. The Question of the Animal.

This course is built around the question of the animal as a difficulty posed to representation and thought at a time when animals have largely disappeared from humans' living environment, but proliferate as strange protagonists, specters or figures of ambiguity in literature and philosophy. We will consider a range of texts and films that "cast" the animal critically, that is, as a body that strains or scrambles meaning (interruption, irony, illegibility, haunting) and forces us to reconsider the work of language and narrative (indeed, of the "human"). Authors include Kafka, Coetzee, Hofmannsthal, Kofman, Chevallard, Darrieussecq, Derrida, Agamben, de Fontenay, Herzog. Enrollment limited to 20 juniors and seniors.

HMAN 1970C. Modern Arab Thought: The Arab Renaissance.

This course introduces students to the 19th/early 20th century Arab thought – the "Nahda" (Arab Renaissance). Through primary and secondary English texts, we will explore questions raised by thinkers of this epoch pertaining to perceived civilizational crisis, and examine the diagnoses/proposals offered by them. The course underlines the changes and continuities in these concerns under the impact of dramatic socio-political events of the epoch. We will discuss the strengths/weaknesses of "Nahda" thought that continues to inform/preoccupy contemporary Arab debates on culture, democracy, gender and Islam. We will examine the significance of this legacy in today's Arab world. Enrollment limited to 20 juniors and seniors.

HMAN 1970D. Places of Healing: Memory, Miracle, and Storytelling.

From antiquity to our day, therapeutic landscapes such as: mineral and thermal springs; shrines and churches built at sacred springs; volcanic ash mud baths; rocky landscapes emitting odorous gasses; and ponds filled with medicinal leeches, attract health pilgrims who search for healing. Storytelling transformed these into places of memory and pilgrimage. This seminar investigates places of bodily healing and miracle from a cultural studies perspective. The case studies will be drawn from the Mediterranean world and Western Asia (including Lourdes in France, Hierapolis in Southeastern Turkey and the Agiasma churches of Byzantine Istanbul). Enrollment limited to 20 juniors and seniors.

HMAN 1970E. The Precarious University.

The intensification of student protest-occupy movements across the country particularly in California, and the proliferation the OWS movements across the world have rejuvenated social movements against cutbacks for the people and kickbacks for the wealthy. In this seminar, we will address the epistemic shifts and intellectual costs of these ongoing upheavals, particularly the fight against the U.S. university's neoliberalization. We will imagine the kind of progressive university that is sustainable for the arts and humanities, and how the precarious work of artists and humanists are fundamental to 21st century global universities. Enrollment limited to 20 juniors and seniors.

HMAN 1970F. Pain in Polish and Russian Twentieth-Century Literature.

Does pain and reflection on pain teach us something about ourselves, the world, our relation to it? This seminar approaches the question by examining the meaning of pain in Russian/Polish literature/literary theory of the 20th century. Our concern is with pain's resistance to language and representation. The works analyzed offer a variety of responses to problem of pain as it appears in theology, experimental medicine, discussions of materialism, the philosophy of Schopenhauer, and above all, the giants of Russian literature, Dostoevsky and Tolstoy, in whom these debates are dramatized; they also form the ground on which Russian and Polish literature meet. Enrollment limited to 20 juniors and seniors.

HMAN 1970G. International Perspectives on NGOs, Public Health, and Health Care Inequalities.

Non-governmental and other non-state organizations play an expanding role in the provision of health care across much of the globe. Growth and internationalization of the non-governmental sector, contraction of post-socialist and advanced industrial welfare states, and sub-contracting of state-funded services have all contributed. The seminar focuses on this expansion, critically assessing texts on NGOs and health and drawing comprehensively from sources across disciplinary and interdisciplinary boundaries. We will address issues of human welfare, political citizenship and identity, replacement and displacement of states, new forms of health care inequalities, and the self-concepts, missions, and roles of non-profit sector workers around the globe. Enrollment limited to 20 juniors and seniors.

HMAN 1970H. Specters of Comparison.

Comparison, which posits a likeness between the dissimilar, is always profoundly haunted by the question of its ground and judgment. This seminar will examine the comparative logic of capitalist modernity in the works of Marx, Weber, Adorno and Horkheimer, Foucault, Heidegger, and Benjamin. We will ask the following questions: How is equivalence established between nonequivalent objects? How are actual social relations quantified and measured, and is there an ethics to modern forms of comparability? How does language reflect and produce these operations? Or, to put it differently: What are the forms through which difference "haunts" us? We will pay special attention to figures of the double and the ghost in Hoffmann and Freud. Other topics to be covered include rationalization and the disenchantment of the world, the modern uncanny, "mediauras," colonial comparison, and the ethics of incommensurability.

HMAN 1970I. Imposing Orthodoxy: "Jews," "Pagans" and "Heretics" when Constantinian Christianity Won.

What happens when a particular 'orthodoxy' becomes able to impose itself on others? This course examines the imposition of post-Constantinian catholicism on Jews, Samaritans, other Christians (Arians, Miaphysites, etc.) and the remaining ancient Mediterranean populace (4th-7th centuries) to consider a larger cultural phenomenon. We'll draw on ancient authors and legal sources (in translation), archaeological data, and contemporary studies. Half the course entails communal exploration of the late antique Mediterranean. Student research presentations, including studies of comparable situations from other cultural and historical contexts, comprise the second half. Useful prior coursework includes: RELS 400, RELS 410, CLAS 600, CLAS 660, CLAS 1320. Enrollment limited to 20 juniors and seniors.

HMAN 1970J. Miniature: An Introduction to Cognitive Cultural Studies.

Why do we take pleasure in small-scale objects? What is their history and what purposes do they serve? How do the technology and the aesthetics of the small contribute to human cognition? To find answers to these and other questions, the seminar explores the cultural, literary and cognitive significance of miniatures. We will explore productive relationships between three areas of research: imaginative texts produced during the eighteenth century, the period's prolific but insufficiently studied production of small-scale versions of everyday objects, and recent developments in cognitive theory about the role of size-perception in the developing brain. Enrollment limited to 20 juniors and seniors.

HMAN 1970K. Law and Religion.

In an arguably "post-secular" age, conflicts over the relationship between religion and law have moved to the forefront of international debate. In our multicultural/globalized world, such conflicts often provoke contestation over the very possibility of universal definitions of either "religion" or "law," let alone their proper relationship. Our interdisciplinary inquiries on these questions will include concrete legal disputes in domestic/international courts; theoretical debates over the construction of "religion" in fields such as anthropology, religious studies, and philosophy; historiographical controversies about the relationship between "secularization" and sovereignty, particularly in light of the legacy of colonialism. Limited to juniors, seniors, and graduate students.

HMAN 1970L. Topics in the History of Aesthetics: Eighteenth Century.

Modern aesthetics emerged in the eighteenth century at the intersection of different disciplines, discourses, cultures, and European nations. Contributors to the new field came not only from academic philosophy but also from the arts, literature, history, theology, and other fields. Aesthetics was thus and remains primary among interdisciplinary disciplines. Readings for this course will be drawn from British, German, and French authors such as Shaftesbury, Du Bos, Addison, Hutcheson, Hume, Burke, Kames, Diderot, Mendelssohn, Lessing, Kant, Schiller, and Herder. Enrollment limited to 25 juniors and seniors.

HMAN 1970M. Living in End Times.

Doomsday predictions/apocalyptic themes have become commonplace. Between "End of History" theses/Mayan Calendar predictions/posthumanist theories/the Rapture, and environmental/financial collapse, it seems we are living in what many believe to be End Times. This course will examine some principal clusters of ideas around finality: posthumanism/singularity, environmental collapse, patriot survivalism, and post-politics. We will look at a number of cultural products: traditional fiction/non-fiction, blogs/podcasts/films. It will be less important to establish whether the Mayan calendar calculations are accurate than seeing the connections between those claims and the claims of survivalists/Rapture theorists. Taken together, what do all these claims say about this moment in history? Enrollment limited to 25.

HMAN 1970N. The Israeli-Palestinian Conflict in the Global Scene.

Dominant narratives of Israeli/Palestinian conflict obscure influential forces taking place outside the boundaries of Israel/Palestine, stories we believe are unique/historically peculiar. We will see how groups have been inspired by/have inspired both peoples' struggles for survival/self-determination. We examine case studies revealing connectivity/reciprocity: Zionism's inspiration for Garvey's U.S.-back-to-Africa movement; adoption of Fanonian/Maoist/Guevarian thought in Middle East; Black Panther Party's support for Palestinians/their endorsement of an Israeli Black Panther Party in the 1970s; South Africa/Latin America's economic/military ties to Israel; Palestinian call for international Boycott Divestment Sanctions; and examine how struggles for self-determination negotiate between seeking territorially bounded independence/globally networked liberation, in the region/beyond. Enrollment limited to 20 juniors and seniors.

HMAN 1970O. Autonomy and Globalization.

Many of today's dissident movements adopt leaderless/self-managed practices presenting us with radically different notions of what it means to self-determine. We will situate these movements within historical struggles for autonomy. By "autonomy" we understand the quality or state of being self-governing/self-determining. By "self," we understand not the self-originating/self-determining/rational individual constructed by Enlightenment liberal humanism, but rather, a diversity of self-defined collectivities made up of social individuals. We will consider runaway slave societies (Western Hemisphere), Operismo (Italy), Zapatistas (Mexico), Tahrir Square's protesters (Egypt), Occupy Movement (US), Shackdwellers (South Africa), refugee/migrant movements. Readings include Marx/ Cleaver/Linebaugh/Rediker/Negri/Tronti/Virno/Berardi/Holloway/others, and documents from movements we engage. Enrollment limited to 20 juniors and seniors.

HMAN 1970P. Pragmatism, Religion, and Politics.

Pragmatism is a distinctive American school of thought that sees the goal of philosophy not as the apprehension of timeless truths but as a practical project of bettering individual lives and society as a whole. Pragmatists such as William James and John Dewey were devoted to deepening America's commitment to democracy. Both saw an important place for an unconventional sort of religion in democratic life. This course explores the pragmatist thought of James, Dewey, and others, looking especially at their views on religion and politics. We also will explore the influence of pragmatism on Barack Obama. Enrollment limited to 20 juniors and seniors.

HMAN 1970Q. Working (on) Concepts in the Humanities.

Concepts are usually thought of as cognitive tools, constituents of thought used for categorization/inference/memory/learning/decision-making. We shall think about them as effects of a language game whose rules change across genres, media, and discursive regimes. Looking for these rules and analyzing them comparatively, we shall ask how concepts are formed/displayed/performed, when do we need them/can we do without them. We shall read philosophers (Plato, Descartes, Kant, Heidegger, Wittgenstein, Foucault, Derrida, and Deleuze), intellectual historians (Koselleck, Skinner), literary works (Kleist, Kafka, Musil), and look at some conceptual art. Advanced juniors, seniors and graduate students welcome. Enrollment limited to 20.

HMAN 1970R. Literature and the Arts in Today's Cuba.

Cuba today is home to writers, musicians and artists who engage with new media and a global audience against the backdrop of a socialist revolution. This seminar will explore esthetic and political dimensions of contemporary Cuban culture with authors who will speak to us directly through a video link with Casa de las Américas in Havana. Knowledge of Spanish required.

HMAN 1970S. Ethics and the Humanities.

This seminar will engage with ethical issues in a broad range of humanities disciplines. We will survey historical and thematic perspectives on ethics, and will consider the ethical implications of authorship and possession of texts and objects; translation as an ethical problem; data and open access; the perspective of the human subject; public humanities, public intellectuals and community-based research; and ethical issues in popular culture. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970T. Music, New Media, and Virtual Performance.

We'll investigate how new media technologies shape musical practices (and vice versa). Topics will include DJ cultures, digital music distribution and related intellectual property issues, digital gameplay, music videos, popular music reception, online music lessons, and virtual communities. We'll give equal attention to production, circulation, and reception practices, as well as to their increasing convergence. Readings will include both contemporary and historical studies. The course will require critical engagement with a diverse range of media, genres, and cultural contexts, encouraging students to examine their own media production and consumption practices. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970V. Pragmatic Medical Humanities.

The question, "What is medical humanities?" has flummoxed the very experts who ardently argue for its importance to medical education and the professional and personal growth of health care providers. The interdisciplinary nature of medical humanities, engaging in conversations with persons who possess different expertise, knowledge and approaches, provides opportunities for insight unavailable elsewhere. Students will investigate alternative meanings, interpretations and purposes embedded in the term "medical humanities." They will develop their own personal relationship to this term/field of study, and its utility as a tool for understanding and responding to the profound experiences of clinical medicine, illness and health. Enrollment limited to 20. Not open to first year students or sophomores. This is a half-credit course.

HMAN 1970W. Medicine and Colonialism in the Atlantic World: A View from the South.

This seminar examines the role of disease, medicine, and health in the history of the Atlantic World. Our analysis will be centered on events that took place in Latin America, the Caribbean, and Sub-Saharan Africa, during the era of European colonial expansion (1490-1940). In these four and a half centuries, the West became the dominant force in global geopolitics and Western medicine emerged as the hegemonic form of healing worldwide. This seminar explores the complex relationship between these two historical developments. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970Y. Politics and Authority in Islamic Law and Society.

Few courses offer insight into the genesis of Islamic political theory in light of the social and historical circumstances of the medieval period. This seminar seeks to address major trends in political thought of classical Islam. In addition to reading secondary scholarship on social and political aspects of early Muslim society, we will also examine primary sources in translation (Prolegomenon, Book of Ordinances); literary genres, including official state epistles from the medieval period; and the work of Ibn Taymiyya. Finally we will address issues of authority, ethics and gender in contemporary analyses. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970Z. Knowledge Networks and Information Economies in the Early Modern Period.

This course is designed to introduce students to major topics in the developing historical literature on the relationships between intellectual and economic history, and their implications for European culture, mainly in the first two centuries after Columbus and Da Gama. Enrollment limited to 20 juniors and seniors.

HMAN 1971B. Paris Archive: The Capital of the Nineteenth Century, 1848-1871.

We will take as our starting-point Walter Benjamin's notes for his unfinished masterwork "The Arcades Project." The *Passagenwerke* comprise a massive index of citations/observations on the nature/form of the city of Paris in every aspect of its cultural/political life in the 19th/20th centuries. We will read works from which he culled his aphorisms/ investigate the present status of each of his assertions/citations, with historical/contemporary readings. We will discuss the nature of historical/archival interpretation and try to bring together artifacts – textual/visual/sensorial – that might constitute a "Museum" of 19th Century Paris. Taught by Prof. Anthony Vidler. Graduate students encouraged to register. Enrollment limited to 20.

HMAN 1971C. History, Theory and Practice of Storytelling Using Stereoscopic ("3D") Motion Pictures.

This course will support/enhance Brown's tradition in the Humanities by sharpening the focus on interdisciplinary/comparative work across cultural/linguistic boundaries. Can science/technology/medicine foster the presentation of innovative work in humanities by bringing 3D to New Media? Why do some cultural values dictate genres typically produced in 3D? What were the origins of 3D motion pictures/how might new technologies affect the distribution/visualization of 3D projects? How can 3D enrich relations between humanities and studio/performing arts? We provide Brown students with an opportunity to establish a foundation for analyzing/telling stories using stereoscopic tools, and receive basic technical experience using 3D small-format video equipment.

HMAN 1971E. Cross-Cultural Approaches to Death and Dying.

Despite the universality of death, human responses are incredibly varied. This course situates biological, medical, and psychological conceptions of death and dying in conversation with the religious and ethical perspectives that have also informed human responses to death and dying in cultural contexts. This course—team-taught by a psychologist, a scholar of religion, and two end-of-life care physicians—facilitates a more informed understanding of death-related cultural practices and a more skilled response to death-related decisions arising in the practice of medicine and in life. Limited to 20 students in Medical Humanities and graduate Humanities fields. Honors undergraduates and PLMEs may enroll with permission.

HMAN 1971K. Varieties of Secularism (RELS 1746).

Interested students must register for RELS 1746.

HMAN 1971R. The First Scientific Americans: Exploring Nature in Latin America, 1500-1800 (STS 1701C).

Interested students must register for STS 1701C.

HMAN 1971S. Introduction to iPhone/iPad Moviemaking Using 3-D and 360 VR Comparisons.

Mobile Devices are democratizing movie-making by lowering barriers to entry, enabling students to become full-fledged members of the film industry virtually overnight. This pioneering course provides the basic tools for students to create and distribute no- and low-budget live-action motion pictures with professional production values utilizing only their personal smartphones. Students will acquire the skills to plan, capture and edit short motion pictures through hands-on instruction and experimentation with low-cost accessories, including selfie-sticks, lens adapters, directional microphones and iPhone apps like Filmic Pro, Vizzywig and iMovie. Limited to junior, senior and graduate students.

HMAN 1971T. Law, Nationalism, and Colonialism.

This seminar explores the internationalism of the past century in terms of its relationship to separatist nationalism, anti-colonialism, and religious radicalism. It takes as its point of departure the dramatic political, cultural, and intellectual transformations that followed in the wake of World War I. A guiding hypothesis of the seminar is that internationalism cannot be understood apart from its complex relationship to "identity" broadly conceived – identity of local/transnational groups as well as the identity of internationalists themselves. Readings will be drawn from law/cultural studies/politics/postcolonial theory. Enrollment limited to 20.

HMAN 1971U. Kabbalah: An Introduction to Jewish Mysticism.

In the 12th and 13th centuries, new ways of approaching Judaism sprung up in France and Spain that would come to be known as "kabbalah." New approaches included aspirations for mystical illumination, elaborate mythological narratives, and human history. Kabbalists radically and self-consciously departed from conventional understandings of Judaism, particularly those of medieval Aristotelian philosophers like Maimonides. They claimed to find their mythological, mystical worldviews in traditional texts, from the Bible through rabbinic writings. This course introduces students to kabbalah's founding period, focuses on primary texts in translation, especially the Zohar, the magnum opus of classical kabbalah. No prior background necessary.

HMAN 1971W. Decolonizing African Education: Student Activism and Social Change, 1960-present (EDUC 1035).

Interested students must register for EDUC 1035.

HMAN 1971X. The Southern Question and the Colonial Mediterranean (ITAL 1400P).

Interested students must register for ITAL 1400P.

HMAN 1971Y. Visions of Liberation: African Decolonization Now? (COLT 1610R).

Interested students must register for COLT 1610R.

HMAN 1971Z. Cannibalism, Inversion, and Hybridity: Creative Disobedience in the Americas (HIAA 1870).

Interested students must register for HIAA 1870.

HMAN 1972A. Landscape and Japanese Cinema (MCM 1504X).

Interested students must register for MCM 1504X.

HMAN 1972B. Environmentalism and the Politics of Nature (ANTH 1556).

Interested students must register for ANTH 1556.

HMAN 1972C. Picturing Paradise: Art and Science in the Americas.

The study of nature has developed together with the representation of flora and fauna in Europe and the Americas. After the encounter, visual thinking remained an integral part of how knowledge was negotiated between different communities on both sides of the Atlantic—as several scientific expeditions involving artists confirm. This course, which includes field trips to museums and collections, examines connections between knowing and making, ranging from the tradition of pre-Columbian writer-painters to contemporary Latin American artist collectives. We will investigate the entangled histories of art and science as seen through the artistic productions inspired by the exuberant American land.

HMAN 1972D. Art of Criticism (ENGL 1901F).

Interested students must register for ENGL 1901F.

HMAN 1972G. Eternal Returns: Poetry and Politics in Modernity.

The title of this course alludes to Friedrich Nietzsche's "eternal return of the same," which he famously called "the highest formula of affirmation," and which later philosophers and thinkers, such as Pierre Klossowski and Martin Heidegger, would repeatedly return to. Yet Nietzsche's discovery is not new, for it infects, too, the thinking of the professional revolutionary, Louis-Auguste Blanqui, the returns of commodity production in high capitalism, and the poetic figurations of the big city found in nineteenth-century writers such as Charles Baudelaire. In this course, we will examine the problem of returns—temporal, political, economic, and poetic—in modernity.

HMAN 1972I. Me, Myself, and I: Exploring Senses of Self from a Multidisciplinary Perspective.

Human beings have long puzzled over how precisely to conceptualize and understand what it is we are. Questions about the nature of the self have informed the speculations of philosophy, the soteriologies of religion, the trajectories of self-cultivation in contemplative traditions, and the therapeutics of psychology. Recently, cognitive science and phenomenology have attempted to correlate abstract concepts about the self with lived experience, emphasizing how various senses of self give rise to our self-concepts. Through this course, students will engage with conceptions of self that we often take for granted by studying senses of self from multidisciplinary and cross-cultural perspectives.

HMAN 1972J. Urban History of Latin America (HIST 1979L).

Interested students must register for HIST 1979L.

HMAN 1972K. Anthropology of Climate Change (ANTH 1112).

Interested students must register for ANTH 1112.

HMAN 1972M. Environmental Political Thought (POLS 1185).

Interested students must register for POLS 1185.

HMAN 1972N. The Indian Ocean World (HIST 1979K).

Interested students must register for HIST 1979K.

HMAN 1972Q. The Nature of Conquest: Scientific Literatures of the Americas (HISP 1330X).

Interested students must register for HISP 1330X.

HMAN 1972R. Transnational Hispaniola: Haiti and the Dominican Republic (AFRI 1050W).

Interested students must register for AFRI 1050W.

HMAN 1972S. Comparative Education: International Trends and Local Perspectives (EDUC 1030).

Interested students must register for EDUC 1030.

HMAN 1972T. Apartheid in Post-Apartheid South African Literature (COLT 1814L).

Interested students must register for COLT 1814L.

HMAN 1972U. Feminist Thoughts for a Heated Climate (POLS 1180).

Interested students must register for POLS 1180.

HMAN 1972V. Sex, Gender, Empire (HIST 1979F).

Interested students must register for HIST 1979F.

HMAN 1972W. Rhythm and Resistance (AFRI 1050V).

Interested students must register for AFRI 1050V.

HMAN 1972Y. Indigenous Peoples and American Law.

The European colonial empires and their successor states in the Americas all developed bodies of law concerned with the indigenous peoples who preceded them. In the United States, this body of law is generally still known as "American Indian Law" or, more recently, "Federal Indian Law." It emerged out of colonial-era juristic thinking and was adapted and transformed after the U.S. gained independence from Britain. This seminar will study both the history and structure of this body of law. It will also seek to uncover the ways the technical legal materials embody deep-rooted cultural presuppositions about indigenous peoples.

HMAN 1973A. Race, Sexuality, and Mental Disability History (AFRI 1060Z).

Interested students must register for AFRI 1060Z.

HMAN 1973B. Feminist Theory for a Heated Planet (POLS 1824N).

Interested students must register for POLS 1824N.

HMAN 1973C. East Asian Cinemas in a Global Frame (MCM 1203U).

Interested students must register for MCM 1203U.

HMAN 1973D. Sports and Culture in Latin America (HISP 1371B).

Interested students must register for HISP 1371B.

HMAN 1973E. The Age of Constantine: The Roman Empire in Transition (CLAS 1120V).

Interested students must register for CLAS 1120V.

HMAN 1973F. Ruined History: Visual and Material Culture in South Asia (HIST 1979D).

Interested students must register for HIST 1979D.

HMAN 1973G. Writing Animals in the Iberian Atlantic (HISP 1331A).
Interested students must register for HISP 1331A.

HMAN 1973H. Water is Life/New Currents in the Study of Land, Water and Indigeneity (ETHN 1750H).
Interested students must register for ETHN 1750H.

HMAN 1973I. Oppositional Cinemas (MCM 1505J).
Interested students must register for MCM 1505J.

HMAN 1973N. Islam in America: A Global History.
This course explores the history of Muslims in America — and American discourses about Islam — from 1492 to the present. We follow five historical contexts bridging Spain and Portugal, West Africa, the Middle East, South Asia, and North America, including: (1) Iberian-Ottoman rivalry from the Mediterranean to the Indian Ocean and European colonization of the Americas; (2) transatlantic slave trade and the roots of African-American Islam; (3) the U.S. Founders' ideas about Muslims and religious freedom, plus diplomatic engagement with Morocco, the Ottoman Empire, and Persia; (4) large-scale immigration of Asian Muslims following the 1965 Civil Rights Act; and (5) racialization of Muslim Americans — and oft-misidentified minorities including Arab, Iranian, Sikh, Jewish, Black, and Latinx Americans — before and after 9/11 and U.S. wars in Afghanistan and Iraq.

HMAN 1973T. The Politics of Chinese Cinema (MCM 1204D).
Interested students must register for MCM 1204D.

HMAN 1973U. Art for an Undivided Earth: Transnational Approaches to Indigenous Activism and Art (ENGL 1711J).
Interested students must register for ENGL 1711J.

HMAN 1973W. Indigenous Politics in Hawai'i: Resurgence and Decolonization (POLS 1820I).
Interested students must register for POLS 1820I.

HMAN 1973Y. Rhythm and Silence: A Creative Writing Workshop (HISP 1700B).
Interested students must register for HISP 1700B.

HMAN 1973Z. Ammianus Marcellinus (LATN 1930B).
Interested students must register for LATN 1930B.

HMAN 1974A. Cinema and Imperialism (MCM 1505S).
Interested students must register for MCM 1505S.

HMAN 1974B. Southeast Asia's Entangled Pasts: Excavated, Curated, and Contested (ARCH 1494).
Interested students must register for ARCH 1494.

HMAN 1974C. Dawnland Voices: Exploring Native New England (AMST 1902S).
Interested students must register for AMST 1902S.

HMAN 1974D. Avicenna (PHIL 1002).
Interested students must register for PHIL 1002.

HMAN 1974E. Political Theology for the Anthropocene.
The Seminar develops a discourse in political theology for gaining insight into the catastrophes of the modern world and those associated with the Anthropocene. The political imagination embedded in a cluster of texts from the Hebrew Bible and the political theology they imply will enrich discussions in political theory about sovereignty, government, law, and violence. The seminar gives special attention to the way the modern state and other modern and contemporary institutions have come to substitute for God as authors of large scale, globalized, and planetary catastrophes. Our theoretical companions include Buber, Assman, Agamben, Arendt, Foucault, Boltanski, and Žižek.

HMAN 1974F. Anthropology in/of the Museum (ANTH 1901).
Interested students must register for ANTH 1901.

HMAN 1974G. Authority, Identity, and Visual Culture in Colonial Latin America (HIAA 1631).
Interested students must register for HIAA 1631.

HMAN 1974H. The Human Skeleton (ANTH 1720).
Interested students must register for ANTH 1720.

HMAN 1974I. Contested Histories of Colonial Indochina: Encounters, Soc. Transformations, Legacies of Emp-HIST 1978D.
Interested students must register for HIST 1978D.

HMAN 1974J. Rap as Storytelling (MUSC 1240R).
Interested students must register for MUSC 1240R.

HMAN 1974K. Governing Culture: Music and the Arts in Political Life.
The social function and governmental regulation of aesthetic life play a key role in the constitution of political regimes. This course examines debates on the arts as instruments of power, distinction, resistance, contestation, and revolution, from the early modern period to the present. The government of music, sound, noise, and silence will offer a point of comparison among absolutist monarchies, modern republics, totalitarian regimes, liberal democracies, and colonial empires. In addition to music, the course draws from political sources, theoretical works, literature, and the visual arts.

HMAN 1974L. The Coming Apocalypse: Between the Earth and the World.

A cascading catastrophe threatens to turn the earth uninhabitable and bring our world to its end. How to think, in this context, the relation between our world, the world, and the earth? Are they known, experienced, shared with others, or being destroyed in the same way? How have their differences and convergence been affected by globalization, and affected our understanding of the "Anthropocene"? Following the news on ongoing and future climate catastrophes, the seminar addresses these and related questions through critical readings of theoretical and philosophical texts, including works by Arendt, Latour, Haraway, Povinelli, Yussof, Moore, and Mbembe.

HMAN 1974M. Solidarities: Sharing Freedom, Inventing Futures.
Solidarity between people—even between species—has never been more needed. But our culture is saturated by personality politics and ubiquitous narcissism. How can we think and organize ourselves out of this impasse? Is it shared interests or shared identities that unite us? What does freedom mean in an interconnected age? These are some of the questions that any attempt to think through the question of solidarity in the twenty-first century must encounter. Writers to consider include Marx, Arendt, Foucault, Simondon, Negri, Stuart Hall, Maurizio Lazzarato, Donna Haraway, Couze Venn, and Ruth Ozeki, among others.

HMAN 1974N. Narrating the Borderlands: Literature, Legality, and Solidarity (HISP 1371F).
Interested students must register for HISP 1371F.

HMAN 1974O. Print and Power in Modern Southeast Asia (HIST 1962E).
Interested students must register for HIST 1962E.

HMAN 1974P. Theo-Politics: Political Readings of the Hebrew Bible.
The seminar presents the Hebrew Bible as a primary source for political theory. It offers readings of some highly charged theo-political episodes through which some key political concepts are explicated and problematized. Special attention is given to systemic violence, states of exception, the politics of plagues, and resistance. The readings are guided by (mostly) contemporary thinkers who contributed to the study of these concepts in non-biblical contexts. Reconstructing God's multiple political personae and several types of biblical theocracies, the seminar questions the gap separating our putatively modern, secular political imagination from that of the political cultures documented in the Bible.

HMAN 1974R. Humans, Animals, and Machines.
This course examines the invocation of animals and machines to illuminate the meanings and limits of the human in modern American thought and culture. Our objects of analysis will range from medical experiments to popular films, primatology to video games, and Crisp babies to science fiction. Readings will consider the roles of animals and machines in the history of categories of race, gender, and bodily difference. Throughout we will examine the political, cultural, and epistemological stakes of the shifting boundaries of the natural and the unnatural, as well as the human and non-human.

HMAN 1974X. Contested Histories of Colonial Indochina: Culture, Power, Change (HIST 1978D).

Interested students must register for HIST 1978D.

HMAN 1974Z. The Creative Ensemble (TAPS 1280B).

Interested students must register for TAPS 1280B.

HMAN 1975A. Disability and Culture in the Past and Present (ANTH 1760).

Interested students must register for ANTH 1760.

HMAN 1975B. Authority, Identity, and Visual Culture in Colonial America (HIAA 1631).

Interested students must register HIAA 1631.

HMAN 1975C. From Pancho Villa to Netflix: An Introduction to Mexican Cinema (HISP 1371I).

Interested students must register for HISP 1371I.

HMAN 1975D. Philosophy of Biology (PHIL 1900).

Interested students must register for PHIL 1900.

HMAN 1975E. Philosophy of the Environment: Environmental Utopias (PHIL 1785).

Interested students must register for PHIL 1785.

HMAN 1975G. Planning the Family: Gender, Reproduction, and the Politics of Choice..

This course explores 20th-century efforts to address population growth and family planning in a variety of global contexts, ranging from macro-level initiatives to individual practices. For some women, state leaders, and international experts, contraception meant sexual liberation, increased autonomy, and the reduction of economic hardship. But for others, the same biomedical technologies were associated with colonial control and efforts to reduce "undesirable" people. How is it possible for contraception to hold such expansive and contradictory meanings? In order to assess this central question, students will engage with critical theories of gender, race, class, nationalism, and decolonization.

HMAN 1975H. Orientalism and the Question of Palestine: Theory, History, Literature (MES 1244).

Interested students must register for MES 1244.

HMAN 1975I. History, Nation, Popular Culture and Caribbean Politics (AFRI 1600).

Interested students must register for AFRI 1600.

HMAN 1975J. Love Hurts: Romance, Media, Masochism (MCM 1506X).

Interested students must register for MCM 1506X.

HMAN 1975K. Race, Gender, and Sexuality in Hispanophone Caribbean Literature (HISP 1331M).

Interested students must register for HISP 1331M.

HMAN 1975L. What We Talk about When We Talk About Horror (MCM 1205A).

Interested students must register for MCM 1205A.

HMAN 1975M. Philosophy of the Environment (PHIL 1785).

Interested students must register for PHIL 1785.

HMAN 1975N. Mourning and Experimental Form (HISP 1331O).

Interested students must register for HISP 1331O.

HMAN 1975O. Caribbean Popular Culture (AFRI 1600).

Interested students must register for AFRI 1600.

HMAN 1975P. Medieval Race (ENGL 1361Q).

Interested students must register for ENGL 1361Q.

HMAN 1975Q. Crippling Technoscience (STS 1700).

Interested students must register for STS 1700.

HMAN 1975R. Religion from Below.

There has always been a tension between "religion," as it is practiced by ordinary people and communities, and the prescriptions of those who see themselves, or who have more official roles, as religious "elite." What, though, does it mean to speak of this "lived" or "popular" religion? Primarily through the close readings of case studies, this course will explore how scholars approach and theorize actual lived religious practice, and whether through such a cross-disciplinary and transhistorical approach we might be able to think more broadly about the ways in which people approach religion, and the reasons they do so.

HMAN 1975S. Figures of the Sovereign: Concepts and Stories from the Life of Power.

The sovereign is a person, institution, or a people where sovereignty – often understood as "the supreme authority in a given territory" – resides. How does the sovereign display its marks and perform or exercise its supreme authority? How is it questioned or undermined? These are matters of political imagination and public contestations no less than of legal definitions and conceptual distinctions. This is also where the problematization of the very idea of sovereignty may begin. We will study these questions by following the sovereign's language, time, impunity, and unruly subjects. Our stories, images, and concepts will be drawn from a variety of sources: early modern (Machiavelli, Hobbes), modern (Schmitt) and contemporary political theory (Honig, Butler, Sawyer); modern literary fictions (Melville, Kafka); journalistic essays on autocrats, abroad and at home (Snyder, Gessen); and anthropological accounts of "stateless societies" (Clastres, Graeber).

HMAN 1975T. Bodies at Work: Disability and Capitalism (STS 1700R).

Interested students must register for STS 1700R.

HMAN 1975U. The Jewelers of the Oumma – Inhabiting the Jewish Muslim World.

The independence of Algeria in 1962 marked the end of a centuries-old intertwined Jewish and Muslim world in North Africa and the Middle East. This end, however, is made into a non-event in the annals of history. We will study the colonial projects that produced this termination as a non-event, and will ask questions about the role of different imperial technologies such as art, museum, and archive in normalizing it. The Maghreb will be our point of departure, but students are invited to explore other imperial geographies and ask how practices of art-making such as jewelry, pottery, embroidery and others – not works of art destined to be displayed in museums – can resuscitate imaginaries of shared worlds?

HMAN 1975V. Latin Radicals: Polemics by Spaniards and native authors in early colonial Mexico.

The seminar, rooted in an ongoing research project on Cristóbal Cabrera, the first poet in the Americas, has a broader compass, incorporating texts by Cabrera's influential contemporaries and associates which contain inflammatory criticism of the conduct of the Spaniards in the Indies. The classes will also introduce writings by indigenous Mexican rulers who took advantage of their humanist education to write Latin, challenging aspects of the colonial status quo and advancing the interests of their local communities.

HMAN 1975X. Blackness and Puerto Rican Literature (HISP 1331R).

Interested students must register for HISP 1331R.

HMAN 1975Y. Narratives of Disability in Greek and Latin Literature (CLAS 1070).

Interested students must register for CLAS 1070.

HMAN 1976A. Disability and Sexuality: Politics of Desire and Desirability (STS1700A)..

Interested students must register for STS 1700A.

HMAN 1976B. Encountering Monsters in Comparative Literature (COLT 1815U).

Interested students must register for COLT 1815U.

HMAN 1976C. Native American Architecture (HIAA 1625).

Interested students must register for HIAA 1625.

HMAN 1976I. The World We Share: An Encounter Between a Continental Philosopher and Five Africana Thinkers.

What is “this world” we inhabit and share with others? Who are “we” in the name of whom “the world” is questioned and its apocalyptic end announced? Who are “they” — friends, neighbors, strangers, enemies, animate and inanimate beings — with whom the world is shared? To explore these questions, the course stages an encounter between French philosopher Jean-Luc Nancy, who wrote at the radical edge of continental philosophy and critical theory, and Black radical thinkers Ta-Nehisi Coates, Achille Mbembe, Toni Morrison, Christina Sharpe, and Olúfemi Taiwo, whose works reflect upon concrete and inherited experiences of colonization, slavery, and forced modernization. Through class discussions and assignments, participants will practice close readings of relatively short, selected texts drawn from the reading materials. There are no prerequisites; some experience in continental philosophy, postcolonial theory, and African American studies is recommended.

HMAN 1976J. Pacific Indigeneities: From Māori Mythology to James Cameron’s Avatar (EAST 1702)..

Interested students must register for EAS 1702.

HMAN 1976K. Anarchisms in Asia and Beyond (EAST 1704)..

Interested students must register for EAST 1704.

HMAN 1976L. Material Histories (HIAA 1627).

Interested students must register for HIAA 1627.

HMAN 1976M. Borders, Belonging, and Memory in the Black Mediterranean (ITAL 1001).

Interested students must register for ITAL 1001.

HMAN 1976N. Reimag Line-Mex/US Bd-HISP1371T.

Interested students must register for HISP 1371T.

Interested students must register for HIAA 1626.

HMAN 1976R. Pacific Indigeneities: From Māori Mythology to James Cameron’s Avatar (EAST 1702)..

Interested students must register for EAST 1702.

HMAN 1976S. The Latin American Diaspora in the US (HISP 0750B)..

Interested students must register for HISP 0750B.

HMAN 1976T. Ethnography, Oral History, and Storytelling: Theories and Methods of Narrating Italy (ITAL 1002)..

Interested students must register for ITAL 1002.

HMAN 1976U. The Politics of Symbolic Worth: Groups, Identities, and Status in American Politics.

What leads politics to become meaningful, engaging, and contentious for members of the public? In this course, we will examine how American politics is shaped by struggles between social groups over the meanings and status of group identities. First, we will examine theoretical perspectives suggesting political behavior can be seen as symbolic action to affirm—and sometimes legally enforce—one’s own morality, social status, lifestyle practices, and vision of the proper social world. Then, we will apply this framework to understanding two areas of American politics: the politics of white racial resentment, and stalled political action to address climate change. This course will provide conceptual tools for understanding what’s at stake in public debates for many Americans, and how elite-public interactions over the meanings and status of group identities have shaped American politics in the 20th and 21st centuries.

HMAN 1976W. Posthuman Latin America: Contemporary Imagination and Visions of the Future (HISP 1371U)..

Interested students must register for HISP 1371U.

HMAN 1976X. Cicero in New Spain (CLAS 1121C).

Interested students must register for CLAS 1121C.

HMAN 1976Y. Alternative Technofutures: Black Speculative Visioning for a Better Tomorrow (AFRI 1099).

Interested students must register for AFRI 1099.

HMAN 1976Z. Eating and the Politics of Wellness (STS 1700W).

Interested students must register for STS 1700W.

HMAN 1977B. Foreign Policy Worlds: Diplomatic Designs and International Relations.

Foreign policy unfolds through carefully crafted encounters and exchanges in both domestic and diplomatic arenas. International actors leverage narratives, venues, dress, gestures, images, and soundscapes to sustain relations with others, pursue security goals, and affect the world they live in. At the intersection of the humanities and social sciences, this course engages participants in new research on White House state dinners while drawing from a range of historical and global case studies from the early modern era to the present. Diplomatic dinners provide a lens into the everyday practices, protocol-driven scenes, mediatized moments, and spectacular occasions that are constitutive of the international stage and the theater of trust, respect, competition, conflict, and hegemony. At the end of the semester, a planning memo outlining the purpose and components of a state visit offers an opportunity to put knowledge into practice.

HMAN 1977C. We the People.

How do individual people come together to make a People? We will read key ancient texts including Aristotle, Livy, and Cicero, enlightenment thinkers like Rousseau and Hobbes, and modern theorists from Arendt and Schmitt to Chakrabarty and Mouffe to see how the “we” of We the People has been used both to include and exclude. We will also consider practices of political action both ancient and modern. Can a People create itself by a vote, a manifesto, or a riot? What is the relationship between the People and populism? The course is explicitly grounded in the ancient world; as well as analyzing how ancient concepts have echoed through the centuries, we will also look to the distant past for difference, asking how we might propose alternative genealogies of the People.

HMAN 1977D. Settler Colonial Cities: Indigenous Histories, Presents, and Futures.

The course examines the Indigenous histories, presents, and futures of settler colonial cities. Founded on Indigenous lands expropriated for town building, modern cities in settler colonial societies were and are complicit in processes displacing Indigenous people and appropriating their cultures, objects, and ancestors. We will draw on anthropology, archaeology, archival history, geography, heritage preservation, public art, and urban studies to explore colonialist tactics of spatial removal and symbolic and documentary violence aimed at erasure. Most importantly, we will look at how Indigenous people have challenged claims of their absence in urbanizing landscapes through their oral histories, writing, and material culture, and by their presence and diverse experiences in cities in the United States, Canada, Australia, and beyond.

HMAN 1977F. Hospitality and Literature.

This course will explore ways of thinking about literature in relation to the concept of hospitality, and vice-versa: we’ll test the proposition that literary hospitality helps us conceive of a hospitality irreducible to subjectivity, property, or power. Texts to be examined include the Bible, The Odyssey, and other classical texts; philosophical writing by Immanuel Kant, Emmanuel Levinas, and Jacques Derrida; and Franz Kafka’s The Castle, Clarice Lispector’s The Passion According to G.H., and poems by Paul Celan.

HMAN 1977G. Archival Activism and Digital Worlds.

This course examines the possibilities and perils of “archival activism”—the concerted effort to preserve the stories of marginalized people as part of the historical record—in the digital age. The growth of social media and the ubiquity of digital devices that can record, photograph, and upload events from a first-person perspective has made all participants in historical events into potential archivists. Through an examination of digital documentation created by ordinary citizens during major events in recent history—including the COVID-19 pandemic, racial justice protests, and the January 6 insurrection—we ask, what kinds of archives are we and our digital devices creating? What kinds of histories can or should be written with these records? And what roles can, and should, social scientists and other scholars of the contemporary be playing in collecting and preserving digital histories of the now?

HMAN 1977H. Critical Race Theory Now.

Moving beyond the reductive and polarizing deployment of Critical Race Theory (CRT) in current political discourse, this interdisciplinary seminar traces its history as a legal intervention foregrounding race and racism in the development of U.S. law and in the (infra)structures of U.S. civic, socioeconomic, and political life. Together, we will explore the central tenets of CRT, including the ubiquity and permanence of racism, intersectionality, whiteness as property and currency, and redistributive justice. Reading seminal texts of CRT alongside contemporary African American literature, we will attend to specific topics, such as affirmative action, immigration, mass incarceration, and reparations. The overarching inquiry of this course is: (1) how might the law be complicit in upholding racial hierarchy as well hierarchies of gender, class, sexuality, and citizenship, and (2) how might the law and literature be used to dismantle those same hierarchies?

HMAN 1977I. Black Digital Humanities: Black Technocultures (AFRI 1098).

Interested students must register for AFRI 1098.

HMAN 1977J. Disability, Coloniality, Decoloniality (STS 1400).

Interested students must register for STS 1400.

HMAN 1977K. Interpreting Literature on Stone, Paper, and Film (COLT 1310W).

Interested students must register for COLT 1310W.

HMAN 1977L. The Politics of Health and Disease (POLS 1295).

Interested students must register for POLS 1295.

HMAN 1977M. Combating Colonialism: Comics and Indigenous Storytelling (HIST 1958D).

Interested students must register for HIST 1958D.

HMAN 1977N. Artificial Images (GRMN 1702).

Interested students must register for GRMN 1702.

HMAN 1977O. The Black Outdoors.

What are the racialized and gendered politics of the outdoors? How does the concept of the Black outdoors challenge dominant narratives of nature, freedom, and belonging? What forms of Black cultural production have emerged from social life lived underground, under siege, and in flight? And how might Black artistic or cultural practices help us rethink what it means to be outside? This course explores the multiple dimensions of the Black outdoors — as theory, practice, poetics, and survival. We will examine how Black life has been shaped by, and has shaped, the outdoors and the environment more broadly — from the fields of the plantation to the vastness of outer space, from the breathless garrett to the open breeze, from the underwater afterlives of the Middle Passage to the speculative geographies of Black futures.

HMAN 1977P. Wet Ethnographies.

Recent experimental ethnographies explore the relationship between research and writing, textual strategies, and the politics of ethnography. Experimental methods provide tools to think and write about projects of coloniality and capital and how they shape the material environment. This seminar introduces students to ethnographies that take place in environments where the boundaries between water and land get blurred, in bodies, deltas, river embankments, swamps, mangrove wetlands, and reclamation areas that carry signs of both enabling and challenging former and continuing colonial projects of empire or capital. We will critically read and examine ethnographic works that tackle “wetness” and “fluidity” as theoretical tools to understand temporality, circulation, and flow and challenge linear development projects from a feminist perspective. The course fosters attunement to more-than-human life and materialities of soil, water, and land/seascape through ethnographic practices of walking and drawing, among others.

HMAN 1977Q. Philosophical Foundations of Cognitive Science (PHIL 1890K).

Interested students must register for PHIL 1890K.

HMAN 1977R. Toxic: Health, Environment, and Life after Harm (ANTH 1314).

Interested students must register for ANTH 1314.

HMAN 1977S. Bottom Ecologies: Blackness, Queerness, and the Environment.

How have Black queer communities — and minoritarian communities more broadly — transformed environments of shame and disposability into sources of erotic power, pleasure, and collective survival? Building on Toni Morrison’s “Sula” and theories from Black feminisms, queer-of-color critique, and Black ecological thought, this course views the “bottom” as Black queer ecological thought. We will trace how Black queer communities generate counter-knowledge, reshape racialized and sexual subjectivities, and challenge conventional environmental discourse by queering ecological analysis. Ultimately, this course examines the “bottom” as both a sexual position and an ecological site historically raced, and marked as disposable, dirty, abject. Readings from Morrison, Jennifer Nash, Audre Lorde, Darieck Scott, Juana María Rodríguez, Kathryn Bond Stockton, and Leo Bersani will guide our exploration of how landscapes of racial abjection and erotic desire converge, offering new critical tools for environmental humanities.

HMAN 1977T. Environmental Anthropology (ANTH 1555).

Interested students must register for ANTH 1555.

HMAN 1990. Independent Study.**HMAN 2300. Introduction to Digital Humanities.**

Digital humanities uses digital methodologies and formats to answer humanities research questions, produce and share knowledge, and teach. It encompasses critical studies of digital environments, innovative modes of researching and advancing arguments (including methodologies for constituting archives, analyzing texts and images, and visualizing data), new forms of scholarly and general publications, and digital pedagogy. The digital changes the way we research, understand, and share information in the humanities. This course will introduce students to a range of methodologies and critical lenses. Students will learn to collect resources formatted for machine-actionable research, analyze qualitative and quantitative datasets, and visualize and present their findings. They will consider the ethics of digital work and publication. Each student will plan a digital humanities project. This course is open to all graduate students and fulfills a requirement for the doctoral certificate in digital humanities.

HMAN 2301. Digital Humanities Capstone Seminar.

Participants in the Digital Humanities Capstone Seminar will learn how to design and build their own digital humanities project and/or participate as a key member on an already established digital humanities project with a faculty leader through hands-on, step by step instruction. Students will grapple with key methodologies and theoretical frameworks (including critical, Black, Indigenous, and Latinx digital humanities) and consider how to situate their own work within these ideas. Seminar participants will participate in the Digital Humanities Salon, where they will also present their project. Where desired and advisable, the capstone project may build toward dissertation work. Admission in the course is conditional on enrollment in the doctoral certificate in digital humanities, and partial or full completion of the digital tools and methods requirement.

HMAN 2400I. Environmental Humanities.

We live in a time of immense global change and ecological rupture that poses a foundational challenge for modern society. How are we to respond to environmental crises that take place on a geological scale without papering over complex issues of social inequality, racial difference, and powerful gender norms? How might we promote the flourishing of sustainable communities that include both human and non-human, present and future beings? This collaborative seminar will address deep philosophical questions like these by exploring a range of work in environmental humanities. The readings reflect a diversity of disciplinary commitments and methodological approaches ranging from History, Anthropology, and Philosophy to Indigenous Studies and Science Studies.

HMAN 2400Q. War and the Politics of Cultural Memory (ENGL 2901D).

Interested students must register for ENGL 2901D.

HMAN 2400T. Imagining Cities: Early Modern Urban Perspectives.

Every city is a palimpsest in space and time. Architectural treatises, legal charters, novels, poems, paintings, maps, and the archeological record all provide points of entry to real and imagined urban centers. This collaborative humanities seminar considers early modern cities as varied as Rome, Seville, Peking, Mexico City, and the City of God, but seminar participants will propose their own cities of interest. This multidisciplinary archive forms a basis for collaborations in recovering and reconstructing built environments from different perspectives in text, image, and digital media, working with original materials in special collections wherever possible.

HMAN 2400Z. Instruments and Instrumentalities.

What is an instrument? Today, in a variety of fields, the definitions of instrument and instrumentality are transforming. While retaining its older connotations of delegation, means to ends, and tool-use, the "instrument" now also implies bigger, messier complexes of technologies, bodies, and rationalities. In this seminar, we will think transversally across categories and contexts to consider the form and meaning of musical instruments, technical instruments, and ideas of instrumentality. Readings will draw from music, media studies, science and technology studies, sound studies, cultural studies, and related fields. This is a distributed seminar, collaboratively taught between Brown and McGill Universities.

HMAN 2401K. Technologies of Memory (ENGL 2901R).

Interested students must register for ENGL 2901R.

HMAN 2401L. Postcolonial Theory (ENGL 2900X).

Interested students must register for ENGL 2900X.

HMAN 2401T. Critique of Political Theology: Ancient Texts and Contemporary Questions.

The seminar examines political theology through critical readings of ancient canonical texts considered as foundational in the traditions of Western philosophy, Judaism, and Christianity. Texts from Anaximander, Sophocles, Euripides, Aristotle, the Hebrew Bible, the New Testament, and the Renaissance musings of Etienne de La Boetie will be read alongside 20th-century thinkers—Carl Schmitt, Pierre Clastres, Cornelius Castoriadis, Hans Blumenberg, Michel Foucault, Regina Schwartz, Jan Assmann, Giorgio Agamben, Judith Butler, and Bonnie Honig. Can readings of ancient canons be both non-anachronistic and critical? Must critique be secular? Or Gnostic? Can the political be separated from the theological? What can formations of ancient theo-political imagination teach us about the limits of ours? The seminar is taught in parallel with Professor Stathis Gourouris and his class at Columbia university. Collaborative work will take place among students at Brown and across the two campuses.

HMAN 2402E. Trace and Absence: Comparative Perspectives on the Past in Things.

Long before there were archaeologists, there were people who knew how to interpret traces of the past. Those traces have always been in flux, subject to changing cultural, environmental, and technological factors. While stone carvings, bones, ruins, and other durable objects have long encouraged reflections about the beings who created them, there are also those who have considered smells, flowers, dreams, and other seemingly ephemeral phenomena to be traces of distant pasts. What can be a trace of the past? How have people followed these traces? And how might the insights and oversights of these past ways of knowing the past inform our own efforts to identify or create traces for an uncertain future? This course explores some of the many ways in which individuals and communities have found and followed traces of earlier times.

HMAN 2402F. Grounds of Comparison: Approaching the Humanities from "Elsewhere".

An injunction to compare has taken hold in humanities work, and it should be welcomed. Yet the "grounds" of comparison are largely Euro-colonial turf, even when all the comparanda involved arrive from far outside the bounds of Western modernity. Led by readers of literature outside the circle of the modern West, this seminar asks: Can we compare from elsewhere? How can we attain comparative vantage points on culturally and temporally unlike texts without occupying the spaces of epistemic and political domination? Together we will interrogate grounds of comparison through explorations of transregional and transhistorical readings, including Third-Worldist manifestos, medieval Arabic philosophy, and multiscriptal poetics from early Japan. We consider the stakes and ethics of comparison and comparatism; strategies for decentering staid paradigms without turning our backs on theory or history; and potential affinities among mutually remote texts and their readers.

HMAN 2402G. Mending What is Broken: Repair, Debt, and Reparations.

The seminar brings together two distinct approaches—phenomenological and narratological—to explore the constellations formed by the three concepts of debt, repair, and reparations, as well as the harm, loss, or suffering they presuppose. Drawing inspiration from various intellectual traditions, we will look at different scales of damage and repair. We will ask how these concepts have been used and abused in efforts to undo the harms which humans do to other humans, and to the world they inhabit and share. Advocating for reparations for slavery in the United States has often taken German reparations for Nazi crimes as a historical reference and precedent: our seminar will consider analogies and differences, as well as the limits of this model. We will also reflect upon the claims for reparations for ecological catastrophes enabled or accelerated by abandonment, negligence, or greed.

HMAN 2402H. Artists and the East India Company (HIAA 2780).

Interested students must register for HIAA 2780.

HMAN 2402I. Race and its Avatars: Literary Identity Politics From the Medieval to the Present (ENGL 2762A).

Interested students must register for ENGL 2762A.

HMAN 2402K. From Big Data to Lilliputians: Considerations of Scale Across the Disciplines.

We live in an era of big problems and small details. It is a time of globalization and atomization, of big data and nanotechnology—nothing is too minute to escape surveillance, regulation, or sale, and scalability is often used as a measure of success. Scale is the stuff of awe and the sublime and the feeling of utter insignificance. Can one person's behavior change the way an entire system works ("personalized medicine," or climate change)? When does a change in scale mean a change in kind? Is morality/ethics a question of scale? Should we think big, or is the devil in the details? We will discuss the theme of "Scale" from a variety of historical and other perspectives with texts from philosophy, literature, history of science, theology, psychology, sociology, and political theory, as well as film and poetry.

HMAN 2402L. Tempest.

This seminar takes Shakespeare's 1610–11 play *The Tempest* as a portal for the exploration of settler-colonialism as a politics of imagination—or state of deterritorialization in which prevailing forms of imaginative life (on both sides of the colonial divide) are destroyed, altered, or proliferated. The seminar will trace the reception, appearance, and disappearance of Caliban and his mother Sycorax (the absent yet ever-present witch of Algerian origin) in colonial and anticolonial works such as Octave Mannoni's *Prospero* and Caliban (1956), Philip Mason's *Prospero's Magic* (1962), George Lamming's *The Pleasures of Exile* (1960), and Aimé Césaire's *A Tempest* (1969), including variations by Esiaba Irobi, Tiffany Lethabo King, Peter Brooke, Sylvia Federici, Margaret Atwood, and Rabi Alameddine. This inquiry will entail reconsideration of forms of language, healing, music, magic, craft, and dreaming. Seminar participants will collaborate in a scripted and rehearsed performance.

HMAN 2410. Approaches to Environmental Humanities Research.

This collaborative, interdisciplinary seminar engages modes of inquiry in environmental humanities research and accounts for a range of theories and methods that encompass qualitative, historical, decolonial, and community-engaged scholarships, among others. The seminar focuses in particular on human and nonhuman relations and their impacts on environmental change, drawing on concepts and practices such as survivance, duration, weathering, extraction, and geological time. In addition to scholarly and theoretical texts, we will explore films, novels, creative nonfiction, and performances. Assignments help students engage and refine approaches to environmental scholarly inquiry and practice in a time of intensifying planetary and local crisis.

HMAN 2500. Project Development Workshop.

In this capstone course, students completing the Doctoral Certificate in Collaborative Humanities pursue individual or collaborative projects, such as a dissertation chapter, an article on method/theory, or a stand-alone essay related to the larger field. The workshop provides a collaborative and supportive space in which students from different disciplines can share their work and receive and give feedback that will broaden and sharpen the framing of their projects. At the end of the semester, participants present in a Collaborative Public Workshop. Admission to the seminar requires a formal application process and the completion of two HMAN 2400 seminars.

HMAN 2900Y. The State and the Circulation of Meaning (ANTH 2325).

Interested students must register for ANTH 2325.

HMAN 2970C. Concepts of Space and Time in Media Discourses.

No description available. Enrollment limited to 20 graduate students.

HMAN 2970D. Biological Issues in Cultural Theory.

Contemporary culture is increasingly preoccupied by biological themes and issues—genomes, brain images, biotechnology, the natural environment, etc.—and, not unrelatedly, by a wave of new biological determinisms: "gay genes," "God genes," mental "hardwiring," etc. At the same time, ongoing work in fields such as developmental biology, ethology, neuroscience and science studies increasingly challenges classic dualisms of nature/culture and mind/body along with traditional assumptions about the nature of biological entities and the operations of scientific knowledge. The seminar will focus on a selection of these issues and developments especially relevant to the interests of humanities scholars and students of culture and cultural theory. Enrollment limited to 20 graduate students.

HMAN 2970E. Pain, Medicine and Society.

We take on the big question of pain as an interdisciplinary enterprise, drawing on the rich and varied faculty of Brown University and Alpert Medical School. We will examine acute/chronic/physical/psychic pain, the nature of suffering, and why some might find value/solace in pain and suffering. We will examine representations of pain in literature, art and music; look at the shifting conceptions of pain and suffering across cultural/ethnic/religious communities, and the actual/perceived barriers to effective treatment of pain. Most importantly, we will foster sensitivity and impart tools that will improve our understanding and treatment of individuals suffering from pain. Enrollment limited to 20 students in Medical Humanities and graduate Humanities fields. Honors undergraduates and PLMEs may enroll with instructor permission.

HMAN 2970G. Space and Capital.

This course examines various ways Western/non-Western societies have conceptualized space, with a specific focus on the tension between capitalist/common space. We adopt the map as a lens into this question, focusing on the cadastral survey's rise in the Modern era and on its role in parceling space into strictly bounded, individual property. Throughout the semester, we undergo an enquiry into the map's uncritical reception in the contemporary era, understanding this development as linked to the Scientific Revolution; the role of linear perspective; the Age of Discovery's world-as-picture; as well as to the processes of primitive accumulation, colonialism, and the nation-state. Enrollment limited to 20.

HMAN 2970L. History and Theory of Catastrophes.

This seminar proposes a philosophical history of catastrophes (large-scale disasters) and uses it as a vantage point for questioning contemporary critiques of modernity/secularization. Starting from Biblical narratives of God-made disasters, we will follow God's role in the way north-western societies interpret/cope with catastrophes. Reading/viewing documentation of catastrophes from Defoe's *Journal of the Plague Year* to Cooper's/Block's/Spike Lee's reports on Hurricane Katrina, we will examine the emergence of the state as a major actor responsible for preparing for catastrophes/mitigating their effects, but often also for their generation, and discuss the globalization of catastrophes and with catastrophes as special sites of globalization. Enrollment limited to 20.

HMAN 2970M. Race, Space, and Struggle.

This seminar will examine the stark realities of spatial racialization: ghettos, slave plantations, prisons, refugee camps, and border walls, situating the creation of these spaces as violent responses to broader social/economic crises. At the same time, this course will highlight the the always already existing practices of resistance by exploring how inhabitants these spaces responded to their marginalization. Because these spaces are also lived, our understanding of anti-racist struggle will encompass a broad array of everyday practices, the appropriation of space, artistic expressions of resistance, and everyday forms of cooperation/creativity, alongside more traditional forms of organized interventions. (Course prerequisites: none) Enrollment limited to 20.

HMAN 2970Q. Latin in America (LATN 2080F).

Interested students must register for LATN 2080F.

HMAN 2970R. Political Foucault.

Michel Foucault was one of greatest political thinkers of the 20th century. He was not always recognized as such, but his work has shaped the field within which critical political theory is pursued today. The seminar will follow Foucault's thinking on power and its subjects, the state, sovereignty, government, and the political, as these concepts were developed, articulated, and experimented with during one decade of intensive research and revisions -- the nineteen seventies. Our main primary texts will be the three series of lectures Foucault delivered at the Collège de France between 1975 and 1979.

HMAN 2970T. And What About the Human? Black/Anti-Colonial Thought, Human Freedom and Emancipation?.

This course will examine the figure of the human posed in radical anti-colonial thought as a distinctive mode of thinking. Reviewing some major 20th century thinkers, Foucault, Derrida, Arendt alongside Fanon, Ceasire and Wynter, the course will also examine the complex relationships between the figure of the human, freedom and emancipation. Graduate or undergraduate senior students only. Enrollment limited to 20.

HMAN 2970U. Antiquity and Innovation in the Hispanic Renaissance (HISP 2160N).

Interested students must register for HISP 2160N.

HMAN 2970X. Political Concepts: The Balibar Edition.

The seminar is dedicated to the political philosophy/theory of Étienne Balibar, a contemporary post-Marxist and post-structuralist French philosopher. The seminar will focus on the conceptual dimension of Balibar's work through a study a small cluster of concepts with which he has been especially engaged: ideology, city, citizen and citizenship, equa-liberty, violence, politics and the political. By explicating the meaning of these concepts in Balibar's work and their role as theoretical-political interventions, we will open the question of the political and experiment with the intellectual and creative power of conceptual analysis and its possible contribution to political theory.

HMAN 2970Y. Race and Nation in the Spanish Caribbean (AFRI 2502).

Interested students must register for AFRI 2502.

HMAN 2970Z. Logos, tekhnē, philosophia.

Today, Western thinking forms the technoscientific apparatus of societies of hyper-control, built on the foundation of ubiquitous and reticular computing. This amounts to what Martin Heidegger called Gestell, which imposes itself as the digitalized merging of science and technology. We find ourselves confronted forcefully (as what the Greeks called ubris) with the question of the status of technics with respect to knowledge in all its forms. It has become crucial to understand how and why from its birth, with Plato, philosophy has made technics unthinkable thereby establishing the unthought that then comes to constitute the threat of the Anthropocene.

HMAN 2971C. Decolonial Methodology: Pedagogy for a New Era of Dissent and Resistance.

The seminar will focus on the ways to develop and nurture a decolonial methodology that is intersectional, anti-racist, anti-capitalist and anti-imperialist. The aim is to produce a space of trust that allows debating hard questions and challenging our own assumptions, and encouraging collective thinking and cooperative learning.

HMAN 2971E. Kinds of Others.

Multiple "Others," from the ancient barbaria to the contemporary and queer, from the abnormal to the colonial subject, from the Jew to the black have been widely studied in the humanities and social sciences. The seminar addresses this proliferation of others and explores the role of the Other in the economy of the self, the religious community, or the nation. We will experiment with different principles for classifying this variety of kinds of others and modes of othering. The typological approach will guide a double survey: of philosophical conceptions of otherness, and of modes of constructing kinds of others.

HMAN 2971F. Critique of Political Theology: Ancient Texts, Contemporary Readings.

The seminar examines the intersection of the theological and the political through critical readings of ancient canonical texts considered foundational for Western philosophy, Judaism, and Christianity. Texts from Anaximander, Sophocles, Euripides, Plato, Aristotle, the Pentateuch, and Paul's Epistles will be read alongside 20th-century thinkers — Carl Schmitt, Giorgio Agamben, Jacques Rancière, Pierre Clastres, David Graeber, Regina Schwartz, Jan Assmann, Judith Butler, and Bonnie Honig. Can the reading of ancient texts be non-anachronistic and critical? Can the political be separated from the theological? Are the ancient formations of theo-political imagination still with us today? What can they teach us about ours?

HMAN 2971G. The Coming Apocalypse: Between the Earth and the World.

A cascading catastrophe threatens to turn the earth uninhabitable and bring our world to its end. How to think, in this context, the relation between **our** world, **the** world, and the **earth**? Are they known, experienced, shared with others, or being destroyed in the same way? How have their difference and convergence been affected by globalization, and affect our understanding of "the Anthropocene"? Following environmental news, the seminar addresses these and related questions through literary, theoretical, and philosophical texts, including works by Nietzsche, Heidegger, Arendt, Derrida, Nancy, Latour, Haraway, Povinelli, Coates, and Mbembe. Open to juniors and seniors with instructor permission.

HMAN 2971H. Solidarities: Sharing Freedom, Inventing Futures.

Solidarity between people—even between species—has never been more needed. But our culture is saturated by personality politics and ubiquitous narcissism. How can we think and organize ourselves out of this impasse? Is it shared interests or shared identities that unite us? What does freedom mean in an interconnected age? These are some of the questions that any attempt to think through the question of solidarity in the twenty-first century must encounter. Writers to consider include Marx, Arendt, Foucault, Simondon, Negri, Stuart Hall, Maurizio Lazzarato, Donna Haraway, Couze Venn, and Ruth Ozeki, among others. Open to juniors and seniors with instructor permission.

HMAN 2971I. It's About Time: Temporalities of Waiting, Suspension, and Rupture in Theory, Literature, and Film.

This is a seminar on three forms of temporality — waiting, suspension, and rupture — and the coming to an end that all imply. These forms will be explored as pertaining to politics, theology, art, and experience. The work will be theoretical and hermeneutic; it will involve theoretical texts in political and critical theory and political theology, literary works, and films. We will explore time from the perspective of (its) ending. We will be interested in the prospect — whether a menace or a blessing — of a coming end, but also with the power and authority to bring an end, to an argument, to waiting in line, to a relationship, to life. We will study the power to suspend a coming end and the life under its shadow.

HMAN 2971J. The Order of Evils: Phenomenological, Moral, and Political Investigations.

A critical reading of "The Order of Evils: Toward an Ontology of Morals" (2000), a "poststructuralist" moral treatise that combines phenomenological and structural analysis and is attuned to the historicity of knowledge and moral matters. The book understands evil as discrete harm, which becomes a moral matter only once it is judged as gratuitous, and an object of critique only once it is grasped in its regularity. The seminar, oriented toward revising the book, reexamines the reasoning that supports these intuitions and their implications: a transformation of moral discourse; a new ontology of "moral things"; the primacy of others over the self; a downgrade of "liberty," "justice," and "rights"; and a critical interest in the historical conditions of political action. Seminar participants will also read works by thinkers who inspired the project, including Kant, Marx, Heidegger, Levinas, Lyotard, and Derrida.

Comparative Literature

Comparative literature is the study of literature and other cultural expressions across linguistic and cultural boundaries. At Brown, the Department of Comparative Literature is distinct in its conviction that

literary research and instruction must be *international* in character. The department performs a role similar to that of the study of international relations, but works with languages and artistic traditions, so as to understand cultures "from the inside." Both the department's undergraduate and graduate programs are held to be among the finest in the country.

For additional information, please visit the department's website: <https://complit.brown.edu/>

Comparative Literature Concentration Requirements

The concentration in Comparative Literature enables students to study an illustrative range of literary topics and to develop a focused critical understanding of how cultures differ from one another and what those differences mean. Our courses provide opportunities to engage with literary works across linguistic and cultural boundaries, exploring the traditions and innovations of the literatures of the world.

In the spirit of Brown's Open Curriculum, a concentration in Comparative Literature affords great academic freedom. Advanced literature courses from any literature department at Brown count for concentration credit. Any language—ancient or modern—supported at Brown may form part of a Comparative Literature concentration program. All students take a course in literary theory and have the opportunity to complete a senior essay.

There are three concentration tracks and requirements:

- Track 1: Comparative Literature in Two Languages
- Track 2: Comparative Literature in Three Languages
- Track 3: Literary Translation

Genre and Period Requirements for all concentrators:

- One course in each literary genre (poetry, narrative, and drama/film)
- Courses must cover at least three different historical periods (such as, Antiquity; Middle Ages; Renaissance/Early Modern; Enlightenment; Modern: 19th-21st centuries).

Prerequisites in languages:

Students must demonstrate proficiency in the languages of their selected literatures. We recommend that prerequisite(s) for taking 1000-level courses in their languages be completed by Semester V.

Students working in non-European languages may be allowed more latitude; be sure to be sure to consult a concentration advisor about constructing an individualized plan.

Selecting literature courses in your language areas:

Readings must normally be in the original language. If English is one of your languages, courses need to be devoted chiefly to literature originally written in English.

Transfer of Credits:

Two courses per semester of study abroad may be applied to the concentration, up to a total of four courses (for two semesters abroad). A maximum of five courses from external venues (study abroad; transfer credits from other institutions, including summer study) may be applied to the concentration.

Joint or Double Concentration:

Joint or double concentration programs may also be arranged. Students may also combine a concentration in Comparative Literature with a teaching certificate in English or a modern language. A student interested in such a program should consult the advisor in the Education Department (<http://www.brown.edu/academics/education/>) and the advisor in Comparative Literature as early as possible (preferably by Semester V). In accordance with University policy, double concentrators are allowed a maximum overlap of two courses between concentrations.

Track 1: Concentration in Comparative Literature in two languages

Requirements

COLT 1210	Introduction to the Theory of Literature	1
TWO literature courses taught above the 1000-level in the first chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)		2
TWO literature courses taught above the 1000-level in the second chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)		2
FIVE electives. Courses taught in Comparative Literature and other literature courses at any level (below or above 1000) may satisfy this requirement.		5
Total Credits		10

Examples of courses that may fulfill the requirements, above, include but are not limited to the following. Students are encouraged to discuss class choices with their advisor.

COLT 0510C	The World of Lyric Poetry
COLT 0510F	Fidel Castro and Che Guevara, The Men and the Myths
COLT 0510K	The 1001 Nights
COLT 0510P	Reading the Renaissance
COLT 0610D	Rites of Passage
COLT 0610L	Murder Ink: Narratives of Crime, Discovery, and Identity
COLT 0610Q	Before Wikipedia
COLT 0710C	Introduction to Scandinavian Literature
COLT 0710I	New Worlds: Reading Spaces and Places in Colonial Latin America
COLT 0710N	A Comparative Introduction to the Literatures of the Americas
COLT 0710Q	The Odyssey in Literature and Film
COLT 0710X	Fan Fiction
COLT 0710Z	Comedy from Athens to Hollywood
COLT 0711H	The Arabic Novel
COLT 0711L	The Quran and its Readers
COLT 0711O	Off the Beaten Path: The Diversity of Modern Japanese Literature
COLT 0711Q	Writing Love in Korean Literature
COLT 0810H	How Not to Be a Hero
COLT 0810I	Tales and Talemakers of the Non-Western World
COLT 0810L	The Pursuit of Happiness
COLT 0810M	Uncanny Tales: Narratives of Repetition and Interruption
COLT 0811I	Classical Mythology and the Western Tradition
COLT 0811Z	Islands in the Western Imaginary: Paradise, Periphery, Prison
COLT 0812O	Reading Art in Literature
COLT 0812V	Troy: City, Legend, Literature
COLT 0812W	The Epic Tradition: from Homer to Milton
COLT 1210	Introduction to the Theory of Literature
COLT 1310G	Silk Road Fictions
COLT 1310J	The Arab Renaissance
COLT 1310N	Global Modernism and Crisis
COLT 1410S	Classical Tragedy

COLT 1420B	A Mirror for the Romantic: <i>The Tale of Genji</i> and <i>The Story of the Stone</i>
COLT 1420F	Fantastic and Existentialist Literatures of Argentina, Uruguay and Brazil
COLT 1420O	Proust, Joyce and Faulkner
COLT 1421V	Modernisms North and South: Ulysses in Dublin, Paris, and Buenos Aires
COLT 1422L	The Modernist Novel: Alienation and Narration
COLT 1422M	Reading the Short Story
COLT 1430B	Art and Exemplarity in Medieval and Early Modern Literature
COLT 1430D	Critical Approaches to Chinese Poetry
COLT 1430I	Poetry of Europe: Montale, Celan, Hill
COLT 1430L	Voices of Romanticism
COLT 1431B	Modern Arabic Poetry
COLT 1431C	Poets, Poetry, and Politics
COLT 1431F	Reading Modernist Poetry
COLT 1440P	Nationalism and Transnationalism in Film and Fiction
COLT 1440U	The Listener (Literature, Theory, Film)
COLT 1440X	Shéhérazades : Depicting the "Orientale" in Modern French Culture
COLT 1610B	Irony
COLT 1610V	The Promise of Being: Heidegger for Beginners
COLT 1710A	Introduction to Literary Translation
COLT 1710C	Literary Translation Workshop
COLT 1710D	Exercises in Literary Translation
COLT 1810G	Fiction and History
COLT 1810N	Freud: Writer and Reader
COLT 1810P	Literature and Medicine
COLT 1811L	Travel, Tourism, Trafficking through the Ages
COLT 1812A	Literatures of Immigration
COLT 1813M	Making a List
COLT 1813N	Early Modern Women's Writing
COLT 1813O	Adventures of the Avant-Garde
COLT 1814S	The Balkans, Europe's Other?: Literature, Film, History
COLT 1814U	Politics of Reading
COLT 1815F	Memory, Commemoration, Testimony
COLT 1815U	Encountering Monsters in Comparative Literature
COLT 2520F	Theories of the Lyric
COLT 2720C	Literary Translation
COLT 2720D	Translation: Theory and Practice
COLT 2820A	New Directions for Comparative Literature
COLT 2820M	Discourses of the Senses
COLT 2821S	Historical Form
COLT 2822A	War

Track 2: Concentration in Comparative Literature in three languages

Requirements

COLT 1210	Introduction to the Theory of Literature	1
TWO literature courses taught above the 1000-level in the first chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)		2

TWO literature courses taught above the 1000-level in the second chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)	2
TWO literature courses taught above the 1000-level in the third chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)	2
THREE electives. Courses taught in Comparative Literature and other literature courses at any level (below or above 1000) may satisfy this requirement.	3
Total Credits	10

Examples of courses that may fulfill the requirements, above, include but are not limited to the following. Students are encouraged to discuss class choices with their advisor.

COLT 0510C	The World of Lyric Poetry
COLT 0510F	Fidel Castro and Che Guevara, The Men and the Myths
COLT 0510K	The 1001 Nights
COLT 0510P	Reading the Renaissance

COLT 2820M	Discourses of the Senses
COLT 2821S	Historical Form
COLT 2822A	War

Track 3: Concentration in Literary Translation Requirements

COLT 1210	Introduction to the Theory of Literature	1
Literary Translation (COLT 1710)		1
At least one course in linguistics (including COLT 2720 Literary Translation and history of the language courses). This may be taken at any level.		1
At least one workshop in Literary Arts. This may be taken at any level.		1
TWO literature courses taught above the 1000-level in the first chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)		2

TWO literature courses taught above the 1000-level in the second chosen literature. (Courses may be taken in any literature department, and may fall under such courses codes as COLT, ENGL, FREN, HISP, CHIN, RUSS, GRMN, etc.)

TWO electives. Courses taught in Comparative Literature and other literature courses at any level (below or above 1000) may satisfy this requirement.

A senior thesis, eligible for Honors, consisting of substantial work in translation with a critical introduction. Completing a thesis is required of all Track 3 students but does not guarantee departmental honors.

Total Credits **10**

Examples of courses that may fulfill the requirements, above, include but are not limited to the following. Students are encouraged to discuss class choices with their advisor.

COLT 0510C	The World of Lyric Poetry
COLT 0510F	Fidel Castro and Che Guevara, The Men and the Myths
COLT 0510K	The 1001 Nights
COLT 0510P	Reading the Renaissance
COLT 0610D	Rites of Passage
COLT 0610L	Murder Ink: Narratives of Crime, Discovery, and Identity
COLT 0610Q	Before Wikipedia
COLT 0710C	Introduction to Scandinavian Literature

COLT 2821S	Historical Form
COLT 2822A	War

Notes:

Honors in Comparative Literature

Students in all tracks may earn honors in the concentration by successfully completing a thesis that is granted honors upon submission. Completing a thesis in any track does not guarantee departmental honors. Honors are granted upon the recommendation of the two thesis readers.

Tracks 1 & 2. Theses are analytical studies of literary topics, comparative in nature, based upon research, and usually between 50 and 100 pages. They are usually composed of 3 chapters, with an introduction and a conclusion. Students are expected to choose a topic that involves work in each of the literatures of their concentration in the original language.

Track 3. Theses consist of a substantial work in translation with a critical introduction outlining the method used and specific problems encountered, and commenting on the history of the original work together with other translations, if any.

(See detailed Guidelines for Honors Theses (<http://www.brown.edu/academics/comparative-literature/undergraduate-program/honors-thesis/>) in Comparative Literature on Departmental website).

Capstone option

Students in Tracks 1 & 2 not taking Honors are urged, but not required, to complete a senior essay, which may be less extensive in scope and length than the Honors thesis but which should constitute an integration of some aspect of their study.

Comparative Literature Graduate Program

The department of Comparative Literature offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. While doctoral students may also earn the Master of Arts (A.M.) degree en route to the Ph.D., the department does not admit students into a terminal Master's degree program.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/comparative-literature> (<http://www.brown.edu/academics/gradschool/programs/comparative-literature/>)

Courses

COLT 0510A. Best-sellers.

Study of seven novels published within the last decade that have enjoyed broad success with reading publics in different places. What pleasures of thought and imagination do we derive from these books, and how can we express clearly our responses? What is the appeal of these best-sellers first to their home audience, then to readers in other social environments and cultures? How may we reshape our own horizons of thought in order to appreciate them? Students will be encouraged to develop their skills of literary analysis, interpretation, and critical discussion. Two lectures and one discussion section per week. Several short papers, quizzes, and a final exam.

COLT 0510B. Caribbean Re-writes.

Through close readings of canonical European texts and rewritings of them in the twentieth-century Caribbean, we explore the literary possibilities and political implications of writing the old in a new language. Readings include Columbus's diaries alongside Carpentier's *The Harp and the Shadow* (Cuba); Shakespeare's *Tempest* with that of Aimé Césaire (Martinique); and *Jane Eyre* and *Wuthering Heights* alongside novels by Jean Rhys (Dominica) and Maryse Condé (Guadeloupe).

COLT 0510C. The World of Lyric Poetry.

Lyric poetry is the prime mode for conveying emotion in many cultures, from ancient times to the present day. This course will survey the variety of forms and themes from the earliest texts from Greece, Rome, China and Japan, then the glories of the Renaissance and the Tang Dynasty, then move to the challenges for lyric expression in the modern world. Enrollment limited to 19 first year students.

COLT 0510D. Poetry and Music.

Explores the collaboration between poets and composers in the twentieth century. It will primarily focus on Modern Greek composers (Hadjidakis, Theodorakis, Lagios and others) and their collaboration with numerous poets (García Lorca, Gatsos, Eluard, Elytis, Neruda, Ritsos and others). These works will also be examined in depth from a literary and theoretical perspective. Enrollment limited to 19 first year students.

COLT 0510F. Fidel Castro and Che Guevara, The Men and the Myths.

Che Guevara and Fidel Castro are among the twentieth century's most iconic figures, thanks to their roles in the Cuban Revolution and in anti-imperialist struggles across the globe. They are also among the most divisive, eliciting passionate disapproval among some and strong admiration among others. In this seminar, we will read Guevara and Castro's speeches and writings alongside literary, visual and cinematic representations of them, paying particular attention to the ways in which their lives and deaths have generated distinct interpretations, in Cuba and beyond. Open only to first-year students.

COLT 0510G. "The Grand Tour; or a Room with a View": Italy in the Imagination of Others.

Italy has for many decades been the place to which people traveled in order to both encounter something quite alien to their own identities and yet a place where they were supposed to find themselves, indeed to construct their proper selves. This course introduces students to some of the most important texts that describe this "grand tour." We will read texts (both literary and travelogues by Goethe, De Stael, Henry James, Hawthorne, Freud, among others, as well as view films (such as "A Room With a View:") - all in order to determine the ways in which Italy "means" for the cultural imagination of Western civilization. For first year students only.

COLT 0510I. Virgil and Milton.

We will read the *Aeneid* and *Paradise Lost* with interpretive patience. The study of fate, character, and poetics will be wedded to investigations of beauty, wonder, and nationhood. Enrollment limited to 19 first year students.

COLT 0510K. The 1001 Nights.

Explores the origins, performance, reception, adaptation, and translation of the *1001 Nights*, one of the most beloved and influential story collections in world literature. We will spend the semester in the company of genies, princes, liars, slaves, mass murderers, orientalist, and Walt Disney, and will consider the *Nights* in the context of its various literary, artistic, and cinematic afterlives.

COLT 0510L. What is Tragedy?

Introduction to tragedy. Readings may include Sophocles, Shakespeare, Hegel, Chekhov, Chan-wook Park, and Jia Zhangke. Enrollment limited to 19 first year students.

COLT 0510M. Early Modern Selves: From Soliloquy to Self-Portrait.

We will study the early modern self through its manifestation in the soliloquy (Shakespeare), philosophical treatise (Descartes), early modern poetry, and self-portraiture (Rembrandt). After examining Hamlet's "To be or not to be" speech and other Shakespearean soliloquies as moments in which characters represent themselves in speech, we will turn to Descartes' view of man's essence as his thinking nature. We will then read metaphysical poetry to understand the influence of religion on the early modern self. Readings include Hamlet, Richard II and III, Taming of the Shrew, Discourse on Method, Meditations, and poetry by John Donne.

COLT 0510N. Shakespeare (ENGL 0310A).

Interested students must register for ENGL 0310A.

COLT 0510O. Twentieth-Century Experiments.

In this course, we will read some of the most experimental and adventurous literature of the 20th century. Instead of understanding texts as mirrors of social reality, we will consider them as laboratories—spaces for testing out, working through, or mixing up new ideas, categories, and ways of seeing and feeling. We will pay special attention to 20th-century international avant-garde movements, including Futurism, Dadaism, and Surrealism, and we will explore the relation of the literary avant-garde to the avant-garde in painting, cinema, and music.

COLT 0510P. Reading the Renaissance.

How do these works figure the renaissance as a cultural formation? Petrarch, Rime Sparse; Boccaccio, Decameron; Castiglione, Book of the Courtier; Erasmus, Praise of Folly; Thomas More, Utopia; Machiavelli, Prince, Mandragola; Wyatt and Ronsard (poems), Spenser, Faerie Queen and Shepherdes Calender, Cervantes, Don Quixote.

COLT 0510Q. How Poems See (ENGL 0100Q).

Interested students must register for ENGL 0100Q.

COLT 0510R. War and the Arts: Guantanamo, Twenty Years On.

In January 2002, the first captives in the so-called "War on Terror" were flown to the Naval Station Guantánamo Bay, Cuba, for indefinite periods of detention that for some lasted over twenty years. More than a century earlier, in 1901, the Platt Amendment was signed into U.S. law, enabling the lease "in perpetuity" that gives the U.S. military exclusive use of the forty-square mile naval station, despite the Cuban government's objection. Participants in this seminar will assess the legal and political arguments that have structured "Guantánamo" as an exceptional space, of grave concern to human rights advocates and scholars. At the same time, however, and drawing on poetry, art and memoirs by detainees and military personnel at the base and by Cubans living near its border, we will consider an alternative Guantánamo of sympathies, solidarities and shared space.

COLT 0510S. Latinx Aesthetics in the Mainstream.

In this course, we will be examining issues related to class, gender, sexuality, and race as they play out within the diverse political, social, and cultural formations that together constitute Latinidad. We will take stock of the complex "big picture"—for example, how national aesthetic conventions color Latinx attitudes towards self-expression. We will also proceed on more intimate, interpersonal terms, turning our attention to the everyday practices and imaginaries by which Latinx subjects negotiate their subjectivities within an American national project that demands assimilation without civic inclusion. The course will draw on an array of materials, bringing academic scholarship and pop culture commentaries to bear on music albums, lyrics, short stories, novels, and more.

COLT 0610A. The Far Side of the Old World: Perspectives on Chinese Culture.

A survey of traditional Chinese culture focusing on the major literary and artistic achievements of six major periods in Chinese history, including philosophical texts, poetry, various forms of the fine arts, and vernacular fiction and drama. A broad range of primary materials will give the student greater insight and appreciation of Chinese culture in general and also provide a foundation for further study of East Asia in other disciplines.

COLT 0610C. Banned Books.

An examination of literary censorship in which we read various texts forbidden for putatively violating social, religious, and political norms in particular historical and cultural contexts. We also analyze the secondary literature surrounding the banning of these ostensibly "dangerous" texts in order to theorize questions and assumptions about the power of art and the ironies generated by these debates.

COLT 0610D. Rites of Passage.

Examines a seemingly universal theme—coming of age—by focusing on texts from disparate periods and cultures. Proposes that notions of "growing up" are profoundly inflected by issues of class, gender and race, and that the literary representation of these matters changes drastically over time. Texts from the Middle Ages to the present; authors drawn from Chrétien de Troyes, Quevedo, Prévost, Balzac, Brontë, Twain, Faulkner, Vesaas, Rhys, Satrapi and Foer. Enrollment limited to 19 first year students.

COLT 0610E. Crisis and Identity in Mexico, 1519-1968.

Examines four moments of crisis/critical moments for the forging of Mexican identity: the "Conquest" as viewed from both sides; the hegemonic 17th century; the Mexican Revolution as represented by diverse stakeholders; the "Mex-hippies" of the 1960s. We especially explore how key literary, historical, and essayistic writings have dealt with Mexico's past and present, with trauma and transformation. Readings include works by Carlos Fuentes, Sor Juana Inés de la Cruz, Octavio Paz, Juan Rulfo, and the indigenous Nican Mopohua on the Virgin of Guadalupe. All in English. No prerequisites.

COLT 0610G. Literature and the American Presidency.

We are accustomed to engaging the American presidency as a public office approached through the prism of government, political science, and the like. This course studies the presidency through a literary lens, focusing on four presidents and three literary genres: epistolography (J. Adams and Jefferson), biography (Washington) and literary analysis (Lincoln). We will also study on video the inaugurals and farewells of more recent presidents and, finally, examine non-traditional literary forms, such as pamphlets, songs, posters, broadsides, graphics, newspapers, magazines, and original documents from various presidential elections.

COLT 0610H. Renaissance Epic.

Explores Renaissance attempts to renew, parody, and question the classical epic tradition. The study of poetics, narrative, and imagination will be wedded to investigations of beauty, wonder, and nationhood. Authors will include Ariosto, Tasso, Ercilla, Spenser, Camões, du Bartas, and Milton.

COLT 0610I. Introduction to Cultural Studies.

We live in a cultural saturated with information. The messages we register, the meanings we deduce, and the knowledge upon which we ground our actions and choices require critical examination if we are to engage as thoughtful actors in our personal and civic lives. This class will encourage students to reflect on their initial impressions and reactions to various media and will give them critical tools to examine how formal and thematic strategies work to shape and elicit our sympathies, our desires, our fears, and our beliefs. Focusing primarily on visual and written texts drawn from popular culture—video, print, film, and Web sources—students will practice their analytical skills by evaluating these texts in classroom discussions, several short writing assignments, and one longer essay. Reading the work of several cultural theorists, students will learn to analyze persuasive argumentation through an attention to rhetorical and framing devices and to recognize and decipher visual cues, enabling them to interpret texts and images and to produce coherent critical positions of their own. This class will prepare participants for college courses that require them to process knowledge and not simply acquire information.

COLT 0610L. Murder Ink: Narratives of Crime, Discovery, and Identity.

Examines the narrative of detection, beginning with the great dramatic whodunit (and mystery of identity) *Oedipus Rex*. Literary texts which follow a trail of knowledge, whether to establish a fact (who killed Laius?) or reveal an identity (who is Oedipus?) follow in Sophocles' footsteps. We read Sophocles' intellectual children. Readings include: *Hamlet*, *The Murders in the Rue Morgue*, *The Woman in White*, and other classic novels and plays. We also analyse seminal films of the genre, including *Laura* and *Vertigo*. Will include the twentieth-century detective story, with particular attention to women writers and the genre of the female private eye.

COLT 0610N. Being There: Bearing Witness in Modern Times (ENGL 0710F).

Interested students must register for ENGL 0710F.

COLT 0610O. The Death of the Subject in Twentieth and Twenty-first Century Literature.

Examines the condition of the subject in Western novels and plays written after 1945. Traditional markers of identity in works of literature are being eroded by globalization, split families, the invasion of science in genetics, and increased mobility. Signs of this crisis include loss of agency and individuality, various pathologies including schizophrenia, and the replacement of humans with clones. We will investigate the intricacies of the derailment of the subject and how literary form is affected in novels by Beckett, Coetzee, W. G. Sebald, Kazuo Ishiguro, Michel Houellebecq, Chuck Palahniuk, and in plays by Caryl Churchill.

COLT 0610P. Stories and Storytelling.

An introduction to stories, how they are constructed, and how they are told. We will explore the role of storytellers in the creation of a story, the idea of "plot," the forms that stories take, and the category of fiction itself—in essence, how and why stories are made, and made up. Our discussion will range from topics such as fictional forms, the acts of reading and of telling, the role of memory, and the invention of self, to questions of time and duration. Texts examined will be drawn from a variety of genres, periods, and cultures.

COLT 0610Q. Before Wikipedia.

How did humans organize knowledge before Wikipedia? This course explores the fascinating history of encyclopedic texts, archives, and databases in various cultural contexts. We consider issues of book history, the classification of knowledge, and the obsession to collect, compile, and document everything knowable and unknowable in both real and fictional encyclopedias.

COLT 0610S. Literature and Knowledge.

What is knowledge? How do we know what we know? We will read literary texts concerned with these questions to consider how knowledge relates to power, and how deception, stupidity, and mystification force us to question what we know. Readings include Austen, Hawthorne, Melville, Flaubert, James, and Schnitzler.

COLT 0610T. Chinese Empire and Literature.

This course explores ancient and modern approaches to empire and imperialism, focusing on China from the Qin (221-206 BCE) establishment of unified empire through the Qing (1644-1911 CE) confrontation with the British and other European empires. Emphasis will be placed on the relation between imperial expansion and literary production, and the role of Chinese and non-Chinese literature in representing China's multilingual and multiethnic past. Texts include China's most famous work of historical literature, Sima Qian's *Shiji*; poems, short stories, tomb sculptures, contemporary film; as well as critical essays on empire, colonization, and cross-cultural heritage.

COLT 0610U. Altered Cinema: The Cultural Politics of Film Revision (MCM 0901R).

Interested students must register for MCM 0901R.

COLT 0610V. Claims of Fiction (ENGL 0150X).

Interested students must register for ENGL 0150X.

COLT 0610W. Getting Emotional: Passionate Theories (ENGL 0500Q).

Interested students must register for ENGL 0500Q.

COLT 0610Y. Women's Writing in the Arab World.

This course examines Arab women's writing through the lenses of both Arabic and Western feminist theory and criticism. Beginning with a survey of pre-modern female literary personae in Arabic (the elegist, the mystic, the singing slave), we will then examine major figures in the early modern feminist movement, modernist poetry, autobiography, film, and the novel. No Arabic required; supplemental Arabic section may be offered at the discretion of the professor. Texts by Etel Adnan, Salwa Bakr, Hoda Barakat, Assia Djebar, Nazik al-Mala'ika, Alifa Rifaat, Hanan al-Shaykh, Miral al-Tahawy, Fadwa Tuqan, Adania Shibli. Films by Moufida Tlatli, Annemarie Jacir.

COLT 0610Z. Intersections of Race and Culture in the West.

This course will introduce students to ways in which knowledge, power and race have been interrelated in understandings of culture and in the writing and reception of literature. Beginning in antiquity, we will trace a history of political, ethnic, and social groups' perceptions and categorizations of each other and of shifts in the definitions of "race" and "culture" as concepts. We will then consider changing ideas of alliance, belonging and power, in the context of contemporary American and global politics. The course will draw from readings across various languages, and from the work and lectures of several guest speakers.

COLT 0611B. Global Detective Fiction.

Though often marginalized as unserious or lowly "genre fiction," the detective plot has interested and influenced literary figures ranging from Jorge Luis Borges and Thomas Pynchon to Tzvetan Todorov and Frederic Jameson. In this course, we examine both the origins and the afterlives of the detective plot in fiction from around the world. We focus especially on the figure of the detective as reader and the commentaries detective fiction offers on reading itself. After beginning with "classics" by Poe, Conan Doyle, Chesterton, Chandler, we move on to examine select novels and stories from Europe, the Middle East, the Americas, and Africa. At the end of the course, students will write a 10 to 15-page research paper on a topic of their choosing OR a detective story (or other creative project developed in consultation with the professor) of their own authorship.

COLT 0611C. Literature and Judgment.

Investigates the intersections between acts of literature and acts of judgment, between language and the law. How is literature to be judged, when is it "good" or "bad"? Does literature lie, and if so, does it matter? Does it hide a crime? And, in turn: does literature provide its own particular kind of judgment, one that may make evident the very fictional status of the law? Readings span from the Bible to contemporary post-colonial readings (Rousseau, Tolstoy, Zola, Freud, Kafka, Arendt, Benjamin, Henry James, Primo Levi, Coetzee, Sadegh Hedayat).

COLT 0710A. Women's Words: Writing in Medieval Europe and Japan.

An introduction to women poets, dramatists, and prose writers from medieval court cultures, with an emphasis on what these authors show us about their educational, social, moral/spiritual environment and civilization. What did the pen or writing brush enable them to express and achieve? How were they able to negotiate the gaps between a male classical literary language and their own vernacular speech? Readings may include works by Christine de Pizan, Dhuoda, Heloise, Hildegard of Bingen, Hrotsvitha, Julian of Norwich, Margery Kempe, Marie de France, Murasaki Shikibu, Sei Shonagon, and Trotula plus shorter texts written by both men and women. Instructor permission required.

COLT 0710B. Very Short Poetry: From Tanka to Twitter.

Though implicit and explicit claims have been made for the novel as a universal form, the novel does not match the very short poem in terms of ubiquity across history and cultures. Reading a set of very short poems each week, we will move across ages and continents, from Greek and Latin epigrams to the Japanese "haiku" and its precursors, from the early modern sonnet to experiments with poetic constraints in the computer age. Primary sources will be juxtaposed to touchstones of theory, neat ideas, and provocative essays. All readings available in translation as well as in the original.

COLT 0710C. Introduction to Scandinavian Literature.

An introduction to major works of Scandinavian writers, painters and filmmakers over the past 150 years. Figures include Kierkegaard, Ibsen, Strindberg, Munch, Hamsun, Josephson, Södergran, Lagerkvist, Vesaas, Cronqvist, Bergman, August and Vinterberg, as well as children's books by Astrid Lindgren and Tove Jansson.

COLT 0710D. Inventing the Renaissance.

The invention of the Renaissance as a cultural formation and as a part of the western cultural imaginary. We will consider the so-called "discovery of man," humanism and the recovery of the classical past, the production of scriptural identity or the "bibliographic ego," courtiership, the formation of the early modern state and the discovery of the "new world" through readings of major English and continental writers of the period.

COLT 0710E. Japanese Literature and Society: Historical Survey of Japanese Literature.

A reading of the major literary monuments, from early *waka* to *Genji* to the fiction of Ōe Kenzaburō. Surveys Japanese literary production from the 8th century to the present, examining the formation of literary genres, aesthetic values, and reading habits of successive eras in the context of political, social, and cultural development. No prerequisites.

COLT 0710F. Latin America: The French Connection.

Raises questions of intertextuality between French and Latin American literature, focusing on how each represents the other. Beginning in the late nineteenth century, questions aesthetic categories of the real, the surreal and the marvelous/magical real; and literary responses to World War II and the Dirty War, the 1968 student protests in Paris and Mexico City, feminist movements, and globalization.

COLT 0710H. Mexican *lettres*, 1519-1968.

The course approaches the history of ideas in Mexico by examining four critical moments/moments of crisis in the country's development. We focus on the issues and burdens of the past as conceptualized in historical, essayistic, and literary writings of the Conquest, the Baroque, the Mexican Revolution, and the iconoclastic 1960s. In English.

COLT 0710I. New Worlds: Reading Spaces and Places in Colonial Latin America.

An interdisciplinary journey-combining history, literature, art, film, architecture, cartography-through representations of the many worlds that comprised the colonial Hispanic New World. We traverse the paradisiacal Antilles, the U.S. Southwest, Tenochtitlan/Mexico City, Lima, Potosí. We read European, indigenous, and Creole writers, including: Columbus, Las Casas, Bernal Díaz, Aztec poets, Guaman Poma, Sor Juana. In English. Excellent preparation for study abroad in Latin America. Enrollment limited to 19 first year students.

COLT 0710L. Storytelling: Verbal Art as Performance.

This course offers a comparative selection of oral and written folktales from Arabic, Chinese, African, North American, and European traditions in translation in order to study the formation and reception of storytelling in different socio-cultural contexts (Western and non-Western, contemporary and traditional). We will consider storytelling and associated performance practice in the light of a variety of theoretical disciplines (e.g., rhetoric, folklore, sociolinguistics, performance studies, literary criticism, narratology). There will be lectures, presentations, and videorecordings.

COLT 0710N. A Comparative Introduction to the Literatures of the Americas.

Considers the common links between the diverse literatures of North and South America, approached in relation to one another rather than to Eurocentric paradigms. Focuses on the treatment of such topics as the representation of the past and the self, the role of memory and the imagination, the nature of literary language, and the questions of alienation, colonialism and post-colonialism, communication versus silence, and fiction versus history in the works of selected writers from North and Latin America, including García-Márquez, Faulkner, Cortázar, Allende, Lispector, Morrison, Doctorow, Rosa, and DeLillo. Enrollment limited to 15 first year students.

COLT 0710P. Women and Writing in Medieval France and Japan.

An introduction to women poets and prose writers from early court cultures, with emphasis on what these authors show us about their social environment and civilization. What did the pen or writing brush enable them to express and achieve? How were they able to negotiate the gaps between a male classical literary language and their own vernacular speech? What kinds of literary approaches and conventions were perfected by them? How did they view their personal social status? What educational, moral, and spiritual concerns did they voice? Readings: works by Murasaki Shikibu, Sei Shōnagon, Heloise, Marie de France, Christine de Pizan, plus shorter texts written by both men and women between 700 and 1450 C.E.

COLT 0710Q. The Odyssey in Literature and Film.

Examines reincarnations of the Homeric figure of Odysseus in contemporary literatures and film as modernist figure, postcolonial subject, and existentialist hero. How is the Odysseus myth altered from culture to culture (Greece, Rome, Ireland, the Caribbean)? How is it re-visioned in different historical periods and from different perspectives (feminist, marxist, postcolonial) and genres (epic, poetry, the novel, film, drama)? Major authors include Homer, Virgil, Tennyson, Joyce, Kazantzakis, Cavafy, Seferis, Atwood, Walcott; criticism by Bakhtin, Edith Hall, Adorno, Derrida. Films include works by Angelopoulos, the Coen brothers; Singer's *Usual Suspects*, Mendes' *James Bond* offering *Skyfall*, and Kubrick's 2001: *Space Odyssey*.

COLT 0710S. Words and Images: A Survey of Japanese Literature.

This survey course on Japanese literature will introduce works ranging from the 7th century AD to the present. This course will provide a historical survey of classic and modern texts, while paying attention to the close relationship Japanese literature has had with visual culture from the calligraphic poems of the Heian period to the postwar influence of manga upon literature.

COLT 0710U. Leaves of Words: A Survey of Japanese Literature.

While Zen, sushi and anime have become commonplaces in contemporary American parlance, Japanese literature and culture remain static enigmas, conjuring up visions of stolid-faced samurai, cherry blossoms, and post-modern dystopias. In this survey of Japanese literary works from the 8th century to the present, we will examine the development of canons of literature, both poetry and prose, and aesthetics in specific social contexts in Japanese cultural history. Also, we will consider their re-evaluations in subsequent eras, raising questions about the stability and continuity of such traditions. In addition to readings, we will briefly look at film, *manga* and anime.

COLT 0710V. The Arab World Writes Itself: Contemporary Arabic Literature.

In his seminal work *Orientalism*, Edward Said paraphrases Marx, and suggests that Orientalist attitudes towards the Middle East have produced a discourse in which the East must always be spoken for, and not allowed to represent itself. Said's argument has become even more relevant in the past decade, given the growing interest in the Middle East as a region in the US, coupled with a dearth of spaces where voices from the region can offer their own narratives. Designed as an introductory course to contemporary Arabic Literature, this course includes a variety of readings in translation and films from across the Arab world; it foregoes an intense exploration of one national literature for a more varied survey of the textual output of several countries. We will attempt to situate each literature within its national context and within the larger pan-Arab, regional and international context while being sensitive to the political, geographical, and historical forces that have influenced these texts, including the rise of Arab nationalism and the independence struggles of the mid-twentieth century, and immigration. We will also examine—and hopefully question—some of the discursive themes and conceptual frames that have been traditionally used to think about contemporary Arabic literature. Enrollment limited to 20.

COLT 0710W. Cultures of Colonialism: Palestine/Israel.

Examines the history and literary production of the Israeli-Palestinian colonial encounter from 1948 to the present. Aims to delineate the deep links between domestic culture and colonialism in Israel-Palestine by raising questions about statehood, dispossession, and exclusion in the imaginaries of both peoples and by examining novels in relation to the ethical and political imperatives of settler-colonial dynamics. Authors include: David Grossman, Emile Habibi, Jabra I. Jabra, Sahar Khalifah, Kanafani, Amos Oz, and A. B. Yehoshua. Sophomore seminar. Enrollment limited to 20 sophomores.

COLT 0710X. Fan Fiction.

What is imitation (sincerest form of flattery) to literary canons? Vergil's *Aeneid* appropriated Aeneas from the *Iliad*, Joyce's *Ulysses* modernized the *Odyssey*. Admiration as a source of inspiration is a major force in the evolution of fiction. "Fan Fiction" explores intriguing characters in greater detail and new contexts, allowing them new lives in contemporary imagination. This course presents pairs or sets of works that are explicitly linked by the intimate relation of imitation. Classic readings will be paired with their mostly contemporary updates, including *Pride and Prejudice*/ *Murder at Pemberley*, *Heart of Darkness*/ *State of Wonder*, and *Monkey*/ *Tripmaster Monkey*.

COLT 0710Z. Comedy from Athens to Hollywood.

This course will look at ancient comedy from its birth in Athens and Rome through Renaissance incarnations to the 19th and 20th century, including novels and films as well as plays. We will survey the main topics of comedy, from Aristophanes' focus on the absurdities of daily and political life in Athens to the Roman codification of a genre of everyman in love and in trouble. We will also examine how later writers and filmmakers use both traditions to give comedy its subversive power of social commentary.

COLT 0711A. Epics of India (CLAS 0820).

Interested students must register for CLAS 0820.

COLT 0711B. Ishiguro, Amongst Others (ENGL 0710L).

Interested students must register for ENGL 0710L.

COLT 0711C. Postcolonial Tales of Transition (ENGL 0710E).

Interested students must register for ENGL 0710E.

COLT 0711D. Comparative Approaches to the Literatures of Brazil and the United States (POBS 0850).

Interested students must register for POBS 0850.

COLT 0711E. Reading and Writing African Gender.

In this course, we will examine ways that gender and literary genre figure in postcolonial African writing, and in its reception. We will closely read novels by four significant women authors: Mariama Bâ (Senegal), Zoe Wicomb (South Africa), Tsitsi Dangarembga (Zimbabwe), and Chimamanda Ngozi Adichie (Nigeria). We will also read short, lesser-known texts, such as Richard Rive's "Riva" and Binyavanga Wainaina's "The Missing Chapter," that question boundaries of gender, genre, and sexuality.

COLT 0711F. Arabic Literature: The Qur'an to Darwish.

The course offers an introduction to Arabic literature from ancient Arabian poetry to contemporary Palestinian novels. Topics include desert poetry, the Qur'an, medieval Muslim court literature, popular literature, Arabic literary theory, and the emergence of modern Western genres, with a focus on Palestinian literature as a test-case. We will engage first-hand with Imru' al-Qays' *Qifa Nabki*, al-Jahiz's *Books of Misers*, Ibn Hazm's theories about love, Mahmoud Darwish's *I Come from There*, and Emile Habibi's *The Pessoptimist*. All readings are in English.

COLT 0711G. The Realist Novel (Europe, America, Latin America).

How did the 19th-century novel shift from at times idealistic descriptions of domestic life to realist representations of individual, psychological, social, and political "reality"? In this course on the realist novel, we will address how literary realism attempted a description of the world "as it was": what were the social and political questions the realist novel took up? How did it conceive gender and sexuality, and how did it account for issues of social inequality, colonialism, and other types of bourgeois ideology? What national projects did non-European novels engage in, particularly in Latin America and the United States?

COLT 0711H. The Arabic Novel.

This course offers students both a foundation in the "classics" of Arabic fiction and a foray into recent experimentations with form and language. We'll spend the first half of the semester with Egyptian Nobel laureate Naguib Mahfouz, tracing his evolution from Victor Hugo-esque chronicler of life in Cairo to Faulknerian experimentalist. We'll then examine the works of authors who deem themselves "post-Mahfouzian," including Gamal al-Ghitani, Sonallah Ibrahim, Elias Khoury, and Hanan al-Shaykh. Students will emerge with a transnational, inclusive understanding of the Middle East glimpsed through the region's literature. No Arabic necessary; students with Arabic may read in the original.

COLT 0711J. The Art of Revolution in Latin America.

This course considers the role of the arts—visual, literature, music, film, and performance—in Latin American social movements. We will study the work of artists and activists in the Mexican Revolution, Cuban Revolution, Nicaraguan Revolution, South American dictatorship resistances, and contemporary social movements such as the Chilean student movement and narco-trafficking. We will trace the use of the arts in organizing, social critique, collective action, and propaganda, and how they have shaped ideology and culture in Latin America and beyond.

COLT 0711K. Arab Voices beyond the Middle East: Cultural Encounters in Europe and the Americas.

This course introduces students to literature by Arabs writing outside of their country of origin and in relation to a new cultural landscape, in the US, Britain, Canada, and Brazil. We will explore, through poems, short stories, novels, films, and music, the themes of exile, assimilation, gender, sexuality and war in transnational and transcultural contexts. Authors include: Rawi Hage, Etel Adnan, Rabi' Alameddine, Ahdaf Sueif, and Saad Elkhadem.

COLT 0711L. The Quran and its Readers.

Like the Bible, the Quran has had a monumental impact upon world literature. Its narratives and imagery permeate the textual, visual, and auditory landscapes of many societies in the Islamic world and beyond. In this course, we approach the Quran through the works of some of its most interesting readers, including Jami, Dante, Rumi, Hafez, Goethe, and Rushdie. All readings are in English.

COLT 0711M. Off the Beaten Path: A Survey of Modern Japanese Literature (EAST 0800).

Interested students must register for EAST 0800.

COLT 0711O. Off the Beaten Path: The Diversity of Modern Japanese Literature.

An introduction to major and minor works of Japanese literature produced during the Japanese Empire and in post-WWII Japan. Canonical writers include Tanizaki Junichiro, Higuchi Ichiyo and Kawabata Yasunari, as well as contemporary novelists Ogawa Yoko, Murata Sayaka and others, including women, queers, revolutionaries and Japan-resident Koreans. Close reading skills will be emphasized, as well as an understanding of how literature has generated knowledge about race, ethnicity, gender, class and their intersections.

COLT 0711Q. Writing Love in Korean Literature.

This course looks at literature to explore how intimacy, passion and commitment have been socially sanctioned and redefined in Korea. From Yi Dynasty tales to modern-day webtoons, we will explore the roles different genres have played in the generation of forms of human affect that are themselves intimately tied to Korea's tumultuous history. What does it mean to love, and to write about love, under the conditions of Neo-Confucianism, empire, war, national division, authoritarianism, and the neoliberal marketplace? No prerequisites.

COLT 0711R. Writing and Resistance in Indigenous America (1500–1700).

Material extraction, forced religious conversion, and physical brutality were but a few of the oppressive acts imposed on the Indigenous populations of the Americas by Western colonialism. However, those under Iberian and British Rule—in Peru, Mexico and New England—found ways to resist and negotiate the terms of domination by adopting, and therefore adapting, European forms and norms. This class takes an interdisciplinary approach that combines historiography, literature, and art, to analyze the mechanisms of Indigenous resistance within the developing structures of colonialism: race, religion, geography, and gender. We will read a variety of texts that originate from Aztec, Inca, Algonquian, Spanish, Brazilian, and British contexts. All readings available in English, but students are welcome to read any in the original language.

COLT 0711T. Writing and Censorship.

Book bans have risen sharply during over the past two years. When and why did school libraries and bookstores become hotbeds of controversy? Who are the censors today? And how has censorship changed over time? In this seminar, we will read books that have been burned, put on trial, banned or challenged, in earlier periods and in today's world. We will think critically about the ideas of decency, protection and security that underlie such censorship: who defines them, and for whose benefit? As we consider the role book bans play in public life today, we will explore anti-censorship practices in the arts, journalism, law and grassroots advocacy.

COLT 0711U. Home and Away: South Asian Literature in the Global Diaspora.

This course aims to explore fictional works and memoirs produced by and about South Asians residing in the United States, Canada, the United Kingdom, and the Caribbean. We will examine themes of identity, departure, exile, arrivals, forced migration, alienation, and belonging and compare the texts to recognize any similarities or differences in migration patterns from various South Asian communities in different global zones within the Anglosphere. Along with novels, this class will introduce readings on colonialism, postcolonialism, and migration to provide a historical context for global migration as well as examine the publishing industry in North America and Britain and the growth of "immigrant" stories.

COLT 0810A. Ancient Greek Myth in Modern Poetry.

Various responses to ancient Greek myths by poets in the Western tradition, especially modern Greek. Considers how poets since 1800 have approached, rewritten, or subverted the classical version of myths, such as those of Eurydice, Helen, Orpheus, Persephone, Penelope, and Ulysses. Emphasizes the challenges posed by the past, issues of cultural and political context, and questions of gender. Readings in English.

COLT 0810C. Arthurian Tales and Romances of the Middle Ages.

Why did stories of King Arthur, his knights, and their ladies fascinate writers and audiences throughout Europe? What can Arthurian quests, marvels, and love adventures tell us about successive pre-modern societies that shaped them? What are our responses to their cultural beliefs and forms of playful make-believe? Readings (in modern translation) of medieval Latin, French, English, Welsh, and German texts.

COLT 0810D. City (B)Lights.

Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences, including sociology, political economy, urban ecology. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images, American cities and literary works will be brought to the foreground.

COLT 0810E. Confession, Autobiography, Testimony.

Does writing a life give it coherence and veracity, or create a fiction? What is the relationship between first-person narrative and truth, and between authorship and authority? How does the form of a first-person text -- a religious confession, a personal journal, a political denunciation, a collective memoir -- affect the telling? Must the reader of such an account be "you" to the teller's "I", and how does the intimacy of this relationship shape the experience of reading? In this course, we test the limits of self-narration against ethical and physical limits, reading first-person narratives that purport to be non-fictional. We will read accounts of different experiences -- social and sexual transgression, suffering and perpetrating violence, slavery -- and explore both the possibilities and duplicities of writing as "I".

COLT 0810F. Desire and the Marketplace.

Studies love and desire as the interplay between men, women, and money in mercantiled societies, in seventeenth century Japan, eighteenth century England, nineteenth century France, and twentieth century Africa. Novels featuring female protagonists by Saikaku, Defoe, Flaubert, Emecheta and Bâ, readings in economic and feminist theory, and visual art--Japanese woodcuts, Hogarth, nineteenth century French painting, West African arts.

COLT 0810G. Equity Law Literature Philosophy.

Justice, rigorously applied, yields injustice. This paradox haunted Western aspirations toward legal and political justice from antiquity to the Renaissance. It necessitated the formulation of a complementary principle, equity, whose job it was to correct or supplement the law in cases where the strict application of it would lead to unfairness. In England, equity was enforced by a separate system of law, and it was a weighty, ambiguous term of great emotional force, with a particular appeal to Shakespeare. After its decline, Dickens and Kafka wrote two of the greatest literary works set in a world without equity.

COLT 0810H. How Not to Be a Hero.

One of Shakespeare's greatest plays is about a character who was an irredeemable failure: Coriolanus. What can failure teach us? What kind of strength does a language of failure possess? We will read the ancient sources themselves (Livy, Lucian, Plutarch), and modern adaptations of these stories (Bertolt Brecht, T. S. Eliot, Günter Grass). We will also look at other "exemplary" failures who inspired Shakespeare and later literature, including Lucullus and Timon.

COLT 0810I. Tales and Talemakers of the Non-Western World.

Examines many forms of storytelling in Asia, from the *Epic of Gilgamesh* and the *Arabian Nights Entertainments* to works of history and fiction in China and Japan. The material is intended to follow the evolution of non-western narratives from mythological, historical and fictional sources in a variety of cultural contexts. Topics will include myth and ritual, the problem of epic, tales of love and the fantastic, etc.

COLT 0810J. The Colonial and Postcolonial Marvelous.

A celebration and critique of the marvelous in South American and related literatures (U.S., Caribbean). We follow the marvelous from European exoticizing of the New World during the colonial period to its postcolonial incarnations in 'magical realism' and beyond. We attend particularly to the politics and marketing of the marvelous, in writers including Borges, Chamoiseau, Columbus, García Márquez, Fuguet. Reading in English or Spanish.

COLT 0810L. The Pursuit of Happiness.

This course will study the emergence of the modern concept of happiness from the ancient ideal of the "good life" to the notion of "pursuit of happiness" as an "inalienable right." We will trace the development of this concept in the early modern period and read representations of the search for happiness in a variety of literary, philosophical, and political texts (including the American and the Haitian Declarations of Independence and the French Declaration of Rights). Readings will include oriental and fairy tales, novels, and essays (by Mme d'Aulnoy, Mme du Chatelet, Montesquieu, Johnson, Fielding, Voltaire, and Rousseau, among others). Enrollment limited to 19 first year students.

COLT 0810M. Uncanny Tales: Narratives of Repetition and Interruption.

What makes stories creepy? Close readings of short narratives with special attention to how formal and thematic elements interact to produce the effects of uncertainty, anxiety and incoherence peculiar to "the uncanny." Topics include: the representation of the self in images of the arts; the representation of speech; instabilities of identity and spatial and temporal boundaries; doubles, monsters, automata and hybrids. Texts selected from: Walpole, Shelley, Hoffmann, Kleist, Poe, Dostoyevsky, Freud, Wilde, Cortazar, Kafka, Lovecraft.

COLT 0810O. Civilization and Its Discontents.

Investigates the age-old tension between order and chaos as a central dynamic in the making and interpretation of literature. Texts will be drawn from drama, fiction and poetry from Antiquity to the present. Authors include Sophocles, Shakespeare, Racine, Beckett, Prevost, Bronte, Faulkner, Morrison, Blake, Whitman, Dickinson, and Rich.

COLT 0810P. Moderns and Primitives.

Modernism has been called a 'Renaissance of the Archaic'. We will read from the major works of Anglo-American modernism (Eliot, Joyce, Lawrence, Pound), focusing on their attitudes toward the primitive and the archaic. In addition, we will examine anthropological theories from the Victorian period to Durkheim, explore primitivism in modernist music and painting, and read about recent controversies surrounding modernism and primitivism.

COLT 0810U. Lovers, Slaves, Kings and Knaves: Major Plays in Western Literature.

This course will introduce students to representative tragedies and comedies, focusing in particular upon their development as literary genres; continuities and variations of character, plot, and theme; stage and performance conventions; and the classical tradition. Readings will include Aeschylus, Sophocles, Euripides, Aristophanes, Shakespeare, Racine, Eilde, Ibsen, and Vogel.

COLT 0810X. European Renaissances.

Just what is the European renaissance and when and how did it happen and who decided? Let's look at the renaissances of Petrarch, Boccaccio, and Giotto, of Erasmus, and Thomas More and Holbein, of Machiavelli and Castiglione and Raphael. Are these renaissances intellectual, aesthetic, visual, rhetorical? Did they happen in the fourteenth century, the fifteenth, the sixteenth? Or in the nineteenth when they were first clearly described?

COLT 0810Z. Myth and Literature.

Authors throughout the ages have been fascinated by ancient mythology and have incorporated elements of it into their texts, often modifying commenting on or even destroying the original myth in the process. This course will investigate the values, dangers and limitations of myth-making/using in literature. Primary texts will include major works by Milton, Goethe, Kleist, Racine and Kafka. Texts will be supplemented by secondary readings and multimedia elements. Students will learn to question and engage critically with the historical, cultural, literary and scientific frontiers that separate myth and reality. Assignments will include two short papers and a final paper.

COLT 0811A. Introduction to Modernism: Past, Future, Exile, Home (ENGL 0700F).

Interested students must register for ENGL 0700F.

COLT 0811C. Belonging and Displacement: Cross-Cultural Identities (POBS 0810).

Interested students must register for POBS 0810.

COLT 0811F. Writing War (ENGL 0100M).

Interested students must register for ENGL 0100M.

COLT 0811G. Literature, Trauma, and War (ENGL 0500L).

Interested students must register for ENGL 0500L.

COLT 0811H. Monuments and Monsters: Greek Literature and Archaeology.

Surveys Greek archaeology from the Bronze Age to the Hellenistic period, and reads Greek literature roughly contemporary with the archaeological period surveyed, with an emphasis on epic and drama. No previous knowledge or prerequisites needed.

COLT 0811I. Classical Mythology and the Western Tradition.

Reads classical texts that expound the fundamental mythological stories and elements of the Western tradition, then will read selected texts from the Renaissance through the twentieth century that utilize these myths. Ancient texts covered will include the *Epic of Gilgamesh*, Hesiod's *Theogony* and *Works and Days*, Ovid's *Metamorphoses*, and plays by Aeschylus, Sophocles, and Euripides. Later texts will include Shakespeare's *Venus and Adonis* and *Rape of Lucrece*, Milton's "Lycidas," and lyric poetry by Keats, Shelley, Browning, Swinburne, Rilke, Auden, and Yeats. This course is suitable for anyone wishing to understand the classical background to Western literature.

COLT 0811M. Planes, Trains, and Automobiles: Travel and Transport in Modern Literature and the Arts.

This course studies how new modes of transportation and the experiences they enabled stood as symbols of both the fears and joys of rapid modernization in 19th- and 20th-century literature, film, and visual art. How did the speeding locomotive, the plane's aerial view, and the personal freedom of the automobile transform the ways people traversed space, experienced time, traded, and came into contact with one another? In formal terms, how did these experiences inspire innovations in the media we examine by Whitman, Kipling, Baudelaire, Marinetti, Brecht, Woolf, Huxley, Stein, Ruttman, Wegman, Picabia, Duchamp and others? No prerequisites.

COLT 0811N. Poetics of Madness: Aspects of Literary Insanity.

This course surveys a wide range of literary texts with a view to tracing the long process of transition from pre-modern to modern conceptions of madness on the one hand, and to identifying the symbolic logic and discursive modalities that underlie its respective representations on the other. Spanning several centuries of artistic preoccupation with the alienated mind, these texts will serve as points of reference in a focused exploration of the relationship between insanity and literature, as it has been shaped by social dynamics, cultural norms, philosophical ideas, and medical theories. Authors include Euripides, Erasmus, Shelley, Dostoyevsky, Stevenson, and Woolf.

COLT 0811Q. Mediterranean Cities.

Athens, Istanbul, Alexandria: three iconic cities of the Levant that will serve as points of reference in a focused exploration of East Mediterranean history and culture. Reads and discusses a number of texts that span several decades and a wide range of styles and genres – from realism to postmodernism and from autobiography to thriller – but exhibit a common interest in the urban landscape and its relationship to basic aspects of human existence: identity and ideology, memory and desire, isolation and connection, hope and fear, life and death. Authors include Theotokas, Seferis, Taktsis, Durrell, Mahfouz, Kharrat, Tanpinar, Shafak, Altun.

COLT 0811T. Statelessness and Global Media: Citizens, Foreigners, Aliens (MCM 0901K).

Interested students must register for MCM 0901K.

COLT 0811W. The Myth of Venice in Literature: Memory, Desire and Death.

This course will explore the myth of Venice in literature: focusing on the *topos* of Venice in the genre of travel writing, we will study the theme of liberty and decadence associated with Venice's theatrical and political culture. Readings will include Shakespeare's *The Merchant of Venice*, excerpts from De Brosses's *Travels through Italy*, Goldoni's *Memoirs*, Rousseau's *Confessions*, and Casanova's *Histoire de ma vie*. We will also study the influence of these accounts on the Romantic poets (Goethe, Wordsworth, Byron, Shelley, and Musset), and modernity (Henry James's *The Aspern Papers*, Thomas Mann's *Death in Venice*, Donna Leone's *Death at the Fenice*).

COLT 0811Y. Great Jewish Books (JUDS 0681).

Interested students must register for JUDS 0681.

COLT 0811Z. Islands in the Western Imaginary: Paradise, Periphery, Prison.

Paradise, periphery, or prison? The representation of the island has been described as imaginary and not actual, mythological and not geographical. Examines the fascination with islands in the western cultural imaginary. Selective readings from literature, film and historical texts focus on ways in which island spaces have been represented in diverse social, national, imperial contexts as well as the effect of such projections on the native islanders, their visitors and often subjugators. Authors may include Homer, Plato, Marco Polo, Mandeville, Darwin, Defoe, Tournier, Kincaid, Kafka, Durrell, Seferis; theoretical works drawn from critical geography, postcolonialism, and the field of island studies.

COLT 0812A. Hamlet Post-Hamlet.

Shakespeare's *Hamlet* is perhaps the most widely read, performed, adapted, parodied and imitated literary text of the western tradition. In this seminar we will begin by reading/re-reading the play before turning to a number of appropriations of Shakespeare, both in the west and non-west, in order to address social and aesthetic issues including questions of meaning and interpretation, intertextuality and cultural translation. First Year Seminar. Enrollment limited to 19.

COLT 0812B. What is Colonialism? Archives, Texts and Images.

Through a close reading of a variety of texts and images from 16th-19th century we will study the transformation of lands and people into appropriable objects and the formation of political regimes in and through different colonial projects. We will follow the encoding of slavery in literary works, in the corpus of laws, in travelers' visual renditions and in the bodies of people. We will use the archive as a source and a site for the production of knowledge. Students will create small textual and visual archives around different topics, and will use them in writing their final work.

COLT 0812D. Mythology of India (CLAS 0850).

Interested students must register for CLAS 0850.

COLT 0812E. God and Poetry (JUDS 0820).

Interested students must register for JUDS 0820.

COLT 0812G. The Palestinian-Israeli Conflict in History, Literature, Film.

An examination of the Palestinian-Israeli conflict through the lens of cultural production. The course will explore the history of the conflict, from the 1947 partition of Palestine to the second Intifada in 2005, through major literary works and films juxtaposed with cultural and historical texts. We will discuss the way that literature and film provide us with humanistic and counterhegemonic narratives, interrogating issues such as nationalism, ethnicity, gender, colonialism, collective trauma and cultural resistance. Exploring the tension between historic and aesthetic production, we will look at how literary and cinematic works challenge, re-imagine and supplement political accounts of the conflict.

COLT 0812K. Film Classics: The Greeks on the Silver Screen (MGRK 0810).

Interested students must register for MGRK 0810.

COLT 0812M. Hamlet Post-Hamlet (ENGL 0150Z).

Interested students must register for ENGL 0150Z.

COLT 0812N. Film Classics: The Greeks on the Silver Screen (MGRK 0810).

Interested students must register for MGRK 0810.

COLT 0812O. Reading Art in Literature.

This course will explore the role of art objects in poetry and prose from East Asia and the west. How are objects represented in literature, and how does the language of art inform texts? Authors from antiquity to today have described works of art in their texts to reveal essential aspects of their cultures: heroic destiny, fatal struggles between life and art, and glimpses of the sublime. Readings include ekphrasis from antiquity, poetry from East Asia and the west, and fiction by Wilde, Balzac, Hawthorne, selections from *The Tale of Genji* and *The Dream of the Red Chamber*, and others.

COLT 0812P. Banned Books of Middle East.

From Danish cartoons and fatwas to student protests and the stabbing of a Nobel laureate, in this course we will study several literary scandals that have rocked the Middle East since the mid-twentieth century. Our focus will be not only on the content and form of the texts themselves, but also on the historical, political, social, and cultural circumstances in which literature comes to have meaning for particular social and religious communities. Texts by Naguib Mahfouz, Sonallah Ibrahim, Salman Rushdie, Ahmed Naji, Mohammed Choukri, Magdy al-Shafee, Susan Abulhawa.

COLT 0812Q. Film Classics: Greeks on the Silver Screen (MGRK 0810).

Interested students must register for MGRK 0810.

COLT 0812R. Reimagining the Americas: Latinx and Indigenous Stories of Migration.

This course explores migration stories that reimagine the territory known today as the Americas, Abya Yala, Turtle Island, and Ixachitlān. It brings together narrators who call into question the idea of the nation and the mechanism of borders. What role does language play in community building as Native peoples face diasporas and become transnational networks? How is mobility bringing forth new forms of storytelling? By engaging with poetry, essays, films and artwork from Indigenous and Latinx writers, class discussions will try to understand Abya Yala in its full complexity. We will pay particular attention to how our course materials depict the environment as they address questions of land ownership, settler colonialism and ties to homelands. Readings will be provided in English and include Leslie Marmon Silko, Yásnaya Aguilar Gil, Natalie Diaz and Yuri Herrera.

COLT 0812S. Non-human Rights and Wrongs.

"Even the creature has rights," says Campion in HBO's *Raised by Wolves*. Our course will ask after the past, present and future of rights, including interpreting literature, television and film to imagine who (or what) might one day possess them. Only persons have rights, but the essence of personhood flickers and blurs like a phantom, somehow common to corporations, human beings, boats and cities, among other "things." Like ghost-hunting lawyers we'll trace the word "person" from the Ancient Greek theater mask (prosopon) through Christianity's thought of the Trinity (God as "one substance, three persons") up to contemporary legal cases regarding animal rights such as the 'monkey selfie' case. Key authors include: Kafka, Cixous, Plato, Shelley, Chevallard, Zizioulas. Media screened includes: *Blade Runner 2049*, *Solaris*, *Caprica*. Students from all disciplines are welcome.

COLT 0812T. Hideous Monsters of the Mind: Monster Literature, Monster Theory, and American Identities.

What do ancient beliefs about headless men and giants have in common with rap music and free love? Strangely enough, a single word has been used to refer to each: "monster." In this course, we examine how monsters from European literary and intellectual traditions are translated into American culture. We begin with a survey of pre-modern traditions: the "Monstrous Races" described by Pliny the Elder, the prodigies of Aristotle and Cicero, and the biological/medical tradition that was extrapolated from a hybrid reading of Hippocrates and Macrobius. After following these traditions in Medieval and Early Modern writing, the bulk of the course reads from key moments in American history where resurrected monsters policed (and infiltrated) the boundaries of emerging American notions of identity and difference: from white supremacist pseudoscience to black abolitionism, and from "freak shows" to postmodern performance art.

COLT 0812U. Beyond Yellowness: Representations of Race and Ethnicity in East Asia.

What do race and ethnicity mean to regions outside Europe and North America? How did the perceptions of different physiological and cultural features define premodern and modern East Asia? Since when and for what reasons did some people, whom Marco Polo considered "white," become racially Asian or yellow in literary and cinematic representations? This survey course will demystify East Asian homogeneity and discuss how various literary, cinematic, and critical works from antiquity up to the modern era present notions and issues related to race and ethnicity in the region now known as East Asia. The reading material will include excerpts from *The Zuo Tradition*, *The Travels of Marco Polo*, Bai Juyi, Min Jin Lee, *Orientalism*, and others. The course will be taught in English, and no prior knowledge of Asian cultures or languages is required.

COLT 0812V. Troy: City, Legend, Literature.

This course will examine the legend of Troy: the struggle for and loss of the great city, and the inevitability of the lives destroyed of both besieged and besiegers, Trojans and Greeks. The city and its destruction are the earliest surviving Western literature, and are a continuous presence through the centuries. Some themes to be examined will include self and other in the narrative, the human and the divine, and fate and free will. We will also analyze how different cultures and times both adopt and adapt the characters for nation-building.

COLT 0812W. The Epic Tradition: from Homer to Milton.

This course will engage with the epic tradition from its origins in the ancient eastern Mediterranean to the early modern period. Epic, as the earliest genre and example of ancient literature in the Western canon, is foundational to our ideas of literature and our myths of society, national identity, and aspirational achievement. In this course we will read *Gilgamesh*, the earliest Near Eastern epic, the *Iliad*, the *Aeneid*, and selections from the *Odyssey*, the epics that formed the cores of ancient Greek and Roman literature, as well as medieval and early modern epics (*Inferno*, *Paradise Lost*) that draw on these rich and influential traditions.

COLT 0812X. Culture, Climate, and the Anthropocene's Others.

Using the theoretical framework of the Anthropocene, this course considers a wide array of aesthetic codes—from Ovidian elegy and Shakespearean tragicomedy to zombie narrative and postcolonial ghost stories—to investigate how distinct cultural forms contest, recast, and, at times, reinstate the (often-hierarchical) boundaries between human and nature, human and animal, and human and human. Through a sampling of poetry, narrative, and film, we will explore the uneven terrain of the Anthropocene, in which the feedback loops of race, class, gender, and other forms of social difference, along with geography itself, continue to separate humans, even as evidence mounts for the inseparability of humans from the rest of the planet, including its nonhuman inhabitants. Course materials will be provided in English and include works from Ishirō Honda, Octavia Butler, Colson Whitehead, Tommy Orange, J.M. Coetzee, and Bong Joon-Ho, among others.

COLT 0812Y. Love and Longing across the Indian Subcontinent.

The Indian subcontinent is home to several languages and contains one of the most strikingly diverse and vibrant bodies of literature spanning several centuries and a wide geographic landscape. The aim of this course is to introduce you to primary texts such as poems and narrative works in various languages (in translation) that provide a glimpse into the types of love—romantic, devotional, filial, platonic among others—and the theories and prescriptive texts that accompany them. From ancient sensual Sanskrit and Tamil Sangam love poems to multilingual Bhakti verses, Marathi abhangs and Kannada vacanas; from Urdu and Persian ghazals to Indian cinema, this course combines literary texts with visual materials and performance arts to acquaint you with the various moods and expressions of love in the subcontinent and demonstrate the symbiotic and inextricably intertwined relationship between various media in the region.

