An interdisciplinary study of the rise of modernist aesthetic theory in the United States, its dissemination across various aesthetic (poetry, fiction, various plastic arts) and intellectual (economics, sociology, political theory) fields, and its persistence in United States intellectual life in the various permutations of postmodernism that have succeeded it. Authors to be considered include: poets such as Eliot, Williams, Bishop, Brooks, and Ashbery; novelists such as Faulkner, Hurston, O'Connor, and Didion; aesthetic theorists such as Greenberg, Rosenberg, Fried, Baraka and Kraus; and social theorists such as von Neuman, Rawls, Cavell, Kuhn, Samuelson, Drucker, and Friedman. Enrollment limited to 20.

ENGL 1760V. Lying, Cheating, and Stealing.

Explores literature's treatment of transgressions large and small, with particular attention to the way in which modernist narratives expose, obstruct, condone, or condemn acts of wrongdoing. What is the relationship between a misdeed and its retelling? Does writing right the story of a wrong? Readings from Rousseau, Graham Greene, Oscar Wilde, Lauren Slater, Nietzsche, Freud, as well as film, television, and select readings from law. Enrollment limited to 20 seniors and juniors.

ENGL 1760Y. Toni Morrison.

This course will consider Toni Morrison's novels and essays through four prisms: her interest in the anxieties of Americanness; her attention to language, which includes a consideration of form and of literary theory; her study of love; and her figuring humanity through the experiences of people who are racially black and (often) gendered female. Not open to first-year students. Enrollment limited to 20.

ENGL 1760Z. Law and Literature.

What is the relationship between law and literature? How do these supposedly separate disciplines contribute to our sense of justice and our understanding of injustice? We examine these questions through novels, legal writings, legal opinions, and film, in order to discover how law and literature create interrelated narratives that shed light on issues like identity, sexuality, injury, policing, speech, and silence. We read literary and legal narratives to see to how they inform each other, but also illuminate each other's blind spots. Writers include Robert Louis Stevenson, Virginia Woolf, James Weldon Johnson, and Claudia Rankine. Enrollment limited to 18.

ENGL 1761A. Nationalizing Narratives: Advanced Studies in the Twentieth-Century U.S. Novel.

Focuses on the complex relationship between the genre of the novel and nationalist rhetorics in the modern U.S. Gives particular attention to how literary discourses of nationalism articulate with those of race, gender, and sexuality.

ENGL 1761B. Narratives of Blackness in Latinx and Latin America.

We analyze literary, visual, and performative narratives of blackness in the Spanish- and Portuguese-speaking Americas in relation to whiteness, indigeneity, class, and gender. Primary texts include Carlos Fuentes' *The Death of Artemio Cruz*, Loida Maritza Pérez's *Geographies of Home*, and Herman Melville's *Benito Cereno*. Films include *Xica* (dir. Carlos Diegues) and *Bad Hair* (dir. Mariana Rondón). Enrollment limited to 20. Instructor permission required.

ENGL 1761C. Race, Writing, Manhood: Rhetorics of the "Authentic" in 20th-Cent African + Asian American Literature.

Explores the interrelatedness of racial, sexual, and literary identity in works by U.S. black and Asian male writers. Particular interest given to how the issue of homosocial desire frames literary accounts of racial authenticity. Writers and theorists studied may include James Baldwin, Frank Chin, Ralph Ellison, Frantz Fanon, David Henry Hwang.

ENGL 1761D. Hollywood and American Modernism from FDR to JFK.

Study of the interactions among Hollywood and modernism from the beginning of the sound era through the early 1960s. Authors and directors to be considered include, Loos, Fitzgerald, Faulkner, West, Ferber, Hawks, Wilder, Hitchcock, Mann, and Ford. Enrollment limited to 20.

ENGL 1761E. Blackness and Being.

Through reading criticism, theory, literature, we will think about the representational, aesthetic, and, philosophical (ontological, epistemological, ethical) questions that shape blackness as a conceptual notion. Our study will think through feminist and queer studies, as well as through diaspora and American and ethnic studies, and will consider the historical trajectory of various critical turns in theorizing (literary) blackness. Enrollment limited to 20 juniors and seniors. Instructor permission required. Class list will be finalized after the first day of classes. Please email the professor to add your name to the potential roster.

ENGL 1761F. Toni Morrison.

This course is an advanced introduction to the oeuvre of Nobel Laureate Toni Morrison. Reading her novels and nonfiction, we investigate concerns that shaped our world in the last century and haunt the current one, foregrounding Morrison's writing as a key site of trouble and of transformation.

ENGL 1761G. Translational Echoes of the Korean War.

This course explores how the emergence of cinematic, televisual and literary dimensions of hallyu, or the Korean wave, provides an opportunity to reckon with the complex formations of war, empire and capitalism that have linked the histories of Korea and the United States. Judging by the remarkable popularity of the film *Parasite*, the Netflix series *Squid Game* and Han Kang's novel *The Vegetarian*, Americans seem to have developed an interest in the darker aspects of South Korean contemporary life and the violent events that have shaped them: a devastating civil war and decades under the repressive rule of military dictatorships, which were both shaped by the exigencies of US empire. We explore ways of analyzing such works that combine an understanding of the interlocking histories they illuminate with a critical awareness of the aesthetic and formal strategies that structure them.

ENGL 1761J. Bad, Mad, and Sad: Literatures of Misbehaving Femmes.

In this seminar, we closely analyze fiction and nonfiction writings, as well as films, that explore affective and psychological modes such as mischief, melancholia, and insanity as inflected by gender, race, and class. Readings may include works by authors such as Maryse Condé, Jamaica Kincaid, Nella Larsen, Andrea Long Chu, Ottessa Moshfegh, Jean Rhys, Shola von Reinhold, and Laurie Weeks.

ENGL 1761L. Reading the Black Masses in Literature and Critical Practice.

African American literary and critical practice in the twentieth century was definitively shaped by claims about the linkages between literature and mass politics. We will unpack the continuities and divides that constituted such assertions. Historical nodal points in our investigations will include racial uplift, the Harlem Renaissance, the Black Power Movement, and the post-identity debates.

ENGL 1761M. Asian American Travel Narratives.

Examines mobility and movement as key motifs in Asian American fiction. The course will focus on Asian American literary texts that are structured around travel, both in relation to the United States and to Asia. Our approach will draw from Americanist and Asian Americanist cultural theories about narratives of mobility and from postcolonial theories about travel writing. Enrollment limited.

ENGL 1761N. Natural and Supernatural: Issues in the Study of Science and Religion.

Religion has been studied in a number of fields (anthropology, classics, history, philosophy, psychology, sociology) as a complex of human/cultural phenomena to be examined and explained naturalistically or, as it is said, "scientifically." The course focuses on a set of key classic and contemporary texts in this tradition and on the issues they raise for current understandings of science, religion and the relations—historical, intellectual, cultural and political—between them. Enrollment limited to 20 juniors, seniors, and graduate students.

ENGL 1761O. "Everything that is must be destroyed": American Modernism.

This class will attempt to discover whether there is such a thing as American modernism, examining the connections between works and movements as different as Gertrude Stein's highly experimental *Three Lives*, the Harlem Renaissance (Larsen, Hurston), American Gothic (Anderson, Faulkner), social realism (Wharton, Wright), the cosmopolitan fiction of Fitzgerald and Hemingway, and the proto-postmodern work of Barnes and West. Enrollment limited.

ENGL 1761P. Yeats, Pound, Eliot.

Readings in the poetry and selected prose of Yeats, Pound, and Eliot. Enrollment limited to 20.

ENGL 1761Q. W. G. Sebald and Some Interlocutors.

The works of W. G. Sebald have received a huge amount of critical attention since his death in 2001, particularly from critics interested in the question of the ethics of literature after Auschwitz. But what is Sebald's literary heritage, and who are his interlocutors? What internal and external connections do his works establish? Besides Sebald's works, readings will include Stendhal, Kafka, Walser, Borges, Bergson, Resnais, Lanzmann. Banner registrations after classes begin require instructor approval. Enrollment limited to 20. Not open to first-year students.

ENGL 1761R. The Non-Fiction of "Race" in 20th-Century US Culture.

This course examines influential autobiographies and other non-fictional literary works about the meaning of race in America across the 20th century. Writers we examine may include W.E.B. DuBois, Sui Sin Far, Maxine Hong Kingston, N. Scott Momaday, Richard Rodriguez, Maxine Hong Kingston, Richard Rodriguez, and Malcolm X. Enrollment limited to 20 juniors and seniors.

ENGL 1761S. The Fifties in Color: Race, Empire, and the U.S. Cold War Culture.

In this seminar, we examine a range of cultural texts of the 1950s that provide some productive points of entry into the study of U.S. culture in the early part of the Cold War. We give particular attention to issues of race and ethnicity as they were shaped both by domestic and foreign policy concerns. Enrollment limited to 20.

ENGL 1761T. Conrad and Naipaul: The Supremacy of the Visible?.

The reception of Conrad's works turns on a critical quandary: are his commitments primarily sensory, celebratory and imperialist, or conceptual, subdued and self-critical? This course will examine Conrad's works in detail, and the critical and literary responses to them: most notably, the work of his most direct successor, the British-Caribbean novelist V. S. Naipaul. Other readings include Said, Achebe, Jameson, Badiou, Rancière, Deleuze. Enrollment limited. Not open to first-year students. Banner registrations after classes begin require instructor approval.

ENGL 1761V. The Korean War in Color.

We examine US and South Korean representations of the Korean War. We look at how this event was depicted in US films of the 1950s with a focus on how it occasioned a transformation of American understandings of race, both domestically and transnationally. We then look at how this event has been memorialized by contemporary American authors as well as in South Korean literature and film. Authors we read include: Susan Choi, Ha Jin, Chang-rae Lee, Toni Morrison, Jayne Anne Phillips and Hwang Sok-Yong. Enrollment limited to 20. Not open to first-year students.

ENGL 1761W. Modern South Asia: Literature and Theory.

This seminar provides an overview of 20th and 21st century writing from and about South Asia. It will serve, in addition, as an introduction to postcolonial studies. Theoretical readings will focus on issues of diaspora; transnational cultural circulation; and subaltern historiography. Fiction will be primarily Anglophone (Anand, Du Bois, Forster, Naipaul, Rushdie, etc.), with some vernacular texts in translation (Chughtai, Limbale, Premchand, Tagore). Enrollment limited to 20.

ENGL 1761Y. Issues in World Literature.

What is world literature? How does it relate to fields like comparative literature and postcolonial studies? We will read fiction and drama usually featured in this canon, including works by Achebe, Coetzee, Homer, Kafka, Rushdie, Shikibu, and Walcott. We will also attend to the critical paradigms that constitute the field, from Goethe's *Weltliteratur* to more recent theorizations by Casanova, Damrosch, Deleuze, Moretti, Spivak, etc. Enrollment limited to 20. Not open to first-year students.

ENGL 1761Z. Modernism and Everyday Life.

We examine modernist literature in the context of contemporary art, psychology, and theories of everyday life to ask how this period understood ordinary objects and events. Could they be the proper subject matter of art? In the right circumstances, might they actually be art? Writers include Woolf, Joyce, Hughes, McKay, Stein, Beckett, Freud, deCerteau. One previous literature class strongly recommended. Not open to first-year students.

ENGL 1762A. Perverse Cinema.

A seminar on movies that pursue and spectacularize the perverse, as well as on how viewing movies is itself a perverse pleasure. We will study film genres that traffic in what's sensational, excessive, uncanny, and transgressive, such as the detective film, thriller, melodrama, sex film, horror, and sci-fi. Special emphasis on the movies of Hitchcock, Kubrick, Lynch, and Cronenberg. Enrollment limited to 20 concentrators in English, Comparative Literature, MCM, Gender and Sexuality Studies, and Theatre and Performance Studies. Not open to first year students.

ENGL 1762B. The Ekphrastic Mode in Contemporary Literature.

Ekphrasis – the extended description of a visual work of art in a work of literature – is as old as Homer and as modern as McEwan; however, in contemporary literary criticism the concept has been eclipsed by terms such as "self-reflexivity" and "metafiction." This course proposes a rediscovery of ekphrasis as a key feature of contemporary works of literature and film. Includes texts by Sebald, Alan Bennett, Godard, Starnone, Panahi, McEwan. Enrollment limited to 20. Not open to first year students.

ENGL 1762C. Image, Music, Text.

This course examines a number of novels and short stories alongside their various cinematic, theatrical, or musical adaptations in order to ask what a medium is and what distinctive formal features might define literature, cinema, theater, and music. Writers will include Melville, Conrad, Maupassant, Mann, and Cortazar; filmmakers will include Hitchcock, Antonioni, Godard, Visconti, and Coppola; critics will include Barthes, Deleuze, and Rancière. Limited to 20 junior and senior concentrators in English, Comparative Literature, MCM, Hispanic Studies, Italian Studies, French Studies, German Studies, Literary Arts.

ENGL 1762D. Kubrick.

On Kubrick's feature films, documentaries, and photography, starting with his sci-fi masterpiece 2001, followed by his early noirs (*Killer's Kiss*; *The Killing*); sex films (*Lolita*; *A Clockwork Orange*; *Eyes Wide Shut*); and war films (*Paths of Glory*; *Dr. Strangelove*; *Full Metal Jacket*). Topics include: adaptation; genre; masculinity in extremis; technophilia and technophobia; the aesthetics of violence; and sex on film. Limited to 20 junior and senior concentrators in English and MCM. Instructor permission required.

ENGL 1762G. Asian American Literature and the Intimacies of Fiction.

John Okada once wrote that "only in fiction can the hopes and fears and joys and sorrows of people be adequately recorded." This survey course on Asian American literature and culture evaluates the place of fiction, along with the delicate but also contentious line between fiction and nonfiction, in Asian American studies. Does Asian American fiction exist only to "authentically" capture and represent marginalized experiences? What then makes a certain representation "authentic" or "inauthentic"? We will consider these questions in their historically gendered dimensions as well as associated questions of relation, desire, and collective identity (or lack thereof). Course materials will include literary works such as *The Coffin Tree*, *The Namesake*, and *Dictée*; films such as *Mississippi Masala* and *Better Luck Tomorrow*; and television series such as *The Assassination of Gianni Versace*.

ENGL 1762H. "The Wire"

Over sixty episodes, David Simon's acclaimed television series explores a range of social and political issues, but it does so with unusual literary ambition and success. In this course we'll ask how "The Wire" generates interest, engagement, and debate in part by appropriating and adapting generic strategies and aesthetic devices deployed by such "classic" authors as Shakespeare and Dickens. Enrollment limited to 20.

ENGL 1762J. Books Behind Bars: African American Literature's Response to Mass Incarceration.

Many scholars have noted—perhaps most famously Angela Davis—the rise of the prison industrial complex over the latter half of the 20th century, which disproportionately undermined the freedom dreams of Black Americans after the victories of the civil rights movement. This class will address the various methods and forms contemporary Black writers have used to discuss this ever-looming injustice that hangs over Black American life: how it impacts family structures and marriages and has altered various roles—including gender roles—within the Black community.

ENGL 1762M. Caribbean Literature.

Focusing mostly on prose narrative from the nineteenth-century to the present day, this seminar is an overview of various important texts from the Anglophone, Hispanophone, and Francophone or Kreyol Caribbean texts. As crucial themes in the literary culture of the Caribbean, class discussion will be framed around questions of colonialism, slavery, blackness, whiteness, indigeneity, class as well as literary and aesthetic innovations such as surrealism, realism, and other important formalist trends and interventions. Texts originally written in Spanish and French will be read in translation, but students have the option of reading them in the original if they prefer as long as they are able to engage the class through the translation as well. Enrollment limited to 20.

ENGL 1762R. Transpacific Bodies and Materialities.

How are Asian American and Pacific Islander bodies figured across different texts—in contemporary novels, poetry, and visual arts? How do the transits and residues of US empire across the Pacific inform these representations? This course investigates texts that center AAPI bodies and their varying materialities, including paper, digital, textual, watery, and earthy forms. We will think through the ways these other-than-human bodies push the bounds of race and gender and question national belonging. Course topics include the Indochina refugee crisis following the War in Vietnam, the US militarization of the Philippines and Guåhan, and the rise of tourism in Hawai'i. Texts may include fiction by Viet Thanh Nguyen, Lê thị diễm thúy, R. Zamora Linmark, and Kristiana Kahakauwila; poems by Rick Barot, Aimee Suzara, Craig Santos Perez, and No'u Revilla; and photography, art installations, and film.

ENGL 1762S. London: Reading and Writing Its Past, Present, and Future.

This London-based summer study-abroad program will explore the literature, culture, history, and politics of London with Brown students. After two weeks of reading, students will spend three weeks on-site in London, living in Regent's University, ideally located inside one of London's most central parks. Classroom discussions and daily trips to museums, theaters, and art galleries will take students to London landmarks like St. Paul's, the Globe Theatre, the Tate art museums, the Cabinet War Rooms, and the Houses of Parliament. Weekend excursions include Cambridge, Oxford, Bath, and the Wimbledon tennis tournament. Texts include literature by Shakespeare, Dickens, Woolf, Smith, Selvon, and Hall, plus numerous plays, musicals, and films. Co-taught by two Brown English faculty members, Ravit Reichman and Jonathan Readey, and a number of London-based lecturers, the faculty will be thrilled to share our love of London with Brown students.

ENGL 1762T. Race and the Gothic.

In this undergraduate seminar, we muse on the aesthetic, formal, and thematic relationship between race and gothic literature and film, as well as theories of the gothic. Motifs that crowd the novels and films we explore include: death, the racialized Other, the repressed reaches of the inner self, the void, terror, encounters with alterity, shadows, blackness, nightmares, candlelit cavernous hallways, crumbling stone ruins, cliffs and crashing water, weeping willows along a dirt road, and more. We approach these motifs in prose narratives by writers such as Octavia Butler, Alejo Carpentier, and Edgar Allan Poe, as well as through various visual treatments in film, television, and dance.

ENGL 1762U. Modern(ist) Times.

How does modernist fiction of the early twentieth century face the speeding up, slowing down, and time lapses people experience in modernity? How do literature and film imagine the causes of these changes, and how do they alter their own forms in response? Course may include work by Larsen, Woolf, Joyce, Barnes, Faulkner, Freud, Bergson, Chaplin, and Dreyer. Previous literature course strongly recommended. Enrollment limited to 20.

ENGL 1762V. Odysseys of Indenture: Literature and Archives of Global Asian Labor.

This course explores the literature and archives of indentured labor out of Asia to far-flung European colonies from Cuba to Mauritius, Trinidad to Natal, Brazil to French Indochina. Through the lens of archive theory, we will ask: How might we approach the vast but piecemeal archive of indenture, with its gaps and silences? How do we contend with state power in the managing and maintaining of those archives? What does it mean to read historical archives and manuscripts literarily—with close attention to their language and form? And what makes indenture narratives into modern narratives of "odyssey?" In the latter half of the course, we will study contemporary forms of Asian migrant labor, including guest work, sex work, and domestic work, interrogating what changes and what remains the same across the nineteenth, twentieth, and twenty-first centuries.

ENGL 1762W. Extravagant Texts: Reading the World Through Asian American Literature (ETHN 1750S).

Interested students must register for ETHN 1750S.

ENGL 1762X. Asian American Avant-Garde.

This course explores Asian American avant-garde writing, performance, and visual art from the long twentieth century. We will begin with the historical avant-garde during the early twentieth-century Asian Exclusion era, before moving on to the Fluxus and Language writings of the 1960s-80s, and finally to the proliferation of experimental writing since the 1990s. Reading canonical and lesser-known works alongside criticism theorizing the avant-garde, we will pay particular attention to questions of literary and aesthetic form and their relationship to racial form. Authors include H.T. Tsiang, Jose Garcia Villa, Yoko Ono, Theresa Cha, Hualing Nieh, John Yau, Karen Tei Yamashita, Pamela Lu, Mei-mei Berssenbrugge, Bhanu Kapil, Tan Lin, Myung Mi Kim, Divya Victor, and Don Mee Choi. There will be opportunities for both critical and creative engagement with course material.

ENGL 1762Y. South Asian Modernisms.

The view of modernism as a narrowly European and North American movement stands challenged by transnational and interdisciplinary perspectives. This course builds on such approaches through the lens of South Asian modernisms through the long twentieth-century. We will read leading writers (Mulk Raj Anand, Qurratulain Hyder); examine the rise of little magazines (Marg) and societies such as the Indian People's Theatre Association, the Progressive Writers' Association, and New Cinema Movement. Discussion will incorporate materials on caste modernism, Muslim cosmopolitanism, South Asian psychoanalysis, sociology, indigenous studies, anarchist economics & environmental thought.

ENGL 1780. Undergraduate Independent Study in Modern and Contemporary Literatures.

Tutorial instruction oriented toward a literary research topic. Section numbers vary by instructor. Instructor's permission required.

ENGL 1900A. "Literature" and the Ideology of the Aesthetic.

Theoretical and historical analysis of the idea of "literature" as writing that has the status of art, in relation to the emergence and elaboration of discourses of the "aesthetic." Readings in 18th- and 19th-century German and British sources (Kant, Schiller, Hegel, Nietzsche; Coleridge, Shelley, Arnold, Wilde) and in 20th-century literary and aesthetic theory (Benjamin, Adorno, Barthes, Foucault, Derrida, Williams, Eagleton). Enrollment limited to 20. Priority given to English concentrators. All other students must obtain instructor's permission.

ENGL 1900D. Literature and Politics.

Literature as a changing historical formation that often represents and is always shaped by the practices of organizing, asserting, and controlling power in society. Sustained focus on writings by Raymond Williams, Leon Trotsky, Michel Foucault, Edward Said, Gayatri Spivak, and Terry Eagleton, and on literary texts read from the perspectives of these six theorists (possibly Shakespeare, Milton, Marvell, Swift, Dickens, Gaskell, the Brontës, Victor Serge, Anna Akhmatova). Enrollment limited to 20.

ENGL 1900E. Aesthetics and Politics.

Considers the shifting relationship between art and politics beginning with the formation of aesthetics in the Enlightenment and continuing through such 20th-century historical moments as Naziism, modernism, impressionism, socialist realism, postmodernism, and such thinkers as Kant, Hegel, Marx, Adorno, Lyotard, Cixous, Deleuze.

ENGL 1900F. Interpretation.

This course will introduce students to the central issues in the theory of interpretation and their implications for critical practice. Topics will include the causes and consequences of interpretive conflict, the availability of tests for validity, the roles of the author and the reader, and the historical, social, and political dimensions of understanding. Readings will include major theoretical statements as well as critical essays and background materials related to three controversial novels.

ENGL 1900I. Critical Methodologies: Contemporary Literary Theory.

A survey of theories of literature from the early 20th century to the present, with particular attention to relations between "literary theory" and the broader phenomena of cultural studies and Critical Theory writ large. We will examine the New Critics; structuralism, post-structuralism and new historicism; cultural theory, including psychoanalysis, marxism, and aesthetic theory. Topics will include literariness and textuality, the reader and subjectivity, narrative and mimesis, and the reemergence of form in contemporary literary studies. Enrollment limited to 20. Not open to first-year or graduate students.

ENGL 1900J. Zoopoetics.

This course will explore the intersections between the depictions of plants and animals in twentieth and twenty-first century poetry and the theoretical conversations about non-human worlds unfolding in emerging fields, such as animal studies and the environmental humanities. Readings will range from poetic texts by Francis Ponge and Marianne Moore to theoretical texts by figures such as Donna Haraway.

ENGL 1900K. Reading Sex.

How do we interpret "sex," as a concept, as a thing, as a phenomenon? What kinds of ethical, political, historical, and aesthetic contexts are informed by--and, in turn, form--our sense of "sex" itself? This course will focus on intensive close readings of various queer theoretical texts, novels, and films that variously try to think through the multiple ways we try to represent and render sex legible, while at the same time calling into question our sense of what, ultimately, sex can be as something that both binds and unbinds the human. Enrollment limited to 20.

ENGL 1900L. The Problem of American Literature.

Considers questions such as: what are the distinctive qualities (if any) of American literature, and how do the various writers from diverse cultural settings fit into a single literary tradition called "American" (or do they fit in)? In order to examine the assumptions and implications of studying literature as a national phenomenon, focuses reading on various critical and theoretical texts.

ENGL 1900M. Twentieth-Century Reconceptions of Knowledge and Science.

Significant critiques of classic and prevailing (rationalist, realist, positivist) ideas of scientific truth, method, objectivity, and progress and the development of alternative (constructivist, pragmatist, historicist, sociological) accounts; the dynamics of knowledge; the relation between scientific and other cultural practices. Readings include works by Fleck, Popper, Kuhn, Foucault, Rorty, and Latour. Prerequisite: UC 49 (An Introduction to Science Studies) or college-level work in critical theory, science, or philosophy.

ENGL 1900O. Contemporary Feminist Literary Theory.

An advanced survey of 20th-century feminist literary theory with an emphasis on U.S., British, and French traditions. Topics include canon formation, "resisting readers," and the category of "women's writing," as well as the relation of feminist criticism to problematics such as critical race theory, poststructuralism, psychoanalysis, and postcolonialism.

ENGL 1900P. History of Criticism from Plato to Postmodernism.

A survey of the major theorists of literature in the western tradition, from the Greeks to the contemporary period. Recurrent issues will include the definition of literary value, the distinctiveness of the aesthetic experience, and the moral and social uses of literature. Enrollment limited. Banner registrations after classes begin require instructor approval.

ENGL 1900Q. Women In/And the Novel.

An introduction to the novel through feminist theory, considering social and historical reasons why women read, wrote, and figured in novels, from the 18th century to the 20th. Novels by Defoe, Austen, George Eliot, Rhys, Woolf; readings in feminist theory and criticism. Priority will be given to concentrators in English and Gender Studies. Others will be admitted only with permission of the instructor.

ENGL 1900R. Queer Relations: Aesthetics and Sexuality.

A study of the relationship between aesthetic thought and sexuality in a variety of literary and cinematic works. We will supplement our readings with ventures into queer theory, emphasizing how art is related to identity, community, race, gender, and ethics. Authors include Wilde, Pater, James, Winterson, Cole, Guibert, Foucault, Bersani, Edelman. Films by Julien and Jarman.

ENGL 1900T. The Postcolonial and the Postmodern.

Explores the contexts and conceptual implications of theories of postmodernism and postcolonialism. Particular attention to intersections and disjunctions between both concepts as attempts to grapple with the challenges of modernity from the vantage point of the late-20th century. Course will end with two novels that address related issues with the tools of fictional narrative: Coetzee's *Foe* and Rushdie's *Midnight's Children*. Readings include: Butler, Hall, Jameson, Laclau, Lyotard, Spivak. Not open to first-year students. Enrollment limited to 20.

ENGL 1900U. Word and Image.

How do words and images represent? This course will examine major statements about the relation between verbal and visual representation from Lessing's classic study *Laocoön* to contemporary theories of the semiotic and social construction of images. Theoretical readings will be accompanied by analyses of examples from literature and the visual arts, ranging from painting to film and graphic novels. Not open to first-year students. Banner registration after classes begin requires instructor approval.

ENGL 1900V. Camera Works: The Theory and Fiction of Photography.

This class focuses both on literature influenced by and theoretical considerations of photography. Texts and films to include Barthes' *Camera Lucida*, essays by Benjamin, Kracauer, and Krauss, Cortazar's "Blow-Up," Antonioni's *Blow-Up*, Fitzgerald's *Tender is the Night*, Sebald's *The Emigrants*, West's *The Day of the Locust*, Frampton's *Nostalgia*, Egoyan's *Calendar*, Rancière's *The Future of the Image*, and poetry by Rich, Ashbery, and Larkin. Not open to first-year students and sophomores. Open to English concentrators only.

ENGL 1900Y. Medieval Manuscript Studies: Paleography, Codicology, and Interpretation.

How do you read a medieval manuscript? This course teaches hands-on methodologies for deciphering the material text, including palaeography (history of scripts) and codicology (archeology of the book); contemporary models of interpreting scribal texts, including editorial theory and analysis of readers' reception; and medieval concepts of textuality and interpretation, including medieval theories of authorship and the arts of memory. Prior course work in Middle English or Latin or other medieval language recommended. Not open to first-year students. Enrollment limited to 20. Instructor permission required.

ENGL 1900Z. Neuroaesthetics and Reading.

Analysis of the theories of art, reading, and aesthetic experience proposed by neuroscience and cognitive science in light of traditional aesthetics and contemporary literary theory. Enrollment limited to 20. Prerequisite: At least one course on neuroscience or cognitive science and one 1000-level literature course. Instructor permission required.

ENGL 1901B. Politics and the Novel.

This course will explore how various realist and modernist novels represent political life, both in its practical dimensions and as forms of consciousness (ideologies, world views, attitudes). We will also explore theoretical and critical writings on the topic of literature and politics. Authors will include Elizabeth Gaskell, E.M. Forster, Lionel Trilling, Ralph Ellison, Doris Lessing, and Viet Thanh Nguyen. Enrollment limited to 20.

ENGL 1901E. Reading Literature in a Digital World.

We will explore the implications of using digital technologies to study literature. How does our understanding of literature and literary study change—if it does—in light of recently developed digital methods for studying such works? How do such methods compare with traditional ways of studying literature? How might literary studies be reconceived in relation to new media studies? Enrollment limited to 20.

ENGL 1901F. Art of Criticism.

This course explores the art of literary criticism through analysis of individual critics as well as larger schools of criticism. Focusing on the twentieth century, we will read works by those affiliated with high theory as well as those who stood outside that influential development. The goal will be to understand literary criticism as a form of thinking, and an art, in its own right, one with philosophical, social, and literary dimensions. Authors include: Oscar Wilde, Kenneth Burke, Mary McCarthy, Lionel Trilling, Raymond Williams, Paul de Man, Eve Sedgwick, D. A. Miller, John Guillory. Enrollment limited to 20.

ENGL 1901H. The Late 60s: Film Countercultures.

On representative late-60s counterculture movies concerned with antiauthoritarianism; hippy Bohemianism; social and sexual experimentation; dropping out; and psychedelia. Bookended by rock music festival documentaries (*Monterey Pop*; *Gimme Shelter*; *Woodstock*), the seminar is mostly concerned with feature films (*The Graduate*; *Bonnie and Clyde*; *2001*; *Midnight Cowboy*; *Easy Rider*; *Medium Cool*). It will also consider some underground art cinema of Kenneth Anger and Andy Warhol. Enrollment limited to 20 juniors and seniors in English and MCM. Instructor permission required.

ENGL 1901J. Fanon and Spillers.

This course will consider the conceptual/theoretical contributions of Frantz Fanon and Hortense Spillers, as frames for reading some iconic texts in the black literary canon. Central to our study will be an exploration of blackness, subjection, and gendering—as well as thinking about how these idioms relate to the genre conventions of our course's literary works. Enrollment limited to 20 juniors and seniors. Instructor permission required.

ENGL 1901L. Cronenberg/Lynch.

A genre-oriented study of two major contemporary expressionist filmmakers, David Cronenberg and David Lynch, by means of juxtaposing some of their key works. Films by Cronenberg: "The Fly," "Videodrome," "Crash," "A Dangerous Method," and "Maps to the Stars." Films by Lynch: "Eraserhead," "Blue Velvet," "Wild at Heart," "Mulholland Drive," and "Inland Empire." Enrollment limited to 20 juniors and seniors. Instructor permission required.

ENGL 1901Q. You Better Work: Sexuality, Labor, Blackness.

This seminar takes a historical, theoretical, and interdisciplinary approach to sexuality, labor, and blackness in the United States. We will engage in black feminist, trans, and queer methodologies of selected literature, film, and artwork while we also consider the limits of labor as a conceptual apparatus. Thinkers include Samuel R. Delany, Saidiya Hartman, Gayl Jones, Audre Lorde, Toni Morrison, Tourmaline. Open to juniors and seniors only. Enrollment limited to 20.

ENGL 1901T. Practices of Autofiction.

One of the more sensational developments in contemporary literature in the United States is the emergence of so-called "autofiction," an abbreviation of the term "autobiographical fiction." But what is distinctive about this literary form, if anything, and what is behind its current popularity? Does it, as one prominent theorist has proposed, denote "a new craving for reality in contemporary literature," or is its significance on the contrary, in the words of another critic, that it "neatly and economically poses the question of the self as fiction"? This course will survey a range of "autofictional" practices in literature, art, and film, and consider several explanations for this wave of interest. Authors include Knausgaard, E. Hardwick, G. Murnane, Teju Cole, Sophie Calle, J. Panahi, Paul B. Preciado, A. Ernaux, F. Jameson, T. Moi, A. Kim.

ENGL 1901U. Aesthetic Theory/Cultural Studies (MCM 1503E).

Interested students must register for MCM 1503E.

ENGL 1910A. Dreamworlds: Utopia from Plato to the Present.

Can acts of writing change the world? This course looks at a number of famous utopias and dystopias from classical time to the modern period and analyzes how the genre's literary experiments transform reading into a political act. Works by Plato, More, Montaigne, Shakespeare, Swift, H.G. Wells, and Le Guin. Films will include *Blade Runner* and *Pleasantville*.

ENGL 1910E. Lyric Language: Renaissance Forms and Modern Poetry.

Tracing poetic forms from renaissance to modern-- stubborn models like the sonnet (Shakespeare/Berryman), the ode (Jonson/ Creely), and the sestina (Sidney/Bishop); soft forms like blank/free verse (Milton/ Wordsworth/Eliot); generic containers like elegy, epigram, and satire (Herrick/Donne/Keats/Auden); low and nonsense verse (Skelton/Carroll/ hip-hop); and the functions of repeatable forms like line and stanza (Spenser/Tennyson/Dr. Suess/Heijinian).

ENGL 1910F. Working Fictions: Race, Gender, and Sexuality at Work.

Eight hours a day. Five days a week. Such is the standard work week the world over, but what exactly is the "work" we do during these hours? What work happens beyond these hours? What does and does not count as work and why? How is work differently configured along lines of race, gender, sexuality, class, and dis/ability? In order to address these questions, we will trouble imaginaries of "free" labor through attention to enslaved and indentured labor, reproductive and sex work, and migrant and gig work in a global economy. From Herman Melville's satire, "Bartleby, the Scrivener," to Karl Marx's and Adam Smith's theories of labor, to workplace films like Jeanne Dielman and Office Space, this course explores representations of work in its diverse and ubiquitous forms, spanning the age of colonialism to our contemporary global division of labor.

ENGL 1911. Narrating the Anthropocene (ENVS 1911).

Interested students must register for ENVS 1911.

ENGL 1950A. Form and Feeling in Renaissance Poetry.

Pending Approval. Renaissance poets laid claim to the ethical power of poetry to move people through imagination. How does formal imitation and innovation create fields of feeling in the poetry of Spenser, Sidney, Shakespeare, Donne, Jonson, and Milton? Enrollment limited to 20 seniors.

ENGL 1950B. Literature and the Ideology of the Aesthetic.

Pending Approval. Theoretical and historical exploration of the idea of literature understood as writing that has the status of art--and of the relation of this idea to the emergence and elaboration of discourses of the aesthetic. First six weeks: decisive eighteenth- and nineteenth-century developments in the meaning of literature as it relates to the aesthetic. Second six weeks: recent positions (especially poststructuralist and Marxist) that figure prominently in current debates. Enrollment limited to 20 seniors.

ENGL 1950F. Law and Literature.

This seminar explores the conceptual, psychological and rhetorical connections between literature and law, examining how both disciplines shape the imagination but also aim to elicit response and responsibility. We will consider how literary works, legal writings, and legal opinions inform each other, but also illuminate each other's blind spots. Looking beyond trial scenes, the course invites students to think about how principles and notions in law structure, and are structured by, literature and language. Authors include Walter Benjamin, Joseph Conrad, Albert Camus, Rebecca West, and Chinua Achebe; legal texts by Holmes, Bentham, Cover and a number of judicial opinions. Limited to 20 senior English concentrators.

ENGL 1950G. Reading Narrative Theory.

Narrative is a powerful category of analysis spanning genres, historical periods, media forms, and the distinction between the "fictional" and the "real." This course examines major narrative theorists of the twentieth and twenty-first centuries. We will focus on literary examples, such as theories of the folktale and novel, and scholarship that interrogates the work of narrative in historiography, in cinema and television, and in extra-literary contexts (in the struggle of political campaigners to "control the narrative" or debates on narrative in gaming, medical research, law, and theory itself). Limited to 20 senior English concentrators. Others admitted by instructor permission only.

ENGL 1950H. The Recent Novel and its Cultural Rivals.

A careful consideration of several major late twentieth- and early twenty-first century Anglophone novels in terms of their relationship to rival aesthetic forms and media--film, television, radio, video games, and the like. Writers to be considered included: Morrison, Lee, Rushdie, Smith, Didion, Díaz, Pynchon, and Egan. Enrollment limited to 20 senior English concentrators. Others admitted by instructor permission only.

ENGL 1990. Senior Honors Thesis in Nonfiction Writing.

Independent writing project under the direction of a faculty member. Permission should be obtained from the Honors Director for Nonfiction Writing. Enrollment limited to English concentrators whose application to the Honors in Nonfiction Writing program have been accepted.

ENGL 1991. Senior Honors Seminar in English.

Weekly seminar led by the Advisor of Honors in English. Introduces students to sustained literary-critical research and writing skills necessary to successful completion of the senior thesis. Particular attention to efficient ways of developing literary-critical projects, as well as evaluating, incorporating, and documenting secondary sources. Enrollment limited to English concentrators whose applications to the Honors in English program have been accepted. Permission should be obtained from the Honors Advisor in English. S/NC

ENGL 1992. Senior Honors Thesis in English.

Independent research and writing under the direction of a faculty member. Permission should be obtained from the Honors Advisor in English. Open to senior English concentrators pursuing Honors in English. Instructor permission required.

ENGL 1993. Senior Honors Seminar in Nonfiction Writing.

This course is designed for students accepted into the Nonfiction Honors Program. It will be run in workshop format, and will focus on research skills and generative and developmental writing strategies for students embarking on their thesis projects. Weekly assignments will be directed toward helping students work through various stages in their writing processes. Students will be expected to respond thoughtfully and constructively in peer reviewing one another's work. Open to seniors who have been admitted to the Honors Program in Nonfiction Writing. Instructor permission required. S/NC

ENGL 1994. Senior Honors Thesis in Nonfiction Writing.

Independent research and writing under the direction of the student's Nonfiction Writing honors supervisor. Permission should be obtained from the Honors Advisor for Nonfiction Writing. Open to senior English concentrators pursuing Honors in Nonfiction Writing. Instructor permission required.

ENGL 2210. Proseminar.

This seminar, required for *first-year graduate students in English*, considers the state and stakes of literary studies today. The course aims to familiarize students with contemporary critical debates and stances in the wider discipline, and to engage with current methodologies, theories, and analytical tensions. We also address issues of professionalization as they relate to the first years of graduate work. Enrollment limited to 10. S/NC.

ENGL 2360A. Renaissance Drama.

This course explores Early Modern drama: its styles of representation, material conditions, and political engagements, in Marlowe, Jonson, Middleton, Webster, Ford, Beaumont and Fletcher, and others. Drawing on current scholarship, it posits the stage as the site of contests over national identity, royal power, gender ideology, social mobility, nascent capitalism, religious and ethnic differences. Enrollment limited to 15 graduate students. Undergraduate English concentrators may request permission of the instructor.

ENGL 2360B. Before Holinshed: The English Brut Chronicle Tradition.

Holinshed's 16th-century history drew from 400 years of manuscript chronicles, most in verse, which founded the "modern" history of England on a Trojan/Celtic ancient Britain. We will read the medieval versions of these historical narratives from Geoffrey of Monmouth, Wace, and Layamon to the popular 15th-century Middle English prose Brut. Critical engagements with manuscript/print cultures and the "Brut" narrative as a vocabulary for nationalism. Enrollment limited to 15.

ENGL 2360C. Beowulf.

This course will consist of a careful reading and analysis of *Beowulf* in its original language. In addition to developing language competence, we will also discuss the poem through comparison to other Old English poems and Scandinavian analogues. Themes will include the manuscript context, heroism, gender, sacrifice, lamentation and elegy, the monstrous, material culture, and contemporary theoretical approaches to the poem. Prerequisite: 2000-level Introduction to Old English or its equivalent. Enrollment limited to 15.

ENGL 2360D. Early Modern Drama.

An intensive introduction, for specialists and others, to the great classics and some less-known gems of a stellar period in English drama. Plays by Marlowe, Middleton, Webster, Jonson, and Ford, among others. Topics: the popular theatre and its audience; urban culture; English nationhood; boy actors and the representation of gender and sexuality; play texts in print culture. Enrollment limited to 15.

ENGL 2360F. Introduction to Medieval Studies.

Equips students with critical, linguistic, and historical knowledge to interpret Middle English texts (1066-1500). Primary texts by Chaucer and others, to be read in contexts of current critical debates (on topics including textuality, sexuality, and political formations) and medieval conceptual systems (including dream theory, alchemy, arts of memory). Priority to graduate students; no prior Middle English required. Enrollment limited to 15.

ENGL 2360G. Medieval Manuscript Studies: Paleography and Interpretation.

How to read and understand a medieval manuscript text. Methodologies include paleography, codicology, editorial theory. Hands-on analysis and interpretation of specific Middle English texts in their manuscript medium (in microfilm, facsimile, digital representation, and when accessible, actual manuscripts). For students already acquainted with Old English and/or Middle English; Latin helpful. Textual projects in other medieval languages possible with instructor's consent. Enrollment limited to 15.

ENGL 2360H. Race and Place in Renaissance Literature.

Reads early modern English drama, poetry, and prose depicting the migration of groups to foreign places (England, the Indies, the Americas) to consider how such writing defines the connection between space and identity. We will consider how this literature values environment as against blood, soil against seed, as determinants of identity capable of marking people as "strange," "alien," or "natural." Authors will include Marlowe, Shakespeare, Fletcher, Massinger, Drayton, Jonson, and Bacon. Enrollment limited to 15 graduate students. All others will be admitted only with permission of the instructor.

ENGL 2360I. Renaissance Embodiments.

Considers Renaissance representations of self in pre-modern terms—that is, inseparable from the physical conditions of climate and region. How did early modern culture draw the line between culture and nature? Where do these theories connect with or depart from modern paradigms of self in such authors as Elyot, Shakespeare, Calvin, Luther, Burton, Donne, Montaigne, Jonson, and Browne? Enrollment limited to 15.

ENGL 2360K. The Renaissance and Modernity.

Modernism restages 17th-century cultural and political revolution and restoration. An examination of the problem of style and modernity, looking at practices in poetic and prose style and at the emergence of the term "modernity" at the moment of high modernism and after. Enrollment limited to 15.

ENGL 2360N. The Pearl Manuscript in Context.

Close translation of the Middle English alliterative poems in British Library Manuscript Cotton Nero A.x., *Pearl*, *Cleanness*, *Patience*, and *Sir Gawain and the Green Knight*, with attention to their medieval theological, generic, and codicological contexts. Enrollment limited to 15.

ENGL 2360O. Irony and Satire.

Works of irony and satire (from the Civil Wars to the death of Swift) allow an investigation of current issues in the study of Civil War, Restoration, and Early 18th-C. texts, including revisionist history, the public sphere, Anglo-Irish relations, print culture, mercantilism, and gender construction. Enrollment limited to 15.

ENGL 2360P. Thinking with Romance in the Renaissance.

Modernity defines romance as escapist, a mode that flies from the "real." Yet Renaissance writers placed it at the center of debates about politics, ethics, and knowledge. Tracking its generic fingerprint in Spenser's romance-epic, we will consider its adaptation for the stage as tragicomedy and its relation to epistemological shifts dividing science from fiction, knowledge from pleasure. Authors include Raleigh, Spenser, Shakespeare, Fletcher, Massinger, Bacon, Cavendish. Open to graduate students only.

ENGL 2360Q. Manuscript, Image, and the Middle English Text.

This seminar will engage with the interpretive issues raised by considering manuscript images in relation to manuscript text. Selected Middle English texts will include *Pearl*, works by Chaucer, and the popular Middle English prose *Brut*, in the context of twelve historiated manuscripts of the fourteenth and fifteenth centuries. Enrollment limited to 15 graduate students.

ENGL 2360R. Civil Wars, Restoration, and Early Georgian Literature.

The seminar will consider major works from the English Civil Wars to the first years of the eighteenth-century, with attention to cultural and theoretical contexts for understanding important developments such as print culture, war, nation-formation, the marketplace, and public/private spheres. Writers will include Milton, Rochester, Behn, Restoration playwrights, Dryden, Swift, and others. Additional readings will include selections from Adorno, Pocock, Anderson, Zizek, Brown, Johns, and others. Enrollment limited to 15 graduate students.

ENGL 2360S. Alternative Miltons.

This seminar undertakes a close reading of Milton's monumentally significant epic "Paradise Lost." We will also consider the current state of Milton criticism. What's new in Milton criticism? What approaches have been holding fort? Has Milton criticism been slower to take to critical and theoretical innovation than Shakespeare criticism? If so, why, and what might we do about it? On that account, the seminar will engage a range of newer approaches—disability studies, queer theory, trauma theory, eco-criticism, animal studies, technoculture studies, and popular culture studies—to consider what they have to offer by way of new perspectives on Milton. Enrollment limited to 15 graduate students.

ENGL 2360Y. Lyric and Ecstasy.

This seminar principally focuses on ecstatic states in the lyric verse of three extraordinary seventeenth-century English poets—John Donne, Richard Crashaw, and John Milton—who are rarely read together. We will consider lyric poetry—both erotic and religious—not only as an apposite medium for rendering ecstatic experience, but also how lyric poetry itself might function as a stimulus for ecstasy. We might also venture into some consideration of music along similar lines. Limited to 15 graduate students.

ENGL 2360Z. Shakespeare: a Politics of Love.

This seminar will explore certain of Shakespeare's plays—mainstays such as *Romeo and Juliet* and *Othello* but also more marginal texts, such as *All's Well* and *As You Like It*—in order to discern a politics of love. Enrollment limited to 15.

ENGL 2361E. Sadomasochism and Early Modern Literature.

This class considers the political, psychic, sexual, and aesthetic implications of pain and pleasure in early modern literature. Primary texts include Shakespeare's sonnets and comedies, Sidney's *Astrophel and Stella*, and poetry by the Earl of Rochester, Robert Herrick, and Aphra Behn. Secondary texts include Deleuze, Freud, MacKinnon, Bersani, Jane Gallop, and Laura Kipnis.

ENGL 2361H. Evil Plays: Shakespeare and Contemporaries.

Coleridge posited of the villainous Iago a "motiveless malignancy." That is, the evil he performs exceeds any reason provided. We'll consider the question of evil in Shakespeare's tragedies *Titus Andronicus* (which pushes the logic of revenge past its breaking point); *Macbeth*; *Othello*; *King Lear*. Because Renaissance drama is more than Shakespeare, we'll also consider spectacularizations of evil in his contemporaries Ford, Webster, and Middleton. Instructor permission required.

ENGL 2380. Graduate Independent Study in Medieval and Early Modern Literatures.

Section numbers vary by instructor. May be repeated for credit. Instructor's permission required.

ENGL 2450. Exchange Scholar Program.**ENGL 2560A. American Exotics.**

From the beginning of colonization all the way up to the American Revolution, America is consistently figured as a remote and alien place. We will explore the figurative transformation of "America" by examining the use of images of the "remote" and "exotic" in British American colonial writing, including poems, plays, maps, travel narratives and natural histories. Enrollment limited to 15.

ENGL 2560C. Early American Studies.

A critical introduction for graduate students to the scholarly field of early American studies, from the colonial era to the late 19th century. Enrollment limited to 15.

ENGL 2560E. Liberalism.

An interdisciplinary approach to American culture and literary history through the lens of liberal ideologies. Readings include Franklin, Thoreau, sentimental novel, and Ellison's *Invisible Man*. Enrollment limited to 15 graduate students. Exceptions with permission by instructor.

ENGL 2560F. Realism.

Begins with European theories of realism, including Lukacs, Watt, Jameson, and others, who define realism by linking it to some aspect of modernization. Moves to theories that expose the limits of classical realism in the name of someone as some aspect of history it systematically subordinates or excludes, e.g., women, colonial subjects, minority cultures. Enrollment limited to 15.

ENGL 2560G. Romantic Orientalism.

Representations of the "Orient" in British and transatlantic literary culture during the "Romantic" period (c. 1770-c. 1830). Connections between cultural representation and both assertions of and challenges to British colonial and imperial power. Theoretical, historical and political analysis by Said, Barrell, and others; poetry by Coleridge, Southey, Byron, P.B. Shelley; prose by Sydney Owenson, Charlotte Dacre, Thomas DeQuincey. Enrollment limited to 15.

ENGL 2560H. Romanticism and the Ideology of the Aesthetic.

Historical development of discourses of the "aesthetic" as they relate to the problem of "romanticism" as the name of a distinctive era in British and European literature and culture. Ideas about the autonomy of art in the period of the French and the Industrial Revolutions. Readings in Baumgarten, Kant, and Hegel; in Coleridge, W. Wordsworth, P. B. Shelley, and Keats. Enrollment limited to 15.

ENGL 2560K. The Transatlantic Enlightenment.

A graduate seminar in literatures and cultures of the long 18th century in transatlantic context. Emphasis on print culture, the Black Atlantic, colonialism and slavery, as well as the American Revolution. Enrollment limited to 15.

ENGL 2560L. The Victorian Novel.

An intensive seminar on the Victorian novel. The aim will be historically contextualized, theoretically informed interpretations of some leading examples of this complex literary form. Will focus on the role of the (British) novel, as distinct from the (American) short story, in rise of mass culture, and on recent formalist, stylistic, and historical approaches to the Victorian novel as a literary form. Enrollment limited to 15.

ENGL 2560N. American Literature and the Corporation.

An examination of 19th-century American literature in the context of the rapid growth of corporate forms in American economic, political, and social life from the mid-1830s through the turn of the century. How does literature participate in the debate this process of incorporation occasioned, and in what ways was it shaped by the process of incorporation occasioned, and in what ways was it shaped by the process? Readings include Hawthorne, Melville, Harper, Grant, Alcott, Crane, and Chestnutt. Enrollment limited to 15.

ENGL 2560Q. Victorian Fictions of Consciousness.

Victorian novels, Brontë through James, with an emphasis on the ways in which novels engage 19th-century theories of mind and psychology, looking at such central concepts as memory, will, sensation, and perception. Examines the importance of form and the subgenres of Victorian fiction (*Bildungsroman*, sensation novel, multiplot novel) in the construction of concepts of selfhood and consciousness. Attention also to the place of consciousness in Victorian and 20th-century theories of the novel. This course will also serve as an introduction to working on topics in science and literature. Enrollment limited to 15.

ENGL 2560R. Romantic Dispossession: Subjectivity and Agency.

This course examines the diverse arguments made by writers of the Romantic era concerning nonidentity, and focuses on the kinds of ethical, political, and aesthetic considerations that arise once identity is forfeited and dispossession is perceived as either a matter of self-discipline, the negative result of sympathy, a characteristic of literary culture, or a sign of melancholic loss. Enrollment limited to 15 graduate students. Undergraduate seniors will be admitted only with the permission of the instructor.

ENGL 2560T. The Realist Imagination.

A study of American literary realism. We will situate realism in the context of the realist turn in American artistic, political, legal, and economic enterprise from the Civil War to World War II, and measure the realist novel's relations to alternative aesthetic ideologies such as transcendentalism, regionalism, naturalism, and modernism. Authors to be considered include Emerson, DeForest, Grant, Twain, Cable, Chesnutt, Dreiser, Wharton, Cather, Anderson, Dos Passos, Faulkner, and Hurston. Enrollment limited to 15.

ENGL 2560U. Romanticism and the Ruins of Empire.

Representations of the ruins of ancient empires (Babylonian, Assyrian, Roman) in relation to British and French imperialism during the period we call "Romanticism." Enrollment limited to 15.

ENGL 2560V. Transatlantic Studies.

This course offers a theoretical and historical examination of "transatlantic" models of literary analysis as an alternative to traditionally national ones. It will look at a recent criticism theorizing the field, including both literary and historical scholarship. Primary readings will be from Rowson, Equiano, Franklin, Emerson, and Twain, among others. Enrollment limited to 15.

ENGL 2560W. The Figure of the Artist in the Nineteenth Century.

This course considers the changing representations of the artist in the 19th century, as prophet, intellectual, professional, critic, genius, madman, aesthete, and social celebrity. Readings will focus on 19th-century novels, with select essays, reviews, and other nonfiction prose. Authors include George Eliot, Charles Dickens, Anthony Trollope, Arnold Bennett, George Gissing, H. G. Wells, George Bernard Shaw, Oscar Wilde. Enrollment limited to 15.

ENGL 2560X. The Rise of the Novel.

The seminar would combine the study of eighteenth-century novels [some canonical, like *Robinson Crusoe*, *Clarissa*, *Tom Jones*, and *Tristram Shandy*; some less so, like amatory fiction and revolutionary fiction of the 1790's] with important theories of and debates about the novel — its origins, rise, and discourses. Enrollment limited to 15.

ENGL 2560Y. Writing the Ruins of Empire: Romantic Cultural Property.

British literary responses to the shifting significance and value status of ancient artifacts and works of art in the period of the French Revolution and Napoleonic Wars. Ruins as "cultural property," "cultural capital," and "aesthetic object"—then and now. Effects of colonial expansion and imperialist rivalry on collecting, connoisseurship, the advent of public museums, the marketing of antiquities, the marketing of literature. Primary readings in Gibbon, Volney, Byron, P.B. Shelley, Mary Shelley, Anna Barbauld, Felicia Hemans, Hazlitt, Keats.

ENGL 2560Z. Global Early American Literature.

What does American literature before 1860 look like viewed from a global perspective? Our goal will be to see what specifically literary problems and questions came into focus when we read American literature in terms of economic, social, philosophic, and ideological issues that extend across the globe. Authors may include John Smith, Anne Bradstreet, Charles Brockden Brown, and Herman Melville. Enrollment limited to 15 graduate students.

ENGL 2561A. Manifest Destinies: Liberalism and Expansion in American Literature, 1820-1920.

An investigation of the relations between American literature and the territorial expansion of the United States from the early 19th century through World War I. Topics include the role of liberalism in the rise and operation of American expansion, the relationship between colonialist and imperialist visions of America's manifest destiny, the ideological implications of literary genres of open space (the western, the sea narrative), race and the patterns of internal migration in the United States, and the connection between the Turner thesis and literary form (Howellsian realism, Whitman's poetics and Dickinson's anti-poetics, Jewett's regionalism). Authors include Cooper, Poe, Melville, Douglass, Craft, Whitman, Dickinson, James, Jewett, and Twain. Enrollment limited to 15 graduate students.

ENGL 2561B. Things Not Entirely Possessed: Romanticism and History.

This course explores how Romanticism *thinks through* the historical, and in particular, it engages Romantic mediations of historical knowledge through aesthetic form. What is the relationship of the aesthetic to the historical? How is subjectivity an effect of a poem's negotiation of the past? And what role does the "future" play in Romanticism? Authors will include Liu, Pfau, Levinson, McGann, Goodman, Chandler, Ferris, Pyle.

ENGL 2561C. Intellectuals and the Public Sphere.

Considers the relationship of the artist to the public sphere, focusing on the late nineteenth century. We will look back from debates today over the "public intellectual" to Victorian debates over the "intellectual." Attention to how narratives of intellectual decline in the late nineteenth and twentieth centuries portray the figure of the artist: as prophet, intellectual, professional, critic, genius, woman, madman, aesthete, scientist, and social celebrity. Readings will include literary writers and essayists (such as Dickens, Trollope, James, Pater, Shaw, Wilde, Wells), alongside theorists (Humboldt, Weber, Brecht, Benjamin, Habermas, Bourdieu, Latour, Kittler). Enrollment limited to 15 graduate students.

ENGL 2561H. American Literature Without Borders.

Recent theoretical and critical approaches to colonial and 19th-c. American literature: transatlantic, Caribbean, hemispheric; borderlands; imperial, colonial and postcolonial cultural formations; the Black Atlantic; diasporic and migration studies. Enrollment limited to 15 graduate students.

ENGL 2561J. Satire and Irony.

Satire is not so much a genre as it is a mode of discourse, like irony, that resists formal constraints and can function in almost any kind of text. Satire's dynamic contradictions (reform and frustration; laughter and anger; topicality and generality; purposefulness and pointlessness; public and private) enliven early modern texts, and complicate the relationship between language and meaning. Theories of satire provide a framework for the study of its history and practice. Emphasis falls on the great age of satire (especially the works of Jonathan Swift and his contemporaries) but some attention will be given to earlier and later examples.

ENGL 2561L. Nature and Law in American Literature.

This course will explore how American authors registered the transformation of natural history into the sciences of life. It will pay special attention to how new sciences of life influenced the legal and political practices that constitute our understanding of personhood. It will explore how sciences and emerging experimental medicine competed with discourses of the supernatural in deciding who has the right to live and die.

ENGL 2561V. The Pursuit of Happiness: Transatlantic Literary Culture in the Long Eighteenth Century.

English and American literature of the long eighteenth century with a focus on emerging concepts of happiness. Reading includes poetry, novels, satire, travel, moral philosophy, and other genres. The right to pursue happiness placed in the context of new forms of social mobility such as education, class, and affectionate marriage, but also in the context of war, empire, slavery, and other metropolitan and colonial cultural formations and exchanges. Enrollment limited to 15.

ENGL 2561Z. Adorations: Keats and Shelley.

An introduction to several poetic and prose texts by two late Romantic writers, centering on their interests in address, adoration, disappearance, temporality, and love.

ENGL 2562. First Person: Narcissism and Literary Form.

This course will examine first person point-of-view in literature from several perspectives: narrative theory, psychoanalysis (Freud, Lacan, Kohut), and examples from world literature (may include: David Copperfield, The Turn of the Screw, Notes from Underground, The Good Soldier, Swann's Way).

ENGL 2580. Graduate Independent Study in the Enlightenment and the Rise of National Literatures.

Section numbers vary by instructor. May be repeated for credit. Instructor's permission required.

ENGL 2760A. American Modernist Poetry and Poetics.

Study of the poetry and prose of Eliot, Pound, Stevens, Williams, H.D., Moore, and Hughes, with additional readings in criticism and theories of modernism. Enrollment limited to 15 graduate students.

ENGL 2760B. City, Culture, and Literature in the Early Twentieth Century.

Examines the way the city structures early 20th-century culture and history. Through novels, poetry, and cultural criticism, considers a range of topics that include the relation between the city, consciousness, and ideology; the effects of changing urban immigration; and the effects of mobility. Authors include Simmel, Benjamin, Harvey, Williams, Rotella, James, Woolf, Wright, and Eliot. Enrollment limited to 15 graduate students.

ENGL 2760D. Contemporary African American Literature and the End(s) of Identity.

Investigates the controversies surrounding the claim that the late 20th century marks the end of nationalist and essentialist paradigms in the scripting of black identity. Readings from a range of literary and theoretical works dealing with this intricate problem, including Stuart Hall, Hortense Spillers, Reginald McKnight, Trey Ellis, Octavia Butler, and Paul Beatty. Enrollment limited to 15.

ENGL 2760E. Law and Literature: From Response to Responsibility.

Explores modernism as it is shaped by the normative and ethical concerns of a rapidly changing world through literary works, legal writings, and legal opinions. Examines the conceptual, psychological and rhetorical connections between literature and law, and considers how both disciplines shape the imagination but also aim to elicit response and responsibility. Authors include Walter Benjamin, Joseph Conrad, Virginia Woolf, Rebecca West, Chinua Achebe, and others; legal texts include Holmes, Bentham, Cover and a number of legal opinions. Enrollment limited to 15.

ENGL 2760F. Metaphoric Expression: Emerson, James, Stein.

According to William Carlos Williams, metaphoric vision continually blinds Americans to the actual conditions of their world. In an attempt to answer this charge, we will read these three densely metaphorical writers against their varied historical backgrounds, hoping in the process to better understand the role played by figurative language in the shaping of American society, culture, and identity. Enrollment limited to 15.

ENGL 2760G. Modernist Fiction and Theories of Modernism.

Examines a range of modernist fiction—including work by Conrad, Dos Passos, H.D., Joyce, Larsen, Rhys, Toomer, Woolf—alongside selected theories of modernism. Considers approaches ranging from theories of reification and the aesthetic to more recent considerations of modernism's relation to gender, nation, race, empire, and professionalism. Enrollment limited to 15 graduate students.

ENGL 2760H. Nationalizing Narratives: Studies in the Twentieth-Century U.S. Novel.

In this seminar, we will examine a number of important 20th-century U.S. novels for the ways in which they conjure the nation both as "imagined community" and "fictive ethnicity." Particular focus will be given to how the category of national identity becomes intertwined issues of race, gender, sexuality, and region as well as with ideologies of the aesthetic. Enrollment limited to 15.

ENGL 2760I. Possession and Dispossession in the Modern Novel.

Examines modernist sentimentality as it is figured in notions of property. By exploring the legal and literary relationship between owning and being, we will consider how writers such as Forster, Woolf, Joyce, and Lawrence use property to conceive of human relationships— and by extension, social justice— in dramatically new ways. Enrollment limited to 15.

ENGL 2760K. Postcolonial Theory and Africanist Discourse.

Explores central questions in current Anglo-American postcolonial theory, and examines how related questions emerge with specific inflections in writings by Africanist philosophers, historians, and creative writers. Issues include: varied connotations of the very idea of "Africa"; ideology and subjectivity; constructivism and essentialism; nationalism and globalization; aesthetics and politics. Texts by Amílcar Cabral, Frantz Fanon, Stuart Hall, Paulin Hountondji, Fredric Jameson, Ernesto Laclau, Ngũgĩ wa Thiong'o, Wole Soyinka, Gayatri Spivak, Yvonne Vera. Enrollment limited to 15 graduate students. Undergraduate seniors may be admitted with instructor's permission.

ENGL 2760L. Literature and Photography.

Since the invention of photography in 1839, novelists have often claimed the camera as an important model for their work. We will endeavor to investigate this claim, asking in the process what the links between modernism and the visual arts have to tell us about the nature of fictional representation. Readings to include a number of theoretical discussions of photography. Enrollment limited to 15.

ENGL 2760M. Postcoloniality and Globalism.

This seminar is an introduction to postcolonial theory: its precursors, key figures, and ongoing configurations in anglophone literary studies. Starting with Stuart Hall's provocative question posed in a 1996 essay – "When was the post-colonial?" – we will ask why it became possible to name an intellectual current "postcolonial" in the 1990s. We will consider how literary and cultural criticism got to the moment of Hall's intervention, and where we currently are in terms of archives and the aims of postcolonial humanistic inquiry. Readings will move between theoretical and literary texts, allowing us to explore how theory and literature can enrich or complicate one another. Issues to be addressed include: modernity, cultural nationalism, racialization, and the idea of "literature" itself, understood as motion of critique. Authors will include: Bhabha, Césaire, Chow, Fanon, Hartman, Morrison, Said, Salih, Spillers, Spivak, Walcott, Wicomb, Wynter.

ENGL 2760N. The Politics of Modernism.

An exploration of the controversies that have surrounded the political implications of modernist form. Topics will include the Brecht-Lukacs debate, surrealism and the politics of the avant-garde, the so-called "great divide" between innovative and popular art, and the relation of modernism to postmodernism. In addition to examining important theoretical statements, we will test their arguments against selected literary examples. Enrollment limited to 15.

ENGL 2760O. Shame, Colonialism, Ethics.

This course constructs a dialogue between debates on post-Holocaust aesthetics ("Is poetry possible after Auschwitz?") and the central questions of postcolonial theory ("Can the Subaltern Speak?"), and considers the ethical and aesthetic salience of shame. It is organized around three writers whose work suggests that the novel form itself might require decolonization: Naipaul, Coetzee and Caryl Phillips. Enrollment limited to 15.

ENGL 2760P. The Fifties in Color: Race, Empire, and U.S. Cold War Culture.

Examines U.S. cultural texts of the '50s in relation to both domestic race politics and foreign policy concerns. Explores issues of assimilation, conflict, containment, development, and integration in a transnational as well as a national framework. Writers we study may include Ralph Ellison, Jack Kerouac, Phillip Roth, John Okada and Jade Snow Wong. This course is limited to 15 graduate students.

ENGL 2760Q. Ways of Seeing: Modern American Fiction and Photography.

Reads a number of important modernist novels alongside the work of early 20th-century American photographers, focusing on what this fiction's engagement with photography has to teach us about the reproduction and circulation of American identity and history. Writers include James, Dos Passos, Hurston, Agee, Welty, and Ellison; photographers include Stieglitz, Strand, and Weston. Enrollment limited to 15.

ENGL 2760R. Realism and the American Novel.

An inquiry into the form, purpose, longevity, and afterlife of American realism. In what way did it differ from its British counterpart? In what ways was it different from naturalism, modernism, and romanticism? What was its aesthetic and political legacy? How has it been read by critics? Writers to include Melville, Dreiser, Norris, James, Chestnutt, Wharton, Jewett, and Wright. Enrollment limited to 15.

ENGL 2760T. Postmodernism and Literary Form.

Intended for graduate students interested in the relationship between socio-historical conditions and literary form, and for those interested in thinking beyond a narrowly periodized notion of the postmodern. Beginning with Lukács's *The Theory of the Novel*, considers the problematic of literary representation as it emerges in the modern age. Readings include Beckett, Nabokov, Burroughs, Amis, Rushdie, McEwan, Lyotard, and Moretti. Enrollment limited to 15.

ENGL 2760U. Reading the Black Masses in Literature and Critical Practice.

For more than a century, African American literature and criticism have been definitively shaped by claims about the linked fate of the black masses and the world of letters. These contested assertions provide occasions for rethinking the traditional ends of black literary production. Class conflict, the waning of black nationalism, and diasporic identity politics, are among the topics examined under this rubric. Likely literary writers include Washington, Larsen, Ellison, Brooks, and Wideman. Enrollment limited to 15 graduate students.

ENGL 2760V. Neo-Victorianism: Rewriting the Long Nineteenth Century.

This seminar examines recent novelists rewriting canonical 19th-century texts by Dickens and others, playing with matters of postcoloniality and gender. *Jack Maggs*, for example, answers the questions, "Can the subaltern speak?" and "Does the empire write back?" while *Fingersmith* offers a lesbian version of the Victorian sensation novel. *Patchwork Girl* rewrites *Frankenstein*, stitching together fiction, gender, and identity. Enrollment limited to 15.

ENGL 2760W. American Literature and the Visual Arts.

With the publication of several recent studies of cinema and modernism, interest in the relation between literature and the visual arts has never been higher. We will chart the forms this relation takes in the modern era by reading both theoretical attempts to diagnose it (Benjamin, Barthes, Derrida, Rancière) and literary attempts to enact it (James, Stein, Ellison, Williams, Agee). Enrollment limited to 15 graduate students.

ENGL 2760X. After Postmodernism: New Fictional Modes.

What happens when the "postmodern," the period that did away with periodization, is over? This class will discuss issues such as contemporaneity, materiality, subtraction, subjectivity, the event, and the frame in approaching British and American literature at the turn of the 21st century. Readings include Ishiguro, Cooper, Toussaint, Seth, Coetzee, Chatwin, Danielewski, Deleuze, Bergson, Badiou, Lukács, Voloshinov, Adorno, Pasolini, Nancy. Enrollment limited to 15 graduate students. Banner registrations after classes begin require instructor approval.

ENGL 2760Y. American Orientalism and Asian American Literary Criticism.

We examine critical studies of American Orientalism, influential works of Asian Americanist cultural criticism, American Orientalist texts by white and black authors, and literary texts by Asian American authors. Critics, cultural historians and writers we read may include: Christina Klein, Vijay Prashad, Elaine Kim, Frank Chin, Lisa Lowe, W.E.B. DuBois, Susan Choi, Nam Le, Karen Tei Yamashita. Enrollment limited to 15 graduate students.

ENGL 2760Z. African American Literature After 1965: Nationalism and Dissent.

Since the late 1960s, major theoretical and literary currents in African American letters have been profoundly influenced by black nationalism. This seminar examines the persistence of nationalist thought in ongoing debates about racial authenticity, gender inequality, black aesthetics, and diasporic politics. In so doing we will attend to both the complexity of nationalist ideology and the dissent generated by it. Authors include Baraka, Cruse, Giovanni, Morrison, Senna, Whitehead, and Gilroy. Open to graduate students only.

ENGL 2761B. Temporalities.

Centered on modernism and the early 20th century, this course will investigate the varied models of time pulsing through literary and theoretical texts, and consider a range of issues, including memory and forgetting, historical progress and decay, utopian futurity, and queer temporalities. Readings include work by Freud, Bergson, Nietzsche, Benjamin, Joyce, Woolf, Barnes, Stein, Faulkner. Enrollment limited to 15.

ENGL 2761C. Black Internationalism and Its Discontents.

This seminar reassesses the broad influence of internationalism in African American letters from the age of abolition to the present. We will be concerned with literary writings that foreground the global struggle of black subjects to assert political agency in relation to Western imperialism and transatlantic slavery. Equally crucial will be a reconsideration of an established body of theoretical writings that conceive of diasporic modes of solidarity and cultural expression as alternatives to the black nationalist intellectual tradition. Authors include Martin Delany, W.E.B Du Bois, Richard Wright, Angela Davis, Brent Edwards, and Paul Gilroy.

ENGL 2761F. The Racial Lives of Affect.

This course explores both dominant and emergent theoretical paradigms that anatomize the affective dimensions of racialized subjectivity in the US with a particular emphasis on recent scholarship that is linked with the field of affect theory. Rather than attempting an exhaustive or definitive mapping of that field, this seminar focuses on those thinkers whose works enhance our understandings of race. Enrollment limited to 15.

ENGL 2761J. Identity and Agency.

Any consideration of identity is bound to run up against the concept of agency. Considering identity and agency as mutually constitutive, this course looks at identity's formation and reformation as a narrative experience and effect, examining its emergence on historical and affective terrains. Approaching identity from a range of vantages (psychoanalysis, gender, history, law), we trace the ways that identities might be consolidated into (or, alternatively, unravel) cultural, political, national, or social arrangements. Works by Woolf, Selvon, James Weldon Johnson, Christopher Isherwood, Proust, Fanon, Arendt, Freud, Winnicott, Butler. Enrollment limited to 15.

ENGL 2761P. Modernism and Theories of Space.

This course analyzes literary modernism as it intersects with theories of space both historical and formal. Topics include: colonialism and global spaces, Fordist production, gendered public/private divides, as well as networks, underworlds, spatial form, and models of wandering. Readings include work by Lefebvre, Harvey, Latour, Frank, Larsen, Joyce, McKay, Woolf. Enrollment limited to 15 graduate students.

ENGL 2761Q. Blackness and Being: Studies in Black Literary and Cultural Criticism.

Through some recent critical readings, we will think about the enduring "problem" of blackness—its representational, aesthetic, and/or philosophical (ontological, epistemological, ethical) challenges. Our study will think through feminist and queer studies, as well as through diaspora and American and ethnic studies. We will also think historically about what motivates various turns to thinking about blackness and being. Enrollment limited to 15 graduate students.

ENGL 2761S. Naturalism and the Anthropocene.

The world of naturalist fiction is strange and terrifying: monstrous new forms of life; speaking animals; suicide; madness; financial ruin; ecological disaster. We will study this world in light of our catastrophic present, reading recent work in new materialism, neuroscience, animal studies, science studies, and environmentalism. Authors include Zola, Stein, Wharton, Chesnutt, Conrad, Hardy, Nietzsche, Bergson, Freud, Du Bois, James. Enrollment limited to 15 graduate students.

ENGL 2761T. Race and the Gothic.

In this graduate seminar, we muse on the aesthetic, formal, and thematic relationship between race and gothic literature and film, as well as theories of the gothic. Motifs that crowd the novels and films we explore include: death, the racialized Other, the repressed reaches of the inner self, the void, terror, encounters with alterity, shadows, blackness, nightmares, candlelit cavernous hallways, crumbling stone ruins, cliffs and crashing water, weeping willows along a dirt road, and more. We approach these motifs in prose narratives by writers such as Octavia Butler, Alejo Carpentier, and Edgar Allan Poe, as well as through various visual treatments in film, television, and dance.

ENGL 2761Y. The Blue of the Plums is the Memory of the Sea: Poetic Ecologies of Displacement.

This seminar takes up the concept of displacement from two different vantage points. One is a consideration of how anthropogenically generated processes of environmental change can lead to a transformation of ecological edges at which different organisms meet one another in the composition of an ecosystem. The other takes up a consideration of human displacement, particularly in the context of violence such as war, through what the theorist Sarah Ahmed has termed a "migrant orientation" as a way of contemplating what it means to inhabit an ecology following such displacements.

ENGL 2761Z. The Black Aesthetic.

This graduate seminar pursues an interdisciplinary investigation of various philosophies, theories, and expressive praxes that constellate under the rubric of The Black Aesthetic. Our study is organized along two axes: The first reckons with colonial modernity's role in constructing the aesthetic as a racializing technology to measure and impose taste, sensibility, reason and/as civilizational capacity. The second grapples with the political orientations that, nonetheless, undergird contemporary black cultural production across literary genres and visual/media forms. Engaging such thinkers as Édouard Glissant, Saidiya Hartman, Denise Ferreira da Silva, Phillip Brian Harper, Sylvia Wynter, and Kevin Quashie, among others, we will study such black aesthetic theories as opacity, fabulation, excess, dissimulation, (anti-)representation, and black world(ing).

ENGL 2762A. Race and its Avatars: Literary Identity Politics From the Medieval to the Present.

This seminar is devoted to developing an understanding of "racism" as "a singular history" (Etienne Balibar), consisting of a number of racisms with "no fixed frontiers" that can cross-contaminate each other across wide expanses of time and space. We attend to the long history of this multivalent and multicombinant racism in two ways, by 1) studying pre-modern forms of collective hatred and fear that emerged prior to the putative stabilization of race as an identitarian category, and 2) exploring how to conceptualize relationally the various racial formations that emerged in modernity out of the slave trade, colonialism, and Nazism. Theorists we study include: daSilva, Foucault, Heng, Mbembé, Said, Spillers, Wolfe, and Wynters. The literary works we read include: The King of Tars, The Canterbury Tales, The Tempest, Jane Eyre, Ceremony, Jasmine, and Beloved.

ENGL 2762B. : The Blue of the Plums is the Memory of the Sea: Poetic Ecologies of Displacement.

This seminar takes up the concept of displacement from two different vantage points. One is a consideration of how anthropogenically generated processes of environmental change can lead to a transformation of ecological edges at which different organisms meet one another in the composition of an ecosystem. The other takes up a consideration of human displacement, particularly in the context of violence such as war, through what the theorist Sarah Ahmed has termed a "migrant orientation" as a way of contemplating what it means to inhabit an ecology following such displacements.

ENGL 2780. Graduate Independent Study in Modern and Contemporary Literatures.

Section numbers vary by instructor. May be repeated for credit. Instructor's permission required.

ENGL 2900A. Contemporary Feminist Theory: Feminist Address.

Recent feminist theory addresses identity politics and the critique of the subject; problematics of race, class and gender; the challenge of queer theory; the demand for materialist analysis. We consider these topics in light of the problematics of address. What are the forms of feminist address? How are they received or refused? Who are the subjects of contemporary feminisms? Enrollment limited to 15.

ENGL 2900C. Theories of Literature: From Classical Antiquity to Postmodernity.

Investigates theories of literature in two self-conscious historical epochs: classical antiquity, represented by figures such as Plato, Aristotle, and Horace, and by practices such as marginal notation of texts, literary commentaries, and performance techniques; and the 20th century, represented by figures such as Adorno, Barthes, and Bakhtin, with special attention to the intersections between philosophy and literature and poststructuralist conceptions of textuality. Enrollment limited to 15.

ENGL 2900D. Walter Benjamin and Modern Theory.

Intensive study of Walter Benjamin's essays on modern culture and literature (in particular Goethe, Baudelaire, Proust, and Kafka). Explores the consequences of his thinking for problems in contemporary literary and cultural theory. German and/or French helpful but not required. Enrollment limited to 15.

ENGL 2900E. Deleuze: Literature and Aesthetics.

How does Deleuze help us read modern culture? This course will focus on Deleuze's writings on literature, painting and cinema as a point of entry to the work of one of the most original and intriguing thinkers of the late 20th century. We will look at the reasons for Deleuze's fascination with Anglo-American literature, and discuss the extent to which Deleuze's model of literary analysis breaks with -- while remaining fundamentally indebted to -- Marxism and psychoanalysis. Other readers include Melville, Kafka, T. E. Lawrence, as well as films by Antonioni, Godard and Sembene. Enrollment limited to 15.

ENGL 2900F. Form and Content.

Readings in aesthetics, literary theory, structuralism-poststructuralism, and cultural studies that address the form/content distinction in one of its many avatars. Topics will include the sign, thematics, formlessness, formalism and historicism, tenors and vehicles, structure, and defamiliarization, among others. Previous work in literary or cultural theory strongly recommended. Enrollment limited to 15.

ENGL 2900G. History and Form.

An exploration of the relation between historical and formalist approaches to literary interpretation, from the New Critics to the so-called "New Formalism." What is the role of form in historically and politically oriented criticism (examples will be taken from Marxism, the New Historicism, feminism, cultural studies, and post-colonial theory)? What happens to history when form takes center stage (for example, in structuralism and deconstruction)? Is it possible (and desirable) to avoid a pendulum swing between the poles of historicism and formalism and to mediate the conflicting claims of history and form? Or is a focus on one at the expense of the other the necessary cost of an incisive interpretive strategy? In addition to theoretical readings that exemplify the conflict between history and form, attention will be paid to the history of reception of one or more literary works in order to articulate the practical implications of their opposition and interdependence. Enrollment limited to 15.

ENGL 2900H. Queer Passivity.

A study of the concept of passivity in queer theory, literature, and film. Subjects will include AIDS and temporality; the senses and dissolution; asceticism and chastity; pornography and sovereignty. We will explore post-structuralist theories and continental philosophies (Agamben, Cavarero, Deleuze, Derrida, Marion, Nancy) that resonate with the kind of queer receptivity that will be the object of study. Enrollment limited to 15.

ENGL 2900K. Nietzsche, Foucault, Latour.

The seminar will trace a line of radical thought about truth, language, knowledge and power—and their interrelations—in the writings of Friedrich Nietzsche, Michel Foucault and Bruno Latour. Particular attention will be given to the significance of their work for poststructuralist language theory, constructivist epistemology and science studies, and current issues involving the relations between science and religion. Enrollment limited to 15 graduate students.

ENGL 2900M. The Reading Effect and the Persistence of Form.

This course examines the "reading effect" as it emerges in work on the question of form and contemporaneous scholarship on the problematics of reading. We will trace the ways in which these related but distinct critical idioms negotiate concepts of mutual concern (interpretation, representation, the reading subject/reading brain). Topics include "new formalism," cognitive studies, symptomatic reading. Theorists from Althusser and deMan to Marcus, Wolfson and Zunshine. Enrollment limited to 15 graduate students; undergraduate seniors may enroll with instructor permission.

ENGL 2900N. Ethical Turns in Psychoanalysis and Literature.

This course examines ethics, broadly conceived, as the place where literature and psychoanalysis intersect or coexist in tense or collaborative relation. We will consider ethics at sites or moments of transition—as turns, upheavals, or ordinary acts that bring into view notions of responsibility, conviction, obligation, knowledge, ignorance, and complicity. Readings by Barthes, Benjamin, Fanon, Arendt, Freud, Lacan, Winnicott, Klein, Butler. Enrollment limited to 15 graduate students.

ENGL 2900X. Postcolonial Theory.

In this introduction to postcolonial theory we will consider key Western sources (Hegel, Marx, Lacan, Levi Strauss, Emmanuel Levinas); anticolonial manifestos (Gandhi, Fanon, Césaire, Memmi); political and ethical practices (civil disobedience, armed struggle, friendship). In addition to canonical critics (Said, Bhabha, Spivak), the course will review new interests in the field (transnationalism, non-western imperialisms, the environmental turn). Offered as a collaborative humanities seminar in Spring 2025, Postcolonial Theory will host and think with a series of guest scholars.

ENGL 2901D. War and the Politics of Cultural Memory.

The past several decades have seen the rise of a veritable memory industry devoted to the memorializing of wars. This seminar focuses on a selection of British, European, and American novels, memoirs, and films that self-consciously engage in remembering a range of conflicts, from the First World War to the "War on Terror," alongside a relevant body of theoretical writings. Our aim is to think in detail, and collectively, about the political stakes of such literary remembrances and to develop together a "contrapuntal" approach that engages with the collaborative tensions between Anglo-European, postcolonial, and US minority modes of memory.

ENGL 2901K. Theory, Technics, Religion.

Critical theory has a rich history of engagement with fundamental and overlapping questions of technics, media and religion. This seminar focuses mainly on important texts from the last century (Benjamin, Heidegger, Levinas, Derrida, Agamben), but also reads more broadly in the post-Enlightenment critical and speculative tradition (Kant, Hegel, Marx, Freud, Weber). Selections from the Bible and readings from a few literary texts from various eras will also be assigned. Enrollment limited to 15 graduate students.

ENGL 2901P. Black Feminism: Roots, Routes, Futures.

This graduate seminar pursues an interdisciplinary investigation of black feminist theories, methods, praxes, and politics. Using a black feminist lens, it investigates legacies of racial slavery and colonialism; the pathways and promises of African diaspora; citizenship, labor, and the law; theories of the flesh and changing definitions of kin; human ontology and the mutability of gender; black expressive practices and emancipatory politics. Enrollment limited to 15.

ENGL 2901R. Technologies of Memory.

From archives to monuments, photographs to films, sound recordings to selfies to Twitter feeds, modern life has reached a saturation point of object-driven memory. This course examines modes of capturing memory in the 20th and 21st centuries, and asks what replaces the medieval memory palace as an imaginary habitat for recollection. Enrollment limited to 15.

ENGL 2901T. Twenty-first Century Critical Theory.

Intended as an introduction to some influential emergent strains of literary-theoretical scholarship over the past two decades, this course will examine work in contemporary aesthetics, ecological and environmental thought, affective criticism, transgender studies, black studies, and debates around the prospects of a future for literary studies. In each case, a substantial 21st-century text will be considered alongside several canonical works (by figures such as Kant, Marx, Lukács, Du Bois, Haraway) with which it is in conversation. Contemporary authors include Lauren Berlant, Saidiya Hartman, Achille Mbembe, Fred Moten, Jeffrey Nealon, Rob Nixon, Sianne Ngai, Paul B. Preciado, and Sylvia Wynter.

ENGL 2940. Scholarly Writing for Journal Publication.

Writing and professionalization workshop intended for graduate students in literary studies. Topics covered include selection of journal; framing, structuring and composition of the article; the logistics of peer review; sharing and workshoping drafts; working with academic mentors and advisors. Every passing student will have a publishable article under consideration by the end of the semester. Enrollment limited to 12 English Ph.D. students. Instructor permission required. S/NC.

ENGL 2950. Seminar in Pedagogy and Composition Theory.

An experimental and exploratory investigation into writing as a preparation for teaching college-level writing. Reviews the history of writing about writing, from Plato to current discussions on composition theory. Against this background, examines various processes of reading and writing. Emphasizes the practice of writing, including syllabus design. Enrollment restricted to students in the English Ph.D. program.

ENGL 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ENGL 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Institute at Brown for Environment and Society

The Institute at Brown for Environment & Society supports research to understand the interactions between natural, human and social systems. Our teaching programs prepare future leaders to envision and build a just and sustainable world. Our engagement programs take research from the lab to the statehouse, the hospital and the public sphere.

Undergraduate and graduate students can study conservation science and policy, water and food security, environmental health, climate science and meteorology, biogeography and evolution, and more. Research is conducted in laboratories, on supercomputers and at field sites around the world.

For additional information, please visit the Institute's website: <http://www.brown.edu/academics/institute-environment-society/>

Environmental Sciences and Studies Concentration Requirements

Students in IBES' Environmental Sciences and Studies (ENVS) concentration learn how to tackle today's urgent climate and sustainability challenges through a truly multidisciplinary education. Core faculty with joint appointments across the University—from sociology to geology to anthropology and more—provide diverse perspectives, equipping students with the skills to address complex issues through innovative problem-solving and interdisciplinary exploration.

Through a rigorous set of core courses, track requirements, and a capstone (<https://ibes.brown.edu/education/undergraduate-education/curriculum/capstone/>) experience — as well as immediate access to real-world research opportunities and expert faculty (<https://ibes.brown.edu/people/faculty/>) — students gain the knowledge and skills needed to address the complex relationships between human systems and the natural world. These programs prepare our future leaders to make

meaningful contributions toward building a more sustainable and equitable planet.

- The A.B. in Environmental Sciences and Studies ensures undergraduates obtain a holistic and interdisciplinary understanding of the environment.
- The Sc.B. in Environmental Sciences and Studies is a more in-depth treatment of a single field: Climate and Energy; Conservation and Natural Systems; Environmental Justice and Health; or Sustainable Development and Governance.

Both degrees provide interdisciplinary exposure to the natural and social sciences, as well as public policy.

Standard program in Environmental Sciences and Studies:

Requirements for the A.B. Degree

Core Requirements

ENVS 0110	Humans, Nature, and the Environment: Addressing Environmental Change in the 21st Century	1
ENVS 0490	Environmental Science in a Changing World	1

Tools - pick one

Courses focused on building qualitative or quantitative research tools

ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis	
ANTH 1940	Ethnographic Research Methods	
APMA 0160	Introduction to Scientific Computing	
APMA 0350	Applied Ordinary Differential Equations	
APMA 0360	Applied Partial Differential Equations I	
APMA 0650	Introduction to Probability and Statistics	
APMA 1650	Introduction to Probability and Statistics with Calculus	
APMA 1930P	Mathematics and Climate	
BIOL 0495	Statistical Analysis of Biological Data	
CPSY 0900	Statistical Methods

ENVS 1554	Farm Planet: Hunger, Development, and the Future of Food and Agriculture	
ENVS 1557	Birding Communities	
ENVS 1825	Commodity Natures: Supply Chains From Extraction to Waste and Alternatives to Endless Growth	
HIST 0270A	From Fire Wielders to Empire Builders: Human Impact on the Global Environment before 1492	
HIST 0270B	From the Columbian Exchange to Climate Change: Modern Global Environmental History	
HIST 1081	The Environmental History of Subsistence and Extraction in Africa before 1900	
HIST 1360	Amazonia from the Prehuman to the Present	
HIST 1382	The Environmental History of Latin America	
HIST 1820B	Environmental History of East Asia	
HIST 1973Q	Environmental Pressures of South Asia	
HIST 1974D	The Practice of History	
HIST 1976I	Imperialism and Environmental Change	
HIST 1976J	Earth Histories: From Creation to Countdown	
LACA 1504P	The Amazon, Climate Change, and Conservation	
RELS 0260	Religion Gone Wild: Spirituality and the Environment	
Electives - three courses		3

Electives provide increased environmental expertise and further enhance a student's ability to customize a course of study. Acceptable electives include any ENVS courses, a class that's MAIN FOCUS is on the environment, and prerequisites for classes students take to fulfill requirements within their declared track.

Capstone - one or two courses 1-2

The College expects that a capstone will be completed in semesters 7 or 8 - with the intention of providing an opportunity for students to integrate many aspects of their course of study, or area of focus. This requirement can be met with a two-semester thesis (ENVS 1970 & ENVS 1971), one-semester research project (ENVS 1970 or ENVS 1971), or an approved capstone course.

Total Credits 12-13

¹ The core requirement of ENVS 0490 can be waived for students with an AP exam score of 5 in Environmental Science.

Honors

Students interested in graduating with honors in their concentration must complete a thesis determined to be of the highest quality and must have excelled in their coursework required for the concentration, which is defined here as receiving a grade of "A" in the majority of courses taken to fulfill the concentration. You can learn more by visiting the honors page (<https://www.brown.edu/academics/institute-environment-society/education/undergraduate/honors/>) on the IBES website.

Students pursuing a ScB ENVS degree must choose 5 courses from one of the track options below:

1. Climate and Energy
2. Conservation Science and Natural Systems
3. Environmental Justice and Health
4. Sustainable Development & Governance

Requirements for the Sc.B. Degree

Core Requirements

ENVS 0490	Environmental Science in a Changing World	1
ENVS 0110	Humans, Nature, and the Environment: Addressing Environmental Change in the 21st Century	1

Tools - pick one 1

Courses focused on building qualitative or quantitative research tools

ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis
ANTH 1940	Ethnographic Research Methods
APMA 0160	Introduction to Scientific Computing
APMA 0350	Applied Ordinary Differential Equations
APMA 0360	Applied Partial Differential Equations I
APMA 0650	Introduction to Probability and Statistics
APMA 1650	Introduction to Probability and Statistics with Calculus
APMA 1930P	Mathematics and Climate
BIOL 0495	Statistical Analysis of Biological Data
CPSY 0900	Statistical Methods
CPSY 0950	Introduction to programming
CSCI 0111	Computing Foundations: Data
CSCI 0190	Accelerated Introduction to Computer Science
DATA 0200	Data Science Fluency
ECON 1620	Introduction to Econometrics

EEPS 0250 Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction

EEPS 1320 Introduction to Geographic Information Systems for Environmental Applications

EEPS 1330 Global Environmental Remote Sensing

EEPS 1340 Machine Learning for the Earth and Environment

EEPS 1400 Climate Modeling I

ENVS 1107 Cartography and Geovisualization

ENVS 1911 Narrating the Anthropocene

IAPA 1500A Ethnographic Research Methods

PHP 1855 Infectious Disease Modeling

SOC 1020 Methods of Social Research

SOC 1100 Introductory Statistics for Social Research

SOC 1117 Focus Groups for Market and Social Research

SOC 1340 Principles and Methods of Geographic Information Systems

URBN 1100 Investigating the City: Hands-on Research Methods for Urban Analysis

Foundations in Earth Sciences and Technology - pick one 1

Courses focusing on earth, atmospheric, engineering or water sciences.