COLT 0812Z. From Cuneiform to Klingon: Writing Systems and the Worlds They Make.

This course will take a comparative approach to writing systems across time, languages, and cultures. What are the cognitive, literary, cultural, social, and political implications of using systems of symbols to express ourselves, whether via ink on paper or pixels on a screen? How do writing systems unite and divide societies, enable nationalism and imperialism, and give flight to interplanetary fantasies? Through readings in theory and history as well as literary works from Chinese folktales to J. R. R. Tolkien, students will explore the graphic dimension of human language and literature.

COLT 1001A. Troubled Origins: Accounting for Oneself (Nietzsche to Eribon).

What does it mean to account for one's life by accounting for one's origins? Nietzsche, for one, expressed the "uniqueness" of his existence "in the form of a riddle": "As my father I have already died, as my mother I still live and grow old." We will study literary and philosophical attempts at catching up with one's troubled origins, including Nietzsche's *Ecce Homo: How One Becomes What One Is* (self-interpretation); Freud's *Selbstdarstellung* (self-portraiture); Kafka's "Letter to Father" (paternal confessions); Derrida's *Monolingualism of the Other* (native languages and lost origins); Eribon's *Returning to Reims* ("class closet"). Undergraduates from diverse fields welcome.

COLT 1020. What Is Friendship?

Friendship is one of the most significant yet highly vexing experiences of our human existence. What does it mean to have or to be a friend? How do friendship and romantic love relate? Why are writers as different as Montaigne, Nietzsche, and Derrida so intensely drawn to the statement attributed to Aristotle: "Oh my friends, there are no friends"? Why does Heidegger's notion of "Being-With" invoke an ear that listens for the voice of the friend? To what extent is intimate friendship always also an experience of anticipated mourning, in which a friend imagines himself crying over the death of another? Is an enemy a fallen friend? This course will trace key concepts of friendship through the Western tradition, spending quality time with a number of highly influential writers and thinkers, both ancient and modern. All students welcome.

COLT 1021. Literature and Photography: Writing and Thinking with Light.

"I didn't draw any people," Kafka once wrote, "I told a story. Those are pictures, only pictures...one takes photographs of things in order to forget them. My stories are a way of closing my eyes." Kafka's sentences invite us to reflect upon the relationship between literature, photography, and philosophical thought—from the first heliograph in 1826 and the inception of the daguerreotype in 1839 to the digital image of today. Taking as our point of departure the relation of literature and "light-writing," we will address selected issues in the historical and conceptual interaction among word, image, and critical thought. Our wager: texts and photographic images share a common relationship to time, desire, death, mourning, and politics. Writers may include Kafka, Proust, Benjamin, Kracauer, Barthes, Heidegger, and Derrida. Images by photographers including August Sander and Andrew Moore. Students from diverse fields welcome.

COLT 1210. Introduction to the Theory of Literature.

An historical introduction to problems of literary theory from the classical to the postmodern. Issues to be examined include mimesis, rhetoric, hermeneutics, history, psychoanalysis, formalisms and ideological criticism (questions of race, gender, sexuality, postcolonialism). Primarily for advanced undergraduates. Lectures, discussions; several short papers.

COLT 1310B. Classics of Indian Literature (CLAS 1160).

Interested students must register for CLAS 1160.

COLT 1310C. Twentieth-Century Western Theatre and Performance (TAPS 1250).

Interested students must register for TAPS 1250.

COLT 1310D. Between Gods and Beasts: The Renaissance Ovid (ENGL 1360S).

Interested students must register for ENGL 1360S.

COLT 1310E. A Classical Islamic Education: Readings in Arabic Literature.

This seminar introduces students to the essential texts of a classical education in the Arabic-Islamic world. What works of poetry, literary criticism, belletristic prose, biography, geography, history, and other disciplines were considered staples of a well-rounded education in medieval Baghdad, Cairo, Damascus, or Fez? Emphasis will be placed on close and patient readings of primary sources. At least three years of Arabic required.

COLT 1310G. Silk Road Fictions.

The course introduces students to cross-cultural comparative work, and to critical issues in East-West studies in particular. We will base our conversations on a set of texts related to the interconnected histories and hybrid cultures of the ancient Afro-Eurasian Silk Roads. Readings will include ancient travel accounts (e.g., the Chinese novel *Journey to the West*, Marco Polo); modern fiction and film (e.g., Inoue Yasushi, Wole Soyinka); and modern critical approaches to the study of linguistic and literary-cultural contact (e.g., Lydia Liu, Emily Apter, Mikhail Bakhtin, Edward Said). Topics will include bilingual texts, loanwords, race and heritage, Orientalism. No prior knowledge of the topic is expected and all texts will be available in English.

COLT 1310H. Classics of Indian Literature (CLAS 1160).

Interested students must register for CLAS 1160.

COLT 1310I. Modern African Literature (ENGL1710J).

Interested students must register for ENGL 1710J.

COLT 1310J. The Arab Renaissance.

Explores the 19th-century Arabic cultural renaissance known as the Nahda. Topics include intellectual encounters between Europe and the Middle East, the birth of the Arabic novel, and the rise of Islamic modernism. We will read selections from the works of Shidyaaq, Tahtawi, Zaydan, Shawqi, Bustani, and others, alongside historiographical and theoretical texts. At least three years of Arabic required.

COLT 1310K. History of the Romance Languages (FREN 1020B).

Interested students must register for FREN 1020B.

COLT 1310L. Political Commitment in Modern Arabic Literature.

This course will explore the history of and debates surrounding political consciousness and commitment in modern Arabic literature. We will trace the diverse literary strategies by which authors, living under difficult political circumstances, expressed their criticisms and envisioned social and political justice. Beginning in the mid-20th century and continuing to the present, we will read and discuss landmark works of Arabic fiction in translation, and the debates that surround them. Authors include: Etel Adnan, Sonallah Ibrahim, Sahar Khalifeh, Tayeb Salih, and Hasan Blasim.

COLT 1310N. Global Modernism and Crisis.

The early twentieth century was marked by a proliferation of crises in politics, the economy, language, indeed in the very fabric of society. This interdisciplinary course will insist on the global dimension of crisis, analyzing how modernist artists in the metropolis and the periphery represented this situation in different, yet overlapping ways. We will also examine how modernist works provide unique ways of thinking about what is lost in a moment of crisis and what potential may arise out of it. Authors will include: Eliot, Huidobro, Dos Passos, Woolf, Galvão, Arit and Faulkner.

COLT 1310P. Silk Road Fictions (EAST 1310).

Interested students must register for EAST 1310.

COLT 1310R. From "Wild Beast" to "True Born Prince": Native Resistance in Native and Anglo-American Literature.

How does Wampanoag war leader, Metacom, go from "a Salvage and a wild Beast" in 1677 to a "true born prince" in 1814? Coaxing Anglo-America's violent Native history into a positive national epic has made this collective amnesia an American commonplace. In this course, we first concentrate on contemporary accounts of three early conflicts between Native peoples and settlers: the second Anglo-Powhatan War (1622-'32), "King Philip's War" (1675-'76), and Tecumseh's War (1810-'13). The second half of the course will turn to the Removal Era, a high point in American literature's obsession with the "fate" of indigenous peoples. This is also the time of James Fenimore Cooper's and Washington Irving's contributions to that narrative, both of whom we will read. Accompanying them, however, will be Native retellings of those same conflicts (e.g. William Apess, George Stiggins, E. Pauline Johnson, and others').

COLT 1310S. The Jewelers of the Ummah: The Jewish Muslim World is Not History (HMAN 1975U).

Interested students must register for HMAN 1975U.

COLT 1310U. History of Romance Languages (FREN 1020B)..

Interested students must register for FREN 1020B.

COLT 1310W. Interpreting Literature on Stone, Paper, and Film.

This course examines the interpretation of globally renowned epics and classic literary works in South Asia and in its diaspora. Beginning with the sculptural, performed (both in South and Southeast Asia), written, and Bollywood imaginings of the Ramayana and Mahabharata, we move into painted and cinematic re-tellings of West Asian classics such as Layla Majnun and tales from the Arabian Nights. Rounding up this course would be Bollywood interpretations of the Shakespearean plays *Comedy of Errors*, *Romeo and Juliet*, and *Macbeth* along with Kamila Shamsie's novel *Home Fire*, a re-imagining of Sophocles' play *Antigone* in the contemporary British Muslim community in the United Kingdom.

COLT 1310Y. South Asian Modernisms (ENGL 1762Y).

Interested students must register for ENGL 1762Y.

COLT 1330M. Transatlantic Surrealisms (FREN 1330E).

Interested students must register for FREN 1330E.

COLT 1410A. All the World's a Stage: Seventeenth-Century Drama.

Readings of representative English and continental plays of the 17th century including Shakespeare, Jonson, Corneille, Molière, Tasso, Calderon, and others. How do dramatists represent and negotiate oppositions between art and nature, imagination and reason, myth and history, freedom and fate through dramatic form and metaphor? Why is the stage such a powerful metaphor for the world?

COLT 1410B. Chinese Opera: Aesthetics and Politics of the Performing Body.

Explores traditional Chinese drama, which has always been a music theater, from the perspective of contemporary cultural theory, and in a comparative and interdisciplinary context. Analyzing classical plays in relation to their staging in today's regional operas, this course will first examine the dialectics of "prettiness and artistry" in traditional Chinese theater aesthetics and its implications in gender politics. It will then move on to investigate issues of cross-dressing and erotic desire in Chinese drama of the late imperial period in comparison with that of early modern England. Lastly, the ramifications of Chinese opera as a national imagination in modern cultural politics, as embodied in the play *M. Butterfly*, the film *Farewell My Concubine*, and the Beijing opera version of *Turandot*, will be addressed.

COLT 1410C. Chinese Theatre in the Mao Years.

This course focuses on two major issues: policing traditional theater and "model revolutionary drama" as "a new proletarian culture." The course will begin with a study of Mao Zedong's ideas on literature and art in the light of contemporary cultural theory. It will then look at examples of the "new opera" and "new history play," examining them in relation to a complex of censorship issues concerning the exercise of political power in administering human life and the body, literature and drama as political representation, and the hermeneutics of censorship.

COLT 1410D. Dramatic Literature and Theoretical Practice in Eighteenth-Century England.

An introduction to the dramatic literature of 18th-century England in the context of contemporary theatrical conventions and innovations. Plays read alongside treatises on acting techniques, stage design, and contemporary theatrical pamphlet-debates. The sociopolitical contexts of the London patent theaters and the coexistent "illegitimate" entertainments are explored, as well as the influential effects of Continental theatrical theory and innovation.

COLT 1410E. Japanese Theatre: from Dengaku to De Sade.

Surveys traditional Japanese theatre from the lofty medieval Nō drama to the more popular genres of Jōruri (puppet theatre) and Kabuki in the Edo period (1600-1868). Through playscripts, related secondary criticism, videotapes, and films, we will examine the function of spectacle and theatre, the problem of representation or mimesis, the notion of audience, and the relation of text to performance. Concludes with more recent examples of Japanese drama and performance.

COLT 1410F. Medieval Drama.

How drama developed in northwestern Europe between the tenth and early sixteenth century—from liturgical tropes and miracle plays to mystery cycles and morality plays, from popular feasts and minstrel performances to fool's plays, farces, and other secular comedies. Emphasis on the cultural context and social functions of dramatic games and performances in premodern Europe.

COLT 1410K. European Early Modern Drama.

An introduction to early modern drama in the French, Italian, Spanish, and English traditions. The goal is to explore a wide range of imaginative impulses in the Renaissance and Baroque periods. Readings will include plays by Corneille, Racine, Calderón, Lope de Vega, Shakespeare, Machiavelli, and Molière.

COLT 1410L. Philosophy and Tragedy.

Explores the intersection of philosophy and tragedy in western literature. Readings may include Sophocles, Plato, Aristotle, Shakespeare, Hegel, and Nietzsche.

COLT 1410M. Shakespeare and Philosophy.

Explores the relationship between Shakespeare and philosophy. Readings include philosophers who have written about Shakespeare (Hegel, Nietzsche, Cavell, and others), as well as philosophers who may illuminate interpretive problems in Shakespeare (Plato, Seneca, Spinoza, and others).

COLT 1410N. Found in Translation: The Adaptation of Literature to Film in Japan.

Contrasting the demands of the text versus the screen, we will read eight to ten works of modern Japanese literature and view the film versions of each in order to discuss the problem of translation from one medium to another. Possible works for inclusion are *Rashomon*, *Harp of Burma*, *Woman in the Dunes*, and *The Makioka Sisters*. Finally, we will consider *manga* (the graphic novel) and its adaptation into *anime*.

COLT 1410O. Shakespeare and.

Canon formation and disciplinary divisions have deformed the way in which we read Shakespeare. Frequently presented as a post-romantic singular "author," cut off from the sources, texts and genres on which he drew and the collaborators with whom he worked, Shakespeare looks, reads and performs differently in relation to the rich contexts in which the plays were produced and through which they are produced today. We will read plays and other materials with attention to formal and historical questions including genre, the Shakespearean text, gender, sexuality, status, degree, and nation.

COLT 1410P. Shakespeare.

We will read a number of Shakespeare's plays from *The Comedy of Errors* to *The Winter's Tale* in relation to the sources, analogues, and genres (classical, continental and English) on which he drew. We will consider both formal and historical questions. Issues to be addressed include genre, the Shakespearean text, gender, sexuality, status, degree, and nation. Some attention to what has come to be called "global" Shakespeare. Written work to include a mid-term and two papers.

COLT 1410S. Classical Tragedy.

This course will read the great Greek tragedies of Aeschylus, Sophocles, and Euripides, and some Senecan tragedy. We will then read Renaissance and later tragedies that use the classical world as a setting, such as *Antony and Cleopatra*, *Julius Caesar*, and tragedies that rewrite classical themes, including O'Neill's *Mourning Becomes Electra*.

COLT 1410T. Tragedy from Sophocles to *The Wire*.

Explores tragedy from Athens to Baltimore. Readings will include Sophocles, Shakespeare, Hegel, Chekhov, Jia Zhangke, Chan-Wook Park, Marx, Trotsky, and the deindustrialized American city. Open to juniors and seniors. Instructor permission required.

COLT 1410U. Shakespeare in Perspective.

We study Shakespeare together with selections from other writers or thinkers, including those who have written about Shakespeare (e.g. Nietzsche, Emerson, Coleridge), and those who can illuminate interpretive problems in Shakespeare (e.g. Plato, Melville).

COLT 1410V. Russian Theatre and Drama (TAPS 1430).

Interested students must register for TAPS 1430.

COLT 1410Y. Shakespeare and Embodiment (ENGL 1360Z).

Interested students must register for ENGL 1360Z.

COLT 1411B. Theater and Revolution.

This class explores how theater and dramatic literature question and shape our understanding of "revolution" as a radical turn, incisive rupture, and profound shift in the way we perceive and organize our social and cultural life. How does drama accompany revolutionary movements, and how do revolutions compel political theater to transform itself? Readings include Aristophanes's *Lysistrata*, Shakespeare's *Coriolanus*, Büchner's *Danton's Death*, Brecht's *Life of Galileo*, and Parks's *The America Play*. We will analyze plays and performances, write our own dramatic scenes, and discuss key concepts of theater theory and practice.

COLT 1411D. Antigones.

As one of the most revised and interpreted works around the globe, Sophocles' *Antigone* invites a comparison of adaptations across cultural contexts. This course examines how the play's exploration of citizenship, law, gender, family, and resistance to authority has shaped philosophical conceptions of tragedy and speaks to contemporary political issues. We will consider reimaginings of *Antigone* under apartheid laws in South Africa, the Mexican drug war, and in the age of ISIS. The class is designed as a workshop where students will study versions of *Antigone* (theoretical texts, dramatic literature, poetry, visual art) and engage in adaptation, translation, and performance.

COLT 1411E. Race and Gender in Early Modern Theater.

In this course, we will cover a selection of Early Modern tragedies from various literary traditions (English, French, Italian, Spanish), to critically discuss and analyze dramatic representations of gender and race as portrayed on the Early Modern stage. Considering moments of renegotiation, critique, and resistance towards dominant hierarchies, we will give especial attention to marginalized characters, and/or to characters who are explicitly gendered or racialized in the plays in which they appear. We will accompany our reading of primary-source texts with selections from contemporary critical theory on gender and race, which will provide an important springboard for intersectional analysis.

COLT 1411F. Medicine and Disability in Shakespeare and Early Modern Drama.

In this course, which will focus heavily on Shakespeare, we will cover a dynamic range of Early Modern plays from various literary traditions (English, French, Italian, Spanish, Portuguese), to study the representation of health, medicine, medicinal concerns, and disability on the Early Modern stage. As disability was often at the (unacknowledged) crux of larger sociopolitical, philosophical, and medical debates, giving it close attention sheds light on salient aspects of premodern embodiment, performativity, and configurations of "self" and "other," in which disability identity has a determinative role. Alongside our reading of plays and related primary-source texts, we will engage with contemporary critical approaches to disability, health, performance, and premodern identity, which will provide a helpful springboard for intersectional analysis.

COLT 1420A. *The Tale of Genji* and its Legacy.

The Tale of Genji (circa 1000 CE), authored by Murasaki Shikibu, a woman of the Heian court, has been canonized over the centuries as the greatest work of Japanese literature. No work in the Japanese tradition has exerted as much literary influence as this mammoth work of prose fiction detailing the private lives of Genji, the brilliant son of the emperor, those with whom he consorts, and his descendants. We will read *Genji* in its entirety, along with antecedent works, other texts of the period, works influenced by Murasaki's opus, other historical materials, and secondary commentary. There are no prerequisites for this course and it is open to all undergraduates.

COLT 1420B. A Mirror for the Romantic: *The Tale of Genji* and *The Story of the Stone*.

In East Asian Buddhist culture, the mirror is a symbol of the mind in both its intellectual and emotional aspects. These masterworks detail the lives and loves of Prince Genji, cynosure of the medieval Japanese court, and Jia Baoyu, the last hope of an influential Chinese clan during the reign of Manchus. We examine both works as well as the sources of *Genji* and literary aesthetics of the Tang dynasty.

COLT 1420E. The Nineteenth-Century Novel (ENGL 1561I).

Interested students must register for ENGL 1561I.

COLT 1420F. Fantastic and Existentialist Literatures of Argentina, Uruguay and Brazil.

Jorge Luis Borges proclaimed that South American writers can "wield all themes" without superstition, with irreverence. This course examines the ways in which 20th century writers from Argentina, Uruguay and Brazil appropriated European fantastic and existentialist fictions, taking them in new directions. Readings, in English or original languages, include Borges, Cortázar, Onetti, Lispector. Prerequisite: previous college literature course(s).

COLT 1420G. Fictions of the Caribbean.

The Caribbean has inspired conflicting cultural and political claims, and a wealth of visual images. We will rethink the formation, representation and self-presentation of the Caribbean countries, steering our explorations through postcolonial and postmodern theory to questions of appropriation, language and identity. Readings from Columbus and Shakespeare to Danticat, Santos Febres and Kincaid; essays by Glissant, James Benítez Rojo and others.

COLT 1420K. Masterworks of Chinese Fiction.

Focuses on three acknowledged classics of Chinese fiction—*Three Kingdoms*, *The Journey to the West*, and *The Dream of the Red Chamber*—works which demonstrate the range of the genre as they represent historical, fantastical, and sociopsychological subjects. Topics include the role of fiction in Chinese society, the masterworks as mirrors of Chinese culture from the 14th through 18th centuries, and the comparative theory of the novel.

COLT 1420L. Modern Japanese Fiction.

Narrative fiction from the Meiji Period (1868-1912) to the present in the context of modern Japanese cultural and intellectual history. In addition to more canonical writers such as Natsume Sōseki and Mori ōgai, examines the legacy of women writers such as Higuchi Ichiyō and Enchi Fumiko; proletarian writers such as Hayama Yoshiki, Kobayashi Takiji, and Hayashi Fumiko; and more contemporary mass-audience writers such as Yoshimoto Banana and Yamada Eimi.

COLT 1420N. Postcolonial Faulkner.

How is it that Faulkner became one of the most influential North American authors in the Third World? To answer this, we read Faulkner's "The Bear" against two of his citational novels, *Absalom, Absalom!* and *The Sound and the Fury*. We then turn toward a number of Faulknerian novels from the Arab world and Latin America. We discuss theoretical texts that describe the legacies of various colonialisms.

COLT 1420O. Proust, Joyce and Faulkner.

A reading of three major Modernist authors, with a focus on the following issues: role of the artist, representation of consciousness, weight of the past. Texts include substantial portions of Proust's *Recherche*, Joyce's *Portrait and Ulysses*, Faulkner's *Sound and the Fury*, *Light in August* and *Absalom, Absalom!* Prior background in these authors desirable, especially *Ulysses*.

COLT 1420Q. The Bildungsroman.

Readings of novels in the *Bildungsroman* tradition and the theoretical questions of the genre: the historicity and constitution of the self; problems of the representation of a life; the category of the unity of a life as a factor of identity; notions of progress, development and completion. Considerations of the successes and failures of this model. Readings to be selected from Rousseau, Chateaubriand, Sterne, Goethe, Novalis, Flaubert, Musil, Kerouac.

COLT 1420S. The Captivity Narrative.

Because the captivity narrative implies both a feminized subject and a writing subject, it provides a link among political, social, and literary phenomena common to all modern Western cultures. Examines various novels consumed by members of such cultures (including gothic romances, *Bildungsromanen*, boys books, girls books, ethnographic journeys, and prison diaries) as versions of the captivity narrative.

COLT 1420T. The Fiction of Relationship.

Explores the manifold ways in which narrative literature sheds light on the relationships that we have in life, both knowingly and unknowingly. The novel form, with its possibilities of multiple voices and perspectives, captures the interplay between self and other that marks all lives. Authors include Laclos, Melville, Brontë, Kafka, Woolf, Faulkner, Borges, Burroughs, Vesaas, Morrison, and Coetzee.

COLT 1420U. The South: Literatures of the U.S. South and South America.

For Jorge Luis Borges, in his story of the same title, the South is a spectral region, hovering between imagination and reality. The literatures of the U.S. South and South America enact his notion of the South. We examine the remarkable similarities between the two literatures—similarities that result from literary influence and from social, cultural, and historical circumstances. Prerequisites: previous upper-level literature course(s), relevant to your studies at Brown. Instructor permission is required and will be given after second class.

COLT 1420V. Visionary Fictions.

Visionary and apocalyptic writing, subversive of modes of perception and understanding as well as of political doctrines and systems, from Blake and Novalis to mid-nineteenth century French writers (Nerval, Rimbaud, Lautréamont), Surrealism and William Burroughs' *Naked Lunch*.

COLT 1420X. The European Novel From Goethe to Proust.

Readings of major European novels of the 19th century as literary reflections on philosophical questions such as aesthetic and ethical judgment, subjectivity, mimesis, memory and the novel itself as a genre. Authors include Goethe, Stendhal, Balzac, Dickens, Flaubert and Proust. Selections from Kant, Hegel, Marx, Lukács and Benjamin.

COLT 1420Y. Gigantic Fictions.

Terms such as 'epic,' 'mammoth,' 'gigantic,' and even 'loose, baggy monsters' have been coined to describe examples of literary discourse that inordinately exceed the normative boundaries of fiction. How are we to understand these narratives? What is the relation between literary gigantism and mimesis? How do 'gigantic fictions' threaten to break their literary bounds? What holds these mammoth narratives together? What impels authors to elect such a grand scope for literary representation? We explore these questions and others through close reading of several works deemed to be among the most gargantuan from authors such as Rabelais, Murasaki Shikibu, Tolstoy and Joyce.

COLT 1421F. Esthers of the Diaspora: Female Jewish Voices from Latin America (POBS 1500H).

Interested students must register for POBS 1500H.

COLT 1421G. Dickens and Others (ENGL 1511G).

Interested students must register for ENGL 1511G.

COLT 1421I. The Paternalistic Thriller and Other Studies in Colonial Fiction.

The impact of colonialism on European fiction from the rise of empire to its decline and fall, focusing on authors who wrote from direct contact with the peoples of Africa and Asia, such as Rudyard Kipling, Joseph Conrad, T. E. Lawrence, E. M. Forster, and Isak Dinesen. Topics will include romantic images of conquest, imperial ideology in literature, differing attitudes towards acculturation, and the changing symbolism of exotic settings.

COLT 1421K. Faulkner (ENGL 1710G).

Interested students must register for ENGL 1710G.

COLT 1421L. "Terrible Beauty": Literature and the Terrorist Imaginary (ENGL 1760I).

Interested students must register for ENGL 1760I.

COLT 1421M. Conrad and Naipaul: The Supremacy of the Visible? (ENGL 1761T).

Interested students must register for ENGL 1761T.

COLT 1421N. Kafka's Writing (GRMN 1340M).

Interested students must register for GRMN 1340M.

COLT 1421O. W. G. Sebald and Some Interlocutors (ENGL 1761Q).

Interested students must register for ENGL 1761Q.

COLT 1421Q. Word and Image: *Ekphrasis*, the Iconic Narrative, and the Graphic Novel.

An examination of the tradition of illustrated narratives from the pre-modern to the modern periods: the ancient Indian epic the *Ramayana*, the early eleventh-century Japanese *Genji Monogatari*, the medieval English *Canterbury Tales*, the late eighteenth century *Marriage of Heaven and Hell*, as well as the contemporary graphic novel *Persepolis* and examples of Japanese *manga*. Discussion will focus on the nature of iconography and symbolism; the historical privileging of text over image; the significance of parallel visual and verbal representation and its implications for culturally-specific theories of reading. Instructor permission required.

COLT 1421R. The European Novel from Richardson to Goethe.

This course studies the rise of the novel in eighteenth-century England, France, and Germany, focusing on the development of epistolary fiction, but with side-glances at the picaresque and sentimental tradition. Texts to be read include Richardson's *Pamela*, Fielding's *Shamela* and *Joseph Andrews*, Rousseau's *Julie*, Laclos's *Les liaisons dangereuses*, perhaps Bernardin de Saint-Pierre's *Paul et Virginie*, perhaps Sade's *Justine*, and definitely Goethe's *Sorrows of Young Werther*.

COLT 1421S. The Poetics of Confession (ENGL 1561J).

Interested students must register for ENGL 1561J.

COLT 1421T. Mediterranean Fictions: On Debts, Crises, and the Ends of Europe.

Sun-drenched, seductive, and timeless, the Mediterranean is an appealing location from which to ponder Europe's debt to this cradle of western civilization. Recently, the region's economic debt crisis has crystallized thoughts that, beginning here, a peaceful, unified Europe will come undone or be rehabilitated. The word 'crisis' itself hinges on a making a crucial decision, often in marking the turning point of a disease. This course examines representations of this moment through literature and film—but also in history, anthropology, journalism, and art—and in the context of other pivotal twentieth-century Mediterranean texts that marked, and anticipated, seismic shifts on the continent.

COLT 1421U. Words Like Daggers: The Epistolary Novel.

Letters as novels, novels in letters: this course traces the development of the epistolary novel, as it was cultivated in Europe from the seventeenth to the twentieth centuries. Through focused discussions of seminal, as much as fascinating, specimens of the genre, we will study the major impact that epistolary fiction had on the stylistic and conceptual evolution of the novel in general, also exploring its interactions with a range of established or shifting social structures, gender roles, discursive practices, and modes of consciousness. Authors include Montesquieu, Laclos, Goethe, Hölderlin, Stoker, Foscolo, Tabucchi, Alexandrou, and Galanaki.

COLT 1421V. Modernisms North and South: Ulysses in Dublin, Paris, and Buenos Aires.

James Joyce's *Ulysses* (Ireland, 1922), André Breton's *Nadja* (Paris, 1928), and Julio Cortázar's *Hopscotch* (Argentina, 1963): key texts of modernism, the avant-garde, and post-modernism, from different moments and outpost of literary modernity, but in intimate conversation with one another about the place of the human in art, and of art in politics. Join Stephen Dedalus, Leopold and Molly Bloom, Nadja, Horacio Oliveira, and a cast of minor characters on a journey through the hearts, minds, memories, and nervous systems of various modern metropolises.

COLT 1421W. Blast from the Past: The Historical Novel.

Focuses on a popular literary genre known as the historical novel. We will discuss its defining characteristics, cultural meanings, and basic differences from other types of fiction. We will also explore larger theoretical issues that are intricately related to the development and scope of the genre: the representation of the past and its relationship to the present; the creative integration of the gaps between factual history and lived experience; and finally the complex interaction between authenticity and fictionality, exemplarity and specificity, temporality and detachment. Authors include Flaubert, Yourcenar, Kadare, Pamuk, Calvino, Lampedusa, Roidis, and Galanaki.

COLT 1421X. Fairy Tales and Culture (FREN 1330A).

Interested students must register for FREN 1330A.

COLT 1422A. The Twilight Zone: Classics of Horror Fiction.

This course discusses a number of seminal works – from Gothic novels to ghost stories and vampire epics – that exploit the oldest and strongest emotion of mankind: fear. Why are authors and readers fanatically drawn to something as disturbing as horror, supernatural or not? How do the gruesome or the macabre become sources of intellectual excitement and aesthetic gratification? How can texts whose intended effect is to shock and distress compel us to confront suppressed instincts, challenge deep-rooted certainties, or reflect on things and ideas that we generally prefer to ignore? Are you brave enough to find out?

COLT 1422B. Family Fictions in the Enlightenment.

This course will study the changing representation of the family in the literature, art and culture of Enlightenment Europe. We will analyze the critique of traditional models of the family and the construction of an ideal of domesticity based on new concepts of childhood, education and marriage. We will read stories of "domestic misfortunes" as well as proposals for alternative solutions to "ill husbandry." Readings will include novels, plays, theoretical texts and visual documents (paintings and caricatures).

COLT 1422D. Short Forms: Major Works in a Minor Key (HISP 1330Q).

Interested students must register for HISP 1330Q.

COLT 1422E. The 19th-Century Novel: Transatlantic Perspectives.

What happened when the novel crossed the Atlantic? After its rise in Europe in the mid 18th century, the novel quickly spread and became a dominant literary genre both in the U.S. and in Latin America. In this course we will read key 19th-century novels in the European tradition; we will then discuss how this (by no means homogenous) European genre was assimilated and modified across the Atlantic. What did writers in Brazil and in the U.S. do with the genre, and how did they transform it according to national specificities? We will focus on English, French, American, and Brazilian novels.

COLT 1422F. Short Forms: Major Works in a Minor Key (HISP 1330Q).
Interested students must register for HISP 1330Q.

COLT 1422H. Mediterranean Fictions: On Debts, Crises, and the Ends of Europe (MGRK 1230).

Interested students must register for MGRK 1230.

COLT 1422L. The Modernist Novel: Alienation and Narration.

This course will examine how the modernist novel is not only about alienation—estrangement from others, the meaninglessness of existence, the divorce of private self from public life—but also incorporates alienation into its narrative structures. Through the close analysis of novels by European and Latin American authors (Kafka, Camus, Woolf, Onetti, Rulfo and Di Benedetto), we will consider alienation from a variety of angles: as a formal problem for narrative; as an existential situation; an experience of history and the past; and as a condition related to the uneven global economy.

COLT 1422M. Reading the Short Story.

This course invites students to explore the pleasurable challenges of close reading within the context of a compressed form, the modern short story. Select works from the nineteenth century on wards—many of them masterpieces, some hidden gems from around the world—will help us question what we think they mean and how we know this. We will develop practices and techniques for articulating such quandaries even as we observe how sociocultural themes, theories of interpretation, and literary movements intertwine with expressions of the self and the politics of identity.

No prerequisites. Open to all undergraduates.

COLT 1422N. Peasant-Boom-Slum: The Latin American Novel.

Despite being associated with peasants and agricultural goods, Latin America has become the most urbanized region in the world. In this course, we will analyze novels that attempt to make sense of Latin American society in relation to this chaotic and rapid historical transformation. Beginning with nineteenth-century writers who called on civilization to conquer the barbaric countryside, we move to the so-called "Boom" novels of the twentieth century that ambiguously questioned the authoritarian and destructive impulses of this modernizing project, and conclude with contemporary authors who reflect on the utter collapse of modernization. In these novels, we will see that the topic of the city and the countryside becomes a powerful framework for imagining and thinking through issues of indigeneity, gender, industrialization, memory and dictatorship. Authors: Borges, Arit, Galvão, Rulfo, Fuentes, Vargas Llosa, Arguedas, Lispector, Bolaño and Aira.

COLT 1422Q. Fantastic Tales (ENGL 1512B).

Interested students must register for ENGL 1512B.

COLT 1430A. Ancient Greek Myth in Modern Poetry.

Various responses to ancient Greek myths by poets in the Western tradition, especially modern Greek poets. Considers how the classical version of myths, such as those of Helen, Oedipus, Orpheus, Persephone, Penelope, and Ulysses, are approached, rewritten, or subverted in poetry since 1800. Emphasizes the challenges posed by the past, issues of cultural and political context, and on questions of gender. Readings in English.

COLT 1430B. Art and Exemplarity in Medieval and Early Modern Literature.

In this course we will cover a selection of Classical, Medieval and Early Modern works from various linguistic traditions (English, French, Italian, Portuguese, and Spanish), which feature literary representations of art, especially via scenes that are ekphrastic in nature (the description of Achilles's shield in Homer's *Iliad*, for instance), and via textual moments that use exemplary ekphrastic scenes as a point of departure for larger commentaries on: the nature of art, the role of the artist, and the reception of works of art along with their attendant sociocultural impact. Taking moments of renegotiation, critique, and resistance towards dominant hierarchies as a helpful framework, along with texts that explicitly situate themselves against the exemplary model from which they are drawing, we will give special attention to race and gender by examining the artistic representation of marginalized bodies that are explicitly gendered or racialized in the literary texts in which they appear. We will also look at race and gender in select works from Medieval and Early Modern artists.

COLT 1430C. Classical Japanese Poetry.

A historical study of various poetic forms of *waka* or Japanese poetry from the 8th-century anthology, the *Man'yōshū*, to the advent of modern verse, including *jiyūshi* or free verse, in the latter part of the 19th century. Focuses on the relationship of poetry to religion, the political implications of *waka*, and the dominant aesthetic governing poetic conventions in different periods.

COLT 1430D. Critical Approaches to Chinese Poetry.

Examination of works of Chinese poetry of several forms and periods in the context of Chinese poetic criticism. Knowledge of Chinese not required, but provisions for working with original texts will be made for students of Chinese language.

COLT 1430H. Poetry, Art, and Beauty.

What does it mean to be beautiful in classical and European literature and the arts? How do poems and works of visual art embody beauty? How is the idea of beauty defined by thinkers from Plato to Benjamin and Danto? Works include Sappho, Plato, Aristotle, Catullus, Horace, Petrarch, Kant, Wordsworth, Baudelaire, Rilke, Benjamin, Stevens. Works of art considered range from the Lascaux caves through renaissance classical painters like Giotto and Raphael to contemporary installations.

COLT 1430I. Poetry of Europe: Montale, Celan, Hill.

The fifty years between the Second World War and the formation of the European Union was a period in which the meaning of "Europe" was placed under great strain. The class will examine the strains and debates about Europe within the lyric poetry of several literary traditions. It will take the form of close historical, formal, and critical readings of three books of poems in their entirety: Montale's *The Storm and Others* (1956), Celan's *No-One's Rose* (1963), and Hill's *Canaan* (1997). Enrollment limited to 25.

COLT 1430J. Readings in Poetry and Poetics.

Concentrated readings of Hölderlin, Shelley, Baudelaire, and Yeats in conjunction with theoretical texts by Heidegger, Derrida, De Man, and Benjamin. Texts include poetry, essays, novels, and dramas of the poets in a critical and philosophical context. Focuses on the relationship between figurative and expository language, the limits of commentary, and the concept of criticism as repetition and translation. French or German required. Frequent writing and oral presentations.

COLT 1430K. The Classical Tradition in English Poetry.

We will read a number of famous short poems from antiquity in conjunction with the major English writers who later translated, imitated, and reworked them. We will pay special attention to the question of creative innovation. We will read Horace, Theocritus, Virgil, Dryden, Pope, Tennyson, and others.

COLT 1430L. Voices of Romanticism.

Readings of lyric poetry in the European Romantic tradition. Focus on problems of lyric subjectivity and representation, and the rhetoric of "voice." Emphasis on formal features of poetry. The course will be based on close reading and frequent writing assignments. Readings from Wordsworth, Shelley, Keats, Goethe, Novalis, Hugo, Nerval, Lamartine, Baudelaire and others.

COLT 1430N. The Albatross and the Nightingale: Nineteenth-Century Poetry.

Readings in French, German, British and American poetry of the nineteenth century. Texts selected from: Hölderlin, Mörike, Heine, Hugo, Nerval, Baudelaire, Keats, Hardy, Dickinson, Poe and others. Focus on close reading, and rhetorical and formal elements of poetry. Frequent writing assignments.

COLT 1430O. The Poetry of Childhood.

Selected readings from among Rousseau, Blake, Hölderlin, Wordsworth, Baudelaire, Rimbaud, Nietzsche, Freud, Yeats, Char.

COLT 1430Q. Poetry and the Sublime (GRMN 1440C).

Interested students must register for GRMN 1440C.

COLT 1430S. Latin American Death Trip (LITR 1230K).

Interested students must register for LITR 1230K.

COLT 1430T. Leaves of Words: Japanese Poetry and Poetics.

A historical study of various poetic forms of Japanese poetry (*waka*) from the 8th-century anthology, the *Man'yōshū*, to the advent of modern verse, including *jiyūshi* or free verse, in the latter part of the 19th century into the 20th century. Focuses on the relationship of poetry to society, religion, the political implications of *waka*, and the dominant aesthetic modes governing poetic conventions in different periods.

COLT 1430U. Measures of Poetry: A Workshop.

Rhythm, intonation and their written forms measure poetic matter. This workshop introduces prosody through exercises in theory and practice: the line; metrical and stanzaic form; rhyme; music and performance; free verse; language writing; and the task of translation (form). Even monkeys, Darwin wrote, express strong feelings in different tones. Enrollment limited to 20.

COLT 1431B. Modern Arabic Poetry.

An advanced course with readings in modernist Arabic poetry, beginning with the so-called neo-classical poets and proceeding through Romanticism and Modernism, from Egypt to Lebanon, Palestine, Iraq, and beyond. We will examine such recurring themes as love, loss, and longing; war, exile, and homeland; cultural heritage (turath) and creative innovation (*ibda'*); gender and genre. All readings in Arabic; at least three years Arabic language study (or equivalent) required for enrollment.

COLT 1431C. Poets, Poetry, and Politics.

The award of the 2016 Nobel Prize for Literature to Bob Dylan ignited a lively debate about who is, and who is not, a poet. Historically, who were deemed poets, what was their function? What do their poems do and how do they work? Do they foment revolution or "make nothing happen," as Auden once wrote? How does the poet aspire to a unique, individual voice even as he or she may (be seen to) best represent a constituency? This course relates the poetic act to political action and interrogates the commonly aired contention that politics makes for bad poetry.

COLT 1431D. Reading Modernist Poetry.

The period between 1880 and 1950, generally known as the age of Modernism, saw profound changes at every level of Western society, including politics, war, religion, and art. In this course, we will examine how various poets in Europe and beyond responded to and helped shape these changes through their art. Emphasis will be on reading for form as well as theme and socio-historical context, and on poetry as performance. Authors may include Yeats, H.D., Hughes, Rilke, Lasker-Schüler, Celan, Apollinaire, Césaire, Montale, Ungaretti, Blok, Akhmatova, Lorca, and Neruda. Knowledge of at least one non-English language highly recommended.

COLT 1431E. Loss in Modern Arabic Literature.

This course examines the literary expression of and response to various forms of loss, including military defeat, diaspora, and prison confinement in Arabic poems, short stories, and novellas from the 20th century through the post-Arab Spring. We explore how texts reimagine social and political geographies through diverse poetic and narrative techniques to enrich our understanding of the region and of central debates in its literary tradition. Though the topics may seem quite grim, we will find that many of the readings render forms of loss into aesthetics of beauty or empowerment. No knowledge of Arabic necessary.

COLT 1431F. Reading Modernist Poetry.

The period between 1880 and 1950, generally known as the age of Modernism, saw profound changes at every level of Western society, including politics, war, religion, and art. In this course, we will examine how various poets in Europe and beyond responded to and helped shape these changes through their art. Emphasis will be on reading for form as well as theme and socio-historical context, and on poetry as performance. Authors may include Yeats, H.D., Hughes, Rilke, Lasker-Schüler, Celan, Apollinaire, Césaire, Montale, Ungaretti, Blok, Akhmatova, Lorca, and Neruda. Knowledge of at least one non-English language highly recommended.

COLT 1431H. Women Writing Epic (CLAS 1930F).

Interested students must register for CLAS 1930F.

COLT 1431I. Ovid's Metamorphoses (CLAS 1120X)..

Interested students must register for CLAS 1120X.

COLT 1431K. Modern Arabic Poetry and Poetics.

This is an advanced course with readings in modern Arabic poetry. It introduces students to a set of topics and formal problems that have structured poetic production in the Arab world from the mid-twentieth century to the present: the relationship between poetry and prose, modernity and heritage, (the Arabic) language and progress, political commitment and aesthetic autonomy, and resistance and the everyday. Primary readings for this course are in Arabic, with secondary readings in English. At least three years of Arabic language study (or the equivalent) are required for enrollment.

COLT 1440B. Killer Love: Passion and Crime in Fiction and Film.

Discusses textual and cinematic representations of criminal passion and its ambiguous relationship to religious, moral, and social norms. We will focus on extreme forms of intimacy both as a thematic choice of cultural production and as a symbolic medium of communication. Why is it that art so often explores unsanctioned emotions and deviant behaviors? What is at stake when narratives capitalize on violent manifestations of desire? In what ways is the semantics of excessive love related to conceptions of subjectivity, sociability, and sexuality? What role does it play in the creative process itself?

COLT 1440F. 1948 Photo Album: From Palestine To Israel.

Why do we name the "Israeli-Palestinian conflict" as we do? The purpose of this class is to use photographs – alongside historical and literary documents—to question the framework of a "national conflict" and study its emergence as a given, unquestioned and axiomatic scheme for any historical narrative of that period. Reading archival material and post-colonial and photography theories, each week we shall study one photograph taken in 1948, reconstructing the photography event as well as its myriad relations among the protagonists involved and its after life as an archived image, to include photographed persons, photographers, editors, journalists, politicians, and more.

COLT 1440H. The Literature and Cinema of Global Organized Crime (SLAV 1500).

Interested students must register for SLAV 1500.

COLT 1440K. Israeli-Palestinian Conflict: Contested Narratives (UNIV 1001).

Interested students must register for UNIV 1001.

COLT 1440M. Lyric Genre-Benders.

In this course, we will ask what constitutes poetic language and how to identify the lyric as a genre. Are there discernible traits that lyric poems share, or is poetry, like pornography, something we recognize only when we see it? We will have a special focus on how genre is related to gender, and consider the historical precedent of poetry calling readers to its defense. Discussion will revolve around essays on lyric theory both classic and contemporary, prose poems by Baudelaire and Davis, fragments by Sappho, and finally, poems by Basho, Dickinson, Rankine, and more.

COLT 1440P. Nationalism and Transnationalism in Film and Fiction.

Reports of the demise of nationalism always seem greatly exaggerated. How are notions of transnationalism dependent on rewriting the nation? This course revisits films of world cinema acclaimed for their national cachet from a transnational perspective and in dialogue with their literary intertexts. We will study these films' fictional narration, cinematic articulation, and critical reception and consider how they signify in multinational networks of funding, distribution, production, conception, and critical reception. Students will analyze the political, ethical, and artistic stakes of confronting difference as both a located and universal stance or commodity. Films and texts chosen from across the globe.

COLT 1440Q. Stranger Things: The German Novella (GRMN 1440X).
Interested students must register for GRMN 1440X.

COLT 1440S. Images d'une guerre sans nom: the Algerian War in Literature and Film (FREN 1410R).

Interested students must register for FREN 1410R.

COLT 1440T. Cinema's Bodies.

The course explores the cinematic construction of bodies, female, male, animal and others. They are not standing alone as they are framed, cut, exposed, veiled, enlarged, distorted and gendered. The body is screened at the screen and composed into an imaginary image of beauty, death, sex, work. Cinematic devices like close-up, camera angle, light etc. transform bodies into the body of the film and its specific style, from which they can't be subtracted. This leads to the question of the spectator's body as screen for the filmic body and the many theoretical explorations to the embodied visions cinema entails and stimulates.

COLT 1440U. The Listener (Literature, Theory, Film).

Listening is not only the supposedly peaceful, welcoming activity that verges on mere receptive passivity. Listening or not listening also has to do with the exercise of power and this is the reason why we have a responsibility as listeners. In order to explore what could be described as the politics of listening, we will follow multiple paths that will lead us from the strategies of listening in concert venues to the medical practice of auscultation and the generalization of surveillance techniques. Our seminar will interweave readings in literature or theory (Kafka, Nietzsche, Calvino, Foucault, Chekhov, Freud, Deleuze. . .) and screenings of selected filmic scenes.

COLT 1440X. Shéhérazades : Depicting the "Orientale" in Modern French Culture.

Centered around the storied figure of Shéhérazade, this course explores literary and visual representations of "oriental" women in France from the 18th century to the contemporary period. Structured in a chronological and thematic manner, the course confronts students with highly influential orientalist depictions of women (including Voltaire, Loti, and Delacroix), as well as postcolonial and feminist responses to orientalism. Primary sources will be supplemented with theoretical readings from Edward Said, Fatima Mernissi and Joan Scott among others, in order to question the evolution and relevance of "orientalism" in France today and articulate the enduringly complex relation between imperialism and gender.

COLT 1440Z. Poets on Poetry.

How do poets think about poetry? How might their ideas differ from those of professional theorists and critics? In this course we will look at the variety of ways in which poets throughout history have written about their craft, from essays and letters, to poems, translations, and writing guides. In addition to discussing issues surrounding the theory, composition, and ethics of poetry, students will write poems of their own, according to the "rules" of famous poets like Edgar Allan Poe and John Keats. Authors may include Celan, Gander, Hayes, Horace, Lorde, Montale, Moore, Neruda, Pound, Shelley, Swensen.

COLT 1441A. The Serial Imagination: Literature and Journalism in the 19th Century (ENGL 0151L).

Interested students must register for ENGL 0151L.

COLT 1610B. Irony.

A study of the trope of irony and its evaluation, especially in the Romantic tradition. Focuses on the epistemological implications of irony and the role it plays in contemporary criticism. Readings from Plato, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, White, De Man.

COLT 1610C. Japanese Aesthetics and Poetics.

Focuses on the historical development of aesthetic values and their relation to social culture, religion, and national identity in Japan from the Nara period to the 20th century, with particular emphasis on the literary arts. Readings from Fujiwara Teika, Zeami Motokiyo, Sen no Rikyū, Okakura Tenshin, and others. A background in critical theory/philosophy and in East Asian studies helpful.

COLT 1610D. Theory of Lyric Poetry.

Through readings of recent critical discussions of the lyric genre, we will explore general methodological problems of literary theory. Discussions include: the role of form, structure and tropes in analyzing poetry; problems of subjectivity and voice; the relation between poetry and history; the function of reading; and the problematic "objectivity" of criticism. Readings from Hölderlin, Shelley, Baudelaire, Yeats, Jakobson, Benveniste, Riffaterre, Jauss, Johnson, De Man.

COLT 1610E. Aesthetics and Politics (ENGL 1900E).

Interested students must register for ENGL 1900E.

COLT 1610F. New Theories for a Baroque Stage (TAPS 1280N).

Interested students must register for TAPS 1280N.

COLT 1610G. Mihail Bakhtin (RUSS 1895).

Interested students must register for RUSS 1895.

COLT 1610I. Getting Emotional: Passionate Theories (ENGL 1560W).

Interested students must register for ENGL 1560W.

COLT 1610J. Holocaust Literature (JUDS 1820).

Interested students must register for JUDS 1820.

COLT 1610K. Literature and Multilingualism (GRMN 1340N).

Interested students must register for GRMN 1340N.

COLT 1610L. What is Reading?.

The answers to this question will be read—deciphered—in the many "reading scenes" found throughout the history of literature or philosophy. In Plato's *Phaedrus*, reading thus appears caught in a network of desire and power: the dominant role—the *erases* ("lover") who writes and teaches—and the passive or submissive position—the *eromenos* ("beloved") who reads and learns—are constantly permuted and destabilized. Hobbes' *Leviathan*, Melville's *Moby Dick* and *Billy Budd*, Goethe's and Valéry's *Faust* will lead us to question what we do when we read and reflect upon what could be called a *politics of reading*.

COLT 1610M. Twentieth-Century Russian Approaches to Literature: Bakhtin and the Russian Formalists (SLAV 1890).

Interested students must register for SLAV 1890.

COLT 1610N. Ecological Thought.

This course will serve as an introduction to the new interdisciplinary field of the environmental humanities. Discussing an exciting range of texts and films—from Mary Shelley, Virginia Woolf, and Arundati Roy to Ridley Scott and Werner Herzog—we will investigate how literary and cinematic works make ecological crisis perceptible. The following topics will be central to our discussions: garbology (especially hoarding, collecting, and the relation between trash and modern poetry); "slow violence" and postcolonial environmentalism; queer ecology; biopolitics; the representation of non-human animals; the effects of 24/7 consumerism; and the political uses of ecological nostalgia, disgust, grief, and wonder.

COLT 1610P. Holocaust Literature (JUDS 1820).

Interested students must register for JUDS 1820.

COLT 1610Q. Gender Theory and Politics in France (FREN 1420C).

Interested students must register for FREN 1420C.

COLT 1610R. Visions of Liberation: African Decolonization Now?

If, as many African thinkers contend, the acquisition of formal national independence did not signify liberation, it is necessary to imagine decolonization now. In "Visions of Liberation," we will examine ideas, particularly those of Césaire and Fanon, that have shaped decolonial thinking in Africa. What is the contemporary relevance of notions of freedom imagined by thinkers of the early and mid-twentieth century? How have postcolonial and post-apartheid writers conceived of freedom? What does it mean to call Mali a "postcolony" or "neocolony," or to state that South Africa is not postcolonial? Previous knowledge of the topic is not required.

COLT 1610U. Gender, Sexuality, and Culture in the Modern Middle East.

An introduction to women's and gender studies in the Middle East, with a particular focus on Arabic literature and film. We will begin by laying critical foundations for discussing gender issues in the Middle East, with readings on Orientalism, the harem, and the veil. Other units include: pre-modern female literary personae, gender and revolution, women writing war, feminism and class, colonialism and culture.

COLT 1610V. The Promise of Being: Heidegger for Beginners.

"The most thought-provoking thing in our thought-provoking time is," Martin Heidegger writes, "that we are still not thinking." Our undergraduate seminar will study, slowly and carefully, some of Heidegger's most fascinating and challenging paths of thinking, especially as they relate to questions of Being and our being-in-the-world. We will encounter his unique engagements with art and literature, his critique of modern technology, his reflections on what it means to "dwell" somewhere, his views on finitude and death, and his notion of being "on the way" toward language. No previous familiarity with Heidegger is assumed; curious students from diverse fields welcome.

COLT 1610W. Whites, White Jews and Us: Radical Black, Arab & Jewish Thinkers.

Inspired by Houria Bouteldja's book *White, Jews and Us*, which we will read in class, we will read authors who are engaged with generations of (forced) displacement and concomitant fraught cartographies. The class will proceed along lines drawn by two questions: (a) what makes these texts radical and how does their radicalness opens paths of refusal, care and repair of and in shared worlds; (b) how do these authors engage with identities made and remade by displacement and catastrophe, and how imagination, fabulation, remembrance and reclamation of never-completely-lost worlds are mobilized to question these identities, borders and injustices they produce. We will read texts by Ella Shohat, Houria Bouteldja, Saidiya Hartman, Susan Slymowics, Anarkata, Aliyyah Abdur-Rahman, Lital Levy and others.

COLT 1610Y. Of Friends and Enemies.

"And so will believe in our stellar friendship, though we should have to be terrestrial enemies to one another," Nietzsche says. How are friendship and enmity construed in the Western traditions? What are the philosophical and ethical implications of dividing one's personal, cultural, and political world into friends and enemies? What is the elusive relation between friendship and community, hospitality, war, and mourning? We will scrutinize the history and theory of friendship and enmity through close readings of writers such as Plato, Aristotle, Cicero, Montaigne, Kant, Emerson, Nietzsche, Freud, Heidegger, Schmitt, Blanchot, Nancy, and Derrida. Students from diverse fields welcome.

COLT 1611A. The Uncanniness of Being: Freud, Heidegger, Derrida.

It is one of the defining features of modernity that the human being has become wholly problematic to itself. We can no longer take for granted what it means to be human, and our being-in-the-world poses itself as an abiding question mark. To be human and to live in time has become inextricable from a certain uncanniness. We will study key texts by three of the most insightful thinkers of this uncanniness: Freud, Heidegger, and one of their best readers, Derrida. Whether engaging with the dark vagaries of our sexuality, posing the question of "Being" in relation to the horizon of our death, or elucidating the work of mourning: Freud, Heidegger, and Derrida help us to come to terms with the mysterious adventure of dwelling in the world as radically finite human beings. Students from diverse fields welcome.

COLT 1611B. Hospitality and Literature (HMAN 1977F).

Interested students must register for HMAN 1977F.

COLT 1611C. Gift and Debt.

By alternating literary and philosophical approaches to gift and debt, we will try to gain a historical perspective on what Maurizio Lazzarato has called "the making of the indebted man" in our contemporary neoliberal era. Important landmarks for our approach will include: Shakespeare's *The Merchant of Venice*, Bataille's *The Accursed Share*, Goethe's *Faust I* and *Faust II*, and Derrida's *The Gift of Time*.

COLT 1710A. Introduction to Literary Translation.

This is a workshop course introducing the history and theory of literary translation, with demonstrations and exercises translating poetry and prose. All languages welcome, but students must be proficient to the level of reading literature in the original language. Foreign language through 0600 or permission of the instructor.

COLT 1710B. Advanced Translation (LITR 1010F).

Interested students must register for LITR 1010F.

COLT 1710C. Literary Translation Workshop.

The primary focus of this course is the practice of literary translation as an art. Using the workshop format, each student will complete a project by the end of the semester. Examples and theoretical texts will illuminate the historical, ethical, cultural, political, and aesthetic values that underlie every translation, keeping an eye towards opening up the field beyond inherited practices to consider the contemporary implications of our choices, intentions, and purposes in translation. Open to all levels. Heritage speakers are welcome, collaboration is permitted, and an open-spirited approach to this developing and fascinating practice is strongly recommended.

COLT 1710D. Exercises in Literary Translation.

Exercises and investigations in the history, theory, and practice of literary translation. Students pursue individual projects for translation workshops. Common exercises draw on Shakespeare translation, from classic translations in Europe to unique examples like Nyerere's Swahili *Caesar* and current projects like Shakespeare in Modern English or *The Chinese Shakespeare*. Prerequisite: one foreign-language course in literature at 1000-level (or equivalent).

COLT 1810A. Onnade: The Woman's Hand in Classical Japanese and Medieval Western Literature.

A consideration of various genres of women's writing from 700 to 1450 C.E. focusing on such issues as literary conventions, the relationship to the vernacular, the role of religion in education, and questions of gender and social class. Writers may include Berthgyth, Murasaki Shikibu, Sei Shōnagon, Héloïse, Marie de France, the comtesse de Dia, Lady Nijō, Julian of Norwich, Christine de Pisan, and various anonymous women.

COLT 1810B. Aesthetics in the Colonial Frame.

Draws together works from a wide range of contexts and genres—Enlightenment philosophy, romantic travel literature, Arabic novels and poems—to compose a conversation about aesthetics in the colonial context of Egypt. Senior Seminar.

COLT 1810C. City (B)Lights.

Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images, American cities and literary works are foregrounded.

COLT 1810E. Dwellers Amid the Clouds: the Literature of the Court.

A survey of three court traditions—Heian Japan, medieval Iceland, and early modern England—in which the relationship between the literary genres and the specific social context from which they emerge is highlighted in the form of particular literary conventions. Topics include the question of patronage, the function of particular literature as shibboleth, the idea of spectacle and play, the politics of literature, and the trope of irony as courtly emblem.

COLT 1810F. Enlightenment and Anti-Enlightenment in Eighteenth-Century Germany.

Some of the most intractable questions of contemporary philosophy were vigorously debated in eighteenth-century Germany. What are the limit of reason? Does its supposed neutrality and universality mask its own set of prejudices? Are there any universally valid claims in truth or ethics? How, why, should Christian, Jew, and Muslim tolerate their differences? We will read literary and philosophical works by Hamann, Herder, Jacobi, Kant, Lessing, and Mendelssohn.

COLT 1810G. Fiction and History.

How the historical fiction that has flourished over the past four decades challenges the notions of objectivity and totalization, while providing alternative viewpoints for the reconstruction and reinterpretation of the past. Authors considered include Grass, Doctorow, DeLillo, García-Márquez, Allende, Danticat and Gordimer. Theoretical texts by White, LaCapra, Benjamin, Ricoeur, and Chartier. Films such as *The Official Story* and *Europa, Europa* will be viewed and incorporated into the discussions. Prerequisite: two previous courses in literature. Enrollment limited to 19. Instructor permission required.

COLT 1810H. Tales of Two Cities: Havana - Miami, San Juan - New York.

In this course we will compare representations of Havana and San Juan in contemporary fiction and film to literary inscriptions of Cuban Miami and Puerto Rican New York. We will explore mapping the city as mapping identity and city-writing as reconstruction and creation, viewing through the eyes of children, tourists, and urban detectives. Authors include Antonio José Ponte, Roberto G. Fernández, Mayra Santos Febres and Ernesto Quiñones. Good preparation for study abroad on the Brown-in-Cuba program. Not open to first year students.

COLT 1810I. Gates of Asia.

An exploration of the growth of European knowledge of Asia from the rise of the Mongol empire through the Great Game and its aftermath. Primary sources include three kinds of accounts provided by travelers who set their hearts on Asian exploration: personal narratives, official reports and dispatches, and scholarly studies of the exotic cultures. Enrollment limited to 20.

COLT 1810J. History and Aesthetic Form.

In this course, we will examine the co-articulation of theories of history with theories of language and aesthetics. Focus will be on the interdependence between an emerging interest in history and the origin of language, and approaches to literary history, genre definition, and general aesthetic categories. Readings to be selected from Vice, Rousseau, Herder, Lessing, Schiller, Hegel, Novalis, Lukacs, Adorno, Derrida and De Man.

COLT 1810L. Housing Problems.

Examines architectural figures and problems of containment and construction in a variety of literary and theoretical texts. We will consider how images of buildings structure texts and outline spaces for subjectivity. Themes include the gothic, haunted houses, foundations, ruins, walls, and doors. Texts selected from Descartes, Derrida, Goethe, Hegel, Austen, Coleridge, Poe, Baudelaire, Melville, Hawthorne, Kafka, Tschumi and Borges.

COLT 1810M. Image and Text: the Reconstitution of Narrative.

An examination of the tradition of illustrated narratives in several premodern cultures: the early 11th-century Japanese *Genji Monogatari*, the medieval English *Canterbury Tales*, and the ancient Indian epic the *Māhābhārata*. Discussion focuses on the nature of iconography and symbolism; the historical privileging of text over image; the significance of parallel visual and verbal representation and its implications for culturally-specific theories of reading. Seminar.

COLT 1810N. Freud: Writer and Reader.

A broad survey of Freud's writings, with particular emphasis on psychoanalysis' relevance to literary theory and cultural analysis. Readings include Freud's major works, as well as secondary sources focused on applications to literary studies.

COLT 1810O. Latin American Literature in Dialogue with France.

Complicates the question of influence in Latin American literary and intellectual self-fashioning, specifically with regard to France. Explores the productivity and perplexity of this relationship through romanticism and articulations of the real (as realism, surrealism and magical realism). Approaching the twenty-first century, considers Latin American perspectives on French theories of feminism, postmodernism and globalization.

COLT 1810P. Literature and Medicine.

The purpose of this course is to examine a number of central issues in medicine-disease, pain, trauma, madness, the image of the physician--from the distinct perspectives of the sciences and the arts. Texts will be drawn from authors such as Sophocles, Hawthorne, Gilman, Tolstoy, Kafka, Anderson, O'Neill, Hemingway, Ionesco, Verghese, Barker, Sacks, Foucault, Sontag, Scarry, Gawande and others. Open enrollment course: lecture + section.

COLT 1810Q. Literature and Money in the Age of Paper.

Focuses on the complex and highly ambivalent relationship between literature and money in nineteenth-century European literature. Works by Poe, Balzac, Dickens, Baudelaire, Stevenson, Hardy, and Zola. Relevant philosophical writing by Smith, Marx, Nietzsche, and Derrida.

COLT 1810S. Literature and the City.

Literature's obsession with the modern city, in 19th- and 20th-century American, English, and French fiction and poetry, in writers such as Blake, Whitman, Balzac, Dickens, Baudelaire, Rimbaud, Eliot, Williams, Bellow, Morrison. Opportunities for work in other literatures and genres, e.g., in Germany, Brecht.

COLT 1810T. Literature and the Culture of Capitalism.

This course will examine the literary responses to capitalism in terms of five organizing tropes: regionalism, urbanization, consumerism, aestheticism, and modernism. Our investigation will begin sometime in the early 19th-century with the moment that consolidated conditions favorable for industrialization and conclude in the first decade of the 20th-century with literary modernism and the collapse of the cultural myths of progressive enlightenment and democracy. Readings include texts by Wordsworth, Malthus, Sue, Mayhew, Marx, H. Rider Haggard, Stowe, Carroll, Zola, Wilde, Stoker, Freud. Three papers and a final essay.

COLT 1810U. Angela's Ashes and What Went Before: Irish Immigration and Literary Creation.

Readings in the major works of Joyce, Beckett and Farrell, without forgetting Jonathan Swift and William Butler Yeats.

COLT 1810V. Marx and Modern Literature.

A contrastive and integrative study of the range of Marx's writings and works by writers such as Shakespeare, Dickens, Baudelaire, Flaubert, Woolf, and Stevens. Examines Marx's leading concepts in philosophy, history, economics, ideology, and aesthetics in relation to the particularities of literary forms. One or two short papers and a longer final study of a literary work chosen from the student's major field. Enrollment limited to 30.

COLT 1810X. Mirror for the Romantic: *The Tale of the Genji* and *The Story of the Stone*.

In East Asian Buddhist culture, the mirror is a symbol of the mind in both its intellectual and emotional aspects. These masterworks detail the lives and loves of Prince Genji, cynosure of the medieval Japanese court and Jia Baoyu, the last hope of an influential Chinese clan during the reign of Manchus. We examine both works as well as the sources of Genji and literary aesthetics of the Tang dynasty. Prerequisites: COLT 0710, RELS 0040 (0088) or 0100 (0006), or permission of the instructor.

COLT 1810Y. Modern Japanese Women Writers.

An examination of women's writing from the Meiji Period (1868-1912) to the present. Readings include works from such writers as Higuchi Ichiyo, Miyamoto Yuriko, Enchi Fumiko, and Tsushima Yūko. Topics include the relation of 'woman' to the modern, the legacy/construction of the past, the implications of *joryū bungaku* (women's literature), and the problem of resistance and subversion.

COLT 1810Z. Nietzsche.

Intensive and extensive reading of Nietzsche and some of the reception that has made him so prominent in contemporary literary and cultural theory. Topics include Nietzsche's aesthetics, theory of history, the concept of the eternal return, European decadence, misogyny and anti-semitism. Texts will be selected from Nietzsche, Heidegger, Horkheimer and Adorno, Deleuze, Derrida, Irigaray, de Man, Kofman, Lacoue-Labarthe, Foucault, Hamacher, Ronell, etc.

COLT 1811B. Postcolonial Theory and Fiction.

There is hardly a place in the contemporary world which has not somehow been touched by the histories and consequences of colonialism. What does it mean, then, to speak about the postcolonial? Should the postcolonial be seen as a new periodization in the study of world literatures, a recent trend in critical theory, or another type of minority discourse involving previously colonized peoples?

COLT 1811D. Reading Revolution, Representations of Cuba, 1959-The Present.

Considers the cultural and ideological impact of the Cuban revolution inside and outside Cuba. Starting in the 1960s, reads Latin American "boom" novels, European theorists and U.S. civil rights activists. Moving to today, addresses post-Soviet Cuba's literary production and the impact of new technologies on culture, as well as political change under Raúl Castro. Fiction, film and essays by Castro, Sartre, García Márquez, Reinaldo Arenas, Antonio José Ponte, Fernando Pérez and others. Excellent preparation for the Brown-in-Cuba program.

COLT 1811F. The "Tenth Muse" Phenomenon.

The texts and contexts of women writing in English, Spanish and French, during the sixteenth and especially seventeenth centuries. Often dubbed "Tenth Muses," these first early modern women writers to gain public prominence wrote iconoclastic texts and/or epitomized socially sanctioned scripts for women. Authors include: Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana, Mme de Lafayette, Maria de Zayas.

COLT 1811H. The Idea of Beauty.

What does it mean to be beautiful in classical and European literature? How is beauty defined by thinkers from Plato to Benjamin? Readings from the classical, medieval, Renaissance, and modern periods are brought into question by works concerning the problems of aesthetics. Works by Plato, Aristotle, Horace, Augustine, Dante, Petrarch, Shakespeare, Racine, Tolstoy and others in addition to readings from the history of aesthetics from Kant through the present.

COLT 1811I. The Nordic Legacy: Ibsen, Strindberg, Munch and Bergman.

This course examines the work of four major Scandinavian artists. As key figures in the development of modern theater, painting and film, these four figures share a number of common concerns: challenging the pieties of bourgeois mores; reconceiving the relations between the sexes; moving from the social to the metaphysical; undermining the unitary view of the self; and forging an artistic "language" through which the in-dwelling power of the psyche can be revealed.

COLT 1811J. The Paternalistic Thriller and other Studies in Colonial Fiction.

The impact of colonialism on European fiction from the rise of empire to its decline and fall, focusing on authors who wrote from direct contact with the peoples of Africa and Asia, such as Rudyard Kipling, Joseph Conrad, T.E. Lawrence, E.M. Forster, and Isak Dinesen. Topics will include romantic images of conquest, imperial ideology in literature, differing attitudes towards acculturation, and the changing symbolism of exotic settings.

COLT 1811L. Travel, Tourism, Trafficking through the Ages.

Why go away to find ourselves? How does the self constitute itself "elsewhere"? This course considers the genre of travel writing and its theory: how are roots, routes, and rootlessness treated in diverse racial, spiritual, sexual, national, and imperial encounters. Today, when cosmopolitan tourists, intellectuals, or exotic and erotic adventurers share the same beach as downtrodden, abject refugees and their traffickers, what are the cultural, ethical and political implications of leisurely seeking out (self-) discovery, disappearing authenticity, and commodified otherness? Readings include Herodotus, Equiano, Chatwin, Kingsley, Montagu, Darwin, Twain, Miller, Durrell, Baldwin, Phillips, Iyer, Houellebecq, Woolf, Thompson, Theroux, Baudrillard

COLT 1811N. Persons and Portraits: Self in Early Modern Europe.

Challenges the presumed supremacy of the "modern subject," the sovereign rational mind personified by Descartes. Rival theories of self in Machiavelli, Luther, Montaigne, Hobbes, Pascal, and Spinoza are explored alongside the richly embodied "persons" pictured in painting (Titian, Rembrandt, Velázquez), conduct literature (Castiglione, La Rochefoucauld), drama (Milton, Molière, Calderón), psychological fiction (La Fayette), and satiric prose (La Bruyère).

COLT 1811O. Modernism: From Paris to Athens, 1900s - 1950s.

The course examines Modernism as it developed in major European cities. Apart from focusing on major venues of modernism (Zurich, Berlin, Paris) it centers on marginal geographical spaces with specific emphasis on Athens, Greece. It further explores the rise of such movements as Cubism, Futurism, Dadaism and Surrealism and proceeds to explore the reaction of Greek modernists to these movements.

COLT 1811Q. Poisonous or Prophetic?.

Wright's *Native Son*, Burrough's *Naked Lunch*, Derrida's *Specters of Marx*, and Rimbaud.

COLT 1811S. Philosophy and Literature of German Romanticism.

A fateful collaboration between philosophy and literature was centered in Germany roughly between 1788 (Schiller's 'Gods of Greece') and 1807 (Hegel's *Phenomenology of Spirit*). A survey of the major literature of this period, organized thematically, will serve as an introduction to this complex phenomenon. Authors include (in translation) Fichte, Goethe, Hölderlin, Novalis, Schelling, Schiller, and Tieck.

COLT 1811T. Levantine Cities: Alexandria, Istanbul, Athens.

Explores the literary and filmic imagination of three Eastern Mediterranean cities, Alexandria, Istanbul, and Athens. It examines the history, culture and politics of these cities and the ways in which they emerge in literature, film, poetry and travelogues. How is the city defined in these works? How are social tensions addressed, such as those between Greeks and Turks and Arabs or between Christians, Muslims and Jews? How are thematic and historical issues resolved, such as those involving antiquity and modernity, tradition and modernization, colonialism and nationalism, religion and secularism? How are these cities defined in the works of western writers? Enrollment limited to 30.

COLT 1811U. Literature and the Arts.

Readings in the apparitions and articulations of the arts in fiction, philosophy, criticism and poetry. Focus on the interaction between language and other media, the figure of the artist, problems of expression and performance. Readings from Diderot, Hegel, Balzac, Hoffmann, Baudelaire, Poe, Nietzsche, Wagner and Mann.

COLT 1811W. Visual Obsessions: Japanese Film, Fiction, and Modernity.

The pervasiveness of visual obsessions in contemporary Japanese culture prompts us to rethink the impact of modernity in terms of visuality. Through the examination of a wide range of filmic, literary, and visual art forms produced in Japan from the 1920s to the 2000s, this course explores the question of visuality as a historically and technologically conditioned way of seeing. The issues to be considered in this class include: the construction of "Japanese" aesthetics, orientalism, ocularcentrism, the problems of interiority and the subject, the relation between habit and the everyday, and cultural nationalism. This course will introduce important theoretical concepts about vision and modernity, asking students to interrogate these concepts through the close examination of specific Japanese texts and films discussed in class. Writers, filmmakers, and visual artists include: Tanizaki Jun'ichirō, Edogawa Rampo, Abé Kōbō, Karatani Kōjin, Ozu Yasujiro, Kurosawa Akira, Ichikawa Kon, Suzuki Seijun, and Murakami Takashi.

COLT 1811X. Marx and his Critics.

This course will focus on a close study of the work of Karl Marx and its legacy for critical theory. The first part of the course will be dedicated to a reading of Marx's most important texts, with special emphasis given to his theories of economy, of ideology, alienation and fetishism. The second part will be dedicated to a reading of some of Marx's most important readers: Lukacs, Gramsci, Althusser, Zizek and Derrida. Instructor's permission required.

COLT 1811Y. Genius and Melancholia in the Renaissance.

Explores Renaissance accounts of genius, genial inspiration, and melancholia, and their accompanying ideas of intellection and immortality. Primary materials include Dürer, Montaigne, Rabelais, Ficino, Ariosto, Erasmus, Saint Teresa, and Luther. Secondary or contemporary texts include Warburg, Panofsky, Saxl, Klibansky, Wind, Benjamin, Kierkegaard, and Sebald.

COLT 1811Z. Literature and the American Presidency.

We shall read widely in writings by, and about, selected American presidents, but also focus on the ways in which presidents have used literature as a dictional source in their own writing and thinking. We will attend also to the relationship of culture to power as evidenced in other textual media, such as film.

COLT 1812A. Literatures of Immigration.

Why do people migrate? How do literary genres, including poetry, fiction, autobiography and memoir, characterize immigrant experiences? How is the experience of "coming from somewhere else" similar and different for each subsequent generation of immigrants? How does literature indicate the impacts of migration on the culture, politics and economics of the countries of immigration and emigration? How do literatures of immigration imagine the past, present and future of networks and communities of immigrants? Focusing on twentieth-century literary texts and the socio-historical context of mass migration, the first half of the course examines immigration literature in the U.S., the second half of the course explores literatures of immigration beyond the U.S., and the course concludes with an inquiry into immigration in our presently globalizing age.

COLT 1812B. Aesthetics and Politics (ENGL 1900E).

Interested students must register for ENGL 1900E.

COLT 1812C. The Ethics of Romanticism (ENGL 1560Y).

Interested students must register for ENGL 1560Y.

COLT 1812F. Violence and Representation.

Traces diverse genealogies from which to theorize violence and its relation to aesthetics. We will identify a disciplinary philology for "violence" as a signifier within visual culture, art practice and literature; historicize key transitions in varied invocations of violence in representation; study texts (photography, film, novel, installation) that create a space where violence can be discussed as both everyday and extraordinary. Some issues to be considered: representability in moments of historical crisis (war, colonialism, genocide); the efficacy of genres and artistic movements in representing violence (tragedy, surrealism, theater of cruelty); and the violence of representation (surveillance, spectatorship, voyeurism).

COLT 1812H. "Women's Literary Make-up": Mirrors, Maquillage and the Tenth Muse.

Focuses on the problem of creative inspiration for women writers and how the pursuit of aesthetic perfection, both somatic and literary as well as their interrelation, becomes a recurring motif in women's writing from various traditions. Readings will include fiction and poetry from the English, Japanese, and Arab traditions, both modern and pre-modern. This is an undergraduate seminar open to juniors and seniors. Prerequisite: coursework in literature and at least one course in gender studies/women's studies. Instructor permission required.

COLT 1812I. Collective Struggles and Cultural Politics in the Global South.

Traces the historical and ideological mapping of the North-South axis and the regional mythologies informed by racism, empire and nationalism. We will examine the ways in which imagined geographical hierarchies continue to shape cultural and political struggles and the vectors of globalization. Along with readings on imperial histories, liberal and neoliberal political economies, and postcolonialism this class seeks to establish connections between resistant narratives and collective struggles in the Global South. We will discuss political philosophies of Marx, Gramsci, Arendt, Fanon, Harvey and Schwarz, as well as the works of Achebe, Hurston, Kincaid, Rushdie, Roy, Sembene, and Wright. First year students require instructor permission.

COLT 1812J. Poetry and Ethics.

If history is, as Charles Olson claims, a "form of attention" and we are all participants in a collective reality relative to our capacity for language use, what ethical issues come to bear on what the poet chooses to attend to--not only as subject matter but as form? Can poetic language be sufficiently responsive to the challenge of empathy? Is there an ethics of attention? Guided by philosophical texts, we shall investigate ethical possibilities in a range of world poetics.

COLT 1812K. European Intellectual and Cultural History: Exploring the Modern, 1880-1914 (HIST 1220).

Interested students must register for HIST 1220.

COLT 1812M. Erotic Desire in the Premodern Mediterranean (CLAS 1750L).

Interested students must register for CLAS 1750L.

COLT 1812N. Culture and Anarchy (ENGL 1511I).

Interested students must register for ENGL 1511I.

COLT 1812O. Lying, Cheating, and Stealing (ENGL 1760V).

Interested students must register for ENGL 1760V.

COLT 1812P. Essaying the Essay (CLAS 1120J).

Interested students must register for CLAS 1120J.

COLT 1812S. Violence and the Multiple Responses of Medieval France.

Examines violence and its representations from a variety of perspectives: literary, historical, psychological, etc. Different literary forms (11th - 13th) introduce conflicts between competing value systems, problems raised by militant religion, vendettas and the pursuit of justice. Across the gamut of appetites and emotions, violence takes a variety of shapes, producing broken hearts and broken heads. The beautiful seductiveness of violence, despite its horrors, is frequently transformed into artistic and literary expression, from the highest forms of Western tradition to the cheap exploitations of pulp fiction. What can the Middle Ages teach us about violence, yesterday and today? Not open to first year students.

COLT 1812T. On Being Bored (ENGL 1511L).

Interested students must register for ENGL 1511L.

COLT 1812U. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).

Interested students must register for ENGL 1900R.

COLT 1812V. War, Anti-War, Postwar: Culture and Contestation in the Americas.

This course addresses the relationship among language, war and the arts from the mid-twentieth century on. Even as armies engage in combat around the globe, the term "war" legitimates a much broader spectrum of situations, lending them the structure of organized hostility and the moral opposition of right to wrong. From the "Cold War" to the "War on Terror", to Argentina's "Dirty War" and Cuba's "War on Imperialism", literature, cinema, visual arts and community-based projects have responded to real and rhetorical declarations of "war." Drawing from U.S. and Latin American contexts, we will explore a range of responses and challenges.

COLT 1812W. Love, Adultery, and Sexuality (RUSS 1450).

Interested students must register for RUSS 1450.

COLT 1812X. Literature and History: Russian Historical Imagination in the European Context (RUSS 1600).

Interested students must register for RUSS 1600.

COLT 1812Y. Central Europe: An Idea and its Literature (SLAV 1790).

Interested students must register for SLAV 1790.

COLT 1813B. Dying God (CLAS 1930B).

Interested students must register for CLAS 1930B.

COLT 1813C. Erotic Desire in the Premodern Mediterranean (CLAS 1750L).

Interested students must register for CLAS 1750L.

COLT 1813D. Issues in World Literature (ENGL 1761Y).

Interested students must register for ENGL 1761Y.

COLT 1813E. Chinese Women, Gender and Feminism from Historical and Transnational Perspectives (EAST 1950B).

Interested students must register for EAST 1950B.

COLT 1813F. Communication Culture and Literary Politics (MCM 1503Q).

Interested students must register for MCM 1503Q.

COLT 1813H. God, Sex and Grammar: Literary Ethics in Medieval Europe.

What does it mean to read and write ethically? While modern culture values intellectual property, many medieval texts celebrated what we call plagiarism. On the other hand, medieval thinkers saw serious consequences in literature, which could lead authors and readers to heaven or hell. But then as now, ethics were rarely clear-cut, subject to forces as diverse as religion, sexual desire, capitalism, and even language itself. Reading some of the great authors of the period, as well as modern critical reflections, we will explore the ethical dimension of literary production in the medieval world and in our own society.

COLT 1813I. The Colonial and the Postcolonial Marvelous.

A celebration and critique of the marvelous—as the strange, wondrous, magical, or unreal—as it has been wielded in Spanish American and related literatures (French Caribbean, Brazilian). We follow the marvelous from European exoticizing of the New World during the colonial period to its postcolonial incarnations in "magical realism" and beyond. We attend particularly to the political, ideological, social, and commercial implications of the marvelous in writers including Carpentier, Chamoiseau, Columbus, Esquivel, Sor Juana Inés de la Cruz, and García Márquez. Readings in English, though you may read texts in the original French, Spanish, or Portuguese.

COLT 1813K. The Problem of the Vernacular.

It has been said that a language is a dialect with an army and a navy. Under what conditions do dialects, vernaculars, creoles, and slangs become mediums for literary and artistic expression? How have writers in different cultures managed the relationship between their "official" national languages and their more intimate mother tongues? This course explores this problem in a variety of literary traditions, including Chinese, Arabic, Greek, Hebrew, Scots, Latin and the Romance vernaculars, and a variety of other languages.

COLT 1813M. Making a List.

The list is one of the most ancient and enduring figures of rhetoric and one of the most versatile means of organizing literary works. From the catalogues of Homeric epic to the postmodern fables of Borges to new digital media, from medieval encyclopedism to Renaissance copia, from the descriptive realism of novels to modernist techniques of collage, the simple list has produced an astonishing variety of effects in a wide range of genres and authors. We will read widely in this course, from many periods, literatures, authors, and genres.

COLT 1813N. Early Modern Women's Writing.

Interested in women writers, feminism? If so, it's vital to understand their early modern origins. This course explores the rich feminist tradition enacted in the often edgy texts of women writing on the cusp of modernity. We study writers from England, France, Latin America, North America, and Spain, focusing on self-fashioning, gender and sexuality, love and marriage, imagined worlds, religion, eccentricity, and writing and fame. Authors include Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana Inés de la Cruz, Mme de Lafayette, María de Zayas. Enrollment limited to 20. Texts and class in English.

COLT 1813O. Adventures of the Avant-Garde.

In the early years of the twentieth century, a series of artistic movements rippled across the Western hemisphere, exploding conceptions of art and culture while reconfiguring international relations. Explores those movements, from their predecessors (Baudelaire, Rimbaud, Mallarmé), through overlapping –isms (Cubism, Futurism, Constructivism, Vorticism, Expressionism, Dada, Surrealism), to avatars in the Americas. In keeping with the avant-garde's cross-pollinating spirit, we study texts from a variety of traditions, forms, and genres: from poetry through prose to manifestoes, from painting and photography to film, music, and dance, touching on questions of translation and translatability between languages, cultures, and art-forms. Enrollment limited to 25.

COLT 1813P. Captive Imaginations: Writing Prison in the Middle Ages.

Many great works of the Middle Ages were written in prison or about the experience of imprisonment. Reading some of these masterpieces, we will discover why the medieval prison was such a fruitful space for poetic creation, and how the perspective of incarcerated writers helped to shape a diversity of literary traditions. Topics will include fortune and free will, sexual and cultural difference, and the construction of the individual. We will also explore the nature of medieval systems of captivity, which differed greatly from those of modern society. Selected authors: Boethius, Mas'ud Sa'd Salman, Juan Ruiz, Chaucer, François Villon.

COLT 1813Q. Literature and Judgement.

There exists a close but complex relationship between the acts of making literature and making judgments. This course will explore some of these relationships and ask, for instance: how does judgment weigh upon the literary act? how do literary considerations bear on our making judgments? what criteria are called forth in both of these moments? Texts treated will be literary, critical-analytical, legal, and cinematic, and include such authors as Arendt, Benjamin, Derrida, Freud, Henry James, Kafka, Kant, Primo Levi, Nietzsche, Tolstoy and Verga.

COLT 1813R. The Ekphrastic Mode in Contemporary Literature (ENGL 1762B).

Interested students must register for ENGL 1762B.

COLT 1813V. The Cash Nexus: Economy and Literature.

At a time when human existence is grounded with unprecedented conviction in a rigid set of utilitarian principles and materialistic values, the relationship between literature and various modes of economic exchange presents itself as a richly rewarding field of research. The texts we will focus on offer rare insights into the ways monetary factors affect personal identity, interpersonal relationships, and social life in general. These works reflect a diachronic tension between human interactions and financial transactions that will be the basis of our critical engagement with a series of issues and questions that are more pertinent today than ever before.

COLT 1813X. Getting Emotional: Passionate Theories (ENGL 1560W).

Interested students must register for ENGL 1560W.

COLT 1813Z. Soil: The Earth and Environmental Writing.

Why do people fight over soil? In an increasingly urbanized world, how have the ways we talk about soil, earth, and land shifted? In this class, we will explore the politics and aesthetics of writing about soil in its particular relations to ecology, homeland, geography, and race. Readings include Homer's *Odyssey*, Derek Walcott's *Omeros*, and ecological criticism from ancient China to Rachel Carson and Ramachandra Guha and beyond. Limited to 20.

COLT 1814A. Fashion and Power (GNSS 1960Y).

Interested students must register for GNSS 1960Y.

COLT 1814D. East-West Encounters: Politics and Fictions of Orientalism.

We will explore the myth of the East that develops in Europe during the Enlightenment in the wake of the extremely popular and influential translations of *The Thousand and One Nights* (Alf Layla wa Layla) in the early eighteenth century. We will focus on narratives of the encounter between East and West, on the discovery and construction of the Oriental "Other," and on its representation in the literary and visual culture of the Enlightenment. Particular attention will be paid to the figure of Shahrazad and the theme of the harem. We will study some modern versions of the *Arabian Nights*.

COLT 1814F. Erotic Desire in the Premodern Mediterranean (CLAS 1750L).

Interested students must register for CLAS 1750L.

COLT 1814G. Political Commitment in Arabic Literature.

This course will explore the history of and debates surrounding political consciousness and commitment in modern Arabic literature from the mid-20th century to the present. Through close readings of mainly novels, novellas, and short stories, we will ask how, why, and with what consequences Arab authors have challenged political realities with literary expression. We will trace the diverse strategies by which authors articulated their criticisms and envisioned justice grounded in their political context. Topics and themes will include socialist realism, resistance literature, alienation, self-criticism, and responses to colonialism and censorship. No knowledge of Arabic required.

COLT 1814L. Apartheid in Post-Apartheid South African Literature.

In this course, we explore the political stances that contemporary South African writing articulates towards the apartheid regime. We bring particular attention to the textual emergence of queer subjectivities. During apartheid (1948-1994), South Africa became a global symbol of racial injustice, and several South African writers became famous for their anti-apartheid literary production. Since 1994, critics have looked for new frames in which to analyze a "new" literature. In the search for "newness," however, we may forget to consider how the "old"—apartheid—reappears in post-apartheid literature. Authors include Zackie Achmat, K. Sello Duiker, Phaswane Mpe, and Zoe Wicomb.

COLT 1814M. Postcolonial Literature + Thought in the Middle East and North Africa.

This course examines postcolonial literature and thought in the ME and North Africa through literature, theory and film. During the early and mid-20th century, anticolonial movements transformed the region's cultural landscape, igniting new intellectual circles and literary scenes. We will study these movements as a launching ground for regional culture, interrogating local anti-colonial thought in works by writers such as Memmi and Fanon, and examining its evolution from the 1960's-1990's in work from Egypt, Algeria, Tunisia, Lebanon, Syria, Israel, Morocco and Palestine. How did intellectuals and artists articulate issues like national liberation, Westernization, radical culture, feminism, Marxism and Orientalism?

COLT 1814Q. Species Matters: Animals in Literature, Film, and Theory.

Nonhuman animals constitute the limit against which humans define themselves; at the same time, they challenge such boundaries. Thinking about animals, then, always also means exploring our own humanity. In this course, we will draw on the vast archive of literature, philosophy, and art that engages animals in order to reconsider what and how these representations mean. Considering our complex relationships with other animals, we will address questions of ontology, aesthetics, and ethics: What makes an animal? Can animals be represented? How should animal suffering affect us?

COLT 1814R. Reflections from Damaged Life: Freud, Adorno, Blanchot, Derrida (GRMN 1891).

Interested students must register for GRMN 1891.

COLT 1814S. The Balkans, Europe's Other?: Literature, Film, History.

Introduces the modern Balkans through a critical examination of literary and visual, historiographic and political, narratives. The course considers the contestation over a shared historical past and interreligious geographic space through common and divergent master narratives, motifs, myths, and recurring discourses. It also examines the region's aesthetic, religious, and political relation to Europe. Do the Balkans constitute a traumatized, "balkanized," self-colonized, abject modernity at Europe's edges, its inner alterity? Given the acclaim achieved by Balkan filmmakers since 1989, the course also asks how Balkan artists, caught in-between nationalism, Orientalism, Eurocentrism and globalization, assert agency and subjectivity and captivate our imaginations.

COLT 1814T. Maghrebi Fiction and Psychoanalysis.

Recent fiction from the Maghreb (Morocco, Algeria, Tunisia, Libya) in both French and Arabic has been preoccupied with mothers and fathers, gestation and regeneration, inheritance and transmission, filled with figures for desires and origins blocked or diverted. In this course, we will read Maghrebi literature together with works of psychoanalytic theory, focusing in particular on uncertain origins and aborted futures, geographies of the North African landscape and of the soul. Texts by Achaari, Berrada, Chraïbi, Djebbar, Kateb, al-Koni, Mustaghanimi, Wattar; Deleuze & Guattari, Fanon, Freud, Jameson, Jung, Lacan. Students of French or Arabic invited to read in the original.

COLT 1814U. Politics of Reading.

What do we do when we read? And do we even do something, or, as Blanchot suggests, do we rather let be? While being true to Michel de Certeau's plea for a "politics of reading" and an "autonomy of the reader", we will question its binary logic (active vs. passive): 1. by looking closely at the (de)construction of a "sovereign reader" in Hobbes' *Leviathan*; 2. by analyzing the reading imperative—"Read!"—as it is staged in Plato's and, above all, in Sade's erotics; 3. by taking seriously Walter Benjamin's paradoxical intuition that one should "read what was never written".

COLT 1814Y. Posthumanism and the Ends of Man.

Have we ever been human? As mechanical implants, virtual extensions, and organic interdependencies challenge self-contained conceptualizations of human being, posthumanist theories invite us to rethink our self-understanding. In this course, we will explore the human as a fluid category in perpetual motion. Focusing on female and gender nonconforming bodies, which have traditionally been situated at the limits of the human, we will analyze the critical potential of hybrids, androids, and cyborgs. Readings among others by Ovid, the Brothers Grimm, E.T.A. Hoffmann, Han Kang, and Octavia Butler; films will include *Metropolis*, *Mad Max: Fury Road*, and the series *West World*.

COLT 1815A. Apocalypse.

The End of the World is central to the Abrahamic faiths. From the Jewish sources, through Christian and Islamic tradition and until the present day, the idea of the End of World is decisive for the understanding of major events in history, such as the birth of Islam or Modernity. Through readings across the religious and the secular traditions starting with the Torah and ending with Steve Bannon and ISIS.

COLT 1815F. Memory, Commemoration, Testimony.

In this course we will study problems of remembering and forgetting in a variety of texts including poetry, philosophy, psychoanalysis, memoirs, public monuments, memory studies and trauma theory. We will explore the roles of language and representation in dealing with the past, the temporality of the self, the operation of the unconscious, the memorial and the monument. We will also look at the politics of memory in relation to the cultural traumas of slavery, the Holocaust, Viet Nam and 9/11. Readings from Rousseau, Hegel, Wordsworth, Proust, Derrida and de Man; Freud, Caruth, Saidiya Hartman, Segalen; Arendt and Reznikoff.

COLT 1815G. Repetition: Kierkegaard, Nietzsche, Freud (GRMN 1200D).

Interested students must register for GRMN 1200D.

COLT 1815I. Torn Halves of Modernism.

This course analyzes the constitutive contradictions of modernist works from a global perspective. We will address, for instance, tensions between the periphery and the metropolis, city and countryside, realism and modernism, aesthetic autonomy, commodification and political commitment. We will also examine these questions across various media: novels, poetry, photography, architecture and film. Readings include works by Dos Passos, Faulkner, Döblin, Manuel Maples Arce, Roberto Arlt, Patrícia Galvão.

COLT 1815O. Modern Greece in the World (MGRK 1240).

Interested students must register for MGRK 1240.

COLT 1815P. The Coming Apocalypse: Between the Earth and the World (HMAN 1974L).

Interested students must register for HMAN 1974L.

COLT 1815R. Germans and Jews (GRMN 1340Y).

Interested students must register for GRMN 1340Y.

COLT 1815T. Narratives of Disability in Greek and Latin Literature (CLAS 1070)..

Interested students must register for CLAS 1070.

COLT 1815U. Encountering Monsters in Comparative Literature.

What is a monster? What happens when one encounters a monster? This literature-based seminar considers monsters in different literary traditions, including ancient epic, folktale, poetry, theory, science fiction, and cinema. Monstrous figures from different cultural traditions, places, eras, genres, and forms will guide us through various representations of monstrosity—a concept which both invites and defies definition. We will ask: What cultural and imaginative needs do monsters fill? How do monsters help us think about identity politics, and the cultural production of ideas of self and other? To what extent are monsters tools of ideological oppression, and to what extent are monsters liberatory figures that offer conceptual alternatives to systems of oppression and violence?

COLT 1815V. "Blitzlesen", or Fascism and Speed-reading: Deleuze, Cixous, Heidegger.

Today everyone, it seems, is a lightning reader, or "Blitzleser". Rather than feel guilty about this, our course will ask: what would it mean to speed-read responsibly? Reading is, like democracy, always a matter of counting, of deciding which frequencies count (whether of letters, words, motifs etc.). Speed-reading risks overloading democracy with too much information and too many dots to connect, feeding paranoid narratives in the style of QAnon or indeed Nazism itself. How to speed-read like a democrat? Our eyes will dart from Deleuze's claim that Cixous invented stroboscopic literature—difficult literature which only becomes readable when one reads quickly—to fascism's obsession with speed, which led Hannah Arendt to claim fascism desires "only a movement that is constantly kept in motion." Key authors include: Bernhard, Woolf, Martinetti, Deleuze, Guattari, Nancy, Lacoue-Labarthe, Heidegger. Media: The Lighthouse, Speed Racer.

COLT 1815W. How to Do Things with Modernism (HMAN 1976F).

Interested students must register for HMAN 1976F.

COLT 1815Z. Between Word and Image: The Twentieth-Century Arab Avantgarde.

What is the Arab avantgarde, and why is visuality its main project? How do experimental works of art and literature question dominant historical and political narratives? This seminar explores form-agitating literary and artistic works that emerged from major Arab cities in the twentieth century. It examines the role of the metaphorical and literal image as a new mode of storytelling, as an act of witnessing and documenting. Throughout the course, we will also touch on themes of memory and nostalgia, postcolonial nationalism, freedom and commitment, exile and return, as we navigate the complexities and developments of Arab cultural modernisms. Most primary texts will be read in Arabic with English translations offered when available. At least three years of Arabic (or equivalent) are required for enrollment.

COLT 1816. Cultures of Fascism.

It has often been stated that fascism, as a totalitarian political system, could not produce a culture of its own but only propaganda or at best ideology. In this course we will explore this proposition by exploring some of fascism's products in texts, film, art and architecture through the lens of critics and theorists of fascism such as Arendt, Benjamin, Kracauer, Gramsci, Bataille, Primo Levi (among others). Our focus will be on the Italian and German examples.

COLT 1970. Individual Independent Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 1980. Group Independent Study.

Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

COLT 1990. Senior Thesis Preparation.

Special work or preparation of honors theses under the supervision of a member of the staff. Open to honors students and to others. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 2450. Exchange Scholar Program.**COLT 2520A. City (B)Lights: Interdisciplinary Approaches to the Study of the City.**

Literary texts from the U.S., England, France, and Germany, together with substantial readings in the social sciences and selected works of art and cinema. Intended as a laboratory for interdisciplinary studies in an expansive educational spectrum for humanities Ph.Ds.

COLT 2520B. Dark and Cloudy Words: Metaphor and Poetry.

An examination of the philosophical significance of metaphor and its literary function in poetry ranging from *makurakotoba* in the *Man'yōshū* to *kenningar* in Skaldic poetry, to the use of the trope in a number of modern poets. Critical writings include works by Aristotle, Ki no Tsurayuki, Shelley, Christine Brooke-Rose, Max Black, Donald Davidson, Paul Ricoeur, and Jacques Derrida.

COLT 2520C. Irony: Language and Failure.

A study in the trope of irony and the ways in which it complicates the possibility of understanding. Focus on Socratic irony, the dialogue, and Romantic irony. We will also consider the epistemological implications of irony and the role it plays in contemporary criticism. Readings from Plato, Quintilian, Diderot, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, De Man, Rorty and Derrida.

COLT 2520D. The Literature of the Americas.

Forsaking the dominant Eurocentrism in comparative literary studies, this seminar will search for the common links between the diverse literatures of North and Latin America, approached in relation to one another rather than to "Old World" models. Authors to be considered include Margaret Atwood, Julio Cortázar, Carlos Fuentes, William Faulkner, Gabriel García-Márquez, Clarice Lispector, Machado de Assis, Toni Morrison and João Guimarães Rosa.

COLT 2520E. Dialectics of Word and Image.

Explores how proximities and interactions of text and image construct and complicate meaning. It brings together a constellation of theoretical and historical readings that have bearing on particular problems generated at the nexus of word and image. Readings by Horace, Abd al-Qahir Jurjani, Lévi-Strauss, Ricoeur, Derrida, Mitchell and others will anchor a cross-disciplinary investigation of European and non-European paradigms of the relationship between text and image in various literary and visual cultures since late antiquity. We will examine specific examples of the interaction between word and image in several Islamic manuscripts.

COLT 2520F. Theories of the Lyric.

Through readings of recent critical discussions of the lyric genre, we will explore more general methodological problems of literary theory. Questions to be raised include: the role of form, structure and tropes in analyzing poetry; problems of subjectivity and voice; the relation between poetry, history and politics; the function of reading; and the problematic "objectivity" of criticism. Readings from Jakobson, Benveniste, Jauss, Benjamin, Johnson, De Man, Lacoue-Labarthe, Agamben, Badiou and Derrida. Focus on poets Hölderlin, Baudelaire and Celan.

COLT 2540C. Romanticism and Cultural Property (ENGL 2560Y).

Interested students must register for ENGL 2560Y.

COLT 2540D. After Postmodernism: New Fictional Modes (ENGL 2760X).

Interested students must register for ENGL 2760X.

COLT 2540E. Political Romanticism (GRMN 2320E).

Interested students must register for GRMN 2320E.

COLT 2540F. Romanticism and Cultural Property (ENGL 2560Y).

Interested students must register for ENGL 2560Y.

COLT 2540M. Latin American Existential Literature (HISP 2520L).

Interested students must register for HISP 2520L.

COLT 2540N. Alexandrian Poetry (CLAS 2930A).

Interested students must register for CLAS 2930A.

COLT 2650A. Comparative Literature and Its Others.

Is there such a thing as comparative literacy? This course examines the history and practices of Comparative Literature as a major discipline, including its self conceptualizations, its relations with national literatures and with other disciplines, and its evolving methods of reading. Texts include literary as well as theoretical ones.

COLT 2650C. Romantic Theory: Theirs and Ours.

Recent criticism will serve as the point of departure for looking into the relation of literary criticism to its Romantic history. Emphasis on how "Romantic" problems inform contemporary criticism on such topics as periodization, literature and history, theory of symbol and allegory, and the relation between literature and philosophy. Texts will be selected from Benjamin, M.H. Abrahms, de Man, McGann, Lacoue-Labarthe and Nancy, Chase, et. al.; Fichte, Schelling, Coleridge, Wordsworth, Schlegel, Novalis.

COLT 2650D. Theory of Comparative Literature.

Designed to introduce students to some of the central theoretical issues that define the discipline of Comparative Literature through the study of twelve central texts in the field. We will begin with Erich Auerbach's foundational text *Mimesis*, and end with Gayatri Spivak's *Death of a Discipline*. In between the authors to be read and analyzed will be Bakhtin, Lukacs, Barthes, Derrida, DeMan, Jameson, Greenblatt and others. Open to graduate students, and to undergraduates by permission of the instructor.

COLT 2650E. Theory of Lyric Poetry.

No description available.

COLT 2650F. Irony.

A study of the trope of irony and its evaluation, especially in the Romantic tradition. Focus on the epistemological implications of irony and the role it plays in the philosophical tradition and in contemporary criticism. Readings from Plato, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, De Man, Rorty and Derrida.

COLT 2650G. Literary Readings in Aesthetic Theory.

The seminar will examine not just the major themes but also the rhetorical complexities of a number of powerful texts in the history of aesthetic theory. Authors to be considered include Plato, Aristotle, Longinus, Burke, Kant, Hegel, Nietzsche, Heidegger, Benjamin, Adorno. Literary texts will be considered in conjunction with these texts, sometimes by way of famous arguments or exchanges (e.g., Heidegger and Staiger on Mörike).

COLT 2650H. On the Sublime (GRMN 2660A).

Interested students must register for GRMN 2660A.

COLT 2650N. Hamlet: Appropriation, Mediation, Theory (ENGL 2360X).

Interested students must register for ENGL 2360X.

COLT 2650T. Foundations of Literary Theory (POBS 2600C).

Interested students must register for POBS 2600C.

COLT 2650U. Theory, Technics, Religion (ENGL 2901K).

Interested students must register for ENGL 2901K.

COLT 2650V. Italian Theory: In and Out (HMAN 2400U).

Interested students must register for HMAN 2400U.

COLT 2650W. Vision and Visualization in Literature: The Rhetoric of Enargeia (CLAS 2110K).

Interested students must register for CLAS 2110K.

COLT 2650X. Police, Strike, Justice: Revisiting Walter Benjamin's "Critique of Violence" (GRMN 2662F).

Interested students must register for GRMN 2662F.

COLT 2720A. Advanced Practicum in Literary Translation.

Readings in theory of translation, and in monuments of literary translation from Renaissance times to the present, will be assigned to students needing further background in these areas. Students will each complete two projects: (1) by mid-semester, a critical treatment of a published translation or a comparison of such translations; (2) for the final seminar presentation and paper, the student's own translation into English from some literary text in a language familiar to the student.

COLT 2720B. Theory and Practice of Literary Translation.

Readings in the history and theory of translation from the Renaissance to the present, along with selected major examples of literature in English translation. Students will write two papers: (1) an analysis of a theoretical issue in translation, with ample attention to the historical context of that issue; and (2) either a discussion of an important translation as a criticism of the original work; or a critical comparison of several translations of an original work; or an annotated translation into English of a literary text from a language familiar to the student.

COLT 2720C. Literary Translation.

Study and practice of translation as art and a potent form of literary criticism. Translation is an act of interpretation, which informs the language of the translator and the text as a whole: context, intent, and language. Discussion will include the impact of cultural difference, tone and time on translation, and the role of analytical as well as intuitive understanding of the original in the translator's endeavor.

COLT 2720D. Translation: Theory and Practice.

This seminar will address the theory and practice of translation, and their place in the Humanities. Essays by translators, authors and scholars will be drawn from a range of contexts, as will literary and historical texts. Each participating student will work on a substantial translation project over the course of the semester. The seminar is a requirement for students completing the Department of Comparative Literature's Graduate Certificate in Translation Studies. Open only to graduate students.

COLT 2820A. New Directions for Comparative Literature.

In this seminar we will read a number of recent critical and theoretical works (not limited to the humanities) which may fruitfully suggest new directions for literary studies. Our readings may include topics such as the new history of capitalism, sociological approaches to the modern choice architecture of emotions, recent philosophy of science, border studies and migration, decolonization, ecocriticism and public humanities. Participants will be expected to contribute to the syllabus according to their own research interests.

COLT 2820B. Fiction and History.

Focuses on how the historical fiction that has flourished over the past three decades challenges the notions of objectivity and totalization, while providing alternative viewpoints for the reconstruction and reinterpretation of the past. Authors to be considered include E. L. Doctorow, Gabriel García-Marquez, Günter Grass, José Saramago, Isabel Allende, Lidia Jorge, Coover. Attention will also be paid to theoretical texts by Hayden White, Dominick LaCapra, Walter Benjamin, Linda Hutcheon, and Roger Chartier.

COLT 2820D. The "Tenth Muse" Phenomenon.

The texts and contexts of women writing in English, Spanish and French, during the sixteenth and especially seventeenth centuries. Often dubbed "Tenth Muses," these first early modern women writers to gain public prominence wrote iconoclastic texts and/or epitomized socially sanctioned scripts for women. Authors include: Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana, Mme de Lafayette, Maria de Zayas.

COLT 2820E. What was Enlightenment?

Emphasizes two of the Enlightenment's most durable artists-Mozart and Jane Austen-situating them in the context of other writers of their times (such as Kant, Casanova, and Adam Smith) and modern appropriations of their work (in criticism and performance). Sub-themes are desire, reason, education, and forms of otherness. Class hours include viewing time.

COLT 2820F. Latin America and Theory.

Explores the engagement of Latin American literature and criticism with non-Latin American bodies of literary and cultural theory (including poststructuralism, postcolonialism, postmodernism and cultural studies), addressing tensions between the autochthonous production of theoretical frameworks and their import from other contexts. Readings include the Latin American Subaltern Studies group, *Revista de Crítica Cultural*, Rama, García Canclini, Sarlo, Richard and current new media theorists. Open to graduate students and qualified seniors.

COLT 2820H. The Politics and Aesthetics of Masochism.

Masochism is defined as a, aestheticized positive, consensual investment in power relations. As such, it directly engages the relationship between politics and aesthetic forms, but as a sexualized relationship. Masochism articulates relations of gender in ways that seem to challenge traditional structures. Readings include novels and films, as well as theoretical engagements with masochism.

COLT 2820I. Literature and the State of Exception.

This course takes as its point of departure Walter Benjamin's famous diagnosis of modernity as a paradoxical condition under which the exception has become the rule. We will consider the aesthetic and political implications of such a state of exception in nineteenth-century literature. Authors include Baudelaire, DeQuincey, Arnold, Melville, Whitman, Benjamin, Derrida, Nancy and Agamben.

COLT 2820L. Moderns and Primitives.

Major writers, artists, and theorists of European modernism put a new emphasis on the status of primitive society and archaic pre-history. We will consider the works of Durkheim, Eliot, Joyce, Picasso, and others with reference to the anthropology and ethnography of their period, and to subsequent post-colonial critique and controversy.

COLT 2820M. Discourses of the Senses.

A comparative study of a variety of discourses dealing with the relation among the senses, the arts, and the problems of comparativity, interdisciplinarity, and intermediality. Topics will include ekphrasis, synaesthesia, mysticism and the theory of correspondence, the Gesamtkunstwerk, and the limits between media. Readings from Condillac, Lessing, Kant, Swedenborg, the German Romantics, Baudelaire, Wagner, Balzac, Lacoue-Labarthe, Nancy, Panofsky, Tschumi and others.

COLT 2820N. City (B)Lights.

Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences, including sociology, political economy, urban ecology. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images. American cities and literary works are foregrounded.

COLT 2820O. Jacques Derrida's of Grammatology.

This course is an introduction to the thought of the French philosopher Jacques Derrida. We will focus on his most important work, his "Grammatology", though a series of some of his essays will also be part of the readings. Other readings will include the works of authors crucial to Derrida's thought and to an understanding of the "Grammatology": Heidegger, Nietzsche, Freud, Saussure, Rousseau and Levi-Strauss.

COLT 2820P. Aesthetics and the Eighteenth Century Subject.

The debates about taste, judgment, beauty, sentiment, and sensation in the eighteenth century gave rise to the discourse of aesthetics as we know it today, but they also exerted a powerful influence on how knowledge, virtue, and subjectivity were imagined in the post-enlightenment period. In this course, we will examine some of the founding texts of aesthetic theory from the era (including Locke, Smith, Burke, Lessing, and Kant), and then turn to consider how aesthetic questions informed and were taken up by Goethe's narrative of subject-formation in his Bildungsroman, Wilhelm Meister's Apprenticeship. In English.

COLT 2820Q. Culture and Politics in Cuba and the Caribbean.

Complicating standard narratives about intellectuals and the Cuban Revolution, explores writings whose relationship to the state is neither affirmative nor oppositional. Focusing on journals and on recent work in cultural theory, history, anthropology, and political science, addresses the evolution and potential of civil society; articulations of marginality; revisions of socialism and the Soviet legacy; and the mobility of theory. Spanish required.

COLT 2820R. Postcolonial Melancholia.

Figures of loss and defeat proliferate widely in the accounts of colonization, national liberation, and decolonization in South Asia, Africa, the Arab world, and the Americas. We will attend to the particularity of loss by juxtaposing readings in literature and postcolonial theory with readings on mourning and melancholia, drawn from a range of disciplines.

COLT 2820S. Poetry after Kant.

Begins with the intensive study of a selection of writings by Immanuel Kant focused especially on force and conflict in politics and aesthetics. This study, along with relevant readings from more recent work, will provide the basis for an approach to this topic in nineteenth-century poetry. Readings of Kant (*Critique of Judgment*, "Toward Eternal Peace," *The Conflict of the Faculties*), Walter Benjamin, Jacques Derrida, and Giorgio Agamben and will lead to several "case studies" of nineteenth-century poetry, including works by Friedrich Hölderlin, Charles Baudelaire, and Matthew Arnold.

COLT 2820T. Universals.

Explores the status of universals in classical, Hellenistic, Scholastic, and Renaissance metaphysics. Also explores the literary implications of this philosophical problem. Readings include Plato, Aristotle, Chrysippus, Augustine, Cicero, Seneca, Abelard, Avicenna, Aquinas, Scotus, Ficino, Cusanus, Pico, and Suárez.

COLT 2820U. Literature and Judgment.

Investigates the intersections between acts of literature and acts of judgment, between language and the law. How is literature to be judged, when is it "good" or "bad"? Does literature lie, and if so, does it matter? Does it hide a crime? And, in turn: does literature provide its own particular kind of judgment, one that may make evident the very fictional status of the law? Readings span from the Bible to contemporary post-colonial readings (Rousseau, Tolstoy, Zola, Freud, Kafka, Arendt, Benjamin, Henry James, Primo Levi, Coetzee, Sadegh Hedayat).

COLT 2820V. Nietzsche, Foucault, Latour (ENGL 2900K).

Interested students must register for ENGL 2900K.

COLT 2820W. Ethical Turns (ENGL 2900N).

Interested students must register for ENGL 2900N.

COLT 2820X. Things Not Entirely Possessed: Romanticism and History (ENGL 2561B).

Interested students must register for ENGL 2561B.

COLT 2821C. From Hegel to Nietzsche: Literature as/and Philosophy (GRMN 2660O).

Interested students must register for GRMN 2660O.

COLT 2821L. Postcoloniality and Globalism (ENGL 2900Z).

Interested students must register for ENGL 2900Z.

COLT 2821S. Historical Form.

This class explores comparative literary approaches to historical narrative, especially in the context of recent work in transnational studies. Questions to be considered will include: what are the implications of transnational and postcolonial historiography for the formal study of historical writing and knowledge? What are the aesthetic resources of non-European traditions for narrative analysis? What tropes and spatiotemporal frameworks do writers use to narrate the connected past?

COLT 2821Z. Objects of (and in) Animation (MCM 2120H).

Interested students must register for MCM 2120H.

COLT 2822A. War.

More than a century ago, the mass scale of modern industrial warfare seemed to mark a break in Western philosophy and literature. Innovative theoretical analyses and a new, self-conscious genre of "war poetry" emerged to engage with the consequences of the mass slaughter, concerned with such topics as nihilism, the limits of empathy, and the discontinuity of experience. These issues only intensified after the Second World War and have remained pressing. We will read representative texts from the First World War to the present, exploring such issues as the linguistic representation of war, the problem of visibility, and the civilian-military divide.

COLT 2822B. Introduction to Italian Studies (ITAL 2100).

Interested students must register for ITAL 2100.

COLT 2822C. What Is Called Thinking? On Critical Styles (GRMN 2661T).

Interested students must register for GRMN 2661T.

COLT 2822K. Virgil's Aeneid (LATN 2010E).

Interested student must register for LATN 2010E.

COLT 2822O. Literature and Philosophy: Case Studies of a Vexed Relationship (GRMN 2662Q).

Interested students must register for GRMN 2662Q.

COLT 2822R. Metals, Mining, and Jewelry: Making the World Anew (HMAN 2402D).

Interested students must register for HMAN 2402D.

COLT 2822T. Book-Objects (HISP 2351E).

Interested students must register for HISP 2351E.

COLT 2822V. Orientalism (HIST 2982A).

Interested students must register for HIST 2982A.

COLT 2822W. Critical Disability Studies (Medieval and Early Modern) (HISP 2520T).

Interested students must register for HISP 2520T.

COLT 2830C. Literature and the Arts.

An investigation of the discourse of the arts in the modern European tradition. Topics include the relation between the Ancients and the Moderns, evaluations of the possibilities and limitations of differing media, the role of language in discussions of the "other" arts, and conceptions of synaesthesia and correspondence. Texts selected from Perrault, Winckelmann, Lessing, Diderot, Rousseau, Kant, Hegel, Hoffman, Baudelaire, and others.

COLT 2830F. Walter Benjamin and Modern Theory.

An intensive reading of selected essays by Walter Benjamin on language, literature, aesthetics, and politics will be paired up with the study of the interpretation and impact of this work on contemporary work in literary theory and philosophy. In addition to Benjamin, we will also read Jacques Derrida, Philippe Lacoue-Labarthe, Samuel Weber, Giorgio Agamben, and Peter Fenves. German and/or French helpful but not required. Open to graduate students only.

COLT 2830H. Cultural Translation: Theory and Practice.

Across a range of disciplines, "cultural translation" today stands for the dynamic interactions among cultures. Derived from cultural anthropology and linguistic translation, the metaphor of translation (already a metaphor: trans+latere, to bear across) is used increasingly to analyze how cultures are transmitted through the operations of colonial expansion, diaspora and immigration. Though cultural globalization is assumed to be a 20th century phenomenon, the result of an expansion and acceleration in the movement and exchange of ideas, commodities and capital, this seminar considers a longer historical frame for understanding cultural competition. Theoretical texts including Schleiermacher, Jakobson, Benjamin, Derrida, Spivak, and a "case study," Shakespeare.

COLT 2830I. Histories of the Early Modern Body.

This seminar considers the production of knowledge about the body in the early modern period. The institution of science and how the emerging "science" of the body was visualized; discourses of the erotic, the scientific and the religious; the body in varied cultural performances including the blason, devotional texts, erotica, drama etc. Texts include theoretical work on gender and sexuality. Open to graduate students only.

COLT 2830L. Economies of the Visual (The Reverse of Images).

In *The Time-Image*, Deleuze wrote: "Money is the reverse of all the images that the cinema shows and edits on the obverse, so that films about money are already, if implicitly, films within the film or about the film." What are the implications of this sentence for the economy of images (what Susan Buck-Morss terms their *iconomy*)? From *The Big Store* (Marx Brothers) to Peter Jackson's *King Kong*, we will trace various mobilizations of the gaze, leading from the proto-cinematographic elevators and escalators to the actual developments of eye-tracking technologies, allowing for an increasing commodification of the gaze itself.

COLT 2830P. The History of Wonder in Colonial Spanish American *Lettres* (HISP 2350H).

Interested students must register for HISP 2350H.

COLT 2830Q. Augustan Literature and Egypt (LATN 2090I).

Interested students must register for LATN 2090I.

COLT 2830S. Grounds of Comparison: Approaching the Humanities from "Elsewhere" (HMAN 2402F).

Interested students must register for HMAN 2402F.

COLT 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Center for Computation and Visualization

The Center for Computation and Visualization (CCV) strives to build and foster an environment that enables teaching, learning, research, and creative undertakings that involve and rely on the use and development of advanced computing and visualization technology. CCV provides high-performance computing, highly reliable research data storage, visualization resources, physical and virtual server hosting, high-performance backup and archival services, as well as outstanding collaborative scientific support to empower computational research, scholarship, creativity, and innovation for the entire Brown community.

The computing platform comprises a 700+ high performance computing node system, some with extra large memory and some with GPUs for accelerated computing, for a total core count of over 7,000, and peak

performance of roughly 125 Teraflops. A GPFS parallel filesystem provides roughly 400 Terabytes of disk storage and 40 Gigabits per second Infiniband connectivity is used for all parallel applications messaging and I/O. The storage system is integrated with a 2 Petabyte Tivoli TSM backup/archival system. CCV also maintains a high end visualization lab with large scale immersive visualization capabilities. This includes a fully immersive 360 degree YURT, a 3-wall Cave system, and a multi-projector stereo flat display wall. Custom visualization solutions for software and hardware needs are available.

For additional information please visit the center's website at: <http://www.ccv.brown.edu/>.

Center for Computational Molecular Biology

The prime intellectual mission of Brown University's Center for Computational Molecular Biology (CCMB) (<https://www.brown.edu/academics/computational-molecular-biology/>) is to promote the development, implementation and application of analytical and computational methods to foundational questions in the biological and medical sciences. The research programs of the Core Faculty in CCMB lie fundamentally at the intersection of computer science, evolutionary biology, mathematics, and molecular and cellular biology.

Biological questions that currently unite the CCMB Core and Associate Faculty are: How do genotypes and genes interact to produce phenotypes, and how does this happen from womb to tomb? What drives the formation, maintenance and evolutionary transformations of communities of organisms over time? Quantitative questions that currently unite the CCMB faculty are: how can we design powerful algorithms to make sense of the sea of data produced in the genomic era? What principles are required for a theoretical framework to completely model cellular systems?

The research challenges at the heart of CCMB are a rich source of mathematical problems motivated by the complex nature of genomes, disease processes and evolutionary relationships. These challenges are both multi-scale (with units of interest ranging from molecules to communities of organisms) and large-scale (data-intensive, due to advances in sequencing technologies). Thus, CCMB rounds out the broader landscape of research in methodological development at Brown University by partnering with and complementing the Data Science Initiative (<https://www.brown.edu/initiatives/data-science/>) and the Brown Center for Biomedical Informatics. (<https://www.brown.edu/academics/medical/about-us/research/centers-institutes-and-programs/biomedical-informatics/>)

In addition to these research interests, CCMB Faculty members are actively involved in the operation of Brown's NIH-funded COBRE Center for the Computational Biology of Human Disease (<https://www.brown.edu/research/projects/computational-biology-of-human-disease/>), and administer both an undergraduate concentration (<https://www.brown.edu/academics/computational-molecular-biology/courses-study/>) and an interdisciplinary doctoral program (<https://www.brown.edu/academics/computational-molecular-biology/courses-study/>) in Computational Biology. This is a short video about our Ph.D. program in Computational Biology (<https://www.youtube.com/watch?v=p3zBdW-ENTU>).

Computational Biology Concentration Requirements

Computational biology involves the analysis and discovery of biological phenomena using computational tools, and the algorithmic design and analysis of such tools. The field is widely defined and includes foundations in computer science, applied mathematics, statistics, biochemistry, molecular biology, genetics, ecology, evolution, anatomy, neuroscience, and visualization.

Students may pursue a Bachelor of Arts or a Bachelor of Science. Students pursuing the ScB have the option of electing a concentration in Computational Biology with one of three focus areas: Computer Sciences, Biological Sciences, or Applied Mathematics & Statistics. Both programs

require a senior capstone experience that pairs students and faculty in creative research collaborations.

Standard program for the A.B. degree

Please see the bottom of the page for more information regarding the University Writing Requirement, the Capstone Experience, and the Computational Biology Honors Program.

Standard program for the A.B. degree

Please review the footnotes for clarifying details and see the bottom of the page for more information regarding the Capstone Experience and the Computational Biology Honors Program.

Prerequisites (0-3 courses)

Students must complete or place out of these prerequisites.

MATH 0100	Single Variable Calculus, Part II	
or MATH 0170	Single Variable Calculus, Part II (Accelerated)	
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians	
or MATH 0180	Multivariable Calculus	
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
BIOL 0200	The Foundation of Living Systems	
General Core Requirements: Biology		2
BIOL 0470	Genetics	
BIOL 0280	Biochemistry	
or BIOL 0500	Cell and Molecular Biology	
General Core Requirements: Chemistry		1
CHEM 0330	Equilibrium, Rate, and Structure	
or CHEM 0350	Organic Chemistry I	
General Core Requirements: Computer Science		2
Choose one of the following groupings of introductory courses:		
Group A		
CSCI 0111	Computing Foundations: Data and Program Design with Data Structures and Algorithms	
& CSCI 0200		
Group B		
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms	
& CSCI 0200		
Group C		
CSCI 0170	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms	
& CSCI 0200		
Group D		
CSCI 0190	Accelerated Introduction to Computer Science and Program Design with Data Structures and Algorithms (or any full-credit computer science course above CSCI 0190)	
& CSCI 0200		
General Core Requirements: Probability & Statistics²		1
APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
or MATH 1210	Probability	
Comp Bio Core Course Requirements		4
CSCI 1810	Computational Molecular Biology	
APMA 1080	Inference in Genomics and Molecular Biology ²	

AND two of the following:	
APMA 1070	Quantitative Models of Biological Systems
APMA 1660	Statistical Inference II
APMA 1690	Computational Probability and Statistics
BIOL 1222A	Current Topics in Functional Genomics
BIOL 1430	Foundations of Population Genetics
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data
BIOL 1525	Pathogenomics: Analysis, interpretation and applications of microbial genomes
BIOL 1545	Human Genetics and Genomics
BIOL 1555	Methods in Informatics and Data Science for Health
BIOL 1575	Evaluation of Health Information Systems
CSCI 1420	Machine Learning
CSCI 1470	Deep Learning
CSCI 1820	Algorithmic Foundations of Computational Biology
PHP 1510	Principles of Biostatistics and Data Analysis
PHP 1560	Using R for Data Analysis
Additional 1000+ level course with concentration advisor approval	
Capstone Experience	1
Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision (i.e: BIOL 1950/1960, CSCI 1970, APMA 1970). The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor resulting in an advanced research project or a 2000-level Computational Biology course that covers an advanced topic within the Computational Biology field and includes an advanced research component.	
Total Credits	11

¹ These courses are prerequisites for APMA 1655. Students who matriculate in or after Fall 2025 will be required to take APMA 1655 as a prerequisite for APMA 1080 and will therefore need to complete or place out of one of these courses.

² APMA 1655 will be a prerequisite for APMA 1080 starting in Fall 2025. Current concentrators (as of Spring 2025) may still take APMA 1080 with APMA 1650 as their prerequisite but APMA 1655 is encouraged. Students matriculating in Fall 2025 or later will need to take APMA 1655 before taking APMA 1080.

³ Some 2000-level courses are not available to undergraduate students due to department restrictions but have 1000-level equivalents (such as BIOL 1545/2545) that can count for capstone credit with approval from the instructor and the student's faculty advisor. Please reach out to the CCMB Academic Programs Coordinator for more information.

Capstone Experience:

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

Honors:

In order to be considered a candidate for honors, students will be expected to maintain an outstanding record. Students must have a majority of

either As or S with distinction grades in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters semesters, of reading and research with a CCMB faculty member or approved advisor. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters of reading and research with a CCMB faculty member or approved advisor.

Students seeking honors are advised to choose a Thesis Advisor prior to the end of their Junior year. Students must complete the Comp Bio Honors Registration form (<https://docs.google.com/forms/d/e/1FAIpQLSe5jZSlwNdZqCFOWTPVQN7PQUM1aMmrZOOdLxox9DVuCjkDZw/viewform/>) and submit their honors proposal to ccmb@brown.edu by the first Friday in October of their senior year. Students must submit a honors thesis in April of their senior year and present a public defense of their theses to the CCMB community. More information about the honors guidelines and deadlines can be found here: https://ccmb.brown.edu/academics/undergraduate-program/honors-designation. Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student's advisor.

Standard program for the Sc.B. degree

Please see the bottom of the page for more information regarding the University Writing Requirement, the Capstone Experience, and the Computational Biology Honors Program.

CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms
Group C	

CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms	
Group D		
CSCI 0190 & CSCI 0200	Accelerated Introduction to Computer Science and Program Design with Data Structures and Algorithms (or any full-credit computer science course above CSCI 0190)	
General Core Requirements: Probability & Statistics²		1
APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
or MATH 1210	Probability	
General Core Requirements: Computational Biology		2
APMA 1080	Inference in Genomics and Molecular Biology ²	
CSCI 1810	Computational Molecular Biology	
Six Courses in One Track		6
Choose one of 3 tracks: Computer Science, Biological Sciences, or Applied Mathematics and Statistics. See track requirements below.		
Capstone Experience		1
Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision (i.e: BIOL 1950/1960, CSCI 1970, APMA 1970). The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor resulting in an advanced research project or a 2000-level Computational Biology course that covers an advanced topic within the Computational Biology field and includes an advanced research component. ³		
Total Credits		16

¹ These courses are prerequisites for APMA 1655. Students who matriculate in or after Fall 2025 will be required to take APMA 1655 as a prerequisite for APMA 1080 and will therefore need to complete or place out of one of these courses.

² APMA 1655 will be a prerequisite for APMA 1080 starting in Fall 2025. Current concentrators (as of Spring 2025) may still take APMA 1080 with APMA 1650 as their prerequisite but APMA 1655 is encouraged. Students matriculating in Fall 2025 or later will need to take APMA 1655 before taking APMA 1080.

³ Some 2000-level courses are not available to undergraduate students due to department restrictions but have 1000-level equivalents (such as BIOL 1545/2545) that can count for capstone credit with approval from the instructor and the student's faculty advisor. Please reach out to the CCMB Academic Programs Coordinator for more information.

Tracks

Please review the prerequisites required for the courses below in CAB. Students should also be aware of the requirements for enrolling in a given CSCI course, which can be found on the Computer Science website.

Computer Science Track:

Three of the following:		3
CSCI 1230	Introduction to Computer Graphics	
CSCI 1270	Database Management Systems	
CSCI 1411	Foundations of AI	

CSCI 1420	Machine Learning	
CSCI 1430	Computer Vision	
CSCI 1470	Deep Learning	
CSCI 1820	Algorithmic Foundations of Computational Biology	
CSCI 2952G	Deep Learning in Genomics	
or other 1000+ level Computer Science course approved by the concentration advisor.		
Three of the following:		3
APMA 1070	Quantitative Models of Biological Systems	
APMA 1660	Statistical Inference II	
APMA 1690	Computational Probability and Statistics	
BIOL 1430	Foundations of Population Genetics	
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data	
BIOL 1555	Methods in Informatics and Data Science for Health	
CPSY 1492	Computational Cognitive Neuroscience	
CSCI 0320 & CSCI 0330	Introduction to Software Engineering and Introduction to Computer Systems ¹	
CSCI 1550	Probabilistic Methods in Computer Science	
CSCI 1570	Design and Analysis of Algorithms	
PHP 1510	Principles of Biostatistics and Data Analysis	
PHP 1560	Using R for Data Analysis	
or another 1000+ level computational course approved by the concentration advisor.		
Total Credits		6

¹ Both CSCI 0320 and CSCI 0330 need to be taken to fulfill one of the six course requirements in this track.

Biological Sciences track

At least four 1000+ level courses comprising a coherent theme related to Computational Biology. Examples of themes include: Biochemistry, Ecology, Evolution, Genomics, Immunology, or Neurobiology. Other themes can be approved by your concentration advisor.

AND two courses from the following:		2
APMA 1660	Statistical Inference II	
APMA 1690	Computational Probability and Statistics	
BIOL 1222A	Current Topics in Functional Genomics	
BIOL 1250	Host-microbiome Interactions in Health and Disease	
BIOL 1430	Foundations of Population Genetics	
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data	
BIOL 1525	Pathogenomics: Analysis, interpretation and applications of microbial genomes	
CSCI 1420	Machine Learning	
CSCI 1470	Deep Learning	
CSCI 1820	Algorithmic Foundations of Computational Biology	
PHP 1560	Using R for Data Analysis	
or other 1000+ level Computational Biology course approved by concentration advisor.		
Total Credits		6

Applied Mathematics & Statistics Track:

At least three courses from the following:

3

APMA 0350 & APMA 0360	Applied Ordinary Differential Equations and Applied Partial Differential Equations I ¹	
APMA 1070	Quantitative Models of Biological Systems	
APMA 1660	Statistical Inference II	
APMA 1690	Computational Probability and Statistics	
APMA 1740	Recent Applications of Probability and Statistics	
PHP 1510	Principles of Biostatistics and Data Analysis	
PHP 1560	Using R for Data Analysis	
At least three of the following:		3
BIOL 1222A	Current Topics in Functional Genomics	
BIOL 1430	Foundations of Population Genetics	
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data	
BIOL 1555	Methods in Informatics and Data Science for Health	
CSCI 1411	Foundations of AI	
CSCI 1420	Machine Learning	
CSCI 1470	Deep Learning	
CSCI 1820	Algorithmic Foundations of Computational Biology	
PHP 1855	Infectious Disease Modeling	
or other 1000+ level Computational Biology course approved by concentration advisor.		
Total Credits		6

¹ Students must take both courses in this set (APMA 0350 & APMA 0360) to fulfill one of the six course requirements.

Capstone Experience:

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

Honors:

Honors:

In order to be considered a candidate for honors, students will be expected to maintain an outstanding record. Students must have a majority of either As or S with distinction grades in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters semesters, of reading and research with a CCMB faculty member or approved advisor. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters of reading and research with a CCMB faculty member or approved advisor.

Students seeking honors are advised to choose a Thesis Advisor prior to the end of their Junior year. Students must complete the Comp Bio Honors Registration form and submit their honors proposal to ccmb@brown.edu by the first Friday in October of their senior year. Students must submit a honors thesis in April of their senior year and present a public defense of their theses to the CCMB community. More information about the honors guidelines and deadlines can be found here: <https://ccmb.brown.edu/academics/undergraduate-program/honors-designation>. Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student's advisor.

Computational Biology Graduate Program

The Center for Computational Molecular Biology (CCMB) offers Ph.D. degrees in Computational Biology to train the next generation of scientists to perform cutting edge research in the multidisciplinary field of Computational Biology. During the course of their Ph.D. studies students will develop and apply novel computational, mathematical, and statistical techniques to problems in the life sciences. Students in this program must achieve mastery in three areas - computational science, molecular biology, and probability and statistical inference - through a common core of studies that spans and integrates these areas.

The Ph.D. program in Computational Biology draws on course offerings from the disciplines of the Center's Core faculty members. These areas are Applied Mathematics (APMA), Computer Science (CS), the Division of Biology and Medicine (BioMed), Brown Center for Biomedical Informatics (BCBI), and the School of Public Health/Biostats (SPH). Our faculty and Director of Graduate Studies (DGS) work with each student to develop the best plan of coursework and research rotations to meet the student's goals in their research focus and satisfy the University's requirements for graduation.

Applicants should state a preference for at least one of these areas in their personal statement or elsewhere in their application. In addition, students interested in the intersection of Applied Mathematics and Computational Biology are encouraged to apply directly to the Applied Mathematics Ph.D. program (<http://www.brown.edu/academics/applied-mathematics/graduate/>), and also to contact relevant CCMB faculty members (<https://www.brown.edu/academics/computational-molecular-biology/about/people/faculty-and-staff/>).

Our PhD program assumes the following prerequisites: mathematics through intermediate calculus, linear algebra and discrete mathematics, demonstrated programming skill, and at least one undergraduate course in chemistry and in molecular biology. Exceptional strengths in one area may compensate for limited background in other areas, but some proficiency across the disciplines must be evident for admission.

- Ph.D. Program Overview & Handbook (https://www.brown.edu/academics/computational-molecular-biology/sites/brown.edu/academics/computational-molecular-biology/files/uploads/Comp%20Bio%20Ph.D.%20Program%20requirements%20%26%20handbook_1.pdf) (pdf file)
- FAQ (<http://brown.edu/academics/computational-molecular-biology/frequently-asked-questions/>)

The application process to the CCMB graduate program is run through the Graduate School (<http://www.brown.edu/academics/gradschool/>)

Computer Science

Since our inception in 1979, the Computer Science Department at Brown has forged a path of innovative information technology research and teaching at both the undergraduate and graduate levels. From our modest beginnings as an interest group within the Divisions of Applied Mathematics and Engineering in the 1960s to its current stature as one of the nation's leading computer science programs, the Computer Science Department has continuously produced prominent contributors in the field. Computer Science combines the intellectual challenge of a new discipline with the excitement of an innovative and rapidly expanding technology. The department resides in Brown's Center for Information Technology; this striking building houses many of the university's computing activities, as well as the department's instructional computing facilities and research labs. Faculty, staff and students are provided state-of-the-art computing facilities.

We are a diverse community of scholars engaged in all aspects of research, teaching and mentoring in computer science and its related interdisciplinary disciplines. Realizing the importance of computing and algorithmic thinking in so many scientific, social and technological endeavors, we collaborate extensively with colleagues in archaeology, applied mathematics, biology, cognitive and linguistic sciences, economics, engineering, mathematics, medicine, physics and neuroscience.

Our undergraduate offerings reflect the department's multidisciplinary orientations, with joint concentrations in mathematics, applied mathematics, computational biology and economics. We have strong undergraduate research groups and a long history of involving undergraduates in projects that span disciplinary boundaries.

For additional information, please visit the department's website: (<https://www.cs.brown.edu/>)<https://www.cs.brown.edu/> (<http://www.cs.brown.edu/>)

Computer Science Concentration Requirements

Computer science is now a critical tool for pursuing an ever-broadening range of topics, from outer space to the workings of the human mind. In most areas of science and in many liberal arts fields, cutting-edge work depends increasingly on computational approaches. The undergraduate program at Brown is designed to combine breadth in practical and theoretical computer science with depth in specialized areas. These areas range from traditional topics, such as analysis of algorithms, artificial intelligence, databases, distributed systems, graphics, mobile computing, networks, operating systems, programming languages, robotics and security, to novel areas including games and scientific visualization.

Our requirements are built on a core set of foundation courses, each representing an essential area within computer science. Concentrators choose the upper-level courses that align with their interests. Students may not use more than two CSCI 1970 courses to complete the requirements for the Sc.B. and one CSCI 1970 course for the A.B. requirements.

For up-to-date information on our concentration requirements please see <https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-requirements-2024>. Please see <https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/> for additional information regarding our concentration requirements (including allowed substitutions and policies).

Requirements for the Standard Track of the Sc.B. degree

Requirements for the Standard Track of the Sc.B. degree

Prerequisites (0-3 courses)

Calculus prerequisite: students must complete or place out of second semester calculus.

MATH 0100	Single Variable Calculus, Part II
or MATH 0170	Single Variable Calculus, Part II (Accelerated)
or MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)

Concentration Requirements

Core-Computer Science:

Select one of the following introductory course Series: 2

Series A

CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms

Series B

CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms

Series C

CSCI 0190	Accelerated Introduction to Computer Science

AND

an additional CS course numbered 200 or above not otherwise used to satisfy a concentration requirement; this course may be CSCI 0200, a Foundations course, or a 1000-level course.

Series D ¹

CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms

Introductory Math Foundations 1

CSCI 0220	Introduction to Discrete Structures and Probability
or MATH 1530	Abstract Algebra

Foundations Courses

ScB students must take one course from each foundation area.

Foundations Areas

a. Algorithms/Theory Foundations 1

CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction

b. AI/Machine Learning/Data Science Foundations 1

CSCI 0410	Foundations of AI

c. Systems Foundations, Concentration credit for only one of 300/330 1

CSCI 0300	Fundamentals of Computer Systems
or CSCI 0330	Introduction to Computer Systems

CSCI Electives 5

Five CSCI courses at the 1000 level ²

Four Additional Electives. These can include: 4

CSCI 0320	Introduction to Software Engineering
1000-level and 2000-level CSCI courses (no more than three non-technical courses as defined in concentration handbook)	
Linear algebra (MATH 0520, MATH 0540, or APMA 0260)	

Up to three approved 1000-level courses outside of CS (see the concentration handbook for the current list. Note that concentration credit for only one APMA 1650, 1655).

Capstone

A capstone taken in the senior year (from the list of approved capstone courses in the concentration handbook). The capstone may also be used to satisfy another requirement.

Total Credits 15

¹ Students wishing to go directly from CSCI 0111 to CSCI 0200 will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200.

² None of these can be CS non-technical courses. The list is in the concentration handbook. [<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>]

Requirements for the Professional Track of the both the Sc. B. and A.B. degrees.

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Honors in CS requires a two-semester research project (including writeup and presentation) during the last two semesters. In addition, honors candidates must have earned A's or S-with-distinction in 2/3 (rounding up) of the courses used towards the concentration, excluding introductory-sequence courses (CS courses numbered 0200 or below) and the calculus prerequisite. See the department's honors webpage (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/honors/>) for more details.

Requirements for the Standard Track of the A.B. degree

Concentration Requirements (10 courses)

Core Computer Science:

Select one of the following series:

2

Series A

CSCI 0150 & CSCI 0200 Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms

Series B

CSCI 0170 & CSCI 0200 Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms

Series C

CSCI 0190 Accelerated Introduction to Computer Science

AND

An additional CS course 200 or above not otherwise used to satisfy a concentration requirement; this course may be CSCI 0200, a Foundations course, or a 1000-level course.

Series D ¹

CSCI 0111 & CSCI 0200 Computing Foundations: Data and Program Design with Data Structures and Algorithms

Introductory Math Foundations

1

CSCI 0220 Introduction to Discrete Structures and Probability

Foundations Courses

AB students must take one course from each foundation area

Foundation Areas

a. Algorithms/Theory Foundations

1

CSCI 0500 Data Structures, Algorithms, and Intractability: An Introduction

b. AI/Machine Learning/Data Science Foundations

1

CSCI 0410 Foundations of AI

c. Systems Foundations

1

CSCI 0300 Fundamentals of Computer Systems
or CSCI 0320 Introduction to Software Engineering
or CSCI 0330 Introduction to Computer Systems

CSCI Electives

2

Two CSCI courses at the 1000 level. ²

Two additional electives. These can include:

2

CSCI 0320 Introduction to Software Engineering (if not used towards System Foundations)

1000-level and 2000-level CSCI courses (at most one can be a non-technical course as defined in concentration handbook).

Linear algebra (MATH 0520, MATH 0540, or APMA 0260)

One approved 1000-level course outside of CS (see the concentration handbook for the current list)

Capstone

A capstone taken in the senior year (from the list of approved capstone courses in the concentration handbook). The capstone may also be used to satisfy another requirement.

Total Credits

10

¹ Students wishing to go directly from CSCI 0111 to CSCI 0200 will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200.

² Neither of these can be non-technical courses. The list is in the concentration handbook. [<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>]

Requirements for the Professional Track of the both the Sc. B. and A.B. degrees.

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Honors in CS requires a two-semester research project (including writeup and presentation) during the last two semesters. In addition, honors candidates must have earned A's or S-with-distinction in 2/3 (rounding up) of the courses used towards the concentration, excluding introductory-sequence courses (CS courses numbered 0200 or below) and the calculus prerequisite. See the department's honors webpage (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/honors/>) for more details.

Computer Science-Economics Concentration Requirements

The joint Computer Science-Economics concentration exposes students to the theoretical and practical connections between computer science and economics. It prepares students for professional careers that incorporate aspects of economics and computer technology and for academic careers conducting research in areas that emphasize the overlap between the two fields. Concentrators may choose to pursue either the A.B. or the Sc.B. degree. While the A.B. degree allows students to explore the two disciplines by taking advanced courses in both departments, its smaller number of required courses is compatible with a liberal education. The Sc.B. degree achieves greater depth in both computer science and economics by requiring more courses, and it offers students the opportunity to creatively integrate both disciplines through a design requirement. If you are interested in declaring a concentration in Computer Science-Economics, please refer to this page for more information regarding the process. For more information about the CS Pathways, see this page.

Standard Program for the Sc.B. degree.

Prerequisites (3 courses):

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or MATH 0540	Linear Algebra With Theory
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science
ECON 0110	Principles of Economics

Required Courses: 17 courses: 8 Computer Science, 8 Economics, and a Capstone

CSCI 1450	Advanced Introduction to Probability for Computing and Data Science ¹	1
or APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	

Select one of the following Series:

2

Series A

CSCI 0150 & CSCI 0200 Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms

Series B

CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms	
Series C		
CSCI 0190	Accelerated Introduction to Computer Science (and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0200, a Foundations CS course, or a 1000-level course.)	
Series D		
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms	
Two courses, touching two different Foundations areas		2
a. Algorithms/Theory Foundations		
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction	
b. AI/Machine Learning/Data Science Foundations, No concentration credit for 1410, 1411		
CSCI 0410	Foundations of AI	
c. Systems Foundations, Concentration credit not for both 300, 330		
CSCI 0300 or CSCI 0320 or CSCI 0330	Fundamentals of Computer Systems Introduction to Software Engineering Introduction to Computer Systems	
Three 1000-level CSCI courses, which must be technical courses as defined in concentration handbook.. One of these can be an additional 100-level Foundations course.		3
ECON 1130	Intermediate Microeconomics (Mathematical) ²	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Three courses from the "mathematical economics" group (CSCI 1951K can be counted as one of them, if it has not been used to satisfy the computer science requirements of the concentration and if the student has taken either ECON 1470 or ECON 1870):		3
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
Two additional 1000-level Economics courses excluding 1620, 1960, 1970 ³		2

One capstone course in either CS or Economics: a one-semester course, normally taken in the student's last semester undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic (preferably at the intersection of computer science and economics) in depth, to produce a culminating artifact such as a paper or software project. A senior thesis, which involved two semesters of work, may count as a capstone.

Total Credits **17**

- ¹ Concentration credit will be given for only one of APMA 1650, APMA 1655, and CSCI 1450.
- ² Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required
- ³ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites. If the primary thesis advisor belongs to Economics (Computer Science), then students must have a reader in the Computer Science (respectively, Economics) department.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Standard Program for the A.B. degree:

Prerequisites (3 courses):

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or MATH 0540	Linear Algebra With Theory
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science
ECON 0110	Principles of Economics

Required Courses: 13 courses: 7 Computer Science and 6 Economics

CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	1
or APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	

Select one of the following series: **2**

Series A

CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms

Series B

CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms

Series C		
CSCI 0190	Accelerated Introduction to Computer Science (and an additional CS course numbered 200 or above not otherwise used to satisfy a concentration requirement; this course may be CSCI 0200, a Foundations course, or a 1000-level course)	
Series D		
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms	
Two courses, touching two different Foundations areas:		2
a. Algorithms/Theory Foundations		
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction	
b. AI/Machine Learning/Data Science Foundations.		
CSCI 0410	Foundations of AI	
c. Systems Foundations. Concentration credit for only one of 300/330		
CSCI 0300 or CSCI 0320 or CSCI 0330	Fundamentals of Computer Systems Introduction to Software Engineering Introduction to Computer Systems	
Two 1000-level CSCI courses, which must be technical courses, as defined in concentration handbook.		2
ECON 1130	Intermediate Microeconomics (Mathematical) ¹	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1

ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
or any graduate Economics course ³		
Total Credits		13

¹ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

² CSCI 1951K can be counted as one of them, if it has not been used to satisfy the computer science requirements of the concentration and if the student has taken either ECON 1470 or ECON 1870.

³ Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and

1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites. If the primary thesis advisor belongs to Economics (Computer Science), then students must have a reader in the Computer Science (respectively, Economics) department.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Applied Mathematics-Computer Science Concentration Requirements

The Sc.B. concentration in Applied Math-Computer Science provides a foundation of basic concepts and methodology of mathematical analysis and computation and prepares students for advanced work in applied mathematics, computer science, and data science. Concentrators must complete courses in mathematics, applied math, computer science, and an approved English writing course. While the concentration in Applied Math-Computer Science allows students to develop the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life, students who have completed the concentration have pursued graduate study, computer consulting and information industries, and scientific and statistical analysis careers in industry or government. This degree offers a standard track and a professional track.

Standard Program for the Sc.B. degree.

Prerequisites – the equivalent of two semesters of single-variable calculus

A second semester of single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, the second semester of calculus is taught in one of MATH 0100, MATH 0170, or MATH 0190.

Requirements – 17 courses ¹

Mathematical Requirements – 8 courses

MATH 0180	Multivariable Calculus ²	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra ²	1
or MATH 0540	Linear Algebra With Theory	
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science	
or APMA 1170	Introduction to Computational Linear Algebra	
APMA 0355	Applied Ordinary Differential Equations with Theory ³	1
APMA 0365	Applied Partial Differential Equations I with Theory ⁴	1
APMA 1160	An Introduction to Numerical Optimization	1
or APMA 1170	Introduction to Computational Linear Algebra	
or APMA 1180	Introduction to Numerical Solution of Differential Equations	
or APMA 1690	Computational Probability and Statistics	
or APMA 1740	Recent Applications of Probability and Statistics	

Two approved 1000-level or higher APMA courses. ^{5,6}	2
One 1000-level or higher APMA or MATH course ^{5,6}	1
Computer Science Requirements – 8 courses	
Select one of the following introductory course sequences:	2
CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms
CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms ⁷
CSCI 0190 and one CSCI course numbered 0200 or higher	
Select one foundational course in each of three of the following four clusters:	3
1. Algorithms/Theory	
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction
2. AI/Machine Learning/Data Science	
CSCI 0410	Foundations of AI and Machine Learning
3. Systems	
CSCI 0300 or CSCI 0320 or CSCI 0330	Fundamentals of Computer Systems ⁸ Introduction to Software Engineering Introduction to Computer Systems
4. Probability	
APMA 1655 or APMA 1650 or CSCI 1450 or MATH 1210 or MATH 1610	Introduction to Probability and Statistics with Theory ^{6,9} Introduction to Probability and Statistics with Calculus Advanced Introduction to Probability for Computing and Data Science Probability Probability
Three approved 1000-level or higher CSCI courses, which must be technical CS courses. ¹⁰	3
Additional Requirements – 1 course	1
One approved capstone in computer science or applied mathematics taken in the student's senior year. ¹¹	
Total Credits	17

¹ A required course may be replaced by a more advanced course with concentration advisor approval. No course may be used to satisfy more than one of the required 17 concentration credits. Transfer credits and courses receiving placement credit notation can satisfy concentration credit as long as they appear on the Brown internal transcript. At most 3 post-matriculation transfer credits (such as study abroad courses or summer courses at another institution) can be used for concentration credit. Pursuing honors will require 18 courses – these 17 along with two semesters of independent study courses for the honors research project, one of which can be used to satisfy the capstone concentration requirement. For students with multiple concentrations: calculus, linear algebra, one intro CSCI course, and at most two additional courses can be used for concentration credit in the other concentration(s).

² APMA 0260 can substitute for the multivariable calculus and/or the linear algebra requirements. If it is used as a substitute for both requirements, then students must take one additional approved 1000-level APMA or MATH course not used elsewhere for concentration credit. Footnotes 5 and 6 apply.

³ MATH 1110 may be used in place of APMA 0355. If MATH 1110 is used, then the concentration must include at least four 1000-level APMA courses (not including APMA 1910, 1920 or research/independent study courses; footnote 5 applies). These can appear anywhere in

the declaration. Students matriculating prior to Fall 2025 can use APMA 0330 or APMA 0350 as a substitute for APMA 0355. Students matriculating in Fall 2025 or later who wish to use APMA 0330 or APMA 0350 must also complete the APMA 0355 online bridgework course and pass the in-person bridgework exam that is offered once per semester. MATH 1120 may be used in place of APMA 0365. If MATH 1120 is used, then the concentration must include at least four 1000-level APMA courses (not including APMA 1910, 1920 or research/independent study courses). These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0340 or APMA 0360 as a substitute for APMA 0365. Students matriculating in Fall 2025 or later who wish to use APMA 0340 or APMA 0360 must also complete the APMA 0365 online bridgework course and pass the in-person bridgework exam that is offered once per semester.

⁴ APMA 1650 cannot be used to satisfy this requirement for students matriculating in Fall 2025 or later, unless they also complete the APMA 1655 online bridgework course and pass the in-person bridgework exam that is offered once per semester. APMA 1910, 1920, MATH 1090, 1910 and research/independent study courses are not allowed. At most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001 can be used for concentration credit.

⁵ At most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit.

⁶ Students wishing to go directly from CSCI 0111 to CSCI 0200 will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200.

⁷ At most one of CSCI 0300, CSCI 0330 can be used for concentration credit.

⁸ APMA 1655 is recommended. Higher-level courses in probability can satisfy this requirement with concentration advisor approval. The following courses are automatically approved: APMA 1080, APMA 1200, APMA 1660, APMA 1690, APMA 1710, APMA 1740/ APMA 2610, APMA 2630, APMA 2640.

⁹ Non-CSCI courses and CS art/ humanities/policy courses cannot be used for concentration credit even if they are allowed as part of a pure CS concentration. This list is maintained in the CS concentration handbook at this link (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>). At most one of the electives can be an independent study course (such as CSCI 1970, CSCI 1973). At most one of CSCI 0410, CSCI 1410, CSCI 1411 can be used for concentration credit. EEPS 1340 is a non-CSCI course that can be used as a CSCI elective, but at most one of EEPS 1340 and CSCI 1951A can be used for concentration credit.

¹⁰ Completing a capstone during the junior year might be allowed in exceptional cases for which completion during the senior year is impossible, such as the student's faculty research mentor not being on campus during the student's senior year, but this requires prior approval from the concentration advisor and the Director of Undergraduate Studies in CS. The following options can be used to satisfy this requirement:

- A pre-approved course that satisfies the APMA Sc.B. capstone requirement: currently APMA 1360, APMA 193*/194* (where * is any combination of numbers and letters; these are the APMA senior seminars).
- Completion of a CS capstone as described in the CS Concentration Handbook at this link (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>). Usually, this involves taking one of the approved CS capstone courses at this link (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-requirements-2020/capstone/>) and registering the capstone with the instructor of the course and with the CS department using the form linked at the top of the CS capstone courses page. Depending on the course it may require the completion of an additional project.
- A directed research/independent study course from the APMA 1970/1971 or CSCI 1970/1973 series that is used for undergraduate research. For students pursuing honors in APMA-CS, one of the two required semesters of independent study courses can be used.
- A directed research/independent study course in a related discipline (i.e. STEM disciplines, ENVS, PHP, etc.) that is used for undergraduate research if the project is relevant to the student's learning goals in the concentration and with approval from the concentration advisor.

(e) An upper-level course related to the concentration (usually a 1000-level or higher APMA, CSCI, or MATH course) in addition to a research experience equivalent in scope and scale to work the student would pursue in an Applied Math and Computer Science research-related independent study course. Examples include UTRAs, LINK awards, REUs, research programs at other institutions, the APMA Directed Reading Program, etc. This requires approval from the concentration advisor and appropriate documentation that should be uploaded to ASK. The research experience must be completed during the student's senior year or the summer before the student's senior year. Exceptions require prior approval from the concentration advisor and the Director of Undergraduate Studies in CS.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Concentrators that demonstrate excellence in grades and in undergraduate research can be awarded departmental honors. Honors students with primary advisors in Applied Math should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Applied Math concentrators (<https://bulletin.brown.edu/the-college/concentrations/apma/>) and as published on the APMA departmental website (<https://appliedmath.brown.edu/academics/undergraduate-program/honors/>). Honors students with primary advisors in Computer Science should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Computer Science concentrators (<https://bulletin.brown.edu/the-college/concentrations/comp/>) and as published on the CS departmental website (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/honors/>). Students wishing to do honors research with a non-APMA or CS advisor should contact the Directors of Undergraduate Studies in APMA and CS to discuss options.

Mathematics-Computer Science Concentration Requirements

Students may opt to pursue an interdisciplinary Bachelor of Science degree in Math-Computer Science, a concentration administered cooperatively between the mathematics and computer science departments. Course requirements include math- and systems-oriented computer science courses, as well as computational courses in applied math. Students must identify a series of electives that cohere around a common theme. As with other concentrations offered by the Computer Science department, students have the option to pursue the professional track of the ScB program in Mathematics-Computer Science.

Requirements for the Standard Track of the Sc.B. degree.

Prerequisites

Three semesters of Calculus to the level of MATH 0180, MATH 0200, or MATH 0350 3

MATH 0520	Linear Algebra	1
or MATH 0540	Linear Algebra With Theory	
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science	

Core Courses

MATH 1530	Abstract Algebra	1

Select one of the following series:	2
Series A	

CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms	
Series B		
CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms	
Series C		
CSCI 0190	Accelerated Introduction to Computer Science (and an additional CS course numbered 200 or above not otherwise used to satisfy a concentration requirement; a Foundations course, or a 1000-level CS course)	
Series D ¹		
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms	
Foundations Courses: Two courses, touching two different Foundations areas:		2
a. Algorithms/Theory Foundations		
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction	
b. AI/Machine Learning/Data Science Foundations.		
CSCI 0410	Foundations of AI	
c. Systems Foundations. Concentration credit for only one of 300/330		
CSCI 0300	Fundamentals of Computer Systems	
or CSCI 0320	Introduction to Software Engineering	
or CSCI 0330	Introduction to Computer Systems	
Three 1000-level Mathematics courses		3
Three courses in Computer Science at the 1000-level or higher. One of these can be an additional 100-level Foundations course or a CSCI non-technical course, as defined by the concentration handbook.		3
Three additional courses different from any of the above chosen from Mathematics, Computer Science, Applied Mathematics, or related areas ⁴		3
A capstone course in Computer Science or Mathematics ⁵		1
Total Credits		19

¹ Students wishing to go directly from CSCI 0111 to CSCI 0200 will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200.

² These must be CSCI courses at the 1000-level or higher. Credit will only be given for one of CSCI 410, CSCI 1410, CSCI 1411, and only one credit for CSCI 300, CSCI 330. See current handbook for list. <https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>

³ Concentration credit will be given for only one of APMA 1650, APMA 1655, and CSCI 1450. These must be approved by a concentration advisor.

⁴ A one-semester course, taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth. A senior thesis which involves two semesters of work may count as a Capstone. Course-based capstones are currently only available through CS. Approved capstone courses and instructions may be found in the CS concentration handbook (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>)

Requirements for the Professional Track of the Sc.B. degree.

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Computer Science Graduate Program

Ph.D. Requirements

Requirements for the Ph.D. program can be found at https://cs.brown.edu/degrees/doctoral/reqs/reqs_phd.2015.pdf

The department of Computer Science offers two graduate degrees in computer science. The Master of Science (Sc.M.) degree for those who wish to improve their professional competence in computer science or to prepare for further graduate study, and the Doctor of Philosophy (Ph.D) degree.

For more information on admission, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/computer-science>
(<http://www.brown.edu/academics/gradschool/programs/computer-science/>)

Requirements for the Masters Degree

Degree requirements are divided into two components: the Basic Component (six courses) and the Advanced Component (two courses). Students must have a B average for all eight courses. All courses must be taken for a grade (they may not be taken S/NC).

Basic Component

The basic component consists of six courses at the 1000 level or higher. Three of them must be CSCI courses. Three of them may be courses related to Computer Science, but offered in other departments and approved by the DGS (master's). An (evolving) list of such courses is on our website.

Advanced Component

One of:

- Two instances of CSCI 2980 in which the student completes a master's project under the direction of a CS faculty member and provides a project report approved by that faculty member. Thus the master's project represents two semesters of work.
- Two 2000-level CSCI courses other than 2980.

Restrictions

No more than two courses (in the combined Basic and Advanced components) may be Arts/Humanities/Policy courses without advisor and DGS approval. These courses are listed in our website, but currently are: {1250, 1280, 1360, 1370, 1800, 1805, 1860, 1870, 1952B, 1952X, 2002, 2402C, 2952S, 2999A, APMA 1910, DEVL 1810, IAPA 1701A, IAPA 1801, PLCY 1702X}.

No more than three instances of 2980 may be used.

Rationale

Students entering the Master's program typically have one of two goals: they intend to pursue research careers in computer science and are preparing themselves to enter PhD programs, or they intend to become professional computer scientists and pursue careers in industry. In both cases, some students might take collections of courses that not only give them strength in particular areas of computer science, but also include complementary areas that familiarize them with other ways of thinking about the field. For example, a student whose interests are in the practical aspects of designing computer systems should certainly take courses in this area, but might also gain some breadth, taking courses in, perhaps,

artificial intelligence. However, some students might feel they've obtained sufficient breadth from their undergraduate studies, and feel the need to take courses only in their areas of specialization. Thus, while we suggest to students that they should explore both depth in a particular area as well as breadth in a broad collection of areas, we allow them to take whatever collection of CS courses they (and their advisors) feel serves their needs.

Students whose goals are research careers should become involved as quickly as possible with research groups as part of their Master's studies, and demonstrate and learn about research by participating in it. The resulting research reports will serve to establish their suitability for entering PhD programs.

Students whose goals are to be professional computer scientists should have some professional experience as part of their preparation. A certain amount of basic coursework is required before a student can qualify for a pedagogically useful internship. Students with limited experience in computer science should take a few advanced computer science courses before embarking on an internship. Other students, particularly those whose undergraduate degrees were at Brown, will likely have had internship experiences while undergraduates. Internships provide insights for subsequent courses and project work at Brown. Students without such experiences are at a disadvantage with respect to their peers.

Note that these internships are not courses and the work is not evaluated as it would be for a course. Students' advisors will assist them in choosing an internship, but it is up to students themselves to ensure that they get as much benefit as possible from their experiences. They must be able to take advantage of these experiences while completing their Master's projects — we expect as high-quality work from them as we do from students who entered the program with prior internship experiences.

A Master's degree normally requires three to four semesters of full-time study, depending upon one's preparation.

CSCI 1010	Theory of Computation	1
CSCI 1040	The Basics of Cryptographic Systems	1
CSCI 1230	Introduction to Computer Graphics *	1
CSCI 1234	Computer Graphics Capstone	.5
CSCI 1250	Introduction to Computer Animation	1
CSCI 1260	Compilers and Program Analysis	1
CSCI 1270	Database Management Systems	1
CSCI 1280	Intermediate 3D Computer Animation	1
CSCI 1300	Interaction Design	1
CSCI 1310	Fundamentals of Computer Systems	1
CSCI 1330	Computer Systems	1
CSCI 1340	Introduction to Software Engineering	1
CSCI 1360	Human Factors in Cybersecurity	1
CSCI 1380	Distributed Computer Systems	1
CSCI 1420	Machine Learning	1
CSCI 1430	Computer Vision	1
CSCI 1440	Algorithmic Game Theory	1

CSCI 2951E	Topics in Computer Systems Security	1
CSCI 2951I	Computer Vision for Graphics and Interaction	1
CSCI 2951O	Foundations of Prescriptive Analytics	1
CSCI 2951U	Topics in Software Security	1
CSCI 2951X	Reintegrating AI	1
CSCI 2952G	Deep Learning in Genomics	1
CSCI 2952N	Advanced Topics in Deep Learning	1
CSCI 2952O	A Practical Introduction to Advanced 3D Robot Perception	1
CSCI 2952Q	Robust Algorithms for Machine Learning	1
CSCI 2952R	Systems Transforming Systems	1
CSCI 2952S	Topics in Cyber and Digital Policy	1
CSCI 2999A	Cybersecurity Management Within Business, Government, and Non-Profit Organizations	1

* Students may arrange with the instructor to receive 2000 level credit for additional coursework in CSCI 1230, 1660 or 1670

Professional Track

Students choosing the professional track must complete the eight courses of the basic and advanced components given above. In addition, students must complete full-time internships doing work that is related to Computer Science, totaling 140 - 840 hours, whereby each internship must be at least 140 hours in duration. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member.

On completion of each professional experience or internship, the student must write a reflective essay about the experience addressing specific prompts on our website. The essay must be sent to and approved by the DGS.

Concurrent ScB (NUS) and ScM in Computational Biology (Brown University)

The School of Computing at National University of Singapore and The Department of Computer Science at Brown have established a concurrent Bachelor's and Master's degree program in Computational Biology. After having first completed four years of under-graduate study at National University of Singapore (NUS), qualified students will attend Brown University to complete their fifth and final year of study in computational biology. After the successful completion of requirements set forth by both universities, the students will simultaneously earn both their Sc.B. and Sc.M. degrees. The Sc.B will be awarded by the National University of Singapore, while the Sc.M. is awarded by Brown University.

Cybersecurity - Online Graduate Program

The Master of Science in Cybersecurity is designed to be completed in 4 semesters. It takes 8 courses to complete the program and students can take up to 3 courses per semester, but the Department strongly recommends taking no more than 2 courses per semester--especially during one's first term at Brown. We do not currently offer summer term courses in the program, so courses are completed during fall and spring. Course availability varies and there is no guarantee that students will be able to take every course they are interested in.

Students in the program are only pre-approved to take the courses from the standard curriculum during the specific semesters listed below. If you deviate from the standard curriculum without approval from your Director of Graduate Studies, the course you register for may not count towards your degree.

Computer Science Track

Computer Science Track:

Required Courses:

CSCI 1860	Cybersecurity Law and Policy	1
CSCI 2660	Computer Systems Security	1
CSCI 2999A	Cybersecurity Management Within Business, Government, and Non-Profit Organizations	1

Select Three Track courses:

3

CSCI 1310	Fundamentals of Computer Systems
CSCI 1340	Introduction to Software Engineering
CSCI 1510	Introduction to Cryptography and Computer Security (prerequisite: CSCI 1010 Theory of Computation, prerequisite/corequisite: CSCI 1660 Computer Systems Security)
CSCI 1515	Applied Cryptography (prerequisite: CSCI 1310 Fundamentals of Computer Systems or CSCI 1330 Computer Systems)
CSCI 1650	Software Security and Exploitation (prerequisites: CSCI 1330 Computer Systems, CSCI 1670 Operating Systems)
CSCI 1670	Operating Systems (prerequisite: CSCI 1330 Computer Systems)

CSCI 1680	Computer Networks (prerequisite: CSCI 1310 Fundamentals of Computer Systems or CSCI 1330 Computer Systems)
CSCI 2670	Operating Systems (prerequisite: CSCI 1330 Computer Systems)
CSCI 1690	Operating Systems Laboratory (prerequisite: CSCI 1330 Computer Systems)
CSCI 1730	Design and Implementation of Programming Languages
CSCI 1951L	Blockchains and Cryptocurrencies (prerequisite: CSCI 1330 Computer Systems)
CSCI 2590	Advanced Topics in Cryptography (prerequisite: CSCI 1510 Introduction to Cryptography and Computer Security)
CSCI 2951E	Topics in Computer Systems Security (prerequisite: CSCI 1660 Computer Systems Security)
CSCI 2951U	Topics in Software Security (prerequisite: CSCI 1650 Software Security and Exploitation)

Select Two Elective Courses: 2

CSCI 1010	Theory of Computation
CSCI 1260	Compilers and Program Analysis
CSCI 1270	Database Management Systems
CSCI 1360	Human Factors in Cybersecurity
CSCI 1570	Design and Analysis of Algorithms
CSCI 1760	Multiprocessor Synchronization
CSCI 1800	Cybersecurity and International Relations
CSCI 1805	Computers, Freedom and Privacy
CSCI 1870	Cybersecurity Ethics
CSCI 1951R	Introduction to Robotics
CSCI 2002	Privacy and Personal Data Protection
CSCI 2980	Reading and Research

This course can be used for a project relevant to policy challenges in cybersecurity. It can count as 1 or 2 courses: shorter projects will count as one course and are completed in one semester; longer projects will count as two courses and are completed in two semesters.

Policy Track

Policy Track:

Required Courses:

CSCI 1360	Human Factors in Cybersecurity	1
CSCI 1880	Introduction to Computer Security	1
CSCI 2200	Cybersecurity Law and Policy	1
CSCI 2999A	Cybersecurity Management Within Business, Government, and Non-Profit Organizations	1

Select Three Track courses: 3

CSCI 1040	The Basics of Cryptographic Systems
CSCI 1800	Cybersecurity and International Relations
CSCI 1805	Computers, Freedom and Privacy
CSCI 1870	Cybersecurity Ethics
IAPA 1811	Contemporary Digital Policy and Politics (Only Available for Synchronous Attendance) (Course With Limited Enrollment) or CSCI 1952X Contemporary Digital Policy and Politics (Asynchronous Version of IAPA 1811) (Course With Limited Enrollment)
CSCI 2002	Privacy and Personal Data Protection

CSCI 2952S	Topics in Cyber and Digital Policy (Course With Limited Enrollment)
Select Two Elective Courses: 2	
CSCI 1951L	Blockchains and Cryptocurrencies
ENGN 2125	Engineering Management + Decision Making
ENGN 2150	Technology Entrepreneurship and Commercialization I (This course has a limited number of seats for ScM in Cybersecurity students. The number of seats available varies by semester)
ENGN 2180	Globalization Immersion Experience and Entrepreneurship Laboratory (This course has a limited number of seats for ScM in Cybersecurity students. The number of seats available varies by semester)
CSCI 2951E	Topics in Computer Systems Security (if you have satisfied prerequisites)
CSCI 2980	Reading and Research
This course can be used for a project relevant to policy challenges in cybersecurity. It can count as 1 or 2 courses: shorter projects will count as one course and are completed in one semester; longer projects will count as two courses and are completed in two semesters.	

Cybersecurity - Residential Graduate Program

The Master of Science in Cybersecurity is designed to be completed in 4 semesters. It takes 8 courses to complete the program and students can take up to 3 courses per semester, but the Department strongly recommends taking no more than 2 courses per semester--especially during one's first term at Brown. We do not currently offer summer term courses in the program, so courses are completed during fall and spring. Course availability varies and there is no guarantee that students will be able to take every course they are interested in.

Students in the program are only pre-approved to take the courses from the standard curriculum during the specific semesters listed below. If you deviate from the standard curriculum without approval from your Director of Graduate Studies, the course you register for may not count towards your degree.

Computer Science Track

Computer Science Track:

Required Courses:

CSCI 2200	Cybersecurity Law and Policy	1
CSCI 2660	Computer Systems Security	1
CSCI 2999A	Cybersecurity Management Within Business, Government, and Non-Profit Organizations	1

Select Three Track courses: 3

CSCI 1310	Fundamentals of Computer Systems
CSCI 1330	Computer Systems
CSCI 1340	Introduction to Software Engineering
CSCI 1510	Introduction to Cryptography and Computer Security (prerequisite: CSCI 1010 Theory of Computation, prerequisite/corequisite: CSCI 1660 Computer Systems Security)
CSCI 1515	Applied Cryptography (prerequisite: CSCI 1310 Fundamentals of Computer Systems or CSCI 1330 Computer Systems)
CSCI 1650	Software Security and Exploitation (prerequisites: CSCI 1330 Computer Systems, CSCI 1670 Operating Systems)

CSCI 1670	Operating Systems (prerequisite: CSCI 1330 Computer Systems)
CSCI 2670	Operating Systems (prerequisite: CSCI 1330 Computer Systems)
CSCI 1680	Computer Networks (prerequisite: CSCI 1310 Fundamentals of Computer Systems or CSCI 1330 Computer Systems)
CSCI 1690	Operating Systems Laboratory (prerequisite: CSCI 1330 Computer Systems)
CSCI 1730	Design and Implementation of Programming Languages
CSCI 1951L	Blockchains and Cryptocurrencies (prerequisite: CSCI 1330 Computer Systems)
CSCI 2590	Advanced Topics in Cryptography (prerequisite: CSCI 1510 Introduction to Cryptography and Computer Security)
CSCI 2951E	Topics in Computer Systems Security (prerequisite: CSCI 1660 Computer Systems Security)
CSCI 2951U	Topics in Software Security (prerequisite: CSCI 1650 Software Security and Exploitation)

Select Two Elective Courses: 2

CSCI 1010	Theory of Computation
CSCI 1260	Compilers and Program Analysis
CSCI 1270	Database Management Systems
CSCI 1360	Human Factors in Cybersecurity
CSCI 1570	Design and Analysis of Algorithms
CSCI 1760	Multiprocessor Synchronization
CSCI 1800	Cybersecurity and International Relations
CSCI 1805	Computers, Freedom and Privacy
CSCI 1870	Cybersecurity Ethics
CSCI 1951R	Introduction to Robotics
CSCI 2002	Privacy and Personal Data Protection
CSCI 2980	Reading and Research

This course can be used for a project relevant to policy challenges in cybersecurity. It can count as 1 or 2 courses: shorter projects will count as one course and are completed in one semester; longer projects will count as two courses and are completed in two semesters.

Policy Track**Policy Track:****Required Courses:**

CSCI 1360	Human Factors in Cybersecurity	1
CSCI 1880	Introduction to Computer Security	1
CSCI 2200	Cybersecurity Law and Policy	1
CSCI 2999A	Cybersecurity Management Within Business, Government, and Non-Profit Organizations	1

Select Three Track courses: 3

CSCI 1040	The Basics of Cryptographic Systems
CSCI 1800	Cybersecurity and International Relations
CSCI 1805	Computers, Freedom and Privacy
CSCI 1870	Cybersecurity Ethics
IAPA 1811	Contemporary Digital Policy and Politics (Only Available for Synchronous Attendance) (Course With Limited Enrollment) or CSCI 1952X Contemporary Digital Policy and Politics (Asynchronous Version of IAPA 1811) (Course With Limited Enrollment))

CSCI 2002	Privacy and Personal Data Protection
CSCI 2952S	Topics in Cyber and Digital Policy (Course With Limited Enrollment)
Select Two Elective Courses: 2	
CSCI 1951L	Blockchains and Cryptocurrencies
ENGN 2125	Engineering Management + Decision Making
ENGN 2150	Technology Entrepreneurship and Commercialization I (This course has a limited number of seats for ScM in Cybersecurity students. The number of seats available varies by semester)
ENGN 2180	Globalization Immersion Experience and Entrepreneurship Laboratory (This course has a limited number of seats for ScM in Cybersecurity students. The number of seats available varies by semester)
CSCI 2951E	Topics in Computer Systems Security (if you have satisfied prerequisites)
CSCI 2980	Reading and Research
This course can be used for a project relevant to policy challenges in cybersecurity. It can count as 1 or 2 courses: shorter projects will count as one course and are completed in one semester; longer projects will count as two courses and are completed in two semesters.	

Courses**CSCI 0020. The Digital World.**

Removes the mystery surrounding computers and the ever-growing digital world. Introduces a range of topics and many aspects of multimedia, along with explanations of the underlying digital technology and its relevance to our society. Other topics include artificial intelligence, IT security, ethics and the economics of computing as well as the effects of its pervasiveness in today's world. Introductory programming and analytic skills are developed through Excel, HTML, CSS, Javascript, and Python assignments. CSCI0020 is a good introduction to a wide range of CS topics that have broad relevance in our society. No prerequisites. Cannot be taken to fulfill CS Concentration.

CSCI 0030. Introduction to Computation for the Humanities and Social Sciences.

Introduces students to the use of computation for solving problems in the social sciences and the humanities. We will investigate a series of real-world problems taken from the news, from books such as Freakonomics, and from current research. Topics covered include data gathering, analysis, and visualization; web-based interfaces; algorithms; and scripting. Enrollment limited to 20. Instructor permission required.

CSCI 0040. Introduction to Scientific Computing and Problem Solving.

CSCI0040 provides an introduction to using computers to solve STEM (Science, Technology, Engineering and Mathematics) data analysis, visualization and simulation problems from engineering, neuroscience, biology, mathematics and finance.

Students will access and analyze a number of "real world" data sets while becoming fluent MATLAB programmers. Other tools utilized may include Excel, Wolframalpha and Python.

By course end, students should be able to use MATLAB to solve a large variety of scientific data analysis, visualization and simulation problems.

No prior programming experience is required (MATLAB is easy and fun to use).

CSCI 0050. A Data-Centric Introduction to Programming.

An introduction to computer programming with a focus on skills needed for data-intensive applications. Topics include core constructs for processing both tabular and structured data; decomposing problems into programming tasks; data structures; algorithms; and testing programs for correct behavior.

CSCI 0060. Practical System Skills.

An introduction to develop hands-on-computing skills necessary to comfortably work within a UNIX-like operating system. Topics include the shell, its filesystem, bash scripting, SSH, version control, as well as how to locally develop, deploy and publish a website. <https://cs.brown.edu/courses/csci0060/>

CSCI 0080. A First Byte of Computer Science.

Introduces non-CS concentrators to the academic discipline of computer science, its thought processes, and its relevance to other fields and modern life more generally. The target audience is students who are interested in learning more about what computer science is about and the ideas it has to offer tomorrow's citizens and scholars. Topics include the basics of computation and programming, a taste of theoretical computer science and algorithms, and an introduction to codes and artificial intelligence. Although students will learn to read and understand short programs, the course will not teach or require advanced programming skills.

CSCI 0081. TA Apprenticeship: Full Credit.

Being an undergraduate TA is a learning experience: one not only gets a deeper understanding of the course material, but gains management and social skills that are invaluable for one's future. Students taking this course must first be selected as an undergraduate TA for a Computer Science course, a course the student has taken and done well in. Students will work with the course's instructor on a variety of course-related topics, including preparation of material and development of assignments. Whether CSCI 0081 or its half-credit version (CSCI 0082) is taken is up to the professor of the course being TA'd. Instructor permission required.

CSCI 0082. TA Apprenticeship: Half Credit.

Being an undergraduate TA is a learning experience: one not only gets a deeper understanding of the course material, but gains management and social skills that are invaluable for one's future. Students taking this course must first be selected as an undergraduate TA for a Computer Science course, a course the student has taken and done well in. Students will work with the course's instructor on a variety of course-related topics, including preparation of material and development of assignments. Whether CSCI 0082 or its full-credit version (CSCI 0081) is taken is up to the professor of the course being TA'd. Instructor permission required.

CSCI 0100. Data Fluency for All.

This course is intended to introduce Brown students to computational techniques that data scientists use to tell stories. Data fluency encompasses both data literacy, the basics of statistics and machine learning, and data communication, which relies heavily on principles of design. Students will gain hands on experience using statistical tools such as 'R' to analyze real world data sets, and 'ggplot' to visualize them. Sample application domains include just about every field, since the only requirement is data, which there almost always are (e.g., the complete works of Shakespeare is a sample data set).

CSCI 0111. Computing Foundations: Data.

An introduction to computing and programming that focuses on understanding and manipulating data. Students will learn to write programs to process both tabular and structured data, to assess programs both experimentally and theoretically, to apply basic data science concepts, and to discuss big ideas around the communication, use, and social impacts of digital information. Designed for both concentrators and non-concentrators, this is the first course in either a two- or three-course introductory sequence leading into advanced CS courses. Programming assignments will be smaller scale than in CSCI 0150/0170, thus allowing students time to practice programming and discuss computational ideas in a broader context.

CSCI 0112. Computing Foundations: Program Organization.

Explores how organization of programs, data, and algorithms affects metrics such as time performance, space usage, social impacts, and data privacy. Students will learn how to choose between candidate data structures for a problem, how to write programs over several standard data structures, how to assess the quality of programs (from theoretical, practical, and social perspectives), and how to apply their skills to computational problems that could arise in a variety of fields. The course will teach object-oriented programming, in combination with basic functional and imperative programming concepts. The course is designed for both concentrators and non-concentrators. Prerequisite: CSCI 0111

CSCI 0130. User Interfaces and User Experience.

Have you ever had trouble using someone else's microwave? Have you ever wondered why keyboards are ordered "qwertyuiop"? We will focus on hands-on experience to learn when to use different interfaces, how to model and represent user interaction, how to elicit requirements and feedback from users, as well as the principles of user experience design, methods for designing and prototyping interfaces, and user interface evaluation. Students interested in gaining hands-on experience designing a user interface as well as learning the process behind building an effective interface should take this course. There will be assignments, readings, and workshop time, where students will have the opportunity to work alongside each other as they learn critical tools for interface and web design. This course is open to students that have not taken CSCI 1300 or CSCI 0130 in the past.

CSCI 0150. Introduction to Object-Oriented Programming and Computer Science.

Introduces programming in Java (a modern, widely-used programming language), interactive 2D computer graphics, and some fundamental data structures and algorithms. Students learn by programming a sequence of interactive graphics programs which gradually increase in complexity, including Doodle Jump, Tetris (<http://bastilleweb.techhouse.org/>), and a significant final project. Lectures are supplemented by skits performed by the UTAs (Undergraduate Teaching Assistants) to teach course concepts and for a bit of added entertainment! This course is intended for both potential concentrators and those who may take only a single course. There are NO prerequisites, and no prior knowledge of programming is required, though students who do have prior programming experience are also encouraged to take the course!

CSCI 0160. Introduction to Algorithms and Data Structures.

Introduces fundamental techniques for problem solving by computer that are relevant to most areas of computer science, both theoretical and applied. Algorithms and data structures for sorting, searching, graph problems, and geometric problems are covered. Programming assignments conform with the object-oriented methodology introduced in CSCI 0150. Prerequisite: CSCI 0150 or written permission.

CSCI 0170. Computer Science: An Integrated Introduction.

CSCI 0170 is a computer science introduction suitable for students with no prior experience. It focuses on functional programming, which provides a new experience for students who have already done some programming and a solid foundation for students who have never programmed at all. Students learn to design solutions to computational problems, solutions that are compact, elegant, and efficient. Over the course of the semester, the computational problems addressed grow in complexity, from simple (e.g. long addition) to moderate (e.g. implementation of one programming language in another) to sophisticated (e.g. an implementation of an AI game player for two-person games of complete information). We study clear and precise formulation of computational problems, use of recursion, and rudimentary analysis of algorithms. The emphasis is on problem solving and insight and crafting beautiful things rather than on coding.

CSCI 0180. Computer Science: An Integrated Introduction.

A continuation of CSCI 0170. Students learn to program in Java while continuing to develop their algorithmic and analytic skills. Emphasis is placed on object-oriented design, imperative programming, and the implementation and use of data structures. Examples are drawn from such areas as databases, strategy games, web programming, graphical user interfaces, route finding, and data compression. Lab work done with the assistance of TAs. Prerequisite: CSCI 0112, 0170, or CSCI 0190. CSCI 0111 can be used if additional work is done and with the instructor's permission.

CSCI 0190. Accelerated Introduction to Computer Science.

A one-semester introduction to CS, similar to the two-course introductory sequences (CSCI 0150-0200 and CSCI 0170-0200).

All interested students, irrespective of background, must pass online placement assignments during the summer. Though placement is most appropriate for students with some prior programming experience, it is self-contained so all are welcome to try learning the provided material and attempting placement. Information will be available by June 1st at <https://cs.brown.edu/courses/csci0190/>.

Please do not request override codes. Override requests made through CAB will be ignored. The only way to get into the class is through placement. Students who do not successfully pass the placement process won't be allowed to register. Students who do pass will be sent registration instructions by course staff; you do not need to contact them (nor make requests through CAB).

CSCI 0200. Program Design with Data Structures and Algorithms.

Students extend their program-design skills while learning multiple data structures, common graph algorithms, different forms of societal impacts from programs, how to analyze programs for performance, and how to work effectively with multiple styles of programming languages. Examples and course projects draw from several areas of computer science to help students identify their broader interests within the field. There will be a required weekly lab session involving hands-on work with course material. Prerequisite: CSCI 0112, CSCI 0150, 0170, or CSCI 0190. In addition, CSCI 0111 can be used with both additional work and the instructor's permission. The first two weeks of the course will be taught as at least two parallel tracks based on which prerequisite course a student has taken. CSCI 0200 will be offered every semester (fall and spring).

CSCI 0220. Introduction to Discrete Structures and Probability.

Seeks to place on solid foundations the most common structures of computer science, to illustrate proof techniques, to provide the background for an introductory course in computational theory, and to introduce basic concepts of probability theory. Introduces Boolean algebras, logic, set theory, elements of algebraic structures, graph theory, combinatorics, and probability. No prerequisites.

CSCI 0300. Fundamentals of Computer Systems.

Covers fundamental concepts, principles, and abstractions that underlie the design and engineering of computer systems. Students will learn how a computer works, how to write safe and performant systems software, and what systems abstractions support today's complex, high-performance systems developed in industry. Specific topics include machine organization, systems programming and performance, key concepts of operating systems, isolation, security, virtualization, concurrent programming, and the basics of distributed systems. Combined lectures, labs, and several hands-on projects involving programming exercises in C/C++. Prerequisites: CSCI 0190, or 0200; or permission of the instructor.

CSCI 0310. Introduction to Computer Systems.

Basic principles of computer organization. Begins with machine representation of data types and logic design, then explores architecture and operations of computer systems, including I/O, pipelining, and memory hierarchies. Uses assembly language as an intermediate abstraction to study introductory operating system and compiler concepts. Prerequisite: CSCI 0150 or CSCI 0180 or CSCI 0190.

CSCI 0320. Introduction to Software Engineering.

"The course focuses on designing, building, testing, and maintaining systems collaboratively. Learning goals include front-end and algorithmic development, debugging, advanced testing (e.g., fuzzing), specification, source control, code review, productive AI use, and more. In the first half of the course, students complete and receive formative feedback on weekly sprints. In the second half, students propose, design, implement, and present a substantial group project. New this semester: the course will be using entirely TypeScript (with various frameworks). No prior experience with TypeScript is necessary, just like in previous semesters. The switch allows for a smoother introduction to web programming and reduces setup overhead."

CSCI 0330. Introduction to Computer Systems.

High-level computer architecture and systems programming. The course covers the organization of computer systems (in terms of storage units, caches, processors, and I/O controllers) and teaches students assembly-language programming and C-language programming. Extensive programming exercises introduce students to systems-level programming on Unix systems, as well as to multi-threaded programming with POSIX threads. Students will be introduced to the functions of operating systems. Prerequisite: CSCI 0160, 0180, 0190, or 0200.

CSCI 0410. Foundations of AI and Machine Learning.

This course will provide broad coverage of core topics in artificial intelligence (AI), as a prelude to students taking more in-depth AI courses later on. To this end, the course will introduce students to prevalent AI models, both logical and probabilistic, as well as algorithms to solve these models based on search, planning, reinforcement learning, and supervised and unsupervised machine learning. These ideas will be applied to develop basic natural language processing, computer vision, robotic, and multiagent systems, all with an eye towards building socially responsible AI. Students who take this course may not take CSCI 1411.

CSCI 0500. Data Structures, Algorithms, and Intractability: An Introduction.

This course will cover the basics of how to design and analyze data structures and algorithms. We will develop algorithmic intuition through rigorous analysis of algorithmic correctness and performance. We will also study the theory of NP-completeness, which helps us understand which problems are computationally intractable.

CSCI 0530. Coding the Matrix: An Introduction to Linear Algebra for Computer Science.

Introduces vectors, matrices and their role in computer science in three components: (1) concepts, theorems, and proofs, (2) procedures and programs, (3) applications and working with data. Weekly lab sessions where students apply concepts to a real task with real data. Example labs: transformations in 2-d graphics, error-correcting codes, image compression using wavelets, synthesizing a new perspective in a photo, face recognition, news story categorization, cancer diagnosis using machine learning, matching airplanes to destinations, Google's PageRank method. Other topics as time allows. Skills in programming and prior exposure to reading and writing mathematical proofs required.

CSCI 0535. Linear Algebra for Machine Learning.

The goal of this course is to provide firm foundations in linear algebra and optimization techniques that will enable students to analyze and solve problems arising in various areas of data science, especially machine learning and data analysis. The students will acquire a firm theoretical knowledge of these concepts and tools. You will also learn how to use these tools in practice by tackling various judiciously chosen projects (from Machine Learning, etc.).

CSCI 1010. Theory of Computation.

The course introduces basic models of computation including languages, finite-state automata and Turing machines. Proves fundamental limits on computation (incomputability, the halting problem). Provides the tools to compare the hardness of computational problems (reductions). Introduces computational complexity classes (P, NP, PSPACE and others).

CSCI 1040. The Basics of Cryptographic Systems.

This course will cover cryptographic concepts such as data privacy, encryption, authentication, digital signatures, differential privacy, privacy-enhancing technologies, secure computation, and electronic money. The emphasis will be on how to use cryptographic systems correctly in a larger context, rather than on the mathematical details of how they work; although we will cover some of those details too, on a high level. This course will be aimed at practicing and aspiring poets, economists, software engineers, law and policy wonks, and business tycoons. No prerequisites.

CSCI 1230. Introduction to Computer Graphics.

Fundamental concepts in 2D and 3D computer graphics, e.g., 2D raster graphics techniques and simple image processing. Focuses on geometric transformations, and 3D modeling, viewing and rendering. A sequence of assignments in C++ culminates in a simple geometric modeler and ray tracer. Prerequisite: CSCI 0160, CSCI 0180, CSCI 0190, or CSCI 0200. Some knowledge of basic linear algebra is helpful but not required. Strong object-oriented programming ability (e.g., in C++, Java or Python) is required.

CSCI 1234. Computer Graphics Capstone.

CSCI 1234 is a half-credit course intended to be taken concurrently with CSCI 1230 and provides students with a greater understanding of the material by having them extend each of 1230's assignments to greater depth.

CSCI 1250. Introduction to Computer Animation.

Introduction to 3D computer animation production including story writing, production planning, modeling, shading, animation, lighting, and compositing. The first part of the course leads students through progressive exercises that build on each other to learn basic skills in 2D and 3D animation. At each step, student work is evaluated for expressiveness, technical correctness and aesthetic qualities. Students then work in groups creating a polished short animation. Emphasis on in-class critique of ongoing work which is essential to the cycle of visually evaluating work in progress, determining improvements, and implementing them for further evaluation.

Please see course website for application procedure.

CSCI 1260. Compilers and Program Analysis.

Lexical analysis, syntactic analysis, semantic analysis, code generation, code optimization, translator writing systems.

CSCI 1270. Database Management Systems.

Introduction to database systems internals, design and implementation. Includes data models and structures, languages, query processing and optimization, concurrency control and recovery algorithms. Coverage of relational distributed and parallel databases as well as noSQL big data systems. Prerequisites: One of CSCI 0300, 0330 (or equivalent coursework).

CSCI 1280. Intermediate 3D Computer Animation.

Continues work begun in CSCI 1250 with deeper exploration of technical and artistic aspects of 3D computer animation including more sophisticated shading and lighting methods and character modeling, rigging, animation, and dynamics. After a series of individual exercises, students pursue an independent topic and then, working alone or in pairs, create a polished demonstration. Emphasis is on in-class critique of ongoing work. Prerequisite: CSCI 1250. Students may contact the instructor in December for permission.

CSCI 1290. Computational Photography.

Describes the convergence of computer graphics and computer vision with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate, and interact with visual media. Topics covered: cameras, human visual perception, image processing and manipulation, image based lighting and rendering, high dynamic range, single view reconstruction, photo quality assessment, non photorealistic rendering, the use of Internet-scale data, and more. Students are encouraged to capture and process their own data. Recommended previous knowledge of computer graphics or computer vision (such as CSCI 1230, 1430, 1470, or ENGN 1610).

CSCI 1300. Interaction Design.

Have you ever walked into a door thinking that you were supposed to pull instead of push? Have you ever been stuck on a website, not sure how to proceed next? Learn the principles of interaction design, methods for designing and prototyping interfaces, and user interface evaluation. Students interested in both learning the process behind designing a user interface should take this course. There will be assignments, readings, and studios, where students will have the opportunity to work alongside TAs and interact with industry guests as they learn critical tools for interaction design.

Website: <http://cs.brown.edu/courses/csci1300/>

CSCI 1302. Sociotechnical Approaches to AI and HCI.

All technology is sociotechnical: it is designed and built by people, and in turn, shapes our lives and the societies we are part of. An understanding of people and the broader sociopolitical contexts in which we live is critical for designing functional, societally-beneficial technology, and for understanding how and why technology can sometimes have unintended or harmful consequences. This course aims to help students develop this sociotechnical lens for designing, building, and critiquing technology. Throughout the course, we'll also cover the unique considerations and impacts introduced by data-driven and AI systems. Students will learn theory, methods, and ethical and policy considerations relevant to this space, including: principles of user interaction, qualitative & quantitative HCI research methods (e.g., semi-structured interviews, survey design), human-AI interaction, algorithmic fairness and justice, and design considerations for privacy and security.

CSCI 1310. Fundamentals of Computer Systems.

Covers fundamental concepts, principles, and abstractions that underlie the design and engineering of computer systems, with reference to applications of these concepts in industry. Topics include machine organization, systems programming and performance, key concepts of operating systems, isolation, security, virtualization, concurrent programming, and the basics of distributed systems. Combined lectures, case studies, labs, and several hands-on projects involving programming exercises. This course is intended for Computer Science Master's students only. Anyone else wanting to take the course should contact the instructor.

CSCI 1320. Creating Modern Web & Mobile Applications.

This course covers all aspects of web application development, including initial concept, user-centric design, development methodologies, front and back end development, databases, security, testing, load testing, accessibility, and deployment. There will be a substantial team project. The course is designed for students with a programming background (equiv CSCI 0320/CSCI 0330/CSCI 0300) who want to learn how to build web applications, and for students with a background in web design, including HTML and Javascript, who are interested in learning how to extend design techniques to incorporate the technologies needed in modern web applications. Project teams will consist of students with both backgrounds.

CSCI 1330. Computer Systems.

High-level computer architecture and systems programming. The course covers the organization of computer systems (in terms of storage units, caches, processors, and I/O controllers) and teaches students assembly-language programming and C-language programming. Extensive programming exercises introduce students to systems-level programming on Linux systems, as well as to multi-threaded programming with POSIX threads. Students will be introduced to the functions of operating systems. Enrollment limited to Master's students only.

CSCI 1340. Introduction to Software Engineering.

"The course focuses on designing, building, testing, and maintaining systems collaboratively. Learning goals include front-end and algorithmic development, debugging, advanced testing (e.g., fuzzing), specification, source control, code review, productive AI use, and more. In the first half of the course, students complete and receive formative feedback on weekly sprints. In the second half, students propose, design, implement, and present a substantial group project. New this semester: the course will be using entirely TypeScript (with various frameworks). No prior experience with TypeScript is necessary, just like in previous semesters. The switch allows for a smoother introduction to web programming and reduces setup overhead. Only Master's students may enroll in CSCI 1340. It shares lectures and base assignments with CSCI 0320, but goes deeper into topics like specification, performance, review, and modifying algorithms to suit the project context. Assignments have additional requirements

CSCI 1360. Human Factors in Cybersecurity.

For the most up to date information on this class, please visit this page: <https://cs.brown.edu/courses/csci1360/> This course is designed to push you to think about cybersecurity as an idea with both physical and virtual elements. Throughout the course, we will examine the value of information, the importance of users, and the difficult balance between security and usability. The ultimate goal of this course is to give you the intellectual and scientific framework you need to create systems that are both secure and efficient to use. The course focuses on usable security practices, but also looks deeply at the way our society influences security

CSCI 1370. Virtual Reality Design for Science.

Explores the visual and human-computer interaction design process for scientific applications in Brown's immersive virtual reality Cave. Joint with RISD. Computer Science and design students learn how to work together effectively; study the process of design; learn about scientific problems; create designs applications; critique, evaluate, realize and iterate designs; and demonstrate final projects. Instructor permission required.

CSCI 1377. Tools for Thought.

Humanity's technological progress is defined in part by the development of tools which augment our cognitive capabilities: language, writing, notation, calculators, diagrams, and more. Computers have significant potential for developing even more powerful tools for thought (TFT). People regularly use computational TFTs such as data visualization, search engines, computational notebooks, and generative AI. Despite this progress, many cognitive processes look roughly the same today as they did 30 years ago: communicating with PDFs, learning with textbooks, programming with IDEs, data analysis with spreadsheets. The goal of this course is to equip you with the foundations to build the next generation of computational TFT.

CSCI 1380. Distributed Computer Systems.

Explores the fundamental principles and practice underlying networked information systems, first we cover basic distributed computing mechanisms (e.g., naming, replication, security, etc.) and enabling middleware technologies. We then discuss how these mechanisms and technologies fit together to realize distributed databases and file systems, web-based and mobile information systems.

CSCI 1385. Distributed Systems Laboratory.

CSCI 1385 is a half-credit course intended to be taken concurrently with CSCI 1380 and provides students with a greater understanding of the material by having them extend each of 1380's assignments to greater depth.

CSCI 1410. Artificial Intelligence.

Algorithms and representations used in artificial intelligence. Introduction and implementation of algorithms for search, planning, perception, knowledge representation, logic, probabilistic representation and reasoning, robotics and machine learning.

CSCI 1411. Foundations of AI and Machine Learning.

This course will provide broad coverage of core topics in artificial intelligence (AI), as a prelude to students taking more in-depth AI courses later on. To this end, the course will introduce students to prevalent AI models, both logical and probabilistic, as well as algorithms to solve these models based on search, planning, reinforcement learning, and supervised and unsupervised machine learning. These ideas will be applied to develop basic natural language processing, computer vision, robotic, and multiagent systems, all with an eye towards building socially responsible AI. One can get credit for only one of CSCI 0410 and CSCI 1411.

CSCI 1420. Machine Learning.

How can artificial systems learn from examples and discover information buried in data? We explore the theory and practice of statistical machine learning, focusing on computational methods for supervised and unsupervised learning. Specific topics include empirical risk minimization, probably approximately correct learning, kernel methods, neural networks, maximum likelihood estimation, the expectation maximization algorithm, and principal component analysis. This course also aims to expose students to relevant ethical and societal considerations related to machine learning that may arise in practice. Please contact the instructor for information about the waitlist.

CSCI 1430. Computer Vision.

How can we program computers to understand the visual world? This course treats vision as inference from noisy and uncertain data and emphasizes probabilistic and statistical approaches. Topics may include perception of 3D scene structure from stereo, motion, and shading; segmentation and grouping; texture analysis; learning, object recognition; tracking and motion estimation. Strongly recommended: basic linear algebra, calculus, and probability.

CSCI 1440. Algorithmic Game Theory.

This course examines topics in game theory and mechanism design from a computer scientist's perspective. Through the lens of computation, the focus is the design and analysis of systems utilized by self-interested agents. Students will investigate how the potential for strategic agent behavior can/should influence system design, and the ramifications of conflicts of interest between system designers and participating agents. Emphasis on computational tractability is paramount, so that simple designs are often preferred to optimal. Students will learn to analyze competing designs using the tools of theoretical computer science, and empirical tools, such as empirical game-theoretic analysis. Application areas include computational advertising, wireless spectrum, and prediction markets.

CSCI 1450. Advanced Introduction to Probability for Computing and Data Science.

Probability and statistics have become indispensable tools in computer science. Probabilistic methods and statistical reasoning play major roles in machine learning, cryptography, network security, communication protocols, web search engines, robotics, program verification, and more. This course introduces the basic concepts of probability and statistics, focusing on topics that are most useful in computer science applications. Topics include: modeling and solution in sample space, random variables, simple random processes and their probability distributions, Markov processes, limit theorems, and basic elements of Bayesian and frequentist statistical inference. Basic programming experience required for optional homework assignments.

Students cannot get concentration credit for both CSCI 1450 and APMA 1650/ APMA 1655

CSCI 1460. Computational Linguistics.

The application of computational methods to problems in natural-language processing. In particular we examine techniques due to recent advances in deep learning: word embeddings, recurrent neural networks (e.g., LSTMs), sequence-to-sequence models, and generative adversarial networks (GANs). Programming projects include sentiment classification, topic modelling and machine translation. Prerequisites are not strictly required, but the course will assume some knowledge of machine learning and deep learning, and will involve programming assignments in Python and PyTorch.

CSCI 1470. Deep Learning.

What is deep learning? How is it related to machine learning? How is it applied to perform tasks like classifying images or translating languages? Deep Learning belongs to a broader family of machine learning methods. Deep learning-based methods (e.g., convolutional neural networks, recurrent neural networks, autoencoders) have led to rapid improvements in applications like computer vision, natural language processing, robotics, and even genomics and health. In this course, you will get an overview of the prominent techniques of deep learning and their applications. This course is designed to help you understand the underlying concepts as well as the promise and pitfalls of deep learning. It also aims at providing hands-on practice of implementing and applying deep learning methods in Python. Students may take only one of CSCI 1470 and CSCI 2470.

CSCI 1480. Building Intelligent Robots.

How do robots function autonomously in dynamic, unpredictable environments? This course focuses on programming mobile robots, such as the iRobot Roomba, to perceive and act autonomously in real-world environments. The major paradigms for autonomous control and robot perception are examined and compared with robotic notions in science fiction. Prerequisite: CSCI 0150, CSCI 0170 or CSCI 0190. Recommended: CSCI 1410 or CSCI 1230.

CSCI 1491. Fairness in Automated Decision Making.

We know we want to build more equitable technology, but how? In this course we'll review the latest developments in how to build more equitable algorithms, including definitions of (un)fairness, the challenges of explaining how ML works, making sure we can get accountability, and much more.

CSCI 1510. Introduction to Cryptography and Computer Security.

This course studies the tools for guaranteeing safe communication and computation in an adversarial setting. We develop notions of security and give provably secure constructions for such cryptographic objects as cryptosystems, signature schemes and pseudorandom generators. We also review the principles for secure system design.

CSCI 1515. Applied Cryptography.

This course teaches cryptography from a practical perspective and provides hands-on experience of building secure systems in C/C++. Students will implement secure authentication and communication systems using foundational cryptographic algorithms such as encryption schemes, authentication codes, digital signatures, key exchange, and hash functions. The course also covers advanced topics including zero-knowledge proofs, secure multi-party computation, fully homomorphic encryption, and post-quantum cryptography. Students will use these tools to develop applications such as secure online anonymous voting, privacy-preserving data analysis, and private information retrieval.

CSCI 1520. Algorithmic Aspects of Machine Learning.

In this course, we will explore the theoretical foundations of machine learning and deep learning. We will focus on designing and analyzing machine learning algorithms with provable guarantees. More specifically, in this course we will (1) introduce basic tools in linear algebra and optimization, including the power method, singular value decomposition, matrix calculus, (matrix) concentration inequalities, and (stochastic) gradient descent, (2) cover many examples where one can design algorithms with provable guarantees for fundamental problems in machine learning (under certain assumptions), including topic modeling, tensor decomposition, sparse coding, and matrix completion, and (3) discuss the emerging theory of deep learning, including landscape analysis, generalization and over-parameterization, neural tangent kernels, generalization bounds, and implicit regularization.

CSCI 1550. Probabilistic Methods in Computer Science.

Randomization and probabilistic techniques play an important role in modern computer science, with applications ranging from combinatorial optimization and machine learning to communications networks and secure protocols. This course introduces the most fundamental probabilistic techniques used in computer science applications, in particular in randomized algorithms, probabilistic analysis of algorithms and machine learning.

Prerequisite: Basic background in probability theory course such as CSCI 1450.

CSCI 1570. Design and Analysis of Algorithms.

A single algorithmic improvement can have a greater impact on our ability to solve a problem than ten years of incremental improvements in CPU speed. We study techniques for designing and analyzing algorithms. Typical problem areas addressed include hashing, searching, dynamic programming, graph algorithms, network flow, and optimization algorithms including linear programming.

CSCI 1575. Algorithms: in Depth.

Half-credit course intended to be taken with CSCI 1570. Students will explore each topic in greater depth by collaboratively solving homework problems that will reinforce valuable new perspectives on the material. Corequisite: CSCI 1570.

CSCI 1580. Information Retrieval and Web Search.

Covers traditional material as well as recent advances in information retrieval (IR), the study of indexing, processing, and querying of textual data. The focus will be on newer techniques geared to hypertext documents available on the World Wide Web. Topics include efficient text indexing; Boolean and vector space retrieval models; evaluation and interface issues; Web crawling, link-based algorithms, and Web metadata; text/Web clustering, classification; text mining.

CSCI 1590. Introduction to Computational Complexity.

Introduction to serial and parallel models of computation; time and space complexity classes on these models; the circuit model of computation and its relation to serial and parallel time complexity; space-time tradeoffs on serial computers; area-time tradeoffs on the VLSI computational model; interactive and probabilistically checkable proofs; the definition of NP in terms of probabilistically checkable proofs; hardness of approximations to solutions to NP-hard problems. Prerequisite: CSCI 0510.

CSCI 1600. Real-Time and Embedded Software.

Comprehensive introduction to the design and implementation of software for programmable embedded computing systems, in applications such as Internet of Things, transportation, and mobile. Includes the overall embedded real-time software design and development processes, with a focus on engineering for reliability. Major project component.

CSCI 1610. Building High-Performance Servers.

In depth study of modern server design. Considers architectures for building high-performance, robust, scalable, and secure network servers. We will consider all aspects of "mission-critical" servers. Topics include multithreaded and asynchronous programming techniques, database access, performance profiling, security, and redundancy. Teams will build significant projects. Prerequisite: CSCI 0320 or 0360. CSCI 1670 or 1680 is recommended.

CSCI 1620. Computer Systems Security Lab.

This course is a half-credit lab intended to be taken concurrently with CS1660 and provides students with a deeper understanding of the material by doing advanced versions of the cs1660's projects. These advanced versions focus on real-world skills: performing attacks that are more difficult and rely on less serious vulnerabilities, performing attacks against systems with more real-world constraints, and creating attacks that achieve a higher standard of quality than a mere "proof of concept." Instructor permission required.

CSCI 1640. AI and Security.

Artificial Intelligence (AI) concerns the design of machines that perceive the environment and learn from experience to act wisely. Security concerns the protection against machines that exploit opportunities and behave maliciously to inflict harm. CSCI1640 will study these two fast-growing, practice-relevant and life-impactful CS fields, conjointly, as they relate, influence or apply to each other. With new concepts introduced from the ground up and using both a holistic and an analytical exposition of ideas, CSCI1640 will address the question of "How do AI and Security intersect, interleave or interfere?" and will cover a variety of topics around the impact that AI has to Security and the role that Security has in AI. Topics include trustworthy and privacy-preserving Machine Learning (ML), secure federated learning, crypto-enhanced neural networks, adversarial ML, ML-based security and cyberattacks, rational cryptography, generative AI, AI safety and superintelligence.

CSCI 1650. Software Security and Exploitation.

CSCI 1650 covers software exploitation techniques and state-of-the-art mechanisms for hardening software. The course begins with a summary of prevalent software defects, typically found in applications written in memory unsafe languages, like C/C++, and proceeds with studying traditional and modern exploitation techniques, ranging from classical code injection and code reuse up to the latest goodies (e.g., JIT-ROP). For the most part, it focuses on defenses against certain vulnerability classes and the way(s) to bypass them. Students will be introduced to advanced software exploitation techniques and countermeasures, and study (in depth) the boundaries and effectiveness of standard hardening mechanisms, such as address space randomization and stack and heap protections.

CSCI 1660. Introduction to Computer Systems Security.

This course teaches principles of computer security from an applied viewpoint and provides hands-on experience on security threats and countermeasures. Topics include code execution vulnerabilities (buffer overflow, sandboxing, mobile code), malware (trojans, viruses, and worms), access control (users, roles, policies), cryptosystems (hashing, signatures, certificates), network security (firewalls, TLS, intrusion detection, VPN), and human and social issues. To be added to the course waitlist, please fill out this form: <https://forms.gle/pHPAy9ntQkAQ7xLD9>

CSCI 1670. Operating Systems.

Covers not just the principles of operating systems but the intricacies of how they work. Topics include multithreaded programming, managing threads and interrupts, managing storage, processor scheduling, operating-system structure, virtualization, security, and the design of file systems (both local and distributed). Extensive examples are taken from actual systems, including Linux and Windows. Students are expected to complete both problem sets and programming assignments (in C). Prerequisite: CSCI 0300, 0330, 1310, or 1330.

CSCI 1675. Designing High-Performance Network Systems.

How can we understand the performance of network systems and make them faster? To explore this question, we will break it down into pieces, including (i) how to define and measure a system's performance, (ii) how to determine what factors in the system's design affect its performance, and (iii) how to use this information to make the system faster. Through lectures, labs, readings, and hands-on programming projects, we will explore topics including throughput-latency curves, tradeoffs between open and closed request generation, and concurrency. Hands-on projects will involve modern Linux technologies such as perf and io_uring, as well as modern microservice architecture tools such as Kubernetes and distributed tracing frameworks. The class will consist of lectures, short homework assignments that reinforce lecture content, and 4 project assignments with programming and technical writing components that explore these topics in greater detail.

CSCI 1680. Computer Networks.

Covers the technologies supporting the Internet, from Ethernet and WiFi through the routing protocols that govern the flow of traffic and the web technologies that are generating most of it. A major concern is understanding the protocols used on the Internet: what the issues are, how they work, their shortcomings, and what improvements are on the horizon. Prerequisite: CSCI 0300, 0330, 1310, 1330 or consent of instructor.

CSCI 1690. Operating Systems Laboratory.

Half-credit course intended to be taken with CSCI 1670. Students individually write a simple operating system in C. Serves to reinforce the concepts learned in 1670 and provides valuable experience in systems programming. Corequisite: CSCI 1670.

CSCI 1710. Logic for Systems.

The course will focus on proving properties about systems and programs. We will study the distinction between programs and specifications, and check for whether the former obey the latter. We will work with tools that have extensive automation such as model constructors, model checkers, and proof assistants. Problems and projects will apply to real-world systems. Prerequisite: CSCI 0190 or CSCI 0200. Preferred but not required: CSCI 0220

CSCI 1715. Formal Proof and Verification.

Proof assistants are tools that are used to check the correctness of programs. Unlike tools like model checkers and SAT solvers, proof assistants are highly interactive. Machine-checked formal proofs lead to trustworthy programs and fully specified reliable mathematics. This course introduces students to the theory and use of proof assistants, using the system Lean. We will use Lean to verify properties of functional programs and theorems from pure mathematics. We will learn the theory of deductive reasoning and the logic that these tools are based on. Text: "The Hitchhiker's Guide to Logical Verification" by Blanchette et al. Prereqs: CSCI 1710 Logic for Systems or a proof-based mathematics course. Basic familiarity with functional programming (e.g. Haskell, ML) is helpful but not required.

CSCI 1729. Programming Languages Lab.

Half-credit course intended to be taken concurrently with CSCI 1730. Students individually implement a full programming language chosen by the course. Reinforces the concepts learned in CSCI 1730 and provides valuable experience in implementing programming languages. Corequisite: CSCI 1730

CSCI 1730. Design and Implementation of Programming Languages.

Explores the design principles of modern programming languages through implementation, comparison, and reflection. Examines a variety of linguistic features that impact both control and data. Topics vary by year; more information on the course home page. Prerequisite: CSCI 0190, or CSCI 0200.

CSCI 1760. Multiprocessor Synchronization.

This course examines the theory and practice of multiprocessor synchronization. Subjects covered include multiprocessor architecture, mutual exclusion, wait-free and lock-free synchronization, spin locks, monitors, load balancing, concurrent data structures, and transactional synchronization. Prerequisites: CSCI 0330

CSCI 1780. Parallel and Distributed Programming.

Covers the practical aspects involved in designing, writing, tuning, and debugging software designed to run on parallel and distributed systems. Topics might include client-server computation, threads, networks of workstations, message passing, shared memory, partitioning strategies, load balancing, algorithms, remote procedure call, and synchronization techniques. Prerequisites: CSCI 0220 and either 0320 or 0360; 0510 recommended.

CSCI 1800. Cybersecurity and International Relations.

The global Internet shortens distances, makes businesses more efficient and facilitates greater social interaction. At the same time, it exposes vital national resources to exploitation and makes it easier for the international criminal element to prey on innocent Internet users. Cybersecurity is concerned with making the Internet a more secure and trustworthy environment. In this course we study this topic from the technological and policy points of view. The goal is to facilitate communication across the divide that normally characterizes the technological and policy communities.

CSCI 1805. Computers, Freedom and Privacy.

Who is the Big Brother that we most fear? Is it the NSA -- or is it Google and Facebook? Rapidly changing social mores and the growing problem of cybersecurity have all contributed to a sense that privacy is dead. Laws protecting privacy and civil liberties are stuck in the analog age, while the capabilities for mass digital surveillance continue to advance rapidly. This course will examine a variety of informational privacy and technology issues. A major theme: the historical and contemporary struggle to bring surveillance under democratic control to protect against abuses of privacy, civil liberties and human rights.

CSCI 1810. Computational Molecular Biology.

High-throughput experimental approaches now allow molecular biologists to make large-scale measurements of DNA, RNA, and protein, the three fundamental molecules of the cell. The resulting datasets are often too large for manual analysis and demand computational techniques. This course introduces algorithms for sequence comparison and alignment; molecular evolution and phylogenetics; DNA/RNA sequencing and assembly; recognition of genes and regulatory elements; and RNA and protein structure. The course demonstrates how to model biological problems in terms of computer science.

CSCI 1820. Algorithmic Foundations of Computational Biology.

The course is devoted to computational and statistical methods as well as software tools for DNA, RNA, and protein sequence analysis. The focus is on understanding the algorithmic and mathematical foundations of the methods, the design of associated genomics software tools, as well as on their applications. Topics include: sequence alignment, genome assembly, gene prediction, regulatory genomics, and SNP's variation. The course is open to computer and mathematical sciences students as well as biological and medical students.

CSCI 1850. Deep Learning in Genomics.

Deep learning models have achieved impressive performance in fields like computer vision and NLP. The collection of vast quantities of biological data naturally leads to the question -- can deep learning help us understand genomics? We will cover deep learning models like Auto-encoders and Convolutional Neural Networks and how have they been applied to solve problems in genomics. We will learn about different biological datasets, interpretation methods that help explain predictions, and what unique challenges are presented by the data in this field. Critical thinking and learning from the practical application of models to data are expected outcomes.

CSCI 1851. Machine Learning for Biology and Health.

This is an applied machine learning course covering details of different machine learning methods (from linear regression to transformers) and how they have been applied to various tasks in biology and health domains.

CSCI 1870. Cybersecurity Ethics.

This timely, topical course offers a comprehensive examination of ethical questions in cybersecurity. These issues pervade numerous, diverse aspects of the economy and society in the Information Age, from human rights to international trade. Students will learn about these topics, beginning first with acquaintance with the dominant ethical frameworks of the 20th and 21st centuries, then employing these frameworks to understand, analyze, and develop solutions for leading ethical problems in cybersecurity. The things that you learn in this course will stay with you and inform your personal and professional lives.

CSCI 1880. Introduction to Computer Security.

This course examines the basic principles of computer security for an organization, recognizing which system components relate to which principles. Additionally, the course covers methodologies and skills for making informed security decisions and understanding how to apply security principles to design security mechanisms while considering tradeoffs. Topics include general security principles, cryptography, authentication authorization, identity, and access management, operating systems security, network security, web security, and applications security. Throughout the course, you will develop a preliminary cybersecurity plan for an organization

CSCI 1900. csciStartup.

In csciStartup, you will incorporate and run a startup. Apply as a team to be part of a prototype class to remove the mystery from starting a company and to focus entirely on a product you're passionate about. Teams will incorporate, build a product for real customers, advertise their product, and improve it week after week. We'll spend half our class meetings with individual attention to each group's progress and how to improve your offerings. Assignments will be designed to apply to any company, with enough flexibility to ensure you're always working on things that make sense for your business.

CSCI 1950A. Computational Modeling and Algorithmic Thinking.

In this course you will learn how to apply tools from statistics and computer science to build computational models of physical and biological systems. Example applications include modeling and then simulating the behavior of a collection of genes, the spread of disease in a population, a single neuron in isolation or the complex of neurons comprising the primate visual cortex.

CSCI 1950B. Computational Topology and Discrete Geometry.

This course will investigate (through a mixture of lectures and student presentations of recent papers) topics in computational topology, including Morse theory and discrete differential geometry. Other possible topics are knot polynomials, simplicial homology, and geometric probability theory. Some mathematical sophistication and programming skills required. No prerequisites.

CSCI 1950H. Computational Topology.

We will study various algorithmic problems that arise in the study of topological phenomena, such as winding number, turning number, knot polynomials, topology of covering spaces (especially Riemann surfaces), and discrete Morse theory. The mathematical topics will be briefly introduced before we move to computations, but some a priori mathematical sophistication will make the course more valuable to the student. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 1950J. Introduction to Computational Geometry.

Geometric algorithms in two and three dimensions. Algorithmic and geometric fundamentals. Point location, convex hulls, proximity (Voronoi diagrams, Delaunay triangulations), intersections, the geometry of rectangles. Prerequisites: CSCI 0160, 0170, or 0190; and CSCI 0220.

CSCI 1950K. Innovating Game Development.

A project-centered course focused on technological, paradigm, and design innovations for game development. As teams, students will propose and implement a project demonstrating a novel technology for gaming. Examines the current state and future of game development through a seminar of speakers active in game development and research. A strong computer science or engineering background is recommended.

CSCI 1950M. Advanced Practical Combinatorial Algorithms.

We review recent as well as well-established advanced techniques in combinatorial optimization and constraint satisfaction. Students will study and individually present research papers and work on challenging software projects in small teams. Prerequisites: CSCI 0160, 0180, or 0190; and CSCI 0510; and CSCI 1490 or 2580, or instructor permission.

CSCI 1950N. 2D Game Engines.

2D Game Engines covers core techniques used in the development of the software that drives computer games and other interactive software. Projects involve building different varieties of 2D game engines as well as games that require use of the features implemented in the engines. Topics include high-level engine design, vector and raster graphics, animation, collision detection, physics, content management, and game AI. This course has also been offered as DISP CSCI1971. Students interested in an override should request on through Courses@Brown. Priority will be given to both seniors and juniors.

CSCI 1950T. Advanced Animation Production.

Students will apply knowledge and skills gained in previous animation courses to produce a high quality short animated film as a group. Production will follow the industry standard pipeline that includes modeling, texturing, lighting, animating, rendering, and post production. Interested students will perform preproduction story and concept design prior to beginning of course. Prerequisite: CSCI 1250. Enrollment limited to 15. Instructor permission required.

CSCI 1950U. Topics in 3D Game Engine Development.

Covers core techniques in 3D game development with an emphasis on engine architecture. Students independently develop their own engines using C++, OpenGL, and the Qt framework, then work in groups to create a polished game. Topics include: spatial subdivision, player representation, collision detection and response, game networking, GPUs, and OpenGL. Prerequisites: CSCI 1230 or knowledge of C++ and one of CSCI0300, CSCI0320, or CSCI0330 or equivalent experience. Enrollment limited to 25.

CSCI 1950X. Software Foundations.

Software Foundations will be a project-based course focusing on the challenges and techniques involved in proving non-trivial properties about real-world systems. We will base our exploration around formal development in a proof environment. Roughly half of the course will be a guided tutorial of proof techniques using one or more theorem provers; in the remainder, students will apply this knowledge to existing systems. No prior experience with theorem provers or proof assistants is necessary, but familiarity with and aptitude for functional programming will be a huge bonus. Prerequisite: CSCI 1730 or equivalent; mathematical maturity.

CSCI 1950Z. Computational Methods for Biology.

This course will introduce algorithms from machine learning and combinatorial optimization with a focus on their application to biological data. Topics will include problems in phylogenetic inference, population genetics, and biological interaction networks.

CSCI 1951A. Data Science.

Mastering big data requires skills spanning a variety of disciplines: distributed systems over statistics, machine learning, and a deep understanding of a complex ecosystem of tools and platforms. Data Science refers to the intersection of these skills and how to transform data into actionable knowledge. This course provides an overview of techniques and tools involved and how they work together: SQL and NoSQL solutions for massive data management, basic algorithms for data mining and machine learning, information retrieval techniques, and visualization methods.

Prerequisites: CSCI 0160, CSCI 0180, CSCI 0190, or CSCI 0200. One of CSCI 0300, 0330, CSCI 0320, 1310 or 1330 strongly recommended.

CSCI 1951B. Virtual Citizens or Subjects? The Global Battle Over Governing Your Internet.

The Internet began as a U.S. government research project, progressed to an open network run by free-spirited geeks, and transitioned in the late 1990's to a unique governance model in which nations, corporations, and civil society were supposed to all have a voice. Where are the real decisions being made? Who is making them? How can you and citizens of other nations influence these decisions? The global battle to run the Internet, brewing for years, has broken wide open with revelations of American spying on a massive scale.

CSCI 1951C. Designing Humanity Centered Technology.

This semester we will explore how emerging technologies might shape our lives in the near future, as we design and build working prototypes. We will proceed from a set of questions that will complement a deep immersion in design process and creative practice. We will explore the "how" and "why" of designing new technologies. The course will help students build a portfolio of design projects that are in response to various design strategies such as Human Centered Design, Speculative Design, Critical Design, and Design Fiction, as well as developing skills for iterative prototyping and participatory critique.

Students interested in registering should sign

CSCI 1951G. Optimization Methods in Finance.

Optimization plays an important role in financial decisions. Many computational finance problems ranging from asset allocation to risk management, from option pricing to model calibration can be solved efficiently using modern optimization techniques. This course discusses several classes of optimization problems (including linear, quadratic, integer, dynamic, stochastic, conic, and robust programming) encountered in financial models. For each problem class, after introducing the relevant theory and efficient solution methods, we discuss problems of mathematical finance that can be modeled within this problem class. Prerequisites: CSCI 1450 or APMA 1650, and CSCI 1570.

CSCI 1951I. CS for Social Change.

Working in a studio environment to iteratively design, build, and test technical projects in partnership with different social change organizations, students will be placed in small teams to collaboratively work on projects that will range from developing a chatbot to aid community engagement to conducting geospatial data analytics. We will also reflect on our positionality and ethics in engaging in social impact work and what it practically means to leverage technology to create social change on an everyday basis.

CSCI 1951J. Interdisciplinary Scientific Visualization.

Students will learn about solving scientific problems using computer graphics and visualization. Projects will involve the solution of scientific problems using computer graphics, modeling, and visualization. Working in small groups, students will identify scientific problems, propose solutions involving computational modeling and visualization, evaluate the proposals, design and implement the solutions, apply them to the problems, evaluate their success, and report on results. Example projects might include interactive software systems, immersive virtual reality cave applications, quantitative analysis tools, or new applications of existing visualizations methods. The focus will be on applications in the new virtual reality cave.

CSCI 1951L. Blockchains and Cryptocurrencies.

Introduction to modern blockchain-based systems. Topics covered include consensus and distributed computing, examples cryptocurrencies, programming smart contracts, privacy and secrecy, transfer networks, atomic swaps and transactions, non-currency applications of blockchains, and legal and social implications. Students will do a programming project and a term project.

CSCI 1951N. VR+X, The Potential of Virtual Reality to Transform Nearly Everything.

This course introduces students to the history, present, and future possibilities of virtual reality (VR) with a focus on addressing the question: What is the transformative potential of virtual reality? We'll critically evaluate a variety of applications in fields as varied as healthcare, architecture, education, and storytelling. Students will learn discovery and design thinking processes of a kind that can lead to the development of VR solutions. Students will create a design concept for a VR use case in a field of their choosing.

CSCI 1951P. Design of Robotic Systems (ENGN 1931I).

Interested students must register for ENGN 1931I.

CSCI 1951Q. Topics in Programming Languages.

This course explores advanced techniques and recent research in the theory and practice of programming language design. This year's focus is program analysis: algorithms which deduce facts about programs to improve their correctness and performance. We will cover both static and dynamic analysis techniques used in ahead-of-time compilers, just-in-time compilers, bug-finders, and domain-specific languages. This course will provide hands-on experience designing analyses for a simple language targeting WebAssembly in a JIT compiler implemented in Rust.

CSCI 1951R. Introduction to Robotics.

Each student will learn to program a small quad-rotor helicopter. We will provide each student with their own robot for the duration of the course. The course will cover PID controllers for stable flight, localization with a camera, mapping, and autonomous planning. At the end of the course, the aim is for students to understand the basic concepts of a mobile robot and aerial vehicle. Enrollment by instructor permission.

CSCI 1951T. Surveying VR Data Visualization Software for Research.

In a collaborative group effort, this course will search out, install, test, and critically evaluate VR software that supports data visualization for researchers. We will target several specific types of data, including volumetric data, and remote sensing data. We will investigate the capabilities of software for head-mounted displays (HMDs), big-metal displays like caves and the yurt, and, as a baseline, desktop displays. Software evaluation will include web research, hands-on case studies, and surveying. Results will be documented in a courses wiki.

CSCI 1951V. Hypertext/Hypermedia: The Web Was Not the Beginning and the Web Is Not the End.

Hypertext/Hypermedia systems -- first designed in the 1960s -- link information and people. Developed in the late 1980s, the Web was the first global hypermedia system; 30+ years later, it represents a small part of past visions. Students will identify still-uncommon features by exploring/using systems from the 1960s onwards. They will read papers for class discussion. They will study architecture and design topics such as annotating, note taking, searching, networking, collaboration, permanence, and social impact. Web programming projects, using TypeScript/MERN stack, will culminate in group projects to create their own hypertext/hypermedia systems. Prerequisites: An introductory CS sequence or equivalent experience

CSCI 1951W. Sublinear Algorithms for Big Data.

A huge quantity of data is worth little unless we can extract insights from it. Yet, the large quantities mean that classic algorithms (running in linear, quadratic or even more time) can be infeasible in practice. We must instead turn to new algorithmic approaches and paradigms, which allow us to answer valuable questions about our data in runtime that is still feasible even when the data set is Facebook-sized.

Surprisingly, to answer many computational and statistical questions, sometimes there is no need to read/store every piece of data! This course focuses on this exciting "sublinear" algorithmic regime. We will study practical algorithms, making clever use of randomness with strong theoretical guarantees

Prerequisites: (CS22 or equivalent); (CS145 or APMA1650/1655 or equivalent); (CS157 or CS155). Mathematical maturity is essential: this is a theory course with proofs.

Recommended: CS155

CSCI 1951X. Formal Proof and Verification.

Proof assistants are tools that are used to check the correctness of programs. Unlike tools like model checkers and SAT solvers, proof assistants are highly interactive. Machine-checked formal proofs lead to trustworthy programs and fully specified reliable mathematics. This course introduces students to the theory and use of proof assistants, using the system Lean. We will use Lean to verify properties of functional programs and theorems from pure mathematics. We will learn the theory of deductive reasoning and the logic that these tools are based on.

Text: "The Hitchhiker's Guide to Logical Verification" by Blanchette et al.

Prereqs: CSCI 1710 Logic for Systems or a proof-based mathematics course. Basic familiarity with functional programming (e.g. Haskell, ML) is helpful but not required.

CSCI 1951Y. Using an Interactive Proof Assistant to do Mathematics.

Proof assistants are software tools based on logic. They are typically used in both mathematics and computer science to verify proofs of theorems (in mathematics) or algorithm correctness (in CS). Beginning texts often emphasize mathematical applications focused on logic, while typical undergraduate mathematics education does not. The corpora of mathematics results for many proof assistants are heavily slanted towards real analysis and abstract algebra, but have limited depth in topology and geometry. Students will learn to use the Isabelle proof assistant to initially do some proofs covering introductory material in a Calculus book, and then move on to study both real and synthetic projective geometry, leading up to showing every Desarguesian projective plane admits coordinates in some division ring. They'll also complete final projects in some geometry-related topic.

CSCI 1952A. Human-AI Interaction.

AI systems do not exist in a vacuum; they exist in a human world. This course will examine human-AI interaction, spanning the gamut from how humans design AI systems, to how humans work with and alongside AI systems, to how AI systems affect human behaviors. Sometimes the AI systems under scrutiny will be embodied (robots!), sometimes not. The course will be both discussion and project based. As a final project, students will conduct a pilot study on human-AI interaction. This course is aimed at graduate students or others with interest in conducting human-AI interaction research. With perseverance and dedication, these course projects could be converted into conference papers at venues like AAAI, HRI, or NeurIPS.

CSCI 1952B. Responsible Computer Science in Practice.

What can ethics and social and political theory tell us about how to navigate the social impacts of computing? How do these perspectives shape technical decisions computer scientists have to make? The role of computer scientists is rapidly evolving: as the systems they build affect everyone, from individuals to society at large, computer scientists become more than just coders. They must be able to assess the social impacts of the technology they develop and engage with experts from other disciplines which offer critical insights and normative perspectives on those impacts. The goal of this course is to enable you to understand and critically reflect on key concepts and ideas in ethics and social and political theory on topics ranging from fairness to consent, digital well-being to regulation, and to apply them to concrete technical decisions in practical exercises and project-oriented work.

CSCI 1952D. Intelligent Robotics.

This course will cover the techniques required to design robots capable of intelligent decision-making. The course will proceed through several levels of the control stack required for such robots, from low-level perception and control, through spatial perception and motion planning, through object manipulation, to high-level planning. Students should be both mathematically sophisticated and competent programmers.

CSCI 1952I. Language Processing in Humans and Machines (CLPS 1850).

Interested students must register for CLPS 1850.

CSCI 1952R. Systems Transforming Systems.

The subject of the seminar is the development of new techniques, tools, and systems for automatically augmenting existing software systems with new capabilities — including, but not limited to, parallelism, distribution, isolation, and security. The seminar will have a dual focus: 60% on advanced scientific topics in systems and 40% on academic communication, especially technical writing. These two foci will be structured as overlapping layers — systems in the foreground, technical communication in the background. A key goal will be for students, working in teams of 4–5 members, to develop papers worthy of scientific publication; as such, the course is structured around projects designed carefully, and with appropriate support, to result in paper publications in the systems community.

CSCI 1952V. Algorithms for the People.

Computer science has transformed every aspect of society, including communication, transportation, commerce, finance, and health. The revolution enabled by computing has been extraordinarily valuable. The largest tech companies generate almost a trillion dollars a year and employ millions of people. But technology does not affect everyone in the same way. In this seminar, we will examine how new technologies, ranging from facial recognition to drones, are affecting marginalized communities.

CSCI 1952X. Contemporary Digital Policy and Politics.

This course will examine the politics and processes for making policies related to the internet and digital policy issues. We will examine current issues at the national level, including the White House and federal agencies, Congress, international institutions and industry on issues such as privacy and information security, and on debates like whether and how to regulate Big Tech. Topics covered include the creation of national policies at the White House, the regulatory process, legislation, standards, global implications and the politics of technological change.

Format and participation: This is an asynchronous version of IAPA 1811, available only to students enrolled in a completely online master's degree program, by permission of the instructor. Students will complete weekly activities in lieu of attending synchronous class discussions.

CSCI 1952Y. Computer Architecture.

How does a computer program actually turn into the electrons moving inside of your computer? What are the relevant metrics and tradeoffs for designing a computer, and what impact do these tradeoffs have on our software? In this course, we cover computer organization and design, from a software lens. Topics include instruction set architectures, processor design and pipelining, memory hierarchies, program flow optimization, I/O, and emerging applications. Homeworks and final project will use powerful architecture simulators and explore general and specialized hardware for various applications.

CSCI 1952Z. Robots as a Medium: Creating Art with Teams of Robots.

In this course, students will work in groups to use teams of flying and ground robots to create works of art, such as paintings, composing music, choreography, etc. This course is open to all concentrations, no prior experience necessary!

CSCI 1953A. Accessible and Inclusive Cybersecurity and Privacy.

will address the unique privacy and security challenges experienced by vulnerable and at-risk populations. Central to developing safer technology for all is recognizing and addressing the diverse digital-safety needs, responses, and risks of a wide range of users including how contextual and human factors shape privacy decisions and protective behaviors. We will examine the technical foundations of security and privacy, pinpointing where they fail to provide holistic safety solutions. We will also examine the role of AI chatbots and agents, analyzing how they can both enhance and compromise user safety. The course will blend theoretical knowledge with practical applications, covering inclusive design principles in cybersecurity and privacy, threat models for vulnerable groups, societal and ethical considerations for security practices, and strategies for integrating inclusivity into security research, policymaking, and system

CSCI 1953B. Special Topics in Computational Design and Fabrication.

This course explores the core mathematical, algorithmic, and computational principles that drive modern design tools, focusing on digital design representations, generative design, optimization, and interactive exploration. Students will learn to develop computational models for automating design processes, implement algorithms for shape generation and performance evaluation, and integrate digital design with fabrication techniques such as 3D printing, laser cutting, and machine knitting. The course includes coding assignments, fabrication assignments, and a final project where students implement or extend recent papers in the field.

CSCI 1970. Individual Independent Study.

Independent study in various branches of Computer Science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CSCI 1971. Independent Study in 2D Game Engines.

2D Game Engines covers core techniques used in the development 2D game engines. Projects involve building different varieties of 2D game engines as well as games that require use of the features implemented in the engines. Topics include high-level engine design, vector and raster graphics, animation, collision detection, physics, content management, and game AI. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 1972. Topics in 3D Game Engine Development.

Covers core techniques in 3D game development with an emphasis on engine architecture. Students independently develop their own engines using C++, OpenGL, and the Qt framework, then work in groups to create a polished game. Topics include: spatial subdivision, player representation, collision detection and response, game networking, GPUs, and OpenGL. Prerequisite: CSCI 1230 and one of the following CSCI 0320, CSCI 0330, CSCI 1950N, OR CSCI 1971.

CSCI 1973. Independent Study.**CSCI 2000. Computer Science Research Methods.**

What does it mean to conduct research in computer science, and how might we be most effective at it? To help begin a fruitful career in CS research, this class will cover the philosophy and practice of forming ideas, executing research, presenting outcomes, and understanding and contributing to our community. The aim is to kick-start your time at Brown CS by being the 'missing semester' on how to be a PhD student, and by peeling back the curtain on why CS academia works like this to help you make the most of your time. Discussions include: motivating, pitching, and funding research; finding, reading, and reviewing research; selecting research areas and forming hypotheses; designing, performing, and evaluating research; communicating research; research collaborations; and research ethics. We will learn together through presentations, activities, discussions, plus readings and assignments out of class.

CSCI 2002. Privacy and Personal Data Protection.

If you tried to live for one day without generating any digital personal data, how would you spend it? In the Information Age, the use of personal data has proliferated and is pervasive. This course offers a comprehensive examination of protection of privacy and personal data, which is central to autonomy, dignity, and liberty. Topics include identity, financial, health, educational, and other data. Students will learn about: Fair Information Practices; the development of modern privacy rules in the United States and around the world; Fourth Amendment privacy and the autonomy of the individual in relation to the state; key US laws (HIPAA, FERPA, GLBA, GINA, COPPA, etc.); significant international rules (European Union's General Data Protection Regulation (GDPR), etc.); important institutions (Federal Trade Commission, Data Protection Authorities, etc.); standards; Privacy by Design and Default; and emerging issues.

CSCI 2200. Cybersecurity Law and Policy.

Course description: Cybersecurity and cyber conflict pose unique legal and policy challenges for governments, companies and citizens. The way those problems are resolved will shape the future of the internet. This course will examine cybersecurity as a legal and policy problem. How can government and society address network and computer insecurity while upholding privacy, civil liberties and other fundamental values?

CSCI 2230. Computer Graphics.

This course offers an in-depth exploration of fundamental concepts in 2D and 3D computer graphics. It introduces 2D raster graphics techniques, including simple image processing. The bulk of the course is devoted to 3D modeling, geometric transformations, and 3D viewing and rendering. A sequence of assignments culminates in a simple geometric modeler and ray tracer. C++ and the graphics library OpenGL are used throughout the course, as is shader programming on the GPU. The final project is typically a small group project spec'd and implemented by the group using shaders or ray tracing to create special effects.

CSCI 2240. Advanced Computer Graphics.

CSCI 2240 explores several key areas of 3D graphics—rendering, geometry processing, optimization, and simulation—taking a sophisticated approach to each. This year, we are looking to improve the course's coverage of optimization by adding more lecture content on the topic (optimization theory, methods for solving (sparse) linear systems, etc.) and by designing a new assignment (likely 3D as-rigid-as-possible shape manipulation). Prerequisites: one of CSCI 0530, MATH 0520, MATH 0540; CSCI 1230; and familiarity with multivariable calculus by e.g. having taken one of MATH 180, MATH 200, MATH 350

CSCI 2270. Topics in Database Management.

In-depth treatment of advanced issues in database management systems. Topics vary from year to year and may include distributed databases, mobile data management, data stream processing and web-based data management. Prerequisite: CSCI 1270.

CSCI 2300. Human-Computer Interaction Seminar.

Covers methods for conducting research in human-computer interaction (HCI). Topics will be pursued through independent reading, assignments, and class discussion. Comprises four assignments that apply to HCI research methods and push the envelope, which are designed to be meaningful and have the potential for real impact. Students will gain the background necessary to perform research in HCI and the skills to conduct human-centric research. There will be little content about user interfaces, but students may find some topics in CSCI 1300 relevant. Please see the course website when it's available (shortly before the semester begins) for information about overrides.

CSCI 2310. Human Factors and User Interface Design.

Covers current research issues involving the implementation, evaluation and design of user interfaces, while also providing a basic background in the fundamentals of user interface evaluation, programming, tools, and techniques. A possible topic is programming and designing device-independent interfaces. Previous topics have included the development of pervasive internet-based interfaces and software visualization. Prerequisite: Consent of instructor.

CSCI 2330. Programming Environments.

Programming tools; control and data integration; software understanding and debugging; environments for parallel and distributed programming; reverse engineering; configuration management and version control and debugging. Emphasis on current research areas. Prerequisite: consent of instructor.

CSCI 2340. Software Engineering.

Topics in the design, specification, construction and validation of programs. Focus will be on tools to support each of these stages. Course will pay special attention to the concerns raised by the properties of modern software systems including distribution, security, component-based decomposition and implicit control. A basic software engineering course such as CSCI0320 or CSCI1340 or extensive industrial programming experience is required. Knowledge of system programming such as CSCI0300, CSCI0330, CSCI1310, or CSCI1330 is highly recommended.

CSCI 2370. Interdisciplinary Scientific Visualization.

Learn how to do research on using computer graphics, visualization, and interaction applied to scientific problems. Working in small multidisciplinary groups, students identify scientific problems, propose solutions involving computational modeling and visualization, design and implement the solutions, apply them to the problems, and evaluate their success. Prerequisites: programming experience, some graphics experience, problem ideas.

CSCI 2390. Privacy-Conscious Computer Systems.

We will examine research papers on distributed system design, privacy-preserving, and secure computing techniques, and discuss how to apply these ideas in practice. The goal is to understand if, and how we can better protect the sensitive data we entrust to computer systems, both against leaks and against unauthorized or unethical use. We will look at web services, datacenter systems, distributed communication systems, and machine learning systems. During class, you will present and discuss papers, finish a set of hands-on assignments, work on a research project, and present your project at the end of the semester.

CSCI 2410. Statistical Models in Natural-Language Understanding.

Various topics in computer understanding of natural language, primarily from a statistical point of view. Topics include: hidden Markov models, word-tagging models, probabilistic context-free grammars, syntactic disambiguation, semantic word clustering, word-sense disambiguation, machine translation and lexical semantics. Prerequisite: CSCI 1410.

CSCI 2420. Probabilistic Graphical Models.

Probabilistic graphical models provide a flexible framework for modeling large, complex, heterogeneous collections of random variables. After a brief introduction to their representational power, we provide a comprehensive survey of state-of-the-art methods for statistical learning and inference in graphical models. We discuss a range of efficient algorithms for approximate inference, including optimization-based variational methods, and simulation-based Monte Carlo methods. Several approaches to learning from data are explored, including conditional models for discriminative learning, and Bayesian methods for controlling model complexity. Programming experience required for homeworks and projects, which integrate mathematical derivations with algorithm implementations. PREREQUISITES: CSCI1420 or APMA1690.

CSCI 2430. Topics in Machine Learning.

Machine learning from the artificial intelligence perspective, with emphasis on empirical validation of learning algorithms. Different learning problems are considered, including concept learning, clustering, speed-up learning, and behavior learning. For each problem a variety of solutions are investigated, including those from symbolic AI, neural and genetic algorithms, and standard statistical methods. Prerequisite: CSCI 1410 or familiarity with basic logic and probability theory.

CSCI 2440. Advanced Algorithmic Game Theory.

This course examines topics in game theory and mechanism design from a computer scientist's perspective. Through the lens of computation, the focus is the design and analysis of systems utilized by self-interested agents. Students will investigate how the potential for strategic agent behavior can/should influence system design, and the ramifications of conflicts of interest between system designers and participating agents. Emphasis on computational tractability is paramount, so that simple designs are often preferred to optimal. Students will learn to analyze competing designs using the tools of theoretical computer science, and empirical tools, such as empirical game-theoretic analysis. Application areas include computational advertising, wireless spectrum, and prediction markets.

CSCI 2450. Exchange Scholar Program.**CSCI 2470. Deep Learning.**

Deep Learning belongs to a broader family of machine learning methods. It is a particular version of artificial neural networks that emphasizes learning representation with multiple layers of networks. Deep Learning, plus the specialized techniques that it has inspired (e.g. convolutional neural networks, recurrent neural networks, and transformers), have led to rapid improvements in many applications, such as computer vision, machine learning, sound understanding, and robotics. This course gives students an overview of the prominent techniques of Deep Learning and its applications in computer vision, language understanding, and other areas. It also provides hands-on practice of implementing deep learning algorithms in Python. A final project will implement an advanced piece of work in one of these areas. Students may take CSCI 2470 or CSCI 1470 but not both.

CSCI 2500A. Advanced Algorithms.

In this course, we study a selection of advanced algorithms and data structures that are provably correct and fast. Our goal is to present a broad range of algorithmic ideas and techniques, especially those that have had significant impact on the field and/or have had or might have practical impact. Prerequisite: CSCI 1570 or the equivalent

CSCI 2500B. Optimization Algorithms for Planar Graphs.

Planar graphs arise in applications such as road map navigation and logistics, graph drawing and image processing. We will study graph algorithms and data structures that exploit planarity. Our focus will be on recent research results in optimization. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2510. Approximation Algorithms.

Approximation Algorithms deal with NP-hard combinatorial optimization problems by efficiently constructing a suboptimal solution with some specified quality guarantees. We study techniques such as linear programming and semidefinite programming relaxations, and apply them to problems such as facility location, scheduling, bin packing, maximum satisfiability or vertex cover. Prerequisite - one of the following: CSCI 1510, 1550, 1810, 1950J, 1950L, any graduate-level course on algorithms (including 2500A, 2500B, 2580).

CSCI 2520. Computational Geometry.

Algorithms and data structures for fundamental geometric problems in two and three dimensions. Topics include point location, range searching, convex hull, intersection, Voronoi diagrams, and graph drawing. Applications to computer graphics, circuit layout, information visualization, and computer-aided design are also discussed. Prerequisite: CSCI 1570 or instructor permission.

CSCI 2530. Design and Analysis of Communication Networks.

A theory seminar focusing on algorithmic and combinatorial issues related to the design and analysis of communication networks for parallel and distributed systems. Topics include packet routing, circuit switching, distributed shared memory, fault tolerance, and more. Prerequisites: CSCI 1550, 1570, or equivalent.

CSCI 2531. Internet and Web Algorithms.

This advanced graduate course/seminar focuses on the mathematical foundations of algorithms for handling large amounts of data over networks. We'll read and discuss recent papers in information retrieval, search engines, link analysis, probabilistic modeling of the web and social networks, and more. Recommended: CSCI 1550 and CSCI 1570, or equivalent courses.

CSCI 2540. Advanced Probabilistic Methods in Computer Science.

Advanced topics in applications of probabilistic methods in design and analysis of algorithms, in particular to randomized algorithms and probabilistic analysis of algorithms. Topics include the Markov chains Monte Carlo method, martingales, entropy as a measure for information and randomness, and more. Prerequisite: CSCI 1450. Recommended but not required: CSCI 1570.

CSCI 2550. Parallel Computation: Models, Algorithms, Limits.

The theoretical foundations of parallel algorithms. Analysis of the most important models of parallel computation, such as directed-acyclic computation graphs, shared memory and networks, and standard data-exchange schemes (common address space and message-passing). Algorithmic techniques with numerous examples are cast mostly in the data-parallel framework. Finally, limitations to parallelizability (P-completeness) are analyzed. The content of the course is likely to change as technology evolves.

CSCI 2560. Advanced Complexity.

Advanced topics in computational complexity, such as: the polynomial hierarchy, interactive proofs, pseudorandomness, derandomization, probabilistically checkable proofs.

CSCI 2570. Introduction to Nanocomputing.

Nanoscale technologies employing materials whose smallest dimension is on the order of a few nanometers are expected to replace lithography in the design of chips. We give an introduction to computational nanotechnologies and explore problems presented by their stochastic nature. Nanotechnologies based on the use of DNA and semiconducting materials will be explored. Prerequisite: CSCI 0510.

CSCI 2580. Solving Hard Problems in Combinatorial Optimization: Theory and Systems.

The theory of combinatorial optimization and how it is embodied in practical systems. Explores issues encountered in implementing such systems. Emphasizes the wide variety of techniques and methodologies available, including integer programming, local search, constraint programming, and approximation algorithms. Problems addressed may include: scheduling, coloring, traveling salesman tours, and resource allocation. Prerequisites: CSCI 0320 and basic knowledge of linear algebra.

CSCI 2590. Advanced Topics in Cryptography.

Seminar-style course on advanced topics in cryptography. Example topics are zero-knowledge proofs, multi-party computation, extractors in cryptography, universal composability, anonymous credentials and ecash, interplay of cryptography and game theory. May be repeated for credit. Prerequisite: CSCI 1510 or permission of the instructor.

CSCI 2640. AI and Cybersecurity Policy.

Two dynamic, cross-cutting technological domains, cybersecurity and artificial intelligence, have massive, pervasive impacts on economies and societies. Multiple stakeholders, including policymakers, both in the United States and around the world, struggle to keep up and to develop robust, sustainable, technologically-neutral, harmonious policies to meet the demands of this moment. This course will consider US and international activities and their implications. Stakeholders include governments, certainly, but also the private sector and NGOs, who play important roles. You will leave this course with a stronger understanding of the policy process, the stakeholders, and current developments in cybersecurity, artificial intelligence, cybersecurity policy, and artificial intelligence policy in the United States and abroad.

CSCI 2660. Computer Systems Security.

This course teaches computer security principles from an applied viewpoint and provides hands-on experience with security threats and countermeasures. The course additionally covers principles and skills useful for making informed security decisions and for understanding how security interacts with the world around it. The main topics covered are cryptography, authentication, access control, web security, and network security. Other topics include cybersecurity ethics and privacy. The course aims to balance theory and practice. These advanced versions focus on real-world skills: performing attacks that are more difficult and rely on less serious vulnerabilities, and creating attacks that achieve a higher standard of quality than a mere "proof of concept." This course covers the same material as CSCI 1620 and 1660 and shares their assignments. Graduate students only. If you are interested in this course, request an override and fill out this form: <https://forms.gle/pHPay9ntQkAQ7xLD9>

CSCI 2670. Operating Systems.

Covers not just the principles of operating systems but the intricacies of how they work. Topics include multithreaded programming, managing threads and interrupts, managing storage, processor scheduling, operating-system structure, virtualization, security, and the design of file systems (both local and distributed). Extensive examples are taken from actual systems, including Linux and Windows. Students are expected to complete both problem sets and programming assignments (in C) and will individually write a simple operating system. Prerequisite: one of CSCI 0300, CSCI 0330, CSCI 1310, or CSCI 1330. Graduate students only. This course covers the same material as the combination of CSCI 1670 and 1690 and shares their assignments.

CSCI 2680. Computer Networks and the Internet.

The Internet is ubiquitous today — you are using it right now! To understand it, we will read and discuss both classical and recent research papers on computer networking, including the design, structure, and technical history of the Internet, and we will consider the implications on both the design of other computer systems, as well as on Internet applications. We will study topics including routing, content delivery, transport algorithms, datacenter networks, edge networks, and Internet-scale applications. During class students will present and discuss papers. Assignments will include written paper summaries and reviews, as well as a semester-long research project. Students will present their projects at the end of the semester.

CSCI 2690. Datacenter and Cloud Operating Systems.

Most of the large-scale web applications and enterprise applications we use daily rely on datacenters for compute, storage, networking and security, commonly via cloud computing interfaces. There are many research questions around how to use the datacenter as a computing platform to architect the “best” applications, all while datacenter hardware is rapidly evolving. This is a graduate-level seminar on cloud and datacenter operating systems. We will study topics such as serverless computing, kernel bypass operating systems, tiered and far memory systems, hardware accelerators, and disaggregation. The goals of the class are to (1) learn about the challenges surrounding cloud and datacenter systems, (2) practice reading, analyzing, and presenting systems research papers on these topics, and (3) perform a semester-long research project and present findings to the class.

CSCI 2730. Programming Language Theory.

Theoretical models for the semantics of programming languages and the verification of programs. Topics will be drawn from operational semantics, denotational semantics, type theory and static analyses. Recommended prerequisite: CSCI 1730, CSCI 1950Y or instructor permission.

CSCI 2750. Topics in Parallel and Distributed Computing.

CSCI 2750 is a graduate seminar that will consider an advanced topic (to be determined) in distributed computing. May be repeated for credit.

CSCI 2810. Advanced Computational Molecular Biology.

High-throughput experimental approaches now allow molecular biologists to make large-scale measurements of DNA, RNA, and protein, the three fundamental molecules of the cell. The resulting datasets are often too large for manual analysis and demand computational techniques. This course introduces algorithms for sequence comparison and alignment; molecular evolution and phylogenetics; DNA/RNA sequencing and assembly; recognition of genes and regulatory elements; and RNA and protein structure. The course demonstrates how to model biological problems in terms of computer science. Course overrides are available at the instructor's discretion.

CSCI 2820. Algorithmic Foundations of Computational Biology.

The aim of this course is to provide computer science and mathematical sciences foundations, as well as biological insights, for numerous seminal algorithms in the field of computational biology, i.e., algorithmic foundations for Computational Biology. Topics include: The BLAST Algorithm and Karlin-Altschul Statistics, Genome Assembly Algorithms and Haplotype Assembly Algorithms, Hidden Markov Models (HMM) Algorithms: The Learning Problem, Recombination and Ancestral Recombination Graphs Algorithms, Rigorous Clustering: Spectral Graph Theory Algorithms, Algorithms for Constructing Suffix Trees in Linear Time, Protein Folding Algorithms (An Introduction). Each chapter is devoted to a class of fundamental computational problems of genomics related to the analysis of DNA, RNA, protein sequences and protein structures and their molecular biology function.

CSCI 2840. Advanced Algorithms in Computational Biology and Medical Bioinformatics.

Devoted to computational problems and methods in the emerging field of Medical Bioinformatics where genomics, computational biology and bioinformatics impact medical research. We will present challenging problems and solutions in three areas: Disease Associations, Protein Folding and Immunogenomics. This course is open to graduate students and advanced undergraduates with Computational or Life Science backgrounds. Prior background in Biology is not required.

CSCI 2890. Comprehensive Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CSCI 2950C. Topics in Computational Biology.

This course will investigate active and emerging research areas in computational biology. Topics include cancer genomics; genome rearrangements and assembly; and protein and regulatory interaction networks. The course will be a mixture of lectures and student presentations of recent conference and journal papers.

CSCI 2950D. Sensor Data Management.

Sensor networks combine sensing, computing, actuation, and communication in a single infrastructure that allows us to observe and respond to phenomena in the physical and cyber world. The sensors range from tiny “smart dusts” to dime-sized RFID tags and large-scale weather sensors. This course will cover the state-of-the-art in designing and building sensor networks, focusing on issues that revolve around data and resource management. No prerequisites.

CSCI 2950E. Stochastic Optimization.

This advanced graduate course/seminar will focus on optimization under uncertainty, or optimization problems where some of the constraints include random (stochastic) components. Most practical optimization problems are stochastic (subject to future market conditions, weather, faults, etc.), and there has been substantial research (both theoretical and experimental) in efficient solution for such problems. We'll read and discuss some of the recent works in this area.

CSCI 2950F. Implementing Web-Based Software Systems.**CSCI 2950G. Large-Scale Networked Systems.**

Explores widely-distributed systems that take advantage of resources throughout the Internet. The systems leverage their large size and geographic diversity to provide bandwidth scalability, rapid responses, fault-tolerance, high-availability and diverse data collection. Topics include overlay networks, peer-to-peer systems, content distribution networks, distributed file systems and wide-scale measurement systems.

CSCI 2950H. Advanced Cryptography.**CSCI 2950I. Computational Models of the Neocortex.**

This course addresses the problem of modeling the perceptual neocortex using probabilistic graphical models, including Bayesian and Markov networks, and extensions to model time and change such as hidden Markov models and dynamic Bayesian networks. The emphasis is on problems of learning, inference, and attention. Sources include the literature in computational and cognitive neuroscience, machine learning, and other fields that bear on how biological and engineered systems make sense of the world. Prerequisites: basic probability theory, algorithms and statistics.

CSCI 2950J. Cognition, Human-Computer Interaction and Visual Analysis.

In this graduate seminar we will learn about models of human cognition and perception, and explore potential implications of the models on how computers and humans can interact effectively when performing scientific analyses. Participants will be responsible for reading assigned materials, taking turns guiding discussions of the readings, and preparing a final paper and presentation. It is recommended that participants have some background in at least one of the areas of study.

CSCI 2950K. Special Topics in Computational Linguistics.

Every year will cover a different topic in computational linguistics, from a statistical point of view, including parsing, machine translation, conference, summarization, etc. Prerequisites: CSCI 1460 or permission of the instructor.

CSCI 2950M. Computer Science, Algorithms and Economics.

Course investigates the interplay of economic theory and computer science. It is suitable for advanced senior undergraduates and for graduate students. We will study topics such as: algorithms for selfish routing; competitive combinatorial auctions; Multicast cost sharing and cooperative games; graphical models for games; and related topics. This course will be organized around the presentation of recent research papers. Prerequisite: CSCI 1570 or equivalent.

CSCI 2950N. Special Topics in Autonomous Robotics.

No description available.

CSCI 2950O. Topics in Brain-Computer Interfaces.

Introduces the mathematical and computational foundations of brain-computer interfaces. Statistical learning, Bayesian inference, dimensionality reduction, information theory, and other topics are presented in the context of brain interfaces based on neural implants and EEG recordings. Prerequisites: Basic knowledge of probability, statistics and linear algebra (e.g., CSCI 1550, APMA 1650, APMA 1690, or APMA 2640). Enrollment limited to 20 students.

CSCI 2950P. Special Topics in Machine Learning.

This seminar course explores current research topics in statistical machine learning. Focus varies by year, and may include Bayesian nonparametrics; models for spatial, temporal, or structured data; and variational or Monte Carlo approximations. Course meetings combine lectures with presentation and discussion of classical and contemporary research papers. Students will apply some this material to a project, ideally drawn from their own research interests.

CSCI 2950Q. Topics in Computer Vision.

This course will cover current topics in computer vision by focusing on a single real problem in computer vision. Recent courses have focused on forensic video analysis of an unsolved murder and three-dimensional object recognition for a mobile robot. Readings from the literature are integrated with group projects to solve problems beyond the state of the art. Strong mathematical skills (probability, linear algebra, calculus) and previous exposure to computer vision (e.g. CSCI 1430) are essential.

CSCI 2950R. Special Topics in Advanced Algorithms.

We will study an advanced topic in the design and analysis of algorithms. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2950S. Advanced Practical Combinatorial Algorithms.

We review recent as well as well-established advanced techniques in combinatorial optimization and constraint satisfaction. Students will study and individually present research papers and work on challenging software projects in small teams. Prerequisites: CSCI 0160, 0180, or 0190; and CSCI 0510; and CSCI 1490 or 2580, or instructor permission.

CSCI 2950T. Topics in Distributed Databases and Systems.

This course explores data and resource management issues that arise in the design, implementation, and deployment of distributed computing systems by covering the state of the art in research and industry. Typical topics include cloud computing and sensor networks. Strongly recommended: CSCI 0320, CSCI 1270, or CSCI 1951A.

CSCI 2950U. Special Topics on Networking and Distributed Systems.

Explores current research topics in networking, distributed and operating systems. Specific topics may include wireless and sensor networking, Internet-scale distributed systems, cloud computing, as well as the core problems, concepts, and techniques underlying these systems. The course has two components: reading and discussion of current and classical research papers, and a research project related to the topic but ideally drawn from students' own research interests. This is a graduate-level course, undergrads can join with the consent of the instructor.

CSCI 2950V. Topics in Applied Cryptography.

This course surveys recent developments in applied cryptography. Research in this field is motivated by privacy and security issues that arise in practice from areas like cloud computing, databases, surveillance and finance. Topics will vary each year. Pre Requisites: CSCI 1660 and CSCI 1510 recommended or instructor permission. This year's theme is cryptography for social good.

CSCI 2950W. Online Algorithms.

Decisions must often be made before the entire data is available. Online algorithms solve problems in which commitments must be made as the data is arriving. Choosing which items to evict from a cache before knowing future requests, which advertisers to consider for displaying ads alongside the result of a search, or which most representative data to store when computing statistics about a huge stream of information. We will discuss the worst-case model, which hinges against the worst possible future data, and some stochastic and game-theoretic models.

CSCI 2950X. Topics in Programming Languages and Systems.

Examines contemporary research topics in software construction from the perspectives of programming languages, software engineering and computer-aided verification. The primary goals are to understand which theory applies to which problems and to convert that theory into tools. Topics include security, modularity, and new paradigms in software composition. Prerequisite: CSCI 1730 or written permission of the instructor.

CSCI 2950Y. Theorem Proving.

This course explores computer-assisted theorem proving with the Coq Proof Assistant. The course will teach students to formally specify software and model mathematical theories. We will then study techniques for mechanically proving theorems about these Coq. Prerequisites: CSCI 1730 or CSCI 0170 and permission of the instructor.

CSCI 2950Z. Robot Learning and Autonomy.

This seminar course will cover current research topics related to perceiving and acting in the real world. These topics will be pursued through independent reading, class discussion, and project implementations. Papers covered will be drawn from robotics, computer vision, animation, machine learning, and neuroscience. Special emphasis will be given to developing autonomous control from human performance. No prerequisites.

CSCI 2951A. Robots for Education.

This seminar will explore the potential for robotics to engage future generations of scientists and engineers, with a particular focus on broadening participation in computing across society. Academic papers describing existing models, systems, courses, and evaluation for teaching robotics at undergraduate and secondary levels will be covered through students presentations. A group project will be conducted to find viable and accessible "off-the-shelf" technology solutions suited to teaching robotics without requiring a technical background. Instructor permission required.

CSCI 2951B. Data-Driven Vision and Graphics.

Investigates current research topics in image-based graphics and vision. We will examine data sources, features, and algorithms for understanding and manipulating visual data. We will pay special attention to methods that use crowd-sourcing or Internet-derived data. Vision topics such as scene understanding and object detection will be linked to graphics applications such as photo editing and image-based rendering. These topics will be pursued through independent reading, class discussion and presentations, and a semester long research project. Strong mathematical skills and previous imaging (vision or computational photography) courses are essential.

CSCI 2951C. Autonomous Agents and Computational Market Design.

An important area of research in artificial intelligence is how to effectively automate decision making in time-critical, information-rich environments. Electronic markets are a prime example of such environments. In this course students will create their own simulated electronic market as well as autonomous agents that trade in their market simulation. Application domains will include supply chain management, the Dutch flower auctions, and ad auctions, such as those run by Google and Facebook. Enrollment limited to 40 graduate students.

CSCI 2951E. Topics in Computer Systems Security.

This course explores advanced computer security and privacy and highlights current research in the area. Topics include applications security, applied cryptography, cloud security, operating systems security, software security, web security, usable security, and vulnerabilities and defenses in cyber-physical systems (e.g., automotive, medical, and industrial control devices). Recent research papers will be presented and discussed, and projects will provide an opportunity for creative work. Class attendance is required, and active participation in class discussions is essential. The course can be used to satisfy the capstone requirement for the ScB degree in Computer Science. Instructor permission is required to register.

CSCI 2951F. Learning and Sequential Decision Making.

The course explores automated decision making from a computer-science perspective. It examines efficient algorithms, where they exist, for single agent and multiagent planning as well as approaches to learning near-optimal decisions from experience. Topics will include Markov decision processes, stochastic and repeated games, partially observable Markov decision processes, and reinforcement learning. Of particular interest will be issues of generalization, exploration, and representation. Participants should have taken a graduate-level computer science course and should have some exposure to machine learning from a previous computer-science class or seminar; check with instructor if not sure. Recommended Prerequisites: CSCI 1950F or CSCI 1420

CSCI 2951I. Computer Vision for Graphics and Interaction.

Computer vision reconstructs real world information from image and video data; computer graphics synthesizes dynamic virtual worlds; interaction lets us explore these worlds; and machine learning allows us to map between domains across vision, graphics, and interaction. In visual computing, these fields converge to exploit both models of visual appearance and databases of examples to generate and interact with new images. This enables applications from the seemingly simple, like semantic photo editing, to the seemingly science fiction, like mixed reality. In this seminar, we will discover the state-of-the-art algorithmic contributions in computer vision which make this possible. Please join us!

CSCI 2951K. Topics in Collaborative Robotics.

Practical approaches to designing intelligent systems. Topics include search and optimization, uncertainty, learning, and decision making. Application areas include natural language processing, machine vision, machine learning, and robotics.

CSCI 2951M. Advanced Algorithms Seminar.

Students in this course will read, present, and discuss recent breakthrough papers on the topic of algorithms, and the related areas needed to analyze algorithms. This course is aimed at current and potential future graduate students who want to gain technical depth and perspective on the field of algorithms. Topics will roughly alternate by year, with even years emphasizing fundamental techniques, and odd years emphasizing applications such as machine learning. Suggested prerequisites: CSCI 1570 and mathematical maturity. Instructor permission required. Enrollment will be limited to 24 students, based on an application that will be described on the first day of class. Ideal students will have a mix of the following: 1) motivation to learn how to read papers, 2) technical skills and background, 3) willingness to participate and contribute to discussions.

CSCI 2951N. Advanced Algorithms in Computational Biology.

This is a full-lecture, graduate course on algorithms and biomedical applications. The Foundations lectures are an introduction to the biological and medical genomics application areas. Each Algorithm section is devoted to an algorithmic method presented in rigorous depth, followed by an important open problem in the application area, together with the current most effective algorithmic solutions to the problem. Graduate students and advanced undergraduates in computational and mathematical sciences and engineering are welcome. Biological, life sciences and medical students and faculty are welcome as well and will be able to participate more in the applications areas.

CSCI 2951O. Foundations of Prescriptive Analytics.

We are undoubtedly in the middle of an Analytics Revolution that enabled turning huge amounts data into insights, and insights into predictions about the future. At its final frontiers, Prescriptive Analytics is aimed at identifying the best possible action to take given the constraints and the objective. To that end, this course provides students with a comprehensive overview of the theory and practice of how to apply Prescriptive Analytics through optimization technology. A wide variety of state-of-the-art techniques are studied including: Boolean Satisfiability, Constraint Programming, Linear Programming, Integer Programming, Local Search Meta-Heuristics, and Large-Scale Optimization. Pre Requisites: One of CSCI 0300, 0320, CSCI 0330, CSCI 1310, OR CSCI 1330 and recommended: one of CSCI 0530, CSCI 1570, MATH 0520 or MATH 0540.

CSCI 2951S. Distributed Computing through Combinatorial Topology.

Although computer science itself is based on discrete mathematics, combinatorial topology and its applications may still be unfamiliar to many computer scientists. For this reason, this course provides a self-contained, elementary introduction to the concepts from combinatorial topology needed to analyze distributed computing. Conversely, while the systems and models used here are standard in computer science, they may be unfamiliar to students with a background in pure or applied mathematics. For this reason, this course also provides a self-contained, elementary description of standard notions of distributed computing. CSCI 0220 required, CSCI 1760 recommended

CSCI 2951T. Data-Driven Computer Vision.

Investigates current research topics in data-driven object detection, scene recognition, and image-based graphics. We will examine data sources, features, and algorithms useful for understanding and manipulating visual data. We will pay special attention to methods that harness large-scale or Internet-derived data. There will be an overview of the current crowdsourcing techniques used to acquire massive image datasets. Vision topics such as scene understanding and object detection will be linked to graphics applications such as photo editing. These topics will be pursued through independent reading, class discussion and presentations, and projects involving current research problems in Computer Vision.

CSCI 2951U. Topics in Software Security.

This course investigates the state-of-the-art in software exploitation and defense. Specifically, the course is structured as a seminar where students present research papers to their peers. We will begin with a summary of prevalent software defects, typically found in applications written in memory unsafe languages, and proceed to surveying what we are up against: traditional and modern exploitation techniques, ranging from classical code injection and code reuse up to the newest goodies (JIT-ROP, Blind ROP). For the bulk part, we will focus on the latest advances in protection mechanisms, mitigation techniques, and tools against modern vulnerability classes and exploitation methods.