EEPS 0070 Introduction to Oceanography

EEPS 0160M Natural Disasters

EEPS 0220 Understanding Earth and Environmental Processes

EEPS 0240 Earth: Evolution of a Habitable Planet

EEPS 0360 Solving the Climate and Carbon Challenge

EEPS 0830 Water in Our World

EEPS 0850 Weather and Climate

EEPS 1310 Global Water Cycle

EEPS 1370 Environmental Geochemistry

EEPS 1400 Climate Modeling I

EEPS 1510 Dynamic Meteorology

EEPS 1720 Tackling Climate Change with Machine Learning

ENGN 0490 Fundamentals of Environmental Engineering

ENGN 1342 Groundwater Flow and Transport

ENVS 0070G Historical Climatology and Global Climate Change

Ecology/Biological Sciences - pick one 1

Courses focused on ecological or conservation biology

BIOL 0210 Diversity of Life

BIOL 0380 The Ecology and Evolution of Infectious Disease

BIOL 0420 Principles of Ecology

BIOL 0430 The Evolution of Plant Diversity

BIOL 0940D Rhode Island Flora: Understanding and Documenting Local Plant Diversity

BIOL 1440 Marine Biology

BIOL 1470 Conservation Biology

BIOL 1515 Conservation in the Genomics Age

ENVS 1775 Biogeography

Environmental Justice and Equity - pick one 1

Courses focused on environmental issues through a justice and/or equity lens

ENVS 0150 Climate Futures and a Sociology of Just Transitions

ENVS 0705	Equity and the Environment: Movements, Scholarship, Solutions
ENVS 1232	Land Stewardship, Sovereignty, and Justice
ENVS 1247	Clearing the Air: Environmental Studies of Pollution
ENVS 1554	Farm Planet: Hunger, Development, and the Future of Food and Agriculture
ENVS 1601	Reimagining Climate Change
HIST 1081	The Environmental History of Subsistence and Extraction in Africa before 1900
SOC 0250	An Environmental Sociology for a Rapidly Warming World

Environmental Policy and Politics - pick one 1

Courses focused on the policy, politics and/or governance of environmental issues

ECON 1050	Environmental Economics and Policy
ENVS 0715	Political Ecology
ENVS 0717	Ocean Resilience: Ecology, Management, and Politics
ENVS 0718	People and Oceans: How we Inhabit and Inhibit our Blue Planet
ENVS 1555	Local Food Systems and Urban Agriculture
ENVS 1574	Climate Policy Research: Organizations and Obstruction
ENVS 1580	Environmental Stewardship and Resilience in Urban Systems
ENVS 1601	Reimagining Climate Change
ENVS 1615	Climate Change, Human Rights, and the Policy Process
ENVS 1805	Ocean Governance and Policy
ENVS 1823	Climate Media, Discourse, and Power
ENVS 1925	Energy Policy and Politics
LACA 1504R	Environmental politics in Latin America: Indigenous Peoples and Afro-descendants' perspectives
POLS 1015	Politics and Nature
POLS 1435	Politics of Climate Change
POLS 1820G	Politics and Nature
POLS 1822I	Geopolitics of Oil and Energy

Environmental History and Humanities - pick one 1

Courses focused on the role of history, culture, and the arts in the environment

AMST 1904K	Power + Water: Material Culture and its Environmental Impact
ARCH 0680	Water, Culture and Power
CHIN 0914	Environment, Food, and Health in China
ENGL 1160P	Writing Climate, Writing Community
ENGL 1190U	Nature Writing
ENVS 1554	Farm Planet: Hunger, Development, and the Future of Food and Agriculture
ENVS 1557	Birding Communities
ENVS 1825	Commodity Natures: Supply Chains From Extraction to Waste and Alternatives to Endless Growth
ENVS 1916	Animals and Plants in Chinese History
HIST 0270A	From Fire Wielders to Empire Builders: Human Impact on the Global Environment before 1492
HIST 0270B	From the Columbian Exchange to Climate Change: Modern Global Environmental History

HIST 1081	The Environmental History of Subsistence and Extraction in Africa before 1900
HIST 1360	Amazonia from the Prehuman to the Present
HIST 1382	The Environmental History of Latin America
HIST 1820B	Environmental History of East Asia
HIST 1973Q	Environmental Pressures of South Asia
HIST 1974D	The Practice of History
HIST 1976I	Imperialism and Environmental Change
HIST 1976J	Earth Histories: From Creation to Countdown
LACA 1504P	The Amazon, Climate Change, and Conservation
RELS 0260	Religion Gone Wild: Spirituality and the Environment

Electives - three courses 3

Electives provide increased environmental expertise and further enhance a student's ability to customize a course of study. Acceptable electives include any ENVS courses, a class that's MAIN FOCUS is on the environment, and prerequisites for classes students take to fulfill requirements within their declared track.

Capstone - one or two courses 1-2

The College expects that a capstone will be completed in semesters 7 or 8 - with the intention of providing an opportunity for students to integrate many aspects of their course of study, or area of focus. This requirement can be met with a two-semester thesis (ENVS 1970 & ENVS 1971), one-semester research project (ENVS 1970 or ENVS 1971), or an approved capstone course.

Additional Track specific requirements: 5

Total Credits 17-18

Tracks

TRACK 1 - Climate and Energy

This track is intended for students interested in climate change science, energy systems, and energy/climate change policy

FOUNDATIONS - pick two 2

These courses serve as a foundation to understanding energy, climate systems, and data analysis¹

APMA 0160	Introduction to Scientific Computing
CSCI 0111	Computing Foundations: Data
CSCI 0190	Accelerated Introduction to Computer Science
CHEM 0330	Equilibrium, Rate, and Structure
EEPS 0240	Earth: Evolution of a Habitable Planet
EEPS 0250	Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction
EEPS 1340	Machine Learning for the Earth and Environment
EEPS 1370	Environmental Geochemistry
EEPS 1400	Climate Modeling I
EEPS 1720	Tackling Climate Change with Machine Learning
ENGN 0030	Introduction to Engineering
ENGN 0032	Introduction to Engineering: Design
ENGN 0490	Fundamentals of Environmental Engineering
ENGN 0510	Electricity and Magnetism
ENGN 0810	Fluid Mechanics

PHYS 0030	Basic Physics A	
PHYS 0050	Foundations of Mechanics	
ENERGY, ENVIRONMENTAL TECH, & INFRASTRUCTURE - pick one		1
ENGN 0490	Fundamentals of Environmental Engineering	
ENGN 1340	Water Supply and Treatment Systems - Technology and Sustainability	
ENGN 1930U	Renewable Energy Technologies	
ENGN 1931P	Energy and the Environment	
ENVS 1400	Sustainable Design in the Built Environment	
ENVS 1580	Environmental Stewardship and Resilience in Urban Systems	
CLIMATE - pick one		1
EEPS 0360	Solving the Climate and Carbon Challenge	
EEPS 0830	Water in Our World	
EEPS 0850	Weather and Climate	
EEPS 1400	Climate Modeling I	
EEPS 1430	Principles of Planetary Climate	
ENGN 1931R	The Chemistry of Environmental Pollution	
ENVS 0465	Climate Solutions - A multidisciplinary perspective	
ENVS 1247	Clearing the Air: Environmental Studies of Pollution	
ENERGY & CLIMATE POLICY - pick one		1
ANTH 1601	Reimagining Climate Change	
ECON 1340	Economics of Global Warming	
ENVS 1574	Climate Policy Research: Organizations and Obstruction	
ENVS 1925	Energy Policy and Politics	
POLS 1435	Politics of Climate Change	
POLS 1822I	Geopolitics of Oil and Energy	
Total Credits		5

¹ Students can use a prerequisites for any of the courses selected to fulfill an "Elective" requirement.

TRACK 2 - Conservation Science and Natural Systems

This track is intended for students interested in ecological and conservation sciences

ECOLOGY		1
BIOL 0420	Principles of Ecology	
CONSERVATION		1
BIOL 1470	Conservation Biology	
ORGANISMAL DIVERSITY, ECOLOGY & CONSERVATION TOPICS - pick two		2
BIOL 0410	Invertebrate Zoology	
BIOL 0430	The Evolution of Plant Diversity	
BIOL 0450	Evolutionary Behavioral Ecology	
BIOL 0480	Evolutionary Biology	
BIOL 0940D	Rhode Island Flora: Understanding and Documenting Local Plant Diversity	
BIOL 1515	Conservation in the Genomics Age	
ENVS 1775	Biogeography	
POLITICS & HISTORY OF NATURAL SYSTEMS - pick one		1
ENVS 0715	Political Ecology	
ENVS 0717	Ocean Resilience: Ecology, Management, and Politics	
ENVS 0718	People and Oceans: How we Inhabit and Inhibit our Blue Planet	

ENVS 1232	Land Stewardship, Sovereignty, and Justice	
ENVS 1555	Local Food Systems and Urban Agriculture	
ENVS 1805	Ocean Governance and Policy	
HIST 1974D	The Practice of History	
LACA 1504R	Environmental politics in Latin America: Indigenous Peoples and Afro-descendants' perspectives	
POLS 1015	Politics and Nature	
POLS 1435	Politics of Climate Change	
POLS 1820G	Politics and Nature	

Total Credits **5**

¹ Most students with an intention of going to grad school in this field will also need: At least one semester of calculus and a statistics course

TRACK 3 – Environmental Justice and Health

This track is intended for students interested in exploring environmental issues through a justice/equity lens

RACE, CLASS, & GENDER INEQUALITY - pick one **1**
Any class focused on race, class, or gender - these courses do not have an environmental theme

AFRI 0090	An Introduction to Africana Studies	
AFRI 1920	Health Inequality in Historical Perspective	
ANTH 1624	Indians, Colonists, and Africans in New England	
ECON 1370	Race and Inequality in the United States	
ETHN 1000	Introduction to Ethnic Studies	
GNSS 0120	Introduction to Gender and Sexuality Studies	
HIST 0150D	Refugees: A Twentieth-Century History	
SOC 0230	Sex, Gender, and Society	
SOC 1270	Race, Class, and Ethnicity in the Modern World	

ENVIRONMENTAL JUSTICE & EQUITY - Pick 2 **2**
These courses focus on environmental issues through a justice and/or equity lens

ENVS 0150	Climate Futures and a Sociology of Just Transitions	
ENVS 0705	Equity and the Environment: Movements, Scholarship, Solutions	
ENVS 1232	Land Stewardship, Sovereignty, and Justice	
ENVS 1247	Clearing the Air: Environmental Studies of Pollution	
ENVS 1554	Farm Planet: Hunger, Development, and the Future of Food and Agriculture	
ENVS 1601	Reimagining Climate Change	
HIST 1081	The Environmental History of Subsistence and Extraction in Africa before 1900	
SOC 0250	An Environmental Sociology for a Rapidly Warming World	

FOUNDATIONS IN HEALTH & INEQUALITY - pick one **1**
These courses offer a foundation or an additional tool to study environmental health and inequality

ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis	
ANTH 1940	Ethnographic Research Methods	
EEPS 1320	Introduction to Geographic Information Systems for Environmental Applications	
ENVS 1107	Cartography and Geovisualization	

PHP 0310	Health Care in the United States
PHP 0320	Introduction to Public Health
PHP 0330	Health Law and Policy
PHP 0400	Intro. to Health Disparities & Making Connection btw Structure, Social Determinants&Health Equity
PHP 1650	Race, Racism and Health
PHP 1681	Reproductive Health, Rights and Justice
PHP 1855	Infectious Disease Modeling
PHP 1920	Social Determinants of Health
SOC 1020	Methods of Social Research
SOC 1100	Introductory Statistics for Social Research
SOC 1117	Focus Groups for Market and Social Research
SOC 1340	Principles and Methods of Geographic Information Systems
ENVIRONMENTAL HEALTH - pick one	
These courses focus specifically on public health and the environment	
BIOL 1820	Environmental Health and Disease
ENVS 0120	Climate Change and Public Health in a Warming World
PHP 0720	Public Health and the Environment
PHP 1070	Global Burden of Disease
PHP 1101	World of Food: Personal to Global Perspectives on Nutrition, Agriculture and Policy
PHP 1700	Current Topics in Environmental Health
PHP 1720	Environmental Exposure Assessments in Practice
PHP 1725	Rural Public Health
PHP 1730	Climate Risks and Health Solutions
Total Credits	

1

5

¹ Many AFRI, ETHN, and GNSS classes count with IBES Curriculum Committee approval.

TRACK 4 - Sustainable Development & Governance

This track is intended for students interested in the interplay between environmental governance and economics on the global stage, with an emphasis on the non-Western world

GLOBAL GOVERNANCE & DEVELOPMENT - pick one

1

Courses focused on global governance or development (some are non environmental)

ENVS 0717	Ocean Resilience: Ecology, Management, and Politics
ENVS 1615	Climate Change, Human Rights, and the Policy Process
ENVS 1805	Ocean Governance and Policy
IAPA 1001	Foundations of Development
IAPA 1401	Economic Development in Latin America
IAPA 1404	Economic Development of China and India
POLS 0200	Introduction to Comparative Politics
POLS 0400	Introduction to International Politics
POLS 1435	Politics of Climate Change
POLS 1440	Security, Governance and Development in Africa
POLS 1500	The International Law and Politics of Human Rights
POLS 1822I	Geopolitics of Oil and Energy

POLS 1826B	Political Economy of Development
SOC 1490	Power, Knowledge and Justice in Global Social Change
ENVIRONMENT, JUSTICE, & NON-WESTERN PERSPECTIVES - pick two	
Any class focused on the Environment and the Global South and/or other non-Western perspectives	
AMST 1904K	Power + Water: Material Culture and its Environmental Impact
ENVS 0150	Climate Futures and a Sociology of Just Transitions
ENVS 0705	Equity and the Environment: Movements, Scholarship, Solutions
ENVS 1232	Land Stewardship, Sovereignty, and Justice
ENVS 1554	Farm Planet: Hunger, Development, and the Future of Food and Agriculture
ENVS 1580	Environmental Stewardship and Resilience in Urban Systems
ENVS 1601	Reimagining Climate Change
ENVS 1825	Commodity Natures: Supply Chains From Extraction to Waste and Alternatives to Endless Growth
ETHN 1751A	Indigenous Laws, Environmental Racism, and LandBack
HIST 1360	Amazonia from the Prehuman to the Present
HIST 1382	The Environmental History of Latin America
HIST 1960J	More-Than-Human Histories of Africa
LACA 1504P	The Amazon, Climate Change, and Conservation
LACA 1504R	Environmental politics in Latin America: Indigenous Peoples and Afro-descendants' perspectives

2

ECONOMIC PERSPECTIVES - pick one

1

These courses are intermediate-level economic tools courses

ECON 1050	Environmental Economics and Policy
ECON 1110	Intermediate Microeconomics
ECON 1340	Economics of Global Warming
ECON 1355	Environmental Issues in Development Economics
ECON 1410	Urban Economics
ECON 1500	Current Global Macroeconomic Challenges
ECON 1530	Health, Hunger and the Household in Developing Countries
ECON 1560	Economic Growth

FINANCE & ECONOMIC PERSPECTIVES - pick one

1

These courses are either intermediate-level economic tools courses, courses focused on sustainable investing and finance, or the social science of economics systems

ECON 1050	Environmental Economics and Policy
ECON 1110	Intermediate Microeconomics
ECON 1340	Economics of Global Warming
ECON 1355	Environmental Issues in Development Economics
ECON 1410	Urban Economics
ECON 1500	Current Global Macroeconomic Challenges
ECON 1530	Health, Hunger and the Household in Developing Countries
ECON 1560	Economic Growth

ENVS 1207	Eco-Entrepreneurship
ENVS 1545	The Theory and Practice of Sustainable Investing
ENVS 1547	Finance and the Environment
HIST 0150A	History of Capitalism
IAPA 1701Y	Climate Change, Power, & Money
PHIL 1561	Are We Doomed? Ethics, Economics, and the Future

Total Credits**5**

Honors

Students interested in graduating with honors in their concentration must complete a thesis determined to be of the highest quality and must have excelled in their coursework required for the concentration, which is defined here as receiving a grade of "A" in the majority of courses taken to fulfill the concentration. You can learn more by visiting the honors page (<https://www.brown.edu/academics/institute-environment-society/education/undergraduate/honors/>) on the IBES website.

Courses

ENVS 0070C. Transcending Transportation Impacts.

Students will be engaged in interdisciplinary analyses of the life-cycle costs, environmental impacts, technical developments, and policy innovations at the local and regional level. We will discuss technical modifications in vehicles, such as plug-in hybrids, as well as policy and planning on intermodal systems, recycle-a-bike programs, intelligent transportation systems, and other innovations. Enrollment limited to 19 first year students. Instructor permission required.

ENVS 0070D. The Misuse of Scientific Information in American Life.

Many important political issues hinge on matters of science or technology. But most Americans are ill-equipped to assess these matters. As a result, we are vulnerable to spin when scientific information is distorted, cherry-picked or otherwise misused to advance financial, political or even religious goals. This course examines ways these phenomena skew public discussion of climate change, vaccine safety, the teaching of evolution, cancer screening, GM food and a host of other issues. Enrollment limited to 19 first year students.

ENVS 0070E. What Does It Mean To Be Green?

What does it mean to be green? From saving energy to recycling to eating organic food, in recent years the idea of going green has gained increasing attention. But green is not solely a proxy for environmentalism: it encompasses competing, and at times contradictory meanings. This seminar places contemporary green debates in historical and cross-cultural contexts. We'll examine multiple paradigms of greenness in the Global South as well as the Global North. Topics range from imperial visions of tropical landscapes to the green revolution emphasis on agrochemicals, from conservation to climate change. Enrollment limited to 19 first year students.

ENVS 0070G. Historical Climatology and Global Climate Change.

This course will look at climate trends through the lens of civilizations across the globe. The Maya, Indus and Nile have been cradles to great civilizations, each impacted to a different degree by climate variability. Climate change is now causing history to repeat itself through the displacement of people as climate refugees in places like Honduras, Pakistan and Ethiopia. In this course, we will focus on and analyze instrumental, observational and geologic datasets to assess the role of climate in shaping past civilization and modern society.

ENVS 0110. Humans, Nature, and the Environment: Addressing Environmental Change in the 21st Century.

This is an engaged scholars course that offers an introduction to contemporary environmental issues. We explore the relationships between human societies and the non-human environment through a survey of topical cases, including: human population growth and consumption, global climate change, toxins, waste streams, water resources, environmental justice and ethics, and agro-food systems. This course also analyzes various solutions—social, political, technical, and economic—put forth by institutions and individuals to address questions of environmental sustainability. Each student must register for a 50-minute weekly engaged scholar lab in addition to lectures. Each lab will partner with a community organization to complete an engaged, environmental project. See class notes for reserved seating registration set up by semester level.

ENVS 0120. Climate Change and Public Health in a Warming World.

Climate change is a rapidly evolving societal challenge. While our atmosphere is shared globally, the impacts of climate change on human health are multifaceted and profoundly unequal. This course will provide a broad overview of the diverse impacts of current and future climate change on human health, with a focus on impacts and interventions in the US. The course will introduce epidemiologic tools to quantify the health impacts and disparities of climate-related exposures, with a focus on extreme weather and air pollution. By examining policies promoting climate adaptation and mitigation in the public health context, the class cohort will balance an engagement with the vast scope of the climate challenge with the opportunity and optimism of pathways to equitable societal thriving.

ENVS 0121. Plants, Food, and People (BIOL 0190H).

Interested students must register for BIOL 0190H.

ENVS 0150. Climate Futures and Just Transitions.

The just transition is a foundational concept for labor-environmentalism and it has generated a range of productive debates between labor, feminist, environmental justice, indigenous forces and other actors about the possibilities, genuine dilemmas and trade-offs that confront all attempts to think through the challenge of decarbonization. Following the incorporation of the term "just transition" into the preamble to the Paris Agreement in 2015 at COP 21, it has also taken on a further life of its own in the international climate space as many leading climate NGOs, business elites and international unions articulate their commitment to decarbonization through the language of just transitions. This course seeks to build a reconstructive environmental sociology of the just transition, incorporating debates from political ecology, energy/technology studies, critical art and design studies and the climate social sciences.

ENVS 0160. Migration and Borders in a Time of Climate Crisis.

This course foregrounds the political implications of migration and border regimes in the context of environmental change, historically, today, and in the future. It examines in what sense environmental and climate factors might be causally related to human movement. We will seek to understand the fears of a future "climate refugee crisis," and how states and security regimes are already preparing for climate displacement. Furthermore, we will ask how migrant justice groups are challenging the closed-border policies of many states in 'the Global North' as well as the global structural inequalities that create the vulnerabilities that drive movement and migration.

ENVS 0220. Physical Processes in Geology (GEOL 0220).

Interested students must register for GEOL 0220.

ENVS 0240. Earth: Evolution of a Habitable Planet (GEOL 0240).

Interested students must register for GEOL 0240.

ENVS 0241. Climate and Climate Change (GEOL 0030).

Interested students must register for GEOL 0030.

ENVS 0260. Religion Gone Wild: Spirituality and the Environment (RELS 0260).

Interested students must register for RELS 0260.

ENVS 0300. Environment and Society in Africa (SOC 0300L).

Interested students must register for SOC 0300L.

ENVS 0360. Solving the Climate and the Carbon Challenge (EEPS 0360)..**ENVS 0410. Environmental Stewardship.**

Challenges students to address the economics and logistics of implementing strategies to conserve resources and reduce the negative impacts of the built environment. The goal is to learn the rationale, process and technical aspects of the practice of environmental stewardship. Topics include sustainable design, institutional change, and corporate environmental responsibility. Students collaborate in interdisciplinary teams on applied projects. Permission by instructor by application process prior to enrollment in the class.

ENVS 0420. Principles of Ecology (BIOL 0420).

Interested students must register for BIOL 0420.

ENVS 0465. Climate Solutions - A multidisciplinary perspective.

This course will explore solutions to the climate crises through the lens of multiple disciplines. Lectures will cover topics in physical science, economics, political science, persuasive communication, social science, and equity. Online lectures by disciplinary experts from around the country, but developed specifically for this class, will be the basis for the in class discussions and activities led by Brown Faculty.

ENVS 0490. Environmental Science in a Changing World.

Introduces students to environmental science and the challenges we face in studying human impacts on an ever-changing earth system. We will explore what is known, and not known, about how ecosystems respond to perturbations. This understanding is crucial, because natural systems provide vital services (water and air filtration, climate stabilization, food supply, erosion and flood control) that can not be easily or inexpensively replicated. Special emphasis will be placed on climate, food and water supply, population growth, and energy.

ENVS 0495. Introduction to Environmental Social Science.

This course introduces students to core areas of theory and research in the environmental social sciences. It also challenges students to think carefully about what we learn and don't learn when we apply different disciplinary lenses to interdisciplinary environmental challenges.

ENVS 0510. International Environmental Law and Policy.

Introduces students to principles of international environmental law and examines how international organizations, national governments and non-state actors interact to address human impacts on the global environment. Considers effects of treaties, trade agreements and foreign aid on resolution of trans-boundary environmental problems including climate change, marine governance, biodiversity loss and trade in endangered species and hazardous waste. Students negotiate a mock treaty (NEWORLD) to mitigate some aspect of human impact on global change from the perspective of different state and non-state actors. Introductory coursework that addresses some aspects of environmental studies or environmental science is recommended.

ENVS 0520. Wild Literature in the Urban Landscape.

Combines deep study of ecological poetry, fiction, essays and other writing with service to schools in the community through exploration of local ecological challenges through both creative and more discursive expressions. The field-work or community component to this course will involve students in conducting workshops that combine literature and ecology in order to better elucidate and understand local issues related to, for one example, eco-industrial histories associated with Gorham Silver in Providence and the current state of Masphaug Pond on the Reservoir Triangle, where a public high school, Alvarez, now sits on contaminated soil. Enrollment limited to 22 undergraduates. S/NC.

ENVS 0580. Foundations of Physical Hydrology (GEOL 0580).

Interested students must register for GEOL 0580.

ENVS 0700A. New England Environmental History.

Explores the environmental history of New England from the arrival of people circa 10,000 years ago to the present day. Topics include Native American and colonial environmental interactions and 20th century environmental transformations. From abandoned textile mills to Northern forests, understanding the history of a place can help us plan for its future.

ENVS 0700C. Extinction: A Global History.

In the past five centuries, about 800 species of animals and plants have gone extinct, the majority of them in the last one hundred years. Recent estimates suggest that 41 percent of described amphibians, 26 percent of mammals, and 13 percent of birds currently face the threat of extinction. We will examine the current global extinction crisis as a biological, historical, cultural, economic, and political phenomenon. This course adopts an interdisciplinary approach by examining the issue of extinctions from the perspectives of the humanities and environmental sciences.

ENVS 0700D. Food for Thought: Food and Agriculture in the History of the Americas.

This course is an introduction to the history of food and agriculture in the Americas. We will examine key topics such as the domestication of plants and animals several thousand years ago, food production + consumption in pre-Columbian societies, the impact of European colonialism + colonial systems of food production across the Americas farming in the 19th century, the industrialization of agriculture in the 19th and early 20th centuries in the US and Latin America, the Green Revolution, organic agriculture and alternatives to industrial agriculture in the Americas in the past few decades, and the future of food + agriculture.

ENVS 0705. Equity and the Environment: Movements, Scholarship, Solutions.

This course will explore how the environment is inseparable from raced, classed, and gendered structures of power. Focusing primarily on the environmental justice (EJ) movement, we will examine how structural inequality gives form to our experiences with the environment, our conceptions of the environment, and our efforts to improve our environments. Drawing from a range of disciplinary scholarship, journalism, public commentary, and videos, this course aims to elucidate how marginalized groups have mobilized to address differential exposure to pollution and waste, climate change, "the wilderness," pipelines, slums, environmental population control measures, and fossil fuel extraction, among many other topics. This course seeks to serve first-years and sophomores, and build a foundation for students in the Environment and Inequality track of IBES.

ENVS 0710. Powering the Past: Environmental Histories of Energy Use and Social Change.

From wood, water, and muscles, to coal, oil, and nuclear power, humans have a long history of reshaping their environments to access energy. The nature of these energy sources also influences the form and distribution of political and economic power. Using environmental history methods, this course examines the ties between energy, power, environmental change, and inequality, from before the agricultural revolution to the present. Readings and lectures link the United States and Europe to the rest of the globe, with particular emphasis on the nineteenth and twentieth centuries. Each class combines lecture and discussion. No prerequisites.

ENVS 0714. Colonial Ecologies.

The rapidly warming planet makes it increasingly clear that the natural and human worlds are deeply intertwined, and that local ecologies are inherently tied to global political and economic processes. While resulting devastation has more recently emerged as a political crisis, the assimilation of local landscapes and ecologies into global social processes has a much deeper history. This class considers the development and intensification of such global connections from the early modern era to the contemporary moment. It contextualizes local ecological changes wrought by expansive colonial powers—poisoned mountains, mono-cropped landscapes, and disappeared forests—within the emergence of a global economy predicated on extraction. The course studies these themes through an interdisciplinary political ecology framework that examines how power operates through the environment, and how nature is in turn produced as a political force.

ENVS 0715. Political Ecology.

Political ecology asks how power mediates human-environment relationships. How do we, as society, understand "the environment," environmental problems, our role in them, and potential solutions? How have human-environment interactions reproduced inequity related to class, race, gender, and worldview; how does inequity, in turn, relate to environmental realities? Whose environmental "truth" counts, whose doesn't, and why? Are better futures possible (and who defines "better futures")? In this course, we will consider these questions and more. We will examine how knowledge production and socio-economic structures and processes relate to environmental change across economic, political, social, and ecological contexts. The first part of the course will introduce political ecology's roots and major arguments. We will use this foundation to analyze real-world cases and consider the opportunities, or "openings," for different environmental futures.

ENVS 0716. Conservation and Resilience: Management Tools for Oceans and Beyond.

This course introduces and critically examines policy and engagement tools employed in conservation management. The use of policy tools such as protected areas and marine spatial planning has exploded in recent decades, and global interest in alternative energy, food security, and biodiversity conservation has heightened their use and critique in conservation and resilience. With a focus on coastal and marine contexts, the course will explore practical questions such as: What policy tools are available for conservation management? How are they designed, implemented, and adaptively managed in particular contexts? Real world case studies in sites such as Rhode Island, Hawaii, Bermuda, and the high seas will inform discussions and help us consider what factors might contribute to management success or failure. Along the way, students will gain experience using public engagement tools such as participatory mapping and focus groups.

ENVS 0717. Ocean Resilience: Ecology, Management, and Politics.

In this course, we will examine ocean management for resilience and conservation: policy design, implementation, and effects on ecosystems and people. The use of tools such as marine protected areas and marine spatial planning has exploded in recent decades, and global interest in alternative energy, food security, and marine biodiversity conservation has heightened the use, and critique of these key tools in ocean conservation and resilience. Co-taught by an interdisciplinary team (a coastal ecologist and an oceans governance scholar), this course will explore questions such as: What management tools are available? What do they do (and not do) and how? How are they created and managed in particular contexts? Who gets to decide and why?

ENVS 0718. People and Oceans: How we Inhabit and Inhibit our Blue Planet.

What comes to mind when you think of the ocean? Oceans might conjure images of contemplative beach walks, fascinating animals like whales and giant squid, or big splotches of blue on a globe. Often, however, we imagine them devoid of people. In this course, we will dive into the depths of oceans as peopled spaces, lively with cultural connections, technological innovation, power struggles, and more. Topics will include fishing, deep sea mining, marine conservation, seafaring, maritime dumping, high seas governance and more. The course will include lectures coupled with opportunities for discussion, and students will have the opportunity to follow their aquatic curiosities, conducting research on a topic of their choice. By the end of course, students will gain a more holistic understanding of how oceans are peopled and our role as inhabitants of our Blue Planet.

ENVS 0720. Ecological Imperialism.

Empires have played important roles in transforming the earth's environments for over two millennia, conquering land and transforming its ecosystems and societies to make them more profitable. This course will examine how empires have reorganized the landscapes of conquered regions from the ancient empires of Rome and China to the informal American empire, focusing in particular on Asia, Africa and Latin America.

ENVS 0721. La Frontera: Environmental Histories of the U.S.-Mexico Borderlands.

Counterintuitive as it may seem, borderlands are effective tools for disrupting binaries and nature/culture dichotomies. In their inherent tension, borders as in-between zones create space to re-examine colonial, capitalist, and modernist paradigms. What does a borderlands perspective add to our understanding of the environment? Or, conversely, what does the centrality of the environment add to the ways we view the borderlands region? This course will introduce you to the relationship between the human and more-than-human worlds of the U.S.-Mexico borderlands where we will come to appreciate, for instance, how a river can disrupt geopolitical boundaries, how desert nature can cross the corporeal boundary through sensorial pathways, or how the border wall itself is both real and violent as well as imagined and porous depending on the time, place, and which multispecies form we consider.

ENVS 0830. Water in Our World (EEPS 0830).

Interested students must register for EEPS 0830.

ENVS 0900. Quantitative Methods in Psychology (CLPS 0900).

Interested students must register for CLPS 0900.

ENVS 0930A. Appropriate Technology (ENGN 0930A).

Interested students must register for ENGN 0930A.

ENVS 1000. Fieldwork in the Urban Community (URBN 1000).

Interested students must register for URBN 1000.

ENVS 1070. The Burden of Disease in Developing Countries (PHP 1070).

Interested students must register for PHP 1070.

ENVS 1081. The Environmental History of Subsistence and Extraction in Africa before 1900 (HIST 1081)..

Interested students must register for HIST 1081.

ENVS 1105. Introduction to Environmental GIS.

This course introduces the tools, techniques, and fundamentals of Geographic Information Systems (GIS) using the ArcGIS software package. GIS has broad applications in environmental, natural, and social sciences. Examples include disaster management, transportation planning, and environmental quality assessment. By the end of this course, students will understand the processes of spatial data analysis, geographic databases, visualization and cartography, and uncertainty quantification. Students will produce an independent final research project in Story Maps and present their results in a highly-visual flash talk. Tuesday 4:00-6:30 PM seminar will be held online. However, students will have the option to attend lab group meetings either virtually or in person. Course override required. Contact the instructor (samiah_moustafa@brown.edu) with year, concentration, and statement of interest.

ENVS 1107. Cartography and Geovisualization.

Join Professor Seda Salap-Ayca and your fellow students on this journey of learning as the group delves into the topic of Cartography and Geovisualization. Why does it matter to engage with this topic? Maps are our powerful tools to tell stories, but what is the story behind them? What makes a map design effective? In this course, you will learn the fundamentals of cartography and map design. Students will critique and create appealing maps throughout the semester. There isn't a prerequisite for the course, however, an introductory level of GIS will be helpful to understand the terminology and the concepts. If you haven't taken any GIS course before, some basics will be covered during the training assignments. The majority of the hands-on exercises will be based on variety of software, therefore a basic level of computer skills is essential.

ENVS 1110. Estuarine Oceanography (GEOL 1110).

Interested students must register for GEOL 1110.

ENVS 1180. Feminist Thoughts for a Heated Climate (POLS 1180).

Interested students must register for POLS 1180.

ENVS 1201. Introduction to Geographic Information Systems and Spatial Analysis (ANTH 1201).

Interested students must register for ANTH 1201.

ENVS 1207. Eco-Entrepreneurship.

Environmental, business, and social opportunities are often seen as being at odds. This course is a hands-on, interactive journey to explore bringing an impactful idea for an environmental product/service/solution into the world and designing a business plan to do so. You will identify an environmental area of opportunity, learn how to focus on the problem before the solution, identify the key stakeholders including your users/customers, and build a business model. You will look at the triple bottom line, and learn new tools, best practices, and frameworks to breathe life into your solution and make it viable. Instructions for submitting a personal statement before enrolling will be available in the syllabus.

ENVS 1225. Arctic Climate and Policy: Winter Session in Bodø.

The Arctic is a region where rapid climate and social changes will have important and far-reaching consequences. Current issues include access to mineral and hydrocarbon resources, possibilities for new maritime routes, cross-border cooperation, governance and self-determination, sustainability of fisheries, opportunities for Arctic tourism, and support of indigenous communities. Students will travel to Bodø, Norway, to participate in this class together with undergraduates from Babson College and Nord University Business School. Students will work together across disciplines and cultures to learn how to apply knowledge to map relevant policy issues more creatively, effectively, and responsibly.

ENVS 1230. Forest History of Colonial New England: Combining Evidence from Documents and Pollen.

Bringing metal tools and animals with them from Europe, settlers set out to transform the Northeastern American landscape shortly after founding Plymouth Colony in 1620. Historical accounts describe an abundance of tree cover, which, environmental historians argue, provided the frame and fuel for American nationhood. But what do we really know about the pre-colonial canopy of the Northeast and its transformation under colonialism? To find out, we have to go back into the woods and understand how forests age. Using ecology and pollen records, we can learn about Abenaki and early settlers' interactions with the treed landscape.

ENVS 1232. Land Matters: Stewardship, Sovereignty, and Justice on the Ground.

We are connected to Land. Whether our connection is intimate and acknowledged or distant and unexplored, human (and other) lives are rooted in Land. In this course, we draw out matters of land, asking how and for whom land matters. Building on scholarship, journalism, public commentary, movements, podcasts, and videos, we explore land as a multifaceted and fundamental source of life, knowledge, community, wealth, power, theft, exclusion, sovereignty, justice, and healing. The course is grounded in US-based land histories and how colonial violence, patriarchy, white supremacy, and capitalism intersect to shape land access, control, and ownership. From this foundation, we explore on-the-ground efforts toward land justice, including decolonization, reparations, agrarian commons, and land trusts. Students will leave the course with frameworks for envisioning and helping to build equitable, just, and healthy Land futures based in stewardship, intention, and care.

ENVS 1233. Underground Studies: Extractivism and Decolonization in the Americas/Abiyala.

In times of the environmental crisis, one of the most important things humans should do is to reflect on how and why we got here. How did we allow our waters to be contaminated? Why did we destroy forests? Why do we understand ourselves as superior to other living beings? To answer these questions, we will think of the environmental degradation of Abiyala (the Guna word the Americas) from the point of view of artists, documentarians, and writers that think about different underground spaces and engage with questions of ecofeminism and extractivism. We will consider the environmental effects of mines, industry, ecological manipulation, and even science. And we will engage with the work of Indigenous peoples, Latinx, women, and others with anti-colonial perspectives, such as Emil Keme, Macarena Gómez Barris, Maricela Guerrero, Yásnaya Aguilar Gil, Natalie Diaz, among others.

ENVS 1245. Air Pollution & Chemistry.

Air pollution is a major concern across the globe, impacting human health, ecosystems, and climate. This course will provide students with an understanding of the chemical and physical processes that determine the composition of the atmosphere, with an emphasis on the dispersion of pollutants responsible for urban smog, acid rain, climate change, and the ozone hole. Topics to be covered also include health and environmental impacts of air pollutants, potential technological solutions, air pollution monitoring, and international policy regulations. Prerequisites: CHEM 0330, CHEM 0050, ENGN 0720 or similar.

ENVS 1247. Clearing the Air: Environmental Studies of Pollution.

Whether air, water or land borne, pollution is a multivalent "wicked problem" that has profound implications for the climate, ecological and economic systems, and human health and well-being. Emphasizing engaged scholarship based in Providence, we will explore pollution's historical origins, review current pollution measurements and reduction/mitigation efforts, and discuss alternative approaches that better address pollution's historical legacies and resulting social and environmental inequalities. Coursework will revolve around a Providence-based air monitoring project, augmented by readings, guest lectures, and discussion. Assessment will involve participation in discussion, 2-3 response papers and a final project linked to an engaged, field-study.

ENVS 1260. Indigenous People and Nature: Birds (ANTH 1260).

Interested students must register for ANTH 1260.

ENVS 1270. From Magic Mushrooms to Big Pharma: Anthropology of Drugs (ANTH 1880).

Interested students must register for ANTH 1880.

ENVS 1330. Global Environmental Remote Sensing (GEOL 1330).

Interested students must register for GEOL 1330.

ENVS 1331. Weather and Climate (GEOL 1350).

Interested students must register for GEOL 1350.

ENVS 1350. Environmental Economics and Policy.

This course considers environmental issues through an economic lens. It is loosely arranged around four questions: why are markets so powerful? Why do markets frequently fail to deliver environmental goods? Can markets be harnessed to deliver environmental goods? If so, why don't we do that?

ENVS 1355. Environmental Issues in Development Economics (ECON 1355).

Interested students must register for ECON 1355.

ENVS 1356. Health, Hunger and the Household in Developing Countries (ECON 1530).

Interested students must register for ECON 1530.

ENVS 1370. Environmental Geochemistry (GEOL 1370).

Interested students must register for GEOL 1370.

ENVS 1400. Sustainable Design in the Built Environment.

Course develops students' analytical abilities to apply fundamental concepts of environmental issues, building systems analysis, and architectural and engineering design. Students learn how to reduce the negative environmental impacts, and maximize positive social and economic impacts, of the built environment. Students cultivate applied skills in sustainable design; including fundamental energy calculations, heat flow analysis, schematic design analysis, and building operating impacts assessment. Course emphasis is on building energy flows. Students conduct group and independent research projects, providing the opportunity to study broader impacts of the built environment and propose solutions. Class meetings combine lectures, student presentations, and group workshops. To join the waitlist if there are no available seats, please enter an override request reason and briefly summarize your learning objectives in Courses@Brown. Your concentration and semester information is automatically entered.

ENVS 1410. Environmental Law and Policy.

Introduces students to environmental law in the United States. Uses legal decisions and policy frameworks to consider the roles of non-/governmental actors in formation and implementation of environmental policy. Students will become familiar with major federal environmental laws and regulatory databases and see how legal precedent, differing understandings of risk and alternative regulatory and market-enlisting strategies have shaped solutions to environmental problems. Provides opportunity to apply legal skills to local environmental legislation or legal problem. Intermediate coursework in Environmental Studies, Political Science, Community Health, Urban Studies or other environmentally-related coursework is recommended. First year students need instructor permission.

ENVS 1415. Power, Justice, and Climate Change.

Climate change creates injustices in who caused the problem, who is suffering worst and first, and who is taking action. Power differences between nations and social groups drives unequal disaster risks and "compounded vulnerabilities" for poor peoples and nations, and has led to gridlock in United Nations negotiations. The course reviews social and political dimensions of climate change, including local and national adaptation and mitigation efforts, media dynamics, collective and individual denial, negotiations, the rise of climate social movements, and countermovements. Enrollment limited to 40.

ENVS 1421. Podcasting For the Common Good: Storytelling with Science.

How can we use podcasts to spread compelling information about the future of our planet? In this hands-on, interactive course, we bring new perspective to environmental topics by integrating scientific research with audio story telling techniques. Students will learn how to find answers to environmental questions, use recording equipment, conduct interviews, write scripts, and make a finished product. Students will produce several audio projects for the course including an episode for Possibly- a podcast produced through a partnership between IBES and The Public's Radio. Students who want to enroll should write a one page (max) statement about how skills related to explaining environmental and health issues will help them in their educational trajectory. Statements can be emailed to Megan_Hall@Brown.edu.

ENVS 1440. Conservation Biology (BIOL 1470).

Interested students must register for BIOL 1470.

ENVS 1450. Ecosystem Analysis.

Develops ability to measure and characterize important biological and physical parameters of terrestrial ecosystems. Weekly field trips to explore measurement techniques and develop testable questions and/or hypotheses about different forested ecosystems. Qualitative and quantitative writing exercises explore how to describe the patterns and processes associated with the ecosystems visited. One Saturday field trip to central Massachusetts and one weekend field trip to New Hampshire are required. A background in environmental issues, as evidenced by taking BIOL 0420, is strongly recommended.

ENVS 1455. Marine Conservation Science and Policy.

Students will develop an interdisciplinary understanding of ocean ecosystems and how humans are connected to them socially, economically, and ecologically. Integration of the scientific and human dimensions of marine conservation will be achieved through analysis of the current status, trends, and threats to ocean ecosystems, and the range of solutions to mediate these threats. This course is designed for advanced juniors, seniors and graduate students; participating students are expected to have background in at least one related field (e.g., biology, geosciences, sociology, economics, or political science) beyond the intermediate level. Suggested prerequisites include ENVS 0490, BIOL 0420 or 1470.

ENVS 1460. Microbial Diversity and the Environment.

This is a lecture and discussion based course that focuses on the role of microbes in biological, geological, and environmental processes. This includes: introductory concepts, origins of life, bacterial evolution, role in climate change, metabolic diversity of biogeochemical cycles, microbial communities and interactions, habitat specific examples, and applications in the environment and human health. Recommended background courses: BIOL 0200, CHEM 0330 and an intermediate science course (e.g., BIOL 0280, GEOL 0240, or ENVS 0490).

ENVS 1490. SES-Independent Study/Science Writing.

The culmination of the Semester in Environmental Sciences at the Marine Biological Laboratory is an independent research project that builds on the topics covered in the aquatic and terrestrial ecosystem analysis core courses. In addition students participate in a seminar designed to help improve their ability to tell a lay reader about science. Enrollment is limited to students in this program. Instructor permission required.

ENVS 1491. SES-Terrestrial Ecosystem Analysis.

Team-taught course examining: the structure of terrestrial ecosystems fundamental biogeochemical processes, physiological ecology, impacts of environmental change on the landscape; the application of basic principles of ecosystem ecology to investigating contemporary environmental problems. Part of the Semester in Environmental Science at the Marine Biological Laboratory; enrollment is limited to students in this program. Instructor permission required.

ENVS 1492. SES-Aquatic Ecosystem Analysis.

Team-taught course examining the structure of freshwater, estuarine and marine ecosystems; impacts of environmental change on the landscape at local regional and global scales; the application of basic principles of ecosystem ecology to investigating contemporary environmental problems such as coastal eutrophication, fisheries exploitation. Part of the Semester in Environmental Science at the Marine Biological Laboratory; enrollment is limited to students in this program. Instructor permission required.

ENVS 1493. SES-Environmental Science Elective.

Two environmental science electives are offered each fall semester as part of the Semester in Environmental Science at the Marine Biological Laboratory, including: aquatic chemistry, mathematical modeling of ecological systems and microbial ecology. Enrollment is limited to students in this program. Instructor permission required.

ENVS 1500. Environmental Justice and Climate Change in Rhode Island TRI-Lab Engaged Research.

The TRI- Lab (Teaching, Research, Impact) on Climate Change and Environmental Justice in Rhode Island will be taught by a team including two experts from the RI state Department of Health. It will investigate ways to reduce the climate change-related public health risks to vulnerable individuals in three targeted neighborhoods in Providence, and increase the capacities of these neighborhoods to respond to climate change threats. Content topics to be covered include: projected climate change impacts in RI; public health risk assessment; risk outreach and communications strategies; state and federal policies, design and evaluation of adaptive responses; community-based research methods.

ENVS 1510. Environmental Theory and Philosophy.

Each student develops his or her own concept of "socially better." The task is to understand conceptions of "socially better" belonging to various authors and others in the class, to put one's own concept in context with the readings and class discussion, and explain why that concept is sensible and should be taken seriously by others. Prerequisite: ENVS 1350 or permission of the instructor.

ENVS 1530. From Locke to Deep Ecology: Property Rights and Environmental Policy.

Examines the evolution of property law and tenure in land, water, the atmosphere and natural resources, and the consequences of these property rights regimes for environmental protection. Readings drawn from the scientific, legal, public policy and popular literature are used to consider the development of American attitudes about the relationship between people and nature; the relationship between public and private rights in the land, sea, freshwater, atmosphere and wildlife; and the use of innovative property rights regimes in environmental policy. Intermediate coursework in Environmental Studies, Urban Studies, American Civilizations or other environmentally-related coursework is recommended.

ENVS 1535. Environmental (In)justice and Island Societies: Towards Equitable, Sustainable Solutions.

The island nations of the world are among the most vulnerable to the economic and social strains of globalization, and the impacts of climate change. This course will take a case-based approach to deconstructing and proposing equitable and sustainable solutions for various environmental justice challenges faced by islands across the Caribbean, Atlantic and Indian Oceans, and Pacific. Cases will include: (a) Puerto Rico and self-determination in the post-Hurricane Maria period; (b) military occupation in the South China Sea; (c) ocean grabbing, territoriality and small-scale fishers in Kiribati; (d) nuclear testing in the Marshall Islands; and (e) climate-induced relocation in Fiji.

ENVS 1540. Technology and Material Culture in America: The Urban Built Environment (AMST 1520).

Interested students must register for AMST 1520.

ENVS 1545. The Theory and Practice of Sustainable Investing.

21st century businesses and investors face a broadening and deepening array of Environmental, Social, and Governance (ESG) risks and opportunities. Climate change, water scarcity, community conflicts, resource depletion, supply chain breakdowns, worker well-being and economic inequality pose present material challenges that make sustainability an imperative for successful corporations and investors. We will examine current ESG strategy, trends, future scenarios, players, and frameworks and integrate that theory with practical investment performance analysis, metrics, and study of screens, asset classes, and diversification.

ENVS 1547. Finance and the Environment.

This course inspects the power and pitfalls of finance/capitalism, empowering students to interrogate if and how the global financial system can be leveraged to solve social and environmental problems. Whether you're interested in nonprofit advocacy, policy/politics, consulting, investment banking, or really anything else, understanding how money works and how it flows (and the impacts this has on the environment, social issues, and by extension all aspects of human life) is critical. We begin with an overview of the global financial system, including financial instruments like money, stocks, bonds, and mutual funds. We'll then look at organizations that operate our financial system like banks, asset managers, pension funds, insurers, and financial regulators. The majority of time will be spent looking at real-world examples of how people and organizations try to use finance as a tool to solve social and environmental issues.

ENVS 1548. Values At Risk: Environmental Risk and Resilience in the Financial System.

This class will first look at risk in the financial system, seeking first to understand what it is, how it has been understood in the past, and how it impacts business and decision-making today. We will then dig deeper into environmental risk, what it is, how it is measured, and how it is incorporated into financial choices. Throughout the course we will pay particular attention to insurance (and Alternative Risk Transfer) and credit rating scores as financial approaches that attempt to manage and price risk. We will then look at how we can best prepare ourselves to withstand risk and how such efforts can be incentivized. Finally, the class will collectively try to come up with new and interesting ways to incorporate environmental risk into today's financial world and present these ideas to risk managers from across the financial spectrum.

ENVS 1552. Science and Power: The Corruption of Environmental Health.

The topics we focus on include: the use of human research subjects, the corporate use and corruption of science, health and development, and climate change's impact on environmental health. What are the most effective ways to improve environmental health on the local, national, and/or global level? Developing a plan(s) to achieve improvements in environmental health is the main purpose of the course. Various reading, videos, and guest faculty will address this question, but the answer is not known. If the answer was known these problems (and this course) would not exist. Students will be expected to develop creative approaches to various solution(s) eg. Tiktok, TV show, plan for community organizing, legislation etc.

ENVS 1554. Farm Planet: Hunger, Development, and the Future of Food and Agriculture.

Hunger amidst plenty is an enduringly wicked problem. Modern agriculture has become incredibly productive, fueling the global grain trade, the meatification of human diets, and the exponential expansion of food and non-food products. Still, the number of people who are hungry, food insecure, and/or malnourished is stable or increasing in various parts of the world. As global population rises, calls to further increase and intensify agricultural production ring out across the globe. Through (agro-)ecological, feminist, and justice lenses, we will explore the political economy of food insecurity and agriculture, the political ecology of agricultural development, and critical humanist approaches to the past, present, and future of farming. We will connect with human geographers, sociologists, anthropologists, historians, Indigenous scholars, Black Studies scholars, feminists, and people working outside of academia.

ENVS 1555. Local Food Systems and Urban Agriculture.

This is an engaged scholar course. Urban agriculture has a critical function in a small but increasing movement toward more localized and sustainable food systems. This course focuses on research and readings from multiple disciplines addressing urban agriculture and local food systems' role in shaping food policies, labor practices, sustainable agricultural practices, and human health (to name a few). More importantly, students will work with community partners to actively engage in a local food system project. Enrollment limited to 40.

ENVS 1556. Environmentalism and the Politics of Nature (ANTH 1556).

Interested students must register for ANTH 1556.

ENVS 1557. Birding Communities.

This seminar explores and builds communities around a charismatic and conspicuous class of animals: birds. The irony is that birds are marvelously diverse and abundant, but birding is associated with a narrow and privileged sector of society. Birding provides an excellent case to explore the politics of inclusion and exclusion around race, economic status, gender, dis/ability, citizenship, sexuality in relations with nature. While studying these politics of access and authority worldwide and historically, we create our own community of knowledge and practice by going birding with adults or schoolchildren. Participants in this seminar will learn from interdisciplinary scholarship, school children, and not least, the birds. History matters. Think globally. Bird locally.

ENVS 1560A. Env. Archaeology (ANTH 1560).

Interested students should register for ANTH 1560.

ENVS 1570. Guts of the City: Perspectives on Urban Infrastructure and Environmental Planning (URBN 1570).

Interested students must register for URBN 1570.

ENVS 1574. Climate Policy Research: Organizations and Obstruction.

Over three decades, sufficient and equitable policies addressing the crisis of climate change have been elusive, and US leadership is crucial for an adequate global response. After several weeks of readings and lectures on climate policy, the course shifts to team-based research to produce strategic, policy-relevant briefings and scholarly outputs, some with partner organizations. Students will travel to D.C. for five days in October to attend meetings with experts and staff from government agencies, industry organizations, think tanks, journalists and environmental NGOs, and to hold briefings on our joint research.

ENVS 1575. Engaged Climate Policy at the UN Climate Change Talks.

Twelve undergraduate students will study a group of core readings, conduct independent and group projects, and attend the United Nations Framework Convention on Climate Change's (UNFCCC) 23rd Conference of the Parties (COP23) and related climate change events in Bonn, Germany in November 2017. Students will critically analyze contemporary political events; develop and addresses pertinent research questions; engage with and interview experts in the field; craft policy-relevant and empirically grounded publications; and develop experience in using social media. Team-based research may be shared at the climate negotiations in Bonn. Contact J. Timmons Roberts for an application - j_timmons_roberts@brown.edu.

ENVS 1580. Environmental Stewardship and Resilience in Urban Systems.

This course investigates current environmental impacts and risks related to urban infrastructure systems. Students analyze efforts to minimize negative environmental, health and economic impacts of the built environment. The course explores urban initiatives to increase sustainability and resiliency of infrastructure systems in anticipation of increased risks related to climate change. The goal is to learn the rationale, process and technical aspects of the practice of environmental stewardship and resilience planning in an urban context. Students will develop competence in technical analysis, policy analysis, and program implementation through case studies and systems analyses.

ENVS 1601. Reimagining Climate Change.

We know what causes climate change and we know what to do about it—yet it seems we only keep making it worse. Our climate stalemate suggests we need to look critically at the dominant responses to climate change so as to identify: why they have become commonsensical yet ineffectual or unrealizable; and why other responses remain silenced or unexplored. Such a lens impels us to reconsider silver-bullet “solutions” while creating space for views marginalized by exploitative, racist, patriarchal, and anthropocentric systems. Toward these ends, this course will prepare students to reconceptualize climate change and reimagine our responses to it.

ENVS 1605. Glaciers and Climate Change.

What is the fate of glaciers in a warming world? Where, how much, and how rapidly will glaciers melt? This course investigates how Earth's glaciers are responding to climate change. This class will provide a comprehensive overview of changes to Earth's glaciers, ice caps, and ice sheets, synthesize the latest scientific information, find gaps in our current knowledge, and identify what questions should be explored in future research. And, students will work with glacier-based observations and interpret trends using remote sensing, GIS, and/or other visualization techniques. Topics will also include impacts to sea level rise, ocean circulation, and water resources.

ENVS 1615. Climate Change, Human Rights, and the Policy Process.

The diminishing quality of Earth's systems and resources carries profound implications for the fulfillment of human rights and aspirations. But even as Western knowledge systems understand better the intrinsic interdependencies between humans and the non-human, policy gridlock persists. Indeed, scientific findings are regularly contested on political grounds. The purpose of this course is to learn how to apply diverse knowledges from Indigenous to Modern to map the relevant policy in problems at the intersection of human rights and environmental integrity, and to develop approaches to address them in ways that are creative, effective, responsible and just.

ENVS 1650. Statistical Inference I (APMA 1650).

Interested students must register for APMA 1650.

ENVS 1660. Instrumental Analysis with Environmental Applications (GEOL 1660).

Interested students must register for GEOL 1660.

ENVS 1700B. Watershed Policy + Management: Governance Beyond Borders.

Changes in land use at parcel and landscape scales have altered water cycles, water quality and water-dependent ecosystems. Governance Beyond Borders examines the management of water, land use and aquatic life in coastal watersheds. We will consider the accomplishments of the top-down, expert-driven federal laws of the 1960s and 1970s. However we will focus on integrated, trans-boundary approaches to governance of land, water, pollutants and aquatic life and become immersed in thinking like a watershed. ENVS1410 is desirable but not required. Other relevant courses could include BIOL1470, ENVS1350, ENVS1530, ENVS1615. Enrollment is limited to 18 students. Instructor's approval is required.

ENVS 1710. Environmental Health and Policy.

Provides an overview of environmental health methods and their application to policy and regulation. Students will learn the basic tools of environmental health sciences, including toxicology, epidemiology, and risk assessment, as well as the scientific basis for regulation. Traditional environmental health concerns will be discussed, as well as emerging discourses on environmental health issues, including urban pollution and its concomitant health concerns, climate change, issues of health disparities and environmental injustice, and the interrelationship between humanitarian crises and environmental degradation. Open to both undergraduate and graduate students of all fields, space permitting. Prerequisite: ENVS 0110 or instructor permission.

ENVS 1711. Predicting the Future.

From ancient oracles to modern algorithms, humans have always sought to know the future. Today, prediction and projection are central to how we prepare for shifting environments and the implications for health, migration, food insecurity, and conflict. This course examines the tools and limits of predicting the future across temporal scales – from next week to the end of the century and beyond -- with a focus on climate impacts. Students will explore methods ranging from statistical time series, ensemble models, scenario development to speculative writing, study the implications of global change, and critically reflect on uncertainty and bias in predictive practice. By the end, students will understand both how forecasts are made and how they are represented, contested, and used in decisions about the environment, health, and society.

ENVS 1720. Environmental Justice: The Science and Political Economy of Environmental Health and Social Justice.

Provides an overview of environmental justice history, theory and definitions. Students will review quantitative, qualitative, and theoretical approaches for understanding the origins and persistence of environmental discrimination. Examines the regulatory, institutional, structural, political, and economic forces that underlie patterns of race and class-based discrimination and their implications for environmental health among diverse communities. Case examples of environmental justice organizing will inform students of positive efforts by people of color in protecting their communities. Not open to first year students. Prerequisite: ENVS 0110.

ENVS 1725. Political Economy of the Environment in Latin America (INTL 1450).

Interested students must register for INTL 1450.

ENVS 1755. Globalization and the Environment.

What are the effects of globalization on the environment? Can globalization be greened? Corporations, civil society, international organizations and states are in a race to globalize their rules, sometimes working together, and others times in bitter conflict. This course seeks to understand this set of issues through a mix of examining concrete social/environmental problems and studying theories of globalization and social change. While addressing global issues and the impacts of wealthy nations, this course focuses most on the developing countries, where the impacts of these global issues appear to be worst, and where resources are fewest to address them. Enrollment limited to 20 juniors and seniors.

ENVS 1775. Biogeography.

This course will provide an overview of the field of biogeography - the study of the geography of living organisms. Traditionally viewed as the study of geographic distributions, modern biogeography explores a great diversity of patterns in the geographic variation of nature — from morphological and genetic variation among individuals and populations to differences in the diversity and composition of biotas along geographic gradients. Ultimately, our ability to predict how species, communities and ecosystems will respond to climate change and to develop strategies for conservation are dependent upon insights from the field of biogeography. Class meetings will be split between lectures and discussions. Discussions will be informed by a set of weekly readings from the primary literature. Each student will conduct an original research project (term paper) on some topic in biogeography. Prerequisites: BIOL 0420 and 0480.

ENVS 1790. North American Environmental History (HIST 1790).

Interested students must register for HIST 1790.

ENVS 1791. From Nature's Dangers to Nature Endangered: A History of American Environmental Thought (HIST 1977T).

Interested students must register for HIST 1977T.

ENVS 1805. Ocean Governance and Policy.

This course offers a deep dive into ocean and coastal governance and policy. As residents of the Ocean State, how well do we understand how society interacts with ocean spaces and resources, from local to national and global scales? We will investigate how marine policy planning and implementation processes interact with particular political, social, and economic contexts through case study examples, local practitioner guest speakers, and in-class debates. Using a variety of marine policy sectors (e.g., fisheries, energy, and biodiversity management), we will critically evaluate management tools (e.g., market mechanisms, regulations, area-based management, and community-based management). We will unsettle "established" policy assumptions, asking: Who governs oceans? How does power relate to ocean policy creation and outcomes? What are the roles of science, knowledge, institutions, history, and context in how ocean governance plays out on the ground (or in the waves!)?

ENVS 1823. Climate Media, Discourse, and Power.

How does the American public think about and talk about climate change, and how are these discussions shaped by the interventions of powerful interest groups and political elites? In this course, we will consider how individuals' understandings of climate change are deeply shaped by relations of power, from corporate strategies to delay meaningful action on climate change, to the norms and operations of media institutions, to dominant environmentalist discourses that fail to engage larger socioeconomic structures. While we will primarily discuss how public understanding has historically been constrained by the operation of power, we consider throughout possibilities for crafting climate narratives that resist these limitations to pursue transformative change. This course will focus primarily on climate politics in the United States, but we will also consider other national contexts and impacts on communities across the globe.

ENVS 1824. Environmental Political Thought (POLS 1824L).

Interested students must register for POLS 1824L.

ENVS 1825. Commodity Natures: Supply Chains From Extraction to Waste and Alternatives to Endless Growth.

What goes into the things we use everyday? Who makes commodities and under what conditions? What happens to stuff after we throw it away? Are we stuck with mass consumption? Are there workable alternatives? These are the kinds of questions we will unpack. Reading from commodity and discard studies, and political economy and ecology, we will situate economic growth in social and environmental context. We will look at production, extraction, circulation, disposal, and afterlives of commodities, with particular attention to invisibilized labor and environmental externalities. And we will explore sustainability proposals, including circularity, degrowth, and repair. In addition to an individual paper, you will apply analytical tools in a semester-long research project to examine a commodity of your choosing. With peers, you will produce a report, narrative website, video, or web-series to narrate the life and afterlife of your thing.

ENVS 1875. The Nature of Cities.

This course investigates the environmental conditions and consequences of cities and urbanization in the context of climate change, aging urban infrastructure, and deepening social and environmental inequality. We will examine different efforts to conceptualize the socio-ecological and historical processes that create and change cities, and explore ways in which these processes are consequential, including cities' appetites for natural resources, energy, and land; pollution and hazardous waste; newer and older forms of environmental injustice and privilege; and urban sustainability movements. We will take an interdisciplinary approach, drawing mainly on scholarship from anthropology, geography, history, sociology, and urban studies. Throughout, we will treat cities as laboratories for engaged humanities and social science inquiry.

ENVS 1878. EJ and The City: Perspectives on Environmental Justice and Inequality.

This seminar will discuss topics in the study of environmental justice and inequality, integrating research from sociology, geography, political ecology, and interdisciplinary environmental studies. The course moves through three thematic blocks. The first presents a broad survey of environmental justice movements and environmental inequality scholarship in US cities, focusing on hazards, risks, and exposure. The second introduces literature on critical environmental justice and the link between environmental inequality and the racialization of urban space. The third block circulates outward from urban spaces to consider the social-environmental embeddedness of the city at multiple scales, and the position of the city within broader patterns of human-geographic and landscape transformation. The course concludes with a discussion of green redevelopment, social movement organizing, and issues related to knowledge production and methodology.

ENVS 1879. Environmental Amnesia: How to Navigate Losses in Nature by Looking at the Past.

As our environment deteriorates and the biodiversity we coexist with declines, each generation is born and normalized into new sets of ecological conditions. We continue to perceive environmental problems and solutions, and develop new ways and technologies to adapt based on these shifting and degrading baselines. Meanwhile, narratives about past environmental conditions and past interactions between humans and their environments provide channels for us to reimagine parts of nature that have been erased from our collective memory, and the forgotten traditional practices in which we interact with nature. We will interrogate the effects of archaeological and historical narratives, based on scientific research, materiality, oral histories, legends, and art recounting past environments on our collective memory and imagination of nature in the midst of species loss and environmental degradation.

ENVS 1890. Native American Environmental Health Movements (ETHN 1890J).

Interested students must register for ETHN 1890J.

ENVS 1900. Introduction to Geographic Information Systems for Environmental Applications (GEOL 1320).

Interested students must register for GEOL 1320.

ENVS 1909. Introduction to Critical Botanical Histories.

Botany—a scientific field dedicated to the study of plants—shares a close relationship with histories of colonialism, industrial capitalism, bioprospecting and climate change. Yet working and thinking with plants is often considered an apolitical activity. This course studies how the institutional homes of plants, like botanical gardens, greenhouses, and plantations emerged in close association with colonialism, capitalism and war economies. At the same time, the course locates plants as 'potent' actors that variously make/unmake capitalist designs. It tracks 'weedy' and 'recalcitrant' histories where Indigenous peoples, enslaved and indentured laborers, and refugee communities colluded with plants to re-world, resist, adapt and endure in the wake of colonial/capitalist violence. The course explores possibilities of socio-environmental justice through a reimagining of plant-human history. It includes works by historians, botanists, anthropologists, novelists, filmmakers and immersive learning sessions at Brown University's greenhouse and herbarium.

ENVS 1910. The Anthropocene: The Past and Present of Environmental Change.

Scholars in many disciplines have begun using the term the Anthropocene to signal a geological epoch defined by human activity. This seminar examines the Anthropocene idea from the perspective of environmental history. What activities might have changed the planet – the use of fire thousands of years ago, or agriculture, or fossil fuels? Is the Anthropocene another term for climate change, or does it include pollution and extinction? Is it a useful concept? Drawing on anthropology and the sciences as well as history, we will use the Anthropocene to think through environmental change and the human relationship with the non-human world.

ENVS 1911. Narrating the Anthropocene.

Narratives are key to how we understand our world—making nonfiction storytelling a critical part of comprehending and acting in a time of environmental crises. Through regular writing practice and discussions of readings and other media—including podcasts and film—this class will examine models for how nonfiction narratives can foster a better understanding of past and present environmental change, imagine an environmentally just future, explain technical information for a broad audience, and support an informed, politically active citizenry. Visits from authors and creators will supplement class discussion, as assignments build toward each student completing an environmentally-focused creative narrative project.

ENVS 1913. China's Environment: Power, Pollution and Hope.

This course focuses on key environmental issues transforming Chinese landscapes and society. It introduces students to China's geography and identifies contemporary environmental problems (including air, water and soil pollution, biodiversity loss, etc.) as well as their proposed solutions. Considering China's recent history of rapid economic growth and stark socio-economic inequalities, a central objective of the course is to develop tools to effectively locate environmental issues within a broader political, social and economic context — a skill transposable to other geographical and environmental contexts. We will draw on scholarship from geography, anthropology, political science, and environmental science.

ENVS 1914. Colonization and Environmental Change in Chinese History.

This course explores how the wide diversity of cultures and ecosystems that existed across the East Asian mainland 3,000 years ago came to be replaced with the language, culture and agricultural practices of North and Central China. It aims to teach students to think comparatively about processes of colonialism, especially the environmental aspects of the gradual colonization of non-Chinese ethnic groups in what is now South China.

ENVS 1915. Histories of Global Wetlands.

Wetlands are increasingly recognized as dynamic ecosystems, but for much of human history were valued only after being drained to make farmland. This course explores how humans have used, transformed and destroyed wetlands around the world over the past two millennia. In some cases people have entirely rebuilt hydrological systems with dikes, sluices and dams, creating landscapes that require constant management and investment to remain livable. Studying the environmental history of wetlands can help with conservation, managing cities built upon them, and recognizing how coastal peoples can adapt to rising sea levels.

ENVS 1916. Animals and Plants in Chinese History.

Plants and animals are the basis of human civilization, providing us with shelter, clothing, medicine and, especially, food. While historians have traditionally put humans at the center of history, this course shifts the focus to species that have shaped Chinese society from prehistoric farming to global agribusiness. We will study wild animals, farmed fish, silk worms, crops like rice and soybeans, livestock like pigs and cattle, fruit like oranges and peaches, drugs like tea and opium, and building materials like wood and bamboo. We will examine the roles these species have played from Chinese villages to Brown's campus, which is home to dozens of Chinese ornamental plants and was built in part from the profits of the tea and silk trades. Studying the histories of specific species will help students appreciate the central roles that plants and animals have played in Chinese civilization, and still play in our daily lives.

ENVS 1920. Methods for Interdisciplinary Environmental Research.

This course provides an introduction to a wide range of research approaches in the social and environmental sciences. We will cover the epistemological and theoretical foundations of various research approaches and discuss implications of these foundations for what research questions are answerable and what evidence one can bring to bear to answer such questions. By the end of the semester, students will be able to write a clear and answerable research question, and know what methods are appropriate to use to answer such a question. Enrollment limited to ENVS Juniors.

ENVS 1925. Energy Policy and Politics.

From coal power to solar power, energy drives economies and increases quality of life world-wide. However, this same energy use can, and often does, lead to severe environmental destruction/pollution and global warming. This course serves as an introduction to energy policy in the United States and also explores global attempts to solve energy problems. This course examines different types of energy sources and uses, different ideological paths driving energy policy, the environmental impacts of energy use, current global and domestic attempts to solve energy problems, and the role of renewable and alternative forms of energy in future energy policy.

ENVS 1926. Wasted: Rethinking Chemical Environments.

This senior seminar investigates chemical and other forms of industrially produced waste and its impacts on environment and society. We will take an interdisciplinary approach, drawing on scholarship from anthropology, geography, history, sociology, science studies, and discard studies. We will follow chemicals around the world, from their inception in Western laboratories to their disposal in landfills and waste pits of the global South. Along the way, we will consider how corporations engineer chemicals' manufacture, governments regulate their use, sciences measure their human and ecological effects, and communities contend with the lived realities of chemical exposure and toxic suffering.

ENVS 1927. Nature, Society and Culture.

This senior seminar provides a selective overview of major approaches, debates, and interdisciplinary cross-currents shaping environmental sociology. It's designed to provide a substantive background to undergraduates interested in pursuing a specialization in environmental sociology or related fields. The general goal is to deepen collective understanding of the dynamic interrelationships shaping human societies and the natural environment. We will pursue this goal by considering how sociologists and others have conceptualized society-environment relations and by critically assessing the various approaches developed to examine those relations, their causes, and outcomes.

ENVS 1928. Race and the Politics of Nature: Intersecting Histories and Political Ecologies.

This senior seminar examines the ongoing perpetuation of race and racism as fundamentally related to concepts of "nature" and "the natural." We examine scientific and pseudoscientific concepts about population, biology, and resource scarcity, western environmentalism's origins and history, and relations with projects of incarceration, border violence, triage, environmental determinism, dehumanization, and the maintenance of essentialist understandings of 'race.' This course centralizes a critical race studies lens towards the history of environmental injustices, while also querying in what way nature, ecology, or environmentalism might be liberatory projects for racial justice.

ENVS 1929. The Fate of the Coast: Land Use and Public Policy in an Era of Rising Seas.

For the last few decades, there has been a land-rush on the ocean coasts of the United States. Unfortunately, this swamps the coast at a time when sea levels are on the rise. In some places the rise is natural, in some places the rise is exacerbated by human activities and everywhere it is fueled by climate change. This course will examine the causes of sea level rise, the effects it produces on land, the steps people have taken to deal with these effects and their consequences, and possible remedies. Enrollment limited to 20. Preference given to juniors and seniors.

ENVS 1930. Science Journalism.

Students will attend lectures and immerse themselves in reporting a local science or environmental story. Lectures and workshops will focus on the nuts and bolts of reporting, from researching and pitching to interviewing, writing, fact checking, and editing. Assigned readings will include books and digital examples of compelling science journalism, both historic and current. By the end of the course, students will produce their own local stories about climate change in Rhode Island, together creating an in-depth project published in collaboration with a local news outlet.

ENVS 1931. Renewable Energy Technologies (ENGN 1930U).

Interested students must register for ENGN 1930U.

ENVS 1931E. Writing the Environment.

Few issues are more important than restoring and preserving our environment, but also few are more complex and politicized. Researchers must know how to convey the substance and importance of their work, not just in the language of scholarly journals, but also in ways that engage a lay audience while maintaining scientific accuracy. This seminar focuses on writing about subjects including new findings, the people who make them, scientific disputes, calls to action and policy debates. Participants will produce news and feature articles, profiles, op-ed pieces, essays, policy papers, web pages and the like. Enrollment limit 15.

ENVS 1965. Engaged Environmental Scholarship and Communication.

This upper level seminar will enable to students to place their research in the context of environmentally relevant policy and practice. Development of an environmentally-focused thesis or independent research project is a prerequisite. Students will hone practical professional skills, e.g. how to communicate scientific findings to the media and policy audiences; oral presentation skills, and tips on professional interactions. Required of all Brown Environmental Fellows (<http://blogs.brown.edu/bef/>), and open to others engaged in environmentally relevant projects from the natural and social sciences and humanities. Enrollment is limited to 15 seniors and graduate students, by application only (available Fall 2011). Instructor permission required. Contact Heather_Leslie@brown.edu for more information.

ENVS 1967. Animal, Vegetable, Mineral: Environmental Histories of Non-Human Actors (HIST 1976C).

Interested students must register for HIST 1976C.

ENVS 1968O. The Black Outdoors (HMAN 1977O).

Interested students must register for HMAN 1977O.

ENVS 1968P. Wet Ethnographies (HMAN 1977P).

Interested students must register for HMAN 1977P.

ENVS 1970. Independent Study.

First semester of individual analysis of environmental issues, required for all environmental studies concentrators. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 1971. Independent Study.

Second semester of individual analysis of environmental issues, required for all environmental studies concentrators. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 2010. Special Topics in Environmental Studies.

A mandatory seminar for graduate students in environmental studies. This course develops group problem-solving skills by addressing a current local, national or global environmental issue. We will work on problem definition, identifying options for addressing the problems, and crafting potential solutions. In all stages we work closely with non-profit groups, government agencies, or firms, who have the capacity to implement solutions. Students learn basic research design and begin the process of developing a research question and possible methods for conducting their Master's thesis research.

ENVS 2110B. Radical American Romanticism: Democratic, Environmental, + Religious Traditions in America (RELS 2110B).

Interested students must register for RELS 2110B.

ENVS 2420. The Structure of Cities (ECON 2420).

Interested students must register for ECON 2420.

ENVS 2450. Exchange Scholar Program.**ENVS 2705. Community and Professional Development for Brown Graduate Students.**

Graduate students in the Institute at Brown for Environment and Society (IBES) and across the Brown University campus more generally span a wide range of disciplines and departments. This presents both challenges and opportunities for interdisciplinary interaction among graduate students from different fields. The foremost goal of this seminar is to create a space for intellectual community-building and collaboration among Brown graduate students representing a broad array of intellectual pursuits, both within IBES and across campus. Its second goal is to help graduate students develop some useful professional skills in speaking, writing, networking, and career planning post-Brown. A student-favored community-building event will take place at the end of the seminar. Possible ideas for this event include (but are not limited to) a panel with invitees, field trip, poster session, invited speaker, group proposal, volunteer event, or social event.

ENVS 2980. Reading and Research.

First semester of thesis research during which a thesis proposal is prepared. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 2981. Reading and Research.

Second semester of thesis research. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 2990. Thesis Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

Center for Fluid Mechanics

The Center for Fluid Mechanics, also known as 'Fluids@Brown', serves to coordinate and promote research and teaching at Brown University in the broad field of Fluid Mechanics and Soft Matter, through the development of research collaborations, seminars, the sharing of intellectual knowledge and the coordination of graduate courses. Participating members of the Center include faculty from the School of Engineering, the Department of Earth, Environmental & Planetary Sciences, the Division of Applied Mathematics, the Department of Physics and the Department of Ecology, Evolution, and Organismal Biology.

Fluid mechanics is an enabling science that describes dynamics over a huge range of scales - from the global scales of climate and ocean dynamics to the swimming of micron-scale bacteria. Fundamental research challenges involving fluid dynamics continue to emerge in engineering, the physical or biological sciences, mathematics and scientific computation.

Current information on activities and research may be found at the Center's website at <https://fluids.brown.edu> (<https://fluids.brown.edu/>)

French and Francophone Studies

The Department of French and Francophone Studies at Brown promotes an intensive engagement with the language, literature, and cultural and critical traditions of the French-speaking world. The Department offers both the B.A. and the PhD in French and Francophone Studies. Courses cover a wide diversity of topics, while placing a shared emphasis on language-specific study, critical writing skills, and the vital place of literature and art for intellectual inquiry. Undergraduate course offerings are designed for students at all levels: those beginning French at Brown, those continuing their study of language and those undertaking advanced research in French and Francophone literature, culture and thought. Undergraduate concentrators and non-concentrators alike are encouraged to avail of study abroad opportunities in their junior year, through Brown-sponsored and Brown-approved programs in France or in another Francophone country. Graduates in French and Francophone studies go

on to pursue careers in a number of fields, including translation, public service, college and secondary education, publishing and the media.

For additional information, please visit the department's website: <http://www.brown.edu/Departments/French/>

French and Francophone Studies Concentration Requirements

The concentration in French and Francophone Studies is committed to the pursuit of an interdisciplinary, linguistically rigorous, and textually informed understanding of French and Francophone literatures and cultures. Concentrators engage actively through their coursework with a wide range of texts and critical perspectives, pertaining to multiple literary genres, media, and contexts. They have opportunities to study different periods of French history as well as Francophone cultures beyond France.

Concentration Requirements

A minimum of ten courses is required for the concentration in French and Francophone Studies. Concentrators must observe the following guidelines when planning their concentration. It is recommended that course choices for each semester be discussed with the department's concentration advisor.

Of the minimum ten courses:

At least four courses in French and Francophone Studies numbered 950 and above, such as:

FREN 0950A	Advanced Written and Oral French: Traduction	1
FREN 0960A	Ateliers d'écriture	1
FREN 1070M	La question animale	1
FREN 1110F	Le Roman contemporain	1
FREN 1120F	L'enfer, c'est les autres	1
FREN 1130G	Modernismes poétiques	1
FREN 1210F	L'œuvre romanesque de Marguerite Duras	1
FREN 1310N	La Pornographie	1
FREN 1310P	La théorie féministe en France	1
FREN 1410X	Dés/Accords franco-américains	1

At least one course covering a pre-Revolutionary period (i.e. a course focusing on medieval, Renaissance, 17th or 18th century France), such as:

FREN 1000B	Littérature et culture: Chevaliers, sorcières, philosophes, et poètes	1
FREN 1040B	Pouvoirs de la scène: le théâtre du XVIIe siècle	1
FREN 1040C	Le Grand Siècle à l'écran	1
FREN 1040D	Molière et son monde	1
FREN 1410I	Sorcellerie et Renaissance: le sort de la sorcière	1

At least one course focusing primarily on a Francophone literature or a cultural context other than that of France, such as:

FREN 1410R	Images d'une guerre sans nom: The Algerian War in Literature and Film	1
FREN 1410T	L'expérience des réfugiés: déplacements, migrations	1

- FREN 0600, FREN 0610, and FREN 0620(Advanced French) and FREN720 (First Year Seminar) may count for concentration credit

Additional guidelines:

- A senior capstone project (<https://www.brown.edu/academics/french-studies/undergraduate/senior-capstone/>) will be completed during the senior year.
- Up to four courses (taken in French) from a semester's study abroad (and up to five courses from a full year abroad) may count towards the concentration. A year or semester of study abroad in France or a Francophone country is considered an integral part of the

concentration and is therefore highly recommended. Students should consult the concentration advisor prior to going abroad to find out which types of courses will count for the concentration.

- Up to two 1000-level courses taught in English with a meaningful engagement with French/Francophone texts and/or contexts may be accepted for concentration credit. These may be courses offered within the Department of French and Francophone Studies or other departments at Brown. (Appropriate courses on French or Francophone topics from other departments must be approved by the concentration advisor.)

• FREN 1140A	French Theory	1
FREN 1150G	New Wave Cinema from Paris to Hollywood	1
FREN 1330A	Fairy Tales and Culture	1
HIST 1272D	The French Revolution	1
MUSC 1677	Music and Culture in Third Republic France	1

The Concentration Advisor for the Department of French and Francophone Studies will be happy to discuss the concentration program in French and Francophone Studies with interested students.

The Senior Capstone

The senior capstone is a research project, a translation or a piece of creative work undertaken by all concentrators of French and Francophone Studies in their final year. As a culminating piece of work for their concentration, it is a conceptually rigorous, in-depth treatment of a subject (or a body of work) within French and Francophone Studies, and an opportunity for concentrators to demonstrate the specific strengths and forms of competence—linguistic, analytic, interpretive, critical, theoretical, cultural—developed in the course of the concentration. The learning goals of the capstone project include: building on writing proficiency in French, demonstrating critical reasoning skills, and showing, in writing, the ability to engage thoughtfully with salient questions of French and/or Francophone culture.

The senior capstone experience is usually fulfilled by a research essay completed for a 1000-level (or a 2000-level) course taken in the department during the senior year. In some cases, where appropriate to the course materials and focus, the capstone project may take the form of a work of translation or a piece of creative writing. The project will be 8-12 pages in length and will be written in French. By mid-semester, students will submit to the professor of the course a 300-word statement of the objectives and methods of the project. Students will then meet with the professor to discuss plans for the project. At the end of the academic year, students will give a presentation of 5-7 minutes on their projects at the annual Senior Forum. The professor evaluating the project will inform the DUS of successful completion of the capstone project.

In the case of students pursuing Honors, the senior thesis fulfills the role of the senior capstone.

The senior capstone is intended as a meaningful scholarly experience where concentrators may follow their intellectual passions and best express their growth as students of French and Francophone Studies. Concentrators should discuss their plans for the senior capstone with the Concentration Advisor at the end of their junior year or the beginning of their senior year.

Honors

The Honors Program welcomes applications from students who wish to deepen their study of French and Francophone literature and culture by pursuing during their senior year an independent research-based inquiry into a particular set of texts or questions (literary, historical, cultural, theoretical or linguistic), a translation project or a creative work under the supervision of a thesis advisor. Students may earn honors in the concentration by successfully presenting a thesis, for the preparation of which they will normally enroll in FREN 1990 in either or both semesters of their senior year.

Eligibility and Application Procedure

Candidates for honors in French Studies are expected to have a strong track record in courses taken for their concentration, and will have completed at least two-thirds of the courses required for the concentration (6 courses) by the application deadline.

Applications for admission to the Honors Program are submitted by the end of September in the student's seventh semester. This means that the candidate should ideally begin to think of their thesis project, and establish contact with a potential thesis advisor by the end of the spring semester of their junior year or in the first weeks of the fall semester of their senior year. Students generally choose as advisor a faculty member with whom they have taken a class, but they are also encouraged to contact others whose specialization aligns with their interests. If in doubt, the concentration advisor can be consulted for suggestions of an appropriate advisor. (Note that faculty may not be easy to contact over the summer. Students are thus advised to seek contact during the academic year.) For the application (form available below), the student will provide a brief thesis proposal (1 or 2 paragraphs in French presenting the object of study and intended approach). The application must also feature a thesis title, the name and signature of the thesis advisor, and two recommendations from French and Francophone Studies faculty. Upon admission, the student will also choose a second reader.

Students applying for admission to the Honors Program must submit a completed application (https://docs.google.com/forms/d/e/1FAIpQLSfZ3UPzEjSxhCaCm-b_gJOgsaMvZghzuP5Q-a17rg3PK4K4Dg/viewform/) to the French Studies Honors/Concentration Advisor by **September 26** (or the weekday closest to that date). Recommendations should be from department faculty who have close knowledge of the student's work, preferably through a course taken by the student during their sophomore or junior year. **Please submit these forms to your faculty recommenders no later than September 18** (or the weekday closest to that date). They will then be forwarded to the Honors Advisor who, after reviewing the complete application along with the student's transcript(s), will make a determination about admission to the Honors Program.

A successful application allows the student to pursue the Honors Thesis Project. Honors is officially granted only when the student's two readers approve the completed thesis.

Requirements

Students pursuing honors in French Studies take a minimum of eleven courses. In addition to the standard requirement of ten courses, FREN 1990 (Senior Thesis) is to be taken in either or both semesters of the student's senior year. This independent study is designed for the student to devote time to thesis research and writing under the supervision of a thesis advisor.

The student is expected to work in close consultation with his/her thesis advisor and to respect deadlines for completion of the outline, drafts, and the final version of the thesis, which at the latest must be submitted by the end of the week after Spring Recess (see deadlines below). It is expected that the student and the thesis advisor will establish a schedule and meet on a regular basis through the entire year. (Meetings once every two weeks on average, particularly during the spring semester, are encouraged). The second reader may or may not be from the Department of French and Francophone Studies, and may be consulted less frequently during the earlier stages of the research/writing, according to their availability and the student's needs. However, the student is expected to share at least one advanced draft with the second reader before the final submission.

The final complete version of the thesis must be submitted by **April 16** (or whichever weekday falls closest to that date). Students should submit one copy to each reader and one electronic **and** one hard copy of the thesis to the Concentration advisor.

Work submitted after the final submission deadline will not be accepted for Honors. In such cases, a grade will be given for the Senior Thesis course, but Honors cannot be awarded.

The Senior Thesis

Theses ordinarily range from 50 to 80 pages and are written in French. Topics, approach, and precise calendar of work should be decided in close consultation with the thesis advisor. Students are encouraged to consult previous French Honors theses to get a sense of the range of projects that are possible. At every stage of their research and writing, students are expected to adhere rigorously to Brown University's Academic Code (http://www.brown.edu/Administration/Dean_of_the_College/curriculum/academic_code.php) which may be consulted online.

The Research Essay: The thesis is usually a research-based essay dealing with primary sources (literary works, historical archives, etc.) consulted and cited in the original French. A meritorious Honors thesis will be written in competent and precise language and evince meaningful internal structure and coherence. It will formulate precisely its framing questions and provide textual support for its propositions while making clear their furthest stakes. While students are encouraged to cultivate the originality of their own questions or perspectives, they are also expected to be in productive dialogue with scholarship in the field. Accordingly, to be awarded Honors, a thesis will demonstrate a consistent citation style and clear and correct attribution of all terms and ideas not the student's own.

The Translation Thesis: Students may alternatively choose to undertake for their Honors thesis a work of translation. This choice must be made with prudence and in close consultation with the thesis advisor, so that there is agreement on the difficulty level of the chosen text, the argument for translating it, and expected standards of ambitiousness and precision in the translation. Usually the translation will be from French to English, though the case may be made on the rare occasion for translation from English to French. Students may choose to translate a whole work, select excerpts, or a series of texts (as in the case of poems or shorter narratives). In all cases, a translation thesis must, to qualify for French Honors, include a critical introduction or preface (a minimum of 10 pages) in which the translator demonstrates advanced knowledge of the place of the chosen text in its original cultural and literary context, engages reasonably with scholarship pertaining to the original text, and shows a mature understanding of the stakes and debates of translation as a practice.

The Creative Project: Some students may elect to undertake for their Honors project a creative work. This decision must be made in close consultation with the thesis advisor, so that there is agreement on the level of ambition and interest of such a project. The creative thesis may be a narrative, poetic, theatrical or experimental/hybrid text. Written in French, it is expected to involve a reading- or research-based dimension. In other words, the creative work will demonstrate meaningful engagement with analogous work in the French/Francophone context, and the pursuit of a certain scholarly intention through creative means—whether to advance knowledge or examination of a certain topic, to experiment with the formal means by which to express or explore a certain issue, or to creatively rewrite an existing work with a view to questioning it or investing it with new meanings. As with the translation thesis, a creative thesis must, to qualify for Honors, include a critical introduction or preface (a minimum of 10 pages) in which the author discusses, in informed and articulate terms, the cultural, literary and/or critical stakes of the project: its intentions, its context and background, its formal choices.

Honors students will be invited to present their work to members of the Department and fellow and potential French concentrators at the end of term sometime after the April final submission date.

Calendar of Deadlines:

Precise details regarding deadlines and nature/length of submissions must be established clearly between the student and his/her advisor. Suggested deadlines for major stages are as follows:

- Submission of Applications to Honors Program - - **September 26**
- Rough outline of thesis due to thesis advisor by **the first week of November**
- First portion of written work due to thesis advisor (**minimum of 20 pages**) by **mid-December**
- Submission of full draft to both readers by **March 10**

Completed thesis submitted to both readers by April 16

French and Francophone Studies Graduate Program

The department of French and Francophone Studies offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) Degree. Under most circumstances, the A.M. degree is only awarded as part of the Ph.D. track.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/french-studies>
(<http://www.brown.edu/academics/gradschool/programs/french-studies/>)

Center for Geometric Computing

The Center for Geometric Computing, founded in the summer of 1995, consists of members of the faculty of the Department of Computer Science and their students. The Center was initially established to enhance the visibility of a major research effort funded by the Army Research Office and the National Science Foundation. The main objective of the Center is to facilitate the transfer from basic research in computational geometry to several applied areas.

Over the years, the Center has expanded its core geometric computing research focus into new strategic directions with significant potential for technological and economic impact, including applied cryptography, computer security, cloud computing, data security, graph drawing information visualization, and metrology. Funding for research in the above areas is currently provided by NSF and NetApp. Members of the Center are Professors Roberto Tamassia (Director), Franco P. Preparata (past Director), and Bernado Palazzi. The Center frequently hosts internationally known visitors participating in joint projects.

German Studies

The Department of German Studies is a vibrant intellectual community with strong ties to the full range of critical inquiry that characterizes the humanities at Brown. It focuses its research and teaching on German literature, culture, and critical thought (from German Idealism and Romanticism to the Frankfurt School and beyond), with a comparative and transdisciplinary orientation. It offers both the B.A. and the Ph.D. in German Studies, affording its students – from beginning language learner to advanced doctoral researcher – the opportunity to combine their interests in the literary, cultural, and intellectual production of the German-speaking countries with a wide variety of complementary pursuits, including philosophy, aesthetics, history, music, cultural theory, psychoanalysis, and film, among others. The Department encourages this approach through its flexible yet rigorous curriculum; intense research and teaching collaboration with faculty in related Brown departments and from partner institutions in Europe; rich and varied course offerings in both German and English; as well as attractive study abroad opportunities in Berlin and Tübingen.

For additional information, please visit the department's website: <https://www.brown.edu/academics/german-studies/>

German Studies Concentration Requirements

German Studies exposes students to the language, literature, and culture of the German speaking areas of Central Europe. Concentrators combine intensive study of the German language with interdisciplinary studies by complementing courses from the German Studies core program with courses from other departments that deal with topics from the German cultural tradition. The quest for national identity that dominated German history in the nineteenth and twentieth centuries has been augmented by contemporary Germany's efforts to come to terms with its past and create new ways of dealing with diversity. Our curriculum therefore looks back at the German literary, cultural, and historical tradition, examining figures from Goethe or Christa Wolf to Marx, Freud, Nietzsche, and

Heidegger, alongside the "texts" of contemporary German media, including television, film, and music. Most concentrators study abroad for one or two semesters.

Standard program for the A.B. degree

Many students elect to complete a double concentration, combining German Studies with one of the above areas, or with fields such as International Relations or Economics, Comparative Literature or History of Art and Architecture.

Knowledge of the German language is not required for declaring a concentration in German Studies. However, since language fluency is the basis for sophisticated understanding of German culture, students must meet a language requirement by the time they graduate.

Concentration Requirements

- Nine courses beyond GRMN 0400 or GRMN 0450;
- At least six of the nine courses must be at the 1000-level (or higher);
- Two of the 1000-level courses must involve writing assignments in German, and students must obtain at least a grade of B in these courses;
- At least five of the nine courses must be taken in the Department of German Studies (or four if a student spends a whole year in Germany on Study Abroad);
- Completion of a Senior Seminar (i.e. a course from the German Studies 1900 series) as part of the five courses within the Department of German Studies; and
- If a student studies abroad for one semester, as many as four courses, in the case of two semesters, as many as five courses, from study abroad may count toward the concentration.

GRMN 0500F	Twentieth-Century German Culture
GRMN 0600C	From Faust to Freud: Germany's Long 19th Century
GRMN 0750B	Tales of Vampirism and the Uncanny
GRMN 0750D	The Poetics of Murder: Crime Fiction from Poe to the Present
GRMN 0750F	Historical Crime Fiction
GRMN 1200C	Nietzsche - The Good European
GRMN 1200D	Repetition: Kierkegaard, Nietzsche and Freud
GRMN 1320A	German Aesthetics from Lessing to Heidegger
GRMN 1320D	Goethe
GRMN 1320E	Classical German Literature: Goethe und die Klassik
GRMN 1320F	Eighteenth-Century German Aesthetics
GRMN 1320G	Drama and Religion

GRMN 1320O	Freudian Inspirations: Psychoanalysis and the Arts
GRMN 1320S	Reading Friedrich Hölderlin; An Introduction
GRMN 1330A	The Individual in the Age of Industry
GRMN 1340A	Crime and Punishment- Introduction to German Mystery Texts and Films
GRMN 1340B	Guilt Management: Postwar German Culture
GRMN 1340C	Jahrhundertwende 1900
GRMN 1340D	Modern German Prose, 1978-1998
GRMN 1340I	Turn of the Century
GRMN 1340J	The Works of Franz Kafka
GRMN 1340K	Unmittelbar nach 1945: Literatur und Film in Deutschland
GRMN 1340L	The Modern Period

GRMN 1340M	Kafka's Writing
GRMN 1340Q	Vergangenheitsbewältigung: German Literature of Memory
GRMN 1440A	Dada-Performance and Digital-Interactivity
GRMN 1440C	Poetry and the Sublime
GRMN 1440D	Modernity and Its Discontents: The German Novella
GRMN 1440E	Märchen
GRMN 1440F	Lyric Poetry From the Middle Ages to the Present
GRMN 1440H	Projections of America
GRMN 1440L	German Lyric Poetry: From Goethe to Heine
GRMN 1440N	Kunstmaerchen: the Literary Fairytale in the Nineteenth Century
GRMN 1440O	Modern German Drama
GRMN 1440P	Heroes, Failures and Other Peculiar Characters-The German Novel from Goethe to Kafka
GRMN 1440S	Grimms' Fairy Tales
GRMN 1440X	"Stranger Things: The German Novella"
GRMN 1440Y	Return to Sender: Love, Letters, and Literature
GRMN 1441C	Introduction to German Romantic Poetry
GRMN 1450A	German-Jewish Literature
GRMN 1450B	Die Berliner Republik und die Vergangenheit
GRMN 1450C	National Socialism and the Shoah in Recent German Prose
GRMN 1450F	20 Years After: The End of GDR and German Reunification
GRMN 1450G	Love and Death
GRMN 1450H	Images of America in German Literature
GRMN 1640C	German National Cinema from 1917 to 1989, and Cold War Germanys in Film
GRMN 1660B	Berlin: A City Strives to Reinvent Itself
GRMN 1660C	German Culture in the Nazi Era
GRMN 1660F	After Hitler: German Culture and Politics, 1945 to Present
GRMN 1660G	Kafka
GRMN 1660H	Literary Discourse of Minority Cultures in Germany
GRMN 1660I	Literature and Other Media
GRMN 1660K	Thinking After Philosophy
GRMN 1660L	German Jews and Capitalist Markets in the Long Nineteenth Century
GRMN 1660P	Having Beethoven Over in 1970
GRMN 1660Q	Film and the Third Reich
GRMN 1660R	Freud
GRMN 1660S	Mord und Medien. Krimis im intermedialen Vergleich
GRMN 1660T	Germans/Jews, Deutsche (und) Juden
GRMN 1660U	What was Socialism? From Marx to "Goodbye Lenin"
GRMN 1660V	Nietzsche
GRMN 1660W	Early German Film and Film Theory
GRMN 1661A	Race and Classical German Thought
GRMN 1661E	Germany, Alcohol, and the Global Nineteenth Century
GRMN 1900A	The Weimar Republic (1918-1933)
GRMN 1900B	Sites of Memory

GRMN 1900C	Cultural Industry and the Aesthetics of the Spectacle
GRMN 1900D	Fleeing the Nazis: German Culture in Exile, 1933-1945
GRMN 1900E	Made in Germany - A Cultural History of Science, Technology, and Engineering
GRMN 2320B	The Works of Heinrich Kleist
GRMN 2320C	Enlightened Laughter
GRMN 2320D	Kafka in English
GRMN 2320E	Political Romanticism
GRMN 2330A	Vision and Narration in the 19th Century
GRMN 2340A	German Literature 1968-1989
GRMN 2340B	Poetik der AutorInnen
GRMN 2340C	German Modernism
GRMN 2460A	German Literature 1945-1967
GRMN 2460C	Literature of the German Democratic Republic
GRMN 2460D	Thomas Mann: Die Romane
GRMN 2660A	On the Sublime
GRMN 2660C	Socialism and the Intellectuals
GRMN 2660G	Reading (in) German Literature
GRMN 2660H	Historicism, Photography, Film
GRMN 2660I	Torture in European Literature and Aesthetic Theory
GRMN 2660O	From Hegel to Nietzsche: Literature as/and Philosophy
GRMN 2660P	The Essay: Theory and Praxis
GRMN 2661A	"Other Worlds"
GRMN 2661F	Textual Border Crossings: Translational Literature
GRMN 2661J	Art, Philosophy, and Truth: A Close Reading of Benjamin's Essay on Goethe's Elective Affinities
GRMN 2661Q	Goethe's Faust
GRMN 2662A	Theories of Poetry and the Poetic

Honors

Candidates for honors will be expected to have a superior record in departmental courses and will have to be approved by the Department of German Studies. Honors candidates must take one additional course at the 1000-level from the German studies offerings and present an acceptable Senior Honors Thesis. The additional course may be used for preparation of the honors thesis. Students are encouraged to discuss their thesis topics with the concentration advisor no later than the third week of classes in Fall of their Senior year.