CSCI 2951X. Reintegrating AI.

The goal of AI has been to build complete intelligent agents, yet the field has been fragmented into a collection of problem-specific areas of study. We will first spend a few weeks in lecture covering a new approach to integrating existing AI subfields into a single agent architecture, and remainder of the semester on self-directed, semester-long research projects.

Grading based on a mid-semester project proposal, and a substantial open-ended final project. The projects will be multi-disciplinary in nature but students will have the opportunity to work in small groups, so they need not necessarily have expertise in the relevant areas. Graduate students welcome; undergraduates need instructor permission to enroll.

CSCI 2951Z. Advanced Algorithmic Game Theory.

This course examines topics in game theory from a computer scientist's perspective. Through the lens of computation, it will focus on the design and analysis of systems involving self-interested agents, investigating how strategic behavior should influence algorithm design, which game-theoretic solution concepts are practical to implement, and the ramifications of conflicts of interest between system designers and participating agents. Students will create their own automated trading agents for various simulated market games. Topics include: auctions and mechanism design, equilibria, and learning. For graduate credit, students will complete additional homework exercises, and a significant programming project.

CSCI 2952B. Topics in Computer Science Education Research.

How do people learn computing, and what can we do to teach them better? Answering these questions requires applying techniques from a variety of disciplines: computer science, naturally, but also cognitive science, psychology, linguistics, sociology, and more—even fields like economics can be relevant. This course studies different focused topics in computing education research (CER), drawing on these other disciplines as needed.

CSCI 2952C. Learning with Limited Labeled Data.

One of the most remarkable abilities of recent systems created with machine learning is their flexibility. Large pre-trained models (so-called “foundation models”) can be adapted with relative ease to a wide range of tasks. Sometimes this adaptation can happen with no training examples at all. How is this ability achieved? What are its limits? And what should we do when it fails? This seminar course will survey recent research on these topics, including pre-training and transfer learning, instruction tuning, reinforcement learning from human and AI feedback, few-shot and zero-shot learning, weak supervision, and synthetic data generation. Students will lead discussions on recent research papers and develop final research projects.

CSCI 2952F. Distributed Systems at Scale: Microservices Management.

This seminar investigates and explores cutting edge challenges and issues in the emerging Microservices paradigm. Microservices are a specific cloud paradigm for enabling distributed systems and applications at scale. In particular, this course builds on the foundations provided by the initial distributed systems, networking and operating systems offering (i.e., CSCI 1380, CSCI 1680, CSCI 1670) and explores how these concepts are used to realize, manage, and orchestrate microservices. The course is driven by materials from academic conferences and industrial blogs. The industrial blogs will provide context and motivation for different problems. The academic reasons will provide a deep dive into the technical details: we will focus on reading, analyzing, critiquing and brainstorming academic papers. Students taking this class should be familiar with reading academic literature, performing critical analysis, and working on open ended problems with undefined solutions. More information: <http://cs.brown.edu/courses/info/csci2952-f/>

CSCI 2952G. Deep Learning in Genomics.

Deep learning models have achieved impressive performance in fields like computer vision and NLP. Given an adequate amount of data, these models can extract meaningful representations to perform accurate predictions. The collection of vast quantities of biological data naturally leads to the question -- can deep learning help us understand genomics? In this seminar-style class, we will cover the recent research literature trying to answer this question. We will learn how state-of-the-art models like CNNs, RNNs, GCNs, GANs, etc. have been applied to solve significant problems in genomics and what unique challenges are presented by the data in this field.

CSCI 2952H. Recent Progress in Reinforcement Learning.

Reinforcement learning is a framework for studying machines that interact with a sequential environment to achieve a goal. In the past decade, the RL framework has gained a lot of attention owing to its intriguing success in solving problems in complicated domains such as games, robotics, and dialog systems. We observe continual growth in the number of RL papers published in major machine-learning conferences. This growth calls for a careful investigation of the recent progress in the field. By reading selections of the current RL literature, this graduate-level course examines some of the latest theoretical and empirical progress in the field.

CSCI 2952I. Language Processing in Humans and Machines.

Understanding language requires transforming sequences of sounds into words, combining words into meaningful thoughts, and incorporating thoughts into an ongoing discourse. Psychologists and linguists have been trying to reverse-engineer how humans do this so easily, at the speed of conversation. In parallel, computer scientists have been trying to engineer machines to solve the same problems, leading to products like Siri and Alexa. This class will explore how these two kinds of research can help each other, bringing recent insights from machine learning into the study of human language processing, and insights from human processing into the architectures of machine language systems. For CS students: Machine Learning, Deep Learning, Computational Linguistics (or comparable experience). For CLPS students: At least one of CLPS 0200, 0300, 0800, or 1800

CSCI 2952K. Topics in 3D Computer Vision and Deep Learning.

We live in a world that spans 3 dimensions. Cameras and sensors image the 3D world by projecting to a 2D plane. How can we recover the 3D world back from these images? What techniques can we use to process 3D data? In this course we will study computer vision and machine learning techniques to recover 3D information of the world from images, and process and understand 3D data. We will learn about classical computer vision techniques but focus on cutting-edge deep learning methods. The techniques we will study are widely used, for instance, in self-driving cars and smartphone AR face filter apps.

CSCI 2952N. Advanced Topics in Deep Learning.

Prepares graduate students with the knowledge they need to apply Deep Learning techniques for their own research. There has been tremendous success in developing unified neural architectures that achieve state-of-the-art performance on language understanding (GPT-3), visual perception (ViT), and even protein structure prediction (AlphaFold). We plan to understand how they work, and how the success of such unified models can give rise to further developments on self-supervised learning, a technique that trains machine learning models without requiring labeled data; and multimodal learning, a technique that utilizes multiple input sources, such as vision, audio, and text. We will study recent attempts to interpret these models, thus revealing potential risks on model bias. Paper reading, student presentations, and invited guest lectures. Students required to work on a final project that explores a novel direction along the line of the papers we cover.

CSCI 2952O. A Practical Introduction to Advanced 3D Robot Perception.

This course is aimed at preparing graduate students and senior undergrads to do advanced work at the intersection of two important and popular fields: computer vision and robotics. The course will focus on the latest advances through lectures, readings, and discussion groups. The lectures and readings will be designed to represent a mix of classical techniques as well as the most recent advances in the two fields. The unique highlight of this course is the inclusion of a practical component: students will implement a project that combines computer vision and robotics by using cameras and a real robot arm. Students will form teams for this project and have exclusive access to a camera and a small robot arm both of which can be interfaced with the students' laptops. Pre-reqs: One of CSCI 1430, CSCI 1470, CSCI 1951R, CSCI 1230.

CSCI 2952P. Graduate Theory Seminar.

A theory course/seminar for graduate and advance undergraduate students interested in the mathematical foundations of algorithm.

CSCI 2952Q. Robust Algorithms for Machine Learning.

As machine learning systems start to make more important decisions in our society, we need learning algorithms that are reliable and robust. In this course, we will (1) cover basic tools in linear algebra, matrix calculus, and statistics that are useful in theoretical machine learning, (2) explore different adversarial models and examine whether existing algorithms are robust in these models, and (3) design and analyze provably robust algorithms for fundamental tasks in machine learning. In particular, we will focus on the research areas of high-dimensional robust statistics, non-convex optimization, learning with strategic agents, and spectral graph theory. This is a research-oriented course where students are asked to read and present sophisticated papers in top machine learning conferences. Knowledge of basic linear algebra, algorithms, data structures, probability and statistics is essential. Prior experience with machine learning is required.

CSCI 2952R. Systems Transforming Systems.

The subject of the seminar is the development of new techniques, tools, and systems for automatically augmenting existing software systems with new capabilities — including, but not limited to, parallelism, distribution, isolation, and security. The seminar will have a dual focus: 60% on advanced scientific topics in systems and 40% on academic communication, especially technical writing. These two foci will be structured as overlapping layers — systems in the foreground, technical communication in the background. A key goal will be for students, working in teams of 4–5 members, to develop papers worthy of scientific publication; as such, the course is structured around projects designed carefully, and with appropriate support, to result in paper publications in the systems community.

CSCI 2952S. Topics in Cyber and Digital Policy.

This online asynchronous course explores advanced topics in cybersecurity and digital policy, including privacy and civil liberties. Research papers and/or projects will provide an opportunity for creative work. Topics may include public policy and the international aspects of cybersecurity, legislation and legal requirements concerning digital policy issues, the history and background of privacy and civil liberties in information and information systems, cyber conflict, and related subjects. There is no set class time. Students and the instructor will coordinate work online and over Zoom through periodic meetings. CSCI 1800, 1860, 1805, 1870 or equivalent background is a prerequisite. Instructor permission required.

CSCI 2952T. An Algorithmist's Toolkit.

Doing research in theory and algorithms is often inaccessible because it requires an eclectic mathematical toolkit that is spread over many areas. The goal of this course is to consolidate many of these tools into a single course. Namely, this course will equip students with a mathematical foundation that will allow them to jumpstart their own theory research, particularly in algorithms. The course will cover not only many of the recurring mathematical tools in algorithms but also the ways in which these tools are used to design algorithms with rigorous guarantees. It is intended mainly for early-stage theory graduate students and advanced undergraduates. Some planned topics include polyhedral methods, metric embeddings, techniques from graph theory and the multiplicative weights framework.

CSCI 2952W. Critical Data and Machine Learning Studies.

In this course, we will investigate the complex ways that data and AI technologies are shaped by human values, social processes, and power structures. We will engage with 1) social theory, exploring concepts such as situated knowledge, intersectionality, and positionality and 2) recent research that bridges these concepts with modern machine learning & AI technology and practice. Students will develop both critical and imaginative ways of thinking: understanding how to situate technology in its sociotechnical context, while building alternative and more just futures. The course will introduce different research methodologies and applications areas relevant to scholars in this interdisciplinary space. Students will complete reading reflections, class discussions, and a final project engaging with the course themes.

CSCI 2952X. Research Topics in Self Supervised Learning.

We will cover everything around state-of-the-art Self Supervised Learning (SSL) pipelines, starting from the basics. Background will be provided along with in-depth implementation details. We will cover computer vision, multimodal, and world models. Coding exercises will have to be completed as well as research group projects to implement our own alternative solutions. Guest lectures from top SSL researchers will also take place throughout the semester.

CSCI 2952Y. Special Topics in Computational Design and Fabrication.

This course explores the core mathematical, algorithmic, and computational principles that drive modern design tools, focusing on digital design representations, generative design, optimization, and interactive exploration. Students will learn to develop computational models for automating design processes, implement algorithms for shape generation and performance evaluation, and integrate digital design with fabrication techniques such as 3D printing, laser cutting, and machine knitting. The course includes hands-on assignments and a final project where students build their own computational design workflow.

CSCI 2952Z. Coordinated Mobile Robotics (ENGN 2912U).

Interested students must register for ENGN 2912U.

CSCI 2955. The Design and Analysis of Trading Agents.

The Dutch Flower Auctions (DFA) clear over 100,000 auctions per day, each lasting on average between 3 and 5 seconds! This semester, we'll study the mechanism through which the DFA distribute 2/3 of the world's flowers, focusing on both the sellers' and buyers' decision-making processes. More generally, we'll research ways to automate and optimize decision-making in time-critical, information-rich environments, like the DFA. Undergraduate students require instructor permission, and should have already completed CSCI 0190, or CSCI 0150 and CSCI 0160, or CSCI 0170 and CSCI 0180.

CSCI 2956A. Design of Agents for Bidding in Sponsored Search Auctions.

This course investigates the new field of sponsored search auctions. Although students will be exposed to the field from the point of view of both the search engine and the advertiser, the course's focus is on advertiser's bidding algorithms. The students will implement novel bidding agents, and the course will culminate in a competition among the students' agents. Undergraduate students who obtained permission from the instructor or completed CSCI 0910, or CSCI 0150 and CSCI 0160, or CSCI 0170 and CSCI 0180 can register for the course. CSCI 1410 is a co-requisite.

CSCI 2956R. Multiplicative-Weights/Packing-Covering Method for Approximating Linear and Semidefinite Programs.

We will study the method called, variously, multiplicative weights and packing-covering. We will in particular investigate the use of this method for finding approximately optimal solutions to linear programs and semidefinite programs. Prerequisite: A graduate-level course on algorithms. Enrollment limited to 10. Instructor permission required.

CSCI 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CSCI 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

CSCI 2999A. Cybersecurity Management Within Business, Government, and Non-Profit Organizations.

For the most up to date information on this class, please visit this page: <https://cs.brown.edu/courses/csci2999-a/> CSCI 2999A will put you in the shoes of decision-makers working in business, government, and non-profit sectors so that you can gain experience grappling with real-world management problems through thought exercises and thoughtful reflection. I anticipate that the course will feature guest speakers that will help you learn unique insights. Content is designed to strengthen your skills as both a cybersecurity practitioner and leader. By examining real events that organizations have faced, you will practice and refine your ability to evaluate the challenges that arise for organizational leaders.

CSCI XLIST. Courses of Interest to Concentrators in Computer Science.

Data Science Institute

Brown University's Data Science Institute (DSI) serves as a campus hub for research and education in data science. Through our research and academic programs, we strive to ensure that those most in need are not the last to benefit from fundamental research in data science or data-driven applied research. Brown's DSI is unique because we:

- Equally value both domain-driven and fundamental methodological research in data science;
- Increase data fluency and educate the next generation of data scientists, through our master's program and providing outreach to students and researchers at a variety of career stages;
- Explore the impact of the data revolution on culture, education, health and genomics, society, and social justice by engaging with research partners within the University and beyond.

The DSI offers multiple academic programs:

- Residential master's degree (<https://dsi.brown.edu/academics/masters-programs/masters-data-science/>) in Data Science, including a fifth-year master's (<https://dsi.brown.edu/academics/masters-programs/masters-data-science/fifth-year-masters-degree/>) option for Brown undergraduates
- Online master's (<https://dsi.brown.edu/academics/masters-programs/online-masters-data-science/>) in Data Science: Policy, Governance, and Society
- Doctoral certificate (<https://dsi.brown.edu/academics/doctoral-certificate/>) for Brown graduate students
- Undergraduate certificate (<https://dsi.brown.edu/academics/certificate-data-fluency/>) in Data Fluency

The DSI also supports two research centers, the Center for Computational Molecular Biology (<https://ccmb.brown.edu/>) (CCMB) and the Center for Technological Responsibility, Reimagination, and Redesign (<https://cntr.brown.edu/>) (CNTR).

To support data science research and education across Brown's campus, the DSI hosts seminars and public lectures, offers workshops in data science skills, and offers small grants to Brown researchers in all disciplines.

For additional information, please visit the institute's website: <http://dsi.brown.edu/>.

Data Fluency Certificate Requirements

The Certificate in Data Fluency provides a formal pathway for undergraduates in concentrations other than applied mathematics, computational biology, computer science, math, and statistics (see details below) who wish to gain fluency and facility with the tools of data science. The driving intellectual question motivating certificate students is how we can infer meaning from data whilst avoiding false predictions. The required experiential learning component provides you with the opportunity to apply your data-science skills in applied settings, engage in research that uses data science, teach data science as an undergraduate teaching assistant, or undertake an internship that has a substantive data-science component.

As with all undergraduate certificates (<https://www.brown.edu/academics/college/degree/undergraduatecertificates/>), the certificate has the following requirements:

- Students may not earn more than **one certificate** and may only have **one declared concentration**.
- Students must be enrolled in or have completed at least **two courses** toward the certificate at the time they declare in ASK.
- No more than **one course** may count toward your concentration and the certificate.
- Students may declare in ASK **no earlier** than the beginning of the fifth semester and must declare **no later** than the last day of classes of the antepenultimate (typically the sixth) semester, in order to facilitate planning for the capstone or other experiential learning opportunity.
- Students must submit a proposal for their experiential learning opportunity by the end of the **sixth semester**.

Excluded Concentrations: Applied Mathematics, Computational Biology, Computer Science, Mathematics, and Statistics. This includes joint concentrations in these areas; for example, Applied Mathematics-Economics is also excluded. According to the certificate guidelines, a student's concentration and certificate cannot have substantial overlap.

For more information on the Certificate in Data Fluency, please visit the Data Science Institute (<https://dsi.brown.edu/academics/certificate-data-fluency/>) website.

Certificate Requirements

Certificate Requirements

Core Courses:

DATA 0080	Data, Ethics and Society	1
CSCI 0111	Computing Foundations: Data	1
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
or CPSY 0950	Introduction to programming	

DATA 0200	Data Science Fluency	1

Elective Course: Select one follow-up Applied Math, Biostatistics, Computer Science or domain-specific course with a significant data component from the following list (or another course with approval from the certificate advisor):

ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis	
APMA 1650	Introduction to Probability and Statistics with Calculus	

BIOL 0495	Statistical Analysis of Biological Data
BIOL 1555	Methods in Informatics and Data Science for Health
BIOL 1565	Survey of Health Informatics
CPSY 0900	Statistical Methods
CPSY 1291	Computational Methods for Mind, Brain and Behavior
CPSY 1580C	Visualizing Information
CSCI 1411	Foundations of AI
CSCI 1420	Machine Learning
CSCI 1450	Advanced Introduction to Probability for Computing and Data Science
CSCI 1470	Deep Learning
CSCI 1951A	Data Science
DATA 1030	Hands-on Data Science
DATA 1150	Data Science Fellows ¹
DATA 1500	Data Visualization & Narrative
ECON 1620	Introduction to Econometrics
ECON 1660	Big Data
EDUC 1230	Applied Statistics for Ed Research and Policy Analysis
ENVS 1105	Introduction to Environmental GIS
EEPS 1320	Introduction to Geographic Information Systems for Environmental Applications
EEPS 1330	Global Environmental Remote Sensing
EEPS 1340	Machine Learning for the Earth and Environment
HIST 1825J	History of Artificial Intelligence
MATH 1210	Probability
MUSC 1210	Seminar in Electronic Music: Real-Time Systems
PHP 1501	Essentials of Data Analysis
PHP 1510	Principles of Biostatistics and Data Analysis
PHP 1560	Using R for Data Analysis
SOC 1020	Methods of Social Research
SOC 1100	Introductory Statistics for Social Research
SOC 1340	Principles and Methods of Geographic Information Systems

Capstone: 0-1

The required experiential learning component provides students with the opportunity to apply their data-science skills in their concentration, engage in research that uses data science, teach data science as UTAs, or undertake an internship that has a data-science component. The capstone may be completed for credit via an independent study course or not for credit. ²

Options for fulfilling this requirement include:

1. Participate in a Brown University credit experience (i.e. independent study).

2. Participate in a non-credit experience: summer Internship; TA for data-related course; work with a local organization on a data-related project. A 10-12 page reflective paper is required for this option.

3. Be a Data Science Fellow. ¹

Total Credits 4-5

¹ Students may complete DATA 1150 and the concurrent Data Science Fellows project to fulfill both the elective and experiential components of the certificate.

² Students must submit a proposal for their experiential component by the end of the sixth semester.

Data Science Graduate Program

Master of Science in Data Science

The Data Science Institute (DSI) at Brown offers a master's program (ScM) that prepares students from a wide range of disciplinary backgrounds for distinctive careers in Data Science. With connections to departments across campus, in particular Brown's Division of Applied Mathematics (<https://appliedmath.brown.edu/>) and Department of Computer Science (<https://cs.brown.edu/>), the master's program offers a unique and rigorous education for people building careers in data science. The program is designed to provide a fundamental understanding of the methods and algorithms of data science, to be achieved through a study of relevant topics in mathematics, statistics, and computer science, including database engineering, visualization, machine learning, and deep learning. The program also provides experience in important, frontline data-science problems in a variety of fields, and introduces students to ethical and societal considerations surrounding data science and its applications.

The program's course structure, including the capstone experience, ensures that students meet the goals of acquiring and integrating foundational knowledge for data science, applying this understanding in relation to specific problems, and appreciating the broader ramifications of data-driven approaches to human activity.

All students begin the program in September; **there is no option for starting in the spring semester**. The default program length is 21 months but students may elect to complete the program over 12, 16, 21, or 24 months. In some cases, exceptionally well-prepared students complete their work in nine months.

The curriculum for the Data Science Master's Program consists of nine credits: eight required courses, one of which is the experiential project course, and one elective. The nine credit-units divide as follows:

- 3 credits in mathematical and statistical foundations
- 3 credits in data and computational science
- 1 credit in societal implications and opportunities
- 1 elective credit to be drawn from a wide range of focused applications or deeper theoretical exploration
- 1 credit capstone experience.

We also offer an option as a 5th Year Master's Program if you are an undergraduate at Brown. This allows you to substitute maximally 2 credits with courses you have already taken. **5th-Year students must complete the degree in one year (September - August).**

For more information on admission and program requirements, please visit the following website: <https://www.brown.edu/academics/gradschool/programs/data-science> (<https://www.brown.edu/academics/gradschool/programs/data-science/>).

Master of Science in Data Science

For more information about the Master's Program curriculum and when courses are offered, please visit the DSI Master's curriculum page (<https://dsi.brown.edu/academics/masters-degree/curriculum/>) or Courses@Brown (<https://cab.brown.edu/>).

DATA 1030	Hands-on Data Science	1
DATA 1050	Data Engineering	1
APMA 1690	Computational Probability and Statistics	1
DATA 2020	Statistical Learning	1
CSCI 1470	Deep Learning	1
or CSCI 2470	Deep Learning	
CSCI 1491	Fairness in Automated Decision Making	1
DATA 2060	Machine Learning: from Theory to Algorithms	1
or CSCI 1420	Machine Learning	
DATA 2050	Data Science Practicum	1

The practicum experience is a hands-on thesis project that entails an in-depth study of a current problem in data science. Students will synthesize their knowledge of probability and statistics, machine learning, and data and computational science. Students will work in teams on projects with Brown faculty members or with external companies. The project will be completed as part of a course that includes additional career-oriented skills development.

One elective: 1

Domain knowledge relevant to individual interest, 1 credit, must be a graduate level course with 4-digit course number starting with a non-0 digit. Most graduate level CSCI and APMA courses qualify. Please contact the DGS if you plan to take a course from a different department.

Total Credits 9

Data Science Policy, Governance & Society Graduate Program

Master of Science in Data Science: Policy, Governance & Society

The acceleration of artificial intelligence, machine learning, and advanced analytics is rapidly reshaping industries and societies across the globe. With this immense potential for transformation comes the need to develop robust governance frameworks that ensure data and AI systems are deployed responsibly, ethically, and legally. Brown's online Master's in Data Science: Policy, Governance & Society program prepares students to be leaders and stewards of their organization's data assets and analytics capabilities.

This fully online program brings a world-class education to a globally diverse student body while maintaining the same academic rigor and excellence of an Ivy League University. A flexible format delivered asynchronously gives working professionals global access to graduate education from one of the country's leading universities.

The curriculum for the online ScM in Data Science consists of eight required courses.

For more information about the online Master's Program curriculum and when courses are offered, please visit the department website (<https://dsi.brown.edu/academics/masters-programs/online-masters-data-science/>) or Courses@Brown (<https://cab.brown.edu/>).

DSIO 2130	Advanced Topics of AI Governance	1
DSIO 2030	Applied Learning Experience	1

Courses

Data Science

DATA 0080. Data, Ethics and Society.

A course on the social, political, and philosophical issues raised by the theory and practice of data science. Explores how data science is transforming not only our sense of science and scientific knowledge, but our sense of ourselves and our communities and our commitments concerning human affairs and institutions generally. Students will examine the field of data science in light of perspectives provided by the philosophy of science and technology, the sociology of knowledge, and science studies, and explore the consequences of data science for life in the first half of the 21st century. Fulfills requirement for Certificate in Data Fluency

DATA 0200. Data Science Fluency.

As data science becomes more visible, are you curious about its unique amalgamation of computer programming, statistics, and visualizing or storytelling? Are you wondering how these areas fit together and what a data scientist does? This course offers all students regardless of background the opportunity for hands-on data science experience, following a data science process from an initial research question, through data analysis, to the storytelling of the data. Along the way, you will learn about the ethical considerations of working with data, and become more aware of societal impacts of data science. Course does not count toward CS concentration requirements.

DATA 0250. Applied Statistics in Python.

As more students engage in data science there is a need to provide guidance on conducting basic statistical analysis in Python. This course will provide a non-specialist approach to applied statistics, specifically linear models Python. Students will learn how to conduct linear modules using the Statsmodels package in Python. Students should have good working knowledge of descriptive statistics (equivalent to a high school AP level). Python coding experience is helpful but not required. Student learning would be assessed through hands-on Python coding activities and written interpretation of statistical reports. Students from the humanities and social sciences are particularly encouraged to enroll in this course. Pre-req- Basic High School A.P. knowledge of statistics.

DATA 1010. Probability, Statistics, and Machine Learning.

An introduction to the mathematical methods of data science through a combination of computational exploration, visualization, and theory. Students will learn scientific computing basics, topics in numerical linear algebra, mathematical probability (probability spaces, expectation, conditioning, common distributions, law of large numbers and the central limit theorem), statistics (point estimation, confidence intervals, hypothesis testing, maximum likelihood estimation, density estimation, bootstrapping, and cross-validation), and machine learning (regression, classification, and dimensionality reduction, including neural networks, principal component analysis, and unsupervised learning).

DATA 1030. Hands-on Data Science.

Develops all aspects of the machine learning pipeline: data acquisition and cleaning, handling missing data, exploratory data analysis, visualization, feature engineering, modeling, interpretation, presentation in the context of real-world datasets. Fundamental considerations for data analysis are emphasized (the bias-variance tradeoff, training, validation, testing). Classical models and techniques for classification and regression are included (linear and logistic regression with regularization, support vector machines, decision trees, random forests, XGBoost). Uses the Python data science ecosystem (e.g., sklearn, pandas, matplotlib). Prerequisites: Python coding experience suggested. Familiarity with linear algebra and calculus. A course equivalent to CSCI 0050, CSCI 0150 or CSCI 0170 is strongly recommended.

DATA 1050. Data Engineering.

The course will cover the storage, retrieval, and management of various types of data and the computing infrastructure (such as various types of databases and data structures) and algorithmic techniques (such as searching and sorting algorithms) and query languages (such as SQL) for interacting with data, both in the context of transaction processing (OLTP) and analytical processing (OLAP). Students will be introduced to measures for evaluating the efficacy of different techniques for interacting with data (such as 'Big-Oh' measure of complexity and the number of I/O operations) and various types of indexes for the efficient retrieval of data. The course will also cover several components of the Hadoop ecosystem for the processing of 'big data.' Additional topics include cloud computing and NoSQL databases. Introduction to concepts and techniques of computer science essential for data science will also be covered.

DATA 1080. Large Language Models and Generative AI.

The primary emphasis of this course will be on the technical foundations of large language models (LLMs) and generative AI (Gen AI). The course will cover the use of agents and tools to combine the power of large language models and Gen AI with a wide range of traditional computer algorithms. Additionally, the course will cover the social impacts of this technology and the safety concerns it raises. Students will be required to complete a project to build a multi-agent system in which each agent uses both the power of generative AI and traditional algorithms and in which the collaboration of the agents produces a system which can perform a complex task such as planning a trip or building a predictive model or creating a database or a creating a website. Programming assignments will be done in Python or PyTorch.

DATA 1150. Data Science Fellows.

DATA 1150 for juniors and seniors possessing data science skills, seeking to apply these skills and collaborate with faculty to integrate data science content into Brown courses. The course teaches communication, teaching and learning strategies, and determining project requirements. Qualified students have a combination of programming experience (intermediate level or above in R or Python), statistical knowledge (intermediate level or above) and knowledge of how data and computing can be used in applied fields. Students in the data fluency certificate must have DATA 0200 prior to DATA 1150. Students need to complete the application (url below) no later than August 1st for consideration. Qualified students must participate in an interview with the instructor and override requests will be granted only to students by instructor approval. <https://forms.gle/Je3Przs3NDEo4eG9>

DATA 1200. Reality Remix - Experimental VR.

This course pursues collaborative experimentation with virtual and augmented reality (AR and VR). The class will work as a team to pursue research (survey of VR/AR experiences, scientific and critical literature review), reconnaissance (identifying VR/AR resources on campus, in Providence and the region), design (VR/AR prototyping). Research findings are documented in a class wiki. The course makes use of Brown Arts Initiative facilities in the Granoff Center where an existing VR laboratory will be expanded through the course of the semester based on student needs. Class culminates in the release the class wiki as a resource for the Brown community.

DATA 1340. Machine Learning for the Earth and Environment (EEPS 1340).

Interested students must register for EEPS 1340.

DATA 1450. Text Analytics.

This course will first cover techniques for compiling textual corpora from web pages, pdfs, scanned pdfs, images, audio clips, etc. Secondly, it will look at processes for extracting some common types of information from these corpora. In particular, we will cover extracting named entities (persons, locations, organizations, etc.), relations between entities, events, transactions, topics, document summaries, abstracts, legal clauses, etc. This course is different from standard courses in Natural Language Processing and Computational Linguistics in that we will spend significant amount of course time on compiling textual corpora from documents in a variety of formats and our emphasis will be on extracting information that can be fed to analytics pipelines.

DATA 1491. Fairness in Automated Decision Making (CSCI 1491).

Interested students must register for CSCI 1491.

DATA 1500. Data Visualization & Narrative.

Data visualization is an essential tool in both discovering and communicating key analytical findings. However, data practitioners and developers can sometimes undervalue the visual polish that goes into creating the most effective graphics. This course will act as a technical primer for building data visualization using code, but a core focus will be the graphic design decisions – color, hierarchy, font selection, labeling – that elevate visualizations. Additional topics will include cartography, web design, and interaction.

DATA 1720. Tackling Climate Change with Machine Learning (EEPS 1720).

Interested students must register for EEPS 1720.

DATA 2020. Statistical Learning.

A modern introduction to inferential methods for regression analysis and statistical learning, with an emphasis on application in practical settings in the context of learning relationships from observed data. Topics will include basics of linear regression, variable selection and dimension reduction, and approaches to nonlinear regression. Extensions to other data structures such as longitudinal data and the fundamentals of causal inference will also be introduced.

DATA 2030. Forces of Influence in AI Governance.

Artificial Intelligence (AI) technologies have infused every industry, government, and field of research. It's a part of the vast majority of every person's daily life. Indeed, it is no longer viable to consider AI/tech as a field on its own. To navigate this rapidly moving, and increasingly complicated space as effectively as possible, we have to first step back and take an ecosystem-wide view. We'll start there, with a field-wide overview, then dive into the theories of change and the different actors that influence the governance of AI systems globally (think big tech, governments, investors, media, etc). This course will give an overview of those who are influencing the governance of AI technologies, and their dynamics, and help students make informed choices for themselves and their work in or adjacent to tech & AI.

DATA 2040. Deep Learning and Special Topics in Data Science.

A hands-on introduction to neural networks, reinforcement learning, and related topics. Students will learn the theory of neural networks, including common optimization methods, activation and loss functions, regularization methods, and architectures. Topics include model interpretability, connections to other machine learning models, and computational considerations. Students will analyze a variety of real-world problems and data types, including image and natural language data.

DATA 2050. Data Science Practicum.

This course is a requirement for master's students in Data Science and is only open to them. The course includes a semester-long capstone project as well as instruction on topics that prepare students for working as data scientists, such as requirements gathering, version control, bug tracking, software deployment, and other professional development. Capstone projects will be sourced from entities in Brown (departments, labs, researchers, etc.) as well as external entities (companies, nonprofits, etc.) and will engage most of the core components of data science: Data sculpting (data cleaning, formatting, feature selection, etc.), exploratory data analysis, data modeling, and data visualization. Students will also address any social and ethical issues raised by their project. Students will usually work in teams of 3 - 4.

DATA 2060. Machine Learning: from Theory to Algorithms.

Data science techniques and tools are all around us. Machine learning is a term used across many different disciplines, and often people use machine learning tools without a thorough understanding of how and why the tools work. This course will provide a foundation of machine learning grounded in the mathematical models behind the techniques. We will cover the theory, computational methods, and visualization inherent in the application of machine learning models. Students will learn the statistical learning framework, common assumptions in the data generation process, the mathematics behind machine learning models, including supervised and unsupervised techniques, as well as how to implement machine learning models in Python from scratch. Strong python skills (preferably object-oriented programming) are required. All DSI and CS ScM students will receive overrides as this is a required course for them.

DATA 2080. Data and Society.

A course on the social, political, and philosophical issues raised by the theory and practice of data science. Explores how data science is transforming not only our sense of science and scientific knowledge, but our sense of ourselves and our communities and our commitments concerning human affairs and institutions generally. Students will examine the field of data science in light of perspectives provided by the philosophy of science and technology, the sociology of knowledge, and science studies, and explore the consequences of data science for life in the first half of the 21st century.

DATA 2110. Topics in Econometrics.

This course will begin with a survey of the literature on identification using instrumental variables, including identification bounds, conditional moment restrictions, and control function approaches. The next part of class will cover some of the theoretical foundations of machine learning, including regularization and data-driven choice of tuning parameters. We will discuss in some detail the canonical normal means model, Gaussian process priors, (empirical) Bayes estimation, and reproducing kernel Hilbert space norms. We will finally cover some selected additional topics in machine learning, including (deep) neural nets, text as data (topics models), multi-armed bandits, and data visualization.

DATA 2450. Exchange Scholar Program.**DATA 2980. Research in Data Science.**

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Data Science (Online)**DSIO 2000. Technical Foundation for Data Science Success.**

Focused on practical applications, this course covers the foundational concepts from programming, linear algebra, calculus, probability, and statistics that are most relevant to technical data science skills in the curriculum. At the end of the course, all students will achieve a baseline level of technical knowledge to prepare them for the technical components of the program. Learners will have the opportunity to explore more in-depth topics to discover how foundational topics like derivatives, matrices, and distributions are applied in machine learning and data modeling. Examples are drawn from advanced courses to highlight how these tools can be applied to theories and practice examined in this course.

DSIO 2010. Data Engineering in Disguise.

This course introduces students to the core principles of data engineering, emphasizing the often-hidden ethical choices that shape how massive datasets are managed. Students will learn about the fundamentals of data architecture, storage, and processing, while exploring critical values issues such as privacy, biases, data provenance, ownership, and copyright. This course interweaves the ethical considerations with the technical mechanics of data engineering, which exemplifies the real-world choices data engineers make as well as their broader societal implications. By the end of the course, students will understand not just the technical foundations of data engineering, but also the value-laden decisions involved in handling large-scale data.

DSIO 2100. Basic AI & Policy Ethics.

This course provides an introduction to the ethical and policy considerations surrounding artificial intelligence (AI) in today's society. Students will explore key ethical concerns, such as data privacy, bias, and accountability, as well as the societal and historical contexts that have shaped current AI governance. In addition, the course will offer a high-level overview of how AI systems are developed, including the basics of data collection, usage, and the training process for machine learning models. By examining these topics, students will gain a foundational understanding of the complex interactions between AI technologies and societal impacts, preparing them for deeper discussions in future courses on AI governance and responsible innovation.

DSIO 2110. Evidence-Driven Policy Making.

This course explores the role of artificial intelligence (AI) and machine learning (ML) in shaping evidence-driven policy decisions across various sectors. Using case studies from various AI/ML sectors, students will critically examine how AI/ML tools influence policy outcomes. Rather than delving into the technical intricacies of ML, this course emphasizes a "black box" approach, where data inputs lead to predictions. Students will learn to distinguish between prediction and intervention, recognize the limitations of AI/ML, and develop a transparent, precise language for discussing these technologies. By fostering healthy skepticism, this course equips students to make informed decisions about AI's role in evidence-based policy making.

Lefschetz Center for Dynamical Systems

The Lefschetz Center for Dynamical Systems at Brown University promotes research in dynamical systems interpreted in its broadest sense as the study of evolving systems, including partial differential and functional equations, stochastic processes and finite-dimensional systems. Interactions and collaborations among its members and other scientists, engineers and mathematicians have made the Lefschetz Center for Dynamical Systems one of the leading groups in dynamical systems and control theory.

The Lefschetz Center for Dynamical Systems originated in 1964, when a large group of mathematicians and control theorists came to Brown from the Research Institute for Advanced Studies (RIAS) in Baltimore. (<http://www.nasonline.org/publications/biographical-memoirs/memoir-pdfs/lefschetz-solomon.pdf>) Solomon Lefschetz (https://en.wikipedia.org/wiki/Solomon_Lefschetz) (1884-1972), its first director, was one of the most outstanding mathematicians of this century. The Center has been privileged to name itself in his honor for these many years.

For additional information please visit the center's website at: <https://sites.brown.edu/dynamical-systems/>.

Early Cultures

The Program in Early Cultures (until recently called the Program in Ancient Studies) was founded in the late 1970s, when faculty in various academic units sought new ways to foster collaboration and promote the study of ancient civilizations among Brown's students. It is a Program of rich collaboration, critical exploration, and truly interdisciplinary scholarship that seeks to bring together all those at Brown (faculty, graduate students, undergraduates, and staff) who are interested in the cultures, religions, and histories of ancient civilizations. Geographically, the "ancient world" represented at Brown comprises early China and India, West Asia (Mesopotamia, Iran, Anatolia, and Israel), Egypt, the Mediterranean (especially Greece and Italy), the early Islamic and Byzantine worlds as well as the Pre-Columbian Mesoamerican civilizations.

For additional information, please visit the department's website: http://www.brown.edu/Departments/Early_Cultures/

Courses

ERLY 0680. Judaism, Christianity, and the Bible (JUDS 0680).

Interested students must register for JUDS 0680.

ERLY 0990. Concepts of the Self in Classical Indian Literature (CLAS 0990).

Interested students must register for CLAS 0990.

ERLY 1000A. Writing History in the Ancient World.

The Greeks and Romans created the western tradition of historiography as a genre of literature and historical reflection. The seminar will focus on the great historians from Herodotus to Tacitus and examine what purpose they pursued in writing history, investigate the origins of historical writing, and look at forms of historical reflection and writing in other ancient civilizations. Instructor permission required.

ERLY 1000B. Geography, Ethnography, and Perceptions of the World in Antiquity.

Curious about the shape and limits of the earth and the variety of cultures, ancient Greeks and Romans explored and described the world, drew maps, and interpreted the customs of others in fascinating ways. We will discuss relevant texts (Homer, Herodotus, Strabo, Tacitus, etc., in translation) and compare the Graeco-Roman world with that of other ancient civilizations (China, Mesopotamia, Aztecs).

ERLY 1000C. Epic and History in the Ancient and Medieval Worlds.

This seminar will focus on the question of preservation, transformation, and distortion of historical memory in epic poetry from various parts of the ancient (Mesopotamian, Hittite, Greek, and Roman) and medieval (German, French, Hispanic, and Slavic) worlds. Additional issues to be discussed include orality and literacy, cultural memory, and the social function of poetry in changing conditions. Texts in translation.

ERLY 1000D. Highways and Byways in Antiquity.

No description available.

ERLY 1000E. The Gift in Antiquity (RELS 1880A).

Interested students must register for RELS 1880A.

ERLY 1120G. The Idea of Self (CLAS 1120G).

Interested students must register for CLAS 1120G.

ERLY 1150. Animal Acts.

From the blood-soaked amphitheaters of the Roman Empire to tattooing and other forms of body modification, this course will explore how people, ancient and modern, view animals and what looking at animals reveals about what it means to be human. Examining evidence from a variety of disciplines (archaeology, religious studies, history, philosophy, art, and literature), we will investigate the problematic boundary between "man" and "animal" and challenge the presumed superiority of the "human".

ERLY 1155. Animals in the Ancient City: Interdependence in the Urban Environment.

In the past, as in the present, humans and animals were city dwellers, living side by side in urban environments. This course will focus on five ancient cities – in India, China, Egypt, Italy and Mexico – to examine the places where human and animal lives intersected in these early metropolises. We will explore how these complex relationships had a pervasive influence on nearly every aspect of urban life: from religious practices, to city planning, to entertainment, to health.

ERLY 1410. Ancient Egyptian Literature (EGYT 1410).

Interested students must register for EGYT 1410.

ERLY 1420. Ancient Egyptian Religion and Magic (EGYT 1420).

Interested students must register for EGYT 1420.

ERLY 1750K. Madwomen and Lovers (CLAS 1750K).

Interested students must register for CLAS 1750K.

ERLY 1970. Individual Study Project.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ERLY 1990. Thesis Preparation.

Required of seniors in the honors program. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ERLY 2110F. Greek Palaeography and Premodern Book Cultures (GREK 2110F).

Interested students must register for GREK 2110F.

Earth, Environmental and Planetary Sciences

Students in Earth, Environmental, and Planetary Sciences develop a comprehensive grasp of principles as well as an ability to think critically and creatively. Formal instruction places an emphasis on fundamental principles, processes, and recent developments, using lecture, seminar, laboratory, colloquium, and field trip formats. Undergraduates as well as graduate students have opportunities to carry out research in current fields of interest.

The principal research fields of the department are geochemistry, mineral physics, igneous petrology; geophysics, structural geology, tectonophysics; environmental science, hydrology; paleoceanography, paleoclimatology, sedimentology; and planetary geosciences. Emphasis in these different areas varies, but includes experimental, theoretical, and observational approaches as well as applications to field problems. Field studies of specific problems are encouraged rather than field mapping for

its own sake. Interdisciplinary study with other departments and divisions is encouraged.

For additional information, please visit the department's website: <http://www.brown.edu/academics/earth-environmental-planetary-sciences/>

Earth and Planetary Science Concentration Requirements

Earth and Planetary Science is a highly interdisciplinary concentration employing principles from physics, chemistry, and biology to understand processes on and in the Earth and other planetary bodies. Concentrators can study Earth and planetary interiors, including the formation of rocks and minerals, movement of the Earth's tectonic plates, and mountain building and volcanism. Other areas emphasize surface processes, such as coastal erosion, formation of water resources, and desertification. This concentration is a good choice for students who seek a broad scientific understanding of the processes that shape the physical world around us.

Both A.B. and Sc.B. degrees are offered, requiring 12 and 19 courses, respectively. These degrees build skills in critical thinking, data analysis and modeling, finding solutions to complex problems, and written and oral communication. DEEPS provides a highly collaborative learning environment that emphasizes process-oriented, hands-on approaches in the classroom, in labs and on field trips. There are many opportunities for students to do paid research during the summer or academic year.

Students interested in this concentration may also wish to consider related concentrations: Earth, Climate and Biology, Geophysics and Climate Physics, and Geochemistry and Environmental Chemistry.

Note - For students still enrolled with the prior Concentration in Geological Sciences A.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Standard program for the A.B. degree

This program provides a broad introduction to the geosciences. It is recommended for students seeking to combine diverse educational interests with a general understanding of Earth processes and Earth history. It is attractive for double concentrations, such as geoscience and economics as a career path to law or business, or geoscience and English as a career path to journalism or technical writing. Some course requirements may be flexible based on consultation with the concentration advisor.

Three basic supporting science courses

CHEM 0330	Equilibrium, Rate, and Structure (or equivalent)	1
Two courses to build quantitative skills:		2
MATH 0090	Single Variable Calculus, Part I (or higher)	
BIOL 0495	Statistical Analysis of Biological Data	
or APMA 1650	Introduction to Probability and Statistics with Calculus	
CSCI 0111	Computing Foundations: Data (or higher)	
ENGN 0040	Engineering Statics and Dynamics (or higher)	
APMA 0350	Applied Ordinary Differential Equations (or higher)	
PHYS 0050	Foundations of Mechanics (or higher)	

Nine Concentration courses

Two of these four fundamentals courses:		2
EEPS 0220	Understanding Earth and Environmental Processes	
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	
EEPS 0240	Earth: Evolution of a Habitable Planet	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	

Select three of the following:	3
EEPS 1240	Stratigraphy and Sedimentation
EEPS 1410	Mineralogy
EEPS 1420	Petrology
EEPS 1450	Structural Geology
Three additional upper level EEPS courses or an approved substitute such as a field course	3
One additional upper level science or math course with approval from the concentration advisor.	1
Total Credits	12

Standard program for the Sc.B. degree

This program is recommended for students interested in more in-depth study in geoscience, planetary science and related fields, potentially including graduate school and wide-ranging careers in these areas. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geological Sciences Sc.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Basic supporting science courses

CHEM 0330	Equilibrium, Rate, and Structure (or equivalent)	1
Four courses to build quantitative skills:		4
MATH 0090	Single Variable Calculus, Part I (or higher)	
BIOL 0495	Statistical Analysis of Biological Data	
or APMA 1650	Introduction to Probability and Statistics with Calculus	
CSCI 0111	Computing Foundations: Data (or higher)	
APMA 0350	Applied Ordinary Differential Equations (or higher)	
ENGN 0040	Engineering Statics and Dynamics (or higher)	
PHYS 0050	Foundations of Mechanics (or higher)	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	

Fourteen Concentration courses

EEPS 0220	Understanding Earth and Environmental Processes	1
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	1
EEPS 0240	Earth: Evolution of a Habitable Planet	1
Three of the following:		3
EEPS 1240	Stratigraphy and Sedimentation	
EEPS 1410	Mineralogy	
EEPS 1420	Petrology	
EEPS 1450	Structural Geology	
Three additional upper level EEPS courses or an approved substitute such as a field course		3
Four upper level science or math courses with approval from the concentration advisor		4
EEPS 1970	Individual Study of Geologic Problems (Senior Research Thesis)	1
Total Credits		19

Earth, Climate, and Biology Concentration Requirements

Students in Earth, Climate and Biology apply principles from Earth science, biology, chemistry, and physics to understand how major components of the Earth system, such as its atmosphere and oceans,

interact with and sustain life over time. Many courses emphasize climate change, environmental quality, and biogeochemistry, so this concentration is a good match for students interested in studying the environment. Courses also investigate Earth history, including past climate, extinction events, and using the Earth's sedimentary record to investigate environmental change.

Both A.B. and Sc.B. degrees are offered, requiring 12 and 19 courses, respectively. These degrees build skills in critical thinking, data analysis and modeling, finding solutions to complex problems, and written and oral communication. DEEPS provides a highly collaborative learning environment that emphasizes process-oriented, hands-on approaches in the classroom, in labs and on field trips. There are many opportunities for students to do paid research during the summer or academic year.

Students interested in this concentration may also wish to consider related concentrations: Geochemistry and Environmental Chemistry, Geophysics and Climate Physics, and Earth and Planetary Science.

Standard program for the A.B. degree

This program provides a broad introduction to the geologic and biologic processes that shape the Earth and our environment. It is recommended for students seeking to combine diverse educational interests with a general understanding of Earth processes, including the evolution of climate and the environment, global environmental change and Earth history. The program prepares students for careers in environmental science, geoscience, ecology, oceanography, and global change. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geology-Biology A.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Basic supporting science courses

BIOL 0200	The Foundation of Living Systems (or equivalent)	1
or BIOL 0210	Diversity of Life	
CHEM 0330	Equilibrium, Rate, and Structure (or equivalent)	1
A course to build quantitative skills:		1
MATH 0090	Single Variable Calculus, Part I (or higher)	
BIOL 0495	Statistical Analysis of Biological Data	
or APMA 1650	Introduction to Probability and Statistics with Calculus	
CSCI 0111	Computing Foundations: Data (or higher)	
ENGN 0040	Engineering Statics and Dynamics (or higher)	
PHYS 0050	Foundations of Mechanics (or higher)	
APMA 0350	Applied Ordinary Differential Equations (or higher)	

Nine Concentration courses

Two of these four fundamentals courses:		2
EEPS 0220	Understanding Earth and Environmental Processes	
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	
EEPS 0240	Earth: Evolution of a Habitable Planet	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	
EEPS 1240	Stratigraphy and Sedimentation	1
Select three upper level Biology courses such as:		3
BIOL 0410	Invertebrate Zoology	
BIOL 0420	Principles of Ecology	
BIOL 0430	The Evolution of Plant Diversity	
BIOL 0480	Evolutionary Biology	
BIOL 1470	Conservation Biology	

Three EEPS courses such as: 3
One of EEPS 0220, EEPS 0230, EEPS 0240, or EEPS 0250 if not already taken

EEPS 0850	Weather and Climate
EEPS 1120	Paleoceanography
EEPS 1130	Ocean Biogeochemical Cycles
EEPS 1150	Limnology: The Study of Lakes
EEPS 1310	Global Water Cycle
EEPS 1320	Introduction to Geographic Information Systems for Environmental Applications
EEPS 1370	Environmental Geochemistry
EEPS 1615	Climate Change, Human Rights, and the Policy Process
EEPS 1970	Individual Study of Geologic Problems

Total Credits 12

Standard program for the Sc.B. degree

This program is recommended for students interested in more in-depth study in the Earth, environmental, or biological sciences, potentially including graduate school and diverse careers in these areas. It is relevant for students interested in environmental science, paleoclimate, Earth systems science, biogeochemistry, oceanography, or paleobiology. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geology-Biology Sc.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Five supporting science courses:

BIOL 0200	The Foundation of Living Systems (or equivalent)	1
or BIOL 0210	Diversity of Life	
CHEM 0330	Equilibrium, Rate, and Structure (or equivalent)	1

Three courses to build quantitative skills: 3

MATH 0090	Single Variable Calculus, Part I (or higher)
BIOL 0495	Statistical Analysis of Biological Data
or APMA 1650	Introduction to Probability and Statistics with Calculus
CSCI 0111	Computing Foundations: Data (or higher)
ENGN 0040	Engineering Statics and Dynamics (or higher)
APMA 0350	Applied Ordinary Differential Equations (or higher)
PHYS 0050	Foundations of Mechanics (or higher)

Fourteen concentration courses:

EEPS 0220	Understanding Earth and Environmental Processes	1
EEPS 0240	Earth: Evolution of a Habitable Planet	1
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	1
or EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	
EEPS 1240	Stratigraphy and Sedimentation	1
Three upper level Biology courses such as:		3
BIOL 0410	Invertebrate Zoology	
BIOL 0420	Principles of Ecology	
BIOL 0430	The Evolution of Plant Diversity	
BIOL 0480	Evolutionary Biology	
BIOL 1470	Conservation Biology	

Three upper level EEPS courses such as: 3

EEPS 0850	Weather and Climate

EEPS 1120	Paleoceanography	
EEPS 1130	Ocean Biogeochemical Cycles	
EEPS 1150	Limnology: The Study of Lakes	
EEPS 1310	Global Water Cycle	
EEPS 1320	Introduction to Geographic Information Systems for Environmental Applications	
EEPS 1330	Global Environmental Remote Sensing	
EEPS 1370	Environmental Geochemistry	
EEPS 1430	Principles of Planetary Climate	
EEPS 1615	Climate Change, Human Rights, and the Policy Process	
Three upper level science or math courses with approval from the concentration advisor		3
EEPS 1970	Individual Study of Geologic Problems (Senior Research Thesis)	1
Total Credits		19

Geochemistry and Environmental Chemistry Concentration Requirements

The Geochemistry and Environmental Chemistry concentration offers two different emphases. Low-temperature geochemistry involves study of chemical and biochemical processes on and near Earth's surface, including land, oceans and freshwater bodies, and how the geochemical record reflects climate conditions. High-temperature geochemistry includes study of the formation and evolution of the Earth and other planets, magma formation and properties, volcanic activity, and metamorphism.

Both A.B. and Sc.B. degrees are offered, requiring 12 and 19 courses, respectively. These degrees build skills in critical thinking, data analysis and modeling, finding solutions to complex problems, and written and oral communication. DEEPS provides a highly collaborative learning environment that emphasizes process-oriented, hands-on approaches in the classroom, in labs and on field trips. There are many opportunities for students to do paid research during the summer or academic year.

Students interested in this concentration may also wish to consider related concentrations: Earth, Climate and Biology, Geophysics and Climate Physics, and Earth and Planetary Science.

Standard program for the A.B. degree

This program is recommended for students interested in applying chemical and physical principles toward an understanding of Earth and planetary history and processes, and environmental and resource issues, while pursuing diverse academic goals. The program prepares students for careers in environmental science, Earth and planetary science, and global change. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geology-Chemistry A.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Three basic supporting science courses

CHEM 0330	Equilibrium, Rate, and Structure	1
Two courses to build quantitative skills:		2
BIOL 0495	Statistical Analysis of Biological Data	
or APMA 1650	Introduction to Probability and Statistics with Calculus	
MATH 0090	Single Variable Calculus, Part I (or higher)	
ENGN 0040	Engineering Statics and Dynamics (or higher)	
CSCI 0111	Computing Foundations: Data (or higher)	
APMA 0350	Applied Ordinary Differential Equations (or higher)	
PHYS 0050	Foundations of Mechanics (or higher)	

Nine Concentration courses

Two of these four fundamentals courses: 2

EEPS 0220	Understanding Earth and Environmental Processes	
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	
EEPS 0240	Earth: Evolution of a Habitable Planet	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	
Three additional chemistry courses such as:		3
CHEM 0350	Organic Chemistry I	
CHEM 0360	Organic Chemistry II	
CHEM 0500	Inorganic Chemistry	
CHEM 1060	Advanced Inorganic Chemistry	
CHEM 1140	Physical Chemistry: Quantum Chemistry	
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics	
BIOL 0280	Biochemistry	
Two courses from the following:		2
EEPS 1410	Mineralogy	
EEPS 1420	Petrology	
EEPS 1130	Ocean Biogeochemical Cycles	
EEPS 1370	Environmental Geochemistry	
Two additional upper-level EEPS courses or substitutes with approval from the concentration advisor.		2
Total Credits		12

Standard program for the Sc.B. degree

This program is recommended for students interested in more in-depth study in geochemistry, climate science, planetary science and related fields, potentially including graduate school and wide-ranging careers in these areas. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geology-Chemistry Sc.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Basic Supporting Science Courses:

CHEM 0330	Equilibrium, Rate, and Structure	1
Four courses to build quantitative skills:		4
MATH 0090	Single Variable Calculus, Part I (or higher)	
BIOL 0495	Statistical Analysis of Biological Data	
or APMA 1650	Introduction to Probability and Statistics with Calculus	
CSCI 0111	Computing Foundations: Data	
ENGN 0040	Engineering Statics and Dynamics (or higher)	
APMA 0350	Applied Ordinary Differential Equations (or higher)	
PHYS 0050	Foundations of Mechanics (or higher)	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	

Fourteen Concentration Courses

EEPS 0220	Understanding Earth and Environmental Processes	1
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	1
EEPS 0240	Earth: Evolution of a Habitable Planet	1
EEPS 1370	Environmental Geochemistry	1
EEPS 1410	Mineralogy	1
Three additional chemistry courses such as:		3
CHEM 0350	Organic Chemistry I	

CHEM 0360	Organic Chemistry II	
CHEM 0500	Inorganic Chemistry	
CHEM 1060	Advanced Inorganic Chemistry	
CHEM 1140	Physical Chemistry: Quantum Chemistry	
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics	
BIOL 0280	Biochemistry	
Two upper level courses from EEPS such as		2
EEPS 1130	Ocean Biogeochemical Cycles	
EEPS 1240	Stratigraphy and Sedimentation	
EEPS 1380	Environmental Stable Isotopes	
EEPS 1420	Petrology	
Three additional upper-level science or math courses with approval from the concentration advisor		3
EEPS 1970	Individual Study of Geologic Problems	1
Total Credits		19

Geophysics and Climate Physics Concentration Requirements

The Geophysics and Climate Physics concentration involves applying physics and mathematics to study processes that operate on and within the Earth and other planets, over short and long timescales. Geophysical approaches are fundamental for understanding how the oceans, atmosphere and ice sheets respond to climate change, managing resources such as water and geothermal energy, mitigating natural hazards such as earthquakes and volcanoes, and understanding the dynamic processes that shape the surfaces and control the interiors of Earth and other planetary bodies. Geophysics spans both theoretical modeling of physical processes and the analysis of geophysical data (including remote sensing and machine learning), and typically involves computing, as well as lab experiments and field work.

Both A.B. and Sc.B. degrees are offered, requiring 12 and 19 courses, respectively. These degrees build skills in critical thinking, data analysis and modeling, finding solutions to complex problems, and written and oral communication. DEEPS provides a highly collaborative learning environment that emphasizes process-oriented, hands-on approaches in the classroom, in labs and on field trips. There are many opportunities for students to do paid research during the summer or academic year.

Students interested in this concentration may also wish to consider related concentrations: Earth, Climate and Biology, Geochemistry and Environmental Chemistry, and Earth and Planetary Science.

Standard program for the A.B. degree

This program is recommended for students interested in applying physical and mathematical principles toward understanding and modeling processes affecting Earth, its environment and climate, and other planets.

Its requirements are well-suited to students seeking to combine these fields with other educational interests, while preparing them for diverse careers including environmental science, global change, and Earth and planetary science. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geology-Physics/Mathematics A.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Five supporting science courses:

CHEM 0330	Equilibrium, Rate, and Structure (or equivalent)	1
A course involving mechanics such as:		1
PHYS 0050	Foundations of Mechanics	
PHYS 0070	Analytical Mechanics	
ENGN 0040	Engineering Statics and Dynamics (or the equivalent)	

Three courses in APMA or MATH, one of which must be APMA 0350 or equivalent 3

Seven concentration courses:

Two of these four fundamentals courses: 2

EEPS 0220	Understanding Earth and Environmental Processes	
EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	
EEPS 0240	Earth: Evolution of a Habitable Planet	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	
or EEPS 0350	Mathematical Methods of Fluid	

One of these courses: 1

EEPS 1430	Principles of Planetary Climate	
EEPS 1610	Solid Earth Geophysics	

Two of the following courses, can combine different foci: 2

Climate focus:

EEPS 1310	Global Water Cycle	
EEPS 1510	Dynamic Meteorology	
EEPS 1520	Ocean Circulation and Climate	

Solid Earth and planets focus:

EEPS 1410	Mineralogy	
EEPS 1450	Structural Geology	
EEPS 1620	Continuum Physics of the Solid Earth	

Data science focus:

EEPS 1340	Machine Learning for the Earth and Environment	
EEPS 1690	Introduction to Methods in Data Analysis	
EEPS 1720	Tackling Climate Change with Machine Learning	

One additional EEPS course such as: 1

Climate focus:

EEPS 1130	Ocean Biogeochemical Cycles	
EEPS 1630	Introduction to Quantitative Glaciology	
EEPS 1820	Geophysical Fluid Dynamics: Rotating, Stratified Turbulence Edition	

Solid Earth and planets focus:

EEPS 1560	Global Tectonics	
EEPS 1650	Earthquake Seismology	
EEPS 1810	Physics of Planetary Evolution	

Data science focus:

EEPS 1330	Global Environmental Remote Sensing	

Other alternatives:

EEPS 1970	Individual Study of Geologic Problems	
a field or sea course or any EEPS course listed in the concentration		

One course in physics or engineering such as: 1

PHYS 0060	Foundations of Electromagnetism and Modern Physics	
PHYS 0470	Electricity and Magnetism	
PHYS 0500	Advanced Classical Mechanics	
PHYS 1600	Computational Physics	
ENGN 0310	Mechanics of Solids and Structures	
ENGN 0490	Fundamentals of Environmental Engineering	
ENGN 0510	Electricity and Magnetism	
ENGN 0810	Fluid Mechanics	
ENGN 1370	Advanced Engineering Mechanics	

Total Credits **12**

Standard program for the Sc.B. degree

This program is recommended for students interested in more in-depth study in climate science, geophysics, planetary science and related fields, potentially including graduate school and careers in these areas. Students will gain hands-on experience with theoretical and numerical modeling of processes, data analysis, and computing. Some course requirements may be flexible based on consultation with the concentration advisor.

Note - For students still enrolled with the prior Concentration in Geology-Physics/Mathematics Sc.B., please refer to the Archived Bulletin link on left hand navigation for your requirements for the year you declared.

Five supporting science courses:

CHEM 0330	Equilibrium, Rate, and Structure	1

A course involving mechanics such as:		1

PHYS 0050	Foundations of Mechanics	
PHYS 0070	Analytical Mechanics	
ENGN 0040	Engineering Statics and Dynamics (or the equivalent)	

Three courses in APMA or MATH, one of which must be APMA 0350 or equivalent	3

Fourteen Concentration Courses:

EEPS 0220	Understanding Earth and Environmental Processes	1

EEPS 0230	Geochemistry: Earth and Planetary Materials and Processes	1

or EEPS 0240	Earth: Evolution of a Habitable Planet	
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction	1

or EEPS 0350	Mathematical Methods of Fluid	
EEPS 1430	Principles of Planetary Climate	1

EEPS 1610	Solid Earth Geophysics	1

Three of the following courses, can combine different foci:	3

Climate focus:

EEPS 1310	Global Water Cycle	
EEPS 1510	Dynamic Meteorology	
EEPS 1520	Ocean Circulation and Climate	

Solid Earth and planets focus:

EEPS 1410	Mineralogy	
EEPS 1450	Structural Geology	
EEPS 1620	Continuum Physics of the Solid Earth	

Data science focus:

EEPS 1340	Machine Learning for the Earth and Environment	
EEPS 1690	Introduction to Methods in Data Analysis	
EEPS 1720	Tackling Climate Change with Machine Learning	

One additional EEPS course such as:	1

Climate focus:

EEPS 1130	Ocean Biogeochemical Cycles	
EEPS 1630	Introduction to Quantitative Glaciology	
EEPS 1820	Geophysical Fluid Dynamics: Rotating, Stratified Turbulence Edition	

Solid Earth and planets focus:

EEPS 1560	Global Tectonics	
EEPS 1650	Earthquake Seismology	
EEPS 1810	Physics of Planetary Evolution	

Data science focus:

EEPS 1330	Global Environmental Remote Sensing	

Other alternatives:

a field or sea course

or any EEPS course listed in the concentration

Three courses in physics or engineering such as:	3

PHYS 0060	Foundations of Electromagnetism and Modern Physics	
PHYS 0470	Electricity and Magnetism	
PHYS 0500	Advanced Classical Mechanics	
PHYS 1600	Computational Physics	
ENGN 0310	Mechanics of Solids and Structures	
ENGN 0490	Fundamentals of Environmental Engineering	
ENGN 0510	Electricity and Magnetism	
ENGN 0810	Fluid Mechanics	
ENGN 1370	Advanced Engineering Mechanics	

One additional upper-level science or math course with approval from the concentration advisor	1

EEPS 1970	Individual Study of Geologic Problems	1

Total Credits	19

Earth, Environmental and Planetary Sciences Graduate Program

The department of Earth, Environmental and Planetary Sciences offers a graduate program leading to the Doctor of Philosophy (PhD) degree.

For more information on admission and program requirements, please visit the following website:

<https://graduateprograms.brown.edu/graduate-program/earth-environmental-and-planetary-sciences-phd> (<https://graduateprograms.brown.edu/graduate-program/earth-environmental-and-planetary-sciences-phd/>)

Courses

EEPS 0010. Face of the Earth.

This course covers the fundamental processes that have created and sculpted the Earth's surface, from the highest mountains to the deepest oceans; from the hottest deserts, to the coldest glaciers. These processes include plate tectonics, volcanism, earthquakes, glaciation and erosion. The goals are to provide an understanding of how our planet works and provide experience in interpreting geologic information. This will provide student with a deeper understanding of important issues such as climate change, pollution, natural resources, land use, and geologic hazards. For nonscience concentrators. Geoscience concentrators should take EEPS 0220.

EEPS 0011. Geology in the Real World: Intersections Between Geology and Society.

Do you know how the Earth and its processes affect you? If you want to learn how geology influences the lives of everyone on Earth, this is the class for you. We will use case studies, like the Tohoku earthquake that displaced 200,000 people, to guide our exploration. Along the way, you will learn to critically evaluate how science is presented in the media. Ten years from now you might not remember how to tell gneiss from schist, but because of this class you should be able to tell your neighbor how geology affects the lives of everyone in the world.

EEPS 0030. Climate and Climate Change.

This course is designed to provide students with an understanding of the climate system on Earth, changes in Earth's climate over time, and interactions between climate change and human society. Topics will include: global energy balance; the structure, composition and role of the atmosphere and oceans; the influence of the global carbon cycle on climate; the social, economic and political drivers of human perturbations to the carbon cycle; and societal vulnerability, resilience and adaptive capacity in the face of environmental changes. No prerequisites; course open to all levels.

EEPS 0050. Mars, Moon, and the Earth.

Space exploration has revealed an astonishing array of surface features on the planets and their satellites. Why are atmospheres on the planets different from Earth's atmosphere? Do other planets represent our past or future environment? Is there life on other planets? The planets and their histories are compared to gain insight and a new perspective on planet Earth.

EEPS 0070. Introduction to Oceanography.

Examines the ocean's role in Earth's global environment, emphasizing the dynamical interaction of the ocean with the atmosphere, biosphere, cryosphere, and lithosphere. Focus on physical/chemical/biological systems' interconnections needed to understand natural and anthropogenic variability on various time and space scales, from El Niño to global warming. Three lectures, written exercises on oceanographic problems; two field trips to study estuarine and coastal processes.

EEPS 0100. Surviving the Apocalypse: Earth's Journey Through Natural Disasters Past and Present.

The course explores Earth's geological disasters, focusing on global changes over its long history. We will work our way from past to present and explore whether, through our actions, we are plunging towards another Mass Extinction. Using the physical principles we learn from the geological past; we will apply these concepts to today's natural hazards and explore how hazards are exacerbated in a warming world. The course will turn to the future towards paths to mitigate climate change through geoengineering. Unlike an engineering approach, we will mirror geo-engineering strategies with geological events we have already explored. We emphasize interdisciplinary processes occurring within Earth's depths and surface, taking an expansive viewpoint on time. The student's overarching learning outcome is scientific communication. Students will develop a term-long project creating a short documentary or a popular science article.

EEPS 0160A. Climate Justice.

In this course, we will cover the science behind the climate crisis, explore the history of climate change, and study case studies of climate change inequity and injustice. As scientists we will identify the principle processes that shape modern climate change. We will learn to think critically and reflect on the history of greenhouse gas emissions. We will work together to highlight climate injustices and propose change and solutions for climate equity.

EEPS 0160B. Global Change: Ecology and Climate.

Examines ways in which global change will affect ecosystems, considering how temperature, rainfall, and land use can modify the distribution of organisms in the future, and reduce biodiversity. Examine how biotic feedbacks to global change can modify climate change through their effects on the carbon cycle, absorption of sunlight at the land surface, and retention of water in soils. Enrollment limited to 19 first year students.

EEPS 0160C. Global Environmental Change.

Examination of evidence that supports or refutes various perspectives on global environmental change, with a foundation in the principles that govern the fundamental underlying processes. Example topics include climate change (warming, cooling, neutral), population growth (how many, how fast), and loss of natural resources (diversity). Topics explored through selected readings from the natural and social sciences. Enrollment limited to 19 first year students.

EEPS 0160D. Living Within the Landscape.

Physical processes that shape the Earth's surface provide an inescapable context for human activity. We will examine the physical principles that govern erosion and sedimentation, slope stability, river and coastal flooding, and groundwater flow, and analyze how these processes affect land-use philosophies and decision-making. Enrollment limited to 19 first year students.

EEPS 0160E. Volcanos, Windows into the Deep Earth.

Examines the physical and chemical principles controlling the generation of volcanoes and their different styles of eruption. Investigates where and why volcanoes occur, and what volcanic lavas can tell us about the composition and evolution of the Earth and other planets. Evaluates volcanic hazards and their environmental impacts and the economic benefits and cultural aspects of volcanism. Two-day field trip. Enrollment limited to 19 first year students.

EEPS 0160F. Patterns: in Nature, in Society.

The shapes of plants and animals, of mountains and shorelines arise because nature dissipates energy as rapidly as possible. These morphological patterns allow description of the "energy" landscape that produced them. Societies and economies show temporal and spatial patterns as well; does the "flow rate" of ideas and of money cause these patterns? We will explore just how "entropy rules." CAP course. Enrollment limited to 19 first year students.

EEPS 0160G. Energy Resources.

Most of our energy comes directly from the Earth - predominantly as fossil fuels, but also from geothermal, wind, and hydro sources. Developing technologies for alternative energy such as solar, nuclear, biomass and fuel cells also rely on Earth resources. The potential for these energy sources will be discussed. The science behind their utilization and environmental impact (e.g. carbon sequestration and nuclear waste disposal) will be introduced and the trade-offs in making decisions for the future will be explored. CAP course. Enrollment limited to 19 first year students.

EEPS 0160H. Chicken Little or Armageddon? Past and Future Cosmic Threats.

Explore the probability of the next impact on the Earth and assess the possible consequences through historic times (incidents), folklore/legends, examples in recent geological time (last 10 million years), and the catastrophic consequences 65 million years ago. Strategies for searching and possible mitigation of the next "big one" will be considered. This seminar will explore the realities of various predictions, consider public policy, investigate strategies for prevention, and assess the role of the press in shaping perceptions. Enrollment limited to 19 first year students.

EEPS 0160I. Diamonds.

This class will connect the fascinating scientific story of diamonds with their equally fascinating role in history and society. This class will explore topics that include: (1) the origin of diamond's physical and optical properties; (2) the geologic processes involved in the generation of diamonds and diamond enriched deposits; and (3) modern methods of synthetic diamond production. Societal topics include: (1) the role and perception of diamonds in society; (2) the political and societal impact of the discovery of vast diamond deposits in South Africa in the 1800's; (3) the role of diamond (and gold) mining in the rise of Apartheid in South Africa in the 20th century; (4) the rise and fall of the de Beers monopoly and its influence on popular culture; (5) the race to make synthetic diamonds; and, (6) 'blood diamonds' in modern west Africa.

EEPS 0160J. The Natural History of Great Writers: From Goethe to Steinbeck.

Many great and influential writers have also been natural historians. This course examines selections from the writing of such authors as the romantic and naturalist Johann Wolfgang von Goethe, the rationalist Benedict de Spinoza, the intuitive thermodynamicist William Blake, the naturalist novelist John Steinbeck, the lepidopterist novelist Vladimir Nabokov, the amateur paleontologist Arthur Conan Doyle, the proto-ecologist Henry David Thoreau, and the philosopher and sociologist Herbert Spencer. We will examine in a modern scientific context how facts and theories of natural history informed their writing and influenced their worldviews. Specific topics in this seminar will include: man's place in nature and the importance of the discovery of this deep time perspective, Darwinian evolution and its impact on sociology, and the emerging science of ecology in 19th century American literature. Enrollment limited to 19 first year students.

EEPS 0160L. Apocalypse Now: Fact or Fiction?

This FYS will focus on major concepts in earth and planetary sciences as depicted through the destruction of Earth and other worlds, both real and fictional, in media. Focus on depictions of apocalypses and assess their feasibility based on lectures, readings, and discussions of the evolution of Earth, the Solar System, and the Universe. Types of apocalypses covered may include planetary collisions and impacts, disturbance of planetary magnetic fields, alien biological warfare, supernovae, catastrophic climate change, ice ages, lithospheric rifting, and other phenomena. Learning and Teaching Goals • Basic introduction to Solar System and Universe formation and evolution • Basic introduction to earth and planetary sciences, including some simple calculations • Ability to scientifically evaluate depictions of earth and planetary sciences in the media • Understanding of realistic events that could destroy planetary bodies and their host civilizations • Collaboration and team-building skills • Presentation and observation-backed argument skills • Execution and evaluation of good communication

EEPS 0160M. Natural Disasters.

This First Year Seminar will explore natural disasters: the physical processes that cause them, and their effects on human life. Types of natural disasters covered include earthquakes, volcanoes, tsunamis, hurricanes, tornadoes, and floods. We will explore how and why natural disasters disproportionately affect low-income and minority communities. The focus of the course will be case studies of specific disasters, allowing us to discuss both the science of natural hazards and the vulnerability of human populations to those hazards.

EEPS 0160N. Monsters of the Abyss: Oceanography and Sea Tales.

We will read from the logbooks of Cook, Darwin, Wallace, and Nansen. Their discoveries and expeditions inspired and were inspired by fiction that we will also read, including *Moby Dick* and *20,000 Leagues Under the Sea*. The daring successes and cannibalistic dooms of the *Essex*, *Beagle*, *Terror*, *Challenger*, and *Fram* inspired 19th century writers to imagine what lay far across and deep beneath the oceans. These retellings—fictional, narrative, and scientific—helped formulate and fund further research. Who risks their life for a bird, a map, a widow, or an eclipse? How would these scientists and their ideas do today? Enrollment limited to 19 first year students.

EEPS 0160O. Extreme Weather: Exploring the Science Behind Nature's Most Intense Events.

This first-year seminar introduces students to the science behind extreme weather phenomena. Students will explore the formation, behavior, and societal impacts of severe events such as hurricanes, tornadoes, floods, and blizzards. The course emphasizes active learning through collaborative discussions, weekly essays, and presentations. Students will strengthen their critical thinking and writing skills while examining the real-world effects of extreme weather on communities and ecosystems.

EEPS 0160P. From Human Migration to Solving Crimes: The World of Forensic Isotopes.

Chemistry, and isotope systems in particular, have wide-ranging applications that include unraveling the history of human migration, human diet, the role of trading and coins in antiquity, nuclear forensics, combating counterfeit pharmaceuticals, food fraud, illegal logging and animal trade, to missing person investigations. Even the age of Jupiter can be estimated based on isotopes! This course will review basic concepts in isotopes (what are isotopes and how are they measured?) with emphasis on practical applications and how isotopes are used to address questions relevant to ancient and modern societies. This course consists of lectures, readings and discussion of recent articles on forensic isotope applications, and a final project (short paper and presentation) selected by the student.

EEPS 0160Q. Building the Solar System.

In this First-Year Seminar we will explore the ingredients, processes, and timescales for building a planetary system like our own – the Solar System. This course provides an introduction to meteorites, and how we can decipher their compositional (i.e., petrographic, chemical, and isotopic) code in order to obtain direct insights into the earliest stages of the Solar System. By integrating such cosmochemical data with theoretical models and astronomical observations, the students will learn about the current understanding of key aspects of the Solar System's evolution; such as, the sources of its building materials, the processes of planet formation, and the origin of Earth's habitability. Furthermore, we will discuss the cultural importance of meteorites as well as the specifics of the Solar System compared to exoplanetary systems.

EEPS 0160R. Geollywood: Geosciences in Hollywood.

This course explores how Earth, environmental and planetary sciences are perceived by the public through Hollywood movies and TV shows. In this First Year Seminar, students will learn about basic geologic/environmental principles and how they are portrayed in popular culture. Students will critically analyze the depiction of geological processes, space exploration, and environmental issues in movies and explore how these portrayals influence public perception of these fields and the scientists who study them. This course aims to bridge the gap between scientific concepts and public engagement through the lens of popular culture, fostering a deeper appreciation for the geosciences and the role of media in shaping scientific knowledge of the general public.

EEPS 0160S. Assembling Rhode Island.

Rhode Island has existed as a state in the U.S. for over 200 years, but the land itself is the product of hundreds of millions of years of rich geologic history. As a participant in this First Year Seminar, you will engage with introductory principles of geology toward an understanding of the tectonic history of Rhode Island as well as the geological processes that presently influence and modify its landscape. The basis of our investigation of Rhode Island geology will come from observations made over a series of afternoon-long field trips to geological points of interest in the state and nearby.

EEPS 0160W. Earth Science Behind Protest Movements.

Exploitation of natural resources, contamination of water and air, and the response of the Earth system to human actions all lie at the root of protest movements such as the labor, environmental justice, and climate action movements. Motivated by the cultural, historical, and social context of these movements, this First Year Seminar will explore Earth processes such as: building the Appalachian Mountains and forming its energy resources, the environmental impacts of natural resource extraction, effects of human actions on air and water quality, and climate. We will consider the connection of these topics to the local Providence community as well as their global contexts. Classes will be a combination of mini-lectures, seminar-style discussions, and in-class activities that allow students to synthesize course concepts while practicing data analysis and scientific communication.

EEPS 0160Z. Mountains: Past, Present and Future.

In this first-year seminar, students will learn about mountains from a variety of natural and social science perspectives. We will explore the geologic origins of mountain building, surface processes that shape mountains over time, mountain climates and ecosystems, tools for understanding past changes in mountain environments, societal and cultural importance of mountains, and future changes in mountains as the climate warms. Classes will be a combination of lectures and seminar-style discussions in order to provide students with various pathways for learning, synthesizing and communicating the course concepts. Through this course, students will learn about the complexities of mountain systems, explore scientific research related to various aspects of mountains, understand the interdisciplinary nature of earth science, practice reading and interpreting scientific papers, and develop skills for communicating scientific concepts in written and verbal form.

EEPS 0220. Understanding Earth and Environmental Processes.

How does plate tectonics create mountains, earthquakes and volcanoes? What processes drive climate change? How do humans exacerbate flooding? This course provides an introduction to the processes that shape the Earth's surface, govern the structure of its interior, cause natural hazards, contribute to climate change and affect the human environment. Topics include interior processes (plate tectonics, mountain building, volcanism, earthquakes, flow of solid rocks), environmental processes (climate change, atmospheric and oceanic circulation, flow of rivers, glaciers, groundwater, water and energy resources), and the connections between them. Lectures are complemented by three labs, informal small-group study sessions, and field trips. Collaborative learning is encouraged. Enrollment is limited to 100.

EEPS 0230. Geochemistry: Earth and Planetary Materials and Processes.

This course is an introduction to the formation of minerals and rocks, and the physico-chemical processes acting during planetary evolution. Topics include: Earth formation and differentiation, determination of age and origin of volcanic, crustal and mantle rocks using their elemental compositions and radiogenic and stable isotopes. Weekly laboratory. Intended for science concentrators. Lab times TBD

EEPS 0240. Earth: Evolution of a Habitable Planet.

Introduces Earth's surface environment evolution - climate, chemistry, and physical makeup. Uses Earth's carbon cycle to understand solar, tectonic, and biological cycles' interactions. Examines the origin of the sedimentary record, dating of the geological record, chemistry and life on early Earth, and the nature of feedbacks that maintain the "habitable" range on Earth. Two field trips; five laboratories arranged.

EEPS 0250. Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction.

Application of numerical analysis to mathematical modelling in the natural sciences including topics such as ground water and glacier flow, earthquakes, climate models, phase equilibrium, and population dynamics. Numerical methods will include the solution of linear algebraic systems of equations, numerical integration, solution of differential equations, time series analysis, statistical data analysis tools. Development of computer programming skills in the Matlab programming environment. Suggested prerequisites: MATH 0090, 0100; PHYS 0030, 0040, or 0050, 0060.

EEPS 0300. Sustainability of Earth Resources.

Fossil fuels are not the only Earth resource we rely on in great quantities. Over 1.5 billion cell phones are made yearly; each using 64 different elements, at least 12 of which are currently irreplaceable. Iron, copper, nickel, rare earth elements, and even sand, are all key components of our modern world that we extract from the Earth. How much are left? How environmentally damaging is it to extract them? Are there alternative extraction methods, or alternative materials? Can they be recycled? What part of your world would you be willing to give up to reduce environmental impacts?

EEPS 0310. Fossil Record.

Integrated view of the history of life: biogeochemical cycles, biodiversity, evolution by natural selection, ecology, and physiology along a multiplicity of scales from the microbial to the planetary, as recorded in the fossil record. Attention is given to how biotic systems, in contrast to just physical systems, have changed through time maintaining the chemical and thermodynamic non-equilibrium state of the Earth's surface. Two lectures per week; several labs including dissections for paleobiological comparisons and one field trip to fossil localities and museum collections in Connecticut and Massachusetts. Prerequisites: EEPS 0220 or 0230 or 0240, BIOL 0200, or instructor permission.

EEPS 0350. Mathematical Methods of Fluid.

Intended for undergraduates concentrating in geological and physical sciences or engineering, especially those interested in the quantitative study of Earth. Problem sets will cover common approaches to quantify the dynamics and chemistry of solids and fluids in nature. Mathematical topics to be introduced include linear algebra, vectors and tensors, differential equations, dynamical systems, eigenvalues and eigenvectors, empirical orthogonal functions, fractals, chaos, and statistics. Applications include waves in the oceans, atmosphere, and solid earth, convective and conductive heat flow, reaction rates, gravitational potential energy, Newton's laws on a rotating planet, measuring coastlines and ranges, and dating errors in stratigraphy.

EEPS 0360. Solving the Climate and Carbon Challenge.

Explore the critical aspects of climate change, greenhouse gas emissions, and carbon management, reduction and removal. Through a series of engaging lectures, students will gain an understanding of the current state and future trends of climate and carbon challenges in the 21st century, including the impacts and projections of climate change, the social cost of carbon, climate justice, the carbon cycle, and non-CO2 greenhouse gases. The course will cover the state of the art in emissions mitigation technologies and strategies, along with carbon dioxide removal approaches, to equip students with the knowledge and tools that are currently being explored for developing scalable carbon reduction strategies. The course will also delve into policy, economics, and social systems solutions, including international, national, and state-level climate policies, carbon markets, climate financing, and the role of innovation in addressing climate change. Students will also

EEPS 0580. Foundations of Physical Hydrology.

Qualitative introduction to the dynamics of watersheds and groundwater flow from an intuitive perspective. Lays the foundations for understanding the physical mechanisms by which water is transported throughout a hydrologic system. Provides background for future studies, but is primarily designed to enable informed citizens to thoughtfully critique water management practices and public policy. Pre-college math and physics background is expected.

EEPS 0810. Planetary Geology.

This introductory level course will examine the evolution of our Solar System and the geology of planetary bodies, including Mercury, Venus, the Moon, Mars, asteroids, and the moons of Jupiter and Saturn. We will discuss the origin of the Solar System from a geological perspective and explore how scientists combine observations from extraterrestrial samples such as meteorites with data returned by satellites and rovers to develop and test hypotheses related to planetary evolution. Emphasis will be on comparing geologic processes on these bodies to well-understood processes on Earth, results from past, current, and upcoming planetary missions, and the future of human and robotic exploration of space.

EEPS 0820. Dynamic Earth.

This survey course explores fundamental geodynamical processes with an emphasis of how interior (mantle) dynamics influences Earth's surface environment. The course is suited to all DEEPS students as either a foundational geophysics course with an Earth systems slant, or a course that acts as a steppingstone to higher level geophysics courses (e.g., EEPS 1610).

EEPS 0830. Water in Our World.

This course will focus on understanding natural and societal dimensions of the water cycle. The coming century will see substantial pressure on global water resources owing to increasing human demand, alteration of river systems, and climate change. The first half of the course introduces fundamental concepts in physical hydrological science, and the second explores human modifications and environmental problems associated with a perturbed water cycle. The topical sequence of the class will progress first through different components of the water cycle (e.g. precipitation, evaporation, runoff), followed by different ways in which humans use and depend upon freshwater resources.

EEPS 0850. Weather and Climate.

Weather phenomena occur on short time scales, and form the basis for understanding climate, the study of changes over longer time scales. This course aims to provide an understanding of the processes that drive weather patterns, the general circulation of the atmosphere, and climate on Earth. Topics include the structure and composition of the atmosphere, sources of energy that drive atmospheric processes, weather forecasting, the hydrological cycle, forces that create severe weather, the influence of humans on the atmosphere, and factors that influence climate, climate variability and climate change. Recommend courses or equivalent: MATH 0090, MATH 0010, PHYS 0050.

EEPS 1110. Descriptive Coastal and Estuarine Oceanography.

An introduction to coastal and estuarine oceanography, focusing on ocean environments landward of the continental shelf/slope break. These environments are of significant value, both environmentally and economically. They are under pressure and strongly impacted by human activities, both directly (e.g. commercial fishing) and indirectly (urbanization within the adjacent river drainage basins). The extent to which these waters continue to be economically valuable is intimately linked to their environmental health. As such, an understanding of coastal and estuarine processes is critical to their management. This course will address the coastal and estuarine circulation context as well as the environmental context. Coastal and estuarine oceanography will be addressed in class lectures, discussions, and exercises while the environmental concerns will be addressed in the context of individual student research projects culminating in a research paper and in-class presentation.

EEPS 1120. Paleooceanography.

An examination of the Cenozoic history of the world ocean with attention to the processes which have acted to change its circulation, climate, geometry, and biology. Develops a strategy to use marine sediments and microfossils to identify and understand past variations in the oceans. Class projects analyze and interpret various types of paleoceanographic data. Laboratory arranged. Offered alternate years.

EEPS 1130. Ocean Biogeochemical Cycles.

A quantitative treatment of the cycling of biologically important elements in the world ocean. Special attention paid to the carbon system in the ocean and the role that organisms, in conjunction with ocean circulation, play in regulating the carbon dioxide content of the atmosphere through exchange with the surface ocean. For science concentrators. Offered alternate years. Prerequisite: CHEM 0330 or equivalent, or instructor permission.

EEPS 1150. Limnology: The Study of Lakes.

This course will provide an interdisciplinary overview of the physics, chemistry, biology, and geology of lakes. Areas of emphasis will include the origin of lake basins, water circulation patterns, heat and water budgets, biogeochemical processes, lake ecosystems, and the stratigraphic record of lakes. We will also discuss human and climatic impacts on lakes. Prerequisites: EEPS 0220 and 0240, or instructor permission. Enrollment limited to 20.

EEPS 1220. Climate Extremes and Human Rights: Winter Session in Geneva.

People around the world are exposed to many hazardous extreme events, including wildfire, flood, heatwave and drought. The locations, frequency and intensity of these extremes are already changing, and increasingly these changes can be linked to increases in greenhouse gas emissions from human activities. But many factors must interact with extreme events to cause a humanitarian disaster. These include the exposure of people and infrastructure to the impacts of extreme events, and the response capabilities before, during, and after the disaster. Furthermore, the vulnerabilities created by poverty and conflict have an impact on the characteristics of disasters, and extreme events in turn can exacerbate existing human rights calamities. The disasters at the nexus of climate change and human rights can be understood through the lens of incident theory. Each damaging climate extreme tends to motivate if not force action.

EEPS 1240. Stratigraphy and Sedimentation.

Introduction to depositional environments and processes responsible for formation of sedimentary rocks. Major sedimentary environments in the Recent are discussed, general models are proposed, and stratigraphic sequences in older sediments are examined in the light of these models. The Phanerozoic stratigraphic record is examined from the perspective of Earth system history. Laboratory arranged. Prerequisites: EEPS 0220 or 0240, or instructor permission.

EEPS 1250. New England Field Geology.

How do geologists know what happened on earth thousands to millions of years ago? What is their evidence? Can our own observations, measurements, and analyses provide new insights and context for understanding the past? Through field trips and seminar discussion, this course will provide an introduction to geological field methods and an overview of the geologic history of the region in and around Rhode Island. In addition to field trips that focus on regional bedrock geology and developing mapping skills, the course will also involve field trips that develop field skills for investigating Pleistocene glacial deposits and Holocene soils. The course will introduce field methods, field mapping, structural analysis, and soil and site evaluation. The course will require attendance of weekend field trips, maintaining a detailed field notebook, making three geological maps, seminar participation, and writing one final report.

EEPS 1310. Global Water Cycle.

The goal of this class is to understand the physical principles and processes of the global water cycle. Topics include the climatic importance of water, circulation of atmospheric water vapor, formation of rain and snow, availability of soil water, plant-water relations, mass balance of glaciers, and ongoing and expected changes in the water cycle. Additional goals: become familiar with the current research literature, practice clear and concise science writing, and to use simple programming in Python to plot and analyze actual data sets.

Students are expected to have taken at least one geology-related course. Programming experience recommended, but not necessary.

EEPS 1320. Introduction to Geographic Information Systems for Environmental Applications.

This class serves as an introduction to Geographic Information Science (GIS). This innovative field explores the relationships between spatial information and a vast array of spatial data types. Through lab work and foundational lectures, this course covers the guiding principles behind various facets of GIS including the nature of spatial data, map projections, spatial model building, spatial analysis, and cartographic production. You will have the opportunity to explore cutting-edge GIS techniques and apply them to real-world problems across multiple disciplines. Throughout the course, you will be challenged to think spatially and practice basic GIS concepts and theory to enable you to make useful and meaningful contributions to various disciplines through spatial analysis and techniques. By evaluating the relationship between different spatial information, you'll develop a better understanding of how the world interacts and gain tools to make a difference.

EEPS 1330. Global Environmental Remote Sensing.

Introduction to physical principles of remote sensing across electromagnetic spectrum and application to the study of Earth's systems (oceans, atmosphere, and land). Topics: interaction of light with materials, imaging principles and interpretation, methods of data analysis. Laboratory work in digital image analysis, classification, and multi-temporal studies. One field trip to Block Island. Recommended preparation courses: MATH 0090, 0100; PHYS 0060; and background courses in natural sciences.

EEPS 1340. Machine Learning for the Earth and Environment.

This course introduces science students to modern data science tools for exploratory data analysis, predictive modeling with machine learning, and scalable algorithms for big data. The course will familiarize students with a cross-section of common machine learning models and algorithms with an emphasis on developing practical skills for working with data. Topics covered in the course may include dimensionality reduction, clustering, time series modeling, linear regression, regularization, linear classifiers, ensemble methods, neural networks, model selection and evaluation, scalable algorithms for big data, and data ethics. The course will present case studies of these tools applied to problems in the Earth sciences. The intended audience for this course is advanced undergraduate and graduate students in Earth, Environmental and Planetary Sciences or other physical science disciplines. Students will practice and develop their skills in data science through a hands-on project on a topic of their choice. This course is taught using the Python programming language.

EEPS 1350. Spatial Data Science.

Spatial Data Science explores the application of statistical, computational, and geographic principles to analyze and derive insights from spatial data. This class serves as an advanced Geographic Information Science (GIS) course focusing on three important stages of geographic information: modelling, analyzing, and visualization of spatial information. This course is designed for students interested in leveraging spatial data science techniques to analyze, visualize, and interpret spatial data for decision-making and problem-solving in diverse fields such as geography, environmental science, urban planning, and public health. Through lab work and foundational lectures, this course covers the guiding principles behind various facets of Spatial Data Science including big data, cluster analysis, geosimulation, pattern recognition, deep learning, network analysis, and geovisualization. You will have the opportunity to explore cutting-edge spatial data science techniques and apply them to real-world problems across multiple disciplines.

EEPS 1370. Environmental Geochemistry.

The course will examine the biogeochemical cycling, fate and transport of chemicals in the atmospheric and aquatic environments. Topics such as chemical weathering, natural water pollution and remediation, acid deposition, global warming and air pollution will be examined through natural ecosystem examples from rivers, lakes, estuaries, and ocean. Field trips and laboratory arranged. Prerequisites: CHEM 0100 or 0330, or instructor permission.

EEPS 1380. Environmental Stable Isotopes.

Introduction to the concepts, analytical methods, theory and environmental applications of stable H, O, C, N and S isotopes. In addition, there will be an introduction to non-traditional stable isotopes of Li, Ca, Si and Mg as well as an introduction to clumped isotopes, mass fractionation laws and mass-independent isotope effects. Emphasis will be placed on theory and applications of light isotopes in paleoclimate studies, environmental hydrogeology and biogeochemistry. Prerequisites: CHEM 0100, EEPS 0220 or 0230 recommended, or instructor permission.

EEPS 1390. Planetary Surface Processes.

This course is designed to introduce students a variety of physical and chemical processes that shape and sculpt the surfaces of solid planetary bodies (asteroid, comets, moons, & terrestrial planets). We will learn the ways mountains can form and how their topography is supported (Is Venus' 11 km high Maxwell Montes the result of a rising mantle plume? among other questions). This course will cover the processes of faulting, tectonics, volcanism, impact cratering, landslides, and weathering from wind, and water. These processes will be explored from a physical quantitative perspective.

EEPS 1400. Climate Modeling I.

An introduction to climate modeling, focusing on the fundamental principles of climate dynamics and the techniques used to simulate and understand the climate system of Earth and other planets. Students will learn about the underlying physics, concepts, and computational methods involved in climate modeling. The course will explore the challenges and uncertainties associated with climate models and their role in predicting future climate change. The course has two tracks: quantitative and qualitative. Students in the qualitative track will focus on interpretation of model results and modeling concepts and have additional reading assignments and will be assessed with writing assignments and should register for EEPS1400. Students in the quantitative track will gain hands-on experience with analyzing climate modeling output and software tools to do so and will be assessed with problem sets and should register for EEPS1400E or EEPS1400.

EEPS 1400E. Climate Modeling I.

This course provides an introduction to climate modeling, focusing on the fundamental principles of climate dynamics and the techniques used to simulate and understand the climate system of Earth and other planets. Students will learn about the underlying physics, concepts, and computational methods involved in climate modeling. The course will explore the challenges and uncertainties associated with climate models and their role in predicting future climate change. The course has two tracks: quantitative and qualitative. Students in the quantitative track will gain hands-on experience with analyzing climate modeling output and software tools to do so and will be assessed with problem sets. Students in the qualitative track will focus on interpretation of model results and modeling concepts and have additional reading assignments and will be assessed with writing assignments. Quantitative track students should register for this course number.

EEPS 1410. Mineralogy.

Introduction to mineralogical processes on Earth and the terrestrial planets. Topics include: crystallography; crystal chemistry; fundamentals of mineralogical thermodynamics and kinetics; mineral defects and their dynamics; physicochemical properties of minerals and magmas. Laboratory study devoted to analytical techniques for minerals/materials analysis: X-ray and electron diffraction; reflectance spectrometry; transmitted optical microscopy; electron microscopy; X-ray spectrometry. In addition to Earth scientists, the course should be of interest to chemical/materials engineering and chemistry concentrators. Prerequisites: EEPS 0230, CHEM 0100 or 0330 or equivalent, or permission of instructor.

EEPS 1420. Petrology.

Introduction to the origin and evolution of igneous rocks. Topics include: physical properties of magma, thermodynamics and phase equilibria, igneous rocks and their classification, magmatic processes, trace elements and isotopes, basalts and layered intrusions, survey of lunar and planetary petrology. Prerequisites: EEPS 1410, or instructor permission.

EEPS 1430. Principles of Planetary Climate.

This course provides the physical building blocks for understanding planetary climate. Topics include thermodynamics applied to planetary atmosphere, basic radiative transfer, energy balance in the atmosphere, and climate variability. In-class exercises and homework problems are designed to strengthen the understanding of basic concepts and to improve problem-solving skills.

EEPS 1450. Structural Geology.

Introduction to the geometry, kinematics and mechanics of rocks deformed by brittle fracture or faulting and ductile solid state flow, on scales from microscopic to mountain ranges. The emphasis is on using concepts to interpret the formation, strain history and rheology of deformed rocks in terms of the operative grain-scale processes, material properties and environmental conditions. Weekly 2 hour lab involving hands-on experience closely related to class topics. Two field trips. Prerequisites: EEPS 0220 or instructor permission.

EEPS 1470. Sea Level Rise (And Fall).

This course will explore the many themes that surround the global problem of sea level rise. Moving from Earth's early history to modern times, through different case studies, this course will explore the underlying physics that contribute to sea level rise on time scales of years to millions of years. The relevant physics that drive this change will be covered, from deep time geological processes (i.e., eustasy and dynamic topography), ice age sea level (glacial isostatic adjustment, viscoelastic deformation theory), and modern-day sea-level change (sea level feedbacks on ice sheet stability, thermal expansion, sea level fingerprinting). The emphasis of this course is the interplay between the dynamics of the solid Earth (mantle and crust) and the overlying oceanic and cryosphere system and so any student interested in a wide perspective on the Earth system is encouraged to join.

EEPS 1510. Dynamic Meteorology.

The objective of EEPS 1510 is to understand the fundamental physical principles that govern the motion of the atmosphere. Students will explore the dynamics of the atmosphere and the mathematical laws governing weather and climate. Topics include the fundamental equations of motion in rotating fluids, hydrostatic, geostrophic and thermal wind balance, and vorticity, as applied to phenomena, including sea breezes, planetary waves, midlatitude cyclones, fronts, and the global general circulation. The emphasis will be on physical interpretation of the equations but facility with vector calculus is critical. Enrollment limited to 30.

EEPS 1520. Ocean Circulation and Climate.

Examines physical characteristics, processes, and dynamics of the global ocean to understand circulation patterns and how they relate to ocean biology, chemistry, climate change. Assignments address ocean's role in the climate system; ocean observations and models; the origin, distribution, and dynamics of large-scale ocean circulation and water masses; energy and freshwater budgets; and variability of the coupled system on seasonal to centennial timescales e.g. El Niño. Intended for geological and physical sciences undergraduate and graduate students with quantitative skills and an interest in oceans, climate, paleoclimate. Pre-requisites: EEPS 0250, EEPS 0350, PHYS 0720, or MATH 0180. Offered alternate years.

EEPS 1530. Polar Oceanography.

Polar Oceanography examines the physical processes governing the behavior of the high-latitude (Arctic and Southern) oceans, with an emphasis on interactions between sea ice and the upper ocean. The course will focus on both modeling and remote-sensing of polar systems, drawing upon recent advances in sea ice physics, ocean circulation, and satellite remote sensing. While understanding observations will be an important component of the course, we will emphasize their interpretation through a physical and mathematical lens. This course is intended for students who are interested in climate and fluid dynamics as well as computational science. We will also explore how these concepts are implemented in the numerical models used in contemporary Earth system models. Recommended: •

EEPS 1560. Global Tectonics.

Plate tectonic theory and the evolution of continents and the seafloor. Emphasis on the structure and tectonics of western U.S. considering geological, geophysical, and geochemical constraints as well as direct geodetic observations of plate motions from GPS measurements. Prerequisite: EEPS 0220 and 0230. Three or more of EEPS 0220, 0230, 1240, 1410, 1420, 1450 and 1610 are recommended.

EEPS 1580. Quantitative Elements of Physical Hydrology.

Physical hydrology with emphasis on fundamental physical principles and mathematical tools. Topics include precipitation, surface runoff, groundwater flow, water quality and contaminate transport. Prerequisites: APMA 0340; and ENGN 0510 or PHYS 0470; ENGN 0810 is recommended; or instructor permission.

EEPS 1590. Quantitative Modeling of Hydrologic Processes.

A quantitative overview of selected topics at the advanced undergraduate and beginning graduate student level of analytical and numerical models for simulating surface runoff, groundwater flow and contaminant migration. While participants will employ computers and scientific visualization to implement the material, no prior computing experience is expected. Non-concentrators encouraged. No exams. Prerequisites: PHYS 0470, or ENGN 0510.

EEPS 1590A. Quantitative Modeling of Hydrologic Processes.

A quantitative overview of selected topics at the advanced undergraduate, beginning graduate student level of analytical and numerical models for simulating surface runoff, groundwater flow and contaminant migration. While participants will employ computers and scientific visualization to implement the material, no prior computing experience is expected. Non-concentrators encouraged. No exams. Prerequisites: PHYS 0070, or ENGN 0510.

EEPS 1600. Environmental and Engineering Geophysics.

A hands-on introduction to non-invasive geophysical methods applied to subsurface investigations of soil and bedrock conditions, groundwater, geotechnical engineering, forensics, archaeology and other environmental applications. Students will use ground penetrating radar, seismic, gravity resistivity, electromagnetic and magnetic methods in the field one afternoon a week to investigate relevant environmental and geotechnical problems. A background in geology is not expected. Prerequisites: APMA 0340 and PHYS 0470, or ENGN 0510, or instructor permission.

EEPS 1610. Solid Earth Geophysics.

A survey of basic geophysical techniques for determining the structure and dynamics of Earth's interior. Topics include: global structure from seismic waves; gravity, magnetic field, and shape of the Earth; thermal processes within the Earth; structure of continental and oceanic lithosphere. Recommended courses: EEPS 0220, PHYS 0470, APMA 0330. No prerequisites.

EEPS 1615. Climate Change, Human Rights, and the Policy Process.

The diminishing quality of Earth's systems and resources carries profound implications for the fulfillment of human rights and aspirations. But even as Western knowledge systems understand better the intrinsic interdependencies between humans and the non-human, policy gridlock persists. Indeed, scientific findings are regularly contested on political grounds. The purpose of this course is to learn how to apply diverse knowledges from Indigenous to Modern to map the relevant policy in problems at the intersection of human rights and environmental integrity, and to develop approaches to address them in ways that are creative, effective, responsible and just.

EEPS 1620. Continuum Physics of the Solid Earth.

Physics of the Earth with emphasis on fundamental physical principles and mathematical tools. Topics include application of: conductive and convective heat transfer to cooling of the Earth; potential theory to interpretation of gravity anomalies; solid mechanics to deformation of Earth's lithosphere; fluid mechanics to flow in the Earth's interior and in porous media. Recommended courses: EEPS 0220; APMA 0340; PHYS 0470 or ENGN 0510.

EEPS 1630. Introduction to Quantitative Glaciology.

This class will focus on a quantitative understanding of glaciers. Topics will include glacier mass balance, energy balance in glaciers, ice deformation physics, glacier hydrology, subglacial mechanics, ice sheet stability, and planetary glaciology. Emphasis will be on a theoretical understanding of what physical processes are important for glaciers and how to make predictions of their long-term behavior. Primary course objective: To learn how to quantitatively understand glacier processes. Specific learning goals: - Gain a quantitative understanding of how glaciers behave and why - Gain an understanding of which processes are important and how to model them - Learn how to reason quantitatively about the Earth and make predictions

EEPS 1650. Earthquake Seismology.

This course is an introduction to seismology that focuses on the seismic waves generated by earthquakes, and how the information contained in these waves can be used to understand earthquake processes and the structure of the Earth. We will discuss applications of seismology that address earthquake hazards and other societal issues. Recommended courses: EEPS 1610; or EEPS 0220 and experience with differential equations; or the equivalent. Offered in alternate years.

EEPS 1670. Time Series Analysis & Modeling in Climate Sciences.

This course introduces students to the fundamental principles and techniques of time series statistical analysis and modeling, focusing on APPLICATIONS in climate and environmental sciences. Through lectures, hands-on exercises, and case studies, students will gain a deep understanding of the methods and of how to analyze and interpret time series data in the context of environmental changes and phenomena. Each student will also conduct a research project that can be connected to their own research involving time series.

EEPS 1690. Introduction to Methods in Data Analysis.

This class will be an overview of different ways one can quantitatively analyze data. Topics will include linear regression, least squares inversion, principal component analysis, and Bayesian methods. Emphasis will be on both a theoretical understanding of these methods and on practical applications to geophysical and earth science problems. Exercises will include using MATLAB to analyze data.

EEPS 1710. Remote Sensing of Earth and Planetary Surfaces.

Geologic applications of remotely sensed information derived from interaction of electromagnetic radiation (X-ray, gamma-ray, visible, near-IR, mid-IR, radar) with geologic materials. Applications emphasize remote geochemical analyses for both terrestrial and extraterrestrial environments. Several spectroscopy and image processing labs. EEPS 1410 (Mineralogy), PHYS 0060, or equivalent recommended.

EEPS 1720. Tackling Climate Change with Machine Learning.

Explore recent work that leverages machine learning (ML) as a tool for tackling climate change, with a focus on climate science and climate adaptation. We will discuss how modern machine learning can be used to assess, understand and respond to projected climate extremes, natural disasters, and environmental change. The target audience for this course is advanced undergraduate students or graduate students who are interested in using ML and AI to address high-impact global issues. Students will read and discuss recent research papers on ML for Climate and complete an original project as a member of a multidisciplinary team. Climate themes may include: Climate models and predictions; Extreme weather and natural disasters; Farms and forests; Oceans and marine ecosystems; Climate misinformation. Machine learning topics may include: Physics-informed learning and emulators; Explainable AI; Uncertainty quantification; Image super-resolution; Graph neural networks, Policy optimization.

EEPS 1730. Isotope Geochemistry.

This course provides a comprehensive introduction to radiogenic and stable isotope geochemistry. Beginning with a brief overview of nuclear physics and nucleosynthesis, it then reviews radioactive decay schemes including and their use in geochronology. Subsequent classes cover nucleosynthetic anomalies in meteorites and early solar system chronology and the use of radiogenic isotopes (including Uranium-series) in understanding the evolution of the Earth's mantle, crust, and oceans. Attention then turns to stable isotopes reviewing the basic principles involved in controlling stable isotopes during both equilibrium and kinetic fractionation, followed by their application on diverse topics but particularly on climate evolution. Finally, the course explores recent developments including unconventional stable isotopes, mass-independent fractionation, isotopic 'clumping', noble gasses isotopes and their applications.

EEPS 1745. Planetary System Design: A Team Project Course.

Introduction to the research process for planetary systems. This upper-level undergraduate course includes a lecture phase that covers an overview of planetary science, the research project(s) to be pursued, problem-solving, scientific writing, communications, and diversity and bias in the field of planetary science. Subsequently, students experience the latest practices in planetary research by forming sub-project teams and collectively designing and planning a research project. Effective team and communication skills are emphasized. Scientific writing and presentations are required throughout, culminating in the final paper and public presentation. This course has been submitted for special designations in writing (WRIT), race, gender, and inequality (DIAP), and collaborative research & scholarly experiences (COEX). The following courses are recommended (and/or permission of the Professor): MATH 0090, MATH 0100; PHYS 0030, PHYS 0040 or PHYS 0050, PHYS 0060 or PHYS 0070; and, EEPS 0250, EEPS 0220, EEPS 1610, EEPS 1810, or EEPS 1950H.

EEPS 1750. Geomorphology.

Landscapes are one of the most accessible and striking parts of a planet's geologic record. Because we live on Earth's surface, landscapes and the forces that shape them are also integral parts of society. This course introduces students to the quantitative study of processes that shape Earth's surface. We will use a combination of theory and field observations to investigate major components of continental geomorphic systems, especially hillslopes and rivers. Our ultimate goal will be to understand how the major factors that shape Earth's surface – tectonics, climate, and life – create the landscapes we observe. The course is designed to be accessible to undergraduate and graduate students from a range of disciplines, including Earth and planetary science, physics, engineering, and IBES. As such, we do not assume an extensive geology background.

EEPS 1810. Physics of Planetary Evolution.

The course will explore and expose students to the fundamental physics necessary to understand how planetary bodies evolve. The evolution of planetary bodies will be discussed on the basis of geological and geophysical evidence derived from exploration of the Solar System. This course will study the physical processes responsible for and that occur as a consequence of differentiation and deformation of planetary bodies. Includes the study of physical processes responsible for volcanism and deformation on the surface as well as the state and structure of the interior of planets.

EEPS 1820. Geophysical Fluid Dynamics: Rotating, Stratified Turbulence Edition.

Explores theories of the large-scale ocean and atmosphere, including quasigeostrophic, planetary geostrophic, and shallow water equations. Topics will vary to focus on features of the general circulation and climate system (e.g. thermocline, westward intensification, jet stream dynamics, polar vortex, meridional overturning circulations), instabilities and waves (e.g. gravity, Rossby, and Kelvin), or rotating stratified turbulence. May be repeated with permission of instructor. Pre-requisites: EEPS 0350 or PHYS 0720 or APMA 0340 and EEPS 1510 or EEPS 1520.

EEPS 1930P. Mathematics and Climate (APMA 1930P)..

Interested students must register for APMA 1930P.

EEPS 1940. Undergraduate Research in Earth, Environmental and Planetary Sciences.

Designed for undergraduates to participate, individually or in small groups, in research projects mentored by the DEEPS faculty. A minimum of 12 hours per week of guided research is expected as are one hour weekly meetings with the supervising faculty member. Students should consult with faculty to find a mutually agreeable research project and obtain permission to enroll.

EEPS 1950B. Atmospheric Chemistry.

Earth's atmosphere touches everything on the surface of our planet has evolved, from the first signs of life on land and in the oceans to today's. This seminar course will provide students with an understanding of the chemical and physical processes that determine the composition of the atmosphere and its implications for climate, ecosystems, and human welfare. Topics to be covered include basic measures of the atmosphere; photolysis and reaction kinetics; atmospheric transport of trace species; stratospheric ozone chemistry; tropospheric hydrocarbon chemistry; oxidizing power and nitrogen, oxygen, sulfur, and carbon cycles; chemistry-climate-biosphere interactions; aerosols, smog, and acid rain.

EEPS 1950C. Planetary Materials.

A comparative planetology course that examines the origin and evolution of materials on the Earth, Moon, and Mars through sample analyses, spacecraft observations, and modeling approaches. Recommended courses: EEPS 1410, 1420. No prerequisites.

EEPS 1950D. Field and Tectonics Seminar.

Development of field mapping and interpretive skills used in the evolution of complex orogenic terranes. Structural field mapping is carried out in highly deformed metamorphic and igneous rocks in the New England Appalachians, the site of a continental collision associated with the formation of the supercontinent Pangea. Expected: EEPS 0230 and EEPS 1450, or equivalent, and field mapping experience (generally a summer geological mapping course). Students are required to arrive one week prior to the start of classes for the beginning of field work. Instructor permission required.

EEPS 1950F. Geomicrobiology.

Microbes were the predominant form of life for most of Earth's history and continue to drive many of the elemental cycles that sustain life in our contemporary biosphere. By taking this course students will learn about the phylogenetic and metabolic diversity of microbes in the environment and their influence on global biogeochemical cycles. Students will gain hands-on experience with molecular and environmental microbiological techniques and the bioinformatics tools required to analyze and interpret the resulting data. There are 2 sections or topical areas: Phylogenetic and ecological diversity of microbes; Microbial and metabolic diversity of biogeochemical cycling. Prerequisite: BIOL 0415 or 1460 or 1480 or EEPS 1130. Enrollment limited to 12. Instructor permission required.

EEPS 1950G. Astrophysical and Dynamical Processes in Planetary Sciences.

Astrophysical and Dynamical Processes in Planetary Sciences is a course that challenges students to use physical and geophysical analysis to construct a quantitative understanding of the formation and evolution of the Sun, the solar system's planets and small bodies, and extrasolar planets. The goal is to provide senior undergraduate and first-year graduate students with core knowledge of facts and current theories in the planetary sciences. Through lectures, problem sets, and exams, the students will construct quantitative framework on which to evaluate, and place into context, hypotheses and theories discussed in upper-level graduate courses. Prerequisites: MATH 0100; and one of EEPS 0050, PHYS 0210, 0220, or 0270. APMA 0330 is desirable but not required.

EEPS 1950H. Gravitational Fields and Data Analyses.

The course will cover fundamental and cutting-edge methods applied to Earth and planetary gravity data acquired by spacecraft, aircraft, sea, and surface gravimeters. Students will learn and practice how to represent, analyze, manipulate, and interpret gravitational data. The course will also include topics on potential field theory, geomagnetic data, pattern recognition methods, Monte Carlo methods, and computer modeling techniques. Topics covered in this course provide a foundation for a wide variety of advanced data analysis, representation, and manipulation techniques that extend beyond Earth and planetary sciences. The following courses are recommended prerequisites (and/or permission of the Professor): MATH 0090, 0100; PHYS 0030, 0040 or 0050, 0060 or 0070; and, GEOL 0250 or previous programming experience in MATLAB or a high-level programming language (e.g., C, C++, Fortran, etc.).

EEPS 1960A. Earthquakes and the Rheology of the Crust and Mantle.

Introduces the principles of rock rheology and uses them to describe brittle and ductile deformation processes in the crust and mantle. Topics to be covered include: brittle fracture and crack propagation, frictional sliding, the brittle/plastic transition, viscous deformation mechanisms,

EEPS 1960B. Special Topics in Geological Sciences: Physical Hydrology.

Physical Hydrology is the description of processes that involve the transport of aqueous fluids in the subsurface of the Planets. We will learn about the principle that govern the motion of these fluids and the common approaches to describe their dynamics in terms of governing equations. The goal of the course is to be introduced to flows in porous media, as well as transport of heat, chemical species and multiphase flows (unsaturated aquifers). We will discuss applications from geothermal energy extraction, CO₂ geological sequestration strategies and reactive transport, such as those encountered for pollutant remediation and sediment diagenesis.

EEPS 1960F. Patterns: in Nature, in Society.

The shapes of plants and animals, of mountains and shorelines arise because nature dissipates energy as rapidly as possible. These morphological patterns allow description of the energy "landscape" that produced them. Societies and economies show temporal and spatial patterns as well: does the "flow rate" of ideas and of money cause these patterns? These societal patterns are statistically identical to the natural (i.e., non-human) ones. Does this fact challenge ideas of free will? Does it affect one's development of a personal philosophy? From a perspective grounded in natural philosophy, we will explore just how "entropy rules." Enrollment limited to 16. Instructor permission required.

EEPS 1960G. Geo-, Environmental + Planetary Sciences' curriculum design + teaching pract. for local high school.

A practical introduction to Geo-, Environmental and Planetary Sciences' curriculum design and teaching with a strong "learning by teaching" component. You will learn about the principles and best practices of science education and communication and will also participate in Earth Science teaching lessons for 10th and 11th grade students at a local high school (Hope HS) co-teaching material previously developed by DEEPS CORES outreach program alternating with in-class physics tutoring in 11th grade. You will observe and reflect on your in-school teaching experience. By the end of the course you will be familiar with the inquiry-driven teaching approach and backwards design and will be able to practice their application. For reasons of capacity at Hope High School, this course is capped at 18 students. The course consists of 2 main parts: 1) science-teaching principles and practical application (teaching at Hope

EEPS 1960H. The Early Earth.

Primary focus on evolution of the solid Earth (core, mantle, crust) but will also include discussion of the Archean hydrosphere, atmosphere and biosphere. Reading and discussing current literature, with lectures. Intended for graduate students and upper level undergraduates with advanced petrology and/or geophysics. Enrollment limited to 20.

EEPS 1960J. Reactions and Rheology: Chemical and Mechanical Kinetics in Mineral Systems.

Characterization of atomic diffusion and dislocation motion responsible for chemical and physical reactions and plastic rheology in ionic solids. Topics include: point-defect thermodynamics; atomic diffusion (physical and mathematical); solid-solution formation; solid-state compound formation; dislocation structures; grain boundary structure and chemical segregation; plastic rheology. Recommended three or more of EEPS 1410, EEPS 1420, or EEPS 0410, ENGN 1410, or CHEM 0330, CHEM 1060. Enrollment limited to 20.

EEPS 1960K. Carbon Cycle Seminar.

Consideration of quantitative models of the cycling of carbon between various reservoirs near Earth's surface. Topics include: mass balance models of carbon sedimentation; carbon chemistry in the ocean; exchange of carbon between atmosphere, ocean, and biosphere; and consumption of carbon in weathering reactions with rocks. Special emphasis will be placed on the use of isotopic tracers (d¹³C, ¹⁴C) to estimate present and past dynamics of the carbon cycle. Instructor's permission required. Enrollment limited to 20.

EEPS 1960L. Foundational Readings in the Earth Sciences.

This class focuses on the reading and discussion of a number of foundational and highly influential papers in the Earth sciences. Topics of papers will cover all aspects of Earth science, including the age of the Earth, plate tectonics, the discovery of planets, climate change, and chaos. The focus of writing assignments and discussion will be on gaining an appreciation for what sets these contributions apart from other science of that time and will include brief discussions about why the authors of the papers are not representative of a diverse world population. Specific Learning Goals: (A) Improving critical thinking and evaluation of groundbreaking ideas; (B) Understanding the scientific context in which breakthroughs are made; (C) Improving communication (written and oral); (D) Understanding the changing diversity of scientists in historical context.

EEPS 1960M. Lab and Field Methods in Hydrology.

A series of hands-on opportunities for students to characterize the hydrologic properties of soils and simple hydrologic systems in the lab, combined with selected outdoor exercises using standard hydrologic tools in the field. High school math and physics recommended. Enrollment limited to 20.

EEPS 1960X. Ocean, Cryosphere, and Sea Level Change.

Or IPCC and you can, too! Interested in finding out how big climate science gets done? This graduate and undergraduate reading and writing seminar will emphasize study of the breakthrough science that has been published in the Intergovernmental Panel on Climate Change Assessment Reports. Focus will be on the physical science basis: past and future changes in the overall earth system, ocean circulation and properties, ice sheets, glaciers, sea ice, and sea level; evaluation of models and projection methods; detection and attribution; projections; abrupt change and long-term commitment; and extremes. Pre-requisite: any of EEPS 0850, EEPS 1430, EEPS 1510, EEPS 1520, EEPS 1820, or permission of instructor.

EEPS 1960Z. Physical Volcanology.**EEPS 1970. Undergraduate Senior Thesis Course.**

Preparation of senior thesis project. Required of candidates for the degree of Bachelor of Science with a concentration in DEEPS. Students must be in the seventh semester or beyond to register. Course will culminate in a written thesis document. Two semesters of EEPS 1970 are required for students pursuing Honors in a DEEPS concentration.

EEPS 2300. Mathematical and Computational Earth Sciences.

For graduate students interested in quantitative study of the Earth in geological, physical, or engineering sciences. Mathematical topics to be introduced include tensor analysis, asymptotic and perturbation analysis of differential equations, numerical integration of differential equations, basis functions and pattern recognition, fractals and multifractals, and statistics. Applications will vary by offering, but examples include: statistics of turbulence and earthquakes, advection-reaction-diffusion systems, boundary layers, development of shocks and singularities, climate change, carbon sensitivity, and dimensional reduction of geophysical data. Intensive review of introductory mathematical methods through leading discussions in a lower level class. Earth, fluid, or solid science background recommended.

EEPS 2330. Advanced Remote Sensing.

Strategies and the physical principles behind the quantitative extraction of geophysical and biophysical properties from remotely sensed data. Emphasis on radiative transfer theory and modeling of spectra and spectral mixtures from optical constants. Advanced methods of digital image processing. Methods of integrating remotely sensed data into a GIS framework will be introduced. Recommended preparation course: EEPS 1330 or 1710; MATH 0100; PHYS 0600.

EEPS 2350. Quaternary Climatology Seminar.

Discussion of current problems in paleoclimatology and global climate change. Students analyze the primary literature, and do original analyses of their own on published data. Topics include: theories of ice ages, millennial-scale climate variability, the influence of greenhouse gases and radiative forcing on climate, and historical and future climate changes. Prerequisites: graduate student status; or EEPS 0240 and 1240; or instructor permission.

EEPS 2400. Life Beyond Earth.

This course will explore the questions of What is Life and Where does Life Exist? The course will utilize peer-reviewed literature and textbook excerpts to understand the basic, fundamental components of life on Earth to understand the conditions and environments that are conducive to the emergence and persistence of life on other worlds. Course topics that will be examined include: the definition and requirements of life, the emergence, persistence, and consequence of life on Earth, life beyond Earth, astrobiology, and the search for extant extraterrestrial life. The following courses are recommended prerequisites (and/or permission of the Professor): EEPS 0050 or 0240; and CHEM 0100 or higher-level chemistry course

EEPS 2410. Kinetics of Geochemical Processes.

Emphasizes kinetic theories and their geological applications. Topics include: rate laws of chemical reaction, rates of chemical weathering; fundamentals of diffusion, nucleation, crystal growth, and dissolution; transport theory. Recommended prerequisite: EEPS 2460 or equivalent.

EEPS 2430. Igneous Petrology.

Study of mineral equilibria in igneous rocks in relation to theoretical and experimental studies in silicate systems. Principles of the origin and evolution of igneous rocks in space and time. Offered alternate years.

EEPS 2440. Petrogenesis Metamorphic Rocks.

Study of metamorphic rocks with emphasis on mineral equilibria, metamorphic facies, and metamorphic facies series. Topics include: metasomatism, mobile components, partial anatexis, and petrogenetic grids. Prerequisite: EEPS 2460. Offered alternate years.

EEPS 2450. Exchange Scholar Program.**EEPS 2460. Phase Equilibria.**

Principles of thermodynamics and phase equilibria in unary, binary, ternary, and multicomponent systems using analytical and graphical methods. Other topics include: solution theory, equations of state, and thermodynamics of surfaces.

EEPS 2520. Numerical Geodynamics.

Numerical methods for the solution of continuum physics problems arising in geophysics and geology: Basic theoretical formulations and algorithms implementing finite element, finite difference, and boundary element methods are developed. Applications include problems in viscous and plastic flow, elasticity, and heat and mass transport discussed within a geological framework. Course consists of lectures and a computer project applying the methods and concepts considered to a scientifically significant problem. Recommended: APMA 0330, 0340; ENGN 1750. Offered alternate years.

EEPS 2630. Interpretation Theory in Geophysics.

Use basic statistical theory and its matrix algebra representation and modern approaches for the optimum design of experiments, constructing model solutions to measurements, and describing nonuniqueness in models, with particular emphasis on generalized linear-inverse techniques. Introduction to stochastic processes and prediction. Recommended courses: EEPS 1610; MATH 0290, 0520, or APMA 0330, 0340, and computer programming skills. Offered alternate years.

EEPS 2650. Advanced Seismology.

The theory of modern seismology will be applied to imaging of Earth structure (from local to global scales) and determination of earthquake source models. Topics include elastic wave propagation, representation theorems, seismic tomography, moment tensors, source-time functions, and models of fault rupture. Offered alternate years.

EEPS 2800. The Chemistry and Mineralogy of Mars.

Examination of the chemical and mineralogical composition of Mars as revealed from meteorites and spacecraft missions. Example topics include: SNC meteorites, origin and evolution of the crust, alteration processes, remote near- and thermal-infrared observations, remote gamma-ray and neutron measurements, and petrology of surface materials. Recommended courses: EEPS 1410, 1420, 1710, or equivalent. No prerequisites.

EEPS 2810. Planetary Science Seminar.

New data for the Moon and Mercury from recent missions (including Chandrayaan-1, Lunar Reconnaissance Orbiter, GRAIL and MESSENGER) permit new insights into "The Crater to Basin Transition on the Moon and Mercury". In this seminar course we will examine this transition using these new data and recent developments in cratering theory and modeling. The course will feature research from the NASA SSERVI activity. Prerequisites: Instructor permission.

EEPS 2840. Asteroids and Meteorites.

Compositional and petrographic characteristics of meteorites are examined along with the physical and compositional diversity of asteroids and other small bodies of the solar system. Possible links between specific types of asteroids and meteorite groups will be evaluated in the context of early solar system evolution. Data from spacecraft encounters with asteroids will be critically reviewed.

EEPS 2850. Regolith Processes.

Particulate material (regoliths) and soils develop on every planetary surface. Physical and chemical alteration of the uppermost surface results from interwoven active processes of specific environments. Understanding these processes and products is central to interpreting data returned from planetary surfaces. Regoliths reflect surface history over a variety of time scales. Several planetary environments are examined in detail. Prerequisites: EEPS 1410, 1710, 2880, or instructor permission.

EEPS 2860. Planetary Volcanology.

An examination of volcanism using observations of features and deposits on planetary bodies, comparing them to predictions from the theory of magma ascent and emplacement. Attention to the influence of different variables (e.g. gravity, composition, temperature, pressure, and atmospheric effects). The history of planetary volcanism, its relation to thermal evolution, and comparative planetary volcanology are also addressed. Offered alternate years.

EEPS 2870. Planetary Evolution – Origin/Evolution of the Moon: Touchstone for Understanding Planets.

The Moon forms a fundamental baseline for our understanding of the origin of planets and their early evolution, in terms of primary and secondary crustal formation, core and mantle formation and evolution, magnetism, impact basins, and global tectonics. A major goal of this course is to identify major outstanding questions and scientific and exploration goals for future robotic and human exploration missions to the Moon. Sponsored by NASA SSERVI, the lecture series is jointly organized by SSERVI teams at Brown University and the Lunar and Planetary Institute in Houston with many affiliated SSERVI institutes participating.

EEPS 2880. Planetary Cratering.

Impact cratering is arguably the most pervasive geologic process in the solar system. This course will study the physical process of impact cratering and its place in planetary science. The course will take a process oriented approach to understanding impact cratering with firm foundations in geologic observation and impact experiments. To explore the extreme process of impact cratering, we will use continuum/rock mechanics, thermodynamics, numerical modeling, experiments, and observations. Principal topics will include the formation of craters from contact of the projectile to final crater morphology; shock metamorphism; impact ejecta and products; cratered terrains; impacts and planetary evolution; and impact hazards.

EEPS 2910B. Advanced Remote Sensing and Geographical Information Systems (GIS).

Strategies and the physical principles behind the quantitative extraction of geophysical and biophysical measurements from remotely sensed data. Advanced methods of digital image processing and data integration. Introduction to Geographical Information Systems (GIS) and methods of integrating remotely sensed data into a GIS framework. Prerequisites: EEPS 1330 or 1710; MATH 0100; PHYS 0060; or permission of the instructor.

EEPS 2910C. The Global Nitrogen Cycle.

This seminar course will survey the literature and discuss aspects of the marine, atmosphere, biosphere and geologic cycles of reactive nitrogen. Topics include general evaluation of the N cycle in these systems and records of changes in the N cycle through time, particularly on relevant climate change timescales.

EEPS 2910E. Miocene: Prelude to the Ice Ages and Analogue to Future Climate Change.

The Miocene Epoch (~23 to 5 Ma) was characterized by a variety of interconnected changes including the tectonic evolution of various ocean gateways, changes in surface and deep-ocean circulation patterns and evolving ocean and atmospheric chemistry. In the Middle Miocene, these conditions resulted in reduced pole-to-equator temperature gradients and global mean annual surface temperatures of ~18°C, equivalent to warming predicted for the next century. These evolving conditions in the Late Miocene set the stage for the initiation of high amplitude northern hemisphere glacial cycles. Study of Miocene climate will yield insight into mechanisms relevant to past and future climate change.

EEPS 2910F. Earthquake Mechanics, Rheology and Rock Friction.

Reading current literature, class discussion, lectures to explore current research in fault mechanics and rheology. Time in the lab examining microstructures in both experimental and natural samples. Topics will include: (1) Deformation mechanisms associated with slow slip and tremor; (2) Grain-size evolution processes and their geophysical implications; (3) Grain-size sensitive deformation processes and their geophysical implications. Prior to each class, students will submit (via email) at least 2 questions about the assigned reading. After class, there will be 3 or 4 questions to answer on topics covered in the reading and during class discussion.

EEPS 2910G. Dynamics of Ice Sheets and Glaciers.**EEPS 2910H. Geophysical Phenomena Across the Solar System.**

This graduate level course will survey the current state of knowledge for geophysical processes and mechanisms related to the formation and evolution of terrestrial bodies within the inner Solar System and will incorporate case study investigations of outer Solar System worlds (excluding gas giants). The course will apply fundamental science concepts in physics and chemistry to examine key topics within planetary geophysics, including planet-wide magma oceans, planetary collisions and impacts, volcanism, tectonics, and magnetism. Course is formatted to allow for lecture content and presentation and discussion of relevant themes and concepts. No prior background in the geological sciences is required.

EEPS 2910I. Marine Geophysical Techniques.**EEPS 2910J. Early Evolution of the Solar System.**

The so-called NC-CC dichotomy describes the fundamental difference in the genetic make-up of inner ('non-carbonaceous') and outer ('carbonaceous') Solar System materials, and is one of the most influential discoveries in modern cosmochemistry. In this seminar, we will follow a series of scientific studies that ultimately led to its full recognition and use recent publications to discuss how it revolutionized our understanding of the early evolution of the Solar System. This includes diverse topics such as (i) the origin, processing, and transport of material in the protoplanetary disk, (ii) the timescales and processes of planetesimal/planet formation and migration, as well as (iii) the nature of Earth's building blocks and origin of its habitability. No prior courses required; basic knowledge of cosmochemistry and isotope geochemistry is recommended. Intended for graduate students, but upper-level undergraduates may register with permission of the instructor.

EEPS 2910L. Planetary Crusts.

What are planetary crusts? How do they form? What mineralogic, petrologic, and structural characteristics are shared among the terrestrial planets, moons and asteroids and what are unique to a single body? We will examine the characteristics of crusts of the terrestrial planets, the Moon, Vesta, Ceres and several satellites of the giant planets. We will explore questions such as when and how do planets and moons develop primary crusts? How have they been characterized (samples, remote sensing, geophysics and in-situ)? What are the major processes that affect planetary crusts and their formation? We will consider data from spacecraft missions like MESSENGER to Mercury, orbiter and lander for data from Mars, and the Dawn mission to Vesta and Ceres, as well as a host of other missions to bodies across the solar system.

EEPS 2910M. The Changing Arctic.

What is the fate of the Arctic and high latitude regions in a warming world? This course explores how the Arctic is changing and its implications to the physical, natural, and social systems. This class will provide a comprehensive overview of the Arctic and synthesize the latest scientific findings from an array of readings/reports. Topics covered will include changes in: snow, freshwater, ice, permafrost, sea level rise, shipping routes, Arctic policy and governance, and identify how these changes are impacting Arctic-dwelling communities and adaptation strategies available. Instructor override required. Email samiah_moustafa@brown.edu with a statement of interest, year and concentration.

EEPS 2910P. Origin and Evolution of Planetary Systems.

The goal of this course is to introduce students to our current understanding of how planetary systems form and evolve. We will focus on the physical theories describing how the structures of planetary systems develop and how planets, moons, and other heavenly bodies form. We will also consider the relationship between these theories and observations (astronomical, geophysical, cosmochemical) of the Solar System and extrasolar planetary systems. This will include some discussion how the Solar System fits into our understanding of the veritable menagerie of planetary systems.

EEPS 2910T. Lattice Boltzmann Modeling in Natural Sciences.

Introduction to the lattice Boltzmann method for solving problems such as diffusion in complex media, fluid dynamics, porous and reactive transport, multiphase flows, and the propagation of waves. The course will cover an introduction to Boltzmann theory and the discretization of the equations on the lattices, the implementation of various solvers (diffusion, Navier-Stokes equations...) and application to problems in Natural Sciences and Engineering. This course will be divided between lectures and coding practicum and has a final project designed by the student.

EEPS 2920B. Special Topics: Ocean Worlds.**EEPS 2920C. The Sedimentary Rock Cycle of Mars and Earth.**

This course consists of a mixture of instructor and student-led discussions on topics related to the sedimentary rock cycle on Mars as viewed through the lens of how we understand such processes on Earth. Topics: sediment transport and deposition, erosion processes and rates, lithification + diagenesis, water-rock interaction, and cyclicity in strata. Major goal: Assess how the sedimentary rock record of Mars can be used to understand changes in depositional processes and environmental conditions through time. Results from Mars satellite and rover data will be discussed, with an emphasis on fundamental processes as understood from detailed studies of Earth's sedimentary rock record. Prerequisite: Undergraduate level sedimentology/stratigraphy, or permission of instructor.

EEPS 2920D. Introduction to Geochemical Modeling.

Continuum descriptions of mass transfer in geochemical cycles. Topics include: fundamentals of diffusive and advective mass transfer, kinetics of weathering and early diagenesis, fluid flow in the Earth's crust and mantle, trace elements and isotopes in magmatic processes. Recommended: CHEM 0330, EEPS 1610 and APMA 0330, 0340.

EEPS 2920E. Introduction to Organic Geochemistry.

Mainly literature critiques and seminars, supplemented by introductory lectures. Topics include organic biomarkers, analytical methodologies, natural macromolecules, stable isotope ratios of biomarkers, application of organic geochemistry in studies of climatic and environmental change, fossil fuel exploration, and applied environmental research.

EEPS 2920F. Kinetics of Mineralogical and Petrological Processes.

Emphasizes kinetic theories and their geological applications. Topics include: fundamentals of diffusion in crystals and melts, theories of nucleation and crystal growth, kinetics of melting and dissolving, theory of phase transformation. Prerequisite: EEPS 2460 or equivalent.

EEPS 2920G. Special Topics in Geological Sciences: Exoplanet Seminar.

The goal of this course is to introduce students to the study of planets orbiting other stars. Learning outcomes: Recognize the methods for detection and characterization of exoplanets, and the information these methods provide about exoplanetary systems. Discuss planet properties that can be derived from observational methods.

Summarize our understanding of exoplanet populations. Recognize cutting edge work being done in the field of exoplanets – such as the search for exomoons, habitability, and biosignatures. Recall updated facilities (both ground and space based) for future exoplanet studies. Assessment of journal articles and synthesizing material across sources. Completion of an independent project on an outstanding question in exoplanet science.

EEPS 2920H. Past Variations in the Global Carbon Cycle.

This course will examine variations in the earth's carbon cycle over multiple time scales. We will examine geological tools that measure rates of carbon storage and release, especially over the past one million years. Special emphasis will be given to monitoring rates of past biological carbon storage.

EEPS 2920I. Special Topics: Dynamics of Tropical Climate and Ecosystem.**EEPS 2920J. The Source of Liquid Water in the Nochian History of Mars.****EEPS 2920L. Evolution of the Moon II.**

A seminar on the thermal and chemical evolution of the Moon. In this part II of lunar seminar, we will focus more on petrological and geochemical observations of lunar samples, terrestrial layered intrusions, related geophysical observations, and lunar petrogenesis. Prerequisite: EEPS 1420, 2730, or 2920K.

EEPS 2920O. Physics of Melt Migration.

A seminar course focusing on the physical processes and geochemical consequences of melt migration in the mantle. Topics include, but are not limited to: flow in porous media; compaction; adiabatic melting and melt-rock reaction; instabilities in melt migration; melt generation beneath mid-ocean ridge; and melt migration in other tectonic environments. Recommended course: EEPS 1620. Enrollment limited to 15. S/NC

EEPS 2920Q. Rheological Boundaries in the Earth.

The properties of lower crust control the coupling of mantle convection to shallow crustal dynamics, post-seismic creep and the chemical evolution of the Earth. On Earth we have xenoliths and exhumed lower crustal rocks to study and relate to geophysical, experimental and theoretical investigations. We will explore these avenues of research with the goal of synthesizing our understanding of the behavior of lower crust on Earth as well as other terrestrial planets.

EEPS 2920R. Evolution of the Moon.

Petrological, geochemical, and geophysical observations, physical and chemical processes relevant to the formation and evolution of the Moon.

EEPS 2920S. Continental Cratons.

The focus of this course is the formation, evolution, and structure of continental cratons. These topics will be explored through a survey of the observational constraints on cratons, including seismology, gravity, heat flow, geochemistry, and petrology. The use of dynamical models to investigate the assembly, destruction, and long-term stability of cratons will also be considered.

EEPS 2920T. Science Applications of Lunar Spectroscopy.

This course will focus on current science issues that are addressed with new lunar orbital or laboratory spectroscopy data. Each participant must identify a specific science topic (and data source) to be pursued and brought to completion during the term. Format will be seminar with very active participation by all attending. At the beginning of the term each participant will describe their chosen research topic. Subsequent sessions will critically examine issues that are associated with each topic in an iterative fashion, focusing on progress made, problems faced, solutions designed, insights found, and finally completed project. Prerequisites: EEPS 1710 and confirmation with instructor about the project.

EEPS 2920U. Climate Variations.

This course will examine the geologic record of lake basins on decadal to million-year time-scales. Students will gain hands-on experience with techniques in paleolimnology including sediment core acquisition, sediment description, petrography, sedimentology and environmental analysis, geochemistry, basic core scanning, and age determination, modeling, and time series analysis. The biotic content and interpretation of fossils will be stressed. The course will also cover theoretical aspects of paleolimnology and more specialized techniques according to student interests through student-led discussions and a course project on regional lake sediments. Graduate students only; enrollment limited to 20.

EEPS 2920V. Terrestrial Nitrogen and Carbon Cycling.

This course will examine aboveground/ belowground processes in the context of the global nitrogen and carbon cycles, and the impacts of both natural and anthropogenic disturbances. It will include discussion of processes such as (de)nitrification, N-fixation, respiration, photosynthesis, and decomposition and their relationship to soil properties; the coupling of N and C cycles in soils related to climate change and increasing N deposition. It will include emphasis on emerging new techniques to quantify N and C processes in the laboratory, field and through modeling, and field trip investigating current field studies. Prerequisites: BIOL 1480 or EEPS 1130 or equivalent biogeochemistry course. Enrollment limited to 15.

EEPS 2920W. Numerical Climate Change Scenarios for Southern New England.

This seminar will examine regional-scale climate model scenarios for past and future climate change in Southern New England. Reliable estimates of the trajectory and variability of climate change are needed to address specific climate impacts, adaptations, and mitigations. Global climate model simulations, based on a range of IPCC green house gas scenarios, need to be "downscaled" to achieve useful regional resolution. Understanding the generation of these high-resolution "downscaled" climate scenarios and compiling a number of observed and modeled climate variables to assess the trends and reliability of climate scenarios for Southern New England is the goal of the seminar.

EEPS 2920Z. The Evolution of Lacustrine Ecosystems.**EEPS 2980. Research in Geological Sciences.**

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Enrollment is restricted to graduate students only.

EEPS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

East Asian Studies

The 21st century has turned to Asia as a center of international trade, culture, and critical inquiry. The Department of East Asian Studies offers Brown students a window onto this vitally important corner of the world, whose civilizations reach back several millennia and whose cultural

and economic ties extend throughout the globe. A vibrant community of teachers and undergraduates who work closely together in the spirit of free inquiry, the Department of East Asian Studies embodies Brown's unique mission "to serve the community, the nation and the world."

The Department offers several tiers of instruction in Chinese, Japanese and Korean, with courses designed to accommodate students ranging from those who have never taken a class in the language before, to those hoping to hone their abilities at the highest levels. East Asian Studies also offers Brown students the opportunity to explore the visual, textual and religious cultures of East Asia through introductory and advanced courses on literature, film, pilgrimage and translation, among others.

For additional information, please visit the department's website: <http://www.brown.edu/academics/east-asian-studies/>

East Asian Studies Concentration Requirements

East Asian Studies is a multidisciplinary concentration designed for students wishing to attain reasonable fluency in Chinese, Japanese, or Korean with specialized exposure to selected East Asian subjects. It serves students with two types of interests: those who aim to pursue active professional careers related to the East Asian region; and those who want to pursue graduate study in the humanities or social sciences with particular emphasis on China, Japan or Korea. Students in East Asian Studies will gain language proficiency and familiarity with East Asia through advanced courses in a variety of disciplines. Concentrators are strongly encouraged, but not required, to study in East Asia for one or two semesters. The concentration requires students to demonstrate a basic proficiency in Chinese, Japanese, or Korean.

The Language Requirement

The concentration requires students to demonstrate a basic proficiency in Chinese, Japanese, or Korean. For the purposes of the concentration, proficiency is determined to be consistent with successful completion of the Department's third-year course sequence in Chinese, Japanese, or Korean (0500-0600), or its equivalent. Native speakers of these languages may, for example, demonstrate competency such that language courses may be unnecessary. Department language instructors may also determine that course work completed at one of the language-intensive study abroad programs attended by our undergraduates is comparable to courses offered at Brown. Up to three upper level (700-999) language courses may count as electives for the Focus concentration credit. (Lower-level language courses do not count as concentration electives).

Note that we do not equate completion of third-year Chinese, Japanese, or Korean with fluency in these languages. Rather, we believe that students who have demonstrated the skills associated with third-year Chinese, Japanese, or Korean have acquired a foundational understanding of the languages' grammar, vocabularies, and conversational patterns, such that they are able to make themselves understood in everyday situations, and to understand both spoken and written communication.

For the purposes of the concentration, language courses through the third-year are treated as an accompanying requirement.

Language Prerequisites (demonstrating proficiency through the third-year or 0600 level in one of the three languages below)

Chinese	
CHIN 0100 & CHIN 0200	Basic Chinese and Basic Chinese
CHIN 0300 & CHIN 0400	Intermediate Chinese and Intermediate Chinese
CHIN 0350 & CHIN 0450	Elementary to Intermediate Chinese for Advanced Beginners and Advanced Chinese for Heritage Learners
CHIN 0500 & CHIN 0600	Advanced Modern Chinese I and Advanced Modern Chinese I

Japanese

JAPN 0100 & JAPN 0200	Basic Japanese and Basic Japanese
JAPN 0300 & JAPN 0400	Intermediate Japanese and Intermediate Japanese
JAPN 0500 & JAPN 0600	Advanced Japanese I and Advanced Japanese I
Korean	
KREA 0100 & KREA 0200	Korean and Korean
KREA 0300 & KREA 0400	Intermediate Korean and Intermediate Korean
KREA 0500 & KREA 0600	Advanced Korean and Advanced Korean
KREA 0912	Business Korean
Language Electives (language courses that may be counted for concentration credit)	
Chinese	
CHIN 0700 & CHIN 0800	Advanced Modern Chinese II and Advanced Modern Chinese II (either course may be taken for one semester)
CHIN 0911	Business Chinese
CHIN 0912	Chinese Language and Culture
CHIN 1040	Modern Chinese Literature
Japanese	
JAPN 0700 & JAPN 0800	Advanced Japanese II and Advanced Japanese II (either course may be taken for one semester)
JAPN 0711	Japanese Linguistics
JAPN 0810	Classical Japanese
JAPN 0811	Business Japanese
JAPN 0812	Japanese Language and Society through Contemporary Film
JAPN 1010	Readings in Contemporary Japanese Fiction

Electives

The concentration requires that students complete a total of eight electives tied to their course of study, which may be defined in linguistic, chronological, thematic, or cultural terms. Students should choose their courses with the following four requirements in mind.

- **Focus Requirement:** In order to ensure intellectual coherence and focus in the concentration, at least three of the eight electives must focus on the geographic region associated with the student's language study/expertise (including expertise demonstrated in lieu of coursework). For example, a concentrator studying Japanese language, or who has demonstrated competency in Japanese to fulfill the departmental language requirement, should take at least three courses focusing on Japan. Up to three upper level (700-999) language courses may count as electives for the focus concentration credit. (Lower-level language courses do not count as concentration electives).
- **EAST Requirement:** At least three of the eight electives must be East Asian Studies (EAST) courses at any level; Chinese (CHIN), Japanese (JAPN), or Korean (KREA) courses at the 1000-level and above may also count toward this requirement.
- **Breadth Requirement:** At least one of the eight electives must focus on an East Asian country or culture other than those associated with the language the student is using to satisfy the concentration's language requirement. A concentrator studying Chinese, for example, must choose at least one course that focuses on Korea and/or Japan.
- **Senior Seminar Requirement:** At least one of the eight elective courses must be an advanced research seminar, taken in the senior year.

As is common in multidisciplinary concentrations, a wide range of courses, including many taught by faculty in other departments, may be counted toward the concentration. These include courses offered by East Asian Studies faculty, faculty with courtesy appointments in the Department, and courses with a significant focus on East Asia offered in such disciplines such as American Studies, Art History, Economics, International Relations, and many others.

Sample Electives offered by East Asian Studies

EAST 0140	Childhood and Culture in Japan
EAST 0304	Words on Things: Literature and Material Culture in Early Modern China
EAST 0307	China Through the Lens: History, Cinema, and Critical Discourse
EAST 0406	Foreign Bodies in Japan, 600–1600
EAST 1505	Two Koreas

For additional elective choices, visit <http://brown.edu/academics/east-asian-studies/courses/more-course-offerings>.

Senior Seminars

At least one of the eight elective courses must be an advanced research seminar, usually taken in the senior year. The research seminar will normally provide students with the opportunity to develop a project or paper focusing on one or more of their areas of inquiry within the concentration. Students are strongly encouraged to find ways to incorporate the use of Chinese-, Japanese-, or Korean-language materials in their research and learning in these courses. Courses falling into this category include EAS seminars over the 1000 level, as well as designated seminars offered by affiliated faculty in such departments as History, Religious Studies, and Comparative Literature, among others. The Department will provide a list of pre-approved senior seminars every semester. Students wishing to add courses to that list must submit their requests in writing to the Director of Undergraduate Studies at the start of the semester.

Sample advanced seminars offered by East Asian Studies

EAST 1931	Market Economy, Popular Culture, and Mass Media in Contemporary China
EAST 1942	Queer Japan and Beyond

Double Concentrations

Students who are interested in developing a double concentration, including East Asian Studies as one of the two concentrations, should bear in mind that normally no more than two courses may be double-counted toward satisfying the course requirements of either of the two concentration programs involved.

Study Abroad

Concentrators are strongly encouraged, though not required, to study in East Asia for one or two semesters during their undergraduate years. Course credits earned abroad are generally transferable to Brown. However, a maximum of three courses taken abroad, of genuine intellectual substance and significantly related to East Asian Studies, may be considered for concentration credit.

Summary of requirements:

- Language study through the level of 0600 or the equivalent of Chinese, Japanese, or Korean
- Eight elective courses (see details above)
 - **Focus Requirement:** three courses.
 - EAST Requirement: three courses.
 - Breadth Requirement: one course.
 - Senior Seminar: one course.
- Honors candidates only: EAST 1980 - EAST 1981

Please note: EAS does not currently offer a concentration in Vietnamese. Students who take Vietnamese language in EAS may wish to consider

completing a Certificate in Intercultural Competence through the Center for Language Studies.

Honors

East Asian Studies offers qualified students, in their senior year, the opportunity to undertake a sustained research and writing project that, ideally, will result not merely in a long term paper, but in a piece of original scholarship. To enroll in the Honors Program, the student must be a senior East Asian Studies concentrator, and have earned an A or an S with Distinction in the majority of courses for the concentration. Candidates for Honors are required to have developed a competence in an East Asian language sufficient to allow them to use East Asian language materials in carrying out their research. Students must also successfully obtain the support of at least two faculty members who will agree to serve as primary and secondary advisors for the thesis. Prospective writers submit a thesis prospectus, brief bibliography, and completed application forms (with signatures), ordinarily late in the student's six semester, to the Director of Undergraduate Studies, who provides the final permission to proceed. Synopses of successful thesis proposals will be distributed to Department faculty.

Thesis writers enroll in advisor-specific sections of the thesis-writing course EAST 1980 (Fall) and EAST 1981 (Spring), meet regularly with their advisors over the course of both semesters, and submit final versions of their theses to the Department in mid-April. Advisors and students are required to provide updates of their progress to the Director of Undergraduate Studies at regular intervals.

The completed thesis is evaluated for Honors by the thesis director and by the second reader. In case of a difference of judgment between the two readers, a third opinion may be sought. EAST 1981 counts as one concentration elective credit. The awarding of Honors in East Asian Studies will occur only if the Honors Thesis receives a final grade of A. If an A is not received, the student will still receive University academic credit for EAST 1980-81. Students are notified in mid-May whether the Department has recommended the awarding of Honors. Copies of readers' comments are provided to the student.

Graduating concentrators may have the ability to present the results of their senior theses in the department's Senior Project Forum. The Forum will usually take place at the end of the spring semester, but may also occur at the end of the fall semester to accommodate mid-year graduates.

Courses

Chinese

CHIN 0100. Basic Chinese.

A year-long introduction to Standard Chinese (Mandarin). Speaking, reading, writing, and grammar. Five classroom meetings weekly. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of course work in CHIN 0200 covers the entire year and is recorded as the final grade for both semesters.

CHIN 0150. Advanced Beginning Chinese.

A year-long intensive course designed for students with some prior knowledge of Chinese. Designed to enhance listening, speaking, reading, and writing skills. Five classroom meetings weekly. Placement interview required. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in CHIN 0250 covers the entire year and is recorded as the final grade for both semesters.

CHIN 0200. Basic Chinese.

A year-long introduction to Standard Chinese (Mandarin). Speaking, reading, writing, and grammar. Five classroom meetings weekly. This is the second half of a year-long course. Students must have taken CHIN 0100 to receive credit for this course. The final grade for this course will become the final grade for CHIN 0100. If CHIN 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

CHIN 0250. Advanced Beginning Chinese.

A year-long intensive course designed for students with some prior knowledge of Chinese. Designed to enhance listening, speaking, reading, and writing skills. Five classroom meetings weekly. Placement interview required. This is the second half of a year-long course. Students must have taken CHIN 0150 to receive credit for this course. The final grade for this course will become the final grade for CHIN 0150. If CHIN 0150 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

CHIN 0300. Intermediate Chinese.

An intermediate course in Standard Chinese designed to further communicative competence and to develop reading and writing skills. Five classroom meetings weekly. Prerequisite: CHIN 0200 or permission of instructor.

CHIN 0350. Elementary to Intermediate Chinese for Advanced Beginners.

This course is designed to enhance listening, speaking, reading, and writing skills for Chinese heritage students who have some prior knowledge of Chinese. Five classroom meetings weekly. Placement interview required.

CHIN 0400. Intermediate Chinese.

An intermediate course in Standard Chinese designed to further communicative competence and to develop reading and writing skills. Five classroom meetings weekly. Prerequisite: CHIN 0300 or permission of instructor.

CHIN 0450. Advanced Chinese for Heritage Learners.

This course is primarily designed for Chinese heritage students who have successfully completed CHIN 0350. If you have not taken CHIN0350, please contact the instructor for a proficiency evaluation. Upon completing this course, you can take CHIN 0700 or equivalent, i.e. courses that have a prerequisite of CHIN 0600. This is an advanced-level course offering comprehensive work on all four language skills, with a focus on developing your ability to use sophisticated grammatical structures, vocabulary, and improving your reading and speaking skills. Materials used in this course will include a textbook, supplementary articles, and video clips.

CHIN 0500. Advanced Modern Chinese I.

An advanced course designed to enable students to read authentic materials. Students enhance their listening, speaking, reading, and writing skills; improve their narrative and descriptive abilities; and learn to express abstract ideas both orally and in writing. Five classroom meetings weekly. Prerequisite: CHIN 0250 or CHIN 0400 or permission of instructor.

CHIN 0600. Advanced Modern Chinese I.

An advanced course designed to enable students to read authentic materials. Students enhance their listening, speaking, reading, and writing skills; improve their narrative and descriptive abilities; and learn to express abstract ideas both orally and in writing. Five classroom meetings weekly. Prerequisite: CHIN 0500 or permission of instructor.

CHIN 0700. Advanced Modern Chinese II.

This course is designed to enhance the Chinese proficiency of those who have taken Advanced Modern Chinese I (CHIN 0600) or the equivalent. All four language skills are emphasized through selected authentic materials. At the end of the year, students should be able to express their ideas with sophistication and nuance. Drills on complex sentence patterns will be conducted when necessary. Prerequisite: CHIN 0600 or permission of instructor.

CHIN 0710. Introduction to Classical Chinese.

This course aims to build on basic knowledge of reading Classical Chinese grammar, syntax, and vocabulary, and to catch a glimpse of ancient Chinese wisdom. The class will use modern Chinese (Mandarin) to discuss classical texts. Readings are original works of prose and poetry dating from the 2nd to 12th century. Prerequisite: CHIN 0600. Instructor permission required.

CHIN 0711. Two Sides of the Coin: Advanced Chinese Conversation.

Many of us know about the trolley scenario- would you kill one to save five? What do you think about organ trade- is it immoral for people to buy organs from the poor in order to save lives? What is your stance on the Affirmative Action? Did you know China has similar laws? The goal of this course is to develop your listening and speaking skills in Chinese by way of exploring morally debatable issues. Class materials will cover a broad range of topics and will not be limited to those unique to China. Prerequisite is CHIN 0600 or equivalent.

CHIN 0712. Chinese Language in the Big Screen.

This course is designed for advanced Chinese language students who have completed CHIN 0600 or equivalent. You will gain language and culture proficiency through studying different genres of movies that reflect Chinese history, social issues and Chinese people's values. The primary objective of this course is to further develop your language proficiency in meaningful and entertaining contexts. By conducting research into the films, creating video summary, and sharing your work with your fellow students, you will build up your interpretive and presentational skills. In place of a final written exam, you will be asked to produce a mini-film.

CHIN 0800. Advanced Modern Chinese II.

See Advanced Modern Chinese II (CHIN 0700) for course description. Prerequisite: CHIN 0700 or permission of instructor.

CHIN 0910. The Changing Face of China: Advanced Reading in Chinese Media.

This course is designed to help students develop advanced reading proficiency and formal oral and writing communication skills. Students will listen and read up-to-date news, reports and commentaries from various Chinese media sources, such as TV broadcasts, newspapers, magazines, and websites. Through reading and discussion, students will gain a better understanding of a wide range of current issues in a rapidly changing China, including economics, politics, education and popular culture. Class format varies from lecture, discussion, debate, and group and/or individual presentations. Prerequisites: CHIN 0800 or the equivalent.

CHIN 0911. Business Chinese.

Business Chinese is an advanced Chinese course that aims to further improve students' comprehensive language ability and at the same time help students gain a basic understanding of China's current economic situation, business practices and workplace culture. The learning materials are adapted from authentic documents, business news reports, career reality shows, as well as MBA textbooks. The topics include case studies of Chinese and international companies, Chinese business culture, cross-cultural comparisons and job interview techniques.

It is expected that after completing this course, students will improve their four skills of listening, speaking, reading and writing in Chinese, be able to use professional terminology to participate in discussions on economic and business issues, and write simple business analysis reports. Students will also learn to search for information and conduct research on Chinese websites.

CHIN 0912. Chinese Language and Culture.

This course is designed for advanced learners of Chinese to enhance their language proficiency, as well as to grasp essential skills to observe and appreciate Chinese culture from the perspective of language, especially through Chinese radicals, idioms, proverbs, taboos, verses, vernacular language and internet language. The teaching methods in this course include lecture, case studies, and heuristic approach etc. After taking this course, students are expected to have much deeper understanding of Chinese language and culture and be able to use the language in a near native and artistic way.

CHIN 0913. Life, Trends, and History of Modern China.

This course is designed to continue developing students' all four language skills through studying authentic materials of different forms (e.g. literature and films) and genres (e.g. stories and argumentative articles). Through the course readings, we will study how daily life in modern day China has been impacted by important past and current trends, traditions, social values and political policies. The course will offer intensive speaking and writing practice. Prerequisite: Chinese 0800 or equivalent.

CHIN 0914. Environment, Food, and Health in China.

Environment, Food, and Health in China is an advanced Chinese course that aims to further improve students' comprehensive language ability and help students gain a basic understanding of China's environmental challenges and policies, the culinary tradition, and conceptions and practices related to health. The learning materials are adapted from authentic articles, documentaries, reports, and interviews in multimodal formats. The topics include the relationship between human and nature, energy utilization, pollution and protection, food culture, food exchange in globalization, food safety and health, food as medicine, etc. In this course, students will improve their four skills of listening, speaking, reading and writing in Chinese, be able to understand China's environmental issues, dietary tradition, and health practices. Students are expected to write simple analysis essays in formal style and improve presentational and interpersonal language skills on these themes.

CHIN 1010. Stories from the Chinese Empire: Scholars, Demons and Swindlers.

This bilingual course introduces the culture and society of late imperial China by reading short stories, novels, prose essays between 1368 and 1911. To maintain students' language skills, the lecture is primary in mandarin aided by English explanation. Students can choose to complete the assignments in either English or Chinese. The course explores the interwoven spectacular fantasy and societal reality of the imperial China. A chronological exposure to different cultural practice and social structures is organized under three rubrics, namely, scholar-official as social elite; merchants and courtesans as mobile agents; and criminals and demons as outcast.

CHIN 1040. Modern Chinese Literature.

Introduces students to the most representative writers in 20th century China. Emphasizes textual and historical analyses. Major issues include Westernization, nationalism, revolution, class, gender, and literary innovations. Designated primarily as a literature course, rather than language class, and conducted entirely in Mandarin Chinese. Prerequisite: CHIN 0800. Instructor permission required.

CHIN 2450. Exchange Scholar Program.**East Asian Studies****EAST 0010. Beyond Orientalism: Understanding "East Asia".**

This course explores the cultural and ideological foundations of the region we call "East Asia," from prehistoric times to the present day. After interrogating the colonial origins of the Euro-American concept of "East Asia," we will examine the historical distinctions, interactions, and mutual influences that shaped the regions and peoples now associated with the countries of China, Japan, and Korea. In addition exploring systems of status and political power—including class, race/ethnicity, and gender—the course will expose students to the rich religious, literary, and artistic traditions developed within and across the East Asian region.

EAST 0040. Foundations of Chinese Religions (RELS 0040).

Interested students must register for RELS 0040.

EAST 0100. Introduction to Buddhism (RELS 0100).

Interested students must register for RELS 0100.

EAST 0130. Sex, Gender, and Society in Imperial China.

This course examines the changing nature of gender relations across China's imperial period, from roughly 200 BCE to the early twentieth century. From early cosmological ideas about yin and yang, to the policies of the Qing dynasty in the late 19th century, we will see how gender relations intersected with philosophical ideals, political agendas, religious values, and economic developments. We will examine the kinds of choices that were available to men and women at various points in time, and explore the ways that they navigated those choices to construct meaningful lives.

EAST 0140. Childhood and Culture in Japan.

This seminar offers students an interdisciplinary look at how children became central to social life in modern Japan. What set of historical and philosophical conditions made childhood newly visible in the late 19th century? How has the relationship between the marketplace and childhood evolved over the past hundred years? How have class, gender, ethnicity and sexuality inflected the ways childhood has been experienced? Students will analyze different cultural texts for and about children (early fairy tales, comic books, propaganda, film) in relation to critical essays drawn from a variety of disciplines.

EAST 0141. Catastrophic Japan.

Japan is a place where catastrophic events have occurred more frequently and done more damage over the last century and a half than they have in all but a handful of other locations on the planet. This seminar examines how massive earthquakes, destructive tsunami, the firebombing of Tokyo, the obliteration of Hiroshima and Nagasaki by atomic weapons, and large-scale exposures to toxic substances and radiation have shaped Japan's modern history. We will explore the debates over how best to mitigate the effects of "natural" and technological hazards, and analyze the role played by popular culture in shaping the meanings assigned to catastrophes past, present and future.

EAST 0150. Language, Culture, and Society: Korea.

This course aims to look into the interaction between language, culture and society. It will specifically examine the role of language in myriads of social contexts with special focus on Korean society. Topics to be covered in this course include language contact (e.g. with Japan and China), language variation (e.g. regional, generational, gender), language and identity, language and social class, language perceptions and attitudes, language education in a social context, and so on. Knowledge of the Korean language is preferred but not required.

EAST 0152. Worlds of Korean Cinema.

This class covers the major themes and eras of South Korean filmmaking from the post-1945 era to the present. We will pay attention to issues of colonialism, national division, civil war, military dictatorships, the democratic movement, and globalization. We will investigate not only the major genres of South Korean cinema, but also the increased recognition throughout the world of such renowned Korean auteurs as Park Chan-wook and Bong Joon-ho.

EAST 0160. Buried History, Hidden Wonders: Discovering East Asian Archaeology (ARCH 0160).

Interested students must register for ARCH 0160.

EAST 0290E. Engaged Buddhism (RELS 0290E).

Interested students must register for RELS 0290E.

EAST 0303. Literature, Science, and Technology in China.

This course explores relations between Chinese science, technical know-how, and literary writings in early modern and contemporary China. The course encourages students to re-define science and technology in the context of China's changing Confucian education system, booming market economy, and the multiethnic empire and explores the impact of imperial legacy in scientific imagination in contemporary China. By drawing on materials from local museums as well as latest Chinese science fictions, we will investigate the ways in which knowledge about medicine, handicrafts, and foreign lands transformed the form and content of novels and belle-lettres.

EAST 0304. Words on Things: Literature and Material Culture in Early Modern China.

This course examines Chinese literary representation of artifacts written between 1000 to 1900 CE. Our discussion will highlight international trade and the transforming science and technology in early modern China. The course aims to guide students to conduct inter-artistic analysis as a means to decipher the political, religious, gendered, and technical significance embedded in literary representation of material objects. To emphasize a comparative perspective, we will also draw on scholarship outside of the field of Chinese literature. We will explore artifacts in the following categories: illustration, painting and calligraphy, seals, ceramics, furniture, and textile.

EAST 0305. China Modern: An Introduction to the Literature of Twentieth-Century China.

A general introduction to modern and contemporary Chinese literature from the May Fourth Movement to contemporary Taiwan and the People's Republic of China. Emphasizes reading of literary works in relation to topics such as cultural tradition, modernity, nationalism, revolution, class, gender, region, cultural commodification, and literary innovations. Readings in English. No previous knowledge of Chinese required.

EAST 0306. Literature and Science in Early Modern China.

This course explores the relations between Chinese literature and the studies of nature and technological know-how from 1368 to 1911. Introducing recent insight in the history of science and technology, the course challenges students to re-define science in the context of the changing Confucian curriculum, the booming market economy, and the multiethnic empire. The course investigates the ways in which the form and content of poetry, novel, and essays transformed because of their appropriation of knowledge about medicine, handicraft, and foreign lands. Topics include: encyclopedia for merchants, carpenters' spell, autofiction of Confucian engineers, novel medicine, and so on.

EAST 0307. China Through the Lens: History, Cinema, and Critical Discourse.

This is a critical introduction to the history of mainland Chinese film. It focuses on three dimensions of cinematic practice: the historical context of film productions, the specific context/form of each film, and the critical reception of Chinese films in film studies. Important themes such as nation, visual modernity, cinematic narrative, and commercialism will be studied across the three dimensions.

EAST 0309. Courtesans, Concubines, and Wives: Gender Relations in Imperial China.

This course examines gender relations in China in the imperial period, from roughly 200 BCE down to 1911 CE. By examining the categories of courtesan (entertainers), concubines (secondary consorts), and wives, we will see how the Chinese gender system evolved over time. We will examine how the gender system was both shaped by other social and cultural phenomena and in turn impacted other aspects of culture and society. The course follows a roughly chronological trajectory: each section of the course will be devoted to a particular set of historical issues that was particularly salient in that period. We will examine how gender relations intersected with philosophical ideals, political agendas, religious values, and economic developments, and how individuals navigated the gender system to construct meaningful lives.

EAST 0311. Chinese Language, Arts, and Culture.

Chinese Language, Arts, and Culture immerses students in Chinese culture through arts and language, with a three-week field trip to three of China's Four Great Ancient Capitals: Xi'an, Luoyang, and Beijing. Guided by the proverb, "Read ten thousand books and travel ten thousand miles," students explore Chinese culture by visiting museums, archaeological sites, and historical landmarks. A key visit includes the Youli Castle Site in Henan, where King Wen of Zhou created the I Ching (Book of Changes), a foundational Chinese classic. On-site visits and evening discussions focus on royal court culture (palaces, treasures, and the feudal system) and vernacular culture (Buddhism, Taoism, food, and clothing). The course follows a structure of previewing materials, visiting historical sites, and evening discussions. Top Chinese experts also give lectures on significant cultural topics, such as the evolution of dragon imagery.

EAST 0315. Beyond the K-Wave: A Deep Dive into Korea's Energy Industry.

South Korea, known globally for its vibrant culture and technological advancements, is also a leader in the energy sector. This course offers a unique opportunity to explore Korea's energy industry and culture beyond the popular K-wave. By combining industry visits, cultural experiences, and academic learning, students will gain a valuable understanding of the global energy landscape and prepare themselves for the challenges and opportunities of the future. By participating in this summer course, you will not only gain valuable knowledge about Korea's energy industry but also have the opportunity to immerse yourself in Korean culture, creating a truly enriching and memorable experience.

EAST 0401. Japan: Nature, Ritual, and the Arts.

This course is an introduction to Japanese culture and aesthetics as represented in pre-modern literature, drama, tea practices, landscape and the fine arts. Recurring themes include Japanese attitudes toward the natural world; traditional conceptions of beauty; and the function of ritual in artistic cultivation. The course is designed for students who have no previous exposure to Japanese studies at the college level; no prerequisites.

EAST 0402. Japan's Floating World.

An introduction to visual, literary, and dramatic expressions of Japan's moral and aesthetic values in the early modern period (17th-19th centuries). We will seek to identify recurring intellectual and cultural patterns, as illustrated in woodblock prints, Kabuki, puppet theatre, and popular fiction, with an eye to connections with later popular culture. Course materials are primary readings in translation, secondary scholarship, and audiovisual works. No previous knowledge of Japan or Japanese language is expected.

EAST 0403. Off the Beaten Path: A Survey of Modern Japanese Literature.

An introduction to major and minor works of Japanese literature produced during the Japanese Empire as well as in post-WWII Japan. Covered writers include canonical novelists such as Tanizaki Junichiro, Kawabata Yasunari, and Oe Kenzaburo, as well as writers lesser known outside of Japan today, including women, queers, revolutionaries and colonial/resident Koreans.

EAST 0405. From Basho to Banana: Four Centuries of Japanese Literature.

This course explores classic writers of Japanese literature written between 1600 and 2000. We will focus on both the specificity of Japanese genre as well as the historical, social relations that have shaped them-- Edo merchant culture, modernism, the avant-garde, mass culture and postmodernism, among others. Writers covered will include Ihara Saikaku, Jippensha Ikku, Higuchi Ichiyo, Natsume Soseki, Akutagawa Ryunosuke, Tanizaki Junichiro and Yoshimoto Banana. No prerequisites.

EAST 0406. Foreign Bodies in Japan, 600-1600.

Foreign bodies move through premodern Japanese literature. Fictional tales are set into motion by a Parhaean physiognomist, a Persian lumberjack, and a princess from the moon. Khitan eschatologists persuaded aristocrats to commission countless sculptures of Indian physiques and contributed to Murasaki Shikibu's existential gloom. Noble anatomies were covered by imported robes and exotic perfumes; dramatists danced like Turkic "khans." This survey traces foreign bodies' impact on literary culture from the arrival of literate Korean émigrés in the 600s until the arrival of Portuguese missionaries in the 1500s. We will also theorize our own role as foreign bodies vis-à-vis the corpus. Readings in translation. No previous knowledge of Japanese language or culture required.

EAST 0410. Introduction to East Asian Civilization: China (HIST 0410).

Interested students must register for HIST 0410.

EAST 0411. Diplomats, Drunkards, and Anarchists: Competing Visions of the Future in Japan's Global Past.

This course offers a broad introduction to the global and transnational dimensions of a cornerstone event in modern East Asian history: the 'Opening' of Japan. This historical moment connected the country with the wider world in a myriad of contradictory ways. It produced the first non-Western nation state to join the ranks of colonial 'Great Powers'. It also inspired anti-imperialists and critics of Western modernity throughout the world: from Black internationalists and Muslim intellectuals to environmental activists and anarchist revolutionaries. We will study various sources, methods, and theories to make sense of these and many more cross-border connections. We will also reflect on competing notions of historical progress that inform our interpretations of the past. By the end of the course, students will have acquired foundational knowledge and skills to scour the past for lost imaginations of the future.

EAST 0412. Off the Beaten Path: The Diversity of Modern Japanese Literature (COLT 07110).

Interested students must register for COLT 07110.

EAST 0501. Korean Youth, Identity, and Nation.

Youth contribute greatly to Korea's brand and GNP (BTS, Black Pink), yet suffer from the OECD countries' highest youth unemployment rate. Abroad, Korean youth are a silenced "model minority," mediating assimilation and parental pressures. Introducing modern history, from Confucianism, education, politics, militarism, immigration, to adoption, this interdisciplinary course will analyze recent media (Kdramas, Minari, Minor Feelings) mirroring identity production today, but through the eyes of Korea's youth and their complicated relationship to Korean society. We will study compressed modernity, cram schools, gender, the cult of masculinity, the church, the LGBTQ community, eSports, youth mental health, and post-graduation futurities.

EAST 0531. Complicating Korean History: Topics and Issues.

Korea is known for its musicians, serene palaces, and North Korea. Under these ubiquitous stereotypes, however, it has an even more fascinating culture and history, punctuated by numerous invasions, colonialism, and division. In this inter-disciplinary survey course, we explore various facets of Korea North and South, from foundation myths to contemporary life and address Korean history broadly, examining key debates around origins, colonialism, and division. We move chronologically through major cultural, political, economic moments that inform Korean identity, arriving at the particulars of North and South Korea today, from daily life, gender, the diaspora, to KPop, and consider peninsular futurity.

EAST 0532. Korean Controversies and Negotiations: Moving Beyond Colonial Origins of National Division.

Covering the broad sweep of Korean modernity and contemporary history, this course will introduce and debate the most fundamental and contested issues in Korea today. In this theme-based course, students will have the opportunity to consider and debate these topics in an informed and balanced context which takes into account several perspectives of debate, through informed lectures and historical insights. These conversations will equip students to negotiate Korean identity and politics within a larger global context, beyond the Korean nation into the boardrooms of global corporate entities, the United Nations conference and other professional environments, outside the ivory tower.

EAST 0533. Beyond Gangnam Style: Seoul, Dislocation, and the Search for Place.

Seoul has become a celebrated cultural hub both within Asia and globally. However, underneath the glitter of modernity visible in the urban sprawl of Seoul's "Gangnam Style" are forgotten stories, stratified claims, and a tumultuous history covering 35 years of Japanese rule, a war, and the ongoing presence of 28,500 American troops. This course will take an interdisciplinary approach to Seoul incorporating history, urban culture, literature and visual media, and engage key concepts informing the burgeoning field of Korean studies. Attention will be given to contestations over space, IT infrastructure, architectural spaces, and the emergence of new subjectivities.

EAST 0534. Patriots, Communists, and Traitors in Modern Korea.

Korean history and politics is polarized by labels of "patriot," "traitor," "right wing," and "communist." Considering global capitalism and its complicity with colonialism, this course will examine Korea following the 1917 Bolshevik Revolution and 1919 post-Wilsonian moments, and understand how these international events changed domestic politics. Through close readings of key historical documents, we will uncover the colonial origins of Korean Communism and radicalism, which both still hold great influence on the popular imagination and effect contemporary society in the two Koreas in complicated ways.

EAST 0560. Forms of Attachment: Writing Love in Korean Literature.

This course looks at literature to explore how intimacy, passion and commitment have been socially sanctioned and redefined in Korea. From Yi Dynasty tales to modern-day webtoons, we will explore the roles different genres have played in the generation of forms of human affect that are themselves intimately tied to Korea's tumultuous history. What does it mean to love, and to write about love, under the conditions of Neo-Confucianism, empire, war, national division, authoritarianism, and the neoliberal marketplace? No prerequisites.

EAST 0610A. The Far Side of the Old World: Perspectives on Chinese Culture (COLT 0610A).

Interested students must register for COLT 0610A.

EAST 0701. Empire and its Aftermath: Modern Culture in Japan and the Koreans.

This course introduces the modern cultures of Japan and Korea through an examination of events, artifacts, and cultural practices. With a broad understanding of culture as a general process of artistic and intellectual development, as a body of material artifacts, and as a social practice of ordinary life, attention will be brought to the relationship of high culture, popular media and political activism to the abiding structures of empire. Topics covered may include: early colonial fiction, the re-creation of tradition, the proletarian arts, myth in the DPRK, ethnic minority experience, the globalization of popular culture, girls' culture, and translational activism.

EAST 0703. Confucianism and Its Critics.

This course confronts the changing historical phenomenon we call "Confucianism" on its own terms, as represented by its advocates, as well as from the perspective of its interlocutors and critics. It is an opportunity to become familiar not only with the Confucian canon and its main commentarial traditions, which undergirded education in East Asia into the nineteenth century, but also with the ways in which these ideas were rejected, adjusted, and reconfigured in early Daoist discussions, Neo-Confucian debates with Buddhists, and modern disputes over their socioeconomic, political, and/or gender impact. Readings are drawn from primary Chinese, Korean, and Japanese texts in translation, and from modern interpretations of Confucianism and its legacy. The course format is primarily discussion and short lecture. No prerequisites. Counts for concentration credit in East Asian Studies and Religious Studies.

EAST 0710U. Leaves of Words: A Survey of Japanese Literature (COLT 0710U).

Interested students must register for COLT 0710U.

EAST 0910D. Two Virgins in the Attic: Advanced Japanese Readings in Canonical and Popular Literature (JAPN0910D).

Interested students must register for JAPN 0910D.

EAST 1120K. Skeptical Traditions East and West (CLAS 1120K).

Interested students must register for CLAS 1120K.

EAST 1202E. Extreme Asian Cinema: Contemporary Genre Cinemas in an East Asian Context (MCM 1202E).

Interested students must register for MCM 1202E.

EAST 1210. Imagining Modern China.

This course introduces students to the literary and cultural milestones in twentieth-century China, highlighting the capacity of literature as a form of historical engagement and ethical reasoning. Featuring masterpieces by mainland Chinese as well as Sinophone and ethnic minority writers, and translation works and critically acclaimed films, the course unpacks the multivalence of Chinese literary and cultural modernity as well as that of the very term "China." Issues for discussion include translation and intercultural encounters, nationalism, tradition, gender, the revolutionary legacy, cultural identity, diaspora, and literary citizenship. All readings and discussions are in English.

EAST 1230. Edo Woodblock Printing.

This course provides an introduction to Japanese art and cultural history through a survey of woodblock print media from its emergence in the mid-17th century to the end of the early modern era. Topics for consideration include East Asian pictorial traditions, the publishing industry, censorship, social identity, and specialist print communities. The course will track the development of Japanese woodblock printing from its origins in printed books and monochrome prints, and the transition to hand-coloring and multi-colored printing that facilitated a highly nuanced media form, via the publishing industry's shifting relationship with the authorities, and influences from China and the West.

EAST 1301. Word for Word: Linguistic Principles in Chinese-English Translation.

English has tense, Chinese has aspect; English has inflection and conjugation, and Chinese uses word order and function words to sort out syntactic structures. This course will explore and bridge such great differences between the two languages through linguistic readings and translation exercises.

Prerequisite: two years of Chinese study or the equivalent proficiency.

EAST 1302. Returnees in China's Modernization.

This course examines the impact on contemporary China of returnees, people who having left China to study abroad have now returned home and become reintegrated into society. Focusing on a series of in-depth studies of returnees who have carved out professional identities in the commercial world, the state, and civil society. The returnee experience will be examined from 2 angles: the manner by which contemporary returnees negotiate Chinese tradition and Western learning, and the differences between this cohort's experience and that of previous generations of returnees in China's now century and a half long period of modernization.

EAST 1303. Chinese: A History of the Language.

This course traces the historical evolution of modern Chinese, commonly known as Mandarin. We will examine the uniqueness of Chinese characters, and explore their relationship to other features of the language, including word formation, phonology, grammar, and dialects. The goal will be to understand the manner by which the written script has become so central to the development of Chinese civilization.

EAST 1304. Crafting Early Modern China: Handicraft, Witchcraft and Statecraft.

This course examines how Chinese cultural industry was shaped by socio-political institutions and religious practice between 1400 and 1900 CE. The course highlights the concept of craft, broadly understood as the ways of making artifacts and building social community by using environmental resources and through micro-political negotiations in everyday life. The course aims to equip students in ways to decipher the political, religious and gendered significance embedded in cultural products, including literature and decorative arts. We will explore artifacts from the following categories: literary illustration, painting and calligraphy, seals, ceramics, furniture, and textiles. Prerequisites: None.

EAST 1307. Sex and Society in Modern China.

This course traces changing gender relations across China's "long 20th century." We begin by examining lives and relationships of men and women in the late 19th century, before the fall of the Qing dynasty. We then investigate the ways that external and indigenous forces have changed (or not) gender relationships during the rapid and often violent transitions of the twentieth century, from the Republican period (1911-1949) to the People's Republic; from the Nanjing Decade (1927-37) to the Maoist period (1950-1976) and the period of economic reform (1976-present day). Why did Chinese politicians see the reform of family and gender relations as central to their larger political goals? What were the "new" gender relations supposed to be? How was gender reform carried out (or not) and what were its effects, intended and unintended?

EAST 1308. Transnational Chinese Cinema.

How was cinema perceived when it was first introduced into China, and what discussions did the film audience and critics have in common with their counterparts in the West? Did you know that fashion designers and "it girls" in 1930s China would immediately copy and disseminate the latest looks and clothing after watching a Hollywood film? This course offers a survey of Chinese cinemas since the early 20th century, situating them in a global context of border-crossing movements of media technologies, cinematic forms, and artistic styles. We will watch and learn to critique significant works produced in Shanghai, Hong Kong, Taiwan, and beyond; contribute to the ongoing intellectual conversations on the transnational cultural, political, and technological interactions; and study how they shape and are shaped by the body of films that were referred to as "Chinese cinema."

EAST 1309. Media, Environment, and the (Post-)Human in Contemporary China.

This advanced undergraduate seminar explores relationships between media, environment, and evolving conceptions of the human in contemporary China. Through an interdisciplinary approach, we examine how various media forms have engaged with China's ecological challenges while redefining notions of humanity in the face of historical, technological and environmental changes. We investigate environmental and media landscapes from socialist China to the post-pandemic era, covering topics such as human-environment relationships during the Mao era, post-socialist (post-)humanism, Chinese ecocinema, apocalyptic imagination in recent sci-fi blockbusters, pandemic narratives, and social media. The course also explores emerging media technologies, including virtual reality, and their implications for human-media interactions. Students will engage with theoretical frameworks from media studies, environmental humanities, posthumanist theory, and Chinese cultural studies. Analysis will cover diverse primary sources including films, literature, and digital media.

EAST 1310. Silk Road Fictions.

The course introduces students to cross-cultural comparative work, and to critical issues in East-West studies in particular. We will base our conversations on a set of texts related to the interconnected histories and hybrid cultures of the ancient Afro-Eurasian Silk Roads. Readings will include ancient travel accounts (e.g., the Chinese novel *Journey to the West*, Marco Polo); modern fiction and film (e.g., Inoue Yasushi, Wole Soyinka); and modern critical approaches to the study of linguistic and literary-cultural contact (e.g., Lydia Liu, Emily Apter, Mikhail Bakhtin, Edward Said). Topics will include bilingual texts, loanwords, race and heritage, Orientalism. No prior knowledge of the topic is expected and all texts will be available in English.

EAST 1311. Reading the Song Dynasty.

The Song dynasty (960-1279) was among the most important and transformative periods in Chinese history. The Song was marked by rapid economic growth; new technological discoveries; the expansion of overseas trade networks; the development of new forms of elite status; the dramatic enlargement of the literate elite, and new family and kinship structures. These changes, in combination with the increasingly wide use of printing in this period, created new kinds of sources for historians to study. This course introduces students to a variety of Song textual genres and how they can be used as sources for historical research. In addition to some secondary works in English, we will explore primary source genres ranging from government documents, local gazetteers, and biographical accounts to scholar's "notebooks" (*biji*), personal letters, and poetry. Basic competence in Classical Chinese (*gu wen*) is required.

EAST 1370. Performances in the Asias (TAPS 1270).

Interested students must register for TAPS 1270.

EAST 1401. Japanese Linguistics: Communication and Understanding Utterances.

Introduces a linguistic analysis of Japanese language to attain an overview of structure and a foundation for understanding how grammar relates to various modes of communication. Topics include discourse analysis, pragmatics, communicative intention, communication strategies, and intercultural communication gaps. Linguistic data is drawn from films and fiction. Prerequisite: basic knowledge of Japanese grammar, vocabulary, and linguistics. Enrollment limited to 20. Basic knowledge of Japanese language and general linguistics. Consult with the instructor.

EAST 1403. Buddhist Classics.

An opportunity to read and understand the canonical texts of East Asian Buddhism. Through close reading, written analysis, and discussion, participants will become conversant with the major Mahayana Buddhist teachings in their original scriptural or literary articulations. Selected later interpretations may also be considered. All readings are in English translation. Previous study of Buddhism is recommended, but not required. Enrollment limited to 10 students.

EAST 1410N. Lost in Translation: The Adaptation of Literature to Film in Japan (COLT 1410N).

Interested students must register for COLT 1410N.

EAST 1412. Sinners and Seers in Japanese Literature.

Exploration of Japanese Buddhist sensibilities as expressed in poetry, popular tales, drama, and fiction. Recurring themes include wrongdoing and its karmic consequences; renunciation; tension between aesthetic and religious commitments; pilgrimage as creative process; the role of nature in the quest for enlightenment. Reading and discussion in a seminar-style format. A previous course in Buddhism or East Asian culture is helpful but not required. Counts for concentration credit in Religious Studies and East Asian Studies.

EAST 1415A. Classical Daoist Thought (RELS 1415A).

Interested students must register for RELS 1415A.

EAST 1420. The Confucian Mind.

This course explores the Neo-Confucian tradition, a pervasive influence in the intellectual, educational, and political life of China, Korea, and Japan from late medieval through early modern times. Emphasis is on conceptions of the mind and their implications for moral cultivation and social action; the legacy of Confucian values in modern East Asia may also be considered. Readings are primary texts in translation and selected secondary works; the format is primarily discussion. Recommended prerequisite: RELS 0040. Not open to first year students. Enrollment limited to 20.

EAST 1430. Classics of East Asian Buddhism (RELS 1430).

Interested students must register for RELS 1430.

EAST 1430C. Classical Japanese Poetry (COLT 1430C).

Interested students must register for COLT 1430C.

EAST 1430T. Leaves of Words: Japanese Poetry and Poetics (COLT 1430T).

Interested students must register for COLT 1430T.

EAST 1440. Themes in Japanese Buddhism: Original Enlightenment (RELS 1440).

Interested students must register for RELS 1440.

EAST 1501. Korean Culture and Film.

This course aims to introduce and explore various aspects of Korean history, culture and society. Students are expected to develop a comprehensive understanding of Korean culture by examining contemporary films that pertain to issues such as national identity, history, international relations, religion, Korean life style, and family life. Enrollment limited to 20.

EAST 1502. The Korea Brand: Understanding KPop, Film, and Culture of the Two Koreas in the Global Context.

The global media has recently showcased two newsworthy events related to Korea: BTS at the 2018 BMAs, and the Inter-Korea Summit. This course examines the arrival of "Korea" globally, from the West's fascination with the North Korean nuclear crises, to the hype around KPop, KFilm, cosmetics, food, and eSports. We will question the fascination with NK in US media outlets, versus its treatment in SK media. The ways in which the particular, local, and authentic, within Korean cultural production negotiates the global market is of particular interest.

EAST 1503. Korean Film and Culture: The Appeal of Korean Film.

This introductory course offers an overview of Korean film production from its colonial beginnings to the present, linking film with major historical, political and cultural events or shifts over the past century. Topically organized, the course will explore issues of cultural identity in the ways that the domestic movie industry has interacted with the foreign filmic audience. Focusing on how film narratives can influence (rather than reflect) social reality, we will analyze the imagination and construction of national identity and cultural tradition (and its critique) across these films.

EAST 1504. Asia Extreme: Beauty and Violence in Korean Media.

Korean films are often identifiable within two distinct tropes – the beautiful, tranquil Orient and a violent, frenetic hyper-modernity. Koreans, however, grapple with identifying themselves and their modern experiences differently beyond how the international community and the "West" sees them – as the exotic "East." Seeking to understand and complicate this dichotomy, we will explore how Korea has struggled to hone and complicate national identity (their critique, their futurities) through film, and examine how Korea has been struggling since the 1990s to overcome the national in the face of globalization and cosmopolitanism to address the local and the liminal.

EAST 1505. Two Koreas.

This course examines the historical formation of the South and North Korean societies from the mid-1940s up to the present moment. Among the topics discussed are colonial collaboration and resistance, Korea in the Cold War order, postwar industrial and economic reforms, and the global consumption of Korean culture. We will look at these topics through a wide range of sources (including films, memoirs, diaries, art, and scholarly assessments) that reflect the diversity of experiences of Koreans across social, class, gender, and regional lines. In analyzing these sources and their representations, we will pay close attention to the politics of images, the role that images play in producing cultural meaning, visibility and power relations, and images as forms of visual communication. We will also examine how images circulate through our digital environments and networks, how they shape our perception of the

EAST 1510. Chinese: A History of the Language.

This course traces the historical evolution of modern Chinese, commonly known as Mandarin. We will examine the uniqueness of Chinese characters, and explore their relationship to other features of the language, including word formation, phonology, grammar, and dialects. The goal will be to understand the manner by which the written script has become so central to the development of Chinese civilization.

EAST 1510A. China's Late Empires (HIST 1510A).

Interested students must register for HIST 1510A.

EAST 1530. Modern Korea (HIST 1530).

Interested students must register for HIST 1530.

EAST 1540. Power, Profit, and Pillage: The Rise and Fall of Trading Kingdoms in Asia (ANTH 1540).

Interested students must register for ANTH 1540.

EAST 1701. Women's Literature in Japan and Korea.

This course focuses on Japanese and Korean women's literature from the modern period, giving particular attention to the historical issues and the narrative strategies that play out in celebrated works of women's fiction. The goal of the class is to deepen our understanding of the universal and particular aspects of women's writing in Japan and Korea and at the same time to learn an idiom with which to talk about literary form. Previous coursework in East Asian Studies or Literary Studies is suggested but not required. Instructor permission required.

EAST 1702. Pacific Indigenities: From Māori Mythology to James Cameron's Avatar.

What is indigeneity? The answer is all but straightforward, especially in the context of the Western Pacific. We will examine a deeply eclectic mix of sources of Pacific indigeneity – from Māori Mythology, the Kuroshio Current, and Okinawan cuisine to Southeast Asian revolutionary thought, Oceanian cosmology, and James Cameron's Avatar. In doing so, we will lay bare the intricacies of the concept of indigeneity as they relate to one of the world's hotbeds of bio- and linguistic diversity. Paying close attention to forms of knowledge production both within and beyond the academy, this course explores Pacific manifestations of the global indigenous movement.

EAST 1704. Anarchisms in Asia and Beyond.

This course examines the transnational legacy of anarchist thought and action as it emerged in various places in Asia from the 19th century onward. We will explore anarchism as a worldly phenomenon rather than an import from 'the West' – paying special attention to how it emerged out of connections between aristocrats, commoners, colonial bureaucrats, plantation workers, first-wave feminists, and ethnographers in Japan, China, Philippines, Indonesia, Australia, and elsewhere. Working with primary source materials will give you a taste of what it is like to be a scholar of transnational intellectual history – a detective and storyteller in one.

EAST 1706. Transnational Feminist Knowledge Production and Practices: Perspectives from East and West Asia..

This advanced interdisciplinary seminar aims to challenge U.S.- and Euro-centric historiographies as well as dominant and homogenizing framings of feminism, whether empirically driven or theoretical. Bringing together transnational critiques, regional expressions, and local historiographies, the seminar explores new feminist research spaces and worldviews, with a specific focus on East and West Asia (Middle East). What are the historical trajectories of feminism in these two regions generally associated with diverse cultural traditions and authoritarian politics? What are the political strategies, artistic imaginations, and alternative visions articulated by feminists in these two regions? The course will delve into these questions with particular reference to transnational feminist politics in both activist struggles and cultural practices. It will invite students to consider questions concerning transnational feminist solidarities, knowledge production, power dynamics, and tensions and conflicts within and between feminist groups and initiatives.

EAST 1707. Uneasy Embodiments: Racial and Gendered Objecthood (TAPS 0800P)..

Interested students must register for TAPS 0800P.

EAST 1810X. Mirror for the Romantic: *The Tale of the Gengi* and *The Story of the Stone* (COLT 1810X).

Interested students must register for COLT 1810X.

EAST 1811L. Travel and Tourism through the Ages (COLT 1811L).

Interested students must register for COLT 1811L.

EAST 1910. Independent Study.

Sections numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 1920. Senior Reading and Research: Selected Topics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 1931. Market Economy, Popular Culture, and Mass Media in Contemporary China.

Course focuses on mainland Chinese cultural and media production since the mid 1980's, when China began transforming itself culturally and economically into a capitalist society with socialist characteristics. Traditional values, socialist legacy, commercial forces, and globalization have all played significant roles in the ongoing transformation. The goal of the course is to examine the complex interactions among diverse historical forces in a rapidly changing China. Course taught in Mandarin Chinese.

EAST 1932. Chinese Women, Gender and Feminism from Historical and Transnational Perspectives.

This seminar course is designed to critically re-evaluate (re)presentations of Chinese women, gender, and feminism in historical, literary, and academic discourses. It examines a diverse body of texts produced through different historical periods and in different geopolitical locations. It emphasizes gender as both a historical construct(s) among competing discourses and as a material process of individual embodiment and disembodiment. The goal of the course is to help advanced students understand Chinese history from a distinctly gendered perspective, to recognize women's roles in history and writing, and to develop a reflective, cross-cultural approach to gender, politics, and the self.

EAST 1935. Prose of the World: Understanding Late Imperial China through Fiction and Belles-Lettres.

This course introduces the culture and society of late imperial China through fiction and prose written between 1368 and 1911. The course aims to analyze literary work as the interface of social development and cultural renovation. A chronological exposure to various geographical regions is structured under three conceptual frameworks: cultural belatedness as abundant historical reference; early modernity as commercialization; and pre-modern China encountering the world. The balanced selection of readings in four major literary genres, written by male and female authors, cover topics including: social uprising, the imperial court, civil examination, diplomacy, urban market, travel, religious cult, and courtesan culture. Prerequisites: None.

EAST 1936. Memory and Justice in East Asia.

How does history affect the present, the political, the social, and the personal around East Asia? What are the social mechanisms and frameworks of affect and knowledge that have shaped historical memories of humiliation, violence, trauma, and culpability? This seminar focuses on several key topics to explore modern modes of remembering and justice seeking including: mapping memory; imperialism and the museum; wartime conduct and war crimes trials; political violence and transitional justice; and grassroots organizing, community justice, ritual actions, and other non-state memory work. Final projects can be web portfolios or podcasts on an event or phenomenon of your choice.

EAST 1937. From Desktop to Stage: Drama and Performance in Late Imperial China.

This course examines the multiple social and aesthetic functions of late imperial Chinese theatre between 1368 and 1840: theatre as lyrical self-expression, political action, ideological propaganda, and/or religious ritual. Close examination of translated plays and their sociohistoric contexts are combined with multimedial approaches that explore woodblock illustration, stage adaptation, and film related to the selected plays. The course covers topics that range from literati masterpieces, theatrical training, props and costumes, regional theatres, to women's ballads. Prerequisites: Some knowledge of Chinese history is preferred but not mandated.

EAST 1941. Translating Japanese: Short Fiction, Poetry, Film and Manga.

This seminar/workshop discusses a broad range of narrative arts produced over the past 100 years in Japan, and practices the art of translating them. Drawing rigor from the field of linguistics and translation theory, we shall make central to our effort of analyzing Japanese cultural productions an attentiveness to the historicity of language and a self-consciousness of our roles as cultural interpreters. While the course will focus on mid-20th century Japanese short fiction, we will also work on poetry, music, manga, animation, and film, depending on the interests of enrolled students. Pre-requisites: JAPN 0600 or equivalent. Instructor permission required.

EAST 1942. Queer Japan and Beyond.

This seminar investigates cultural practices enacted by Japanese gays and lesbians, or otherwise related to same-sex attraction. How have sexual identities traditionally been constructed in Japan, and how has the modern period transformed them? How has same-sex sexuality become figured in the Japanese art, literature and popular culture of the 20th century; and how have the forces of a global LGBT culture interacted with the specific experiences of a same-sex community in Japan? This class explores questions about queer history, writing and cultural practice by looking at particular moments in the Japanese past and present.

EAST 1980. Reading and Writing of the Honors Thesis.

Prior admission to honors candidacy required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 1981. Reading and Writing of the Honors Thesis.

Prior admission to honors candidacy required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 2000. Grounds of Comparison: Approaching the Humanities from "Elsewhere" (HMAN 2402F).

Interested students must register for HMAN 2402F.

EAST 2450. Exchange Scholar Program.**EAST XLIST. Courses of Interest to Concentrators.**

Japanese

JAPN 0100. Basic Japanese.

Introduction to Japanese language. Emphasizes the attainment of good spoken control of Japanese and develops a foundation of literacy. No prerequisites. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in JAPN 0200 covers the entire year and is recorded as the final grade for both semesters. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

JAPN 0150. Advanced Beginning Japanese.

Designed for those who have had high-school Japanese or other Japanese language experience. An opportunity to organize previous knowledge of Japanese and develop a firm basis of spoken and written Japanese. Prerequisite: Reading and writing knowledge of Hiragana, Katakana, and some Kanji. Placement test required. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in JAPN 0250 covers the entire year and is recorded as the final grade for both semesters. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

JAPN 0200. Basic Japanese.

Introduction to Japanese language. Emphasizes the attainment of good spoken control of Japanese and develops a foundation of literacy. This is the second half of a year-long course. Students must have taken JAPN 0100 to receive credit for this course. The final grade for this course will become the final grade for JAPN 0100. If JAPN 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

JAPN 0250. Advanced Beginning Japanese.

Designed for those who have had high-school Japanese or other Japanese language experience. An opportunity to organize previous knowledge of Japanese and develop a firm basis of spoken and written Japanese. Prerequisite: Reading and writing knowledge of Hiragana, Katakana and some Kanji. Placement test required. This is the second half of a year-long course. Students must have taken JAPN 0150 to receive credit for this course. The final grade for this course will become the final grade for JAPN 0150. If JAPN 0150 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

JAPN 0300. Intermediate Japanese.

Further practice of patterns and structures of the language. Readings are introduced on aspects of Japanese culture and society to develop reading and writing skills, enhance vocabulary, and provide points of departure for conversation in Japanese. Prerequisite: JAPN 0200 or equivalent. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

JAPN 0400. Intermediate Japanese.

See Intermediate Japanese (JAPN 0300) for course description. Prerequisite: JAPN 0300 or equivalent. Enrollment limited to 18.

JAPN 0401. Japanese Language Through Popular Culture.

Japanese pop culture has been disseminated worldwide and it is one of the top reasons why people start studying Japanese today. This content-based language course examines various aspects of Japanese pop culture including but not limited to manga, anime, and video games. While students discuss topics related to Japanese pop culture, they will also learn grammar structures that enable them to write formal essays in Japanese. Through the materials of Japanese pop culture, students will also develop the skills needed to succeed in today's world, such as critical thinking, problem solving, creativity, digital literacy, and communication. Above all, this course will emphasize creativity and help students learn how to attract people.

JAPN 0500. Advanced Japanese I.

Continued practice in reading, writing, and speaking. Emphasizes the development of reading proficiency and speaking in cultural contexts. Students read actual articles and selections from Japanese newspapers. Course includes translation, with writing and discussion in Japanese. Films and video tapes are shown as supplementary materials. Prerequisite: JAPN 0400 or equivalent.

JAPN 0600. Advanced Japanese I.

See Advanced Japanese I (JAPN 0500) for course description.

JAPN 0700. Advanced Japanese II.

Reading of articles from Japan's press with discussion in Japanese. Focuses on explanations and drills on the fine points in grammar and vocabulary as well as on the practice of writing in various styles. Movies and video tapes are used as supplementary materials. Prerequisite: JAPN 0600 or equivalent.

JAPN 0710. Japanese Cities: Tokyo and Kyoto.

The goal of this course is to develop the ability to use Japanese source materials for research in social sciences. Course covers lifestyles in two contrasting cities, Tokyo and Kyoto. Topics include topography, environmental issues, houses, urban life-styles, and natural habitation. We will ask questions: why houses are so compact in cities; why crows and boars pick on garbage, etc. Information sources are films, videos, and websites in addition to textbooks. Prerequisite: JAPN 0600 or equivalent. Enrollment limited to 20.

JAPN 0711. Japanese Linguistics.

This course will provide a structural overview of the Japanese language. Students will learn how to develop skills for analyzing the language through looking at sounds, meaning, and grammar. Topics include linguistic analysis of various sentence structures that students often find difficult to use, learning to choose words and sentences in appropriate situations, looking at the relation between language and culture.

JAPN 0712. Advanced Reading for Research.

This is an advanced reading course. Class activities include reading and translation of scholarly articles in the fields of students' interests, and of selected writings in humanities and social sciences in general or in broad perspectives. Readings include literary essays, fiction and short stories, articles from major newspapers, weekly and monthly journals/magazines. Prerequisite JAPN 0600 Advanced Japanese II.

JAPN 0800. Advanced Japanese II.

See Advanced Japanese II (JAPN 0700) for course description.

JAPN 0810. Classical Japanese.

Introduction to classical Japanese language (kobun), a.k.a. literary Japanese (bungo). Based on the Early Middle Japanese of 9th-through-11th-century aristocrats, this language was in use well into the 20th century. It opens the worlds of storytelling noblewomen, poet-monks, love-stricken samurai, and modern Japan's "founding fathers." Its grammar reveals new ways to think about time, action, and experience. Its study affords you an enhanced command of the contemporary language. Parsing authentic passages from famous works, we learn to read premodern Japanese texts with the aid of dictionaries, commentaries, and digital resources.

Prerequisites: This course is taught in English with an English-language textbook, although some supplemental resources are available only in modern Japanese. At minimum, completion of (or simultaneous enrolment in) intermediate modern Japanese is recommended. If in doubt, consult with instructor.

JAPN 0811. Business Japanese.

Designed to teach post-advanced level Japanese language, with the focus on effective oral and written communication in business situations, this course emphasizes vocabulary building in the areas of business and economics, use of formal expressions, business writing, and conversation and presentation skills, as well as familiarizing students with Japanese corporate culture, protocol, and interpersonal relationships. Instructor permission required.

JAPN 0812. Japanese Language and Society through Contemporary Film.

This course aims at further development of your linguistic proficiency and broadening your knowledge of Japanese language, culture, and society by studying contemporary Japanese film through the lens of social justice. Films are selected from a wide range of genres: mainstream blockbusters, documentaries, and anime. Our discussions will focus on the cinematic treatment of diversity and social justice in Japan, including issues related to racial/ethnic and sexual minorities in Japan (Ainu, burakumin, Okinawan, Zainichi, "Half", LGBTQ), gender discrimination, economic inequality, and mental/physical disability. Prerequisites: JAPN 0700 or equivalent, Japanese heritage language speakers with instructor's consent.

JAPN 1010. Readings in Contemporary Japanese Fiction.

Introduces contemporary short stories and novellas by award winning writers published after 2000. Authors include Yoko Ogawa, Natsuo Kirino, Jiro Asada, Bin Konno. We will analyze why the great many readers are drawn into these literary works through socio cultural background of urban communities. Prerequisites: JAPN0700 or instructor permission.

JAPN 1990. In Their Own Words: Advanced Readings in Japanese Literature and Criticism.

This advanced Japanese literature class offers students the chance to read works of modern Japanese literature in dialogue with important works of criticism as we work our way through each decade of the 20th century. Readings will be in both Japanese and English. We will consider both the formal properties of fiction and the historical pressures of gender, ethnicity, class, imperialism and globalization. Authors vary depending on student interest, but often include writers such as Natsume Soseki, Abe Kobo, Ch'oe Chông-hûi, Kono Taeko, and Kawakami Hiromi as well as celebrated Japanese critics such as Maeda Ai and Komori Yoichi.

Korean**KREA 0100. Korean.**

Begins with an introduction to the Korean writing system (Hangul) and focuses on building communicative competence in modern Korean in the four language modalities (listening, speaking, reading, writing). Provides a foundation for later work in spoken and written Korean. Five classroom hours per week. No prerequisite. Enrollment limited to 18. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in KREA 0200 covers the entire year and is recorded as the final grade for both semesters.

KREA 0200. Korean.

Begins with an introduction to the Korean writing system (Hangul) and focuses on building communicative competence in modern Korean in the four language modalities (listening, speaking, reading, writing). Provides a foundation for later work in spoken and written Korean. Six classroom hours per week. Enrollment limited to 18. This is the second half of a year-long course. Students must have taken KREA 0100 to receive credit for this course. The final grade for this course will become the final grade for KREA 0100. If KREA 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

KREA 0250. Elementary Korean for Advanced Beginners.

Elementary Korean for Advanced Beginners is designed for heritage students who have a significant listening and speaking background, either from prior formal learning or previous exposure to a Korean-speaking community, but do not have sufficient basic skills in reading and writing. This introductory Korean course places more emphasis on building an understanding of the fundamental structure of the language and enhancing reading and writing skills by reinforcing grammar and vocabulary. After successful completion of this course, students are expected to be able to understand the main ideas or some facts from simple texts dealing with basic personal and social needs, to be able to meet a number of practical writing needs, and to become more familiar with various aspects of Korean culture and society.

KREA 0300. Intermediate Korean.

An intermediate course in Korean designed to further communicative competence in spoken Korean and to provide additional reading practice in stylistically higher level materials that are progressively integrated into the given dialogues. Discussions on various aspects of Korean culture and society. Five classroom hours per week. Prerequisite: KREA 0200 or instructor permission.

KREA 0400. Intermediate Korean.

See Intermediate Korean (KREA 0300) for course description. Prerequisite: KREA 0300 or equivalent.

KREA 0450. Intermediate Korean for Advanced Beginners.

As a continuation of KREA0250 (Elementary Korean for Advanced Beginners), this course is also designed for heritage learners of Korean who have a foundational understanding of the language and wish to rapidly advance their proficiency. Focusing more on expanding vocabulary, refining grammar, and enhancing both oral and written communication, the course addresses the specific needs of heritage learners. Emphasis will be placed on conversational fluency, including smooth use of honorifics and cultural literacy. Students will explore authentic materials, engage in structured dialogues, and participate in discussions that connect language learning to their personal and cultural experiences. This course is ideal for learners who want to strengthen their ties to the Korean language and culture while accelerating their language learning journey.

KREA 0500. Advanced Korean.

Aims to help students develop an advanced level of communicative competence, with special focus on enhancing their reading comprehension, essay writing, and discourse (discussion and presentation) skills. Authentic reading materials from a variety of sources will be used to introduce various topics and issues pertaining to Korean society and culture, thus students' cultural understanding will also be enhanced. Prerequisite: KREA 0400 or equivalent or permission of instructor.

KREA 0600. Advanced Korean.

See Advanced Korean (KREA 0500) for course description. Prerequisite: KREA 0500 or equivalent or permission of instructor.

KREA 0910. Media Korean.

Develop linguistic competence and deepen cultural understanding through exposure to a variety of media sources. Built on the Content-based Instruction model and Genre-based Approach. Discuss current Korean affairs and core issues of culture based on assigned materials. Develop reading and listening comprehension skills through pre-class activities, oral proficiency through in-class discussion and presentation, and writing proficiency through assigned essays writings, in addition to various integrative tasks. Tuesday classes will focus on comprehending the text and source materials, Thursday classes will focus on related tasks and activities. Enrollment limited to 20. Conducted entirely in Korean.

KREA 0911. Korean Culture and Society.

Develops oral proficiency in Korean language through a variety of readings on Korean culture and society. By reading about and discussing important aspects and core issues of Korea, students enhance their speaking competence and cultural understanding. Prerequisites: KREA 0300 and 0400 or permission of instructor. Enrollment limited to: 15.

KREA 0912. Business Korean.

For students who are interested in Korean culture in general and business culture in particular, and in improving their Korean language skills in a business context. The course not only focuses on business and economy-related words and expressions, but also on developing learners' confidence in business writing, conversation and presentations in Korean. Enrollment limited to 15. Prerequisite: KREA 0600 or instructor's permission.

KREA 0913. The Korean Vision: A Debate.

The contemporary Korean society has undergone significant transformation in the past few decades, not only on the personal level, such as changes in personal life style and family structure, but also on the public level, such as economic development and political affairs. Various issues due to these changes have sparked a much heated debate within Korean society. This course will look into some of these major controversial issues with texts and media materials. Through this content-oriented advanced level language course, students will be able to improve their Korean language proficiency, as well as deepen their understanding of Korean culture and society. Prerequisite: KREA 0600. Enrollment limit to 18.

KREA 1090. Translating Korean: Fiction, Poetry & Film.

This class explores the theory and practice of translation in the context of Korean cultural production. Each week we shall grapple with a particular issue in translation studies in dialogue with a Korean-language text. By the end of this course students should be able to locate the tools necessary to carry out translations from Korean to English, to demonstrate an understanding of translation as a craft with its own standards, responsibilities, and complexities, and to have completed a significant translation project themselves. Learners of the Korean language who have completed Korean 600 as well as native speakers of Korean are welcome.

KREA 1950W. Translating Korean: Fiction, Poetry, Film and K-Pop (EAST 1950W).

Interested students must register for EAST 1950W.

Vietnamese**VIET 0100. Beginning Vietnamese.**

This course is the first half of a year-long introduction to Vietnamese designed for absolute beginners or students with very little prior of Vietnamese. It aims to build up a solid foundation of pronunciation and grammar for your Vietnamese language studies and allow you to feel confident in communicating about everyday situations. This course will get you speaking, listening, writing, reading, and understanding aspects of Vietnamese culture through authentic conversations, language presentation, and extensive practice and review.

VIET 0200. Beginning Vietnamese.

VIET 0200 is the second half of a year-long introduction to Vietnamese designed for absolute beginners or students with very little prior knowledge of Vietnamese. It aims to build up a solid foundation of pronunciation and grammar for your Vietnamese language studies and allow you to feel confident in communicating about everyday situations. This course will get you speaking, listening, writing, reading, and understanding aspects of Vietnamese culture through authentic conversations, language presentation, and extensive practice and review.

VIET 0300. Intermediate Vietnamese.

This course is designed for students who have completed the second semester of Vietnamese VIET 0200 or have an equivalent level of proficiency. This course will expand your structures and knowledge of the Vietnamese language and multifaceted culture through idioms, proverbs, dialogues, and stories. Classroom activities and practices will help you communicate effectively and absorb meaning through speaking, listening, reading, and writing.

VIET 0400. Intermediate Vietnamese.

VIET 0400 is designed for students who have completed the third semester of Vietnamese VIET 0300 or have an equivalent level of proficiency. This course will expand your structures and knowledge of the Vietnamese language and multifaceted culture through idioms, proverbs, dialogues, and stories. Classroom activities and practices will help you communicate effectively and absorb meaning through speaking, listening, reading, and writing.

Economics

Economics is a social science that analyzes how people, businesses, and governments make the best of limited resources, and how they make choices when faced with tradeoffs. Microeconomics studies these decision-makers and the markets in which they interact, while macroeconomics studies the workings of the economy as a whole. Economics provides tools for understanding public policy issues like inequality, poverty, education, health, taxes, trade, regulation, and the environment.

For additional information, please visit the department's website: <http://www.brown.edu/Departments/Economics/>

Economics Concentration Requirements

Economics is the study of how individuals, businesses, and governments allocate resources to satisfy their objectives. The study of economics helps students understand markets, firms, financial organizations, and public debate about economic policy, including taxation, government

expenditure, trade, globalization, health, and welfare. The concentration in Economics prepares students for graduate study in fields such as business and law, for graduate study leading to teaching and research in economics, and can be a stepping-stone to employment in business, finance, non-profit, and government organizations. Students may choose the standard concentration, the business track, or the public policy track, all of which have a corresponding professional track. If you are interested in declaring a concentration in Economics, please refer to this page for more information regarding the process.

Students are required to begin with ECON 0110, an introductory course that stresses current economic issues, and the concepts and principles of economic analysis. Intermediate level courses in microeconomics (ECON 1110 or ECON 1130), macroeconomics (ECON 1210), and econometrics (ECON 1620 followed by ECON 1629 or ECON 1630) round out the list of foundation courses for the concentration. Economics concentrators must also fulfill a math requirement (ECON 0170).

The economics department sponsors a number of concentration options. The most popular is the standard economics concentration, described below. The standard concentration has an optional Business Economics track, as well as a Public Policy track, both described below. Three additional concentration options are administered jointly with other departments and are described separately under their respective titles. They are the concentrations in applied mathematics–economics, mathematical–economics, and computer science–economics. The first two are especially recommended for students interested in graduate study in economics.

All concentrators in economics programs are encouraged to consult their concentration advisors regularly. Economics concentrators who wish to study abroad should consult first with the department transfer credit advisor.

Standard Economics Concentration

ECON 0110	Principles of Economics ¹	1
ECON 0170 or MATH 0100	Essential Mathematics for Economics Single Variable Calculus, Part II or a higher-level math course. ²	1
ECON 1110 or ECON 1130	Intermediate Microeconomics Intermediate Microeconomics (Mathematical)	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1620 or MATH 1620 or APMA 1650	Introduction to Econometrics Mathematical Statistics Introduction to Probability and Statistics with Calculus	1
or APMA 1655	Introduction to Probability and Statistics with Theory	
ECON 1629 or ECON 1630	Applied Research Methods for Economists Mathematical Econometrics I	1
At least five additional 1000-level Economics courses. ³		5
Total Credits		11

¹ Students who place out of ECON 0110 on the basis of qualifying scores on the AP, IB, or A-level exams must take an additional 1000-level course (6 instead of 5).

² Students can satisfy the mathematics requirement with qualifying scores on the AP, IB, or A-level exams (but not the math department's self placement exam). Note that certain advanced economics courses may impose additional math prerequisites.

³ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1960 (thesis course) does not count toward the concentration.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Business Economics Track

ECON 0110	Principles of Economics ¹	1
ECON 0170	Essential Mathematics for Economics	1
or MATH 0100	Single Variable Calculus, Part II	
	or a higher level math course	
ECON 0710	Financial Accounting	1
ECON 1110	Intermediate Microeconomics	1
or ECON 1130	Intermediate Microeconomics (Mathematical)	
ECON 1210	Intermediate Macroeconomics	1
ECON 1420	Industrial Organization ²	1
ECON 1620	Introduction to Econometrics	1
or APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	
or MATH 1620	Mathematical Statistics	
ECON 1629	Applied Research Methods for Economists	1
or ECON 1630	Mathematical Econometrics I	
ECON 1710	Investments I	1
ECON 1720	Corporate Finance	1
Two Business Economics electives from the following list:		2
ECON 1090	Introduction to Game Theory	
ECON 1310	Labor Economics	
ECON 1400	The Economics of Mass Media	
ECON 1450	Economic Organizations and Economic Systems	
ECON 1465	Antitrust and Competition	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1540	International Trade	
ECON 1550	International Finance	
ECON 1660	Big Data	
ECON 1730	Venture Capital, Private Equity, and Entrepreneurship	
ECON 1740	Mathematical Finance	
ECON 1750	Investments II	
ECON 1760	Financial Institutions	
ECON 1770	Crisis Economics	
ECON 1780	Advanced Topics in Corporate Finance	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1830	Behavioral Finance	
ECON 1870	Game Theory and Applications to Economics	
Total Credits		12

¹ Students who place out of ECON 0110 on the basis of qualifying scores on the AP, IB, or A level exams must take a sixth 1000-level Economics elective (which need not come from the Business Economics group). Note that at most one economics elective in the 1000-1099 range may be applied towards the concentration.

² Or Econ 1460, if previously taken (it is not being offered in the near future).

³ Students can satisfy the mathematics requirement with qualifying scores on the AP, IB, or A-levels exams (but not the Math department's self placement exam). Note the certain advanced economics courses may impose additional math prerequisites.

⁴ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1960 (thesis course) does not count toward the concentration.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Public Policy Track

ECON 0110	Principles of Economics ¹	1
ECON 0170	Essential Mathematics for Economics ²	1
or MATH 0100	Single Variable Calculus, Part II	
ECON 1110	Intermediate Microeconomics	1
or ECON 1130	Intermediate Microeconomics (Mathematical)	
ECON 1210	Intermediate Macroeconomics	1
ECON 1620	Introduction to Econometrics ³	1
ECON 1629	Applied Research Methods for Economists	1
or ECON 1630	Mathematical Econometrics I	
Five Public Policy Electives from the list below: ⁴		5
ECON 1000	Using Big Data to Solve Economic and Social Problems	
ECON 1070	Race, Crime, and Punishment in America	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1310	Labor Economics	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1350	Environmental Economics and Policy	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Health Economics	
ECON 1370	Race and Inequality in the United States	
ECON 1385	Intergenerational Poverty in America	
ECON 1390	Inequality of Income, Wealth, and Health in the United States	
ECON 1410	Urban Economics	
ECON 1420	Industrial Organization	
ECON 1430	The Economics of Social Policy	
ECON 1440	The Economic Analysis of Political Behavior	
ECON 1480	Public Economics	
ECON 1500	Current Global Macroeconomic Challenges	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1540	International Trade	
ECON 1550	International Finance	
ECON 1560	Economic Growth	
ECON 1570	The Economics of Latin Americans	
ECON 1600	Education, the Economy and School Reform	

Interdisciplinary requirement. Two courses outside of the economics department that relate to better understanding the implementation and/or evaluation of public policies (may be below or above 1000-level). Several departments offer such courses, and availability varies from year to year. Some pre-approved options are

AFRI 1920	Health Inequality in Historical Perspective
CPSY 0220	Making Decisions
CPSY 0700	Social Psychology
PHP 0310	Health Care in the United States
PHP 0330	Health Law and Policy
PHP 0850	Fundamentals of Epidemiology
POLS 0010	Introduction to the American Political Process
POLS 1050	Ethics and Public Policy
POLS 1823Z	Gender and Public Policy
SOC 1330	Remaking the City
URBN 0210	The City: An Introduction to Urban Studies
Students may also request advisor permission for other courses	

A capstone project in the senior year. This can be satisfied in different ways: (a) the capstone is automatically fulfilled if one of the public policy electives completed is designated as a capstone course (see the list of capstone courses on the economics department website); or (b) a capstone project is otherwise arranged and completed for a public policy elective; or (c) an honors thesis is completed, under the guidelines of honors in the economics concentration; or (d) completion of an undergraduate research assistantship (URA). In cases (a), (b) and (d), a capstone form must be submitted to the department.⁵

Total Credits

13

¹ Students who place out of ECON 0110 on the basis of qualifying scores on the AP, IB, or A level exams must take a sixth 1000-level Economics elective (which need not come from the Public Policy group).

² Students can satisfy the mathematics requirement with qualifying scores on the AP, IB, or A-levels exams (but not the Math department's self placement exam). Note the certain advanced economics courses may impose additional math prerequisites.

³ APMA 1650, APMA 1655, CSCI 1450, or MATH 1620 can substitute for ECON 1620

⁴ Note that at most one economics elective in the 1000-1099 range may be applied towards the concentration.

⁵ A complete list of Capstone courses can be found on the Economics Department website (<https://economics.brown.edu/academics/undergraduate/honors/>).

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

To graduate with honors, students must satisfy the following requirements **by the end of Junior year**:

- Complete at least 70% of the courses required for the concentration.
- Have earned a grade of "A" or "S with distinction" in at least 70% of grades earned in the economics concentration, or 50% in the joint concentrations in APMA-Econ, CS-Econ, and Math-Econ (excluding courses transferred to Brown without a grade, and those taken Spring 2020).
- *Economics Concentrators* must find a faculty thesis advisor in the economics department.

2

- *Joint Concentrators* must find a primary faculty thesis advisor in either economics or the partner department. CS-Econ concentrators must have a secondary reader in the other department by the fall of senior year. APMA-Econ and Math-Econ do not require a secondary reader, unless the primary advisor deems it necessary. Joint concentrators need to satisfy the honors requirements of the economics department if their thesis advisor is in the economics department; while they need to satisfy the honors requirements of the partner department if their thesis advisor is in the partner department.

During Senior year, thesis writers must:

- Enroll in ECON 1960 with their thesis advisor in the fall and spring semesters.
- Submit a thesis proposal to their thesis advisor and the Undergraduate Program Coordinator by mid-September.
- Submit their work in progress to their thesis advisor and the Undergraduate Program Coordinator by mid-December.
- Depending on the nature of the thesis work, the thesis adviser may require the student to successfully complete one or more courses from among the data methods (<https://economics.brown.edu/academics/undergraduate/concentrations/combined/course-groupings/>), mathematical economics (<https://economics.brown.edu/academics/undergraduate/concentrations/combined/course-groupings/>) and/or financial economics (<https://economics.brown.edu/academics/undergraduate/concentrations/combined/course-groupings/>) course groups in the fall of senior year, if they have not already done so.
- Complete an honors thesis by the deadline agreed upon with their advisor and obtain the final approval of their advisor by mid-April.
- Thesis writers are encouraged, but not required, to participate in the departmental Honors Thesis Presentation session held in May, with a brief presentation of their work and findings.
- *Please refer to the Economics Department Honors Thesis page (<https://economics.brown.edu/academics/undergraduate/honors-and-capstones/thesis/>) for specific deadlines.

Applied Mathematics-Economics Concentration Requirements

The Applied Mathematics-Economics concentration is designed to reflect the mathematical and statistical nature of modern economic theory and empirical research. If you are interested in declaring a concentration in Applied Mathematics-Economics, please refer to this page (<https://economics.brown.edu/academics/undergraduate/concentrations/declaring/>) for more information regarding the process.

Requirements for the Bachelor of Arts

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians

Course Requirements:

Applied Mathematics Requirements

APMA 0355	Applied Ordinary Differential Equations with Theory	1
APMA 0365	Applied Partial Differential Equations I with Theory	1
Select one of the following:		1
APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	

CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	
Select one of the following:		1
APMA 1200	Operations Research: Probabilistic Models	
or APMA 1210	Operations Research: Deterministic Models	
APMA 1655	Introduction to Probability and Statistics with Theory ¹	1
One 1000-level or higher APMA course (except APMA1910, APMA1920, and research/independent study)		1
Economics Requirements:		3
ECON 1130	Intermediate Microeconomics (Mathematical) ²	
ECON 1210	Intermediate Macroeconomics	
ECON 1630	Mathematical Econometrics I	
Two 1000-level courses from the "mathematical-economics" group: ³		2
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
One 1000-level course from the "data methods" group: ³		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	

ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
One additional 1000-level economics course. ⁴		1
Total Credits		13

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra

² Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

³ No course may be used to simultaneously satisfy the "mathematical economics," and "data methods" requirements.

⁴ Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Applied Math-Economics concentrators who wish to pursue honors must find a primary faculty thesis advisor in either Economics or Applied Math. They will be held to the Honors requirements of their advisor's department. Joint concentrators in Applied Mathematics-Economics with an Economics thesis advisor should follow the requirements published here (<https://economics.brown.edu/academics/undergraduate/honors-and-capstones/thesis/>), while concentrators with an Applied Math thesis advisor should follow the requirements published here (<https://www.brown.edu/academics/applied-mathematics/undergraduate-program/honors/>).

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Requirements for the Bachelor of Science

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory

Course Requirements:

Applied Mathematics Requirements

APMA 0355	Applied Ordinary Differential Equations with Theory	1
APMA 0365	Applied Partial Differential Equations I with Theory	

Select one of the following:

1

APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	
CSCI 0190	Accelerated Introduction to Computer Science	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
Select one of the following:		1
APMA 1200	Operations Research: Probabilistic Models	
or APMA 1210	Operations Research: Deterministic Models	
APMA 1655	Introduction to Probability and Statistics with Theory ¹	1
Two 1000-level or higher APMA or MATH courses with at least one in APMA (except APMA1910, APMA1920, MATH1090, MATH1910 and research/independent study). At most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001 and at most one of APMA 1650, APMA 1655, MATH 1210, MATH 1610 can be used for concentration credit		2
Economics Requirements:		
ECON 1130	Intermediate Microeconomics (Mathematical) ²	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Three 1000-level courses from the "mathematical-economics" group: ³		3
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
One 1000-level course from the "data methods" group: ³		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	

ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
Two additional 1000-level economics courses ⁴		2
Total Credits		15

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra.

² Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

³ No course may be used to simultaneously satisfy the "mathematical economics" and "data methods" requirements.

⁴ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Applied Math-Economics concentrators who wish to pursue honors must find a primary faculty thesis advisor in either Economics or Applied Math. They will be held to the Honors requirements of their advisor's department. Joint concentrators in Applied Mathematics-Economics with an Economics thesis advisor should follow the requirements published here (<https://economics.brown.edu/academics/undergraduate/honors-and-capstones/thesis/>), while concentrators with an Applied Math thesis advisor should follow the requirements published here (<https://www.brown.edu/academics/applied-mathematics/undergraduate-program/honors/>).

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Standard program for the A.B. degree (Mathematical Finance track):

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)

or MATH 0350 Multivariable Calculus With Theory		
Course Requirements: 13 Courses: 6 Applied Math and 7 Economics		
Applied Mathematics Requirements		
APMA 0355	Applied Ordinary Differential Equations with Theory	1
and		
APMA 0365	Applied Partial Differential Equations I with Theory	1
Select one of the following:		1
APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	
APMA 1200	Operations Research: Probabilistic Models	1
APMA 1655	Introduction to Probability and Statistics with Theory	1
Select one of the following:		1
APMA 1160	An Introduction to Numerical Optimization	
APMA 1180	Introduction to Numerical Solution of Differential Equations	
APMA 1210	Operations Research: Deterministic Models	
APMA 1330	Applied Partial Differential Equations II	
APMA 1360	Applied Dynamical Systems	
APMA 1660	Statistical Inference II	
APMA 1670	Statistical Analysis of Time Series	
APMA 1680	Nonparametric Statistics	
APMA 1690	Computational Probability and Statistics	
APMA 1710	Information Theory	
APMA 1720	Monte Carlo Simulation with Applications to Finance (preferred)	
APMA 1740	Recent Applications of Probability and Statistics	
APMA 1860	Graphs and Networks	
MATH 1010	Analysis: Functions of One Variable	
APMA 193X, 194X	Senior Seminar series, depending on topic	4
Economics Requirements:		
ECON 1130	Intermediate Microeconomics (Mathematical)	1 ³
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Select two 1000-level courses from the "financial economics" group:		2
ECON 1710	Investments I	
ECON 1720	Corporate Finance	
ECON 1730	Venture Capital, Private Equity, and Entrepreneurship	
ECON 1750	Investments II	
ECON 1760	Financial Institutions	
ECON 1770	Crisis Economics	
ECON 1780	Advanced Topics in Corporate Finance	
ECON 1830	Behavioral Finance	
Select one 1000-level course from the "mathematical economics" group:		1 ²

ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
Select one 1000-level course from the "data methods" group:		1 ²
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	

Total Credits **13**

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra

² No course may be used to simultaneously satisfy any two or more of the "financial economics," "mathematical economics," and "data methods" requirements.

³ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

⁴ Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Standard program for the Sc.B. degree (Mathematical Finance track):

Prerequisites:

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory

Course Requirements: 16 courses: 7 Applied Math and 9 Economics

Applied Mathematics requirements:

APMA 0355	Applied Ordinary Differential Equations with Theory	1
and		
APMA 0365	Applied Partial Differential Equations I with Theory	1
Select one of the following:		1
APMA 0160	Introduction to Scientific Computing (preferred)	
APMA 0200	Introduction to Modeling	
CSCI 0111	Computing Foundations: Data	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	
APMA 1200	Operations Research: Probabilistic Models	1
APMA 1655	Introduction to Probability and Statistics with Theory ¹	1
Select two of the following:		2
APMA 1160	An Introduction to Numerical Optimization	
APMA 1180	Introduction to Numerical Solution of Differential Equations	
APMA 1210	Operations Research: Deterministic Models	
APMA 1330	Applied Partial Differential Equations II	
APMA 1360	Applied Dynamical Systems	
APMA 1660	Statistical Inference II	
APMA 1670	Statistical Analysis of Time Series	
APMA 1680	Nonparametric Statistics	
APMA 1690	Computational Probability and Statistics	
APMA 1710	Information Theory	
APMA 1720	Monte Carlo Simulation with Applications to Finance (preferred)	
APMA 1740	Recent Applications of Probability and Statistics	
APMA 1860	Graphs and Networks	

MATH 1010	Analysis: Functions of One Variable	
APMA 193X, 194X	Senior Seminar series, depending on topic ⁴	
Economics Requirements:		
ECON 1130	Intermediate Microeconomics (Mathematical) ³	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Select three 1000-level courses from the "financial economics" group: ²		3
ECON 1710	Investments I	
ECON 1720	Corporate Finance	
ECON 1730	Venture Capital, Private Equity, and Entrepreneurship	
ECON 1750	Investments II	
ECON 1760	Financial Institutions	
ECON 1770	Crisis Economics	
ECON 1780	Advanced Topics in Corporate Finance	
ECON 1830	Behavioral Finance	
Select two 1000-level courses from the "mathematical economics" group: ²		2
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
Select one 1000-level course from the "data methods" group: ²		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1345	Climate Change and the Commons	
ECON 1340	Economics of Global Warming	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Research Seminar in Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1520	Culture, History and Comparative Development	

ECON 1530	Health, Hunger and the Household in Developing Countries
ECON 1629	Applied Research Methods for Economists
ECON 1640	Mathematical Econometrics II
ECON 1660	Big Data
ECON 1670	Advanced Topics in Econometrics
ECON 1680	Machine Learning, Text Analysis, and Economics
ECON 1825	Behavioral Economics and Public Policy
ECON 1830	Behavioral Finance

Total Credits **16**

¹ Students can also use APMA 1650 but must also complete the APMA 1655 online bridgework course, pass the in-person bridgework exam that is offered once per semester, and have taken multivariable calculus and linear algebra

² No course may be used to simultaneously satisfy any two or more of the "financial economics," "mathematical economics," and "data methods" requirements.

³ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

⁴ Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Computer Science-Economics Concentration Requirements

The joint Computer Science-Economics concentration exposes students to the theoretical and practical connections between computer science and economics. It prepares students for professional careers that incorporate aspects of economics and computer technology and for academic careers conducting research in areas that emphasize the overlap between the two fields. Concentrators may choose to pursue either the A.B. or the Sc.B. degree. While the A.B. degree allows students to explore the two disciplines by taking advanced courses in both departments, its smaller number of required courses is compatible with a liberal education. The Sc.B. degree achieves greater depth in both computer science and economics by requiring more courses, and it offers students the opportunity to creatively integrate both disciplines through a design requirement. If you are interested in declaring a concentration in Computer Science-Economics, please refer to this page for more information regarding the process. For more information about the CS Pathways, see this page.

Standard Program for the Sc.B. degree.

Prerequisites (3 courses):

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or MATH 0540	Linear Algebra With Theory
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science
ECON 0110	Principles of Economics

Required Courses: 17 courses: 8 Computer Science, 8 Economics, and a Capstone

CSCI 1450	Advanced Introduction to Probability for Computing and Data Science ¹	1

or APMA 1650	Introduction to Probability and Statistics with Calculus
or APMA 1655	Introduction to Probability and Statistics with Theory

Select one of the following Series: **2**

Series A

CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms

Series B

CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms

Series C

CSCI 0190	Accelerated Introduction to Computer Science (and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0200, a Foundations CS course, or a 1000-level course.)

Series D

CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms

Two courses, touching two different Foundations areas **2**

a. Algorithms/Theory Foundations

CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction

b. AI/Machine Learning/Data Science Foundations, No concentration credit for 1410, 1411

CSCI 0410	Foundations of AI

c. Systems Foundations, Concentration credit not for both 300, 330

CSCI 0300	Fundamentals of Computer Systems
or CSCI 0320	Introduction to Software Engineering
or CSCI 0330	Introduction to Computer Systems

Three 1000-level CSCI courses, which must be technical courses as defined in concentration handbook.. One of these can be an additional 100-level Foundations course. **3**

ECON 1130	Intermediate Microeconomics (Mathematical) ²	1

ECON 1210	Intermediate Macroeconomics	1

ECON 1630	Mathematical Econometrics I	1

Three courses from the "mathematical economics" group (CSCI 1951K can be counted as one of them, if it has not been used to satisfy the computer science requirements of the concentration and if the student has taken either ECON 1470 or ECON 1870): **3**

ECON 1170	Welfare Economics and Social Choice Theory

ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies

ECON 1255	Unemployment: Models and Policies

ECON 1470	Bargaining Theory and Applications

ECON 1490	Designing Internet Marketplaces

ECON 1545	Topics in Macroeconomics, Development and International Economics

ECON 1560	Economic Growth

ECON 1640	Mathematical Econometrics II

ECON 1660	Big Data

ECON 1670	Advanced Topics in Econometrics

ECON 1680	Machine Learning, Text Analysis, and Economics

ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
Two additional 1000-level Economics courses excluding 1620, 1960, 1970 ³		2
One capstone course in either CS or Economics: a one-semester course, normally taken in the student's last semester undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic (preferably at the intersection of computer science and economics) in depth, to produce a culminating artifact such as a paper or software project. A senior thesis, which involved two semesters of work, may count as a capstone.		1
Total Credits		17

¹ Concentration credit will be given for only one of APMA 1650, APMA 1655, and CSCI 1450.

² Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

³ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites. If the primary thesis advisor belongs to Economics (Computer Science), then students must have a reader in the Computer Science (respectively, Economics) department.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Standard Program for the A.B. degree:

Prerequisites (3 courses):

MATH 0100	Single Variable Calculus, Part II
MATH 0520	Linear Algebra
or MATH 0540	Linear Algebra With Theory
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science
ECON 0110	Principles of Economics

Required Courses: 13 courses: 7 Computer Science and 6 Economics

CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	1
or APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	

Select one of the following series:

Series A	
CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms
Series B	
CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms
Series C	
CSCI 0190	Accelerated Introduction to Computer Science (and an additional CS course numbered 200 or above not otherwise used to satisfy a concentration requirement; this course may be CSCI 0200, a Foundations course, or a 1000-level course)
Series D	
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms
Two courses, touching two different Foundations areas:	
a. Algorithms/Theory Foundations	
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction
b. AI/Machine Learning/Data Science Foundations.	
CSCI 0410	Foundations of AI
c. Systems Foundations. Concentration credit for only one of 300/330	
CSCI 0300 or CSCI 0320 or CSCI 0330	Fundamentals of Computer Systems Introduction to Software Engineering Introduction to Computer Systems
Two 1000-level CSCI courses, which must be technical courses, as defined in concentration handbook.	
ECON 1130	Intermediate Microeconomics (Mathematical) ¹
ECON 1210	Intermediate Macroeconomics
ECON 1630	Mathematical Econometrics I
Three courses from the "mathematical-economics" group: ²	
ECON 1170	Welfare Economics and Social Choice Theory
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies
ECON 1255	Unemployment: Models and Policies
ECON 1470	Bargaining Theory and Applications
ECON 1490	Designing Internet Marketplaces
ECON 1545	Topics in Macroeconomics, Development and International Economics
ECON 1640	Mathematical Econometrics II
ECON 1660	Big Data
ECON 1670	Advanced Topics in Econometrics
ECON 1680	Machine Learning, Text Analysis, and Economics
ECON 1750	Investments II
ECON 1770	Crisis Economics
ECON 1805	Experimental and Behavioral Economics
ECON 1820	Theory of Behavioral Economics
ECON 1860	The Theory of General Equilibrium
ECON 1870	Game Theory and Applications to Economics

or any graduate Economics course ³

Total Credits **13**

¹ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

² CSCI 1951K can be counted as one of them, if it has not been used to satisfy the computer science requirements of the concentration and if the student has taken either ECON 1470 or ECON 1870.

³ Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites. If the primary thesis advisor belongs to Economics (Computer Science), then students must have a reader in the Computer Science (respectively, Economics) department.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Mathematics-Economics Concentration Requirements

The Mathematics Economics concentration is designed to give a background in economic theory plus the mathematical tools needed to analyze and develop additional theoretical constructions. The emphasis is on the abstract theory itself. Students may choose either the standard or the professional track, both award a Bachelor of Arts degree. If you are interested in declaring a concentration in Mathematics Economics, please refer to this page for more information regarding the process.

Standard Mathematics-Economics Concentration Honors:

Economics

ECON 1130	Intermediate Microeconomics (Mathematical) ¹	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Two courses from the "mathematical-economics" group: ²		2
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	

ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
One course from the "data methods" group: ²		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
Two additional 1000-level economics courses ³		2
Mathematics		
Calculus: MATH 0180 or higher		1
Linear Algebra - one of the following:		1
MATH 0520	Linear Algebra	
MATH 0540	Linear Algebra With Theory	
Probability Theory - one of the following:		1
MATH 1210	Probability (Formerly MATH 1610)	
MATH 1620	Mathematical Statistics	
APMA 1650	Introduction to Probability and Statistics with Calculus	
Analysis - one of the following:		1
MATH 1010	Analysis: Functions of One Variable	
MATH 1630	Real Analysis I (Formerly MATH 1130)	
MATH 1640	Real Analysis II (Formerly MATH 1140)	
Differential Equations - one of the following:		1
MATH 1110	Ordinary Differential Equations	
MATH 1120	Partial Differential Equations	
One additional course from the Probability, Analysis, and Differential Equations courses listed above		1
Total Credits		14

¹ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

- ² No course may be "double-counted" to satisfy both the mathematical-economics and data methods requirement.
- ³ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, ECON 1620 and ECON 1960 can be used for university credit and up to two 1970s may be used for university credit.
- ⁴ MATH 1630 (formerly MATH 1130) is a prerequisite for MATH 1640 (formerly MATH 1140).

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites.

Professional Track:

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Economics Graduate Program

The department of Economics offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. Ph.D. students can earn the A.M. on the way to the Ph.D. or can receive the A.M. if they choose not to complete the Ph.D. program. The A.M. requires passing eight courses in the areas of Microeconomics, Macroeconomics, and Econometrics. Effective the 2020-21 academic year the department will also offer a Post-Baccalaureate Certificate in Economics to select cohort of students working as Research Associates within Economics.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/economics> (<http://www.brown.edu/academics/gradschool/programs/economics/>)

Courses

ECON 0110. Principles of Economics.

This course offers an extensive coverage of economic issues, institutions, and vocabulary, plus an introduction to economic analysis and its application to current social problems. It is required for all economics concentrators and it is a prerequisite for ECON 1110, 1130, 1210 and 1620. It also serves as a general course for students who will take no other economics courses and want a broad introduction to the discipline.

ECON 0160. Intro to Finance - Money, Markets and You.

References to business, accounting, and financial markets are ubiquitous in our daily lives but are often intimidating to the outsider due to the specialized vocabulary and extensive use of abbreviations and acronyms (S&P 500, Fed Funds rate, EBITDA, EPS, P/E, DCF, EVA, etc.). However, regardless of our career choices, business and the financial markets play a role in our lives. All of us are consumers of financial services and we are all directly and indirectly impacted by capital allocation and market movements - it behooves us to be educated consumers, employees, business owners, and citizens.

ECON 0170. Essential Mathematics for Economics.

This course teaches the mathematical skills useful for upper level Economics classes. Emphasis is on acquisition of tools, problem solving, intuition, and applications rather than proofs.

This course satisfies the mathematics requirement for the Economics concentration, but does not serve as a prerequisite for upper level courses in Math, Applied Math, or other departments. Students planning further courses in those areas should take MATH 0100 or MATH 0170 (which also satisfy the Economics concentration requirement) instead. Ideally, ECON 0170 should be taken before ECON 1110, or at least simultaneously.

ECON 0180A. Using Big Data to Solve Economic and Social Problems.

This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as those with more experience. Topics include equality of opportunity, education, racial disparities, effects of the COVID-19 pandemic, health care, climate change, criminal justice, and tax policy. In order to be eligible, first year students would have to turn in the homework assignment and attend the first class.

ECON 0180D. The Power of Data (and its Limits).

Open any newspaper, any magazine, any academic journal, you'll find claims which rely on data. Government policies, economic data, health recommendations – all of these are based on some underlying data analysis. Data used in this context has enormous power, but it also has limits. Understanding these limits is key to using – but not mis-using – the power of data.

This first-year seminar will focus on understanding where data comes from, what we can learn from it, and what the limitations are. The course will emphasize policy-relevant economic and public health applications.

ECON 0180E. The Economics of Higher Education.

Some of the most important and controversial policy issues we face today concern higher education—such as whether college should be free, college debt should be forgiven, Federal Pell Grants should be increased, and colleges should embrace online instruction. This seminar will provide students with the skills and knowledge needed to understand and analyze these issues and is structured in two parts. In Part 1 (Basics), students will be given a grounding in how the U.S. system of higher education is structured and financed. Part 2 (Issues) will take a data-driven approach to assessing key questions about higher education, with applications to state and national policy issues. Guest speakers will occasionally visit the seminar to share their expertise with the class.

In order to be eligible, first year students would have to turn in the homework assignment and attend the first class.

See Class Notes for additional information

ECON 0200. 20th Century Political Economy.

This course covers major debates in the 20th century political economy, starting with the Bolshevik Revolution and the Treaty of Versailles. We examine the Great Depression, the New Deal, and Postwar economic planning in the US and UK. We then turn to consider important periods in the second half of the 20th century, including Indian Economic Planning, Bretton Woods, and inflation in the 1970s. The course ends with a consideration of trade, trade deficits, sovereign debt crises, and austerity. The aim is to develop an understanding of both sides of key debates in political economy.

ECON 0300. Health Disparities.

This seminar will examine the causes and consequences of racial and ethnic disparities in health in the United States, and their relationship to economic disparities. Although the course will be taught primarily from an economics perspective, it will draw on literature from sociology, demography and epidemiology. Enrollment determined by lottery.

ECON 0400. Race and Inequality in America.

This seminar examines the social disadvantage of African American in the United States from the perspectives of economics, though with due attention to sociology, politics and history. The course takes a holistic view of the relevant issues, ranging broadly. Quantitative economic analysis is used, but mastery of technique is not our primary focus. Issues to be examined include: Persistent racial disparities and their structural/historical origins Racial stereotypes, racial stigma, and racial justice Affirmative action policies Reparations for slavery, segregation and discrimination Race, Incarceration and American Values Race, crime, and urban policing Race and American politics

ECON 0510. Development and the International Economy.

A course designed primarily for students who do not plan to concentrate in economics but who seek a basic understanding of the economics of less developed countries, including savings and investment, health and education, agriculture and employment, and interactions with the world economy, including trade, international capital flows, aid, and migration.

ECON 0520. The Economics of Gender Equality and Development.

This course shows how an economics lens can be useful in understanding disparities in gender outcomes; how these disparities evolve over the development process; why closing gender gaps matters for development; and the roles of public policies and private action. Among the outcomes examined are human capital, access to economic opportunities, and agency or the ability to make choices and take actions. We will use the tools of economics to think about how individuals and families make decisions, respond to opportunities generated by markets, and are affected by the parameters outlined by both formal and informal institutions and social norms.

ECON 0600. Gender in the Economy.

What determines the division of labor in a household? Why is the employment to population ratio for men lower today than it was in the 1950s? Why is it higher for women? What is the cause of the gender wage gap and how has it changed over time? These are some of the questions addressed in this course. We will cover economic theories, empirical research, and trends associated with: marriage, divorce, cohabitation, labor supply decisions, division of labor in the household, gender inequality, and fertility choices.

ECON 0710. Financial Accounting.

This comprehensive course covers the basics of accounting theory and practice. Students learn about the accounting procedures for various forms of business organizations, and the tools used to record, analyze, and communicate financial data within an organization. In addition, students learn how to interpret, decipher, and understand financial information and its role within the financial statements. Whether you're pursuing a career in accounting, finance, or any business-related field, this course equips you with the essential skills to navigate the complex world of financial reporting and analysis.

ECON 0720. Business Fundamentals Bootcamp.

Brown has partnered with Hult International Business School (<https://www.hult.edu/lp/hult-brown-bootcamp/>) for this program - renowned for its skill-focused approach to education and commitment to learning by doing. The Business Fundamentals Bootcamp enables you to learn and practice the fundamental skills needed for innovation within a business setting. Rapidly evolving labor markets in the Age of AI place a premium on your ability to articulate, analyze, assess, and execute on innovative ideas. You will learn new business concepts in the areas of Marketing & Branding, Financial Acumen, and New Product Planning. You will integrate these skills by applying them to a growth challenge for an international food company - Grupo Bimbo (\$15B Revenues, Household Brands: Thomas' Muffins, SaraLee, Entenmann's). Throughout the course, you will test your business hypotheses and iterate your ideas. On a weekly basis you will turn concepts learned into practical skills, working in teams. The program culminates with a competitive pitch to company executives. Faculty will challenge and support you with practice opportunities -- individually and in collaborative teams. Your faculty for this immersive experience will be a combination of Brown faculty, Hult faculty, senior executives and practitioners, and coaches.

ECON 1000. Using Big Data to Solve Economic and Social Problems.

This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as those with more experience. Topics include equality of opportunity, education, racial disparities, effects of the COVID-19 pandemic, health care, climate change, criminal justice, and tax policy.

ECON 1050. Environmental Economics and Policy.

This course considers environmental issues through an economic lens. It is loosely arranged around four questions: why are markets so powerful? Why do markets frequently fail to deliver environmental goods? Can markets be harnessed to deliver environmental goods? If so, why don't we do that? This course was previously listed as ENVS 1350 and ECON 1350; ECON 1350 had ECON 1110 as a prerequisite, and had problem sets and exams requiring calculus. The only prerequisite for this course is ECON 0110. By the end of the course, student will be able to articulate answers to all four questions, and use mathematical models to explore these issues further in depth.

ECON 1070. Race, Crime, and Punishment in America.

This new course will use the perspectives of economics to examine the causes and consequences of high levels of incarceration in the United States, especially as it relates to the social disadvantage of African Americans. Quantitative analysis will be used sparingly. Students will be evaluated based on three short writing assignments. Issues examined include: racial disparities in punishment; the impact of crime on communities; policing and race relations in American cities; stereotypes and the economics of crime; the governing of prisons and the limits of punishment.

ECON 1090. Introduction to Game Theory.

This course offers an introduction to game theory, which studies strategic interactive decision-making. A more detailed (tentative) plan of what we will cover is available as an appendix to this syllabus (see the end of the document).

ECON 1110. Intermediate Microeconomics.

Tools for use in microeconomic analysis, with some public policy applications. Theory of consumer demand, theories of the firm, market behavior, welfare economics, and general equilibrium.

ECON 1130. Intermediate Microeconomics (Mathematical).

Microeconomic theory: Theories of the consumer and firm, competitive equilibrium, factor markets, imperfect competition, game theory, welfare economics, general equilibrium. May not be taken in addition to ECON 1110.

ECON 1170. Welfare Economics and Social Choice Theory.

Advanced microeconomic theory class for undergraduates. Building on the intermediate microeconomics course, the approach is more formal and mathematically more rigorous, presenting arguments and expecting students to carefully develop techniques in order to understand and produce logical proofs. Topics include the efficiency and coalitional stability properties of markets, as well as other mechanisms to allocate resources. Market failures are discussed, including advanced treatments of externalities, public goods, and asymmetric information. The second part of the course will discuss a number of topics in social choice theory, including different normative criteria of compensation, life and death choices, majority voting, Arrow's impossibility theorem.

ECON 1200. History of Economic Thought.

This course covers the history of modern (20th century) economics and economic thinking from the marginal revolution through the first half of the 20th century. The aim will be to develop an understanding of the origin and evolution of central concepts in economic theory, including subjective utility, marginal analysis, competitive markets, examine methodological disputes over positivism and formalism, and the development of general competitive equilibrium. We will consider the emergence of certain subfields in modern economics, and end with a discussion of the relevance of these ideas for economics in the 21st century.

ECON 1205. The Economics of Populism and Polarization.

The recent rise of populism has been unprecedented in history. At the same time, the U.S. is described as increasingly polarized by mass media. What accounts for this? How do these two concepts relate to each other? This course will use tools from microeconomics and applied econometrics to study the origins and implications of populism and political polarization, exploring how economic, cultural, and political factors interact. Students will complete weekly readings, a presentation, a discussion, and a final paper. Classes will be as interactive as possible.

ECON 1210. Intermediate Macroeconomics.

This course offers a comprehensive overview of various topics in macroeconomics such as output, consumption, investment, unemployment, inflation, and economic growth. This course will develop theoretical models used to study the economy over different periods of time, from one or two years to several decades. Students will use theoretical models in combination with graphical and mathematical analysis to examine the impact of shocks and monetary and fiscal policies on the aggregate economy.

ECON 1225. Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies.

The course is concerned with macroeconomic policy in the US, with special focus on the recent economic crisis. The main objective of the course is to introduce students to the type of models and methods used in current research in macroeconomics both in the scholarly literature but also in the practice of central banks and major policy institutions. Events of the financial crisis and the economic recession of 2007-2009 will serve to illustrate the challenges confronted by macroeconomic analysis.

ECON 1255. Unemployment: Models and Policies.

This course will cover research topics related to unemployment, focusing on the models used to describe unemployment and the policies used to tackle unemployment. It will address the following questions: Why does unemployment exist? Why does unemployment vary across countries? Why does unemployment vary over time? What is the socially optimal level of unemployment? How should unemployment insurance, monetary policy, and fiscal policy respond to an increase in unemployment during a recession?

ECON 1300. Education, the Economy and School Reform (EDUC1600).

Interested students must register for EDUC 1150.

ECON 1301. Economics of Education I.

This course teaches students how to use microeconomics to analyze a broad array of education policy issues. The departure of this course from ECON 1110 is the emphasis on studying microeconomics in applied settings, and in particular, using microeconomic concepts to think about, analyze, and solve policy questions in education.

ECON 1305. Economics of Education: Research.

This course will cover academic research in the Economics of Education. Topics include production of student achievement, measuring student achievement, funding of public education, and school choice and school vouchers.

ECON 1310. Labor Economics.

This class covers theoretical and empirical analyses of wage and employment determination in the U.S. labor market and examines the impact of labor market institutions and government policy on worker outcomes. Topics include labor supply, labor demand, labor market equilibrium, minimum wages, monopsony power, labor exploitation, human capital, wage inequality, and labor market discrimination. Special attention is paid to issues that arise when attempting to draw credible inferences from non-experimental data and to the types of research designs that can address these issues.

ECON 1315. Health, Education, and Social Policy.

The goal of the course is to help students to use economic theory and modern empirical methodology to think critically about the relative costs and benefits of health and education policies. By the end of the course students should feel comfortable critically evaluating proposals meant to increase human capital through school reforms, increased access to health care, or improved health environments.

ECON 1330. Gender and Development.

This course explores gender-specific challenges in development, examining how gender outcomes evolve with economic processes. Students will engage with theoretical frameworks and recent empirical research papers to understand the intersectionality of gender with important phenomenon studied in Development Economics. This course is ideal for students interested in applying insights and techniques from microeconomics and econometrics.

ECON 1340. Economics of Global Warming.

The problem of global warming can be usefully be described with the following simple economic model. We face a tradeoff between current consumption, future consumption, and future climate, have preferences over consumption and future climate and would like to choose our optimal climate/consumption bundle. This course is organized around filling in the details required to make this model useful, characterizing the optimal climate/consumption path suggested by the model, and finally, investigating policies to achieve the optimal path.

ECON 1345. Climate Change and the Commons.

This discussion-based seminar course aims to help students understand the different political challenges related to climate change. We will begin with an overview of the causes and consequences of climate change, emphasizing how the average effects conceal net winners and losers under the current status quo. Subsequently, we will step back to build a conceptual framework to understand the complexities underlying the Tragedy of the Commons, as well as the basics of market and non-market solutions. Finally, we will return to climate change to discuss the challenges of addressing it, both globally and within individual countries, that stem from the Tragedy of the Commons.

ECON 1350. Environmental Economics and Policy.

This course considers environmental issues through an economic lens. It is loosely arranged around four questions: why are markets so powerful? Why do markets frequently fail to deliver environmental goods? Can markets be harnessed to deliver environmental goods? If so, why don't we do that?

ECON 1355. Environmental Issues in Development Economics.

Examines environmental issues in developing countries, including air and water pollution, land use change, energy use, and the extraction of natural resources. Uses microeconomic models of households and firms, linking household/firm decision-making on environmental issues to choices in labor, land, and product markets. Develops basic empirical techniques through exercises and a project. For readings, relies exclusively on recent research to illustrate the roles of econometrics and economic theory in confronting problems at the nexus of the environment, poverty, and economic development.

ECON 1360. Research Seminar in Health Economics.

The class covers healthcare in the U.S. from an economic perspective. A major theme throughout the semester is an attempt to understand why the U.S. has the lowest life expectancy among all wealthy nations while at the same time having by far the highest per-capita spending on healthcare. We also examine the impact of government policy and healthcare institutions on health outcomes in the U.S., with an emphasis placed on determining the credibility of empirical evidence. Consequently, we survey the issues that arise when attempting to draw causal inferences from non-experimental data and the types of research designs and econometric tools that can address potential sources of bias. More generally, the course emphasizes the development and application of critical thinking skills in the context of health economics, with classes often conducted in the style of a research seminar.

ECON 1370. Race and Inequality in the United States.

We examine racial inequality in the United States, focusing on economic, political, social and historical aspects. Topics include urban poverty, employment discrimination, crime and the criminal justice system, affirmative action, immigration, and low wage labor markets. Black/white relations in the US are the principle but not exclusive concern.

ECON 1375. Inequality of Opportunity in the US.

This course examines empirical evidence on inequality of opportunity in the US. We cover recent work in economics that measures the importance of parents, schools, health care, neighborhoods, income, and race in determining children's long-term labor market success, and implications of these findings for US public policy. We will also place the empirical work in historical and philosophical context and cover a variety of statistical issues.

ECON 1385. Intergenerational Poverty in America.

In the US, the children of poor parents are eight times more likely to grow up to be poor than the children of high-income parents. What accounts for this? In this course we try to answer this question by examining how poverty influences child development and, ultimately, their income and wellbeing in adulthood. We will begin the course with an overview of poverty and intergenerational mobility in America, looking at historical trends and placing the US in international context. To understand why poverty is persistent across generations in the US, we begin with the economic model of skill formation in childhood. We then consider the existing research exploring how a number of factors explain the intergenerational persistence of poverty, including parental time, pollution, infant and child health, the justice system, neighborhoods, stress, and preschool/education systems. This course will involve reading and discussion of economic research and a final independent research project that will require data analysis and the application of empirical methods students have learned in econ 1629/1630.

ECON 1390. Inequality of Income, Wealth, and Health in the United States.

Inequality of income, wealth, and health, with a focus on the United States. Topics include measurement of inequality, mobility, and poverty; the mapping from individual characteristics to income and wealth; transmission of economic status between generations; the division of national income between capital and labor; factors causing the rise in inequality in the United States since 1980, including technological change and globalization; differential trends in life expectancy, morbidity, and health behaviors among income groups; government policies that impact inequality, including progressive taxation, the minimum wage, support of unionization, public education, and immigration policy; and the political economy of redistributive policies.

ECON 1400. The Economics of Mass Media.

The mass media shape our culture and politics but are also shaped by their economic incentives. In this course we will use tools from microeconomics and econometrics to study the effects of mass media on economic, social and political behavior, and to study the factors that shape media content and availability. We will develop implications for business and public policy. Students will complete weekly readings, bi-weekly assignments, a take-home midterm, and a final paper and presentation. Class time will be devoted to a mix of lecture and discussion of readings and lecture topics.

ECON 1410. Urban Economics.

The first part of the course covers the set of conceptual and mathematical models widely used to understand economic activity both between and within cities. The second part of the course examines various urban policy issues including urban transportation, housing, urban poverty, segregation and crime. The course makes extensive use of empirical evidence taken primarily from the United States.

ECON 1420. Industrial Organization.

A study of industry structure and firm conduct and its economic/antitrust implications. Theoretical and empirical examinations of strategic firm interactions in oligopolistic markets, dominant firm behaviors, and entry deterrence by incumbents. Economics of innovation: research and development activities and government patent policies. Network effects, and why market share critical mass matters for firm survival in certain markets.

ECON 1430. The Economics of Social Policy.

This course will cover research topics in the economics of social policy. The course will focus on understanding the context for key social policies in health, education, social welfare and other areas as well as understanding the methods that economists use to generate causal impacts of these policies.

ECON 1440. The Economic Analysis of Political Behavior.

Slow economic growth, controversial policy, and over a decade of continuous war have led many to question the extent to which government is a force for the common good. Blame is often assigned to specific politicians or ideological perspectives. Public choice economics instead analyzes the incentive structure within which political decisions take place, seeking to uncover the forces guiding the behavior of voters, legislators, judges, and other political agents. This course will examine the insights and limitations of the public choice perspective in the context of electoral politics, legislation, bureaucracy and regulation, and constitutional rules.

ECON 1450. Economic Organizations and Economic Systems.

Positive and normative study of the organizations that comprise and the institutional structures that characterize a modern mixed market economy. Theoretical efficiency and potential limitations of private enterprises and markets including (a) why some market actors are organizations (e.g., companies), (b) effort elicitation problems in organizations, (c) the problem of cooperation in traditional versus behavioral economics, and (d) alternative kinds of organization (including proprietorships, corporations, nonprofits, government agencies). Roles of government, and problems of government failure, including the collective action problem of democracy. State-market balance and contemporary controversies over the economic system in light of the 2008 financial crisis.

ECON 1460. Industrial Organization (Mathematical).

A more mathematical treatment of industry structure, firm conduct, and economic/antitrust implications. Theoretical and empirical examinations of strategic firm interactions in oligopolistic markets, dominant firm behaviors, and entry deterrence by incumbents. Economics of innovation: research and development activities and government patent policies. This course uses mathematical methods from intermediate microeconomics, including game theory, and from econometrics, including regression analysis.

ECON 1465. Antitrust and Competition.

Antitrust law shapes competition through public policy based on economics and economic incentives. In this course we will use tools from microeconomics, econometrics, and industrial organization to learn about Antitrust policy and regulation of competition in the marketplace. We will learn about antitrust through the context of economics and Antitrust cases over the past century. Students will complete weekly readings, and a final paper. Class time will be devoted to a mix of lecture and discussion of readings and lecture topics.

ECON 1470. Bargaining Theory and Applications.

Bargaining theory is emerging as an important area within the general rubric of game theory. Emphasis is on providing a relatively elementary version of the theory in order to make it accessible to a large number of students. Covers introductory concepts in game theory, strategic and axiomatic theories of bargaining and their connections, applications to competitive markets, strikes, etc.

ECON 1480. Public Economics.

What is the appropriate role for government in a market economy? How can public policy help or hinder economic outcomes? How do governments choose what policies to pursue? These are the sorts of questions addressed in Public Economics, which uses the tools of economic theory to analyze a wide range of topics, including taxation, public goods, healthcare policy, zoning, voting behavior, and more.

ECON 1487. Translating Evidence into Economic Policy.

The objective of this course is, precisely, to offer those insights to students interested in a career in policymaking by providing case studies of the most important and challenging policy questions of our lifetimes. By the end of the course students will have deepened their understanding of the most important policy challenges from an array of different contexts and the evidence around them, with a special focus on quantitative methods useful to analyze those questions. This class is particularly designed for students that have already studied some of the basic econometric methods, but feel they could get a better understanding of them when looking at them in the context of actual, real-life, policy challenges.

ECON 1490. Theory of Market Design.

How can we use economic theory to better design economic markets? This course studies various theoretical models that help understand important design features in many real-world markets. Topics include market entry, pricing, search, auctions, matching, reputation, and peer-to-peer platform design. We will develop theoretical "case studies" of several real-world markets (egs. eBay, Airbnb, Google advertising, Uber, Tinder, TaskRabbit). Prerequisites: ECON 1110 or ECON 1130. While ECON 1870 is not a prerequisite, you may benefit from familiarity with this course material.

ECON 1500. Current Global Macroeconomic Challenges.

We will study some of the most important macroeconomic challenges that the world faces today including secular stagnation, inequality, COVID-19, climate change, fiscal sustainability. This course aspires to make you a better economist and a better citizen of the world. We will talk about the 'big stuff' that really matters, the economic forces that shape the lives of billions of people – including your own. By the end of the course, you will feel more comfortable evaluating economic policy aimed at tackling complex real-world economic issues that are riddled with tradeoffs and uncertainty.

ECON 1510. Economic Development.

This course is an introduction to development economics and related policy questions. It discusses the measurement of poverty and inequality; growth; population change; health and education; resource allocation and gender; land and agriculture; and credit, insurance, and savings. The course provides a theoretical framework for the economic analysis of specific problems associated with developing economies, and introduces empirical methods used to evaluate policies aimed at solving these problems. By the end of the class, students will be able to discuss some of the "hot topics" in development, like microfinance, family planning, or the problem of "missing women" in South-East Asia.

ECON 1520. Culture, History and Comparative Development.

Why are some societies rich and others poor? While typical answers emphasize proximate causes like factor accumulation, technological progress, and demographic change, weighing the shadow of history on contemporary economic performance occupies an increasing part of the agenda among growth and development economists. This course will critically survey the recent empirical literature highlighting the role of historical events and geographic endowments in shaping social, political, and cultural factors and the process of development.

ECON 1530. Health, Hunger and the Household in Developing Countries.

Microeconomic analysis of household behavior in low income societies emphasizing the economic determinants of health and nutrition and the evaluation of policy. The relationship among health, nutrition, fertility, savings, schooling, labor productivity, wage determination, and gender-based inequality. Emphasizes theoretically-based empirical research.

ECON 1540. International Trade.

Theory of comparative advantage, trade, and income distribution. Welfare analysis of trade: gains from trade, evaluation of the effects of trade policy instruments-tariffs, quotas, and subsidies. Trade under imperfect competition. Strategic trade policy. Trade, labor markets, preferential trade agreements, and the world trading systems.

ECON 1545. Topics in Macroeconomics, Development and International Economics.

This class is a senior seminar that covers selected topics at the intersection of macroeconomics, economic development and international trade. The leading theme of the class is the determinants of the observed cross-country differences in income per capita and growth rates. We will consider a wide range of theories to explain such disparities in economic outcomes, with a special focus on theories that stress problems in financial markets. We will also study the role of wealth inequality. We may also cover structural change, the link between volatility, diversification and development, and selected topics in international trade.

ECON 1550. International Finance.

The balance of payments; identification and measurement of surpluses and deficits; international monetary standards; the role of gold and paper money; government policies; free versus fixed exchange rates; international capital movements; war and inflation; the International Monetary Fund.

ECON 1560. Economic Growth.

A theoretical and empirical examination of economic growth and income differences among countries. Focuses on both the historical experience of countries that are currently rich and the process of catch-up among poor countries. Topics include population growth, accumulation of physical and human capital, technological change, natural resources, income distribution, geography, government, and culture.

ECON 1565. Income Inequality.

This course examines the macroeconomic dimensions of income inequality. How much of national income is paid to capital and how much to labor? What determines the gap in wages between workers with different skill levels, as well as variation in wages within skill groups? How have changes in technology, openness to trade, government policy, and the quantities of factors of production contributed to changes in these relative returns? What determines the aggregate quantities of different factors of production as well as their distribution among individuals? How does inequality feed back to affect macroeconomic stability and long term growth?

ECON 1570. The Economics of Latin Americans.

This course introduces students to the economic study of Latin Americans (both in the US and abroad). Topics include the determinants of economic development, institutions and growth, imperialism, conflict, immigration and discrimination.

ECON 1590. The Economy of China since 1949.

This course examines the organization, structure, and performance of the economy of China. Emphasis is placed on the changing economic system including the roles of planning and markets and government economic strategy and policies. The pre-reform period (1949-78) receives attention especially as it influences developments in the market-oriented reform period since 1978. Topics include rural and urban development, industrialization and structural change, rural-urban migration, income inequality and growth, the role of international trade and investment. Both analytical and descriptive methods are used.

ECON 1600. Education, the Economy and School Reform.

This seminar examines the linkages between educational achievement and economic outcomes for individuals and nations. We study a range of system, organizational, and personnel reforms in education by reviewing the empirical evidence and debating which reforms hold promise for improving public education and closing persistent achievement gaps. Understanding and critiquing the experimental, quasi-experimental and descriptive research methods used in the empirical literature will play a central role in the course.

ECON 1620. Introduction to Econometrics.