European Critical Thought Certificate Requirements

The Certificate Program in European Critical Thought will provide undergraduates from all areas of the University a scaffolded approach to foundational texts in critical theory, as well as its antecedents and legacy. Students will hone skills in analyzing a wide range of complex arguments and modes of expression, including literary and aesthetic idioms, which probe and expose the limits and conditions of possibility for conceptual formations, institutional establishments, disciplinary boundaries, and organizations of power. This certificate program is therefore suited not only to prepare students of literature to analyze the tensions that span lyric poetry and larger social structures, but also to prepare scientists to question, for instance, the social and conceptual presuppositions of the scientific approach to data and knowledge. In this way, our new Certificate Program will affirm the central role of the humanities within the broader context of the University, and it will offer a much-needed complement to the recent investment in other areas of research at Brown, such as the newly established Data Science Institute.

As with all undergraduate certificates (<https://www.brown.edu/academics/college/degree/undergraduatecertificates/>), the certificate has the following requirements:

- Students may not earn more than **one certificate** and may only have **one declared concentration**.
- Students must be enrolled in or have completed at least **two courses** toward the certificate at the time they declare in ASK.
- No more than **one course** may count toward your concentration and the certificate.
- Students may declare in ASK **no earlier** than the beginning of the fifth semester and must declare **no later** than the last day of classes of the antepenultimate (typically the sixth) semester, in order to facilitate planning for the capstone or other experiential learning opportunity.

Excluded Concentrations: German Studies.

Certificate Requirements:

Students will be required to complete four courses, including:

At least one of two course offerings on an Introduction to German Critical Thought

1

GRMN 1000A	Introduction to German Critical Thought (Kant to Freud)
GRMN 1000B	Introduction to German Critical Thought II

At least one of the 1000-level courses offered in German Studies with the designation "Special Topics in Critical Thought" (STICT), which will be focused on different topics each year.

1

GRMN 1XXX

Two additional courses, to be chosen in consultation with the Director of the program. Examples of possible electives include:

2

COLT 0810G	Equity Law Literature Philosophy
COLT 1210	Introduction to the Theory of Literature
COLT 1430I	Poetry of Europe: Montale, Celan, Hill
COLT 1440U	The Listener (Literature, Theory, Film)
COLT 1610B	Irony
COLT 1810N	Freud: Writer and Reader
COLT 1813Q	Literature and Judgement
COLT 1814U	Politics of Reading
ENGL 1760U	American Modernism and its Aftermaths
ENGL 1761Q	W. G. Sebald and Some Interlocutors
FREN 1140A	French Theory
GRMN 1200H	Writers in Exile: Addressing Fascism in America
GRMN 1661P	Marx, Nietzsche, Freud: The World Is Not What You Think
HMAN 1974L	The Coming Apocalypse: Between the Earth and the World
HMAN 1975S	Figures of the Sovereign: Concepts and Stories from the Life of Power
PHIL 1230	Kant: The Critique of Pure Reason

Experiential Learning

Critical theory profoundly challenges the distinctions between theory and practice, experience, and cognition. For this reason, the "experiential" component of the program will be fulfilled in a manner that highlights the unique and profound interventions that thinking can make.

1. Critical Theory Colloquium: Students will be required to participate in four sessions of the Critical Theory Colloquium, a three-hour forum for the intensive discussion of primary texts and recent research in critical theory that will be held at least once per semester. A faculty member from the Department of German Studies, sometimes in collaboration with an invited guest, will design and facilitate each session. Readings will be made available to participants no later than two weeks in advance of each session, so as to allow each participant ample time to prepare. A Zoom

option will always be available for those students who are unable to attend the colloquium in person.

This colloquium series will ensure that all students enrolled in the certificate program, regardless of whether they are enrolled in the same classes, will have the opportunity to convene once per semester and engage collaboratively with pathbreaking studies in critical theory. Since the Critical Theory Colloquium will be open to all interested members of the Brown community, it will also add a public dimension to the students' learning experience, while serving as a community-building institution beyond the certificate program.

The final session of the Critical Theory Colloquium each year will include public presentations of research on the parts of those students who are completing the certificate program. (See below, nr. 3.)

2. Research in Critical Theory:

a. Capstone Project: Students may fulfill the research component of the experiential learning requirement by completing an Honors Thesis for their declared concentration that engages substantively with critical theory. Proposals for theses will be reviewed and approved by the Director of the certificate program.

b. Graduate Seminar: Upon receiving approval from the Director of the certificate program, students may also fulfill the research component of the experiential learning requirement by successfully completing a graduate seminar that entails extensive engagement with critical theory.

3. Public Presentation: All students completing the certificate program will be expected to present their research at the final meeting of the Critical Theory Colloquium for the academic year.

German Studies Graduate Program

The department of German Studies offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) degree. The A.M. degree is only awarded as a transitional degree for Ph.D. candidates and is not open for admission for non-Ph.D. applicants.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/german-studies>
(<http://www.brown.edu/academics/gradschool/programs/german-studies/>)

Courses

German Studies

GRMN 0100. Beginning German.

A course to learn the German language and about the culture of German-speaking countries. For students interested in gaining a deeper understanding of German history, philosophy, literature, art, music and business through knowledge of the German language. Helps prepare for internships and study abroad, may introduce you to the language of your heritage or to a totally new language, positions you well for further language study, research or other opportunities. 4 hours per week. No previous knowledge of German required.

GRMN 0110. Intensive Beginning German.

An intensive, double-credit language course that meets three days a week and focuses on speaking, listening, reading and writing skills and the cultures of the German-speaking countries. At the end of the semester, students will be able to communicate successfully about everyday topics relating to the university, jobs, daily life and traveling. Ideal for undergraduate students interested in learning German for study abroad or for concentration requirements and for graduate students interested in starting their foreign language requirements. The course is designed for new students of German, regardless of any previous experience with German.

GRMN 0121. German for Reading.

This course prepares students to read and understand German texts and to translate these German texts from a variety of disciplines and in various genres into English. This intensive introduction to German grammar and syntax is for students without prior knowledge of German, but also for those students with some background in German who wish to review and master German grammar. The student who successfully completes this course will have the necessary foundation for reading and translating texts from German into English. Course is open to undergraduates. Graduate students must email Jane_Sokolosky@brown.edu to enroll. May be taken for a grade or S/NC but students may NOT enroll as audit.

GRMN 0200. Beginning German.

A course to learn the German language and about the culture of German-speaking countries. For students interested in gaining a deeper understanding of German history, philosophy, literature, art, music and business through knowledge of the German language. Helps prepare for internships and study abroad, may introduce you to the language of your heritage or to a totally new language, positions you well for further language study, research or other opportunities. Students interested in this course who have not taken GRMN 0100 should contact the instructor.

GRMN 0300. Intermediate German I.

Focuses on deepening students' understanding of modern German culture by reading texts and viewing films pertinent to Germany today. Intended to provide a thorough review of German grammar and help students develop their writing, reading, listening, and speaking skills. Recommended prerequisite: GRMN 0200.

GRMN 0400. Intermediate German II.

An intermediate German course that stresses improvement of the four language skills. Students read short stories and a novel; screen one film; maintain a blog in German. Topics include German art, history, and literature. Frequent writing assignments. Grammar review as needed. Four hours per week. Recommended prerequisite: GRMN 0300.

GRMN 0450. Intensive Intermediate German.

Open to students participating in Brown in Berlin or Tübingen, this is an intensive intermediate course which meets 20 hours per week for one month in Berlin. Students work on all four language skills through daily reading, writing and speaking assignments. The course introduces students to contemporary German literature, culture and politics. Prerequisite: GRMN 0300 or equivalent. May not be taken for credit by students who have completed GRMN 0400.

GRMN 0500A. Cold War Germanys and the Aftermath.

The year 1990 unifies Germany and divides two decades in German history. The course investigates how self identification and the experience of present time were depicted in German literature and film in East and West in the 80s and 90s. Oral and written skills in German are furthered while deepening participants' understanding of Germany's cultural and social situation. In German. Prerequisite: GRMN 0400 or permission.

GRMN 0500B. From Zero Hour to the Wende.

An exploration of postwar German culture through the study of literary and film texts. Oral and written skills in German are furthered while deepening participants' understanding of the prehistory of contemporary Germany. In German. Prerequisite: GRMN 0400 or permission.

GRMN 0500E. The Presence of the Past: German Literature and Film (1945-present day).

Exploration of ways in which the German past, through cultural materials, including literature and film, played a role in the construction and deconstruction of the Berlin Wall, the two Germanys, and contemporary Germany. German oral/written skills are furthered while deepening participants' understanding of present-day Germany. In German. Prerequisite: GRMN 0400 or permission.

GRMN 0500F. Twentieth-Century German Culture.

A broad exploration of twentieth-century German culture using many kinds of written and visual texts (e.g. literature, journalism, film, art). While continuing to work on all four language skills (speaking, listening, reading, writing) students will gain more intensive knowledge about German culture, society, and history. In German. Recommended prerequisite: GRMN 0400.

GRMN 0600B. Was ist Deutsch?.

In this course we will examine some of the ideas and myths that became entangled with the emerging notion of a "German" identity in the eighteenth and nineteenth centuries. Some of the terms that we will discuss include 'Kultur,' 'Bildung,' 'Freiheit' and 'Gesellschaft,' all of which have rich semantic histories. Conducted in German. Recommended prerequisite: one course in the GRMN 0500 series.

GRMN 0600C. From Faust to Freud: Germany's Long 19th Century.

In the 19th century, a fundamental renegotiation took place about what it means to be German. Literary, aesthetic, and philosophical discourses played a decisive role in these deliberations on German identity. We will study seminal texts from these fields and discuss how they shaped German self-understanding in the 20th century and beyond. Readings by Goethe, Büchner, Stifter, Wagner, Nietzsche, Raabe, Fontane, George, Freud, among others. In German. Prerequisite: GRMN 0500.

GRMN 0750A. Faust and the Faust Legend.

Variations on the Faust theme focus on the role of knowledge in modern society. How do we define what we know? How do we accommodate knowledge with belief? What are the limits of human knowledge and can they satisfy us? Texts from the Reformation to the present: Marlowe, Calderon, Goethe, Turgenev, Mann, Bulgakov, Kerouac, Havel. In English. Enrollment limited to 19 first year students.

GRMN 0750B. Tales of Vampirism and the Uncanny.

This course compares literary texts of horror and haunting in English and German Romanticism. The psychoanalytic foundations of vampirism are discussed to enable students to boldly go beyond mere fandom and engage these texts on a more sophisticated level. Readings by Walpole, Coleridge, Poe, Tieck, E.T.A. Hoffmann and others. In English. Enrollment limited to 19 first year students.

GRMN 0750C. Crime Fiction: The Global Hyper-Genre.

Twenty-five percent of all new literary books worldwide are crime fiction. As a means of a society to reflect upon itself, crime fiction reflects how certain cultures deal with the dialectics of threatening and securing civic order, how they depict mentalities, traditions, topographies, or cultural chance. In English.

GRMN 0750D. The Poetics of Murder: Crime Fiction from Poe to the Present.

In this course, we will trace the literary and cinematic depiction of mystery and mayhem from the earliest manifestations of the genre to the present. Texts will include examples from the "Golden Age," the hard-boiled mode, the police procedural, and historical crime fiction. Enrollment limited to 19 first year students.

GRMN 0750E. Reading Film: An Introduction to German Cinema.

What is it that fascinates us about cinema? What desires and drives have held us in thrall to the moving image? This seminar introduces you to writing about film, not just within the specific field of media studies but within the humanities as a whole. We will examine 12 filmic examples (ranging from early silent film to contemporary popular cinema) alongside a selection of theoretical and historical readings. The course will impart the basic skills needed to write in a critical, reflective, and rigorous way about film. For those interested in film in the context of any humanities field. Enrollment limited to 19 first year students.

GRMN 0750F. Historical Crime Fiction.

There is almost no time period that has not been covered by historical crime fiction. From ancient Egypt and Rome to 18th century China, historical crime fiction has complemented and contested our knowledge of history. In this seminar, we will do some extensive time travel and explore how crime fiction explores the past and challenges our understanding of bygone times. Readings of texts by Ellis Peters, Umberto Eco, Peter Tremayne, Lindsey Davis, Alan Gordon, Robert van Gulik, Laura Rowland, among others.

GRMN 0750G. On the Ego and the Echo.

There is more than mere resonance between the first-person singular, "ego," and the word for those "echoes" which may rebound from any number of sources, for self-consciousness would be unconscious of itself without reflection. This dependency of the self upon reflection also implies, however, that the ego could never have simply been one with itself, but remains open at its core to alterity and plurality: to echoes of unknown provenance. This course will pursue the subject(s) of self, speech, and reflection, with readings of theoretical and literary texts from antiquity to the present.

GRMN 0750H. Classics of Crime Fiction.

This course will provide an overview of crime fiction from its beginnings in the 19th century to more recent postmodern manifestations of the genre. We will read classic examples of the detective story, golden age and hard-boiled crime fiction, the police procedural, the psychological thriller, the spy novel, and metaphysical crime fiction. In addition to the history of the genre, students will also be introduced to relevant theoretical concepts of reading crime fiction. Reading and Discussions of texts by Edgar Allan Poe, Arthur Conan Doyle, Agatha Christie, Raymond Chandler, Patricia Highsmith, Eric Ambler, among others. Taught in English.

GRMN 0900B. Great Works from Germany.

Cultural and historical analysis of some of the most significant German texts from the past two centuries. Writers: Lessing, Thomas Mann, Günter Grass, Christa Wolf. Philosophers: Kant, Marx, Nietzsche, Freud. Sections: Enlightenment and its limits, liberation and oppression, and love and death. Students will give one presentation in class and write a final essay. In English.

GRMN 0900C. Introduction to German Literature.

This survey course will give a historical overview of the main periods and genres of literature in German from the eighteenth to the early twentieth century. We will also consider how literature relates and contributes to the cultural, intellectual, and political history of Germany. In English.

GRMN 0900D. History of the Holocaust (JUDS 0902).

Interested students must register for JUDS 0902.

GRMN 0990B. The German Novel in the 19th and 20th Century.

The modern and postmodern German novel provides some of the most intriguing reading in the history of Western culture. From 19th century realism to 20th century postmodernism, these authors have commented on political events, provided historical hindsight, analyzed the German psyche, and initiated literary innovations that would have a profound impact on world literature and captivate readers worldwide. Works by Fontane, Kafka, Hesse, Mann, Grass, and Sebald, among others. In English.

GRMN 0990C. Introduction to Scandinavian Literature.

An introduction to major works of Scandinavian writers, painters and filmmakers over the past 150 years. Figures include Kierkegaard, Ibsen, Strindberg, Munch, Hamsun, Josephson, Sodergran, Lagerkvist, Vesaas, Cronqvist, August and Vinterberg, as well as children's books by Astrid Lindgren and Tove Jansson. In English.

GRMN 0990D. The German Novel From Classicism to Realism.

What is a novel, and how did it emerge as such a dominant genre in the course of the 18th and 19th centuries? This course introduces some of the most important German prose works prior to the 20th century, including texts by Goethe, Novalis, Hoffmann, Droste-Hülshoff, and Stifter. We will begin with the novel's earliest classical forms, follow its development in tandem with genres such as the fantastic tale and the novella, and end with a discussion of realism. All readings and discussions in English; no German language proficiency required.

GRMN 0990E. The Rhine River: An Aesthetic, Environmental, and Political History.

From Hölderlin to Hugo, cannonballs to canalization, this course examines representations of Europe's most important waterway in the modern period. Although it has long been seen as a "natural" border between France and Germany, the Rhine River has been anything but undisputed. Both the French and German nationalist movements claimed the river as their own, spawning a bi-lingual catalogue of songs, poems, and historical legends. We will approach the Rhine from an interdisciplinary perspective, with readings from economists, environmentalists, historians, and cultural studies scholars. We will be aided by a vast array of primary source material. Taught in English.

GRMN 0999M. Marx and Money in Modern Germany.

No critique of capitalism has been more enduring than Karl Marx's nineteenth-century account of European finance and industry. We will engage Marx's work alongside a close reading of the societies Marx sought to critique. We will also contextualize the work of Marx's contemporaries and successors, including Engels, Simmel, Sombart, as well as look at the continuation of the "capitalism debate" in Weimar and Nazi Germany. Our focus on the societies in which these writings emerged, allows for a less obstructed view onto these economic and social ideas. Issues of religion, gender, politics, militarism, and globalism will be considered. In English.

GRMN 1000A. Introduction to German Critical Thought (Kant to Freud).

One of the great intellectual pleasures in our short lives is to engage with the tradition of modern German critical thought in its broader European context. This course introduces all Brown students who do not wish to deprive themselves of this complex pleasure to some of the giants who have prompted us to reconceptualize the way we think about the world and our tenuous place within it, from questions of what we can know to a critique of political economy and the dark side of our sexuality. Authors to be studied include Kant, Schiller, F. Schlegel, Hegel, Marx, Nietzsche, and Freud. Undergraduates from diverse fields welcome. In English.

GRMN 1001. German for Reading.

This course prepares students to read and understand German texts from a variety of disciplines and in various genres. This intensive inquiry into German grammar and syntax is for students without prior knowledge of German, but also for those students with some background in German who wish to review and master German grammar. Student who successfully complete this course will have the necessary foundation for reading and translating scholarly, literary, historical and popular texts from German into English.

GRMN 1022. The Holocaust: Cultural Representations.

We will study cultural attempts to come to terms with an event that eludes full comprehension, asking how understanding is transformed when straightforward meaning and legibility can no longer be assumed. Taking as our point of departure a new reading of Theodor W. Adorno's famous and often misunderstood dictum that "to write poetry after Auschwitz is barbaric," we will study the ways in which exemplary works of literature, art, film, and philosophy engage the challenge of speaking after the very idea of speaking has become suspect. Witnessing, mourning and melancholia, personal and historical loss, the relation between language and disaster, and the uneasy conjunction of ethics and art will be thematized in this course. Writers, artists, and filmmakers to be studied will include Adorno, Agamben, Blanchot, Freud, Celan, Lanzmann, Levi, and Spiegelman. Taught in English; students from diverse fields welcome.

GRMN 1090. Advanced Written and Spoken German.

Designed to increase the range, fluency, and accuracy of idiomatic expression through written and oral practice, and to improve students' reading skills of progressively more difficult authentic texts from a variety of subject areas. Discussions, group projects, and oral reports. Review of selected grammar topics, systematic vocabulary building. Not to forget: "Deutsch macht Spass!" In German. Recommended prerequisite: one course in the GRMN 0600 series.

GRMN 1200C. Nietzsche - The Good European.

Nietzsche prided himself on his transnational identity. He loved German literature and was himself a writer of the first rank. Yet he was critical of the culture and the politics of his nation and he loved the literatures and cultures of many other nations. We will study his philosophical works with a view to his criticisms of *Deutschtum* and his affirmation of other traditions—starting with the Greeks, for by profession he was a classicist. We will also study Nietzsche's journeys—for he was convinced that the places in which he thought and wrote were essential to his thinking and writing. Enrollment limited to 40.

GRMN 1200D. Repetition: Kierkegaard, Nietzsche and Freud.

A study of the concept and the textual practices of repetition. We will consider the relation between repetition and transcendence, history, memory, and art. The course will focus on how the category and the event of repetition problematize identity, interpretation, and expression. Issues include religion and aesthetics of repetition (Kierkegaard); history and the eternal return (Nietzsche); repetition compulsion and the death drive (Freud). We will especially be interested in how the theme of repetition informs the way these thinkers write and what problems this poses to interpretation and understanding. In English.

GRMN 1200H. Writers in Exile: Addressing Fascism in America.

Having fled Nazi Germany, Ernst Bloch wrote of fascism: "The masks of the Ku Klux Klan were thus the first fascist uniform." He was among many diverse writers in exile to be reminded of the political and social formations s/he was seeking to escape, from Bertolt Brecht to Thomas Mann, the erstwhile White House guest and bourgeois advocate of American democracy, who eventually aroused the suspicions of the FBI and came to view in Cold War politics tendencies towards a "fascist dictatorship." In this course, we will closely read texts that emerged from German exiles with a view to their implications regarding fascism and America.

GRMN 1200I. Show Trials: The Aesthetics of Law in Literature and Film.

J'accuse! Zola's public denunciation of the French President, accusing him of anti-Semitism and unlawful imprisonment, has become emblematic for theatrical politics and dramatized trials. Even though their outcomes were decided in advance, the performance of show trials – from the Dreyfus affair to the Auschwitz trials and the prosecution of Saddam Hussein – have been indispensable for the political formation of society. In this course, we will analyze the literary, cinematic, and philosophical reception of such performative trials, ranging from Kafka's Trial and Arendt's Eichmann in Jerusalem to Dreyer's *The Passion of Joan of Arc* and Kramer's Judgment at Nuremberg.

GRMN 1320A. German Aesthetics from Lessing to Heidegger.

A survey of some of the most important German-language contributions to theories of art. Authors include Lessing, Kant, Schiller, Hegel, Nietzsche, Benjamin, Adorno, and Heidegger. Emphasis will be on how aesthetics intersects with literary theory and the idea of critique, and also how it contributes to discussions about knowledge, subjectivity, and power. All readings in English translation.

GRMN 1320C. Goethe's Children.

The name "Goethe" looms large over modern German literature, but what are founding figures without the daughters and sons that question and challenge their authority? This course offers a broad introduction to Goethe's life and works, focusing on themes and questions of youth and childhood in his writings. Readings include canonical works such as *The Sorrows of Young Werther*, *Iphigenia in Tauris*, *Wilhelm Meister's Apprenticeship*, *Faust*, and *Elective Affinities*. We will also examine Goethe's legacy by looking at musical, theatrical, and philosophical responses to images of youth and childhood in his works. [Taught in German; all students welcome.]

GRMN 1320D. Goethe.

Selected readings of Goethe's theater plays, novels, and poetry. Explores the meaning of reading Goethe today, at the 250th anniversary of his year of birth, and investigates the activities around the celebration of this anniversary. Time permitting, we consider versions of Goethe's texts in film and other media. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1320E. Classical German Literature: Goethe und die Klassik.

The anthropology and aesthetics of Weimar Classicism. Readings of major works by Johann Wolfgang Goethe and Friedrich Schiller, with discussion of selected texts by Herder, Humboldt, and Kant. In German. Pre-requisite: GRMN0600 or placement. Prerequisite: GRMN 0600 or permission.

GRMN 1320F. Eighteenth-Century German Aesthetics.

A survey of important aesthetic writings from the period, including some texts of Winckelmann, Lessing, Schiller, Goethe, and Hamann. Major questions to be treated include the role of imitation, the concept of form, the relationship between the beautiful and the good, and formation of aesthetic judgments. Course will conclude with selections from Kant's *Critique of Judgment*. In English.

GRMN 1320G. Drama and Religion.

Lessing used the stage as his "pulpit" when forbidden to publish in religious disputes. Some dramatists addressed particular religious views in tragedies or satiric comedies; others staged religious themes more generally or in metaphysical imagery. We examine the variety, nature and context of these stagings in texts by major German authors: L. Gottsched, Gellert, Lessing, Schiller, Goethe, Kleist, and Hölderlin. In English, with a German section (TBA) for those able and interested.

GRMN 1320I. What is an Image? German Aesthetics and Art from Lessing to Heidegger.

A survey of some of the most important German-language contributions to theories of art, alongside a discussion of some major art-works from the German tradition. Authors include Lessing, Kant, Schiller, Hegel, Nietzsche, Benjamin, Adorno, and Heidegger. Emphasis will be on how aesthetics intersects with literary theory and the idea of critique, and also how it contributes to discussions about knowledge, subjectivity, and power. All readings in English translation. In English.

GRMN 1320O. Freudian Inspirations: Psychoanalysis and the Arts.

This course engages with the central concepts and motifs of Freud's psychoanalytic theory and how they relate to works of literature, art, and film. What do Sophocles, Ovid, and Hoffmann tell us when we read *Oedipus Rex*, *The Metamorphoses*, and *The Sandman* today? How does our understanding of these texts differ from or resemble Freud's reading of them? And when we engage art that cites psychoanalytic concepts—such as Hitchcock's *Marnie* or Lars von Trier's *Melancholia*—do we recognize the Freud we encounter in our readings of his own texts? (In English; all students welcome)

GRMN 1320P. Friends and Adjuncts: J. P. Hebel, Kafka, Benjamin, Sebald.

He was a favorite among seminal German writers and thinkers such as Goethe, Kafka, and Walter Benjamin. Nonetheless, Johann Peter Hebel's work remains largely unknown outside of German-speaking countries and is generally ignored by the academy. In this seminar we will read Hebel's poetry and prose alongside some of the seminal works of those who wrote and thought with him as unexpected friends or adjuncts. In English.

GRMN 1320S. Reading Friedrich Hölderlin; An Introduction.

The course is intended as an introduction to the reading of Hölderlin as a poet, so the focus will be on close reading and on intense and detailed discussions of the texts in class. To that end it is indispensable to study the texts in the original German. Available English translations will be used in addition. Of course, linguistic difficulties in understanding the texts (which are, by the way, by no means restricted to non-German speakers) will themselves form an integral part of the seminar discussions. Critical texts will be read in English.

GRMN 1320U. Swiss Literature.

Many of Switzerland's most well-known authors (Gottfried Keller, Robert Walser, Annemarie Schwarzenbach, Friedrich Dürrenmatt, etc.) have challenged its dominant political narratives: Switzerland's neutrality, liberal tradition, natural beauty, and economic prosperity. What makes German-Swiss literature particularly fascinating is its status as a "minor literature," its linguistic singularity and frequent use of words in dialect and other languages. Swiss literature in German will be the focus of the seminar, but Switzerland's multilingualism always has been—and continues to be—reflected in its literature. In our seminar discussions we will follow a trajectory from Albrecht von Haller through Keller, Spyri, Zurich Dada, and Walser to postwar and post-millennial authors. Topics include realism, the avant-garde, pedagogy, economy, the politics of dystopia, climate change, and migration. No prior knowledge of Swiss literature is required. Readings and discussions will be in German. Recommended: GRMN0600 or equivalent.

GRMN 1320X. Weimar Culture: German Modernity and Its Discontents.

The years of the Weimar Republic were the hothouse of German cultural modernity. In a situation of crisis, the time between the end of World War I and the rise to power of National Socialism sees the emergence of new media as radio and film, an ever-accelerating urban life, changing social & gender roles, political radicalisms, as well as different artistic avantgarde movements. Weimar literature breaks from tradition, developing innovative forms to represent this new culture. At the same time, a flourishing journalistic landscape brings about new modes of cultural critique, essayistic theories of modernity, and figures such as the flâneur who reads the modern cityscape. Following a brief introduction to the historical background, we will read two novels of the period, two plays, & a series of selected poems, accompanied by journalistic pieces & representative examples of contemporary literary criticism.

GRMN 1321D. Dancing on the Volcano: Die Kultur der Weimar Republik.

Immerse yourself in the dynamic and transformative period of the Weimar Republic, a time marked by extraordinary cultural and artistic innovation. This course explores the years 1918 to 1933, focusing on how the aftermath of World War I and the political turbulence of the era fueled a cultural renaissance in Germany. By studying the interplay of art, literature, theater, film, music, and social movements, students will uncover the profound impact of this period on modern culture. In German.

GRMN 1330A. The Individual in the Age of Industry.

This seminar discusses the second part of the 19th century, which is distinguished by nation building, industrial revolution, advance of science, realism and belief in progress but also nihilism and cultural pessimism. We investigate how the new age of pragmatism and the "technological sublime" is reflected in short stories by major German writers such as Adalbert Stifter, Karl Gutzkow, Theodor Storm, Gottfried Keller, Wilhelm Raabe, Theodor Fontane, Arno Holz and Gerhart Hauptmann. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1330C. German Romanticism: Texts, Contexts, Legacies.

The Romantic Age in German literature, art, and philosophy is widely acknowledged as pivotal, not just for the development of German modernity, but for the entire history of European literature and art in the transition from the post-Enlightenment period to the modern one. Many topics of discussion today, in the field of aesthetics, literary criticism, and philosophy, continue to be indebted to the work of German Romantic writers. But the corpus of Romantic writing is itself a heterogeneous, complex one that defies easy characterization, because these texts are radical and trenchant in their criticism of traditional categories of form, genre, and style. The goal of this seminar is to explore together this diverse body of writing in order to trace its nuances and complexities, with the aim of connecting it not just to its historical moment but also to ours.

GRMN 1340A. Crime and Punishment- Introduction to German Mystery Texts and Films.

This course provides an exploration of German crime, detective and mystery texts and films ranging from the early 19th century to contemporary fiction. In addition to exercising hermeneutic skills, this course aims at improving proficiency in oral and reading comprehension, as well as speaking and writing skills, with an emphasis on vocabulary expansion, advanced Grammar review and stylistic development. This course is recommended for students interested in a combined introduction to literature and high-level language learning. Prerequisite: GRMN 0600 or permission.

GRMN 1340B. Guilt Management: Postwar German Culture.

The central theme of postwar German Culture, from the so-called "Zero-Hour" in 1945 to postunification, was dealing with the Nazi past. We discuss how writers, filmmakers, and critics tried to establish a public discourse on guilt. Films and readings by Mitscherlich, Syberberg, Reitz, Müller, Grass, Christa Wolf, Sichrovsky, Biller, Chaim Noll, and others. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340C. Jahrhundertwende 1900.

Modernism and its discontents in German literature around 1900. Examines naturalism, Jugendstil, Dada, and early expressionism. Poetry, fiction, and drama by Nietzsche, Th. Mann, Stefan George, Rilke, Kafka, Wedekind, Hofmannsthal, Schnitzler, Hauptmann, and others. Operas by Wagner and R. Strauss. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340D. Modern German Prose, 1978-1998.

Since the end of the 1970s, East and West German prose has tended to concentrate more on everyday life than on the overbearing questions of memory that were so central to immediate postwar authors. The changing function of literature in Germany is explored by reading representative prose fiction by major authors such as Becker, Delius, Hein, Strauss, and Walser. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340I. Turn of the Century.

The most important issues in literature around 1900 will be discussed: the critique of language, media, psychoanalysis, urbanization, technical progress, the construction of the subject and a growing sense of isolation. Texts by Hofmannsthal, Rike, Schnitzler, Robert Walser, Georg Simmel, Freud, Nietzsche, Hermann Bahr and others. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340J. The Works of Franz Kafka.

We will read a selection of texts by Kafka (including short stories, a novel, and journal entries) in order to explore his importance for the aesthetics of modernity. Topics include: representation of the law, literature and religion, the role of the paternal, and guilt. Frequent short papers based on close reading of texts, and a longer final paper. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340K. Unmittelbar nach 1945: Literatur und Film in Deutschland.

Often called "Zero Hour," the period immediately following the end of the Second World War was one of turmoil and uncertainty in Germany. An enormous cultural production sprang up under extremely difficult conditions. Texts and films by Heinrich Böll, Wolfgang Borchert, Alfred Andersch, Wolfgang Staudte, Helmut Käutner, and others. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340L. The Modern Period.

Explores the fascinating flowering of modernity in Germany, including the period around 1900 (adolescent Angst and the new Broadway version), Weimar culture (revolution, women's emancipation), Nazi culture, and exile literature in socio-historical context; including examples from film, art, and popular culture. Authors may include: Wedekind, Brecht, Kafka, T. Mann, Toller, Keun. In German. Recommended prerequisite: GRMN 0600 or equivalent.

GRMN 1340M. Kafka's Writing.

Writing--vocation or duty, gift or curse, poison or antidote? This course provides an introduction to Kafka's stories, novels, journal entries, and letters, with a focus on his complicated, tortured relationship to the idea and practice of writing. We will explore how the difficulties of this relationship generate an enigmatic, tragi-comic oscillation between hope and despair that continues to fascinate readers today. This is a writing-intensive course, and the frequent short assignments will involve drafts, revisions, and individual consultations, with the aim of getting you to think critically about your own relationship to writing about literature. In English. Enrollment limited to 40. First year students require instructor permission.

GRMN 1340N. Literature and Multilingualism.

Has literature ever really been monolingual? Has it not spoken, from the outset, with a split tongue, from the interstices between languages, cultures, and identities? In this seminar, we will examine a range of authors from the twentieth century for whom speaking is always speaking otherwise: speaking about the other, speaking as other, as something other than merely speaking. Our goal is to think beyond the 'monolingual paradigm' – the assumption that we are, in the beginning, just one thing and therefore speak just one language. With the help of the writers that we'll be exploring, we will try to come up with ways to describe a life of linguistic multiplicity, beyond the easy binaries of native vs foreign, self vs other.

GRMN 1340Q. Vergangenheitsbewältigung: German Literature of Memory.

This course will examine one of the most loaded terms in German Studies, "the coming to terms with the past" or rather "the mastering of the past", which concerns German strategies of dealing with the atrocities of World War II and the Holocaust. Thus, this course will focus on the literary engagements with issues of trauma, memory, and remembrance. Authors include Adorno, Celan, Klüger, Grass, Weiss, Wolf, Müller, Timm, Kluge, and Sebald. The course will also have a closer look at contemporary debates regarding "Vergangenheitsbewältigung" and the culture of memory in Germany itself. In German. Prerequisite GRMN 0600.

GRMN 1340V. Mis(s)Education: Feminist Undoings of the Bildungsroman.

Declared central to Western history and culture by Freud, the Oedipal complex survived in manifold literary reiterations— particularly the Bildungsroman, which privileges the father as primary educator and eventual adversary. This course challenges the genre's patriarchal premise by shifting focus to female representations, in order to reconsider the traditionally 'masculine' discourse on Bildung. As a dynamic construct, femininity allows to dispute the historically patriarchal paradigm of knowledge acquisition and the precarious position of woman beyond psychoanalysis. Departing from Goethe's Wilhelm Meister's Apprenticeship, we will open the genre's paternal margins toward works such as Arendt's Eichmann in Jerusalem and Satrapi's Persepolis.

GRMN 1340Y. Germans and Jews.

This introductory course will examine the fraught relationship between Germans (and Austrians) and Jews in Germanophone writing across genres from the Enlightenment to the mid- 20th century. We will consider writing by Jewish authors, images of Jews, and the themes of Jewishness and Germanness, emancipation, assimilation, anti-semitism and Zionism. Students will learn analytic reading, writing and research skills. Texts by Lessing, Mendelsohn, Veit, von Arnim, Heine, Marx, Droste-Hülshoff, Lasker-Schüler, Kafka, and Arendt. Readings and discussion in English.

GRMN 1341F. How to Survive Fascism: Post-War German Literature.

This course examines German literature from 1945 to 1965, focusing on how authors responded to the aftermath of World War II and the challenges of rebuilding. Students will explore themes of guilt, memory, and identity through works by writers such as Heinrich Böll, Wolfgang Borchert, Christa Wolf, and others. Discussions and analyses will highlight the cultural and historical shifts that shaped German literary expression during this transformative period. In English.

GRMN 1341G. How to Survive Fascism: Post-War German Literature.

This course examines German literature from 1945 to 1965, focusing on how authors responded to the aftermath of World War II and the challenges of rebuilding. Students will explore themes of guilt, memory, and identity through works by writers such as Heinrich Böll, Wolfgang Borchert, Christa Wolf, and others. Discussions and analyses will highlight the cultural and historical shifts that shaped German literary expression during this transformative period. In German.

GRMN 1440A. Dada-Performance and Digital-Interactivity.

This course investigates the invention of performance art in German Dada and its legacy and further development in contemporary interactive art in digital media. Both phenomena are discussed with respect to their aesthetic, philosophical, and social roots and intentions. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440C. Poetry and the Sublime.

We will examine some theories of the sublime, and read them alongside selected poets who take up certain related questions about representation, perception, and power. The goal will be to come to a better understanding of why the sublime is important as a category in thinking about the relationship between literature, philosophy, and history. Texts may include: Longinus, Schiller, Kant, and Paul de Man on the theory of the sublime, and poetry by Hölderlin, Wordsworth, Rilke, and Celan. In English; reading knowledge of German helpful but not required.

GRMN 1440D. Modernity and Its Discontents: The German Novella.

After the failed revolution of 1848, the German bourgeoisie had to curb its desire to control the sphere of politics. At the same time, the effects of modernization started to manifest themselves in full force. We will discuss how the revolutionary changes of the second half of the 19th century in Germany were worked through in literature, and specifically in the realist novella. Readings by C.F. Meyer, Keller, Stifter, Storm, Raabe, Fontane, Mörike, and Heyse. In German. Recommended prerequisite: one course in the GRMN 0600 series.

GRMN 1440E. Märchen.

Fairy tales in German are usually associated with the Grimm brothers, but there is a rich tradition of popular (*Volksmärchen*) and literary (*Kunstmärchen*) fairy tales going back further and continuing into the present. We read a representative sample, consider typical features of the genre, and discuss the role of *Märchen* in shaping ideology. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440F. Lyric Poetry From the Middle Ages to the Present.

Broad exploration of German poetry, including intersections between poetry/music/art: spiritual/worldly (medieval troubadours, Baroque); classical Greece/modern Germany (Goethe, Schiller, romantics, art songs), poetry/politics (Heine, Brecht), expressions/symbols (Rilke, expressionism), poetry after Auschwitz (Celan, Bachmann), contemporary reflections on history (V. Braun), poetry between cultures (Turkish-German poets, hip-hop). Intensive reading, discussions and vocabulary building. In German. Recommended prerequisite: one course in the GRMN 0600 series.

GRMN 1440G. Talking Animals and the Politics of World Literature.

We have encountered talking animals within literature for over four thousand years. Alongside the Fables of Aesop, there are comparable animal stories from Ancient Babylon, Egypt, and from the Indian-Arabian-Persian cultural space, whose distribution was just as far-reaching. Animal fables appear easy to understand and universally valid. But do we really understand what it means when animals talk in texts? This course will employ current approaches to human-animal-studies alongside concepts of world literature to examine why animals are made to talk, what functions animal stories have, and what the conditions for their dissemination are. [In English; all Brown students welcome.]

GRMN 1440H. Projections of America.

Since its discovery, 'America' has served as a projection screen for a variety of images of the 'New World': as utopia, as harbinger of modernity, and as the origin of political, economic, and cultural imperialism. Readings of the changing and shifting image of America in German literary and journalistic texts from the 18th century to the present (Lenau, Goethe, Heine, Sealsfield, May, Frisch, and others). In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440L. German Lyric Poetry: From Goethe to Heine.

A survey of German lyric poetry during what Heine calls "die Kunstperiode." Focus on rhetoric of the lyric: apostrophe, prosopopeia, metaphor, metonymy and allegory. Close reading, frequent writing assignments. Reading in German, class discussion in English.

GRMN 1440N. Kunstmaerchen: the Literary Fairytale in the Nineteenth Century.

"Das Kunstmaerchen" or literary fairy-tale occupies a central place in the literature of late romanticism. Focusing on major examples from writers such as Tieck, Eichendorff, and Brentano, we will examine how the content and the representational structure of these texts contribute to debates on categories like the "natural," the "fantastic," and the "moral." In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440O. Modern German Drama.

Explores the fascinating modern German dramatic tradition from the 19th century to the present, emphasizing plays that are still a part of the stage repertory today and authors that have exerted a strong international influence. Authors may include: Büchner, Wedekind, Brecht, Toller, Dürrenmatt, Frisch, Weiss, Heiner Müller. In German. Recommended prerequisite: GRMN 0600 or permission.

GRMN 1440P. Heroes, Failures and Other Peculiar Characters-The German Novel from Goethe to Kafka.

Readings in the tradition of the German novel, including the Bildungsroman, Realism and modernist fiction. Consideration especially of failed heroes and the failure of the novel genre. Authors include Goethe, Hölderlin, Novalis, Stifter, Fontane, Musil and Kafka. Readings and class discussions in English.

GRMN 1440S. Grimms' Fairy Tales.

"One doesn't know the sorts of things one has in one's house," says the servant girl in Kafka's "A Country Doctor," as a stranger, who will soon act violently towards her, emerges on all fours from an unused sty. The precarious moment of finding more than one seeks in one's midst is among the key motifs of Grimms' "Household Tales" that we will trace, following the way they move writers of literature, psychoanalysis, and critical theory. Reading the Grimms among others, we will find: what was "once upon a time" is not finished, nor can these uncanny tales be domesticated.

GRMN 1440W. The European Novel from Goethe to Proust (COLT 1420).

Interested students must register for COLT 1420.

GRMN 1440X. "Stranger Things: The German Novella".

Goethe's famous description of the novella as an "unheard-of event" holds true to this day: scandals, murder, and the supernatural abound in this seminal German genre. Both meticulously structured and notoriously difficult to define, the novella as a form mirrors the paradoxes of its narratives. In this course, we will ask how form and content come together in the novella to engender strange occurrences that vacillate between everyday experiences and fever dreams. What is it about the German novella that creates such a particular sense of unease, and how does this genre mediate modern experience? [In English. All students welcome.]

GRMN 1440Y. Return to Sender: Love, Letters, and Literature.

This seminar investigates the relays between the postal system (18th – 20th century) and German literature, philosophy, as well as love. We will read selected correspondence and literary prose emulating or reflecting the epistolary form. Writers include Goethe, Kafka, Bachmann, and Celan. In English.

GRMN 1441A. Theater and Revolution (COLT 1411B).

Interested students must register for COLT 1411B.

GRMN 1441B. The Awful German Language.

German (not unlike others) is a foreign language. As such, it embodies oddities and barbarisms, provoking both interest and fascination, trembling and fear, from "native" speakers of other (foreign) languages. Yet, even for "native" speakers of German the language is not simply a given, but (at times) a threat (and under threat), an infinite (historical) task, a political-linguistic phantasm, a projection screen, a love affair, a traumatic experience. The seminar will explore complaints and concerns, from inside as well as from outside the German language, by Tacitus, Kleist, Mark Twain, Hölderlin, Hebel, Kafka, Benjamin, Kurt M. Stein, Adorno, Jandl, Pastor, Uljana Wolf. Taught in English (some knowledge of German is highly appreciated).

GRMN 1441C. Introduction to German Romantic Poetry.

German Romanticism reflects a field of writing in which poetry was as powerful and seductive as it was riven by conscious conflict. Through numerous experimentations with open forms, Romanticism counteracts classical unities and closure. In this course we will closely read and discuss – with occasional turns towards music and the visual arts – a representative selection of poems by Brentano, Eichendorff, Günderode, Heine, Novalis, among others. In English.

GRMN 1441L. German Drama (1776-1941).

In Georg Büchner's Woyzeck, the eponymous character at one point says: "Every human is an abyss; one feels vertiginous when looking below." In this course, we explore the ways in which the theatrical stage gives a wide range of outlooks and perspectives on this abyss, and how German drama has cast its characters over the centuries. To that end, we will be reading a selection of German dramatic literature (some more "canonical" plays, and others that are less so) ranging from the eighteenth through the first half of the twentieth century. There will be a focus on close reading and on exploring the language of each text, but attention will also be given to their historical context. Plays by Goethe, Schiller, Lenz, Kleist, Büchner, Else Lasker-Schüler, and Brecht. All readings, class discussions and exercises will be in German; GRMN 0500 or the equivalent is recommended as a prerequisite.

GRMN 1441O. Childhood Imaginaries: Romanticism, Psychoanalysis, and Beyond.

Since the Enlightenment, childhood has been at the center of the Western imagination. In German-language literature, political models of society, psychological theories on the dynamics of thinking and feeling, and critical discussions of history are often negotiated on the basis of an outline of what childhood is. This is because studying how humans develop promises to provide insight into what it means to be human and permits one to construct images of how humans should live. This line of thought breaks from a centuries-old convention of equating children with animals due to their lack of articulate speech and regretting this phase. In this course, we will read key texts of German-language literature from the Enlightenment to the present day that expound childhood as a special, formative epoch of individual life that, at the same time, grants insight into social dynamics.

GRMN 1441P. What Are We Looking At? Paradoxes of the Visual.

In Western cultures, the visual sense has traditionally received preferential treatment, having been associated most closely with knowledge and understanding, as demonstrated by the words 'evidence' and 'theory.' Especially at academic institutions, we want both 'overview' and 'insight,' to 'look at' something 'very closely,' and examine it through various 'lenses' (theoretical frameworks). On the other hand, there is also the obverse, where the optical stands for superficiality, mere appearance, and even deception and confusion. In other words, when we take a closer look at 'seeing,' things appear more complicated than they did at first glance. Texts and movies by Plato, Sophocles, Sigmund Freud, Walter Benjamin, E.T.A. Hoffmann, Goethe, Kleist, Oscar Wilde, Gotthold Ephraim Lessing, Stéphane Mallarmé, Tuvia Ruebner, Michel Foucault, Paul de Man, Wim Wenders, Rainer Werner Fassbinder, and Toni Morrison. Taught in English, no prerequisites.

GRMN 1441Q. Fragen und Antworten.

Questions and answers haunt our everyday life. Rarely their co-appearance, when visiting us; rarely our co-habitation with them; is put—into question. And no answer responding to why the entire life, at times, seems to be a continuous Q&A-session, that wouldn't, immediately, provoke more questions. Questions and answers oscillate between violence and innocence, between mimesis and mockery, rhetorical, didactic and epistemological approaches. This seminar will pursue questions and answers in philosophical, literary and psychoanalytical texts (by Nietzsche, Frege, Wittgenstein; Hebel, Kafka; Freud), in fairy-tales ("Rumpelstilzchen") and poems (by Goethe and Rolf Dieter Brinkmann), in Plato's early dialogue Protagoras, in Bertolt Brecht's interrogation by the House Un-American Activities Committee (HUAC) on October 30 1947, in a scene from Robert de Niro's movie *The Good Shepherd* (2006), and in Jean Genet's last interview (BBC, summer 1985). — Class Taught in German

GRMN 1450A. German-Jewish Literature.

From emancipation to anti-Semitism and from the "Golden Age" to the Shoah, Jewish life in Germany has experienced extremes comparable to no other cultural exchange. In this class, we will explore the German-Jewish encounter by reading literary texts written by German-Jewish authors. Readings by Lessing, Mendelssohn, Heine, Kafka, Jurek Becker, and others. In English.

GRMN 1450B. Die Berliner Republik und die Vergangenheit.

The opening of the Berlin Wall and the reunification of Germany brought with them a dramatic rethinking of both the past and the present of the German nation. Literature, film, architecture, visual art, and music have played important parts in this process. This course will consider a range of documents from the contemporary Berlin Republic and the way they negotiate the Cold War and Nazi pasts. All readings and class discussion in German. Prerequisite: GRMN 0600 or equivalent. Enrollment limited to 20.

GRMN 1450C. National Socialism and the Shoah in Recent German Prose.

Since Germany's reunification in 1990, German discourse on National Socialism and the Shoah has changed significantly. With the generation of the eye-witnesses disappearing, the third generation after World War II renegotiated issues such perpetratorship, guilt, and responsibility on the one hand, wartime-suffering on the other. During the last decade, German literature represented voices from different generations/groups. This seminar will examine literature by Grass (b. 1927), Klüger (b. 1931), Timm (b. 1940), Schlink (b. 1944), Biller (b. 1960) and Erpenbeck (b. 1967) to situate these literary interventions within the framework of characteristic debates of the last few years. Enrollment limited to 40.

GRMN 1450F. 20 Years After: The End of GDR and German Reunification.

The fall of the Berlin wall heralded the German reunification rather than the reformation of the GDR as an example of "democratic socialism." The 20th anniversary gives reason to discuss the development of Germany since 1990. Readings of Volker Braun, Christa Wolf, Thomas Brussig, Ingo Schulze, Clemens Meyer, Yadé Kara. Films: *Goodbye Lenin*, *Das Leben der anderen*, *Willenbrock*. Issues discussed: Cold War, Perestroika, Reunification, East-/West-German identity, Migration and Globalization. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1450G. Love and Death.

The course will examine the theme of love and death in four texts from around 1800: Lessing's *Emilia Galotti*, Goethe's *Werther*, Kleist's *Penthesilea* and Büchner's *Woyzeck*. We will focus on historical changes in the understanding and theory of emotions. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1450H. Images of America in German Literature.

What was, has been, and is America to Germans? Some believe America to be moving in the right direction, and others imagine America as thoroughly evil from the very beginning. Literature, however, does not say this or that. It displays complex images, plays with prejudices, idols, ideals, and stereotypes to show their inner mechanisms and conceptual limits. And, of course, it generates images and counter-images. By examining some canonical texts on this topic, the seminar reconstructs the major perceptions, attributions and ascriptions with which German authors over times have envisioned the United States – even without travelling there.

GRMN 1640C. German National Cinema from 1917 to 1989, and Cold War Germanys in Film.

Examines three phases of German national cinema in competition with Hollywood's early dominance of film production, from the founding of the UFA in 1917 through National Socialist Cinema, the "New German Cinema," and the cinema of East Germany. Explores representations of Germanys during the Cold War, 1949-1989, a mythical Germany cast as the locus of "world evil." Weekly screenings. In English.

GRMN 1660B. Berlin: A City Strives to Reinvent Itself.

Contemporary Berlin buzzes with energy, yet this metropolis is characterized by the legacy of fascism and divided government. The city as cultural space will be interrogated in interdisciplinary ways. Topics range from Weimar culture and Nazi architecture to the Cold War and German reunification. In English with possible extra session for students who have completed GRMN 0400 or higher.

GRMN 1660C. German Culture in the Nazi Era.

Explores the variety and the contexts of German cultural production during the Nazi era. We will examine party sanctioned mass-mediated culture in the Third Reich including literature, film, theater, and public spectacle; as well as "unofficial" cultural productions including exile literature, literature of "inner emigration," "degenerate" art, and concentration camp poetry. We'll inquire into the effects of the political ministrations of culture in the Nazi era, asking to what degree continuities in cultural production were sustained after 1933, and investigating the hallmarks and the legacies of a distinctive "Nazi culture." Previous course work in German history and/or the Holocaust recommended but not required. In English.

GRMN 1660F. After Hitler: German Culture and Politics, 1945 to Present.

From the country that produced Hitler and the Holocaust to today's democratic, peaceful Germany, this course explores the enormous cultural and political transformations since 1945 in both German states and reunified Germany. Topics include: responses to the Nazi past, Germany and Europe, protest movements, migration patterns, women, popular culture, socialism in East Germany, political and intellectual debates, recent assertions that Germany is now a "normal" country. In English.

GRMN 1660G. Kafka.

This course will analyze both the uncanny and comical aspects of Kafka's writings. It offers an exercise in literary analysis discussing methodological approaches as diverse as literary theory, media studies, and cultural studies. It also presents an overview of one of the twentieth century's most haunting writers who in many ways determined for our postmodern mind what we call "literature". In German. Prerequisite: GRMN 0600 or permission.

GRMN 1660H. Literary Discourse of Minority Cultures in Germany.

During the last thirty years or so, strong minority cultures have emerged in Germany. Writers from diverse cultural backgrounds have given voice to the problems and challenges of living among a dominant German culture that only reluctantly started to listen to their concerns. Authors discussed include Schami, Ören, Atabay, Dischereit, Monikova, Müller, and others. Focuses on questions of cultural and ethnic identity as expressed in and through literary texts. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1660I. Literature and Other Media.

When looking at literature and other media, the question is not, whether one will be replaced by the other, but rather, what one medium can do that the other cannot do so well or at all. Study of twentieth-century Media Theory Made in Germany with special emphasis on the relationships of literature to audio-visual media. Readings by Brecht, Benjamin, Adorno, Enzensberger, Kittler, Hörisch and others. In English.

GRMN 1660K. Thinking After Philosophy.

What does it mean when, after Nietzsche, we speak of the "end of philosophy"? Contemporary critical discourse in many fields of the Humanities and social sciences is profoundly impacted by a skeptical break with philosophical traditions that can be traced back to 18th- and 19th-century Germany. This course will follow the development of this break through a range of major paradigms, schools, and critical methods from the time of Goethe to the twentieth century. All readings and class discussion in English. First year students require instructor permission to enroll.

GRMN 1660L. German Jews and Capitalist Markets in the Long Nineteenth Century.

This course focuses on the commercial lives of German Jews, 1789-1918. While the classic historiographical debates surrounding assimilation, emancipation, and anti-Semitism will not be ignored, our spotlight will remain on capitalist markets, where Germans and Jews most often encountered one another. Our study will begin and end in the Franco-German borderlands, with revolution and warfare. In between, we will traverse the German landscape, meeting, among others, bankers in Frankfurt, wine merchants in the Rhineland, and department store magnates in Berlin, all in an attempt to understand the complexities of cross-cultural (dis)integration. Readings and instruction in English.

GRMN 1660P. Having Beethoven Over in 1970.

In 1970, Beethoven arrives in Bonn to visit his birthplace. A tour guide shows him around. It is a journey that begins with the museum one knows, but which gets weirder with each subsequent room. There is a jukebox in the basement. A gully is burning. There are strange utensils on display in the kitchen. As the demarcation between documentary and fiction become blurry, we realize that somebody must have added more rooms to the original floorplan. Our course will analyze TV crime series, Hollywood feature films, the Peanuts, radio pieces, and artworks surrounding Beethoven's bicentennial. Taught in English.

GRMN 1660Q. Film and the Third Reich.

This course explores the cinema of the Third Reich as well as filmic responses to World War II and the Holocaust. Sections will be dedicated to propaganda films by Leni Riefenstahl and others; to the relationship between Third Reich cinema and Hollywood; to propaganda films produced by the Allied forces, and to movies about the Holocaust such as *Shoah* and *Schindler's List*. We will discuss key concepts of film theory, cinema's political efficacy, Holocaust representation in film, music, and language, and questions of trauma, commemoration, and victimhood. [Taught in English; students from diverse fields welcome.]

GRMN 1660R. Freud.

Introduction to Freud's theories of the unconscious and its manifestations, Freud's thinking on culture and aesthetics, his theory of sexuality, his view of religion, and of fascism. In English.

GRMN 1660S. Mord und Medien. Krimis im intermedialen Vergleich.

The genre of the mystery novel has proven exceedingly productive in German speaking countries. At the same time, the new and the newest media have discovered the mystery genre as one of the most appealing narrative structures in contemporary culture. Readings of mystery narratives in book form, on television, on CD-ROM, and on the Internet. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1660T. Germans/Jews, Deutsche (und) Juden.

From emancipation to anti-Semitism and from the 'Golden Age' to the Shoah, Jewish life in Germany has experienced extremes comparable to no other cultural exchange. Widespread philo-Semitism and the official taboo on anti-Jewish sentiments indicate that the relationship between Jewish and non-Jewish Germans today remains one of mutual nonunderstanding and distrust. Texts by Lessing, Mendelssohn, Heine, Kafka, and others. In English

GRMN 1660U. What was Socialism? From Marx to "Goodbye Lenin".

The international socialist movement was born in Germany, and many of Germany's most important cultural figures were attracted to its striving for social justice. But socialism seems to have come to a tragic end. Course includes theoreticians such as Marx and Luxemburg, writers such as Heine and Brecht, and a focus on East German culture (film, art, literature) and its aftermath since the fall of the Berlin Wall. In English.

GRMN 1660V. Nietzsche.

This course will provide an introduction into Nietzsche's thinking. Discussion of the major works from *The Birth of Tragedy* and *Beyond Good and Evil* to *Thus Spoke Zarathustra*. No pre-requisites. In English.

GRMN 1660W. Early German Film and Film Theory.

We will study the interference/interface of cinema and theory in the 20th century. Includes analysis of classical German films and texts by critics such as Eisenstein, Balazs, Vertov, Arnheim, Kracauer, Benjamin. In English.

GRMN 1661A. Race and Classical German Thought.

Thought about race has a complex history in modern intellectual culture; crucial paradigms regarding culture, identity, and biology have roots in the philosophy, science, and arts of eighteenth-century Germany. This course will give in-depth consideration to ideas and paradigms from classical German intellectual culture, and will trace their resonances within African, Francophone, French, and North American race theory in the twentieth century. All readings in English. Not open to first year students.

GRMN 1661D. Giuseppe Verdi, Richard Wagner, and the Music of the Nation (MUSC 1902).

Interested students must register for MUSC 1902.

GRMN 1661E. Germany, Alcohol, and the Global Nineteenth Century.

This course examines the German "long nineteenth century" through the lens of the production, sale, and consumption of alcohol. The cultural resonance of alcohol allows us to better situate Germany in an increasingly global context, where its exchange reflected broader patterns of modernization, social transformation, and nationalism. Whether brewing beer in Chinese Tsingtao, harvesting grapes in California's Napa Valley, or celebrating Purim with wine in Palestine, Germans engaged the nineteenth-century world through their own historical traditions and trades. Our endeavors will be aided by the remarkable "Alcohol and Addiction Studies" special collections at the John Hay Library.

GRMN 1661F. Music, Religion, Politics (MUSC 1675).

Interested students must register for MUSC 1675.

GRMN 1661G. The Case of Wagner (MUSC 1640G).

Interested students must register for MUSC 1640G.

GRMN 1661L. The Promise of Being: Heidegger for Beginners (COLT 1610V).

Interested students must register for COLT 1610V.

GRMN 1661P. Marx, Nietzsche, Freud: The World Is Not What You Think.

We will familiarize ourselves with the key insights of three major writers and thinkers: Karl Marx, Friedrich Nietzsche, and Sigmund Freud. Each transformed how we read the modern world, from the ideology of capital to the question of religion, from the function of art to the unsettling claims that sexuality makes on us. They help us explore the intricate interplay between reason and its dark underbelly, a fragile interaction that makes us who we are. This introductory course is for all Brown students who do not wish to graduate without first having grappled seriously with the ideas of these transformative thinkers, without whom the modern world cannot be understood. If you read only three modern writers during your college career, it should probably be these three. Taught entirely in English; students from diverse fields welcome.

GRMN 1662A. The Promise of Being: Heidegger for Beginners (COLT 1610V).

Interested students must register for COLT 1610V.

GRMN 1700A. Introduction to Yiddish Culture and Language (JUDS 1713).

Interested students must register for JUDS 1713.

GRMN 1701. The Uncanniness of Being: Freud, Heidegger, Derrida (COLT 1611A).

Interested students must register for COLT 1611A.

GRMN 1702. Artificial Images.

What is an image in the age of generative AI? What is its relation to truth or artifice? To better understand the paradigmatic shift heralded by DeepDream hallucinations and algorithmic vision, this seminar explores past and current ontologies of the image. Reflecting on the politics of seeing in a world saturated by images, we will move from early film theory and art history to today's debates on synthetic media and algorithmic aesthetics, and trace how thinkers and artists have challenged common understandings of the visual. Through close readings and screenings, we will explore such key concepts as operational images (Farocki), poor images (Steyerl), and disrelated images (Denson), to develop the analytical tools necessary to think with, rather than about, images across media. In English. Students may also count this course toward the new certificate program in "European Critical Thought" (ECT).

GRMN 1770. Introduction to Yiddish Culture and Language (JUDS 1713).

Interested students must register for JUDS 1713.

GRMN 1770A. Introduction to Yiddish Culture (JUDS 1713).

Interested students must register for JUDS 1713.

GRMN 1800. Posthumanism and the Ends of Man (COLT 1814Y).

Interested students must register for COLT 1814Y.

GRMN 1800A. Berlin: Dissonance, Division, Revision (COLT 1813J).

Interested students must register for COLT 1813J.

GRMN 1892. Kafka and the Philosophers.

Kafka's writings take as a central concern the philosophical interpretability of what we call literature. What is one to make, for instance, of a text that begins with a protagonist awakening one morning to realize that he has been transformed into a monstrous vermin? Or another awakening protagonist unexpectedly detained by officers waiting in his apartment? For Kafka, "correct understanding of something and misunderstanding of the same thing are not entirely mutually exclusive." We will study some of Kafka's greatest stories alongside key attempts at interpreting Kafka philosophically, including Benjamin, Adorno, Derrida, Deleuze/Guattari, and Agamben. In English; diverse fields welcome.

GRMN 1900A. The Weimar Republic (1918-1933).

Advanced students of German culture will pursue their own interests in researching this fascinating period in German culture and political history. Common readings, general discussions, and individual class presentations will facilitate the development of individual projects. Covered areas include literature, art, music, film, politics, etc. Required for concentrators, written permission required for others. Prerequisite: at least 3 100-level GRMN courses or equivalent. In German and English.

GRMN 1900B. Sites of Memory.

The seminar explores the connection between representation and management of space and memory in the German context. Readings drawn from literary works, philosophy, public discourse about monuments and memorials, and so on. Assignments include individual presentations and final research project. Required for concentrators, open to others with instructor's permission. In English and German.

GRMN 1900C. Cultural Industry and the Aesthetics of the Spectacle.

This course explores mass culture and distraction as conceptualized by the Frankfurt School. Readings and discussions will engage with the emergence of distraction as a specific category of experience; the function of entertainment in the culture industries of Nazi Germany; the critique of mass culture in post war Germany, and the reformulation of spectacle and distraction in Culture Studies and postmodern discourse. Readings: Schiller, Adorno, Benjamin, Kracauer, Debord, Baudrillard, Postman, Virilio, Norbert Bolz. In German.

GRMN 1900D. Fleeing the Nazis: German Culture in Exile, 1933-1945.

When the Nazis came to power in Germany in 1933 this caused one of the biggest brain drains in history. We will trace the lives of leading experts in a variety of fields such as literature, music, philosophy, and the sciences and ask questions such as: Why did they leave? Where did they go? How did they do in their new environment? What did they say about their exile afterwards? Specific persons and places of exile will be studied according to the interests of the seminar participants. In German. Recommended prerequisite: one course in the GRMN 0600 series. Open to seniors only.

GRMN 1900E. Made in Germany - A Cultural History of Science, Technology, and Engineering.

In this seminar, we will examine the German technological imagination in literature and film. The material to be studied reaches from nineteenth and early twentieth century German Science Fiction to the history of engineering giants such as Volkswagen or BMW and will also include philosophical reflections of technology, the role of the German engineer as hero, and the image of the mad scientist. A field trip to Germany during spring break is planned. In German. Prerequisite: GRMN 0600. Enrollment limited to 20; first year students require an instructor override prior to registering.

GRMN 1900K. Bleibende Irritationen: Heinrich Heine und Deutschland.

Heinrich Heine (1797-1856) has filled many roles in the history of German culture: a poet who wrote some of the most "Romantic" poems in the German language; an author who effortlessly switched between journalistic and literary writing; and a "wound" (Theodor W. Adorno) that cannot stop refusing to heal. We will conduct extensive readings from Heine's poetic, essayistic, and narrative oeuvre which will result not only in a better understanding of the development of post-classical German literature, but also in a deeper knowledge of German culture as a whole.

GRMN 1900N. Crime Scene Germany.

Crime scenes—Tatorte in German—are locations of past events, reconstructed and (re)staged. The class will provide an idiosyncratic overview of depictions of Germany as a site of Tatorte, in literary texts and beyond. In constellations of texts from Droste-Hülshoff to Rainald Goetz as well as in films and photography, we will discuss what it means to encounter (narrated) history in a place where you "can pick up any given stone anywhere and can be certain that something happened at that very place in those dark times..." (Michaela Melián)

GRMN 1900Q. Contemporary German Crime Fiction.

A "Krimi" in German can refer to a crime story in a multitude of media. This course will look at contemporary German, Austrian and Swiss "Krimis" as novels, TV-series and movies. After a brief overview of crime fiction in German speaking countries, we will examine what is being written, read, and watched today. Readings will include novels by Andrea Maria Schenkel, Christine Lehmann, Uta-Maria Heim, Wolf Haas, and Simone Buchholz, among others. We will also analyze several episodes of Tatort and other German TV crime series. In German.

GRMN 1900S. Money, Murder, Mystery: Contemporary Crime Fiction.

A "Krimi" in German can refer to a crime story in a multitude of media. This course will look at contemporary German, Austrian and Swiss "Krimis" as novels and TV-series. After a brief overview of crime fiction in German speaking countries, we will examine what is being written, read, and watched today. Readings will include novels by Andrea Maria Schenkel, Christine Lehmann, Uta-Maria Heim, Wolf Haas, and Simone Buchholz. We will also analyze several episodes of Tatort and several other TV-series. In German. Senior Seminar.

GRMN 1910A. From Freud to QAnon: History, Politics, Psychoanalysis (HIST 1957J).

Interested students must register for HIST 1957J.

GRMN 1970. Independent Study.

Independent study on a particular topic related to German culture. In German or English. At the discretion of the instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

GRMN 1981A. Introduction to Yiddish Culture and Language (JUDS 1713).

Interested students must register for JUDS 1713.

GRMN 1990. Senior Conference.

Special work or preparation of an honors thesis under the direction of a faculty member. Please check Banner for the correct section number and CRN to use when registering for this course.

GRMN 2081A. Realism, Idealism, and Modernity (II) (PHIL 2080D).

Interested students must register for PHIL 2080D.

GRMN 2320A. 1700.

Comparing language (rhetoric, style), literature (poetry, drama, novel), and other cultural phenomena (theater, dictionaries, emblem books, professionalization), we will consider shifts in cultural paradigms from the early modern to the modern period. Grimmelshausen and Gellert; Gryphius and Gottsched; Opitz and Haller. Readings in German. Discussion in German or English.

GRMN 2320B. The Works of Heinrich Kleist.

Kleist's writings continue to pose interpretive and theoretical riddles for the modern reader nearly 200 years after their composition. We will read a selection of his major texts (dramatic, narrative, and journalistic) alongside some modern American and German criticism, covering methodological approaches such as deconstruction, psychoanalysis, and discourse analysis. Readings in German, with discussion in English.

GRMN 2320C. Enlightened Laughter.

We follow the development of German comedy and theory of comedy and laughter from the late Baroque to the Enlightenment, comparing comedies and theoretical texts with foreign examples. What kind of laughter is appropriate for a bourgeois stage? A German stage? Why is laughing important? What kind? Texts by Weise, Prehauser, the Gottscheds, Gellert, J. A. Schlegel, Lessing, also Molière, Destouches, Farquhar, Graffigny. German texts read in German. Prerequisite: Graduate standing or permission.

GRMN 2320D. Kafka in English.

No description available.

GRMN 2320E. Political Romanticism.

What, if anything, is political about Romanticism? We will read the literary and non-literary writings of British and German romantic authors, with a focus on their complex relationship to political ideas, political practice, and the very concept of "the political." We will also consider why the question of Romanticism's relationship to politics has been re-visited with such insistency in the 20th century. Authors include W. Wordsworth, P. B. Shelley, Coleridge, Friedrich Schlegel, Novalis, and Kleist. All readings and discussions in English.

GRMN 2330A. Vision and Narration in the 19th Century.

Explores the relationship between vision and techniques of linguistic representation in selected literary texts from late romanticism to the fin-de-siècle. Special attention will be paid to the idea of "realistic" representation and to problems that afflict both seeing and speaking in the texts. Authors include Kleist, Stifter, Storm, Keller, Hofmannsthal, Rilke, and Musil. Readings in German, discussions in English. Open to seniors with instructor's permission.

GRMN 2340A. German Literature 1968-1989.

Discussion of major trends in literature in German: New Subjectivity, postmodernism, feminist literature, the role of mythology, post-histoire. Authors to be discussed include Botho Strauss, Elfriede Jelinek, Thomas Bernhard, W.G. Sebald, among others. In German.

GRMN 2340B. Poetik der AutorInnen.

This course will examine postwar literary aesthetics as put forth in the so-called "Poetikvorlesungen" which several universities in German-speaking countries have instituted since 1959. These lectures have featured important contemporary authors thinking about their work - from poetic practices and aesthetic theories to biographic considerations and the technicalities of writing literature in today's world. In German.

GRMN 2340C. German Modernism.

This seminar will explore German literary modernism from around 1880 to the 1930s. Schools and authors to be studied will include Naturalism (Hauptmann, Holz, Schlaf), Neo-Romanticism and Symbolism (Hofmannsthal, Rilke, George), Expressionism (Toller, Benn, Kaiser, Brecht), and New Objectivity (Kästner, Döblin, Fallada). In German. Required proficiency: GRMN 0600.

GRMN 2340E. Nietzsche's Poetics.

Should Nietzsche's theory of the lyric be understood in both the objective and subjective genitive? In what way and to what extent can the textual genesis of his poems be read as a radically open-ended thought process and engagement with the linguistic and epistemic premises of writing? In the seminar we will first investigate a selection of Nietzsche's early writings on Greek poetry, his genealogy of tragedy, and his analysis of the origin of art, and then turn to a careful study of individual poetic texts. We will address questions of doubling, the "mechanics" of art, friendship and interpretation, skepticism, metaphor, hospitality, and self-analysis in their historical context, and also consider Nietzsche's legacy for current debates on philology, philosophy, and the humanities.

GRMN 2450. Exchange Scholar Program.**GRMN 2460A. German Literature 1945-1967.**

Examines the literature and the literary debates in postwar Germany, East and West. Authors to be discussed include those of the *Gruppe 47* and those excluded from the group in the West; Brecht, Seghers, Becher and the new generation in the East. Emphasis on cultural politics and the role of literature in postwar German society (the work of the mourning, political restoration).

GRMN 2460C. Literature of the German Democratic Republic.

Against the background of the history of socialism in Germany, an intensive study of GDR authors and East German authors since reunification, with opportunities to explore other areas such as film and art. Authors may include: Brecht, Müller, C. Wolf, Reimann, Hein, Braun, Tellkamp. Readings in German, discussion in English or German.

GRMN 2460D. Thomas Mann: Die Romane.

In this course, we will read and discuss Thomas Mann's novels, from *Buddenbrooks* (1900) to *Bekenntnisse des Hochstaplers Felix Krull* (1954). Emphasis on narratological analysis and historical contextualization. In German.

GRMN 2500A. Rethinking the Bildungsroman (COLT 2520G).

Interested students must register for COLT 2520G.

GRMN 2660A. On the Sublime.

Survey of major theories of the sublime from antiquity to modern times, with emphasis on German, British, and French texts from the 18th to 20th centuries. Authors to be read include Longinus, Immanuel Kant, Edmund Burke, Jean-Francois Lyotard, and Neil Hertz. Readings and discussions in English, with optional readings in original languages provided. Open to seniors with instructor's permission.

GRMN 2660C. Socialism and the Intellectuals.

The international socialist movement was born in Germany, and many of Germany's most important intellectuals were attracted to its striving for social justice. Against the background of 19th century politics and theory, the course focuses on the Weimar Republic, the cultural politics of the German Democratic Republic and the New Left in the Federal Republic, and developments since reunification. Authors may include Heine, Marx, Hauptmann, Brecht, Müller, C. Wolf. Readings in German, discussions in English and/or German.

GRMN 2660G. Reading (in) German Literature.

What is reading? We will discuss theories of reading from reader-response-theory to performativity and its history. Beginning with Goethe's novel "Werther," we will read German literature since the 18th century. We will focus on the emerging conditions and techniques of reading (extensivity, accessibility, popularity) which still shape text-reader-relations and on the double-bind of reading as a bourgeois model for subject-formation alongside profound ambivalence towards its pleasures. Finally: How is our own experience and performance of reading German literature? In German.

GRMN 2660H. Historicism, Photography, Film.

How does the emergence of photographic media—photography and film—affect concepts of historicity and historical experience? And how do philosophical concepts of history and historicity inform the aesthetics of film and of documentary film in particular? Taking Kracauer's critique of photography and Benjamin's work on film, photography and the philosophy of history as its point of departure and focusing on longitudinal documentaries from the former GDR, West Germany and Switzerland, this course proposes an inquiry into the relationship of photographic media and philosophical concepts of historicity. Readings and discussions in English. Open to graduate students. Juniors and seniors may enroll with instructor permission.

GRMN 2660I. Torture in European Literature and Aesthetic Theory.

Alongside the history of actual torture runs the history of representations of torture. Throughout the centuries, literature has worked through many of torture's manifestations. Texts range from the biblical scenes of crucifixion and punishment to modern forms of torture. Writers like E.T.A. Hoffmann, Mirbeau, Kafka, Améry and Sartre have reflected on torture. And aesthetic theory has taken various stances towards the depiction of torture in the arts, ranging from Winckelmann and Lessing to Adorno and Elaine Scarry. Our graduate seminar will read and discuss a selection of literary and theoretical texts covering the period from the mid-18th century until today.

GRMN 2660O. From Hegel to Nietzsche: Literature as/and Philosophy.

This seminar has two aims. It will scrutinize Hegel's and Nietzsche's respective conceptions of literature, and it will analyze the particular use of literary texts in their writings. The choice of these two authors is based not only on the fact that they qualify as representatives of the trajectory of German philosophy in the 19th century. They also act as antagonists on systematic grounds: While Hegel seeks to outperform literature with philosophy, Nietzsche depicts human life as an "aesthetic phenomenon," arguably creating a "literary" mode of philosophy. Enrollment limited to 30.

GRMN 2660P. The Essay: Theory and Praxis.

An essay, Lukács once said, is not yet form, but form on the way to becoming form. It is something in between: between art, science, and philosophy, between reason and intuition, between "precision and soul" (Musil). We will begin with the idea of the essay in Montaigne and Francis Bacon, and trace its development in Germany's intellectual and literary history from around 1870 till 1960. We will try to understand why, during this period, the essay became the preferred medium of thought and one of the dominant forms of reflecting on great Western narratives as well as important contemporary discourses.

GRMN 2660Q. Freud and Lacan (ENGL 2900T).

Interested students must register for ENGL 2900T.

GRMN 2661A. "Other Worlds".

This seminar explores the notion of "other worlds" in philosophy and art. The starting point for this exploration is a personal feeling. One day I realize that I exist in a world no longer there, although it had never crossed my mind that "my" world, as strange and inhospitable as it might have been, could come to an end. I have turned into a ghost without noticing. What shall I do? Adapt to the new world? Pretend nothing has happened? Resist the disintegration of the old world? Readings by Leibniz, Nietzsche, Bloch, Benjamin, Deleuze, Meillassoux. Films by Visconti and Godard.

GRMN 2661F. Textual Border Crossings: Translational Literature.

We will first attempt to discover what happens to a translation, as well as to the translator, when a text asks for asylum in the guest house of another language: "domestication" or "foreignization," as Lawrence Venuti puts it? Or is it appropriation, acculturation, adoption? Or rather estrangement, alienation, defamiliarization? Next we will investigate different models of derivative, parasitic, and translational writing by authors as diverse as J. Franzen, E. Fried, Ch. Hawkey, E. Jelinek, Y. Tawada, P. Waterhouse, and others. Finally, we will examine translational writing as a means of decolonizing world literature.

GRMN 2661J. Art, Philosophy, and Truth: A Close Reading of Benjamin's Essay on Goethe's Elective Affinities.

This course will be devoted to a close reading of one of the most rewarding, and also most intricate, essays about aesthetics written in the first half of the twentieth century, Benjamin's 1924 essay on Goethe. Rather than discuss the pertinence of the interpretation Benjamin proposes of Goethe's famous novel, we will focus on the ideas he develops in relation to art and philosophy, and the conceptual distinctions he introduces, such as the distinction between commentary and criticism, or the distinction between an artwork's material content and its truth content.

GRMN 2661Q. Goethe's Faust.

Faust is one of the most inspiring and complex dramas written in German, with immense influence on later literary texts. Its form is stunningly experimental and plays out all metric forms that were known in the age of Goethe in German literature. The two-part drama takes place in a time that measures from antiquity to the early nineteenth century, but it is, throughout, a representation of existence within a modern socio-economic dynamic. In this course, we will closely read and discuss selected scenes. Taught in German.

GRMN 2662A. Theories of Poetry and the Poetic.

Poetry, poésie, poesia carries a double meaning in many Western languages, since it can refer to a foundational principle of literary art in general as well as to a specific literary genre. Accordingly, the accent may be on poetic activity, derived from one or several meanings of the Greek poiein, or on the textual product, the poem. The course is interested in the problems and perspectives of this double meaning in a series of texts by poets and literary theorists from different periods, mainly Romanticism and 20th century modernism. Taught in English.

GRMN 2662J. This is Us in Language: On Mother Tongue, Fatherland, and I.

"We" is the battle cry of people who take a single slice of the world and insist that it is the whole world." (Kristof Schreuf) To show how literature and critical reflections on language can be taken as counter-articulations to authoritative claims wherever one speaks in the name of us/we, this class focuses on various texts, spanning from the 19th century to the present, in which we read about the use of one mother tongue (German), the representation of some fatherland (as a reference or projection plane for identities), and articulations of the I and the collective.

GRMN 2662P. Postcatastrophic Narratives: Memory and Postmemory in German Literature after 1945.

German culture after 1945 is determined by a changing relation toward its past: the horrors of National Socialism. This past was repressed, then gradually recognized, until it emerged as an essential part of German identity & politics in the 1980s. Literature played a role as a counter-memory of what had been officially forgotten, adopting a radically modern aesthetics to engage with Adorno's dictum that writing poetry after Auschwitz is barbaric. Literature attempts to represent the unrepresentable, developing a different poetics of memory and postmemory, in part with a political dimension that finds echoes in today's postcolonial debates. After an introduction to the historical context & clarification of key concepts such as trauma, postmemory, & the politics of memory, we will discuss seminal texts by Paul Celan, W. G. Sebald, Alexander Kluge, Wolfgang Koeppen, Peter Weiss, Heiner Müller, Uwe Johnson & others.

GRMN 2662U. Witnessing Totalitarianism: Fascism, Communism, and their Aftermath in German-language Literatures.

The memory of National Socialism has been as mainstay of post-1990 German politics and culture. However, at least with the end of the Cold War, national German memory culture has also been challenged by non-national perspectives, especially by the necessity to commemorate the entanglement of National Socialism with Communist totalitarianisms and to situate German memory culture within a Central and Eastern European context. To engage with this tension, we will read theoretical texts that continue to inform current memory debates (Arendt, Mitscherlich), recent social sciences approaches to transgenerational transmissions of psycho-social sequelae of perpetration and complicity (Welzer & al., Mihal, Gobodo-Madikizela), and literary texts that have brought transgenerational transmissions into the focus of public attention (Bernhard, Sebald), in order then to focus on contemporary German-language texts that negotiate the difficulties of commemorating totalitarianisms.

GRMN 2662W. On Being With the Dead in Art, Literature, and Philosophy.

This seminar will explore the idea that to be alive in an emphatic sense is to live not only with the living but also with the dead. This way of being challenges us continually to reinterpret our relationship with the dead and to engage with them in a spectral dialogue. The dead demand to be treated responsibly in this exchange, even though—or precisely because—they are no longer among the living. But our ways of being with the dead always also pertain to ourselves and our future. After contemplating Heidegger's reflections on being with the dead in *Being and Time*, we will conduct a series of case studies drawn from art and critical thought, including Derrida's "Life-Death" seminar, Barthes' *Mourning Diary*, the prose and poetry of Kafka, Rilke, and Celan, Adorno's reflections on art "after Auschwitz," and other works.

GRMN 2663A. Identification: On the Mark(s) of the Same in Literature, Philosophy, and Psychoanalysis.

How does identification occur? What structures its occurrence? What difference(s) does it make whether identity is conceived as an ontological fundament (Schelling), elaborated as a synthetic function (Benjamin), or traced back to a singular, 'unary' trait (Lacan)? While these questions would not even be legible if it were not for the ideal identity of the letters, lexemes, and syntactic forms that compose them, they also suggest that nothing about the formation or effect of such ideality is self-evident. In this course, we will engage with literary, philosophical, and psychoanalytic negotiations of identity, with readings by writers such as Nicolas Abraham, Theodor W. Adorno, Walter Benjamin, Sigmund Freud, Martin Heidegger, E.T.A. Hoffmann, Friedrich Hölderlin, Edmund Husserl, Heinrich von Kleist, Jacques Lacan, and F.W.J. Schelling.

GRMN 2663B. Dream-Work; or, the Poetics of Thought.

In his seminar on the Formations of the Unconscious, Jacques Lacan remarks: "If there's anything that the Freudian experience tells us, it is that we are determined by laws in the very depths of ourselves, as we rightly or wrongly say, adopting an image—let's simply say, at the level of what lies within us beyond our conceptual grasp of ourselves, beyond the idea that we have of ourselves and draw upon." Those 'laws' align, before all else, with the functions of condensation and displacement that Freud elaborates in the *Interpretation of Dreams*, and that draw what Freud calls the 'Dream-Work' (*Traumarbeit*) into closest proximity with the work of poetry. Departing from Freud's *Interpretation of Dreams*, we will examine the poetics of thought through both psychoanalysis and literary analysis, with readings by writers such as Paul Celan, Sandor Ferenczi, Sigmund

GRMN 2900. Theory and Methods of Foreign Language Teaching.
No description available.**GRMN 2970. Preliminary Examination Preparation.**

For graduate students who have met the tuition requirement and are paying the Registration Fee to continue active enrollment while preparing for a preliminary examination.

GRMN 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

GRMN 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

GRMN XLIST. Courses of Interest to Students Concentrating in German Studies.**Swedish****SWED 0100A. Beginning Swedish.**

Swedish 0100 is an introduction to both Sweden and Swedish, covering various aspects of Swedish history, art and society, as well as screening at least three Swedish films per semester. The course packet contains the text/workbook, *Mål 1*, with additional materials. We will cover one chapter of *Mål* per week, with quizzes every three weeks. There will be a midterm and a final exam, along with a short take-home project. This is a small class, so your presence is absolutely required. Emphasis will be placed on speaking and understanding Swedish. Good will and good humor are required.

SWED 0200A. Beginning Swedish.

Swedish 200 is a continuation of Swedish 100, with the same goals, materials and methods. It may also be suited to students with some prior background in Swedish.

This is the second half of a year-long course (SWED 0100A and SWED 0200A) whose first semester grade is temporary. Neither semester may be elected independently without special written permission. The final grade at the end of the course work in SWED 0200A covers the entire year and is recorded as the final grade for both semesters.

SWED 0300. Intermediate Swedish I.

SWED 0300 is an Intermediate language course designed for students with some prior exposure to Swedish, either through study abroad or their own background. The course will be small and informal, tailored to the needs of the specific students, with joint emphasis on speaking, reading and writing. We will see several Swedish films, as well as read some fiction and poetry.

SWED 0400. Intermediate Swedish II.

Swedish 0400 is the most advanced Swedish language offered at Brown. Students are expected to be able to participate in everyday conversations, having mastered the basics of grammar and vocabulary, in addition to understanding basic spoken and written Swedish. Materials used in the course will include newspapers, poetry, short fiction, film, and music. Students will also be expected to access existing Swedish websites, to broaden their knowledge of Swedish history and culture. Course meets on Tuesdays and Thursdays from 4:00 to 5:20.

Harriet W. Sheridan Center for Teaching and Learning

The Sheridan Center seeks to provide a place where all learners can grow, interdisciplinary collaborations can form, and educators can experiment with different modalities of teaching and learning. At the core of our work is a commitment to educational excellence, equity and access through evidence-based, reflective practices. Through educational partnerships at Brown and globally, we advance the university's mission (<https://www.brown.edu/about/brown-glance/#:~:text=The%20mission%20of%20Brown%20University,life%20with%20usefulness%20and%20reputation>) and create teaching and learning communities dedicated to improving learner success and supporting educators' professional growth.

To learn more about the Center, please see our website: <https://brown.edu/sheridan/> (<https://brown.edu/sheridan/>). To subscribe to our monthly newsletter, please see: sheridan.brown.edu/newsletter/ (<https://sheridan.brown.edu/newsletter/>).

Major initiatives of the Sheridan Center include:

- Partnerships with learning designers, technologists and media professionals to help instructors foster innovative teaching and design remote-accessible courses and programs as engaging learning experiences.

- The Brown Learning Collaborative, which offers rigorous academic courses for undergraduate teaching fellows and evidence-based course design institutes for faculty and TAs; and enhances student learning in key liberal arts areas, such as writing, problem solving, and data science.
- Support for inclusive and anti-racist teaching, embedded in Sheridan programs and offered as focused initiatives for departmental change teams.
- Writing, STEM, academic tutoring, and English language learning expertise to offer direct support to students; develop peer fellows, mentors and tutors; and promote faculty and departmental practices to help all students succeed as learners and communicators.
- Interdisciplinary learning communities for instructors, such as certificates on reflective teaching and course design, a Junior Faculty Fellows program, dissertation writing groups, and course design institutes.
- Assessment and research support for program review, cross-institutional grants supporting educational innovation, and initiatives to enhance teaching and learning at Brown.
- Flexible digital solutions and classroom spaces to explore new approaches

We also offer:

- Confidential consultations – classroom observations; early student feedback; consultations on course design, writing pedagogy, assessment, student evaluations, and graduate and undergraduate TA professional development.
- Services to enhance student learning – pre-orientation programs, peer mentoring programs, conversation partners program, and classroom-based writing workshops on topics such as peer review.
- Programs on teaching – orientations for instructors and students, certificate programs, institutes, and disciplinary and interdisciplinary workshops.
- Educational research and assessment – collaboration on course and curricular assessment, consultations on the scholarship of teaching and learning, and assistance with evaluation sections of postsecondary educational grants.
- Community – programs and projects that bring together faculty, graduate students, postdocs, and undergraduates from across the disciplines.
- Teaching and learning resources – online resources addressing a wide range of topics, and newsletters to summarize research and practice on key teaching topics.

Hispanic Studies

The Department of Hispanic Studies at Brown University takes a distinctly Trans-Atlantic, interdisciplinary approach to the literatures and cultures of Spain and Latin America. Our undergraduate program offers basic through advanced language classes and a wide selection of literature and culture courses, many of them cross-listed. Our graduate program balances generalist training with individually tailored specialization and keeps a firm commitment to professional development and mentoring. All students, both undergraduate and graduate, work closely with faculty members, and peer collaboration is encouraged to further intellectual, creative, and academic growth.

For additional information, please visit the department's website: <http://www.brown.edu/academics/hispanic-studies/>

Hispanic Literatures and Cultures Concentration Requirements

Spanish is the second most widely spoken language in the world and the second language of the United States. In our society, knowing Spanish is not just an asset; it is increasingly a necessity. The Spanish language program offers a sequence of courses ranging from basic to advanced. Students at all levels develop proficiency in speaking, listening, reading, and writing while also studying the cultures and societies of the contemporary Spanish-speaking world. The Hispanic Literatures and Cultures concentration enables students to develop advanced Spanish skills while acquiring a solid background in the complex history, literature, cultures, and intellectual traditions of Spain, Latin America, and the Latinx-U.S. The department offers a variety of courses on topics related to literary history and theory; multicultural contact; linguistics and the history of the language; visual culture, film, and performance studies. Interdisciplinarity is a hallmark of the department, and students in this concentration are encouraged to broaden their perspectives by taking relevant courses in other departments. Most choose to strengthen their academic preparation by participating in a study abroad program in Spain or Latin America and by engaging with Latin American and Latinx communities in the United States.

Concentration Requirements and Overview of the Curriculum

The concentration requires a minimum of ten courses: one required course, HISP 0650 (<https://bulletin.brown.edu/search/?P=HISP%200650>) *Advanced Spanish through Literature and Film* (unless waived¹); up to six courses from HISP 0550 (<https://bulletin.brown.edu/search/?P=HISP%200550>), HISP 0600 (<https://bulletin.brown.edu/search/?P=HISP%200600>) or at the 700 level; and at least three courses at the 1000 level (or equivalent with the approval of the concentration advisor). HISP 0650 (<https://bulletin.brown.edu/search/?P=HISP%200650>) gives students fundamental tools for critical analysis while also specifically targeting the development of advanced grammar and writing skills. The 700 level encompasses panoramic courses in the literary and cultural histories of Spain, Latin America, and the Latinx USA, as well as introductory courses on professional and literary translation and Spanish linguistics, all of which place emphasis on continued refinement of written and oral expression in Spanish. Courses at the 1000 level focus on particular authors, genres, periods, or special topics and introduce students to major critical voices and scholarly perspectives on the materials studied. Concentrators must take at least one Hispanic Studies course with the WRIT designation.

¹ Students can waive this course with an AP of 5 in Spanish Literature; or an SAT II of 750 or above; or a Brown Placement Score in Spanish of 651 or above. For more information on placements go to: <https://www.brown.edu/academics/hispanic-studies/language-placement>

Students may count up to three related courses from outside the Hispanic Studies department toward their concentration. Eligible courses include: 1) courses that explore the literatures, histories, languages, or cultures of Spain, Latin America, or the Latinx USA, offered by other departments or programs at Brown, through study abroad programs², or as transfer credits; 2) courses with relevant content conducted in another related foreign language such as Portuguese, Nahuatl, Quechua, Catalan, Euskera, or Galician, including both upper-division literature/culture courses and language instruction. Nota bene: A maximum of one language-learning course in a non-Spanish language, and a maximum of two courses conducted in English, may count toward the ten required concentration courses. All external courses must receive approval from the DUS, ideally obtained before enrolling.

² For study abroad courses, students must consult with the DUS both before and after completing their study abroad program to confirm course equivalency and ensure that the courses can be applied toward the concentration.

The Hispanic Studies Literatures and Cultures concentration is designed to encourage and support language-specific study, for we believe that

the linguistic cultural products of the Spanish-speaking world are most deeply appreciated in the original language. Hispanic Studies courses are therefore generally taught in Spanish, unless otherwise specified in the course description. Up to two courses taken in English or another language, whether in the department or outside, can count toward the concentration.

Required Course:

HISP 0650	Advanced Spanish Through Literature & Film

Up to six courses from HISP 0550, HISP 0600, or at the 700-level, such as:

HISP 0550	Intermediate Spanish for Heritage Speakers
HISP 0600	Advanced Spanish II
HISP 0710B	Hispanic Culture Through Cinema
HISP 0710C	Introducción a la lingüística hispánica
HISP 0710E	Introduction to Professional Translation and Interpretation
HISP 0730	Encounters: Latin America in Its Literature and Culture
HISP 0740	Intensive Survey of Spanish Literature
HISP 0750B	The Latin American Diaspora in the US
HISP 0750G	Wild-eyed Stories
HISP 0750Q	Health, Illness and Medicine in Spanish and Spanish American Literature and Film

At least three 1000-level courses, such as:

HISP 1240A	Fashion and Fiction in the Early Modern Hispanic World
HISP 1210F	History of the Spanish Language
HISP 1240L	Don Quijote de la Mancha
HISP 1290W	De abuelas a nietas: escritoras españolas y latinoamericanas de 1925 a 2025
HISP 1330Q	Short Forms: Major Works in a Minor Key
HISP 1330W	War, Revolution and the Cult of the Hero in Latin American Culture
HISP 1330Z	Tropical Fictions: Geography and Literature in Latin American Culture
HISP 1331E	Visions and Voices of Indigenous Mexico
HISP 1331J	Hablan los hijos: A New Generation of Latin American Writers
HISP 1331U	"You Are Here": Mapas, Pueblos Indígenas y Mundos Nuevos
HISP 1371T	Reimagining the Line: Contemporary Arts and Political Imagination at the Mexico-US Border
HISP 1500L	Theory and Practice of Translation
HISP 1666	¡Qué miedo! El cine hispánico de horror

Students can take up to two courses in languages other than Spanish, such as:

ETHN 1200D	Latinx Literature
HIST 0234	Modern Latin America
NAHU 0100	Beginning Nahuatl
POBS 0400	Writing and Speaking Portuguese

Total Credits = 10

Capstone colloquium: Giving students an opportunity to reflect upon and celebrate their achievements in the Hispanic Literatures and Cultures concentration, there is an annual colloquium with graduating seniors, faculty and friends. Each graduating senior shares a piece of work or a text, whether studied in class or produced as an assignment, that stands out as particularly significant to their time in Hispanic Studies. This can take several forms: it can be an extract from a poem, novel, play, or critical essay; it can also be a film or music clip or piece of art; or, a translation done by the student, or an original creative text.

Honors Thesis or Project

Students with an excellent record in their Hispanic Studies courses will be eligible to write an Honors Thesis or write and produce an Honors Project. Students pursuing honors must have a record of all A's or a final grade of S with distinction in courses they have as S/NC. Typically, the Honors Thesis is a major research paper of approximately 40 to 80 pages in Spanish, depending on the topic and treatment necessary. Alternatively, a student may, with prior permission of the Director of Undergraduate Studies, present a film, gallery exhibition, or other appropriate project, together with a paper that clearly demonstrates the academic foundations and relevance of the project. For additional details regarding the Honors Thesis in Hispanic Studies, please refer to our website (<https://www.brown.edu/academics/hispanic-studies/honors-program/>).

Hispanic Studies Graduate Program

The department of Hispanic Studies offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) degree. The A.M. is ordinarily received as a part of the Ph.D. program.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/hispanic-studies>
(<http://www.brown.edu/academics/gradschool/programs/hispanic-studies/>)

Courses

HISP 0100. Basic Spanish.

This fast-paced beginning course provides a solid foundation in the development of communicative skills in Spanish (speaking, listening comprehension, reading and writing) as well as some insight on the cultures of the Spanish-speaking world. Individual work outside of class prepares students for in-class activities focused on authentic communication. Placement: students who have never taken Spanish before, or have scored below 390 in SAT II, or below 240 in the Brown Placement Exam. Students who have taken Spanish before and those with an AP score of 3 or below must take the Brown Placement Exam. Students should check Placement and Course Description in the Undergraduate Program section of the Hispanic Studies Website. Enrollment limited to 15; 12 spaces are available for students during pre-registration. 3 spaces will be available at the start of the semester for incoming or re-admitted students who should attend the first class. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

HISP 0110. Intensive Basic Spanish.

This course is a highly intensive, two-semester sequence in one that carries double credit. Primarily for students with some knowledge of Spanish who have scored below 450 in SATII or below 340 in Brown Placement Exam. Students with little or no preparation in Spanish should consult with the Course Supervisor. The course seeks to engage students with a contemporary view of Hispanic cultures through a variety of texts, topics, and themes; it seeks to integrate grammar, vocabulary, and discourse work to support the development of communication in all the modalities. It offers an inclusive perspective on learning and embraces diversity of identities and communities in the Hispanic world. Students learn to use language in interdisciplinary scenarios that help them connect to their academic and life experiences, thus gradually developing their linguistic, communicative, academic, and multicultural competencies as well as professional skills. Ideal for students interested in fast-tracking their language learning to meet study abroad requirements. Enrollment limited to 15. Pre-registered students must attend the first two days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 2nd class when the composition of the course section is finalized.

HISP 0200. Basic Spanish.

A continuation of HISP 0100. This course continues to focus on acquisition of communicative skills (speaking, listening comprehension, reading and writing) as well as cultural awareness. With successful completion of the course students will be able to understand simple texts, carry on short spontaneous conversations involving everyday topics (such as modern day life and its pressures, health, art and culture, nature and the environment, relationships) and write simple texts with good command of grammar and sentence structure. Prerequisites: HISP 0100, Brown placement score: 241 - 340. Note that all students who enter the Spanish program should take the Brown placement test. Students should check Placement and Course Description in the Undergraduate Program section of the Hispanic Studies Website. Enrollment limited to 15; 12 spaces are available for students during

HISP 0300. Intermediate Spanish I.

This course involves about 14-15 hours of work/week. It carries on the work initiated in HISP0110-100-200 to develop and strengthen students' linguistic, communicative, academic, and multicultural competencies. It continues to focus on the integration of grammar, vocabulary, and discourse work to advance competence and proficiency in Spanish and to support further development of communication in all the modalities. This course is framed by an inclusive perspective on learning and embraces diverse identities and communities in the Hispanic World. It fosters a community of learning among students and offers a variety of texts, themes, and topics related to students' academic and life experiences that also help them develop professional skills. Enrollment is limited to 12. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

Pre-requisite: students with an AP score of 3 or below must take the Brown Placement Exam.

HISP 0400. Intermediate Spanish II.

A continuation of HISP 0300. This course continues to develop and strengthen students' linguistic, communicative, academic, and multicultural competencies. It focuses on content and language integration and creates opportunities to use the language in interdisciplinary scenarios related to diverse academic experiences. Enrollment is limited to 15. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

Prerequisites: HISP 0300, Brown placement score: 411 - 490. Note that all students who enter the Spanish program should take the Brown placement test. Students should check Placement and Course Description in the Undergraduate Program section of the Hispanic Studies Website.

HISP 0490A. Spanish for Health Care Workers.

This course provides students with the linguistic and cultural competencies necessary to communicate and help treat Spanish speaking patients with limited English. It includes a general review of pertinent grammar and vocabulary relating to health care professions, assessment, and vocabulary useful for establishing patient rapport. Students will practice communicating in common medical situations, conducting patient interviews, and increase their understanding of possible responses from patients. We will broaden knowledge of different cultures, explore health care systems/ professions in a variety of settings, and have pertinent speakers invited to class. This course does not qualify as a pre-requisite for study abroad or for HISP 0600. Students who complete 0490A successfully can continue with HISP 0500 as the next level. This is an intermediate level language course so if you have taken a 600 course or above, you will be too advanced.

HISP 0500. Advanced Spanish I.

Offers comprehensive work in listening, speaking, reading, and writing, with targeted grammar review. Students work with a variety of readings (literature, newspaper articles, etc.) and with art forms such as music and film, in order to develop oral and written expression and to explore issues relevant to the Hispanic world. Students explore topics of their own interest through student-led activities and presentations. Prerequisites: HISP 0400, 0490A, Brown placement score: 491 - 570. Note that all students who enter the Spanish program should take the Brown placement test. Please check Hispanic Studies website (Undergraduate Programs) for course descriptions and placement information. Enrollment limited to 15; 12 spaces are available for students during pre-registration. 3 spaces will be available at the start of the semester for incoming or re-admitted students who should attend the first class.

HISP 0550. Intermediate Spanish for Heritage Speakers.

Heritage speakers of Spanish are students who understand and speak Spanish to some degree but have not yet had formal education in Spanish. This course is specifically for students who already possess intermediate communicative skills and can communicate effectively in their home and community. This course is designed to validate, strengthen and expand the previous linguistic and cultural knowledge students bring to the classroom. Through a variety of authentic materials, students will explore issues of identity, linguistic rights, equality, and social justice, while developing their Spanish range to include formal registers, and honing their oral communication, reading and writing skills.

HISP 0560. Spanish for Medical Interviews.

This course is designed to equip students with essential Spanish language skills to conduct effective medical interviews with Spanish-speaking patients. The course focuses on building the language skills, and cultural competencies needed to establish rapport, gather comprehensive medical histories, conduct physical exams, discuss symptoms, explain diagnoses, and address patient concerns. Students will learn through role-play scenarios, case studies, and interactive exercises that simulate real-life medical interviews. Emphasis will be placed on active listening, empathy, and cultural sensitivity to ensure clear communication and patient trust. By the end of the course, participants will be able to conduct patient-centered medical interviews in Spanish, improving care for Spanish-speaking communities. Pre-requisites: HISP 0400, Score of 491+ on the Hispanic Studies Placement Exam (the exam is available online; you can find the link on the Hispanic Studies website under "Language Placement Exams"), or equivalent.

HISP 0600. Advanced Spanish II.

Advanced-level work in speaking, listening, reading, and writing, with focused review of challenging Spanish grammar. Course materials include films, music, art works, and a variety of written texts chosen to promote class discussion and in-depth written analysis. There will be individual and group activities, including in-class presentations and creative writing projects. Prerequisites: HISP 0500, Brown placement score: 571 - 650. Note that all students who enter the Spanish program should take the Brown placement test. Enrollment limit 12. Pre-enrolled students must attend the first four classes to maintain their status and notify the instructor in advance if they must miss any day before the 4th class when the course section is finalized.

HISP 0650. Advanced Spanish Through Literature & Film.

HISP 0650 aims to study literature and film from Latin America and Spain through critical reading and analytical writing. This section is thematic: the majority of its contents revolve around the representation of the self. We will read first person literature, autobiographies, diaries, and myriad other genres, focusing on how they inform our notions of memory, authorship and identity. The course will serve as an introduction to the literatures and cultures of the Spanish-speaking world, covering a range of periods and genres (the story, the novel, poetry, film, and non-fiction). Beyond offering a historical and contextualized panorama of cultural production from the Spanish-speaking world, HISP 0650 will also help you develop new strategies for reading, writing, and thinking about literature and film, preparing you for more advanced literature and culture courses at the 1000 level.

HISP 0710A. Cultura gastronómica de España.

Spain has a rich and varied culinary culture — both steeped in its multicultural history and at the cutting edge of new culinary movements. In this course, you will learn about la cocina española in all its dimensions and at the same time develop your linguistic skills in written and oral Spanish. Topics include: the Mediterranean diet (and its threat from fast food), the culture of tapas, the wine regions of Spain, Spain's new star chefs, the olive oil industry, Spanish food products abroad. We will explore these topics through documentaries, recipes, interviews, films, music, short stories, and hands-on cooking.

HISP 0710B. Hispanic Culture Through Cinema.

This course will examine eleven cinematic works of the contemporary Hispanic world (Argentina, Chile, Mexico, Spain, and the USA) from 1999 until 2012. We will focus on the cultural, thematic, technical and aesthetic aspects of the films, as well as on their socio-historical and political context. Every movie will be discussed in class integrating sociological, historical, political and aesthetic contexts, as well as a critical analysis of the film as artistic expression. This is a course also designed to improve students' speaking abilities while learning about Hispanic cultures and cinema. FYS

HISP 0710C. Introducción a la lingüística hispánica.

This course introduces students to the study of language and deepens their knowledge of Spanish in its main linguistic components. After briefly considering the nature of language, we will study the sounds of Spanish (phonology and phonetics), word and sentence structure (morphology and syntax), and the elements and mechanics to express and interpret meaning (semantics and pragmatics). We will then turn our focus to linguistic phenomena such as changes in Spanish over time (historical linguistics), variations in the language according to region and social group (sociolinguistics), and bilingualism, with special attention to Spanish in the U.S.

HISP 0710D. History of the Spanish Language.

We will study of the development of Spanish from the first manifestations to the present, and the development of the language beyond the Iberian Peninsula (in the Sephardic diaspora and in the Americas). Includes the historical and cultural events that deeply influenced the shaping of Castilian language. We will examine the most relevant contributions as well as other languages (Arabic in particular) in shaping the Spanish language. Taught in Spanish.

HISP 0710E. Introduction to Professional Translation and Interpretation.

What is translation? Interpretation? What roles do the translator and interpreter play in communication? What skills and kinds of knowledge are needed to develop competency in translation and interpretation as professional/community services? What factors shape how a text is translated (e.g., purpose, intended audience, type and genre, intercultural differences)? What is the role of translation in advancing language competence and proficiency? Through a functionalist approach, students advance their mastery of Spanish and develop translation competence. In addition to academic work (readings, translation assignments, and in-class exercises), students will also gain practical experience working with Spanish-speaking clinics and community organizations.

HISP 0710F. Introduction to Literary Translation.

This course provides students with an opportunity to enter the fray: working as literary translators, reading texts that reflect on the nature of translation, and considering this frustrating, gratifying, and meaningful field of study and practice for themselves. It offers students an introduction to the field of translation studies (mostly via texts in English, but with discussion in Spanish) as well as a foundation of experience in the practice of literary translation, predominantly from Spanish to English, but with opportunities for translating from English to Spanish or either of these languages to another one. The course is highly interactive, with students frequently called upon to reflect on their experience as translators, and dialogue about this experience with their peers. Throughout the semester, we will engage in regular workshops, with students sharing their work and collaborating with one another throughout.

HISP 0710G. A Taste of Barcelona: Exploring Culture, Art and Community.

Students in this asynchronous/online course will explore Barcelona through the lenses of culture, history and heritage. They will be able to also immerse themselves into the Catalan culture, which is internationally renowned in many fields like cinema, literature, music, theatre, gastronomy, sports, art and architecture. Catalan and Spanish are the two official languages in Barcelona, and its residents consider themselves fully bilingual, so this course will also provide students some basic communicative skills to help them navigate better in the capital city of Catalonia. This is a great opportunity also for students considering studying abroad in Barcelona in the future (the course is offered in English and Spanish is not required).

HISP 0730. Encounters: Latin America in Its Literature and Culture.

An introduction to major authors, movements, and themes of Spanish American literature from the Discovery to the present. This course also aims to develop students' oral and written expression in Spanish. Students are expected to engage in close reading and discussion of texts, as well as to revise their papers. Prerequisite: HISP 0600, or AP score =5, or SAT II (Literature) score of 750 or above, or Brown placement score of 651 or above.

HISP 0740. Intensive Survey of Spanish Literature.

This course provides students an overview of the major authors and movements in Spain's literature from the Middle Ages to the twentieth century. It teaches students to close-read and engage critically with individual texts and their literary, historical, and social conditions of production. Throughout, we will interrogate canon formation, examine the literary construction of the self and the nation, and analyze the reflection — and creation — of culture in literature. Conducted in Spanish. Prerequisite: HISP 0600, or AP score =5, or SAT II (Literature) score of 750 or above, or Brown placement score of 651 or above.

HISP 0750B. The Latin American Diaspora in the US.

This engaged course is designed to bridge academic learning about Latin American diasporic history and culture and volunteer work in agencies serving Latinx communities in Providence. Readings, films, and guest presentations examine the ways in which the Latinx community has imagined itself and has been imagined by others. Spanish language learning occurs in the classroom and the community, where students have the opportunity to enrich and test course content. Conducted in Spanish, Spanglish welcome. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 651 and over in the Brown Placement Exam.

HISP 0750C. Love and War in Medieval and Contemporary Spanish Fiction.

Examines presentations of Medieval Iberian culture in literature and film. This subject interrogates the persistent popularity of medieval themes and stories in contemporary film and fiction. It will consider some medieval narratives, such as *El Cid*, medieval chronicles and ballads, and *La Celestina*, which inspire a tradition of revisionist re-writing, as well as modern "inventions" of the medieval in a range of cultural forms. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

HISP 0750E. Topics in Hispanic Culture and Civilization.

This course provides an overview of the culture and history of Spain from medieval times to the present, drawing from literature, art, music, and film. We will study Islamic al-Andalus, Judeo-Spanish culture (including the Sephardic diaspora), Christian Spain, the conquest and colonization of the "New World," the decline of empire, the Civil War and its aftermath. Historical and cultural connections between Spain and Europe, and Spain and America will also be examined. Taught in Spanish. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

HISP 0750G. Wildeyed Stories.

Students will study a wide-range of stories from cultures of the Spanish speaking world in literature and film: tales, fables, and humorous stories of heroism, deception and revenge. Class discussions will seek to situate the works examined within the political and cultural currents and debates of their time. Emphasis will be placed on both the historical context and on the development of close reading skills. Conducted in Spanish. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

HISP 0750I. Spanish Cinema and Literature: The Postmodern Cinema of Pedro Almodóvar.

Spanish film has experienced a total renewal after Franco's death. In this course we will analyze recent developments in Spanish film paying special attention to the way film directors have exploited a very rich and well established literary tradition from Luis G. Berlanga, and Carlos Saura, to Víctor Erice and Pedro Almodóvar. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

HISP 0750M. The Spanish Civil War: Image, Text, and Memory.

The Spanish Civil War (1936-1939) has inspired a vast trove of scholarly and artistic production. In this course, we will analyze documentary and feature-length Spanish films in order to understand the social and political causes of the war and its central players. We will complement our film discussions with relevant poetry, novels, and art works to expand our critical perspectives on ways of representing and remembering the Civil War. In Spanish for first-year students with SAT II of 750 or above, a 5 on the AP Literature exam, or a Brown Placement Test score of 651 or above. Enrollment limited to 19 first year students.

HISP 0750N. Muslims, Christians, and Jews in Medieval Spain.

Spain was one of the most culturally diverse parts of Europe throughout the Middle Ages, with Muslims, Jews, and Christians living side by side in both the Christian and Muslim kingdoms of the Iberian peninsula for nearly eight centuries (711-1492), in fluctuating peace and tension. Uninterrupted contact produced richly complex patterns of cultural exchange whose legacy is variously embraced and debated today. This first-year seminar will examine relationships between Muslims, Jews, and Christians from the perspectives of literature, music, art, architecture, archaeology, and history. While largely focusing on the centuries of co-existence, we will also consider the expulsions and forced conversions of Jews and Muslims that took place after 1492, as well as the resurgence of these communities in contemporary Spain. Throughout, students will acquire theoretical bases for understanding current interreligious conflict and for envisioning its repair. Instruction in Spanish.

HISP 0750O. Cultural Studies in Spanish America.

This is a culture class, taught in Spanish, in which we will explore the origins and meanings of the terms "culture" and "cultural studies," a particular approach to culture, as it is manifested in a Spanish American context. This critical approach crosses conventional disciplinary boundaries and so will we, examining a variety of texts, phenomena, and themes that extend traditional concepts of "culture." Topics considered will include: sports-- fútbol and lucha libre-- music in literature, melodrama and the telenovela, manifestations of Indian and mestizo identities in the late 20th-21st centuries, tourism, and contemporary urban existence.

HISP 0750P. Screening Social Justice in the Spanish-Speaking World.

This course engages students with social justice issues in the Spanish-speaking world (the US, Latin America, and Spain), analyzing recent films addressing topics such as: racial, gender, and sexual identities; socioeconomic inequality; immigration, the border, and displacement; civil conflict, dictatorship, and their aftermath; the environment and climate change; postcolonial legacies and the impact of neoliberalism and globalization. We will analyze the stories these films tell and how they tell them, asking whether film can be considered an activist project, and what effect it might have on legal, political, and social debates outside the walls of the cinema. While some knowledge of Spanish is a plus, it is not required, as films are subtitled and readings and course materials are in English.

HISP 0750Q. Health, Illness and Medicine in Spanish and Spanish American Literature and Film.

In this class we will read/see, discuss and write about texts and films that deal with health, illness, death and medicine in Spanish and Spanish American contexts. Our approach will be informed by principals of Narrative Medicine that demonstrate how attending to, representing and affiliating oneself with other human beings by studying literature and the arts can transform relationships between patients and healthcare professionals. We will be honing our reading and analytical skills as we confront the subjective dimensions of illness and medicine from humanistic and cross-cultural perspectives. This course is conducted in Spanish.

HISP 0750R. Mexico: An Introduction to Its History and Culture.

This course will take an interdisciplinary approach to studying the rich history of Mexico and its diverse populations. We will examine both how Mexico has constructed its own identity from within (for example, the 20th century explorations of "lo mexicano"). In addition, we will study how Mexico has been constructed from without, especially from the English-speaking world (for instance, American diplomat Joel Poinsett's 19th century views). Course materials will range from both Mexican and European chronicles of conquest to modern reflections and representations by historians, philosophers, filmmakers, musicians, writers, and artists, among others. In English.

HISP 0750S. The Art of Revolution in Latin America (COLT 0711J).

Interested students must register for COLT 0711J.

HISP 0750T. Around Latin America in 80 Days: An Historical and Cultural Journey (LACA 0500).

Interested students must register for LACA 0500.

HISP 0750U. Re-writing Realities: A Non-Fiction Creative Writing Workshop.

This course focuses on the basic elements of creative non-fiction writing in Spanish. By writing our own pieces, we will discover how artistic uses of Spanish language can help us view our 'reality' under a new light. We will be reading texts from the Spanish language tradition of non-fiction produced through hybrid texts—that is, narrative and essayistic pieces that are not investigative journalism. Our readings will range from influential writers such as Rubén Darío, Jorge Luis Borges, and Alfonso Reyes to contemporary authors including Javier Cercas, Juan Villoro, and Eduardo Halfon.

HISP 0750W. Caribe Queer.

The Hispanophone Caribbean and its diasporas have created a vibrant literary and more broadly artistic catalogue through which to think formations of gender and sexuality in racial, political, and economic context. In this course, we focus on 20th- and 21st- century Dominican, Puerto Rican, and Cuban queer and trans authors, characters, artists, and themes. We discuss literary, poetic, and artistic material within a set of historical and theoretical frames. We ask how Hispanophone Caribbean literature and art portray and theorize racial, gendered, and sexual life in relation to historical and contemporary structures of power. A playlist featuring queer and trans Caribbean artists complements the course. Most readings are in Spanish. Class discussions and assignments are in Spanish.

HISP 0750X. Environmental Arts: Film, Literature and Photography.

The climate crisis has pushed artists and scholars to reflect on how we relate to the environment, and to critically assess the concepts that have guided our approach to ideas of nature and the nonhuman since the advent of modernity. We are witnessing a global effort in developing new means of inhabiting the world, and the arts offer a privileged space to investigate these possibilities. This mostly asynchronous course explores environmental aesthetics through multiple media, theoretical perspectives and geographical contexts. With a focus on Hispanophone cinema, literature and photography, we will cover topics such as the urban/rural divide, extractivism and decoloniality, the problem of scale in our understanding of the Anthropocene, the construction of landscape and the relationship between art and the nonhuman. The course will be taught in English, no knowledge of Spanish is required.

HISP 0760. Transatlantic Crossings: Readings in Hispanic Literatures.

This course provides students a comprehensive introduction to literature and culture of the Spanish-speaking world, through exploration of a wide range of genres (short story, poetry, theater, novel, and film) and periods of production. The course not only gives students a contextualized historical panorama of literature in Spanish, it also equips them with strategies for reading, thinking, and writing about texts and films in Spanish, preparing them for more advanced literature and culture courses in Hispanic Studies. The course is conducted entirely in Spanish.

HISP 1020A. Spanish Civil War in Literature and the Visual Arts.

The Spanish Civil War (1936-39) would culminate with the military overthrow of the Republican government and the beginning of Francisco Franco's long dictatorship. This course examines artistic representations of the war, from film (documentary and fictional), through painting (Picasso), to the written works of both Spanish and foreign authors including Orwell, Hemingway, Neruda, Cela, Sender, Rodoreda. Readings and discussion in English.

HISP 1070. Spanish Art in the Age of Empire.

This course examines Spanish artistic culture in the 16th and 17th centuries, when Spain ruled the Low Countries, parts of Italy, the Americas, and the Philippines. We will study foreign-born painters active in Spain (e.g., Sofonisba Anguissola and El Greco), Spanish artists who worked abroad (such as José Ribera), the court painter Diego Velázquez, raised in the global trading capital of Seville, and others. Collectively, they created a tradition encompassing intensely religious imagery and mythological scenes, humble still lifes, and magnificent royal portraits—many on view at a major exhibition at the Boston Museum of Fine Arts in spring 2026.

HISP 1070A. Spanish Art in the Age of Empire (HIAA 1070).

Interested students must register for HIAA 1070.

HISP 1205. World Cinema in Global Context (MCM 1205).

Interested students must register for MCM 1205.

HISP 1205K. Emplaced Art in the Americas : Creating Change Through Materiality (MCM 1205K).

Interested students must register for MCM 1205K.

HISP 1210A. Judeo-Spanish Literature and Culture.

Focuses on Judeo-Spanish literature from the 10th century to the first years of the Spanish Jewish diaspora (end of the 15th century). Poetry and narrative are read as works of moral instruction rooted in traditional modes of art and thought. Considers also the preservation of Judeo-Spanish culture in the Sephardic diaspora through ballads and songs recorded from oral traditions.

HISP 1210E. History of Romance Languages.

The Romance family is one of the most widely-spoken and politically important language families. The aim of this course is to introduce students to the history and linguistic characteristics of the Romance family. Our purpose is to learn the factors that led to the development of modern standard Romance languages, and provide an understanding of Romance structures and their linguistic relationships. The course covers language families; genetic relationships (family trees); typological comparison; internal versus external history; language contact and borrowing; Romance Pidgins and Creoles; Standard language versus dialect; social variation; concepts of Phonetics and Phonology; Morphology; Syntax; Semantics; Lexicon. In English.

HISP 1210F. History of the Spanish Language.

This course is intended to give you a basic introduction to the genealogy and development of the Spanish language. Includes the historical and cultural events that deeply influenced the shaping of the language, the nature of Medieval Spanish, and the development of the language beyond the Iberian Peninsula (Sephardi diaspora and in the Americas). This course will make the history of Spanish accessible to anyone with a knowledge of Spanish and a readiness to grasp basic linguistic concepts.

HISP 1240A. Fashion and Fiction in the Early Modern Hispanic World.

In the early modern period, clothing and fabrics were meant to provide visible markers of social status, gender, religion, race, and nationality. Yet dress did not just so much reflect identity as construct it. It could blur differences even as it supposedly marked them. In other words, clothes often created fictions, and fiction itself frequently focused on clothing. Drawing on literary and historical texts as well as paintings, prints, and maps, this course traces the connections between fashion and fiction in a period of unprecedented change in Spain and the wider Hispanic world. In Spanish.

HISP 1240C. Golden Age Short Stories.

We will examine the spatial itinerary of main literary figures (the *picaro* or rogue, the *morisco*, the soldier, the courtesan, the witch, the *indiano*) and the spaces they inhabited in Spain's short stories throughout the 16th and 17th centuries. Violence, sexual transgression, and social conflicts are themes of inquiry. Emphasis on Cervantes' *Novelas ejemplares*.

HISP 1240L. Don Quijote de la Mancha.

This course will study Miguel de Cervantes's El ingenioso hidalgo don Quijote de la Mancha in its literary and historical contexts. We will read Cervantes's masterpiece as a book about books and about the pleasures and dangers of reading; as a story of the Spanish empire and its discontents; as a palimpsest of Christian, Muslim, and Jewish meetings in Spain; and as a reflection on the nature of language, desire, and madness. All the while, we will read Don Quijote as an eminently entertaining and endlessly engaging work of the human imagination. In Spanish. Prerequisites: HISP 0650 or minimum score of 5 in 'AP Spanish Literature.'

HISP 1250A. Madrid: History, Literature, and Culture.

This course explores cultural production in and about Madrid during key moments of the city's history from its establishment as the capital of imperial Spain in the 16th century through its reinvention as a major international tourist destination in the late 20th. Multimedia in orientation, the course draws on representations of the Spanish capital in literature, painting, photography, maps, music, and film. Topics include: self-invention in the court city, modernization and its discontents, Madrid and Spanishness, provincialism versus internationalism. In Spanish.

HISP 1250B. Hispanic Culture Through Film.

This course examines major trends of Hispanic cinema through a representative selection of culturally diverse films from Spain, Latin America and the USA. Among the course objectives are: to learn about Hispanic history and culture through film, to understand cinema's strengths and limitation for representing culture and history, to gain an understanding of Hispanic cinema in a broader context of globalization, and to learn to write film analyses in Spanish.

HISP 1290D. Contra Franco vivíamos mejor? Literature and Culture of the Spanish Dictatorship (1939-1975).

The end of the Spanish Civil War inaugurated one of the longest dictatorships of the twentieth century. This course will examine the literature and popular culture produced in the peninsula during that period—both the "official" culture allowed and sponsored by the Franco regime, and the voices of resistance that attempted to present alternative political views against a background of repression and censorship.

HISP 1290G. Generación del '98.

To what extent does a national crisis, the Spanish defeat of 1898 by the United States, provoke a movement of patriotic revaluation, the so-called "Generation of '98"? Or are the symptoms of crisis more in accord with *fin de siècle* aesthetics, which incites literary experimentation in all the traditional genres? These crucial questions will be studied in such typical authors as Unamuno, Baroja, Azorín, Antonio Machado, and Ramón del Valle-Inclán.

HISP 1290J. Spain on Screen: 80 Years of Spanish Cinema.

Spain's is one of the most dynamic and at the same time overlooked of European cinemas. In recent years, Spain has become more internationally visible on screen, especially thanks to filmmakers like del Toro, Almodóvar, and Bayona, or actors Penélope Cruz and Javier Bardem. But where does Spanish cinema come from? And what can it tell us about the nation and its history? Focusing on issues such as landscape, memory, violence, gender, sexuality, and national identity, this course provides students with a solid training in film analysis and a wide-ranging introduction to Spanish culture through its cinema. In Spanish.

HISP 1290K. The Spanish Novel since 1975.

In 1975, the death of General Francisco Franco opened the door to a new democratic Spain. In the novel, the social and political novelties generated a change both thematic and formal. This course pays attention to issues such as the diverse genres that have gained strength, such as the groups that have acquired a literary voice, and the portrayal of current preoccupations. Prerequisite: HISP 0730 or 0740.

HISP 1290P. Federico García Lorca, 1898-1936.

Federico García Lorca (1898-1936) embodies Spanish Modernity. While his innovative poetry and drama established him as a crucial figure in the 20th Century Spanish cultural landscape, his brutal murder by Fascist supporters at the beginning of the Civil War made of him a symbol of the lost freedom. This class will study his artistic evolution: from his youth in Granada, and his studies in Madrid—where he met and befriended filmmaker Luis Buñuel and painter Salvador Dalí—to his trip to New York and Latin America. The focus of the class will be the study of his poetry, theatre, and essays, but will also explore both the construction of the Lorca myth, and the period of cultural splendor that is encapsulated in his biographical dates: from the loss of the empire in 1898, to the beginning of the Civil War in the summer of 1936.

HISP 1290U. The Spanish Civil War in Visual Culture.

No other event marked contemporary Spain as profoundly as the Spanish Civil War (1936-39). This course will study the history of the war itself and trace the multiple ways it has been remembered and represented from its immediate aftermath through to the present. Materials will include films and documentaries, paintings and photography, propaganda posters and newsreels, radio and television, monuments and comics, oral histories and fiction. In addition, we will read critical and theoretical texts on historical trauma and individual and collective memory as well as amnesia. This course will be conducted in Spanish.

HISP 1290W. De abuelas a nietas: escritoras españolas y latinoamericanas de 1925 a 2025.

This course delves into the literature produced by Spanish and Latin American women writers over the past century. We will explore novels, short stories, essays, letters, and chronicles. These narratives form "one hundred years of solitude" story, as many of these authors have been sidelined in a literary scene dominated by male voices. We will bridge connections across Spanish-speaking regions and explore how conditions such as gender inequality, family structures, and exile, have consistently molded the discourses and works of these remarkable women. Help us unearth these writers from the dusty shelves of libraries and rescue them from invisibility.

HISP 1330C. Indigenous Literatures of Latin America.

This course explores the presence of indigenous cultures in Latin American literature over the last five centuries. Blending historical and literary analysis, we will delve into foundational indigenous narratives (with a stress on Nahuatl, Mayan and Quechua variants); the vision of Colonial mestizo and bilingual go-betweens; othering discourses in antiquarian, archeological and travel narratives; and the indigenous imprint in contemporary novels, short stories and poetry, including indigenous, women and transnational authors. Through this journey, marginalized cultures throughout the continent show their resilience as the multicultural plot of Latin American history comes to the fore. In Spanish.

HISP 1330D. Patriots, Rogues, and Lovers.

Nineteenth-century Spanish American writers were committed to educating their readers, yet they delighted in entertaining them with melodrama. We critically examine patriotic novels and stories with a focus on tales of love and/or adventure. We consider the breakdown of this trend in the first quarter of the 20th century as well as feminist critiques of it.

HISP 1330K. Contemporary Poetry of Latin America.

An exploration of some representative poets and movements in modern Latin American poetry, with special emphasis on the Latin American Modernists, the Avant-Garde and contemporary trends. Topics include: analytical techniques, historicity, poetry and translation, and a creative writing workshop. For advanced students only. Prerequisites: HISP 0740, or HISP 0600 and HISP 0730. Previous experience in 1000-level Spanish courses desirable.

HISP 1330P. The Philosophy of Borges.

Jorge Luis Borges devoted several essays during his youth to developing his philosophical understanding of concepts like "personality," "memory," "reality," "narrative" and "style." At some point later in his literary career, he attempted to erase the memory of those years from his public existence, to the extent that most of the books published during the 1920s were never reprinted during Borges' lifetime. Nevertheless, it was in those years that he developed the entire philosophical grounding of his future literary work. We will work to decipher Borges' philosophy through the reading and interpretation of his essays, narratives and poems, including several key texts from his first three suppressed prose volumes (*Inquisiciones*, *El tamaño de mi esperanza*, and *El idioma de los argentinos*). In English, with some Spanish readings. Prerequisite: HISP 0730 or 0740.

HISP 1330Q. Short Forms: Major Works in a Minor Key.

This course focuses on two outstanding practitioners of the short story in twentieth century Latin American literature—the Argentines Jorge Luis Borges and Julio Cortázar—paying close attention to each one's most famous collection of stories (Borges' *Ficciones* [1944], Cortázar's *Final del juego* [1956]). We'll map the ways in which their writing connects to different genres (detective fiction, science fiction, poetry), media (photography, painting, film), and practices of adaptation (especially translation), and explore their legacy for more recent writers (Ricardo Piglia, Edmundo Paz Soldán, Roberto Bolaño, Samanta Schweblin).

HISP 1330T. El amor en español.

This course will visit a series of famous, colorful and controversial couples (novios, esposos y amantes) from the literature and history of Spain and Latin America. We will consider such themes as courtly love, erotic love, commonplaces about love and distortions of them, the degradation of idealized love, and the renunciation of human love in favor of divine love in the medieval and Renaissance periods. We will also address contemporary rites of passage in the formation of couples, traditional and modern views of love and marriage, as well as the "death of the couple," love and melancholy, melodrama and hysteria.

HISP 1330U. Hauntings: Gothic Fictions, Banditry and the Supernatural in Latin America.

A specter haunts Latin America. The constitution of the nation-state in the region after the Wars of Independence (1810-1830) entailed creating fictions to include (and, naturally, exclude) those who belonged to the community of the nation. Usually the left-outs were the ones who did not comply with the profile of the desired citizen: lettered, male, white and urban. This course will focus on narrations about those 'left-outs' after the constitution of the Nation-States in the region. We will read fictions about mad monster women, spectral slaves, bloodthirsty bandits, priests-turned-sorcerers, dwarfs, animal rebellions, and many other "exceptions to the norm." In Spanish.

HISP 1330V. Gender Trouble in Spanish America.

This course will explore the construction of gendered identities in Spanish American literature and film after 1960. Questioning normative constructions of gender roles, we will see how masculinities and femininities are represented and respond to changing politics and power, often redefining earlier "gender contracts." Works studied will include novels by Angeles Mastretta, José Donoso, Mario Bellatín and Diamela Eltit, short stories, theater, poetry, and 2-3 films, as well as pertinent theoretical and critical approaches to the study of gender in Latin America. In Spanish.

HISP 1330W. War, Revolution and the Cult of the Hero in Latin American Culture.

This course will tackle the literary underpinning of war and revolution in order to scrutinize its powers. The discourse on war does not originate ex nihilo but recycles and appropriates narratives of the nation, the State or a given region depending on the specificities of each given war. Starting with Bolívar's "Decreto de Guerra a Muerte", passing through literary renditions of civil wars, continuing with guerrilla warfare texts, all the way to narratives on the War on Drugs, this course will question the ways in which war and revolution are made through language and staged in literature. Taught in Spanish.

HISP 1330X. The Nature of Conquest: Scientific Literatures of the Americas.

Throughout history, conquest and colonization have implied different kinds of appropriations: control over new lands, new bodies, new languages. With the appropriation of new languages come the confrontation between different ways of organizing the world and, in particular, alternative ways of understanding humankind's relationship to nature. This course explores the scientific literatures that emerged in the wake of Spanish conquest and colonization of the Americas (1500-1800). These hybrid scientific literatures, written in Spanish but also in Nahuatl, Maya, Quechua and graphic forms, illustrate the lasting cross-pollination between Old and New World notions about American nature.

HISP 1330Y. "Us" and "Them": Cross-Cultural Representations in Spanish American Literature and Film.

This class will study the construction of self and other in Latin American cultural production. By examining examples from colonial times to today in a variety of literary genres and in three particular countries - Mexico, Argentina and Peru - we will examine ethnic, racial, and national identities (primarily). Our study will include some of the theoretical ideas associated with the confrontation between "them" and "us" and changes in these positions: the concept of the contact zone, of acculturation, and cultural hybridity, among others.

HISP 1330Z. Tropical Fictions: Geography and Literature in Latin American Culture.

Tropical nature in Latin America has been represented in conflicting ways: a place of leisure and sensuality, but also of depravity and sloth; a place of infinite riches but also a space where disease and racial degeneration thrive. Tracing the variations and endurance of these tropes in 18th- to 21st-century Western consciousness, this course aims to re-think the tropics in literature, film and the arts from a vantage point different to that of temperate-climate European civilization. Readings include canonical fictions such as *La vorágine* (1924), 19th-century European travelogues from the region, as well as contemporary indigenous art.

HISP 1331A. Writing Animals in the Iberian Atlantic.

Animals are our mirrors, our doubles; creatures onto which we project our notions about humanity and its limits. From Aristotle's ladder to Mesoamerican nahualism, animals have been at the center of how we understand the world and our place in it. This course looks at Animal Studies in dialogue with Hispanic, Latin American and Indigenous Studies to explore how intersectionality illuminates discourses about the human-nonhuman divide. Drawing on studies from both sides of the Atlantic, we will analyze the main genres that have focused on the nonhuman and recent studies on sheep, pigs, the rhinoceros, llamas, and perhaps even hummingbirds.

HISP 1331D. Latin America and the Caribbean: Challenges of the Global South (LACA 1620B).

Interested students must register for LACA 1620B.

HISP 1331E. Visions and Voices of Indigenous Mexico.

"In Mexico we are all mixed" goes a popular dictum, placing mestizaje at the core of what it means to be Mexican. One fifth of the population, however, self identifies as indigenous (pueblos originarios), and keeps experiencing various forms of discrimination for not abiding by the dominant national discourse. HISP 1331E explores three pillars of indigenous identity –land's gifts, material culture and language– to inquire how indigeneity has been deployed and reclaimed by indigenous groups through time. Materials include pre-Hispanic and Colonial codices, murals and objects, and present day literary works, music and cinema, with one hour of Nahuatl basics per week. Prerequisites: HISP 0650 or minimum score of 5 in 'AP Spanish Literature.'

HISP 1331G. Latin American Horror (GNSS 1520).

Interested students must register for GNSS 1520.

HISP 1331H. Latin American Environmental Humanities (LACA 1504G).

Interested students must register for LACA 1504G.

HISP 1331I. Inframundos: Mexican/American Underworlds.

From pre-Columbian times to the diasporic present in the United States, Mexican history and culture are filled with references to underworlds as sites of transgression. The Christian hell and Colonial mine became default spots for native bodies, while prison cells, tunnels and subterranean trains lodge today's poor and disenfranchised. This seminar will visit these sites through literature, film, music and journalism to question which subjects have been read as transgressors through time and why. Authors discussed will include Juan Rufo, Carlos Fuentes, Verónica Gerber, Yuri Herrera, Valeria Luiselli, and Myriam Gurba. Taught in Spanish; Spanglish welcome.

HISP 1331J. Hablan los hijos: una nueva generación de escritores latinoamericanos.

This seminar introduces students to some of the most exciting voices in contemporary Latin American literature: Samanta Schweblin and Mariana Enríquez (Argentina), Alejandro Zambra and Nona Fernández (Chile), José Carlos Agüero and Gabriela Wiener (Peru), Valeria Luiselli and Verónica Gerber (Mexico). We will read their novels and short stories in relation to previous generations of Latin American writers and in conversation across borders with one another. We will look at their reception in their countries of origin and abroad via translation, and explore new ways of writing and talking about literature in blogs, podcasts, and reviews; we will also delve into contemporary experiments in film and the visual arts to see how they dovetail with and comment on common concerns around memory, identity, community, and crisis.

HISP 1331L. Peasant-Boom-Slum: The Latin American Novel (COLT 1422N).

Interested students must register for COLT 1422N.

HISP 1331M. Race, Gender, and Sexuality in Hispanophone Caribbean Literature.

The Hispanophone Caribbean has created a vibrant literary and more broadly artistic catalogue through which to think formations of race, gender, and sexuality in the afterlife of racial slavery and under duress of colonial structures. In this course, we focus on 20th- and 21st-century Dominican, Puerto Rican, and Cuban literary, poetic, and cinematic material within a series of historical contexts and theoretical frameworks.

We ask how Hispanophone Caribbean literature and art portray and theorize racial, gendered, and sexual life in relation to historical and contemporary structures of power. What linguistic and artistic techniques do Hispanophone Caribbean literature and art use to reflect on and render queer and trans life more livable? What are the possibilities and limits of these linguistic and artistic techniques?

All readings are in English translation. A playlist featuring queer and trans Caribbean artists complements the course.

HISP 1331N. Haunting Childhood and Social Justice in Latin America (LACA 1505A).

Interested students must register for LACA 1505A.

HISP 1331O. Mourning and Experimental Form: African Diaspora Religions in Hispanophone Caribbean Literature.

How does one "move on" with loss? How does one live in the wake of loss? And what does it mean to mourn when loss is irreducible to a specific person, cause, or moment in time? In this seminar, we explore these questions by discussing Hispanophone Caribbean novels, cinema, poetry, and music. We pay particular attention to how literary and other artistic media use African diaspora religious practices and how they work with/through/against racial, gendered, and sexual tropes to address questions of loss and mourning. In each thematic unit, students will read primary materials in an intercalated manner to encourage critical dialogue across readings. Class discussions will be in Spanish. A playlist of Hispanophone Caribbean music on the theme of death and mourning complements the course.

HISP 1331R. Blackness and Puerto Rican Literature.

This course approaches Puerto Rican literature as a set of texts with which to critically think about discourses of racial blackness in the Puerto Rican archipelago and its diasporas. We examine key literary moments, from 19th century "foundational fiction" and early 20th century "Afro-Antillean" poetry to contemporary Black Puerto Rican voices. Guided by a set of Puerto Rican and Black U.S. scholars, our discussions are informed by the historical changes in the political status of Puerto Rico and how these changes have shaped discourses of racial blackness in Puerto Rican literature and culture. By focusing on the specificities of various Puerto Rican literary scenes, this course aims to gain insight into broader discussions regarding racial blackness in the Caribbean and Afro-Latin America. Class discussions are in Spanish. A playlist of music by Puerto Ricans complements the course.

HISP 1331U. "You Are Here": Mapas, Pueblos Indígenas y Mundos Nuevos.

Maps can and have been taken lightly as innocent illustrations of space, but there is so much more to them than meets the eye. This course will teach us how to deal with maps as complicated cultural for the study of Latin America. By learning how to "read" maps or "make them speak", we will navigate issues of knowledge and power as they manifest in these documents throughout colonial history and until the era of resolutions. Moreover, we will connect these issues with present-day Indigenous mapping practices and processes or repossession and restorative justice. We will broaden our knowledge of the processes of conquest and colonization in the Americas while reflecting on some classic and urgent topics of ethnic representation, land dispossession, and border-making.

HISP 1331V. First Person Pluralities: Indigenous Literatures of Abya Yala.

This course introduces students to Indigenous literature, philosophical ideas, currents, and traditions of the Americas (Abya Yala), and key themes in contemporary Native American and Indigenous Studies. Particularly, it focuses on the territories now referred to as Latin America. This course aims to provide students with conceptual tools with which to critically interrogate "settler epistemologies," which are often understood as "racialized, anthropocentric, and capitalist understandings of places" that sustain various forms of Indigenous erasure. We will explore how Indigenous-authored literature, understood in a broad temporal and cultural sense, is inextricably linked to land, kinship, and relationality, and we will further discuss how Indigenous writers and activists are currently using these ideas to resist enduring coloniality while building more ethical futures.

HISP 1370A. "One Hundred Years of Solitude": Culture and Politics in García Márquez's Work.

This course will focus on García Márquez's masterpiece in order to analyze its modes of representation, discursive strategies, and fictional construction as well as its interactions with history, politics, and literary and popular traditions. Other related work by the Colombian Nobel Prize winner will be discussed, as will his journalistic pieces and movies. The novel may be read in Spanish or English; discussion will be mainly in Spanish.

HISP 1370B. Gaborium: Memory, Fiction, and Reading in Gabriel García Márquez.

Departing from some formats of writing and reading (myth, history, legend, journalism, memoirs) in García Márquez writings, we plan to study the representation (magical, carnivalesque, political) unfolding in his novels, stories, and essays. From this processing of information and exchange, our course will analyze the cultural history of abundance, scarcity, and Utopia in Latin America. Prerequisite: HISP 0730 or 0740. Enrollment limited to 40.

HISP 1370E. La creatividad en América Latina.

Varias teorías actuales sobre la creatividad se ilustran muy bien con relatos, poemas, películas, música y arte de América Latina gracias a su adaptación de materiales, diversidad de formas, y gusto por la mezcla. Revisaremos las poéticas del dadaísmo, el surrealismo, la literatura fantástica, el realismo mágico, la biografía imaginaria, el utopismo, y el juego verbal. La clase será visitada por algunos autores para discutir sus procesos creativos.

HISP 1370F. Modernity and Memory in Latin America.

Contemporary cultural history proposes that memory is not an archive or a museum of history but a past evoked to amplify the present. We examine the rewriting and transformation of history in texts that illustrate issues of tradition/modernity, countryside/culture, center/margins, migration/exile, feminine/masculine, and popular culture/media culture.

HISP 1370I. The End of the Century and the Idea of the New.

This course will explore the narrative of the end, the culture of crisis, and the literary sceneries of the new aesthetics. Departing from a comparison between the "fin de siècle" and the current "end of the century," we will pass to the apocalyptic views of the millennium and focus on current essays on the topic (Calvino, Baudrillard) as well as on new trends, ideas, and narratives related to this subject in the Americas. This could be the first course on the literature of the 21st century.

HISP 1370K. Literatura latinoamericana del siglo XXI.

Estudiaremos las tendencias innovativas de la narrativa latinoamericana reciente. Veremos la literatura como un trabajo sobre la resignificación de lo nuevo. Nuevas voces, nuevos textos y géneros, y nuevas ideas proponen una visión del futuro que buscaremos documentar. Los libros y textos que leeremos son un mapa del futuro. Algunos temas: el sicodrama familiar, violencia y crisis del proyecto moderno, la saga de la migración, la conciencia transatlántica, el mundo emotivo y los afectos, la ética de la solidaridad.

HISP 1370L. Gabriel García Márquez and the Politics of Magic Realism.

Estudiaremos las principales novelas del autor, desde *El coronel no tiene quien le escriba* hasta *Cien años de soledad*, con especial atención al realismo mágico y las ideas sobre la novela que cultivó el autor. Nuestra discusión se situará en el proceso social y político latinoamericano así como en las mitologías de la cultura popular. Prerequisite: HISP 0730 or 0740.

HISP 1370N. Carlos Fuentes and the New Mexican Narrative.

This seminar will focus on close-readings and conceptualization of Fuentes' innovative works of fiction and main ideas on Mexico and its cultural history. We will discuss a selection of his short-stories, novels and essays, moving from the political to the Gothic, from history to the Baroque. We will follow with new Mexican fiction writers who renew and debate Fuentes practices and ideas. Among them, Carmen Boullosa, Jorge Volpi, Pedro Ángel Palou, Cristina Rivera Garza and Yuri Herrera. The seminar will be in Spanish, and is limited to 40 students.

HISP 1370T. Transatlantic Literature of the XXI Century: The Galaxia Borges.

This course will explore new trends and authors from the Hispano-phonetic world: Spanish, Latin American and Latino narratives of migration, bilingualism, globalization and innovative forms and techniques. This course will be dedicated to Borges global. We will follow his imprint on the international literature and literary ideas. We will read, in Spanish and English, Borges' stories and essays.

HISP 1370V. Mujeres Malas.

This seminar will analyze the notion of "bad women" in Pre-modern and Latin American Literature and visual texts. Perception, representation, and stereotyping of these women, both historical and fictional, as Mad, Witch, Femme fatal, Hysterical, and Crazy, will allow us to follow the ideological narrative that produced these characters. Some of them are based on medical, primitive, political, and even psychoanalytic conceptions. We will discuss the primitive Castilian epic cycle, *Celestina*, *Carmen*, the novel and the opera; Malinche, Cortéz' translator in the conquest of Mexico; and novels and short stories from contemporary authors as well as Luis Buñuel' films. Prerequisite: HISP 0730 or 0740.

HISP 1370W. La Cultura Política de la Transición y DDHH en el mundo Hispánico.

This course will discuss literary representations of "transitions" as the social and cultural mechanisms by which a country or region (Spain, Argentina, Chile, Peru, Cuba) moves from tradition to modernity, from the rural to urban, and from authoritarian regimes to democracy. We will also analyze the role of borders, social spaces, political negotiation, mapping and networks in the sagas of migration. Prerequisite: HISP 0730 or 0740.

HISP 1370Y. Literature and Film of the Cuban Revolution.

Cuba's revolution of 1959 gained extraordinary visibility internationally, motivating images of bearded rebels, jubilant crowds and middle-class flight. Yet even as the Cuban Revolution became an object of representation abroad, it guided the domestic production of new forms of literature and cinema. Over the course of the semester, we will trace the relationship between fiction and film, and between art and the revolutionary project, from 1959 to the present day.

HISP 1371B. Sports and Culture in Latin America.

Sports in Latin America are big, and in some cases huge, and their significance goes way beyond pure entertainment. They are a contemporary theater of sorts where underlying social tensions are relived and sometimes exacerbated. This course studies soccer, boxing, baseball and lesser-known sports (e.g., ultramarathons and women's wrestling) in relation to Latin American national narratives, politics, race, and gender. Using tools of sociology and anthropology, among others disciplines, we will study the representation of and discourse about sports in cinema, literature, television, and other media. IN ENGLISH.

HISP 1371C. "El gran zoo": Animals in Latin American Culture.

From César Vallejo's dismembered spider, to Julio Cortázar's house tiger, to Nicolás Guillén's satirical zoo, this course traces the varied ways in which animals appear in 20th and 21st century Latin American culture. We will pay particular attention to the zones of entanglement between the human and non-human, in order to analyze how a number of Latin American writers and filmmakers tackle oppositions between nature and culture, *civilización y barbarie*, city and countryside, self and other. In unsettling the human-animal divide, Latin American cultures respond to some of the most pressing—perhaps dehumanizing—issues of the century.

HISP 1371D. Latin American Authors Encounter the Sciences (LACA 1504F).

Interested students must register for LACA 1504F.

HISP 1371F. Narrating the Borderlands: Literature, Legality, and Solidarity.

This course explores multiple issues concerning crossing, living, and narrating the United States-Mexico border. We will focus on the border as a legal space bound to interpretations about what it means to migrate legally or illegally across that territory. We will explore the border as a vast and uneven expanse that entails diverse and often contradictory narrations and imaginaries that range from idealized landscapes to apocalyptic wastelands. Finally, we will discuss how border-crossing is a theme for artists and writers working on the solidarity networks from those who have dealt with the journey and its perils.

HISP 1371H. Storytelling in the Americas (LACA 1630).

Interested students must register for LACA 1630.

HISP 1371I. From Pancho Villa to Netflix: An Introduction to Mexican Cinema.

This course is an introductory overview of Mexican cinema, its prominent themes, and its historical eras. We will begin with the silent films of the national period in the 1930s and conclude with the transition to streaming platforms in the 2010s. We will pay attention to three interrelated questions: 1) What is the relation between cinema and political projects? 2) How does national cinema approach gender? 3) What is the role of neoliberal market in reshaping Mexican films? This approach will be useful to see how the production of cinema is related to major political and social processes in Mexico.

HISP 1371L. Take My Breath Away: A Cultural History of Air in Modern Latin America's Imagination and Literature.

Latin America has been conjured up from opposing aerial images. On the one hand, Amazonia has been represented as the "lungs of the earth"; on the other, its megalopolis as polluted places where breathing is hazardous. From Neruda's poetic journey to Machu Picchu, passing through eco-feminist gothic fictions, all the way through accordion, flute and Caribbean music, flight narratives and space films, this course explores what "aire" allows us to recount—or choke—, to scent—or to smell— about being in place or traveling. The languages of instruction will be Spanish and English.

HISP 1371P. On Both Sides of the Lens: Latin American Women Filmmakers (GNSS 1070).

Interested students must register for GNSS 1070.

HISP 1371Q. Insurrectas: Latin American and Latinx Women Writers and Artists.

Although some still hold onto the idea of universal artistic expression, we are increasingly aware of the embodied nature of creative work and of the need to analyze it from intersectional approaches that consider race, gender, class, and other social factors. This course examines creativity, struggle, and resistance in the work of Latin American and Latinx women writers and artists. We will consider debates about artistic innovation, activism, dissidence, and feminism in national and transnational contexts. Writers and artists studied include Frida Kahlo, Violeta Parra, Terri de la Peña, Achy Obejas, Elizabeth Acevedo, and many others. The course will primarily be conducted in Spanish, with some readings in English, and discussions in Spanglish will be welcome.

HISP 1371S. Science with an Accent.

Is it possible to produce science in a language perceived as without power? Why does it feel like juxtaposing "Spanish" and "science" is an oxymoron? How do Spanish-speaking scientists navigate the politics of translation and publication? This seminar introduces students to the history and practice of science and medicine in Latin America, its diaspora, and the wider Spanish speaking world—where the word for "scientist," *científica/e/o*, indeed has an accent. Drawing from disciplines such as Science and Technology Studies, Latine Studies, and Literary and Translation Studies, we will examine topics such as science and *latinidad*, the changing geographies of knowledge, the historical production of *lingua francas*, and the relationship between science and literature in Spanish. With practice-based conversations with Latin American and Latine scientists and scholars every fortnight. Conducted in Spanish; student participation in English welcome.

HISP 1371T. Reimagining the Line: Contemporary Arts and Political Imagination at the Mexico-US Border.

This course explores contemporary literary works, film, and art from and/or about the Mexico-US border. Concentrating on its political and aesthetic dimensions, the course focuses on the divisive nature of the border, the systematic exploitation of its gender and ethnic minorities, and the freedom produced by border experiences and arts. Students will analyze how border writers and artists come up with rhetorical and political strategies that allow them to reimagine themselves and their bi-national territory, and to generate challenging notions of citizenship, nationhood, and culture to establish more fluid and socially responsible modes of representation. The course pays close attention to works and creators that understand the border experience as one of instability and hardship, but also as a form of ideological resistance, subversive power, and freedom. Students are encouraged to bring their own interests and experiences to the course.

HISP 1371U. Posthuman Latin America: Contemporary Imagination and Visions of the Future.

What does it mean to be human? Does the human experience have limits? What happens when we stop being at center stage and something else, animals, plants, technology, the climate, starts occupying our place? Historically, answers to these questions have come from U.S., European and Asian culture, their film industry, literature, speculative artifacts, and academia. In this class, however, we will search to answer these questions from the perspective of Latin American, a standpoint marked by cultural multiplicity, sociopolitical complexity, uneven development, and radical imagination. Starting with Latin American historians who have written on who is and who gets to be human in the region, we will explore various aspects of the Latin American human and posthuman condition through analyzing non-textual media, literature, cultural essays, and the historical framework that produced them. We will concentrate on materials from Argentina, Bolivia,

HISP 1371V. A Nation in its Labyrinth: An Introduction to Colombia.

Tobacco, Rubber, Bananas, Coffee, Coca, Orchids... The image of Colombia has traveled the world under the guise of tropical products linked to speed, pleasure, violence and exoticism. But what lies behind the deceiving, magical spell of these traveling products? This course will travel back from the product to the place where these plants were tended to and flourished. The works of renowned artists such as García Márquez and lesser-known masters like Marvel Moreno or Débora Arango will allow us to read against the grain the history of a country crisscrossed by the diversity of its people and the beauty of its environments. Even though the histories of violence and social conflict will traverse this course, so will the warm sounds of cumbia, the voices of its poets and the green joy of its landscapes.

HISP 1371W. Medicine and Disability in Shakespeare and Early Modern Drama (COLT 1411F).

Interested students must register for COLT 1411F.

HISP 1500L. Theory and Practice of Translation.

The objectives of the course are to give students a firm grounding in the theory of translation studies as well as extensive experience in the practice of literary translation, working closely with several canonical Spanish texts as well as texts of the student's choice. Throughout the course of the semester, students will also be called upon to reflect actively on their experience as translators, and dialogue on this experience with their peers. This course is structured as a workshop, with students sharing their work – both translations and reading reflections – and collaborating with their peers.

HISP 1500M. Queer Aesthetics and Intimacies en español.

This course asks what connections can be drawn among 'queer' texts across time, place, and different genres of writing and forms of artistic expression in Spanish, Latin American, and US Latinx cultures. By looking to literary texts and cultural objects from the 20th to 21st centuries, this course considers how non-normative sex and gender function within spaces beset by colonial, racist, and nationalist legacies and how queerness imagines being within and without these structures. Readings and discussion will be in Spanish with an option to write papers in English for non-concentrators or concentrators fulfilling one of their English-language courses.

HISP 1666. ¡Qué miedo! El cine hispánico de horror.

Hispanic horror film, often overlooked within the world of film studies, is one of the most culturally and cinematically fascinating film genres of the Hispanic world. This course will delve into the dark and intriguing world of Latin American and Peninsular horror film. We will study horror cinema considering works from across time periods, national contexts and directors. This course will ask the following questions: How does the genre express individual and national anxieties in the cultural, social, political and economic realms? To what degree does horror film serve as a social barometer that both explores, negotiates and at times reifies social anxieties about difference, identity, sexuality, normativity, repression, technology, the environment, etc.? This class will be taught in Spanish.

HISP 1700A. Dismantling the Clockwork: Creative Writing and Narrative Techniques.

This class focuses on creating literary texts in Spanish, which involves the development of a sensibility to appreciate narrative texts and the skills to employ writing techniques, e.g. use of the first person, free indirect speech or the stream of consciousness. Drawing from theoretical reflections on writing made by Latin American and Spanish canonical writers as well as examples of its use, we'll explore the creative possibilities of narrative forms: aphorisms, prose poetry and short stories. Our objective is to strengthen students' skills as individual and collaborative authors through exercises in literary production and techniques, strategies, and habits of good writing. In Spanish.

HISP 1700B. Rhythm and Silence: A Creative Writing Workshop.

The course focuses on learning the craft of creative writing in Spanish across genres. We will study underlying principles of writing through lectures, readings, discussions, and exercises. As we reflect upon the creative process, we will examine the relationship between author and text and explore narrative techniques used to construct complex characters, dialogue, and imagery. The object will be to expand our creative writing skills and discuss the works of influential contemporary Latin American authors such as Juan José Arreola, Eduardo Halfon, Juan Carlos Onetti, Juan José Saer and Mario Vargas Llosa.

HISP 1750P. TAs/fellows for First Year Seminar HISP 0750P.

This course provides a senior concentrator the opportunity to work as a TA and fellow for the First Year Seminar HISP 750P: Contemporary Social Justice Cinema of the Spanish Speaking World. The TA/fellow completes more advanced versions of the two short semester papers and for a final project compiles a course development proposal for improvement to the class, along with an annotated bibliography. The student holds weekly discussion sections with first years and also provides developmental writing support throughout the semester.

HISP 1980. Independent Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HISP 1990. Senior Thesis Preparation.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HISP 2013. Dissertation/Professional Development.

This is intended for advanced graduate students in Hispanic Studies at the prospectus or dissertation stages. Its main purpose is to help students conceptualize or refine projects (including corpus of investigation, scholarly approaches, and principal guiding questions) and develop strategies for research and writing. Conducted as a workshop, the seminar provides ample opportunities for participants to give and receive feedback on each other's work and thus acquire important skills in peer review. While focused primarily on the dissertation (prospectus), the seminar also offers guidance on various aspects of professional development such as preparation for the job market and article publication.

HISP 2030B. History and Fiction: Literature of the 15th Century.

The goal of this course is to familiarize students with major literary works of the Fifteenth Century, and their socio-cultural background. Major works of three outstanding poets of this period (Juan de Mena, Íñigo López de Mendoza, and Jorge Manrique), satirical and historical writings, *romances*, (ballads sung with instrumental accompaniment), Alfonso Martínez de Toledo's *Corbacho* and Fernando de Rojas' *Celestina* will be presented in the context of the distinct cultural traditions that coexisted in Spain.

HISP 2030C. Medieval Masterpieces.

Examines three medieval Spanish masterpieces: *Cantar de Mio Cid*, *Libro de buen amor*, and *Celestina*. Other works are read to explore lines of continuity and discontinuity in these three works and their respective genres.

HISP 2030D. Fifteenth-Century Sentimental Romances and Celestina.

The fifteenth-century sentimental romances establish narrative innovations and a literary climate that lead inevitably to the creation of the "novel". With their insistent portrayal of the sufferings of love, romances by Padrón, Flores, San Pedro, and Rojas represent an essential step in the evolution of the modern novel.

HISP 2030E. Medieval Spanish Epic.

A study of the medieval Spanish epic poems and narratives. This seminar will move through a series of topics or events and texts from the 10th to the 15th centuries, exploring the relation between heroic narratives and history. Four medieval cycles (Castilian Counts, Cid, Carolingian, and anti-Carolingian) based on oral traditions will be studied and compared with their ballad congeners printed in the 16th century. We will examine the different contexts and channels in which historical epic narratives were produced, consumed and transmitted.

HISP 2030G. Mester de clerecia.

This course will focus on different works of "mester de clerecia" from the 13th and 14th centuries, and provide an overview of current thinking regarding their nature and origin, while at the same time seeking to interrogate many of the prevailing assumptions and received ideas of Spanish literary historiography. Works and topics will include: Libro de Alexandre (ideologies of power), Libro de Apolonio (the intellectual hero), Berceo's works (hagiography, clerical poetry, the rise of literacy), Poema/ Libro de Fernán González (epic hero), and Libro de buen amor (seduction manual/spiritual guide).

HISP 2030H. Latin in America (LATN 2080F).

Interested students must register for LATN 2080F.

HISP 2160F. Questioning the Canon: Golden Age Theatre.

The canonical dramatic texts of the Spanish Golden Age - from Lope de Vega's *El caballero de Olmedo* and *El castigo sin venganza* to Tirso de Molina's *El burlador de Sevilla* and Calderón's *La vida es sueño* will be opened to new critical inquiry. Dramatic discourse, construction of characters, social and moral issues such as justice versus revenge, reality versus dream, courtly love versus erotic love, chastity versus incest, will be at issue. Each play will also be studied in relation to its social background and as metaphors of power and political crisis.

HISP 2160G. Don Quixote: Contexts and Constructions.

This seminar offers an in-depth study of El ingenioso hidalgo Don Quijote de la Mancha in its "own right" and through an exploration of its afterlives (editions, translations, interpretations, imitations). On the one hand, we will examine the novel in its narrative complexity and engagement with early modern Spanish literature and history. On the other, we will trace its modern critical reception, with particular focus on its paradoxical canonization both as a "universal" masterpiece and a cornerstone of constructions of Spain and the study of Spanish and the Hispanic world.

HISP 2160J. The Poetics and Practice of Space in the Theater of the Spanish Baroque.

This seminar will explore the real and virtual spaces of seventeenth-century Spanish drama. We will examine the diverse spaces in which theatrical performances took place (public playhouses, city streets, court theaters, convents), as well as the various types of spaces represented on the stage (domestic and public, urban and rural, worldly and supernatural, familiar and distant). How did dramatic space articulate the boundaries of the public and private in the Spanish baroque? How did it function in the configuration of social hierarchies, subjectivities, and marginal as well as normative identities? In the theatrical world of seventeenth-century Spain, how did spatial practices on stage shape the experience of space off stage?

HISP 2160M. Early Modern Madrid: The Cultural Creation of a Court Capital.

This seminar explores the role of culture in Madrid's transformation from a secondary town into the epicenter of Spain's global monarchy in the early modern period. We'll study how court-city interactions created synergies and rivalries that made Madrid Spain's cultural, as well as imperial capital. Topics include: global-local negotiations in chronicles and festivities; constructions of insider / outsider status in prose and poetry; theater's centrality in urban social life; articulations and disarticulations of power through clothing and fashion; etc. We'll analyze works by canonical and lesser-known authors, artists, and artisans, while considering other early modern cities comparatively.

HISP 2160N. Antiquity and Innovation in the Hispanic Renaissance.

The artistic and literary florescence of the Siglo de Oro paralleled a broader current of cultural innovation, which extended beyond peninsular Spain to other parts of Europe and the Americas – a movement which can be conceived as a Hispanic Renaissance. After an introductory overview, the seminar will highlight four major tendencies, through close examination of some foundational authors and texts. The course will be organized thematically, but texts will generally be approached in chronological sequence, beginning with Antonio de Nebrija's investigations in the 1490s and ending with Carlos de Sigüenza y Góngora's showcasing of New Spain's complex legacies.

HISP 2160P. The Invention of the Novel: Fiction and Society in Renaissance Spain.

In the space of ten years, at the mid-sixteenth century, four genres made their first appearance in Spain: the picaresque, pastoral and Moorish (or captivity) novels, and the novel of foreign customs and adventures. This course examines how and why these novels, and the more complex novels that followed, became key instruments for commentary and dissent in a society with little tolerance for both pursuits. Working individually and in groups, we will also undertake a series of exercises in close and critical reading to hone analytical skills. All readings, discussions and assignments will be done in Spanish.

HISP 2160Q. Stage and Page in Early Modern Spain: A Seminar on the Comedia Nueva.

This seminar studies the development and florescence of early modern Spain's most popular form of entertainment, the comedia nueva, from both literary and performance perspectives. We will read works by the principal playwrights of the period (Lope de Vega, Tirso de Molina, Calderón de la Barca, and others); examine the comedia's main sub-genres (honor plays, comedias de capa y espada, and autos sacramentales, etc.); and consider the institutional regulation and social and material dimensions of theatrical activity (including the configuration of playhouses and composition of acting companies). Key critical approaches to the comedia, past and present, will also be explored.

HISP 2250N. Madrid's Modern Landscapes (1780-1900).

A seminar to study the changing relationship between landscape, architecture, and society during Madrid's modernization, from the late eighteenth century to the early twentieth. Considers representations of gardens, parks, and "natural" landscapes around the Spanish capital as expressions of how writers, planners, and intellectuals envisioned changes in ideas of national identity, gender relationships, class consciousness, and artistic perception. Readings, presentations, and group discussions are designed to promote a sustained analysis of such concepts as modernization, nature, the city and the country, with an eye not only to Madrid's past but also to our own relationship to landscape in the present.

HISP 2250O. Desterrados: Escapes and Homecomings in Latin American Literature.

This seminar will visit fiction, poetry and sound, from Romanticism to the present, tracking displacement, confinement and return in modern Latin American literature. We will think about the complicated relations between travel, freedom and knowledge; about technology, sound reproduction and the (im)possibilities of travel; the (mis)recognitions unleashed by the reality (or fantasy) of returning home; as well as the fixed (yet cosmopolitan) communities for the infirmed, the banished, the freedom-seekers. Authors read will be Heredia, J.M. Samper, Soledad Acosta, Gómez de Avellaneda, José Hernández, J.A Silva, Valdelomar, León-Gómez, Julio Flórez, J.E Rivera, Horacio Quiroga, De la Parra; Borges, Arenas, Cabezón Cámara, Salazar Masso.

HISP 2250P. Chismosas: Feminist Worldmaking and Gossip.

Traditionally dismissed as women's talk, as an idle and unproductive activity, and as superfluous information, this course provocatively suggests that gossip can be a feminist epistemology. Gossip, through this understanding, enables the dissemination of political thought through marginal spaces of identity and belonging, as well as creating knowledge based on what Muñoz has called a "modality of anti-rigor." Connecting contemporary theory with nineteenth-century to contemporary Peninsular film and literature, the course will explore: (1) how gossip is mobilized in canonical and counter-canonical texts, acting both as alternative networks of knowledge transmission and also as a surveillance, policing, and controlling device; (2) how contemporary theorists—such as Saidiya Hartman, Anjali Arondekar, José Esteban Muñoz, and Silvia Federici—can help us conceive gossip as both an object of study and a methodology for archival studies.

HISP 2350C. La nueva novela de América Latina.

Este curso está dedicado a algunos textos fundadores: *Rayuela* de Julio Cortázar, *Pedro Páramo* de Juan Rulfo, *La muerte de Artemio Cruz* de Carlos Fuentes, *Los ríos profundos* de José María Arguedas, *Cien años de Soledad* de Gabriel García Márquez; pero también a otros que literaria inician nuevas rutas: *La guaracha del macho Camacho* de Luis Rafael Sánchez, *Un mundo para Julius* de Alfredo Bryce Echenique, *Los vigilantes* de Diamela Eltit, y *La ingratitud* de Matilde Sánchez.

HISP 2350E. Novela latinoamericana contemporánea: Crítica Textual y Ediciones Críticas.

Estudiaremos la constelación de novelas fundamentales (*Pedro Páramo*, *Los ríos profundos*, *Rayuela*, *La muerte de Artemio Cruz*, *Cien Años de soledad* entre otras) que configuran un sistema literario hecho de innovación formal, ampliación de la lectura, y puesta en crisis de la representación.

HISP 2350G. Teoría y Práctica Poética en Cesar Vallejo.

Seminario dedicado a estudiar en profundidad la poesía hermética de Vallejo. Analizaremos su práctica poética así como su teoría del poema a través de la evolución de su obra y pensamiento.

HISP 2350H. The History of Wonder in Colonial Spanish American Lettres.

The notion of wonder (*asombro*, *maravilla*) played a determining role in the Spanish and Creole writings of the Spanish American colonial period. The volatile aesthetic of wonder raises and implicates such important issues as otherness, exoticism, category crisis, and identity formation. A studies course examining the role of wonder in New World historiographic and literary writings of the 16th and 17th centuries.

HISP 2350I. Vallejo y sus contemporáneos.

Este seminario monográfico tiene como finalidad explorar la obra poética de César Vallejo en relación a los contextos del modernismo, la vanguardia, y la poesía contemporánea. Partiremos de un análisis formal del lenguaje poético y su organización semántica, de modo de ejercitarnos en el análisis textual de la poesía.

HISP 2350M. Poetics of the Avant-Garde in Latin America.

This course traces the shocks and flows of avant-garde activities through Latin America, beginning in the first decades of the twentieth century and weaving our way to the present. We will explore manifestoes, poetry, artworks, and film from Argentina, the Caribbean, Chile, Brazil, Mexico, and Peru, from creacionismo through Brazilian modernismo, ultraísmo and estridentismo, poesía afroantillana and tecnoindigenismo, with occasional detours into Iberian experiments, culminating with studies of the neo-avant-gardes of the 1960s and of the nostalgia for the avant-gardes which characterizes the early twenty-first century.

HISP 2350P. Teoría Literaria: la literatura Transatlántica.

Dedicado a la teoría del texto transatlántico, en este seminario trabajaremos sobre la historia intelectual de la interculturalidad Atlántica. A partir de los modelos, contactos, apropiación, debate y dialogismo que entre Europa y América Latina configuran un sistema literario, nos detendremos en la construcción del Sujeto, la Representación y la Lectura. Estudiaremos a Guamán Poma de Ayala y Garcilaso de la Vega, la saga de Calibán, los modelos de la formación nacional en Martí y Sarmiento, y la genealogía de la mezcla como la diferencia moderna de la producción cultural latinoamericana. En español.

HISP 2350V. The Politics of Romanticism in Spanish American Literature.

This course postulates Romanticism as a regime of representation employed by second-generation citizens of the new Latin American republics to organize time-space in post-Independence Spanish America. Through readings of national romances, periodicals, poetry, cuadros de costumbres and travelogues, we will discuss what Romanticism and being Romantic meant for mid-19th-century writers and readers in Spanish America. Weekly readings will be organized around a word from a glossary of Romantic keywords: lengua, pueblo, indio, España, among others. Finally, the course will examine connections between 19th-century Romanticism, 20th century criollismo and Populism.

HISP 2350X. Literatures of Work and the Work of Literature in Tropical Latin America.

This seminar investigates the ways in which labor has been represented in tropical Latin American literature from Independence until the mid-20th century. We will explore the representations of different agro-export tropical booms in fiction —tobacco, rubber, banana, among others— in order to understand how work determined the ways in which populations and landscapes were imagined into being. Finally, this seminar will incorporate fictions of labor that appear more difficult to control or are rendered as gothic: vagrancy and banditry. Seminar readings and discussion will be in Spanish.

HISP 2450. Exchange Scholar Program.**HISP 2520I. Sor Juana Inés de la Cruz in Her Literary Context.**

Intensive study of Sor Juana's major writings in a variety of genres; comparisons with other writers of her extended literary milieu.

HISP 2520J. Teoría y practica del texto transatlántico.

Este curso propone varios escenarios teóricos sobre el texto transatlántico. Partiendo de modelos de teoría literaria formal trabajaremos sobre un conjunto de textos de ambas orillas del idioma. Revisaremos las cuestiones del género, representación, lectura y recepción, mezcla y heterogeneidad archivo y cambio.

HISP 2520L. Latin American Existential Literature.

European existentialism had a strong impact on Latin American literature, though that impact remains under-explored. The course begins with European existentialism and Latin American identity politics. It then explores the particular constructions of European existentialism effected by Argentine, Uruguayan, Mexican, and Brazilian writers of prose fiction in the mid-twentieth century. Readings in Spanish and English. Instructor override needed for registration.

HISP 2520M. The Poetry and Discursive Strategies of Spanish American Modernismo.

The development of *Modernismo* was a turning point in the elaboration of the continental self-image. Modernista poets like Rubén Darío, Leopoldo Lugones, Julio Herrera y Reissig, Julián del Casal, Manuel Gutiérrez Nájera and José Asunción Silva were among the first original Hispanic American creators of literature, but they did *not* share a common view on continental problems and solutions. The relevance of Modernismo for the shaping of Latin American self image cannot be overstated. *Modernista's* conceptions on new intellectuals, aestheticism, *l'art pour l'art*, racism, immigrants, science and the occult, modernization, decadence, *dandyismo*, the body, sex, feminism, anarchism, cosmopolitanism, pan-Latinism, universalism and nationalism will be discussed.

HISP 2520O. The Old Science in the New World: Nature, Culture, and Empire in the Age of Exploration.

Studies how Spain's exploration and conquest of the Americas tested European understandings of the natural world; of nature's bearing on human psycho-physiology and, thereby, on culture; and of the balance between normalcy and deviance in natural and human domains. Topics range from changing theories about the distribution of land and life around the globe to "natural" and "moral" histories implicated in a debate over Spain's rights to the Americas and its peoples. Readings: Aristotle, Strabo, Pliny, Ptolemy, Columbus, Vespucci, Oviedo, Las Casas, and Acosta. Students will be able to read primary texts in either Spanish or English. Discussion in English. Undergraduates welcome.

HISP 2520P. Narrativa latinoamericana contemporanea (De Juan Rulfo a Diamela Eltit).

Estudiaremos los modos de representación, prácticas de escritura y lectura, redes culturales, tramas sociales y políticas de los relatos de la modernidad crítica y diferencia latinoamericana. Autores: Cortázar, García Márquez, Fuentes, Bryce, Rodríguez, Juliá.

HISP 2520Q. Critical Readings in Cuban, Puerto Rican and Dominican Literature.

This course traces the emergence and evolution of nationalist expression in literary and political texts from Cuba, Puerto Rico and the Dominican Republic. Beginning with early anti-colonial and nation-building writing, we focus particularly on the idea of the island in articulations of national culture. We address key figures in the intellectual history of the Caribbean; essays, novels and poetry from the nineteenth-century to the twenty-first; and recent critical and theoretical work on the Spanish Caribbean. Weekly topics include the intersection of race and nationalism; exile and migration; and transnational ties to the broader Caribbean, the U.S. and Latin America. This course is for graduate students only.

HISP 2520R. Radical Borders.

This course considers Mexico from a transnational perspective in order to explore the aesthetic and political dimensions of its northern and southern borders. We will examine the question of migration from and to Mexico in novels, poems, and theoretical materials from countries such as El Salvador, Honduras, and the United States. The objective is to conceptualize the notion of border not only as a space of surveillance and law enforcement but also as an arena for radical politics and revolutionary ideals. We will read texts by Horacio Castellanos Moya, Alaíde Foppa, Yuri Herrera, Subcomandante Marcos, and Sayak Valencia among others.

HISP 2520T. Critical Disability Studies (Medieval and Early Modern).

Using disability studies and disability theory, the medical humanities, the history of science and technology, and the history of the body as helpful theoretical frameworks, this course will study the representation of disability in Medieval and Early Modern primary sources and in contemporary critical interventions. Although "disability" is often (erroneously) exclusively attributed to later literary and historical moments, the "non-normative" body was frequently centered in premodern negotiations of selfhood, embodiment, agency, and individual and collective identity. In addition to exploring and developing a critical vocabulary for discussions of medieval and early modern disability, and considering fully the charge of anachronism, students will be asked to engage with Medieval and Early Modern texts (and select Classical intertexts) that prioritize disease, diagnosis, impairment, medicine, and corporeal variance, etc., to better understand the determinative role that disability plays in the premodern Weltanschauung.

HISP 2520U. Emergence of the Vernacular: Prestige and Critique (Spanish & Italian).

Using pertinent sources drawn primarily from Latin, Spanish, Italian, and their early variants, this class will study the emergence and development of the vernacular from its beginnings through the Early Modern period. We will consider theorizations of vernacularity alongside some of its most pressing debates as they circulated throughout Spain, Italy, and the Americas, in particular. To this end, we will examine historical sources that exemplify the wide reach of the sociopolitical, linguistic, and identity anxieties and violences surrounding linguistic development, while concentrating our attentions on literary sources (prose, drama, poetry) and didactic manuals and epistles that directly comment upon the status of language(s), vilifying, defending, redefining, or reaffirming them. Students should be proficient in either Spanish or Italian, and have advanced reading abilities in the other.

HISP 2600. Exploring and Extracting in Colonial Latin American Literatures.

This graduate seminar provides a panorama of Latin American literatures during the period covered by the Colonial preliminary exam list. Historiographically, this period has been termed Europe's age of exploration. From the Americas, however, it could be better characterized as the age of extraction. We will probe the writings of key authors and texts from Colonial Latin America on the tension between exploring (associated with the deeply human capacity for curiosity and wonder) and extracting (the result of the also very human impulse to possess and accumulate). In our readings, we will see how at times the two are indistinguishable (a slippage that is evident in the Portuguese "exploração" meaning "exploitation"); at others, we will glimpse at the authors' desire to replenish landscapes, reconstitute rights and reimagine worldviews beyond the regimes brought forth by the adjective "Colonial". Conducted in Spanish.

HISP 2620A. Entre nosotros: Representing the Family in Modern and Contemporary Spain.

This course reflects on the representation of the family in Spanish literature and film since the Civil War, spanning texts and films from the period 1942-2009. Some of the themes we will explore over the course of the semester include: the family as a space for the formation of identities and subjectivities; the symbolic relationship between family and nation; religion; gender roles and the concepts of maternity, fatherhood, and childhood; monstrous families and the specter of incest; modern "found" families constructed outside biological bonds. Texts and films by Sender, Buero Vallejo, Delibes, Cela, Laforet, Buñuel, Borau, Almodóvar, Saura, among others.

HISP 2620O. Authorship and Authoritarianism in Spain and Latin America.

This course examines responses to authoritarianism in contemporary Spanish and Latin American literature, using the particular cases of recent dictatorships in Spain (Francisco Franco, 1939-1975) and Chile (Augusto Pinochet, 1973-1990) as a focus. Alongside novels and a play dealing with dictatorship and its aftermath, we will read theoretical texts that offer varied approaches to history, literature, aesthetics, and politics. Throughout, we will examine the complex relationship between authority, authoritarianism, and authorship in the twentieth and twenty-first centuries, asking how dictatorship is (not) narrated and how we can read narratives emerging from contexts of repression and state terror. In Spanish.

HISP 2620P. The Urbanization of Culture: BCN-MAD from Modernity to Postmodernity.

The way you live is the way you represent reality, David Harvey argued in *The Urban Experience* (1989). Any change in aesthetics, he continued, it should therefore imply a change in the perception of space leading to what Harvey described as the urbanization of consciousness. Playing out of this concept, this class will examine the ways by which two Iberian cities (Barcelona and Madrid) have been both represented and re-imagined in contemporary culture through novels, film, painting and photography.

HISP 2900. Theory and Methods of Foreign Language Teaching.

How are second languages acquired? How can instruction optimize acquisition? How do we evaluate, improve or create effective teaching materials? This course introduces the theory of foreign language learning and teaching and seeks to help language teachers implement communicative language teaching through reflective practice. Written permission required for undergraduates.

HISP 2900A. Translation: Theory and Practice (COLT 2720D).

Interested students must register for COLT 2720D.

HISP 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

HISP 2980. Research in Spanish and Latin American Literature.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HISP 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

HISP 2990A. Learning & Teaching Spanish as a Foreign Language.

This course provides practicing and prospective teachers of Spanish as a second language (L2) with an introduction to the field of second language acquisition (SLA) and its application to language teaching methodology and pedagogy, with a specific focus on the teaching of Spanish. In addition to the theoretical discussion, there is a significant practical component to the course so you can start (or continue) to develop skills and materials for your own work as an instructor at Brown University and beyond.

HISP 2990B. Proseminar in Hispanic Studies.

This proseminar's aims are twofold: 1) to provide graduate students with a map of the discipline of Hispanic Studies, with attention to its history and to its newest directions; and 2) to demystify key elements of an academic career, both specific to the doctoral program in our department and more generally. The bulk of course's meetings will therefore have a dual structure. In the first half of our sessions, we will center on particular fields and their representative and innovative essays, in discussions introduced by members of the department and beyond. The second half of each class session will be devoted to practical issues around professionalization (article publication, reviews, conference participation, crafting the dissertation, etc.). Students will be closely involved in the planning of the course, contributing suggestions for topics to explore and potentially presenting samples of their own work.

HISP 2991. Thesis Preparation.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HISP XLIST. Courses of Interest to Concentrators in Hispanic Studies.

History

As one of the first institutions in the United States to provide for historical studies, Brown University has long valued and nurtured research in the Department of History. The faculty's high standard of scholarship and excellence in teaching are well known, and members of the department are committed to the value a rigorous education in the humanities confers upon students. The department trains students in the fundamentals of historical thinking: skills and attitudes that will provide a foundation for excellence in a wide range of careers and professions, including teaching, law, medicine, business, public service, and advanced historical research.

For additional information, please visit the department's website: <https://www.brown.edu/academics/history/>

History Concentration Requirements

History is the study of how societies and cultures across the world change over time. History concentrators learn to write and think critically, and to understand issues from a variety of perspectives. The department offers a wide variety of courses concerned with changes in human experience through time, ranging from classical Greek and Roman civilizations to the histories of Africa, the Middle East, the Americas, and Asia. While some courses explore special topics, others concentrate on the history of a particular country (e.g. China or Brazil) or period of time (e.g. Antiquity or the 20th century). By taking advantage of our diverse course offerings, students can engage in and develop broad perspectives on the past and the present.

Prospective concentrators should visit the History site and visit the office hours of their prospective concentrator advisor (assigned according to student surname).

Concentration Requirements

Basic requirement: A minimum of 10 courses, at least 8 of which must be courses taught by a Brown University History Department faculty member (<https://www.brown.edu/academics/history/faculty/>) (including their cross-listed courses) and/or courses offered by the Brown History Department (such as those taught by Visiting or Adjunct Professors). Transfer students or study-abroad students who have spent a year or more at another institution must have at least 7 of 10 history courses taught by Brown History faculty or otherwise offered through the Brown History Department.

Summary

Two (2) Courses in the "Premodern" era (P)

One (1) Course in Africa OR Middle East - South Asia

One (1) Course in East Asia OR Latin America

One (1) course in Europe OR North America

One (1) course designated Global

Students may take a maximum of 5 courses in any single geography

Field of Focus (FF) - Students must take four courses in the field of focus. These courses may be used to satisfy different requirements (geography and field of focus, etc.).

Capstone Seminar: All concentrators must complete at least one capstone seminar (HIST 1960s and HIST 1970s series and select HIST 1980s courses), ideally, in the field of focus.

Honors (optional) 3 additional courses related to writing a thesis (one of which, HIST 1992, can count towards your 10 concentration requirements)

Note: Courses can fulfill more than one of these requirements at a time. For instance, HIST1963Q "Sex, Power, God: A Medieval Perspective" would count as "Premodern," a "Europe" class, and a capstone seminar. It could also count towards a field of focus in premodern Europe or the history of sexuality or the history of religion, etc.

Courses below 1000: Students may count no more than four courses numbered below 1000 toward the concentration requirements. Students considering a concentration in History are encouraged to take First Year and Sophomore seminars, as well as courses in the HIST 0150 and 0200 series, for an introduction to historical reasoning, discussion, and writing.

Field of focus: In History, concentrators choose or create their own "track," rather than having to select an existing track. The field of focus must include a minimum of four courses, and it may be: geographical (such as Latin America); geographical and chronological (such as Modern North America); or transnational (such as ancient world); or thematic (such as urban history). All students should consult a concentration advisor early in the process about their potential field of focus. All fields are subject to approval by the concentration advisor.

Thematic fields of focus include but are not restricted to:

- Comparative Colonialism
- Gender and Sexuality
- Law and Society
- Race and Ethnicity
- Science, Technology, Environment and Medicine (STEAM)
- Urban History

Examples of transnational foci include:

- The Ancient World
- The Early Modern Atlantic World
- Africa and the Diaspora
- The Mediterranean World from Antiquity to the Middle Ages
- The Pacific World

Geographic Distribution: Concentrators must take at least four courses defined by geography as follows:

- One course in Africa or Middle East-South Asia
- One course in East Asia or Latin America
- One course in Europe or North America
- One course in Global

Maximum of five courses in a single geography

"Global" courses are defined as those that deal with at least three different regions of the world.

For details on which courses count toward which geographical distribution requirement click here (<https://docs.google.com/spreadsheets/d/1NT5I7zAqlXDCivZXcTdsdceSnMD5v28ke6550tnBrnE/edit/#gid=2138711521>).

Chronological Distribution: All concentrators must complete at least two courses designated as "P" (for pre-modern).

For a listing of which courses count as "P" courses click here (<https://docs.google.com/spreadsheets/d/1NT5I7zAqIXDCivZXcTdsdceSnMD5v28ke6550tnBrnE/edit/#gid=2138711521>)

Capstone Seminar: All concentrators must complete at least one capstone seminar (HIST 1960s and HIST 1970s series and select HIST 1980s courses). They provide students with an opportunity to delve deeply into a historical problem and to write a major research and/or analytical paper which serves as a capstone experience. Students considering writing a senior honors thesis are advised to take an advanced seminar in their junior year. First-Year students are not advised to take these courses.

Transferring Courses: The History Department encourages students to take history courses at other institutions, either in the United States or abroad, as well as history-oriented courses in other departments and programs at Brown. Students may apply two courses taken in other departments/programs at Brown to the ten-course minimum for the History concentration. Students who spend one semester at another institution may apply to their concentration a maximum of two courses from other departments or institutions, and those who spend more than one semester at another institution may apply to their concentration a third course transferred from another institution.

Students wishing to apply such courses must present to their concentration advisor justification that those courses complement some aspect of their concentration. Courses from other Brown departments *may not* be applied toward the chronological distribution requirement. History courses taught by trained historians from other institutions (e.g., from study abroad or a previous institution) *may* be applied toward the chronological distribution requirement so long as at least 2/3 of the course content examine the "premodern" or "early modern" periods.

It is normally expected that students will have declared their intention to concentrate in History and have their concentration programs approved before undertaking study elsewhere. Students taking courses in Brown-run programs abroad automatically receive University transfer credit, but concentration credit is granted only with the approval of a concentration advisor. Students taking courses in other foreign-study programs or at other universities in the United States must apply to the Transfer Credit Advisor and then get approval from a concentration advisor.

Regular Consultation: Students are strongly urged to consult regularly with their concentration advisor or a department advisor about their program. During the seventh semester, all students must meet with their concentration advisor for review and approval of their program.

COURSES BELOW 1000

LECTURE COURSES

150's: Thematic Courses that Cut Across Time and Place

HIST 0150A	History of Capitalism
HIST 0150B	The Philosophers' Stone: Alchemy From Antiquity to Harry Potter
HIST 0150C	Locked Up: A Global History of Prison and Captivity
HIST 0150D	Refugees: A Twentieth-Century History
HIST 0150F	Pirates
HIST 0150G	History of Law: Great Trials
HIST 0150H	Foods and Drugs in History
HIST 0150I	The Making of the Modern World
HIST 0150J	The Ocean in Global History

Gateway Lecture Courses

HIST 0202	African Experiences of Empire
HIST 0203	Modern Africa: From Empire to Nation-State
HIST 0212	Histories of East Asia: China
HIST 0214	Histories of East Asia: Japan
HIST 0215	Modern Korea: Contending with Modernity
HIST 0218	The Making of Modern East Asia

HIST 0228A	War, Tyranny, and Peace in Modern Europe
HIST 0232	Clash of Empires in Latin America
HIST 0233	Colonial Latin America
HIST 0234	Modern Latin America
HIST 0243	Modern Middle East Roots: 1492 to the Present
HIST 0244	Understanding the Middle East: A Modern History
HIST 0247	Civilization, Empire, Nation: Competing Histories of the Middle East
HIST 0250	American Exceptionalism: The History of an Idea
HIST 0252	The American Civil War
HIST 0253	Religion, Politics, and Culture in America, 1865 - Present
HIST 0255A	Mexican American History
HIST 0256	Introduction to Latinx History
HIST 0257	Modern American History: New and Different Perspectives
HIST 0259	Labor, Land and Culture: A History of Immigration in the U.S.
HIST 0270A	From Fire Wielders to Empire Builders: Human Impact on the Global Environment before 1492
HIST 0270B	From the Columbian Exchange to Climate Change: Modern Global Environmental History
HIST 0273A	The First Globalization: The Portuguese in Africa, Asia, and the Americas
HIST 0276	A Global History of the Atomic Age
HIST 0276B	Science and Capitalism
HIST 0285A	Modern Genocide and Other Crimes against Humanity
HIST 0286A	History of Medicine I: Medical Traditions in the Old World Before 1700
HIST 0286B	History of Medicine II: The Development of Scientific Medicine in Europe and the World

SEMINAR COURSES

First-Year Seminars

HIST 0510A	Shanghai in Myth and History
HIST 0520A	Athens, Jerusalem, and Baghdad: Three Civilizations, One Tradition
HIST 0521A	Christianity in Conflict in the Medieval Mediterranean
HIST 0521M	The Holy Grail and the Historian's Quest for the Truth
HIST 0522G	An Empire and Republic: The Dutch Golden Age
HIST 0522N	Reason, Revolution and Reaction in Europe
HIST 0522O	What is Enlightenment?
HIST 0523A	The Holocaust in Historical Perspective
HIST 0523B	State Surveillance in History
HIST 0523M	History of Fascism
HIST 0523P	The First World War
HIST 0535A	Atlantic Pirates
HIST 0535B	Conquests
HIST 0537A	Popular Culture in Latin America and the Caribbean
HIST 0537B	Tropical Delights: Imagining Brazil in History and Culture

HIST 0550A	Object Histories: The Material Culture of Early America
HIST 0551A	Abraham Lincoln: Historical and Cultural Perspectives
HIST 0552A	A Textile History of Atlantic Slavery
HIST 0555B	Robber Barons
HIST 0556A	Sport in American History
HIST 0556B	Inequality and American Capitalism in the Twentieth Century

HIST 1990	Undergraduate Reading Courses
HIST 1992	History Honors Workshop for Prospective Thesis Writers
HIST 1993	History Honors Workshop for Thesis Writers, Part I
HIST 1994	History Honors Workshop for Thesis Writers, Part II

Honors (OPTIONAL):

History concentrators in the 5th or 6th semester may apply for honors. To be admitted, students must have achieved two-thirds "quality grades" in History department courses. A "quality grade" is defined as a grade of "A" or a grade of "S" accompanied by a course performance report indicating a performance at the "A" standard.