This course introduces the statistical methods used to analyze economic data. Economists often need to test the validity of competing theories and to analyze government and business policies. Econometrics provide them with the necessary tools. The course starts with an exposition of essential probability concepts. Then, students will be introduced to statistical inference, estimation and hypothesis testing. The third part of the course will be devoted to regression analysis. Theory is illustrated with examples, and emphasis will be placed on the connection between the theory and application. This practice will be reinforced by computer lectures using Stata, a computer software commonly used by economists for data analysis. This course is a prerequisite for many applied economics courses at Brown and for higher level econometrics.

ECON 1629. Applied Research Methods for Economists.

This class will cover the basics of applied research in economics. We will cover how we use economic theory to formulate a hypothesis to test and how we use data to test our hypothesis. As part of the coursework, students will be exposed to topics across multiple fields of applied economic research (eg, health, labor, political economy, urban economics, development, etc.) that can be explored in greater detail in more advanced classes. Students will read and discuss papers published in professional journals and perform data analysis.

ECON 1630. Mathematical Econometrics I.

Advanced introduction to econometrics with applications in finance and economics. How to formulate and test economic questions of interest. The multivariate linear regression model is treated in detail, including tests of the model's underlying assumptions. Other topics include: asymptotic analysis, instrumental variable estimation, and likelihood analysis. Convergence concepts and matrix algebra are used extensively.

ECON 1640. Mathematical Econometrics II.

Continuation of ECON 1630 with an emphasis on econometric modeling and applications. Includes applied topics from labor, finance, and macroeconomics.

ECON 1650. Financial Econometrics.

Financial time series, for example, asset returns, options and interest rates, possess a number of stylized features that are analyzed using a specific set of econometric models. This course deals with an introduction to such models. It discusses time series models for analyzing asset returns and interest rates, (GARCH) models to explain volatility, models to explain extreme events which are used for the Value at Risk and models for options prices.

ECON 1660. Big Data.

The spread of information technology has lead to the generation of vast amounts of data on human behavior. This course explores ways to use this data to better understand the societies in which we live. The course weaves together methods from machine learning (OLS, LASSO, trees) and economics (reduced form causal inference, economic theory, structural modeling) to answer real world questions in a sequence of projects. We will use these projects as a backdrop to weigh the importance of causality, precision, and computational efficiency. Knowledge of basic econometrics and programming is assumed.

ECON 1670. Advanced Topics in Econometrics.

This class will present advanced topics in Econometrics. The focus will be on cross-sectional methods; the class will start with some basic results needed for any advanced econometrics work, before giving an introduction to asymptotic and identification techniques and concepts, with some applications.

ECON 1680. Machine Learning, Text Analysis, and Economics.

Economists need advanced methods to study data that is complex, high-dimensional, and unstructured. The goal of this course is to highlight the key challenges of working with such data in economics and what machine learning and text analysis methods can be used to address them. Private sector companies, government agencies, and economics graduate programs are all looking for individuals with an understanding of these advanced methods and experience in applying them to real-world problems. This course is designed to help to meet that demand. This course will meet once a week. Lectures will introduce students to new material and include discussions of current economics research using machine learning and text analysis methods. They will also include applied exercises demonstrating methods covered in class and will focus on developing writing assignments and providing peer feedback.

ECON 1690. Latin American Economic History.

Latin America and the Caribbean is one of the culturally richest and most diverse regions of the world. It also possesses a long history, dating back to pre-Columbian indigenous tribes, including the multifaceted trauma of colonization and more than two hundred years of independent republics. In this course we will explore this rich legacy, to uncover the deep roots of regional underdevelopment and inequality today. We will explore and scrutinize some of the canonical explanations for why is the region still poor and unequal. We will cover key topics such as the role of natural endowments, colonial institutions, slavery, education, religion and elites, among others. We will also study the role of politics in economics in a region that has experienced everything from dictatorships, guerrilla movements and crime.

ECON 1710. Investments I.

The function and operation of asset markets; the determinants of the prices of stocks, bonds, options, and futures; the relations between risk, return, and investment management; the capital asset pricing model, normative portfolio management, and market efficiency. Pre-registration will be limited to juniors and seniors (semesters 05 or higher) that meet the listed prerequisite requirements.

ECON 1720. Corporate Finance.

A study of theories of decision-making within corporations, with empirical evidence as background. Topics include capital budgeting, risk, securities issuance, capital structure, dividend policy, compensation policy, mergers and acquisitions, leveraged buyouts and corporate restructuring.

ECON 1730. Venture Capital, Private Equity, and Entrepreneurship.

This course offers an in-depth exploration of how venture capital and private equity investors source and evaluate investment opportunities, structure deals, assist companies in creating value, and execute successful exits. Through lectures and case studies, we'll also cover topics such as fund structures, valuation methods, and incentive design.

ECON 1740. Mathematical Finance.

The course is an introduction to both the economics and the mathematics of finance. Concentrating on the probabilistic theory of continuous arbitrage pricing of financial derivatives, it provides full treatment of Black-Scholes option pricing and its extensions to the case of stochastic volatility and VIX derivatives. More generally, the techniques of change of measure and risk-neutralization are extensively studied, including in the context of fixed-income securities. Finally, implications for financial econometrics (stochastic volatility processes, models of stochastic discount factors) are briefly discussed.

ECON 1750. Investments II.

Individual securities: forwards, futures, options and basic derivatives, pricing conditions. Financial markets: main empirical features, equity premium and risk-free rate puzzles, consumption based asset pricing models, stock market participation, international diversification, and topics in behavioral finance.

ECON 1760. Financial Institutions.

This course analyzes the role of financial institutions in allocating resources, managing risk, and exerting corporate governance over firms. After studying interest rate determination, the risk and term structure of interest rates, derivatives, and the role of central banks, it takes an international perspective in examining the emergence, operation, and regulation of financial institutions, especially banks.

ECON 1770. Crisis Economics.

This course analyzes the economics of financial crises, starting from the preceding run-up and credit market froth, to how crises are initially triggered, amplified, and propagated to the broader macroeconomy. We will devote considerable time to the workings of the financial system, especially financial intermediation and the role of the central bank. The course aims to ground this in economic theory and empirical analyses: as such, many of the readings will be recent journal articles and working papers. By the end of this course, students will be familiar with the systematic forces that drive financial fragility, and the tradeoffs that policy makers face before, during, and after the crises. They will be able to apply the framework to analyze real world scenarios and current events.

ECON 1780. Advanced Topics in Corporate Finance.

This advanced, case-based seminar is focused on delving deeply into several key pillars of corporate finance: valuation, financing, cash management, and, importantly, business ethics. We will build upon concepts presented in earlier finance courses, in particular, ECON 1710 and ECON 1720, and will use MBA-level cases to explore in much greater detail several concepts introduced in these classes. This course is rigorous - we will be analyzing at least one case each week and qualitative and quantitative case write-ups will be required throughout the semester, as well as a comprehensive final project. We will have guest speakers throughout the semester.

ECON 1805. Experimental and Behavioral Economics.

There is a rich literature on experimental economics, which sheds light on whether the predictions of economic theory materialize in controlled, laboratory settings. We will start by studying the methodology of experimental economics, and then delve into a range of classic and more recent topics that have been taken to the laboratory. A large focus of the class will be applications of experimental methods to behavioral economics.

ECON 1820. Theory of Behavioral Economics.

This course provides a formal introduction to behavioral economics, focusing mostly on individual decision making. For different choice domains, we start by analyzing the behavior implied by benchmark models used by economists (e.g. rational choice, expected utility, exponential discounting). Experimental and empirical evidence is then used to highlight some limitations of these models, and to motivate new models that have been introduced to account for these violations. We will cover, for instance, models of limited attention, non-expected utility, and hyperbolic discounting.

ECON 1825. Behavioral Economics and Public Policy.

This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. The course will emphasize careful interpretation and production of new evidence on relevant departures, formalizing this evidence into models that can generate sharp predictions using traditional economic approaches, and exploring implications of those models for public policy.

ECON 1830. Behavioral Finance.

Over the past several decades, the field of finance has developed a successful paradigm based on the notions that investors and managers are generally rational and that the prices of securities are generally "efficient." In recent years, however, theoretical and empirical research has shown this paradigm to be insufficient in describing the various features of actual financial markets. In this course we will examine how the insights of behavioral finance complement the traditional paradigm and shed light on the behavior of asset prices, corporate finance, financial crises, and other phenomena.

ECON 1850. Theory of Economic Growth.

This course explores the origins of wealth and inequality across the globe. It examines: (i) the determinants of the growth process since the emergence of Homo sapiens, (ii) the roots of the dramatic transformation in living standards in the past two centuries, and (iii) the role of deeply rooted geographical, institutional, and cultural characteristics as well as human diversity in the uneven development across the countries and regions. The analysis proposes a resolution for some of the most fundamental mysteries of the journey of humanity: What trapped humankind in poverty for most of human existence? What sparked the massive metamorphosis in living standards over the past two centuries? And what led to the emergence of immense inequality across nations?

ECON 1860. The Theory of General Equilibrium.

Existence and efficiency of equilibria for a competitive economy; comparative statistics; time and uncertainty.

ECON 1870. Game Theory and Applications to Economics.

Study of the elements of the theory of games. Non-cooperative games. Repeated games. Cooperative games. Applications include bargaining and oligopoly theory.

ECON 1960. Honors Tutorial for Economics Majors.

Students intending to write an honors thesis in economics must register for this class. The goal is to help students with the process of developing and writing their thesis. Particular focus will be on data analysis, identifying appropriate literature and testing hypotheses. Each student must find a thesis advisor with interests related to their topic. Students will plan to enroll in this course in both semesters.

Note this course does not count toward Economics concentration credit.

ECON 1970. Independent Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ECON 2010. Mathematics for Economists.

Techniques of mathematical analysis useful in economic theory and econometrics. Linear algebra, constrained maximization, difference and differential equations, calculus of variations.

ECON 2020. Applied Economics Analysis.

This course prepares students to conduct independent research by providing the necessary skills in programming and project organization. Topics covered will include version control, integrated development environments (IDEs), programming basics, package environments, functional programming, data visualization, data science, and more. Material will be presented using the programming language R, with some time spent on introductions to Python, Julia, and some basics of HTML. By the end of the course students should feel comfortable in the major programming languages used in economic research and in producing their own work as a replicable, sustainable project.

ECON 2030. Introduction to Econometrics I.

The probabilistic and statistical basis of inference in econometrics.

ECON 2040. Econometric Methods.

Applications of mathematical statistics in economics. The nature of economic observations, cross-section and time series analysis, the analysis of variance and regression analysis, problems of estimation.

ECON 2050. Microeconomics I.

Decision theory: consumer's and producer's theory; general competitive equilibrium and welfare economics: the Arrow-Debreu-McKenzie model; social choice and implementation.

ECON 2060. Microeconomics II.

Economics of imperfect information: expected utility, risk and risk aversion, optimization under uncertainty, moral hazard, and self-selection problems. Economics of imperfect competition: monopoly; price discrimination; monopolistic competition; market structure in single shot, repeated and stage games; and vertical differentiation.

ECON 2070. Macroeconomics I.

Consumption and saving, under both certainty and uncertainty; theory of economic growth; real business cycles; investment; and asset pricing.

ECON 2080. Macroeconomics II.

Money, inflation, economic fluctuations and nominal rigidities, monetary and fiscal policy, investment, unemployment, and search and coordination failure.

ECON 2090. Topics in Microeconomics: Decision Theory and Evidence.

Decision theory is the use of axiomatic techniques to understand the observable implications of models of choice. It is central to the incorporation of psychological insights into economics, and provides a vital link between theory and experimental economics. This course covers standard economic models of choice in different domains - choice under risk, choice under uncertainty and intertemporal choice. It looks at key topics from behavioral economics: choice with incomplete information, reference dependent preferences, temptation and self control, the Allais paradox, ambiguity aversion and neuroeconomics. In each case it relates the predictions of theory to experimental data on behavior.

ECON 2130. Topics in Monetary Economics.

Business cycle analysis with an emphasis on heterogeneous-agent economics and the interaction between business cycles and economic growth.

ECON 2140. Economic Modeling for Applied Economists.

The purpose of this course is to develop formal tools for building formal, theoretical economic models to support empirical research. This class is aimed at graduate students conducting applied research who have begun conducting independent research. The class will first introduce and review important topics from game theory used in constructing models, but with an applied focus, taking into account common data restrictions and limitations. Emphasis will be placed on tools which can be used to complement existing research goals. Students will be expected to participate in class discussions, weekly assignments, and presentations/reviews of existing papers. Class time will be split between lectures and group discussions/presentations. The main deliverable for the course is to add a formal modeling section to an existing/ongoing independent research project.

ECON 2150. Market Design.

This is a theoretical course in market design, specifically studying the theory and applications of matching. It is designed for students interested in market and mechanism design, and may also be of interest to students interested in utilizing applied theory in their research. The course will begin with an overview of matching markets, but will quickly move to recent advances and open research topics.

ECON 2160. Risk, Uncertainty, and Information.

Advanced topics in the theories of risk, uncertainty and information, including the following: Decision making under uncertainty: expected and non-expected utility, measures of risk aversion, stochastic dominance. Models with a small number of agents: optimal risk-sharing, the principal-agent paradigm, contracts. Models with a large number of agents: asymmetric information in centralized and decentralized markets. Implementation theory.

ECON 2170. Applied Economic Theory.

In this course we will survey some classic theoretical papers published post-1980, drawn from a variety of fields in economics. Our emphasis will be on mastering modeling techniques in these papers, with an eye toward applying those techniques to new problems. The papers fall within the broad areas of industrial organization, information economics and the theory of incentives.

ECON 2180. Game Theory.

Non-cooperative games, dominance, Nash equilibrium, refinements. Cooperative games, core, bargaining set, equilibrium in normal form games. Implementation. Repeated games.

ECON 2190A. Cooperative Game Theory.

No description available.

ECON 2190B. General Equilibrium Theory.

No description available.

ECON 2190C. Topics in Economic Theory.

This edition of the theory topics course will consist of the presentation of recent papers in different areas of economic theory, including axiomatic treatments of risk and information, modern consumer and revealed-preference theories with connections with bounded rationality, implementation theory and mechanism design, and information and institution design. The course will be targeted to second- and third-year graduate students, with the goal of initiating their own research. The active participation of students will be required.

ECON 2190D. Topics on Game Theory.

First, we will discuss the several elements that characterize a two-sided matching market and the concept of setwise-stability versus core. Then, we will model several of these markets (one-to-one, many-to-one and many-to-many, in the discrete and continuous cases) under the game-theoretic approach and will define for all of them the stability concept, establishing its relationship with the core and the competitive equilibrium concepts. Afterwards, we will introduce the theory of stable matching model by focusing on both the cooperative and non-cooperative aspects of the one-to-one matching markets.

ECON 2190E. Topics in Economics: Economics and Psychology.

This course is about the challenges that economic theorists face in their quest for economic models in which decision makers have a "richer psychology" than prescribed by textbook models. The enrichment takes two forms: (i) broadening the set of considerations that affect decision makers' behavior beyond simple, material self-interest; (ii) relaxing the standard assumption that agents have unlimited ability to perceive and analyze economic environments, and that they reason about uncertainty as "Bayesian statisticians". Special emphasis will be put on the implications of "psychologically richer" models on market behavior.

ECON 2210. Political Economy I.

An introduction to political economy, focusing especially on the political economy of institutions and development. Its purpose is to give a good command of the basic tools of the area and to introduce at least some of the frontier research topics. The readings will be approximately evenly divided between theoretical and empirical approaches.

ECON 2260. Political Economy I.

This first course in political economy provides theoretical and empirical coverage of the application of economic analysis to political behavior and institutions. This course is designed for students wishing to specialize in political economy but may also be useful for students specializing in related areas, such as development economics and macroeconomics. After starting with a basic overview of candidates and voters, we then turn to specific topics in the areas of electoral systems, legislatures and legislative bargaining, the role of the media, local public finance, and fiscal federalism.

ECON 2270. Political Economy II.

This is the second course in the political economy sequence. It continues the theoretical and empirical coverage of the economic analysis to political behavior and institutions. This course is designed for students wishing to specialize in political economy. A variety of topics will be covered paying special attention to the formation of skills necessary to become a producer of research and moving away from being just a consumer.

ECON 2310. Labor Economics.

This course teaches core topics in labor economics including labor supply, labor demand, simple search models, and a series of additional selected topics. The primary focus will be on linking theoretical models to tests in the empirical literature. We will typically cover papers and topics in detail, rather than survey the literature. When required, we also cover tools in applied econometrics.

ECON 2320. Applied Methods.

This course examines identification issues in empirical microeconomics. The focus on the sensible application of econometric methods to empirical problems in economics and policy research. The course examines issues that arise when analyzing non-experimental data and provides a guide for tools that are useful for applied research. By the end of the course, students should have a firm grasp of the types of research designs and methods that can lead to convincing analysis and be comfortable working with large-scale data sets.

ECON 2330. Research Design and Falsification Testing in Health and Labor Economics.

We cover how to use credible research designs to draw reliable inferences from non-experimental data in empirical research in health and labor economics. Particular emphasis is placed on constructing rigorous falsification tests to scrutinize the validity of one's research design, statistical model and findings. The class also discusses how a basic understanding of economic theory, institutions and context can inform the analysis and generate decisive falsifications. By semester's end, students should have a firm grasp of the types of research designs and statistical tools that can be used to address selection problems in empirical microeconomics research; be comfortable working with large-scale data sets; and be able to critically evaluate published research and present their own research.

ECON 2340. Labor Economics II.

This is the second course in a two-course, graduate-level sequence in labor economics. The course will focus on covering theory and evidence on wage structures, skill demands, inequality, employment and job loss. Particular areas of focus are: (1) wage determination, equalizing wage differentials, and models of discrimination; and (2) the roles played by supply, demand, labor market institutions, and technology in the evolving distribution of earnings.

ECON 2350. Inequality and Social Policy.

This is a survey course about economic and social inequality with a focus on the applied methods used to examine inequality. The course will provide a broad perspective on the causes and consequences of inequality, develop an understanding of the data and methods used to measure and analyze changes in income and wellbeing, and review selected topics relating to anti-poverty and social policy programs.

ECON 2350B. Inequality and Public Policies.

This course on economic inequality provides an overview of the most recent empirical research on the extent, the anatomy and the historical evolution of inequality. In addition to these descriptives, it focuses on the causes of inequality, covering research designs from the research frontier. The course also reviews the role of government policies, such as anti-poverty programs and progressive taxes on income and on capital, in affecting inequality.

ECON 2360. Economics of Health and Population.

This course is designed to do the following three things: 1) build on your knowledge of the methodological problems and approaches in applied microeconomics with applications from the health economics literature; 2) survey the major topics in Health Economics, and 3) better prepare you to write an empirical microeconomics thesis. By the end of this course you should understand how to draw credible inference using non-experimental data and be able to contribute to public policy debates regarding health and medical care in the US.

ECON 2370. Inequality: Theory and Evidence.

This course uses economic theory to study the problems of inequality. The emphasis is two-fold: (1) to explain persistent resource disparities between individuals or social groups; and, (2) to assess the welfare effects of various equality-promoting policies. Topics include racial stereotypes, residential segregation, distributive justice, incentive effects of preferential policies, dysfunctional identity, and endogenous inequality due to the structure of production and exchange.

ECON 2380. The Economics of Children and Families.

We will consider the current research in economic behavior related to children, child health, and child economic and social well-being. We begin with the model of human capital development and the technology of skill formation and then proceed to empirical work. Individual topics covered will include: models of human capital and the technology of skill formation, the fetal origins of disease, non-marital and teen fertility, the evolution of gaps in human capital, models of parental investment, pre-school environments, the impact of income and in-kind transfer programs on child health and well-being, neighborhood influences, adolescent risky behavior.

ECON 2390. Applied Econometrics I.

The main focus of this course is on econometrics methods for causal inference, program evaluations, and evidence-based policy design, which has become essential tools for empirical work in economics. This course covers a variety of empirical study designs, and for each design, introduces suitable econometric methods. They include randomized control trials, observational studies with unconfoundedness, instrumental variable methods, regression discontinuity designs, panel data designs and difference-in-differences, empirical welfare maximization methods, etc. The course assumes knowledge of statistics and econometrics at the level of first-year Ph.D econometrics courses such as ECON 2030 and ECON 2040.

ECON 2400. Applied Econometrics II.

This is the second half of a two-semester graduate-level course on applied econometrics, which builds on core material from econometric theory as well as second-year applied microeconomics field courses. We will focus on the "sensible" application of various econometric methods to empirical problems in economics and policy research, primarily in non-experimental data. By the end of the course, students should have a firm grasp of the research designs and methods that are commonly used to address selection/endogeneity problems in empirical economics and be comfortable working with large-scale data sets. The primary assignment in the course is the production of an original research paper, with an in-class presentation. Other assignments will include a replication exercise and a referee report.

ECON 2410. Urbanization.

The first part of the course covers social interactions, productivity spillovers, systems of cities models, urban growth, and rural-urban migration. The second part of the course covers topics such as durable housing, land market regulation and exclusion, and local political economy. Besides covering basic theoretical models, emphasis is placed on working through recent empirical papers on both the USA and developing countries. Prerequisites: ECON 2050 and 2060.

ECON 2420. The Structure of Cities.

This course covers standard urban land use theory, urban transportation, sorting across political jurisdictions, hedonics, housing, segregation and crime. Empirical examples are taken primarily from the United States. After taking the course, students will have an understanding of standard urban theory and of empirical evidence on various important applied urban topics. In addition, students will gain practical experience in manipulating spatial data sets and simulating urban models.

ECON 2450. Exchange Scholar Program.**ECON 2460. Applied Macroeconomics and Text Analysis.**

Economists increasingly use advanced text analysis (NLP) and machine-learning methods to study high-dimensional, unstructured data. This course provides theoretical grounding and hands-on experience applying NLP to core macroeconomic topics, from policymaker communication to patent innovation and media-based sentiment indices. Students will learn methods—dictionary approaches, topic modeling, sentiment analysis, large language models—and see how to integrate textual indicators into macro tools like local projections and factor models. The Python-based assignments will build technical foundations, and the major assessments of the course – a replication study and original research project – will foster skill development toward frontier research.

ECON 2470. Industrial Organization.

The focus of this course will be on empirical models for understanding the interactions between firms and consumers in imperfectly competitive markets. Lectures and problem sets will teach canonical models and methods; class discussion will focus on applications of these methods, especially applications outside of traditional areas of industrial organization. Students who take this class will be prepared to conduct research in industrial organization or to "export" methods from industrial organization to other areas of applied microeconomics.

ECON 2480. Public Economics.

Theoretical and empirical analysis of the role of government in private economies. Topics include welfare economics, public goods, externalities, income redistribution, tax revenues, public choice, and fiscal federalism.

ECON 2485. Public Economics I.

This course covers core issues in the design of optimal government policies, and the empirical analysis of those policies in the world. In addition, this course will familiarize students with the basic empirical methods and theoretical models in applied microeconomics. Emphasis is placed on connecting theory to data to inform economic policy. Specific topics include efficiency costs and incidence of taxation, income and corporate taxation, optimal tax theory, tax expenditures and tax-based transfer programs, welfare analysis in behavioral models, and social security and retirement policy.

ECON 2490. Public Finance II.

This course examines empirical work on (1) individual taxation and (2) human capital production. The goal of the course will be to provide graduate students with an overview of recent empirical methods and findings in these areas, and to identify promising research questions for their own work.

ECON 2500. Advanced International Economics.

This is the first field course (part of a sequence) for Ph.D. students on International Macroeconomics and Finance. The course discusses the classic puzzles and the seminal questions in the literature, and explore some of the areas of research that are currently most active. The goal is two-fold. First, introduce you to the modern models, tools, data and topics of International Macroeconomics and Finance. Second, give you the necessary background on the literature to help you navigate amongst possible dissertation topics. The course will have a particular focus on empirical/applied side of the seminal questions in the literature and discuss the new methods and data that the literature is adopting currently.

ECON 2510. Economic Development I.

This course is part of a two-part graduate sequence in development economics. The goal of this sequence is build expertise in the economic field of development economics through the application of theoretical and empirical microeconomic analysis. If development is going to be your major field you are expected to do both courses. Both courses are generally taught in each academic year, though the distribution of content may vary by year. You may take the courses in either order. Topics that are covered in the two courses include fertility, marriage, education, health, infrastructure, agriculture and natural resources consumption, health, firms, labor and credit markets, and social preferences. The courses explore the use of randomized control trials, survey and administrative data, and experimental methods. For details in any particular year please consult the respective syllabi.

ECON 2520. Economic Development II.

This course is part of a two-part graduate sequence in development economics. The goal of this sequence is build expertise in the economic field of development economics through the application of theoretical and empirical microeconomic analysis. If development is going to be your major field you are expected to do both courses. Both courses are generally taught in each academic year, though the distribution of content may vary by year. You may take the courses in either order. Topics that are covered in the two courses include fertility, marriage, education, health, infrastructure, agriculture and natural resources consumption, health, firms, labor and credit markets, and social preferences. The courses explore the use of randomized control trials, survey and administrative data, and experimental methods. For details in any particular year please consult the respective syllabi.

ECON 2530. Experimental and Behavioral Economics.

There is a rich literature on experimental economics, which sheds light on whether the predictions of economic theory materialize in controlled, laboratory settings. We will start by studying the methodology of experimental economics, and then into a range of classic and more recent topics that have been taken to the laboratory. A large focus of the class will be applications of experimental methods to behavioral economics.

ECON 2580. International Trade.

General equilibrium analysis of the theory of international trade and trade policy under perfect competition; trade under imperfect competition; strategic trade policy; trade and growth; and the political economy of trade policy determination. Empirical analysis of trade theories and policy. Additional topics include the theory of preferential trading areas, trade and labor, and the analytics of trade policy reform.

ECON 2590. Topics in International Economics.

Advanced theoretical and empirical research topics in international economics emphasizing positive and normative analysis of trade, trade policy and international trading agreements, policy reform and stabilization, exchange rate determination, sovereign debt and currency crises and optimum currency areas.

ECON 2600. Bayesian and Structural Econometrics.

This course will cover a number of topics in Bayesian econometrics and estimation of structural dynamic discrete choice models. The Bayesian econometrics part of the course will start with introductory textbook material (Geweke, 2005, Contemporary Bayesian Econometrics and Statistics, denoted by G). A list of 11 topics with corresponding readings is given below. Topics 1-5 will be covered. If time permits, a subset of topics 6-11 determined by interests of the course participants will be covered as well. Readings marked with asterisk * are not required.

ECON 2610. Applied Econometrics.

Topics in applied econometrics. Both cross-sectional and time series issues will be discussed. Special emphasis will be placed on the link between econometric theory and empirical work.

ECON 2620. Topics in Econometrics.

This course will begin with a survey of the literature on identification using instrumental variables, including identification bounds, conditional moment restrictions, and control function approaches. The next part of class will cover some of the theoretical foundations of machine learning, including regularization and data-driven choice of tuning parameters. We will discuss in some detail the canonical normal means model, Gaussian process priors, (empirical) Bayes estimation, and reproducing kernel Hilbert space norms. We will finally cover some selected additional topics in machine learning, including (deep) neural nets, text as data (topics models), multi-armed bandits, and data visualization.

ECON 2630. Econometric Theory.

Standard and generalized linear models, simultaneous equations, maximum likelihood, Bayesian inference, panel data, nonlinear models, asymptotic theory, discrete choice, and limited dependent variable models.

ECON 2640. Microeconometrics.

Topics in microeconometrics treated from a modern Bayesian perspective. Limited and qualitative dependent variables, selectivity bias, duration models, panel data.

ECON 2660. Recent Advances in the Generalized Method of Moments.

Method of Moments (GMM) and Empirical Likelihood (EL). Kernel methods for density and regression estimation. Optimal instruments and local EL. Applications to non-linear time series models, Euler equations and asset pricing.

ECON 2800. Macroeconomic Slack.

This course will cover research topics related to macroeconomic slack, both on the labor market (unemployment) and on the product market (idleness). It will address the following questions:

Why does slack exist at the macroeconomic level?

Why does slack vary over time? And how is this related to price flexibility or rigidity?

What is the socially optimal level of slack?

How should monetary policy respond to fluctuations in slack over the business cycle?

How should fiscal policy respond to fluctuations in slack over the business cycle?

What happens to slack at the zero lower bound?

ECON 2820. Discrete Dynamical Systems and Application to Intertemporal Economics.

This course will focus on the qualitative analysis of discrete dynamical systems and their application for Intertemporal Economics.

ECON 2830. Economic Growth and Comparative Development.

This course explores the origins of wealth and inequality across the globe. It examines: (i) the determinants of the growth process since the emergence of Homo sapiens, (ii) the roots of the dramatic transformation in living standards in the past two centuries, and (iii) the role of deeply rooted geographical, institutional, and cultural characteristics as well as human diversity in the uneven development across the countries and regions. The analysis proposes a resolution for some of the most fundamental mysteries of the journey of humanity: What trapped humankind in poverty for most of human existence? What sparked the massive metamorphosis in living standards over the past two centuries? And what led to the emergence of immense inequality across nations?

ECON 2840. Empirical Analysis of Economic Growth.

Examines economic growth, focusing on the effects of technological change, fertility, income inequality, and government policy.

ECON 2860. Comparative Development.

Weighing the shadow of history on contemporary economic performance occupies an increasing part of the agenda among growth and development economists. This course will focus on recent contributions in the literature of the historical determinants of comparative development paying particular attention on how to integrate the use of Geographic Information Systems (GIS) in the research inquiry. The goal is to get you thinking about the big historical processes that have shaped the modern world. We will go over background concepts, critically review recent works and talk about new research designs, like that of spatial regression discontinuity.

ECON 2890C. Topics in Macro and Monetary Economics.

This is a graduate class that covers selected topics at the intersection of macroeconomics and monetary economics, for students in the second year of the PhD and above. The leading theme of the class is the current economic crisis and how it can be modeled. The syllabus is evolving.

ECON 2890D. Topics in Macroeconomics, Development and Trade.

This is a graduate class that covers selected topics at the intersection of macroeconomics, economic development and trade, for students in the second year of the PhD and above. The leading theme of the class is the determinants of the observed cross-country differences in income per capita and growth rates, with a focus on the long run. We start by reviewing theories where factor markets function perfectly and only aggregates matter. We then move to non-aggregative theories, placing special emphasis on theories of financial frictions. We spend some time studying the stochastic growth model with partially uninsurable idiosyncratic risk.

ECON 2920A. Advanced Econometrics - Microeconometrics from a Semiparametric Perspective.

This course is concerned with a rigorous, state-of-the-art introduction to Micro-econometrics. In particular, we will review many of the more recent contributions in Microeconomic Theory. While the focus of this course is theoretical, we will also be concerned with applications and the applicability of these methods. More specifically, we will consider nonparametric regression and density estimation methods, as well as methods and models for binary and categorical dependent variables, for limited dependent variables in general, and for models of selection. We will also discuss more general nonparametric IV models. Prerequisites are: Introductory Econometrics (at the level of the Wooldridge (2002).

ECON 2920B. Topics in Game Theory.

No description available.

ECON 2930. Workshop in Applied Economics.

No description available.

ECON 2950. Workshop in Econometrics.

No description available.

ECON 2960. Workshop in Macroeconomics and Related Topics.

No description available.

ECON 2970. Workshop in Economic Theory.

No description available.

ECON 2971. Race and Inequality Seminar.

This is a workshop primarily for graduate students and faculty in the Department of Economics where original research on issues of race and inequality are presented by external visitors, along with Brown faculty and graduate students. No course credit.

ECON 2980. Reading and Research.

Individual research projects. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ECON 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Education

Rigorous coursework, real-world experience and a particular focus on urban education are all at the forefront of Brown's graduate and undergraduate education curricula. Both inside and outside the classroom, students learn how they can make a positive impact on education systems through teaching, research, and policy. Our degree programs center questions relevant for creating vibrant urban schools that prioritize inclusion and celebrate diversity. Thanks to carefully forged partnerships with schools, civic leaders and non-profit organizations in Providence, students at the graduate and undergraduate levels have ample opportunity for practice-based experiences in classrooms and boardrooms — making for a more meaningful and engaging learning experience.

For additional information, please visit the department's website: <https://education.brown.edu/academics/undergraduate> (<https://education.brown.edu/academics/undergraduate/>)

Education Studies Concentration Requirements

Welcome to Education Studies! Undergraduate concentrators study education in a rigorous, multi-dimensional way that allows them to investigate thorny questions of opportunity and equity in real-world settings. Our ever-expanding array of education courses allows undergraduates to explore fundamental issues of race, class, power, privilege, equity and identity through the lens of education. From introductory courses to advanced seminars, our classes examine how to teach for social justice, how students learn and develop, and how education policies promote or limit opportunity and equity.

Our faculty includes experts in teaching and learning, human development, education policy, and the history of education. We take a multi-disciplinary approach to the field, offering courses from perspectives in anthropology, economics, history, human development, political science, social work, and sociology, among others.

Concentration Requirements

The concentration in Education Studies requires a total of 10 credit-bearing courses and 1 non-credit-bearing experiential component, allowing students to develop a personalized plan of study to structure their Education experiences. The new Education Studies coursework is composed of the following four elements:

1. Three (3) Core Courses: 2 introductory courses (EDUC 0300 and EDUC 0750) will provide students with a broad-based introduction to the field of education and empirical methods used in the field, while 1 Senior Seminar, EDUC 1900, offers a culmination of students' experiences in the concentration.
2. Four (4) Specialization Courses: Students choose 4 courses total in their planned area of emphasis within the education field. Some examples include: Education Policy Analysis; Human Development; Education and Inequality; Education for Social Justice; Adolescence; Immigrant Families, Communities & Education; Child Development; Teaching and Learning; Education and Economics; or any related topic of interest.
3. Three (3) Elective Courses: Students choose three courses related to the field of education and the student's field of study. One (1) independent study course can be counted towards concentration requirements. No more than 3 courses in an Education Studies concentration can come from other departments outside of Education, and all courses should be approved by the student's advisor and meaningfully tied to education.
4. One (1) Experiential Component: Before the beginning of the spring semester of senior year, students must complete an Experiential Component designed to promote practice-based engagement with the field of education and reflect on their experiences, tying them into their academic learning in the Education Studies concentration. Students can satisfy this requirement in one of the ways below and should then upload documentation in their ASK declaration.

- a. **By completing an existing Community-Based Learning and Research (CBLR) in the Department. OR**
- b. **By writing a paper reflecting on their experience through the lens of their coursework in the Department, the student's academic advisor will assess the paper. OR**
- c. **By completing the Experiential Component Based (ECB) Capstone project in EDUC 1900 (Senior Seminar) OR**
- d. **By completing the reflection in an independent study-like course "Reflecting on Fieldwork."**

Education Studies Concentration Plan of Study

Foundational Courses Required for Education Studies Concentration

EDUC 0300	Introduction to Education and Society: Foundations of Opportunity and Inequality
EDUC 0750	Evidence and Method in Education Research
EDUC 1900	Senior Seminar

Other Courses in Education Studies Concentration

4 Courses in Area of Emphasis (could include any 4 of the following)

EDUC 0515	Teaching LGBTQIA History
EDUC 0520	Adolescent Literature
EDUC 0530	Fieldwork and Seminar in Secondary Education
EDUC 0610	Brown v. Board of Education and the History of School Desegregation
EDUC 0620	Cradle of Inequality: The Role of Families, Schools, and Neighborhoods
EDUC 0750	Evidence and Method in Education Research
EDUC 0800	Introduction to Human Development and Education
EDUC 0825	Adolescence in Social Context
EDUC 1190	Family Engagement in Education
EDUC 1240	Qualitative Methods
EDUC 1320	Turning Hope into Results: The Policy Ecosystem of the Providence Public Schools District
EDUC 1430	Social Psychology of Race, Class, and Gender
EDUC 1475	The Big IDEA: The Complexities of Gifted and Special Education
EDUC 1490	Discipline and Punish: Historical Insights on School Punishment
EDUC 1660	Social Context of Learning and Development
EDUC 1675	The Psychology of Teaching and Learning

3 Foundational courses in Education (from the table above)	3
3 Electives	3
1 Experiential Component	0
Total Credits	10

Honors

Concentrators seeking to graduate with honors must apply for honors candidacy by the end of their sixth semester. Successful candidates must meet all requirements for the concentration; maintain a minimum grade average that includes more A's than B's in Education courses (a B must be counterbalanced by two A's); and successfully complete EDUC 1900 (fall) and EDUC 1991 (spring), in which they write a senior thesis under the guidance of a thesis advisor. Honors are awarded on the basis of thesis quality, and students whose theses meet or exceed the standards established in the Department Rubric will earn honors upon graduation.

More information about writing an Honors thesis can be found on our website: <https://education.brown.edu/academics/undergraduate/honors> (<https://education.brown.edu/academics/undergraduate/honors/>).

Combined Baccalaureate/Master of Arts in Teaching Degree

The Education Department offers a combined degree program. Brown undergraduates can apply to earn both the MAT degree and a B.A. or B.S. in a subject field (English, history, math, biology, chemistry, physics, engineering and allied concentrations) in 5 years.

Brown undergraduates can apply through the Education Department during their junior year. During their undergraduate years, candidates must complete all baccalaureate requirements and may take up to two of the required graduate courses. In their fifth year, they will complete the remaining required graduate courses, including the one-year teaching residency. The minimum requirements to complete both degrees are 36 credits, of which a maximum of two may count toward both the bachelor's degree and the MAT degree.

Education Graduate Program

The Department of Education offers two graduate programs: a Master of Arts in Teaching (M.A.T.) and a Master of Arts (A.M.) in Urban Education Policy.

MAT Program Information and Requirements

The MAT program offers a master's degree in one of four secondary education disciplines: English, social studies, science (biology, chemistry, or physics/engineering), or mathematics. The MAT program has an intensive one-year, full-time format, beginning with a summer semester in June and ending the following May. The program is certification-eligible for Rhode Island state teacher certification in secondary education (grades 7-12). Rhode Island is a member of the Interstate Certification Compact (ICC) (<http://www.ride.ri.gov/TeachersAdministrators/EducatorCertification.aspx>), which has reciprocal agreements with 44 states.

MAT program graduate students complete 8 credits in total, consisting of a mix of one-credit and half-credit courses, including the summer practicum and academic-year student teaching.

English - MAT

The following plan of study is required of all secondary English MAT students:

EDUC 2500	Foundations of Teaching and Learning
EDUC 2510A	Educational Theory and Practice in Teaching English I
EDUC 2515	Learning Theory and Special Populations
EDUC 2520A	Educational Theory and Practice in Teaching English II
EDUC 2525	Instructional Design, Planning, and Integrating Technology
EDUC 2530A	Educational Theory and Practice III: English
EDUC 2535	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines I

EDUC 2545	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines II
EDUC 2555	Assessment and Using Data to Support Student Learning
EDUC 2565	Practicum and Seminar I
EDUC 2575	Student Teaching and Seminar
EDUC 2385	Education Inequality and Community Assets: Contexts and Change

The Department of Education offers two graduate programs: a Master of Arts in Teaching (M.A.T.) and a Master of Arts (A.M.) in Urban Education Policy.

MAT Program Information and Requirements

The MAT program offers a master's degree in one of four secondary education disciplines: English, social studies, science (biology, chemistry, or physics/engineering), or mathematics. The MAT program has an intensive one-year, full-time format, beginning with a summer semester in June and ending the following May. The program is certification-eligible for Rhode Island state teacher certification in secondary education (grades 7-12). Rhode Island is a member of the Interstate Certification Compact (ICC) (<http://www.ride.ri.gov/TeachersAdministrators/EducatorCertification.aspx>), which has reciprocal agreements with 44 states.

MAT program graduate students complete 8 credits in total, consisting of a mix of one-credit and half-credit courses, including the summer practicum and academic-year student teaching.

Social Studies - MAT

The following plan of study is required of all secondary Social Studies MAT students:

EDUC 2500	Foundations of Teaching and Learning
EDUC 2510B	Educational Theory and Practice I: Social Studies
EDUC 2515	Learning Theory and Special Populations
EDUC 2520B	Educational Theory and Practice in Teaching Social Studies II
EDUC 2525	Instructional Design, Planning, and Integrating Technology
EDUC 2530B	Educational Theory and Practice in Teaching Social Studies III
EDUC 2535	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines I
EDUC 2545	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines II
EDUC 2555	Assessment and Using Data to Support Student Learning
EDUC 2565	Practicum and Seminar I
EDUC 2575	Student Teaching and Seminar
EDUC 2385	Education Inequality and Community Assets: Contexts and Change

Science - MAT

The Department of Education offers two graduate programs: a Master of Arts in Teaching (M.A.T.) and a Master of Arts (A.M.) in Urban Education Policy.

MAT Program Information and Requirements

The MAT program offers a master's degree in one of four secondary education disciplines: English, social studies, science (biology, chemistry, or physics/engineering), or mathematics. The MAT program has an

intensive one-year, full-time format, beginning with a summer semester in June and ending the following May. The program is certification-eligible for Rhode Island state teacher certification in secondary education (grades 7-12). Rhode Island is a member of the Interstate Certification Compact (ICC) (<http://www.ride.ri.gov/TeachersAdministrators/EducatorCertification.aspx>), which has reciprocal agreements with 44 states.

MAT program graduate students complete 8 credits in total, consisting of a mix of one-credit and half-credit courses, including the summer practicum and academic-year student teaching.

The following plan of study is required of all secondary Science MAT students:

EDUC 2500	Foundations of Teaching and Learning
EDUC 2510C	Educational Theory and Practice 1: Science
EDUC 2515	Learning Theory and Special Populations
EDUC 2520C	Educational Theory and Practice for Science II
EDUC 2525	Instructional Design, Planning, and Integrating Technology
EDUC 2530C	Educational Theory and Practice in Teaching Science III
EDUC 2535	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines I
EDUC 2545	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines II
EDUC 2555	Assessment and Using Data to Support Student Learning
EDUC 2565	Practicum and Seminar I
EDUC 2575	Student Teaching and Seminar
EDUC 2385	Education Inequality and Community Assets: Contexts and Change

The Department of Education offers two graduate programs: a Master of Arts in Teaching (M.A.T.) and a Master of Arts (A.M.) in Urban Education Policy.

MAT Program Information and Requirements

The MAT program offers a master's degree in one of four secondary education disciplines: English, social studies, science (biology, chemistry, or physics/engineering), or mathematics. The MAT program has an intensive one-year, full-time format, beginning with a summer semester in June and ending the following May. The program is certification-eligible for Rhode Island state teacher certification in secondary education (grades 7-12). Rhode Island is a member of the Interstate Certification Compact (ICC) (<http://www.ride.ri.gov/TeachersAdministrators/EducatorCertification.aspx>), which has reciprocal agreements with 44 states.

MAT program graduate students complete 8 credits in total, consisting of a mix of one-credit and half-credit courses, including the summer practicum and academic-year student teaching.

Math - MAT

The following plan of study is required of all secondary Math MAT students:

EDUC 2500	Foundations of Teaching and Learning
EDUC 2510D	Educational Theory and Practice in Teaching Mathematics 1
EDUC 2515	Learning Theory and Special Populations
EDUC 2520D	Educational Theory and Practice in Teaching Mathematics II
EDUC 2525	Instructional Design, Planning, and Integrating Technology

EDUC 2530D	Educational Theory and Practice in Teaching Mathematics III
EDUC 2535	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines I
EDUC 2545	Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines II
EDUC 2555	Assessment and Using Data to Support Student Learning
EDUC 2565	Practicum and Seminar I
EDUC 2575	Student Teaching and Seminar
EDUC 2385	Education Inequality and Community Assets: Contexts and Change

For more information on MAT admission, program requirements, and state certification requirements, please visit the following website:

<https://education.brown.edu/academics/graduate/master-arts-teaching>
(<https://education.brown.edu/academics/graduate/master-arts-teaching/>)

Urban Education Policy Program Information and Requirements

Urban Education Policy (UEP) program graduate students complete nine (9) courses in total, including a required nine-month internship that counts as one course.

UEP students must complete the following eight (8) core courses:

EDUC 2320	Quantitative Research Methods and Data Analysis
EDUC 2330	Urban Education Policy: System and Governance
EDUC 2350	Economic Analysis and Urban Education Policy
EDUC 2360	Policy Analysis and Program Evaluation for Education
EDUC 2367	Strategic Management of School Organizations
EDUC 2380	UEP Internship Seminar
EDUC 2385	Education Inequality and Community Assets: Contexts and Change
EDUC 2390	Race and Democracy in Urban Education Policy

UEP Electives

In addition to the eight courses listed above, UEP students must complete one elective, approved by the student's faculty advisor, in areas that can include public policy, schools and school reform, social contexts of education, economic analysis, urban politics, quantitative analysis, research methods, schools and communities, and organization and leadership.

For more information on the A.M. in Urban Education Policy admission and program requirements, please visit the following website:

<https://education.brown.edu/academics/graduate/urban-education-policy-am>
(<https://education.brown.edu/academics/graduate/urban-education-policy-am/>)

Courses

EDUC 0100. Controversies in Educational Inequality.

Educational inequality has become an increasingly common topic of public, academic, and journalistic debate. This course introduces students to ongoing social scientific debates about the sources and consequences of educational inequality such as: Do charter school provide educational access and opportunities or do they divert resources away from public schools? Does Teach for America improve student outcomes or does it exacerbate problems? Are schools the great equalizer do they amplify larger social inequalities? Each unit and class will involve significant student participation though spirited class discussion and debate.

EDUC 0120. K-12 Education Systems and Climate Change.

The effects of climate change are increasingly visible across all aspects of society. This course will explore the intersection of K-12 education systems and climate change. We will study the risks that rising temperatures and sea levels as well as extreme weather events pose to schools and learning. We will examine what schools teach students about climate science and environmental stewardship. Much of the class will focus on case studies of school systems addressing climate change through a range of initiatives such as developing environment education curriculum, investing in clean-energy infrastructure, launching community-based demonstration projects, and preparing students for the new green economy. Students will develop skills in reading, critiquing, and synthesizing academic research as well as generating evidence-based policy recommendations. We will take an applied, solutions-oriented approach to grappling with the concrete challenges schools face in advancing these efforts.

EDUC 0300. Introduction to Education and Society: Foundations of Opportunity and Inequality.

This course examines the purpose, structure, and challenges of the American educational system as well as the experiences of the diverse learners and teachers within the system. It also explores how educational institutions have served to create social mobility and opportunity, but also to perpetuate inequality across race, class, gender, and other axes of difference. The course requires no prior knowledge.

EDUC 0405. New Faces, New Challenges: Immigrant Students in U.S. Schools.

What challenges do immigrant students face in adapting to a new system of education? This course examines the educational experiences of immigrant youth and their families. Readings include key contributions by scholars across disciplines, as well as a selection of memoirs and films about the pathways newcomers take in navigating school and (trans)forming them. Enrollment limited to 19 first year students.

EDUC 0410G. The Afterschool Hours.

The family and the school are seen as the two primary institutions of childhood. But what about the space in between? Over the course of the twentieth century—once compulsory schooling became law—the way American children occupied the hours between school and home became ever more important. This course examines the literature on how youth should “best” spend their afterschool time. Looking at enrichment courses, sports, work, leisure, and more, this class introduces you to the social science method of interviewing as you learn to undertake your own original research and reflect on how you spent your own afterschool hours.

EDUC 0415. Controversies in American Education Policy: A Multidisciplinary Approach.

Education lies at the center of some of the most important—and most heated—policy debates in the United States today. Policymakers argue over a whole host of topics: what role should the government play in schooling? How should schools best educate students to succeed in the 21st century economy? Do schools reproduce structural racism and inequality in society, or are they engines of opportunity and social mobility? Should students get to choose the school they attend? In this seminar, we will examine a range of current policy debates in education using an interdisciplinary approach. The study of education sits at the intersection of many social science disciplines. We will analyze these debates from the perspective of historians, sociologists, political scientists, and economists. Enrollment is limited to 19 first year students.

EDUC 0425. The Power of Translanguaging: Sustaining Multilingualism in Schools.

This seminar course will first investigate the theoretical foundations of translanguaging practices and policy implications for translanguaging pedagogies. Then students will learn how to design culturally-responsive mini-curriculum units with strategies and resources to support translanguaging. Students will reflect on their own language practices and experiences as monolingual, bilingual, or multilingual individuals within their communities and will research connections to US schooling. We will consider translanguaging from a teaching and advocacy lens for multilingual learners and build translanguaging curriculum units that will be made accessible to teachers who work with culturally and linguistically diverse students in local schools. Proficiency in a language other than English is not a requirement; however, bilingual students and/or students studying foreign languages who would like to support our local multilingual educational community are especially encouraged to enroll in this course.

EDUC 0500A. Habla Conmigo: Cross-Cultural Language Learning and Teaching.

This course highlights the intersection of language learning and language teaching in a cross-cultural context. Through active engagement as a Spanish language learner and an English language teacher, students consider how arts-based, multimodal strategies can influence their experiences. The course builds on The Arts Literacy Project, established at Brown and utilized at The Habla Institute in Mérida, Mexico. Students learn about the components of The Arts Literacy's Performance Cycle framework and integrate this learning with Teaching English to Speakers of Other Languages (TESOL) strategies. Students begin the wintersession in virtual sessions investigating literacy, culturally-responsive pedagogies, and second language acquisition. They apply these theories to practice while immersed in language study for two weeks in Mérida and creating resources for local RI teachers. All proficiencies are welcome: no prior Spanish is required, and heritage Spanish speakers are encouraged to enroll.

EDUC 0508. Theory and Practice of Engaged Scholarship (SOC 0310).

Interested students must register for SOC 0310.

EDUC 0510. Culture Wars in American Schools.

This course will examine the history of "culture wars" in American public schools in the twentieth century, including debates over curriculum and who has the power to make decisions about education. Using primary and secondary sources, we'll look at debates over American history, school prayer, evolution, sex education, Americanization, and parents' rights among other topics. We'll explore how these debates over school curriculum, aims, and control raise important questions about majority and minority rights, the existence and meaning of a common national culture and narrative, and the role of schooling in a democracy. We'll use this history to think critically and with perspective about some of these debates in our current moment.

EDUC 0515. Teaching LGBTQIA History.

What could a high school U.S. history class look, sound, and feel like when taught through the experiences of LGBTQIA people and communities? Students will answer this question by engaging with the theories and practices of teaching LGBTQIA history in secondary social studies and humanities classrooms. Students will be trained in curriculum design, culturally relevant pedagogies, and LGBTQIA history. Students will then create their own unit plans on a topic in LGBTQIA history that could be taught to local Providence high school students. Those interested in the humanities, teaching, and American LGBTQIA history should take this class.

EDUC 0520. Adolescent Literature.

This introductory seminar presents an overview of the historical, socio-cultural, academic, and political issues that provide context for the use and availability of adolescent literature today. Ideas that figure prominently in the course are: connections between reading and democracy and decolonizing the school curriculum. Particular attention focuses on reading engagement for adolescents, the availability of "own voices" texts, access to literacy and fluency through adolescent literature, and issues of censorship in American public school classrooms and libraries. Students in this course will develop an understanding of the place of adolescent literature in today's curriculum debates as well as a background in choosing, reading, and analyzing the literature itself. Students design curriculum for new texts. Assignments include short weekly assignments, discussion board posts, multimedia assignments, curriculum development projects, and final paper and exhibition.

EDUC 0525. Teaching Writing to Teens: Theory and Pedagogy.

This course seeks to explore how writing is being taught in US schools, particularly under resourced schools serving students of color who are in Advanced Placement or Dual Enrollment writing classes. The course also seeks to imagine how writing could be taught from a student centered perspective and a decolonizing perspective. Students will read about the theory and practice of teaching writing and then complete a practicum where they act as writing teachers and tutors to twelfth grade students at Hope High School and Blackstone Academy who are pursuing dual enrollment college credit for their high school writing class. This integration of theory, practice and reflection allows for students to balance academic and authentic learning.

EDUC 0530. Fieldwork and Seminar in Secondary Education.

What makes high school in the US worthwhile, engaging, and equitable for all students? What characterizes a great high school teacher? How are current events affecting teachers and students? In this community-engaged seminar, you will explore these questions as you observe weekly in a local secondary classroom. You will connect observations to a broader investigation of schools as complex educational, political, and social institutions. You will analyze readings on disparities and opportunities in education and you will develop distinct writing skills in 1) fieldwork documentation, through observations and analysis of classroom interactions 2) reflective narration, through development of a portrait of good teaching, and 3) scholarly analysis, through completion of an inquiry paper on a topic of your choice. Take advantage of this timely class to contextualize current national policies within local high school classrooms.

EDUC 0540. Language and Education Policy in Multilingual Contexts.

Millions of children around the world, especially in low- and middle-income countries, begin school learning in a language to which they have had little exposure. Children who learn and are assessed in a language different from that spoken at home or in their community are more likely to drop out of school and demonstrate lower learning outcomes than their peers, on average. Designing multilingual education systems, however, is not always feasible or desirable and requires a different set of resources than monolingual systems. This course explores how multilingual countries and communities design and implement language policies, and the major factors at play when increasing the number of languages used in a school system.

EDUC 0550. Current Issues in US Higher Education.

Higher education has been considered a driver of the American Dream, a key to social mobility and economic security. Yet, higher education also face criticism as a tool for reifying social inequality and as not worth the ever-rising costs. This course explores current debates and challenges in US higher education. Our starting point will be an exploration of campus culture and norms and the work that elite colleges require to serve increasingly diverse student bodies more equitably. We will then broaden our focus to the full landscape of US higher education. Students will learn about the diversity of higher education institutions in the US and grapple with current policy debates: whether and how standardized testing should be used in college admissions, what role for-profit colleges should play, and what role the government should play in containing student debt, among others.

EDUC 0560. Cultivating STEM Identities: Teaching for Equity in the Math and Science Classrooms.

This course will explore how educational experiences and beliefs about identity and power influence how we learn and teach mathematics and science. We will examine equitable, culturally responsive and sustaining teaching practices in secondary mathematics and science classrooms and how these can be utilized to cultivate students' STEM identities. You will have an opportunity to tutor in a STEM classroom, develop and teach a lesson in our class and create a unit plan that could be implemented in a variety of contexts. This course is designed to help you gain a greater understanding of the complexities that surround teaching and learning mathematics and science in the United States.

EDUC 0610. Brown v. Board of Education and the History of School Desegregation.

Using primary and secondary sources in history, education, and law this course will explore the landmark Supreme Court case of *Brown v. Board of Education* which ruled school segregation was unconstitutional and the legal and policy efforts to desegregate schools and promote educational equity that followed it. We will consider the meaning, successes, and failures of school integration, the legacy of *Brown* for education, and consider the meaning of "equal educational" opportunity in the past and present.

EDUC 0620. Cradle of Inequality: The Role of Families, Schools, and Neighborhoods.

In this Sophomore Seminar, we will examine contours of inequality that begin in early childhood and accumulate over time, with particular focus on issues of race, class, and gender. Moreover, we will examine how these factors matter in early childhood and the role of families, schools, and neighborhoods in shaping, ameliorating, and propagating larger inequalities. Through our reading and active discussion, we will develop answers to questions that motivate much inquiry into inequality: Who gets what, and why?

EDUC 0750. Evidence and Method in Education Research.

Understanding evidence is critical to engaging as citizens and leaders the 21st century. This is particularly true in education research, policy, and practice. Recent years have seen an explosion of empirical education research, requirements that policies be evidence-based, and rapid expansion of the use of evidence in school settings. This course will introduce students to a range of methods used to generate evidence in education. It is a required course in the Education concentration.

EDUC 0800. Introduction to Human Development and Education.

Introduces students to the study of human development and education from infancy through young adulthood. This course provides a broad overview of scientific and theoretical understanding of how children develop and how research is generated in the field. Major topics include biological foundations, cognition, language, emotion, social skills, and moral understanding based on developmental theories and empirical research. We will attend to variations in cultural, ethnic, gender, socioeconomic, and other forms of human diversity in social contexts (e.g., family and schools) and how the person-context fit may influence children's developmental trajectories. The course also covers educational contexts, processes, and outcomes.

EDUC 0810. "Education of a Bodybuilder:" Histories of Physical Fitness in the United States.

What happens when we change our focus in education studies from schools to gyms? We imagine personal trainers as teachers, gym-goers as students, fitness media as curricula, and muscle-building as the desired results. This comparison serves as one of the many lenses in which we will engage with the rich histories of fitness, weightlifting, and gym culture. Since the 1800s, educators and entrepreneurs alike have taught Americans how to improve their bodies through multiple modalities. These original "body-builders" created a billion-dollar industry as they laid the foundations for social media, constructed a new model of American manhood, and sold themselves as "professors" of fitness. We will explore their larger cultural influences, "bodybuilding" as an educational concept, and the technologies of weightlifting and gyms throughout history.

EDUC 0815. The Craft of Teaching.

What is the "craft of teaching"? A wide variety of texts are used to investigate the complexity of teaching and learning. Considering current problems as well as reform initiatives, we examine teaching and learning in America from the perspectives of history, public policy, critical theory, sociology, and the arts. Weekly journals and reading critiques; group teaching project; final paper.

EDUC 0820. Politics and Public Education.

Who exercises power in public education? This course examines the key institutions (e.g. school districts, states, Congress, and the courts) and actors (e.g. parents, teachers, interest groups, and the general public) shaping American K-12 education in order to understand recent policy trends and their consequences for students. Major policies discussed include school finance, textbook adoption, school accountability, and school choice. Particular attention is given to the federal No Child Left Behind Act of 2001 and debates over its reauthorization. Previous coursework in American politics or public policy is suggested but not required.

EDUC 0825. Adolescence in Social Context.

What does it mean to be a teenager? Is it an age-based or social-role based distinction? Is teen angst a universal phenomenon? Do parents really just not understand? Both an individual and a collective perspective on adolescence are used to provide an understanding of how this life stage is differently experienced by youth cross-culturally. Readings include theoretical and empirical papers from such areas as psychology, sociology, anthropology, and education. We examine how local context and salient axes of social difference affect both the cultural construction of what adolescence means and how individual youth navigate their everyday lives.

EDUC 0830. Sociology of Education.

While the United States educational system is widely considered the main institution through which the nation delivers on its promise of social mobility, sociologists have long recognized that schools exacerbate – or even produce – social inequality. This course provides an introduction to the application of sociology to questions of education, with a focus on the United States education system. We will ask questions such as: What do schools teach besides academics? How do social class, gender, and racial/ethnic relations shape student experiences? How can we address critical social issues through education policy?

EDUC 0835. Comparative Education.

This course will explore education across the Global South—from adult literacy NGOs in Brazil to Syrian refugees in Turkey, to post-genocide Rwandan classrooms. While initially the international community was concerned with access to education, the main goal now is quality education, especially beyond the primary school level. Readings range from official documents by international organizations, writings by sociologists, historians, political scientists, and anthropologists.

EDUC 0860. Sports in American Society.

This course seeks to understand, analyze, and criticize sport—seen here as one of the primary institutions in the lives of Americans. Working from the basis of sporting events in the Durkheimian sense of symbolic community, we will elevate them to the status of educational and religious institutions in our everyday lives (as we interrogate them and see them in relation to these, and other, institutions as well). Using the primary lenses of gender and race this class examines sports at five different levels—professional, Olympic, NCAA, scholastic, and youth—to understand how athletics have impacted, and will continue to impact, American society.

EDUC 0870. Perspectives on Multilingual Learners in US Schools.

Students in Rhode Island's public schools report speaking over 100 different languages and, in our urban core public schools, nearly 30% of students are designated as Multilingual Learners (MLLs). How are their languages integrated into school? This course investigates how school programs, pedagogies, and practices can either build upon or limit home languages that are inherently present in the classroom. By focusing on the experiences of MLLs in Rhode Island and the broader US public school system, we will consider these essential questions: Who are MLLs? How do historical milestones, federal laws, state policies, and pedagogical practices affect their experiences in school? What are current promising practices for MLLs? What are perspectives of students, families, educators, and policymakers concerning challenges and opportunities for Multilingual Learners?

EDUC 0880. Edvolution: The Economics of Education and Innovation.

This course examines the dynamic relationship between education, innovation, and economic opportunity in the U.S. and global contexts. We'll explore how education builds human capital driving economic growth, how this capital generates transformative innovations, and how these innovations demand new educational approaches—creating a continuous 'race' between education and technology. We'll analyze educational innovation models from school-based reforms and teaching methods to edtech tools. We'll examine who becomes an innovator and how these dynamics affect different populations, with a focus on equity implications. Topics include the economics of funding innovation, why promising ideas in education fail to scale, and emerging trends shaping education's future. Students will complete reflections, case analyses, team presentations, and a final project applying course concepts to real-world educational innovations.

EDUC 0890. E pluribus unum: English and Engaged Citizenship in the United States.

What are the impacts and implications of naming English as the US official language? How does an official national language serve to unify or divide a linguistically diverse nation? This course will examine official English language policies and English language practices in multilingual communities of the US. Students will investigate relationships between English language proficiency and concepts of engaged citizenship in legal, educational, and community spaces. Students will trace the use of English and other languages in US history from colonialism through today, will investigate how waves of English-only policies have impacted K-12 schools throughout history, and will explore both domestic and global alternatives to monoglossic policies and practices.

EDUC 1015. Reimagining Power: Community-Driven Evaluation and Education.

We aim to create programs that change the world, but who determines how their success is measured? In this course, we will interrogate how culture and context should inform program evaluation while supporting organizations across Rhode Island. You will explore, design, and conduct monitoring and evaluation activities using a culturally responsive approach. The course will provide exposure to various educational topics and build your skills in areas throughout the evaluation flywheel, preparing you for complex research and evaluation careers.

EDUC 1050. History of African-American Education.

This course will examine the history of African-American education with particular emphasis on the twentieth century. We will explore African-Americans' experiences with schooling under slavery and segregation, the struggle for desegregation and equity North and South, and the place of education in African-Americans' quest for equal rights. We will also consider how the African-American experience with public schooling makes us rethink major narratives of American education, democracy, and equality of opportunity and how an historical understanding of these issues may help us engage contemporary debates.

EDUC 1090. Adolescent Literature.

This intermediate course presents an overview of the historical, sociocultural, academic, and political issues that provide context for the use and availability of adolescent literature today and the ways in which those issues connect with adolescent development. We will delve into contemporary texts that interest adolescents inside and outside of the classroom. Recent debates about the merit of literature for adolescents echo those debates from generations ago. Still, young adult fiction has developed into one of the largest markets in book publishing. Ideas that figure prominently in the course are: connections between reading and democracy; and decolonizing the school curriculum. Students in this course will walk away with an understanding of the place of adolescent literature in today's curriculum debates as well as a background in choosing, reading, and analyzing the literature itself.

EDUC 1185. Developmental and Educational Journeys of Students in Immigrant Families.

This seminar course explores developmental and educational experiences of students in immigrant families in the United States, from early childhood to late adolescence. Students will examine family socialization, various domains of development (language, academic, socioemotional, and identity), cultural maintenance and adaptation, and home-school dynamics. Through readings and discussions of research from interdisciplinary social science fields, such as psychology, education, anthropology, and sociology, students will gain a deeper understanding of immigrant-origin students' experiences and how social, school, and family contexts and practices influence their developmental and educational journeys. The course highlights assets and agency that immigrant families and students bring as they navigate educational systems, as well as the barriers and challenges they face in the U.S. This course also incorporates community-engaged learning.

EDUC 1190. Family Engagement in Education.

How do families from diverse backgrounds support their children's schooling? What does research tell us about how families influence their children's development and educational processes? Students in this course will examine theories and research findings related to family engagement in education drawing from various social science studies. The course offers an in-depth look at focal topics across diverse groups, such as parental beliefs and practices, family processes in sociocultural contexts, immigrant families, and elements and programs that promote family-school partnerships. This course involves students' fieldwork and engagement in the community.

EDUC 1195. What's AntiBlackness Doing in a "Nice Field Like Education".

This course considers the foundational texts that constitute the study of anti-Blackness and explores how these theoretical constructs can be applied to educational contexts, policies, reforms, and practices. We will consider the following questions: How does anti-Blackness build on and depart from other forms of racial analysis such as Critical Race Theory? How have themes of anti-Blackness weaved through Black activists, educators' and scholars' critiques of education? Lastly, how might the study of anti-blackness provide a foundation for imagining more humane educational practices for all students?

EDUC 1220. The History of American Education.

This course is an introduction to the history of American education with an emphasis on K-12 public schooling. Using primary and secondary sources, we will explore the development of public schools and school systems, debates over aims and curriculum, conflicts over school governance and funding, and struggles for equity and inclusion over time. We will analyze the relationship between schooling, capitalism, and democracy. Finally, in exploring how different generations have defined and tried to solve educational dilemmas, we'll consider how this history might help us approach education today.

EDUC 1225. The American Teacher: How Policy Shapes the Profession.

Teachers are critical for transforming schools and changing trajectories of students' lives; our experiences as students and research underscores their importance in changing students' academic trajectories. We tend to think of teachers as doing their work alone, but they are part of a greater education ecosystem. In this course, we will examine the constraints - those imposed by principals, district policy, and state and federal law - under which teachers work. What can policy makers consider as they work to improve the experience students have in the classroom, especially as we ensure that our most vulnerable students have the most effective teachers?

EDUC 1230. Applied Statistics for Ed Research and Policy Analysis.

This course provides an accelerated introduction to applied statistics for conducting quantitative research in the social sciences, with a focus on education policy. Students will become acquainted with the fundamentals of probability, statistical inference, data visualization, and multivariate regression. Concepts and methods are taught using real-world examples with multiple opportunities for students to apply these methods in practice. The course uses the statistical software program, STATA.

EDUC 1240. Using Qualitative Research Methods.

Designed for sophomores or juniors concentrating in education studies, but also open to other undergraduates interested in qualitative research methods. Through readings, class exercises and discussions, and written assignments, examines issues related to the nature of the qualitative research methods that are commonly used in education, psychology, anthropology, and sociology.

EDUC 1250. Policy Implementation in Education.

This course provides an analytical foundation for students who are interested in education policy implementation, with particular emphasis racial and economic equity. We begin by centering the importance of school equity in the lived experiences of students on the margins. From there, we draw on social science research to examine the strengths and limitations of education governance structures at the federal, state, and local level that dictate how policy is implemented. We, then, examine major policy reform issues through the lens of evidence-based research. Ultimately we explore ways to generate governance and policy solutions in order to improve schools in our most vulnerable communities.

EDUC 1265. Comparative Education Systems: Governance and Policy.

Public education is a core responsibility of government in all nations around the world. This course examines similarities and differences in the way nations organize their public education systems. Who controls education policy, such as curriculum, staffing, and funding? Do children have equal rights to public education? How do nations formulate and enforce equal education opportunity? Is social and racial justice a priority in public education? What is the role of school districts? In addressing these issues, we will pay particular attention to cross-national differences in the centralized versus decentralized governing structure. Students will engage in a country-specific (non U.S.) team project that focuses on a key policy challenge, such as equity, quality, accountability, or innovation. A final, country-specific (non U.S.), research paper will focus on a specific area of governance, management, or funding that needs capacity building or improvement.

EDUC 1289. Cross-Cultural Perspectives on Child Development.

This course will focus on the role of culture in child development from infancy to young adulthood. Contemporary theories and empirical research will be reviewed to examine various topics and domains of development. Major topics include childrearing, parental beliefs and parenting styles, cognition, self, affect, moral development, views of intelligence, knowledge, and learning, and beliefs about school. Prior course work in psychology or human development in education is required, such as EDUC 0300, EDUC 0800, CLPS 0610 or CLPS 0620. Instructor permission required.

EDUC 1300. Schools as Sites of Social Welfare: An Exploration of the Role of Social Workers in Schools.

This course offers an orientation to schools as a nexus for social workers engaging with youth. Students in this course will gain a nuanced perspective and understanding of the needs of marginalized youth and come to understand schools as sites of social welfare. Students will dissect some of the challenges that young people in schools encounter throughout their lived experiences such as educational disabilities and learning challenges, healthcare disparities, and the challenges of living in poverty. Students will evaluate schools as sites of intervention where social workers collaborate with other professionals at the micro and macro level to improve youth conditions related to human development in order to enhance educational achievement and overall well-being.

EDUC 1310. Inside Higher Ed: Sex, Class, and Admissions.

This course introduces students to the sociological study of higher education in the United States. In this seminar, our primary focus will be to engage with the current debates, issues, and problems associated with higher education. Among the questions we will explore are: What is hook-up culture, and can you "opt-out"? What is the purpose of higher education, and how does our background impact how we answer this question? Who are the biggest beneficiaries of affirmative action? Are legacy students and athletes advantaged in the admissions process? Which students are most likely to participate in class discussion? And how does gender matter for who does and does not participate? Who is best served by higher education institutions?

This class is not just about reading research. You will be required to actively discuss and reflect on your collegiate experiences with your classmates.

EDUC 1320. Turning Hope into Results: The Policy Ecosystem of the Providence Public Schools District.

The Providence Public School District (PPSD) serves approximately 22,000 students and their families. This course will examine the policy ecosystem around the district, which-as a result of a 2019 review-is currently undergoing transformational change to provide students with the world-class education they deserve. This course will build students' knowledge of PPCD's history and organizational context. Students will also learn to analyze the district's policy environment while considering the voices of relevant community members. In order to do this, students will learn the national context for specific topic areas such as teacher policy, curriculum and instruction, family engagement, and school culture. As a Community-Based Learning and Research course, students will be involved in both community collaborations and course assignments that will encourage reflection on the relationship between their classroom learning and their role and experiences working with a community partner.

EDUC 1330. Social Psychology of Race, Class, and Gender.

This seminar is designed to give participants an understanding of how members of multiple social groups experience race, class, and gender and how these identities serve as axes of stratification. Through this course, I am hopeful and confident that you will learn to apply the "sociological imagination" to educational issues relating to race, class, and gender. This means understanding race, class, and gender as social constructs, learning how they exist within social structures and institutions, and how their structures and functions influence an individual's perceptions of self and others. Also, we will learn how scholars examine the interconnections between race, class, and gender, the different methodological approaches these scholars take, and issues in studying these social categories simultaneously. In exploring these concepts, we will learn to be critical consumers of research, especially in the public sphere.

EDUC 1340. Economics of Education.

The course will introduce students to the toolkit of applied microeconomics for thinking about, developing, and analyzing education policy. Rather than focus on abstract theory, the course aims to introduce students to economic concepts and thinking via their application to current education policy debates. We will begin by examining the linkages between educational achievement and economic outcomes for individuals and the economy as whole. The course will then survey a range of systemic, organizational, and personnel reforms in education with a focus on U.S. preK-12 public schools. We will review the empirical evidence for each reform and discuss which of these reforms hold promise for improving public education. Understanding and critiquing the experimental, quasiexperimental and descriptive research methods used in the empirical literature will play a central role in the course.

EDUC 1350. Education as Freedom?: Educational Access and Immigration Activism in the US South.

This course explores the political, pedagogical, and practical efforts to expand educational access to minoritized groups in the US, with special attention to the US South, both in the recent past and present. Course texts will include research in Africana studies, anthropology, history, education, and ethnic studies as well as first-person narratives of students, teachers, parents, and other stakeholders living, learning, and working toward equity in the region over time. Students will have the opportunity to hear from community partners in Nashville, Tennessee and Atlanta, Georgia—cities with storied histories in both the Civil Rights and contemporary immigrant rights movements.

EDUC 1430. Social Psychology of Race, Class, and Gender.

Focuses on the social construction of race, class, and gender and how this construction influences an individual's perception of self and other individuals. Topics include identity development, achievement, motivation, and sociopolitical development. Enrollment limited to 30.

EDUC 1460. "Education of a Bodybuilder:" Histories of Physical Fitness in the United States.

What happens when we change our focus in education studies from schools to gyms? We imagine personal trainers as teachers, gym-goers as students, fitness media as curricula, and muscle-building as the desired results. This comparison serves as one of the many lenses in which we will engage with the rich histories of fitness, weightlifting, and gym culture. Since the 1800s, educators and entrepreneurs alike have taught Americans how to improve their bodies through multiple modalities. These original "body-builders" created a billion-dollar industry as they laid the foundations for social media, constructed a new model of American manhood, and sold themselves as "professors" of fitness. We will explore their larger cultural influences, "bodybuilding" as an educational concept, and the technologies of weightlifting and gyms throughout history.

EDUC 1475. The Big IDEA: The Complexities of Gifted and Special Education.

This course introduces students to the historical foundations, policy framework, efficacy research, and ongoing controversies in gifted and special education. Gifted and special education are hot-button policy issues and affect the experiences of all students in U.S. schools. In the U.S., 15% of students receive special education services, and 6% receive gifted education services. Some of these students are educated with their peers, and some are educated in school settings that can cost over \$500,000 relative to an average spending of \$17,000 per pupil nationally. There are many complex issues related to gifted and special education. At the end of this course, students will have a deep understanding of gifted and special education and be positioned to continue engaging on these issues in future studies. The course requires no prior knowledge.

EDUC 1485. AI & Education: Critical and Applied Perspectives.

What does it mean to learn in a world of "thinking machines"? Artificial Intelligence is not simply a technology to be adopted or managed; it exposes the structural contradictions and limits of traditional education itself: how neoliberal logics shape institutions, how outdated cognitive models persist, and how assessment practices reduce understanding to proxies. "AI cheating," for example, will be explored not as a moral failure but as evidence of a system that prioritizes representation over reality. Through readings, discussions, and projects involving generative AI tools, students will engage three threads: (1) critical analysis of both educational and AI systems, (2) epistemological tensions embedded in approaches to cognition and learning, and (3) design strategies for addressing AI's "colonization" of teaching and learning.

EDUC 1490. Discipline and Punish: Historical Insights on School Punishment.

School discipline has played a key function in broader efforts to maintain social order. This seminar traces historic processes and recurrent themes that have contributed to the punitive direction of school discipline reform. We will take seriously factors such as race, gender and class in the school punishment phenomenon and consider how reformers, students, and educators have experienced and shaped policies related to punishment and criminality. We will also consider debates surrounding, discipline reform, and police abolition in schools. By the end of the course students should be able to engage with the historical and theoretical debates, synthesize claims made in readings and evaluate evidence used in the text. Relatedly students will be expected to effectively communicate and make analytic connections in writing and in class discussions.

EDUC 1540. Creating Schools.

In this course we will design a school and the school system in which it lives to meet educational goals for students. To inform this process, we will discuss current standards for school and alternative goals, as well as current school structures such as courses, assessments, and teaching requirements, and potential alternative practices. We will directly consider heterogeneity and inequality and how to build a system that is responsive to multiple dimensions of diversity.

EDUC 1600. Education, the Economy and School Reform.

This seminar examines the linkages between educational achievement and economic outcomes for individuals and nations. We study a range of system, organizational, and personnel reforms in education by reviewing the empirical evidence and debating which reforms hold promise for improving public education and closing persistent achievement gaps. Understanding and critiquing the experimental, quasi-experimental and descriptive research methods used in the empirical literature will play a central role in the course. Prerequisites: Education and PP concentrators, EDUC 0840 and EDUC 1230 (or equivalent); Economics concentrators, ECON 1110 or ECON 1130, and ECON 1620. Enrollment limited to 20.

EDUC 1610. Critical Black Masculinities and Education.

This course is intended for advanced undergraduate to engage and apply critical theories of Blackness and masculinities to illuminate complexities across topics within educational research, policy, and practice. This course unpacks the various ways that masc-identifying people leverage, experience, and correct patriarchy as a destructive force. More specifically, this course focuses on topics related to the educational life-worlds of Black male, men, and/or masc identifying people in institutions of colleges and universities, prisons, community initiatives, and even healthcare systems. We will explore the pedagogies and politics that inform these educational projects as well as the sense-making of those who imagine, implement, and participate in them. Students will be challenged to rethink conventions around what constitutes masculine identity and experience, gain exposure to relevant educational policy and practice issues, and design solutions alongside practitioners, artists, and policy advocates.

EDUC 1615. Introduction to Community-Based Participatory Research in Education.

Using community based participatory research, students in this course will learn a research method that interrogates issues of positionality, power, and equity. Community-based participatory research removes research solely from the realm of academia and engages the community in every part of the research project by centering the voices and perspectives of community members. Central to the course and the method of research are issues of power, trust, reform, ethics, and community partnership. Students in this course will work directly with community organizations to understand the problems of the organization, identify research questions that the organization seeks to understand, and highlight a research plan. Partnership, collaboration, and consultancy are central to every phase of this type of research. Student researchers will conclude by providing recommendations to the community organizations.

EDUC 1620. Urban Schools in Historical Perspective.

Why did urban schools, widely viewed as the best in the nation in the early twentieth century, become a "problem" to be solved by its end? How have urban schools been shaped by social, economic, and political transformations in cities and by other public policies? How have urban schools changed over time? This course will ask these and other questions to explore how historical perspective can help us better understand urban schools today. We will analyze the impact of changes in demographics, urban renewal and suburban development, the political economy of cities, educational expectations, and demands for equity.

EDUC 1645. Moral Development and Education.

This course focuses on the acquisition of moral values within the home, school, and peer groups. We will examine contending approaches to moral development and its fostering. Topics include the philosophical underpinnings of moral theory, the cognitive and behavioral dynamics of moral growth, the values climate of contemporary American society, and the role of education in the moral development of children. We will also consider cultural, ethnic, and gender differences. Prerequisite of one of the following courses: EDUC0300, EDUC0400, EDUC0620, EDUC0800, EDUC0850, EDUC0880, EDUC1289, EDUC1660, EDUC1670, EDUC1675, CLPS0610, CLPS0620, or equivalent. Enrollment is limited to 20 students.

EDUC 1650. Policy Implementation in Education.

This course offers an "analytical foundation" for students interested in public policy implementation, with particular emphasis on education. Drawing on social science research, the course examines strengths and limitations of several frameworks, including the "policy typology" school of thought, the rational actor paradigm, the institutional analysis, the bargain model, the organizational-bureaucratic model, and the "consumer choice" perspective. Enrollment limited to 20.

EDUC 1655. Human Development and Education in East Asia.

This course examines human development and education in East Asia, mainly China, Japan, and South Korea, using comparative and sociocultural perspectives. Topics include cultural beliefs and practices related to learning; school and students' educational experiences; academic and socioemotional development; family socialization; globalization and educational systems. Students will also examine diversity, inequality, and marginalization in educational processes across and within these countries. The course draws on a range of contemporary studies from interdisciplinary social science fields, such as psychology, sociology, and anthropology.

EDUC 1660. Social Context of Learning and Development.

This course focuses on the social environment that contributes to the development of children's minds, language, self, affect, relationships with others, beliefs about learning, experience with/attitudes toward school. The course covers the period from birth through young adulthood. Topics include child development and learning under the influences of family, peers, community, school, and immigration, culture, race/ethnicity, and SES. We will review theoretical frameworks and empirical research and discuss implications for education. Prior coursework in human development, education, and psychology is required, such as EDUC 0300, EDUC 0400, EDUC 0620, EDUC 0800, EDUC 0850, EDUC 1289, CLPS 0610, CLPS 0620, or equivalents. Enrollment is limited to 20 students.

EDUC 1665. Reimagining Humanities Education: Curriculum Development for Secondary Schools.

This advanced seminar links curriculum theory with the practical skills of curriculum design. While much curriculum theory focuses around the canonical curriculum, the course will strive to uncover silences to expose the ways that the lived and experiential curriculum, both historically and contemporaneously, has the potential to provide counter narrative and to bring about a dialogue of diverse perspectives. We will analyze ways that curriculum is informed by and dependent upon conceptions of race, ethnicity, language and nation. Students will learn about the Understanding by Design framework and use it for their own curriculum development projects that bring together literary fiction and primary sources. Archival research experiences, both online at the Library of Congress and in person at the John Hay Library at Brown, inform our understanding of the possibilities of uncovering stories that matter.

EDUC 1670. Juveniles for Justice: Youth Civic Engagement and Activism.

This course examines the meaning of youth activism in terms of individual civic development and collective social transformation. Guiding questions include: How does youth civic engagement affect youth's understandings of themselves, their civic identity, and belonging? How do youth engage in their communities? What effect does this engagement have? What are the barriers and bridges to engagement? Is civic engagement a universal good? The course uses ethnographic cases to explore: 1) how time, place, and social context affect youth's engagement and notions of citizenship and 2) what transferable insights about citizenship, engagement, and change can be gleaned from study across contexts.

EDUC 1675. The Psychology of Teaching and Learning.

This seminar course surveys and critically appraises foundational theories of teaching and learning. As we learn about various theories and the theorists behind them, we consider their effect on our construction of students' learning and teachers' practice. Through reading research in educational psychology and other disciplines, we will examine topics such as learning- and teaching-related beliefs and behaviors, cognitive and socioemotional processes, and motivation that can be applied to teaching approaches and classroom environments. Special attention will be given to sociocultural contexts that affect learning processes and experiences of diverse students. In doing so, we see how these theoretical paradigms are refined with respect to difference, diversity, and intersectionality.

EDUC 1680. Histories of Race and Education in the United States.

Students in this course will explore the interconnections between race and education throughout the history of the United States. Students will investigate 1) how race and racism have shaped education policy and practice throughout American history; 2) the development of white supremacy, anti-Black racism, and other forms of systemic racism within schools; 3) the ways in which BIPOC parents, teachers, students, and reformers have engaged in antiracist activism both within and through educational contexts. Students will complete a final project that helps answer the essential question: how can these histories help promote antiracist educational reform in America today?

EDUC 1690. Literacy, Community, and the Arts: Theory into Practice.

An exploration of ways to improve student literacy skills through the performing arts in area schools. Students read about the theory and practice of literacy and the arts, research national and local initiatives, engage in arts activities, and spend time in area classrooms working with local teachers and artists to draft curriculum materials to be used in summer and school-year programs.

EDUC 1760A. Beauty Pageants as an American Institution.

Beauty pageants are often ridiculed, and even vilified, in American society. Yet their lasting power—from "There She Is" to Toddlers & Tiaras to pageant waves—is undeniable. What accounts for their enduring power? This course draws on inter-disciplinary scholarship to examine how and why pageantry and American femininity have become linked in the public consciousness as they transformed from beauty contests to the largest source of scholarship money available to women in this country. We will examine how pageantry intersects with major institutions—education, politics, and media.

EDUC 1765. Education Policy and Program Evaluations in Low- and Middle-Income Countries.

While tremendous progress has been made around the world toward universal access to primary school in low- and middle-income countries, student learning and progress in secondary school remains an important challenge for many countries.

In the last two decades, governments have implemented many education policies and programs incorporating evaluations using novel methods to estimate their causal impact. Findings have improved our understanding of the effect and cost-effectiveness of a wide range of programs and greatly influenced policy. This course will explore the evidence available, question the theories that motivated the programs, ethics related to evaluation, and the lessons learned.

This course is a seminar and designed for students interested in international education policy and development economics. We will explore education policies around the world, but the main geographical focus will be on countries classified as low- or middle-income.

Students should have completed an introductory data and research methods course equivalent to EDUC 0750.

EDUC 1775. Education for the Future: Innovation, Entrepreneurship, and Scale.

This seminar is both a study and a lab: we will examine research evidence on educational innovations and case studies of educational entrepreneurship, while also creating a space for students to test their own ideas with peers. Working in small teams, students will choose an education pedagogy and use it to teach weekly readings in a round-robin format. Each team will refine and redeploy their pedagogy across the semester, iterating based on peer feedback and evidence. By the end of the course, teams will have developed an educational innovation or venture concept and will pitch how it could scale—whether through startups, institutional adoption, or policy reform. Weekly readings provide the theoretical foundation in the economics of innovation and entrepreneurship, complemented by research evidence on educational policies and innovations from around the world.

EDUC 1900. Senior Seminar.

Required of and reserved for seniors of the Education Studies Concentration as a culminating experience of your Concentration. Our foundational and methodological courses introduced you to the basic themes and research in the field, and upper-level courses typically focused on particular topics in greater depth. Your decision to be an Education Studies concentrator was likely related to one or more of the central themes of the field of education (e.g., human development, education policy and history, culture, race/ethnicity, gender, social justice, etc.). We hope to build on these learning experiences, broadening and deepening your learning across different areas of education.

EDUC 1970. Independent Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 1991. Independent Reading and Research.

Supervised reading and/or research for education concentrators who are preparing an honors thesis. Written permission from the honors advisor required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 2060A. Methods of Teaching: English.

S/NC.

EDUC 2060B. Methods of Teaching: History and Social Studies.

S/NC.

EDUC 2060C. Methods of Teaching: Science.

S/NC.

EDUC 2070A. Student Teaching: English.

S/NC.

EDUC 2070B. Student Teaching: History and Social Studies.

S/NC.

EDUC 2070C. Student Teaching: Science.

S/NC.

EDUC 2090. Literacy Across the Curriculum.

Focuses on three major areas of pedagogy: literacy across the curriculum, special education, and teaching English Language Learners. Topics include: current theory and practice in the three areas, legal requirements for special education, planning for differentiated instruction, assessment and diagnosis of student skill levels, measuring and reporting student achievement, adapting content for ELLS, selecting and working with texts, and effective vocabulary instruction. Open to MAT students only. S/NC.

EDUC 2110. Summer Practicum and Analysis.

Introduces MAT students to elementary school students through work in a unique summer enrichment program for inner city Providence children: Summer Prep readings and seminar meetings focus on arts education; introductions to the teaching of literacy, math and science; curriculum and lesson planning; creating a community of learners; issues of diversity; and physical education. S/NC.

EDUC 2320. Quantitative Research Methods and Data Analysis.

The goal of this course is to provide students in the Urban Education Policy course with a foundation and understanding of basic statistical analyses so that they will be able to design and carry out their own research and will be able to use data to inform education policy and practice.

EDUC 2330. Urban Education Policy: System and Governance.

This course is a requirement for students of the MA in Urban Education Policy program. It examines the system, structure, and governance of urban education policy. It will explore how urban school systems are organized, how urban education policies are made and implemented, and the political realities behind urban policy change. Students will develop an understanding of the landscape of contemporary education policy. The course will include team-based policy projects.

EDUC 2350. Economic Analysis and Urban Education Policy.

This course introduces students to the main economic theories and related applied work that inform education policy analysis by combining economic theory, econometric studies, and education and institutional literature in an examination of current issues in U.S. education, particularly those issues that are most relevant to urban education. We begin by examining key concepts and theories from microeconomics, labor economics, and public economics that are most relevant for studying questions in education. After laying this theoretical foundation, we examine how these theories can illuminate and aid policy analysis around key topics in U.S. education. Open to graduate students only.

EDUC 2360. Policy Analysis and Program Evaluation for Education.

Informed education policymaking requires reliable information about the causal effects of government programs and other factors shaping educational outcomes. This course offers an overview of education policy analysis with an emphasis on econometric strategies for measuring program impacts. It aims to make students critical consumers of policy evaluations and to equip them with tools to conduct their own research. Topics covered include the political context for policy research, social experiments, alternative strategies for making causal inferences, and cost-benefit analysis. Prerequisites: EDUC 1110, POLS 1600, SOC 1100, or written permission of the instructor.

EDUC 2367. Strategic Management of School Organizations.

This course will develop a range of professional, leadership, and management skills, build knowledge and understanding about how organizations work, and offer a place for critical reflection about the internship experience. It will employ case studies of organizations and reforms and draw from the experience of practitioners from the field.

EDUC 2370. Internship.

Students in the Urban Education Policy Master's Program participate in year-long internships in organizations that focus on urban education policy. Each student works with his or her site supervisor to develop a job description for the internship that allows the student to learn from and contribute to the work of the host organization.

EDUC 2380. UEP Internship Seminar.

Students in the Urban Education Policy master's program participate in year-long internships in organizations that focus on urban education policy. Each student works with his or her site supervisor to develop a job description for the internship that allows the student to learn from and contribute to the work of the host organization. This corresponding seminar will explore identity in leadership and study what leadership practices, skills, competencies and dispositions are required to succeed at social change work, both at the internship site and in educational organizations where students may work in after Brown.

EDUC 2385. Education Inequality and Community Assets: Contexts and Change.

Designed for graduate students in the Urban Education Policy A.M. and the Master of Arts in Teaching programs, this course focuses on understanding the dynamic social, cultural, and community conditions shaping America's diverse classrooms. We do so through reading and engaging in anthropological and sociological scholarship on issues like immigrant students, hidden scripts of gender and sexuality in secondary schools, social class and tracking, and ethno-racial discrepancies in discipline. By reading works focused on close observation of students, teachers, and families, students will learn to identify, describe, and evaluate how socio-cultural and socio-economic factors impact learning, student outcomes, and teaching.

EDUC 2390. Race and Democracy in Urban Education Policy.

This course will provide a broad introduction to contemporary education policy centered on issues of race/ethnicity and ideas of democracy. Students will begin by engaging theories of democracy and theories of race. The course will then transition to analyzing major education policy debates such as: school desegregation, school finance, teacher evaluation, curriculum development standards, accountability, educator policies (collective bargaining, certification), special education, and the current policy landscape. The course will include final group projects where students apply the theoretical concepts to strategies for school reform, with the neighboring school districts as cases.

EDUC 2450. Exchange Scholar Program.**EDUC 2500. Foundations of Teaching and Learning.**

This course surveys and critically appraises foundational theories of teaching and learning. As MAT students learn about these theories and the theorists behind them, we consider their effect on our construction of youth's learning and teachers' practice. Through reading ethnographic and qualitative research, we will examine how sociocultural contexts and differences affect how youth learn and how teachers teach. In this way, we see how theoretical paradigms are refined by the experiences of diverse learners and teachers.

EDUC 2510A. Educational Theory and Practice in Teaching English 1.

This course is designed to help MAT students make connections between the theory and the practice of teaching English in the secondary schools. This fast-paced summer course includes a Brown Summer High School practicum teaching experience in the morning and an intensive methods class that accompanies it in the afternoon. The class will focus on high leverage practices for teaching English and visible learning for literacy, particularly in the heterogeneous untracked high school classroom. This workshop-based class focuses specifically on methods for creating a constructivist, student-centered English classroom with high school students from diverse backgrounds in the mainstream classroom.

EDUC 2510B. Educational Theory and Practice I: Social Studies.

This course is designed to provide MAT students with an opportunity to wrestle with the tensions and possibilities embedded in the struggle to bridge educational theory with practice in secondary social studies classrooms. The summer course is an intensive theory- and practice-based experience that is intimately linked with a Brown Summer High School teaching practicum. The practicum, in combination with daily methods classes, will begin the process of developing culturally responsive lessons that integrate the multiple dimensions of social studies: Civics & Government, Historical Perspectives, Geography, and Economics.

EDUC 2510C. Educational Theory and Practice 1: Science.

This course is designed to provide experiences and resources that will support the development of science MAT students. Through interactive activities, readings, and class discussions, the class, as a component to student teaching during Brown Summer High School, will explore key elements and challenges of secondary science teaching and provide a foundation for continued growth and reflection throughout the students' teaching careers. Some of the main topics discussed in this course are national and state science standards, reform-based approaches to instruction and assessment, unit/lesson planning, the use of technology in science teaching, and laboratory safety.

EDUC 2510D. Educational Theory and Practice in Teaching Mathematics 1.

This course is designed to provide a clinical experience and resources that will support the development of math MAT students teaching at Brown Summer High School. Through interactive activities, readings, and class discussions, the class will explore key elements and challenges of secondary mathematics teaching and provide a foundation for continued growth and reflection throughout the students' teaching careers. Topics will include standards, reform-based approaches to instruction and assessment (including fostering mathematical thinking in students through use of active pedagogy), unit/lesson planning, analyzing student work to improve teacher practice, and the use of technology in mathematics teaching.

EDUC 2515. Learning Theory and Special Populations.

This course will provide MAT students with an understanding of factors and responsibilities as you work collaboratively with students, professionals, and parents to establish appropriate educational supports student success and achievement. We will explore the various categories of human exceptionality and their variations; review the main laws and policies that inform your work with exceptional students; study Individualized Education Programs and 504 plans and their implications for instruction; study the Universal Design for Learning (UDL) framework for differentiation; discuss different models for collaborations with school professionals and parents; and access research and resources that support your work with these students.

EDUC 2520A. Educational Theory and Practice in Teaching English II.

This course is designed to accompany MAT students' one-semester fall practicum teaching placement. This field-based course uses the Rhode Island Professional Teaching Standards and the aligned rubric of Danielson's Framework for Teaching as a guiding standard as well as a central assessment mechanism. ETP II integrates theory and practice with standards-based instruction for the culturally relevant classroom. Students will bring their experiences and questions about teaching and learning directly from teaching and/or observations at field sites so the class can address those questions using discussion, research and inquiry. Artifacts of instruction, practice, and assessment will be examined and analyzed.

EDUC 2520B. Educational Theory and Practice in Teaching Social Studies II.

This course provides opportunities for social studies MAT students to meet the Rhode Island Professional Teacher Standards (RIPTS) and the National Council of the Social Studies Preservice teacher standards. In this particular semester, the objectives are to be able to develop standards-based lesson plans and activities for your students that are culturally responsive in social studies based on your knowledge of students and how they learn; use an evaluation framework to distinguish curriculum quality; and successfully revise curriculum as necessary in order to align with the RI GSEs and meet the needs of your students in a culturally responsive way.

EDUC 2520C. Educational Theory and Practice for Science II.

This course provides opportunities for science MATs to meet the Rhode Island Professional Teacher Standards (RIPTS) and the National Science Teacher Association Preservice science teacher standards. In this particular semester, the objectives are to be able to develop standards-based lesson plans and activities for your students that are culturally responsive in science based on your knowledge of students and how they learn; use an evaluation framework to distinguish curriculum quality; and successfully revise curriculum as necessary in order to meet the needs of your students in a culturally responsive way.

EDUC 2520D. Educational Theory and Practice in Teaching Mathematics II.

This course is designed to provide a space for math MAT candidates in their fall placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching mathematics in middle and high school levels. Continuing from our summer work, this course delves more deeply into thinking about what it means to be culturally responsive in particular aspects of curriculum and instruction: CCSS math standards, how students learn, approaches to student-centered mathematics instruction, and choosing and revising curriculum materials. Students will explore what it means to be culturally responsive in each of these areas.

EDUC 2525. Instructional Design, Planning, and Integrating Technology.

In this course, students enrolled in the MAT program will build on the knowledge of instructional design that they developed in the summer. MAT candidates will delve more deeply into the Universal by Design (Ubd) design process and consider its relationship to the Sheltered Instruction Observation Protocol (SIOP) Model. Additionally, students will work with the Technology, Pedagogy and Content Knowledge (TPACK) Model which will support their ability to deliberately integrate developmentally appropriate technology into their plans in order to positively impact student learning.

EDUC 2530A. Educational Theory and Practice III: English.

This course is designed to accompany the English MAT spring semester student teaching placement, with an aim to connect research with an experience, workshop, or record of practice to help students understand, implement, question and revise the practice in their own classrooms. Particular areas of focus include independent teaching in the linguistically and culturally diverse high school English classroom; practices for setting up the heterogeneous high school English classroom; classroom management; diagnostic assessment of student learning; understanding your position as a teacher and the context of your school; creating a professional learning community; and methods of teaching English with technology.

EDUC 2530B. Educational Theory and Practice in Teaching Social Studies III.

This course is a continuation of Educational Theory and Practice 1 and 2, designed to provide a space for social studies MAT candidates in their spring student teaching placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching social studies in middle and high school levels. Building on the work we did in the summer and the fall, this course delves more deeply into thinking about what it means to be culturally responsive in particular aspects of curriculum and instruction.

EDUC 2530C. Educational Theory and Practice in Teaching Science III.

This course for science MAT candidates is a continuation of Educational Theory and Practice 1 and 2. It is designed to provide a space for candidates in their spring student teaching placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching science in middle and high school levels. Continuing from the work done in the summer and the fall, this course delves more deeply into thinking about what it means to be culturally responsive in developing science assessments and in approaching discourse, modeling and mathematical representations.

EDUC 2530D. Educational Theory and Practice in Teaching Mathematics III.

This course is a continuation of Educational Theory and Practice 1 and 2. It is designed to provide a space for math MAT candidates in their spring student teaching placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching mathematics in middle and high school levels. Continuing from the work we did in the summer and the fall, this course delves more deeply into thinking about what it means to be culturally responsive in curriculum and instruction, particularly in approaches to discourse, assessment, and interdisciplinary connections.

EDUC 2535. Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines I.

This half of a year-long course prepares preservice teachers in the MAT program to teach emerging bilingual students/English learners through sheltered instruction in the mainstream classroom and meet students' linguistic, academic, and socio-emotional needs. New teachers must learn how to understand and include the experiences of linguistically diverse and multilingual students in their teaching. Additionally, preservice teachers must learn the nature of language acquisition and how specialized instruction can support this development. Through analysis of case studies, participants will also learn to plan and deliver high quality instruction that is differentiated to meet the needs of English learners.

EDUC 2545. Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines II.

This second half of a year-long course prepares preservice teachers in the MAT program to teach emerging bilingual students/English learners through sheltered instruction in the mainstream classroom and meet students' linguistic, academic, and socio-emotional needs. New teachers must learn how to understand and include the experiences of linguistically diverse and multilingual students in their teaching. Additionally, preservice teachers must learn the nature of language acquisition and how specialized instruction can support this development. Through analysis of case studies, participants will also learn to plan and deliver high quality instruction that is differentiated to meet the needs of English learners.

EDUC 2555. Assessment and Using Data to Support Student Learning.

This course will provide a space for enrolled MAT degree candidates to learn theories related to assessment that are closely tied to their student teaching practical experience and also establish effective ways to measure their impact on student learning. The course will prepare students to explain concepts related to assessment; design formative and summative assessment systems through the UDL Framework; analyze the results of assessment tasks/data and utilize them to inform instructional decisions; and evaluate current and future trends in educational assessment.

EDUC 2565. Practicum and Seminar I.

This clinical experience and seminar, held off-campus at student teaching sites, provides the practical component of the MAT fall semester that will allow MAT students to merge theory and practice. The main goals for this semester are for practicum students to familiarize themselves with their school context, students and community; develop an understanding of how school context and learning about students inform planning curriculum; be aware of the policies and initiatives you are responsible for in the role of a teacher; form professional relationships with your colleagues, students, and families; and begin instructing in a co-teaching model.

EDUC 2575. Student Teaching and Seminar.

This off-campus student teaching clinical experience and seminar, held at student teaching sites, provides the practical component of MAT students' winter and spring semester that will allow students to merge theory and practice and gain proficiency in the domains outlined by the Framework for Teachers. This will be accomplished by taking on the full responsibilities of a teacher for selected secondary classes in your placement school with the guidance of your mentor teacher and your supervisor as well as attending meetings and other programs teachers are required to attend for your placement site.

EDUC 2980. Studies in Education.

Independent study; must be arranged in advance. Section numbers vary by instructor. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Egyptology and Assyriology

The Department of Egyptology and Assyriology is designed to explore the histories, languages, cultures and sciences of ancient Egypt, Mesopotamia and their neighbors. These regions, sometimes known collectively as the Ancient Near East, have a long history stretching back to the formation

of the first complex societies and the invention of writing. As a field of higher learning, Egyptology and Assyriology are represented at most of the world's great universities. Their establishment at Brown, beginning the 2005-06 academic year, is a product of Brown's Plan for Academic Enrichment, a commitment to higher learning in the humanities and the sciences.

Faculty in the department teach undergraduate and graduate courses in Egyptology, Assyriology and the History of Ancient Science.

For additional information, please visit the department's website: <http://www.brown.edu/academics/egyptology/>

Egyptology and Assyriology Concentration Requirements

The concentration in Egyptology and Assyriology offers students a choice of two tracks: Assyriology or Egyptology. The department promotes collaborations with other academic units at Brown devoted to the study of antiquity including Archaeology, Classics, Judaic Studies, and Religious Studies. Egyptology and Assyriology also collaborates with Brown's Joukowsky Institute for Archaeology and the Ancient World.

Assyriology Track

Also known as the Near East or Middle East, Western Asia includes present-day Iraq, Syria, Turkey, and other neighboring states, a broad geographic area that was connected in antiquity with the wider world—the Mediterranean, North Africa, the Arabian Peninsula, Central Asia, and the Asian subcontinent. Students will be exposed to the critical study of the ancient cultures of this region (ca. 3400 B.C.E.–100 C.E.) using the tools of archaeology, epigraphy, and historical inquiry. A variety of interdisciplinary, comparative, and theoretical approaches will be introduced to give students the tools and methods to explore this region's ancient languages and literatures, political and socio-economic modes of organization, art and architecture, religious traditions and other systems of knowledge, such as early science.

The Assyriology (ASYR) track requires a total of at least ten (10) courses that are determined in the following way:

Language Courses (two courses) 2

One course in cuneiform-based language, normally Introduction to Akkadian, Introduction to Sumerian, or Introduction to Hittite. One additional language course, either Intermediate Akkadian or another language with the EGYT or ASYR course code.

ASYR 1000	Introduction to Akkadian
or ASYR 1400	Introduction to Sumerian
or ASYR 1900	Introduction to Hittite Language and Literature

And one of the Following:

ASYR 1010	Intermediate Akkadian
ASYR 1400	Introduction to Sumerian
ASYR 1900	Introduction to Hittite Language and Literature
EGYT 1310	Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I)
EGYT 1320	Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian II)

Foundations (Four Courses): One course in each of the following areas: 4

History

EGYT 0600	Ancient True Crime: Murder, Conspiracy, and Law in the Ancient World
ASYR 0300	Babylon: Myth and Reality
ASYR 0800	The Cradle of Civilization? An Introduction to the Ancient Near East

Archaeology:

ASYR 0800	The Cradle of Civilization? An Introduction to the Ancient Near East

ARCH 0372	Meeting with Mesopotamia
ARCH 0760	Palaces: Built to Impress
ARCH 1475	Petra: Ancient Wonder, Modern Challenge
ARCH 1635	The Great Heresy: Egypt in the Amarna Period
ARCH 1879	A World in Color: Seeing and Experiencing Colors in Ancient Times

Religion and Literature

EGYT 0300	In the Beginning: Cosmos and Creation in the Ancient World
ARCH 0255	Monsters
ASYR 0310	Thunder-gods and Dragon-slayers: Mythology + Cultural Contact - Ancient Mediterranean and Near East
ASYR 1100	Imagining the Gods: Myths and Myth-making in Ancient Mesopotamia
ASYR 1110	Literature of Ancient Iraq

Making Knowledge - Ancient and Modern

ASYR 0320	The Origin(s) of Science
ASYR 0500	Mathematics in the Ancient World
ASYR 1160	Color and Culture in the Ancient Near East
ASYR 1500	Ancient Babylonian Magic and Medicine
ASYR 1600	Astronomy Before the Telescope
ASYR 1700	Astronomy, Divination and Politics in the Ancient World
ASYR 1725	Scientific Thought in Ancient Iraq
ARCH 1538	Heritage Under Fire: From Conflict to Understanding, Memory, and Reconciliation
ARCH 1830	Fake! History of the Inauthentic

Depth Requirement (Two Courses) 2

At least two additional courses at the 1000 level or higher that include ancient Mesopotamia as a major component of the syllabus, usually in ASYR or ARCH. Subject to the approval of the concentration advisor and DUS.

Breadth Requirement (Two Courses) 2

Two additional courses on some aspect of the ancient/premodern world, at least one of which should be with the department's faculty. Subject to the approval of the concentration advisor and DUS.

Total Credits 10

Egyptology Track

Language Courses (two courses) 2

One course in the ancient Egyptian language, ordinarily Middle Egyptian I. However, other phases of the ancient Egyptian language can be substituted for one or both of these, such as Late Egyptian or Coptic. One additional language course, either Middle Egyptian II or another language with the EGYT or ASYR course code.

EGYT 1310	Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I)

And one of the Following:

EGYT 1320	Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian II)
EGYT 2210	Introduction to Coptic
EGYT 2410	Late Egyptian
EGYT 2610	Introduction to Demotic
ASYR 1000	Introduction to Akkadian
ASYR 1010	Intermediate Akkadian
ASYR 1400	Introduction to Sumerian

ASYR 1900	Introduction to Hittite Language and Literature	
Foundations (Four Courses): One course in each of the following areas:		4
History		
EGYT 0500	The Pyramids in Context: Archaeology of Life and Religion of Death in Old Kingdom Egypt	
EGYT 0550	Black Pharaohs: Nubian Kings and Queens of Ancient Egypt	
EGYT 0600	Ancient True Crime: Murder, Conspiracy, and Law in the Ancient World	
EGYT 1030	Collapse! Ancient Egypt after the Pyramid Age	
EGYT 1430	History of Egypt I ¹	
EGYT 1465	Life on the Nile: Ancient Egypt beyond the Pharaohs	
Archaeology:		
EGYT 1510	Ancient Egyptian Art II	
ARCH 0150	Introduction to Egyptian Archaeology and Art	
ARCH 0760	Palaces: Built to Impress	
ARCH 1630	Fighting Pharaohs: Ancient Egyptian Warfare	
ARCH 1635	The Great Heresy: Egypt in the Amarna Period	
ARCH 1879	A World in Color: Seeing and Experiencing Colors in Ancient Times	
Religion and Literature		
EGYT 0300	In the Beginning: Cosmos and Creation in the Ancient World	
EGYT 1100	Ancient Voices: The Literature of Ancient Egypt	
EGYT 1420	Ancient Egyptian Religion and Magic	
ARCH 0255	Monsters	
Making Knowledge - Ancient and Modern		
EGYT 1400	Ethiopia Shall Stretch Forth Her Hands: Black Reception of Ancient Egypt and Nubia	
EGYT 1485	Magic, Mummies, and Drugs: Medicine and Physicians in Ancient Egypt	
EGYT 1490	Calendars and Chronology in Ancient Egypt and the Ancient World	
ASYR 0320	The Origin(s) of Science	
ASYR 0500	Mathematics in the Ancient World	
ASYR 1160	Color and Culture in the Ancient Near East	
ASYR 1600	Astronomy Before the Telescope	
ARCH 1538	Heritage Under Fire: From Conflict to Understanding, Memory, and Reconciliation	
ARCH 1830	Fake! History of the Inauthentic	
Depth Requirement (Two Courses)		2
At least two additional courses at the 1000 level or higher that include ancient Egypt as a major component of the syllabus, usually in EGYT or ARCH. Subject to the approval of the concentration advisor and DUS.		
Breadth Requirement (Two Courses)		2
Two additional courses on some aspect of the ancient/premodern world, at least one of which should be with the department's faculty. Subject to the approval of the concentration advisor and DUS.		
Total Credits		10

Senior Capstone Project

All concentrators in Egyptology and Assyriology are required to complete a capstone project. Under normal circumstances a concentrator will complete a capstone project in their last undergraduate year, the idea being that the project will be a culmination of the student's academic path at Brown and in the department. Students have three options for fulfilling the capstone requirement in Egyptology and Assyriology:

1. Honors Thesis (see policies and procedures for Honors in Egyptology and Assyriology)
2. Independent Study: A one-semester reading and research independent study course under the direction of a faculty advisor in the department (this course may count toward the concentration Depth or Breadth requirement subject to the approval of the concentration advisor and DUS). The independent study should result in a research paper (at least 5000 words) or a significant original translation and analysis of an ancient text or a coherent group of related texts.
3. Course Project: a project undertaken in connection with an EGYT/ASYR/ARCH course at or above the 1000 level (this course may count toward the concentration Depth or Breadth requirement). The specific project should be discussed with, and must be approved by, the instructor of the relevant course and the DUS

The capstone project can take many forms, but the common feature shared among all possible projects will be a public presentation. Typically in the final semester before graduating, the concentrator will give this capstone presentation before the department community. The format of the presentation may vary: students may give an illustrated lecture, present and discuss a video or installation, or propose a novel presentation modality. Both the content and the format of the capstone project must be discussed beforehand and approved by the concentration advisor and DUS no later than the end of the first semester of the senior year.

Honors in Egyptology and Assyriology

1. *Becoming an honors candidate*

Students who wish to consider pursuing honors should meet with the Undergraduate Concentration Advisor in the first half of their sixth semester.

Eligibility is dependent on:

- Being in good standing
- Having completed at least two thirds of the concentration requirements by the end of the sixth semester.
- Having earned two-thirds "quality grades" in courses counted towards the concentration. A "quality grade" is defined as a grade of "A" or a grade of "S" accompanied by a course performance report indicating a performance at the "A" standard.

To pursue honors candidacy, eligible students must:

- Secure a faculty advisor and discuss plans for the proposed thesis project well before the established deadline; this can be done by email when a student is abroad.
- Prepare a thesis prospectus (see below).
- Submit the prospectus to the advisor, one other proposed faculty reader (at least one of the readers must be in the department) and the department chair *no later than the first week of the seventh semester*.

The structure of a thesis prospectus:

An honors thesis in Egyptology or Assyriology is a substantial piece of research with some degree of originality that demonstrates the student's ability to frame an appropriate question and deal critically with the range of original and secondary sources. A thesis prospectus is a short analytical document consisting of several parts. It will normally include a concise and focused research question; a justification for that question that demonstrates familiarity with previous research on the topic; a project description that includes a discussion of the types of evidence available and appropriate to answering the proposed question; a discussion of methods of collecting and analyzing that evidence; a conclusion that returns to the research question and assures the reader that the project will add value to our understanding of the topic; and a bibliography. The

prospectus will ordinarily be in the range of 5-7 pages in length, exclusive of bibliography. The prospectus will include proper citations throughout.

Determination of whether or not a student may pursue the proposed project will be made on review of the prospectus by the readers and department chair. Prospectuses will be evaluated on the following scale:

1. No concerns about the viability of the project.
2. No concerns about the viability of the project, but minor weaknesses in the execution of the prospectus.
3. Concerns about the viability of the project, but willingness to reevaluate a revised prospectus submitted within two weeks of receipt of evaluation.
4. Reservations that the prospectus does not describe an honors-worthy project.
5. Poorly conceived and shoddy work.

Prospectuses will be returned to the student with this numerical evaluation and comments one week after submission of the prospectus. A prospectus must receive an evaluation of 1 or 2 prior to the third week of the seventh semester for a student to be admitted to the honors track. Students who submit an original prospectus that is graded 4 or 5 will not be permitted to rework the prospectus for the second submission.

2. Developing, completing and submitting the honors project

Once accepted as honors candidates, students will pursue a course of study that goes beyond what is expected of a regular concentrator. This includes:

- Enrollment in two semesters of independent study in Egyptology or Assyriology (these do not fulfill course requirements towards the concentration).
- Twice-monthly meetings with the thesis advisor and once-monthly meetings with the second reader. These meetings will be scheduled at the beginning of each term.
- Submission of a comprehensive outline to both readers no later than October 15 (for May graduates)
- Regular submission of drafts. A partial draft including a complete version of at least one chapter or section is due before Reading Period of the seventh semester.
- A complete draft is due to both readers no later than March 15 (for May graduates).
- The revised final thesis is due in both electronic and physical form to both readers and department chair April 5 (for May graduates).

Failure to meet any deadline will result in automatic termination of the honors process. No extensions will be granted. If a thesis is turned in late but before the end of the term, credit and grade for the Independent Study may still be granted.

3. Evaluating the submitted work of honors candidates

In order to receive honors a student must be found to have:

- Remained in good academic standing throughout the academic year.
- Not violated the Academic Code of Conduct during honors candidacy.
- Complete or be about to complete all concentration requirements.
- Produced a thesis that is judged by the readers to meet the department's expectations for honors work (see below), and turned it in by the established deadlines.
- Successfully defended the thesis during a half hour public presentation held during the final exam period of the eighth semester.

Students who submit theses that are deemed to fall short of the expectations will graduate without honors. In that case, the theses will count as a capstone project.

4. Expectations for honors theses:

Originality:

An honors thesis in Egyptology or Assyriology is expected to add to existing scholarship. The thesis must be based on close work with primary sources (usually in publication rather than in person), supplemented by critical engagement with a substantial amount of relevant secondary literature. While the resulting study is not necessarily expected to be ground-breakingly original, and may engage with a well-studied topic,

it will usually include a new insight into or interpretation of the material considered.

Scope:

An honors thesis is not a book or dissertation. It is, however, a very serious piece of research and writing for which two dedicated study courses have provided substantial time to the honors student. The question upon which the honors thesis is based should be focused enough to allow an in-depth treatment, generally in under 100 pages or 30,000 words (exclusive of bibliography and illustrations). Appropriate length will vary considerably depending on the topic itself and the nature of the primary sources being considered, particularly if substantial translation of ancient textual sources is required.

Argument:

The thesis should present a sustained analytic argument in answer to its structuring question. A thesis should not be primarily descriptive or narrative in nature. Each chapter should contain a sub-argument that is clearly related to the overall argument of the thesis. The significance of the argument and its relationship to prior scholarship should be clearly articulated. Honors theses are not expected to demonstrate comprehensive familiarity with the secondary literature, but they are expected to engage critically and maturely with important works on the defined topic.

Methodology:

Egyptology and Assyriology are very broad fields, and the appropriate methods will be determined in conjunction with the thesis advisor on the basis of the questions and types of evidence - textual, archaeological, art historical - under consideration. With very few exceptions the methodology of the thesis is expected to be conventional rather than innovative, rooted in the accepted practices of the field in question.

Organization and writing:

An honors thesis must be well organized and written. It should include an introduction and conclusion as well as well-considered chapters that allow the reader to follow the line of reasoning easily. The relationship of any section to the larger whole should be clear, and segues should help the reader move between sections. Writing should be grammatically correct, well copy-edited, professional, and consistent. Citations and bibliography must be in an accepted style as determined in consultation with the advisor.

Egyptology and Assyriology Graduate Program

PhD Program in Egyptology and Assyriology

Brown is one of the premier institutions for the study of Egyptology, Assyriology, and the history of ancient science, and our PhD students train in the foundational areas of our disciplines: the languages, literatures, history, and material culture of Egypt and Mesopotamia in their wider environment. The department offers instruction in the core ancient languages that are essential for research in our fields: Akkadian (Babylonian and Assyrian, all stages), Egyptian (all stages), Hittite, and Sumerian; instruction in Arabic, Aramaic, Greek, Hebrew, Latin, Sanskrit, Syriac, and Ugaritic is available to our students at Brown as well. In addition to training in philology and critical research methods, our students also become conversant in the archaeological sequence, art and architecture, and repertoires of material culture found across the ancient Near East.

Brown's doctoral program in Egyptology and Assyriology has a number of distinguishing features:

- We offer in-depth disciplinary training that allows our students to pursue focused research in any one of our core fields: Assyriology, Egyptology, the history of ancient science, and the archaeology of Egypt and the Near East.
- We encourage creative interdisciplinary work, including but not limited to research that bridges Egyptology, Assyriology, and the history of ancient science in innovative ways. Our doctoral students have the opportunity to do coursework in and cultivate stimulating intellectual relationships with faculty from Anthropology, Classics, History, the Joukowsky Institute for Archaeology and the Ancient World, and Religious Studies. In addition Brown's Graduate School has an Open

Graduate Program that allows interested doctoral students at Brown to pursue a concurrent master's degree in a secondary field that is outside the scope of their doctoral program.

- We provide significant funding both in the department and across the university to support graduate students' original research. Our doctoral students have recently used support from the department and university to carry out research in museum collections in the US, Europe, and Africa; to participate in archaeological fieldwork (survey and excavation) in Egypt, Sudan, and Turkey; and to present the results of their research at international conferences and symposia.
- We emphasize developing our students professionally and encourage students to reach important early career milestones during their time in the program, such as giving conference papers and submitting academic publications; to that end we have incorporated valuable professional academic skills into our curriculum and assessment.
- We provide a variety of opportunities for our PhD students to train as teachers and develop valuable teaching skills that will be useful in a wide variety of educational settings, including research universities, museums, or teaching colleges focused on the liberal arts.

A few areas of particular interest to the department's faculty include: ancient science (astronomy and astrology, timekeeping and calendrics, divination and medicine); cultural interactions throughout the Mediterranean, Near East, and Africa in the second and first millennia BC; religion and ritual in the ancient Near East, from Egypt and Sudan to Anatolia and Mesopotamia; the history of the Egyptian language and its grammar; the origins and development of writing and the diffusion and reception of cuneiform, hieroglyphic, and alphabetic scripts in the ancient world; kingship and monumentality in ancient Egypt and Sudan; the integration of textual and archaeological methodologies; Coptic manuscripts; the ancient Near East in classical periods and Greek and Roman cultures' perceptions of the more ancient past; Mesopotamian and Egyptian literature; ancient empires of the Near East in context; and the origins of Egyptian civilization.

PhD Tracks

The department currently offers three tracks to the PhD: (1) Assyriology (2) Egyptology, and (3) History of the Exact Sciences in Antiquity. Each track has different course requirements, details of which may be found in the program's Graduate Student Handbook. Students who enter the program in one track may switch to another track providing they are still able to complete the coursework requirements by the end of their third year.

Further details about our graduate program may be found at <http://www.brown.edu/academics/gradschool/programs/egyptology-and-assyriology> (<http://www.brown.edu/academics/gradschool/programs/egyptology-and-assyriology/>)

Courses

Assyriology

ASYR 0300. Babylon: Myth and Reality.

From the Hanging Gardens of Babylon to the Tower of Babel to Babylon 5, the city of Babylon in ancient Iraq holds an important place in contemporary culture. But how much of what is commonly known of Babylon is true? In this course we will explore the ancient city of Babylon through its texts and archaeological remains and investigate the ways Babylon has been viewed over the past two thousand years. Enrollment limited to 19 first year students. Instructor permission required.

ASYR 0310. Thunder-gods and Dragon-slayers: Mythology + Cultural Contact - Ancient Mediterranean and Near East.

This course is an exploration of the mythological imagination in the ancient Mediterranean and Near East. From cosmic origins to epic battles, mighty queens to baneful monsters, mythological motives and narratives crisscrossed the ancient world, bypassing seemingly rigid geographic and cultural boundaries. Particular attention will be devoted to the study of the dynamic reinterpretation of myths in situations of cultural contact. Primary evidence will include material from Mesopotamia, Egypt, Anatolia, the Levant, Greece and Rome. The course will span several millennia, from the earliest attestations of the Epic of Gilgamesh to the Christian and Muslim reinterpretation of so-called pagan myths.

ASYR 0320. The Origin(s) of Science.

"Science begins with the Greeks" is a common refrain in popular introductions to science. But is it true? In this course we will explore a range of non-western scientific traditions, some of which can be dated much earlier than the Greeks, others of which are contemporary or later but which developed independently, in order to critically assess this claim and to better understand the diverse ways that science has developed and been practiced in different cultures. In doing so, we will reflect upon what we mean by "science" and question whether the way that we think about modern science biases our understanding of earlier scientific traditions.

ASYR 0350. Haunted Universe: Monsters and Demons at the Dawn of Civilization.

This seminar explores the relationship between monsters and civilization, considering what exactly it is that monsters do for us; why we create, deploy, and ultimately destroy them; and what they tell us about the peoples among whom they sprang up and roamed. Emphasized is the developing civilization in Mesopotamia, and the place and functioning of monsters and demons in the visual arts and literary contexts, as well as in the worldview, of the early cities of that region. Enrollment limited to 19 first year students.

ASYR 0400. Intimate Stories: Narrative in Ancient Visual Culture.

Images tell stories that carry us to imaginary worlds. A story in pictures engages us deeply, opening the doors of fantastic places and times. In antiquity public monuments displayed visual narratives that animated public spaces, enthralled audiences and delivered state ideologies. This course involves reading narrative imagery from the Middle East and East Mediterranean including magical hunt scenes in prehistoric caves, political tales on Mesopotamian relief sculpture, visions of paradise in Egyptian tombs, Aegean frescoes and Assyrian reliefs of exotic landscapes. Using contemporary perspectives on art, we will explore the material power and everyday significance of pictorial representations as intimate spectacles. Enrollment limited to 19 first year students.

ASYR 0500. Mathematics in the Ancient World.

Mathematics is often touted as a "universal language," but despite this supposed universality, mathematics takes different forms in different cultures and times. This class will look at mathematics in the ancient world, with a focus on how mathematical knowledge has been studied in and understood by modern scholars and how they can and do talk about it today. It will also dive into different applications of mathematics, including astronomy, statecraft, poetry, and more in order to better understand the wide impact of mathematical understanding on these disparate fields.

ASYR 0800. The Cradle of Civilization? An Introduction to the Ancient Near East.

This course explores the cultures of ancient Mesopotamia and the Near East (present-day Iraq, Syria, Turkey, and Iran) from prehistory until the end of the first millennium BC. We will investigate the rich history and archaeology of this region through literary and historical texts (in translation) and archaeological evidence, including visual culture and architecture. Central to our discussion will be questions about how and why scholars study the Middle East in this early period. Topics include: early complex societies, state formation, the origins and development of writing, ancient empires, religion, culture and ethnicity, trade, diplomacy, warfare, agriculture, and craft production.

ASYR 0900. Longing and Lament: Exploring Love and Death in Ancient Near Eastern Literature.

Love and death are two life events inextricably entwined, and poets from Classical antiquity through to the modern day often make love and death prominent themes in their works. This course offers students the chance to engage with how these themes were explored in the poetry of the ancient Near East, focusing on ancient Iraq with parallels from the wider Middle East. The course will introduce how these two key aspects of human experience—love and death—were conceptualized and presented in the world's oldest literature, particularly following the love story, and then demise, of the divine couple Inanna and Dumuzi. Analyzing erotic poetry, love incantations, sex omens, stories about journeying to the Netherworld, ritual laments and more, the course will explore the conceptual connections between love and death through the study of Sumerian and Akkadian literature in translation. No prerequisites.

ASYR 0998. Wrong For Good Reasons: An Introduction to the History of Science.

Lavoisier! Galileo! Newton! According to widespread narratives: heroes of science and progress. These heroes, we are told, triumphed over the obdurate fools who held back the march of science out of deliberate ignorance. But things are not so simple, for their objectors often had good reasons to be "wrong". Through the study of landmark examples selected from Antiquity to the Early Modern Era in what we would call today the fields of Chemistry, Cosmology, Astronomy, and Optics, students will reevaluate received narratives of "science" and "progress". Students will read (in English translation) primary sources ranging from ancient Babylonian astronomical texts to excerpts of Huygens' treatise on light. There are no prerequisites.

ASYR 1000. Introduction to Akkadian.

An intensive introduction to the cuneiform writing system and the basic grammar and vocabulary of Akkadian, a language first attested over four thousand years ago in Mesopotamia (modern Iraq). The earliest known member of the Semitic family of languages (like Arabic and Hebrew), Akkadian was in use for over two thousand years across a wide expanse of the ancient Near East. Students will learn the classical Old Babylonian dialect of Akkadian (ca. 1800 BCE) and read Mesopotamian texts in the original, including selections from the Laws of Hammurabi, as well as excerpts from myths, hymns, prayers, historical documents, and letters.

ASYR 1010. Intermediate Akkadian.

This course is the second semester of an introduction to the Akkadian (Babylonian/Assyrian) language. Students will deepen their knowledge of the cuneiform writing system and continue to develop their grasp of Akkadian grammar, focusing on the Standard Babylonian literary dialect. Readings from Mesopotamian texts in the original language and script will include, among others, selections from the Babylonian creation myth Enūma eliš, Assyrian historical texts, and the Standard Babylonian Epic of Gilgamesh. Prerequisite: Introduction to Akkadian (ASYR 0200; ASYR 1000) or permission of the instructor.

ASYR 1090. Iconoclasm: Destroying Images in the Near East and Beyond.

What drives someone to smash, erase, or otherwise obliterate the image of another? Why do the portraits (and sometimes even the names) of people become targets of destruction? Who has engaged in systematic violence against images and why? If images are inert, why have people repeatedly felt the need to kill them as if they were alive? What does iconoclasm have to do with social memory and forgetfulness? Through a series of detailed case studies we will survey the intentional destruction of images, monuments, and texts in the Near East over many millennia. In thinking about the religious, political, and aesthetic motivations that once incited ancient iconoclasm, we will also consider more recent and even contemporary incidents during which people have found the monuments around them to be deserving of annihilation.

ASYR 1100. Imagining the Gods: Myths and Myth-making in Ancient Mesopotamia.

Creation, the Flood, the Tower of Babel--well-known myths such as these have their origins in ancient Mesopotamia, the land between the Tigris and Euphrates Rivers. Using both ancient texts in translation and archaeology, this course will explore categories of Mesopotamian culture labeled "myth" and "religion" (roughly 3300-300 BCE), critically examining the ancient evidence as well as various modern interpretations. Topics will include myths of creation and the flood, prophecy and divination, death and the afterlife, ritual, kingship, combat myths and apocalypses, the nature and expression of ancient religious experience, and representations of the divine. There are no prerequisites.

ASYR 1110. Literature of Ancient Iraq.

Introduction to rich and varied compositions surviving from ancient Mesopotamia (Iraq) and beyond, including selected myths, epics, hymns, prayers, rituals, oracles, elegiac poetry, fables, proverbs, riddles, debates and more. We will consider what they can tell us about people's lives and values in ancient times and the processes by which written knowledge was preserved and passed on, where the texts were collected and how they come to be scattered in museums. The definition of "literature" adopted in this course considers aesthetic intent but also the subjects (e.g. love, death, heroism, gods) and forms of writing meaningful to an ancient audience.

ASYR 1150. The Art of Civilization: Artist, Image, and Aesthetic in the First Cities.

This course examines various facets of the relationship between art and developing social/political complexity in the ancient world, with case studies drawn primarily from the ancient Near East and Egypt between the rise of the first cities in the late fourth millennium BCE through to the fall of the Achaemenid "world empire" in the mid-fourth century BCE.

ASYR 1160. Color and Culture in the Ancient Near East.

This seminar investigates the meaning of color as a culturally mediated and culturally embedded phenomenon using case studies drawn from the civilizations of the ancient Near East and Aegean. Employing contemporary critical theories from cognition, phenomenology, linguistics and material culture studies, we will explore how human beings perceived, categorized and valued color in ways that vary cross-culturally.

ASYR 1200. Sacred Spaces and Sacred Times: Religious Travels and Pilgrimages in the Ancient Near East.

The course will focus on the cultural and religious-historical interpretation of physical displacements among sacred places, including urban processions, visits to temples and journeys to sacred places within the context of the Ancient Near Eastern religions. We will attempt to sketch a map of the holy centers and cultic itineraries, focusing on case studies from Babylonia, Assyria and Syria from the third to the first millennium BC as well as comparative case studies from surrounding cultures. These topics will be explored with an emphasis on how written and archaeological sources can be interpreted with the help of theoretical literature.

ASYR 1300. The Age of Empires: The Ancient Near East in the First Millennium BC.

The first millennium BC saw a series of empires vying for control of the Near East: the Assyrians, the Babylonians, the Persians, and the Greeks of Alexander the Great and his successors. The course will explore the political, social and cultural history of Mesopotamia and the Ancient Near East under these empires, using evidence drawn from archaeology and ancient texts (in translation).

ASYR 1400. Introduction to Sumerian.

Over five thousand years ago the first cities emerged in southern Iraq, and around that same time writing was invented, most likely to record the language we now call Sumerian. Even after it was no longer spoken, Sumerian became a powerful conduit for the region's cultural heritage, preserving its literature and religious traditions for millennia. In this course students will learn the fundamentals of Sumerian grammar, develop a basic working vocabulary, and explore the cuneiform script through weekly readings in original texts. Selections will come from royal inscriptions, court cases, myths, magical incantations, and even ancient schoolwork. No prerequisites.

ASYR 1420. Monarchs, Gods and Demons: The Art of the Ancient Near East (HIAA 1420).

Interested students must register for HIAA 1420.

ASYS 1500. Ancient Babylonian Magic and Medicine.

A survey of ancient magic and medicine focusing on Mesopotamia (present-day Iraq, ca. 2500-300 BCE), with an emphasis on beliefs about the body, health, illness, and the causes of disease, such as witchcraft or angry gods. Topics will include the training of healers, exorcists, and herbalists; concepts of contagion and plague, modalities of treatment, incantations, prayers, and empirical remedies like prescriptions; ancient perceptions of problems like sexual dysfunction, the perils of pregnancy, tooth decay, epilepsy, and mental illness. Readings will be drawn from ancient texts (in translation), archaeology, and parallels with ancient Egypt, Greece, Rome, and the Bible. No prerequisites. Not open to first year students.

ASYS 1600. Astronomy Before the Telescope.

This course provides an introduction to the history of astronomy from ancient times down to the invention of the telescope, focusing on the development of astronomy in Babylon, Greece, China, the medieval Islamic world, and Europe. The course will cover topics such as the invention of the zodiac, cosmological models, early astronomical instruments, and the development of astronomical theories. We will also explore the reasons people practiced astronomy in the past. No prior knowledge of astronomy is necessary for this course.

ASYS 1650. Time in the Ancient World.

Time plays many roles in civic and everyday life: calendars provide a way of regulating activities ranging from gathering taxes to knowing when to perform religious rituals. This course will provide an introduction to the way time was measured, used, regulated and conceived in the ancient world. We will cover topics such as the calendars used in Mesopotamia, Egypt, Greece and China, sundials and other instruments used for measuring time in the ancient world, and the way time is used in scientific and non-scientific texts.

ASYS 1700. Astronomy, Divination and Politics in the Ancient World.

This course will explore the relationship between astronomy, divination and politics in the ancient world. The sky provided ancient cultures with many possibilities for observing occurrences that could be interpreted as omens. In many cultures, celestial omens were directed towards the king and his government. As a result, interpreting and controlling celestial omens became an important political activity. In this course, we will explore how and why astronomical events were used politically in ancient Mesopotamia, the Greco-Roman world, and ancient and medieval China. No prior knowledge of astronomy is necessary for this course.

ASYS 1725. Scientific Thought in Ancient Iraq.

This course will investigate a variety of ancient scientific disciplines using primary sources from ancient Mesopotamia (modern Iraq). By reading the original texts and studying the secondary literature we will explore the notion of scientific thought in the ancient world and critique our own modern interpretation of what "science" is and how different traditions have practiced scientific methods towards a variety of aims. Looking at a range of disciplines will allow us to compare and contrast the different ways in which scientific thinking is transmitted in the historical record.

ASYS 1750. Divination in Ancient Mesopotamia.

The interpretation of natural events as portents of good or bad outcomes played an important role in religious, political, scholarly and everyday life in ancient Mesopotamia. In this course we will study Mesopotamian omen literature from textual, scientific, philosophical and cultural viewpoints in order to understand how divination operated and what it was used for.

ASYS 1800. Scribes and Scholarship in the Ancient Near East.

This course will explore the development of written traditions among the scribes of the Ancient Near East. Topics covered include the mechanics of writing on clay tablets, the training of scribes and the school curriculum, the status of scribes in society, the development of literary and scholarly traditions, the creation of tablet archives, and the range of scholarship (eg science, medicine, ritual, literature) found in the ancient near east.

ASYS 1900. Introduction to Hittite Language and Literature.

This course is an introduction to Hittite language, literature, and culture. Hittite, the earliest attested Indo-European language (thus related to Greek, Latin, and Sanskrit) was used in Anatolia during the second millennium BCE. It survives in tens of thousands of tablets written in cuneiform script. Students will learn the basic grammar of the language and read in the original or in translation specimens from the fascinating textual legacy of the Hittites, which includes myths, prayers, laws, diplomatic texts as well as formal and informal letters. They will also become familiar with the cultural environment in which those texts were composed.

ASYS 1990. Individual Study Project.

Directed reading and research arranged with individual faculty. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ASYS 2120. Historiography of Exact Sciences.

Introduces graduate students to the sources, problems, and methodologies of the history of astronomy and mathematics from Babylon to Kepler. Prerequisite: AWAS 0200. Open to graduate students only.

ASYS 2130. Historiography of Exact Sciences.

Introduces graduate students to the sources, problems, and methodologies of the history of astronomy and mathematics from Babylon to Kepler.

ASYS 2310A. Ancient Scientific Texts: Akkadian.

Readings and analysis of a major scientific text in Akkadian. Prerequisite: AWAS 0200 or 0210. Open to graduate students only.

ASYS 2310B. Assyriology I.

The kings of Babylonia and Assyria took every opportunity to boast about their military victories, successful hunts, the completion of new cities, and the building and decoration of temples and palaces. But is theirs the only possible version of Mesopotamian history? This course examines episodes in the history of Babylonia and Assyria (ca. 2400-500BCE) by looking at the political and social relationships among kings, political elites, entrepreneurs, and commoners; emphasis is placed on reading Akkadian texts both in the original and in translation, with a focus on letters, royal inscriptions, and astrological reports. Prerequisite: AWAS0210 or instructor's permission.

ASYS 2310C. Assyriology II.

This seminar will focus on selected topics of Neo-Assyrian history (1000-612 BC), including: the royal family; the queen and her influence; celebrating New Year's festivals; hunting lions; conquering a city; constructing and decorating palaces and temples; urban renewal and the founding of new cities; the substitute king ritual; and scholarly life. Assyria in the first millennium BC will be examined principally from Assyrian texts in translation.

ASYS 2310D. Ancient Scientific Texts: Cuneiform Literature.**ASYS 2400. Akkadian Literary and Religious Texts.**

Readings in Akkadian literary and religious texts in the original language and script. Possible genres include myths, proverbs, and literary miscellanea as well as prayers, hymns, incantations, rituals, prophecies, and divinatory texts. This course is intended primarily for graduate students and may be repeated for credit. A reading knowledge of Akkadian cuneiform is required. A reading knowledge of both German and French is recommended but not required.

ASYS 2420. Akkadian Divinatory Texts.

This course offers focused study of the most significant Akkadian divinatory texts from the second and first millennia BCE. Readings will come for the major genres of Mesopotamian divination found at sites throughout the ancient Near East. Emphasis will be placed on matters of textual transmission, reconstruction, and interpretation. We will read texts in the cuneiform script (copies, photographs, and, when possible, actual tablets) and work to place the material in meaningful historical, social, and cultural contexts. Knowledge of Akkadian cuneiform required.

ASyr 2430. Akkadian Historical Texts.

This course offers focused study of the most significant Akkadian historical and chronographic texts from the second and first millennia BCE. Readings in cuneiform will come from the major genres of Mesopotamian history-writing found at sites throughout the ancient Near East, including commemorative inscriptions, annals, chronicles, literary historical texts, and historical miscellanea. We will contend with the disjunctions between ancient and modern modes of historical thinking and work to contextualize the ancient texts. Knowledge of Akkadian cuneiform required. Reading knowledge of German and French will be useful but is not required. Intended primarily for graduate students.

ASyr 2500. Readings in Sumerian.

Advanced readings in Sumerian cuneiform texts in the original script and language. Readings will be selected from a particular genre, historical period, or site. This course is intended primarily for graduate students and may be repeated for credit. A reading knowledge of Sumerian cuneiform is required. A reading knowledge of both German and French is strongly recommended but not required.

ASyr 2600. Topics in Cuneiform Studies.

Advanced readings in Akkadian and Sumerian cuneiform texts in the original script and language(s). The focus of this course will be on the close reading of a specific genre, period, and/or dialect. A rotating cycle of topics to be covered may include the following with a synchronic and/or diachronic approach: historical texts and royal inscriptions, legal and administrative texts, letters, literary and religious texts, medical texts, or scholastic texts. May be repeated for credit. Prerequisite: AWAS 0210 or instructor permission. Open to juniors, seniors, and graduate students.

ASyr 2700. Special Topics in Ancient Sciences.

This course will be a topics course containing a detailed technical and cultural study of an area of science in a culture of the ancient world. Although intended for graduate students, undergraduate students who have taken EGYT 1600 or AWAS 1600 or a similar course may be admitted at the instructor's discretion.

ASyr 2710. Babylonian Astronomy.

An advanced seminar on Babylonian astronomy, taking both a technical and a cultural perspective on the history of this ancient science.

ASyr 2720. Greek Astronomy.

An advanced seminar on ancient Greek astronomy, taking both a technical and a cultural perspective on the history of this ancient science.

ASyr 2750. Art and Visual Culture in the Ancient Near East.

Peoples of the Ancient Near East from prehistory to the Hellenistic period produced a unique corpus of production technologies and visual culture. Cultures from Anatolia to the Iraqi southern alluvium, from the Levant to Iran and the Caucasus shared this common pictorial language in a variety of ways. In this seminar, we will investigate bodies of archaeological, architectural and pictorial evidence from the Near East while also debating relevant art and architecture historical methodologies and discourses in direct relationship to that material. Conceptual issues such as narrative, representation, perspective, agency, technology, style, symbolism, landscape, space, and power will be explored. Enrollment limited to 15.

ASyr 2800. Archaeologies of Text.

An interdisciplinary seminar that examines the interplay between ancient texts and archaeology in the study of the ancient world. Emphasis will be placed on articulating and analyzing the research methods and assumptions found in case studies set in the ancient Near East, Mediterranean, East Asia, and the Americas. Topics will include: canons of literature as/versus ancient inscriptions; materiality of text; texts on display, in deposits, in archives, in libraries, as refuse; literacy and education; practices of documentation and analysis; writing, language, and ethnicity; historical geography; fakes and forgeries; ancient texts and archaeological ethics. No prerequisites. Intended primarily for graduate students.

ASyr 2950. Scribal and Scholarly Practices in Babylonia and Assyria.

This seminar will explore the development of written traditions among the cuneiform scribes of ancient Babylonia and Assyria. Topics covered include the mechanics of writing on clay tablets, the training of scribes and the school curriculum, the status of scribes in society, the development of literary and scholarly traditions, the creation of tablet archives, the circulation of scholarly knowledge, and the range of scholarship (e.g. science, medicine, ritual, literature) found in Babylonia and Assyria.

ASyr 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ASyr 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ASyr 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

ASyr XLIST. Courses of Interest to Concentrators in Egyptology and Assyriology.

Egyptology

EGYT 0300. In the Beginning: Cosmos and Creation in the Ancient World.

As in every human society, the people of ancient Mesopotamia (Iraq) and Egypt wondered about the universe, their world, and how it came about in the first place. Preserved for us in ancient texts and images, their ideas share some things in common with more familiar ancient traditions, such as the creation account in the Bible. In this course, you will look at these ancient texts and images and learn how to dissect them to find what their authors were thinking. In the process, you will discover some surprisingly sophisticated concepts that are still present in our own culture.

EGYT 0310. Intro Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I).

This course will give you the basic tools you need to understand Middle Egyptian texts. You will learn both the language and the writing system of Middle Egyptian at the same time. This is the first half of a two-semester course, dealing with everything except verbs, which are covered in semester two (like many languages, Egyptian could make sentences without verbs). For students who choose to complete the two-semester course, you will be able to read inscriptions you see in museums (or Egypt) and you will know one of the two oldest written languages in the world. Because ancient Egyptian texts reflect the society they were written in, you will also learn a lot about ancient Egypt itself.

EGYT 0410. Ancient Egyptian Literature.

In the history of human civilization, literature in the sense that we still understand it today started being written down very roughly 1800 BCE, about 3800 years ago. Never before had there been literary writings. There had been full-fledged writing for many hundreds of years. But none of it was literature in the modern sense. What triggered the arrival of literature is not clear. The arrival happened more or less at the same time in two places: 1) in Egypt; 2) across the Red Sea from Egypt in Mesopotamia. This is the story of one half of the world's oldest literature, ancient Egypt's.

EGYT 0500. The Pyramids in Context: Archaeology of Life and Religion of Death in Old Kingdom Egypt.

No ancient world monument is more iconic than the Egyptian pyramids of Giza. This ONLINE course sets out to be a comprehensive analysis of the Old Kingdom (2575-2150 BCE) pyramids and the material, historical and symbolic context that produced them. How and why were the pyramids built? What was inside them? How was everyday life in the pyramid towns? What kind of rituals were performed in their multiple chambers? This course wants to show the real face of the pyramids and the people who worked on and lived by them.

EGYT 0550. Black Pharaohs: Nubian Kings and Queens of Ancient Egypt.

This course explores the history of northeastern Africa at a time when ancient Egypt was ruled by its neighbor to the south, Nubia. The Nubian pharaohs from the Kingdom of Kush (present-day Sudan) adopted many Egyptian customs, including hieroglyphic writing, in a period referred to as ancient Egypt's 25th Dynasty (747–656 BC). Study of this period has suffered from racist and colonialist attitudes towards the Black inhabitants of northeast Africa, ancient and modern, feeding into a racialized modern discourse around the identity and origins of the ancient Egyptians as well. In this course students will: examine recent interpretations of the Nubian dynasty using ancient texts in translation, art, architecture, and artifacts; look critically at modern historians' blind spots and prejudices; and evaluate the social constructs of race and ethnicity in the study of the great African civilizations of antiquity.

EGYT 0600. Ancient True Crime: Murder, Conspiracy, and Law in the Ancient World.

Harem conspiracies, kings' assassinations, and self-defense killings. The history of murder, violence, and criminal investigation is as old as humankind. In this course, we will be seeing how crime was perceived and punished in ancient Egypt, Mesopotamia, Greece, and Rome. From mythical accounts of murders to real records of trials of humans, animals, and even objects accused of homicide, we will analyze how aspects of social status or gender played a role in shaping punishment across ancient civilizations. We will look at three ancient cold cases, and perhaps you may be able to help solve an ancient mystery! At the end of the semester we will recreate ancient trials using the same crime, evidence, and participants, but following the law and procedures of each one of the civilizations covered in this course. Will the verdict and sentence be any different?

EGYT 0900. Demons and Drugs, Magic and Medicine: Healing in Ancient Egypt and Mesopotamia.

At the dawn of written history, the ancient peoples of both Egypt and Mesopotamia recorded means of healing the sick. The cool, flowing waters of the Nile, Tigris, and Euphrates—veritable oases against the hostile deserts—influenced theories about sickness causation, as did religious knowledge of gods and demons. Libraries of priests and scholars contained recipe books, botanical treatises, magical incantations, rituals, and hymns, while home remedies included recipes against fevers, wounds, and headaches, as well as an awareness of which talismans protected infants and how to thwart being taken by demons that dance in the dark. Using texts in translation, archaeology, anthropological and bio-scientific publications, and even by recreating ancient medicines, this class takes a comparative look at the complex webs of social experience in ancient Thebes and Babylon, questioning our modern understanding of the human body and sickness.

EGYT 1030. Collapse! Ancient Egypt after the Pyramid Age.

How does a civilization or a kingdom collapse after building some of the most enduring monuments from the ancient world? What happens in Egypt after the Pyramid Age? This course uses texts, objects, and monuments to delve into the history and archaeology of the Late Old Kingdom up to the beginning of the Middle Kingdom in Egypt (c. 2160–2055 BCE), often described as a Dark Age characterized by chaos, decline, and natural disasters. We will discuss how ancient history is written with a particular focus on the narrative of collapse in ancient cultures. The class will be based on presentations and discussions focused on controversies linked to the following topics: politics; kings, kinglets, and rulers; monuments and funerary architecture; climate change; religion and beliefs; (auto-)biographies; literature; and art. There are no prerequisites.

EGYT 1100. Ancient Voices: The Literature of Ancient Egypt.

In 1800 BCE, the ancient Egyptian writer Khakheperreseneb declared that he could not write anything new because everything had already been said. By then, ancient Egypt had already established a complex body of literature that continued to develop over the next several millennia. This course examines literary, religious, historical, and philosophical writings from ancient Egypt, ranging in date from 2400 to 250 BCE, in order to investigate how those texts can enrich our understanding of Egyptian culture and how they relate to broader literary traditions from the ancient world. Selected texts include adventure tales, love poetry, myths, and autobiographies. No prerequisites.

EGYT 1200. Archaeology of Ancient Egypt.

A general survey of the archaeology of ancient Egypt in prehistoric and Pharaonic times. Covers such areas as the development of private and royal funerary monuments, private and royal dwellings, and temples. Attention is also paid to the principles of Egyptian art and architecture and, where appropriate, to archaeological connections with the surrounding cultures. Offered in alternate years.

EGYT 1210. Archaeology of Ancient Egypt.

See Archaeology of Ancient Egypt (EG0120) for description.

EGYT 1310. Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I).

Learn how to read ancient Egyptian hieroglyphs! The classical language of ancient Egypt, Middle Egyptian was spoken ca. 2000–1600 BCE and remained an important written language for the rest of ancient Egyptian history. Students will learn the hieroglyphic writing system, vocabulary, and grammar of one of the oldest known languages and read excerpts from stories, royal monuments, tomb inscriptions, and amulets. By the end of this course, students will be able to decipher textual portions of many monuments and objects in museums. This course may also be taken on its own, and it also serves as the first of a two-semester sequence. No prerequisites.

EGYT 1320. Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian II).

Continuation of a two-semester sequence spent learning the signs, vocabulary, and grammar of one of the oldest languages known. By the end of this introductory year, students read authentic texts of biographical, historical, and literary significance. The cornerstone course in the Department of Egyptology - essential for any serious work in this field and particularly recommended for students in archaeology, history, classics, and religious studies. Prerequisite: EGYT 1310.

EGYT 1330. Selections from Middle Egyptian Hieroglyphic Texts.

Readings from the various genres of classical Egyptian literature, including stories and other literary texts, historical inscriptions, and religious compositions. Students will be expected to translate and discuss assigned texts. Prerequisite: EGYT 1310, 1320.

EGYT 1340. Selections from Middle Egyptian Hieratic Texts.

Introduction to the hieratic script and readings from a variety of hieratic documents, including literary compositions, letters, and religious texts. Students will be expected to translate and discuss assigned texts. Prerequisite: EG 131, 132 (EGYT 1310, 1320).

EGYT 1350. Introduction to Late Egyptian: Voices from the Ancient Village of Deir el-Medina.

Ever wondered what everyday life in ancient Egypt was like? More than just a curiosity, the study of Deir el-Medina—an ancient village inhabited by the workers who dug pharaohs' tombs in the Valley of the Kings in the late second millennium BCE—is a serious exercise in social history. Almost frozen in time, this site and the people associated with it have left behind a trove of historical documents: papyri record workers' sick days, strikes, and legal accounts documenting crimes such as harassment, theft, ancient tomb robberies, and even a harem's conspiracy to assassinate the king. In this course, students will study the finer points of Late Egyptian grammar, before delving into these tantalizing reports. Students must have successfully completed Middle Egyptian I (EGYT 1310). Alternates with its sister course, Middle Egyptian II (EGYT 1320).

EGYT 1400. Ethiopia Shall Stretch Forth Her Hands: Black Reception of Ancient Egypt and Nubia.

This class explores how Black people have thought about, understood, and used the concepts of ancient Egypt and Nubia over the last few hundred years. The class will begin with a short introduction to ancient Egypt and Nubia with particular attention to questions of ethnicity. Then, we will cover the dominant (white) discourse of ancient Egypt from before the decipherment of Egyptian Hieroglyphs into early Egyptology. The third and longest section will be a chronological discussion of the literature, art, and scholarship produced by Black people in relation to ancient Egypt and Nubia. We will see how these pieces fit together to show the long history of Black thought on the subject. Primary sources range from 18th century letters to modern music videos. All required readings will be in English.

EGYT 1420. Ancient Egyptian Religion and Magic.

An overview of ancient Egyptian religion from both a synchronic and diachronic perspective. Examines such topics as the Egyptian pantheon, cosmology, cosmogony, religious anthropology, personal religion, magic, and funerary beliefs. Introduces the different genres of Egyptian religious texts in translation. Also treats the archaeological evidence which contributes to our understanding of Egyptian religion, including temple and tomb architecture and decoration. Midterm and final exams; one research paper.

EGYT 1430. Pyramids, Power, Propaganda: Ancient Egyptian History to 1300 BCE.

The first half of pharaonic history in ancient Egypt saw the invention of writing, the development of kingship, creation of a bureaucracy capable of erecting pyramids that still stand, and colonial expansion of Egypt both south into Nubia and east into the Levant. In this class we will critically examine ancient sources to understand not just what happened in this dynamic span of time but also how we as scholars can know about it. Who wrote what texts for what purposes, and how does the nature of these sources affect our ability to understand Egypt? Can we use literature as historical evidence? Utilizing primary sources in translation - sometimes multiple translations of the same text so we can critique translators - this course equips students to approach the history of an ancient but perennially fascinating place and culture. No prerequisites.

EGYT 1440. History of Egypt II.

As a continuation of EGYT 1430, this course will examine the political and social history of ancient Egypt since the Ramesside Period (ca. 1292-1069 BC) until the Roman conquest in 30 BC. The topics that we will discuss in this course will include, among others, the military and building achievements of such great warrior kings like Ramesses II, the famous Battle of Kadesh against the Hittites and the world's first peace treaty, the harem conspiracy under Ramesses III, the Nubian pharaohs from the Kingdom of Kush, the conquest of Egypt by Alexander the Great, and the subsequent Hellenistic rule under the Ptolemies and Cleopatra. The second half of Egyptian history is closely linked with those of her nearest as well as more distant neighbors and the rapidly changing political situation in the ancient Near Eastern, Mediterranean, and African regions. We will thus learn how we, as historians, should approach the study of this dynamic period and how to critically analyze various textual and archaeological sources in order to reconstruct the historical reality of the ancient world.

EGYT 1450. History of Egypt III, Libyans, Nubians, and Persians in Egypt.

Continuation of EGYT 1430, 1440 (not prerequisites). Covers the Third Intermediate and Late Periods (ca. 1000-332 B.C.E.), from the end of the New Kingdom to Alexander's conquest. Characterized by internal conflict and long intervals of foreign domination, this era, is often described as a period of decline, but closer study shows it to be eventful and rich in documentation. Offered in alternate years.

EGYT 1455. Black Pharaohs: Nubian Rule over Egypt in the 25th Dynasty.

The course will cover Egypt's 25th Dynasty (728-657 BC), when rulers of Nubia, located in the region of modern Sudan, added Egypt to their territories. Using a wide range of textual and archaeological evidence, students will learn about the history of famous 'black pharaohs' such as Taharqa and study some of Africa's most impressive archaeological remains. This fascinating period is not well understood and has often been afflicted in the past by racist, colonialist scholarship; using primary sources and recent theory on ethnic identity, this class will re-examine the complex and changing relationship between Egypt and Nubia.

EGYT 1460. History of Egypt IV. The Age of Cleopatra.

Continuation of EGYT 1430, 1440, and 1450 (not prerequisites). A survey of the history and society of ancient Egypt from Alexander's conquest to the Arab Conquest, ca. 332 B.C.E.-A.D. 600. Covers the Ptolemaic (323-30), Roman (30 B.C.E.-ca. A.D. 300), and Byzantine (ca. A.D. 300-640) periods. Focal point and pivot is the Ptolemaic period, from Alexander the Great to Cleopatra (332-30 B.C.E.). Offered in alternate years.

EGYT 1465. Life on the Nile: Ancient Egypt beyond the Pharaohs.

The history of ancient Egypt is marked by the names of their great pharaohs and monumental buildings. But what about ordinary people who made up the majority of this fascinating culture, yet are not well represented in historical narratives? This course will explore what we know about the daily life of non-royal Egyptians by looking at the primary texts (in translation), art, and material culture of ancient Egypt. We will look at various categories of population, such as children, craftsmen, women, soldiers; and discuss such issues and topics as households, growing up, family, education, love, clothing, medicine, magic, and leisure.

EGYT 1470. Egypt After the Pharaohs: Archaeology and Society in the Coptic and Early Islamic Periods.

The history of Egypt may be famous for the tombs, pyramids and mummies of the Pharaonic periods. This course, however, offers a vision of a different Egypt, a later Egypt: one that evolved from the traditions of the past but was infused by Christianity, Islam, Arabic, and the emergence of one of the world's great cities: Cairo. Students will experience the heritage of Egypt that is contained in the mosque of al-Azhar, the monasteries of the Egyptian desert, and the pageantry and ritual of a new set of ruling elites. At the same time they will understand the continuities of this land which Egyptians refer to as Umm al-Duniya "Mother of the World".

EGYT 1480. Egypt in the Global World.

From the 4th to the 2nd millennium BC we see Ancient Egypt as part of a wider world in the Eastern Mediterranean. Egypt had diplomatic and trade contacts with the major powers and smaller political entities of this period as well as armed conflicts. These contacts left an abundance of material evidence in Egypt in the archaeological and epigraphical records such as foreign luxury items and pottery, and depictions of foreigners in Egyptian tombs and temples. The course will shed light on the varying intensity and character of the relationship between Egypt and her neighbors in the Levant, Nubia and Libya and wider Eastern Mediterranean world.

EGYT 1485. Magic, Mummies, and Drugs: Medicine and Physicians in Ancient Egypt.

Did you know the ancient Egyptians would rub crocodile fat on their heads to treat baldness? Or that an eel warmed in oil would supposedly combat the smell of sweaty feet? If you would like to know more about the practice of medicine in ancient Egypt (including treatments that actually worked), then welcome to Magic, Mummies, and Drugs! In this course, we will read through medical papyri (in translation) and examine ancient mummies to learn how the Egyptians understood and treated the diseases that afflicted them. We will also look at how physicians were trained, which instruments they used, and how much they knew about human anatomy. Lastly, we will explore such specialized branches of medicine as gynecology, dentistry, ophthalmology, surgery, and veterinary medicine.

EGYT 1490. Calendars and Chronology in Ancient Egypt and the Ancient World.

Time is the dimension of history. Chronology studies how we know when events happened. Chronology is much more important to "BC history" than to "AD history." History books state that the great Ramses II ruled around the thirteenth century B.C.E. But how do we know this? The focus of this class is on the answers to such questions through the study of the foundations of the history of Egypt specifically and of the ancient world in general. Some prior knowledge of Egyptian language or civilization might be handy but is by no means required.

EGYT 1500. Ancient Egyptian Art and Architecture.

Ancient Egyptian art and architecture had a remarkably long history, and much that was produced is amazingly well preserved. This course will focus on the inception and development of these material expressions of high culture through detailed studies of monumental buildings and decorated private tombs, as well as the sculpture, painting, and minor arts from the Predynastic period through the end of the Middle Kingdom (c. 3700-1790 BC). Enrollment limited to 20.

EGYT 1510. Ancient Egyptian Art II.

Considers the art of ancient Egypt's New Kingdom or Empire Period (1500-1100 B.C.). The relief carving and painting of Theban temples and tombs are studied in detail, and the developments leading to the revolutionary Amarna style of art is carefully analyzed. Decorative arts, Tutankhamun's treasures, and recent exciting discoveries are all surveyed.

EGYT 1520. The Archaeology of Ancient Egyptian Household and Settlement.

Survey of the primary settlement remains from the Pharaonic Period of ancient Egypt, addressing the practices and problems in settlement and household archaeology. Not open to first year students.

EGYT 1525. Living, Creating, Believing and Dying in the Village of the Royal Tomb Builders.

The site of Deir el-Medina was home to a community of skilled workmen in charge of digging and decorating the tombs of both the Valley of the Kings and Valley of the Queens during the New Kingdom (ca. 1550-1069 B.C.). Deir el-Medina is usually considered the paradigmatic site-witness for studies of Egyptian daily life and benefits from a substantial material record. Through a multi-perspective analysis drawing on both tangible (archaeological structures) and intangible (textual/iconographical) sources, ancient and modern (excavation diaries and new discoveries recently made on the spot!), this course aims at discovering the lifestyle, practices and culture of this community.

EGYT 1550. Ethnic Identity in Graeco-Roman Egypt.

Egypt under Greek and Roman rule (from c. 332 BC) was a diverse place, its population including Egyptians, Greeks, Jews, Romans, Nubians, Arabs, and even Indians. This course will explore the sometimes controversial subject of ethnic identity and its manifestations in the material and textual record from Graeco-Roman Egypt, through a series of case studies involving individual people and communities. Topics will include multilingualism, ethnic conflict and discrimination, legal systems, and gender, using evidence from contemporary texts on papyrus as well as recent archaeological excavations and field survey projects.

EGYT 1910. Senior Seminar.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 1920. Senior Seminar.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 1990. Individual Study Project.

Directed reading and research arranged with individual faculty. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 2210. Introduction to Coptic.

Coptic, the last stage of the ancient Egyptian language, was written with essentially Greek alphabetic characters. An introduction to Sahidic, which is perhaps the best represented of the Coptic dialects. Sahidic grammar is explained, and some texts, mainly of a biblical and patristic nature, are read. Open to undergraduates with the consent of the instructor. No prerequisites, but a knowledge of Middle Egyptian or Greek would be helpful.

EGYT 2300. Readings in Ancient Egyptian.

Advanced readings in ancient Egyptian texts in the original script and language. Readings will be selected from a particular genre, historical period, or site. This course is intended primarily for graduate students and may be repeated for credit. A reading knowledge of ancient Egyptian is required. A reading knowledge of both German and French is strongly recommended but not required.

EGYT 2310. History of the Ancient Egyptian Language.

Diachronic survey of ancient Egyptian from Old Egyptian through Coptic, covering changes in phonology and grammar and analyzing the processes through which these changes took place. Course requirements are short research papers to be presented in class and a final examination. Previous course work in at least one stage of the Egyptian language required; knowledge of Late Egyptian, Demotic (grammar) or Coptic preferable. Prerequisites: EGYT 1310 and EGYT 1320, plus either EGYT 2210, EGYT 2410 or EGYT 2610.

EGYT 2410. Late Egyptian.

Introduction to the grammar of the third historical phase of ancient Egyptian and readings from its various genres, including literary texts, letters, historical inscriptions, and tomb-robbing papyri. Students will be expected to translate and discuss assigned texts. Prerequisites: EGYT 1310, 1320.

EGYT 2450. Exchange Scholar Program.**EGYT 2510. Social Life in Ancient Egypt.**

This course will provide a valuable opportunity to link theory and data innovatively. Taking the lifecycle as its structure, it covers Egyptian life from conception to death and the afterlife, drawing together a range of data sources, such as material culture, iconography, textual data, and human remains.

EGYT 2521. Problems in Amarna History.

The Amarna Period of ancient Egypt (ca. 1350-1300 BC) is one of the most debated, and variously interpreted, in ancient Egyptian history, in terms of people, events, and intellectual movements. In this course, students will research both the evidence and interpretations, and discuss their findings in class, to try to reach a consensus about the most likely scenarios. The instructor will act as a resource for the problems and sources of evidence, and as moderator in class discussions. Grades will be based on the depth of a student's research and on a student's contribution to class discussions.

EGYT 2530. The Perception of Time and Space in Ancient Egypt.

This seminar aims to explore how ancient Egyptian perceived time and space, how they described them, and how they experienced them. Topics covered will include, inter alia, the notion of eternity, the mechanisms of time counting and space organization, the issue of awareness of history, the question of gender-differentiation in the domestic sphere, and the creation of a place.

EGYT 2610. Introduction to Demotic.

Begins with discussions and exercises in the grammar and peculiar script of this late stage of the Egyptian language, followed by readings of actual ancient texts, including *The Instructions of Onkhsheshonkhy*, *The Petition of Petiese*, and *The Story of Setne Khaemwas*. Knowledge of Demotic remains essential for a proper understanding of Egypt during the Saite, Persian, Ptolemaic, and Roman periods. Open to undergraduates with consent of instructor. Prerequisites: EGYT 2410 or 2210.

EGYT 2800. Ancient Egyptian Phonology.

Introduction into the phonology of the ancient Egyptian language, from its hypothetical proto-Semitic cognates to its final stage, the six major dialects of Coptic. The course will concentrate not only on phonology but also on how the principles of Egyptian phonology can be used in understanding and interpreting written forms.

EGYT 2810. Old Egyptian.

Introduction to the grammar of the first historical phase of ancient Egyptian and readings from its two primary genres, the Pyramid Texts and autobiographical inscriptions. Students will be expected to translate and discuss assigned texts. Prerequisites: EG 131, 132 (EGYT 1310, 1320).

EGYT 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

EGYT 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

EGYT XLIST. Courses of Interest to Concentrators in Egyptology and Assyriology.

English

The Department of English fosters the study of British, American, and Anglophone literature—old and new—in ways that are both intensive and open. We offer a wide array of courses in poetry, drama, fiction, creative nonfiction, film, digital media, and theory. All of our courses emphasize the development of student skills in writing, textual analysis, and argument. You will find considerable diversity in critical approaches and methods among the department's faculty, with an emphasis on the social and historical contexts in which literary tendencies, themes, and preoccupations appear, and the ends they serve (which are often multiple and various). English is among the most popular undergraduate concentrations at Brown; and graduates of our highly ranked Ph.D. program are widely recognized for their scholarship and teaching.

For additional information, please visit the department's website: english.brown.edu (<https://english.brown.edu>)

English Concentration Requirements

The English Department fosters the study of British, American, and Anglophone literature—old and new—in ways that are both intensive and open. We study how English literature works, how we understand and appreciate it, and how we write about it. We offer a wide array of courses in poetry, drama, fiction, creative nonfiction, film, digital media, and theory.

All our courses emphasize the development of student skills in writing, textual analysis, and argument. The department's faculty members are deeply committed to undergraduate teaching and advising. You will find considerable diversity in our critical methods, including cross-disciplinary approaches that relate the study of literature to history, politics, science, as well as to other art forms. We encourage students in our classes likewise to forge their own new ways of understanding literature and culture.

In addition to the standard English concentration, we offer an English concentration track in the practice of Nonfiction Writing. The concentration in English and the English/Nonfiction track follow the same core requirements, and students in the English concentration may elect Nonfiction Writing courses as electives. We invite applications from qualified juniors to the honors programs in both English and Nonfiction.

One of the largest humanities concentrations at Brown, English provides a strong foundation for a liberal education and for employment in many sectors, especially those that centrally involve writing and working with texts (in any form). In addition to authorship, scholarship, and teaching, these include: journalism, publishing, advertising, visual media, consulting, public relations, public service, finance, government, corporate research, and administration. Our English concentrators routinely go on to law,

medical, and professional schools as well as to graduate education in literature and the arts.

About the Concentration

We encourage students interested in concentrating in English to visit the department offices at 70 Brown Street and speak with a concentration advisor (<https://english.brown.edu/faculty/>). Students in English courses who are considering an English concentration are welcome to make an appointment to speak with their instructor. Concentration programs must be approved by a concentration advisor.

Concentration Requirements

(10 courses¹):

1. ONE course in "How Literature Matters" (ENGL0100, 0101): 1

Addressing topics about which professors are especially passionate, these introductory courses aim to deepen and refine students' understanding of how literature matters: aesthetically, ethically, historically and politically. Students not only engage with larger questions about literature's significance, exploring the particular kinds of insights and thinking it is especially suited for conveying, they also gain a deeper awareness of the critical methods we use to understand and analyze it, engaging with matters of form, genre and media. Finally, these courses help students develop their skills as close, careful readers of literary form and language.

ENGL 0100A	How To Read A Poem
ENGL 0100C	Altered States
ENGL 0100D	Matters of Romance
ENGL 0100F	Devils, Demons, Do-Gooders
ENGL 0100G	The Literature of Identity
ENGL 0100J	Cultures and Countercultures: The American Novel after World War II
ENGL 0100M	Writing War
ENGL 0100N	City Novels
ENGL 0100P	Love Stories
ENGL 0100Q	How Poems See
ENGL 0100R	American Histories, American Novels
ENGL 0100S	Being Romantic
ENGL 0100T	The Simple Art of Murder
ENGL 0100U	Serial Fictions
ENGL 0100V	Inventing Asian American Literature
ENGL 0100W	Literature Reformatted
ENGL 0100Y	Do the Right Thing
ENGL 0101A	Independence and Modern Literature
ENGL 0101B	Earth Poetics: Literature and Climate Change

2. ONE course in Medieval and Renaissance Literatures (Pre-1700): 1

These courses, which center on Medieval and Renaissance literary works, cast light on periods that can come across to us as both familiar and strange. They focus our attention on how literatures from these periods depict concepts such as aesthetics, romance, gender, sexuality, race, power and politics in ways that are like and unlike how we tend to think of them today—on how pre-modern or early modern works can both defamiliarize the categories of experience and identity we tend to take for granted and also suggest something of their origins. Several courses under this rubric will also engage with recent literary and filmic adaptations of works from these eras, exploring how many such works continue to function as vibrant and at times ambivalent inspirations for the literary imaginings of later periods.

3. ONE course in Literatures of Modernity (Post-1700): 1

These courses explore the many strands of writing in English that have emerged from the eighteenth century through the present, shaping the contemporary world. These literatures reflect on political, economic, and intellectual history, from the idea of the nation and the structures of capital through the rise and dissolution of empire and the emergence of postcolonial states, including the forms of race, gender and sexuality that cut across them. Courses also examine how aesthetic works can shape and critique their moment: they look at genres like the novel and short story, poetry, drama, essays, and new, hybrid forms that have arisen with expanding digital media; they also take up a multitude of literary movements whose influences remain with us today, including Romanticism, realism, naturalism, modernism, and post-modernism.

4. ONE course in Literatures of the Color Line: 1

In 1903, W. E. B. Du Bois famously proclaimed in "The Souls of Black Folk" that "The problem of the twentieth century is the problem of the color-line,—the relation of the darker to the lighter races of men in Asia and Africa, in America and the islands of the sea." Courses in this category explore the complex ways in which literary texts have addressed American histories of race, ethnicity, and empire. They may do so from the vantage point of ideas about difference and hierarchy that predate the modern conception of race and by engaging with earlier histories of conflict and contact. These courses explore issues of intersectionality as well, highlighting how race operates in relation to other structures of difference such as gender, sexuality and class.

ENGL 0100F	Devils, Demons, Do-Gooders
ENGL 0100N	City Novels
ENGL 0100S	Being Romantic
ENGL 0100V	Inventing Asian American Literature
ENGL 0101A	Independence and Modern Literature
ENGL 0150X	The Claims of Fiction
ENGL 0150Y	Brontës and Brontëism
ENGL 0700E	Postcolonial Literature
ENGL 0500R	Slavery and American Literature
ENGL 0510F	Literature of the American Renaissance
ENGL 0700G	American Fiction and Mass Culture
ENGL 0700U	Modernism and Race
ENGL 0710B	African American Literature and the Legacies of Slavery
ENGL 0710Q	American Literature in the Era of Segregation
ENGL 0710V	Death and Dying in Black Literature
ENGL 0710W	Readings in Black and Queer
ENGL 0710X	Black Poetics
ENGL 0710Y	Literature of US Inequality, 1945-2020
ENGL 1310H	The Origins of American Literature
ENGL 1511A	American Literature and the Civil War
ENGL 1511C	Lincoln, Whitman, and The Civil War
ENGL 1511P	Realism, Modernism, Postmodernism: The American Novel and its Traditions
ENGL 1710I	Harlem Renaissance: The Politics of Culture
ENGL 1710J	Modern African Literature
ENGL 1710K	Literature and the Problem of Poverty
ENGL 1710M	Nationalizing Narratives: Race, Nationalism, and the American Novel
ENGL 1710P	The Literature and Culture of Black Power Reconsidered
ENGL 1711D	Reading New York
ENGL 1711H	Lyric Concepts: The Question of Identity in Modern and Contemporary Poetry

ENGL 1711J	Art for an Undivided Earth / Transnational Approaches to Indigenous Art and Activism
ENGL 1711K	The Politics of Perspective: Post-war British Fiction
ENGL 1711L	Contemporary Black Women's Literature
ENGL 1711N	Monsters in our Midst: The Plantation and the Woods in Trans-American Literature
ENGL 1711O	Radical Pasts, Radical Futures: Literature and the Left
ENGL 1711S	James Baldwin
ENGL 1760U	American Modernism and its Aftermaths
ENGL 1760Y	Toni Morrison
ENGL 1761B	Narratives of Blackness in Latinx and Latin America
ENGL 1761E	Blackness and Being
ENGL 1761F	Toni Morrison
ENGL 1761G	Translational Echoes of the Korean War
ENGL 1761V	The Korean War in Color
ENGL 1762M	Caribbean Literature
ENGL 1900D	Literature and Politics
ENGL 1901J	Fanon and Spillers
ENGL 1950H	The Recent Novel and its Cultural Rivals
5. ONE course in Literary Theory and Cultural Critique: 1	
The late-twentieth century saw a revolution in the field of literary studies in the United States, as critics turned their attention to the contextual and historical nature of our categories of knowledge. This turn to theory was influenced by developments in psychoanalysis, linguistics, philosophy, political theory and sociology and by the emergence of social movements that challenged such structures as patriarchy, homophobia, racism, imperialism, economic inequality, and environmental violence. The avenues of inquiry opened up brought an increased awareness of the implication of literature in the operations of power and ideology; a sense of the potential for literary modes of presentation to challenge and displace such operations; and a new attention to the role of gender, race, empire, class, and sexuality in the formation of the literary work. Courses that satisfy the Literary Theory and Cultural Critique requirement explore some dimension of these issues – either directly, taking as their primary focus a set of theoretical questions or debates, or indirectly, by examining a compelling topical question of social and political significance through works of literature and literary theory.	
ENGL 0150W	Literature and the Visual Arts
ENGL 0700E	Postcolonial Literature
ENGL 0710L	Ishiguro, Amongst Others
ENGL 0710R	Poetry and Science
ENGL 0711B	Trans Cultural Production and Trans Studies
ENGL 0710W	Readings in Black and Queer
ENGL 1140A	Intellectual Pleasures: Reading/Writing the Literary Text
ENGL 1190S	Poetics of Narrative
ENGL 1511Y	Emily Dickinson and the Theory of Lyric Form
ENGL 1561D	Writing and the Ruins of Empire
ENGL 1710M	Nationalizing Narratives: Race, Nationalism, and the American Novel
ENGL 1711K	The Politics of Perspective: Post-war British Fiction
ENGL 1711J	Art for an Undivided Earth / Transnational Approaches to Indigenous Art and Activism

ENGL 1760J	Reading <i>Gravity's Rainbow</i>
ENGL 1761D	Hollywood and American Modernism from FDR to JFK
ENGL 1761L	Reading the Black Masses in Literature and Critical Practice
ENGL 1761Q	W. G. Sebald and Some Interlocutors
ENGL 1762D	Kubrick
ENGL 1900D	Literature and Politics
ENGL 1900J	Zoopoetics
ENGL 1900K	Reading Sex
ENGL 1900P	History of Criticism from Plato to Postmodernism
ENGL 1900Y	Medieval Manuscript Studies: Paleography, Codicology, and Interpretation
ENGL 1900Z	Neuroaesthetics and Reading
ENGL 1901H	The Late 60s: Film Countercultures
ENGL 1901L	Cronenberg/Lynch
ENGL 1901J	Fanon and Spillers
ENGL 1901Q	You Better Work: Sexuality, Labor, Blackness
ENGL 1950G	Reading Narrative Theory
ENGL 1950H	The Recent Novel and its Cultural Rivals
ENGL 2360Z	Shakespeare: a Politics of Love
ENGL 2761C	Black Internationalism and Its Discontents
ENGL 2561V	The Pursuit of Happiness: Transatlantic Literary Culture in the Long Eighteenth Century
ENGL 2900N	Ethical Turns in Psychoanalysis and Literature
ENGL 2900X	Postcolonial Theory
ENGL 2901D	War and the Politics of Cultural Memory
ENGL 2901K	Theory, Technics, Religion
ENGL 2901P	Black Feminism: Roots, Routes, Futures
6. FIVE electives ²	5
Total Credits	10

¹ Each course may fulfill ONE requirement. Five courses must be 1000-level courses. With advisor approval, two of the ten required courses may be taken in departments other than English.

² Only TWO courses dealing primarily with the practice of writing at the 1000-level may be counted as electives. ENGL0900 and ENGL0930 do not count toward the concentration, however they do fulfill prerequisites for upper-level Nonfiction courses. One ENGL0200 may be counted toward the 10-course requirement only as an elective.

All substitutions and/or exceptions must be approved by the concentration advisor in consultation with the Director of Undergraduate Studies. A substitution or exception is not approved until specified in writing in the student's concentration file housed in the English Department.

English Concentration -- Nonfiction Writing Track (10 courses)

The English concentration also includes a Nonfiction Writing Track. The requirements are the same as 1 through 6 above, but three of the five electives must be 1000-level Nonfiction Writing courses (only ONE of which may be intermediate: ENGL1030, ENGL1050). Only THREE Nonfiction courses may count toward the track.

Honors in English

The English Honors program is intended for students who have been highly successful in their English concentration coursework and who want the opportunity to pursue a research project in more depth than is

possible in an undergraduate seminar. The program is intended for those students with a strong desire to conduct independent research under the supervision of a thesis advisor and culminates in the writing of a thesis during the senior year.

Admission

Students apply to the Honors Program early in the second semester of their junior year. December or mid-year graduates may apply in their 6th semester, but are encouraged to apply during their 5th semester and write their theses alongside May graduates. Interested concentrators should speak to the Honors Advisor early in their junior year to discuss their plans. Specific deadlines for admission are announced annually and are available on the department website. Students who are studying off campus are expected to meet the application submission deadline.

Admission to the English Honors Program depends on evidence of ability and promise in the study of literature. To be eligible for admission, students must have received more As than Bs (and no Cs or below) in concentration courses completed. Students must complete an application; supply a brief writing sample, and request two letters of recommendation from English faculty with whom they have taken courses. If necessary, letters may come from faculty in related departments. Letters from teaching assistants may only serve as supporting recommendations. Candidates must also submit a one-page project proposal signed by the faculty member who has agreed to serve as the thesis advisor.

See procedures and application (<http://brown.edu/academics/english/english-honors-procedures/>) for more details.

December or mid-year graduates who wish to apply to honors have two options, but the first is highly encouraged:

Option 1:

In their 5th semester (Spring), students apply to the honors program along with the other juniors. Accepted students will be incorporated into the regular honors cohort and must meet the same deadlines: i.e. they must complete their theses at the same time as the other honors students (though for mid-years this will be at the end of their 7th semester). They register for ENGL 1991 English Honors Seminar in the Fall, and ENGL 1992 Senior Honors Thesis in the Spring.

Option 2:

In the 7th semester (the Spring of their final year), students take an independent study with their thesis advisor, under whose direction they will begin to research and write their theses. This course must be taken S/NC. In the 8th semester (the Fall of their final year), as they complete their theses, students take ENGL 1992 for a grade. Mid-year graduates should consult with the Honors Director for information about deadlines.

Requirements

The course requirements for the English Honors Program are the same as those for the regular concentration, with the following additions:

As part of regular coursework, and counting toward the concentration requirements, honors candidates must complete at least three upper-level seminars or comparable small courses in which students have the opportunity to do independent research, take significant responsibility for discussion, and do extensive scholarly and critical writing. Students are encouraged to include at least one graduate seminar in their program. (Permission to take a graduate course must be obtained from the instructor.) Honors candidates should discuss their proposed course of study with the Honors Advisor.

During the Fall and Spring of the senior year, honors candidates must complete two additional courses beyond the ten courses required by the regular concentration: ENGL 1991 and ENGL 1992. ENGL 1991 is the Senior Honors Seminar, in which students begin to research and write their theses, as well as meet to discuss their work. This is a mandatory S/NC course. ENGL 1992, the Senior Honors Thesis is an independent research course that must be taken for a grade.

Honors candidates must continue to receive more As than Bs in courses taken as part of the concentration. Courses completed with a grade of C will not count toward an Honors concentration. A student who receives such a grade and wishes to continue in the program must complete a comparable course with a grade higher than C.

The Honors Thesis

The Honors thesis is an extended essay, usually between 50 and 80 pages, written under the supervision of a department faculty advisor and second reader. (Where appropriate, the advisor or the reader, but not both, may be in another department.) The thesis may be an interdisciplinary or creative project, but it is usually an essay on a scholarly or critical problem dealing with works of literature in English. The specific topic and approach of the thesis are worked out between the student and the thesis advisor, with assistance from the student's second reader. This process should begin in the latter part of the student's junior year. A good way to get an idea of what sorts of projects are possible is to visit the Hay Library, which stores theses from previous years, or to meet with the Honors Advisor.

A prospectus describing the project and endorsed by the faculty advisor must be submitted to the Honors Advisor at the beginning of the senior year. At the end of the senior year fall term, a student must submit approximately 25 pages of draft material toward the thesis. Full thesis drafts are due by mid-March; final bound copies of the thesis are due in mid-April. Late theses will not be accepted for honors after the April deadline; students who hand in theses after the deadline but before the end of the term will receive a grade for the thesis course, but they will not be eligible for departmental honors. The completed thesis will be evaluated by the student's advisor and a second reader, each of whom provides written commentary and suggests a grade for ENGL 1992.

Evaluation

The English Department reviews the academic record as well as the thesis evaluations for each senior completing the Honors Program. Following a successful review, the student will be eligible to graduate with Honors in English.

Honors in Nonfiction Writing

The Nonfiction Writing Honors Program is intended for students who have been highly successful in their English concentration work. Specifically, it allows those who have an expressed and proven interest in nonfiction writing to pursue more completely a single project under the supervision of a first reader. The intention is to help students to complete work worthy of publication. The program culminates in the writing of a thesis during the senior year.

Admission

Students apply to the Nonfiction Writing Honors Program in the second semester of their junior year. December or mid-year graduates may apply in their 6th semester, but are encouraged to apply during their 5th semester and write their theses alongside May graduates. Interested concentrators should have already made contact with at least one member of the Nonfiction Writing faculty and should meet with the Honors Advisor early in their junior year to discuss their plans. Specific deadlines for admission are announced annually and are available on the department website. Students who are studying off campus are expected to meet the application submission deadline.

Admission to the Honors Program in Nonfiction Writing depends upon a student's demonstrated superior ability in nonfiction writing. Students must have taken either one intermediate and one advanced writing course, or two advanced writing courses by the end of their sixth semester and completed each of them with an S. To be eligible for admission, students must have earned more As than Bs (and no Cs or below) in other courses in the concentration plan. Students must submit an application, two letters of recommendation, a writing sample from an advanced writing course, and a project proposal.

See procedures and application (<http://brown.edu/academics/english/nonfiction-honors-procedures/>) for more details.

December or mid-year graduates who wish to apply for nonfiction honors have two options, but the first is highly encouraged:

Option 1:

In their 5th semester (Spring), students can apply to the nonfiction honors program along with the other juniors. Accepted students will be incorporated into the regular nonfiction honors cohort and must meet the same deadlines: i.e. they must complete their theses at the same time as the other honors students (though for mid-years this will be at the end of their 7th semester). They register for ENGL 1993 Nonfiction Honors

Seminar in the Fall and ENGL 1994 Senior Honors Thesis in Nonfiction in the Spring.

Option 2:

In their 7th semester (the Spring of their final year) students take ENGL 1200 and in their 8th semester (the Fall of their final year) they take ENGL 1994. (Students choosing this option must consult with the Honors Advisor for information on deadlines.)

Requirements

Students in the Nonfiction Writing Honors Program take two additional courses beyond the ten courses required by the Nonfiction Writing Track -- ENGL 1993 Honors Seminar in Nonfiction Writing (with the Honors Advisor) and ENGL 1994 Senior Honors Thesis in Nonfiction Writing; the Honors track will bring to twelve the total number of required courses. The ENGL 1993 grade option must be S/NC; ENGL 1994 must be taken for a grade. Honors candidates should discuss their proposed course of study with the faculty member they choose to direct their thesis.

Honors candidates must continue to receive more As than Bs in courses taken as part of the concentration. Courses completed with a grade of C will not count toward an Honors concentration. A student who receives a "C" after admission to Nonfiction Honors and wishes to continue in the program must complete an additional course in a comparable subject area, with a grade higher than C.

The Honors Thesis

The Nonfiction Writing Honors thesis is an extended project, usually of between 50 and 80 pages, written under the supervision of one of the Nonfiction Writing faculty and a second reader (who can be from literature or another department). The specific topic and approach of the thesis are worked out between the student and the first reader, with assistance from the student's second reader. A good way to get an idea of what sorts of projects are possible is to visit the Hay Library, which stores theses from previous years, or to meet with the Honors Advisor. The work typically is in a genre chosen from Nonfiction Writing's spectrum: critical analysis, literary journalism, memoir, lyric essay, or narrative based on travel, science, history, or cultural critique.

Full thesis drafts are due by mid-March; final bound copies of the thesis are due in mid-April. Late theses will not be accepted for honors after the April deadline; students who hand in theses after the deadline and before the end of the term will receive a grade for the thesis course, but they will not be eligible for departmental honors. The completed thesis will be evaluated by its first reader and second reader, each of whom provides written commentary and suggests a grade for ENGL 1994.

Evaluation

The English Department reviews the academic record as well as the thesis evaluations for each senior completing the Nonfiction Writing Honors Program. Following a successful review, the student will be eligible to graduate with Honors in Nonfiction Writing.

English Graduate Program

The Department of English offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/english> (<http://www.brown.edu/academics/gradschool/programs/english/>)

Courses

ENGL 0100A. How To Read A Poem.

It is difficult to get the news from poems/ yet men die miserably every day/ for lack/ of what is found there. Poet William Carlos Williams captures this course's focus on the special ways that poetic language represents and gives shape to human experience. Organized around concepts and practical skills, the readings cross historical and geographical boundaries.

ENGL 0100B. Literature, Trauma, and War.

This course surveys many genres and periods in order to consider and think about two traditional kinds of literary responses to war--glorifying it, and representing its horrors. We'll examine texts by Homer, Shakespeare, Milton, Wordsworth, Byron, Whitman, Hardy, Crane, Freud, Levi, Pynchon, and Sebald, among others; we may also screen one or two films. Limited to undergraduates. Students should register for ENGL 0100B S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100C. Altered States.

A course about ecstasy, rapture, transport, travel, mysticism, metamorphosis, and magic in pre- and early modern verse, drama, and prose, including: Ovid (*Metamorphoses*), Shakespeare (*A Midsummer Night's Dream*; *Othello*), Marlowe (*Dr. Faustus*), *Mandeville's Travels*; the writings of the medieval female mystics Julian of Norwich and Margery Kempe; the ecstatic verse of Crashaw, and the erotic, at times pornographic, verse of Donne, Herrick, Carew, Rochester, and Behn.

ENGL 0100D. Matters of Romance.

Narratives (1100-1500) of men, women, and elves seeking identity on the road, in bed, and at court. Readings (in modern English) include Arthurian romances, *Havelok*, *lais* by Marie de France, and Chaucer's "Wife of Bath's Tale." Primarily for freshmen and sophomores. Students should register for ENGL 0100D S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100E. Catastrophic Communities.

What becomes of communities and individuals in a catastrophe? This course considers the different literary, social and ethical formations that arise or are destroyed in disaster, and examines what it means to be both an individual and part of a collective in times of unprecedented upheaval. Readings by Blanchot, Camus, Sebald, Duras, Freud, Arendt, Jaspers, Orwell, and Eggers.

ENGL 0100F. Devils, Demons, Do-Gooders.

Who hasn't struggled with the problem of good and evil? We will investigate how various writers grapple with these fundamental questions of judgment. What constitutes good and evil in the first place, and who gets to make such judgments? Works may include John Milton, Mary Shelley, Jhumpa Lahiri, Frederick Douglass, Toni Morrison, and Herman Melville. Students should register for ENGL 0100F S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100G. The Literature of Identity.

This course will explore various conceptions of personal identity, with an emphasis on Romanticism. We'll read Anglo-American philosophical and literary texts (mostly poetry) from the Renaissance through the 19th century, taking some excursions into contemporary theory (queer, feminist, post-structuralist). Writers may include Shakespeare, Montaigne, Locke, Hume, Rousseau, Wordsworth, Keats, Emerson, Browning, and Wilde.

ENGL 0100H. Fictions and Frauds: Literature and the Historical Imagination.

How does fiction reinvent history? What makes autobiography "true"? Readings focus on the slave narrative, Hawthorne, historical novels, and Jack Kerouac's "On the Road." Limited to undergraduates.

ENGL 0100I. American Fiction and the Sea.

This class examines one of the most distinctive of literary genres: the sea tale. These narratives are interested not only in how we know what we know, but in the ways we imagine what we don't know. Novels and films to be discussed will include *Moby-Dick*; *Lord Jim*; *Aguirre, the Wrath of God*; *Apocalypse Now*; *The Witness*.

ENGL 0100J. Cultures and Countercultures: The American Novel after World War II.

A study of the postwar American novel in the context of the intellectual history of the 1950s, 1960s, and 1970s. We will read the postwar novel in relation to the affluent society, the vital center, the lonely crowd, the power elite, the one-dimensional man, the post-industrial society. Authors to be considered include Baldwin, Bellow, Ellison, Highsmith, McCarthy, O'Connor, Petry, Pynchon, and Roth. Two lectures and one discussion meeting weekly. Students should register for ENGL 0100J S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100K. The Dead and the Living.

Explores ethical, historical, and personal dilemmas in modernism through the relation between the dead and the living. What claims do the dead have on the living? How do the living shape the lives of the dead? Readings in literature, psychoanalysis, and philosophy, including Henry James, Virginia Woolf, Walter Benjamin, Sigmund Freud, James Joyce, W. G. Sebald, and Julian Barnes. Students should register for ENGL 0100K S01 and may be assigned to a conference section by the instructor during the first week of class.

ENGL 0100L. What Was Postmodern Literature?

How compatible is the idea of the postmodern with the idea of a historical period? This course looks at recent British and American literature through the optic of postmodern theory, discussing how the theoretical problematization of both history and politics has an impact upon the very possibility of fiction. Readings include Doctorow, Pynchon, Amis, Jameson, Lyotard, Baudrillard. Students may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100M. Writing War.

Examines the challenges that war poses to representation, and particularly to language and literary expression in the modern era. We will focus primarily on the First and Second World Wars, exploring the specific pressures war puts on novels and poetry, as well as on history, psychology, and ethics. Works by Sassoon, Owen, Hemingway, Woolf, Rebecca West, Graham Greene, Pat Barker, Tim O'Brien, Georges Perec. Students should register for ENGL 0100M S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100N. City Novels.

This course examines 20th and 21st century novels to consider how these narratives envision the city, its possibilities and limits. How does the city shape how we think, wander, grow up, see and know each other? How does the city divide people? How does the novel imagine ways to bridge those divisions? Readings by Crane, Woolf, Brooks, Desai, Smith, Calvino, Adiga, Yamashita.

ENGL 0100P. Love Stories.

What do we talk about when we talk about love? We will see how writers have addressed this question from Shakespeare's day to the present. Writers may include Shakespeare, Austen, Eliot, Flaubert, Graham Greene, Marilynne Robinson, and/or others. Students should register for ENGL 0100P S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100Q. How Poems See.

What makes poems and pictures such powerful forms of life? Why do pictures have so much to tell us? How do we see things in words? How do graphic images, optical images, verbal images, and mental images together constitute ways of understanding the world? Looking at poems and images from Giotto and Shakespeare, Wordsworth and Dickinson and Turner through such modern poets and painters as Stevens, Ashberry, Warhol and Heijman, we will study sensory and symbolic images, the uses and dangers of likeness, and the baffling confluence of concrete and abstract, literal and figurative, body and mind, matter and spirit.

ENGL 0100R. American Histories, American Novels.

How do novels make readers experience such traumatic historical events as war, slavery, genocide, the internment, and civil conflict? What kind of political or ethical perspective on such events do literary narratives encourage? How do novels construct cultural memory? This course explores important post-1945 novels that make us readers and feel in particularly resonant ways about American histories of race.

ENGL 0100S. Being Romantic.

"Romantic literature" and "Romantic art" are familiar concepts in the history of culture. But what does "Romantic" actually mean? Were Coleridge and Keats especially dedicated to writing about erotic love? Why would "Romantic" literature emerge during the period of the French Revolution and Industrial Revolution? What does early 19th-century "Romanticism" have to do with the meaning and status of the "Romantic" in our culture today? Readings in British and American writing from Blake and Mary Shelley to Ani DiFranco and *Rage Against the Machine*.

ENGL 0100T. The Simple Art of Murder.

A survey of the history of criminal enterprise in American literature. Authors to be considered include Poe, Melville, Hawthorne, Twain, Chandler, Wright, Petry, Highsmith, Millar, Harris, and Mosley.

ENGL 0100U. Serial Fictions.

A study of serial and serialized fictional narratives from the nineteenth century to the present--dime novels, serial genre fictions, literary novels comprised of chapters initially published as short stories, radio and film serials, television programs old (*The Naked City*, *Hawaii-Five O*), newer (*The Wire*, *Sex in the City*), and new (*Americans*), podcasts, and video games (*Legend of Zelda*).

ENGL 0100V. Inventing Asian American Literature.

What insights can literature provide into the complicated workings of race in America? What role can the invention of a literary tradition play in illuminating and rectifying past and present injustices? We explore these questions by examining how the idea of an Asian American literary tradition came into being and by reading influential works that have become part of its canon. Students should register for ENGL 0100V S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100W. Literature Reformatted.

We'll put literary works produced for digital environments (novels on Twitter, cominatory poetry, collaborative fiction on chat forums) in conversation with works of literature produced in traditional forms. Do these new forms offer empowering extensions of the literary, or do they threaten the very forms of literature from which we can profit the most?

ENGL 0100X. Literature and Social Justice.

What role does literature play (if any) in understanding/revealing injustice, oppression, or inequity, or even helping create a more just world? What role might literature play in helping produce the very definitions of sociality and justice through which we see the world? Readings may be drawn from the writings of Mark Twain, Ralph Ellison, Toni Morrison, and Leslie Marmon Silko.

ENGL 0100Y. Do the Right Thing.

An examination of literary works as developing our modern framework of moral values, along the way taking up questions of temptation, corruption, punishment, redemption, and responsibility. We will start with Christian allegorical texts (Dr. Faustus and *Pilgrim's Progress*), complicate the picture with 19th century psychological fiction, and conclude with some masterpieces of art cinema.

ENGL 0101A. Independence and Modern Literature.

Words like "freedom" and "independence" are central to modern global history. This course introduces students to modernist and postcolonial poetry and fiction, exploring individual and collective self-determination. We address questions of aesthetic autonomy and form, and collective aspirations along disparate lines of nation, race, gender, and sexuality. Readings from Achebe, Bulawayo, Conrad, Eliot, Hurston, Joyce, Kincaid, Lamming, Walcott, and Woolf. Students should register for ENGL 0101A S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0101B. Earth Poetics: Literature and Climate Change.

This course will examine how poetic forms of attention can offer a different sense of the shifting temporalities of change in the age of the Anthropocene, allowing us to stretch our range of perception to non-monumental rhythms that may be at play below the thresholds of human perception, but also the vast swaths of geologic time that may supersede them. We will address how literary texts can help us develop our understanding of various kinds of environmental change by attending to the material entanglements between nature and culture.

ENGL 0101C. America Dreaming.

What ever happened to the American Dream? How is American literature a series of dreaming--fantasy, utopia, dystopia, antislavery, reform, the West, and escape. Fiction, film, the essay, the nonfiction novel. What makes for an "American" myth? How is it exported to the world?

ENGL 0101E. Home Away from Home.

Many works of literature send their characters on far-flung journeys, separating them from their homes. Can one, though, be at home even far away from home? What can we learn about the notion of "home" and identity from those exiled from the place they know as home? What becomes visible when viewing the world from a new perspective? And what cultural norms do such stories explore, challenge, and/or re-enforce. Possible readings: *Kindred*, *Exit West*, and *How Much of These Hills is Gold*.

ENGL 0150A. Elizabeth I: The Queen and the Poets.

Queen Elizabeth I, a poet herself, adorned her aging body as the symbolic object of desire for a circle of ambitious male poets. Considers the poetic means by which Sidney, Spenser, and Shakespeare overcome the obvious obstacles to desire presented by her uncertain health and imperious temperament and court their Virgin Queen.

ENGL 0150B. Objects of Beauty in Renaissance Culture.

What made a poem or a play as beautiful in 16th-century England as a hat or the right pair of shoes? Literary history and aesthetics from Wyatt, Surrey, and More, through Sidney, Shakespeare, Jonson, and Donne.

ENGL 0150C. The Medieval King Arthur.

Where did stories of King Arthur come from and how did they develop in the Middle Ages? We will read the earliest narratives of King Arthur and his companions, in histories and romances from Celtic, Anglo-Norman, and Middle English sources, to examine Arthur's varying personas of warrior, king, lover, thief. Enrollment limited to 19 first-year students.

ENGL 0150D. Shakespeare's Present Tense.

Shakespeare in Love suggests how Shakespeare was clued in to elite and popular cultures. Current adaptations like *O* and *10 THINGS I HATE ABOUT YOU* demonstrate how Shakespeare provides anachronistic clues to issues of the present. This course will trace such clues by examining the cultural origins and ongoing adaptations of *Romeo and Juliet*, *Hamlet*, *Othello*, *Twelfth Night*, *Henry V*, and the sonnets. Enrollment limited to 19 first-year students.

ENGL 0150E. Love and Friendship.

What do we talk about when we talk about love? This course poses this question in various ways. How, for instance, can we tell the difference between love's various forms--between love that is friendly and love that is romantic? How do the different forms of love differently shape people? How does love work when it involves sex, or marriage, or children, or divinity? And what must love involve to be called "good"? Why? Materials will range from Plato and St. Augustine to Leo Bersani and Allen Bloom and will also include popular filmic representations of love. Limited to 19.

ENGL 0150F. Hawthorne and James.

An introduction to a pair of writers whose work continues to shape our understanding of American literature and American identity. Focusing on much of their most important work, our aim will be to understand how their conceptions of the relationship between writing and history both complicate and complement each other. Limited to 19 first-year students.

ENGL 0150G. Lincoln, Whitman, and The Civil War.

An introduction to the literature of the American Civil War: Whitman, Lincoln, Melville, Stowe, and other autobiographical and military narratives.

ENGL 0150H. Literature of The American South.

The South is as much a state of mind as a place on the map, and some of the major figures in American literature have contributed to the making of what we think of when we think of "the South." Explores the sometimes contradictory but always important meanings of the American South. Authors include Poe, Douglass, and Faulkner.

ENGL 0150I. The Simple Art of Murder.

This course surveys the history of criminal enterprise in twentieth-century American culture. Drawing from a broad range of sources ("literary" novels and pulp fiction, B-movies and auteurist features), we will assess the role of crime as object of aesthetic attention and attend to the questions that can arise about the idea of the criminal when one takes it up outside of its usual home in courts. Authors: Poe, Hammett, Fitzgerald, Chandler, Wright, Petry, Hughes, Butler. Directors: Hitchcock, Wilder, Huston, Truffaut, Pakula, Lupino. Limited to 19 first-year students.

ENGL 0150J. Inventing America.

One of the distinguishing features of American literature may be its seemingly constant struggle with the idea of America itself. For what, these authors wonder, does/should America stand? We will examine the rhetorical battles waged in some major works over the meaning and/or meanings of America's national identity. Authors may include Franklin, Hawthorne, and Fitzgerald. Limited to 19 first-year students. Instructor permission required.

ENGL 0150K. The Transatlantic American Novel.

This course reads American literature across national boundaries, focusing on the novel genre and the question of "American" identity as a problem in itself. The course takes up this problem in a wide array of novels spanning the period between the late eighteenth and twentieth centuries. Writers include Crèvecoeur, Susanna Rowson, Poe, Melville, Twain, and Nella Larsen. Limited to 19 first-year students.

ENGL 0150L. The Sensational and the Real in Victorian Fiction.

This course will explore two modes through which Victorian novels engaged the turbulent experience of their time: realism and sensation. We will examine how these different genres tackled issues of gender, sexuality, class, and personal and community identity. Enrollment limited to 19 first-year students.

ENGL 0150M. "Model Minority" Writers: Cold War Fictions of Race and Ethnicity.

Explores the construction of race and ethnicity in U.S. writings of the 50s, paying particular attention to how literary texts negotiate the ideological demands of Cold War anti-communism. Writers studied may include Saul Bellow, Carlos Bulosan, Ralph Ellison, Jack Kerouac, Norman Mailer, John Okada, and Jade Snow Wong.

ENGL 0150N. Black Atlantic Narratives of Africa.

We will study fiction, drama, and autobiography by black writers who have used the motif of a literal or symbolic journey to Africa to explore in powerful ways issues of the trans-Atlantic slave trade, Africa as land and concept, individual and collective memory. Writers will include Maryse Condé, Charles Johnson, George Lamming, Paule Marshall, Toni Morrison, and Derek Walcott.

ENGL 0150O. Englishness and Britishness in Contemporary Fiction.

How have writers of fiction responded to recent developments in British political culture? How has the category of Englishness changed during that period? This course offers an overview of some of the most important British writers of the last twenty years and an introduction to theories of culture and ideology. Readings include Ishiguro, Kelman, Caryl Phillips, Zadie Smith.

ENGL 0150P. Is There a Theory of the Short Story?

This course considers the question in the title by looking at works of short fiction by Melville, Conrad, Bierce, Joyce, Lawrence, Kafka, Wicomb, Paley, O'Connor, Beckett, White, and literary theories by figures such as Lukacs, Bakhtin and Deleuze. Enrollment limited to 19 first-year students. Banner registrations after classes begin require instructor approval.

ENGL 0150Q. Realism and Modernism.

The novel as a genre has been closely identified with the act of representation. What it means to represent "reality," however, has varied widely. This seminar will explore how the representation of reality changes as modern fiction questions the assumptions about knowing, language, and society that defined the great tradition of realism. English and American novels will be the primary focus of our attention, but influential French, German, and Russian works will be studied as well. Limited to 19 first-year students. Banner registration after classes begin requires instructor approval.

ENGL 0150R. The Problem of Women's Writing.

Combines a survey of British and American women writers with an interrogation of the concept of women's writing. Authors will include Austen and Brontë, Walker and Viramontes; theoretical topics will include the figure of the author, subjectivity and ideology, the concept of a separate women's canon or tradition, and the complex differences within "feminine" writing and "feminist" reading.

ENGL 0150S. The Roaring Twenties.

This course examines U.S. culture of the 1920s, with particular attention to phenomena that came to be mythologized as the "roaring twenties"—flappers, movie culture, literary and cultural innovation, primitivism and exoticism. We will read fiction and some poetry in the context of movies, publicity, and advertising. Class discussion will focus on analyzing texts with an attention to language and form, as well as connecting these texts to their cultural contexts. Enrollment limited to 19 first-year students.

ENGL 0150T. Arms and the Man.

"Mother Green and her killing machine!" So enthuses a grunt in Full Metal Jacket about the Marine Corps. This seminar explores the romance of man and machine: the individual man's body as a machine and group relations with each man as a cog in a larger body/machine. We'll also consider other sites—including the gym—infiltrated, at least figuratively, by militarism. Texts: Crane, The Red Badge; Herr, Dispatches; Swofford, Jarhead; Paul Fussell, The Great War and Modern Memory; Samuel Fussell, Muscle. Films: Full Metal Jacket; The Hurt Locker; GI Jane; Three Kings; Pumping Iron. Enrollment limited to 19. Instructor permission required.

ENGL 0150U. The Terrible Century.

Although the term "terrorism" was coined in the 18th century, and although its contemporary resonance has reached an unprecedented pitch, the truly terrible century was arguably the 20th. This course introduces 20th century literature in English through a historical and philosophical examination of terror and terrorism. We will focus on several historical contexts, including: British colonialism in Ireland and Africa, South African apartheid, and the post 9/11 world. Readings include Conrad, Bowen, Gordimer, Coetzee, Foulds, Walters, Hamid. Enrollment limited to 19 first-year students.

ENGL 0150V. James and Wharton.

Friends, rivals, fellow ex-pats, and close correspondents for 15 years, Henry James and Edith Wharton had much in common. Their names are often coupled together in much the manner as Hemingway and Fitzgerald, since their fiction has often thought to deal with the same set of concerns: the societal and emotional ups and downs of well-to-do people in London, Paris, and New York. This class will read James and Wharton side by side in order not only to see in what ways they shed light on each other, but in what ways they differ. Limited to 19 first-year students.

ENGL 0150W. Literature and the Visual Arts.

How do words and images represent? Are the processes by which literature and the visual arts render the world similar or different? Is reading a novel or a poem more like or unlike viewing a painting, a sculpture, or a film? This seminar will analyze important theoretical statements about these questions as well as selected literary and visual examples. Limited to 19 first-year students.

ENGL 0150X. The Claims of Fiction.

This course explores the interplay of tropes of strangeness, contamination, and crisis in a range of novels and shorter fiction, in English or in translation. We will ask why social misfits and outsiders somehow become such fascinating figures in fictional narratives. How do these fictions entice and equip readers to reflect on collective assumptions, values, and practices? Writers will include Baldwin, Brontë, Coetzee, Conrad, Faulkner, Ishiguro, Morrison, Naipaul, Rushdie, Salih, Shelley. Limited to 19 first-year students.

ENGL 0150Y. Brontës and Brontëism.

The novels of Anne, Charlotte, and Emily Brontë alongside works (fiction and film) influenced by or continuing their powerful (and competing) authorial visions: *Wide Sargasso Sea* (Rhys), *Rebecca* (Hitchcock), *The Piano* (Campion), and *Suspiria* (Argento). Among other questions, we will discuss the role of Romanticism, feminism, the bodily imaginary, colonialism, and genre. Enrollment limited to 19 first-year students.

ENGL 0150Z. Hamlet/Post-Hamlet.

Shakespeare's *Hamlet* is perhaps the most widely read, performed, adapted, parodied and imitated literary text of the western tradition. In this seminar we will begin by reading/re-reading the play before turning to a number of appropriations of Shakespeare, both in the west and non-west, in order to address social and aesthetic issues including questions of meaning and interpretation, intertextuality and cultural translation. Enrollment limited to 19 first-year students.

ENGL 0151A. Hitchcock!

An exploration of the work of one of the most famous directors of the twentieth century. We will watch many of Alfred Hitchcock's best-loved films, including *The Birds*, *North by Northwest*, *Vertigo*, *Psycho*, *Rear Window*, and *Rope*. In addition, we will read some of the most important criticism of these films. No knowledge of film theory required. Enrollment limited to 19 first-year students.

ENGL 0151B. How to Do Things with Books.

What can one do with a book? Read a novel, sure, but also cook a fabulous meal, join a movement, or reimagine ways of being. Each class will focus on old or rare materials in the John Hay Library and throughout Providence. We'll explore the nature of the book through discussion and hands-on activities such as letterpress printing and zine-making. Enrollment limited to 19 first-year students.

ENGL 0151C. Midsummers.

A traditional occasion for festivity and misrule, midsummer has been important to writers since medieval times. Spanning Shakespeare to Aster, Midsummer to Midsommar, the course includes Ovid's *Metamorphoses* and Korine's *Spring Breakers*. How are midsummers represented? What's the difference between country and city, nighttime and daytime? Do things ever go back to normal, or can a party last forever? Enrollment limited to 19 first-year students.

ENGL 0151D. Men's Films.

This first-year seminar focuses on recent road films, gross-out comedies, "bromances," war films, sports films, superhero movies, sex films, and coming-of-age stories that: (1) seem particularly addressed to male audiences (though this is, of course, complicated) and (2) are concerned with men and masculinity in unusual, often extreme circumstances. In addition to studying this range of films (and film genres), we will read around in film theory, film criticism (including reviews), and gender and sexuality studies. Likely films include: *The Hangover*, *The Hangover 2*; *Bridesmaids*; *Barbie*; *Magic Mike*; *Foxcatcher*; *Neighbors*; *Neighbors 2*; *Everybody Wants Some*; *Deadpool*; *Moonlight*; and *American Sniper*.

ENGL 0151E. Genres of American Comedy.

A survey of a number of American comic traditions, with a special emphasis on the ways in which these traditions elaborate, challenge, and/or promulgate middle-class social norms in the US. Enrollment limited to 19 first-year students.

ENGL 0151F. Waves and Edges: Poetry and the Sea.

In her poem "The Map" Elizabeth Bishop writes: "Land lies in water; it is shadowed green. / Shadows, or are they shallows, at its edges / showing the line of long sea-weeded ledges..." This class will examine how such edges between sea and land can be thought and represented in poetic texts, while also considering environmental effects of climate change.

ENGL 0151L. The Serial Imagination: Literature and Journalism in the 19th Century.

An introduction to the emergence of mass culture in nineteenth-century England and America with particular attention to fiction and nonfiction writing in the periodical press during this period. We will examine some of the key historical developments that led to the rise of mass-market journalism and how it shaped public opinion on issues such as urban poverty, modernity, and slavery. We will also consider aesthetic questions raised by serialization and the relationship between fiction and nonfiction in journalism. Authors include Dickens, Poe, Melville, Stowe, Stevenson, and West. Visits to the Hay Library to consult original materials.

ENGL 0200A. Risk/Rupture/Remains: Contemporary Queer Media and Poetics.

How can we imagine life in a world preoccupied with queer and trans loss? This course introduces contemporary experiments in queer and trans survival across poetry, film, theory, and video games. We will read, watch, and play with particular attention to Black and Indigenous art in the ongoing HIV/AIDS epidemic. Artists may include Dionne Brand, David Wojnarowicz, CAConrad, and Porpentine. Enrollment limited to 17.

ENGL 0200B. Studying at the End of the World.

This course will consider the enduring power of study, as it has been conceptualized in Renaissance European thought as *studia humanitatis*, and more recently in calls for the end of the university as we know it. Through a range of texts, essays, and visual media, we will consider what studying otherwise might mean *here* at the end of the world. Authors include: William Shakespeare, George Jackson, Octavia Butler, Ia Paperson, Kamau Brathwaite, etc. Enrollment limited to 17.

ENGL 0200C. Stories of Speculation: Fabulism and Narrative Realism.

What do moments of upended reality and temporality in literary fiction offer us about the human condition and built environment? From contemporary fairy tale retellings to canonical modernist literature, we will examine novels' engagement with temporality, speculative/magical realism, and fabulism. Texts include Djuna Barnes, Toni Morrison, Nella Larsen, and Han Yujoo. Enrollment limited to 17.

ENGL 0200D. Literature and the Social Contract.

This course considers imaginative works (short stories, novellas, films) through the prism of moral and political philosophy. We will focus on how representations of right and obligation inform notions of self, other, and the illegitimacy of authority. Readings include: Hobbes, Rousseau, Kafka, Adichie, Mann, Melville, Orwell, Octavia Butler, Rawls, Le Guin, Yuri Herrera, Murayama, and Agamben. Enrollment limited to 17.

ENGL 0200E. Giving way: Poetry, Performance, Film.

This course will engage with artistic forms that creatively respond to the present by both heeding its demands while also expressing alternatives to its norms. They map out, figure, and perform various (im)possibilities of existence. Our archive, informed by artists such as Adrian Piper and Lyn Hejinian, will consist of apparitional experience, ecstatic dance, magical sentences, etc. Enrollment limited to 17.

ENGL 0200F. Wild and Unruly: Black Women's Belonging, Place, and Self in Storytelling.

How are belonging, place (or geography), and self expressed by women of African descent across the Black Atlantic? How do literature and other cultural productions help black women creatively navigate senses of self and place? Through the lens of the wild and unruly, this class asks how black women find new ways of expressing the human existence. Enrollment limited to 17.

ENGL 0200J. Stuck in the Suburbs: A Poetics of Everyday Life.

Suburbia is where nothing happens: a landscape that cultivates boredom and indulges angst. But it is also a site of repressed horrors, where our deepest anxieties come home to roost. This course examines architecture, tone, temporality, race, and gender in the literature and films of the suburbs. Texts include Eugenides, Perrotta, Lahiri; *Blue Velvet*, *The Stepford Wives*, *American Beauty*. Enrollment limited to 17.

ENGL 0200K. Trans—: Transformation, Translation, Transgression in Literature.

From transgression to transformation to trans rights, why does the prefix "trans" appear inescapable whenever one is discussing radical change? Centering on this mercurial prefix, this course examines the possibilities and limits of change from ancient anxieties about transcendence to contemporary discussions of transnationalism and transgender identities. Authors include: Wordsworth, Woolf, Ginsberg, Plath, Morrison, Imogen Binnie, hooks, Dylan, Against Me!. Enrollment limited to 17.

ENGL 0200L. Between Home and Haven: Contemporary Narratives of Revolt and Refuge.

What forces dictate our perception of “home”? Is it where we come from? Somewhere we must find? Or is home what persecutes us - a place from which we must escape or rebel? This course will contemplate sanctuary, family, authoritarianism, and resistance across fiction, graphic memoir, and film. Writers may include Marjane Satrapi, Julia Alvarez, and Viet Thanh Nguyen. Enrollment limited to 17.

ENGL 0200M. One True Pairing (“OTP”): The Courtship Plot from Jane Austen to Jane the Virgin.

What’s love got to do with it? This course examines how the courtship plot, from meet-cute to marriage, shapes our understanding, not only of romance and seduction, but also of gender, race, social class, sexual orientation, empire, and literary genre. Texts include fiction by Jane Austen, Nella Larsen, Jenny Han, and Henry James, alongside *Clueless*, *Moonlight*, and *Jane the Virgin*. Enrollment limited to 17.

ENGL 0200N. Godforsaken Spaces: Literatures of the Demonic.

Has fear of the Devil outlived the fear of God? While the demonic rationalizes unfathomable violence and renders forms of otherness intolerable, it may also allow us to imagine social alternatives. This course will explore demonic figures in contemporary literature/film: the scapegoats, witches, and misfits that occupy the margins of society. Authors include: McCarthy, O’Connor, Morrison, Gyasi, Erdrich. Enrollment limited to 17.

ENGL 0200P. Literatures of Anxiety.

From Xanax to safe spaces to #MAGA, our age is notoriously characterized as an unduly anxious one. But anxious by what measures? Tracking expressions of anxiety through a range of literary works, we’ll explore how the so-called “anxious” subject may yet signal a crucial, generative political position. Works by: Atwood, Dostoevsky, Abdellah Taïa, Dionne Brand, Hieu Nguyen, Lacan and LaWhore Vagistan. Enrollment limited to 17.

ENGL 0200Q. “Strangeness” at The Margins: Black and Queer Narratives.

Anchored in black and queer studies, this course will think within “weird” and unusual narratives. How do sexual, gender, and racial identities work together in ways that produce “strange” literature? What might we gain through careful attention to the techniques used in reading/writing marginal selves through oddness? Figures will include Janelle Monae, Toni Morrison, Prince, Sigmund Freud, and Ralph Ellison. Enrollment limited to 17.

ENGL 0200R. Suspicious Minds: American Literature and the Paranoid Imagination.

Why is so much of the American canon founded on suspicion? This course investigates a tradition of American cultural production that finds in paranoia novel ways of imagining history as well as life today. Texts encompass a broad range of genres from the nineteenth century to the present moment, including gothic fiction, satire, speculative fiction, political thrillers, and science fiction. Authors and filmmakers include Edgar Allan Poe, Herman Melville, Henry James, Alfred Hitchcock, Philip K. Dick, Thomas Pynchon, Hannah Arendt, Ishmael Reed, Joan Didion, Colson Whitehead, Paul Thomas Anderson, Jordan Peele, Kathleen Belew, and Boots Riley, among others. We will use these thinkers to investigate the forms of solidarity conspiracy offers, the enduring problem of skepticism in American thought, the narrativization of history, the importance of secrecy in the construction of identity, and our fear of and desire for plots.

ENGL 0200S. Killing Shakespeare: Three Plays and their Afterlives.

Do adaptations of Shakespeare “kill” his texts? In this course, we will explore three plays—*Othello*, *The Tempest*, and *Hamlet*—with some of their most prominent adaptations. We will focus on how these adaptations consider important political questions of their times in relation to Shakespeare. Authors/directors include: Lawrence Olivier, Aime Cesaire, Jawad Al-Asadi, Vishal Bharadwaj, and Julie Taymor. Enrollment limited to 17.

ENGL 0200T. The Revolution Will Not be Televised: Poetry and the Politics of Representation.

What are the political effects of representing a person, thing, or event? Is representation itself a useful political goal? With an emphasis on racial politics, this class examines how poetry plays with representability and irrepresentability to call attention to and perhaps change how we see each other and the world. Readings include works by Gertrude Stein, Claudia Rankine, Mercedes Eng, and Layli Long Soldier. Materials may also include popular music by artists like Bob Dylan and Solange. Enrollment limited to 17.

ENGL 0200U. After the Human?: Literature at the End of the World.

What does it mean to be human? From zombies to aliens, cyborgs to talking bears, contemporary fiction is rewriting our most fundamental categories of identity. This course explores what’s at stake in how we define ourselves, and the challenge ‘nonhumans’ pose to our beliefs about right and wrong, good and evil. Authors include: Ishiguro, Jemisin, Tawada, Vandermeer, Whitehead, and Miéville. Enrollment limited to 17.

ENGL 0200V. Graphic Novels and the Politics of Memoir.

Are comics literature? Can images help us bear witness? How do text and illustration work with or against one another? Paying special attention to the memoir form, this course explores the contemporary graphic novel (together with film and other visual narratives) as a transformative medium for political and aesthetic expression. Works by Spiegelman, Bechdel, Satrapi, Sacco, Richard Linklater, and others. Enrollment limited to 17.

ENGL 0200W. Comedy and Cruelty.

Modernity is often conceived as tragedy—this course imagines otherwise. We will explore the usefulness of the comic frame in the wake of (economic, political, environmental) disaster through 20th-/21st century novels/films by Joseph Conrad, Frank Capra, Ralph Ellison, Samuel Selvon, Paul Beatty, Jordan Peele, Anna Burns, Bong Joon-Ho. This class investigates the possibility of joy in an age of disappointment. Enrollment limited to 17.

ENGL 0200X. Necromancy for Beginners.

Have you ever wanted to speak to the dead? Or bring something dead back to life? This course examines the fantasies, historical practices, and political forces shaping reanimation and otherworldly communication in literature from medieval grimoires to contemporary American film. Authors/directors include: Shakespeare, Marlowe, Milton, Cavendish, Shelley, Lovecraft, Rymer (*AHS*), Bayona (*Penny Dreadful*), Sackheim (*Lovecraft Country*), and Fell/Butler (*ParaNorman*). Enrollment limited to 17.

ENGL 0200Y. Show Me the Money: Advertising and Capitalism in American Literature.

This course examines the intersections of capitalism and advertising in 19th and 20th century American Literature. Central to this investigation will be questions of identity and representation. Each class begins with a discussion around a print, digital, or video advertisement, and engages a variety of works and authors including Harriet Jacobs, Henry James, Herman Melville, *Mad Men*, amongst others. Enrollment limited to 17.

ENGL 0200Z. Black (W)holes, Black Feminism(s), and Black Feeling.

The seminar takes-up black women’s “self-defined sexualities.” What is a black feminist arrangement of erotic feeling, pleasure, and sexuality? What are its coordinates? Conditions? How might they change? We ground our exploration in close study of black feminist poetics—the specific formal and creative choices that poets, fiction writers, visual artists, and others use to critically examine life in art. Enrollment limited to 17.

ENGL 0201C. The Politics of Monstrosity from Beowulf to Slender Man.

Through lenses like queerness, blackness, and femininity, this course will explore how monstrosity comes to be defined and informed by political motives, public anxieties, and notions of normativity. Texts/films include *Beowulf*, *The Faerie Queene* (Edmund Spenser), *Frankenstein* (Mary Shelley), *Dracula* (Bram Stoker), *Fledgling* (Octavia Butler), *The Rocky Horror Picture Show* (dir. Jim Sharman), and *Pan’s Labyrinth* (dir. Guillermo del Toro).

ENGL 0201D. Writing Life: The Self in Narration.

This course engages with modes of life-writing and explores their relations with ethics and politics. We will closely follow different ways through which figures of the self get written in genres of fiction, autobiographical memoirs, testimonial narratives, and other forms of writing. Works by Primo Levi, Saidiya Hartman, J.M. Coetzee, Jean Jacques Rousseau and others.

ENGL 0201E. Guilty Pleasures: Science Fiction & Horror Survey.

Our guilty pleasures—those texts that titillate, enthrall, and excite. By way of artists like Octavia Butler, Jordan Peele, and Shirley Jackson, we will think with classic works of science fiction and horror and explore how these texts theorize matters of race, gender, and class. Texts include *Kindred*, *Get Out*, *The Bone Mother*, and *Alien*.

ENGL 0201F. Sex, Sin, Sonnets: The Poetry of Love and Desire.

How do poems talk about love and sex? How might poetry offer a unique vehicle for transgressive, thwarted, or unattainable desires? By considering themes like the body, shame, excess, lust, pleasure/pain, and ecstasy, we examine how poetry from the Renaissance through the present has explored the most fundamental of human relationships. Authors include Shakespeare, Donne, Hopkins, Yeats, and Plath.

ENGL 0201G. Reimagining The Great Gatsby: The Roaring Twenties in Popular Culture.

This course bridges texts and media from the 1920s to historical fiction and films set in the 1920s as a means to gather historiography of how it is remembered and marketed through images of glitzy flapper gowns, new dance crazes, prohibition, and sexual promiscuity in the US. Similarly, we will also critically engage with how it is contextualized and conveyed in the present moment as a period for self-reinvention and unprecedented social change, where queer and raced subjects can thrive despite harrowing circumstances. Many of the readings, movies, and other media on the syllabus are historical fiction, intended to encourage students to think critically about the representation of this period alongside our present. This course is an exploration of historical fiction and period dramas that serve as a pastiche of 1920s style and aesthetics and a consideration of the many paradoxes these explorations of the past produce.

ENGL 0201S. American Comedy: Shame, Mockery, and the Politics of Laughter.

If national pride is a necessary condition for the self-improvement of a nation, as the American philosopher Richard Rorty has argued, then what happens when one's relationship with one's country is governed instead by overwhelming disgust? Can outrage and embarrassment form the basis of a national tradition? Who are the authors of the canon of American abjection? This course considers a countertradition of American letters comprised of authors uniquely attuned to America's political and moral failures as well as those who, on the basis of race, class, and gender have no access to the feelings of national pride that animates so much of the American literary tradition. Readings for this course span the late nineteenth century to the present, drawing on a range of genres including fiction, film, and stand-up as well as some instances of drama, poetry, and television.

ENGL 0202B. What Monks Want: Asceticism and Austerity Across the Global Anglophone.

Today, the word "austerity" is strongly associated with harsh economic policies that force people to live with less. But what if a person voluntarily embraces an austere lifestyle? In this course, we will consider the figure of the ascetic—an individual who leads a life of severe self-discipline and restraint—across an expansive range of literature from the Global Anglophone, such as Frankenstein, *In the Castle of My Skin*, *Nervous Conditions*, *The Inheritance of Loss*, and *Normal People*. Why would an individual place such demanding restrictions on their everyday life, and what new perspectives could the extremities of asceticism provide on our own lives?

ENGL 0202C. Experiments in Asian and Asian Diaspora Literature and Culture.

This course introduces students to textual, visual, and filmic experiments by Asian and Asian diaspora writers and artists. Instead of reading memoirs and realist novels, we will consider how these artists explore forms like short stories, performance, graphic novels, and films, as well as genres like science fiction, horror, mystery, and romance. This course's focus on speculative and unsettling forms of storytelling will expand our understanding of Asian and Asian diaspora artistry and recast themes of immigration, alienation, belonging, grief, memory, and identity. "What if?" is an important question these storytellers ask; "What if" is a type of creativity we will investigate by close reading these recent experiments at the limits of storytelling. Texts include short and feature-length films and fiction by Haruki Murakami, Karen Tei Yamashita, Kazuo Ishiguro, Ling Ma, and Charles Yu. No prerequisites.

ENGL 0202D. Poetic Justice: Literature on Colonialism.

How have dreams of freedom been written in the 20th and 21st centuries? This course explores writing on unequal relations, relations of exploitation and duress, under the contemporary global and racial order. We will consider how writers address problems of reconciliation, reparation, and equality in a colonial and capitalist society, and how they prepare new revolutionary idioms for our time. Primary texts include a balance of prose and poetry (Jamaica Kincaid, J. M. Coetzee, NoViolet Bulawayo, Derek Walcott, Layli Long Soldier, Dionne Brand, Theresa Hak Kyung Cha), plus a graphic novel (Thi Bui) and a film (Saint Omer, dir. Alice Diop).

ENGL 0202E. Memory and the Literary Imagination: Conceptions of Remembering from Shakespeare to the Present.

What cause do we have to remember? How humans engage with and conceive of the past has been the focus of philosophical and literary study for thousands of years. Whether conceptualized as a form of identity formation, a source of motivation, or an opportunity for reconciliation, memory is deeply integrated into how we think. Throughout this course, we will discuss the influences of memory on individual and collective levels by studying an assortment of poetry, novels, drama, and film. Readings will include texts by William Shakespeare, Virginia Woolf, Toni Morrison, Ilya Kaminsky, and Emily St. John Mandel. No previous experience with literary scholarship necessary.

ENGL 0202F. We the People: American Literatures of Community.

The Preamble begins thus: "We the People of the United States ..." How was this "we" conceptualized at the nation's birth, and how has it changed? How do we imagine and revise the collectivity of the national, racial, cultural, sexual, and social "we" in the 21st century? This course explores what it means to be an individual and inhabit the collective "we" in American literatures that stage the question of the self versus/and/or/with/against/through the communal identity. Some authors include Eugenides, Faulkner, Emerson, O'Brien, Morrison, Chang-rae Lee, Silko, Paul Beatty, Alexis Bechdel, and Craig Santos Perez. No prerequisites.

ENGL 0202G. Literatures of Racial Capitalism.

What is racial capitalism? This question will frame this course as a project of reading toward the entanglement of literatures with race and capital. With particular attention to problems of genre and history, we explore literary representations of what might be called racial capitalism in the spaces of the colony, the slave ship, the plantation, and the modern workplace. Works by Morrison, Melville, Faulkner, and Butler, as well as Marx, Robinson, Smallwood, and Du Bois. No prerequisites required.

ENGL 0202H. The Genesis of Doubt: Skepticism and Film Noir.

Film noir is an enigmatic genre. This course studies film noir (a 1940-50s American film phenomenon with a French name) within an international and interdisciplinary context. Taking inspiration from the stylistically innovative texts we will examine, our approach will privilege a few unconventional angles, including Shakespearean tragedy, modernist fiction, contemporary global cinema, and the philosophical tradition of skepticism.

ENGL 0202J. Race and Satire.

This course looks at satire as a genre that interrogates race and critiques racism using humor, parody, irony, caricature, and other literary techniques. We will look at theories of African American satire and humor, canonical Western works like *Othello*, and contemporary novels by Paul Beatty, Percival Everett, Charles Yu, and Mithu Sanyal. We will also study films such as *American Fiction* and *Get Out*; television including *Atlanta*, *Master of None*, and *Insecure*; and other multimedia by Black, South Asian, and East Asian creators. We will study how these artists wield satire as a potent means of critiquing structural racism and marginalization, close-read these works, and analyze satire's shortcomings.

ENGL 0202L. Religion, The Novel, and the Public Sphere.

How does religion organize identity and community? Who does it include and exclude from the sense of community that it creates? What happens when its power to organize identity intersects with racism, sectarian ideology, and colonialism? The modern world is often characterized as disjointed, and even secular philosophers and literary critics often agree in their tendency to contrast this chaos with a time in which religion made things feel more stable. We will interrogate this assumption about the stabilizing powers of religion in the cultural context of nineteenth through twenty-first century Britain and its empire. We will think through how this idea of religion appears in its interrelated domestic and colonial contexts, and how it continues to impact the public sphere across the world today. Authors studied will include Mary Shelley, Charlotte Brontë, George Eliot, Chinua Achebe, and Zadie Smith.

ENGL 0202M. (Un)Natural Histories: Observation, Exploration, and Knowledge.

What does it mean for writers, scientists, historians, and anthropologists to just observe? In this course we study natural history and travel writing in the 1800s, focusing especially on encounters from Europeans in the Caribbean and South America amid histories of slavery and colonialism. We'll look back to the origins of these modes of thinking in the age of exploration in the seventeenth century, move forward through the eighteenth-century dawn of natural history, and then consider its peak in dialogue with travel writing of the nineteenth century. At the same time, we'll also read contemporary fiction that continues to question the afterlives of these historical periods and interrogate ideas of objective observation. Authors include Charles Darwin, Francis Bacon, Percy Shelley, Jamaica Kincaid, Derek Walcott, Ursula LeGuin, and Octavia Butler.

ENGL 0202N. Ghosts of Colonialisms Past – The Uncanny and the Postcolonial.

In this course, we will explore the idea of colonialism as the political root of Freud's "Unheimlich," or the Uncanny – meaning defamiliarization, the experience of home becoming unhomely, fractured selves and psyches – that is captured in contemporary literature across post-independence Latin America and South Asia. We will trace how the Uncanny and the hauntings from a colonial past inform the present as the afterlives of colonialism, and how colonial thought continues to design modern realities and politics. We will also think about the distinction between the Uncanny and horror and learn how these affective genres can help us articulate new postcolonial realities. Authors include Arundhati Roy, Amitav Ghosh, Mariana Enriquez, Samantha Schwebelin, and others. Films and other media also include the Netflix miniseries "Ghoul", "Temporada de huracanes", "La Ilorana" and more.

ENGL 0202P. Poetics of the Cosmos: Verse, Universe, and Existence.

When encountering a night sky full of stars, we might feel struck by wonder, uncertainty, love, or maybe an unnamable mood. "Everyone arrives one day and asks, is this it? And the stars answer back with more stars," poet Victoria Chang writes. In this class, we'll survey possibilities for engaging creatively with the existence of an endlessly elusive universe. Artists to be engaged with include 20th and 21st century poets, visual artists, musicians, and filmmakers—from Tracy K. Smith, David Bowie, and Stanley Kubrick, to Italo Calvino, Agnes Martin, and Maya Angelou—who through their visions of stars, planets, and extraterrestrial lifeforms, come to question the nature of the cosmos.

ENGL 0300B. The Romance of Travel.

Considers the role of the strange, new, and fantastic in travel accounts of the Medieval period and Renaissance. If travel writers offered their stories as "windows to the world," we will treat them as representations that expose, reinforce, and subvert the author's cultural, political, and social attitudes. Works by Marco Polo, Chaucer, Columbus, Raleigh, Shakespeare, Defoe, and Swift. Enrollment limited to 30.

ENGL 0300C. English Drama 1350-1700.

This course presents great plays not written by Shakespeare, from the mystery plays of the late Middle Ages through Restoration drama. We will address these questions: What kinds of plays spoke to what kinds of audiences? How do changes in theatrical style relate to social change? How do genre, convention, staging, and acting style shape a dramatic text? Enrollment limited to 30.

ENGL 0300E. Three Great Poets: Shakespeare, Donne, Milton.

We will study these premier Renaissance poets from all angles possible, to understand the historical situations and political issues that shaped their writing, the authors and ideas that influenced them, the traditional forms they appropriated for new purposes. Most of all, we will study them to appreciate the power of poetry as a source of knowledge and inspiration. Enrollment limited to 30.

ENGL 0300F. Beowulf to Aphra Behn: The Earliest British Literatures.

Major texts and a few surprises from literatures composed in Old English, Old Irish, Anglo-Norman, Middle English, and Early Modern English. We will read texts in their historical and cultural contexts. Texts include anonymously authored narratives like *Beowulf* and *Sir Gawain and the Green Knight*, selected *Canterbury Tales* by Chaucer, and texts by Sir Thomas Malory, Spenser, Shakespeare, and Aphra Behn. Enrollment limited to 30.

ENGL 0300G. Angels and Demons, Heavens and Hells: The Otherworld from the Middle Ages to the Early Modern Era.

Wonder about what happens after death is among the most fascinating and gripping subjects of human inquiry. We will explore concepts of heaven, hell, purgatory, Satan, angels, ghosts, the soul, virtue and vice, the poetry of salvation, and the power of melancholy. Texts will include Old and Middle English Otherworld narratives, and writings by Dante, Milton, Browne, Marlowe, and others. Enrollment limited to 30.

ENGL 0300H. New Selves, New Worlds.

How did pre-modern and early modern writers imagine the self? How were these notions of the self transformed when individuals traveled to unfamiliar places? How do these new selves imagine certain fundamental questions, such as the power one has to control one's emotions, social environment, and ultimate fate. Authors may include Chaucer, Shakespeare, and Milton. Enrollment limited to 50.

ENGL 0300I. The Arrival of English: Medieval, Renaissance, Early Modern.

In these literary periods, something arrives in England, whether it is the Anglo Saxon invaders, Christianity, French medieval romance, or the continental example of renaissance. Readings include *Beowulf*, *Wanderer*, *Dream of the Rood*, Chaucer's *Canterbury Tales*, Spenser's *Shepherds Calendar* and *Faerie Queene*, and Milton's *Paradise Lost*. Enrollment limited to 30.

ENGL 0300L. The Global Middle Ages.

This course offers students an introduction to the medieval period as a time of active cultural exchange, racial imaginaries, and decentralized globality. We will explore what it means to think about history on a global scale, how to broaden our understanding of the Middle Ages without replicating Eurocentric perspectives, and how literary texts work to mediate history.

ENGL 0300M. Gender in Medieval Literature.

In this course, we will examine the multiplicity of ways that gender and sexuality are portrayed in the literature of medieval Britain and interlinked cultural regions. How do medieval texts depict gender categories, relations of desire and violence, intersectional subject positions, and anxieties about sex that remain alive today? What are some currents of fluidity, peculiarity, and rebellion in early ideas about gender and sexuality? Texts may include the *Roman de Silence*, the *Lais of Marie de France*, and the *Book of Margery Kempe*. No previous experience with medieval literature required.

ENGL 0300N. How To Be Alone: Solitude and Subjectivity.

In this class, we'll discuss why the state of being alone has been a central topic in cultural studies, what it means to address and represent different modes of solitude, and how these representations support or contradict the politics of their surrounding environments. This class will introduce its students to a broad range of texts read alongside classical and contemporary philosophy, and discusses the personal and political ramifications of autonomy, solitude, exclusion and seclusion. In addition to novels and films, materials will include on-demand television, Instagram posts, Reddit posts, TikToks and tweets.

ENGL 0300P. Dreams.

"Why do we dream?" may be an intriguing question, but ultimately one for science to answer. On the other hand, "What can we do with dreams?" is a question that people have approached from an almost limitless number of perspectives over thousands of years. Whether envisioned as a source of philosophical insight, a refuge for unspeakable desires, or an experience to be intentionally manipulated, the space of the dream is an unfailingly fascinating one-- and the works that have been created to explore it are equally as fascinating. In this course, we will engage with various cultural texts about dreams, which may include: *The Dream of Scipio* (Cicero), the *Parliament of Fowls* (Chaucer), *Godless but Loyal to Heaven* (Van Camp), *Paprika* (Kon), and *Inception* (Nolan). No previous experience with literary traditions or ability to remember one's own dreams necessary.

ENGL 0300R. New and Imagined Worlds in the English Renaissance.

In the centuries following the "discovery" of the *Novus Mundus* or "New World," European playwrights, poets and thinkers created a startling diversity of their own "new" or imagined worlds, which sometimes took license from fantastic contemporary reports of overseas discoveries. How do imagined lands comment upon our own? What freedoms and possibilities arise from the ability to imagine alternative worlds?

ENGL 0310A. Shakespeare.

We will read a representative selection of Shakespeare's comedies, tragedies, histories, and romances, considering their historical contexts and their cultural afterlife in terms of belief, doubt, language, feeling, politics, and form. Students should register for ENGL 0310A S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0310D. Violence, Sacrifice, and Medieval Narrative.

This course will introduce students to medieval prose and poetry that centralize the problematic nature of violent conflict and its attendant horrors. We will study literature from medieval England, Wales, Ireland, and Iceland, including *Beowulf*, two Old Icelandic sagas and Eddic poetry, Irish and Welsh texts, and part of Malory's *Morte Darthur*. Topics will include sacrifice, religion, chivalry, horror, and contemporary critical approaches. Open to undergraduates only.

ENGL 0310E. Shakespeare: The Screenplays.

It's been said that if Shakespeare were alive today he'd be working in Hollywood. We will read five or six plays (including at least one representative of each of Shakespeare's genres: comedy, history, tragedy, romance) and then study film adaptations of them. The course is especially concerned with various approaches to the Shakespeare film: not just the straightforward adaptation, but also the Shakespeare spin-off ("10 Things"; "My Own Private Idaho"), the Shakespeare film as a star-turn (Helen Mirren as "Prospera" in Taymor's "Tempest"), and the Shakespeare film as an auteur-turn (Orson Welles's "Chimes at Midnight"; Polanski's "Macbeth").

ENGL 0310F. Prose Sagas of the Medieval North.

In this course, we will read long prose fiction from medieval Iceland, Ireland, and Wales, considering how it is similar to and different from the modern novel. We will consider plot, characterization, and style in each linguistic tradition. Texts may include *The Cattle Raid of Cooley*, *The Mabinogi*, *Njal's Saga*, *Egil's Saga*, *Grettir's Saga*, and *Gisli's Saga*.

ENGL 0310G. Gender and Genre in Medieval Celtic Literatures.

This course traces images of masculinity and femininity in Welsh, Cornish, Breton, and Irish narratives within and around early medieval Britain. You will be introduced to the genres of saga, romance, and the short poetic lai as you consider how the nature and gender of the hero changes in specific cultural and linguistic moments.

ENGL 0310H. New and Imagined Worlds in the English Renaissance.

In the centuries following the "discovery" of the *Novus Mundus* or "New World," European playwrights, poets and thinkers created a startling diversity of their own "new" or imagined worlds, which sometimes took license from fantastic contemporary reports of overseas discoveries. How do imagined lands comment upon our own? What freedoms and possibilities arise from the ability to imagine alternative worlds?

ENGL 0500A. Literature and the Fantastic.

Considers the changing ways Renaissance, Romantic, Victorian, and late-nineteenth-century authors incorporate non-realistic and fantastic themes and elements in literature. Special attention to the relationship between realism and fantasy in different genres. Readings include stories (gothic, ghost, and adventure), fairy tales, short novels, plays, and poems. Shakespeare, Swift, Brothers Grimm, Blake, Wordsworth, Coleridge, Keats, Tennyson, Robert Browning, Christina Rossetti, Stoker, Lewis Carroll, Dickens, Henry James. Enrollment limited to 30.

ENGL 0500B. Introduction to British and American Romanticism.

An exploration of "Romanticism" in literature written and read on both sides of the Atlantic between 1775 and 1865. Poetry, fiction, and essays by writers such as Blake, Wollstonecraft, Wordsworth, Coleridge, Byron, Percy Shelley, Mary Shelley, Keats, Thoreau, Emerson, Fuller, Hawthorne. Enrollment limited to 30.

ENGL 0500C. Inventing America.

Even before there was a United States, American authors argued over just what distinguished "America" from other communities. For what, they wondered, did or should America stand? Examines the rhetorical battles waged in some key pre-Civil War American literary texts over the meaning and/or meanings of America. Authors studied may include Bradstreet, Franklin, Douglass, and Melville. Enrollment limited to 30.

ENGL 0500E. Foundations of the Novel.

Introduces students to the first stages of novel writing in England and to historical and theoretical issues relating to the novel's "rise" to the dominant genre of the modern era. Eighteenth-century works of fiction are long; however, texts selected for this course are less long. They include Defoe's *Moll Flanders*, Richardson's *Pamela* and Fielding's *Joseph Andrews*. Enrollment limited to 30.

ENGL 0500G. Literature and Revolutions, 1640-1840.

Key developments in British and American literature understood in relation to the historical and cultural forces that produced the English Revolution, the American Revolution, the French Revolution, and the Industrial Revolution. Readings in major writers such as Milton, Paine, Blake, Wollstonecraft, Emerson, Barrett Browning, and Dickens, and in some of their non-canonical contemporaries. Focus on the emergence of a transatlantic literary culture. Enrollment limited to 30.

ENGL 0500H. Mariners, Renegades, and Castaways: American Fiction and the Romance of the Sea.

Examines one of the most distinctive of literary genres: the sea novel. Ostensibly stories of mystery and adventure, these texts are also meticulous accounts of working life at sea. Reads a number of well-known and lesser known American tales of the sea, including Poe's *The Adventures of A. Gordon Pym*, Melville's *Moby-Dick*, London's *The Sea-Wolf*, and Crane's "The Open Boat." Enrollment limited to 30.

ENGL 0500I. The Literature and Politics of Friendship.

Considers changing concepts of friendship as a key to major developments in British and American literature from the Renaissance through the 19th century. Special attention given to the ways the literary history of friendship intersects with leading political questions of the day. Shakespeare, Donne, Milton, Defoe, Wordsworth, Keats, Percy and Mary Shelley, Dickens, Poe, Melville, and Henry James. Enrollment limited to 30.

ENGL 0500K. The Transatlantic Novel: Robinson Crusoe to Connecticut Yankee.

How does the "American" novel change if we read it across national borders? This course reads novels written in/about America with this question in mind, focusing on such topics as slavery, exploration, seduction, and cosmopolitan ideals. Readings range from Aphra Behn to Mark Twain. Enrollment limited to 30. Students should register for ENGL0500K S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0500L. Literature, Trauma, and War.

This course surveys many genres and periods in order to consider and think about two traditional kinds of literary responses to war--glorifying it, and representing its horrors. We'll examine texts by Homer, Shakespeare, Milton, Wordsworth, Byron, Whitman, Hardy, Crane, Freud, Levi, Pynchon, and Sebald, among others; we may also screen one or two films. Enrollment limited to 30. Open to undergraduates only.

ENGL 0500P. The Examined Self: Lives of the Soul.

This course examines a crucial tradition in American letters and culture: the literature of self-examination and the spiritual quest. Each work focuses in some way on questions of identity and identification: We will be reading a wide range of authors and genres-- spiritual autobiography, short fiction, the novel, conversion narratives, confessions, and lyric and epic poetry. Limited to 30 students.

ENGL 0500R. Slavery and American Literature.

An examination of the ways in which US writers have sought to represent, confront, and disrupt slavery and its afterlife. Authors to be considered include Douglass, Jacobs, Brown, Wilson, DuBois, Hopkins, Cane, Wright, Ellison, Morrison, and Butler.

ENGL 0500T. Blighted Faith: English Poetry 1830-1914.

Essentially a survey of the most important English poems and poets in between romanticism and modernism. We will be engaging closely with some of the most inventive, ambitious, and indelible verse in English. The major Victorian poets to be read alongside critical debates and cultural context. Authors will include: Matthew Arnold, Elizabeth Barrett Browning, Robert Browning, Thomas Hardy, Gerard Manley Hopkins, Christina Rossetti, and Alfred Tennyson.

ENGL 0510A. Literature and Print Culture.

The cultural impact of widely circulating printed material -- books of poetry, essays, and fiction but also newspapers, stock certificates, and advertisements -- makes the period 1660-1740 the first technologically enabled information age. The production and consumption of published texts changed the world for the restored monarch and his licentious court, for the rising bourgeoisie, and for the newly literate classes. We will follow several controversies, experiments, and innovations of the print revolution in works as apparently diverse as Milton's epic poetry, Manley's erotic secret histories, and the ads in *The Spectator*. Other canonical and non-canonical writers include Rochester, Behn, Dryden, Swift, Manley, Haywood, and Defoe.

ENGL 0510B. The Gothic.

The course will investigate the origins and development of Gothic literature from its invention during the eighteenth century to its postmodern forms. We will consider conventional figures (monsters, distressed heroines, moldering castles), common themes (fear, horror, the supernatural, the irrational, the transgressive), and the cultural work they do. Readings include Walpole, Lewis, Radcliffe, Shelley, James, and King.

ENGL 0510C. The Victorian Novel.

Considers the Victorian novel with an emphasis on its many forms, including the social-problem novel, *bildungsroman*, sensation novel, detective novel, and multiplot novel. Topics covered include the nature of realism, serial publication, empire, the "new woman," industrialization, the "condition of England," science and technology, and the role of the artist. Novels by Charlotte Brontë, Charles Dickens, Elizabeth Gaskell, George Eliot, Wilkie Collins, Thomas Hardy, Anthony Trollope. Students should register for ENGL 0510C S01 and may be assigned to conference sections by the instructor during the first week of class. Banner registrations after classes begin require instructor approval.

ENGL 0510D. Mark Twain's America.

A course for all kinds of readers of Twain and his contemporaries. Close readings of fiction and essays that focus on race, slavery, capitalism, and the development of "modern" literature. Works include *Puddinhead Wilson*, *Huck Finn*, and *Connecticut Yankee*.

ENGL 0510F. Literature of the American Renaissance.

A survey of the major figures of mid-19th-century American literature, with a particular emphasis on how the writers of the period engaged the political and legal issues informing the sectional conflict on the eve of the Civil War. Authors to be considered include Poe, Hawthorne, Melville, Dickinson, Stowe, Douglass, Brown, Jacobs, and Whitman.

ENGL 0510G. New Worlds, New Subjects: American Fiction at the Dawn of the Twentieth Century.

In 1900, the historian Henry Adams declared, Americans lived in a world so radically transformed that "the new American ... must be a sort of God compared with any former creation of nature." This new world had many progenitors: Darwin's theory of evolution; Nietzsche's theory of the will; Freud's theory of the unconscious; the rise of the mass media; the industrial production line; the triumph of consumerism; mass immigration; Jim Crow; the New Woman. This class reads works of fiction from the turn-of-the-century in the context of these transformations. Writers include Freud, Nietzsche, Stephen Crane, Henry James, and Edith Wharton.

ENGL 0510H. Victorian Self and Society.

This multi-genre course is an introduction to literature and culture of the Victorian period, looking at the changing ideas of society and the individual's place within that larger community in an age of empire, industrialization, urbanization, class conflict, and religious crisis. Topics include conceptions of the role of art and culture in society, the railway mania of the 1840s, the "great stink" of London, women's suffrage and the condition of women, and the Great Exhibition of 1851. Readings will include Carlyle, Charlotte Brontë, Ruskin, Robert Browning, Dickens, Tennyson, Christina Rossetti, George Eliot, and Lewis Carroll.

ENGL 0510K. Fictions and Frauds.

Truth and fiction? Fake news, fake history, fictionalized autobiography: where and why do we draw the boundaries of the "real"?

ENGL 0510M. Madness and Enlightenment: Literature 1660-1800.

The term "enlightenment" has been used to emphasize the power of reason in the development of intellectual freedom, democracy, capitalism, class mobility, and other aspects of 18th-century experience. However, the period's major writers were fascinated by unreason, by aberrant states of mind from love melancholy to outright madness. Readings include Swift's *Tale of a Tub*, Pope's *Dunciad*, Johnson's *Rasselas*, Sterne's *Tristram Shandy*, Boswell's *Hypochondriack*, and Godwin's *Caleb Williams*.

ENGL 0510N. Victorian Modernity: Literature 1880-1900.

"Modernity" in the *fin-de-siècle* period meant progress, the "march of the intellect," technological innovation, urban growth, female emancipation, but it also meant fears of degeneration, moral decline, the rise of the crowd, and the degradation of the individual. This course considers how these contradictions come to a climax in the literature, art, and culture of the 1880s and 1890s. Authors include G. B. Shaw, Oscar Wilde, Thomas Hardy, Charles Algernon Swinburne, H. G. Wells, Olive Schreiner, George Egerton.

ENGL 0510P. Fiction from Dickens to James.

An introduction to nineteenth-century fiction in English by eight major authors--four British and four American. Emphasis will be placed on the careful reading and interpretation of the novels and short stories in historical context. Issues to be addressed include the rise of the mass media, transatlantic literary relations, literature and ethics, and aestheticism. Works by Dickens, Poe, Eliot, Melville, Stevenson, Twain, Wilde, and James. Students should register for ENGL 0510P S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0510Q. Unstable Subjects: Race and Meaning in Contemporary (African) American Literature.

What are the stakes involved in defining (African) American literature through a racialized authorial framework? Should we adhere to this prescribed and contentious categorization when considering writers who only incidentally identify as "black," and whose works challenge any critical or aesthetic alignment based upon racial affiliation? More broadly, this course seeks to question the lingering persistence of race as an ontological marker within the literary arts. Writers include but are not limited to Fran Ross, Darryl Pinckney, Andrea Lee, David Henry Hwang, Maurice Manning, and Colson Whitehead.

ENGL 0510R. American Renaissance.

This course examines major and lesser known writers of nineteenth-century America, emphasizing the works of Emerson, Melville, and Catharine Sedgwick. The focus is on Romantic literature and culture, with particular emphasis on the following subjects: Nature and transcendence; capitalism and its discontents; utopianism and reform; slavery and antislavery; the problem of history and national culture; and transatlantic relations. Readings include Transcendentalist essays, slave narratives, romance novels, autobiography, fiction, and lyric and epic poetry. Improved student writing is a main goal of the course.

ENGL 0510S. Good, Evil, and Inbetween.

Are humans born naturally good, evil, neither, or all of the above? Does evil lurk deep within the heart of all that is good, or can the forces of good eradicate those of evil? Is evil an inextricable part of what it means to be human in the first place? We'll examine these and related questions by reading some especially provocative literature, including *Frankenstein*, *Jekyll and Hyde*, and works by Hawthorne, Poe, and Fitzgerald. We'll also view several relevant movies, including *Young Frankenstein*.

ENGL 0510W. Coupling: The Literature of Courtship.

This course examines the courtship plot in the Anglo-American literary tradition, concentrating on novels of the eighteenth and nineteenth centuries but extending forward to twentieth-century and contemporary novels, and explores how these fictions have constructed and challenged normative narratives of gender and sexuality.

ENGL 0510Y. Nineteenth-Century British Fiction.

This course focuses on the fiction of nineteenth-century Britain, with particular attention to its exploration of gender and sexuality, class, national and imperial cultures, the familiar and the strange. Readings will include novels and short stories by Jane Austen, Mary Shelley, Emily Brontë, Elizabeth Gaskell, Charles Dickens, Robert Louis Stevenson, Rudyard Kipling, and Thomas Hardy.

ENGL 0510Z. Worldly Victorians: Victorian Literature at Home and Abroad.

This course explores how Victorian literature engaged questions animated by Britain's experience of conflict and triumphalism at home, and imperial power and anxiety on the global stage. Authors we read will include Alfred, Lord Tennyson; Charlotte Brontë; Elizabeth Gaskell; Rider Haggard; Olive Schreiner; and Bram Stoker.

ENGL 0511A. Dickens: The Novel and Society.

This course rehabilitates Charles Dickens from his reputation as a mainstream writer paid by the word, most famous as the author of sentimental, implausible works for children, such as *A Christmas Carol*. We will be looking at Dickens's social novels as a formally innovative response to the urban and industrial capitalism of his time. Issues will include: realism, the relation of his fiction to his journalism, serial form, and representations of work, the city, and bureaucracy.

ENGL 0511B. The Nineteenth-Century British Novel.

A study of major novelists of the period, through the question: How did the novel develop as a form of social understanding? We will be looking at novels as bearers of social values, especially around questions of property, class, marriage, work, bureaucracy and the state, and selfhood. Authors studied may include: Austen, Brontë, Dickens, Trollope, Eliot, and Hardy.

ENGL 0511C. Fantastic Places, Unhuman Humans.

What can the grotesque, monstrous, and even alien creatures found lurking in an extraordinary range of literature across many centuries reveal about the different ways humans have imagined what it means to be human in the first place? Is the human a unified, single category of being at all? Authors may include Shakespeare, Mary Shelley, and Poe. This course is offered fully online. Students do not need to be on Brown's campus to participate in this course. Students should expect to spend 45 hours per week (or 6-8 hours per day) on coursework.

ENGL 0511D. Austen, Eliot, James.

A survey of the three English novelists who turned the novel into a vehicle for analysis, representation of consciousness, social judgment, and ethical questioning. Major works to be read: *Pride and Prejudice*, *Mansfield Park*, *Daniel Deronda*, and *The Portrait of a Lady*. Particular attention to be paid to questions of voice and the self-reflective capacities of the novel form.

ENGL 0511E. Melville, Conrad, and the Sea.

Stories begin with the sea: *Jason and the Argonauts*, *Sinbad and the Seven Seas*, Odysseus trying to sail home. The sea is the place of 'tall tales,' of adventure, and of terror, but also of industrial labor and modern commerce. This class reads the sea narratives of Herman Melville and Joseph Conrad within this larger narrative and historical context.

ENGL 0511G. Introduction to Native and Indigenous Literatures.

This course will familiarize students with the study of Native and Indigenous literatures in North America. Focusing on a range of genres, geographic locations, and historical moments, students can expect to acquire both a working knowledge of the history of Native literatures in English and a critical methodological approach to the study of American literature.

ENGL 0511H. Late Romantics.

An introduction to the varied work of canonical and non-canonical writers often described as British second-generation or late Romantics: Keats, the Shelleys, Byron, Clare, de Quincey, Hemans, Austen. We will explore what lateness constitutes for these authors as a political, aesthetic, and ethical category, and consider how it informs the kind of distinctly "Romantic" work that characterizes their writings. Particular emphasis on close readings of poetry and theoretical texts, as well as excursions into late nineteenth-century authors.

ENGL 0511J. Renegades, Reprobates, and Castaways.

In this ONLINE course, we'll look at a range of literary works—including short stories, novels, graphic novels, films, and electronic literature—populated by characters cast as pirates, degenerates, depraved, and miscreants. We'll examine how the seemingly disreputable characters, settings, and/or forms offer alternative visions of a just society by challenging powerful institutions, conventional moral principles, and/or dominant conceptions of the "normal" and "natural."

ENGL 0511K. Terrible Births: The Novel out of Romanticism.

A new world struggled to be born at the turn of the nineteenth century, as Europe was consumed in revolutionary wars, the Industrial Revolution spawned new powers and violence, and the age of Romanticism envisioned a Promethean spirit unbound in poetry. We will be reading the novels that defined this tumultuous age and those that came in its wake. We will read Shelley's *Frankenstein*, Brontë's *Wuthering Heights*, and books by Walter Scott, Charlotte Brontë, and Charles Dickens.

ENGL 0511L. Stories of the Future Past.

What does the future hold? What might tales of the past tell us about what's to come? Readings will transport us into the past, future, or both to explore, challenge, or re-enforce many cultural norms. Possible readings: Butler, *Kindred*, Erdrich, *Future Home of the Living God*, Dick, *Do Androids Dream of Electric Sheep?*, St. Mandel, *Station Eleven*, Shelley, *Frankenstein*. This course is offered fully online. Students do not need to be on Brown's campus to participate in this course. Learn what it is like to take an online course at Brown and view technical requirements at: <http://brown.edu/go/whatisonlinelike>.

ENGL 0511P. Severed Selves: Victorian Horror and Science Fiction.

Horror and science fiction from the Victorian period. Works studied may include: Mary Shelley, "Frankenstein"; Bram Stoker, "Dracula"; Robert Louis Stevenson, "Dr. Jekyll and Mr. Hyde"; H.G. Wells, "The Time Machine"; Oscar Wilde, "The Picture of Dorian Gray"; Henry James, "The Turn of the Screw."

ENGL 0511Q. Romanticism Soon.

What was Romanticism? What is it now? And what will it be? This class takes as its focus a cluster of texts by Romantic-era authors and thinkers and puts them in dialogue with a series of contemporary poets in order to measure the past, present, and future of Romanticism as both a period designation and a conceptual force that lives on beyond historical determinations. The course will be about the multiple lives and afterlives of Romanticism, studying a brief period of powerful revolutionary disruptions. Our task will be to explore this critical trans-historical and trans-temporal dialogue and ask: What are the social, political, ethical, and aesthetic questions occasioned by these juxtapositions? How do we assess what romanticism means? How and why does it persist—and perhaps disappear—in the art of our own time? Attention may be paid to films (Jarman, Burnett,

ENGL 0700A. Introduction to African American Literature, 1742-1920.

Surveys African American writing from the beginnings to the Harlem Renaissance, reading both poetry and prose (primarily slave narratives, speeches, essays, and fiction). Attention to how African American authors have shaped a literature out of available cultural and aesthetic resources. Enrollment limited to 30.

ENGL 0700B. Introduction to African American Literature, 1920-Present.

All genres of literature from the Harlem Renaissance to the present, tracing the development of an African American literary tradition. Enrollment limited to 30.

ENGL 0700C. Twentieth-Century American Fiction.

Through detailed readings of a variety of novels from almost every decade, this class explores the various ways fiction responded to what has been called the American century. Our main emphasis will be on the relationship between aesthetic and national representation. Writers to include Wharton, Fitzgerald, Faulkner, Ellison, Kingston, and DeLillo. Enrollment limited to 30. Students will be assigned to conference sections by the instructor during the first week of class.

ENGL 0700D. Inventing Asian American Literature.

Through a focus on works by Asian Americans, this course examines how the concept of literature has evolved across the twentieth century. We address how different genres and literary modes shape the way readers view experiences depicted in literary works, paying attention to how works "theorize" their own interpretation. We also take up the issue of how canons get formed. Enrollment limited to 30.

ENGL 0700E. Postcolonial Literature.

From about the end of World War II, the period now known as the "decolonization era" witnessed the gaining of political independence by many countries that used to be under British colonial rule. In this course we will read across a range of genres—fiction, drama, poetry, travel writing, and cultural criticism—by Anglophone writers from Africa and the Caribbean. Issues will include: cultural-nationalism, diaspora, globalization, and generational shifts. How do the writers explore such categories as class, gender, nation, and race? What interactions do the texts imagine between individual desires, on the one hand, and collective aspirations, on the other? Authors will include J. M. Coetzee, Saidiya Hartman, George Lamming, V. S. Naipaul, Jamaica Kincaid, Jean Rhys, Wole Soyinka, Derek Walcott, and Zoë Wicomb. Enrollment limited to 30.

ENGL 0700F. Introduction to Modernism: Past, Future, Exile, Home.

An introduction to European Modernism with an emphasis on British Literature. We will address ideas of personal and national history through literary and aesthetic innovations of the first half of the 20th century, as well as the relationship—literary, cultural, historical and psychological—between constructions of home and abroad. Texts include James, Conrad, Forster, Joyce, Proust, Woolf, Faulkner, Waugh, and Freud, as well as films by Sergei Eisenstein and Fritz Lang. Enrollment limited to 30.

ENGL 0700G. American Fiction and Mass Culture.

How have American fiction writers responded to the growing national influence of mass culture industries such as recorded music, film, and television? This course will consider this question by assessing both how writers have imagined the impact of mass culture on American life and how the style of literary writing has evolved in relation to popular media. Authors include F. Scott Fitzgerald, Nathanael West, Toni Morrison, Colson Whitehead, and Don DeLillo. Enrollment limited to 30.

ENGL 0700K. 20th-Century Literatures in English.

This course offers a broad introduction to a range of literatures written in English, tracing shifts in the formal conventions of fiction and poetry. We examine ongoing debates about what literature is and what social role it plays. We consider how these debates respond to historical changes such as industrialization, the collapse of global empires, and movements for social equality. Writers include Dreiser, Woolf, Eliot, Hughes, Toomer, Cather, Morrison, Hwang, Rushdie. Enrollment limited to 30. Students should register for ENGL 0700K S01 and will be assigned to conference sections by the instructors during the first week of class.

ENGL 0700L. Make It New: American Literature 1900-1945.

Introductory survey of a major—perhaps *the* major—period of American literature. Genres include poems, plays, short stories, and novels, as well as film. Writers include Willa Cather, Raymond Chandler, T. S. Eliot, William Faulkner, F. Scott Fitzgerald, Robert Frost, Ernest Hemingway, Eugene O'Neill, Gertrude Stein, and Wallace Stevens; filmmakers include Charlie Chaplin and Orson Welles. Enrollment limited to 30.

ENGL 0700O. The Great Debate: Wright, Hurston, and the Meaning of Twentieth-Century Black American Literature.

This course will consider the works of Zora Neale Hurston and Richard Wright, perhaps the two most consequential Black writers of the 20th century. We will explore their supposed disagreements and surprising alignments through four critical lenses: their fraught history with the white publishing industry, their representations of the American south, their understanding of art's relationship to politics, and their positioning within the American literary canon today.

ENGL 0700Q. Poetic Cosmologies.

This course will examine how various traditions within modern and contemporary poetry have addressed the question of materiality. Readings will range from poetic explorations of the archaeologies of place by William Carlos Williams and Charles Olson, to the investigations of non-human materialities of crystals, clouds and bacteria by writers such as Clark Coolidge, Christian Bök and Lisa Robertson. Enrollment limited to 30.

ENGL 0700R. Modernist Cities.

In the early twentieth century, modernist writers headed for New York, Paris, London and other cities, and based their literary experiments on forms of metropolitan life. We will discuss chance encounters, cosmopolitan and underground nightlife, solitary wandering, and bohemian communities. Writers may include Barnes, Dos Passos, Eliot, Hemingway, Hughes, Larsen, Joyce, McKay, Rhys, Woolf. Enrollment limited to 30.

ENGL 0700U. Modernism and Race.

An exploration of the ways in which assumptions about racial difference are perpetuated or challenged by modernist experiments in form. Readings include W. E. B. DuBois, Joseph Conrad, Langston Hughes, Gertrude Stein, Nella Larsen, William Faulkner, and Richard Wright.

ENGL 0700V. Introduction to Post-War British Fiction.

This course is an introduction to the study of 20th century literature in English. We consider central terms of and approaches to literary criticism by reading some of the most important British writers of the last fifty years. We will also take into account theories of culture, ideology and nationhood, and attempt to bring into focus a Britain defined as much by its ways of looking as by historical and geopolitical situation. Readings include Kingsley Amis, Greene, McEwan, Zadie Smith, Spark, Kelman, Banville, Naipaul and Sebald. Enrollment limited to 30.

ENGL 0700W. American Misfits: Short Story Collections of Displacement.

What does it mean to not "fit in" in the United States? How do various forces—such as settler colonialism, war, and imperialism—influence the geographic movements of people within the US and across oceans and borders? How do displacements shape subjects' perceptions of home and familial belonging? This course investigates how short story collections, in form and content, depict transnational and transoceanic experiences of living in the US. Through our readings, students will interrogate the social and affective valences of displacement, questioning ideas of nationhood, sovereignty, and belonging. Authors include: Jamaica Kincaid, Chimamanda Adichie, Viet Thanh Nguyen, Kristiana Kahakauwila, Kali Fajardo-Anstine, Manuel Muñoz, Bienvenido Santos, Yalitza Ferreras, and E.P. Tuazon.

ENGL 0710B. African American Literature and the Legacies of Slavery.

From the antebellum slave narratives to contemporary historical novels about bondage, the African American literary tradition has been shaped definitively by slavery. We will assess this literary history with reference to the social functions of racial violence, the politics of slave resistance, the gendered forms of racial subordination, and the flourishing of black vernacular culture. Authors may include Frederick Douglass, Harriet Jacobs, Charles Chesnut, Toni Morrison, Colson Whitehead, and Octavia Butler.

ENGL 0710E. Postcolonial Tales of Transition.