Students who wish to enroll in honors are recommended to take HIST 1992, "History Honors Workshop for Prospective Students." HIST 1992 can count as one of the 10 courses required for graduation in history. HIST 1992 students who prepare a prospectus that receives a grade of A- or above will be admitted to the honors program. Students in their 7th semester who have not taken HIST 1992 (including but not limited to those who are away from Brown during that semester) may apply to the program by submitting a prospectus no later than the first day of that semester. All honors students must complete one semester of HIST 1993 "History Honors Workshop for Thesis Writers, Part I" and one semester of HIST 1994 "History Workshop for Thesis Writers, Part II." HIST 1993 and HIST 1994 do not count towards the 10 courses required for graduation in history; they are an additional two courses to the minimum of 10 required history courses. Students who contemplate enrolling in the honors program in History should consult the honors section of the department website. They are also encouraged to meet with the Director of the Honors Program (DHP), who serves as the honors advisor.

History Graduate Program

The Department of History is a community of scholars and students committed to the values and ethics of rigorous education in the humanities and humanistic social sciences. The Department is dedicated to research, teaching, and public outreach regarding humanity's vast and diverse past.

The Department's interests span the globe and cover every epoch of human history. Its faculty members are equally acclaimed for their path breaking research, writing, and dedication to teaching and advising.

The Department of History offers graduate programs leading to the Master of Arts (A.M.) degree and Doctor of Philosophy (Ph.D.) degree. The A.M. degree is only awarded to students in the Fifth Year M.A., Concurrent Degree, and Open Graduate Education Programs, and as a transitional degree for Ph.D. students. It is not open for admission to terminal M.A. applicants not currently enrolled at Brown.

For more information about the Ph.D. program please visit the following website:

<https://www.brown.edu/academics/history/graduate-program> (<http://www.brown.edu/academics/gradschool/programs/history/>)

For more information about the A.M. program please visit the following website:

<https://www.brown.edu/academics/history/graduate/ma-program> (<https://www.brown.edu/academics/history/graduate/ma-program/>)

Courses

HIST 0150A. History of Capitalism.

Capitalism didn't just spring from the brain of Adam Smith. Its logic is not encoded on human DNA, and its practices are not the inevitable outcome of supply and demand. So how did capitalism become the dominant economic system of the modern world? History can provide an answer by exploring the interaction of culture and politics, technology and enterprise, and opportunity and exploitation from the era of the slave ship to the era of the container ship. HIST 0150 courses introduce students to methods of historical analysis, interpretation, and argument. This class presumes no economics background, nor previous history courses.

HIST 0150B. The Philosophers' Stone: Alchemy From Antiquity to Harry Potter.

Alchemy today conjures Harry Potter or Full Metal Alchemist, not the serious scholarly tradition that captivated Isaac Newton and Carl Jung. We will explore alchemy's long history, examining how it has endured and adapted to different cultural, social, intellectual, economic, and religious contexts. What did alchemists do? How did they explain their art? And why has alchemy come to represent fraud and folly in some circles and wisdom in others? Students will answer these questions by conducting research in the Hay. HIST 0150 courses introduce students to methods of historical analysis, interpretation, and argument. Presumes no previous history courses.

HIST 0150C. Locked Up: A Global History of Prison and Captivity.

A long history lies behind the millions of men and women locked up today as prisoners, captives and hostages. Beginning in antiquity and ending in the present, this course draws on materials from a variety of cultures across the world to explore incarceration's centuries-old past. In examining the experience and meaning of imprisonment, whether as judicial punishment, political repression, or the fallout of war, the class will ask fundamental questions about liberty as well. History 150 courses introduce students to methods of historical analysis, interpretation and argumentation. This course presumes no previous history courses.

HIST 0150D. Refugees: A Twentieth-Century History.

Refugees are arguably the most important social, political and legal category of the twentieth century. This introductory lecture course locates the emergence of the figure of the refugee in histories of border-making, nation-state formation and political conflicts across the twentieth century to understand how displacement and humanitarianism came to be organized as international responses to forms of exclusion, war, disaster and inequality.

Syllabus link: <https://blogs.brown.edu/refugees-20th-century/>

HIST 0150F. Pirates.

As long as ships have sailed, pirates have preyed upon them. This course examines piracy from ancient times to present, from the Mediterranean Sea to the Indian Ocean and the Caribbean. We will explore questions: How did piracy evolve over time? Where, why, and how did people become pirates, and what (if anything) made them different from other seafarers? How is piracy related to other historical processes, notably imperialism and nation-building? What explains the resurgence of piracy in the twenty-first century? Why have pirates become the stuff of legend, and how accurately are they portrayed in books and films?

HIST 0150G. History of Law: Great Trials.

Through discussion of a variety of trials spanning more than two millennia, this course will probe the nature of demonstrative and transitional justice, the relationship between ideology and law in different societies and time periods, and how trials affirm or contest legal personhood, criminal responsibility, and social marginalization. Cases to be covered include: Socrates, Jesus Christ, the French Revolutionary Terror, the Amistad case, the Dreyfus Affair, the fictional Japanese Rashomon trial, the Stalinist show trials, the Nuremberg trials, and the trials of Nelson Mandela, O.J. Simpson, Dilma Rousseff, and Saddam Hussein (to name a few).

HIST 0150H. Foods and Drugs in History.

What we consume connects us to the worlds of both nature and culture. Bodily and socially, "you are what you eat," but if your well-being suffers, you often seek out other ingestible substances. In many times and places, changing what you eat is thought to be healing, while in other times and places drugs – either remedial or recreational – are thought to be distinct and more immediately restorative. Few human interactions with the larger world are more important or interesting than how comestibles and medicines have been discovered, mixed, transformed, distributed, and how those processes have changed us.

HIST 0150I. The Making of the Modern World.

The modern world is often seen as a triumph of liberal enlightenment thought, scientific discovery, and economic progress. But it is also a product of settler colonialism, imperial expansion, and massive waves of population displacement that reorganized human societies along racialized and capitalist modes of inclusion and exclusion. This course seeks to understand the making of our current world from the conquest of the "Americas" and the slave trade to industrialization and climate change. It also considers lessons from the struggles by native, enslaved, colonized, and displaced populations for a more just, peaceful, and greener future.

HIST 0150J. The Ocean in Global History.

This course examines how the ocean and its denizens have influenced and been shaped by diverse social, material, political, and cultural factors across different spaces and chronologies. We will consider how historical actors across global history have approached the ocean and its creatures as sources of sustenance and power, cosmology and knowledge, conveyance and death. We will weigh, too, how adopting an oceanic perspective can open new ways of understanding the past, present, and future of our planet and its inhabitants. Topics considered include contemporary and historic Indigenous seafaring traditions and maritime subjectivities across Moana/Pacific and other oceanic basins; Atlantic seaborne empires, piracy, human trafficking in the age of sail; the establishment of oceanography as a scholarly discipline; the evolution of maritime transportation infrastructure under global capitalism; the political ecology of a warming ocean in the era of climate crisis.

HIST 0150K. Curators, Hoarders, and Looters: The Long and Curious History of Collecting.

What does it mean to collect? What drives human cultures to amass, hoard, steal, select, separate and display objects? This undergraduate lecture course – at the intersection of anthropology, geography, history, and museum studies – examines forms and practices of collecting from antiquity to the present. We will explore museums, archives, libraries, and other less formal institutions from around the globe, probing in the process the disciplinary boundaries by which scholars have sought to understand the implications of collections in different times and distant territories. We will unpack libraries, visit early modern cabinets of curiosities, and gain insights into Indigenous collections: from Polynesia to Mashantucket. And we will address the fraught yet fascinating relationship between the collection, the catalogue, and the archive – and the gathering, registering, and organizing that constitute them.

HIST 0202. African Experiences of Empire.

This is a "flipped" course on sub-Saharan Africa from the mid-nineteenth through the mid-twentieth centuries. It presupposes no knowledge of Africa and serves as an introduction to the continent. It focuses on daily life, families, and popular culture. Students will analyze change, question perspectives, and imagine life, and question what "Africa" was during the period of European imperialism. Most readings are primary sources, which include photographs, songs, and oral histories. The course is "flipped"; students' first introduction to the content comes before class meetings through the text and multi-media sources. Class meetings are dedicated to discussion and exercises, including role-playing.

HIST 0203. Modern Africa: From Empire to Nation-State.

This course examines the major historical developments in Africa from 1945 to the present and pays special attention to the diversity of experiences within the vast continent. The first part focuses on Africans' varied responses to the waning European imperial project and explores different ways in which African nationalist leaders and everyday people challenged colonial administrations to ultimately achieve their independence. The second part of the class investigates the consequences and opportunities of decolonization, including questions of political legitimacy, state-building, structural adjustment programs and international aid, human rights, and civil conflicts.

HIST 0212. Histories of East Asia: China.

China's ascendancy as a global economic power in recent decades has been regarded by many as a reclaiming of its former glory. In introducing the history of China from earliest times to the present, this course aims to provide an understanding of the making and remaking over millennia of what we call Chinese civilization, with its changes, contingencies, and continuities, its various claims to greatness, and its many recurring challenges. This course is open to all students and assumes no prior knowledge of Chinese culture, history, or language. Readings consist of both a textbook and relevant primary sources.

HIST 0214. Histories of East Asia: Japan.

This is a course for students who have always been curious about Japan but haven't had an opportunity to explore that interest fully, for anyone in search of a better understanding of the historical contexts that shaped Japan's complex relationships with China, Korea and the West, and for all those who wish to broaden their exposure to the histories of East Asia. Open to all students, this course assumes no prior knowledge of Japanese culture, history, or language.

HIST 0215. Modern Korea: Contending with Modernity.

This course examines the extraordinarily rapid revolution of Korea from isolated, agrarian society into a culturally modern, industrialized, and democratic nation that is an important actor on the world stage. It also will investigate how a non-Western society generates its own inspiration for human relations, social structure, political and cultural values. Includes coverage of North Korea.

HIST 0216. Southeast Asian History.

From Melaka to Manila, and from sultanates to megacities, this new course introduces students to the plural past of Southeast Asia. In doing so, it analyzes how the region came to be (as a field of study in the mid-twentieth century), while surveying, too, the ways in which histories of polity, port, empire, and revolution have shaped not only the world in Southeast Asia—but also Southeast Asia in the world.

HIST 0218. The Making of Modern East Asia.

This course examines Asia in the shaping of the modern world, from competing definitions of empires circa 1800 to the rise of the notion of the twenty-first as a "Pacific Century." It investigates the definition(s) of Asia as a world region, explores transnational interactions and emphasizes Asians as historical actors via written, visual and aural sources. Events are placed in the context of key historical paradigms, including varying definitions of modernity, the rise of the nation-state, birth of mass politics, new mechanisms of war, the language of self-determination, changing views of gender, shifting types of media and consumption, etc.

HIST 0228A. War, Tyranny, and Peace in Modern Europe.

This course explores the relationship between war, culture, and society in modern Europe. The two world wars changed the political, social, and cultural landscape of Europe, and by extension, of the rest of the world, not least the United States. We will not delve into the military history of these vast conflicts; instead, we will examine how the experience of total war remolded European understanding and practices of memory and commemoration, culture and representation, humanity and civilization, utopia and revolution, catastrophe and identity. We will read influential scholarly texts and literary works, and watch important contemporary films.

HIST 0232. Clash of Empires in Latin America.

Examines Latin America as the scene of international rivalry from the 16th to the 19th century. Topics include comparative colonization, the transatlantic slave trade, privateering and piracy in the Caribbean, and the creation of an "Atlantic world." P

HIST 0233. Colonial Latin America.

Colonial Latin America, from Columbus's voyage in 1492 to Independence in the nineteenth century, was the creation of three peoples: Europeans, Native Americans, and Africans. Spanish and Portuguese conquerors brought with them the world of the Crusades, the Inquisition, and the Renaissance. Native Americans lived there already, in rich empires and hunter-gatherer bands. Africans came as slaves from Senegal, Nigeria, Congo and Angola, bringing old traditions and creating new ones. These diverse peoples blended together to form a new people. This was a place of violence, slavery and oppression – but also of art, faith, new societies, new ideas. P

HIST 0234. Modern Latin America.

This course is an introduction to the history of modern Latin America. Through lectures, discussions, shared readings, we will explore major themes in the past two hundred years of Latin American history, from the early nineteenth-century independence movements to the recent "Left Turn" in Latin American politics. Some of the topics we will examine include the racial politics of state-formation; the fraught history of U.S.-Latin American relations; the cultural politics of nationalism; how modernity was defined in relation to gender and sexuality; and the emergence of authoritarian regimes and revolutionary mobilizations, and the role of religion in shaping these processes.

HIST 0243. Modern Middle East Roots: 1492 to the Present.

A robust introduction to Middle East history from early-modern to contemporary times. We begin in Reconquista Spain with the expulsion of Iberia's longstanding Muslim and Jewish populations, before journeying to the eastern Mediterranean at the Ottoman Empire's zenith. In the "long" 19th-20th centuries, we explore modern tensions shaping this amorphous but pivotal region, including: colonialism, nationalism, and Islamism; water, fossil fuels, and information infrastructures; constitutionalism, authoritarianism, and "street" politics; and interventions by the US, USSR/Russia, and local powers. Emphasizing socioeconomic, legal, and environmental history perspectives, our goal is to unearth the roots of conflict and other conditions shaping today's "Mideast."

HIST 0244. Understanding the Middle East: A Modern History.

The Middle East is the only region of land to bridge three continents and is (arguably) the most controversial in America today. Assuming no prior knowledge of a region that persistently captures headlines, this course provides a robust academic introduction to modern Middle East history from the late Ottoman Empire to contemporary times. Throughout, we explore an amorphous but pivotal world region stretching from Algeria to Afghanistan, and Turkey to Yemen, via land, sea, air, and a variety of "3D" perspectives: from local environments and economies, to governance and geopolitics; language, kinship, and faith, to art, music, and sports. Most of all, we shall seek to understand how competing modern forces like constitutionalism, militarism, and humanitarianism; colonialism, nationalism, and international law; and elites to everyday people shape(d) the region today.

HIST 0246. The Ottoman Empire and Modern Middle East.

The Middle East is the only region of land to bridge three continents and is (arguably) the most controversial in America today. Assuming no prior knowledge of a region that persistently captures headlines, this course provides a robust academic introduction to Middle East history, comprising: (1) the early modern Ottoman Empire, from the conquest of Constantinople in 1453 to collapse in WWI; and (2) the dramatic remaking of Southwest Asia and Northern Africa into a new "Mideast/MENA" region from Ottoman partition to contemporary times. Throughout, we explore the pivotal region between Algeria and Afghanistan via land, sea, air, and other "3D" perspectives: local economies and governance to geopolitics; language and faith to art, music, and sports; and ultimately, how competing modern forces like constitutionalism and militarism; colonialism, nationalism, and international law; and elites to everyday people shape(d) the region today.

HIST 0247. Civilization, Empire, Nation: Competing Histories of the Middle East.

The "Middle East" is a recent invention. 100 years ago, virtually none of the states currently populating the region's map existed. This course considers how historians (and others) have used the concepts of civilization, empire, and nation to construct competing narratives about this pivotal region's past from the rise of Islam to the present. Since facts acquire meanings through interpretative frameworks, we ask: What is privileged and what is hidden in these narratives? And what would the history of this region look like if we could see it through the eyes of the peoples who have long lived there?

HIST 0250. American Exceptionalism: The History of an Idea.

For four centuries, the theme of America having a special place in the world has dominated American politics and culture, though many have questioned or challenged American distinctiveness. This course examines articulations and critiques of American exceptionalism, using sources from American history and literature, from comparative history and literature, and from modern U.S. culture and politics. Although it offers an introduction to American history, it is different from a traditional high school or introductory college course because of its thematic focus and its emphasis on U.S. history in a global context. Intended for students in any discipline and in any year at Brown.

HIST 0252. The American Civil War.

This course, covering the period roughly from 1820-1865 and focusing mostly on 1860-1865, examines the origins of the Civil War, the war itself, and preliminary efforts at reconstruction during wartime. The class meetings and readings will focus on the transformation wrought by the war, investigating in particular certain issues relevant to current affairs: 1) enslavement, emancipation, and struggles for equality; 2) sectionalism, secession, and insurrection; 3) the role of law in the prosecution and resolution of war; and 4) the role of the Civil War in American popular culture and politics. There are no prerequisites--the course is accessible to students at all levels--but some knowledge of U.S. history might be useful.

HIST 0253. Religion, Politics, and Culture in America, 1865 - Present.

Religion has played an undeniable role in the contemporary American cultural landscape. This course lends some perspective on the present by investigating the various and, at times, surprising role religion has played in history in the shaping of American culture from 1865 to the present.

HIST 0253A. Colonial America: A Global History.

Colonial America was more than just the original 13 colonies that later became the United States. Those North American colonies were perched on the edge of a wide and vast world of trade, commerce, and migration that extended into the Caribbean, South America, Africa, and into the Pacific and Indian Oceans. Native Americans, Africans, Spanish, Dutch, French, Portuguese, and Asians were all an important part of this world. Join us on an exploration using primary and secondary sources, videos, and objects that reveal the globalized world of early America. Course is open to all students; there are no prerequisites. P

HIST 0255A. Mexican American History.

This course provides a comprehensive historical examination of ethnic Mexicans in the United States. Students first address Native American societies prior to European colonization in order to understand the historical antecedents of Mexican people in the US. Proceeding chronologically, students then examine how the Spanish colonial era, Mexican Independence, and other major events during the nineteenth century shaped the "Mexican American" experience. We also explore the history of Mexican community in the U.S. during the American conquest of the Southwest, the twentieth century immigration experience, and the development of diverse Mexican American communities after 1900. By utilizing primary and secondary sources, we will explore major questions, theory, and research methods pertinent to Mexican American & Chicano/a/x history, including, immigration, xenophobia, ethnic identity formation, gender, articulations of race and labor in urban and rural settings, political activism, and urban cultures.

HIST 0256. Introduction to Latinx History.

This course provides a comprehensive historical examination of Latinx people in the United States. Students will explore major questions, theory, and research methods pertinent to the historical narratives of Mexican Americans, Puerto Ricans, Dominican Americans, Cuban Americans, and Central Americans. Major topics of study include immigration, ethnic identity formation, social and political activism, labor, and articulations of race, gender, and culture in urban and rural settings. This course ultimately demonstrates how the Latinx experience is vital to our understanding of the social, economic, and cultural history of the United States.

HIST 0257. Modern American History: New and Different Perspectives.

Rather than a survey, this course uses specific episodes and events to reveal different modes of analysis. Examples of questions are: What do gender perspectives tell us about men on the frontier and women in dance halls? What is the importance of baseball to American culture? How do a historian and a lawyer differ in their analysis of a sensational crime case? How can we understand why the U.S. dropped two atomic bombs on Japan? How did scandals in television and popular music signal an end to American innocence? How has the Baby Boom generation altered American society? And more.

HIST 0259. Labor, Land and Culture: A History of Immigration in the U.S..

Current debates surrounding immigration and immigrants in U.S. society focus largely on the recent past, while simultaneously reiterating long-standing ideas and narratives. This course will equip students to better understand the genesis of such debates, including ideological, economic, and social factors, by exploring the history of immigration to what is now the United States. Sources from popular culture will aid students' insight into the ways in which American Exceptionalism, national identity, and constructions of "otherness" are woven into discourses regarding immigration, and further considers the ways in which "immigrant" is constructed as distinct from histories of colonialism, enslavement, and refuge.

HIST 0260. Early Modern India, 1500-1800.

This course surveys historical developments in what are now the modern nation states of India, Pakistan, and Bangladesh between roughly the sixteenth and eighteenth centuries. Students will explore South Asian society, culture, and religion in the broader context of state-formation, imperial expansion, and global economic transformations. We will examine the makings of the Mughal Empire, one of the most influential states in the subcontinent's history, its predecessors, successors, and rivals, as well as its complex and contested legacy. This course will also consider why myriad European individuals, corporations, and states turned to South Asia in pursuit of their commercial as well as political fortunes. The course will conclude with a discussion of the ruptures of the eighteenth century, particularly the advent of multiple provincial kingdoms, and the establishment of British political authority. P

HIST 0270A. From Fire Welders to Empire Builders: Human Impact on the Global Environment before 1492.

Environmental problems are often considered a modern issue, but people have been transforming their surroundings for millennia. This course is an introduction to the study of premodern environmental history that includes case studies from around the globe. We will begin with foraging people burning landscapes and then study how farmers came to build their own agricultural ecosystems. We will study how the expansion of commerce and the growth of political organizations vastly increased the ability of our species to transform environments. Since this is a heavily interdisciplinary field that depends on a wide variety of sources, the course will include primary source readings from scientific and archaeological articles and premodern texts. P

HIST 0270B. From the Columbian Exchange to Climate Change: Modern Global Environmental History.

Environmental stories are constantly in the news, from weird weather to viral outbreaks to concerns about extinction and fracking. In this course, we put current events in the context of the past 500 years, exploring how climate, plants, animals, and microbiota – not just humans – acted as agents in history. From imperialism to the industrial revolution and from global capitalism to environmental activism, we will examine how nature and culture intermingled to create the modern world. This is an introduction to environmental history and assumes no prior courses.

HIST 0273A. The First Globalization: The Portuguese in Africa, Asia, and the Americas.

This class surveys history of Portuguese empire in Asia, Africa, and Brazil from fifteenth to early nineteenth centuries. Portugal pioneered the European expansion in the fourteenth century, laying the groundwork for several historical phenomena that defined modernity – the formation of colonial coastal enclaves in Africa and Asia, the colonization of the Americas, and the beginning of large-scale trade across the Atlantic and Indian oceans. The class analyzes the economic, religious and technological factors behind Portugal's pioneering role in European expansion. We focus on patterns of socio-cultural and religious interaction between Portuguese and native peoples in Asia, Africa, Brazil. P

HIST 0276. A Global History of the Atomic Age.

We live in the atomic age. From 1945 to the foreseeable future, atomic weapons and nuclear energy have had (and will continue to have) a tremendous effect on global politics, the environment, and everyday life around the world. This course introduces students to three themes in this broader history: first, we examine the origins of nuclear proliferation and the global arms race; second, we explore cultural responses to the atomic age; third, we juxtapose the excitement over the unlimited promise of nuclear energy with the slow catastrophes that accompanied weapons development, the nuclear industry, and waste storage.

HIST 0276B. Science and Capitalism.

We will explore the longstanding relationship between science and commerce from the 17th century to our own asking when the modern notion of science as a disinterested pursuit of objective truth took root. We will also explore how knowledge of the natural world has been shaped by personal, financial, and other kinds of self-interest in a number of diverse contexts ranging from Galileo's invention of the telescope in Renaissance Italy to the patenting of genetically engineered organisms in today's world, paying special attention to the diverse mechanisms that have been devised to guard against fraud and disinformation.

HIST 0285A. Modern Genocide and Other Crimes against Humanity.

This lecture course explores genocide and other crimes against humanity across the world during the 20th century. We will discuss the origins of modern genocide in the transition to modernity and subsequent conceptualizations of this phenomenon; review examples of colonial, imperial, racial, communist, anti-communist, and post-colonial genocides; discuss war crimes and other mass crimes perpetrated by authoritarian regimes; and consider policies of mass deportation and ethnic cleansing. This course will conclude with a discussion of attempts by the international community to prevent and punish genocide along with various ways in which genocide has been commemorated or denied.

HIST 0286A. History of Medicine I: Medical Traditions in the Old World Before 1700.

People have always attempted to promote health and prolong life, and to ameliorate bodily suffering. Those living in parts of Eurasia also developed textual traditions that, together with material remains, allow historians to explore their medical practices and explanations, including changes in their traditions, sometimes caused by interactions with other peoples of Europe, Asia, and Africa. We'll introduce students to major medical traditions of the Old World to 1700, with emphasis on Europe, and explore some reasons for change. A knowledge of languages and the social and natural sciences is welcome not required. P

HIST 0286B. History of Medicine II: The Development of Scientific Medicine in Europe and the World.

From the 18th century onward, Western medicine has claimed universal validity due to its scientific foundations, relegating other kinds of medicine to the status of "alternative" practices. The course therefore examines the development of scientific medicine in Europe and elsewhere up to the late 20th century, and its relationships with other medical ideas, practices, and traditions. Students with a knowledge of languages and the social and natural sciences are welcome but no prerequisites are required.

HIST 0505. Africa and the Transatlantic Slave Trade.

This class deals with the History of transatlantic slave trade by emphasizing how Africa affected and was affected by the largest forced migration in the History of humankind. The class will engage key debates in the historiography of the slave trade, such as whether the trade underdeveloped Africa, the connection between the trade and the rise of coastal kingdoms in West Africa, and African resistance/cooperation with the slave trade. P

HIST 0510A. Shanghai in Myth and History.

"Fishing village", "Paris of the East", or "a waking dream where everything I could already imagine had been taken to its extreme?" In an iconic role, Marlene Dietrich bragged that "it took more than one man to change my name to Shanghai Lily," but the local song "Shanghai by Night" retorted, "To look at her/Smiling face/Who would know that she's troubled inside?" We will examine why Shanghai has gripped the imaginations of so many, placing the material history of the city alongside dream and image, focusing on the four topics of colonialism, race and ethnicity, gender and sexuality, and class.

HIST 0510B. History of Tokyo.

This first-year seminar explores Tokyo's history from its early-modern origins as Edo, the seat of the Tokugawa shogunate, to its 21st century circumstances as the planet's largest metropolis and a nodal point for convergences of capital, culture, and precarity. We will study the transformation of the built environment alongside accounts of daily life, debates over the value of the city's past and speculation about Tokyo's possible futures, among other topics. Participants in the seminar will work with primary sources (in translation) in a range of mediums – text, films, maps, photographs – as well as scholarly analyses from multiple disciplinary perspectives.

HIST 0520A. Athens, Jerusalem, and Baghdad: Three Civilizations, One Tradition.

We examine core beliefs of early Greek, Jewish, Christian, and Islamic civilizations that form the basis of Western thought. Serving similar ideological purpose in the pre-modern world as have political and economic theories for the modern world, religion and philosophy defined individual lives and collective identities. We focus on the manner of appropriation and modification of thought from one culture to another in order to appreciate that there is far more similarity than difference in belief systems among what are today viewed as separate, even contesting, cultures. Enrollment limited to 20 first year students. Instructor permission required. P

HIST 0521A. Christianity in Conflict in the Medieval Mediterranean.

Students in this class will learn about medieval history by taking on roles, informed by classic texts, in elaborate games set in the past. Drawing on the innovative "Reacting to the Past" curriculum, this class explores two dramatic moments in medieval history: the debate about Christian belief held at Nicaea in 325 and the deliberations about crusading held at Acre in 1148. Students will adhere to the intellectual beliefs of the medieval figures they have been assigned to play, and will learn skills—speaking, writing, critical thinking, leadership, and teamwork—in order to prevail in difficult and complicated situations. P

HIST 0521M. The Holy Grail and the Historian's Quest for the Truth.

Dan Brown's wildly successful novel *The Da Vinci Code* has recently given a feminist twist to an enduringly popular medieval legend also captured in big-screen antics of *Monty Python* and *Indiana Jones*: the quest for the Holy Grail. Beginning with Brown's novel and other modern representations of the search for the Grail then turning back to texts from the Middle Ages, this seminar will unravel the truth - or truths - behind the legend. One central question will be how historians can use legends to understand the cultures they study. Instructor permission required. P

HIST 0522G. An Empire and Republic: The Dutch Golden Age.

Between about 1580 and 1690, a new nation emerged in Europe that became a bastion of liberty, ideas in ferment, fine art, military power, science and technology, and global economic reach: the Dutch Republic. A nation that thought of itself as peaceful, yet was constantly at war; as Protestant, yet was composed of people of many faiths; as personally aspirational, yet derived much wealth from the conquest and slavery of others. Its people and institutional arrangements greatly influenced Britain and America on their paths to power, too. Its rise and eclipse may be instructive.. Enrollment limited to 19 first-year students. P

HIST 0522N. Reason, Revolution and Reaction in Europe.

First year seminar designed to introduce students to the study of history through a focused look at the French Revolution. It will be divided into two very different parts. The first part will be organized as a traditional history seminar in which we explore together the eighteenth-century developments that preceded the outbreak of the French Revolution. In the second half of the class, students will be assigned different roles in order to re-enact the discussions in the National Assembly that, from 1791 to its collapse in 1792, tried to create a constitution for the new French Nation. P

HIST 0522O. What is Enlightenment?

What is the Enlightenment? And why does it matter today? This First-Year Seminar introduces students to a crucial historical epoch that reinterpreted the past – with searing critiques of certain European philosophical and religious traditions – and became a flashpoint for the future, causing debates and controversies well into the 20th century – and beyond. Drawing on a range of approaches and disciplines, we will examine the social and cultural foundations of Enlightenment thought in Europe and throughout the non-European world, including segments on the origins of anthropology, Orientalism, critiques of imperialism and slavery, encyclopedism and the rise of print, as well as science, music, art, literature, and philosophy.

HIST 0523A. The Holocaust in Historical Perspective.

The course will examine the history and historiography of the Holocaust from early accounts to recent reconstructions of the origins, implementation, and aftermath of the "Final Solution." We will also analyze documents, testimonies, memoirs, trial records, and various forms of representations and commemorations of the Shoah. Enrollment limited to 19 first year students.

HIST 0523B. State Surveillance in History.

How and why do states watch their citizens? This course explores historical practices of state surveillance from the perspective of both the "watchers" and the "watched." Special emphasis will be given to twentieth-century Europe, but examples from other parts of the world and the US will also be featured in the readings. Some of the readings will be primary sources: memoirs, diaries, surveillance files. Other sources will include films and short fiction and some scholarly pieces on the workings of state security and secret police organizations.

HIST 0523M. History of Fascism.

What is fascism—both in theory and in practice—and what remains of it a century after the establishment of the first fascist regime in Italy? This course will explore the social, cultural, and intellectual origins of fascism, the rise of fascist movements in Europe in the early to mid-20th century, the politics and policies of fascist parties and regimes—including Germany, Italy, Iberia, in the Balkans, and in the Baltic States—and transnational links to the Americas, Asia, and Africa. This course will conclude with considerations of anti-fascism in the postwar world as well as the legacies of fascism in contemporary far right politics.

HIST 0523O. The Academic as Activist.

Since the late nineteenth century, the modern research university has struggled with questions about When is the researcher participating in engaged scholarship? When does engagement suggest, instead, a lack of objectivity? How have economists, anthropologists, biologists, and historians tried to contribute to the common good, and where have their efforts broken barriers of privilege, and when have their efforts contributed to further oppression? This seminar will look at debates over the role of academics in political life. Topics may include: Fabian socialism, libertarianism and development economics, pan-African movements, and the Green Revolution.

HIST 0523P. The First World War.

On the eve of the First World War, many Europeans cheered for a "war to end all wars." It achieved nothing of the like, instead inaugurating a century of war and unthinkable destruction. This seminar explores the history of the first truly global conflict, examining its origins, its course, its aftermath, and how it might help us better understand our own world today. A broad set of primary sources, from soldiers' diaries to rationing cards, artwork, and diplomatic cables, forms the basis for discussion. Designed as an introduction to historical inquiry and writing.

HIST 0535A. Atlantic Pirates.

This seminar explores piracy in the Atlantic from the sixteenth to the early nineteenth centuries. We will examine everyday life on pirate vessels; the pirates' role in emerging colonial societies and economies; the complex links between piracy, imperialism, and nation-building; and the image of pirates as both villains and figures of legend. Enrollment limited to 19 first year students. P

HIST 0535B. Conquests.

What does "conquest" mean? How does it take place, and how is it experienced by both the invaders and the invaded? Drawing upon both primary and secondary sources, this seminar explores how conquest shaped the region we now know as Spanish America. We will begin with the great pre-Columbian empires of the Aztecs and Incas, and then turn to Spanish expeditions in the sixteenth century. The course will encompass specific moments of encounter (such as the Spanish capture of the Inca emperor Atahualpa at Cajamarca), as well as the broader implications of forging a new political and social order. P

HIST 0537A. Popular Culture in Latin America and the Caribbean.

From tango to plastic surgery, Donald Duck to reggaeton, this course places popular culture at the center of modern Latin American and Caribbean history. How, we will ask, did popular culture reflect and shape struggles over national belonging? How did foreign cultural products come to bear on international relations and transnational flows? In what contexts has culture served as a vehicle of resistance to dominant ideologies and systems of power? Far from a mere "diversion," popular culture instead offers a compelling lens onto the relationship between state and society in Latin America and beyond.

HIST 0537B. Tropical Delights: Imagining Brazil in History and Culture.

Examines the many ways that Brazilians and foreigners have understood this vast continent-size country, ranging from early European explorers' anxieties about Cannibalism to modern images of the Amazonian rainforest, Rio De Janeiro's freewheeling Carnival celebrations, and the array of social movements mobilizing for social justice. Through an examination of historical sources, literature, movies, and popular culture, this seminar will consider how multiple images and projections of Brazil have shaped national and international notions about the country. Reserved for First Year students. Enrollment limited to 19.

HIST 0540F. Women in the Middle East, 7th-20th C.: Patriarchal Visions, Revolutionary Voices.

This course provides an historical approach to women's lives, status, and perceptions. It focuses on women in the Middle East, from the seventh century emergence of Islam to the twentieth century revolutions and struggle for new identities. It examines the contested roles of women in society and the ways women were culturally crafted. In particular, we will discuss the modes by which women's lives were narrated (by themselves and others); women's use of the "patriarchal bargain" to deal with the shift from so-called "traditional" to so-called "modern" culture; and the encounter between "Eastern" and "Western" societies.

HIST 0550A. Object Histories: The Material Culture of Early America.

History is not just about people; it is also about things! Come explore the world of early America through the lens of objects--boats, dresses, plows, houses, wagons, watches, silver cups, wigs, blankets, land, gardens, hammers, desks--and the cultures that produced and consumed them. As a first year seminar, this course is designed to engagingly introduce students to the basic concepts of historical study. We will take several field trips to local historical sites, both on and off campus. Our primary focus will be specific objects and their contexts and histories. Enrollment limited to 19 first year students. P

HIST 0551A. Abraham Lincoln: Historical and Cultural Perspectives.

This seminar uses life, legacy, myth of Abraham Lincoln to explore central themes such as frontier in early republic, nature of political leadership, law/legal culture, and emergence of sectionalism, slavery, antislavery, Civil War. Frequent short writing assignments and research investigations allow students in-depth explorations of Lincoln's works, the writings of his contemporaries, and modern non-fiction, fiction, and film. The course enables us to consider two larger themes: 1) the relationship between memory and history; and 2) the function of history in modern society. The course has no prerequisites and does not presuppose special knowledge of American history.

HIST 0552A. A Textile History of Atlantic Slavery.

This class explores the experiences, politics, and cultures of enslaved African and African-descended people through clothing and fashion. As a historical source, textiles reveal things that might otherwise remain obscure in the documentary record. Students will engage material culture methodologies to consider the multiple stories that might be told through a particular fabric or garment. The course will explore recent scholarship about slavery in the Caribbean, South America, and particularly the United States to recognize the role of clothing and textiles in enslaved people's concurrent struggles for self-liberation and self-fashioning in the face of horrific violence. This course presumes no background knowledge in African American history or material culture studies. And while students are not expected to have crafting expertise, such knowledge (e.g., weaving, sewing, knitting, dyeing) is certainly welcome as we undertake experiential research into various fiber arts.

HIST 0555B. Robber Barons.

Today, the United States looks a lot like it did at the turn of the 20th century. Much like it is now, America's economy at that time saw tremendous growth interrupted by periodic financial crises. Moreover, both are periods of immense inequality. Whereas we have the one per cent, the late 19th century witnessed a small group of capitalists amass unprecedented fortunes, which provided immense political power. In this class, we will explore what the lives of these "robber barons" can tell us about the role of economic privilege in shaping America's social, cultural, and political history.

HIST 0556A. Sport in American History.

This course covers the relationship of sports to aspects of American culture since 1900. Topics include gender, race, amateurism, professionalism, intercollegiate athletics, and sports heroes. Enrollment limited to 19 first year students.

HIST 0556B. Inequality and American Capitalism in the Twentieth Century.

"Inequality in America rose, fell, and rose sharply again over the 20th century. Why were the early decades of the century so unequal? How did working and middle-class Americans gain a greater share of wealth and why did it these gains later slip away? How truly egalitarian were the mid-century decades? We will examine the rise of corporations, the New Deal, deindustrialization, labor, housing, and the economics of race and gender that weave through them all. Students will come away from the class able to link global economic trends with the intimate everyday experiences of inequality in America.

HIST 0557A. Slavery and Historical Memory in the United States.

How has America chosen to remember and forget the enslavement of millions of its own people? What are appropriate ways to acknowledge slavery in monuments, museum exhibitions, film, literature, and public policy? By approaching these questions through a wide range of visual and textual sources, we will explore the indeterminate space between history and memory. Enrollment limited to 19 first year students.

HIST 0557B. Slavery, Race, and Racism.

This seminar will address the history of race and racism as it relates to the history of slavery in America. We will trace the emergence of slavery in the New World, with a heavy emphasis on slavery in the U.S. South. The course is broad in scope, beginning with the emergence of the slave trade and concluding with a look forward to the ways that the history of slavery continues to impact the way race structures our lives today. In short, this course provides an introduction to slavery studies and to the history of race in America.

HIST 0557C. Narratives of Slavery.

This course will uncover the history of the slave trade, the labor regimes of slavery in the Caribbean and North America, and the rise of the Cotton Kingdom through the voices of the very people who lived through it: enslaved people themselves. We will read slave narratives, court documents, abolitionist treaties, oral histories of formerly enslaved people, and fictional accounts produced in the period. We will give special attention the ways that different kinds of historical sources--different types of narratives--shape what we know and how we know it in the history of slavery.

HIST 0557D. World of Walden Pond: Transcendentalism in the Age of Reform.

World of Walden Pond examines the 19th century phenomenon of Transcendentalism: America's most romanticized social, religious, philosophical, and literary movement. Focusing especially on Ralph Waldo Emerson, Henry David Thoreau, and Margaret Fuller, we'll examine Transcendentalism in the age of reform and evaluate how a small group of individuals responded to and help shape abolition, feminism, and environmentalism. The central problem Transcendentalists wrestled with will be our focus, too: how to reconcile a desire for individualism with the need for collective action.

HIST 0557F. The US in the World.

From the first European settlements in America to the Trump Presidency, the United States has been a nexus of the worldwide movement of people, ideas, and goods that we call “globalization.” A global perspective is therefore crucial to understanding myriad aspects of the country’s history, from revolutionary warfare, to state-building, to abolition of the slave trade, to U.S. contributions to universal human rights. Drawing on a variety of primary and secondary sources, including literature and films, this seminar traces the transformation of the United States from a settler-colonial society into a marginal Atlantic state and, following WWII, a global superpower.

HIST 0558B. History of American Feminism.

This first-year seminar will introduce students to the history of women and gender in the 18th, 19th, and 20th c. United States. Beginning with the question, what is feminism?, we will encounter original sources and scholarship about who women were, what they were up against, and what they wanted. We will thus take “women” as a contingent category that changed over time often in relation to categories such as: race, reproduction, violence, protest, work, and queerness. This course will introduce students to gender history and feminist theory, as well as to the skills and habits of historians across fields.

HIST 0558C. Latinx Social Movement History.

This course examines the history of Latinx social movements and politics during the 20th century into the present moment. Students will learn how various Latinx groups have organized around issues of race, ethnicity, labor, class, immigration, sports, gender, sexuality, citizenship, reproductive rights, and education. We will explore how these groups have utilized social and political organizing to make demands for social justice and equality. By utilizing primary and secondary sources, students will explore major questions, theory, and research methods pertinent to the historical narratives of Latinx people. Students will closely examine the legacy of these social movements and their implications for present-day politics and organizing.

HIST 0559A. Culture and U.S. Empire.

How have U.S. policymakers obtained public consent for their foreign policies? What sorts of ideas expressed in U.S. popular culture and public discourse have helped convince enough Americans that their nation’s foreign policies were wise and just? How have ideas expressed in American culture supported and critiqued U.S. empire from within? In this seminar, we will examine the relationship of American culture to the U.S. imperial project by looking at how cultural narratives about race, gender, sexuality, class mobility, and American exceptionalism have not only shaped Americans’ interactions with other peoples, but have also rationalized the spread of U.S. power.

HIST 0559B. Asian Americans and Third World Solidarity.

As historian Vijay Prashad puts it, “The Third World was not a place. It was a project.” During the 20th century struggles against colonialism, the peoples of Africa, Asia, and Latin America believed that another world was possible. Here, too, in the United States, minorities and their allies dreamed of dignity, democracy, and justice. Looking through the experiences of Asian Americans, this course examines the domestic freedom movements in the context of global decolonization. Topics include: campus activism, immigration, capitalist labor regimes, neocolonialism, cultural hegemony, and Afro-Asian connections.

HIST 0559C. Archives and Activism.

This U.S. history seminar introduces students to the Brown University Library’s Special Collections by examining its archival holdings on 20th century activism. We will focus on the archives of imprisoned activist Mumia Abu-Jamal, student protest at Brown, and the Hall-Heag Collection of US right- and left-wing political groups.

HIST 0574A. The Silk Road, Past and Present.

The Silk Road has historically been the crossroad of Eurasia; since the third-century BCE it has linked the societies of Asia—East, Central, and South—and Europe and the Middle East. The exchange of goods, ideas, and peoples that the Silk Road facilitated has significantly shaped the politics, economies, belief systems, and cultures of many modern nations: China, Russia, Afghanistan, Uzbekistan, and India. This course explores the long history (and the mythologies or imaginations) of the Silk Road in order to understand how the long and complex pasts of the regions it touches are important in the age of globalization.

HIST 0576A. The Arctic: Global History from the Dog Sled to the Oil Rig.

The Arctic is regularly in the media, thanks to climate change. This course examines the long history of human thinking about and habitation in the far north before and during the era of global warming. Focusing on how people valued, survived, and made the arctic home, topics range from whaling, the importance of dogs, cultural imaginaries and colonialism to capitalist and communist arctics, the meaning of sea ice, indigenous rights, and climate change. The course introduces historical methods and environmental history through reading, writing, discussion, and interpreting artifacts.

HIST 0577A. The Chinese Diaspora: A History of Globalization.

Why are there Chinese in the US, Canada, Mexico, Cuba, Peru? Singapore, Indonesia, Thailand, Vietnam, the Philippines? Australia, New Zealand, Fiji, Guam, Samoa? Mozambique, Zimbabwe, Cape Verde, Ghana? Spain, Germany, France, Russia, Czech Republic? Mauritius, Madagascar? India, Sri Lanka, Myanmar? Hong Kong, Macau, Taiwan? How and when did 50 million Chinese find their way around the world during the past 500 years, from the Ming Dynasty to the present moment? We will explore worldwide distribution of ethnic Chinese through Time (history) and Space (culture) in the so-called “Chinese diaspora,” and examine questions of migration, identity, belonging, politics and conflict.

HIST 0577B. The US-Mexico Border and Borderlands: A Bilingual English-Spanish Seminar.

In this First Year seminar, we will examine the historical formation, contemporary reality and popular representation of the U.S.-Mexico border from bilingual (English-Spanish), multicultural (U.S., Mexican, Mexican-American, indigenous and Asian immigrant), and transnational perspectives within the framework of globalization, and pay particular attention to the movement of peoples—workers, families, women and children—in both directions.

HIST 0580M. The Age of Revolutions, 1760-1824.

In the middle of the eighteenth century, the Americas belonged to a handful of European monarchies; within a few decades, most of the Americas was composed of independent republics, some of the European monarchs were either deposed or quaking on their thrones. Usually considered separately, revolutions in British North America, France, Saint-Domingue (Haiti) and Spanish America had diverse local circumstances yet composed a single cycle of intellectual ferment, imperial reform, accelerating violence and, forging of new political communities. We will examine revolutions that helped create the world we live in. Enrollment limited to 19 first year students. P

HIST 0580O. Making Change: Nonviolence in Action.

This seminar will focus on the life and work of one of the most influential thinkers of the twentieth century, examining both his role in the Indian nationalist movement, as well as the global impact of his ideas on leaders such as Martin Luther King Jr. and Nelson Mandela. Enrollment limited to 19 first year students.

HIST 0582A. Animal Histories.

Animals have been people’s energy, food, wealth, gods, hobbies, icons, and companions. Wild and domesticated non-human animals are essential yet often invisible historical subjects. This seminar makes them visible by tracking them through time—ancient, modern, and contemporary—on every continent. They are often symbols, but we look beyond animals as represented by people. We are more interested in them as actors and subjects with agency. By pushing at the boundaries of what constitutes legitimate topics, this seminar serves as a critical introduction to the historical discipline.

HIST 0582B. Science and Society in Darwin's England.

This course is a first year seminar designed to introduce students to the study of history. It will be divided into two very different parts. The first part will be organized as a traditional history seminar in which we explore together the world in which Darwin developed his theory of the Origin of Species. The second part will be a historical re-enactment of an 1863 discussion in Britain's Royal Society about whether to award Darwin their highest honor, the Copley Medal. Enrollment limited to 19 first year students.

HIST 0590. Living in Soviet Russia and Beyond.

Drawing on film, interviews, literature, and more, this first-year seminar explores what it might have meant to "be" Soviet — and for whom and when. We will focus on lived experience as a topic of historical inquiry, and discuss the challenges and potentialities of doing so. While the primary geographic and temporal focus will be on Russia in the Soviet period, we will also look at examples of neighboring Soviet socialist republics, as well as the period immediately after the USSR's collapse in 1991.

HIST 0591. Indigenous Canada.

This course, focusing primarily (but not exclusively) on Canada, will examine colonization thematically. These themes will include: colonization of the land, colonization of the soul, colonization of education, colonization of the body, and colonization of identity. You will learn about Indigenous societies in what became Canada through a broad historical span from pre-contact to the early twenty-first century by investigating a variety of sources including archaeological, artistic, and experiential evidence as well as documents, landscapes, and oral histories. This course centers sources on Indigenous perspectives to challenge conventional histories of colonialism, focusing on resistance, continuity, and agency.

HIST 0592. American Revolution in Popular Culture.

Catchy dialogue, lovable characters, and unforgettable music have shaped popular understanding of the complexities of American independence. Indeed, college-aged Americans are likely to know their American Revolution primarily through Liberty's Kids, American Girl dolls, and such musicals as *Hamilton* and *1776*. How do these popular culture representations of the American past work to guide the present and future possibilities of American society? To shape the consciousness of Generation Z? To turn history into commodity, or to mobilize it in the service of radically divergent political agendas? As national attention turns to the 250th anniversary of the Declaration of Independence, this class explores the American Revolution's multiple lives in popular culture since the Bicentennial. Students will read scholarship on the Revolution itself, as well as works on the politics of culture in modern America.

HIST 0621A. Surviving Medieval Paris.

What was it like to live in medieval Paris? This course explores this question from a variety of perspectives, including that of the urban poor, university students, sex workers, clergy, members of royal and noble courts, and merchants. Using sources ranging from poetry to chronicles to architecture, we will consider how cultural, political, and economic developments (including the construction of Notre Dame, the centralization of royal power in Paris, the emergence of one of the first universities, and the Black Death) impacted various individuals and communities within the city from around 1000 to 1500. The course also explores various moral perceptions of urban life in medieval Paris, a city which was described simultaneously as a city of plenty, a city of sacred learning, and a hotbed of sin.

HIST 0621B. The Search for King Arthur.

The King Arthur legend is one of the most enduring stories to emerge from medieval Britain. Drawing evidence from written and archaeological sources, we'll delve into shadowy period in which legend is based, between the collapse of Roman imperial power in Britain and establishment of the Anglo-Saxon and Celtic kingdoms that would succeed the empire. We'll also take students inside the historian's workshop, exposing them to the tools, texts, and objects from which historians and archaeologists construct their interpretations of how the inhabitants of Arthur's Britain lived and died. Enrollment limited to 20 sophomores. P

HIST 0622A. "Information Overload" in Early Modern Europe.

Our current information overload is not the first time we've agonized over too much information and utilized different ways to cope. This course examines information overload in Early Modern Europe (1500-1800) and its connection to early modern data science. We will engage with the forms of information overload: knowledge access and use, community and social bonds, commodification, and even as a non-issue. Using a varied assortment of primary sources—from copyright laws to herbariums to account books—along with developing techniques to read academic articles and books, this class will help you begin to analyze the past with the tools of a historian. You will find that modern familiarity of "information overload" provides an entry way into thinking about the authority placed—and constructed—on information both in the early modern period and now.

HIST 0623A. British Social History.

What is the role of history in imagining progress, identity, and political movements? This course begins by reading classic nineteenth-century historians From Trevelyan to E. P. Thompson, asking about the politics implicit in their choice of subject and archive. It then turns to contemporary history, asking, how have debates about race, gender, and the environment in the past thirty years shaped how we look at history? How have different tools like digital history or the analysis of culture changed what we look at or why? How is the study of history changing today?

HIST 0623B. The Russian Revolution.

This sophomore seminar will examine in detail the Russian Revolution that toppled the Tsarist Autocracy in February 1917 and brought to power the Bolshevik party in October 1917. No prior knowledge of Russian history is required, although students should be eager to read extensively (and intensively), to participate in collaborative learning through discussion and the sharing of written work, and to improve their academic writing skills. At the end of the semester, students will work on final projects in which they offer their own interpretations of key events.

HIST 0623C. Americans in the USSR.

This Sophomore Seminar will investigate the countless American journalists, diplomats, students, tourists, athletes, musicians, etc. who traveled to the Soviet Union. We will pay careful attention to their preconceptions, motivations, experiences, and reflections after the fact. Some went for work, others to explore an alternative to capitalism or to build socialism, and still others traveled to explore a society that claimed to have overcome discrimination based race and gender. At the end of the semester, students will work on final projects in which they delve more deeply into a specific aspect of the topic.

HIST 0623D. The Great Patriotic War: The Soviet Experience of World War II.

The Eastern Front of World War II, fought largely on the territory of the Soviet Union and referred to there as the "Great Patriotic War," represents one of the most lethal military conflicts in history. The war revealed and highlighted both the weaknesses and the strengths of the Soviet Union, stretching it to the breaking point before leading it to the postwar status of a superpower. This course will consider the decisive contribution of the Soviet Union to the defeat of Nazi Germany through the frameworks of political, social, cultural, economic, and gender history. Voices "from below" balance the incredible scale of this conflict with humanizing perspective help us to confront a central paradox—how the Soviet Union helped to end a genocide and liberated much of Europe while committing horrific atrocities of its own.

HIST 0623M. Becoming French: Minorities and the Challenges of Integration in the French Republic.

Recent controversies around Muslim integration, including debates around the headscarf and uprisings in the working class suburbs of French cities, point to difficulties France has faced in integrating minority populations. We'll explore the encounter between France and its immigrant, religious, and racial minorities from the Revolution to contemporary times. By comparing paths of integration and debates around minority inclusion and consider how minorities negotiated their identities as they struggled to internalize France's cultural and historical legacy. We'll address political and historiographical debates over the relationship between political citizenship and religious/cultural identity. Enrollment limited to 20 sophomores.

HIST 0624. Coexistence and Violence in Europe: Jews, Muslims, Roma and their Neighbors.

From 1800 to 1950, the territories of Central, Eastern, and Southeastern Europe were transformed from imperial peripheries with religiously and ethnically diverse populations to homogeneous nation-states. This transformation was achieved not only through assimilation and migration, but also through extreme intercommunal violence, including forced population exchange, ethnic cleansing, and genocide. Today, these borderlands are a place of contested memory, where present-day homogeneity is projected backward in time by some, while others feel nostalgia for a lost era of coexistence. Students will consider examples of both peaceful coexistence and violent conflict among populations as well as the impact of the modern state, its institutions, and ideologies such as nationalism, liberalism, and socialism on these regions. Throughout the course students will focus especially on the history of the Jewish, Muslim, and Romani minorities in light of course themes.

HIST 0637B. Fractious Friendships: The United States and Latin America in the Twentieth Century.

From the vantage point of ordinary men and women, statesmen, businessmen, and scholars, this course explores how Latin Americans in various countries viewed and engaged with the United States during the twentieth century. We will look at how perceptions of the United States formed across Latin America and how and why they changed over time (or why they did not). The ultimate aim is to uncover the reasons for the sometimes amicable, but often strained, ties between Washington and its hemispheric counterparts. Prominent topics include imperialism, nationalism, war, diplomacy, popular culture, consumerism, and industrialization.

HIST 0637C. Culture and Cold War in Latin America.

How did the Cold War seep into everyday life? This course explores the relationship between culture, cultural production, and Cold War politics in Latin America. Over the course of the semester, we will highlight key themes such as: national identity, morality, modernity, religion, popular culture, authoritarianism, and imperialism. By pairing cultural studies readings and historical monographs, this course will engage cultural analysis in the study of Cold War history.

HIST 0637D. From Saint Domingue to Haiti: The Haitian Revolution and US Reverberations..

On January 1, 1801, Toussaint Louverture declared France's former colonial jewel free and renamed it Hayti to honor its Indigenous roots. But the road to freedom was not easy, each argument for and against slavery and freedom as varied and complex as the next. This course, examines the making of the first free Black republic in the western hemisphere - from the west African coast to debates in France and the United States that centered on equality, commerce and abolition - debates that continue to reverberate throughout the nation of Haiti and its people today.

HIST 0650B. Well-Behaved Women Seldom Make History: Women and Power During the American Revolution.

This seminar explores the role of women in the Revolutionary Era, from the 1760s through the end of the American Revolution to recast the traditional American founding narrative. This course will highlight women's daily experiences to address their part in the political origins of the conflict, the resulting tension surrounding hierarchies of patriarchal power, and economic repercussions to ask if women had a concurrent revolution. Students will use primary and secondary sources to look at the gendered power dynamics as experienced by enslaved, Native American, and other dispossessed women during this violent period. P

HIST 0654A. Welfare States and a History of Modern Life.

History of the American welfare state, from its origins in nineteenth-century industrial capitalism to contemporary debates about health care, in comparative perspective. Why did welfare states appear and what form did the U.S. version take? Considerations of social inequality, labor relations, race, gender, family policy, the social wage, and the relationship between markets and the state are all considered. Some comparison with European models.

HIST 0654B. American Patriotism in Black and White.

This course explores the different and sometimes conflicting definitions and meanings of patriotism and citizenship through the lens of African American history and military participation, using primary and secondary sources from the colonial period to the present, including political and legal documents, letters to editors, literary pieces, plays, speeches, and petitions. What are the many definitions of freedom and patriotism, and how have black people understood their realities as they chose to serve militarily? This social and political (not military) history focuses on the political implications of African Americans' military service for/to the nation over three centuries.

HIST 0654C. The Oldest Profession: Race, Gender, and the Politics of Sex Work.

In America, sex sells. The sex industry has and continues to be a topic of debate surrounding issues of consent, labor, pleasure, and the gendered marketplace. This course examines various facets of the sex industry (i.e., prostitution, exotic dance, film, and internet-based sex work) from the nineteenth century to the present day and examines the industry through the lenses of gendered labor, race and class, and the social, political, and legal controls employed to regulate the industry. The course will examine historical texts on sex work as well as live interviews with retired sex workers to explore the lived experiences of sex work from historical and contemporary perspectives.

HIST 0655A. Culture Wars in American Schools.

This course examines "culture wars" in American public schools over the past century. It will explore how and why school curriculum has become an arena for cultural conflict and how those debates have changed over time. These debates clashes in schools over religion, values, politics, and educational aims raise important questions about majority and minority rights, the existence and meaning of a common national culture, and the role of schooling in a democratic nation. Enrollment limited to 20 first year students and sophomores.

HIST 0656A. History of Intercollegiate Athletics.

The United States is the only country in the world in which practically every institution of higher education finances and promotes high-caliber athletics. How did this phenomenon happen? Has there ever been any resistance to its happening? How and when did African Americans integrate collage sports? Did Title IX really open up opportunities for women in college sports? Are sports the "front door" of colleges and universities? This course examines these and other questions as it examines the interrelationship between the histories of sports and higher education in the U.S.

HIST 0657A. Early American Lives.

This is a writing-intensive (WRIT) course that examines the intersection of biography and history. We will focus on 17th to 19th c. North America and read studies of a First Nations convert to French Catholicism, a renegade Puritan woman, an enslaved African American who escaped from George Washington, a Revolutionary-era artist, a 19th c. lesbian couple, and a Civil War spy. Students will also research and write their own historical-biographical essays.

HIST 0658D. Walden + Woodstock: The American Lives of Ralph Waldo Emerson and Bob Dylan.

Emerson and Dylan are cultural icons. Emerson has been called "Mr. America" and Dylan has just won the Nobel Prize for Literature. Both had boundless energy for public performance and self-representation; both actively supported turning points in the civil rights struggle; both raged against American military aggression; both were at the epicenter of a wide circle of intellectuals, while denying their own centrality. What is the celebrity intellectual's responsibility to society while remaining true to oneself? Poems, essays, autobiographies, songs, and movies provide insight into these eternally fascinating geniuses and their times.

HIST 0659A. Excessive Force: State Violence, Vigilantism, and the History of "Law and Order" America.

During the summer of 2020, the deaths of George Floyd, Breonna Taylor and others at the hands of police sparked protests across the United States and around the world. Many activists insisted upon viewing these popular uprisings in historical terms, suggesting the violence endemic to the contemporary criminal legal system is rooted in the history of antebellum era slave patrols. This course further explores that idea by tracing the history of state violence and extralegal vigilantism from the colonial period to the present. Whether carried out by duly constituted authorities or ordinary citizens, by force or in its apparent absence, conceptions of legal order have played an instrumental role throughout U.S. history. Covering topics ranging from citizen's arrest laws to Broken Windows policing, our aim will be to approach "law enforcement" as an essentially political process that's changed over time.

HIST 0673A. Colonial Encounters in the Early Atlantic.

This seminar introduces students to the range of primary sources and archival collections used by historians and other scholars to understand the emergence of an integrated Atlantic world in the period between 1400 and 1650. Analyses of source material will be supplemented by secondary scholarship to consider the various approaches by which historians have characterized patterns of trans-regional exchange, dispossession, and colonialism between Atlantic Africa, Brazil, the Greater Caribbean, and Atlantic Europe. Students will have the opportunity to develop paleogeographic fluency in late medieval and early modern written sources in any relevant language(s) in which they have preexisting knowledge.

HIST 0675A. The Chinese Diaspora: A History of Globalization.

To understand globalization is to study linkages and circulation of peoples, goods, cultures and ideas across space (land and sea) and over time. There is no better illustration of globalization than the Chinese diaspora--the worldwide dissemination of Chinese people and their descendants across the world from the Ming Dynasty to present. After sketching the global contour of this phenomenon, students will drill down deeper into specific regions of the world to examine conflicts and integration as immigrants localize; identity, community and social formations as immigrants re-territorialize; as well as transnational relationships with place of origin and co-ethnics in the diaspora.

HIST 0676A. History of the Laboratory.

Few spaces better represent progress and profit than laboratories. Industrial, commercial, public, and private labs are seen as catalysts for moving society forward and inching toward a technotopian future. In the meantime, such spaces produce better medicines, goods, and knowledge. However, these modern laboratories have a history. From their beginnings in the ancient world through medieval, early modern, and finally twenty-first-century forms, these spaces changed in the face of emerging cultural, social, and intellectual forces. This course traces this history while taking into consideration factors such as non-Western influences, colonialism, and history "from below." From alchemical experiments to Franklin's electricity to modern medical research, we will trace the development of laboratories through primary and secondary sources including ancient archaeological finds, prison notebooks, and the classic film *Frankenstein*.
P

HIST 0678A. What Do Concubines Have to Do with It? Gender, Sexuality, and Status in the Premodern World.

Intimate relationships outside the scope of marriage were everywhere in the medieval world. Often associated with notions of romanticism and 'illicit love' in the modern imagination, the individuals involved in these relationships had to grapple with a variety of sociocultural and legal realities to pursue such ends as economic or legal independence or obtaining positions of autonomy and power. Drawing upon a range of sources, this course considers both the constraining and transgressive possibilities of non-marital intimate relationships across the medieval and early modern periods (roughly c.600-1700). This thematic focus provides a new way of exploring the premodern world, considering such issues as gender, sexuality, class, race, drawing comparisons across seemingly disparate regions -- from the Iberian Peninsula to the colonial Transatlantic to Tang China -- while also attending to historical contingencies on the level of the local and personal.

HIST 0682E. Lobsters, Thylacines, and Bacteria: An Introduction to Animal Histories.

Amid a period of existential human angst about the future of our planet and the other creatures on it, the discipline of history is experiencing an "animal turn". This developing interdisciplinary approach draws on numerous fields, from anthropology to veterinary science, to better understand the lived experiences of non-human animals in the near and distant past. Animals have not only played important roles in human history, as abstract symbols, exploited resources, or close partners, but they also have their own histories. Can we get at animal histories independent of human interference? In this discussion-based seminar we will explore a variety of research modes in the emerging field of animal histories and tackle the challenge of de-centering humanity in the study of the past.

HIST 0685A. The Social Lives of Dead Bodies in China and Beyond.

The dead are all around us, but how do we know it? This course aims to uncover how corpses interact with the living as participants in social relations, especially during times of community upheaval. We'll take China and Taiwan as jumping off points, but also look elsewhere in Africa, the Americas, Asia and Europe since the 19th century, when the broadening scale and nature of warfare; state expansion; rapid development; global circulations of technology; and the interplay of international philanthropies with older forms of charity and ritual pacification significantly affected the treatment, conceptions, and actions of the dead.

HIST 0690A. Empire and Everyday Life in Colonial Latin America.

What was it like to live a "regular" life in the American colonies of Spain and Portugal? How did people eat, dress, have fun, start and sustain families, pursue careers, and think about the world and themselves? Drawing upon a range of sources, this course considers how global and local forces intersected in the individual or community in myriad, yet historically contingent, ways. This micro focus provides another way of considering the broad historical forces at work in the colonies, such as religion, gender, politics, race, technology, and geography, from the "inside-out" perspective of individual and communal accounts and stories.

HIST 0690B. Women's Work: Gender and Capitalism in American History.

This course examines the importance of women and gender to the long economic history of the United States. Whereas the history of American capitalism has often been a primarily male story, this course moves women from the margins of the narrative to the center. It asks how female labor (paid and unpaid), cultural norms around gender and family, and issues of sex and reproduction have fundamentally shaped economic life --not just for women, but for all Americans. Students will gain insight into American women's history, the history of capitalism, and the intersectional history of gender, sexuality, race, and class.

HIST 0690C. Cities of the Global South.

With the most significant wave of population growth and urbanization sweeping across Asia, Middle East, Africa, and Latin America, the 'Global South' is taking center stage in academic discourses. This course examines numerous cities across these regions, along multiple thematic axes, to provide an understanding of the social, political, cultural, economic forces shaping its dwellers' fates -- from a historical perspective: whose history is being recorded, and by whom? what do historians mean by "history of the city"? just what is the 'Southern' city? how do we bring alive the heterogeneity of these cities embedded in different historical trajectories? how can we convey these cities as places of both challenge and great promise? Utilizing a diverse archive of academic texts, fiction, documentaries, and maps this course explores cities as varied as Lahore, Delhi, Tehran, Cairo, Mexico City, Havana, Bogota, Kinshasa, and Nairobi.

HIST 0690D. Bodies that Matter: Environmental Histories of Disability in the United States.

This course places two stories side-by-side: changing experiences and conceptions of disability in the United States and changing experiences and conceptions of the nonhuman environment. Reading scholarship in environmental and disability history and relying on a diverse array of primary sources from memoirs to comic books, this course traces relationships between bodies, minds, and land in the U.S. over the past 200 years. Through histories of slavery, animal labor, wilderness conservation, eugenics, atomic radiation, disability and environmental activism, and COVID-19, we will ask how human and nonhuman bodies were made and unmade in processes of environmental change indoors and out, how the political meanings of disability, incapacity, and productivity were constructed over time, and what a just future for disabled life and the nonhuman world might entail."

HIST 0690E. Gender and Sexuality in the Cold War Americas.

Counter to its name, the Cold War represented a period of heated conflicts throughout the Americas. Intense ideological clashes in the U.S. paralleled the wave of authoritarian regimes, armed struggles, and revolutions in Latin America. While each country had to contend with its own history and particularities, from the Lavender Scare to the Mothers of the Plaza de Mayo notions and anxieties about gender and sexuality appear as a connecting thread of regional conflict. In this course, we will examine how ideas about gender were a central battleground for the political transformation of the region. We will consider how states and institutions employed conservative gender ideologies as avenues of political and individual control, while shifting ideas about gender also served as avenues for the activation of new political subjects. Extensive knowledge of Latin American or U.S. history is not required.

HIST 0690F. Unnatural Disasters: Rethinking Histories of Catastrophe in the Americas.

Since Hurricane Katrina, the history of natural disasters and the new interdisciplinary field of critical disaster studies have surfaced. Both fields of agree that natural disasters are windows onto the societies they strike and are processes emerging from historical human and nonhuman causes. Natural disasters, they agree, are unnatural. Studying a range of environmental processes from melting glaciers in the Andes to radioactive pollution west of Rockies, this course adopts a hemispheric scope to connect geographical, temporal, and thematic fields of history. We will think together about the agency of American environments and the hazards that haunt them. We draw on diverse methods to examine the roles that race, power, indigeneity, disability, gender, and science play in the history of (un)natural disasters. These methods will help us analyze primary sources while also encouraging curiosity for overlooked American communities and environments.

HIST 0691. Indigenous Education.

This course examines contemporary Indigenous issues through the lens of education. Why were colonial schools established? What was the legacy of colonial schooling? How has reconciliation been sought? How have Indigenous communities responded? Students will examine current issues and how they relate to historical processes such as Indigenous epistemologies; the origins, development, decline, and legacy of the federal residential, boarding, and day school system; the meaning of apologies; and the importance of language revitalization. Additionally, students will study how Indigenous activists, storytellers, and artists have used colonial mediums to combat colonialism and resist epistemicide: the eradication of Indigenous knowledge. Students will use discussion periods to analyze and reflect on their own lives and how their gender, ethnicity, and privilege relates to, contributes to, or challenges, Indigenous issues. Topics/themes include colonization, treaties, justice, truth and reconciliation, Indigenous leadership, and Indigenous resistance.

HIST 0720. The Romans.

The Romans established the only successful pan-Mediterranean empire in history, lasting nearly 1,000 years, with a legacy living everywhere today, from the U.S. Constitution to the English alphabet. Who were these people? We will study their social-political history from the city's founding in 753 BCE to its fall in 476 CE, confronting the opinions of ancient authors directly to study historical questions such as: what challenges and problems did empire create? How did gender shape Roman lives? Or what does the decline of Rome's democracy reveal about the state of American democracy?

HIST 0770. Evil: The History of an Idea.

This course considers how individuals and societies have constructed the idea of evil. We examine evil's origins in religious traditions and review how those interpretations have been deployed and how the concept of evil has changed over time. Is it possible to offer a universal definition of evil? Is it true that "When a woman thinks alone, she thinks evil?" Does evil exist in "the Other" or oneself? To answer these questions, we engage in activities and discussion about sin, hell, pacts with the devil, witches, torture, lynching, genocide, psychopaths, empathy, and representations of evil in music, literature, and film.

HIST 0770B. Political Imprisonment and Captivity in the Modern World: from Revolution to Conscience.

This course examines the history of political incarceration and captivity since the French Revolution. What is the relationship between the rise of ideologies such as fascism, communism and nationalism on the one hand, and the use of political imprisonment on the other? How do crimes and the political intersect? We examine several cases to consider how captivity has been used for political purposes in the modern world. In addition to scholarly works, readings will consist of primary source documents and memoirs. Emphasis will be placed on Europe, but the course will also include lectures and readings on other geographic regions.

HIST 0770C. World War II: A Global History from Below.

The largest and deadliest conflict in human history, World War II dramatically transformed the modern world. This course will look at the war from the bottom up, exploring the experiences of ordinary people from across the world. In particular, centering the opportunities and challenges the war presented to members of marginalized groups in uniform, in occupied territory, and returning home after the war. Students will analyze a variety of primary and secondary sources through class discussion and assignments, drawing conclusions about the agency of these individuals as well as the social, cultural, and political legacies of the war.

HIST 0770D. WWII on the Screen: Memory, Politics, and Representation.

This course will explore how cinematic portrayals of the Second World War—the largest and deadliest armed conflict in human history—have shaped our understanding of the war and its aftermath. As a requirement for this class, students will watch and discuss films depicting the events of World War II in a variety of temporal and national contexts. Class discussions will examine cinema not only as secondary source that can be used to learn more about historical events, but also as a primary source that reveals the changing nature of political memory surrounding the war. Students will examine the mass psychology of the cinematic experience and consider how the ascendancy of cinema as both an art form and a means of mass political communication that shaped political and social life in the twentieth-century.

HIST 0903I. History of Holocaust-JUDS0902.

HIST 0930A. Word, Image and Power in Renaissance Italy (ITAL 0580). Interested students must register for ITAL 0580.

HIST 0930E. Sacrifice and Suffering: Rhetorics of Martyrdom Compared (RELS 0640).

Interested students must register for RELS 0640.

HIST 0930F. Twentieth-Century Africa (AFRI 0160).

Interested students must register for AFRI 0160.

HIST 0930G. Difficult Relations? Judaism and Christianity from the Middle Ages until the Present (JUDS 0050M).

Interested students must register for JUDS 0050M.

HIST 0930I. History of the Holocaust (JUDS 0902).

Interested students must register for JUDS 0902.

HIST 0930J. The World of Byzantium (CLAS 0660).

Interested students must register for CLAS 0660.

HIST 0930L. Israel's Wars (JUDS 0050H).

Interested students must register for JUDS 0050H.

HIST 0930M. Brothers Betrayed: Jews and Poles from 1500 until Today (JUDS 0901).

Interested students must register for JUDS 0901.

HIST 0930N. War and Society in the Ancient World (CLAS 0560).

Interested students must register for CLAS 0560.

HIST 0930P. Powering the Past (ENVS 0710).

Interested students must register for ENVS 0710.

HIST 0930Q. Introduction to Modern South Asia (SAST 0700).

Interested students must register for SAST 0700.

HIST 0930R. War and Society in Ancient Greece (CLAS 0650).

Interested students must register for CLAS 0650.

HIST 0930S. Beyond Orientalism: Understanding 'East Asia' (EAST 0010).

Interested students must register for EAST 0010.

HIST 0930T. Ecological Imperialism (ENVS 0720).

Interested students must register for ENVS 0720.

HIST 0930U. Before Wikipedia (COLT 0610Q).

Interested students must register for COLT 0610Q.

HIST 0930W. 21st Century Classics (CLAS 0320).

Interested students must register for CLAS 0320.

HIST 0930X. The Quran and its Readers (COLT 0711L).

Interested students must register for COLT 0711L.

HIST 0930Y. Courtesans, Concubines, and Wives: Gender Relations in Imperial China (EAST 0309).

Interested students must register for EAST 0309.

HIST 0930Z. The 1001 Nights (COLT 0510K).

Interested students must register for COLT 0510K.

HIST 0931A. How do you Feel? The History of Emotions (RELS 0843).

Interested students must register for RELS 0843.

HIST 0931B. An Introduction to Africana Studies (AFRI 0090)..

Interested students must register for AFRI 0090.

HIST 0940A. History of Intercollegiate Athletics (EDUC 0850).

Interested students must register for EDUC 0850.

HIST 0940B. The Campus on Fire: American Colleges and Universities in the 1960's (EDUC 0400).

Interested students must register for EDUC 0400.

HIST 0940C. When Leaders Lie: Machiavelli in International Context (ITAL 0981).

Interested students must register for ITAL 0981.

HIST 0940D. The Border/La Frontera (ETHN 0090A).

Interested students must register for ETHN 0090A.

HIST 0940E. Autobiography of the Civil Rights Movement (AFRI 0110C).

Interested students must register for AFRI 0110C.

HIST 0940F. Brown v. Board of Education (EDUC 0610).

Interested students must register for EDUC 0610.

HIST 0940G. From Amsterdam to Istanbul: Christians, Moslems, and Jews (JUDS 0050E).

Interested students must register for JUDS 0050E.

HIST 0940H. The Jew in the Modern World (JUDS 0050L).

Interested students must register for JUDS 0050L.

HIST 0940I. Social Welfare in the Ancient Greek City (CLAS 0310).

Interested students must register for CLAS 0310.

HIST 0940K. Israel's Wars (JUDS 0050H).

Interested students must register for JUDS 0050H.

HIST 0940L. Difficult Relations? Judaism and Christianity from the Middle Ages Until the Present (JUDS 0050M).

Interested students must register for JUDS 0050M.

HIST 0940M. Catastrophic Japan (EAST 0141).

Interested students must register for EAST 0141.

HIST 0940N. Religion Violence and Media (RELS 0090M).

Interested students must register for RELS 0090M.

HIST 0940Q. Shipwrecks and Castaways in History and Literature (POBS 0830).

Interested students must register for POBS 0830.

HIST 0960G. When Leaders Lie: Machiavelli in International Context (ITAL 0981).

Interested students must register for ITAL 0981.

HIST 0980C. Culture Wars in American Schools (EDUC 0510).

Interested students must register for EDUC 0510.

HIST 0980K. Extinction: A Global History (ENVS 0700C).

Interested students must register for ENVS 0700C.

HIST 0980L. Food for Thought: Food and Agriculture in the History of the Americas (ENVS 0700D).

Interested students must register for ENVS 0700D.

HIST 0980Q. Contestations Within Political Islam (RELS 0600F)..

Interested students must register for RELS 0600F.

HIST 0980R. Anticolonial Perspectives from South Asia (HIST 0980R).

Interested students must register for SAST 0740.

HIST 0980S. The Making of Modern South Asia (SAST 0745).

Interested students must register for SAST 0745.

HIST 0983A. The Chisolm Massacre: Reconstruction and the Politics of Violence (HMAN 0900Q).

Interested students must register for HMAN 0900Q.

HIST 0983B. Religious Freedom in America (RELS 0845).

Interested students must register for RELS 0845.

HIST 1030. Entangled South Africa.

Examines the contradiction of twentieth century South Africa as a divided society that nonetheless had dense contact across boundaries. In considering daily life, social interactions, and relations with animals, we find a challenging politics of entanglement within the class, gender, and racial hierarchies of apartheid. We close with a discussion of new divisions and alignments emerging during the transition to democratic rule in the 1990s.

HIST 1050. Africa and the Transatlantic Slave Trade.

This lecture class looks at the relationship between Africa and the Transatlantic slave trade from the late fifteenth century to the nineteenth century. We deal with the main regions of Atlantic Africa affected by the largest forced migration in the history of humankind, focusing on such issues as resistance to the slave trade and the role of slavery in the African continent. The class will reflect on the relationship between the slave trade and African patterns of long-term underdevelopment as well as the relationship between the abolition of the trade and the rise of colonialism in the nineteenth century. P

HIST 1060. Colonial Africa.

From in the late 19th century until the mid-20th century, European powers held the African continent as their colonial possession. This course engages recent historical literature to survey the changes wrought through empire. Beginning with Africa international relations before the imperial scramble, we will probe what changed and what endured under this new condition. We also examine hopes for an independent future. We will seek out both the limits of European empire in Africa and the incomplete nature of decolonization.

HIST 1070. "Modern" Africa.

This course begins with the end of imperialism and ends with a look toward the future. Themes include the pivotal importance of the newly sovereign states, the ongoing engagement with the rest of the world, and shared opinion about the imperative of modern development, even as definitions of modern and development differed. Readings include many primary sources, supplemented by articles on history and social science. Evaluation is based on participation, a map quiz, mid-term and final examinations, and short writing examinations, including article reviews. Students will also discover, analyze, and edit two new primary sources.

HIST 1080. Humanitarianism and Conflict in Africa.

This course focuses on the major issues and debates concerning humanitarianism and international intervention in 20th century Africa. It will explore the history of humanitarianism and the many challenges that arise when governments and institutions intervene in a conflict. Then students will investigate specific sites of conflict in Africa (ranging from Nigeria, Somalia, Rwanda, Sudan, and Western Sahara) and analyze different models of intervention and aid. These case studies will expose students to pivotal events in African history and equip them with a critical vocabulary with which to assess contemporary conflicts.

HIST 1081. The Environmental History of Subsistence and Extraction in Africa before 1900.

How did Africa become the poorest continent? To answer this, this course explores relationships between environment and society from ancient times through the beginning of the colonial era. Topics include foraging, cultivating, herding, metallurgy, population movement, long-distance trade, the Atlantic slave trade, European conquest, and imperial occupation. We also examine concepts of wealth, poverty, and justice. Reviewing case studies from different regions, we consider the ecological, demographic, social, economic, and political factors that shaped production, as well as the global developments that made Africa vulnerable to resource extraction for external profit. No experience of African history required. P

HIST 1090. Black Freedom Struggle Since 1945.

This lecture course unpacks the history of the black mass civil rights movement in the United States using a range of sources and methods. Moving thematically and focusing primarily on the South, the course considers the roles of the courts, the government, organizations, local communities, and individuals in the ongoing struggle for social, political and economic equality. Sources include photographs, documentaries, movies, letters, speeches, autobiography, and secondary readings. By the end of the course, students will have a grasp on how to critically analyze primary sources but also develop tools for more general critical analysis and writing. Moreover, students will understand why history matters.

HIST 1101. Chinese Political Thought from Confucius to Xi Jinping.

This lecture-discussion course traces the rich history of Chinese political thinking from the beginnings of written history—when different visions of good governance competed for the attention of the rulers of the day—through to the present. We begin with the study of ancient political ideas, for it is during the earliest periods of Chinese history that the greatest variety of government modes are proposed. Political philosophy is the focus, but we also examine the institutions that were developed to translate ideals into action and to the tensions that arose as a consequence of efforts to reconcile different political philosophies in practice during the imperial period. The last section of the course is devoted to the radical changes in thinking and government institutions that take place over the course of the late nineteenth, twentieth, and twenty-first centuries.

HIST 1110. Imperial China/China: Culture and Legacy.

As the current revival of Confucianism in the People's Republic of China demonstrates, the past is still very much alive in China today. This lecture-and-discussion course surveys the history of China from the origins of the first state through the twilight of the imperial period in the nineteenth century. Lectures are designed and the reading assignments chosen to emphasize in particular those ideas and beliefs, institutions and government structures, and literary and artistic developments that have shaped (and continue to shape) China today. "Imperial China" provides the knowledge necessary for informed study of modern China. P

HIST 1111. Women and Gender Relations in China.

An overview of the changing roles of women (and men) in Chinese society. We begin with the cosmological views that defined the genders and their separate spheres in early China; and the institutions (the family, the imperial state) that regulated gender roles and factors (class, religious belief) that complicated and at times undermined these regulations. We focus then on how the economic, social, and intellectual changes of the early modern period precipitated a re-examination of women and their roles in the family and society; and trace the impact of the resulting changes on modern and contemporary gender roles and relations. P

HIST 1112. China's Early Modern Empires.

"China's Early Modern Empires" traces the development of empire in the China region from the rise of the Mongols in the twelfth century to the eve of China's encounter with the West in the nineteenth century. The course focuses on the early modern empires of the Chinese Ming (1368-1644) and Manchu Qing (1644-1911), situating them in larger patterns of world history. We look at how conquest and the demands of empire-building shaped frontier relations and East Asian regional geopolitics, as well as social relations (ethnic and gender identities in particular), economic organization, government, and culture within the core Chinese portions of the empires. Emphasizing the dynamic character of the region's history prior to the rise of modern Western imperialism, the course provides a solid foundation for the study of modern and contemporary China. P

HIST 1118. China's Late Empires.

A post-nationalist perspective on history in China from 1200-1930, with emphasis on empire--formation, gender, and daily life in the Mongol Yuan, Chinese Ming, and Manchu Qing empires, as well as nationalist reconstructions of the Chinese past in the early twentieth century. P

HIST 1120. At China's Edges.

What does it mean to live on the borders of a rising world power? This course explores the commonalities and differences of the vast areas where China meets Central, South, Northeast, and Southeast Asia. We will analyze the modern histories of such places as Xinjiang, Hong Kong; Taiwan; Manchuria; Sichuan; Yunnan; and Tibet through a number of overarching themes, starting with environment and place-making. Other topics include comparative colonialisms and experiences of decolonization; the experience of war in borderlands; conceptions of ethnicity over time; and nation-building, citizenship, and the "art of not being governed."

HIST 1121. The Modern Chinese Nation: An Idea and Its Limits.

How did the Chinese empire become a nation-state? This course introduces the history of Chinese societies from 1850, when a massive civil war destabilized the country and sent a new wave of migrants across the globe. We will explore how local and regional society was affected by the spread of new conceptions of the Chinese nation, new kinds of government, and cultural and technological innovations. Coursework addresses the construction of race, ethnicity, and religion as well as gender and sexuality; the effects of war and catastrophe; different formulations of revolution and self-strengthening; and more.

HIST 1122. China Pop: The Social History of Chinese Popular Culture.

An exploration of how the artifacts of visual, material, aural and ritual culture illuminate the construction of and tensions in Chinese society at various levels and localities during the last two centuries. Topics include arrangements of space and time; gender and the body; popular entertainment; religion and performance; the growth of mass media; and the relationship of cultural forms to politics, local identity, and global forces. Class projects will draw on the Haffrenreffer collection and develop multimedia presentations.

HIST 1123. China's Socialist Dreams.

A history of the People's Republic of China under Mao in its context. We'll explore the appeal of anarchism and socialism in the early 20th century and experiments in rural utopianism and worker autonomy. To understand the Chinese Communist Party, we'll examine it as upstart, revolutionary vanguard, strategic ally, army, and state builder. Using new research on 1950s-70s Chinese society, we'll ask how the Maoist party-state reached the lives of urbanites and farmers; affected gender relations and constructions of sexuality, age, and family; and shifted formulations of ethnicity, race and China's place in the world.

HIST 1124. China and the Modern World.

This course would stretch from the 19th century to the present day, placing China alongside of its major regional and global interlocutors of each era. Thus, the course would engage with East and South Asian maritime history, Japanese and Korean history, Soviet and Russian history, US history in several time periods, and so on. This course would serve as a launching pad for students to further explore Chinese, Asian and transnational history.

HIST 1140. Samurai and Merchants, Prostitutes and Priests: Japanese Urban Culture in the Early Modern Period.

Examines the cultural traditions of the urban samurai, the wealthy merchant, and the plebian artisan that emerged in the great metropolises of Edo, Osaka, and Kyoto during the early modern period. Focuses on the efforts of the government to mold certain kinds of cultural development for its own purposes and the efforts of various social groups to redirect those efforts to suit their desires and self-interest. P

HIST 1141. Japan in the Age of the Samurai.

This course is for students interested in exploring Japan's remarkable cultural, political and social transformations during the Age of the Samurai, which began in the late 12th century and came to a close in the mid-19th century. Lectures, readings and films will explore how the emergence of new forms of military expertise and technologies led to the creation of warrior-led "tent governments," that first co-existed with and eventually supplanted the structures of power centered on Kyoto and the Imperial Court. Open to all students. P

HIST 1149. Imperial Japan.

This course is for students interested in exploring the changing ideas, technologies and practices that shaped Japan's history from the 1850s, when it confronted the power of an encroaching West, to the 1930s when its choices led the nation to the edge of ruin. Lectures and readings will address the collapse of the Tokugawa regime, the Meiji Restoration, the construction of empire, and the emergence of new forms of cultural and political expression. Students will also learn how ideas about gender, race, and tradition were understood and made use of in Imperial Japan. Open to all students.

HIST 1150. Modern Japan.

Japan is a rich site for an exploration of many of the key processes and concepts that have shaped, and continue to transform, the modern world. These include the creation of the nation as the fundamental structure for social and political organization, a development that came late to Japan and had profound effects on its relationships with its neighbors, the crafting of its own histories, and with the emergence of debates about what it meant to be "Japanese." The course also explores how ideas about gender, race, and tradition have been understood and made use of in modern Japan.

HIST 1155. Japan's Pacific War: 1937-1945.

Uses film, oral histories, historical fiction, and more traditional forms of historical interpretation to explore the events, ideas, and legacies of Japan's Pacific War. The armed conflict began in 1937 with the Japanese invasion of China and ended in 1945 with the atomic bombing of Hiroshima and Nagasaki. Some attention is paid to military developments, but the principle concerns fall into the areas of mutual images, mobilization, and memory.

HIST 1156. Postwar Japan.

This course is for students interested in exploring Japan's remarkable cultural, political and social transformations from the closing days of the Second World War, through its emergence as an apparent exemplar of democratization's potential and capitalism's benefits, and on to the contemporary era. Lectures, readings and films will explore the legacies of the war and the Occupation, the so-called "economic miracle" (and its effects on the environment), the protest movements of the 1960s and beyond, and Japan's complicated relationships with its neighbors, with the U.S., and with its own recent history. Open to all students.

HIST 1200A. Mediterranean Culture Wars: Archaic Greek History, c 1200 to 479 BC.

From the end of the Bronze Age to the end of the Persian Wars is a period of considerable change in the Mediterranean and beyond. The Greek polis challenges the powers of the ancient Near East. Over seven centuries we meet Greek writing, Homeric epic, and the first historian (Herodotus). But the Greek world lay on the edges of the Ancient Near East and this course tries to offer a more balanced approach than the typically Hellenocentric perspective of the standard textbooks.

It addresses cultural, political, social, and economic histories. Literary, epigraphical and archaeological cultures provide the evidence. No previous knowledge of the ancient world is required.

HIST 1200B. The Fall of Empires and Rise of Kings: Greek History to 478 to 323 BCE.

The Greek world was transformed in less than 200 years. The rise and fall of Empires (Athens and Persia) and metamorphosis of Macedon into a supreme power under Philip II and Alexander the Great provide the headlines. The course covers an iconic period of history, and explores life-changing events that affected the people of the eastern Mediterranean and the topics that allow us to understand aspects of life and culture of the peoples of the eastern Mediterranean. and through these transformations, offers insights into the common pressures that communities confronted. No prior knowledge of ancient history is required. P

HIST 1200C. History of Greece: From Alexander the Great to the Roman Conquest.

In 334 BCE, the 22-year-old Alexander crossed over to Asia and North Africa, changing the history of the West forever. The invasion by a small, if intensely introspective, Greek peoples led to the spread of a monotheistic idea, belief in individualism, alienation from central power, and, conversely, the creation of natural law and human rights, and a deep desire for universalism. By its silences, the preserved narrative (constructed by European males) minimizes the lives of women, children, slaves, and those not of European origin. But largely because of Alexander's conquests and the expansion of cosmopolitan thinking, the evidence embedded in Hellenistic history is far more diverse than for most other periods of classical history. This course focuses on inclusive social and intellectual history. Of particular emphasis will be the tension between the individual and the search for universal connection. P

HIST 1201A. Roman History I.

No description available.

HIST 1201B. Roman History II: The Empire.

The social and political history of the Roman Empire (14-565 CE). Focuses on expansion, administration, and Romanization of the empire; crisis of the 3rd century; militarization of society and monarchy; the struggle between paganism and Christianity; the end of the Empire in the West. Special attention given to the role of women, slaves, law, and historiography. Ancient sources in translation.

HIST 1202. Formation of the Classical Heritage: Greeks, Romans, Jews, Christians, and Muslims.

Explores essential social, cultural, and religious foundation blocks of Western Civilization, 200 BCE to 800 CE. The main theme is the eternal struggle between universalism and particularism, including: Greek elitism vs. humanism; Roman imperialism vs. inclusion; Jewish assimilation vs. orthodoxy; Christian fellowship vs. exclusion, and Islamic transcendence vs. imminence. We will study how ancient Western individuals and societies confronted oppression and/or dramatic change and developed intellectual and spiritual strategies still in use today. Students should be prepared to examine religious thought from a secular point of view. There is no prerequisite or assumed knowledge of the period. P

HIST 1205. The Long Fall of the Roman Empire.

The collapse of the Roman Empire was the crucible in which the cultures of the medieval West, Byzantium, and Islam were forged. This class examines the tensions and transformations within Mediterranean society between 250 and 1100 CE and how these tribulations gave birth to new identities, boundaries, economies, and religious beliefs. We will explore too the points of contact between the emerging Latin, Byzantine, and Islamic worlds and how people living in the late ancient and early medieval Mediterranean sought to devise solutions to the challenges that confronted them as their worlds collapsed, expanded, and changed. Class meetings will interweave narrative and thematic lectures with student analysis of primary sources in translation. Topics include early Christianity, the body, gender, barbarian invasions and the fall of the Western Roman Empire, the rise of Islam, Charlemagne, and the Vikings. P

HIST 1210A. The Viking Age.

For two centuries, Viking marauders struck terror into hearts of European Christians. Feared as raiders, Norsemen were also traders and explorers who maintained a network of connections stretching from North America to Baghdad and who developed a complex civilization that was deeply concerned with power and its abuses, the role of law in society, and the corrosive power of violence. This class examines the tensions and transformations within Norse society between AD 750 and 1100 and how people living in the Viking world sought to devise solutions to the challenges that confronted them as their world expanded and changed. P

HIST 1211. Becoming Medieval: Self, Other, and the World.

Complex relations among the foundational categories of self, other, and the world emerged in high medieval Europe that shaped the future of the globe. In exploring the high middle ages, this course exposes constructions of the self and patterns of power that engendered xenophobia, colonizing conquests, anti-Semitism, Islamophobia, environmental change, surveillance of deviants, and stark hierarchies of class, gender, and sexuality. Yet cross-dressing peasant girls who led armies, crusading knights who wore Muslim silks, Jews who advised Christian rulers, sub-Saharan Africans who enjoyed prominence at European courts, and Mongol-curious missionaries also belonged to the process of becoming medieval. As this course demonstrates, Europe in this period became intertwined with other regions, and was home to people of a diverse array of identities who lived boundary-defying lives and articulated capacious notions of self, other, and the world that resonate today.

HIST 1211A. From Imperial Diadem to Papal Tiara: Analyzing the Sources for the History of Europe, 476 to 1215.

How do we know what happened in the past? Sure, you can flip open a book or read a Wikipedia page, but how, in this age of fake news, do you know who to trust? What makes a source of information reliable or unreliable, useless or useful? Looking at the history of western Europe from the aftermath of the fall of Rome, this course tackles these questions head-on through a deep, analytical engagement with a variety of different primary sources. From the spectacular miracles of saints to everyday lists of dry goods and property boundaries, true history resides in the text, if only one is clever enough to see it.

HIST 1213. Memories of the Medieval in the Age of White Supremacy.

This course explores how the idea of a "medieval" period helped to create nationalist and racist identities in Europe and America—and continues to provide the bedrock for white nationalist identities—over the course of the nineteenth and twentieth centuries through an exploration of literature, art, architecture, and film.

HIST 1216. The Paradox of Early Modern Europe.

European social, intellectual, political, and economic history from the 15th to the 18th centuries, with an eye to the paradox embodied in the term "early modern." On the one hand, this is supposedly the heroic era of Columbus, Machiavelli, Newton, and Montesquieu, when Europeans became increasingly global, urban, and critical. On the other hand, this period also saw the rise of judicial torture, new regimes of discipline, colonialism, and a robust belief in the unseen world of demons, angels, and witches. We will explore the interplay of these paradoxical forces in Europe's transformation from medieval into modern. P

HIST 1230A. Modern European Intellectual and Cultural History: Revolution and Romanticism, 1760-1860.

A lecture course, primarily for juniors and seniors, that focuses on salient philosophic, artistic, and ideological currents of 19th-century Europe. Beginning with the crisis of political and cultural legitimacy posed by the French Revolution, it concludes with the consolidation of bourgeois culture in the 1860s and 1870s and the two great scientific systematizers of these decades: Darwin and Marx.

HIST 1230B. Modern European Intellectual and Cultural History: The Fin de Siecle, 1880-1914.

A sequel to HIST 1230A focusing on radical intellectual and cultural currents that challenged and destabilized the assumptions of Victorian high culture during the fin de siecle. Through a careful reading of primary texts by Hobhouse, Nietzsche, Weber, and Freud. The course explores issues such as the rise of mass consumer culture, neoliberal and neofascist politics, philosophic irrationalism, psychoanalysis, and the woman question.

HIST 1230C. The Search for Renewal in 20th century Europe.

The overarching theme of the course is the relationship between modernity and the primitive as manifested in major cultural, aesthetic and political movements in the 20th century. Films are an integral part of the course.

HIST 1235A. Making A "Second Sex": Women and Gender in Modern European History.

This course deals with the history of European women and gender from the Enlightenment to the present. It will focus on large historical themes and questions, especially shifting constructions of femininity and masculinity. It will begin with an analysis of eighteenth-century philosophies regarding women and gender, and it will move to examinations of specific topics such as industrialization, Victorian femininity, the suffrage movements, gender and the Great War, interwar sexuality, fascism, gender and the Second World War, and the sexual revolution.

HIST 1240A. Politics of Violence in 20C Europe.

Europe's 20th century saw the emergence of forms of violence unthinkable in a world without mass politics. To better understand the changes in European states and societies that gave rise to total war and the violence associated with totalizing ideologies such as fascism and communism, we will read Lenin, Mussolini, Hitler, Fanon and others who sought to interpret violence as an extension of ideology. We will also read selections from more recent works by state leaders, historians and cultural figures from Ukraine to France, from Turkey to Great Britain who have reinterpreted past violence for present political ends.

HIST 1241A. Migration in European History.

From the "Germanic" people's migrations of antiquity to the global refugee crises of today, migration has left an indelible mark on European society. What are the causes and consequences of periods of "mass" migration? Surveying major episodes in recent European migration history, this lecture course explores how human mobility has historically shaped culture, politics, economics, and society on this continent. Special attention will be given to the 19th century, an exceptional chapter in global migration history that saw more than 50 million Europeans departing for the Americas.

HIST 1241B. Understanding the Body in Medieval and Early Modern Europe.

In medieval Europe, the body was both a site of sin and the grounds where sin might find redemption in penance or prayer. The health of the medieval body was implicated by the health of the soul (and vice versa). In early modern Europe, the body shed some of its sacred meanings as it became an object of professionalized medical discourse. We trace this "disenchantment" of the body by examining concepts of sickness and health, the roles of gender and racial differences in understanding the nature of the body, and the changing social practices regarding human bodies and mortal remains. P

HIST 1260D. Living Together: Muslims, Christians, and Jews in Medieval Iberia.

A pressing issue in today's pluralistic societies is how people of different identities (religious, ethnic, etc.) can live together. This course explores a slice of history that can help us think through questions of difference in our world: medieval Spain, where for centuries Muslims, Christians, and Jews lived in close proximity. Through explicit juxtaposition with modern debates, this course examines how these people understood and structured their relations with each other in the Iberian Peninsula between 711 and 1492. Themes include: identity and cultural definition; power and religious violence; tolerance and intolerance; acculturation and assimilation; gender and sexuality. P

HIST 1261E. After Empire: Modern Spain in the 20th Century.

This course situates 20th-century Spain at the crossroads of postcolonialism, ideological violence, and contested modernization. Spain entered the century amidst a profound national identity crisis, stirred by its defeat in the Cuban Independence War. Over the next decades, conflict erupted among advocates of different visions of Spain, while the rise of mass politics transformed Spain in the first battleground in the global confrontation between fascism, communism, and liberalism. General Franco's victory in the Spanish Civil War installed an authoritarian regime lasting four decades whose legacies marked Spain's transition into the current democratic system and its problematic relationship with discontented sectors.

HIST 1262F. Women, Gender, and Feminism in Early Modern Italy.

This course explores the variety of Italian women's histories, issues of gender and sexuality, and ingenious responses to circumvent the social, economic, religious, and political limitations placed upon them during the early modern period (1400-1800). Italian women produced some of the foundational texts of historical feminism, the intellectual and cultural movement that advanced the idea of equality across genders and the necessity of equal access to opportunity and education. This course surveys the alternatives proposed to the gender hierarchies of Italian society and will include selections from archival documents, letters, literature, treatises, and the visual arts. Taught in English. P

HIST 1262M. Truth on Trial: Justice in Italy, 1400-1800.

Why do we think that one human being can judge another? How did this activity, enshrined in legal and political systems, profoundly shape society? This course examines the changing face of justice, from the medieval ordeal to judicial torture; the expansion of inquisitorial and state law courts; and the critical role the judicial system played in shaping Italian society. Using Italy as a focus, the course explores how law courts defined social, political, scientific, and religious truth in the early modern period. P

HIST 1264M. Cultural History of the Netherlands in a Golden Age and a Global Age.

Between 1580 and 1690 two nations emerged in Europe from what had been one unified region. To the north, the Dutch Republic gained its independence from Spain and developed as a bastion of liberty, ideas in ferment, visual arts, Calvinist faith, science, technology, global economic reach. To the south, the "loyal" Netherlands, now Belgium, returned to the Spanish and Catholic fold, but sustained its leading position in the arts, competed in global trade, and negotiated a new compromise of government. In this course we present an interdisciplinary, comparative view of the "two" Netherlands and their legacy in the world. P

HIST 1266C. English History, 1529-1660.

Examines politics, religion, and society from the Protestant Reformation to the Puritan Revolution—a period of rapid and dramatic change when the world, for most English people, was turned upside down. Considers the experiences and concerns of ordinary men and women, as well as the elite. Takes in Scotland, Ireland, and the great migration to New England. P

HIST 1266D. British History, 1660-1800.

A survey of British history from the restoration of monarchy to the Wilkes affair and the loss of the American colonies. In addition to political developments such as the Glorious Revolution and the rise of party, examines political ideology (including the great political theorist, John Locke) and various themes in social history (such as crime, popular protest, the sexual revolution, and the experiences of women). P

HIST 1267. The Global British Empire, 1600-The Present.

This course charts the long history and continuing legacies of the British Empire, an entity that has transformed every single continent over the last four centuries and is widely associated with the makings of the modern world. We examine how and why a powerful and expansive British Empire emerged and sustained itself. Equally, we zoom in on the regular contestation and even outright rebellion that this transcontinental polity inspired. This course is an opportunity to think connectively and comparatively about historical experiences in America, India, the Caribbean, and Africa among multiple other British imperial spaces. We will track the making and unmaking of the British Empire by studying the evolution of global trade, labor regimes including slavery, the consumption of commodities such as sugar, as well as new ideas about governance, race, and identity.

HIST 1268A. The Rise of the Russian Empire.

This course provides a broad survey of Russian history from Kievan Rus' to the Crimean War. Topics include the rise of Moscow, the Time of Troubles, the reforms of Peter the Great and Catherine the Great, the Napoleonic Wars, and the conservative reign of Nicholas I. The following themes are emphasized in the lectures and readings: the changing stratification of society; the expansion of the Russian empire; Russia and the West (including diplomatic and cultural relations); economic development; and the origins and growth of the Russian intelligentsia and radical opposition to the autocracy. P

HIST 1268B. Russia in the Era of Reforms, Revolutions, and World Wars.

This course examines the rapid industrialization, modernization, and urbanization of Russia from the era of the "Great Reforms" (1860s) through the Second World War. We will examine both the growing discontentment among the population with autocracy's efforts to maintain power and the Bolshevik effort to recreate the economy, society, and everyday life. Topics will include Russian Marxism and socialism, terrorism, the Russian revolutions of 1917, the rise and consolidation of Soviet socialism, famine, the red terror, and World War II.

HIST 1268C. The Collapse of Socialism and the Rise of New Russia.

This course examines late Soviet socialism, the collapse of the USSR, and the emergence of the new Russia. The following themes are emphasized in lectures and readings: the major features of de-Stalinization; Soviet and Russian foreign policy during and after the Cold War; the domestic and international causes and consequences of the collapse of the Soviet Union; and the emergence of a new Russian government and national identity during the 1990s and early 2000s.

HIST 1270C. German History, 1806-1945.

This course examines the development of German history from the dissolution of the Holy Roman Empire to the end of World War II. During that time the German states went from being a sleepy backwater to being the conquerors of Europe, finally conquered themselves by the Allied Forces. Through lecture, readings, and discussion we will examine post-Napoleonic Germany, Prussia's role in uniting Germany, the Wilhelmine Empire, the Weimar Republic, and finally National Socialism. The class will take into account politics, economics, war, and culture in painting a full picture of the development of a distinct German state and society.

HIST 1272C. Liberty, Equality, Fraternity? The History of Modern France.

This course follows the history of France from the time of Louis XIV to the present, focusing on social and cultural trends, with particular emphasis on the boundaries of French national identity. It asks who belonged to the French nation at key moments in French history, including the Enlightenment, the French Revolution, the Napoleonic era, industrialization, imperialism, and the two world wars, as well as the complex questions presently facing France. We will examine how inclusions and exclusions during these moments reveal larger themes within French history, such as those dealing with race, class, gender, immigration, and anti-Semitism, amongst others.

HIST 1272D. The French Revolution.

This course aims to provide a basic factual knowledge of the French Revolution, an understanding of the major historiographic debates about the revolutionary period, and a sense of the worldwide impact of events occurring in late-eighteenth century France. A strong historiographic focus will direct our attention to the gendered nature of the revolutionary project; the tension between liberty and equality that runs throughout French history; the intersection of race and citizenship in the Revolution; and the plausibility of competing social, political, and cultural interpretations of the Revolution.

HIST 1272E. Paris: Sacred and Profane, Imagined and Real.

Paris has been called the capital of modernity, the capital of the nineteenth century, and the capital of the black Atlantic. This course explores how Paris grew from a small settlement into a vast city with an enormous global impact. Covering the settlement of the Celtic Parisii in the mid-third century BCE through the present, the course investigates the dynamic relationship between urban space, public activism, racism, and colonialism. It also considers who has been excluded from the city's complex mythology and how these myths impacted experiences of the "other" (including people of color, low-income people, Jewish people, and women).

HIST 1280. Death from Medieval Relics to Forensic Science.

From CSI: Crime Scene Investigation to Ghost Busters to murder mysteries, western society finds death and dead bodies both fascinating and horrifying. This lecture course considers how the western world has dealt with life's most fundamental truth – all humans die – by looking at the history of death and dead bodies from the Middle Ages up to the early twentieth century. Topics include the worship of Christian relics, Catholic and Protestant conceptions of the "good death," body snatching and dissection, society's fascination with murder, execution as legalized death, forensic science and dead bodies, and ghosts. P

HIST 1310. History of Brazil.

This course charts the history of Brazil from Portuguese contact with the indigenous population in 1500 to the present. It examines the country's political, economic, social, intellectual, and cultural development to understand the causes, interactions, and consequences of conflict, change, and continuity within Brazilian society.

HIST 1312. Brazil: From Abolition to Emerging Global Power.

How did Brazil transform itself from a slave society in 1888 to rising international economic and political force? This course will examine the history of Brazil from the end of slavery to the present. We will analyze the reasons for the fall of the Empire and the establishment of a Republic, the transformations that took place as immigrants arrived from Europe, Japan, and the Middle East in the early twentieth century, and the search for new forms of national identity. We will study the rise of authoritarian regimes and the search for democratic governance in more recent years.

HIST 1313. Brazilian Biographies.

How do the famous Brazilian singers Carmen Miranda and Caetano Veloso fit into any comprehensive understanding of Brazilian history? Do the life stories of the eighteenth-century freed slave Xica da Silva or the twentieth-century favela dweller and best-selling author Carolina Maria de Jesus represent unique characters or larger social phenomena of different times and places? How have Brazilian and foreign authors written the history of Brazil through portraits of individuals. This course will examine life stories of Brazilians of all races and social classes through texts, documents, and films to see what these biographical portrayals reveal about Brazilian history/culture. P

HIST 1320. Rebel Island: Cuba, 1492-Present.

Cuba, once the jewel in the Spanish imperial crown, has been home to some of the world's most radical revolutions and violent retrenchments. For two centuries, its influence has spread well beyond its borders, igniting the passion of nationalists and internationalists as well as the wrath of imperial aggression. This course traces the history of Cuba from its colonial origins through the present, foregrounding the revolutionary imaginary that has sustained popular action-from anti-slavery rebellions through the Cuban Revolution and its discontents-in addition to the historical processes that have forged one of the world's most vibrant socio-cultural traditions.

HIST 1331. The Rise and Fall of the Aztecs: Mexico, 1300-1600.

This course will chart the evolution of the Mexica (better known as the Aztecs) from nomads to the dominant people of central Mexico; examine their political, cultural, and religious practices (including human sacrifice); explore the structure and limitations of their empire; and analyze their defeat by Spanish conquistadors and their response to European colonization. We will draw upon a variety of pre- and post-conquest sources, treating the Aztecs as a case study in the challenges of ethnohistory. P

HIST 1332. Reform and Rebellion: Mexico, 1700-1867.

This course focuses on Mexico's difficult transition from colony to nation. We will examine the key political, social, economic, and cultural developments during this period. Major topics will include: the paradoxical eighteenth century, which saw Mexico emerge as the most prosperous region of the Spanish empire, even as social and economic tensions deepened; the outbreak of peasant rebellions in the early nineteenth century; the elite-led movement for independence; the economic decline and political turmoil of the early republic; foreign interventions by the United States and France; and the rise of the Liberals as Mexico's dominant political force. P

HIST 1333. The Mexican Revolution.

To study the Mexican Revolution is to examine the sweeping history of Modern Mexico: from the Liberal reforms of Benito Juárez to the enduring power of the Partido Revolucionario Institucional (PRI); from peasant revolutionary Emiliano Zapata to his namesake Zapatistas of Chiapas; from Pancho Villa's mass revolutionary army to transnational mystic Teresita Urrea; from the landlord Francisco Madero who led the insurgency to Lázaro Cárdenas who enacted land and labor reforms; from the constant flows of migrants crossing the border back and forth to Mexico's defiance against Trump's wall.

HIST 1340. History of the Andes.

Before the Spanish invaded in the 1530s, western South America was the scene of the largest state the New World had ever known, Tawantinsuyu, the Inca empire. During almost 300 years of colonial rule, the Andean provinces were shared by the "Republic of Spaniards" and the "Republic of Indians" - two separate societies, one dominating and exploiting the other. Today the region remains in many ways colonial, as Quechua- and Aymara-speaking villagers face a Spanish-speaking state, as well as an ever-more-integrated world market, the pressures of neoliberal reform from international banks, and the melting of the Andean glaciers.

HIST 1350. States, Kingdoms and Atlantic Trade.

Beginning in the 15th century Portuguese maritime explorers ventured down the coast of West Africa in search of ivory, animal skins, spices, gold. Fueled by accounts of Muslim explorers before them, they encountered dynamic African kingdoms that rivaled their own. In turn encounters with Europeans caused a shift in African polities causing the economies of African trade to shift from antiquated Saharan trade routes to the Atlantic Coast. As the demand for labor in the American colonies began to increase, transatlantic African trade began to include the continent's most precious commodity, captive African bodies. This course delves into the complex relationship between African and European polities and the business of transatlantic slavery in the burgeoning colonies of the Americas from 1400 to 1881, when European powers met in Berlin to discuss the division of the continent for its valuable resources.

HIST 1360. Amazonia from the Prehuman to the Present.

This course merging lecture and discussion will examine the fascinating and contested history of the largest rainforest on the planet and one of the world's most complex fluvial ecosystems: Amazonia, in equatorial South America, from its pre-human history to the present day. The course will include readings and discussions on the region's ecological origins; the social history of its diverse Indigenous populations, immigrant groups, and African-descended populations; exploration myths and European colonial projects; and more recent efforts to exploit and protect Amazonia's extraordinary natural and human resources. The course will use tools and resources from archaeology, anthropology, biology, and social and cultural history, and will also examine popular representations of the Amazon through novels, newspapers, podcasts, and film.

HIST 1370. The United States and Brazil: Tangled Relations.

This lecture course explores the complex relations between Brazil and the United States from the American Revolution to the present. Through the use of documents, films, literature, and historical monographs, we will examine the diplomatic, political, economic, and cultural interactions between the largest nations in the Americas, paying particular attention to the growing influence of the United States. We will focus on the "Special Relationship" that developed during World War II, the effects of Washington's foreign policy during the Cold War, U.S. involvement over the course of the military dictatorship, and new forms of interactions after the return to democracy.

HIST 1381. Latin American History and Film: Memory, Narrative and Nation.

This course is centered around the relationship between history and storytelling. It takes as a starting point that history is itself political, and asks that we always consider both how and why we tell stories about the past. Together, we will critically examine a broad range of films and texts that engage with the Latin American past, and explore what they have to say about how gender and sexuality, imperialism, slavery, the church, revolution and repression shaped the region. How do films represent the past, and how do we approach "historical film"? How have narrative and documentary films been used as in various social and political struggles? Each week, we will examine documentary, narrative, or experimental films in relation to other modes of historical storytelling, from academic historiography to graphic novels, first person testimonios, memoirs, oral histories, and journalism.

HIST 1440. The Ottomans: Faith, Law, Empire.

This course explores the rise and fall of the longest-lived Muslim dynasty in history, the Ottoman Empire (1299-1923). From Turkish nomads in Asia Minor to multiethnic empire spanning three continents, the Ottomans were the premier power of southern Europe, northern Africa, and the eastern Mediterranean in the early modern world. From medieval "Turko-Persia" to the catastrophes of World War I, we shall engage difficult historical questions surrounding law and empire, religion and secularism, nationalism and statebuilding, and the legacy of Ottoman rule in and outside today's Turkey—from Sarajevo to Baghdad, Crimea to Mecca, and "where East meets West": Constantinople/Istanbul.

HIST 1445. The Making of the Ottoman World, 15th - 20th Centuries.

This course treats some of the major themes of Ottoman state and society, one of the major empires of the world out of which many new polities in the Balkans, Anatolia, the Middle East and North Africa emerged during the twentieth century. At the center of the course is the transformation of the "classical" Ottoman state to the early modern and modern through the many shapes and forms it has taken. We will be covering the beginnings from the 15th century and end with the analysis of the making of the modern Ottoman society in the early 20th century.

HIST 1455. The Making of the Modern Middle East.

From North Africa to Afghanistan, Turkey to the Arabian peninsula, the goal of this course is to provide students with a robust background in modern Middle Eastern history, broadly defined. We begin in the long nineteenth century, an era of intense social and economic transformation that led to the collapse of the Ottoman empire and emergence of a new state system, primarily under British and French colonial rule. We then explore forces shaping the contemporary region, including nationalism, oil, regional conflicts and the Cold War, Islamism and mass politics, and military interventions by the US and other world powers. M

HIST 1456. Bankrupt: An Economic and Financial History of the Middle East in the 19th and 20th Centuries.

This course critically examines the economic, and particularly, the financial history of the modern Middle East in the 19th and 20th centuries. It is structured chronologically and thematically. It starts in the mid-19th century by examining the role of European states, as well as private European investment firms and oil companies, in facilitating the colonization of the region via loans, capitulations, and extractive concession agreements. It then shifts to the post-colonial period, studying how western oil companies, banks, investment firms, and multi-national organizations shaped the trajectories of the newly-independent states in the Middle East.

HIST 1457. Understanding the Palestinians.

Palestinians are largely absent in narratives about the "Arab-Israeli Conflict." This course introduces new scholarship that centers Palestinian experiences and agency within the larger thematics of capitalism, colonialism, nationalism, and indigeneity. Ultimately, we ask: Who are the Palestinians? What does their transformation from a largely peasant society into a dispossessed, displaced, and stateless people tell us about the making of the modern world? And why has the Palestinian condition become a signifier for global struggles for justice, equality freedom, and a shared world?

HIST 1460. Modern Turkey: Empire, Nation, Republic.

This course will treat some of the major themes of Turkish history and society, one of world's Muslim majority countries today. Since Turkey unfolded from the Ottoman Empire in the early 20th century, Turkish nationalism and its many shapes and forms has been at the center of the country's uneasy history of democratization. Mapping the political, socio-economic and cultural landscape, this ventures through Turkish history to study state and society through political thought and economy of democracy, exploring secularism, Islam, feminism, Kurdish question, memory and popular culture.

HIST 1470. Legal History in the Middle East.

This course is devoted to exploring questions of law and legal history in the Middle East/eastern Mediterranean region from late antiquity to the present. Emphasis will be on the Islamic legal tradition from medieval to modern times, including intersection-and-friction points between the shari'a and Roman, Persianate, and Mongol imperial legacies, and fellow Abrahamic faiths. From the earliest schools of Islamic jurisprudence to late Ottoman constitutionalism, and the sociolegal impact of the 1979 Iranian Revolution to the Arab Spring uprisings, our goal is to explore the depth and diversity of legal cultures and institutions across different epochs of Middle East history.

HIST 1501. The American Revolution.

This course will explore the period of the American Revolution from the 1760s through the turn of the nineteenth century. Taking a broad view of the conflict and its consequences, we will situate the American colonies in their North American and Atlantic context, examine the material and ideological concerns that prompted the Revolutionary War, and trace the consequences of the conflict for the nation that followed. Students will be invited to look beyond the Founders to the experiences of women, slaves, Native Americans, common soldiers, and Loyalists.

HIST 1502. The Early Republic United States.

This course explores the politics and culture of the United States between the ratification of the Constitution in 1789 and the financial crisis of the late 1830s. The establishment of the federal government still left crucial questions unresolved: the characteristics of national identity, the boundaries of citizenship, the legitimacy of slavery, and the tense relationship between capitalism, colonialism, and democracy. Relying on primary sources and secondary scholarship, the course will revisit familiar debates over warfare, sovereignty, and public policy, while also introducing students to a wide range of critical voices seeking to fulfill the idealistic possibilities of the American Revolution.

HIST 1503. Antebellum America and the Road to Civil War.

Surveys society, culture, and politics between 1800 and 1860. Topics include the social order of slavery, the market revolution and its impact, abolition and other evangelical reform movements, and the development of sectional identities.

HIST 1505. Making America Modern.

This course surveys a crucial period in American history between the end of Reconstruction and the beginning of World War I. During this time, the United States transitioned from a relatively fragmented, traditional, and largely agricultural society into one that was remarkably diverse, increasingly urban, and highly industrialized. In surveying this important transitional period, we will pay particular attention to far-reaching changes in the nation's business and economic life, its social movements, as well as its cultural developments, all with an eye to understanding how the United States became one of the world's most commanding economic, political, and cultural powers.

HIST 1507. American Babylon: Crisis and Reckoning in the Postwar United States, 1945-1980.

This course explores the major cultural and political developments in U.S. history in the tumultuous postwar decades: liberalism, radicalism, and conservatism; race, class, gender, and sexuality in shaping national life; the Cold War and the fate of the New Deal; rise of the New Right; and the making of a second gilded age, among others. We consider postwar history in three broad periods: One, the consolidation of "Cold War liberalism" under international and domestic anticommunism through the 1960s; Two, a period we might call the "second Reconstruction," between 1954 and 1973, when race-, gender-, and sexuality-based movements produced a social and legal revolution on behalf of equality and human rights; and Three, a period of backlash to the rights revolution that overlapped with the rise of an oligarchic phase of capitalism known as "neoliberalism," between the 1970s and the present.

HIST 1511. Sinners, Saints, and Heretics: Religion in Early America.

This course considers the major people, events, and issues in the history of religion in North America, from pre-contact Native cosmologies to the tumultuous events of the Civil War. Attention will be given to "religion as lived" by ordinary people, as well as to the ways that religion shaped (or not) larger cultural issues such as immigration, public policy, social reform, warfare, democracy, slavery, and women's rights. Prior knowledge of religion in North America is not required; there are no prerequisites to this course, and it is open to all students. P

HIST 1512. First Nations: The People and Cultures of Native North America to 1800.

This course explores the history of North America through the eyes of the original inhabitants from pre-contact times up through 1800. Far from a simplistic story of European conquest, the histories of Euroamericans and Natives were and continue to be intertwined in surprising ways. Although disease, conquest, and death are all part of this history, this course also tell another story: the big and small ways in which these First Nations shaped their own destiny, controlled resources, utilized local court systems, and drew on millennia-old rituals and practices to sustain their communities despite the crushing weight of colonialism. P

HIST 1513. U.S. Cultural History from Revolution to Reconstruction.

What does it mean to survey a country's history? In this course, it means setting out in several different directions in order to determine the form, extent, and situation of the United States from the 1750s to the 1870s. It means looking carefully at the nation's past through its cultural productions (ideas, beliefs, and customs expressed in print, material, and visual forms). And it means paying close attention to the details. Each week, students will examine one object, text, or idea in order to track broader developments in American history during this time period.

HIST 1514. Capitalism, Slavery and the Economy of Early America.

The simultaneous expansion of capitalism and slavery witnessed intense struggle over the boundaries of the market, self-interest, and economic justice. This course traces those arguments from Colonization through Reconstruction and asks how common people navigate the shifting terrain of economic life. The approach is one of cultural and social history, rather than the application of economic models to the past.

HIST 1515. American Slavery.

This lecture course will address the history of slavery in America. We will trace the emergence of slavery in the New World, with a heavy emphasis on slavery in the U.S. South, and a focus on the relationship of slavery to the emergence of systems of racial and gendered power. The course is broad in scope, beginning with the emergence of the slave trade and concluding with a look forward to the ways that the history of slavery continues to impact the way race and gender (as well as sexuality and class) structure our lives today.

HIST 1520. Women in Early America.

This course examines the major social and cultural developments of early America through the lens of women's history. We will explore differences among representations of women, constructions and ideals of womanhood, and lived experiences, as we engage such topics as: cross-cultural exchange and conflict; citizenship and enslavement; work and cultural expression; and women's varying degrees of access within social, civic and legal arenas. Relying heavily on sources like letters, diaries, legal records, and artifacts, we will work to identify strategies and best practices for recovering the voices and experiences of early American women buried in the archive.

HIST 1530. The Intimate State: The Politics of Gender, Sex, and Family in the U.S., 1873-Present.

Examines the "intimate politics" of gender norms, sex and sexuality, and family structure in American history, from the 1870s to the present, focusing on law and political conflict. Topics include laws regulating sex and marriage; social norms governing gender roles in both private and public spheres; the range of political perspectives (from feminist to conservative) on sex, sexuality, and family, and the relationship of gender to notions of nationhood and the role of the modern state. Some background in history strongly recommended.

HIST 1531. Movement Politics in Modern America.

This course explores the history of political movements in the United States from Reconstruction through Trumpism—politics from the bottom up, a history of "popular politics." The course begins with emancipation and the rise of industrial capitalism in the late nineteenth century and the civil rights, populist, and reform politics that emerged in response. The course concludes the New Right and transformations in political culture from Reaganism to Trumpism. In between, we consider civil rights, progressivism, feminism(s), the New Deal coalition, anti-communism, Black freedom, the New Left, second wave feminism, and gay rights. Major themes include: conservatism and liberalism across the twentieth century; race, class, and gender in shaping the nation's politics; the relationship between social movements and political power; the democratic promise and the limitations of political movements and of the U.S. political system more broadly.

HIST 1532. Black Freedom Struggle Since 1945.

Examines the extended history of the Civil Rights Movement in the U.S. with a range of primary sources. Starting at World War II, the course considers the roles of the courts, the government, organizations, local communities, and individuals in the ongoing struggle for African American equality, focusing on African American agency. Sources include photographs, documentaries, movies, letters, speeches, autobiography, and secondary readings. Must have taken at least one post-1865 U.S. history course demonstrating a foundation in this time period.

HIST 1533. Cities and Inequality Since 1920: The United States.

This lecture course takes up the relationship between cities and social and economic inequality—especially racial, but also other forms of social disadvantage along lines of class, gender, sexuality, indigeneity, and geography. Its focus is the urban history of American cities, suburbs, and towns and how urban development since the advent of the motor-car suburb in the 1920s shaped American social life. Students will learn about and explore topics such as zoning, racial redlining and other forms of segregation, real estate markets, the home building industry, urban public policy and law, urban leisure, transportation, and many others. At the center of the course is the question of how people live in dense connectivity and community and what the history of the modern American city can tell us about the nature and durability of social inequality.

HIST 1550. American Urban History, 1600-1870.

Both a survey covering urbanization in America from colonial times to the present, and a specialized focus exploring American history from an urban frame of reference. Examines the premodern, "walking" city from 1600-1870. Includes such topics as cities in the Revolution and Civil War, the development of urban services, westward expansion, and social structure. P

HIST 1551. American Urban History, 1870-1965.

A survey with a specialized focus exploring American history from an urban frame of reference. Topics include the social consequences of the modern city, politics, reform, and federal-city relations.

HIST 1553. Empires in America to 1890.

In this class, we'll consider some of the forms of empire-building by various groups of indigenous and colonizing peoples in what is now the United States in order to understand the development of imperial U.S. power in both domestic and international contexts. Rather than resting upon a foregone conclusion of European settler colonial "success," the course explores the contingent and incomplete nature of empire-building even within unbalanced power relationships.

HIST 1554. American Empire Since 1890.

This survey of twentieth-century US history through the lens of racial capitalism and empire will focus on the United States as a settler state whose power also relies on overseas colonialism and free trade imperialism. Topics include: ideology and political culture, labor and extraction, social movements and resistance, knowledge production and the military-industrial-complex, neoliberal scarcity and financialization.

HIST 1570. American Legal and Constitutional History.

History of American law and constitutions from European settlement to the present. Not a comprehensive survey but a study of specific issues or episodes connecting law and history, including morals and marriage laws, slavery, contests over Native American lands, delineations of race and gender, economic regulation, and the construction of a right to privacy.

HIST 1571. The Intellectual History of Black Women.

This course will introduce students to the intellectual productions and theoretical traditions of African American women. Focused on the canonical texts of African American women, this class gestures toward diaspora as well. Moving chronologically from the history of slavery to the present will require that we simultaneously confront the question of what counts as "intellectual" history. Thus even as we will read the written words of black feminists across time, we will also call into question what Barbara Christian calls "the race for theory," turning also to resistance practices, material culture, and bodily performance as sites of black feminist theorization.

HIST 1572. America Unbound: New Approaches to U.S. International and Diplomatic History.

Traditionally understood as a field studying the activities of ambassadors, diplomatic history has recently begun to examine the role of marginalized agents in the making of international relations. This methodological shift entails reimagining the place of the United States in a globalizing world. In line with these developments, this course reconsiders the broader international stakes of what we tend to regard as "internal" developments in U.S. history (for instance, the American Revolution, the Civil War, the New Deal, or the civil rights movement). Reconceiving international relations in this integrated way emphasizes how crucial interactions with Native American, European, Latin American, African, and Asian nations were to negotiating such matters as the nature of political authority, the role of race and gender in structuring sociopolitical life, or the relationship between citizenship rights and state violence over the course of U.S. history.

HIST 1620. Resisting Empire: Gandhi and the Making of Modern South Asia.

Gandhi's India tracks the emergence and transformations of British colonial rule in the Indian subcontinent, the insurgencies and the cultural and economic critiques that shaped anti-colonial nationalism, the conflicts that fueled religious differences and the ideas that shaped non-violent civil disobedience as a unique form of resistance. With readings from Gandhi, Marx and Tagore, amongst others, this course interrogates relationships between power and knowledge, histories from below, as well as violence and political mobilizations that would, by the mid-twentieth century, bring down an empire and create a bloody and enduring divide with the birth of two nation-states.

HIST 1640. Inequality + Change: South Asia after 1947.

With a focus on inequality and change this lecture course will survey South Asia's history post-1947, with the end of colonial rule and the making of nation-states. With a historical attention to 'inequality', we will interrogate the inequalities cast by rural poverty, environment, religion, caste, gender and ethnicity and the remarkable contestations of people in the region that have challenged state power, and have thus shaped South Asia's postcolonial histories. We will particularly focus on histories from below, and engage historical and literary writings, newspapers as well as documentary films.

HIST 1730. "Cannibals", "Barbarians" and "Noble Savages": Travel and Ethnography in the Early Modern World.

This seminar will trace the growth of European images of the "other" in early modern Africa, Europe and the Americas. Using the tropes of "cannibal", "barbarian" and "noble savage", it explores evolving theories about human nature, human difference and race. Alongside critical analyses drawn from several disciplines, the main readings will be primary sources. These vivid, enigmatic accounts are both portraits of a world alien to the writer, and also mirror the writer's own culture.

HIST 1731. Diplomatic History of Abolitionism, 1760-1865.

This course deploys insights and methodologies from "new" diplomatic history to account for a landmark process which shaped the birth of the modern world, the abolition of slavery and the slave trade. We will not only seek to account for how changes in diplomatic practice conditioned the struggle for abolition, but also for how new arguments and strategies for the abolition of slavery transformed the diplomatic world in ways which still reverberate in the actions and institutions of contemporary international bodies, from NGOs to national embassies and the United Nations.

HIST 1735. Slavery in the Early Modern World.

There were multiple forms of slavery in the Early Modern world. We will look at three major systems: Mediterranean slavery and the Barbary Corsairs, Black Sea slavery and slave elites of the Ottoman Empire, and the Atlantic triangular trade. We will examine the religious, political, racial, and economic bases for these slave systems, and compare the experiences of individual slaves and slave societies. Topics discussed include gender and sexuality (e.g. the institution of the Harem and the eunuchs who ran it), the connection between piracy and slavery, and the roles of slavery in shaping the Western world. P

HIST 1736. A Global History of the Reformation.

2017 marked the 500th anniversary of the publication of Martin Luther's "95 Theses," an event often considered to have caused the Reformation in Europe. This course explores the religious reforms of the sixteenth and seventeenth centuries in a global context, examining how the interaction of peoples from Europe, Asia, Africa, and the Americas shaped both contemporary debates and their enduring legacies. Bound up in Catholic and Protestant controversies about how humanity should interact with the divine were fundamental reappraisals of how to define who counted as human, the desirability/possibility of cultural pluralism, and religion's place in public life. P

HIST 1740. Capitalism, Land and Water: A World History: 1350-1848.

The choice of how we allocate land and water shapes famine, drought, war, homelessness and poverty. Over the centuries, utopians and empires have looked to very different systems of allocation, from village communalism to plantation systems to state provision of infrastructure to free-market systems. This course mixes histories of political economy, theology, literature, and anthropology, asking how imaginary landscapes become the material realities of farm and highway. Themes will include the rise of modern, surveying, engineering, cities, infrastructure systems, and land reform. It will ask about the consequences of history in an era of environmental disaster, famine, mortgages, and evictions.

HIST 1741. Capitalism, Land and Water: A World History: 1848 to the present.

The choice of how we allocate land and water shapes famine, drought, war, homelessness and poverty. Over the centuries, utopians and empires have looked to very different systems of allocation, from village communalism to plantation systems to state provision of infrastructure to free-market systems. While an economist or political scientist might study these regimes through abstraction, the historian dives into the social context of different systems, reading government documents, social protests, as well as architecture, maps, and the landscape itself, as an archive that testifies as to the nature of consent, participation, and resistance in a political system.

HIST 1800. Religion and Power in North America to 1865.

This course explores the relationship of various forms of religion and power in North America from the pre-Columbian period through the US Civil War and Reconstruction. We explore the confluence and conflict of Indigenous, African, and European beliefs and practices. Topics include: native agency and settler colonialism; race and slavery; war and politics; gender and patriarchy; soul-craft and statecraft; domination and empowerment.

HIST 1820A. Environmental History.

Environmental history examines the changing relationship between human beings and their physical surroundings. We will actively question the boundary between nature and culture, showing how social and natural history mutually inform one another. We will do so by asking three interrelated questions. First, how has the material context in which history unfolded impacted the development of our culture, society, and economy? Second, how and why did people's ideas and representations of the natural world change over time? Finally, in what ways and to what ends have human beings actively though not always intentionally altered their physical surroundings?

HIST 1820B. Environmental History of East Asia.

With a fifth of the world's population on a twentieth of its land, the ecosystems of China, Japan, Korea and Vietnam have been thoroughly transformed by human activity. This course will explore the human impact on the environment from the first farmers to the industrial present, exploring how wildlife was eliminated by the spread of agriculture, how states colonized the subcontinent, how people rebuilt water systems, and how modern communism and capitalism have accelerated environmental change. Each week we will examine primary sources like paintings, essays, maps and poems. The course assumes no background in Asian or environmental history.

HIST 1820D. Commodity Environments: Histories, Afterlives, and Emergent Worlds.

We are surrounded by commodities today: from teas on our breakfast tables, oil and gases running our cars to metals powering our phones and laptops. Have you wondered where these commodities came from? How does a seemingly 'remote', 'war-torn' frontier get connected to global financial centers? What happens to forests, rivers, hills, mountains, and Indigenous ecologies after a 'resource' is identified? This course studies the environmental histories of commodity production and consumption from the early modern to present times. It focuses on the afterlives of commodities—the unintended effects of subjecting vibrant life worlds to colonial-capitalist logics. Tuesdays will be lectures, and Thursdays will be collaborative reading sessions of primary and secondary sources. Prior background of history and environmental studies is helpful but not necessary.

HIST 1820E. Environmental History of Commodities: Past and Present Worlds.

We are surrounded by commodities today: from teas and sugars on our breakfast tables, oil and gases running our cars to metals powering our phones and laptops. Have you wondered where these commodities came from? How does a seemingly 'remote', 'war-torn' frontier get connected to global financial centers? What happens to forests, rivers, hills, mountains, and Indigenous ecologies after a 'resource' is identified? This course studies the environmental histories of commodity production and consumption from the early modern to present times. It focuses on the afterlives of commodities—the unintended effects of subjecting vibrant life worlds to colonial-capitalist logics. Prior background in history/ environmental studies is helpful but not necessary.

HIST 1820G. Nature on Display.

This course will explore the different ways in which people have represented the natural world in a variety of context and time periods from the 16th to the 21st century. We will look at the depiction of nature in museums, gardens, documentary films, and municipal parks, as well as the science of biology and ecology. As we do so, we will explore our changing attitudes towards nature and the place that we occupy in it, thinking through the complex and philosophically fraught question of what nature is, and what, if anything, distinguishes it from the rest of our world.

HIST 1825F. Nature, Knowledge, Power in Early Modern Europe.

This course examines the creation and circulation of scientific knowledge in early modern Europe, ca. 1450-1600. We will explore the practices, materials, and ideas not just of astronomers and natural philosophers, but also of healers, botanists, astrologers, alchemists, and artisans. How did social, political, economic, and artistic developments during this period reshape how naturalists proposed to learn about, collect, manipulate, and profit from nature? We will also consider the ways in which colonial projects forced Europeans to engage with other "ways of knowing" and rethink classical knowledge systems. P

HIST 1825H. Science, Medicine and Technology in the 17th Century.

This course examines the development of science and related fields in the period sometimes called 'the scientific revolution'. It will both introduce the student to what happened, and ask some questions about causes and effects. The new science is often associated with figures like Harvey, Galileo, Descartes, Boyle, Leeuwenhoek, and Newton. But it is also associated with new ways of assessing nature that are mingled with commerce. The question of the relationship between developments in Europe and elsewhere is therefore also explored. P

HIST 1825J. History of Artificial Intelligence.

The course will trace the origins and trajectory of ideas about artificial intelligence, starting with the "active intellect" of Aristotle, early analog computers and automata, Ada Lovelace's "calculus of the nervous system," through the "general intellect" and "machine capital" of Karl Marx, Karel Čapek's "Universal Robots," the "Turing test," "cyberpositivity" and Donna Haraway's "Cyborg Manifesto," and concepts like "swarm intelligence," "singularity," and the "black box" problem. Sources will encompass a range of disciplinary approaches (philosophy, sociology, computer science, etc.), formats (text, film, graphic novel), and genres including Japanese anime and Afrofuturism.

HIST 1825L. The Roots of Modern Science.

This course explores the ways theories of physics, chemistry, biology and mathematics grew in relation to the natural, cultural and social worlds of the 18th and 19th centuries. There are no formal pre-requisites for the course, which is designed to be equally open and accessible to science and humanities students.

HIST 1825M. Science at the Crossroads.

This course will look closely at the dramatic developments that fundamentally challenged Western Science between 1859 and the advent of the Second World War in the 1930s. Its primary focus will be on a variety of texts written in an effort to understand and interpret the meanings of fundamentally new ideas including from the biological side—evolutionary theory, genetic theory, and eugenics; from the physical side relativity theory, and quantum mechanics. The class should be equally accessible to students whose primary interests lie in the sciences and those who are working in the humanities.

HIST 1825S. Science and Capitalism.

We will explore the longstanding relationship between science and commerce from the 17th century to our own asking when the modern notion of science as a disinterested pursuit of objective truth took root. We will also explore how knowledge of the natural world has been shaped by personal, financial, and other kinds of self-interest in a number of diverse contexts ranging from Galileo's invention of the telescope in Renaissance Italy to the patenting of genetically engineered organisms in today's world, paying special attention to the diverse mechanisms that have been devised to guard against fraud and disinformation.

HIST 1830B. Politics and the Psyche from Sigmund Freud to Donald Trump.

This combined lecture/discussion course explores the relation between politics and the emotions from Sigmund Freud's discovery of the unconscious in Vienna around 1900 to the rise of populist and anti-democratic politics in the United States and Europe today. Historical knowledge generally focuses on civilizations, societies, systems, and events as they move, evolve, and transform through time. Psychoanalytic knowledge added the inner, mental (psychic) lives of people and cultures. Psychoanalysis redefined the humanities, the social sciences, and their relationships, paving the way as well for new approaches such as gender and sexuality studies. We will focus on the role of psychoanalysis as a political science, attuned to the modes of mass and media politics of the 20th and 21st centuries.

HIST 1830M. From Medieval Bedlam to Prozac Nation: Intimate Histories of Psychiatry and Self.

Humankind has long sought out keepers of its secrets and interpreters of its dreams: seers, priests, and, finally, psychiatrists. This lecture course will introduce students to the history of psychiatry in Europe, the United States, and beyond, from its pre-modern antecedents through the present day. Our focus will be on the long age of asylum psychiatry, but we will also consider the medical and social histories that intersect with, but are not contained by, asylum psychiatry: the rise of modern diagnostic systems, psychoanalysis, sexuality and stigma, race, eugenics, and pharmaceutical presents and futures.

HIST 1835A. Unearthing the Body: History, Archaeology, and Biology at the End of Antiquity.

How was the physical human body imagined, understood, and treated in life and death in the late ancient Mediterranean world? Drawing on evidence from written sources, artistic representations, and archaeological excavations, this class will explore this question by interweaving thematic lectures and student analysis of topics including disease and medicine, famine, asceticism, personal adornment and ideals of beauty, suffering, slavery, and the boundaries between the visible world and the afterlife, in order to understand and interpret the experiences of women, men, and children who lived as individuals—and not just as abstractions—at the end of antiquity. P

HIST 1901. Conspiracy? A Possible History of U.S. Politics and Culture.

From QAnon supporters to vaccine skeptics to adherents to false charges of a "stolen" presidential election, conspiracy theories have captured the imaginations of millions of Americans. Whether blaming social media platforms, partisan disinformation campaigns, or a full-scale crisis of democracy itself, in attempting to explain the apparently expanding reach of a conspiratorial habit of mind, observers have mostly stressed its recent origins. But what if we approached the present situation as a reflection of lasting tensions long visible in the history of American political culture? This class considers the history of conspiracy theories as a symptom of longstanding anxieties about the state of American democracy and the vitality of the modern public sphere. From the Salem Witch Trials to the January 6th insurrection, we adopt conspiracy as a lens through which to explore the historical relationship between power and knowledge.

HIST 1902. American Women's History.

This course uses gender and sexuality as a category of analysis to delve into American history between the sixteenth century and the present. We will ask how gender and sexuality were conceptualized and constructed throughout American history to explore large historical themes and individuals' daily lives. Using an intersectional approach, the course begins with the convergence of Africans, Europeans, and Indigenous peoples, through the violence surrounding the nation's founding, the expansion of the nation-state and slavery, the Civil War and its reverberations, the US in the world, the Civil Rights Movement, Roe vs Wade, and concludes in the present moment.

HIST 1930A. History of American School Reform (EDUC 1200).

Interested students must register for EDUC 1200.

HIST 1930B. Academic Freedom on Trial: A Century of Campus Controversies (EDUC 1740).

Interested students must register for EDUC 1740.

HIST 1930C. The Century of Immigration (AMST 1611Z).

Interested students must register for AMST 1611Z.

HIST 1930D. Making America: Twentieth-Century U.S. Immigrant/Ethnic Literature (AMST 1611A).

Interested students must register for AMST 1611A.

HIST 1930E. Health and Healing in American History (GNSS 1960B).

Interested students must register for GNSS 1960B.

HIST 1930F. Renaissance Italy (ITAL 1360).

Interested students must register for ITAL 1360.

HIST 1930G. Black Freedom Struggle Since 1945 (AFRI 1090).

Interested students must register for AFRI 1090.

HIST 1930H. Teaching Topics in American History and Literature, 1945-1980 (EDUC 1620).

Interested students must register for EDUC 1620.

HIST 1930I. American Higher Education in Historical Context (EDUC 1730).

Interested students must register for EDUC 1730.

HIST 1930J. Word, Image and Power in Renaissance Italy (ITAL 1580).

Interested students must register for ITAL 1580.

HIST 1930L. The History of American Education (EDUC 1020).

Interested students must register for EDUC 1020.

HIST 1930M. History of African-American Education (EDUC 1050).

Interested students must register for EDUC 1050.

HIST 1930N. Germany, Alcohol, and the Global Nineteenth Century (GRMN 1661E).

Interested students must register for GRMN 1661E.

HIST 1930P. Development, Dependency, and Decline in Africa, 1950-2025 (AFRI 1640).

Interested students must register for AFRI 1640.

HIST 1930Q. History of the State of Israel: 1948 to the Present (JUDS 1711).

Interested students must register for JUDS 1711.

HIST 1930R. Roman History I: The Rise and Fall of an Imperial Republic (CLAS 1310).

Interested students must register for CLAS 1310.

HIST 1930S. Roman History II: The Roman Empire and Its Impact (CLAS 1320).

Interested students must register for CLAS 1320.

HIST 1930T. History of African-American Education (EDUC 1050).

Interested students must register for EDUC 1050.

HIST 1930U. Slavery in the Ancient World (CLAS 1120E).

Interested students must register for CLAS 1120E.

HIST 1930V. History of Zionism and the Birth of the State of Israel (JUDS 1712).

Interested students must register for JUDS 1712.

HIST 1930W. Introduction to Yiddish Culture (JUDS 1713).

Interested students must register for JUDS 1713.

HIST 1930Z. The Lower East Side: Immigration and Memory (JUDS 1730).

Interested students must register for JUDS 1730.

HIST 1931A. Kabbalah: Jews, Mysticism, and Magic (JUDS 1740).

Interested students must register for JUDS 1740.

HIST 1931B. Money, Power, Sex and Love: the Modern Jewish Family in Europe and America (JUDS 1722).

Interested students must register for JUDS 1722.

HIST 1931C. The End of Modern Jewish History (JUDS 1716).

Interested students must register for JUDS 1716.

HIST 1931D. The Fragility of Life in Ancient Greece (CLAS 1130).

Interested students must register for CLAS 1130.

HIST 1931E. The Culture of Death in Ancient Rome (CLAS 1420).

Interested students must register for CLAS 1420.

HIST 1931F. Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC (CLAS 1210)..

Interested students must register for CLAS 1210.

HIST 1931G. Roman Religion (CLAS 1330).

Interested students must register for CLAS 1330.

HIST 1931H. 1968: A Year in Review (AFRI 1968).

Interested students must register for AFRI 1968.

HIST 1931L. Women, Gender and Feminism in Early Modern Italy (ITAL 1262).

Interested students must register for ITAL 1262.

HIST 1931M. The Persian Empire and Achaemenid Culture (CLAS 1230).

Interested students must register for CLAS 1230.

HIST 1931Q. The Modern Middle East: Struggles for Power and Justice (MES 1111)..

Interested students must register for MES 1111.

HIST 1931R. Race in U.S. Cities and Suburbs (ETHN 1751F)..

Interested students must register for ETHN 1751F.

HIST 1931S. The Civil Rights Movement (AFRI 1090A).

Interested students must register for AFRI 1090A.

HIST 1941A. Vietnam/American War: Nation, Literature, Memory, and the Cultural History of Conflict.

This course examines the cultural history of the "Vietnam War" (also known as the "American War") from the perspective of Vietnam from 1954 to 1986. What were the political, ideological, civil, international, and colonial roots of conflict? How was war experienced on the ground in the Democratic Republic of Vietnam (North Vietnam) and Republic of Vietnam (South Vietnam)? This class challenges the orthodox and American-centric views of the war by investigating how different actors contested the vision of a post-colonial Vietnamese nation. We will dedicate attention to literature, gender, migration, memory, and debates on historical contingency, agency, and complexity.

HIST 1942A. Taiwan's Geographies.

Too frequently understood only as a geopolitical anomaly and foreign relations battleground, Taiwan has a rich history as a complex site of overlapping geographies and shifting spatial imaginations. These include indigenous geographies; non-human environments; human circulation and migration in the Pacific and Southeast, East, and Northeast Asia; successive eras of European and Asian colonization and empire; and twentieth century regional and global communities of politics, labor, affect, and more. We'll approach these histories via scholarly writing, film, music, literature, digital visualizations, and other sources.

HIST 1947Q. History of Jews in Brazil.

This seminar examines the history of Jews in Brazil from early Portuguese colonial rule to the present, first focusing on the role of Jews and New Christians in early economic development. We then examine the Inquisition in Brazil, North African Jewish immigration in the mid-nineteenth century, Eastern European immigration in the twentieth-century, and the formation of communities and institutions over the last hundred years. We study Brazil's foreign policy to Israel and other Middle Eastern countries. Finally, we consider the role of Jews in the opposition to the dictatorship and in the process of democratic consolidation.

HIST 1948. Global Palestine.

Global Palestine: Palestine is often imagined as being locked into a national conflict with Israel over a territory slightly larger than the state of Vermont. This class seeks to break out of this framework, considering Palestine within larger—global, even—structures and processes of colonialism and decolonization; forced displacement and securitization; and shifting modes of temporality and spatialization. The goal is not only to provide useful and nuanced approaches to Palestinian history, but to use the histories of Palestine and Palestinians to examine more closely the workings and effects of global dynamics.

HIST 1949A. Legal History: The Case of the Middle East.

This seminar is devoted to exploring questions of law and legal history in the Middle East. Together we shall navigate a range of imperial, colonial, and national legal systems in the region via select case studies from early modern to contemporary times. Major themes include not only Islamicate legal traditions and jurisdictions, but the intersections, tensions, and synergy between Islamic law and Roman, Persianate, and European imperial legacies; fellow Abrahamic faiths and the interplay between religion and secularism; and the evolving role of international law including human rights and humanitarian law. From early schools of Islamic jurisprudence to Ottoman, Egyptian, and Iranian constitutions, and the role of lawyers and judiciaries from decolonization to the Arab Spring uprisings, our goal is to explore the depth, diversity, and transformation of legal cultures and institutions across different epochs of Middle East history.

HIST 1950A. The Indigenous Worlds of the American Revolution.

This course considers the wider area of the American Revolution through the experiences and actions of Indigenous nations. Although the usual story of the American War of Independence is centered on the political standoff between the American colonists and the colonies (and eventual states), the view from Indian country looked vastly different, with divergent allegiances, and experiences ranging from 1760 to 1795, during which the American Revolution was only one conflict.

HIST 1952A. World of Walden Pond: Transcendentalism as a Social and Intellectual Movement.

This course examines the 19th century phenomenon of Transcendentalism: this country's most romanticized religious, philosophical, and literary movement. Focusing especially on Emerson, Thoreau, and Fuller, we'll examine the ideas of the Transcendentalists in the age of reform and evaluate the application of their principles to abolition, feminism, and nature. The central problem which they wrestled with will be the focus, too, of our investigations: the tension between individualism and conformity.

HIST 1952B. The Intimate State: The Politics of Gender, Sex, and Family in the U.S..

This seminar examines the "intimate politics" of gender, sexuality, and race in modern American history, focusing on law and political conflict from Reconstruction to the present. Its central concern is how the "private" (the intimate) is constructed and regulated by state power—by government. Topics include laws regulating sex and marriage; social norms governing gender roles in both private and public life; the range of political perspectives (from feminist to conservative) on sex, sexuality, and family; the transition from slavery to freedom; gender, sexuality, and U.S. empire; and the relationship of gender, sexuality, and race to notions of nationhood and the role of the modern state. Some background in history recommended but not required.

HIST 1953S. Costs of Resistance: History Through Film.

Through films and documentaries about places with contentious histories and ongoing political conflicts, this course will examine the solidarities and fractures that resistance against colonial and foreign control brings about in struggling societies. We will particularly engage with themes around sovereignty and self-determination, nationality and belongingness, and history and memory. Such questions not only have real-world stakes for peoples' survival and political identities, but also shape in profound ways the imaginations and practices of resistance and solidarity across the globe. Course materials will revolve around struggles of Palestinians, Irish, Kurds, Kashmiris, Tamils, and Indigenous Americans, among others. The primary texts in this course will be films and documentaries that we will watch together as a class. Each week or module will revolve around a one film or documentary. Select readings will supplement themes of each film or documentary.

HIST 1956A. Thinking Historically: A History of History Writing.

Philosopher George Santayana famously warned that "Those who cannot remember the past are condemned to repeat it." Ten years later, industrialist Henry Ford perhaps even more famously dismissed that notion: "History is more or less bunk." What we mean by history and how we construct and use it are essential questions in all societies. Thinking Historically explores how we view and employ the past. The course examines major ways of interpreting the past through a survey of historians and methods and studies how history is produced, used, and misused, by professionals as well as by the public.

HIST 1956B. Rites of Power in Modern China.

Confucius and Mao shared at least one characteristic: a conviction that ritual is a critical part of exercising power. This course investigates the meaning of ritual and its importance in the formation of Chinese communities in the modern era, whether households, villages, empires, communes, regions, or nation-states. Topics include family and gender roles, imperial ceremonies, religious rites, revolutionary politics, cults of personality, grassroots movements, and popular protests. The class will collaboratively explore how political activists embraced new media (photographs, mass performance, music, film, video) and techniques (boycotts, mobilization, marches, purges) that merged ritual power with material action.

HIST 1956D. Jewish Humor, Commercial Entertainment, and Modern Identity in 20th C America and Central Europe.

The seminar explores the relationship between humor, popular culture and Jewish ethnic identity in early 20th-century Europe and America. It argues that self-deprecating humor and satiric performance of Jewish stereotypes were not expressions of self-hatred, but complex cultural gestures that led to integration within mainstream society. Topics to be considered are: the joke as a social gesture; the Jewish music hall as an urban institution; the politics of blackface in American Vaudeville; the East-European Jews in Hollywood.

HIST 1956S. History of Artificial Intelligence.

The course will trace the origins and trajectory of ideas about artificial intelligence, starting with the "active intellect" of Aristotle, early analog computers and automata, Ada Lovelace's "calculus of the nervous system," through the "general intellect" and "machine capital" of Karl Marx, Karel Capek's "Universal Robots," the "Turing Test," "cyberpositivity" and Donna Haraway's "Cyborg Manifesto," and concepts like "swarm intelligence," "hive mind," "singularity," and the "master algorithm." Sources will encompass a range of disciplinary approaches (philosophy, sociology, computer science, etc.), formats (text, film, graphic novel), and genres including Japanese anime and Afrofuturism.

HIST 1958A. Archives of Desire: Non-Normative Genders and Sexualities in the Hispanophone World.

This course focuses on non-normative genders and sexualities in the Hispanophone world from the pre-colonial to the present period. It pays particular attention to affects, desires, and subjectivities captured in the historical testimonies of gender and sexual non-conformists. From the life of "The Nun Lieutenant" Catalina de Erauso or the 1901 lesbian marriage of Elisa and Marcela, to recent LatinX queer diasporas in the United States, we will discuss the historical tensions among Catholic morality, taxonomic and empiricist projects originated in the early modern era, and the embodied and emotional experiences of gender and sexual non-conformists.

HIST 1958C. History beyond Empires and Nations: Kashmir 1846-2020.

This course examines how histories of borderlands and margins, emanating from empires and nationstates, turn them into simultaneous objects of desire and control. Through the example of Kashmir—long conceptualized as a famed paradisaical land, which in the postcolonial era turned into a politically disputed and a heavily militarized zone—we will critically parse through orientalist, nationalist, academic, and popular histories about such regions. Building upon comparisons with similarly contested sites such as Palestine, the course will center a people's understanding of the history of a place through an exploration of counter historical narratives, literary works, protest music, and poetry.

HIST 1958D. Combating Colonialism: Comics and Indigenous Storytelling.

This course would begin with decolonial theory, history of indigenous storytelling, then move into the history of comics and highlight indigenous stereotypes, and then move into how indigenous people have used this very white-American form of storytelling and reclaimed indigenous portrayals.

HIST 1958E. On the Move: Problems and Histories of Tourism and Mobilities.

This course examines histories of modern recreational tourism and the politics of mobility more generally. Tourism is a fascinating point of departure through which we can examine how histories of empire, consumerism, gender, and the environment all converge upon practices many (but certainly not all) of us take for granted. The premise of this seminar is based on two basic questions: through tourism, how do we change a place and how does that place change us? How does human mobility produce a new set of economic, social, and political relations? The answers will vary across time and space, but through engagement with scholarship and various primary sources we can come to better understand how the pleasure modern-day travelers derive from temporarily being someplace else is ultimately something deeply embedded into the structures and historical processes of the modern world itself.

HIST 1960A. African Environmental History (AFRI 1060M).

Interested students must register for AFRI 1060M.

HIST 1960B. Alien-nation: Latina/o Im/migration in Comparative Perspective (AMST 1903B).

Interested students must register for AMST 1903B.

HIST 1960C. End of the West: The Closing of the U.S. Western Frontier in Images and Narrative (AMST 1904D).

Interested students must register for AMST 1904D.

HIST 1960D. Africa Since 1950 (AFRI 1060A).

Interested students must register for AFRI 1060A.

HIST 1960E. Word and Utopia: Seventeenth-century Portuguese World (POBS 1600S).

Interested students must register for POBS 1600S.

HIST 1960F. The Portuguese Colonial Empire in a Comparative Perspective (XIX-XX Centuries) (POBS 1600Y).

Interested students must register for POBS 1600Y.

HIST 1960G. Southern African Frontiers, c. 1400-1860.

This seminar explores southern Africa before 1860 to explore a global phenomenon: the pernicious emergence of race as the salient marker of human difference. We examine successive frontiers over millennia to track the changing dynamic between indigenes and newcomers. Discussions unpack overarching trends in the ways people negotiated cultural, political and economic difference. Both violence and absorption were always in play, but by the mid-nineteenth century, fluidity and hybridity gave way to assimilation to European norms. In these borderlands at the end of Africa lies the tragic history of our world: inherited race as an overpowering and rigid determinant of status. P

HIST 1960H. Indigeneity and Assimilation in Southern Africa: The Khoe-San.

South Africa is infamous for apartheid, the starkest form of settler colonialism. Yet 20th-century segregation reversed centuries of assimilationist policies against South Africa's First Peoples: the Khoe-San. From the mid-17th century, this distinctive cultural group endured environmental and epidemiological shocks, conquest, and genocide. Their descendants only survived within a Dutch-speaking underclass. This seminar traces their survival: from early encounters and violent subjugation to claims-making against 19th century British liberalism, ending with recent assertions of indigeneity among "Coloured" descendants in decolonizing South Africa. Khoe-San history—trauma, adaptation, and endurance—forms a crucial chapter in African history and comparative colonial history. P

HIST 1960I. Portuguese Discoveries and Early Modern Globalization (POBS 1600D).

Interested students must register for POBS 1600D.

HIST 1960J. More-Than-Human Histories of Africa.

This seminar offers a more-than-human consideration of Africa's past. It takes physical matter, microbes, plants, animals, the built environment, and people all as historical actors. Our premise will be that agency is not a human preserve but is embedded in and shared across heterogeneous assemblages. We sample recent writings in Africa's environmental history while considering more-than-human implications of Africa's position as the cradle of humanity, the source for the Atlantic slave trade, the imperial possession of Europe, and an underdeveloped margin of the global capitalist economy.

HIST 1960K. The End of Empires? A Global History of Decolonization (POBS 1600I).

Interested students must register for POBS 1600I.

HIST 1960L. Conflicts, Diasporas and Diversities: Religion in the Early Portuguese Empire (POBS 1600J).

Interested students must register for POBS 1600J.

HIST 1960M. The Birth of the Modern World: A Global History of Empires (POBS 1601A).

Interested students must register for POBS 1601A.

HIST 1960N. South Africa since 1990 (AFRI 1060T).

Interested students must register for AFRI 1060T.

HIST 1960Q. Medicine and Public Health in Africa.

This course explores the major debates in the history of medicine in Africa during the nineteenth and twentieth centuries and highlights the coexistence of a variety of healing traditions and medical understandings across the continent. It will focus on the following questions: What are some of the ways Africans practice and understand medicine? How have these practices interacted with other medical systems? What impact did colonialism have on the production of medical knowledge? How were practices and treatments evaluated and deemed effective? By whom and on what grounds? And how have independent African states addressed these critical issues?

HIST 1960R. South Africa Since 1990.

South Africa transformed after 1990, but the past remains powerful. This seminar offers a study of this dynamic and complicated country as well as an exercise in contemporary history. It explores the endurance and erosion of the apartheid legacy and the emergence of new problems. A quarter century isn't enough for a full body of academic historical work to have developed, so the syllabus features journalism, opinion pieces, social science, and biographies – works that provide the "first draft" of history. In addition to the political history, we will focus on the Truth and Reconciliation Commission and HIV-AIDs.

HIST 1960S. North African History: 1800 to Present.

This course focuses on the francophone Maghrib (Morocco, Algeria, Tunisia) and offers an introduction to major themes in the history of Africa and the Arab world in the nineteenth and twentieth centuries. Students will gain the tools to analyze and historicize the dynamic history of this region. We will examine a range of topics, including the transformations of pre-colonial social, economic and cultural patterns, conquest and resistance, comparative histories of colonialism, nationalism, decolonization and revolution, the consolidation of postcolonial states, regional cooperation, the rise of Islamism and civil conflicts, and the Arab Spring.

HIST 1960Z. Zionists Anti Zionists and Post Zionists: Jewish Controversies in the 20th Century (JUDS 1752).

Interested students must register for JUDS 1752.

HIST 1961B. Cities and Urban Culture in China.

Treats the development of cities and urban culture in China from roughly the sixteenth century (the beginning of a great urban boom) to the present. We will look at the physical layout of cities, city government and social structure, and urban economic life, often from a comparative perspective. The course focuses, however, on the changing culture of city life, tracing the evolution of a vernacular popular culture from the late imperial period, through the rise of Shanghai commercial culture in the late nineteenth and early twentieth centuries, to the diverse regional urban cultures of contemporary China.

HIST 1961C. Knowledge and Power: China's Examination Hell.

For centuries a rigorous series of examinations requiring deep knowledge of the Confucian Classics was the primary tool for the selection of government officials in imperial China. This system has been variously celebrated as a tool of meritocracy and excoriated as the intellectual "straightjacket" that impeded China's entry into the modern world. This seminar examines the system and the profound impact it had, for better or worse, on Chinese society and government in the early modern period, and the role that its successor "examination hell"—the gaokao or university entrance examination—plays in society today.

HIST 1961D. Heaven Above, Suzhou and Hangzhou Below: Urban Culture in Early Modern China.

The commercial boom of sixteenth and seventeenth century China stimulated the growth of a lively popular culture in the great cities of the southeast—Nanjing, Suzhou, and Hangzhou. These cities became magnets for ambitious scholars, pleasure-loving merchants, courtesans, artists, and writers and sites for the production of some of the great masterpieces of Chinese vernacular fiction, drama, book art, and painting. After some background reading in socioeconomic history, the course focuses on analysis of the literature and art of the period and what it reveals about the short-lived "floating world" of late imperial China. P

HIST 1961E. Medieval Kyoto - Medieval Japan.

In the Western historical lexicon, the term "medieval" often conjures up images of backwardness and stagnation. Japan, however, pulsated with political, economic, and cultural creativity during its middle ages. This course explores topics central to Japan's medieval revolution: - The emergence of a samurai-led shogunate and the creation of new warrior values ; -The appearance of Zen and popular religious sects ; -The creation of innovative "Zen arts" such as noh drama and the tea ceremony, and; -The destruction of Kyoto and its subsequent resurgence in the sixteenth century as a city shared by aristocrats, merchants, and artisans. P

HIST 1961F. Women in Early Modern China.

"Women in Early Modern China" explores the changes in the roles of women and the definition of gender relations that mark the early modern period (roughly, late fifteenth through the eighteenth centuries) in Chinese history. These changes were crucial to the conceptions of women and their place in society that shaped the modern feminist movements of the late nineteenth and early twentieth century. Throughout the course we will be thinking about gender relations as relationships of power: about how power was gendered in political, economic, social, and cultural institutions and spheres; and about how the intersection of gender with class, religious belief, and medicine shaped power relationships. We will also be particularly attentive to women's participation in these power relationships—that is, the ways in which they could (and did) reinforce, manipulate, exploit, subvert, or resist them.

HIST 1961H. Korea: North and South.

This course offers a systematic investigation of the political, economic, and social histories of Korea, North and South, from the inception of the two governments following liberation from Japanese occupation in 1945 to the present day. Enrollment limited to 20.

HIST 1961I. North Korea: Past, Present, Future.

Typically, the Democratic Peoples Republic of Korea (DPRK) is portrayed as a rogue nation ruled by the Kim family, autocrats who are either "mad" or "bad" and whose policies have traumatized the country's citizens, wrecked the economy, and threatened nuclear disaster on South Korea, East Asia, even the USA. This course moves beyond such stereotypes to examine the interconnected political, economic, and cultural transformations of the DPRK from 1945 to the present. Also included are the lived experiences of the Korean people, the plight of refugees, and the question of unification with South Korea.

HIST 1961M. Outside the Mainstream.

When ratifying UN Covenant on Civil Rights in 1979, its representative reported, "The right of any person to enjoy his own culture... is ensured under Japanese law. However, minorities... do not exist in Japan." Nothing could have been further from the truth. Japan is - and has been - home to immigrants, indigenous populations forced to accept Japanese citizenship, outcast communities of Japanese ethnicity, and otherwise ordinary persons who live outside the mainstream as outlaws and prostitutes. This course examines how minority communities came into existence, struggled to maintain distinctive lifestyles in what many view as an extraordinarily homogenous society.

HIST 1961N. Colonization and Ethnicity in East Asian History.

East Asia is among the most culturally and linguistically homogeneous regions of the earth, the result of over two millennia of conquest and colonization. This course explores how the wide diversity of cultures, languages, and ecosystems that once existed across East Asia were transformed into a few dominant cultural groups. We will cover two main topics. One is the process whereby the people now known as the Chinese (or Han) were formed through imperial conquest and cultural mixing. The second focuses on the Ainu people of Northeast Asia and how they were forcibly incorporated into the Japanese nation. This course will teach students to think comparatively about processes of colonialism and ideas of ethnicity. While the colonial practices of Western Europeans have been studied in great depth, those of other civilizations have not received as much attention. P

HIST 1962B. Life During Wartime: Theory and Sources from the Twentieth Century.

This course asks how we are to understand war as everyday experience, and what separates war from, or connects it to, the other great movements of mass social and political disruption that the twentieth century has seen. The first part of the semester will examine different frameworks scholars and thinkers have proposed for understanding war as modern experience (militarization, trauma, collective memory, states of exception, etc.) In the second part we will investigate the uses and limitations of specific types of primary sources, drawn from China's war with Japan. Students will choose their own topics for final projects.

HIST 1962C. State, Religion and the Public Good in Modern China.

In late imperial China, religion formed an intrinsic part of public life, from the cosmological ritual of the state to the constitution of family and communities of various kinds. This arrangement was challenged in the twentieth century by the fall of the dynastic system and the introduction of new definitions of religion, modernity, sovereignty, and secularism. We will explore the ramifications of this change in greater China and its border areas during the past hundred years, looking at how people have sought to create a good public and the public good. Enrollment limited to 20.

HIST 1962D. Japan in the World, from the Age of Empires to 3.11.

This seminar explores the ambitions, anxieties and mutual images that shaped Japan's relationships with China, Korea, and eventually the West, from the early modern era to the 21st century. We will examine the response to Perry's arrival in 1853, Japan's subsequent efforts to join the ranks of the great powers of the day through diplomacy, the pursuit of empire, and military force, and the emergence of radically different ways of being in the world since 1945. Other topics to be covered include the role of race in shaping US-Japan relations, and the legacies of colonialism and war in East Asia.

HIST 1962E. Print and Power in Modern Southeast Asia.

This seminar explores the relationship between print and power in the comparative histories of 20th century colonial era Southeast Asia (focus: Vietnam, Indonesia, Thailand, Burma). What are the mechanics and manifestations of 'print'? How does print communicate and symbolize 'power'? From governmental paperwork to scriptural authority, mass printed newspapers to writers and publishers, print embodies many forms and functions. We will cover the following topics: print culture and print capitalism, circulations and the publishing economy, colonial archives and mapping, the formation of 'imagined communities' and national consciousness, and debates on gender, class, and modernity expressed through popular press and novels.

HIST 1962F. Assembling Chinese History.

The goal of this seminar is to build a community of researchers in the history of China and the Sinophone world, with a focus on understanding the relationships between self, social frameworks, and human geography in the modern era. We'll discuss critical methodologies and research ethics for conducting and using oral interviews; contextualizing and reading archives and a range of published and unpublished documents; understanding material culture; and problems of interpreting evidence at scale. Students will work on their own research project, which could be a paper, film, zine, website, etc. Ability in a spoken or written Chinese language strongly encouraged.

HIST 1962G. Southeast Asian Food History.

This new course aims to introduce students to Southeast Asian history through the lens of food. Spanning the region, it will examine the economic, cultural, medicinal, and social life of food while considering, too, how food—as method and archive—opens new horizons for the study of Southeast Asian history.

HIST 1963L. Barbarians, Byzantines, and Berbers: Early Medieval North Africa, AD 300-1050.

This class explores the transition from antiquity to the Middle Ages through the lens of western North Africa. Divided internally by theological disputes and inter-communal violence, and subjected to repeated conquests and reconquests from the outside, in this period North Africa witnessed the triumph of Islam over Christianity; the rise and fall of ephemeral kingdoms, empires, and caliphates; the gradual desertion of once-prosperous cities and rural settlements; the rising strength of Berber confederations; and the continuing ability of trade to transcend political boundaries and to link the southern Mediterranean littoral to the outside world. P

HIST 1963M. Charlemagne: Conquest, Empire, and the Making of the Middle Ages.

The age of Charlemagne sits at the nexus of antiquity and the middle ages. For two hundred years Charlemagne's family, the Carolingians, welded together fragments of splintered Roman imperial tradition and elements from the Germanic world to forge a new, medieval European civilization. This seminar examines that process by exposing students to the primary sources, archaeological evidence, and modern scholarly debates surrounding the Carolingian age. Topics include the Carolingians' rise to power; Charlemagne's imperial coronation; interactions with the Islamic and Byzantine worlds; the revival of classical learning; the Church; warfare; the economy; Vikings; and collapse of the Carolingian Empire. P

HIST 1963Q. Sex, Power, and God: A Medieval Perspective.

Cross-dressing knights, virgin saints, homophobic priests, and mystics who speak in the language of erotic desire are but some of the medieval people considered in this seminar. This course examines how conceptions of sin, sanctity, and sexuality in the High Middle Ages intersected with structures of power in this period. While the seminar primarily focuses on Christian culture, it also considers Muslim and Jewish experience. Enrollment limited to 20. P

HIST 1964A. Age of Impostors: Fraud, Identification, and the Self in Early Modern Europe.

Alchemists claiming to possess the philosophers' stone; basilisks for sale in the market; Jews pretending to be Catholics; women dressing as men: early modern Europe appeared to be an age of impostors. Officials responded to this perceived threat by hiring experts and creating courts, licenses, passports, and other methods of surveillance in an era before reliable documentation, photography, DNA. And yet one person's fraud was another's self-fashioning. We will examine instances of dissimulation, self-fashioning, and purported fraud, efforts to identify and stem deception, and debates about what was at stake when people and things were not what they seemed. P

HIST 1964B. The Enchanted World: Magic, Angels, and Demons in Early Modern Europe.

European fascination with the unseen world reached its highpoint alongside the Renaissance, Reformation, Scientific Revolution, and Enlightenment. Between 1500 and 1800, theologians, natural philosophers, princes, and peasants devoted enormous energy to understanding, communicating with, and eliminating a host of ethereal creatures, including ghosts, angels, demons, vampires, nature spirits, and witches. Some also sought to access the praeternatural powers that these creatures seemed to command. This course explores the intellectual, social, political, and religious origins of the interest in this unseen world, the structures Europeans created to grapple with it, as well as the factors that ultimately led to its demise.

HIST 1964D. Women in Early Modern England.

Selected topics in the social history of early modern England (c.1500-1800), with particular emphasis on the experiences of women. Themes to be addressed will include the family, working life, education, crime, politics, religion, and the early feminists. Not open to freshmen sophomores. P

HIST 1964E. The English Revolution.

Looks at the origins and nature of the English Civil War and Republican experiment in government (1642-1660) through a close examination of primary source materials. Considers not only the constitutional conflict between the crown and parliament, but also the part played by those out-of-doors in the revolutionary upheaval, the rise of popular radicalism, and the impact of events in Scotland and Ireland. P

HIST 1964F. Early Modern Ireland.

This seminar will cover various themes in the political, religious, social and cultural history of Ireland between c. 1500 and the later eighteenth century. Topics to be discussed will include the Reformation, the Irish Rebellion, Cromwell's rule, the War of the Two Kings, popular protest, the beginnings of the Irish nationalism, and the experiences of women. P

HIST 1964G. Spin, Terror and Revolution: England, Scotland and Ireland, 1660-1720.

Examines the revolutionary upheavals in England, Scotland and Ireland of the later 17th-century through a close examination of primary source materials. Topics covered include: high and low politics, the rise of the public sphere, the politics of sexual scandal, government spin, persecution and toleration, and the revolutions of 1688-91 and their aftermaths. Enrollment limited to 20. P

HIST 1964H. Race and Empire in 18th Century France.

Eighteenth-century France is remembered as the epicenter of the Enlightenment, a period in which people across Europe celebrated individual autonomy, rationality, and empathy. It was also a century of rapid expansion of the French trade in enslaved peoples and the solidification of a colonial empire fueled by enslaved labor. This class will explore the development of French thinking about the non-European world as the French sought to justify, criticize, or simply understand the country's rapidly expanding global reach. P

HIST 1964K. Descartes' World.

An exploration of history and historical fiction through the examination of the early life of René Descartes. One of the most famous philosophers of the 17th century, he was French but wrote his works while living in exile in the Dutch Republic. While his ideas are much debated, little is known about his personal life, especially before he settled in the Republic in 1628, despite many hints about his years as a soldier, his extensive travels in Europe, and his possible political and occult associations. This seminar is designed as a collective exploration into the small pieces of evidence about his early life and the lives of his friends and enemies in order to put mind and body back together rather than to treat them separately. P

HIST 1964L. Slavery in the Early Modern World.

There were multiple forms of slavery in the Early Modern world. We will look at three major systems: Mediterranean slavery and the Barbary Corsairs, Black Sea slavery and slave elites of the Ottoman Empire, and the Atlantic triangular trade. We will examine the religious, political, racial, and economic bases for these slave systems, and compare the experiences of individual slaves and slave societies. Topics discussed include gender and sexuality (e.g. the institution of the Harem and the eunuchs who ran it), the connection between piracy and slavery, and the roles of slavery in shaping the Western world. P

HIST 1964S. Islands of the Mind.

Islands command an outsized place in history and imagination. Objects of desire and fear, sites of connection and isolation, they can drive politics and economies, inspire worldviews and fantasy, and impel movements of people. The power of islands has been brought to life in myths about lost isles and in tales about fictional figures like Circe, Sinbad, and Robinson Crusoe. It has also shaped the lives of countless peoples, including premodern Pacific Ocean indigenous navigators, early modern pirates, nuclear refugees in Oceania, and contemporary migrants in the Mediterranean. Using sources ranging from ancient epics and medieval books of islands to colonial maps and contemporary film, this seminar explores the significance that islands have had over the millennia.

HIST 1965A. City as Modernity: Popular Culture, Mass Consumption, Urban Entertainment in Nineteenth-Century Paris.

Modernity as a distinct kind of cultural experience was first articulated in the Paris of the 1850s. The seminar will explore the meaning of this concept by looking at the theories of Walter Benjamin, as well as historical examples of popular urban culture such as the mass circulation newspaper, the department store, the museum, the café concert and the early cinema. Enrollment limited to 20.

HIST 1965B. Fin-de-Siècle Paris and Vienna.

We will examine two great imperial capitals facing similar set of challenges at the end of a century dominated by Europe. Austria-Hungary and France were forced to reckon with declining status as great powers, made manifest by their defeat at the hands of Prussia in 1867/1870 respectively. Both struggled with place of ethnic and religious minorities in modern states, and both responded with outbursts of political anti-Semitism that emerged. We will not only gain a basic factual knowledge of fin-de-siècle urban life but also explore some of the works and problems animating the intellectual life of the twentieth century.

HIST 1965C. Stalinism.

In this course we will examine in detail one of the deadliest and most perplexing phenomena of the twentieth century: Stalinism. During Joseph Stalin's reign the people of the Soviet Union experienced events of astonishing scale and revolutionary change. Rapid industrialization, massive collectivization, famine, purges, state terror, devastating world war, and foreign occupation brought unprecedented suffering and premature death to tens of millions of Soviet citizens. Given the size of the topic and the limited hours in a semester, this course focuses on Stalin's rise to power and his reign in the 1930s. Rather than surveying the views of a wide range of scholars, we will delve into two very long works of recent scholarship in depth. This is a reading intensive course.

HIST 1965D. The USSR and the Cold War.

This seminar will examine in detail the Soviet Union's involvement in the Cold War, the defining international conflict between the end of the Second World War and the collapse of communism in Europe. Topics include cultural phenomena, economic organizations, and ideology, in addition to diplomatic crises and the indirect military confrontations in Asian, Africa, and the Americas. Enrollment limited to 20.

HIST 1965E. Politics of the Intellectual in 20C Europe.

This course will concentrate on European thinkers' engagement with the politics of the 20th century. Discussion will cover a range of cultural and intellectual currents and ideologies—modernism, fascism, communism, "dissidence," "internal" migration, "anti-politics"—as well as genres (essays, letters, fiction, criticism, poetry, film).

HIST 1965G. Hannah Arendt and Her World.

Hannah Arendt (Hanover, Germany 1906 – New York 1975) is increasingly recognized as a pivotal thinker about her world and ours, bridging Europe and America, philosophy and politics, while taking on such key issues as migration, statelessness, the refugee experience; nationalism, totalitarianism, and Zionism; the politics of race and anti-Semitism; the relation between thinking and acting. In this seminar we will read some of Arendt's key works, including "We Refugees," "Zionism Reconsidered," *The Origins of Totalitarianism*, and *Eichmann in Jerusalem*, accompanied by other texts that inspired her or were in turn inspired by her, from Max Weber to Judith Butler.

HIST 1965H. Europe and the Invention of Race.

This upper-level seminar in European intellectual history will examine key texts from the 16th through the 20th century in which the negotiation of difference and diversity produced and questioned the organization of populations into groups and hierarchies called races. How does "race thinking," with its spectrum from racism to critical race thinking, channel and direct phenomena such as European global expansions, capitalism and slavery, religious difference and secularization, colonialism, imperialism, and fascism.

HIST 1965I. Industrial Revolution in Europe.

Europe's industrial revolution is often cited among the key drivers of global inequality between "the West and the Rest." But industrialization unfolded unevenly everywhere, including within Europe itself. Using a local perspective on a global story, this seminar explores how the industrial revolution unfolded differently and unevenly across the diverse communities, regions, and landscapes of Europe during the long 19th century. Major themes include the urban-rural divide; technology and deindustrialization; the culture of work; faith and politics; socialism, populism, and antisemitism.

HIST 1965L. Appetite for Greatness: Cuisine, Power, and the French.

France has long been synonymous with a delicious cuisine, one with no equal in the world. This seminar will examine the development of French cuisine as a tool for national greatness, beginning with its origins under the Sun King, Louis XIV. We will trace subjects such as the global dissemination of French food after the French Revolution, the food shortages common to French people as the country industrialized, and the feeling that France was losing its culinary hold in the twentieth century. Today, French food again serves as a nexus for the anxieties of the nation, including Americanization and immigration.

HIST 1965M. Double Fault! Race and Gender in Modern Sports History.

From 1936 Berlin Olympics to infamous East German swimmers of the Cold War to 1998 French soccer team, sport culture has consistently helped define overall societal values. We will examine how early modern societies defined the ideal sporting participant, and how shifts over time included and excluded various groups. These shifts, including the promotion of masculinity through duels, the fears of women's emancipation via cycling, and the exclusion of Jews from competition, were based on perceived national needs. Through the study of sports, we will study who we have been as a community—as well as who we aspire to be.

HIST 1965N. "Furies from Hell" to "Femi-Nazis": A History of Modern Anti-Feminism.

Women have faced a deep antipathy at nearly every turn in their struggles for civic and social inclusion. These denials of women's rights often take the form of commentaries—sometimes vicious ones—about women's general natures, bodies, and fitness for public life. Women are consistently tagged with various labels of otherness: opponents of women's rights deem them irrational, unnatural, traitors to society, even sexual deviants. This course will examine the dangers that women allegedly represent to social stability from the Enlightenment to today, as well as how women have fought back to assert their rights and independence.

HIST 1965O. 'Naturally Chic': Fashion, Gender, and National Identity in French History.

From its beginnings, the fashion industry in France has been synonymous with the international reputation of the nation. Similarly, being "chic," having an innate sense of discernment and style, became synonymous with French femininity. This seminar will explore the interconnectivity of the history of fashion in France, the requirements it placed on French women, and the pressures the fashion industry has borne since the 1700s. We will look at how fashion reflected and created the moods of various periods, and we will also see how French women's national belonging has been innately tied to ability to display French fashion.

HIST 1965R. The Crisis of Liberalism in Modern History.

Liberalism has flamed out before. Its collapse in the late 19c left a mark on the psychoanalytic theories of Sigmund Freud, the art of Gustav Klimt, and the fiction of Franz Kafka. Liberalism's second collapse in the 1930s, inspired the founder of neoliberal economics Friedrich Hayek and the philosopher of science Karl Popper. These men were all Austrian, a nationality they shared with the most infamous critic of liberalism, Adolf Hitler. This course wonders why this country in the center of Europe has exercised such an outsized influence on our modern experience.

HIST 1966Q. Colonial Encounters and the Creation of Latin America.

This seminar examines how interactions between Europeans and indigenous peoples shaped the formation of early Latin America. From Florida to Brazil, invasion led to widely varied outcomes, including outright failures. Students will come to see colonization as a difficult, uneven process, as Europeans struggled to comprehend and engage unfamiliar natural and human environments; the new societies that emerged reflected complex transatlantic exchanges. Our readings will consist of primary sources from the sixteenth century, supplemented by academic texts. Students will write a series of three-page response papers, along with a ten to twelve-page essay on major themes from the course. P

HIST 1967C. Making Revolutionary Cuba, 1959-Present.

In January 1959, the forces of rebel leader Fidel Castro entered Havana and forever altered the destiny of their nation and world. This seminar will consider the six decades that followed the rise of a new revolutionary order, as well as its global repercussions. We will examine how political hegemony was achieved as well as the silences and exclusions on which it rested, with particular attention to ideology, race, sexuality, and culture.

HIST 1967E. In the Shadow of Revolution: Mexico Since 1940.

This course traces political, social, and economic developments in Mexico since the consolidation of the revolutionary regime in the 1930s. The topics addressed include: the post World War II economic “miracle”; the rise of new social movements; the Tlatelolco massacre; the deepening crisis of the PRI (the governing party) in the 1980s and 1990s; the Zapatista rebellion; violence and migration on the northern border; and the war against narcotraficantes.

HIST 1967F. The Maya in the Modern World.

This seminar focuses on the Maya in postcolonial Guatemala. The main theme is the evolving relationship between indigenous peoples and the nation-state. Topics include peasant rebellions in the nineteenth century, the development and redefinition of ethnic identities, the military repression of the 1970s and 1980s, the Rigoberta Menchú controversy, and the Maya diaspora in Mexico and the United States. Enrollment limited to 20.

HIST 1967L. Politics and Culture Under The Brazilian Military Dictatorship, 1964-1985.

This course will focus on the political, social, economic, and cultural changes that took place in Brazil during the military dictatorship that ruled the country from 1964-85. We will examine why the generals took power, the role of the U.S. government in backing the new regime, cultural transformations during this period, and the process that led to re-democratization.

HIST 1967Q. Gender and Sexuality in the Modern History of Latin America.

This seminar explores how gender shaped the political and social history of 19th and 20th century Latin America. Together, we will explore some themes at the center of this growing body of scholarship, such as the role of honor and sexual morality in shaping post-independence Latin American societies, the efforts of states to regulate the family, and the role of gender in the organization of the modern labor force. Throughout the semester, we will discuss the intersections of race, gender and class that are at the heart of changing conceptions of sexual morality and ideals of modern family organization.

HIST 1967R. History of Rio de Janeiro.

From colonial outpost to capital of the Portuguese Empire, from sleepy port to urban megalopolis, this seminar examines the history of Rio de Janeiro from the sixteenth century to the present. Using an interdisciplinary perspective rooted in historical analyses, we will analyze multiple representations of the city, its people, and geography in relationship to Brazilian history, culture, and society.

HIST 1967T. History of the Andes from the Incas to Evo Morales.

Before the Spanish invaded in the 1530s, western South America was the scene of the largest state the New World had ever known, Tawantinsuyu, the Inca empire. During almost 300 years of colonial rule, the Andean provinces were shared by the “Republic of Spaniards” and the “Republic of Indians” - two separate societies, one dominating and exploiting the other. Today the region remains in many ways colonial, as Quechua- and Aymara-speaking villagers face a Spanish-speaking state, as well as an ever-more-integrated world market, the pressures of neoliberal reform from international banks, and the melting of the Andean glaciers.

HIST 1968A. Approaches to the Middle East.

When and why did the Middle East emerge as a field of study? What are the different approaches that frame our understanding of this pivotal region, and how did they change over time? This upper-level seminar explores these questions within the larger context of colonial and national and encounters that have shaped modern regimes of knowledge production. The class features visits by leading scholars from different disciplines who reflect on the questions they ask and how they go about answering them. Readings range from canonical works to innovative new scholarship. No pre-requisites but previous coursework on this region recommended.

HIST 1968F. History of Capitalism: The Eastern Mediterranean and the World Around.

This course is an analysis of where the Mediterranean region fits in the evolving capitalist world-economy in the aftermath of the so-called Age of Discovery. The context of the Mediterranean is set in our own age’s “globalization” as histories of capitalism push on the “world” in new ways challenging our mental maps for historical change. The seminar takes on a critical approach to the European historiography on the rise of capitalism and the view that the Mediterranean collapsed with the rise of the Baltic and the Atlantic.

HIST 1968M. The Worlds of Crusading.

In the spring of 1096, more than 40,000 men and women left their homes on an armed pilgrimage from Europe toward Jerusalem. This was the first of many crusading movements, eventually leading to the establishment of crusader states along the Eastern Mediterranean. While these states only lasted two hundred years, the ideological effects of crusading still linger today. This course examines historical evidence from both Christian and Muslim sources to interrogate the cultural, geopolitical, and social forces which combined to ignite crusading fervor. It also seeks to understand how the complicated memory of crusading continues to haunt Muslim-Christian relations today.

HIST 1968V. America and the Middle East: Histories of Connection and Exchange.

This seminar explores the history of connection and exchange between the diverse peoples and societies of two constructed regions: the Middle East and North America. Proceeding chronologically, we begin with the global context of Columbus’s fateful voyage in 1492, before turning to colonial Spanish, Portuguese, and English-British intersections with the Ottoman Empire and Morocco. While including Latin American, Caribbean, and Canadian case studies, the bulk of our course explores US ties to the “Mideast/MENA” region during the 19th-21st centuries. Yet, this isn’t a conventional course in diplomatic history. Rather, we’ll read closely for underlying socioeconomic, cultural, and intellectual processes—trade, migration, education, and evolving conceptions of race, religion, and citizenship—themes often overlooked by foreign relations, watershed events, or conflict. Our goal: to recognize how US-Middle East ties are far more complex, rich, and deep-rooted than is generally assumed.

HIST 1969A. Israel-Palestine: Lands and Peoples I.

The Holocaust largely destroyed the centuries-long Jewish civilization in Europe. For Zionism, originating in late nineteenth-century antisemitism and East-Central European ethno-territorial nationalism, the “final solution” proved the need for a Jewish-majority state in Palestine. Yet the majority of the population in Eretz Israel was Palestinian. The creation of Israel in 1948 was the outcome of a bitter war with the local Arab population and the surrounding states, in the course of which most of the Palestinians were expelled or fled, facilitating the establishment of a Jewish-majority state. The seminar will discuss the fraught question of the two traumatic events of the Holocaust and the Nakba (the expulsion of 1948), and propose that we can both better understand these events, and begin the long path to reconciliation, by applying the tools of empathetic first-person history.

HIST 1969B. Israel-Palestine: Lands and Peoples II.

This advanced undergraduate seminar seeks to provide a deeper understanding of the links between the region now known as Israel and Palestine and the peoples that have inhabited it or have made it into part of their mental, mythical, and religious landscape throughout history. The course will be interdisciplinary at its very core, engaging the perspectives of historians, geologists, geographers, sociologists, scholars of religion and the arts, politics and media. At the very heart of the seminar is the question: What makes for the bond between groups and place - real or imagined, tangible or ephemeral. No prerequisites required.

HIST 1969C. Debates in Middle Eastern History.

This seminar investigates the historical bases of some of the major debates which continue to dominate contemporary discussions on the Middle East. These include debates on colonialism and its legacies; problems associated with the post-colonial Middle Eastern state (the "democracy deficit": human rights; oil; political Islam); and arguments about the causes and consequences of some of the major events in Middle Eastern history (the Israel-Palestinian conflict; the Iranian revolution; the Lebanese civil war; 9/11 and the Iraq invasion; and the Arab Spring). Priority will be given to seniors, and history and MES concentrators. Previous introductory coursework in ME history is highly recommended (Hist 0244 or equivalent) for all students wishing to enroll in this course.

HIST 1969D. Palestine versus the Palestinians.

This course explores alternatives to the common view that the Palestinian-Israeli conflict is a struggle between two nationalist movements over the same land. Moving away from state-centric political discourse, it engages the questions of imperialism, settler-colonialism, and displacement from a bottom-up perspective of everyday life of Palestinian communities in historic Palestine and the Diaspora. How do these internally divided and spatially fragmented communities negotiate the present and imagine the future? Ultimately, the course asks: What does it mean to be a Palestinian? And what can the Palestinian condition teach us about the modern world?

HIST 1969F. Nothing Pleases Me: Understanding Modern Middle Eastern History Through Literature.

This seminar examines the major themes and events in the history of the Middle East in the 20th century through a close reading of literary texts and, in some cases, films. Throughout the course we will try to locate the perspectives of the "ordinary people" of the region, and will pay special attention to the voices of those who are rarely heard from in discourses on the Middle East: religious minorities, sexual minorities, women, children, but also criminals, misfits, misanthropes and others who have been deemed social outcasts.