This course focuses on postcolonial British, Caribbean, and Southern-African works that exemplify, complicate, or refashion the category of the bildungsroman, the "novel of education." Issues to be considered include the ways the texts rework archetypal tropes of initiation, rebellion, development, and the interplay of contradictory passions. We will also think about ways in which issues of race, gender, and sexuality emerge in the texts, and the connections or disjunctions between literature and "the real world." Writers will likely include Dangarembga, CLR James, Ghosh, Ishiguro, Joyce, Kincaid, Lamming, Naipaul, Rhys, Wicomb.

ENGL 0710F. Being There: Bearing Witness in Modern Times.

What is the significance of one who says, "I was there"? This course explores the ethical, literary and historical dimensions of witnessing in an era when traumatic events are increasingly relayed secondhand or recorded in sound and image. Texts include Forster, Woolf, Camus, Freud, Celan, Coetzee; films by Hitchcock and Kurosawa; and readings in law and psychology.

ENGL 0710I. Global South Asia.

This course provides an introduction to contemporary fiction by South Asia and its diaspora. We will read novels written in North America, the Caribbean, Australia, Africa, the United Kingdom, and of course South Asia, paying particular attention to issues of identity, ethnicity, and transnational circulation. Authors include Adiga, Hanif, Lahiri, Meeran, Mistry, Naipaul, Roy, Rushdie, Selvadurai, and Sinha.

ENGL 0710J. Introduction to Asian American Literature.

This course is intended to familiarize students with key issues that have shaped the study of Asian American writings and to provide a sense of the historical conditions out of which those works have emerged. As a literature course, it will focus on textual analysis—on how particular texts give representational shape to the social, historical and psychological experiences they depict. Readings consist primarily of works that have a canonical status within Asian American literary studies but also include newer works that suggest new directions in the field. It also strives to provide some coverage of the major ethnic groups.

ENGL 0710L. Ishiguro, Amongst Others.

Kazuo Ishiguro is one of the most distinctive and enigmatic voices in contemporary fiction. He has few obvious precursors, and there is little consensus among literary critics about the meanings of his works. This course will try to establish principles for reading Ishiguro's works by seeking alliances for his writing in works of philosophy, literature and cinema. Such interlocutors will include Ozu, Kiarostami, Kierkegaard, Sartre, Hadžihalilović, Dostoevsky, Pasolini.

ENGL 0710M. Impressionism, Consciousness, and Modernism.

This course explores the role of the "literary impressionists" (Crane, James, Conrad, and Ford) in the transformation of the novel from realism to modernism (especially the "post-impressionists" Stein, Joyce, and Woolf). "Impressionism" is defined by its focus on consciousness, the inner life, and the ambiguities of perception. What happens to the novel when writers worry about whether the way they tell their stories is an accurate reflection of how we know the world? Attention will also be paid to how the literary experiments of impressionist and post-impressionist writers relate to simultaneously occurring innovations in the visual arts.

ENGL 0710N. Fitzgerald, Hemingway, and the Lost Generation.

An introduction to two of the most popular and influential American novelists of the twentieth century, Scott Fitzgerald and Ernest Hemingway. We will read many of their most important novels and stories, including *The Great Gatsby*, *Tender is the Night*, *In Our Time*, *The Sun Also Rises*, and *A Farewell to Arms*. In addition we will examine the work of the contemporary American writers who most influenced them: Gertrude Stein, Willa Cather, Sherwood Anderson, and T. S. Eliot.

ENGL 0710Q. American Literature in the Era of Segregation.

This course examines how American literature intersects with the legal, ethical, and racial discourses that defined the system of racial segregation. In doing so, the course will assess the ways that literary style and genre became inseparable from the culture of segregation. Authors include Mark Twain, Nella Larsen, William Faulkner, and Richard Wright.

ENGL 0710R. Poetry and Science.

This course will explore the relationship between the observational procedures and modes of composition employed by twentieth and twenty-first century poets who have worked in more conceptual or avant-garde traditions and the practices of description and experimentation that have emerged out of history of science. Readings will range from Gertrude Stein's poetic taxonomies to recent work in critical science studies.

ENGL 0710S. The Eighties: Earnestness to Irony.

From "White Noise" to "Working Girl," Duran Duran to Public Enemy, this course explores the culture, rhetoric, and politics of the 1980s through literature, film, music, and television. What kind of counterculture, if any, emerges from a decade of conservatism, greed and the AIDS epidemic? What, in short, made the 80s unique—and what is the decade's afterimage? Students should register for ENGL 0710S S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0710T. Reading New York.

How have people imagined New York City from the early 20th century to the present? We will discuss immigration, mobility, nightlife and the neighborhood, downtown, underground and gentrified spaces, 9/11. May include work by John Dos Passos, Nella Larsen, E.B. White, Frank O'Hara, Patti Smith, Nan Goldin, Ernesto Quinones, Jonathan Safran Foer.

ENGL 0710U. Funny/Not Funny: Taking Comedy Seriously.

This is a course about how comedy works, when it works, when it fails, and why it matters. Through novels, film, and television, we will consider what makes something funny, and what comedy does to and for us. We'll think about how comedy becomes a way of engaging hard questions about social life, the body, gender, race, culture, and politics. In the process, we will investigate the risks comedians and comic writers take, and how they invite us to ponder the limits of humor—in other words, we'll examine the risks that comedy runs and the reasons it runs them in the first place. At the center of our concerns is comedy as the mode of the underrepresented and disenfranchised — a genre of vulnerability and potency.

ENGL 0710V. Death and Dying in Black Literature.

How is death represented in black literature as a topic and as a figure of genre? Which theoretical ideas help us think about the intertwining of blackness and death? How do notions of gender and sexuality inform this thinking? This course will explore works from the twentieth and twenty-first centuries to consider the scope of black literary imaginings of death.

ENGL 0710W. Readings in Black and Queer.

This course will survey works that engage the intersection of black and queer, especially from 1970 onward. We will use the central idioms of queer of color critique to think about performativity, homophobia, the erotic, and gender normativity; and will use this thinking to read literary representations in various novels, poems, nonfiction essays, plays, and films.

ENGL 0710X. Black Poetics.

This course is interested in poetic thinking: how a poem inclines toward a certain kind of knowing; how a poem's imagining invites philosophical considerations (as in, what is being, and how to be); how a poem's language and its formal qualities sustain such thinking. We are interested, also, in how the questions aesthetics makes possible are relevant to conceptualizations of blackness.

ENGL 0710Y. Literature of US Inequality, 1945-2020.

Study of the way inequality has been represented in US literature from 1945 to the present. Authors to be considered include Morrison, Updike, Wright, Highsmith, Lee, Adichie, Leavitt.

ENGL 0710Z. American Literature and the Constitution.

A study of the interactive relations between US literary constitutional and literary history, with a special emphasis on how American constitutional discourses and American writers have framed and conceived of the interplay between civil rights, racial equality, and economic privilege.

ENGL 0711A. Americans in Paris.

For many American artists, particularly in the years following the first world war, Paris promised artistic freedom; for others, particularly in the years following the second world war, it promised something closer to actual freedom. This class explores the relationship between these two conceptions of liberty, ranging widely over fiction, poetry, autobiography, essays, dance, music, painting, and photography.

ENGL 0711B. Trans Cultural Production and Trans Studies.

What animates the fields of transgender studies and trans cultural criticism in a moment of assimilation, heightened visibility, and violence? By reflecting on contemporary examples of trans cultural production, including literature, film, and new media, this course explores a wide range of art-making and activism working against state violence. Readings and works by Kai Cheng Thom, Tourmaline, and Leslie Feinberg.

ENGL 0711C. Bad Blood: Conflict and the Family in Literature and Cinema.

The family home, often thought of as a refuge from the outside world, can also be a site of tension, competition, violence and horror. Why does dysfunction in the domestic sphere shock and fascinate us, and why is the gothic so intimately tied to the domestic? Readings and viewings from: Shakespeare, Shelley, Brontë, Wilde, Nabokov, Salinger, Hitchcock, Kubrick, Park Chan-wook.

ENGL 0711D. Literature and Social Mobility.

This class examines cultural narratives about people who rise, fall, or remain stuck within systems of social stratification. We'll consider how such stories are celebrated, critiqued, or otherwise used to make a point about the nature of wealth, debt, discrimination, assimilation, merit, or luck. Readings will consist of novels and memoirs, along with material from disciplines like sociology and economics.

ENGL 0800R. Reading Practices: An Introduction to Literary Theory.

What is it to read? This course is an introduction to theories of reading that have shaped literary interpretation and definitions of literature from the early twentieth century to the present, with particular attention to the relation between "literary theory" as a discipline and the broader reading practices it engenders and from which it emerges. We will read the New Criticism, structuralism, post-structuralism, and new historicism, critical race theory and feminist critiques, and recent work in aesthetics. Topics include literariness and textuality, the reader and subjectivity, narrative, rhetoric, and the problem of representation, and "new formalism." Enrollment limited to thirty.

ENGL 0800T. Introduction to Black Literary Theory.

This course will explore key theoretical moves in black literary studies since about 1970. The intent is to think historically and conceptually about the field of black literary studies by exploiting and refusing the distinctions between "theory" and "blackness." Our work might include studying the following areas: deconstruction, archive, feminism, psychoanalysis, aesthetics, phenomenology, affect/new materialism, queer, disability, performance. In sum, this course is a chance to consider blackness as a point of departure for literary study, and perhaps the reverse—literary study as an engagement with thinking conceptually about blackness.

ENGL 0900. Critical Reading and Writing I: The Academic Essay.

An introduction to university-level writing. Students produce and revise multiple drafts of essays, practice essential skills of paragraph organization, and develop techniques of critical analysis and research. Readings from a wide range of texts in literature, the media, and academic disciplines. Assignments move from personal response papers to formal academic essays. Enrollment limited to 17. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 0930. Introduction to Creative Nonfiction.

Designed to familiarize students with the techniques and narrative structures of creative nonfiction. Reading and writing focus on personal essays, memoir, science writing, travel writing, and other related subgenres with an emphasis on reading authors with a diversity of racial and ethnic identities. May serve as preparation for any 1000-level nonfiction writing course. Writing sample may be required. Enrollment limited. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030A. The Thoughtful Generalist.

This "ONLINE" section of "ENGL1030: Critical Reading and Writing II: Research" will prepare you for academic and real-world discourse. In Canvas, you will discuss essays demonstrating deep research distilled into engaging intellectual journey. You will research and revise four explanatory, analytical, persuasive essays, using varied sources to explore subjects or issues of your choice. Mandatory peer reviews and conferences ONLINE. Enrollment limited to 17. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030C. Writing Science.

This course explores how science, as an academic way of thinking and a method, affects our critical thinking and expression of culture. Readings examine the various dialects of scientific discourse. Students write three major research essays on self-selected scientific topics from both within and outside their fields of study. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030D. Myth + Modern Essay.

A writing and research focused course, in which students read a small selection of ancient texts (including *The Epic of Gilgamesh* and Ovid's *Metamorphoses*) and use the myths retold to illuminate the contemporary world and to inform the essays they write. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030E. Testaments of War.

Discovery is at the heart of research. In this course, we will discover how and why literary texts reflect and illuminate the intellectual and social worlds around them. We will use a variety of primary and theoretical sources and research tools, identify powerful research problems, and craft questions and sophisticated thesis statements. The course will also enable you to refine a critically sensitive, informed, and persuasive writing style that will be key to the success of your scholarly work. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030F. The Artist in the Archives.

While artists can benefit greatly from archival work, they are not typically given the tools to make use of these institutions. This writing intensive course takes a two pronged approach to the problem: embedding students in archives both at Brown and RISD to produce creative, lyrical, and multi-media essays; and exploring how artists have used these institutions for information and inspiration. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030G. Backstory.

Everything has a backstory—every object, event or idea. In this workshop-based course we will explore the archives at Brown, RISD and the Rhode Island Historical Society and write about what we find. Expect field trips, time travel, encounters with interesting objects, readings from David Foster Wallace, John McPhee and Katherine Schultz, and in-class prompts to get you going. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030H. Black Popular Culture and Social Movements.

As a site of critical inquiry, Black popular culture provides valuable insight into the ways oppressed people (and allies) identify and mobilize against unjust power structures in society. We will begin with immersion experiences with primary and secondary resources that reveal how "voices on the margins" assert agency, identity, and community. Enrollment limited to 17. No pre-requisites. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030L. Writing at Three Miles an Hour.

Designed as an intermediate nonfiction writing seminar, 'Writing at Three Miles an Hour' will center on slow writing. Peripatetic writers, the subject of Rebecca Solnit's *Wanderlust*, detach themselves from the speed and distractedness of the everyday and return to writing at a meditative pace. Students will write every day and their writing will be based on what they observe while walking—anywhere: to class, to coffee shops, through libraries and museums. Readings will be gathered from writers on walking, among other things. The objectives: to learn how to discover the extraordinary in the ordinary; to learn how to accumulate notes and reflections and to integrate them gradually into longer narratives.

ENGL 1030M. Morning Pages.

Working writers swear that in order to have a productive writing life one needs to establish a writing routine or practice. Those practices differ from person to person but most revolve around setting aside designated writing time every day. In this class students will commit to setting their alarm clocks 30 minutes earlier than usual in order to devote the start of each and every (week)day to writing. During the course of the semester students will develop robust early morning writing practices that center around observation, recollection, and remaining open to mystery. In short: this is a course focused on the practice and process of writing.

ENGL 1050A. Narrative.

This course offers a broad exploration of the many kinds of essays you can write in creative nonfiction. We will be looking at how authors structure their pieces and the range of narrative techniques they often use. You can expect workshops, in-class prompts and readings by Jamaica Kincaid, John McPhee, David Foster Wallace, Annie Dillard, David Sedaris and others. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050B. True Stories.

This class will allow confident writers to explore and develop their creative nonfiction writing. We'll focus on two structures—nonfiction narratives and essays—with occasional forays into other forms. Students will work simultaneously on several small assignments and two larger, self-directed pieces. Readings will include cultural reportage, lyric memoir, science and nature writing, standard and hybrid essays. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050C. Creative Nonfiction: Practice and Criticism.

What is Creative Nonfiction? It has a long history and recently writers have flocked to it; scholars have questioned it: Academic enough? Harm the truth? Narrative with too much "I" and too little "Eye"? Literary? Significant? By reading historical and contemporary examples along with critics, we will explore persistent questions about form, method, ethics, and significance. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050D. Lifewriting.

We explore writing's various forms—memoir, diary, essay, graphic narrative, film, and autobiography—while crafting personal narrative. Students read sample texts, view films, and keep an electronic diary. Projects include a memoir, personal critical essay, and final autobiography, as well as shorter assignments. This is a writing workshop, so students read & critique each others work. Individual conferences with the instructor also provide feedback. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050E. Sportswriting.

This course introduces students to the practice of sportswriting, including writing sports news, features, and columns. Readings will include works by Rick Reilly, Bill Simmons, Frank Deford, Karen Russell, Allison Glock, Tom Wolfe, Hunter S. Thompson, W.C. Heinz, and others. Students will develop skills in analyzing, researching, writing, revising, and workshoping in the genre. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050F. Line Work: Experiments in Short-Form Writing.

This class is based on the premise that to improve your writing, you need to write often. By responding to almost daily drills, you will develop a regular writing habit and explore a range of styles. We will take your most successful pieces through a series of workshops, helping you refine your work and ultimately build a writing portfolio. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050G. Journalism Practicum.

This course provides collegiality and skills development to students working in journalism, including editors at major campus publications—e.g., the *Brown Daily Herald*, the *Independent*, the *Black Star Journal*—and interns at external publications. Receiving credit for their work elsewhere, students will meet individually with the instructor and share ideas and experiences with peers, discussing journalism best practices and the changing journalism landscape, and building skills for future work. Instructor approval required. S/NC

ENGL 1050H. Writing for Journalism.

In this course, students learn to report and write for journalism. You will workshop story ideas; learn how to be a skillful interviewer; conduct research for stories; and learn to write accurately and clearly for general audiences. You will publish several stories, including original multimedia content, on the class's news website, and receive support for publishing more widely. Application and instructor approval required at the beginning of the term.

ENGL 1050J. Multimedia Storytelling.

Through a series of short assignments, we will explore how the stories we tell are affected by the use of audio, visual, and performative tools. The course cumulates in a final project where each student will pursue a long-form story of their choice of subject and medium. Enrollment is limited to 12. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050L. Writing in Place: Travel, Ecology, Locality.

To explore the relationships among people, places and language, this course will incorporate science and nature writing, environmental / ecological writing, travel writing, psychogeography and architectural writing. Assignments and practices will include diaries, observational writing, reporting, criticism and more lyrical forms. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050M. Music Writing.

Music writing asks that we take readers across a space not entirely tangible. To listen—with care—and then articulate, with words written, what was heard and what was experienced. Music writing is a big genre, encompassing journalism (especially criticism), memoir (by listeners and by direct participants), long-form essay, and lyric forms. This course will touch upon these categories. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050N. Writing for Today's Electronic Media.

This course introduces students to the practice of reporting for television news, radio, and their online equivalents—online news and podcasts. Exploring the world of communications for contemporary media, the course features hands-on work in writing news, features, and opinion pieces for television, radio, online news, and podcasts. Students will develop skills in analyzing, writing, revising, and workshoping in these media. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050O. Writing the Asian American Experience.

With a focus on narrative nonfiction by and about Asian Americans, this writing workshop is for anyone who wants to learn more about Asian American communities while practicing research skills and writing processes. Pre-requisites: ENGL 0930 or any 1000-level nonfiction writing course.

ENGL 1050P. Reframing Race in Art Writing.

This seminar will consider how contemporary writers and critics respond to art that directly addresses race and challenges institutional power. We will discuss past and recent controversies involving race and representation in exhibitions and examine the relationships between artists, museums and other art institutions, and public audiences. We will consider how writing about arts and culture can advance public discourse about race, equity, and justice. Enrollment limited to 17. No pre-requisites. Writing sample required. Instructor permission required.

ENGL 1050Q. Writing the Family.

"You must not tell anyone" writes Hong Kingston's auto-fictional narrator—and then a book of family secrets follows. This class examines how authors (authorized or not) use their families as subject matter, storying family and family life. Over the term, we'll work on developing a practical and theoretical ethics of family-writing while contextualizing and practicing writing nonfiction about the family. Enrollment limited to 17. No pre-requisites. Writing sample required. Instructor permission required.

ENGL 1050R. Writing about Health and Healthcare.

In this course, students create engaging, accurate works of journalism about health, care, and medicine in American life. They practice the elements of good reported narrative: depth of research and insight; evocative scene and description; compelling voice; and clear, engaging sentences. Pursuing independent projects, with opportunities to work in multiple media and encouragement to pitch their stories to outlets, students improve their reporting, writing, and production techniques—while learning about and adhering to journalism ethics. Writing sample required for admission in first week of class. Registration after classes begin requires instructor approval. S/NC

ENGL 1050S. Writing the City.

In this advanced course, students use their journalism skills to create compelling stories about the city of Providence. Choosing from multiple media, students work to shed light on urban issues such as housing, homelessness, education, development, and more. Each student chooses an area of interest and, for the rest of the semester, pursues reporting and writing on that issue. By the end of the semester, students can expect to have produced a portfolio of well-crafted works of journalism, with the goal of having one or more accepted for publication. Writing sample required for admission in first week of class. Registration after classes begin requires instructor approval. S/NC.

ENGL 1050V. Writing Wonder, Joy and Awe.

How can we cultivate a sense of wonder amidst personal and societal challenges? Through close attention to the natural world, their own lived experiences, and the voices of others, students will write towards meaning and truth in personal essays that rely on research and reporting. With inspiration from Aimee Nezhukumatathil's *World of Wonders*, Ross Gay's *Inciting Joy*, Brian Doyle's *One Long River of Song*: *Notes on Wonder*, and other essayists, students will work alone and in a community of writers through the writing process to produce and publish an outward facing component such as a zine. Pre-requisites: ENGL 0930 or any 1000-level nonfiction writing course.

ENGL 1050X. Making a Scene.

In this course, students write one building block of creative nonfiction, the scene—character, setting, action. Students will compose dialogue, deploy details of setting that build character and infuse the scene with meaning, and find something for those characters to do in that setting—dusting a lamp, discovering a fortune, or burning down the house. While practicing writing their own scenes, students will engage nonfiction writers such as Joan Didion, Jesmyn Ward, Yiyun Li, James Baldwin, Rachel Aviv, Grace Talusan, and Nicole Chung. Enrollment limited to 17. No prerequisites. Instructor permission required.

ENGL 1050Y. Traces of Empire: Writing Filipino and American Experiences Through Creative Nonfiction.

This course explores the traces of the US in the Philippines through the reading and writing of creative nonfiction. We will study and write about this ongoing relationship in the lives of contemporary Filipinos in the diaspora through topics such as Facebook and elections, Filipino nurses and labor, and the rise of Filipino flavors such as ube in American foods. Students keep a notebook and practice all the stages of writing towards a portfolio of creative nonfiction. This course includes mandatory travel to Manila, Philippines for experiential learning with visits to Ateneo de Manila University and Rappler, a news site.

ENGL 1050Z. Audio/Video Storytelling.

In what ways can you "write" nonfiction with sound? And images? This course is for students interested in writing for podcasting, radio, TV, web content, or any career that involves communicating with audio, video, and/or still images. Students learn how to write for the ear and capture engaging tape—to use sound and image to create vivid scenes that are well paced and clear, and have satisfying narrative arcs. Both experienced and beginning audio and video storytellers are welcome. Application and instructor approval required at the beginning of the term. S/NC

ENGL 1051A. The Art of the Interview.

What makes for a compelling published and/or broadcasted interview? How do nonfiction writers make ethical use of interviews to craft powerful stories? What are the most common interviewing challenges and how might we overcome them? In this course we explore and practice interviewing as a central component in telling engaging nonfiction stories. You'll read, listen to, watch, and analyze interviews as you build your own skills, through conducting interviews of your own and using them to craft essays, narratives, and/or audio/video pieces. You'll workshop these assignments with your peers and contribute to a final course publication. In the process, we will discuss how conducting effective interviews—and even being an effective interview subject—may be relevant to work that students do after Brown. Writing sample and instructor permission required. S/NC.

ENGL 1140A. Intellectual Pleasures: Reading/Writing the Literary Text.

Riffing on the generative tensions between intellectual rigor and aesthetic pleasure, this seminar will examine (through the theoretical framework of cognitive poetics) a richly diverse range of literary texts, from Susan Howe to *Beowulf*. Our objective: to develop an awareness of language that will reshape how we read and how we write literary texts in various genres. Writing centered. Enrollment limited to 12. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. S/NC.

ENGL 1140B. The Public Intellectual.

This course offers advanced writers an opportunity to practice sophisticated, engaged critical writing in academic, personal, and civic modes. Emphasis will be on writing "public" essays (general audience essays that do intellectual work or academic essays that address public topics), ideally in fluid, "hybrid," audience-appropriate forms. Areas of investigation will include (but are not limited to) the review essay, the cultural analysis essay, literary documentary, and the extended persuasive/analytic essay. It will include some brief "touchstone" investigations into rhetorical theory, with the aim of helping to broaden our concepts of audience, analyze the constitutive and imaginative effects of language, increase the real-world effectiveness of our own language practices, and situate our writing within current political, cultural, aesthetic and intellectual debates. Students must have sophomore standing or higher in order to be admitted to the class. A writing sample will be administered on the first day of class. Prerequisite: ENGL 0930, 1030, or 1050. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1140D. Writing Diversity: A Workshop.

This course explores various forms of writing that address the broad spectrum of human experience, including issues of race, gender, varying physical and mental ability, social class, and inequities resulting from colonization, among others. Students will attempt to understand the issues and each other through class readings and articulating personal responses in writing. Writing sample required. Pre-requisite: ENGL 0900, ENGL 0930, or any 1000-level nonfiction writing course. Class list reduced to 12 after writing samples are reviewed during the first week of classes. S/NC.

ENGL 1140E. Writing for Activists.

How can writing support and further change? In this course students will practice grant applications, budget narratives, mission and strategy statements, press releases, position papers, op-eds, and other writing strategies with practical application in activist work. We'll read examples and theoretical grounding, and guest speakers will introduce us to writings and needs specific to a range of fields. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Instructor permission required. S/NC.

ENGL 1160A. Advanced Feature Writing.

For the advanced writer. Nothing provides people with more pleasure than a "good read." This journalism seminar helps students develop the skills to spin feature stories that newspaper and magazine readers will stay with from beginning to end, both for print and on-line publications. Students will spend substantial time off-campus conducting in-depth interviews and sharpening their investigative reporting skills. The art of narrative storytelling will be emphasized. Prerequisite: ENGL1050G or 1050H, or published clips submitted before the first week of classes. Class list reduced to 17 after writing samples are reviewed. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160B. Editors/Producers.

On-site workshop for editors/producers of campus or local journalism that aspires to professional standards. Students must be chosen by peers to edit a campus publication such as the BDH, or to produce a radio show at WBSR or WBRU; or they must have an internship at a local newspaper, radio or TV station. Required: Minimum 20 hours a week editing/producing; participation in skill-building workshops for staff. All issues/shows evaluated. Enrollment limited to 17. Instructor permission required. S/NC.

ENGL 1160C. Radio Nonfiction.

For advanced writers only. Introduction to radio writing and producing. Students find and research stories, interview, draft, edit and fine-tune for radio presentation. Genres include news, profile, feature and personal narratives, editorial and review. Weekly labs focus on recording equipment, digital editing and mixing, and music use. Final project: half-hour radio feature ready for broadcast. Preference given to students who have taken ENGL0160, advanced nonfiction writing courses, English concentrators, or students who have worked at WBSR or WBRU. A writing sample will be administered on the first day of class. Class list will be reduced to 12 after writing samples are reviewed. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160D. The Common Critic.

For the advanced writer. Aimed at the cultivated consumer of books, magazines and newspapers-- what has traditionally been called the common reader. Students will attend films, plays, art shows, concerts or dance performances and write weekly reviews based on these experiences. Readings include Orwell, Woolf, Shaw, Kael, Tynan, Clive James, Zbigniew Herbert, and current reviews. Writing sample submitted at first class; also a previous sample, if possible, submitted at the same time. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160E. Advanced Journalism: Investigative and Online Reporting.

The goal of this class is to rigorously test and improve the reporting and nonfiction writing abilities of students seriously considering a career in journalism. By reading award-winning articles; reporting and writing five nonfiction pieces on campus or in Providence; and rigorously critiquing each other's writing, students will gain a sense of the promise and perils of journalism. Prerequisite: ENGL 0160. Enrollment limited to 17.

ENGL 1160F. Reporting Crime and Justice.

Crime and justice stories are people stories. The drama of everyday life is played out every day in courtrooms. This advanced journalism course will get students into the courtrooms, case files and archives of Rhode Island's judicial system and into committee hearings at the State House where they will report on stories that incorporate drama, tension, and narrative storytelling. Prerequisite: ENGL1050G, ENGL1050H or ENGL1160A (Advanced Feature Writing). Enrollment limited to 17. Instructor permission required. Preference will be given to English concentrators. S/NC.

ENGL 1160G. Literary Journalism: Writing about Politics and Culture.

Students are introduced to procedures and techniques of cultural journalism through reading and discussing work of notable practitioners and writing their own reviews, profiles, and reportage. Enrollment limited to 12. Prerequisites: ENGL0900, ENGL0930, or any intermediate or advanced nonfiction course. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160H. Social Justice Journalism.

Students will investigate perceived injustices and write carefully crafted nonfiction pieces that present complex stories in a fair, balanced, and accurate way. Students will complete several short pieces and a full-length article suitable for publication. Class list will be reduced to 17 after writing samples are reviewed during first week of classes. Preference will be given to English concentrators. Prerequisites: ENGL0930 or any 1000 level nonfiction writing course. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160J. Advanced Journalistic Nonfiction.

For experienced writers. We will study and emulate the works of journalists who write across genres. We will focus on observational skills, narrative arc, the capturing of critical detail, scene setting, character, anecdote, thematic development, precision with words, and voice. Because all such writing is dependent upon quality reporting, we will explore the relationship between fidelity to fact and creativity. Class list will be reduced to 12 after writing samples are reviewed during first week of classes. Preference will be given to English concentrators. Prerequisites: ENGL0930 or any 1000-level nonfiction writing course. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160K. Literary Reportage.

In this course students will develop the skills necessary to writing reported work in a literary style: interviewing, scene writing, research, lyricism, and the like. Through a series of activities students will prepare for and then embark on self-directed research project, resulting in the production of a long-form work of literary nonfiction.

ENGL 1160L. In Order to Write About the Twenty-First-Century City, We First Have to Imagine It.

The city is changing. In the Internet age, the physical city is written over with data, like everything else. The new city, moreover, is not Western, which transforms our notions of urbanity. Students will work towards their own piece of writing about the twenty-first-century city: its new landscapes and characters, its new feelings and intensities. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Not open to first-year or sophomore students. Instructor permission required. Pre-requisites ENGL0900, 0930 or any 1050. S/NC.

ENGL 1160M. Social Justice Journalism in the Digital Age.

This writing class will teach you how to report and craft socially-conscious journalism that is neither dull nor righteous. You will learn about news hooks and angles, compelling central characters, and clever story structures, and how to attract audiences in a distracted visual digital age. Along with long-form narrative we will work multimedia forms: audio, photography, Twitter journalism, and comics. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisite: ENGL 1050G or ENGL 1050H. Instructor permission required. S/NC.

ENGL 1160N. Investigative Reporting: The Opioid Crisis in Rhode Island.

This advanced reporting class will bring journalism students together with computer science concentrators who together will spend the semester investigating and writing about the opioid epidemic in Rhode Island, a public health crisis that has taken thousands of lives. We will produce a series of eye-opening stories -- to be published in a newspaper of general circulation -- based on data sifting, documents and in-depth interviews. Prerequisite ENGL 1160F. Not open to first-year students. Enrollment limited to 12. Instructor permission required.

ENGL 1160P. Writing Climate, Writing Community.

By 2100, sea level rise is projected to make the Market St neighborhood in Warren, RI uninhabitable, and the town is beginning an ambitious plan for managed retreat. How can writers support them in telling stories of what the neighborhood has been--and shaping the story of the future of the town? Guided by faculty and community partners who are working writers and audio storytellers, town managers and planners, public health workers, and the residents of Market St themselves, students in this course will elicit, co-create, and present the story of Warren as it has been and as it is becoming, with the goal of creating a readable, hearable, and visible community archive, a documentation of the transition, and tools for shaping that transition as it moves forward.

ENGL 1180A. Crime Writing.

This course offers students the opportunity to study crime reportage. We will read and analyze excerpts from classics in the genre, magazine articles, and newspaper accounts. Students will develop semester-long individual writing projects covering a particular crime, and can work either with Providence and Brown University police on a local incident, or research a case through secondary source material.

ENGL 1180B. Digital Nonfiction.

In this class, we will join the host of other artists, activists, and writers that have used Twitter bots, iPhone apps, virtual reality experiences, and more to tell compelling stories. No previous digital writing experience is necessary, however, as an advanced creative nonfiction class, Digital Nonfiction requires students to have completed ENGL 0930 or any 1000-level nonfiction writing course. Enrollment is limited to 17. Instructor permission required. S/NC.

ENGL 1180C. Advanced Creative Nonfiction: Writing with Food.

This course examines writing about food and how writing affects food and food culture. We shall explore the relationship of food to the pen through reading classic texts, writing in and out of class, guest lectures, and touring culinary archives. The goal is to polish personal voice in menus, recipes, memoir, history, reportage, and the lyric essay. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180D. Concealing and Revealing: Writing the Unsaid.

We'll read and write works that voice what often goes unvoiced, challenge taboos or build silence into their structures. Creative and critical writing assignments, class discussions reading responses and in-class writing will allow us to enter and question these texts, their motives, and their methods. Prerequisite: ENGL 0130, 0160, 0180, or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180E. Lifewriting.

Features theoretical and practical study of lifewriting's various forms-- memoir, diary, essay, and autobiography-- and the crafting of personal narrative. Students read books, view films, and keep an electronic diary and paper notebook. Requirements include a personal critical essay and autobiography.

Writing sample required. Prerequisite: ENGL 0130, 0160, 0180, 1140, 1160, 1180, or 1190. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180F. Literary Journalism.

Focusing on the craft of literary techniques in a range of journalistic modes, we will read John McPhee, Diane Ackerman, Ian Frazier, Susan Orlean and Tracy Kidder, among others. Workshops and conferences on student work, which can include personal essays, immersion journalism, researched argumentative essays and magazine-style feature articles. Complete and polish several shorter pieces and one longer feature-length article.

ENGL 1180G. Lyricism and Lucidity.

For the advanced writer. This course will explore two subsets of the personal essay that blur or cross boundary lines--the lyric essay and the photographic essay-- in both traditional and experimental formats. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Not open to first year students. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180H. Satire and Humor Writing.

For the advanced writer. This course will introduce students to the practice of writing satire and humorous essays. Readings will include works by Jonathan Swift, Mark Twain, Garrison Keillor, Bill Bryson, David Foster Wallace, David Sedaris, and others, and students will develop skills in analyzing, writing, and workshoping in the genre. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180I. Writing Medical Narrative.

This class will examine the recent turn toward the use of narrative in medicine and the recent trend of published medical narrative. We'll look at literary and cultural narratives of sickness and health and how they shape perceptions and treatments, while keeping the science and politics of health care--and its public discourse--in view. Writing sample required. Prerequisite: ENGL0900, ENGL0930, or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180J. Tales of the Real World.

For the advanced writer, this section offers a chance to practice the pleasures and challenges of nonfiction story-telling in the forms of literary journalism, personal essay, and audio narrative. Inspirations include Gay Talese, James Baldwin, Joan Didion, David Foster Wallace, and *This American Life*. Intensive practice in researching, interviewing, revising, and audio editing. Writing sample required. Prerequisite: ENGL 0130, 0160, 0180, 1050, 1140, 1160, 1180, or 1190. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180K. The Art of Literary Nonfiction.

For the advanced writer. Based on Roland Barthes' notion of the fragment, this workshop features an incremental, literary approach to writing nonfiction, in both traditional and experimental formats. In response to daily assignments, students will produce numerous short pieces and three extended "essays," to be gathered into a chapbook at the end of the course. Writing sample required. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Not open to first year students. Class list reduced to 17 after writing samples are reviewed during first week of classes. Preference given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180L. Travel Writing: In the Domain of the Other.

For the advanced writer. Huck Finn's intention "to light out for the Territory" reflects a pervasive desire to be somewhere else. Restless curiosity about the Other affects travel, writing about travel, and reading about travel. Will concentrate on contemporary travel writers (Heat-Moon, Didion, Chatwin, numerous others) and experiment with various types of narrative structures.

Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180M. Special Delivery: Letters and Diaries.

For the advanced writer. While letters and diaries are constrained by "dailiness"--the writer's informal situation in time--they often form the basis of more formal communications, including the novel. We will keep diaries as self-conscious intellectual enterprises and write letters to address their roles in various literary modes. The final project will be an epistolary essay incorporating structures and motifs from both sub-genres. Writing sample required. Instructor permission required. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor permission. S/NC.

ENGL 1180N. The Longer Literary Essay.

We will focus on reflective essays and researched investigations for the non-scholarly reader, like those in *The New Yorker*, *Science Times*, and *Harper's*. Students learn to develop lengthier pieces, translate technical information, and sustain reader interest. Class consists of discussion of readings, workshops, and occasional visits by professional writers. Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180P. Further Adventures in Creative Nonfiction.

For the advanced writer. A workshop course for students who have taken ENGL 0930 or the equivalent and are looking for further explorations of voice and form. Work can include personal essays, literary journalism and travel writing. Readings from Ian Frazier, Joan Didion, David Sedaris, John McPhee and others. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180Q. Narrating History.

For the advanced writer: the protocols of historical narrative and essay for a general audience. Using the archives of Brown, the Rhode Island Historical Society, and the student's family (if feasible), each writer will research primary and secondary sources, use interviews and oral histories, to help shape three engaging, instructive true stories of the past. Intensive library work, revisions, and peer editing.

Writing sample required. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during first week of classes. Preference given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180R. Travel Writing: Personal and Cultural Narratives.

For the advanced writer. Helps students build skills in the growing genre of travel writing, including techniques for reading, composing, and revising travel pieces. Students will read the best contemporary travel writing in order to develop their own writing in areas like narrative, setting, characters, and voice. The course will feature interactive discussions, instructor conferences, and workshops. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180S. Memoir, the Modern Novel.

Memoir is an ancient form (Augustine, Rousseau) and an American literary standby (Thoreau, Henry Adams) which has exploded in popularity in the past twenty years. We will study its political implications and experiment with this controversial form whose dimensions have barely been explored. We will write new kinds of memoir, stretching our stories towards biography, fiction and historical narrative. Prerequisite: ENGL 0130, 0160, or 0180. Writing sample required. Enrollment limited to 12. Instructor permission required. S/NC

ENGL 1180T. A Slice of Life: Writing the Full Length Memoir.

This course, intended for advanced nonfiction writers, will focus on reading and writing successful book-length memoirs. By studying masters of the form, students will develop a sense of what makes a compelling memoir work and how to approach their own. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180U. Testimony.

How does the creative nonfiction writer bear witness to profound political, social, and environmental change? In this course students engage with the world as writers. They will conduct extensive interviews within the Brown community and beyond and will turn those first hand testimonials into a suite of creative nonfiction pieces in various genres including the lyric, personal, "found," and multi-media essay. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180V. Contemporary Asian American Writers.

In this advanced writing workshop, we will explore the work of Asian American writers who are engaging with questions of race and ethnicity; self-invention and identity; visibility and representation. We'll consider how authors use writing to give voice to marginalized experiences, preserve cultural memory, and redress injustice. Guest writers will read from and discuss their own work. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Writing sample required. Class list will be reduced to 17 after writings samples are reviewed during the first week of classes. Preference given to English concentrators. Instructor permission required. S/NC.

ENGL 1180W. Writing About History.

This course introduces students to the practice of writing about history, including crafting news, features, and memoir pieces. Readings include works by Jill Lepore, Ta-Nehisi Coates, David McCullough, Iris Chang, Henry Louis Gates Jr., John Hersey, W.E.B. Du Bois, and others. Students will strengthen skills in primary and secondary research, interviewing, writing, and revision, utilizing Brown's libraries and other archives. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180X. Anne Carson, Maggie Nelson, Claudia Rankine.

This advanced writing workshop will consider hybridity and formal experimentation through the work of three prominent contemporary practitioners. We'll examine how the range of formal strategies these authors employ resist the limitations of genre and category, invent new ways of reading and writing nonfiction, and create space for a broader, more inclusive, more expansive possibilities for representing lived experience. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Writing sample will be administered on the first day of class. Not open to first-year students. Instructor permission required. S/NC.

ENGL 1180Z. Healthcare Journalism.

How may nonfiction storytelling advance public understanding of health and healthcare? In this course students practice accurate, insightful, and human-centered narrative-writing about medicine, science, and health. You'll develop skills in reporting and writing for general audiences, crafting stories with depth of research and insight; evocative scenes and description; compelling voice; and clear, engaging sentences. You'll read and analyze articles by Atul Gawande, Linda Villarosa, Louise Aronson and other Pulitzer prize-winning writers. You'll contribute features to a course publication while receiving encouragement to publish more broadly. Writing sample and instructor approval required. S/NC

ENGL 1181C. War Reporting: The Coverage of Armed Conflict.

This course explores the origins and roles of modern war reporting, examines challenges journalists face on dangerous and dehumanizing beats, and encourages reflection on journalism's place in the public discourse of armed conflict and political violence. Taught by C.J. Chivers, a Marine Corps veteran and Pulitzer Prize winning reporter and author, the course includes guest lectures by leading journalists with experience in recent wars, and discussions with security and legal professionals who assist news organizations covering organized violence. The examination of risks on conflict beats includes case studies of kidnappings and battlefield deaths of journalists in recent years, and offers examples of risk mitigation and best field practices. Offered for future practitioners and consumers alike, the course promotes skepticism of official narratives, teaches skills for students to curate their own news diets, and encourages critical thinking about journalism itself.

ENGL 1181D. Brown University Writers.

This course develops students' writing skills within a variety of nonfiction and journalistic genres—from personal essays and (auto)biography to feature journalism, travel writing, humor writing, and science writing—by studying the nonfiction writing of successful Brown alumni from across the university's recent history. By analyzing the work of students who sat in our own classrooms at Brown, we will seek to demystify the craft of nonfiction writing and the steps toward building a successful writing career after graduation. Authors include Mara Liasson, Rachel Aviv, Edwidge Danticat, A.J. Jacobs, Ben Lerner, Sarah Ruhl, Tricia Rose, Kevin Roose, Doreen St. Felix, and others. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during the first week. Preference given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190A. "The Arrangement of Words": Liberating Fiction(s).

We read fiction because we enjoy stories. As critical or astute readers, we are often drawn into something more than the story itself: into the way it is told, into the inflections and constructions of language. Concentrating on American fiction writers 1918-1945 (Hemingway, Faulkner, Welty, O'Connor, others), we will examine their fiction and non-fictional prose to see what they do and how and why. Writing will range from critical exposition to annotated fictional experiments. Prerequisite: ENGL 0130, 0160, 0180, 1140, 1160, 1180, or 1190. S/NC.

ENGL 1190B. Real Language: Poetics, Romantics, Writing.

For the advanced writer. Concentrates on the first generation Romantics (Wordsworth and Coleridge) and their poetic/aesthetic experiments to correlate "the real language of men" with poetic perception. Along with primary sources (prose and poetry), we read scholarly, critical, and theoretical texts to construct ways of reading English Romantic poetry and then work on different kinds of writing that derive from those readings. Writing sample required. Prerequisite: ENGL 0130, 0160, or 0180, or instructor permission. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor permission. S/NC.

ENGL 1190C. Advanced Creative Nonfiction: Biography.

Biography, one of the oldest forms of creative nonfiction, tells the life story of a person, idea, place, or thing. We consider old and new forms of biography, experiment with those forms, and practice them as a method of inquiry as well as presentation of self. We also explore biography's connection to journalism, autobiography, memoir, and history. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190D. Writing About Sports in America.

For the advanced writer. Writing about any sport involves one in complex cultural issues that transcend the sport itself. We'll examine work by such authors as Bissinger, Halberstam and Maraniss for voice, craft, and research methods. Students will be required to produce their own pieces of sports writing that explore, through critical research and analysis, the place of sports within the larger culture. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). S/NC.

ENGL 1190F. My So-Called Life: The Art of the Literary Memoir.

The literary memoir offers students inspiration and warning as to the possibilities and limits of using their own experience as text. We study personal essays, narratives, and prose poems by a variety of writers. Advanced writers only. Writing sample required on first day of class. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Instructor permission required. S/NC.

ENGL 1190G. Science as Writing, Scientists as Writers.

For the advanced writer. Investigates the ways science, scientists, and science-related issues have been represented in fiction and nonfiction written for general audiences. Writing assignments include an informal online journal, literary/cultural analyses, fiction or personal essay, and scientific journalism. Readings from literary, journalistic, and scientific writers. A background in science is useful but not required. Science and humanities students welcome. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisite: ENGL 0130, 0160, or 0180. Banner registrations after classes begin require instructor permission. S/NC.

ENGL 1190H. Writing Science, Writing the Sacred.

Explores the relationships between two dominant intellectual paradigms—science and religion—and asks students to respond by writing their own "sacred" and science-related texts. Genres to read and write will be poetry and critical/literary nonfiction.

Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190I. Writing the Southeast Asian War.

It was the Vietnam War, the American War, the Southeast Asian diaspora. By reading varied genres responding to the experience of the war in Southeast Asia and its aftermath, we will study how any experience is multitudinous and how genres manipulate experience in different ways. Analysis and practice of memoir, fiction, poetry, and oral history.

Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190J. African American Language, Literacy, and Culture.

In this course, we will explore the social, educational, and political implications of AAL in the 21st century. Our task is threefold: we will 1) examine AAL semantics, syntax, phonology, and morphology, 2) identify underlying historical and socio-economic forces responsible for shaping AAL, and 3) explore the impact of AAL within Black speech communities and U.S. and global popular culture. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190K. Literary Biography.

For the advanced writer. How does one narrate the twists and turns of a life while simultaneously doing justice to whatever literature the subject managed to produce as he or she plodded through each day? We will examine examples of literary biographies for, among other things, voice, form, and research methods. Students will be required to produce their own pieces of literary biography. Prerequisite: ENGL 0130, 0160, or 0180. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor permission. Enrollment limited. S/NC.

ENGL 1190L. Creative Nonfiction: Practice and Criticism.

For advanced writers. What is Creative Nonfiction? Writers have flocked to it; scholars have questioned it. Does it harm the truth? Is it narrative with too much "I" and too little "Eye"? What makes it significant? To help us explore persistent questions about form, point of view, method, and ethics, readings will include historical examples, recent practitioners, editors, and critics. Intensive reading responses, research, drafting, and revision. Two critical essays; one piece of creative nonfiction. Prerequisite: ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190M. The Teaching and Practice of Writing: Writing Fellows Program.

Do you enjoy talking about language and writing, value giving feedback on others' writing, and want to learn more about inclusive writing pedagogy? This course introduces students to writing theory and pedagogy, best practices to support revision habits for experienced and inexperienced writers, and effective methods for responding to writing in synchronous and asynchronous formats. Toward the end of the semester, students who successfully complete the course will have the opportunity to apply for paid employment with the Writing Fellows program.

ENGL 1190N. Brown: Writing the Archive.

The archives at and around Brown are primary sources for discovering stories—institutional, historical, personal—of our life across time through local history, personal memory, biography, and cultural critique, combining scholarship, media, and the arts. What opportunities for new writing lie behind doors to be opened across the street? Writing sample required.

Prerequisite: ENGL0130, 0160, 0180, or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190P. The Art of Memoir in Theory and Practice.

The course introduces students to the historical and theoretical nuances of memoir. You will critically engage with a variety of readings and develop an appreciation of your creative role as a memoirist. In the process of crafting a portfolio of work you will explore the complexities of remembering and experiment with the style of narrative voice and structure. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190Q. The Essay.

This course offers a feel for the essay and its versatile range, from the informative to the personal to the philosophical. We will study tone and style, meaning, beginnings and endings, and use of historical and personal information. Our focus will be on the craft of writing rather than on literary criticism. Readings include essays by two dozen accomplished writers. Writing sample required. Prerequisite: ENGL 0110, 0130, 0160, 0180, or any 1000-level nonfiction writing course. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190S. Poetics of Narrative.

Narratives are everywhere, simply there, like life itself, Roland Barthes says; we structure our experiences with narratives that we either infer or create. We will read different literary genres to see how narratives work and what makes them poetic and read theoretical texts to understand narrative function and performance. We will write experimentally to experience how stories are constructed. Pre-requisites: ENGL 0900, 0930, or any 1000-level nonfiction writing course. S/NC.

ENGL 1190T. Writing the Mythic Life: The Use of Traditional Narrative.

This course explores the theory and practice of traditional narrative structures such as fairy-tale, myth, and legend in creating stories about ourselves. We will read fiction and nonfiction by Tolkien, C.S. Lewis, A.S. Byatt, and others, engaging critically with the texts as well as creating new ones modeled on them. Writing assignments will include several short papers and a longer end-of-term project. Writing sample required. Prerequisite: ENGL 0900, 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190U. Nature Writing.

This course seeks to develop your skills as a sensitive reader and writer of the natural world. You will build a portfolio of revised work through a process of workshops, tutorials, and conferences, and engage in discussion of a range of written and visual narratives with reference to their personal, political, and ecological contexts. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190W. The Fiction of Nonfiction.

Nonfiction texts are fictions in that they deploy the devices of fiction (pacing, voice, etc.), but even more so in that they are constructs (they're in-formed and made up). In this seminar we will revel in the architectonic of good nonfiction writing. Upending the myth of "objectivity," we will read as if writing mattered, and write as if reading did.

Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190X. Nonfiction Now.

Nonfiction Now introduces students to contemporary nonfiction writing through in-person exposure to professional writers, who will visit the course to deliver a craft lecture, read from their latest work and discuss the labor that goes into maintaining a professional writing life. Students will be expected to read the work of the visitor and produce creative work in response. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 30 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190Y. Editing as Revision.

This fully gamified course, organized by historically-based writing guilds and their competitors in bookselling, introduces students to content, copy, and proofs editing as revision praxis. Students will edit publishable texts inside an imaginative game-world, learning editing strategies that help expert authors revise scholarly nonfiction—strategies students will find useful in working with their own writing as well. Class will be capped at 17. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. Open to juniors and seniors only. Instructor permission required. S/NC.

ENGL 1190Z. The Art of Craft.

What can traditional crafts teach us about our writing? How does building a house or stitching a quilt help us appreciate the ways we can build creative texts? We will consider such questions to help us reflect on our writing as a craft, to invest the key tenets of craft in our writing process, style, and form, and to forge an innovative portfolio of work of which we can feel justly proud. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Instructor permission required. S/NC.

ENGL 1191A. The Poet & The Press Release: Rhetoric of Social Change.

We will consider the role of rhetoric, writing, and public narrative in social and political movements through a lens that draws from critical race theory and intersectionality, literary theory, and anti-racist pedagogy. We will read contemporary thought on topics including the politics of literary craft, rhetorics of public writing, epistemic positioning, representation of race and gender, and rhetorical construction of social issues. We will analyze a range of public writing: organizational mission statements, reports, and fundraising appeals; media representations of social and political movements; political statements and policy positions, to ask: What impact does rhetorical framing have on how we address social issues? What are the limitations and possibilities for organizations that construct social justice discourse? How can we intentionally and ethically use rhetoric and writing skills to advance social change?

ENGL 1191B. Special Topics in Nonfiction Writing: Fugitive Letters: The Prison Notebooks.

U.S. carceral spaces are often sites of prolific writing and intellectual production. Yet letters composed by incarcerated individuals have been largely excluded from critical public conversations about institutional racism and prison reform. In this course, we will consider the prison letter as an important genre for racial, social, and economic justice. We will examine rhetorical choices made by prison writers to agitate, posit grievances, assert arguments, and advocate for institutional change. With this insight, we will exchange letters with prison reform activists currently or formerly residing in carceral facilities in the United States.

ENGL 1191C. Everyone's a Critic: Writing about Art & Culture.

With the rise of social media and online self-publishing platforms, everyone can be a critic, but not everyone's perspectives shape the larger cultural conversation. In the mainstream, we've seen a groundswell of creative production by artists, writers, and makers of color, but the profile of professional cultural critics remains predominantly white and male. And it's not the identity of the critic in itself that is at issue, but that established critics tend to be unfamiliar with the artistic, intellectual, and conceptual ideas that animate the work of many contemporary non-white artists. In this course, we will read and analyze cultural criticism that centers marginalized perspectives, and illuminates aesthetics and creative practices that engage with race, indigeneity, gender and queerness. We will identify and practice interpretive strategies that resist and re-contextualize dominant ideas of cultural value.

ENGL 1191E. Genre Bending.

In this advanced seminar we will examine and produce works of literary art that challenge our definition of genre. We will begin our exploration of genre bending by honing our powers of observation, conversation, and research through a series of guided activities designed to deepen our understanding of various people and places (real and imagined) from which our literary projects spring forth. While we work on building out our own personal, soon-to-be-bent, archives, we will simultaneously read contemporary works of literature from those known for their reckless regard of traditional genre boundaries: Layli Long Soldier, C.D. Wright, Valeria Luiselli, Jessie Ball, Claudia Rankin, Kathryn Scanlon, Alex Marzano-Lesnavitch among others.

ENGL 1200. Independent Study in Nonfiction Writing.

Tutorial instruction oriented toward some work in progress by the student. Requires submission of a written proposal to a faculty supervisor. Section numbers vary by instructor. Instructor permission required. S/NC.

ENGL 1310A. Firing the Canon: Early Modern Women's Writing.

Rediscovery and reconsideration of works by early modern women have changed the literary canon; these once-neglected works are becoming mainstream, and they are changing the way we read 'traditional' texts. The reading in this course includes poetry, letters, drama, essays, fiction, and life-writing by authors including Lanyer, Wroth, Cavendish, Behn, Manley, Haywood, Scott, and Montagu.

ENGL 1310B. American Degenerates.

Colonial British-Americans were called, among other names, monstrous, wild, impotent, and grotesque. They could not, it was said, produce writing worth reading. We will explore the ways in which American writers embraced and/or challenged these charges of cultural and bodily degeneracy. In the process, we will examine the development of modern notions of literature and identity. Students should register for ENGL 1310B S01 and may be assigned to conference sections by the instructor during the first week of classes.

ENGL 1310C. Arguments of Form in Renaissance Poetry.

In the literatures of the European Renaissance, stylistic innovation is a marker of cultural change. The production of sonnets, of neoclassical epigrams, and of poems aspiring to be Ovidian or Vergilian opens up a theoretical space for arguments about faith, thought, words, the self, and society. Readings from Wyatt, Surrey, Gascoigne, Spenser, Sidney, Shakespeare, Donne, Jonson, Milton, and others.

ENGL 1310D. Between Gods and Beasts: The Renaissance Ovid.

Ovid's *Metamorphoses*, an epic compendium of classical myths, narrates with wit and pathos the transformations of body and mind wrought by sexual passion. Central to Renaissance conceptions of the human, it inspired drama, poetry, and narrative. Readings: Shakespeare, Marlowe, Donne, Spenser, Milton.

ENGL 1310E. Border Crossings in Renaissance Drama.

Investigates how distant peoples and places, from Ireland to the West Indies, from East to West, are constructed for the English stage. We will read Marlowe's *Tamburlaine*, Fletcher's *Island Princess*, Heywood's *Fair Maid of the West*, the anonymous *Stukeley* play, Shakespeare's *Othello*, and Daborne's *A Christian Turned Turk* to observe what dangers and freedoms these plays ascribe to specific geographies.

ENGL 1310F. Early Modern Utopias.

Why does the early modern period witness a flourishing of utopias from More to Milton? We will explore this question, in reading a range of utopias by writers such as Montaigne, More, Raleigh, Bacon, Hall, and Cavendish, engaging them not just as visions of ideal societies, but as efforts at reform of England and Englishness.

ENGL 1310H. The Origins of American Literature.

Where does American literature begin? Can it be said to have a single point of origin? Can writings by people who did not consider themselves American be the source of our national literary tradition? Does such a tradition even exist and, if so, what are its main characteristics? How does one understand the various diverse traditions that constitute American literature, including African-American, Native American, and many others, into a single object of study—or does one even need to? Authors may include de Vaca, Anne Bradstreet, Benjamin Franklin, and Phillis Wheatley.

ENGL 1310J. Imagining the Individual in Renaissance England.

How did the men and women of 16th- and 17th-century England apprehend themselves as individual human subjects? In relation to the law and the state? As creatures of God? As humanists interrogating the texts of the past? Readings include works by More, Machiavelli, Hobbes, Wyatt, Erasmus, Luther, Tyndale, Askew, Hooker, Hebert, Donne, Browne, de Montaigne, Ascham, Jonson, and Herrick.

ENGL 1310N. Renaissance Drama.

An introduction to the great classics and some less-known gems of a stellar period in English drama. Plays by Marlowe, Jonson, Webster, Middleton, and Ford, in the context of urban culture, English nationhood, gender and sexuality, playhouses and playing companies, and forms of theatricality.

ENGL 1310O. Restoration and Early Eighteenth-Century Literature.

A survey of writing and cultural history in England between 1660 and 1750, emphasizing innovation and experimentation in drama, satire, poetry, and fiction. Readings include work by Behn, Rochester, Swift, and Defoe.

ENGL 1310S. Women and the Book in the Middle Ages.

We will read texts authored by medieval women such as Marie de France, Marjorie Kempe, Julian of Norwich, and Christine de Pizan, and we will explore other textual roles of women, including book ownership and patronage, translation and scribal transmission. The result? A complex picture of mediated and mediating female participants in manuscript culture. Some readings in Middle English.

ENGL 1310T. Chaucer.

Texts in Middle English by Geoffrey Chaucer including the romance *Troilus and Criseyde*; dream vision poems *Book of the Duchess*, *House of Fame*, and *Parliament of Fowls*; Chaucer's translation of Boethius's *Consolation of Philosophy*; his shorter poems; and two Canterbury Tales. Prior knowledge of Middle English not required. Not open to first-year students.

ENGL 1310U. Monsters, Giants, and Fantastic Landscapes in Early American Literature.

Monsters, giants, "exotic natives," and unknown continents fill the pages of early American writing. Examines how the well-known and obscure writers of early America used the strange and the fabulous to suggest new ways of being normal.

ENGL 1310V. Chaucer: The Canterbury Tales.

Middle English narratives by Geoffrey Chaucer's band of fictional pilgrims, read in their 14th-century historical and literary contexts. Prior knowledge of Middle English not required. Not open to first-year students.

ENGL 1310W. English Poetry and the Renaissance.

The names of Spenser, Sidney, Shakespeare, Donne, Jonson, Milton, and other poets inscribe a golden age of poetry in the cultural mythography of English-language literature. Who are these poets and what stories are told about them? In their time? During the long eighteenth century? By Wordsworth and Browning? By Eliot, the high modernists, and postmodernists?

ENGL 1310Y. Besides Paradise Lost: Milton's Other Poems.

A study of Milton's lyric and dramatic poetry, including the sonnets, Latin poems, *L'Allegro*, *Il Penseroso*, the Nativity Ode, *Lycidas*, *Comus*, the verse epistles and *Samson Agonistes*.

ENGL 1310Z. Three Great Poets: Shakespeare, Donne, Milton.

We will study these premier Renaissance poets from all angles possible, to understand the historical situations and political issues that shaped their writing, the authors and ideas that influenced them, the traditional forms they appropriated for new purposes. Most of all, we will study them to appreciate the power of poetry as a source of knowledge and inspiration. It is recommended that students should have already taken a course in reading poetry, such as ENGL0910A How to Read a Poem or ENGL0400A Introduction to Shakespeare. Students who have taken ENGL0210E may not register for this course.

ENGL 1311A. Milton's Paradise Lost: Poetry and Belief.

Milton, Blake wrote, was of the devil's party without knowing it, and this course offers close reading of the language of *Paradise Lost* as poetry of belief: how does the poetry of Milton's major poem embody belief and doubt for him, in history, and for his readers?

ENGL 1311B. Medieval Zoographies and the Origins of the Human.

This course engages with medieval texts and contemporary theory to attempt to understand the shifting boundaries between humans and animals, as we examine the premodern roots of the discussion over what it has historically meant to be human, and what might come next. Topics will include beast fables and epics, nature and artifice, emotions, the soul, simulacra, sacrifice, and hunting.

ENGL 1311C. Milton.

A close examination of the poetry and prose of John Milton, from the early lyrics to the polemical prose writings of the 1640s and 50s, to the masterpieces *Paradise Lost*, *Paradise Regained*, and *Samson Agonistes*. Not open to first-year students.

ENGL 1311E. History of the English Language.

Provides an introduction to the study of the English language from a historical, linguistic, and philological perspective, and an overview of the study of the "Englishes" that populate our globe. While providing students with the ability to identify and explain language change through historical periods, also examines language as a social and political phenomenon.

ENGL 1311G. Shakespeare, Love and Friendship.

Shakespeare portrays friends who are compared to a "double cherry"; a lover who wants to cut her beloved out in little stars; and subjects who sweat with desire to see their kings. How does Shakespeare imagine the possibilities and pitfalls of affection, whether personal or political? What happens to that affection when Shakespeare is adapted into film?

ENGL 1311H. Sagas Without Borders: Multilingual Literatures of Early England.

This course traces evolutions of the hero in Old English, Norse, Welsh, and Irish narratives within and around early medieval England. Introduction to genres of saga, romance, and the short poetic lai, as students consider how the nature of the hero changes in specific cultural and linguistic moments. Texts in modern English translation. Essays will focus on close textual readings. Not open to first-year students.

ENGL 1311L. From Mead-Hall to Mordor: The Celtic and Germanic Roots of Tolkien's Fiction.

This course traces the sources used by J.R.R. Tolkien in writing *The Hobbit* and *The Lord of the Rings*, including tales drawn from Old English, Norse, Welsh, and Irish literatures. You will be introduced to different medieval genres as you consider how the nature and gender of the hero change in specific cultural and linguistic moments.

ENGL 1311M. Renaissance Poetry and Its Kinds.

English poetry from 1500-1650 traces a revolutionary arc of poetic invention remarkable for diverse individual voices and literary kinds. Forms such as lyric, heroic, pastoral, satiric, epistle, and epigram embraced concerns that were at once affective, political, and religious. How does this variety constitute literature? Wyatt, Surrey, Raleigh, Spenser, Sidney, Marlowe, Donne, Jonson, Herrick, Herbert, Crashaw, Milton.

ENGL 1311N. England and the Renaissance.

New approaches to Latin and Greek letters—the studia humanitatis—that flourished in 14th century Italy rapidly emerged in England in the early 16th century. What does it mean to claim that England had a renaissance? Texts include More's *Utopia* and *Richard III*, Erasmus's *Praise of Folly*, Ascham's *Scholemaster*, poetry from Wyatt and Surrey through Jonson, Donne, Herrick, and Milton.

ENGL 1311P. Medieval Drama.

What were plays in England like before the professionalization of theater? Who starred in them, where were they staged, what were they about-- and what's that sheep swaddled in baby clothes doing in that woman's cradle, anyway? In this course, we will explore works of early English drama, thinking through issues such as the relationship between miracle and stage magic, the place of performance in civic life, and the complicated and ever-flexible role of Christianity in the Middle Ages as expressed through literature. The semester will end with a hands-on staging of a medieval play, as produced entirely by the class; students will be able to contribute to this in whatever way they choose. No previous experience of medieval literature or theatrical performance necessary.

ENGL 1311Q. Medicine and Disability in Shakespeare and Early Modern Drama (COLT 1411F).

Interested students must register for COLT 1411F.

ENGL 1360A. The Stage as Globe in Renaissance Drama.

Investigates how distant peoples and places, from Ireland to the West Indies, from East to West, are constructed for the English stage. We will read Marlowe's *Tamburlaine*, Fletcher's *Island Princess*, Heywood's *Fair Maid of the West*, the anonymous *Stukeley* play, Shakespeare's *Othello*, and Daborne's *A Christian Turned Turk* to observe what dangers and freedoms these plays ascribe to specific geographies. Enrollment limited.

ENGL 1360B. Inventing Britain.

Focuses on the internal colonization of the British Isles as represented by chronicle histories, drama, masques, and epic and lyric poetry: How do the English define themselves as a center striving to incorporate the British periphery? Authors may include Spenser, Shakespeare, King James I, Bacon, Jonson, Milton, and Marvel.

ENGL 1360C. Language and Form in Shakespearean Studies.

Shakespeare's poems and plays are a working dictionary of early modern English and an inventory of the possibilities of formal invention in early modern culture. How can we reach a historically informed awareness of form and formality in Shakespeare? What is the history of formalism in Shakespearean studies? What new modes of inquiry issue from questions of form?

ENGL 1360D. Medieval Manuscript Studies: Paleography, Codicology, and Interpretation.

How to read a medieval manuscript. Students will learn to transcribe and date 5th- through 16th-century scripts in Old and Middle English and some Latin texts, and will learn about interpretive methods. Prior course work in Middle English recommended, and acquaintance with Latin and/or Old English and/or Old French and/or medieval Spanish helpful.

ENGL 1360F. Quest, Vision, Diaspora: Medieval Journey Narratives.

Medieval texts explored ideas of self, love, rite-of-passage, spirituality, and group identity through narratives of travel, both imagined and real. We will read romance quests that foray to fairylands and wastelands, visionary journeys to hell, pilgrimages of self discovery, an epic exodus that founds King Arthur's nation, and a 14th-century round-the-world travelogue. Chaucer, Malory, Kempe, Mandeville, Layamon, Anonymous. Middle English readings. Not open to first-year students. Enrollment limited.

ENGL 1360H. Introduction to the Old English Language.

This course offers a thorough introduction to the earliest period of English language and literature. We begin with an extensive coverage of grammar and syntax before reading short texts and a few Old English poems, including *The Battle of Brunanburh* and *Judith*. Enrollment limited to 20.

ENGL 1360J. Middle English Literature.

In the age of Chaucer, literature in Middle English ranged from lyrics to romance narratives to mystery plays and medieval genres like dream visions and debate poems. This course will introduce students to reading texts like *Sir Gawain and the Green Knight* and *The Owl and the Nightingale* in their original Middle English. No prerequisites. Not open to first-year students. Enrollment limited to 20.

ENGL 1360K. Shakespeare and Company.

Shakespeare belonged to a community of actors and playwrights who competed for audiences in a fledgling entertainment industry. How do his plays compare to those of Marlowe or Jonson, Middleton or Webster? Reading Shakespeare in tandem with his contemporaries, we will consider the genres, sources, styles and conventions they shared, the issues that concerned them, and their differing artistic perspectives. Prerequisite: ENGL 0310A or equivalent. Enrollment limited to 20 juniors and seniors.

ENGL 1360M. Spenser, Milton, and the Politics of the English Epic.

We will read the literary and political writings of England's two major authors of epic -- Spenser and Milton -- assessing their investment in contemporary debates about nation and conquest, rule and liberty, and sexuality and selfhood. Along with the major poems, we will read these authors' shorter literary and political writings.

ENGL 1360N. Shakespeare and European Culture.

How do Shakespeare's works embody and transform the cultures of Europe? What is his relationship to ancient Greece and Rome? To the moral and political philosophies of the sixteenth century? To contemporary literary fashion?

ENGL 1360O. The Ties that Bind: Renaissance Revenge Plays.

From revenge plays to domestic tragedies, family is a value to kill and die for in Renaissance drama. This course considers the cultural pressures such violence responds to, the contaminations it guards against, and explores the political life of these violent domestic affairs. Works by Kyd, Shakespeare, Heywood, Webster, and Middleton. Not open to first-year students. Enrollment limited to 20.

ENGL 1360P. Shakespearean Tragedy.

We will read in depth early, middle and late tragedies by Shakespeare, attending to the genre as understood in the Renaissance and as Shakespeare developed it, along with critical readings that explore tragic form. Oral presentations, short papers, and a final research paper. Prerequisite: ENGL 0310A or equivalent. Enrollment limited to 20 juniors and seniors.

ENGL 1360R. Modernism and the Early Modern: 17th-Century.

Did human nature become modern in the seventeenth century or did modern people just think so? This course will study style, science, politics and cultural transactions in this period of revolution and restoration, examining such texts as Donne's satires and epistles and Eliot's high modernist essays on the division of human nature in this period. Enrollment limited to 20.

ENGL 1360S. Between Gods and Beasts: The Renaissance Ovid.

Ovid's *Metamorphoses*, an epic compendium of classical myths, narrates with wit and pathos the transformations of body and mind wrought by sexual passion. Central to Renaissance conceptions of the human, it inspired drama, poetry, and narrative. Readings: Shakespeare, Marlowe, Donne, Spenser, Milton. Students who have taken ENGL 1310D may not register for this course. Enrollment limited to 20.

ENGL 1360T. Eco-Shakespeare.

Do Shakespeare's plays register and respond to the ecological crises of his day, including deforestation, land enclosure, climate change, and animal exploitation? Or, are they complicit in the ideologies that instated these practices? What kind of relation do Shakespeare's plays envision as underpinning the natural and the cultural realms and how does this differ from modern conceptions? We will seek answers to such questions by considering the plays' use of pastoral tropes and green worlds, but also by analyzing the inter-animating dynamics they stage between subject and environment. Enrollment limited to 23. Not open to first-year students.

ENGL 1360U. Europe in the Vernacular.

Why did a few early medieval European authors write not in Latin or Arabic but in vernacular languages like Castilian, Early Middle English, Old Icelandic, or Old French? We will read primary texts by Layamon, Alfonso X, Dante, troubadours and anonymous others, and assess previous claims about the "rise of the individual" and various proto-nationalisms as we rewrite the story of how, why, and for whom multilingual vernacular writings came to be. Readings in modern English supplemented by medieval languages. Enrollment limited to 20 students. Not open to first-year students. Sophomores require instructor permission to register.

ENGL 1360X. Seventeenth-Century English Lyric Poetry.

This seminar examines in depth four poets—Donne, Jonson, Herbert, and Crashaw—from one of the richest and most daringly experimental periods of English poetry. We will also consider poems by other important seventeenth-century authors, including Herrick, Suckling, the Earl of Rochester, Katherine Philips, and Aphra Behn. Our discussions will treat these poets in various early modern literary and cultural contexts. Since much of the period's most famous lyric poetry is love poetry, the course will be particularly concerned with literary expressions of erotic desire. We'll also consider the affective cross-affiliations between amorous and religious devotion in the period. Other topics include: the history of the lyric; libertinism; ecstatic experience and expression; the relations between body and soul; Renaissance notions of authorship and the literary career; and the "metaphysical conceit," in both the age of Donne and our own.

ENGL 1360Z. Shakespeare and Embodiment.

Consideration of a number of Shakespearean texts including the erotic narrative poem "Venus and Adonis," the early revenge drama *Titus Andronicus*, the history *Henry IV, pt. 1*, the tragedy of *Othello*, among others, and their various representations of the body: as subject to violence, gender and desire, sovereignty and history. Attention to Shakespeare's rewriting of Ovid, novelle, and chronicle history. Enrollment limited to 20. Not open to first year students.

ENGL 1361A. Fantasies of Milton.

Paradise Lost has served as the basis for numerous fantasy novels. Even *Comus* has become a (supposedly inappropriate) children's story. How can a seventeenth-century poet's treatment of temptation, disobedience, reason and self-regard come to seem relevant in the present? What do contemporary writers feel compelled to preserve and to change? How might we reimagine Milton? Enrollment limited to 20.

ENGL 1361D. Women's Voices in Medieval Literature.

This course explores literary works from the early medieval period, both literature by women and literature that represents women's voices and desires. Traditions examined will include the Old and Middle English, Norse, Welsh, and Irish. The course provides insight into the construction of premodern sexualities as well as into the cultural and social histories of multiple national traditions.

ENGL 1361F. Spenser and Shakespeare.

A comparative study of theme, form, and genre based upon paired works: Shakespeare's *Sonnets/Amoretti*; *Faerie Queene I/King Lear*; *Faerie Queene III/Twelfth Night*, *Midsummer Night's Dream*, *Winter's Tale*, *Tempest*, *Venus and Adonis*; *Shepherd's Calendar/As You Like It*. Weekly short interpretative exercises (250-500 words) submitted as CANVAS discussions; draft (1250 words) and final essay (3000 words). Enrollment limited to 20.

ENGL 1361G. Tolkien and the Renaissance.

This course explores the work of J.R.R. Tolkien alongside Renaissance forbears such as Shakespeare, Spenser, Milton and others. Topics to include love and friendship, good and evil, violence and nonviolence, and how literature offers distinctive forms of life. Enrollment limited to 20.

ENGL 1361J. Seminar in Old Norse-Icelandic Language and Literature.

This course offers a thorough introduction to a language both closely related to Old English and in which survives one of the richest medieval literatures. We will start with an extensive coverage of grammar and syntax before reading short excerpts from sagas including *Egil's Saga* and *Grettir's Saga*. Enrollment limited to 20; knowledge of Old English, Latin, or German advised.

ENGL 1361K. Seminar in the Old English Language II.

This course continues the work of Introduction to the Old English Language, which is a prerequisite. We will translate short poems including *The Wanderer* and *The Wife's Lament* and possibly make inroads on *Beowulf*, while exploring history, cultural context, and changes in Old English studies. Projects include a midterm examination, research presentation, and final paper, as well as daily translations. Enrollment limited to 20.

ENGL 1361L. Milton.

A recent book provocatively asked: "Is Milton better than Shakespeare?" Whatever one makes of that question, Milton wrote extraordinary poems in the principal modes of Renaissance verse. This course studies in detail many of those works, including the culturally monumental *Paradise Lost*. We'll also take into account the shape of Milton's authorial career and his always interesting ways with genre. Enrollment limited to 20 juniors and seniors.

ENGL 1361P. Shakespeare's Girls.

From his witty comic heroines to his misogynist stereotypes, Shakespeare's relationship to the "woman question" has long been debated. Taking Shakespeare's plays and poems alongside key texts from feminist reception history, this course asks: what can Shakespeare teach us about feminism? And what can feminism teach us about Shakespeare? We will address issues including race, power, sexuality, and the body.

ENGL 1361Q. Medieval Race.

In this course, we will explore the historically specific contours of race in England and interrelated cultural regions during the High and Late Middle Ages, as well as learn and practice how to read Middle English. No previous knowledge of medieval literature or Middle English necessary. Not open to first-year students. Enrollment limited to 20.

ENGL 1380. Undergraduate Independent Study in Medieval and Early Modern Literatures.

Tutorial instruction oriented toward a literary research topic. Section numbers vary by instructor. Instructor permission required.

ENGL 1510A. Jane Austen and Her Predecessors: The Other History of the Novel.

This course focuses on the novels of Jane Austen — from *Sense and Sensibility* to *Persuasion*. The course first establishes some familiarity with the earlier women writers of narrative fiction, in order to gain a deeper understanding of the development of the novel and of Austen's place in that rich tradition. Additional readings include work by Aphra Behn, Eliza Haywood, Charlotte Lennox, Elizabeth Inchbald, and Mary Wollstonecraft.

ENGL 1510B. Liberalism and American Culture.

A course in the relationship between the rise of liberalism and American literary history. Writings from Franklin, Jefferson, Emerson, Fuller, Rowson, Twain, and Charlotte Perkins Gilman.

ENGL 1510D. The Literature of the American South.

The South is as much a state of mind as a place on the map, and some of the major figures in American literature have contributed to the making of what we think of when we think of "the South." Explores sometimes contradictory but always important meanings of the American South. Authors include Poe, Douglass, and Twain.

ENGL 1510E. American Renaissance.

An intensive reading in American literature between 1820 and 1860, with special attention to Romanticism, race and slavery, and the historical novel.

ENGL 1510H. Why the Novel Happened.

Readings in "early" novels of 18th-century England and in more recent explanations of the novel's rise to dominance as a popular modern genre. How have changing ideas of truth, virtue, gender, money, politics, history, or the human subject interacted with the practices of narrative fiction? Writers to be considered include Behn, Haywood, Defoe, Richardson, Fielding, Sterne, Lewis, Watt, Lukacs, McKeon, and Bakhtin.

ENGL 1510I. The Novel from Defoe to Austen.

How and why did the novel become the dominant literary mode? This course considers the "rise" of the novel during the "long" eighteenth century. Beginning with Behn and Defoe, readings include works by Richardson, Fielding, Sterne, Smollett, Lewis, and Godwin.

ENGL 1510J. Eighteenth-Century Women Writers.

Rediscovery and reconsideration of works by women during the eighteenth century are changing the literary canon: works by women are becoming mainstream, and they are changing the way we read 'traditional' texts. This course includes poetry, drama, fiction, letters, diaries, and essays by writers including Manley, Haywood, Centlivre, Scott, Fielding, Montagu, Sheridan, Burney, Radcliffe, and Wollstonecraft.

ENGL 1510L. Fiction and Mass Media in Nineteenth-Century England and America.

Explores critiques of the mass media from Carlyle and Arnold to Benjamin and McLuhan by way of a reading of important works of popular Anglo-American fiction of the 19th century. Criticism includes essays by Carlyle, Arnold, Benjamin, and McLuhan; literature includes fiction by Poe, Dickens, Melville, Stevenson, and James.

ENGL 1510M. From Melville to Modernism: The American Novel 1851-1909.

A survey of American fiction in the latter half of the nineteenth century. We will examine the ways narrative form helped shape modern America's increasingly fractured sense of identity, focusing specifically on questions of imitation and authenticity, race and nationalism. Writers will include Twain, Stein, Wharton, Crane, Chopin, and Chesnutt.

ENGL 1510O. Inventing Race in America.

What is "race"? Where does it come from? This course argues that categories of racial difference—far from being fixed or natural—have emerged from within writing. We trace the emergence of "race" in America from the late 16th century to the present day by reading 17th-century British colonial writing, 18th-century racial scientists, Jefferson, Crèvecoeur, Melville, Faulkner, Mukherjee, and Silko.

ENGL 1510R. Location and Dislocation in the Late Nineteenth-Century American Novel.

Focuses on the two dominant literary modes of the late 19th century: realism and naturalism. We try to generate working definitions of these two methods in order to understand the ways narrative form shaped Americans' increasingly fractured sense of identity. Writers include Twain, James, Crane, Cahan, Jewett, Chopin, and Chesnutt.

ENGL 1510S. Pre-Raphaelites, Aesthetes, and Decadents.

Looks at both Pre-Raphaelite literature and painting, and the reading includes Browning, the Rossettis, Morris, and Swinburne. The painters include both early hard-edge photographic Pre-Raphaelites and the erotic medievalism of Rossetti, Burne-Jones, and the followers. The course will focus on the tensions in Pre-Raphaelitism between realism and fantasy, fact and symbol, body and spirit.

ENGL 1510T. Swift and His Contemporaries.

Swift's works are central to this course's investigation of literature, politics, and society, Anglo-Irish relations, and the great outpouring of satire in English in the early 18th century. Irony, parody, and mock-heroics inventively transform genres while challenging "abuses" of learning, government, religion, colonialism, and even love. Other writers include Congreve, Manley, Addison, Steele, Montagu, Pope, and Gay.

ENGL 1510V. Civil Rights and American Literature.

An examination of the relations between legal theory and practice and literature, with a particular emphasis on the nature and significance of those relations in the historical development of American discourses of civil rights. Readings include Thoreau, Douglass, Wright, and Perry, and legal theorists such as Dworkin, Unger, Cardozo, and Fish.

ENGL 1510W. George Eliot.

The course will study George Eliot's major works, including *Adam Bede*, *Middlemarch*, and *Daniel Deronda*, as well as examples of her essays and criticism. We will consider her experiments with literary realism, which helped secure for the novel form a position as high art. Giving attention to George Eliot's emphasis on conflicting ethical systems, from sympathy, utilitarian economics, and theology, to theories of physiological necessity, we will also examine the question of choice—including personal, women's social, professional, and marriage choices—that lies at the heart of many of her novels.

ENGL 1510X. The Early American Novel.

A reading of diverse genres of the early American novel, between 1790 and 1860, including the seduction novel, frontier romance, historical fiction, and the antislavery novel. What was the novel's cultural role? Writers include Susanna Rowson, Brockden Brown, Hawthorne, Stowe, and William Wells Brown.

ENGL 1510Z. The Realist Age: American Literature at the Turn of the Century.

What do we mean when we call a novel realistic? When did the term first start being used, and why? This class attempts to answer these questions by studying the emergence of realism as the dominant American literary form at the turn of the century. Writers will include Mark Twain, Henry James, Stephen Crane, Edith Wharton, and Charles Chesnutt.

ENGL 1511A. American Literature and the Civil War.

An examination of the way the Civil War is represented in American literature from Reconstruction to the present. Authors to be considered include Grant, Twain, Dixon, Chesnutt, DuBois, Faulkner, Morrison, Ellison.

ENGL 1511B. The Victorian Novel.

Challenges the notion of a Great Tradition or mainstream Victorian novel by looking at the proliferation of subgenres—e.g., sensation fiction, crime fiction, thug fiction, colonial adventures stories—for which the period is known. Includes novels by Mary Shelley, the Brontës, Dickens, Mrs. Henry Wood, Eliot, Hardy, Stevenson, Haggard, Stoker, and Wilde.

ENGL 1511C. Lincoln, Whitman, and The Civil War.

A literary and cultural history of the Civil War with special emphasis on Whitman's poetry and Lincoln's addresses and letters. It focuses on issues of race, democracy, and modernity.

ENGL 1511E. Monsters, Giants, and Fantastic Landscapes.

Monsters, giants, and exotic landscapes fill the pages of much writing in English before 1900. We will examine the ways in which a number of writers before 1900 use the strange and the fabulous to suggest new ways of understanding what it means to be normal. Authors may include Columbus, Shakespeare, Mary Shelley, and Poe.

ENGL 1511F. Wordsworth and Coleridge: Lyrical Ballads.

An introduction to and close reading of the *Lyrical Ballads*, one of the most radical and innovative volumes in British Romantic literature. We will pay special attention to the aesthetic, historical, ethical, and political dimensions of the text, patiently working through the poems and prefaces, as well as reading antecedent texts, in order to understand why the book was an experiment for its authors, and what are its enduring effects on our contemporary moment.

ENGL 1511G. Dickens and Others.

An introduction to the novels of Charles Dickens (1812-1870) that considers these works in relation to other important intellectual, historical, and literary developments of mid-19th-century England. Special attention given to the political, social, and philosophical significance of "others" in Dickens's writing and in related works from the period. In addition to a set of Dickens's novels, readings include selections from Mill, Arnold, Marx, Tennyson, Eliot, and others.

ENGL 1511H. Literature of the American Renaissance.

A survey of the major figures of mid-19th-century American literature, with a particular emphasis on how the writers of the period engaged the political and legal issues informing the sectional conflict on the eve of the Civil War. Authors to be considered include Poe, Hawthorne, Melville, Dickinson, Stowe, Douglass, Brown, Jacobs, and Whitman. Students who have taken ENGL 0600F may not register for this course.

ENGL 1511I. Culture and Anarchy.

This course will trace the development of the concept of culture from its origin in conflict generated by the universalizing mission of the Enlightenment into a variety of literary and philosophical writings in 19th-century British literature. Readings from Rousseau, Kant, Herder, Burke, Wordsworth, Percy Shelley, Carlyle, Thoreau, Emerson, Tennyson, Arnold, and George Eliot.

ENGL 1511J. The Rise of American Realism.

Realist fiction is traditionally associated with France (Honoré Balzac, Émile Zola) and England (Jane Austen, Charles Dickens, George Eliot). We will read a number of important American realist writers (including Stephen Crane, Edith Wharton, Henry James, and Theodore Dreiser) in order to understand what might be distinctive about American realism and what it might owe to its European forerunner.

ENGL 1511K. Gothic Novels and Romantic Poems.

The difference between "high Romantic" poetry and Gothic popular fiction blurs when we look closely at these haunted and haunting texts. This seminar will examine some major Romantic poems by Wordsworth, Coleridge, Keats, Shelley, and Byron in tandem with Gothic novels by Ann Radcliffe, Matthew Lewis, Jane Austen, and Mary Shelley.

ENGL 1511L. On Being Bored.

This course explores texts/films that represent and formally express states of non-productivity or non-desire. Beginning with the Enlightenment and romantic periods, we will reflect on narratives with neither progress nor plot, characters that resist characterization, and poems that deny assertion and revelation. Authors include: Kleist, Kant, Rousseau, Coleridge, de Quincey, Keats, Blanchot, Levinas, Beckett, Ashbery, Schuyler.

ENGL 1511M. Victorian Self and Society.

This multi-genre course studies literature and culture of the Victorian period, looking at the changing ideas of society and the individual's place within that larger community in an age of empire, industrialization, urbanization, class conflict, and religious crisis. Topics include conceptions of the role of art and culture in society, the railway mania of the 1840s, women's suffrage and the condition of women, and the Great Exhibition of 1851. Readings (essays, poems, stories, plays, and novels) by Carlyle, Charlotte Brontë, Ruskin, Robert Browning, Dickens, Tennyson, Christina Rossetti, George Eliot, and Lewis Carroll.

ENGL 1511N. Liberalism, Empire, and the American Novel.

An historical consideration of how the novel in the United States addresses the relations between American liberalism and the projection of US sovereign authority into international contexts. Topics to be considered include: Manifest Destiny and the frontier; Reconstruction and the rise of imperial America; World War II and the Cold War; and the United States at the end of History.

ENGL 1511O. American Poetry I: Puritans through the Nineteenth Century.

Survey of the invention and development of American poetic traditions. Readings include Bradstreet, Taylor, Wheatley, Freneau, Bryant, Emerson, Poe, Whitman, Melville, Dickinson, and Frost.

ENGL 1511P. Realism, Modernism, Postmodernism: The American Novel and its Traditions.

This course charts the course of American novel from the Civil War to the present. We will attend to the development of a distinctly novelistic literary tradition in American writing over the period and to the interactions between this tradition of literary novel writing and the emergence commercial novelistic generic forms (ie. the detective novel, science fiction). We will also consider the novel's relations to alternative literary modes (narrative history, the sketch, the short story, the occasional essay) and to alternative media (film, television, music). Melville, Twain, DuBois, James, Fitzgerald, Hammett, Hurston, Wright, Nabokov, Butler, Morrison, Dick, Didion.

ENGL 1511Q. Melville, Conrad, and the Sea.

This class reads a number of the major works of Melville and Conrad in order to ask a number of questions crucial to understanding modern narrative: the relationship between realism and the romance (the sea being both the setting for adventure and a place of work); how, why, and by whom stories are told and passed on (the sea being both the place where 'tall tales' are told and where they are set); the role of the eye-witness (how do you prove you saw what no else has seen). Texts include "Moby Dick," "Billy Budd," "Lord Jim," and "Heart of Darkness."

ENGL 1511R. Scandalous Victorians.

This course examines the literature and culture of Victorian Britain through the lens of scandal. Particular attention will be paid to questions of gender, sexuality, class and social mobility, and national and imperial identity, as well as to the dynamics of scandal and the processes of social change.

ENGL 1511S. The Victorian Novel and/as the History of Sexuality.

Might the modern hetero- and homosexual be Victorian constructions that have really "stuck"? We will explore how the Victorian novel contributed to the cultural labor of joining sexuality to a sense of the self, and then pitched in on the effort to meld romance, love, and sexuality into marital relationships. Domesticity, obsession, heterophobia, the Malthusian unconsciousness, and erotic versus romantic friendship will be some of the issues discussed. We will also branch out into issues of pleasure and desire more broadly in Victorian culture. Authors will include Brontë, Dickens, Eliot, Hardy, Charlotte Yonge, and Wilde.

ENGL 1511T. Victorian Inequality.

From "Dickensian" workhouses to shady financiers, Victorian literature has provided touchstones for discussions of inequality today. This course will investigate how writers responded to the experience of inequality in Victorian Britain. Considering multiple axes of inequality, we will explore topics such as poverty and class conflict, social mobility, urbanization, gender, education, Empire, and labor.

ENGL 1511U. Melville, Poe, and American Modernity.

The class will be guided by the premise that the writings of Poe and Melville reflect mid-19th century modernity. To support this claim we will look into their experimentation with narrative structure and ask whether the absence of clearly delineated characters in their stories is related to the emergence of urban crowds, practices of dehumanization employed in New York and Philadelphia prisons and hospitals.

ENGL 1511V. Nature and the Self in Victorian Poetry.

The major works of Victorian poetry, spanning from the end of the Romantic period to the beginnings of Modernist poetry: roughly 1840 to 1890. We will be reading Matthew Arnold, Robert Browning, Thomas Hardy, Gerard Manley Hopkins, and Alfred Tennyson in detail, as well as critical writing and political poetry from the period.

ENGL 1511Y. Emily Dickinson and the Theory of Lyric Form.

This class examines the extraordinary work of Emily Dickinson in an attempt to understand what lyric poetry is and how it works. We will read a generous sampling of Dickinson's poetry as well as a number of the major theoretical accounts of the lyric. Enrollment limited to juniors and seniors.

ENGL 1512B. Fantastic Tales.

How do we explain the popularity of fantastic narratives in an age dominated by the rise of realism and modern science? Why did shorter supernatural tales flourish alongside the lengthy realistic novels of the nineteenth century? Close readings of short fantastic fiction in American and British literature of this period that confront readers with stories that defy realistic and scientific representation. Themes include horror, the uncanny, the gothic, and ghosts. Also considered will be some film adaptations. Works by Washington Irving, Nathaniel Hawthorne, Edgar Allan Poe, George Eliot, Charles Dickens, Elizabeth Gaskell, Robert Louis Stevenson, Henry James, Oscar Wilde, and H. P. Lovecraft.

ENGL 1560A. Jane Austen and George Eliot.

A survey of the major novels of Austen and Eliot. Readings will also include contemporary reviews and responses, letters, and Eliot's critical prose, as well as literary theory and criticism addressing questions such as novelistic form, realism and narrativity, the problem of the subject, the politics of aesthetics, and the changing status of the woman writer in the 19th century. Enrollment limited to 20 seniors and juniors. Instructor permission required.

ENGL 1560B. Melville.

A seminar looking closely at the relation between the life and literary work of Herman Melville, with an extended reading of his masterpiece, *Moby-Dick*. The course will look at the history of writing and publishing during Melville's era and consider some of his contemporaries like Hawthorne and Harriet Beecher Stowe. Enrollment limited to 20.

ENGL 1560E. The Modern Self and Its Others.

How do eighteenth-century representations of personal and public identity mark the emergence of the modern 'subject' as defined by gender, race, nation, language, and the body? Readings will include selections by Swift, Pope, Montague, Stern, Johnson, and Berney.

ENGL 1560F. Nineteenth-Century American Imperialism.

Examines a number of different types of texts—novels, essays, journalism, oral narratives—in order to trace the connections between the internal colonialism of America in the nineteenth century and U.S. colonial ventures in the Caribbean, Asia, and Latin America. Writers to include Melville, Twain, Marti, Black Elk, Crane, Du Bois, and Roosevelt.

ENGL 1560G. Romantic Orientalism.

Representations of "the East" in British writing and visual art from 1775 to 1825. Historical and theoretical accounts of "orientalism" and analysis of the political and ideological sources and consequences of "orientalist" representation. Readings in Wordsworth, Coleridge, Owenson, DeQuincey, Byron, Percy Shelley, and Mary Shelley.

ENGL 1560H. The Victorian Novel.

What specific historical conditions can be seen to have led to the emergence of the novel as a leading literary form in the Victorian era? What cultural work was it called upon to perform? How does it address broader philosophical, economic, political and social questions of the Victorian era? Authors include Dickens, Eliot, Hardy, Stevenson, and Conrad.

ENGL 1560M. Orientalism and the Place of Literature.

Literary representations of "the East" from the Enlightenment through Modernism and their relation to changing conceptions of the meaning and value of "literature" itself. Thinking about "place" in representational, geopolitical, and institutional terms. Readings from the "Arabian Nights," Mary Wortley Montagu, Oliver Goldsmith, Coleridge, Byron, De Quincey, Kipling, Michael Ondaatje, and others; theoretical and historical perspectives from Said, Williams, Eagleton, and others.

ENGL 1560N. Eighteenth-Century Novel.

The 18th century marks the beginning of the novel as we know it. This course considers the "rise" of fiction during the "long" eighteenth century. Beginning with Behn, Haywood and Defoe, readings include works by Richardson, Fielding, Sterne, Smollett, Lewis, and Godwin.

ENGL 1560O. Slavery and American Literature.

This course examines the ways in which slavery is represented in 19th-century American literature. We will consider efforts to delineate the social practices and effects of chattel slavery and deployments of slavery as a form of political rhetoric. Readings include works by Douglass, Jacobs, Stowe, Melville, Howells, Twain, and DuBois.

ENGL 1560Q. The Poetry of Politics: Baudelaire, Arnold, Whitman.

Explores the special challenge to the traditional form of lyric poetry posed by the post-industrial modern city of the mid-19th century. We will study the poetry and prose of Charles Baudelaire, Matthew Arnold, and Walt Whitman as responses to the urban conditions represented by mid-19th-century Paris, London, and New York. Motifs to be considered include modernity, commodification, and crowds. Priority will be given to junior and senior concentrators in English, Comparative Literature, Modern Culture and Media, and French Studies. First-year students and sophomores may request permission by email to take the course.

ENGL 1560R. From Frankenstein to Einstein: Literature and Science from 1800 to 1950.

Science and literature as interrelated ways of knowing and learning, focusing on questions of language, observation, interpretation, and value. Themes include utopias and dystopias, evolution and degeneration, man and machine, entropy and chaos, and the relationship between literary imagination and scientific creativity. Readings include poems, plays, novels, and essays (Shelley, Arnold, Doyle, Poe, Wells, Kafka, Stoppard) alongside a range of scientific writing (Darwin, Huxley, Freud, Gould, James Watson) and philosophy of science (Popper, Feyerabend, Kuhn). Enrollment limited to 20 juniors and seniors. Banner registrations after classes begin require instructor approval.

ENGL 1560S. Forms of American Realism, 1865-1945.

An inquiry into the nature of realism and an examination of its various historical manifestations—literary, legal, political, and aesthetic—between the Civil War and World War II. Authors to be considered include DeForest, Chesnutt, Twain, Howells, Norris, Gilman, Wharton, Hemingway, Steinbeck, Hurston, and Wright. Enrollment limited.

ENGL 1560T. Literature, Religion, and "Culture Wars" in America.

This course examines important moments where religious and literary histories converge. It reads "classic" American literary works in context of ongoing conflicts between evangelical and secular forces in American life, and it thinks about literature as an arena where these very categories are contested and revised. Major readings will include works by John Winthrop, Benjamin Franklin, Harriet Beecher Stowe, African American women preachers, Emerson, Mark Twain, and Flannery O'Connor. Enrollment restricted.

ENGL 1560U. Radicals and Conservatives: the later 18th Century.

The relationship between literature and society is demonstrated by conservatives like "Dictionary" Johnson as well as by radicals like visionary Blake. Readings include works by Johnson, Boswell, Burke, Gibbon, Sterne, Burney, Wollstonecraft, Godwin, and Blake. Enrollment limited to 20.

ENGL 1560V. The Lives of a Text.

Books are composed not merely of concepts. They are material objects whose forms, functions, and value can vary widely. We will make use of rare editions at the John Hay Library to help us explore both the literary content of works and their production and dissemination in various formats and for various audiences. Authors may include Shakespeare, Poe, and Fitzgerald. Enrollment limited to 15. Not open to first year students.

ENGL 1560W. Getting Emotional: Passionate Theories.

This course examines connections between emotion, feeling, and affect in several key texts from 18th-, 19th-, and 20th-century literatures. We will ask how and why affect becomes a central concept for writers and thinkers in the Enlightenment, and chart the ways in which affect productively opens up onto contemporary theorizations of identity, gender, sexuality, and race. Possible authors include: Wordsworth, Austen, Blake, Equiano, Coleridge, Keats, Shelley, Wilde, Pater, Kant, Melville, Hofmansthal, Hume. Films by Todd Haynes, McQueen, Campion, Frampton. Theoretical readings by Berlant, Ellison, Terada, Deleuze, Stewart. Enrollment limited to 20 juniors and seniors.

ENGL 1560X. Transatlantic America.

What was "transatlantic" culture in colonial and 19th-century America? How did American writers continue to engage and respond to English culture? Franklin, Emerson, Sedgwick, Paine, Addison and Steele, Carlyle, and others. Enrollment limited.

ENGL 1560Y. The Ethics of Romanticism.

An exploration of the intersections of moral philosophy and Romantic literature and culture. Writers studied may include Smith, Hume, Bentham, Hazlitt, Hegel, Wordsworth, Coleridge, Keats, Shelley, Byron, Godwin, Equiano, Austen. We will consider how writings of the Enlightenment and Romantic period differently reflect upon problems of knowledge, otherness, identity, community, and aesthetics, and how these reflections are related to the ethical imagination. We will also juxtapose our selections with several recent theoretical debates. Enrollment limited to 20.

ENGL 1560Z. Time and Narrative.

This course studies fiction that experiments with the representation of time alongside philosophical and critical texts on the theory of time. We will consider how engagements with the question of time shape the structures, language, characters, plots, themes, and goals of narrative, looking at topics such as time and language, story and narration, memory and history. We will also consider the impact of technological and social developments on the sense of time (the wristwatch, the telegraph, railway timetables). Authors include St. Augustine, Laurence Sterne, John Locke, David Hume, Ambrose Bierce, Charles Dickens, H.G. Wells, Thomas Hardy, Henry James, Virginia Woolf. Enrollment limited.

ENGL 1561C. Swift and His Contemporaries.

Jonathan Swift's works are central to this course's investigation of early 18th-century literature and culture. The reading focuses on the period as an "information age" energized by issues not unlike those of our own time: partisan politics, money, proliferation of new forms of textuality, globalization, changing views on gender and sexuality, love, religion, and war. The emphasis will be on irony, parody, and satire. Other writers include Congreve, Defoe, Manley, Pope, Gay, Montagu, Addison, and Steele. Students who have taken ENGL 1510T may not register for this course. Not open to first-year students or students who have taken ENGL 1510T. Enrollment limited.

ENGL 1561D. Writing and the Ruins of Empire.

An exploration of literary representations of "empire" and "imperialism" from the 18th century to the present. Readings in Gibbon's *Decline and Fall of the Roman Empire*, Volney's *Ruins of Empire*, and a wide range of 19th- and 20th-century texts. Some consideration of theories of imperialism and of visual representations of cultures of empire. Enrollment limited to 20. Prior coursework in 18th- and 19th-century literature advised.

ENGL 1561E. The Western.

An examination of the formula Western in American fiction, art, and cinema, with a view toward situating the genre within urban middle-class culture in the late 19th- and 20th-century United States. Authors to be considered include Twain, Harte, Crane, Austin, Cather, Doctorow, Reed, Leonard, and L'Amour. Films: *Destry Rides Again*, *Stagecoach*, *Rio Bravo*, *The Seven Samurai*, *Fistful of Dollars*, *Dirty Harry*, *The Man from Laramie*, *Paint your Wagon*, *Act of Violence*, among others. Enrollment limited to 20.

ENGL 1561F. Sacred Readings: The Bible, Biblical Interpretation, and Victorian Literature.

Bible reading in terms of apocalyptic and other prophecies permeates Victorian literature, coloring ideas of politics, gender, character, and the arts in ways that seem a secret code. The course therefore reads works by Charlotte Brontë, the Brownings, Carlyle, Hopkins, Newman, the Rossetti, Ruskin, and Swinburne in light of once common ideas of typology, prophecy, and apocalypse. Enrollment limited to 20.

ENGL 1561G. Swift, Pope, Johnson.

The course provides in-depth study of three major writers of the eighteenth century and will include cultural contexts. Readings include *Gulliver's Travels*, *The Rape of the Lock*, and *Rasselas*. Enrollment limited to 20.

ENGL 1561H. The Brain and the Book: Thinking and Reading in the Victorian Novel.

Considers two nineteenth-century novels in light of theories of cognition, both nineteenth-century and contemporary. This course proposes to study how some of the foundational questions of literary study—the nature of language, the location of meaning, the experience of reading, the power of metaphor, and the sources of creative thought—can also be studied from the perspective of mental science. We will read two Victorian novels in serial installments simultaneously, alongside shorter readings. Limited to juniors and seniors only. Banner registrations after classes begin require instructor approval. Enrollment limited to 20.

ENGL 1561I. The Nineteenth-Century Novel.

This seminar examines how British and French nineteenth-century novels thematize history, memory, representation and desire. Authors to be studied include Austen, Stendhal, Balzac, Dickens, Flaubert, Eliot, and, if time allows, James and/or Proust. Enrollment limited to 20.

ENGL 1561J. The Poetics of Confession.

This course explores the theoretical structures and models of confession in various literary and cinematic sources, with a special emphasis on work from the nineteenth and twentieth centuries. Authors might include: St. Augustine, Rousseau, De Quincey, Foucault, Wordsworth, Bronte, Wilde.

ENGL 1561K. Restoration and Eighteenth-Century Drama.

After almost two decades of closure, public theaters re-opened in 1660. This new beginning occasioned new plays, new kinds of performance and production, and new intersections between the stage and society. We will study works by Etherege, Wycherly, Congreve, Dryden, Behn, Gay, Lillo, Sheridan, and others. Not open to first-year students.

ENGL 1561L. Revolution, War, Poetry: Wordsworth in the 1790s.

William Wordsworth's poetic experiments during the 1790s are often said to have invented modern poetry as the poetry of consciousness; they are also efforts to find language adequate to a time of revolution, war, and modernity. This seminar examines texts by various writers of the revolutionary era, but focuses on Wordsworth's poetry from the early 1790s to the 1805 *Prelude*. Enrollment limited to 20. Not open to first-year students.

ENGL 1561M. American Literature and the Corporation.

A study of the development of the American novel from the Civil War to the present in light of the emergence of the corporation as the principal unit of economic enterprise in the United States. We will survey corporate theory from Lippmann to Collins, and use it to frame the novel's development from realism through modernism into postmodernism. Corporate theorists to be considered: Lippmann, Dewey, Berle, Drucker, Mayo, Demming, Friedman, Coase. Novelists to be considered: Twain, Dreiser, Wharton, Stein, Faulkner, Steinbeck, Wright, Ellison, McCullers, Reed, Gaddis, Morrison. Enrollment limited to 20.

ENGL 1561N. What is an Author?: Poe, Hawthorne, Dickinson.

What does it mean to be identified as an "author"? How did the practices of writing and reading change in 19th-century America? This course addresses such questions by reconsidering the literary careers of Hawthorne, Poe, and Emily Dickinson. Our work will investigate literary culture and book history, focusing on 19th-century authors, readers, magazines, publishing, criticism, and popular media. Enrollment limited to 20.

ENGL 1561P. Henry James and the Art of the Novel.

Henry James wrote about fiction as a form of experience: "The power to guess the unseen from the seen, to trace the implications of things." He advises the writer, "Try to be one of the people on whom nothing is lost!" In this course we will read James's critical writings and his major works in the novel and short story.

ENGL 1561Q. Emily Dickinson.

An intensive reading of the work of Emily Dickinson in the context of her most important poetic predecessors and heirs. Other poets we will be reading will include John Donne, John Keats, Robert and Elizabeth Barrett Browning, Ralph Waldo Emerson, Wallace Stevens, Elizabeth Bishop, and Susan Howe. Students will be expected to have some familiarity with reading lyric poetry. Limited to 20 junior and senior concentrators in English, Comparative Literature, Literary Arts, French Studies, Hispanic Studies, Italian Studies.

ENGL 1561S. Gender and Sexuality in Victorian Literature.

This seminar explores the constructions and the highly charged cultural significance of gender and sexuality in the literature of Victorian Britain. Readings include a selection of fiction, poetry, and prose writing by authors such as Alfred, Lord Tennyson; Emily Brontë; Elizabeth Barrett Browning; Mary Elizabeth Braddon; Dante Gabriel Rossetti; Christina Rossetti; Robert Louis Stevenson; and Thomas Hardy. Enrollment limited to 20.

ENGL 1561T. The Sensational and the Real in Victorian Fiction.

This course will focus on the Victorian novel, which has been called the period's greatest artistic achievement. In particular we will explore two modes through which novels engaged the turbulent experience of their time: realism and sensation. We will examine how these different novelistic modes tackled the issues of gender, sexuality, class, and personal and community identity. Enrollment limited to 20.

ENGL 1561U. Oedipus in Myth, Tragedy, and Theory.

This course is an intensive study of *Oedipus Rex*, as well as an introduction to the debates and responses it has occasioned. It spans several disciplines, from the classics to philosophy to psychoanalysis to literary theory, following the trajectory of this single figure. Readings: Sophocles, Aristotle, Hegel, Rancière, Girard, Foucault, Freud, and Bernard Williams. Enrollment limited to 20.

ENGL 1561W. On Being Bored.

This course will explore how and why certain texts and films represent states of non-productivity or non-desire. Beginning with writings from the Enlightenment and Romantic periods, we will move into contemporary theoretical and aesthetic reflections on the links between art and worklessness: narratives with neither progress nor plot, characters that resist characterization, as well as poems and films that resist emphatic assertion and revelation. Enrollment limited to 20.

ENGL 1561Y. In Excess: Rossetti, Hopkins, Wilde.

This seminar will be a focused close reading of three late Victorian writers whose works might be described as radically excessive insofar as they transgress and push beyond the limits of social, ethical, aesthetic, sexual, and political conventions. What does it mean to describe a text as excessive, and how can excess be considered as a constitutive part of its form? We will concentrate on poetry, plays, and theoretical texts, putting our authors into conversation with contemporary thinkers of excess. Enrollment limited to 20.

ENGL 1562B. Somebodies, Nobodies, and Other Others: 18th-Century Women's Writing.

Women wrote and published in unprecedented numbers for the first time during the eighteenth century. Recovery of their important work is ongoing. Revolution, globalization, and other changes in private and public life prompted writers like Elizabeth Haywood, Mary Montagu, Ann Finch, Charlotte Lennox, Frances Sheridan, Mary Wollstonecraft, Frances Burney to redefine gender roles and challenge cultural prohibitions against female authorship. Enrollment limited to 20.

ENGL 1562D. The Good Book: Reading the Bible as Literature.

The Bible is the most widely read book in history and its influence on English literature cannot be overstated. It is—for better or worse—in the background of almost everything. This course is an entirely secular, non-theological introduction to the literary study of the Bible as collection of narratives, poems, letters, fables, myths, proverbs. We will look at issues of its translation into English and some of the fascinating interpretive problems specific to the Biblical texts. (We will not be reading the entire Bible.) No background required.

ENGL 1562E. The Good Book: Reading the Bible as Literature.

The Bible is the most widely read book in history and its influence on English literature cannot be overstated. It is—for better or worse—in the background of almost everything. This course is an entirely secular, non-theological introduction to the literary study of the Bible as collection of narratives, poems, letters, fables, myths, proverbs. We will look at issues of its translation into English and some of the fascinating interpretive problems specific to the Biblical texts. (We will not be reading the entire Bible.) No background required.

ENGL 1562Z. Queens: Hopkins and Phillips.

A close-reading seminar devoted to select prose and poetic texts by two major queer poets, focusing on their shared transhistorical interests in sexuality, love, devotion, aesthetics, and recklessness.

ENGL 1580. Undergraduate Independent Study in the Enlightenment and the Rise of National Literatures.

Tutorial instruction oriented toward a literary research topic. Section numbers vary by instructor. Instructor's permission required.

ENGL 1710A. "Extravagant" Texts: Advanced Studies in Asian American Literatures.

Examines Asian American writings that are difficult, complex, and/or experimental—that are, in Kingston's phrase, "extravagant." Explores the issue of what is at stake—politically and aesthetically—in writing that explicitly challenges the generic conventions with which much Asian American literature is linked: autobiography, the Bildungsroman, ethnography, realism, and sentimentalism.

ENGL 1710B. American Vertigo: How the World Sees the U.S..

Why does America exercise such an extraordinary attraction for foreign writers? And why, moreover, is the America that appears in those writings so often unrecognizable? This class examines the representation of American life from DeTocqueville to Henry-Levy, looking at work by Amis, Antonioni, Adorno, Nabokov, Kincaid, and others. Two lectures and one discussion meeting weekly. Students will be assigned to conference sections by the instructor during the first week of class.

ENGL 1710C. Race and Nation in American Literature.

From the heyday of literary realism through the rise of modernism, race definitively shaped the national literature of the U.S. This course will consider representations of racial identities in relation to key historical and aesthetic developments within these two periods. Authors include Mark Twain, Frances Harper, Charles Chesnutt, Stephen Crane, William Faulkner, and John Fante.

ENGL 1710D. Anglo-American Nonfiction: Sages, Satirists, and New Journalists.

After examining the relations between fiction and nonfiction, the class will consider the work of Tom Wolfe, Joan Didion, Annie Dillard, and others within contexts created by essayists (Montaigne), satirists (Swift), and Nineteenth-century sages (Carlyle, Thoreau, Nightingale, and Ruskin). The class will become acquainted with various nonfictional forms including prose satire, the meditative essay, sage-writing, autobiography, and travel literature.

ENGL 1710E. Reading Race in Black + Yellow: Comparative Studies in 20th-C African American + Asian American Fiction.

Focusing on pairs of African American and Asian American works that address parallel concerns, we explore the continuities and discontinuities between these literary traditions. Authors we examine may include: James Weldon Johnson and Winnifred Eaton, Richard Wright and Carlos Bulosan, Chang-rae Lee and Toni Morrison, Karen Tei Yamashita and Caryl Phillips.

ENGL 1710F. Tribe, Nation, and Race in African Fiction.

How do major African novelists represent the interplay of tribe, nation, and race in African societies? This course will introduce students to key themes and contexts of African literature in English. We will read the work of the writers for the historical sources and conceptual implications of these categories in modern Africa. Writers include Achebe, Emecheta, Farah, Ngugi, and Vera.

ENGL 1710G. Faulkner.

In examining Faulkner's major works from the early stream-of-consciousness novels through the history-driven and race-inflected texts of the 30s and 40s, this course will evaluate Faulkner's practice as a writer working both in and against Southern culture, and as Modernist writing within an international context. Issues include narrative experimentation, race, class, gender, and the evolution of Faulkner's work. Students should register for ENGL 1710G S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 1710H. Black Internationalism and African American Literature.

The notion that African Americans are an extension of a global racial community has been a fixture of black politics and culture for more than a century. In this course, we will consider how the concept of global racial alliance has shaped black political resistance, literary practice, and critical theory. Likely writers include DuBois, Hughes, McKay, and Wideman.

ENGL 1710I. Harlem Renaissance: The Politics of Culture.

The Harlem Renaissance was a remarkable flowering of culture in post-war New York as well as a social movement that advanced political agendas for the nation. This course takes up the relationship between literature and politics by exploring such matters as the urbanization of black America, the representation of the black poor, the influence of white patronage, and the rise of primitivism. Writers may include Hughes, Hurston, Larsen, Fisher, Locke, and McKay.

ENGL 1710J. Modern African Literature.

This course considers themes, antecedents, and contexts of modern African literature and related forms. Our readings will include fiction in English or in translation, traditional oral forms like panegyric and festival poetry, and some films. We will examine how these diverse materials explore the interplay of ethnicity, nationality, and race. We will also address the issue of "tradition" in contexts where nationalisms of various stripes are becoming stronger, even as the world becomes more interconnected through trade, immigration, and digital technology. Authors will include Achebe, Adichie, Dangarembga, Kourouma, Ngugi, Salih, Soyinka, Wicomb. Films by Kouyaté, Loreau, Sembène.

ENGL 1710K. Literature and the Problem of Poverty.

This course explores poverty as a political and aesthetic problem for American writers. Examines the ways that writers have imagined the poor as dangerous others, agents of urban decay, bearers of folk culture, and engines of class revolt. Authors include Stephen Crane, William Faulkner, Zora Neale Hurston, and Richard Wright.

ENGL 1710L. Modernism and Everyday Life.

We will examine modernist literature in the context of contemporary art, psychology, and theories of everyday life to ask how this period understood ordinary objects and events. Could they be the proper subject matter of art? In the right circumstances, might they actually be art? Writers may include Woolf, Joyce, Williams, Eliot, Stein, James, Freud, deCerteau. One previous literature class required.

ENGL 1710M. Nationalizing Narratives: Race, Nationalism, and the American Novel.

While American novels can imagine the nation as a multiracial unity, they also provide potent critiques of white supremacy, giving literary form to the cultural expressions of communities of color. We examine novelistic visions of the nation by writers like Ralph Ellison, Toni Morrison, and Viet Nguyen along with critical anatomies of nationalism by theorists like Benedict Anderson and Etienne Balibar. Not open to first year students.

ENGL 1710N. Photography and the American Novel.

Traces the impact made by the emerging medium of photography on American fiction from its very beginnings until the present. Our focus will be on the varying strategies adopted by novelists in response to the representational challenges posed by photography. Writers include Hawthorne, Nabokov, Faulkner, Hurston, Citron, Eugenides, and Barthes. Students should register for ENGL 1710N S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 1710O. The Dead and the Living.

Readings in literature, theory, psychoanalysis, philosophy and law examine how the relation between the dead and the living shapes the concerns of modernist narrative and thought. Topics include "Living with the Dead," "Haunting and Knowing," "Writing Lives," "Dreaming and Waking," and "Picturing the Dead." Readings include Joyce, Conrad, Woolf, Forster, and Greene as well as Freud, Lacan, Benjamin, and Barthes.

ENGL 1710P. The Literature and Culture of Black Power Reconsidered.

This course reexamines the Black Power movement as a signal development in American literature and culture. We will read classics from the period with a view toward reassessing the nuances and complexities of their form and politics. At the same time, we will recover less familiar texts that complicate conventional understandings of what defines this movement. Authors include Malcolm X, Huey P. Newton, Angela Davis, Eldridge Cleaver, John Edgar Wideman, Ernest Gaines, and Amiri Baraka.

ENGL 1710Q. Bloomsbury and Modernism.

The contribution of the avant-garde "Bloomsbury Group" to the development of literary modernism. The focus will be on the central literary figures (Virginia Woolf, E. M. Forster, and T. S. Eliot), but attention will also be paid to the visual arts (Roger Fry, Vanessa Bell, and Post-Impressionism) and to social criticism (Lytton Strachey, Leonard Woolf, and John Maynard Keynes).

ENGL 1710S. Writing War.

Examines the challenges that war poses to representation, and particularly to language and literary expression in the modern era. We will focus primarily on the First and Second World Wars, exploring the specific pressures war puts on novels and poetry, as well as on history, psychology, and ethics. Works by Sassoon, Owen, Barbusse, Brittain, Woolf, Rebecca West, Graham Greene, Pat Barker, Marc Bloch.

ENGL 1710W. Literary Impressionism.

An examination of the role of "literary impressionism" in the transformation of the novel from realism to modernism. Writers studied include Henry James, Joseph Conrad, Stephen Crane, Ford Madox Ford, and Virginia Woolf. Close analysis of their narrative methods for dramatizing consciousness, with attention to the political and ethical implications of impressionism's focus on the inner life.

ENGL 1710Y. American Literature and the Cold War.

A study of American literature in the context of the broad intellectual culture--strategic, ideological, philosophical, aesthetic, and economic--engendered by the conflict between the United States and the Soviet Union from 1945 to 1991. We will assess the role of the bomb, McCarthyism, game theory, the military industrial complex, and strategic doctrines of containment and deterrence in the rise of postmodernism in American literature. Authors to be considered include Bellow, Highsmith, Millar, Ellison, McCarthy, Mailer, Pynchon, Wideman, Coover, Delillo. Students should register for ENGL 1710Y S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 1711A. American Poetry II: Modernism.

Study of modernist American poetry. Readings include Pound, Eliot, Stevens, Williams, H.D., Moore, Hughes, and others.

ENGL 1711B. Modernist Fiction.

Readings in British and American fiction and culture in the early 20th century, with particular attention to the relationships between modernist literary experiment and contemporary questions about empire, race, the changing status of women, and the grounds of literary authority. Writers may include Conrad, H.D., Joyce, Larsen, Lawrence, Rhys, Toomer, Woolf. Two lectures and one discussion meeting weekly. Students will be assigned to conference sections by the instructor during the first week of class.

ENGL 1711C. Modernist Henry James.

How consciousness knows the world was a topic of endless fascination to Henry James. By dramatizing the workings of consciousness, James transformed the novel and led the way to modernism. In addition to the aesthetic significance of his experiments with point of view, the course will also analyze the ethical consequences of his insistence on life's ambiguities.

ENGL 1711D. Reading New York.

How have people imagined New York City from the early 20th century to the present? What possibilities does the city provide? What restrictions? To consider these questions we will discuss immigration, mobility, nightlife and the neighborhood, downtown, underground and gentrified spaces, migration and the aftereffects of 9/11. The course ranges across fiction and poetry, memoir and literary journalism, photography and video performance. Texts may include work by Nella Larsen, John Dos Passos, E.B. White, Frank O'Hara, Jane Jacobs, Patti Smith, Nan Goldin, and Teju Cole. A previous literature class is strongly recommended, but not a prerequisite.

ENGL 1711E. African American Literature After 1975.

Over the past fifty years, African American writers have generated some of the most acclaimed and innovative writing in American letters. This course seeks to better understand the historical, political, and aesthetic currents that have shaped this expansive body of writing. In so doing, we will consider this literature in relation to the legacies of black radicalism, the evolution of black feminist thought, the economics of the literary marketplace, and the history of the transatlantic slave trade. Authors include Toni Morrison, Colson Whitehead, Claudia Rankine, Percival Everett, and Gayl Jones.

ENGL 1711H. Lyric Concepts: The Question of Identity in Modern and Contemporary Poetry.

The lyric within contemporary poetry has often been associated with a desire to express a subjective relation to interior experience while experimental traditions have often imagined the poem as a site of formal or conceptual play devoid of specific concerns of identity. This course draws on poets such as Rankine, Moten, Robertson, Hejinian and the critical tools of affect theory to trouble these distinctions.

ENGL 1711J. Art for an Undivided Earth / Transnational Approaches to Indigenous Art and Activism.

The tension between indigenous literary nationalism and methodologies of cosmopolitanism and transnationalism have animated contemporary Native literary studies. At stake is the very meaning of indigeneity itself—how does indigeneity function on a global scale? How do hemispheric approaches to indigeneity transform our understanding of histories of colonialism? How have artists made connections across space without flattening the specificity of their locations?

ENGL 1711K. The Politics of Perspective: Post-war British Fiction.

Offers an overview of British fiction from the last 50 years in order to consider how Englishness, as (i) a set of images and (ii) a mode of looking, has changed. The course covers 3 distinct periods (post-War period, Thatcherism, the New Labour epoch and beyond) and, is intended as an introduction to theories of culture, ideology and literary analysis and to some of the most important British writers of the last fifty years.

ENGL 1711L. Contemporary Black Women's Literature.

Examination of black women's literature in the post- Civil Rights period. Foregrounding complexities of black womanhood, course investigates how black women have used writing to revise history, assert agency, manufacture beauty, and redress personal and group injury. Emphasis on the intersections of precarity and power, race and rebellion, pastness and black feminist futurity within the context of Africana women's literary legacies. Specific attention paid to the aesthetics of form and the interrelations of race, class, sexuality, generation and nation. Not open to first-year students.

ENGL 1711N. Monsters in our Midst: The Plantation and the Woods in Trans-American Literature.

In this course, we engage literary and film representations about how land is imagined in relation to colonial and nationalist enterprises. "Land" here encompasses conversations around the environment, nature, productive versus "wasteful" uses of rural space, sites of black and indigenous marronage, and beyond. Geographically, we focus on the Caribbean, parts of the U.S., and Latin America. Fictional readings may include works by Michelle Cliff, Maryse Condé, William Faulkner, and. We may watch films such as *Pet Semetary*, *Daughters of the Dust*, and *Bacurau*. We also engage recent works of scholarship about race, the environment, and colonialism.

ENGL 1711O. Radical Pasts, Radical Futures: Literature and the Left.

This course examines American literary representations of leftist social movements in the late twentieth century, including the antiwar movement, anticolonialism, and Black Power nationalism. The class explores autobiographical and journalistic accounts published during the U.S. counterculture as well as novels that present this radicalism after its decline. Authors include Norman Mailer, Angela Davis, Joan Didion, E.L. Doctorow, and John Wideman.

ENGL 1711P. 'We have not yet heard enough, if anything, about the female gaze': Contemporary Writing Not by Men.

The concept of the "male gaze" has been central to feminist critiques of cinema. In developing the concept, Laura Mulvey refused to posit a corrective "female gaze" — which makes Maggie Nelson's remark about the female gaze in literature all the more surprising. This course discusses experimental writing primarily by women through the proposition that, without the male gaze, writing has the potential to be an "astonishing equalizer." Writers include Cusk, Fitzgerald, Gladman, Quin, Z. Smith, Spark, S. Hartman.

ENGL 1711Q. Poetic Modernisms: Now!

This course is a survey of modernist poetry that explores how key works by figures such as Langston Hughes, Gertrude Stein, Ezra Pound, William Carlos Williams, and Marianne Moore have continued to shape poetic forms and possibilities throughout the twentieth century and into the contemporary moment.

ENGL 1711S. James Baldwin.

This course is an introduction to the oeuvre of James Baldwin. Celebrity, Civil Rights spokesperson, social critic, and black queer writer of international renown, James Baldwin wrote prolifically over decades and across literary genres, including novels, essays, plays. He once characterized his trenchant critiques of the failures of US democracy as a practice of love. Foregrounding love as a mode of study, an ethic of care, and the practice of critique, our class will grapple lovingly with the life, literary and legacy of James Baldwin.

ENGL 1711T. 1984: The Myth and the Moment.

Since George Orwell's 1949 publication of *Nineteen Eight-Four*, the year 1984 has loomed large in our imagination. We delve into this year as both an idea and a watershed moment. Historically, it was the year of the Space Shuttle *Discovery*'s maiden voyage; ongoing famine in Ethiopia; the continuing Cold War; the Macintosh computer; and the shooting of four African-American teenagers on the New York subway. Culturally, 1984 brought us *Ghostbusters* and *The Terminator*; Louise Erdrich's *Love Medicine* and Milan Kundera's *The Unbearable Lightness of Being*; Prince's *Purple Rain*; the creation of Tetris; and the rise of the infomercial. By focusing on a single year, we consider how culture and politics intertwine in an unfolding history, and how myths animate lived experience. Works by Erdrich, Kundera, John Edgar Wideman, Jayne Anne Phillips, Martin Amis, in addition to film, television, and music.

ENGL 1711V. Everyday Ornaments: Feminist Poetics and Time.

"What shall our new ornaments be? How should we adorn mortality now?," asks the poet Lisa Robertson in her introduction to *The Weather*, a book that is itself dedicated to the everyday practices of atmospheric description. This class will examine how feminist poetic practices can transform the nonmonumental realm of day-to day life through documenting, description, performance, and ornamentation. We will look especially closely at the writings of Bernadette Mayer, who, in her book *Midwinter Day*, attempts to exhaustively document a single day, December 22, 1978.

ENGL 1760A. Joyce and Woolf.

Intensive study of two of the most innovative and influential modern British novelists, with an emphasis on the relation between their formal experiments and their political engagements. Enrollment limited to 20.

ENGL 1760B. Contemporary African American Literature and the End(s) of Identity.

African American writers and intellectuals have begun to question the wisdom of defining black identity in terms that overemphasize the shared racial and cultural heritage of black people. Course assesses a range of literary and scholarly writing that engages these concerns. Explores such topics as the growing class division among African Americans, the effects of integration, the decline of nationalism, and the visibility of sexual minorities. Likely authors include Johnson, Morrison, Wideman, Beatty, and Senna. Enrollment limited.

ENGL 1760C. Body and Event in Contemporary Fiction.

Discusses the recent turn to the body and mortality in contemporary fiction, and considers the proposition that episodes of dismemberment in contemporary fiction stand in for the dismantlement of the literary text itself. Readings include Selby, Ellis, Cooper, Acker, Frame, Deleuze, Butler, Blanchot. Enrollment limited to seniors, juniors, and sophomores. Banner registrations after classes begin require instructor approval.

ENGL 1760D. Race and Detection: American Crime Narratives.

We examine American crime narratives, focusing on their representations of race, class, gender, and sexuality. Writers studied may include James M. Cain, Raymond Chandler, William Faulkner, Sue Grafton, Chester Himes, Walter Mosley, and Mark Twain.

ENGL 1760E. Who's Afraid of Virginia Woolf?

We will read novels, essays, diaries, and letters by Woolf in order to ask how and why Virginia Woolf haunts our culture and to consider her status as a cultural icon. The seminar will explore her work in the contexts of history, modernism, and literary influences, and it will examine the dimensions of Woolf's afterlife—a posthumous dynamic that shapes issues in art, politics, and gender. Enrollment limited to 20 seniors and juniors.

ENGL 1760F. City, Culture, and Literature in the Early Twentieth Century.

How did changes in the city shape early 20th-century literature? How does the literature of this period—whether avant-garde or documentary, progressive or conservative—shape the way we imagine the city? Topics may include urban spectacle, mobility and segregation, the neighborhood and the crowd. Authors include Dos Passos, Eliot, Larsen, Orwell, Woolf, Wright. Prerequisite: two previous literature courses. Priority to English and Urban Studies concentrators.

ENGL 1760G. American and British Poetry Since 1945.

Study of poetry after 1945. Readings include Bishop, Plath, Ashbery, Merrill, O'Hara, Heaney, Larkin, Walcott, Rich, Dove. Enrollment limited to 20.

ENGL 1760I. "Terrible Beauty": Literature and the Terrorist Imaginary.

Why does terrorism fascinate literary writers in the modern period? Is terrorism the figure of something that is unrepresentable in fiction, or is it a type of direct political action that fiction writers aspire to? Can literature's humanistic role of allaying terror survive an age of spectacular politics? How susceptible is terrorism to "aestheticization"? Texts will include works by Conrad, Flannery O'Connor, Naipaul, Dennis Cooper, Frantz Fanon, and Ngugiwa Thiong'o. Enrollment limited to 20 seniors, juniors, and sophomores. Banner registrations after classes begin require instructor approval.

ENGL 1760J. Reading *Gravity's Rainbow*.

An in-depth study of perhaps the most important American novel of the twentieth century. Reading will include Pynchon's early novel *The Crying of Lot 49*, stories by Borges, Kafka, and Nabokov, and a range of historical, texts and films alluded to in *Gravity's Rainbow*, from the sermons of Jonathan Edwards to the poetry of Rilke to *The Wizard of Oz*. Enrollment limited to 20 seniors.

ENGL 1760K. Reading New York.

We will explore narratives of New York City, both fictional and nonfictional, from the early 20th century to the present. Topics to be addressed include immigration, segregation and mobility, cosmopolitanism and the neighborhood, celebrity and postmodernism. Authors may include John Dos Passos, Ann Petry, E.B. White, Jane Jacobs, Rem Koolhaas. Registration limited to English and Urban Studies concentrators. Students from other concentrations should attend class on the first day and will be admitted if space is available. Enrollment limited to 20. Not open to first-year students. Prerequisite: two previous literature classes.

ENGL 1760L. Bloomsbury and Modernism.

This course will explore the contribution of the so-called "Bloomsbury Group" to the development of modernism in Britain. The focus will be on the central literary figures (Virginia Woolf, E. M. Forster, T. S. Eliot), but attention will also be paid to the visual arts (especially Roger Fry and Post-Impressionism) and social criticism (Lytton Strachey, Leonard Woolf, and John Maynard Keynes). A major question will be how the controversies swirling around Bloomsbury exemplify important debates about modernism. Enrollment limited. Not open to first-year students. Banner registrations after classes begin require instructor approval.

ENGL 1760N. Henry James.

James is a pivotal figure in the history of the novel. His explorations of the workings of consciousness and conventions in representation transformed realism and announced the preoccupation of modernism with interpretation, signs, and narrative experimentation. An intensive study of his most important novels from *Daisy Miller* to *The Golden Bowl*.

ENGL 1760O. American Orientalism.

Examines Orientalism as central motif and thematic concern for American writers from Emerson to DuBois to Kingston. Issues to be addressed include the distinctions between U.S., European, and Afro-Orientalisms; how intra-Asian differences (i.e., China-Japan, East/South Asia) shape conceptions of the Orient; how whiteness and blackness are constructed via a vis yellowness; the relationship between Orientalism and racism; how "nativist" Asian American literary texts, on the one hand, and diasporic texts, on the other, negotiate the legacy of Orientalism. Enrollment limited.

ENGL 1760P. "Extravagant" Texts: Experiments in Asian American Writing.

We examine Asian American writings that are difficult, complex, and/or experimental: texts that are, in Maxine Hong Kingston's phrase, "extravagant." By looking at works that explicitly challenge the generic conventions with which much Asian American literature is usually linked—autobiography, the Bildungsroman, ethnography, realism, and sentimentalism—we try to arrive at a more expansive sense of what the ends of Asian American cultural politics might be. Enrollment limited to 20. Not open to first year students.

ENGL 1760Q. James Joyce and the Modern Novel.

One measure of James Joyce's achievement as a writer is his influence (as an inspiration, an antagonist, or a competitor) on novelists who came after him. Our primary concern will be with Joyce's formal innovations: How did his audacious narrative experiments transform the novel as a genre? Do his stylistic games break with the realistic tradition or expose its linguistic and epistemological workings? In addition to *Dubliners*, *Portrait of the Artist*, and *Ulysses*, we will read novels by Woolf, Faulkner, Beckett, and Nabokov. Enrollment limited to 20. Not open to first-year students. Instructor permission required.

ENGL 1760R. The Roaring Twenties.

The 1920s crystallized much of what we consider modern in 20th-century U. S. culture. This course reads literature of the decade in the context of a broader culture, including film and advertising, to analyze the period's central features: the rise of mass culture and of public relations, changes in women's position, consumerism, car culture, nativism and race relations. Writers include Fitzgerald, Hemingway, Larsen, Toomer, Parker. First-year students and students who have taken ENGL 0650K may not register for this course. Enrollment limited.

ENGL 1760S. Law and Literature: From Response to Responsibility.

Explores modernism as it is shaped by the normative and ethical concerns of a rapidly changing world through literary works, legal writing, and legal opinions. Examines the conceptual, psychological and rhetorical connections between literature and law, and considers how both disciplines shape the imagination but also aim to elicit response and responsibility. Authors include Walter Benjamin, Joseph Conrad, Virginia Woolf, Rebecca West, Chinua Achebe; legal texts include Blackstone, Holmes, Bentham, Cover and a number of legal opinions. Enrollment limited to 20 juniors and seniors.

ENGL 1760T. The Texts of Africa.

This seminar considers the various ways in which "Africa" has been depicted in fictional and non-fictional writing from the nineteenth-century on. We begin with classic travel writing by European missionaries (Park, Livingstone, Moffat), and their African and black diasporic counterparts (Crowther, Freeman, Sims, Soga). We then turn to twentieth-century literature and non-fiction (Abrahams, Conrad, Dinesen, Greene, Ndebele, Wright), closely following the rhetorical devices used to evoke the continent as geographical or subjective reality. We will pay particular attention to questions of history, linguistic representation, and the vagaries of intercultural encounter.

ENGL 1760U. American Modernism and its Aftermaths.