HIST 1970A. Colonial Encounters: Indians, Europeans, and the Making of Early America.

This seminar explores Native American histories and cultures in North America, primarily through the multiple and overlapping points of contact and coexistence with Europeans from the sixteenth through the eighteenth centuries. Although we will be reading widely in the very interesting recent literature in the field, a major component of the class is to investigate in a practical way the problem of sources for understanding and writing about American Indian history. As a senior capstone seminar, the final project is a substantial research paper. Enrollment limited to 20. P

HIST 1970B. Enslaved! Indians and Africans in an Unfree Atlantic World.

This course examines the varieties of Indian and African enslavement in the Atlantic world, including North America, up through 1800. Reading widely in recent literature in the field as well as in primary sources from the colonial period, we will ponder the origins, practices, meanings, and varieties of enslavement, along with critiques and points of resistance by enslaved peoples and Europeans. Special emphasis will be given to the lived nature of enslavement, and the activity of Indians and Africans to navigate and resist these harsh realities. A final project or paper is required, but there are no prerequisites. P

HIST 1970D. Problem of Class in Early America.

This seminar considers economic inequality in colonial British North America and the new United States. Studying everyone from sailors, servants, and slaves in the seventeenth century to industrial capitalists and slaveholders in the nineteenth century, this course will look at the changing material structures of economic inequality and the shifting arguments that legitimated or challenged that inequality. Readings will explore how historians have approached the subject of inequality using on class as a mode of analysis. Students will write extended papers that place primary research in conversation with relevant historiography. Enrollment limited to: 20. Written permission required.

HIST 1970F. Early American and Atlantic Money.

The history of finance has become a crucial site for studying governance and statecraft, for recovering the organizing logic of capitalism, and for recognizing the structures of power in any given society. Topics include the recurring debates over metallic and paper currencies, the emergence of a national banking systems, and the technologies of coinage, assaying, and counterfeiting. Particular focus on the relationship among finance, colonization, and slavery, as well as the many speculative monetary systems that circled around the Atlantic world from the fifteenth century through the nineteenth century.

HIST 1970G. Captive Voices: Atlantic Slavery in the Digital Age.

The digital revolution is transforming the study of history. But is it allowing us to better recover the voices and lived experiences of people in the past? This course considers the possibilities and pitfalls of using digital tools to understand the lives of enslaved men and women in the Americas between 1500 and 1800. Each session considers a different digital humanities project, supplemented by primary sources and recent books. For their final project, students will contribute to the Database of Indigenous Slavery in the Americas, which is hosted here at Brown. There are no prerequisites for this course. P

HIST 1970H. Early American Science, Medicine, and Ways of Knowing.

This capstone seminar explores science, medicine, and ways of knowing in early America. Science and medicine in American history have largely been approached as a modern history, focusing on a few famous figures of European descent. Nineteenth and twentieth-century scientists and physicians such as Thomas Edison and Jonas Salk have embodied American values of entrepreneurship and innovation. This course argues that American science and medicine have a longer history that begins with its first colonies. Starting with English science in the era of Jamestown and Plymouth Colony and Indigenous epistemologies of the body and environment and ending in the era of America's founding, this course traces key ways of knowing while also centering important historical themes such as imperialism, slavery, and appropriation.

HIST 1971D. From Emancipation to Obama.

This course develops a deep reading knowledge of significant issues and themes that define African American experiences in the 20th century, experiences that begin with the years following Emancipation and culminates with the election of President Obama. Themes include citizenship, gender, labor, politics, and culture. The goal is to develop critical analysis and historiographical depth. Some background in twentieth century United States history is preferred but not required. Assignments include weekly reading responses, class participation and presentation, and two written papers. Enrollment limited to 20.

HIST 1972A. American Legal History, 1760-1920.

Upper-level undergraduate seminar examining the history of issues that have been contested in recent U.S. legal decisions and practices. The main period covered is 1780-1920, but we will also consider the use and misuse of the history of this period in legal decisions and debates of the past two decades. Among the topics covered are Native American sovereignty; firearms use and regulation; slavery, servitude, and emancipation; women's rights and reproductive freedom; and the meaning of citizenship. Enrollment limited. To be considered for admission, students must contact the instructor before the beginning of the semester. Instructor permission required.

HIST 1972E. Theory and Practice of Local History.

Examines the theory and practice of local history, evaluating examples from a variety of genres ranging through micro history to folk music, from genealogy to journalism. Work with primary documents, evidence from the built environment and visits to local historic sites and archives will enable students to evaluate sources and develop their own ideas about writing history and presenting it to a public audience. Enrollment limited to 20. Instructor permission required.

HIST 1972F. Consent: Race, Sex, and the Law.

In the context of recent student organizing on college campuses, the word "consent" has become headline news. But what is "consent" and what does it have to do with the history of race and sexuality in America? In this course, we will use history, law, and feminist theory to understand the origins of consent, to trace its operation as a political category, and to uncover the many cultural meanings of "yes" and "no" across time. Themes addressed include: slavery, marriage, sex work, feminism, and violence, from the founding of American democracy to the present.

HIST 1972G. Lesbian Memoir.

This capstone seminar explores the genre of lesbian memoir through lenses both historical and theoretical. We will think together whether memoir constitutes a primary source for historical study, and its place in lesbian history. We will consider feminist theoretical questions posed by this genre of writing: What (or who, or when) is a lesbian? Is the category of the lesbian rooted in gender essentialism or disruption? How (or when, or if) did the category of lesbian become marked as white?

HIST 1972H. U.S. Human Rights in a Global Age.

Examines how the U.S. has shaped or been shaped by global human rights struggles. Topics include: indigenous rights in the U.S. Early Republic; Antislavery in the early Atlantic World; anti-imperialism in U.S. wars with Mexico and Spain; U.S. and human rights conventions; the Cold War and Civil Rights; and recent U.S. policies concerning human migration. No prerequisites. Priority given to seniors and juniors and those who have not taken the related course HIST 1972A (though students may take both courses). Instructor permission required (email professor before end of registration period).

HIST 1972I. Loss, Political Activism and Public Feelings: Between Fact and Affect.

Why do political actors deploy quantitative approaches when dealing with catastrophe, while personal experiences of grief draw heavily on affective resources? Juxtaposing texts from public health, public policy, empirical political science, and law, alongside cultural and artistic responses that focus on public feelings of mourning, rage, and defiance, this co-taught course examines political action between fact and affect. Case studies will include the long afterlife of transatlantic slavery, anti-lynching campaigns, the enshrining of the Civil War and Civil Rights Movement in national memory, and political movements such as ACT UP and the Movement for Black Lives.

HIST 1972J. Racial Capitalism and U.S. Liberal Empire.

This seminar will reflect on terms that seem to trip us up: empire, capitalism, modernity. Many Americans reject the notion that the United States is an empire due to a sense of patriotism and/or an inability to distinguish colonialism from imperialism, let alone recognize settler colonialism. In this course, however, we will examine how U.S. empire and racial capitalism are inseparable and consider how liberal blinders have operated in American popular and academic discourse—and that perhaps "provincializing the United States" might offer some clarity.

HIST 1972K. American Labor and Working Class History.

Will historians remember 2023 as a turning point in the history of the organized labor movement or a momentary deviation from a decades-long decline? Public support for unions is at its highest level in years, even as hundreds of thousands of workers in the United States have gone on strike, halting production in critical industries from film and entertainment to auto manufacturing. In this advanced seminar, we will seek historical context to better understand these recent trends by examining histories of class formation, the evolution of working class politics, the development of American capitalism and the transformation of the global economy. Spanning from the history of colonial America to the 21st century, we explore the changing nature of work, and follow the identity, experience, and political activity of working class people as they evolve over time.

HIST 1972L. US Empire and Archives.

It will be a capstone seminar for the History Department that gives students hands-on experience with documents archived at Special Collections in the Hay Library. The theme of US Empire is expansive, relating to peoples, places, and events within the metropole (i.e., the United States) and the larger world in the mid-20th century to the present. Focus will be on hegemonic and counter-hegemonic ideologies and actions, especially concerning racial capitalism, settler colonialism, free trade imperialism, Third Worldism, gender and queer politics, ethnicity, and more. Archival collections include the Hall-Hoag Collection, the Mumia Abu-Jamal Collection, and others.

HIST 1973K. Modern South Asia and the Image Archive.

This seminar will look at how historians, art historians and artists have used an array of visual materials in the archive to make arguments about the past. We will read texts on the history of photography, on popular ephemera, from film studies, as well as interrogate the work of artists who draw on archives. How do we "read" images, interpret them, and how have they impacted our understanding of the past?

HIST 1973Q. Environmental Pressures of South Asia.

South Asia is one of the most densely populated geographical regions of the world. The traditional environmentalist view of separating/protecting 'nature' from human settlements often leads to conflicts of resources/land use here. This course studies the evolution of environmental governance in the diverse ecologies of South Asia across four substantive and methodological parts. Part I involves readings on environmental and agrarian systems in the Mughal Empire from the precolonial period (1526-1757) in South Asia. Part II involves readings on forestry laws from the British colonial period (1757-1947) in South Asia. Part III involves reviewing a series of books and films on environmental history in Asia. Part IV involves researching case studies focusing on local environment cultures from the postcolonial period (1947 to present) in South Asia. The course requires writing a final research paper based on a case study.

HIST 1974A. The Silk Roads, Past and Present.

The Silk Road has historically been the crossroad of Eurasia; since the third-century BCE it has linked the societies of Asia—East, Central, and South—and Europe and the Middle East. The exchange of goods, ideas, and peoples that the Silk Road facilitated has significantly shaped the polities, economies, belief systems, and cultures of many modern nations: China, Russia, Afghanistan, Uzbekistan, and India. This course explores the long history (and the mythologies or imaginations) of the Silk Road in order to understand how the long and complex pasts of the regions it touches are important in the age of globalization. P

HIST 1974B. War and Peace: A Global History.

A seminar examining how the categories of "war" and "peace" have emerged over time and place. How does a society decide that a war exists or has ended, or that there is peace, or that peace has been violated? How has the practice of war and the practice of peace changed over the course of history? We approach these questions by looking at a series of case studies, from Greek-Persian relations of the fifth century BCE to the Mongol imperial system of the thirteenth century to the twentieth-century World Wars and recent efforts (successful and failed) at global governance.

HIST 1974D. River Histories: Fishes, Floods and the Transformation of Freshwater Ecosystems.

As food sources and transportation routes, rivers have long played important roles in human societies, and people have in turn transformed them. While many histories explore the lives of people living along rivers, this course will move from the terrestrial realm into the aquatic realm to consider how fluvial ecosystems work, from the smallest microorganisms to large creatures like salmon and alligators. This will allow us to think about how rivers have changed over time as people blocked them with dams, built levees to stop them from flooding, or straightened them into shipping canals. The best documented members of fluvial ecosystems have usually been fish, so we will pay particular attention to histories of fishing. We will also discuss transportation, water power, flood mitigation, and fights between farmers, fishers, and industrialists over how rivers have been exploited.

HIST 1974E. The Intellectual History of Imperialism.

What is an empire? What does an empire do? What is the difference between imperialism and colonialism? How have historical actors as well as historians between the seventeenth and twentieth centuries answered these questions? This seminar considers the long history of intellectual debate over imperialism and its relationship with state formation, capitalism, labor, subjecthood, and the environment. We will read proponents of imperial expansion, advocates of imperial reform, and fierce critics of imperialism. Readings will include canonical texts authored by major historical figures such as John Locke and Vladimir Lenin as well as pamphlets and legislative debates that document the everyday practice of imperialism. In engaging with such primary sources, we will consider how rival visions of imperialism shaped ideological traditions as diverse as liberalism, fascism, conservatism, and communism.

HIST 1974G. Nonviolence in History and Practice.

This advanced history seminar will begin with exploring sources of Mahatma Gandhi's conception of nonviolent civil disobedience and go on to explore the transformation of those ideas in different contexts of protest and resistance in different parts of colonial India, as well as the US and South Africa. In addition to thinking historically, we will look at the details of strategies and practices that have been developed over the last half century, into the present.

HIST 1974J. Decolonizing Minds: A People's History of the World.

This seminar is an experiment in thinking a global history of the making of the modern world. We read texts that track the movement of ideas, peoples and goods, the formation of political and economic inequalities and the continuous struggles of ordinary people against them. From empires to nation-states, from anti-imperialist nationalist struggles to transnational radical movements, this seminar grapples with the politics of knowledge for drawing out "fugitive" lineages of the past that we need to shape our collective future. No overrides will be given before the semester begins. Interested students must attend first class meeting.

HIST 1974K. Maps and Empires.

The human fascination with maps is perennial, but it has been transformed in recent decades from a field for antiquarian map-lovers to a bona fide domain of intellectual inquiry. Maps are now understood as instruments of power and domination rather than value-free representations of territory. Using the world-renowned cartographic collection of the John Carter Brown Library, this seminar will examine the role of maps and other graphic representations of space in the consolidation and contestation of imperial dominions, introducing students to the idea of using maps as primary source materials for historical and cultural analysis. Winter session. P

HIST 1974L. A Global Idea: Civilization(s).

This seminar explores a global history perspective to the idea of civilization since the eighteenth century. Starting from the view that the Enlightenment was a specifically European phenomenon, a foundational premise of Western modernity, we explore how the master narrative around 'civilization' developed and crystallized through universal history and world history into today's global history. Analyzing the making of this global idea includes topics like the politics of knowledge production, and transnational exchanges of ideas and practices of progress, nationalism, periodization, and intertextuality in the West, Ottoman Empire and others.

HIST 1974M. Early Modern Globalization.

What can the experience of a minority group like the Jews teach us about roots of globalization? What were the economic, political, and cultural conditions that allowed early modern Jewish merchants to create economic networks stretching from India to the New World? We will answer these questions by examining the connections and interactions between four major Jewish centers: Ottoman Jewry in the Eastern Mediterranean, the Port Jews of Amsterdam and London, Polish-Jewish estate managers in Ukraine, and the Court Jews of central Europe. We will see how European expansion exploited - and was exploited by - these Jewish entrepreneurs. P

HIST 1974P. Modernity's Crisis: Jewish History from the French Revolution to the Election of Donald Trump.

As the modern world developed and grew, the question of the Jews' place within it became increasingly important for the majority societies and the Jews themselves to deal with. The solutions found have ranged from inclusion on equal terms through exclusion not only from society but from humanity altogether. In many ways, the debates around this issue have touched on the very meaning of modernity itself. In this advanced undergraduate seminar, we will examine the ongoing polemics on the place of the Jews from the perspectives of both the proponents of the different solutions and the Jews themselves.

HIST 1974S. The Nuclear Age.

This is a course for students interested in questions about the development of atomic weapons, their use on Hiroshima and Nagasaki, the Cold War arms race that followed, and debates over the risks associated with other nuclear technologies. We will look carefully at the scientific and military imperatives behind the Manhattan Project, the decisions that led to the use of atomic weapons on Japan, and subsequent efforts to reflect on the consequences of those choices. We will also explore how popular protest and popular culture after 1945 shaped our understanding of the terrors and promise of the nuclear age.

HIST 1974U. Race, Incarceration, and Freedom in the Americas.

This course examines the history of mass incarceration in the Americas, focusing on the relationship between race, policing, and punishment from colonial Latin America to twenty-first century United States. Together, we will explore ways of thinking about the long history of punishment and its relationship to racial and gender politics as well as different forms of labor exploitation, and think about how different temporal and geographic framings help us think in new ways about the history of incarceration and (perhaps) point to new futures. Among the topics we will explore are the ways contemporary carceral regimes have been shaped by the afterlives of slavery; the shifting meanings of rehabilitation; the experiences of incarcerated individuals; the Cold War politics and transnational roots of militarized policing in the United States; and the ways gender, sexuality, and age shape imprisonment across the hemisphere.

HIST 1974Y. Moral Panic and Politics of Fear.

What are the political uses and content of fear? This course traces the politics of panic as a window onto state, stigma, and society by pairing foundational readings in culture studies with historical monographs grounded in case studies. Over the course of the semester, we will consider such themes as: the mobilization of fear as a strategy of governance; sexuality, sickness, and disgust; the political logic of backlash; racial terror and colonialism; paranoia and conspiracy theories; popular culture and elite repression and appropriation; and the supernatural inflection of fear politics.

HIST 1975J. Portuguese Discoveries and Early Modern Global History.

This seminar introduces students to the study of Portugal and its connections to Africa, Asia and the Americas between the fifteenth and eighteenth centuries. Rather than offering a chronological or geographic overview of the topic, we will consider the shifting meanings of "discovery" as understood by early modern individuals and historians since, and how expressions of "discovery" have reflected tensions and struggles around empire, race, gender, and other social categories of difference.

HIST 1976A. Native Histories in Latin America and North America.

From Alaska to Argentina, Native people have diverse histories. Spain, Portugal, England and France established different colonial societies; indigenous Latin Americans today have a different historical legacy than Native Americans in the United States. But the experiences of conquest, resistance and adaptation also tell a single overarching story. In colonial times, Native Americans and Europeans struggled over and shared the land. After Independence, however, the new American republics tried to destroy American Indians through war and assimilation. But in the last century Native peoples (both North and South) reasserted their identities within modern states: the "vanishing Indian" refused to vanish.

HIST 1976B. The History of Extinction.

This seminar explores the history of animals and people that are no more or whose existence is threatened. To come to terms with these histories, we will study classification of species and cultures, frontiers of exploitation and appropriation, and violence against lives and ways of life. Extinction itself is also an idea: when is it just an evolutionary phenomenon and when is it a historical moment worth marking? We will consider claims about intervention for the good of humans or others. Finally, we will observe forms of mourning. Course requirements include a major independent research project.

HIST 1976C. Animal, Vegetable, Mineral: Environmental Histories of Non-Human Actors.

This course explores stories about the past that account for the character and agency of non-human actors. The triad of "animal, vegetable, and mineral" has traditionally been understood as the lower levels of the great chain of being. Here, we approach them as actors in past worlds, who should be included in the histories we write. The discipline of history will never escape the anthropocentrism of its narratives, but we can mitigate its impoverishing effects. In addition to several short written assignments, students will complete a series of steps to produce a research paper.

HIST 1976D. Powering the Past: The History of Energy.

This seminar will explore the role of energy in shaping our past, and uses energy consumption and production as an entry into central questions in environmental history. Beginning with the regimes of wood, water, and muscle in early human history, the course moves on to explore fossil fuels, nuclear power, and alternative energy sources around the world. While attentive to issues of environmental impact, we will also examine the broader implications of energy use for social, economic, and political developments and challenges. Readings are drawn from anthropology, geography, ecology as well as history. This course presumes no previous history courses.

HIST 1976E. The Anthropocene: Climate Change as Social History.

This seminar will explore ramifications of the concept of the Anthropocene. The Anthropocene has been proposed as a new human-driven geologic age that began with the increased exploitation of fossil fuels in the late eighteenth century. Its proponents emphasize transformations through anthropogenic climate change, but we will also consider the effects of population growth, pollution, habitat destruction, and extinction. To assess the historical validity of the concept, we will discuss the impact of humans on the environment before 1800, the extent of transformation since 1800, and whether human-environmental interactions can be usefully generalized to our species as a whole.

HIST 1976F. Modern Environmental Movements from Conservation to the Rights of Nature.

What are the politics of creating and maintaining a livable Earth after industrialization? How has the environment figured in movements for equality and justice? This senior seminar examines environmental issues and responses under capitalism in North America and socialism in Russia and Eastern Europe. The course covers conservation and preservation; Indigenous anticolonial movements; responses to chemical and plastic pollution; anti-nuclear protest; environmental justice; climate change and anti-fossil fuel movements; and new forms of environmental organizing including the Rights of Nature movement and degrowth. Focused on the 19th and 20th centuries, the class will situate movements in ecological, political, and economic context, assess outcomes, and examine the relationships between economic form and politics. Using primary and secondary sources in a range of media, seminars will include short lectures, discussions, and student-led case studies that build toward a substantive final research project.

HIST 1976G. Animal Histories.

Participants in this seminar are invited to explore human and non-human relations in the global past. The history of human-animal relations is huge, so rather than attempt a general survey, we situate our discussion around selected topics. We begin with one animal, the wolf, and move through established and less-familiar historical topics, building toward our final question: how does the inclusion of animals enhance the discipline? The anthropologist Claude Lévi-Strauss said, "animals are good to think with." So is history. In this seminar we think through those things together.

HIST 1976H. Environmental History of Latin America 1492-Present.

From the development of sugar as the major slave commodity of the 18th century Caribbean to the "Water Wars" in the Bolivian highlands at the turn of the 21st century, race, labor, and imperialism in Latin America have been shaped in relation to the natural environment. This course explores the role of the environment in the colonial and modern history of Latin America. Together, we will examine how the environment shaped the processes of conquest, displacement, settlement, and trade, as well as how these processes transformed the natural environment throughout the hemisphere.

HIST 1976I. Imperialism and Environmental Change.

Empires conquer and control territory to enrich their ruling elites, often transforming the environments of these regions to make them more productive and profitable. This course will examine how empires have reorganized the landscapes of the regions they conquered from the ancient empires of Rome and China to the modern overseas empires of Europe and Japan and the informal American empire.

HIST 1976J. Earth Histories: From Creation to Countdown.

This course offers a humanistic perspective on global climate change, arguably the most pressing issue facing our species today. At the heart of this issue lies the idea that human beings have been elevated to the level of a geological force, merging geological and historical time and necessitating a critical conversation between the sciences and the humanities. To that end, we will foster a collaborative dialogue about the diverse "temporalities" that inform our thinking about the earth and its history, from creation stories to the modern idea of progress. Students will also curate a group exhibition about earth histories.

HIST 1976N. Topics in the History of Economic Thought.

This reading and writing intensive seminar exposes students to the history of economic thought. Each year it is offered, we make our way through a different set of materials that touch upon a variety of topics, including theories of value, property, markets, labor, and inequality. We will also ask how ideas about the relationship between capitalism and other forms of economic production have changed over time. In the Fall of 2025, we will discuss the work of Karl Marx, focusing especially on a new translation of his magnum opus, *Das Kapital*, which has recently been published.

HIST 1976R. Histories of the Future.

This course is for students interested in how ideas about what the future of human societies would look like have developed over time, and in the impact of those ideas on cultural, social and political norms. We will look carefully at examples of early modern prophecy before turning to the more recent emergence of theories of economic and social progress, plans for utopian communities, and markedly less optimistic and often dark visions of where we're headed. We will also explore the roles capitalism, popular culture, and science have played in shaping the practices and vocabularies associated with imagining the future.

HIST 1976U. Planning the Family.

This course explores 20th-century efforts to address population growth and family planning in a variety of global contexts, ranging from macro-level initiatives to individual practices. For some women, state leaders, and international experts, contraception meant sexual liberation, increased autonomy, and the reduction of economic hardship. But for others, the same biomedical technologies were associated with colonial control and efforts to reduce "undesirable" people. How is it possible for contraception to hold such expansive and contradictory meanings? In order to assess this central question, students will engage with critical theories of gender, race, class, nationalism, and decolonization.

HIST 1976V. The History of Childhood.

Childhood is commonly assumed to be natural, universal, and unchanging. Children everywhere have certain things in common: dependence on adults in their early years, developmental immaturity, and pent-up creativity and resilience. But the lived experience and the cultural understanding of childhood are re-invented daily, and differently, across both time and geography. This course explores the long-term history of childhood in different regions of the world, through readings in history, anthropology, psychology, educational theory, and literature.

HIST 1977B. Feathery Things: An Avian Introduction to Animal Studies.

This course will provide grounding in the emerging field of critical animal studies by surveying how we know and interact with one diverse and charismatic class of animals: the Aves. Inspiring science, art, and conservation, traded as resources, kept as hunters or pets, and eaten as meat, birds provide an excellent avenue into animal studies. The diverse ways people relate to birds provides an innovative avenue into studies of social science and human existence. In addition to reading and discussion, we also will experience the many forms of birds around us through indoor and outdoor "laboratory" sessions.

HIST 1977I. Gender, Race, and Medicine in the Americas.

This course examines the relationships among sex, gender, race, disease and modern medicine in the Americas. Together, we will explore ways of thinking about disease and public health as topics of historical inquiry, and examine how health politics have been shaped by processes of imperialism, sexuality, and racial inequality. From nineteenth-century obstetrical experiments on enslaved women, to more recent debates over the disease threat posed by Haitians during the HIV/AIDS pandemic, race and sexuality have both shaped the development of medical knowledge and been used to isolate certain groups as threats. Social concerns over women's bodies and reproductive capacities have also shaped medical research and public health policy across the hemisphere. Through shared readings and guided independent research, this course gives students an opportunity to explore a wide variety of topics related to the history of medicine, race, and gender.

HIST 1977J. War and Medicine since the Renaissance.

Since the Renaissance, warfare has mainly been a mass activity organized by states, with the ability to cause mass harm growing by leaps and bounds. At the same time, states have developed methods to care for their armed forces, and sometimes the civilians entangled in their military operations. This course will deal briefly with the history of warfare, and mainly with the ways in which states, citizens, and interested parties have attempted to ameliorate the bodily effects of warfare, from the Renaissance to the late 20th century.

HIST 1978B. Bearer of Light, Prince of Darkness: The Devil in Premodern Christianity.

Satan. Lucifer. The Prince of this World. The personification of evil in the Abrahamic traditions has gone by many names and titles. To premodern Christians, the devil was not an abstract entity; they felt the real presence of Satan and his demonic army all around them. This course explores the devil as a dynamic concept evolved in accordance with cultural and political priorities. It looks at the relationship between the premodern Christian perceptions of personified evil and the Jewish and Islamic traditions. It will also look at the ways in which misogyny and racism shaped ancient and medieval demonologies. P

HIST 1978C. Women Writers in Early European History.

The Middle Ages and Early Modern periods were periods during which writing was a mode for women's self-fashioning and expression in western Europe. Women's devotional practices in particular offered a dynamic space for education, the advancement of both Latin and vernacular literacies, and the production of often highly personal texts speaking of divine matters on the level of everyday life. We will study a diverse set of writings by women in the medieval and early modern periods, and women's texts will be examined as historical evidence for women's perspectives. P

HIST 1978D. Contested Histories of Colonial Indochina: Culture, Power, Change.

This seminar explores the history of French colonial Indochina (Vietnam, Cambodia, Laos) from 1858 to 1945. Challenging Euro-centric narratives of colonialism, we will critically analyze the colonial encounter as complex exchanges, geographically diverse, and socially uneven. Rather than position colonialism as an external agent of change, this seminar dedicates attention to local agency, and social and cultural transformations. Key historical and theoretical debates addressed include the mechanisms of the colonial state, production and legacies of colonial knowledge, construction of modernity and civilization, development of civil societies, transformations of religious communities, and articulations of identities around gender, class, revolution, and nation.

HIST 1978E. Nationalism and the Nation in Modern Europe.

In the twenty-first century, it seems like nationalism might be a thing of the past. Yet the resurgence of far-right populist movements in the West and even distinctly national responses to the Covid-19 Pandemic has demonstrated the resilience of nationalism and the nation. Why is the idea of the nation so enduring? This course explores the development of nationalism and the emergence and consolidation of nation-states in modern Europe. Through case studies, scholarly and popular articles, and short works of theory on nationalism, students will gain an understanding of the origins of nationalism and European nation-states and their historical trajectory until the present day.

HIST 1978F. Climates of Inequality: The Plantation-to-Petrochemical Complex.

What is the relationship between land, labor, and global capitalist modernity? How does studying environmental injustice help resituate America's colonial past and its imperial present? This interdisciplinary course introduces students to one of the most pressing environmental justice struggles in the nation today: Cancer Alley, USA. Together, we will explore the entwined histories of slavery, settler colonialism, and racial capitalism in Louisiana and the broader Gulf South, connecting colonial history to ongoing forms of state violence. Readings draw heavily from Environmental History, Native American and Indigenous Studies (NAIS), and Black Studies to address themes of ecological devastation and embodied violence, while also highlighting practices of resistance and resurgence from historical uprisings to contemporary cultural revitalization efforts. Students will learn to critically analyze how racialized systems of power and privilege structure inequality while envisioning alternative, more just futures.

HIST 1978G. Wonders, clerics, and natives: The Construction of Mesoamerican Christianities. A political reading.

Drawing upon colonial and indigenous sources, this discussion-based seminar course considers the political implications of the Christianization of Mesoamerica, questioning: What version of Christianity spread among indigenous peoples? Who decided it? What were the effects of this process? How did changes in the pastoral methods and devotional culture during the Spanish domination reflect opposing visions of colonial society? The course explores how these imported religious expressions and their local variations served the different social groups that formed New Spain's colonial society to negotiate their place in a fluctuating social order and legitimize their struggle for political, economic, and symbolic power. Although mainly focused on Indigenous agency and native conceptions of Christian religion, the course also addresses the agency of Afro-descendants, the emergence of afro-catholic identities, and the intersection between religious identities, race, and gender in daily life and public imagination. P

HIST 1978H. When Religion meets Modernity: Tibet Enters the World System.

At a time when many former European colonies in Asia, Africa, and Latin America successfully fought to become independent nation-states, Tibet faced a different fate as it became a colony of the People's Republic of China (1959). Assuming no prior knowledge of the region, this course offers an in-depth introduction to the political trajectory of Tibet's relation with China from the nineteenth to the twentieth century. Yet, at the same time as Tibet was subsumed into a political unit within China, Tibetan Buddhism as a religious ideology continued to spread across both the Himalayan regions of Nepal and Northern India as well as Mongolia. This course explores how Buddhist knowledge systems and cosmologies continue to interact with contemporary themes of modernity, secularism, and nationalism in East/South Asia.

HIST 1978J. Laboring Against Automation.

In 2024, the possibility of total automation looms ever present: will machines replace humans? This seminar places contemporary discourse about automation in historical context, underscoring how the promises and threats of labor automation are not nearly as new as they seem. Focusing on workers' perspectives on automation, as well as their attempts to resist it, this course will highlight the unequal experience of automation across geographic, gendered and racialized hierarchies. Considering both micro-level changes in workplaces and global dynamics, we'll ask: How did textile workers in Bursa and colonial Bombay, tobacco workers in Lebanon, and autoworkers in the United States articulate and act on fears that their labor would become obsolete? And how might colonialism, migration, the offshoring of jobs and the informalization of labor in the Global South be tied to the automation of labor in the Global North?

HIST 1978K. Worlds on the Move: Migration and Exchange Across Europe and the Mediterranean, 1492–1700.

How did people travel across the Mediterranean in the early modern period? What documents and economic resources enabled their mobility? How did cities respond to migration, and what did it mean to cross borders in a world of empires, republics, and religious frontiers? This course explores the mechanisms and experiences of movement, examining how migration shaped the cultural, social, and political development of early modern societies. Drawing on the instructor's expertise, the course places special emphasis on female mobility and the influence of gender relations on migratory experiences. Students will engage with various primary sources, such as archival documents, maps, iconographic materials, and literary texts, which will provide them with essential tools and methods for practicing history and deepen their understanding of how historians work.

HIST 1978L. History of Healing, Medicine, Technology, and Global Health in Africa.

History of Healing, Medicine, Technology, and Global Health in Africa will examine the political, social, and cultural dimensions of health and healing across the African continent. Through historical case studies and contemporary debates, students will explore how indigenous knowledge, medical technologies, and public health interventions have shaped, and have been shaped by, Africans, colonialism, nationalist movements, and global health agendas. Students will be required to participate in a workshop and engage with primary and secondary sources to analyze the intersections of medicine, science, and technology and global health. Students will participate in seminar discussions and expert-led sessions, develop a research project that critically examines a historical or contemporary issue in African health and healing, and produce written reflections, reports, and oral presentations that connect historical insights to present-day challenges. The course emphasizes interdisciplinary thinking, historical analysis, and persuasive communication skills.

HIST 1978O. Enslaved: Indians and Africans in an Unfree Atlantic World.

This course examines the varieties of Indian and African enslavement in the Atlantic world, including North America, up through 1800. Reading widely in the recent literature in the field as well as in primary sources from the colonial period, we will ponder the origins, practices, meanings, and varieties of enslavement, along with critiques and points of resistance by enslaved peoples and Europeans. Special emphasis will be given to the lived nature of enslavement, and the activity of Indians and Africans to navigate and resist these harsh realities. A final project or paper is required. Enrollment limited to 20. P

HIST 1979A. Work: A Global History.

What is work and who is a worker? The industrial male wage worker stubbornly persists in historical and cultural imaginaries of what work under capitalism looks like. Yet we know that most work – and most people who work – have not fit into this narrow conception. This course examines the history of work and workers in a predominantly capitalist world economy from roughly the early nineteenth century until the late twentieth century. Taking a global perspective with a particular focus on geographies in the Global South, topics will include studies of enslavement, agrarian labor, coerced labor, informal labor, migrant labor, wage-work, labor under state socialism, reproductive labor, and the relationship between workers and political movements. We will begin with various theoretical considerations of work and labor under capitalism and then move into a roughly chronological narrative.

HIST 1979B. Empire and Everyday Life in Colonial Latin America.

What was it like to live a “regular” life in the American colonies of Spain and Portugal? How did people eat, dress, have fun, start and sustain families, pursue careers, and think about the world and themselves? Drawing upon a range of sources, this course considers how global and local forces intersected in the individual or community in myriad, yet historically contingent, ways. This micro focus provides another way of considering the broad historical forces at work in the colonies, such as religion, gender, politics, race, technology, and geography, from the “inside-out” perspective of individual and communal accounts and stories.

HIST 1979C. Putin, Stalin and “Friends”: Understanding Eurasia Today through its History and Personalities.

This course uses the past to understand the present in Russia and its neighboring states. Each week we will use a “friend” (a person drawn from current events) as a window into events past and present. We will read a few contemporary articles about these notables alongside historical works that give us the necessary background to explore key aspects of their story. In the middle of the semester, you will choose an event or theme and execute an independent research project using contemporary and historical sources. Topics explored include gender, political activism, terrorism, immigration and battles to control the past.

HIST 1979D. Ruined History: Visual and Material Culture in South Asia.

What does art, architecture and material culture reveal about South Asia's history? This course explores the significance of images, objects, architecture and other forms of material and visual culture to South Asian societies as well as their transformation during the 19th and 20th centuries under pressure from British colonial rule. We will consider how shifts in the meanings of architectural sites (like temples), images and material objects under colonial rule animated political and religious conflict in South Asia between 1880 and 1947. Topics include nationalist cartography; Hindu-Muslim violence around temples and mosques; public performance and anti-colonial activism.

HIST 1979E. Wise Latinas: Women, Gender, and Biography in Latinx History.

Last summer the Brown community reflected on Supreme Court Justice Sonia Sotomayor's autobiography that documents how her experience as a Bronx-raised Puerto Rican and “wise Latina” shaped her illustrious legal career. This course will provide historical context for reading Latinx biographies and locate them within a broader history of women, gender, and sexuality in Latinx histories of the United States. We will examine life histories, oral histories, and biographies. Units will explore the histories of Mexican Americans, Puerto Ricans, Cubans, Dominicans, and Central Americans, paying close attention to race and gender and highlighting struggles for social justice.

HIST 1979F. Sex, Gender, Empire.

Despite brutal violence at their core, European empires were imagined as families consisting of European colonials and their “native” subjects. We'll position sex, gender, family at the heart of the imperial enterprise, examining how boundaries of imperial territory were imagined in terms of a shared household. What a family was and who was part of it became a source of imperial debate which intersected with anxieties around racial mixing and sexuality. In turn, diverse formations of imperial families shaped questions of sex and gender in Europe pursuing this global history of inter-cultural relationships that continue to shape our present day.

HIST 1979G. The Unwinding: A History of the 1990s.

This course will carefully consider the history of a recent decade -- the 1990s. We will reflect on grand historical narratives -- the end of the Cold War, the two-term presidency of a centrist Democrat, and the large challenges faced by the United States at home and abroad. But we will also explore less conventional topics, including the effects of new technology, and the ways in which new media and new tactics reshaped a political consensus that had endured for decades. Finally, we will consider the decade's rich cultural expression, including its music, film, literature and journalism.

HIST 1979H. Prostitutes, Mothers, + Midwives: Women in Pre-modern Europe and North America.

Today's society often contrasts stay-at-home moms with working women. How did women in Europe and North America navigate the domestic and public sphere from the late medieval period to the start of the twentieth century? How did gender affect occupational identity? Were women excluded from the professional class? This seminar investigates gender in the workplace, looks at gender-specific employment, and considers how families functioned. Readings include passages from classical, religious, and medical texts as an introduction to medieval gender roles. Students will explore texts, images, and film to understand pre-modern work and the women who did it.

HIST 1979I. Race and Inequality in Metropolitan America from Urbanization to #blacklivesmatter.

There is nothing natural about the state of race and inequality in American cities today. Urban inequities -- around residential segregation; access to housing, schools, jobs; state violence -- are overwhelmingly the result of decades of choices made by individuals and policymakers. This course will examine this history. We will trace how race has shaped metropolitan America from the late nineteenth century to present day. The course will explore how institutions, government policies, and individual practices developed and perpetuated race and class-based inequalities. We will also examine examples throughout this history of individuals who fought collectively for racial and economic justice.

HIST 1979J. London: 1750 to the Present.

This course explores London's emergence as a major European capital in the eighteenth century, its international pre-eminence in the nineteenth, its experiences of war in the twentieth century and its encounters with immigration, social change and urban discontent in the postwar period. We will focus on themes in the social and cultural life of London, including popular culture, poverty, urban space, crime, and street life. We will discuss how scholars have approached these histories and use contemporary sources—visual and material culture, court records, newspaper accounts, and literature—to explore the lives of Londoners of the past.

HIST 1979K. The Indian Ocean World.

Oceans cover two-thirds of the surface of the earth. They are the world's great connectors. Rather than political boundaries of empire and nation-state, this course focuses on an enduring geography of water as the central shaper of history. Drawing together the history of three continents this course explores the Indian Ocean world as a major arena of political, economic and cultural contact during the nineteenth and twentieth centuries. As we map the contours of this history we study how race, gender and sexuality were shaped across the Indian Ocean. Major topics include Islam, imperialism, indentured labor migration, liberalism and anti-colonialism. HISTGlobal

HIST 1979L. Urban History of Latin America.

Latin America is the world's most urbanized region. 80 percent of Latin Americans live in cities, and iconic cities such as São Paulo and Mexico City are among the world's largest conurbations. The city has long played a key role in the region's history, serving as nodes of imperial power, as religious centers, and as markets from pre-Columbian to colonial times. The 20th century witnessed both the achievement and failure of modernization, as cities industrialized rapidly but grew haphazardly, struggling with poverty and pollution. Today, Latin American cities are multifaceted spaces where both real advancement and daunting problems coexist.

HIST 1979M. Piracy, Patents and Intellectual Property.

Intellectual ownership is one of the most intractable problems in contemporary social and economic life. This course explores the emergence and significance of intellectual ownership in the domains of art, architecture, literature, scientific innovation, media, and law. We are particularly interested in the different social, geographic and national contexts in which regimes of intellectual ownership surfaced, and how different national agencies, individuals, and corporate formations variously construct and enforce understandings of ownership and infringement. We will also canvass contemporary enforcement and implementation mechanisms, global north versus global south wealth disparities, and the fate of intellectual property in the digital world.

HIST 1979N. American Charters.

This seminar will read deeply in thirteen seminal texts from American history. Exploring the context in which each document was written, the intentions of the author(s), the medium of publication, the way audiences experienced the document, and its reception throughout history, arguing that charter documents have assumed high importance in the United States, a nation with little precedent to build upon. From John Winthrop's "City Upon a Hill" speech, which may never have been given, to Second Inaugural of Barack Obama, we'll consider the ways in which ambitious writers/speakers have tried to claim authorship for the narrative of American history.

HIST 1979O. Comparative Black Power.

Fifty years ago, in 1966, Stokely Carmichael made his legendary call for "Black Power!" That call was global, marked by its diversity. How did the idea of Black Power travel? Why did it emerge when and where it did, and what were its meanings in different contexts? This course examines the manifestations of black power movements in the Caribbean and in Africa, in the United States and in India. With the 50th anniversary in mind, this course will critically explore the dreams, international dimensions, gender politics, and legacies of Black Power.

HIST 1979P. History of Chinese Medicine.

In the past several decades consumer discontent with Western medicine has prompted an unprecedented interest in other methods of healing. As the longest continuous literate tradition on the planet Chinese culture has enduring experience in healthcare provision, making it an attractive alternative to biomedicine. In this course we survey the depth and complexity of the Chinese medical tradition through the lens of indigenous techniques and their permutations in diverse locales. Proceeding from the earliest written records on oracle bones to present day ethnographies of clinical practice, we will complement close readings of canonical texts with a focus on lived experience.

HIST 1979Q. Japanese Film and Animation of the 20th Century.

Recent years have seen an explosion of worldwide interest in Japanese popular media, including manga (comics), anime (animation), and films. Yet Japan's current success in exporting films/anime abroad is by no means just a recent phenomenon. We will explore Japanese live action film/animation from its origins through turn of 21st century. Students will learn to read films as narrative texts, and critiquing them on multiple levels. In the process, we will attempt to seek out what about Japanese cinematic art has caught the attention of Western critics, keeping our eyes on questions of identity and responses to historical events.

HIST 1979R. Scientific Controversies from Creationism to Climate Change.

This course examines scientific controversies from the mid-nineteenth century to the present. Topics will include evolution, telepathy, eugenics, lobotomy, recovered memories, vaccination, cloning, and global warming. We will study what these controversies tell us about the shifting relationship between science and society, how changes in scientific paradigms occur, why some controversies resolve, and why others persist, even in the face of long-standing scientific consensus. Students will learn to see science not as a progressive series of discoveries in the eternal pursuit of truth, but as an often messy historical process fully embedded in the politics and culture of its time.

HIST 1979S. History of Life Itself: Biopolitics in Modern Europe.

Life has long existed, but also has a history of its own. With the development of the natural sciences and state governance of its own populations, human life can be said to have entered into history. Homo Sapiens became the subject of medical science, political philosophy, and state law. In looking at the intersecting histories of science, politics, and theories of life, this seminar will examine the origins and effects of political economy, biology, public health, racism, eugenics, state violence, and ultimately democracy. We will read meta-histories from theorists, case studies from historians, and classic works of political philosophy.

HIST 1979T. Modernism and Its Critics.

This course explores how European writers interpreted modern art and manners between 1850 and 1940. As a crucial figure in emerging modern world, the cultural critic aimed to explain the meaning of style for society. Consequently, cultural critics created rich primary resources for understanding politics, beliefs, and everyday life activities. We will especially focus on anxiety about modern life expressed in controversies over avant garde movements from impressionists to expressionists, realists to the surrealists. We will cover issues like hysteria, men's fashion, music, vacations, sexuality, and advertising. In addition to lesser known figures, selected readings include Baudelaire, Nietzsche, Benjamin, Kafka.

HIST 1979U. The Business of Empire: History of Capitalism and U.S. Foreign Relations, 1900 to the Present.

This course explores the intersections between American business and American Empire during the twentieth century. From the United Fruit Company in Latin America to the arms manufacturers at Lockheed Martin, the interests of capital have shaped U.S. foreign relations. As students race this history across the twentieth century, they will learn how the rise of American business to global preeminence depended upon a supportive, interventionist government. This course will appeal to history, IR, and Economics concentrators among others.

HIST 1979V. Technologies of the Soul: The History of Healing.

Movements that sought to heal society formed a distinct counterpoint to establishment science, religion and culture throughout modernity. In this course, we will examine distinctly modern, non-medical forms of healing from the late 18th until the mid twentieth centuries. This course engages cultural history and theory, science, opera and religion asking whether movements such as Mesmerism, Wagnerism, or Anthroposophy formed a hopeful expansion of the healing role of science art and religion? Or did such developments subvert established norms that provoked anxiety? Ultimately we will probe the limits of the humanities while exploring movements that have challenged such boundaries.

HIST 1979W. Debates on the Holocaust.

Few topics in Modern European History have so heavily engaged historians while producing so little consensus as the Holocaust. Several debates have emerged in scholarship around several major issues such as motivation, collaboration, ideology, as well as larger questions around genocide itself. In this course, we will examine each debate and the links to specific methods within history such as periodization, causality and disciplinary boundaries. This course presents a unique entry to gain exposure to foundational historical categories and methods. Students will gain a knowledge of concepts critical to historical debate and foundation in a variety of approaches to history.

HIST 1979X. Modern Enchantments: Science, Religion, and Magic in Modernizing America.

Scholars have long equated modernity with "disenchantment," the subordination of magic and mysticism to the forces of science and secularization. Recent scholarship, however, has challenged this view, suggesting that the persistence of magical worldviews has been integral to the development of modernity itself. In this course, we will explore the various interactions, both conflicting and complementary, between science, religion, and magic in the nineteenth- and early twentieth-century United States. Topics will include spiritualism, hypnosis, phrenology, optical illusions, alternative medicines, stage magic, and the early psychology of religion. Throughout, we will interrogate the concept of modernity and the narrative of disenchantment.

HIST 1979Y. Peace, Justice and Human Rights in a Global Age.

This course explores the history of the major themes, problems and ideals of global peace, justice and human rights. We investigate the theoretical, social and political elements within these ideals and practices, spanning broad temporal and spatial genealogies of human thought. From biopolitics to geopolitics, we uncover attempts to demand food security, health care, and dignity as universal human rights. We highlight philosophies of peace and ethics, and unpack competing conceptions of "justice." Among other topics, the political economy of global survival plays an important role in this perspective, especially within bioethics and environmental justice.

HIST 1979Z. The World in Revolution: America and the Global South during the Long 1970s.

We'll explore varied relationships between Americans and Global South during the long 1970s—from the wave of revolutionary movements of the late 1960s to the Reagan "offensive" of 1981. As we trace these relationships across the decade, students will learn how Americans from all walks of life encountered the revolutionary "Third World." While many on the American Left—from Black Nationalists to feminists such as Bella Abzug—sought cooperation with the revolutionary movements in the Global South, others became determined to reassert U.S. hegemony abroad following the Vietnam War. We will try to understand why this latter group's antagonistic attitude towards the Global South ultimately came to define U.S. foreign policy.

HIST 1980B. Animals and Plants in Chinese History (ENVS 1916).

Interested students must register for ENVS 1916.

HIST 1980C. Histories of Global Wetlands (ENVS 1915).

Interested students must register for ENVS 1915.

HIST 1980H. Heresy Orthod. Isl (RELS1530B).

Interested students must register for RELS 1530B.

HIST 1980I. Portuguese Discoveries and Early Modern Globalization (POBS 1600D).

Interested students must register for POBS 1600D.

HIST 1980L. Islam in America: A Global History (HMAN 1973N).

Interested students must register for HMAN 1973N.

HIST 1980P. Museum Histories (AMST 1903I).

Interested students must register for AMST 1903I.

HIST 1980R. Urban Schools in Historical Perspective (EDUC 1620).

Interested students must register for EDUC 1620.

HIST 1980T. Modernity, Jews, and Urban Identities in Central Europe (JUDS 1718).

Interested students must register for JUDS 1718.

HIST 1980U. Popular Culture, 1400-1800 (ITAL 1430).

Interested students must register for ITAL 1430.

HIST 1980Y. Jews and Revolutions (JUDS 1701).

Interested students must register for JUDS 1701.

HIST 1981B. Birding Communities (ENVS 1557).

Interested students must register for ENVS 1557.

HIST 1981D. Jewish Humor and Commercial Entertainment in Early 20th-Century Europe and America (JUDS 1726).

Interested students must register for JUDS 1726.

HIST 1981F. The Anthropocene: The Past and Present of Environmental Change (ENVS 1910).

Interested students must register for ENVS 1910.

HIST 1981G. Intellectual Change: From Ottoman Modernization to the Turkish Republic (MES 1300).

Interested students must register for MES 1300.

HIST 1981H. Blacks + Jews in American History and Culture (JUDS 1753).

Interested students must register for JUDS 1753.

HIST 1981J. England without a Monarchy: Regicide and Republic, 1649-1660 (HMAN 1974Q).

Interested students must register for HMAN 1974Q.

HIST 1981K. Planning the Family: Gender, Reproduction, and the Politics of Choice (HMAN 1975G).

Interested students must register for HMAN 1975G.

HIST 1981M. A Classical Islamic Education (COLT 1310E).

Interested students must register for COLT 1310E.

HIST 1981N. Death in the West (CLAS 1420).

Interested students must register for CLAS 1420.

HIST 1981P. The Arab Renaissance (COLT 1310J).

Interested students must register for COLT 1310J.

HIST 1981Q. Early Modern Global History at the John Carter Brown Library: A Research Workshop (POBS 1601K).

Interested students must register for POBS 1601K.

HIST 1981R. Transpacific Asian American Studies (ETHN 1750D).

Interested students must register for ETHN 1750D.

HIST 1981S. African American Women's History (AFRI 1170).

Interested students must register for AFRI 1170.

HIST 1981Y. Memory and Justice in East Asia (EAST 1936).

Interested students must register for EAST 1936.

HIST 1982A. Narrating the Anthropocene (ENVS 1911).

Interested students must register for ENVS 1911.

HIST 1982B. Sex and Society in Modern China (EAST 1307).

Interested students must register for EAST 1307.

HIST 1982D. Africana Studies Junior Seminar (AFRI 1330).

Interested students must register for AFRI 1330.

HIST 1982F. Introduction to Critical Botanical Histories (ENVS 1909).

Interested students must register for ENVS 1909.

HIST 1982G. Reading the Song Dynasty (EAST 1311).

Interested students must register for EAST 1311.

HIST 1982H. Mahler's Century (MUSC 1660A).

Interested students must register for MUSC 1660A.

HIST 1982J. We The People (HMAN 1977C).

Interested students must register for HMAN 1977C.

HIST 1982K. Problem of Evil (RELS 1530J).

Interested students must register for RELS 1530J.

HIST 1983A. Islam in South Asia (RELS 1510).

Interested students must register for RELS 1510.

HIST 1990. Undergraduate Reading Courses.

Guided reading on selected topics. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIST 1992. History Honors Workshop for Prospective Thesis Writers.

Prospective honors students are encouraged to enroll in HIST 1992 during semesters 5 or 6. HIST 1992 offers a consideration of historical methodology and techniques of writing and research with the goal of preparing to write a senior thesis in history. The course helps students refine research skills, define a project, and prepare a thesis prospectus, which is required for admission to honors. Students who complete honors may count HIST 1992 as a concentration requirement. Limited to juniors who qualify for the honors program.

HIST 1993. History Honors Workshop for Thesis Writers, Part I.

All students admitted to the History Honors Program must enroll in HIST 1993 for two semesters of thesis research and writing. They may enroll in the course during semesters 6 and 7, or 7 and 8. Course work entails researching, organizing, writing a history honors thesis. Presentation of work and critique of peers' work required. Limited to seniors and juniors who have been admitted to History Honors Program. HIST 1993 is a mandatory S/NC course. See History Concentration Honors Requirements.

HIST 1994. History Honors Workshop for Thesis Writers, Part II.

This is the second half of a year-long course, upon completion the grade will revert to HIST 1993. Prerequisite: HIST 1993.

HIST 2050. Proseminar in Late Medieval History.

Macrohistory/Microhistory. A comparison of two different approaches to the study of the past, especially of late medieval and early modern Europe, focusing on the works of Fernand Braudel and Carlo Ginzburg.

HIST 2080. Seminar in European Social History in the Eighteenth and Nineteenth Centuries.

Methods of analysis for current topics in social, economic, demographic, family, and gender history. Depending on sources available, papers may be on Italian topics of the 16th-19th centuries, or on French or English topics of the 18th-19th centuries. Language requirement depends on area of specialization.

HIST 2090. Proseminar on European Social History in the Eighteenth and Nineteenth Centuries.

Selected readings on changes of social life in European cities in the period of transition from the preindustrial to the industrial economy. Primary focus is on developments in France, England, and Italy. Language requirement depends on area of specialization.

HIST 2450. Exchange Scholar Program.**HIST 2890. Preliminary Examination Preparation.**

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

HIST 2910. Reading and Research.

Section numbers vary by instructor. Please see check Banner for the correct section number and CRN to use when registering for this course.

HIST 2920. History Now.

Focused on current trends in historical writing and research, with emphasis on presenting a diverse range of cutting-edge work in historical and historiographical context. Required for all first-year PhD students in History.

HIST 2930. The Roots of History.

"The Roots of History" encourages critical thinking about some of the different ways in which historians approach thinking and writing about the past. In particular, we will explore some of the major theoretical stances that have influenced the discipline of history. Our focus throughout will be the interplay between theory and practice. By examining how historians have grappled with questions posed by influential thinkers (often working within other fields of knowledge), we will chart the trajectory of the discipline and assess its working methods. Required for all first-year PhD students in History.

HIST 2935. Historical Crossings.

"Historical crossings" is a rough translation of *histoire croisée*, referring to global configurations of events and a shared history, rather than to a traditional comparative history. This Seminar is designed to be the cornerstone of the M.A. program. It will not serve as a traditional historical methods course but instead focus on training students to read and think on various scales of historical analysis—from cross-cultural and trans-geographic to the granularity of social and cultural specificity, requiring students to think both globally and locally and introducing them to an advanced level of historical inquiry, debate, and exploration.

HIST 2940. Writing History.

Required of all 3rd semester Ph.D. students.

HIST 2950. The Practice of History.

This graduate seminar is about the professional skills, tools, and careers of historians—from hallmark best practices to new directions. We will engage different kinds of careers historians are pursuing today, the practical skills and resources necessary to meet them, and how historians are deploying those skills in multiple professional arenas, both in and beyond the academy. We shall also discuss some of the prevalent (although often unwritten) social and cultural norms of academia and university life to prepare you to navigate your training, career, and various institutional contexts that accompany and follow completion of a Ph.D. in History.

HIST 2960. Prospectus Development Seminar.

This collaborative seminar focuses on identifying and contextualizing a dissertation topic; choosing a dissertation committee and a support network; designing and executing plans for research and writing; and articulating a thesis project as a prospectus, grant proposal, and other oral and written forms. This is a required course for and open only to third-year students in the History Ph.D. program.

HIST 2970A. New Perspectives on Medieval History.

Over the past several decades, the field of medieval history has been reshaped radically. New approaches have changed the ways that medievalists think about old subjects. Our understanding of medieval society itself has expanded as previously marginal or unexplored subjects have become central to medievalists' concern. This seminar explores how the ways in which medieval historians practice their craft have altered in response to these developments. Readings in classic older works are juxtaposed with newer ones on their way to becoming classics themselves.

HIST 2970B. Race, Ethnicity and Identity in the Atlantic World.

Explores question of identity in Atlantic world from sixteenth to nineteenth century, focusing on three types of identity: 1) ethnicity; 2) race; 3) nationality. How are such identities created and maintained? Are they "natural" or "artificial"? How do they change over time, and why? Throughout the seminar, we'll consider both internal/external boundaries, how social actors - particularly subalterns - see themselves and how they are imagined by outsiders. Finally, we will examine how identity is expressed in a wide variety of media - codices, paintings, maps, oral histories, diaries, etc. - and how scholars make use of such sources.

HIST 2970C. Rethinking the Civil Rights Movement.

This graduate course encourages a rethinking of the complex components, arguments and activities that have characterized what we have come to know as the Civil Rights Movement, concentrating primarily on African American agency, actions and politics, through careful reading of recent scholarship in the field. While knowledge of U.S. history is preferred, this course asks larger thematic questions about protest movements (the role of the state, relationships with and between oppressed groups and organizations, and periodization), that will interest non-Americanists also. Some of the topics covered include: gender, organizing and strategies, the local, global ramifications and interactions, organizational structures and politics, and the recent concept of the Long Civil Rights Movement. *M*

HIST 2970D. Modernity and Everyday Culture - Reading.

No description available.

HIST 2970E. Early Modern Continental Europe - Reading.

This course is designed to introduce graduate students to some major topics and debates in early modern European history, as well as a range of geographical, methodological, and historiographical perspectives. Readings combine recent works and classics to give a sense both of where the field has been and where it is going. Topics covered include political history, religious interactions (among Christians and between Christians, Jews and Muslims), urban history, the history of the book, Atlantic history, the history of science, and the Enlightenment. The class also provides the opportunity to explore a single topic of choice in greater depth.

HIST 2970F. Problems in Modern Jewish History - Reading.

This course examines significant issues in the history and historiography of modern European Jewry from the mid-18th century to WWII. It is divided into four units each of which considers a thematic question that has been of interest to European Jewish historians, including: emancipation, integration, and acculturation; gender and the study of modern Jewish history; approaches to minority identity; and history and memory. Written permission required.

HIST 2970G. Early Modern European Empires.

This course addresses both the history and historiography of the most relevant European imperial experiences in Africa, Asia and America c. 1400-1800. It will focus on the structure and dynamics of the Iberian case(s), as well as in the profile of the so-called Second European expansion led by the Dutch, the English and a number of other (minor) European examples. Particular emphasis will be given to the relations between these imperial bodies and other (non-European) Empires, by focusing on cross-cultural contacts and conflicts, hybrid societies and images. Restricted to juniors, seniors, and graduate students only. *P*

HIST 2970H. Special Topics Seminar: American Political History.

This graduate seminar will explore a range of approaches to the study of America's political past from the colonial period to the late twentieth century, including scholarship on electoral politics, the state, political culture, grassroots politics and resistance, the politics of gender and family, and American political development. We will analyze how scholars have defined and redefined the field over time and throughout we will interrogate the question, "what is political history?"

HIST 2970I. Methodologies of the Ancient World.

No description available. Open to graduate students only.

HIST 2970J. Early Modern British History-Reading.

No description available.

HIST 2970L. Race and U.S. Empire.

No description available.

HIST 2970M. Readings in East Asian History.

This seminar reviews recent and classic works in the flourishing historiography of East Asia and related fields, with attention to underlying research methodologies. We will pay attention to developments in transnational and global history as well as to "the local turn", and explore where methods and questions in the histories of different parts of East Asia and neighboring regions intersect and where they don't. Graduate students from all backgrounds are welcome; please contact the instructor before registering so that your area of interest can be reflected in the topics on the syllabus.

HIST 2970O. Modern Latin American History - Reading.

No description available.

HIST 2970P. Nineteenth and Twentieth Century American History - Reading.

No description available.

HIST 2970Q. Core Readings in 20th Century United States History.

Major topics and themes in 20th-century U.S. history. *M*

HIST 2970R. U.S. Social/Cultural History, 1877-present - Reading.

Case studies of prominent public intellectuals spanning the century from John Reed to George Willis, Mary McCarthy to Frances Fitzgerald.

HIST 2970U. Topics in Nineteenth and Twentieth Century American History.

M

HIST 2970V. Atlantic Empires.

No description available.

HIST 2970W. Graduate Readings in Early American History.

No description available.

HIST 2970X. Topics in the History of Empire and Culture.

No description available.

HIST 2970Y. History and Theory of Secularity.

No description available.

HIST 2970Z. Core Readings in Nineteenth Century Europe.

Provides an introduction to the central issues of nineteenth-century European history. It has two purposes: first, to help you refine your abilities to think historiographically; second, to assist you in preparing for your comprehensive exams. To that end, we will read both standard interpretations and newer scholarship.

HIST 2971A. Science in a Colonial Context.

This graduate seminar will consider the politics of science in colonies societies. Subjects covered include: the relationship between science and local (indigenous) knowledges, science and the "civilizing" mission, social relations in knowledge production, science and development, racial science and subject bodies, science and nationalism. Assignments will include book review, a review essay and leading discussion.

HIST 2971B. Topics in Twentieth Century Europe.

This course will introduce graduate students to current scholarship on major issues in twentieth century European history. Topics will include (but are not limited to) the causes and consequences of the two world wars; the emergence, workings, and collapse of authoritarian societies; the spread of mass culture and consumerism; Americanization; decolonization; the European Union, and the collapse of the bi-polar political system. In the interest of introducing students to the significant historiographical debates of the field, they will read both standard historical interpretations and newer scholarship. *M*

HIST 2971C. Readings in American History.

Topics in American social and cultural history in the nineteenth and twentieth centuries.

HIST 2971D. Passion, Dispassion, and the Scholar.

What role should passion and the imagination play in intellectual endeavor? Is the dispassionate, objective, and objectifying voice the only appropriate one in the arena of scholarship? How much can or should the scholar let his or her personality and personal investment in a subject appear on the page? The seminar will explore these and related questions by examining non-traditional modes of scholarly writing (primarily but not exclusively drawing on historians and anthropologists). This is not a seminar about theory and method, although such issues will inevitably be part of our discussions. It is a seminar about writing and scholarly voice. *P*

HIST 2971E. Latin American Historiography.

This course examines the development of historical writings on Latin America produced in the United States from the late nineteenth century until the present. We will focus on themes, such as race, gender, labor, subaltern studies, dependency theory, postcolonial analysis, and post-modernism, to understand the diverse approaches to Latin American history. *M*

HIST 2971F. Gender & Knowledge in Early Modern Europe.**HIST 2971G. Notions of Public & Private in Late Modern Europe.****HIST 2971H. Politics and Society in the 20th Century.****HIST 2971I. New Perspectives on Medieval History.**

Over the past several decades, the field of medieval history has been reshaped radically. New approaches have changed the ways in which medievalists think about old subjects. Our understanding of medieval society itself has expanded as previously marginalized or unexplored subjects have become central to medievalists' concerns. This seminar explores the ways in which medievalist historians have altered how they practice their craft in response to these developments. Readings in classic older works are juxtaposed with newer ones on the way to becoming classics themselves.

HIST 2971J. Topics in 19th c. U.S. History.

This state-of-the-field course will introduce students to nineteenth-century U.S. history, with specific attention to how recent transnational, imperial, institutional, and cultural approaches have reframed older debates over the "Age of Jackson," "Manifest Destiny," and the "Market Revolution." This seminar offers core readings for students preparing a comprehensive exam field, while providing others with content knowledge to teach this period of American history.

HIST 2971L. Borderlands: Violence and Coexistence.

Readings of theoretical and empirical studies in interstate and inter-ethnic relations in borderland regions throughout the world, with an emphasis on the modern period in East-Central. Open to graduate students only.

HIST 2971M. History of Medicine.

The history of medicine is a topic that can shed light on any period and place, since all aspects of human life are intertwined parts of the story: ideas, religion, culture, material life, economy, politics, social organization and legal institutions, etc. This reading course is meant to introduce graduate students to the main subjects debated in the field, so that by the end of the semester you will be able to read in the literature and to take up any related archival trail with confidence. Open to graduate students only. *E*

HIST 2971N. Critical Perspectives on Public and Private.

No description available. Open to graduate students only.

HIST 2971O. Graduate Preliminary Readings.

No description available.

HIST 2971P. Diaspora, Displacement, Transnationalism.

This reading seminar is designed to familiarize students with the most cited and current theories on these three transhistorical terms that capture the global phenomenon of human mobility across time and space, from antiquity to the present day. Related concepts include migration, emigration and immigration; exile, expulsion, repatriation and deterritorialization. The class will examine a few exemplary case studies; then students will develop their individual reading lists around these broad themes towards an exam field or a thesis/dissertation prospectus, and share their findings with each other by circulating papers online followed by discussion and critique in class.

HIST 2971R. Approaches to Middle East History.

This course is a rare opportunity that brings together graduate students from Harvard University and Brown University who are interested in the historiography of Middle East, Ottoman, and Islamic studies. Co-taught by Cemal Kafadar (Harvard) and Beshara Doumani (Brown), the meetings will alternate between Cambridge and Providence. The course covers the early modern and modern periods and considers a wide range of canonical and recent scholarship. Special attention will be paid to social and cultural histories that draw on materialist and discursive approaches and that engage larger debates in other disciplines.

HIST 2971T. Colonial Latin America.

This seminar focuses on the historiography of colonial Latin America since the 1960s. Topics include the explosive growth of indigenous-language sources for Mesoamerican history, the histories of childhood and sexuality, the spatial turn and GIS, connections between Latin America and Asia, and the impact of anthropology's ontological turn on environmental history and the history of animals. Requirements include short essays and a literature review.

HIST 2971U. Population Displacements and the Making of the Modern World.

Forced population displacements have long been an engine for the formation of both the modern world and knowledge regimes about that world. Through the frames of racial capitalism, settler colonial and indigenous studies, and environmental justice scholarship, this course explores the histories, ecologies, and subjectivities of displacement from the 15th century to the present. It also interrogates the epistemological erasures that render certain forms of displacement invisible. Students will lead classes on specific themes and case studies that match their interests.

HIST 2971W. Readings in Environmental History.

This course will introduce graduate students to major themes and problems in the field of environmental history. Topics may include climate, animals, the Anthropocene, empire, capitalism, comparative history, marine spaces, and the intersection of cultural, social, and gender history with the environment field, but will be chosen in part based on the interests of enrolled students. Readings will draw from classics and newly published material. Geography and time period are expansive. Discussion will use these works to ground major historiographical questions in environmental history, as well as issues of method, evidence, and narrative style.

HIST 2972G. Anticolonial Lineages: Readings from South Asian History.

This reading course examines scholarship from South Asian history on colonial modernity, formations of religious communities, subaltern consciousness, anticolonial thought, caste, gender and sexuality, amongst other themes. We will consider debates in the field, theory from the south, and questions of historical method. It is open to both graduate students as well as advanced undergraduates.

HIST 2980B. Legal History.

An introduction for graduate students to the significance and methods of legal history, broadly defined. Students will engage with works in legal history from a variety of time periods and geographical areas, and they will be guided to sources related to their specific research interests. A major research essay will be required that draws from the models of legal history given and is based on original research into legal sources. *E*

HIST 2980C. Race, Ethnicity and Identity in Atlantic World.

This seminar examines the meaning of racial and ethnic identity in colonial Latin America. Our primary approach will be historiographical; we will begin with colonial concepts of racial hierarchy, then move on to national ideologies of mestizaje and indigenismo, the emergence of "race mixture" as a scholarly topic, the "caste vs. class" debate of the 1970s and 1980s, and finally recent works on the African diaspora.

HIST 2980D. Topics in Violence in Modern Europe: Interethnic Relations and Violence in Eastern Europe.

This seminar will examine recent studies on interethnic coexistence, violence, and genocide in East-Central and Eastern Europe in the 20th century. Readings will range from works on definitions of ethnicity and the making of nations to studies of communities and interpersonal relations. We will also read and listen to testimonies and analyze contemporary documents.

HIST 2980E. Social History in Early Modern England - Research.

Readings on select topics in early modern English social history. Topics include: marriage formation, crime, social unrest, gender issues, and popular culture. Open to graduate students and advanced undergraduates.

HIST 2980F. Modern British History - Research.

No description available.

HIST 2980G. Topics in Violence in Modern Europe - Research.

No description available.

HIST 2980H. Early American History - Research.

Research seminar.

HIST 2980I. Problems in American Social History - Research.

An advanced examination of the issues and methodology of American urban and social history plus primary research in specific topics.

HIST 2980J. U.S. Women's/Gender History - Research.

Focus is 20th-century history. Open only to graduate students.

HIST 2980K. Passion, Dispassion, and the Scholar.

What role should passion play in intellectual endeavor? Should the scholar's personal involvement in a subject appear on the page? What is the value of the dispassionate voice as opposed to a narrative voice of immediacy? The seminar explores such issues in modes of scholarly writing (primarily but not exclusively historical and anthropological). Although questions of theory and method inevitably arise, this is a seminar about scholarly voice.

HIST 2980L. Research and Pedagogy.

This research seminar is geared to help graduate students think about the ways in which they can incorporate their own research into the courses they will teach. The final product for the seminar is a primary source unit and an accompanying essay that can conceivably serve as a "teacher's guide." All fields and periods welcome. *E*

HIST 2980M. Nature, Space and Power: Environmental History.

No description available.

HIST 2980N. Gender and Knowledge.

No description available.

HIST 2980P. Theory of Everyday Life.

What do we mean by the "everyday" and how can we study it in the social sciences and represent it in the arts? We will focus on attempts to answer this question both on the theoretical and the empirical levels. Readings will include philosophers of everyday life and examples of recent scholarship in "everyday life studies" that have revolutionized the study of leisure, entertainment, national identity, decolonization and gender.

HIST 2980Q. Seminar in Early Modern British History.

No description available.

HIST 2980R. Cultures of Empire.

The goal of this course is to research and produce a piece of original historical scholarship, drawing on methodologies developed during the cultural turn in the study of empires. Early semester readings address approaches to studying empire (Marxian, Subaltern Studies, Cultural Studies, etc.) and various locations: British India, Japanese Manchuria, and Netherlands Indies, among others. The course then evolves into a history writing workshop for the rest of the semester, paying attention also to historical writing, including style, form, and narrative strategies. Relevant to historical inquiry into cross-cultural encounters in any time period.

HIST 2980S. Hannah Arendt and Her World.

This seminar will explore key concerns and paradigms in 20th-century intellectual history via a critical consideration of the thinking of Hannah Arendt (1906-75). In recent years, Arendt's work has earned renewed attention for its multidisciplinary, multicontinental importance as well as for its uncanny currency to the present political and academic moment. Her thinking is thus in many ways "migratory thinking." Migratory thinking involves first the diaspora and exchange of thinkers, most specifically through political exile and emigration during the Nazi period and after. It thus involves both the experience and theorization of "worldliness": the Enlightenment value that remains a key principle for Arendt, with special reference to Lessing. Migratory thinking also involves discursive movement among disciplines and cultures, for example from German philosophy to American political theory/science, and the complications of intellectual and cultural subjectivity of émigré as well as German Jewish thinking. Finally, the history and historical contingency that support this style of thinking emphasize the drive to thinking, responsibility, and judgment at a moment of danger. Readings and seminar discussions will focus on Arendt's work, read in dialogue with the work of thinkers with whom she was in dialogue (Benjamin, Broch, Heidegger, Scholem) and with the later work of thinkers whose own subject positions might be considered comparable to the concerns in the paragraph above (G. Rose, S. Neiman, S. Aschheim, J. Derrida et al.). Themes will include cosmopolitanism, nationalism, and totalitarianism, the global politics of race, capitalism, and exchange, religious/secular tensions, and the relations of society and politics to art and the imagination.

HIST 2980T. Minorities, Citizenship and Nation.

No description available.

HIST 2980U. Power, Culture, Knowledge.

"Truth isn't outside power, or lacking in power... [t]ruth is a thing of this world," wrote Michel Foucault in the mid 1970s. In this course we will read and examine Foucault's seminal works on knowledge and power, and the kinds of scholarship it has engendered at the intersections of history, art history, anthropology, political science and social theory. In addition to Foucault's major interlocutor, Edward Said, we will read Antonio Gramsci, Derrida and Walter Benjamin. We will end the semester with facing the challenge of historicizing our own political present through a number of contemporary thinkers. *M*

HIST 2980V. Early Modern Empires.

This seminar will explore various approaches to understanding the rise, expansion, and contraction of empires in the early modern period (ca. 1500-1800). Students will be required to write a major research essay based on primary sources.

HIST 2980W. First Person History in Times of Crisis: Witnessing, Memory, Fiction.

This seminar examines the relationship between History as a narrative of events and history as individual experience. Postulating that historical events as related by historians were experienced in numerous different ways by their protagonists, the seminar focuses on the complementary and contradictory aspects of this often fraught relationship at times of crisis, especially in war and genocide. While much time will be spent on World War II and the Holocaust, the seminar will engage with other modern wars and genocides across the world. Materials will include eyewitness reports, postwar testimonies and trial records, memoirs and relevant works of fiction. Open to graduate students only. *M*

HIST 2980X. History of Capitalism, 1500 to the Present.

This seminar seeks the history of capitalism at the intersection of economic history, business history, labor history, political economy, and the history of economic thought. This course does not presume that capitalism is a function of timeless human nature nor the inevitable product of market forces. Instead, the course contends that capitalism is a historically-specific and contingent system of organizing economic life, and must therefore be studied as embedded in politics, culture, and institutions. The course will run from the period of early modern global integration and the Atlantic Slave Trade through the recent era of deindustrialization and finance capitalism. Enrollment limited to 20 graduate students.

HIST 2981C. The Frontiers of Empire.

This class will look at interactions along and across imperial frontier zones throughout the world, with an emphasis on the pre-modern and early modern period. Readings will be both theoretical and empirical in nature, and will focus on themes including the conceptualization of space; practices and consequences of warfare, captive-taking, and slavery; identity- and secondary state-formation; economy and society; diplomacy and the negotiation of claims to authority.

HIST 2981E. Environmental History.

A topical seminar with global and chronologically broad scope, "Environmental History" surveys classic works and recent writing on explicitly environmental themes such as agriculture, conservation, energy, and anthropogenic change. Equally, it considers environmental treatments of major topics in other sub-fields such as war, science, imperialism, the body and senses, and animals. In examining this broad range of topics, we will seek what is distinctive about environmental history and how environmental considerations can enhance the students' own research.

HIST 2981F. The Politics of Knowledge.

How do we know what we know? What impact do social, cultural, and economic factors play in the production of knowledge? This course will introduce students to the interdisciplinary field of Science & Technology Studies by critically situating and historically contextualizing the construction of knowledge. Along the way, we will discuss some of the field's most lively debates, including science and capitalism; the global circulation of knowledge; epistemic imperialism and postcolonial science studies; as well as the relationship between scientific and Indigenous knowledge traditions.

HIST 2981I. Theory From The South.

The "global south" is a working category today for a diversity of intellectual projects centered on the non-European postcolonial world. While this category is embedded in histories of empire and culture, critical thinking since the 1970s has already done much to "provincialize Europe" and interrogate the ways in which power and knowledge have been imbricated in the making of universal claims, institutional processes and historical self-understanding. This graduate seminar will draw upon lineages of anti-colonial thought and postcolonial critique to relocate and rethink the "south" as a generative source for theory and history.

HIST 2981J. The Body.

This seminar will consider theories of the body as a site of knowledge, politics, culture, gender, and identification in a broad range of temporal and geographic contexts. We will also examine how historians have written the history of the body, and what sources they have used to do so.

HIST 2981O. Seascapes of History.

This seminar explores the recent "oceanic turn" in history, examining how and why the sea and the maritime matter to interpretations of the past. Key readings will include general works that theorize new maritime history and thalassography, and studies focused on the history of specific oceanic and maritime areas (e.g. the Atlantic, the Pacific, the Indian Ocean, the Caribbean, the Mediterranean), which illuminate sub-themes such as migration, colonization, empire building, trade, sailors' culture, piracy, cultural attitudes toward the sea, religion and sea, and maritime environmental history. Readings will be drawn from a wide range of chronologies as well as geographies.

HIST 2982A. Orientalism.

Europe's fascination with "the Orient" generated a major tradition of intellectual, literary, and artistic production, beginning in the medieval era and persisting to the present day. This seminar explores the social and intellectual history of Orientalism, considering the ways that it has intersected with the study of power, race, sexuality, religion, and language. Readings to include Edward Said's seminal work on this subject alongside several critiques, correctives, and debates that have emerged in recent years.

HIST 2982B. Perspectives on Jewish History.

Jewish history has a complex dynamic. The development of Jewish society is fed not only by Jewish tradition but also by developments in non-Jewish society. Equally, the place of Jews in the non-Jewish world is determined not only by the attitudes of non-Jews but also by the economic, social, and political agency wielded by Jews themselves. This graduate seminar will, in a broad chronological framework, examine the complicated interplay of forces which shaped both the Jewish experience in the non-Jewish world and the non-Jewish world's treatment of its Jewish minority. Among the topics to be discussed: the places of Jews in premodern Christian and Muslim societies; Jewish early modernity; the historical trajectory of Jew-hate; changing Jewish responses to non-Jewish culture; Jewish power, powerlessness, and political development; the modern Jewish experience before, during, and after the Holocaust.

HIST 2989. Black Transnational Feminism (AFRI 2010).

Interested students must register for AFRI 2010.

HIST 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

HIST 2991. History Dissertation Writing Workshop.

This seminar is for History PhD students in residence at Brown who are post-exams and are at any stage of writing their dissertations. It is intended to support dissertators by providing a structured community for setting and sharing goals, writing, and discussing chapters-in-progress. It meets every other week and is a half credit S/NC course.

HIST 2992B. Topics in Islamic Studies: Methods and Theories (RELS 2400L).

Interested students must register for RELS 2400L.

HIST 2992E. Microhistory (ITAL 2050).

Interested students must register for ITAL 2050.

HIST 2992F. History of Black Travel (AFRI 2050).

Interested students must register for AFRI 2050.

HIST 2992G. From Big Data to Lilliputians: Considerations of Scale Across the Disciplines (HMAN 2402K).

Interested students must register for HMAN 2402K.

HIST 2992H. Histories and Cultures of the Medieval and Early Modern Lusophone World (POBS 2600F).

HIST 2992J. Topics in Roman Republican History (CLAS 2080H).

Interested students must register for CLAS 2080H.

HIST 2993. Gender Matters (ITAL 2550).

Interested students must register for ITAL 2550.

HIST 2994. Roman Epigraphy (LATN 2120A).

Interested students must register for LATN 2120A.

HIST 2996. Premodern Art-Science, or the Work of Knowing in Europe before 1800 (HMAN 2400X).

Interested students must register for HMAN 2400X.

HIST 2997. Environmental Humanities (HMAN 2400I).

Interested students must register for HMAN 2400I.

HIST 2998. The World of Late Antiquity (CLAS 2100G).

Interested students must register for CLAS 2100G.

History of Art and Architecture

Work in the department of the History of Art and Architecture at Brown is conceived as an interdisciplinary undertaking, in which students are encouraged to become familiar with the variety of methodologies and practices that have historically been, and continue to be productive in our fields. We also maintain a longstanding commitment to museum studies and the study of objects through a close working relationship with the Museum of the Rhode Island School of Design. Interested students in this department have the opportunity to hold internships and (in the case of graduate students) proctorships at the museum.

For additional information, please visit the department's website: <http://www.brown.edu/academics/art-history/>

Architecture Concentration Requirements

The Architecture concentration introduces students to a broad understanding of concepts and methods for the planning and design of buildings and urban environments. It connects architectural education firmly to the humanities and provides a greater awareness of historical, global, environmental, social and economic issues in the built environment. This approach to the education of architects and urban planners aims to provide them with the tools needed in today's fractured urban society. Apart from training careful observation, critical analysis and problem solving, students will acquire skills in sketching, drafting, model-making, and digital rendering. By combining a carefully selected range of classes in architectural design, the humanities, engineering and technology, and urban life and theory, students will acquire necessary proficiency for pursuing a graduate degree in architecture after Brown.

NOTE: *The Architecture concentration is open for current concentrators and for prospective concentrators admitted to the University in Fall 2024. Starting in Fall 2025, the department will no longer offer this concentration as an option for incoming first year students. More information is available here (<https://hiaa.brown.edu/undergraduate-concentrations/architecture-concentration/architecture-concentration-update/>).*

Self-Assessment

All concentrators are required to write an essay when they file for the concentration that lays out what they expect to gain from the course of study they propose. All second-semester seniors will be required to write a final essay that takes measure of what they have learned from the concentration, including their capstone and other experiences relating to their study of architecture. The self-assessment should be submitted through ASK with a revised list of courses actually taken at least one month prior to graduation.

Summary of Concentration Requirements ¹

1 Introduction to Design Studio	1
2 Practice Courses	2
1 Double-Credit Design Studio	2
4 History of Art and Architecture lecture or seminar courses bearing the A designation	4
1 Pathway Elective in Sciences	1
1 Pathway Elective on Social Sciences / Humanities	1
1 Capstone Course	1
Total Credits	12
.	
HIAA 0100 Introduction to Architectural Design Studio	1
HIAA 0130 Architectural Projection	1

HIAA 0140	Structural and Architectural Analysis	1
HIAA 0150	Intermediate Architectural Design Studio	2
or HIAA 0190	Advanced Design Studio	

4 History of Art and Architecture lecture courses bearing the A designation. The courses should engage at least two different geographic regions (Africa, Americas, Asia, Europe) and two different periods (Ancient-Medieval, Early Modern, Modern-Contemporary). Individual courses can be used to fulfill either the geographic or temporal breadth requirement, but not both. Courses tagged as "Multiple Regions" and "Multiple Periods" can be used to fulfill one geographic and one temporal breadth requirement, respectively. A select number of A designated seminars may be used to fulfill this requirement.

Temporal Periods:		
Ancient/Medieval:		
HIAA 0022	The Art of Enlightenment	
HIAA 0024	Arts of Asia: Beginnings to 1300	
HIAA 0032	Art and Architecture of the Roman Empire	
HIAA 0322	The Arts of Religion and Ritual in the Ancient World	
Early Modern:		
HIAA 0660	Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution	
HIAA 0063	Food and Art in the Early Modern World	
Modern/Contemporary:		
HIAA 0070	Introduction to American Art: The 19th Century	
HIAA 0072	Introduction to American Art: The Twentieth Century	
HIAA 0075	Introduction to the History of Art: Modern Photography	
HIAA 0077	Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art	
HIAA 0084	Postwar to Postmodernism: Art Since 1945	
HIAA 0087	Contemporary Art	
HIAA 0089	Contemporary Photography	
HIAA 0090	The Other History of Modern Architecture	
HIAA 0820	Art and Technology from Futurism to Hacktivism	
HIAA 0850	Modern Architecture	
HIAA 0860	Contemporary Architecture	
HIAA 0861	City and Cinema	
Multiple Periods:		
HIAA 0023	South Asian Art and Architecture	
HIAA 0041	The Architectures of Islam	
HIAA 0081	Architecture of the House Through Space and Time	
HIAA 0770	Architecture and Urbanism of Africa	
Geographic Regions:		
Africa:		
HIAA 0770	Architecture and Urbanism of Africa	
Americas:		
HIAA 0070	Introduction to American Art: The 19th Century	
HIAA 0072	Introduction to American Art: The Twentieth Century	
HIAA 0089	Contemporary Photography	
Asia:		
HIAA 0022	The Art of Enlightenment	

HIAA 0023	South Asian Art and Architecture
HIAA 0024	Arts of Asia: Beginnings to 1300
Europe:	
HIAA 0032	Art and Architecture of the Roman Empire
HIAA 0075	Introduction to the History of Art: Modern Photography
HIAA 0077	Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art
HIAA 0660	Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution
Multiple Regions:	
HIAA 0041	The Architectures of Islam
HIAA 0081	Architecture of the House Through Space and Time
HIAA 0084	Postwar to Postmodernism: Art Since 1945
HIAA 0087	Contemporary Art
HIAA 0090	The Other History of Modern Architecture
HIAA 0322	The Arts of Religion and Ritual in the Ancient World
HIAA 0820	Art and Technology from Futurism to Hacktivism
HIAA 0850	Modern Architecture
HIAA 0860	Contemporary Architecture
HIAA 0861	City and Cinema
Seminar Courses:	
HIAA 1181	Prefabrication and Architecture
HIAA 1190	Spaces and Institutions of Modernity
HIAA 1202	Mountains and Waters: Art and Ecology in East Asia
HIAA 1212	The Pictured Text
HIAA 1213	The Bureaucracy of Hell: Envisioning Death in East Asian Art
HIAA 1307	Politics and Spectacle in the Arts of Ancient Rome
HIAA 1308	Arts of Memory in Ancient Rome
HIAA 1771	Eclectic Arts in the Global 19th Century
HIAA 1820	Abstraction in Theory and Practice
1 Pathway Elective in Sciences ²	
1 Pathway Elective in Social Sciences / Humanities ²	
1 Capstone course. Capstone projects are required for all concentrators. The Capstone is intended to challenge you with an opportunity to synthesize at a high level of achievement the knowledge and understanding you have gained by concentrating in Architecture. Capstone projects embrace many possibilities. You can perfect a studio project or seminar paper in which you have developed a strong interest. You can participate in a graduate seminar to which the instructor has admitted you. You can develop work that you do as a museum or gallery intern. You might work on an archaeological excavation. You can participate in the Honors Program. Beyond these opportunities, the Department is open to other approaches. Capstones are often completed under the auspices of an independent study course. But a capstone may be completed under the umbrella of an existing course. All capstone's must be discussed with and approved by a faculty sponsor and your concentration advisor.	
Total Credits	12

¹ A maximum of four credits may be allowed for courses taken at other universities (transfer credits or from study abroad) or courses on

architectural subjects taken in other departments. No concentration credit will be granted for AP/A-level scores.
² Electives should be chosen in consultation with your concentration advisor.

Honors

During the second semester of the junior year all concentrators will be invited to apply for admission to the Honors Program in Architecture. The honors program is an opportunity for you to mobilize what you have learned to make an original research contribution to the field.

There are two pathways to honors in the Architecture concentration: thesis and project-based.

Those pursuing the thesis option research and write a historical or theoretical essay on a topic of their choice over the course of their senior year. The thesis should be no more than 35 pages in length, plus bibliography and illustrations.

Those pursuing the project option further develop a design project that they initiated in an Intermediate or Advanced Studio in their junior year or in the first semester of their senior year. They devote a minimum of one additional semester further developing their project in regular consultation with a faculty advisor. (This can mean building an additional, more elaborate model, creating more renderings, or refining the concept.)

Students wishing to pursue Honors should have produced consistently excellent work and maintained a high level of achievement (i.e. a majority of "A" or "S with distinction" grades) in all concentration courses. Acceptance into the Honors program depends on the persuasiveness of the thesis topic and the availability of relevant faculty to advise the thesis. Students may refine their proposals by speaking in advance with potential advisors. No honors student may take more than four courses either semester of their senior year—with the honors seminar being considered one of the four courses. Students interested in honors who are expecting to graduate in the middle of the year should contact the concentration advisor no later than the beginning of their junior year.

During both fall and spring semesters you will participate in the monthly meetings of the Honors cohort, in which honors students in both HIAA concentrations share their work-in-progress with each other and with the faculty member who supervises the seminar. These monthly meetings, usually three per semester, are mandatory. Students must enroll in HIAA 1990 (Honors Thesis) in both semesters. Students are also expected to meet separately and regularly with their own thesis advisor.

Theses and projects will be due to the advisor and second reader by March 1 of the Spring semester or by November 1 of the Fall semester if you plan on graduating in December. Comments will be returned to the students for final corrections at that point. There will be a public presentation of Honors work at the end of the Spring semester.

History of Art and Architecture Concentration Requirements

The concentration in History of Art and Architecture (HIAA) introduces students to the history of art, architecture, and material culture. Students in HIAA explore a wide range of artistic traditions from around the world, and develop the skills necessary to analyze artworks, artifacts, and the built environment dating from the paleolithic to the contemporary. Concentrators are encouraged to develop familiarity with the distinctive periods, regions, sub-fields, and theoretical approaches that collectively inform the discipline, while at the same time developing an individualized program. Concentrators will receive essential training in perceptual, historical, and critical analysis.

History of Art and Architecture Requirements

To complete the concentration, you will be expected to take a minimum of ten courses. Our goal in setting out these requirements is to welcome students into a lively and diverse department that also shares a cohesive and strong commitment to the field. We as a faculty want students to cultivate their special interests and also to venture into areas that may not be so familiar but that will open new and exciting possibilities for them.

Ten courses are only the minimum requirement. Beyond that students are encouraged to take courses at RISD, participate in study abroad programs, and take courses in other Brown departments. As we are a truly interdisciplinary department, you will also find that our faculty collaborates with members of other departments to teach courses that bring together the strengths of different disciplines. We encourage both experimentation and concentration.

Since the history of art and architecture addresses issues of practice within specific historical contexts, concentrators are encouraged to take at least one studio art course. Courses in history also train students in methods and approaches that are highly relevant to the history of art and architecture. Study abroad can be a valuable enrichment of the academic work available on campus, in that it offers opportunities for first-hand knowledge of works of art and monuments as well as providing exposure to foreign languages and cultures. Study abroad should be planned in consultation with the concentration advisor in order to make sure that coursework will relate meaningfully to the concentrators program of study.

5 Lecture Courses, numbered HIAA 0001–HIAA 0999. The courses should engage at least three different geographic regions (Africa, Americas, Asia, Europe) and two different periods (Ancient-Medieval, Early Modern, Modern-Contemporary). Individual courses can be used to fulfill either the geographic or temporal breadth requirement, but not both. Courses tagged as “Multiple Regions” and “Multiple Periods” can be used to fulfill one geographic and one temporal breadth requirement, respectively. **5**

Temporal Periods

Ancient/Medieval:

HIAA 0022	The Art of Enlightenment
HIAA 0024	Arts of Asia: Beginnings to 1300
HIAA 0032	Art and Architecture of the Roman Empire
HIAA 0322	The Arts of Religion and Ritual in the Ancient World

Early Modern:

HIAA 0063	Food and Art in the Early Modern World
HIAA 0660	Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution

Modern/Contemporary:

HIAA 0070	Introduction to American Art: The 19th Century
HIAA 0072	Introduction to American Art: The Twentieth Century
HIAA 0075	Introduction to the History of Art: Modern Photography
HIAA 0077	Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art
HIAA 0084	Postwar to Postmodernism: Art Since 1945
HIAA 0087	Contemporary Art
HIAA 0089	Contemporary Photography
HIAA 0090	The Other History of Modern Architecture
HIAA 0820	Art and Technology from Futurism to Hacktivism
HIAA 0850	Modern Architecture
HIAA 0860	Contemporary Architecture
HIAA 0861	City and Cinema
Multiple Periods:	
HIAA 0023	South Asian Art and Architecture
HIAA 0081	Architecture of the House Through Space and Time
HIAA 0770	Architecture and Urbanism of Africa

Geographic Regions:

Africa:

HIAA 0770	Architecture and Urbanism of Africa

Americas:

HIAA 0070	Introduction to American Art: The 19th Century
HIAA 0072	Introduction to American Art: The Twentieth Century

HIAA 0089	Contemporary Photography

Asia:

HIAA 0022	The Art of Enlightenment
HIAA 0023	South Asian Art and Architecture

Europe:

HIAA 0032	Art and Architecture of the Roman Empire
HIAA 0075	Introduction to the History of Art: Modern Photography
HIAA 0077	Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art
HIAA 0660	Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution

Multiple Regions:

HIAA 0041	The Architectures of Islam
HIAA 0081	Architecture of the House Through Space and Time
HIAA 0084	Postwar to Postmodernism: Art Since 1945
HIAA 0087	Contemporary Art
HIAA 0090	The Other History of Modern Architecture
HIAA 0322	The Arts of Religion and Ritual in the Ancient World
HIAA 0820	Art and Technology from Futurism to Hacktivism
HIAA 0850	Modern Architecture
HIAA 0860	Contemporary Architecture

3 Seminars, numbered HIAA 1000–HIAA 1931 **3**

HIAA 1181	Prefabrication and Architecture
HIAA 1201	Brushwork: Chinese Painting in Time
HIAA 1202	Mountains and Waters: Art and Ecology in East Asia
HIAA 1212	The Pictured Text
HIAA 1213	The Bureaucracy of Hell: Envisioning Death in East Asian Art
HIAA 1305	Pre-Columbian Art + Architecture
HIAA 1307	Politics and Spectacle in the Arts of Ancient Rome
HIAA 1308	Arts of Memory in Ancient Rome
HIAA 1620	Arts Between Europe and the World: 1500-1700
HIAA 1720	The Art of Portraiture: Pre-Histories of the Selfie
HIAA 1771	Eclectic Arts in the Global 19th Century
HIAA 1810	Contemporary Art and Activism
HIAA 1811	Possible Futures: Art and the Social Network before the Internet (1950-1979)
HIAA 1820	Abstraction in Theory and Practice
HIAA 1822	Dada and Surrealism: Anarchy, Exile, Alterity
HIAA 1850G	Contemporary American Urbanism: City Design and Planning, 1945-2000
HIAA 1850H	Berlin: Architecture, Politics and Memory
HIAA 1880	Criticality and Modern Art
HIAA 1888	Exhibition as Medium

HIAA 1890G	Contemporary Art of Africa and the Diaspora	
HIAA 1900	Museum Interpretation Practices	
HIAA 1910A	Providence Architecture	
HIAA 1930	The History and Methods of Art Historical Interpretation	
HIAA 1931	Museums, Histories, Critiques	
1 Elective: This can include courses taught in the department, cross-listed courses from other departments, or courses in other departments approved by the concentration advisor.		1
1 Capstone course. Capstone projects are required for all concentrators. The Capstone is intended to challenge you with an opportunity to synthesize at a high level of achievement the knowledge and understanding you have gained by concentrating in the History of Art and Architecture. Capstone projects embrace many possibilities. You can perfect a seminar paper in which you have developed a strong interest. You can participate in a graduate seminar to which the instructor has admitted you. You can develop work that you do as a museum or gallery intern. You might work on an archaeological excavation. You can participate in the Honors Program. Beyond these opportunities, the Department is open to other approaches. Capstones are often completed under the auspices of an independent study course. But a capstone may be completed under the umbrella of an existing course. All capstone's must be discussed with and approved by a faculty sponsor and your concentration advisor.		1
Total Credits		10

¹ A maximum of four credits may be allowed for courses taken at other universities (transfer credits or from study abroad) or courses on art historical subjects taken in other departments. No concentration credit will be granted for AP/IB/A-level scores.

Self-Assessment

All concentrators are required to write an essay when they file for the concentration that lays out what they expect to gain from the course of study they propose. All second-semester seniors will be required to write a final essay that takes measure of what they have learned from the concentration, including their capstone and other experiences relating to their study of the history of art and architecture. The self-assessment should be submitted through ASK with a revised list of courses actually taken at least one month prior to graduation.

Honors

During the second semester of the junior year all concentrators will be invited to apply for admission to the Honors Program in History of Art and Architecture. The honors program is an opportunity for concentrators to mobilize what they have learned to make an original research contribution to the field.

Students wishing to write an honors thesis should have produced consistently excellent work and maintained a high level of achievement (i.e. a majority of "A" or "S with distinction" grades) in all concentration courses. It is advisable for them to have taken at least one seminar in the department and written a research paper before choosing to undertake a thesis. Acceptance into the Honors program depends on the persuasiveness of the thesis topic and the availability of relevant faculty to advise the thesis. No honors student may take more than four courses either semester of their senior year—with the honors seminar being considered one of the four courses. Students interested in honors who are expecting to graduate in the middle of the year should contact the concentration advisor no later than the beginning of their junior year.

During both fall and spring semesters you will participate in the monthly meetings of the Honors cohort, in which honors students in both HIAA concentrations share their work-in-progress with each other and with the

faculty member who supervises the seminar. These monthly meetings, usually three per semester, are mandatory. Students must enroll in HIAA 1990 (Honors Thesis) in both semesters. Students are also expected to meet separately and regularly with their own thesis advisor.

Finished drafts of the thesis, which will generally be no more than 30–35 pages in length (exceptions to be determined in consultation with the instructor), not counting bibliography and visual materials, will be due to the advisor and second reader by March 1 of the Spring semester or by November 1 of the Fall semester if you plan on graduating in December. Comments will be returned to the students for final corrections at that point. There will be a public presentation of Honors work at the end of the Spring semester.

History of Art and Architecture Graduate Program

The department of History of Art and Architecture offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) degree.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/history-art-and-architecture> (<http://www.brown.edu/academics/gradschool/programs/history-art-and-architecture/>)

Courses

HIAA 0010. A Global History of Art and Architecture.

Introduction to the global history of art, architecture and material culture from cave paintings to installation art. The course is both an historical survey as well as an analysis of case study examples. In addition to examining visual strategies of representation, the course explores the varied ways in which art shapes and reflects cultural, social, religious, and political concerns. Weekly one-hour conference required. Limited to 200. A

HIAA 0011. Introduction to the History of Architecture and Urbanism.

Western architecture and urbanism from classical antiquity through the eighteenth century: patterns of development; major architects and monuments; methods of interpretation. Does not presume previous knowledge or special skills. A

HIAA 0012. Theories of Architecture from Vitruvius to Venturi.

Theories and Design from Classicism to Postmodernism: An inquiry into the ways in which the nature of architecture has been thought, both inside the profession and outside, since Vitruvius first defined its study and practice as an "interdisciplinary discipline." The seminar will study selected texts and designs in the culture of western architecture from antiquity to the present. Drawn from works in architectural, social, political, and aesthetic theory the seminar will deepen our understanding of historical architecture and open up ways of interpreting contemporary design culture. A

HIAA 0013. Introduction to Indian Art.

This course presents aspects of Indian art over a period of 2,000 years, and introduces the art of Buddhism, Jainism, Hinduism, Islam, and colonial and post-colonial India. Emphasis is placed on characteristic features, functions and socio-political contexts of stupas, temples, mosques, churches, and other architectural sites as well as sculptures, painted manuscripts, paintings, and photography. A

HIAA 0021. Arts of Asia.

From sacrificial cauldrons to sunflower seeds, and Roman Buddhas to five-toed dragons, this course introduces the incredible diversity of traditions that collectively constitute the arts of Asia. Organized around a series of case studies of exemplary objects, the course explores the temporal, geographic, material, and thematic range of Asian art through the life stories of individual things. Tracing histories of human ingenuity and value, we will examine the ways these things changed the people who saw them and were themselves changed in the process of being seen. And we will come to know them through the ways they change us.

HIAA 0022. The Art of Enlightenment.

This course surveys the history of Buddhist art-making from the earliest representations of the Buddha to the curatorial practices of modern museums. Ranging from the great mandala of Borobudur in Java to the Zen monasteries of Japan, we will examine the complex ways in which theology and scripture interacted with the particularities of time and place in the long development of Buddhist art. Throughout these inquiries, the sensorial qualities of the art will remain at the forefront of our analysis. Together, we will explore the mechanisms by which artists transformed inert matter into powerful implements of the Buddhist dharma.

HIAA 0023. South Asian Art and Architecture.

This course is an introduction to South Asian Art & Architecture, from 2500 BCE until the present, and to Southeast Asian Arts connected to them through religion, trade, or conquest. We will explore a range of media—including architecture, painting, sculpture, textiles, and photography—to ask critical questions about the nature of images and their relationship to emotions, the environment, devotion, politics, performance, and other art forms, like literature, music, and dance. The course will include regular visits to the RISD museum (A)

HIAA 0024. Arts of Asia: Beginnings to 1300.

This course surveys the history of art in Asia from the earliest times through the Mongol Empire. Organized around a series of exemplary objects, the course explores the temporal, geographic, material, and thematic range of early Asian art through the life stories of individual things. Tracing histories of human ingenuity and value, we will examine the ways these things changed the people who saw them and were themselves changed in the process of being seen. And we will come to know them through the ways they change us.

HIAA 0031. Pre-Islamic Empires of Iran.

Introduction to art and architecture of the Ancient Near Eastern empires that flourished between the 6th century BCE and the Islamic conquests of c. 630 CE. We will consider the material culture of the Achaemenids, Seleucids, Parthians, and Sasanians, empires that inhabited primarily the areas of Mesopotamia and the Persian plateau, but spread at times as far afield as the Mediterranean coast, Egypt, the Caucasus, and the Indus Valley. Lectures will prioritize close analysis of the most illuminating art and architecture, so that you leave the course knowing not only the material evidence but also current approaches to interpreting it. A

HIAA 0032. Art and Architecture of the Roman Empire.

How did a small city in central Italy grow to become one of the most powerful empires in history? This course explores the art and architecture produced in ancient Rome from its origins in the 6th century BCE to the fourth century CE. It considers a wide variety of media, including reliefs, freestanding sculpture, architectural monuments, mosaics, wall paintings, and daily-life objects. By exploring the role of art and architecture in the formation and expansion of the Empire, considering the experiences of ancient viewers, the course offers a post-colonial reading of ancient Roman history and culture. (A)

HIAA 0033. The Legacy of Roman Art from the Renaissance to Today.

Beginning in the Renaissance, European artists and scholars were eager to unearth ancient Roman art and architecture to study what they perceived to be the glory of ancient Rome. Discoveries of ancient masterpieces impacted the work of artists like Raphael and Michelangelo, and later Annibale Carracci, Peter Paul Rubens, and Gianlorenzo Bernini. In this lecture course, students will analyze how early modern artists, patrons, and scholars used the visual and cultural vocabulary of ancient Roman art to build monuments dedicated to civic virtue and imperial power, and how many of these artistic practices and cultural ideals continue to shape our society today. Examples of painting, sculpture, and architecture will all be considered. Students will also study the interdisciplinary methods employed by antiquarians and consider how contemporary art historical methodologies can be traced to early antiquarian practices. A

HIAA 0040. Introduction to Medieval Art and Architecture.

A comparative examination of the three artistic cultures of the medieval Mediterranean: Islam, the Byzantine empire, and the predominantly Christian regions of western Europe. Medieval Jewish art is also treated. Topics include medieval attitudes toward the use of images, the architecture of worship (churches, synagogues, and mosques), royal and domestic art, and instances of contact among all three cultures. Weekly one-hour conference required. A

HIAA 0041. The Architectures of Islam.

Through selected case study examples, the course examines the varied manifestations of Islamic architectures. The course spans fourteen centuries and three continents, and examines religious as well as secular buildings. We will trace the sources and 'invention' of Islamic architecture in the Umayyad dynasty of the seventh and eighth centuries, and will explore its varied manifestations up to the contemporary period. By examining cross-cultural and trans-regional interactions, we will also investigate the relationship between Islamic and non-Islamic architectural traditions. A

HIAA 0042. Islamic Art and Architecture.

The formation of an Islamic artistic expression in art and architecture and the regional manifestations of that art from central Asia and the Middle East to Sicily and Spain. Weekly one-hour conference required. A

HIAA 0050C. Illustrating Knowledge.

This seminar will investigate the history of illustration from the first manuscript maps and printed herbals to the present, including paintings, photographs, and computer imaging. We will investigate the role of pictures in the exchange of scientific ideas, and modes of representation developed in both the arts and the sciences. Enrollment limited to 15 first year students.

HIAA 0051. Roman Baroque Palaces as Theaters of Power.

The palaces of Baroque Rome were more than extravagant homes for the elite. They were centers of diplomatic and cultural exchange in which cardinals, princes, and popes sought to express their political power. Through theatrical facades, strategic floorplans, and illusionistic frescoes, the patrons of Rome used their palaces to reinforce political, religious, and cultural identities. Each week students will be introduced to a new Roman palace or villa such as Palazzo Barberini, the Apostolic Palaces, Palazzo Pamphilj, and the Villa Borghese. The impact of developments in urban planning, papal pageantry, and collection and display will be considered throughout. A

HIAA 0061. Baroque.

The course surveys the visual culture of Rome from 1564-1700. During that time Rome became the center of Artistic change in Europe, the seat of the Counter-Reformation Catholic Church and the dominant source of classical learning. All media that participated in these historical developments are included: from papal urban plans to Bernini's fountains and Caravaggio's paintings.

HIAA 0062. Dutch and Flemish Art: Visual Culture of the Netherlands in the Seventeenth Century.

Surveys the amazing art in Holland and Flanders that revolutionized all media. We will see how paintings, sculpture, and architecture formed the historical environment of life in the 17th-century Netherlands. The work of such artists as Rubens, Rembrandt, Van Dyck, and Vermeer is presented as part of this history of art in a "golden age." Weekly one-hour conference required. A

HIAA 0063. Food and Art in the Early Modern World.

"Taste" is the sensory perception of flavor and the act of judging aesthetic quality. This class asks how the taste for food and for art relate in the early modern world. From the movement of spices, scents, chocolate, and sugar to the vessels that were invented to contain them, we will investigate the trade and circulation of foods and objects across the globe. We will then turn to cities that flourished in the wake of such consumption and their rituals of feasting and fasting. Finally, we will consider the transmission of knowledge about food and eating through recipes, culinary ephemera, a set table, and dinner parties. (A)

HIAA 0065. Introduction to the Built Environment.

This course provides an introduction to the major forces and discourses that shape the built environment, with a focus on architecture and the city, but including examples from a wide range of scales and art and creative practices. The course is organized topically, with the goal of offering a general framework, precise vocabulary, and a conceptual armature for thinking critically about the shape of the built environment. This course fulfills an Architecture concentration requirement. A.

HIAA 0070. Introduction to American Art: The 19th Century.

This undergraduate lecture course traces the rise of American painting in the period from the Revolution to the dawn of modernism in the 20th century. Major figures, such as Thomas Cole, Frederick Church, Winslow Homer and Albert Pinkham Ryder, will be examined, as will significant movements, such as the Hudson River School and Tonalism. Discussion will help place American art within the context of history, the invention of national identity, and parallel developments in popular visual culture. Enrollment limited to 50.

HIAA 0072. Introduction to American Art: The Twentieth Century.

This course examines fine art in the US from roughly 1900 through the 1970s, with special attention to modernism and the rise of modern art. Through slide presentations and group discussion, most major figures of the period—Georgia O’Keeffe, Edward Hopper, Alexander Calder, Jackson Pollock, and Andy Warhol among them—will be placed in historical and cultural context. Key events, institutions, and critics of these decades will also be considered. We will look at the role of cultural episodes like the Harlem Renaissance, and the increasing prevalence of women in the art world, as markers of increasing diversity and changing values. Readings by leading scholars will allow a wide-ranging introduction to art historical methods of interpretation. Discussion in sections will help place this art within the context of social history, the invention of national identity, and parallel developments in popular visual culture.

HIAA 0074. Nineteenth-Century Architecture.

Surveys stylistic developments, new building types, and the changing conditions of architectural production through the 19th century. Special emphasis placed on the social context in which buildings were designed and used.

HIAA 0075. Introduction to the History of Art: Modern Photography.

This class will survey the history of photography as an art form and means of visual communication in the modern era. The photograph will be considered from both esthetic and social perspectives; photography’s rise as a medium of personal expression will be examined, as will technology’s role in the creation of new regimes of spectatorship, and the mass dissemination of visual information. The class follows the rise of photography’s acceptance as an art form in the twentieth century, and culminates with its prominence within the phenomenon of postmodernism. Prior coursework in modern history or art history is helpful. Enrollment limited 80.

HIAA 0076. From Turtle Island to Abya Yala: Art of the Indigenous Americas.

Before the western hemisphere was named after Amerigo Vespucci, it had many names, including “Turtle Island” and “Abya Yala.” Many people populated the Americas, from the Arctic and Pacific Northwest to the tip of Tierra del Fuego. These societies tracked days and seasons using complex calendrical systems, developed sophisticated philosophies about humankind’s relationship to nature, and created buildings, cities, monuments, and precious objects that continue to impress viewers today. This course introduces students to key aspects of the Indigenous art and architecture of this hemisphere, from their ancient origins to modern revitalizations and innovations. Over the semester, students will learn the names, characteristics, and key artistic accomplishments of the civilizations that populated the western half of the world.

HIAA 0077. Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art.

Over the long nineteenth century (1789-1900) revolutions replaced kings with citizens. Capitalist and colonial expansion mobilized armies, goods, and slaves across continents. New class and gender dynamics changed patterns of sociability. Technological innovations mass produced images and goods. In this course, we will discern such social and historical factors in Europe and across the globe alongside artistic ones to interrogate what makes art in this period irrepressibly modern. We will study the turbulence that has defined the century, including the art historical swings in style from Classicism to Romanticism to Impressionism, with care. Course includes visits and assignments in museums.

HIAA 0081. Architecture of the House Through Space and Time.

This undergraduate lecture course focuses on one building type, the house, through time in Mesopotamia, China, Japan, the Islamic world, the African diaspora, India, Britain, Rhode Island, and Germany and France. Houses can be minute or monumental, vernacular or high art, provide minimal shelter or afford the material and psychic satisfaction of home. By studying houses, we can bypass some of architectural history’s biases, and explore some of the major debates in the discipline: What is architecture? Who determines what is included/excluded in this category? And on what basis do they make these claims? A

HIAA 0084. Postwar to Postmodernism: Art Since 1945.

This lecture course will survey major artistic movements and strategies that developed from the postwar period through the 1980s. Styles and schools discussed will include art informel, Abstract Expressionism, Happenings, expanded cinema, kinetic art, Fluxus, Situationists, Pop, minimalism, conceptual art, performance, Institutional Critique, video art, and appropriation. Taking a globally comparative approach, emphasis will be on the historical conditions that gave rise to such a multiplicity of practices, as well as the theoretical frameworks used to advance and understand them.

HIAA 0085. German Architecture after World War Two.

This course examines the relationship between architecture and politics in postwar Germany. During the years that immediately followed WW2, we will investigate debates over urban reconstruction and mass-produced housing. After Germany was divided into East and West, we will examine how two opposing ideological settings impacted the approach to architecture in each Germany. Towards the end of the 20th century, we will study various approaches to the design of memorials to historic crimes. Throughout the course, special attention will be given to themes such as searching for a new identity, preventing sprawl, and coming to terms with the Nazi past.

HIAA 0087. Contemporary Art.

This lecture course will survey the major movements and artistic strategies of contemporary art since 1989. Topics include installation art, new documentary, performance/re-performance, new genre public art, relational aesthetics, arte útil, critical geography, post-production, para-fiction, research-based art, and post-colonial, post-critical, and post-internet practices. As suggested by the prevalence of “posts,” our discussion will center on the persistence of history in the art of the present.

HIAA 0089. Contemporary Photography.

This course surveys the rise of photography in the art world in the period after 1960. It examines both the development of photography as an independent medium and the appropriation of lens-based imagery by Pop Art, conceptual art, minimalism, and eventually Postmodernism.

HIAA 0090. The Other History of Modern Architecture.

This lecture course presents modern architecture as the product of the cultural, technological, political, and intellectual developments associated with capitalist expansion across the globe. By exploring the trans-Atlantic slave trade and its effects on Western industrialization, European Jesuit gardeners in China, modernization efforts in 19th century Turkey and Japan, and tropical climate and colonial policy in India, Nigeria, and other global sites; the course will expose students to the “99 percent” who are frequently excluded from discussions about modern architecture, but whose labor and cultural traditions were crucial to the heroic modernism of the West.

HIAA 0100. Introduction to Architectural Design Studio.

The class introduces students to basic tools and strategies in architectural design. A warmup exercise and several design assignments guide students to explore questions about form, function, structure, and light. The semester is devoted to the design of a small house. Students are trained in rigorous, conceptual thinking and graphically and verbally clear pronunciation of consequential design logic. By the end of the semester, the proposed building design is presented in concept diagrams, plans, sections, elevations, and a model. Course is intended for first and second year students. Preference is given to actual and future architecture concentrators. To apply for this class, students are required to submit an override request and a note via CAB to specify their concentration, semester level, and previous applications for this class. Enrollment limited to 15.

HIAA 0130. Architectural Projection.

This course introduces the beginning student to the origins, media, geometries and role(s) of projection drawing in the design and construction process. The student will learn systems of projection drawing from direct experience, and be challenged to work both from life and to life. Subjects such as transparency, figure/ground, sciagraphy, oblique projection, surface development, volumetric intersections, spatial manipulation and analytic operations will build on the basics of orthographic and conic projection. The course involves line and tone drawing, hand drafting, computer drawing(Autocad) and computer modeling(Rhino).

HIAA 0140. Structural and Architectural Analysis.

This course examines in greater detail the importance of materials, structures, and processes in architecture and helps students understand how buildings are made and 'hold together.' The students will study key examples in brick, wood, reinforced concrete, and steel, and design a series of small sample structures.

HIAA 0150. Intermediate Architectural Design Studio.

Building on the skills taught in the Introductory Studio, this studio emphasizes design as a mode of critical cultural inquiry to explore the cultural, environmental, and political forces which shape relationships between cities and the buildings, landscapes that form the public realm. Questions of the meaning of materials, functions, and urban imagery will be addressed with particular emphasis on acquiring greater fluency with the graphic tools and iterative processes through which designers conceptualize, synthesize, and represent the complex conditions of site, program, tectonics, and materiality to create urban landscapes. The city of Providence usually serves as a case study for observation and testing ground for your ideas, in addition to providing a site for your imaginary project. Students will come away with enhanced proficiency in representational techniques and a greater awareness of the social conditions of architectural production.

HIAA 0190. Advanced Design Studio.

This double-credit studio course builds on the skills taught in the Introductory and Intermediate Studios and will challenge students to design a more complex building. Urban planning strategies are developed to carefully insert the proposed building into a hybrid, densely populated urban context within a city. Students will be briefed to either design a residential housing project or a large public building. Students will analyze the built environment and character of the site to create contextual building designs that strengthen a neighborhood. The final presentation will require a complete set of drawings, renderings, a shared urban context model, and a large-scale model of the proposed building design. A jury of invited architects and professors will conduct a discussion of each project in an exhibition-like setting at the List Art Center. This course can be repeated once for credit.

HIAA 0211. Art of Empire: The Early Modern Hispanic World.

This course juxtaposes artists such as Titian and Velázquez alongside frequently unnamed indigenous craftsmen living under Spanish rule across the Atlantic and Pacific oceans. We will track bi-directional artistic exchange and mobility during imperial expansion to ask: how did navigation, religion, natural resources, and trade shape the art of Spain and its colonies as preColombian visual traditions persisted and were exported to Europe? Considering how the power structures of the world's first global empire continue to shape our understanding of the past, we will propose ways to begin decolonizing the study and display of objects produced under imperial rule.

HIAA 0217. Metropolis: The Architecture and Urban Design of Global Cities.

This class serves as an introduction to global questions of urban architecture and planning, their history, present challenges and future opportunities. It is organized around comparative case studies of 20 global metropolitan centers (among them New York City, Los Angeles, London, Paris, Naples, Berlin, Madrid, Dubai, Delhi, Dakha, Tokyo, Manila, Hong Kong, Chongqing, Shanghai, Lagos, Johannesburg, Mexico City, Buenos Aires and Rio de Janeiro). A

HIAA 0311. Envisioning Monstrosity in Early Modernity.

This course introduces students to the historical analysis of visual and material culture through the charged site of the "monster" in the Atlantic World. How and why are monsters made? What can visualizations of monsters tell us about how Otherness is constructed, contested, and critiqued? What do monsters tell us about human oppression, agency, and cross-cultural encounters? Analyzing visual and textual primary sources as well as different theoretical approaches, students will hone in the course sharper visual analysis skills, a critical awareness of the many-sided discourses on monstrosity, and a deeper understanding of early modern Atlantic history.

HIAA 0321. Toward a Global Late Antiquity:200-800 CE.

Competing empires, the division of the eastern and western halves of Roman territory; long distance trade, the rise of monotheism, the spread of Buddhism: how did these factors affect the art and architecture associated with the Roman west, Constantinople, Ctesiphon, Alexandria, the Han Dynasty capitals, and Gandhara? This course takes an expanded view of Late Antiquity, extending beyond typical that associate the period with the post-classical west, to explore the dynamic creativity and intercultural connectivity of an era once considered a "Dark Age" in a world history.

HIAA 0322. The Arts of Religion and Ritual in the Ancient World.

This course explores how humans have imagined and conceptualized notions of divinity throughout the history of the ancient world (circa 3000 BCE to 1000 CE). We will consider a variety of visual representations, architectural monuments, and urban centers to investigate the types of places, natural phenomena, and individuals that were considered sacred. The class also explores how the art and architecture of temples and sanctuaries informs the nature of ancient ritual in a cross-cultural setting (A).

HIAA 0340. Roman Art and Architecture: From Julius Caesar to Hadrian.

An introduction to the major monuments in Roman art at the point when the Empire emerged up to the time of the creation of the Pantheon. No prior background required. A

HIAA 0400. Early Christian, Jewish, and Byzantine Art and Architecture.

No description available. A

HIAA 0415. The Cathedral as a Living Object.

In the Middle Ages, sometimes referred to as the "age of cathedrals," ecclesiastical buildings of incredible size, grandeur, and artistic merit were built. These constructions of glass, stone, and wood were covered in paint, gilding, and sculpture and filled with incense, music, and processions, all of which added to the overwhelming, multisensorial experience of stepping into a cathedral in this period. This course will look at the remarkable art of the cathedral – the buildings, as well as the art within them, and how these buildings changed over time. They are living objects and this course aims to help us see the many eras and changes in these buildings, to know them as they truly are – made anew over and over, to serve the evolving needs of the people who use(d) them.

HIAA 0420. Cathedrals and Castles.

The course aims to engage critically with the major architectural features of the medieval world: the cathedral and the castle. In addition to examining specific buildings as case studies, we will also interrogate the cultural context and the material culture associated with the construction, use and meanings of these important spaces. The course is arranged thematically rather than chronologically. A

HIAA 0421. Inventions and Interpretations of Landscapes in the Middle Ages.

This course examines the multiplicity of the Middle Ages. The landscapes we will explore include imaginary deserts, mental pilgrimages, rabbit warrens, enclosed gardens, and tombs for the living with examples in the Iberian peninsula, Jerusalem, northern Africa, the Alps, Scandinavia, and beyond. The period covered will extend just beyond the Middle Ages to include examples in the Americas and the commodification and dissemination of its landscape across the globe. These broad examples will engage deeply with different forms of evidence to examine how we recreate meaning in the past and to question how we know what we know.

HIAA 0432. Pilgrimage Art and Architecture in the Middle Ages.

From Santiago de Compostela to Jerusalem, the movement of religious pilgrims in the Middle Ages resulted in a rich variety of architectural spaces and material culture. The growth of the cult of relics, and the pilgrims that visited them, fueled the development of the urban landscape and religious practices across the medieval world. This course explores the roots and routes of pilgrimage, focusing on the sacred relics that attracted them and the development of architectural spaces they visited. We will examine not only the art and architectural traditions related to pilgrimage in western Europe but the deep connections and exchange of art and architecture in Byzantine, Jewish and Islamic traditions. (a)

HIAA 0440. Gothic Art and Architecture.

Examines Gothic art and architecture to explore its sources and "invention" in mid-12th-century France and to trace its varied manifestations in European art to the 16th century. Special attention is given to cathedral architecture and decoration. Weekly one-hour conference required. A

HIAA 0460. Muslims, Jews and Christians in Medieval Iberia.

The cultural diversity of medieval Spain and Portugal is proclaimed by their Christian churches, Islamic mosques and Jewish synagogues. The three distinct cultures that produced these buildings lived together for centuries in medieval Iberia, sometimes in peace, sometimes not. For almost eight centuries (711-1492) writers, scholars and artists emerged from a cultural environment of intellectual borrowing nurtured by uninterrupted contact through marriage, conversion, commerce and travel. This convivencia of Jews, Muslims and Christians will be examined from the perspectives of literature, music, art, architecture, archaeology, and history.

HIAA 0550. Painters, Builders, and Bankers in Early Modern Italy.

How close can we get to understanding, or even to seeing, the art and architecture of 15th-century Italy? Michael Baxandall proposed studying it with a 'period eye' to understand the styles and functions of art and architecture in the domestic, civic, and religious lives of early modern people. We will learn to activate a period eye in the contexts of modern conservation, notions of cultural property, wars, the market and museums to understand both the original circumstances of the production of art, and to ask how these works are seen and the functions they serve today. A

HIAA 0555. Power, Dependence, and Social Welfare in Early Modern Italy.

This seminar examines the visual and material culture of power, propaganda, and social justice during the early modern period in Italy (c.1450-1800). Noble families set the tone for art patronage in public and private spaces across Italy. Prominent silk merchants sponsored the construction of the first institutional orphanage in Florence, while local nobility housed slaves. Venetian fathers consigned unwilling daughters to convents, as nuns in Naples built 'invisible cities' and employed artists to adorn them in lavish style. 'Talking statues' in Rome advocated for the end of oppressive taxation by over-zealous popes as The Church marshalled indigenous artisans to propagate the iconography of Catholicism and conversion in the Americas. We consider a range of works (painting, sculpture, prints, woodwork, ceramics, textiles, and clothing) to flesh out emerging, often conflicting discourses of social welfare, charity, opportunity, and oppression across Italy.

HIAA 0560. Constructing the Eternal City: Popes and Pilgrims in Early Modern Rome.

Examines painting, sculpture, architecture and printing in the context of the unique urban character of Early Modern Rome: site of ancient myth, religious pilgrimage, and a cosmopolitan court with power and influence across both visible and invisible worlds. Beginning with late medieval art, and the artists Filarete and Fra Angelico, we move through the Renaissance (Michelangelo and Raphael), and Counter-Reformation (Fontana, Tempesta, Barocci), tracing the formation of modernity in artists' workshops and academies, and through the streets with expanding papal urbanization programs. A

HIAA 0570. The Renaissance Embodied.

Renaissance depictions of the body range from muscular, idealized nudes to decaying, but ambulatory, corpses. Artists dissected human cadavers and, for the first time since antiquity, reflected the use of living models in their workshops and studios. In this course, we examine art that embodied power and sexuality, death and disease, the divine and demonic, the marginalized and the fantastic. We consider a diverse set of bodies as they were represented in paintings, sculpture, drawings, decorative arts and prints in relation to contemporary religious, political and social concerns.

HIAA 0580. Word, Image and Power in Renaissance Italy.

This undergraduate lecture class is designed to introduce cultural and historical perspectives on Italy from Siena in the Middle Ages to Renaissance Florence and the early modern Veneto. Team taught by professors of Italian Art History, History, and Literature, we will move across Italy and the centuries focusing on monuments of literature, art, architecture, and history through different disciplinary lenses. In English.

HIAA 0600. From Van Eyck to Bruegel.

Artists of Flanders and Holland effected a revolution in the techniques and subjects of painting during the 15th and 16th Centuries. This course explores the roots of artistic change in religion, urban history, politics, Italian humanism, economics, and craft traditions. The focus is on the great works of such artists as Jan van Eyck, Hieronymus Bosch, and Pieter Bruegel the Elder.

HIAA 0630. Cultural History of the Netherlands in a Golden Age and a Global Age.

Between 1580 and 1690 two nations emerged in Europe from what had been one unified region. To the north, the Dutch Republic gained its independence from Spain and developed as a bastion of liberty, ideas in ferment, visual arts, Calvinist faith, science, technology, and global economic reach. To the south, the "loyal" Netherlands, now Belgium, returned to the Spanish and Catholic fold, but sustained its leading position in the arts, competed in global trade, and negotiated a new compromise of government. In this course we present an interdisciplinary, comparative view of the "two" Netherlands and their legacy in the world.

HIAA 0632. Mural Painting in Mexico.

Before Rivera, Orozco, and Siqueiros were lauded as heroes of the twentieth-century muralismo movement, artists had been painting on walls throughout Mexico for centuries for both public and private audiences. We will consider how murals were sites for elite consumption and religious contemplation, political tools, agents for social change, and nexuses of collective identity. We will examine Mexican wall painting through time from Pre-Columbian dwellings and ceremonial spaces, to the painted interiors of Spanish colonial residences and churches, to public displays uniting post-Revolutionary Mexico, ending with the Chicano mural movement and vibrant community spaces of contemporary Mexico and the U.S.

HIAA 0660. Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution.

Giotto to Watteau introduces the great works of European art from the Renaissance to French Revolution. What ideas and forces enabled artists such as Leonardo da Vinci, Hieronymus Bosch, El Greco, Caravaggio, and Rembrandt to transform the visual world so profoundly that their innovations still radiate outwards through history into the present? What are the best terms and concepts to describe and understand the new styles that developed between 1300 and 1800? Lectures, discussion, reading, and direct looking consider these questions in a way that works for students at an introductory level. A

HIAA 0710. The Other History of Modern Architecture.

This lecture course presents modern architecture as the product of the cultural, technological, political, and intellectual developments associated with capitalist expansion across the globe. By exploring the trans-Atlantic slave trade and its effects on Western industrialization, European Jesuit gardeners in China, modernization efforts in 19th century Turkey and Japan, and tropical climate and colonial policy in India, Nigeria, and other global sites; the course will expose students to the "99 percent" who are frequently excluded from discussions about modern architecture, but whose labor and cultural traditions were crucial to the heroic modernism of the West. A

HIAA 0770. Architecture and Urbanism of Africa.

This course introduces African built environments from the earliest known examples to the contemporary moment. Through recent debates about heritage and preservation, we will interrogate "Africa" as both an imagined construct and a concrete geographic entity characterized by diverse cultures, contexts, and histories. We will also explore competing interpretations of Africa's architectural and urban history and their contemporary relevance. Weekly one-hour section required. A

HIAA 0771. African American and Caribbean Architectures: Domestic Space.

This course explores domestic landscapes occupied by African-Americans between the earliest years of slavery and the Second World War. We will examine some of the most common housing forms that diasporic Africans inhabited during those years—plantation slave quarters, tenant shacks, and urban tenements, to name a few. Our premise is that study of domestic life can reveal how political, economic, and social forces inform everyday life. The goals of the class are twofold: to improve our understanding of the social history of diasporic Africans and to develop sensitivity to the study of ordinary, everyday landscapes—or "vernacular architecture." A

HIAA 0801. Art After '68.

The tumultuous social unrest of the 1960s was concretized in a worldwide succession of civic revolts in 1968. Throughout this period, art was an organizing tool for various political events. In turn, the concept of 1968 generated an aesthetic response that supported, documented and historicized the period. This course will examine the art and new art forms created in the wake of 1968. We will also look closely at the strategies of contemporary art making that are influenced by the spirit of 1968.

HIAA 0810. 20th Century Sculpture.

Writing in 1937, sculptor Naum Gabo posed the question, "What are the characteristics which make a work of art a sculpture?" Gabo's question has a general resonance for the entirety of the twentieth century, where the medium of sculpture formed many of the significant debates within art. This lecture course is a survey of sculpture in the twentieth century. We will examine the medium through its definitions, material (metal, paper, plastic, stone, wood, etc.), methods (carving, casting, modeling, welding, etc.), practitioners, movements, theories and related practices, like architecture.

HIAA 0820. Art and Technology from Futurism to Hacktivism.

This course will introduce students to the central role of technological media in art of the twentieth and twenty-first centuries. From telephones to computers, the Sony Portapak to the Internet, artists have creatively engaged technology to transform how their art was made, circulated, and received. We will pay equal attention to technology as a medium and the ways artists responded to broader technological change. Looking at works from Europe, the Americas, and Japan, we will interrogate the varying social conditions and political motivations that drove artists to use technology in order to radically change the making and meaning of art.

HIAA 0830. Revolutionary Forms: 100 Years of Art and Politics in Latin America.

This course surveys Latin American art within the context of socio-political and intellectual concerns in the region. We will consider a wide variety of media with an eye to local and global events that prompted their production. We will examine how artworks embodied, challenged, and helped to shape history. We will survey major trends in art production: from photography during the Mexican Revolution to participatory and activist art in the beginning of the 21st century. Students will acquire visual and critical analysis skills in order to actively engage with their visual surroundings. Previous knowledge of art history is not required.

HIAA 0840. History of Rhode Island Architecture.

This course examines the historical development of architecture and building in Rhode Island within the larger context of colonial and national trends and with a focus on important manifestations of a distinct regional identity. Emphasis will be placed on stylistic developments, new building types and technologies, and the social and economic influences on the creation of the built environment. A

HIAA 0850. Modern Architecture.

The "classic" period of European and American modern architecture from the turn of the century to the 1950s. Presents both the established canon of masterpieces by among many others, Frank Lloyd Wright, Mies van der Rohe, and LeCorbusier, and counterbalances this approach with information about new building materials, changing conditions of architectural production, and the "mechanisms of fame." A

HIAA 0860. Contemporary Architecture.

Stylistic, technological, and theoretical developments in architecture from the 1960s to the present. Analyzes movements such as "Brutalism," "Postmodernism," and "Deconstruction" and works by architects such as Frank Gehry, I. M. Pei, and Zaha Hadid. Emphasizes the complex conditions of architectural production in different parts of the world. Complements HIAA 0850, but may be taken independently. A

HIAA 0861. City and Cinema.

An examination of the mutual influence between two of the major art forms of the 20th century: film and architecture. Concentrates on European and American film sets throughout the 20th century and explores their formal and iconographical sources in contemporary architectural discourse. Presentation and examination of sketches, paintings, still photographs, and film clips as well as writings by directors, set designers, critics, and architects (Eisenstein, Reimann, Kracauer, Bunuel and many others). A

HIAA 0870. 20th Century British Art: Edwardian to Contemporary.

The field of British art offers a wide view onto the history of art and aesthetics. This survey of British art in the twentieth century will examine the nation's art, artists, and art movements alongside its current events. Readings will be drawn from periodicals, primary documents (artist's letters and manifestos) and secondary texts (Alloway, Hall, Read and others). Architecture, literature (Martin Amis, Joseph Conrad, Lynton Kwesi Johnson and others) and music will be considered throughout the course.

HIAA 0900. City and Cinema.

An examination of the mutual influence between two of the major art forms of the 20th century: film and architecture. Concentrates on European and American film sets throughout the 20th century and explores their formal and iconographical sources in contemporary architectural discourse. Presentation and examination of sketches, paintings, still photographs, and film clips as well as writings by directors, set designers, critics, and architects (Eisenstein, Reimann, Kracauer, Bunuel and many others).

HIAA 0901A. African American Art History at Tougaloo College.

This course covers the history of the contributions of Black artists and artisans to the Art and Architecture of the United States from 1600-to the present. We examine the careers, works, and lifestyles of African-American artists positioning them within the larger canon of American art and artist. The course exposes the student to African American artists beyond the textbook, with studio visits to Clementine Hunter's former studio, and museum visits to have firsthand encounters with artworks. The course is project based with no exams and includes a research component that utilizes the Tougaloo Art Collection and the works of Edward Bannister.

HIAA 0931. Eco-aesthetics.

This course examines a movement in contemporary art and visual culture – termed “eco-aesthetics” – that works to raise awareness of global climate change and to resist forces of environmental degradation. We will begin by tracing a history of emerging artistic-ecological consciousness in the US and Europe in the 1960s and 70s, and then take a more global, interdisciplinary look at shifting methods of photographic, filmic, and new media documentation and representations of a “post-natural” landscape in the Anthropocene Age. We will analyze collective eco-aesthetic activism in the 21st century, exploring artistic collaborations in various local, regional, and global contexts.

HIAA 1001A. Constructing Memory: The Design of Monuments in the Public Realm.

This is a course about cities, people, and what we chose to recognize and commemorate through the construction of monuments and memorials in the public realm. Cities are distinguished by their public spaces, a complex hybrid of social, cultural, political, and spatial phenomena not easily studied by a single discipline, and it is the urban public realm that provides the greatest insight into the provocative interaction between the cultural values and the built environment.

HIAA 1015. Art from The Four Corners of the Early Modern World.

Between the sixteenth and eighteenth centuries, encounters between Europe, the Americas, Asia, and Africa challenged traditional worldviews as people, objects, and ideas traveled between the “four corners of the world.” These encounters resulted in distinct works of art such Dutch cabinets made from African ebony and classical architectural facades featuring carvings of Chinese peonies in Macau. In this course, we will consider how artistic styles spread across the globe and how historical forces shaped constructions of race and ethnicity. Students will also be introduced to various methodological approaches to the discipline of art history.

HIAA 1016. Museums and the Management of Mesoamerican Art.

Museums act as both a window into the world and a reflection of the cultures that create them. The way in which museums create, organize, and present their collections communicates a message that visitors absorb, whether consciously or subconsciously. In this seminar, students explore how museums both at home and abroad have engaged with objects from the ancient Americas, with particular emphasis on Mesoamerica. Topics of discussion include museum collection practices, repatriation, forgery and authenticity, multicultural representation, and curation and exhibition practices. At the end of the semester, students will submit a virtual exhibit they have designed themselves, along with an essay that justifies their object and design choices.

HIAA 1019. The Cathedral as a Living Object.

In the Middle Ages, sometimes referred to as the “age of cathedrals,” ecclesiastical buildings of incredible size, grandeur, and artistic merit were built. These constructions of glass, stone, and wood were covered in paint, gilding, and sculpture and filled with incense, music, and processions, all of which added to the overwhelming, multisensorial experience of stepping into a cathedral in this period. This course will look at the remarkable art of the cathedral – the buildings, as well as the art within them, and how these buildings changed over time. They are living objects and this course aims to help us see the many eras and changes in these buildings, to know them as they truly are – made anew over and over, to serve the evolving needs of the people who use(d) them.

HIAA 1020. Topics in East Asian Art.

Topics in East Asian Art. Topics will be listed separately.

HIAA 1051. Codicology Compared.

This seminar will critically explore select issues in the study of codicology across Christian and Islamic traditions, particularly in the Mediterranean Basin and adjacent areas of contact. Not a chronological survey, the seminar will instead investigate topics of current art historical and historiographic significance, including: the relationships between manuscript painting and textual traditions and sources; cultures of reading; the impact of religious practice on visual programs; modes of book production and reception; histories of book collecting and provenance; the rise of the professional illuminator in relationship to changes in the locales; along with the methods and means of book production.

HIAA 1070. Spanish Art in the Age of Empire.

This course examines Spanish artistic culture in the 16th and 17th centuries, when Spain ruled the Low Countries, parts of Italy, the Americas, and the Philippines. We will study foreign-born painters active in Spain (e.g., Sofonisba Anguissola and El Greco), Spanish artists who worked abroad (such as José Ribera), the court painter Diego Velázquez—raised in the global trading capital of Seville—and others. Taken together, their art encompassed intensely religious imagery and mythological scenes, humble still lifes and magnificent royal portraits—many on view at a major exhibition at the Boston Museum of Fine Arts in spring 2026.

HIAA 1090. Writing About the Arts.

Writing is a critical skill for those who engage in the practice of art history, art criticism, and art theory. This writing-intensive workshop/seminar will offer students the opportunity to encounter various kinds of art in various real-world settings, then write about them. Different genres of art writing will be explored (reviews, museum wall texts, scholarly analyses, etc.) and, through frequent short assignments, participants will learn to write with greater clarity, precision, and organization. Readings will explore the problems entailed in art historical description and what happens when visual ideas become texts.

HIAA 1101A. Illustrating Knowledge.

This seminar will investigate the history of illustration from the first manuscript maps and printed herbals to the present, including paintings, photographs, and computer imaging. We will investigate the role of pictures in the exchange of scientific ideas, and modes of representation developed in both the arts and the sciences. Enrollment limited to 19 first year students.

HIAA 1101B. Seeing and Writing on Contemporary Arts.

The purpose of this writing intensive seminar (especially designed for freshmen) is to train the students in both seeing and writing on contemporary art. The class will be based on looking at specific works of art of the twentieth century in museum context (using nearby collections, notably) and on how to translate visual observations into analytical and critical writing.

HIAA 1101C. Water and Architecture.

The seminar explores the varied ways in which water is manipulated in architecture and urban planning. It is organized in 'archaeological' order: from the most recent to the oldest. We will examine case studies, beginning with Tadao Ando's Water Temple and Frank Lloyd Wright's Fallingwater. We will examine the local examples of Slater Mill, the Blackstone River, and Barnaby Evans' Waterfire. We will then look back at historical examples: the Hoover Dam, the creation of Venice and the Grand Canal of China, the fountains at Versailles, the Islamic gardens at Isfahan, the medieval hydraulic plan for Canterbury Cathedral, and the Roman aqueduct bridge of the Pont du Gard. One of the principal aims of the course is to place the discussion of design into historical, technological and environmental contexts, and to provide students with experience in the production of architectural projects

HIAA 1104. From Treasuries to Cabinets of Curiosity: A History of Collecting Art and Artifacts.

From the Treasury of Saint-Denis in medieval Paris to Athanasius Kirchner's museum of curiosities in early modern Rome, collectors have long been fascinated by the finest objects formed by nature and human hands. This seminar will focus on the intersection of art and science and the principles of early modern collecting and display. Each week students will consider how collectors classified objects as wonders of art or science, and how the princely and scientific collections of the early modern world shaped modern museum practices. Attention will also be given to the global trade networks that made the collection of such objects possible.

HIAA 1105. Otherworldly and Other Worlds: Representing the Unseen in Early Modern Europe.

This course will examine European beliefs about vampires, witches, angels, demons, "monstrous races" and other enchanted and unseen beings between 1500-1800—the era of the famous witch hunts and a period of confrontation between belief and disbelief about these figures. Spurred by new instruments like the telescope, new technologies in printing and cartography, and unprecedented travel across the globe, knowledge about the universe increasingly expanded in this period to incorporate new discoveries and observations. Close analysis of several case studies will highlight how dramatic debates about these creatures played out in visual form in early modern Europe.

HIAA 1120B. History of Urbanism, 1300-1700.

Examines major themes in the history of urbanism by concentrating on selected towns and cities in order to explore general issues (e.g. the relationship of town and countryside and the emergence of capital cities) and characteristic urban building (e.g. fortifications, designed squares, civic monuments). No prerequisites. A short oral presentation and term paper are required.

HIAA 1120C. History of Western European Urbanism 1200-1600.

Examines major themes in the history of urbanism by concentrating on selected towns and cities in order to explore general issues (e.g. the relationship of town and countryside and the emergence of capital cities) and characteristic urban building (e.g. fortifications, designed squares, civic monuments). No prerequisites. A short oral presentation and term paper are required.

HIAA 1121. Designed in European Style: Colonial Architecture of the Global South.

In many (post)colonial cities across the Global South, colonial architecture often continues to define contemporary cityscapes. These buildings—including but not limited to monuments, commercial spaces, hotels, and houses—function as sites of negotiation for decolonial rhetoric. This course traces colonial architecture across time, linking social, political, and cultural change with specific case studies of colonial architecture across South and Southeast Asia, West Africa, and South America. We will engage both broad theoretical overviews and closely read archival documents, photographs, plans, novels, memoirs, and films to understand colonial architecture in its historical and contemporary contexts. This course provides a foundation to understand the continuous reckoning with colonial remnants in the Global South. This is a WRIT and RPP course and is open to all undergraduate students.

HIAA 1150C. El Greco and Velázquez.

This course will study the great Spanish artists El Greco and Velázquez in relation to the major developments in 16th- and 17th- century European painting and in the context of the social, political, and intellectual concerns of Habsburg Spain, as well as the particular cultural milieu in which they each worked. We will trace El Greco's career from his native Crete to Venice and Rome and finally to Toledo, and Velázquez's from the commercial metropolis of Seville to the court in Madrid. In addition, we will examine their modern reception by art historians, artists, and collectors in Spain and beyond.

HIAA 1150D. El Greco and the Golden Age of Spanish Painting.

This seminar examines the career of the Greek painter from Crete known as El Greco in Spain where he worked in the late sixteenth and early seventeenth centuries. Emphasis will be given to the interaction of various European traditions in the culture of Counter Reformation Europe. Weekly readings and discussion and individual projects required. Enrollment limited to 25 students.

HIAA 1151. Painting Indigenous Histories in Colonial Mexico.

This seminar considers the ways in which indigenous histories and cultures were represented in manuscripts made by indigenous and missionary artists/authors of colonial Mexico. Part of our corpus will include manuscripts held in the John Carter Brown Library. Of particular importance to our inquiry will be definitions of writing and literacy; configurations of space and time; modes of recounting the past; representations of indigenous identities, the evolution and invention of pictorial forms; and the role of pictures in juridical contexts. The course will culminate with the creation of an online exhibition featuring books and manuscripts from the JCB's collection.

HIAA 1170B. Twentieth-Century American Painting.

HIAA 0800 is a suggested prerequisite. Weekly one-hour section required.

HIAA 1171. Cities, Landscapes, and Design in the Age of Pandemics.

This is a course about design and public health. Over the course of the semester, we will examine design proposals by architects, landscape architects, and urban planners which respond to a range of concerns about public space and public health. As a part of our study, we will explore topics including urban planning, and policy strategies proposed by Olmsted, Howard, Burnham, le Corbusier to address to fears about urban density, immigration, and contagion; the effect of treatment protocols for infectious diseases like tuberculosis (hygiene, fresh air, sunlight) on the evolution of the work of designers including Aalto, Neutra, Eames, and others.

HIAA 1172. Words and Modern Architecture.

From its emergence against the backdrop of the industrial revolution and European imperialism, architectural modernism has been shaped by a distinct vocabulary. This course interrogates how architects and critics have used critical terms to define modern architecture in theory and practice. We will investigate the role of six of these words in the formation of architectural modernism: nature, material, structure, detail, program, space. Concentrating on the circulation of these terms in the Anglican world, we will consider their introduction from colonial encounter and French and German discourse. We will also investigate how these defining concepts are linked to mass media.

HIAA 1175. Dance and Architecture.

While debates about the importance of experiencing space through movement have only emerged in architectural theory since the late 19th Century, 'movement in space' has been planned by choreographers for centuries. This class examines the connections and theoretical debates between these two art forms through a number of European and American case studies from the 20th Century. Along the way we will encounter major 20th Century Architects, Set Designers, Dancers and Choreographers, learn about the long history and approaches to dance notations, understand about major stylistic breakthroughs and key works of choreography in space, as well as major theoretical statements. We will invite students to explore their own ideas of movements in space via an exercise in choreography for a space at Brown University. We hope to invite Beth Weinstein, author of "Architecture and Choreography" for a guest lecture. A

HIAA 1181. Prefabrication and Architecture.

Architects have been captivated prefabrication since the Industrial Revolution revealed the benefits of mechanized human labor. This undergraduate project seminar will examine the provenance and relevance of prefabrication. We will consider the prefabricated traditions of Africa and Asia as the foundation for the discipline of "vernacular architecture"; and conceptualize prefab as a technology of colonial expansion, solution to the postwar housing crisis, expression of 1960s counterculture, and response to climate change. Case studies will be drawn from Africa, Australia, Asia, Europe, and North America. A

HIAA 1182. Spaces and Institutions of Modernity.

This undergraduate seminar will explore canonical and emerging theories of modernity as they intersect with our understanding of space and the role of the built environment and designed objects within it. The seminar will be organized as a series of case studies of the iconic sites and institutions of modernity (the metropolis, the world's fair, the museum, the prison) as well as others that have also come to exemplify it (the ship, the plantation, the railroad, the colony). Class time will include analysis of primary documents and field trips to local sites. A

HIAA 1190. Spaces and Institutions of Modernity.

This undergraduate seminar will explore canonical and emerging theories of modernity as they intersect with our understanding of space and the role of the built environment and designed objects within it. The seminar will be organized as a series of case studies of the iconic sites and institutions of modernity (the metropolis, the world's fair, the museum, the prison) as well as others that have also come to exemplify it (the ship, the plantation, the railroad, the colony). Class time will include analysis of primary documents and field trips to local sites.

HIAA 1200A. Ancient Art in the RISD Collection.

The RISD Museum's ancient collection will be studied firsthand and in light of recent scholarship in Greek and Roman art and archaeology. Using the collection as a springboard, the course will explore original contexts for museum objects; issues of cultural property and museum ethics; conservation, restoration and display in museums; and notions of historical interpretation in museum display.

HIAA 1200D. Pompeii.

Pompeii and its neighboring towns are the best examples for studying the life, art, and architecture of a Roman town. This seminar covers the works of art and the life in the town as reflected in the monuments excavated over the past 250 years. Instructor permission required. A

HIAA 1201. Brushwork: Chinese Painting in Time.

How did the tenor of the individual brushstroke become the locus of value in traditional Chinese painting? What other possible standards of excellence—such as verisimilitude—were displaced in the process? This course pursues these questions by analyzing the great monuments of Chinese painting from the perspective of the aesthetic debates that defined them over the centuries. Proceeding from the famous Six Laws of Painting down to the aesthetic watershed of the Northern and Southern Schools, the course traces the fraught interplay of artistic practice and critical judgment in China over more than a thousand years. No prior knowledge required.

HIAA 1202. Mountains and Waters: Art and Ecology in East Asia.

For more than a millennium, painters and poets across East Asia have acclaimed soaring peaks astride expansive rivers as the most sublime of all subjects. Often termed "landscape" in modern English, these images of "mountains and waters" (shanshui) offer fascinating insights into the ways in which what we now call "the environment" was conceptualized in premodern East Asia. Drawing upon recent eco-aesthetic perspectives, this seminar examines these celebrated monuments of East Asian painting as ecological entities, investigating their relationships with the human and nonhuman beings that participated in their reproduction, and interrogating the moral implications of their enduring appeal. First year seminar

HIAA 1203. Patterns of Exchange: Ornament in Art and Architecture Between Local and Global.

This seminar will explore design history through the study of selected decorative motifs and design tropes (i.e., the lotus and dragon designs, floral and geometric motifs, and the concept of symmetry and repetition), examining their evolution through cultural and artistic exchange. Focusing on ornamental features found in movable art objects, such as textiles, ceramics, and metalwork, as well as architecture, students will trace the journey of these motifs across diverse cultures and time periods, observing how they adapt and transform in response to changing contexts. Through structured discussions, assigned readings, and curated museum visits, participants will critically analyze artworks that serve as prime examples of the exchange of decorative elements. This interdisciplinary course is tailored to appeal to a diverse audience, including students of design history, art history, art practitioners, individuals intrigued by the dynamics of artistic exchanges.

HIAA 1212. The Pictured Text.

Writing makes language visible, and thus concerns images. Language also delimits the legibility of imagery. Turning words into images and images into words occurs at great speed around us. This course explores the relation of text and image across world traditions—Chinese, Mayan, Egyptian, Islamic, Greco-Roman, and others, extending up to the present. Topics include: calligraphy, context, scribal practice, the form and shape of writing, including typography, hidden or pseudo-writing, graffiti, and contemporary art.

HIAA 1213. The Bureaucracy of Hell: Envisioning Death in East Asian Art.

This seminar examines the material and visual cultures of death in premodern East Asia. Topics include the materiality of funerary rites, the practice of entombing the dead with miniatures, and the visual tradition associated with the influential Scripture on the Ten Kings, which envisioned the afterlife as an infernal bureaucracy. We will discover that the way people in premodern East Asia envisioned death had a lot to do with the way in which they experienced life. By thinking through the continuities, we will use the present traces of death to envision the absent world of the living.

HIAA 1300. Topics in Classical Art and Architecture.

No description available. Topic courses listed separately.

HIAA 1301. The Palaces of Ancient Rome.

This seminar addresses the palatial art and architecture of the ancient Roman Empire. Key themes include the architectural articulation of political power; the role of international relations in expressing cultural power; the interplay of influence among palaces and villas; the art of adornment, luxury, and collecting; the interaction of architecture and landscape, including interior gardens and urban environments; the critical analysis of archaeological evidence, reconstruction, and legacy. A

HIAA 1302. Women and Families in the Ancient Mediterranean.

What was life like for the women of the ancient Mediterranean? What rights, roles, responsibilities, and expectations defined their lives? Why is the examination of art and architecture such an important source for answering these questions? This course will provide a comparative perspective exploring Greek, Etruscan, and Roman case studies.

HIAA 1303. Pompeii: Art, Architecture, and Archaeology in the Lost City.

Buried by the eruption of Vesuvius in 79 CE, Pompeii stands as a time capsule of city life in the Roman Empire of the 1st century. Exploring the city's grand public baths, theaters, and amphitheaters, its seedy bars and businesses, its temples for Roman and foreign gods, and its lavishly decorated townhomes and villas, this seminar will reconstruct a panoramic view of Roman daily life and consider the Vesuvian region's modern reception since its rediscovery in the 18th century. A

HIAA 1304. Spectacle! Games, Gladiators, Performance, and Ceremony in the Roman World.

Theaters, amphitheaters, baths, circuses, and imperial residences pepper the former territory of the Roman Empire. Modern films conjure the fantastic, yet ephemeral, events of days long past, amplifying the fascination of these ubiquitous ruins. For the Romans, however, spectacle was not only about fun and games. What really took place in these spaces, and why? Learn to separate fact from fiction as we consider artistic, architectural, and archaeological evidence to understand how and why spectacles were fundamental to Roman daily life. A

HIAA 1305. Pre-Columbian Art + Architecture.

Survey of ancient art and building in ancient America, with a focus on Mexico, Central America, and the Andes. Underlying concepts include: meaning and method, cosmos and kingship, narrative and symbol, personality and authorship, empire and royal court. Rich collections of the Haffenreffer museum will form the focus of work in the class. A

HIAA 1306. Art and Crime: The History and Hazards of Collecting the Classical.

What if almost everything you thought you knew about Classical art was wrong, or at least highly suspect? This course will introduce and debate the epistemological and ethical problems entangled in the collection, display, and study of ancient art. Topics of discussion, among others, will include: How have decontextualized artifacts shaped narratives of ancient art? How are looting and forgery intertwined? Do museums and collectors unwittingly support the illegal trade of artifacts? What should be done with the thousands of unprovenanced objects in museum collections? What is repatriation and why is it such a complex issue?

HIAA 1307. Politics and Spectacle in the Arts of Ancient Rome.

This seminar investigates the intersection of politics and spectacles in the artistic production of ancient Rome. We will explore a variety of public monuments to reveal how they codify essential aspects of Roman culture. Topics include the architecture of entertainment spaces such as theaters, amphitheaters, and circuses, as well as the social functions of spectacles such as gladiatorial games and triumphal processions. We will look at expressions of imperial propaganda in monuments such as tombs and honorific arches. The class also considers how these ideas entered the private realm in the form of domestic wall paintings, mosaics, and sculpture gardens. A

HIAA 1308. Arts of Memory in Ancient Rome.

In ancient Rome, art and architecture were important vehicles for preserving memories, both individual and collective. Works of art such as reliefs, stelae, paintings, and monumental tombs, perpetuated the memory of historical events and honored the legacies of notable individuals. This seminar will explore the multiple forms of commemoration in ancient Roman art and architecture, considering a variety of media including burials and cenotaphs, triumphal arches, honorific columns and statues, among others. We will analyze the monuments built by and for members of the Roman elite, as well as private memorials dedicated by ordinary citizens. (A)

HIAA 1310. Topics in Hellenistic Art.

Topics course . Topics listed separately.

HIAA 1360X. The Aesthetics of Color: History, Theory, Critique (GNSS 1960X).

Interested students must register for GNSS 1960X.

HIAA 1400F. Research Seminar Gothic Art.

No description available.

HIAA 1401. Objects of Devotion in the Middle Ages.

How did people in the medieval world 'do' devotion? What role did objects and architectural spaces have in engaging with the divine? This seminar explores the liminal role objects and spaces had as mediators, as foci, and even the metaphysical embodiment of saints in the Middle Ages. We will study the legacy of attitudes toward icons, relics, and martyrdom in Late Antiquity in the early and high European Middle Ages. We examine the medieval approach to materials and the meditative and performative use of devotional art. Topics to be explored include relics and bodily remains, architecture, pilgrimage, gendered devotion art, iconoclasm, and modern museum practices exhibiting devotional art. Students will have the opportunity to engage in-depth with devotional from the Hay Library and the RISD Museum.

HIAA 1410A. Topics in Islamic Art: Islamic Art and Architecture on the Indian Subcontinent.

This course focuses on architecture, manuscript paintings, and decorative arts produced under the patronage of Islamic rulers, who dominated the Indian subcontinent between 1192 and 1858. The class will examine works of art as instruments in the process of establishing an empire as well as expressions of political and religious power. A

HIAA 1410B. Painting in Mughal India 1550-1650.

The Mughal (Muslim) rulers of north India in the sixteenth and seventeenth centuries presided over what was then the richest, most cosmopolitan culture in the world. The earliest rulers were open-minded and intellectually voracious; they brought together Persian, Turkish, and a variety of indigenous Indian traditions to create a distinctive new way of representing and living in the world. This cultural interaction, and the important role played by Portuguese missionaries and English traders, will be the focus of this seminar.

HIAA 1411. Illustrating Indigenous Knowledge in European Print.

This seminar examines the transatlantic politics of publishing indigenous knowledge. In early modern Europe, pictorial prints codified paradigm shifts in geography, ecology, and medicine. Knowledge of newly conquered lands appeared in books illustrated by artists who, often, had never visited the places they pictured. Meanwhile in the Americas, indigenous and creole artists appealed to experienced printmakers and publishers in Europe while building resources and artisanal knowledge among local printmakers. How did the power dynamics of coloniality shape the way knowledge of indigenous peoples was codified? We will answer this question through study of illustrated books in special collections at Brown.

HIAA 1420. Monarchs, Gods and Demons: The Art of the Ancient Near East.

This seminar explores the art and architecture of the ancient Near East, focusing on the interconnected cultures of ancient Iraq, often referred to as Mesopotamia or the "Land Between the Rivers," and Iran from ca. 4000 to 300 BCE. We will trace the development of visual and material culture over the course of arguably the world's oldest civilization. The class will draw on methods and topics from the fields of archaeology, Assyriology, and religious studies. In exploring the "deep time" of the ancient Near East, we will ask fundamental questions about the role of the visual in human society. What is an image? What powers does it have over our lived reality? What makes an image divine? What is a monument? How do art and architecture participate in defining institutions such as the city, religion, or the state?

HIAA 1430A. The Visual Culture of Medieval Women.

Considers women as patrons and producers of medieval art and architecture, and examines the imaging of women in medieval works of art. Topics include: feminist perspectives in medieval history and art history, patronage by royal and aristocratic women, costume and textile production, and the art and architecture of female monastic communities. Optional FLAC French conference offered.

HIAA 1432. Borderlands: Art and Culture between Rome and Iran.

We tend to think of borders as hard and fast lines on a map, separating two distinct spheres of territory under different political authorities. In the ancient world however, borders formed regions of uncertain control, places defined by zones of influence projected from cities, with authorities and actors adept at playing both sides. This was especially true in the Classical and Late Antique Middle East, a region contested by the great empires of Rome and Iran. This class examines the art and architecture produced both by and between Rome and Iran. By studying the depictions (and appropriations) of the other, and the visual and material record of liminal places such as Palmyra, Commagene, Hatra, and Dura-Europos, this course investigates the forms of cultural expression in contested places, and how they forged an international visual language of power, prestige, and sacrality.

HIAA 1440B. The Architecture of Solitude: The Medieval Monastery.

Religious men and women, as well as their patrons, sought to establish places of devotion and learning across the medieval landscape. This course examines the rise and development of the medieval monastery from its late antique beginnings in the deserts of Africa to the rise of the preaching orders in early thirteenth-century Europe. Emphasis will be placed upon the material expressions of western monasticism and upon the notion of the monastery as an architectural, archaeological and historical research problem through examination of individual case study examples. Instructor permission required. Enrollment limited to 12. A

HIAA 1440D. The Gothic Cathedral.

A

HIAA 1440E. The Body and the Senses in Medieval Art.

The seminar considers the contradictory aspects of embodiment in the visual and material culture of the Middle Ages. We will examine the veneration of holy bodies through living holy individuals, and through body parts (relics) and the Eucharist enshrined in sumptuous containers. We will look at the iconography of death and resurrection, the representation of the body in painting and sculpture, attitudes toward sexuality, the performance of identity through clothing, and the sumptuary laws that governed clothing and behavior. We will investigate funerary rituals and burial, and the movement of living bodies in dance and in civic and religious processions. A

HIAA 1440F. Architectural Reuse: The Appropriation of the Past.

This seminar will consider the survival, revival and adaptive reuse of older objects, texts and built spaces in the visual and material culture of successor cultures. We will look critically at the literature on the archaeology of memory, "Renaissance and revival" spolia studies and adaptive reuse. The seminar will examine selected case studies, including the reuse of sculptural elements in the Arch of Constantine, the conversion of Pantheon into a church and Hagia Sophia into a mosque, appropriated elements in the Qutb mosque in Delhi and the adaptation of the Bankside Power Station as the Tate Gallery.

HIAA 1460. Topics in Medieval Archaeology.

No description available.

HIAA 1470. The Lactating, Menstruating Christ: Constructing and Depicting Gender in Late Medieval Europe.

Throughout the long span of the Middle Ages, gender was a mutable category, dangerous and at times powerful because of its instability. This seminar explores the conceptualization, creation, and demarcation of medieval gender, drawing from both medieval texts and the physical record — art, architecture, archaeology, and objects — for evidence. In the first half of the course, we will discuss how gender was defined, bounded, and represented. We will draw from the resulting grasp of how gender was constructed and performed in the second half of the course to complicate, nuance, and interrogate how gender operated in particular contexts and for particular purposes.

HIAA 1550A. Prints and Everyday Life in Early Modern Europe.

Uses the resources of the RISD Museum in graphics and decorative arts (weaponry, embroidery, textiles, and ceramics) from the early modern period. Examines the use of ornament and mythological and sacred themes as they relate to crafts and the transmission of culture, focusing on the making, distribution, materiality, and histories of objects of everyday life.

HIAA 1550B. Topics in the Early History of Printmaking: Festival and Carnival.

This course looks at the printed festival books made for recording ideal versions of royal entries, funerals, weddings and other printed expressions of regal celebration, alongside printed, painted and otherwise recorded evidence of popular celebrations such as carnival, and civic and religious festivals such as the Sienese palio. Although beginning with circulated prints and books, we will also look at the material culture of these events in their widest sense to investigate the advertisement and control of festival cultures. The class will focus on early modern Italy but students are welcome to broaden our geographic horizons. Enrollment limited to 20.

HIAA 1550C. Dreaming of Food in the Early Modern World.

Floods, wars, trade, climate change, class distinctions, carnivals and public feasts kept food at the forefront of the early modern imagination. Focusing on Italy, but including its global connections, we will look at the cultures of food as the material of art and literature in markets, vineyards, courts, recipe books, medicine, kitchens, and the dreams of the hungry. Investigating the cultivation, presentation and consumption of food through related arts and the evolution of manners allows us to consider the design of tableware, food sculpture, and tapestries alongside more canonical arts. Some previous art history required, languages helpful. Upperclass seminar.

HIAA 1560A. Italy and the Mediterranean.

Sicily, Venice, and Rome were Medieval and Renaissance international centers whose populations of pilgrims, traders, soldiers, and diplomats occasioned opportunities for cultural cooperation and violence between East and West. We will study mosaics and architecture of the multi-ethnic Norman rule following the Islamic conquest of Sicily; Venetian relations with the Ottoman Empire and its Greek colonies in goods, painting styles, architecture and atlases; and in Rome obsessions with Egyptian engineering, the vitality of Arabic studies, and reports of travelers resulting from papal efforts to incorporate Eastern Christians under the umbrella of the Roman church. Enrollment limited to 20 juniors and seniors.

HIAA 1560B. Mannerism.

This class provides an opportunity to study courtly painting, sculpture, prints, drawing and architecture of the movement that became known as Mannerism. The material will focus most strongly on the art of Florence and Rome, but we will also be looking at France and Bohemia, and at the history, literature and literature of art of those centers.

HIAA 1560C. Renaissance Venice and the Veneto.

This course explores the visual culture, theater, ritual, architecture, and urban development of Venice and the Veneto from the late medieval period through the 16th century, tracing the development of painting, sculpture, architecture and a literature of art within the city's unique physical configuration and relationship with the East. For advanced students, written permission required and given at first meeting. A

HIAA 1560D. Siena from Simone Martini to Beccafumi.

This course will focus on the art and architecture of republican Siena over the 250 year period before its annexation to Tuscany in 1555. We will study the relationships between piety, work, and politics in a rich period of building and decorating that has determined the look and, to an extent, the culture of the city until the present day.

HIAA 1560E. The Arts of Renaissance Courts.

Courts were active patronage centers in the areas of secular and religious painting, sculpture and architecture, book illumination, rich narrative textiles for interior use and ornamental ones for costume, as well as ephemeral works for theatrical productions, triumphal entries and festivities. Artists working at court were able to ignore guild regulations, and acquired a status for themselves that set them apart from other urban practitioners. Centering our investigation on primary sources as far as possible, we will study a wide range of works, materials, ideologies and practices that contributed to the reputation of the Italian courts as centers of opulence and power. Final project and weekly class meetings required. Enrollment limited to 20. Instructor permission required.

HIAA 1560F. Topics in Italian Visual Culture: The Visible City, 1400-1800.

We will look at the image of the city in all media, attending to the contexts in which they are illustrated, the technologies of representation and the reasons for imagining cities, taking into account iconic and symbolic representations, personifications, maps and views, and comparing visual and textual descriptions of the places of early modern urban life.

HIAA 1600A. Bosch and Bruegel: Art Turns the World Upside Down.

An in-depth look at the work of these two enigmatic Netherlandish artists. After seeing how art history uses various methods to establish what they actually painted and drew, we will move outwards to interpretation and historical study of their images of comedy, proverbs, religion, and landscape. Artworks in local museums will be important focuses of discussion. Prerequisite: Any history of art and architecture course numbered below 1000.

HIAA 1600B. Caravaggio.

Caravaggio is one of the great revolutionary artists and a real cultural phenomenon in his own time and ours. This seminar considers in-depth the nature of his work, the different historical strategies used to explain it, and possible new approaches.

HIAA 1600C. Italian Baroque Painting and Sculpture.

Examines developments in painting and sculpture in 17th century Italy with focus on the impact of the Catholic church and the rediscovery of antiquity on church and palace decoration, public and private commissions, and the rhetoric of Baroque style and iconography. Study of individual artists, including Caravaggio, Artemisia Gentileschi, and Gianlorenzo Bernini, as well as art academies, the mechanics of patronage and writings about art and artists.

HIAA 1600D. The Art of Peter Paul Rubens.

The seminar will study the seminal work of Rubens in all its aspects.

HIAA 1600E. The World Turned Upside Down.

Seminar examining the comic and satirical traditions in Netherlandish art, including works by Hieronymus, Bosch, Pieter Bruegel the Elder, Adriaen Brouwer, and Jan Steen. How do visual images connect with writers such as Erasmus and Rabelais, with polemical satires of the Reformation, and with popular literature along the lines of *Renard the fox*. What historical developments were at play in the formation of comic stereotypes and the representation of charged events such as the celebration of carnival?

HIAA 1600F. Antwerp: Art and Urban History.

No description available.

HIAA 1600G. Art + Religion in Early Modern Europe.

In this seminar we will reconstruct the various ways in which visual communication participated in the practice and changes of religious life during the early modern period (1400-1800). Topics will range from the role played by prints in the spread of the Reformation to the design of new kinds of architecture for the implementation of the Catholic Counter Reformation. Close attention will be given to the significance of iconoclasm (destruction of images), ideals of visual communication for religious persuasion, the invention of new methods of meditation with visual focus, and the relationship between sacred words and images. Enrollment limited to 20.

HIAA 1600H. Comedy in Netherlandish Art From Hieronymus Bosch to Jan Steen.

No description available.

HIAA 1600I. Collections and Visual Knowledge in Early Modern Europe: 1400-1800.

Examines the ways in which collections organized and developed new kinds of knowledge and practices. Collections were decisive in the formation of art, history, science, religion, politics, and international relations. We will discuss the rationales behind these different kinds of collections, the order in which things were placed, the visual organization and architecture that created the first museums, and the economics of collections. Attention to the collections of kings, artists, natural scientists, middle class citizens, humanists, and the devout will provide examples from a wide variety of perspectives. Enrollment limited to 20.

HIAA 1600J. Rembrandt.

This seminar will concentrate on art of Rembrandt. We will study his technique, development, and varied subject matter in all media from drawings to etchings and paintings. Rembrandt's work will be related to the historical contexts in which it was created and displayed. Prerequisite: previous courses in History of Art and Architecture. Enrollment limited to 20.

HIAA 1620. Arts Between Europe and the World: 1500-1700.

How did arts and visual objects of all kinds mediate between Europe and regions of the world opened to contact through trade, conquest, religious conversion, and the exchange of knowledge? This seminar will search for the major contexts of these exchanges and for the best methods to understand their histories. What conditions enabled or prevented mutual recognition? How were foreign materials imported and integrated, as with Chinese porcelain in the Netherlands or European glass in China? What balances of power determined exchanges, from the colonial extinction of Pre-Columbian art to the adaptation of western perspective in Japanese prints?

HIAA 1621. Abolition Architecture.

This graduate/undergraduate seminar introduces students to histories of abolition through constructed environments and artistic, material, and spatial practices. We study abolition of slavery, prisons, and borders during a period from the eighteenth century to the present. Attending to the distinct social movements and discourses sparked by these very different abolitionist targets, we examine the political, ethical, and aesthetic intersections that emerge. We investigate these problems through architecture, landscapes, material culture, and art, studying primary works, secondary texts, and methods. The course emphasizes study through historical reasoning as well as analysis of sensorial and affective material. This multimodal approach is necessary in studying forms of injustice in order to comprehend unfreedom, a paradoxical concept that produces cognitive dissonance and counters liberal reason. (A)

HIAA 1625. Native American Architecture.

Academic disciplines that discuss Native American pasts (such as archaeology, anthropology, and history) have historically characterized Indigenous peoples of North America by what they supposedly "lack." Architectural history is no exception. Despite a deep continental history of Native American constructions—whether monumental earthen mounds or effigies, village complexes, roads, or megaliths—Native architecture is often ignored in histories of architecture. Combining archaeological, ethnographic, archival, and oral-historical sources, this course exposes the erasure of Native Americans from architectural history and celebrates the diversity and complexity of Indigenous built environments. We first examine how different academic disciplines have historically studied (and sometimes erased) Native American architecture. Then we will survey Indigenous architecture before settler colonialism. We end the course studying the violence of and resistance to colonialism in North America and how contemporary Indigenous architectural traditions have been shaped in response.

HIAA 1626. Settler-Colonial Placemaking: From Vikings to the Homestead Act.

The term "settler colonialism" has become popular in recent years to define a spatialized structure of inequality between settler societies and Indigenous peoples. What exactly defines a "settler" in this context? What motivates the movement of people to "new" lands? What forms of violence do settlers enact on Indigenous land? And how has the contemporary landscape been shaped by settlement? To answer these questions, this course examines material and ideological transformations of space, architecture, infrastructure, and landscape that comprise the built environments of European settlements in the North Atlantic World. How might Colonial homesteads, plantations, fields and fences, mines and factories, mills and suburbs, capitals and museums, pipelines and railroads be considered built environments of settler colonialism and capitalism? How do these places come about, and what kinds of relations do they attempt to impose on Indigenous land?

HIAA 1627. Material Histories of American Capitalism.

Political upheavals of the last decade have re-centered capitalism as a social ill, at the root of our current climate crisis, racial and gendered inequality, and the alienating experience of work and life in the 21st century. But how did we get here? A historical approach to capitalism can help us better understand our current conditions. But this history is more than a timeline of events. This course will examine capitalism mainly in North America from 1750-1950 through three types of material culture: Landscapes/Architecture, Objects, and Infrastructure. We will examine concepts argued to be associated with "capitalism": modernity, individualism, industrialization, waged work, enslavement, dispossession, consumerism, and patriarchy. Methodologically, we will examine these concepts through specific material histories tied to spatialized and object forms, such as factories, lumber, plantations, mines, railroads, teacups, or greenbacks.

HIAA 1631. Authority, Identity, and Visual Culture in Colonial Latin America.

After the Spanish invasion, indigenous cultures of the Americas endured profound changes including the suppression of religious practices and reconfiguration of socio-political systems. During the succeeding centuries of colonial rule, diverse members of a highly stratified society relied upon cultural objects to contend for social, economic, political, and religious authority. This course considers the ways in which objects of visual culture in Mexico and Peru functioned as leveraging tools, means to assert authority and identity, ways to maintain the status quo, and forms of resistance with emphasis on the roles various participants played in artistic production and reception.

HIAA 1632. Re-Reading Architecture in Latin America.

This course intends to explore the history of post-independent Latin American architecture, including some aspects urban design, in the light of new theoretical positions that reveal omissions, hesitations and contradictions in existing historiographical registers. In order to undertake this historical exploration, the course offers an opportunity for students to create interdisciplinary connections between traditional architectural history and recent developments in other disciplines such as sociology, geography, and cultural theory.

HIAA 1650A. About Face: English Portraiture: 1600-1800.

About Face: English Portraiture, 1660-1800: This course will consider the function and meaning of portraiture in England from Sir Peter Lely's 'Beauties' of Charles II to James Gillray's social and political satires. We will pay particular attention to the interrelationships between official portraiture and unofficial forms such as caricature.

HIAA 1650B. Visualizing Revolutionary Bodies 1785-1815.

The French Revolution was accompanied by crisis in representation that was both political and cultural. This seminar will examine the problem of how artists and their publics sought to image, or literally to "embody" new forms of individual and communal identity in painting, prints, public festivals, and sculpture. Students will be encouraged to draw on the resources of the John Hay Library, the RISD museum, and other local museums and archives for their research projects.

HIAA 1650C. Visual Culture and the Production of Identity in the Atlantic World, 1700-1815.

This seminar will examine the production, reception and circulation of visual culture within the vortex of the 18th century Atlantic world (including such sites as Britain, France, colonial America, Mexico and the Caribbean). Enrollment limit 20.

HIAA 1650D. Souvenirs: Remembering the Pleasures and Perils of the Grand Tour.

Examines visual image and objects, ranging from portraits, landscape watercolors and graphic satires, to cork models of antiquities, which served to remind and remake travelers' ideas of Italy and other sites on the eighteenth century Grand Tour of the European continent. We will examine the role of anxiety, laughter, pleasure and danger in a rite of passage that was designed to elevate and educate young men, artists, and increasingly, women and men from the middling orders. Enrollment limited to 20.

HIAA 1711. Black and White: Imagining Africans and African Americans in Visual Culture.

Examines forms of visual culture—paintings, prints, photographs, sculpture—that participate in the formation of racial, social, and national identity in the U.S. from c. 1776-1930. Focuses on how visual culture figured African and African Americans in their interrelationships with each other and with other social groups in the U.S.

HIAA 1720. The Art of Portraiture: Pre-Histories of the Selfie.

The selfie is ubiquitous today, but posing for a portrait has a history. This seminar examines the art of portraiture—from the celebrity to the beloved pet to its medium in paint, print, and stone—during the period of its modern formation in the eighteenth century. How are new concepts of the self represented through expression, environment, and stuff? How do people fake it in portrayal to redeem or elevate their pasts? How can a portrait serve as a stereotype and how can it visualize a more equitable society? Course includes visits and assignments in museums.

HIAA 1721. Real and Unreal Landscapes.

This seminar is about how artists imagine the land, and the relationship between people and the places that they inhabit. We will think broadly about how people have conceptualized "nature," the "landscape," and "colonization" from the eighteenth century to today as well as hone in on specific artistic traditions, including those in Africa, Europe, and South Asia and across the Atlantic, Indian, and Pacific oceans. This class will investigate materials that come from the land, such as oil, clay, and pigments; other aspects of the environment, like waterways and clouds; and other art forms, including music, fiction, and dance. A

HIAA 1770. Architecture and Visual Culture of Empire.

This combined undergraduate and graduate seminar examines important urban and architectural concepts and practices that accompanied the expansion of colonial rule across much of the world during the 19th and 20th centuries. Topics to be considered include: how early cultural encounters prefigured later representations of colonizing/colonized communities and their corresponding material cultures; colonial spatial orders and their implied relationship to forms of governance; debates on colonial domesticity and the proper arrangement of the home; and post-colonial architectural developments that grew out of the historical experience of de-colonization. We will consider primarily territories formerly under British, French, and German rule. A

HIAA 1771. Eclectic Arts in the Global 19th Century.

How does art motivate the economy, participate in political action, develop society, and aspire to beauty? In this introduction to the arts of South Asia, 1650 to the present, we will consider these questions. From the floral designs adorning the Taj Mahal to popular clay figurines, and from the British colonial production of turning raw cotton into patterned cloth to Gandhi's movement for independence based on the hand-spun, we will examine the arts of painting, sculpture, and monumental architecture alongside the decorative arts of textiles, furniture, ceramics, and bronze, and modern artists' contemplation of earlier traditions to create the contemporary.

HIAA 1810. Contemporary Art and Activism.

This seminar will trace the ways that art has been conceived as a form of political activism since 1989. We will analyze strategies such as social practice, relational aesthetics, new genre public art, tactical media, critical geography, useful art, and the interactions among artists and Occupy. Emphasis will be on these recurrent issues: the relationship between aesthetics and politics, conceptions of community and the public, and the practical aims of art, both intended and actual. Close readings, class discussion, and weekly response papers will culminate in a final research paper interrogating the political implications of a single artist or artwork.

HIAA 1811. Possible Futures: Art and the Social Network before the Internet (1950-1979).

Decades before the invention of the Internet, artists used computers, cybernetics, and systems theory to envision and engender social networks in their art. This seminar will examine these creative and conceptual experiments with new media, from programmable objects that invite audience participation, to interactive installations accentuating viewers' connection to the environment, to televisual and video works that illuminate how media structure identity and society alike. We will grapple with the extent to which this period gave birth not only to the technologies of the present but ideas about what society can and should be.

HIAA 1820. Abstraction in Theory and Practice.

This seminar will examine the proliferation of abstraction in the first half of the twentieth century. Looking closely at artworks and primary texts from movements such as Cubism, Futurism, Orphism, Expressionism, Suprematism, Constructivism, the Bauhaus, and De Stijl, our discussion will emphasize the politics of form—that is, how artists understood their artworks to directly engage with and even restructure their audiences and the world. enrollment limited to 20

HIAA 1822. Dada and Surrealism: Anarchy, Exile, Alterity.

This seminar will examine the experimental practices of Dada and Surrealism with a focus on the historical conditions, theoretical influences, and political ambitions that shaped them: the trauma of war; experiences of exile and displacement; uses and abuses of psychoanalysis, anthropology, and political theory; Communist allegiances; as well as anti-colonial projects and counterparts in the Caribbean, Latin America, and North Africa. We will consider a range of artistic practices (performance, assemblage, the "readymade," photomontage, poetry, painting, sculpture, exhibitions) with the aim of complicating our understanding of these movements and assessing the relevance of their subversive project today.

HIAA 1850A. Frank Lloyd Wright.

Seminar concentrating on the architecture of Frank Lloyd Wright—usually considered the most important architect in American history—and the critical discourse surrounding it. Selected scholarship serves as a paradigm for broader discussions about the history, contemporary roles, and shortcomings of architectural criticism and historiography. Examines the Frank Lloyd Wright Foundation's approach to critical scholarship and the commercialization of Wright's oeuvre.

HIAA 1850D. Film Architecture.

Since the 1920s, a far-reaching discussion about the mutual influence between the two most important art forms of the 20th century - film and architecture - has engaged set designers, architects, cinematographers and critics. Apart from a fascination with the impact that the techniques of the new medium, such as montage, slow motion, close-ups and camera movements, would have on the perception and presentation of architecture, there continuously has been an enormous interest in the potential of film sets as a realm where visionary, historic, mystical or psychological space could be developed. This seminar will study selected chapters in the history of cinematic set design through the twentieth century and examine masterpieces, major movements, protagonists, and crucial theoretical debates. In addition, the course looks at the depiction of the city through film and the role of the movies as a reflection, commentary, and experimental laboratory for contemporary architecture. A

HIAA 1850E. Architecture, Light and Urban Screens.

This seminar explores the history, theory and practice of architectural illumination and the notion of electric light as a "building material." We will also consider the current interest in urban screens and media facades. The course will follow a historic trajectory from ca. 1900 to the present and will introduce the students to the most important techniques, protagonists and critical debates over the past 100 years. We will critically examine the broader implications of lighting design, the tension between luminous advertising and architectural illumination, the relationship to stage lighting, the implications of a "nocturnal modernity" and the use of light for propaganda purposes. Enrollment limited to 20. Instructor permission required. A

HIAA 1850G. Contemporary American Urbanism: City Design and Planning, 1945-2000.

Examines the history of American urban planning from the canonization of the modernist tradition following WWII to its effect on urbanism over the remainder of the twentieth century. We will examine the influence of the modernist tradition on major urban processes of the time period, including urban renewal, sprawl, suburbanization, and downtown revival. The class considers how modernism was received and will include discussion on postmodern urban analysis and contemporary approaches to green planning. No prerequisites, but prior courses in twentieth century architecture, art, or visual culture will be helpful. Enrollment limited to 20. Instructor permission required. A

HIAA 1850H. Berlin: Architecture, Politics and Memory.

This course deals with the architecture and urbanism of the German capital and the way the city's traditions of commemoration in different phases of its history and under different political regimes. Students will research historic structures and sites of the 19th through 21st Centuries and engage with the intense German debate about historic preservation and commemoration. The course will travel to Berlin during spring break. There we would meet with local architects, politicians and artists to discuss the city's engagement with its dramatic past. Course enrollment by application. A

HIAA 1850I. Architectures of the Sea: Space and Place in the Maritime Cultural Landscape.

This course charts the spatial histories of maritime architecture, from the 18th century to present. Casting a wide net, we will explore the global network of seaborne vessels and the attendant architectural and urban environments that together produced the modern world. Venturing beyond architectural history, this seminar questions how we conceive of space and place in light of the many disciplines invigorated by the spatial turn, among them: Cultural Geography, Anthropology, Marine Archaeology, History, and Cartography. Themes include: the spaces of the transatlantic slave trade, the ocean liner and mass migration, seaside holidaymaking and postwar leisure, and naval and imperial mobilities.

HIAA 1850J. Mies van der Rohe: An Architect and his Time.

This seminar introduces students to the work of Ludwig Mies van der Rohe (1886-1969) one of the most influential architects of the 20th Century. His 65-year career produced a comparatively small number of buildings (and an equal number of unexecuted projects), but among those are exemplary solutions for several building types that are still influential the world over today. The course will introduce students to skills in reading and understanding architecture, to archival research, and in critically assessing the tool of an architect's biography. This will include a critical, comparative analysis of a number of recent biographies on Mies. We will discuss which contextualizing questions to ask and put Mies at the center of a framework of artistic, social, legal, structural and critical conditions. (A)

HIAA 1870. Cannibalism, Inversion, and Hybridity: Creative Disobedience in the Americas.

This seminar examines how artists and intellectuals have depicted, constructed, and defied the notion of "America". While focusing on Latin America in the 20th and 21st centuries, we will also consider Chicano/a artistic production in the U.S. We will look at a series of concepts—cultural cannibalism, inversion, hybridity, in-betweenness, and tropicity—that shape our present understanding of the continent and subvert the legacy of colonialism and imperialism. This seminar considers these terms as current theoretical modes of inquiry and as recurring themes in cultural production, including literature and the visual arts.

HIAA 1870B. SoCal: Art in Los Angeles, 1945 to the Present.

Recent exhibitions, scholarship and media have turned to Los Angeles as a site of exploration of both American art and the larger frameworks of the Americas and international contemporary art. The character of media is directly connected to the circumstances of Los Angeles as a creative community built around an industry of visuality (film). This undergraduate seminar will examine postwar architecture, exhibitions, installation, land art, painting, performance, photography, public art and sculpture in Los Angeles and its impact on art history. This course may be open to a limited number of graduate students.

HIAA 1880. Criticality and Modern Art.

This seminar will interrogate a central way of understanding the politics of twentieth-century art: criticality. The notion that art's relationship to society is one of negation, diagnosis, and destabilization pervades modern art history. This seminar will trace the development of criticality as an artistic practice and art-historical methodology. Alongside texts on critique in philosophy and theory, we will examine artists for whom criticality is paramount: Dada's ballistic mission, repetitions of the neo-avant-garde, anti-art, institutional critique, critical postmodernism, art as undercommons. We will end with recent claims of critique's collapse and assess the viability of criticality in art of today.

HIAA 1881. Architectural Replicas in the Modern and Contemporary Eras.

From World's Fairs to Disney World, copies of buildings are an important part of the architecture of entertainment in the modern and contemporary eras. But replicas, once valued as part of 'serious' architectural practice, also exist outside of the world of theme parks. This seminar will explore what it means to build an architectural replica in a discipline focused on originality. What forms do these replicas take? What might propel an architect to copy part or all of a building in their own work? What place might these replicas occupy in the canon of architectural history?

HIAA 1882. Indigenous Art, Issues and Concepts.

This seminar will map out the field of indigenous art with an emphasis on artworks from English-speaking settler colonial countries, concentrating on Native North American and Aboriginal Australian artists. We will approach indigenous art theoretically, outlining major issues and concepts of this global topic. Units will include defining indigeneity and indigenous art terms, anthropology in relation to art, and curatorial practice. We will begin by addressing the concept of indigeneity through legal and sociopolitical frameworks, continuing with museological display of indigenous art across time, and seeing how museums are working to better contextualize their anthropological collections.

HIAA 1888. Exhibition as Medium.

This seminar will examine "the exhibition" as a medium for artists in the modern and contemporary period, with particular focus on developments since the 1960s. We will look at artists who have staged alternative exhibitions in non-traditional spaces, worked within museums and galleries to dismantle curatorial conventions, and, most of all, created exhibitions that stand alone as single works of art. Emphasis will be on the relationship between form and content, the definition of audience and the public, and the intersections and tensions between art and history.

HIAA 1890E. SoCal: Art in Los Angeles, 1945-Present.

Recent exhibitions, scholarship and media have turned to Los Angeles as a site of exploration of both American art and the larger frameworks of the Americas and International contemporary art. The character of media is directly connected to the circumstances of LA as a creative community built around an industry of visibility (film). This UG seminar will examine postwar architecture, exhibitions installation, land art, painting, performance, photography, public art and sculpture in LA and its impact on art history. This course may be open to a limited number of graduate students.

HIAA 1890G. Contemporary Art of Africa and the Diaspora.

Will explore the art of contemporary Africa and its diaspora with an eye towards understanding the political and economic context in which it is produced and consumed. Our approach will be interdisciplinary, putting key theoretical texts from anthropology on the political economy of Africa in dialog with the works of contemporary artists. However, the intent here is not to reduce creativity to an economic activity alone, though we will be addressing the topic of art markets. Rather, we will explore artistic practices that surmount "the tyranny of the 'already,'" as Malian writers Konate and Savane have eloquently said. Enrollment limited to 20 juniors, seniors, and graduate students.

HIAA 1900. Museum Interpretation Practices.

This course examines current interpretive practices and offers students the opportunity to participate in creating interpretation for the museum context. Questions of material and form, power and identity, models of attention and perception, the relationship between language and vision; and what constitutes learning through experience will be considered. Throughout the semester students will develop their interpretive practice through a series of workshops, exercises, site visits, and critical discussions. This course takes place at the RISD Museum.

HIAA 1910A. Providence Architecture.

Seminar examining selected aspects of the architecture of downtown Providence from the late 19th century to the present. Projects require research at local archives, libraries, and architectural drawings collections. Instructor permission required. A

HIAA 1910B. Project Seminar: The Architecture of Bridges.

No description available.

HIAA 1910D. Water and Architecture.

The seminar explores the varied ways in which water is manipulated in architecture and urban planning. We examine several case studies, including Roman aqueducts such as the Pont du Gard, medieval urban and monastic hydraulic systems, Renaissance and early modern garden (and fountain) design, and the local examples of Slater Mill and the Providence water supply. A

HIAA 1910E. Project Seminar for Architectural Studies Concentrators.**HIAA 1910F. City Senses: Urbanism Beyond Visual Spectacle.**

Architecture and urbanism provide synesthetic experiences of space that don't necessarily privilege visual perception. This project seminar explores alternative approaches to design and an understanding of the city through explorations of all the senses. We will examine case studies of cities through the sounds of church bells, traffic, and water fountains; the smells of foods, plants, and sewers; or even the feelings of light and shade. Students are encouraged to work on projects that map the city through unconventional sensory markers, record sounds, distill scents, or film different corporal means of navigating the urban environment.

HIAA 1920. Individual Study Project in the History of Art and Architecture.

Reading and reports on an approved topic, supervised by a member of the staff. Project proposals must be submitted and approved no later than the first week of the semester. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 1930. The History and Methods of Art Historical Interpretation.

This seminar provides an overview of the methods and theories used by art historians and introduction to the history of the discipline. Through readings and discussions, we will examine how art history emerged as an intellectual pursuit and humanistic discipline in the modern era, and review its foundations in the Western philosophical tradition. The transformations wrought by the advent of critical theory and the incorporation of approaches from outside the discipline of art history will receive particular attention in the second half of the course. Open to juniors and seniors concentrating in History of Art and Architecture or Architectural Studies.

HIAA 1931. Museums, Histories, Critiques.

This course offers a historical and theoretical examination of the art museum from its eighteenth century inception to contemporary expectations and institutional critiques. We will explore the philosophical and social implications of collection and classification, architecture and display practice; institutional mission and audience experience; interpretive strategies and educational goals; curatorial practice and the artist as curator. This critical framework will offer a means to examine the museum's role in structuring knowledge and facilitating experience and its place within intellectual discourse and public life.

HIAA 1990. Honors Thesis.

The subject of the thesis and program of study will be determined by the needs of the individual student. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 1991. Independent Study - WRIT.

This course should be taken in place of HIAA 1990 if students will receive substantive feedback on their prose -- on at least two assignments of any length. Completion of this course may be used to satisfy the writing requirement.

HIAA 2121. Buildings, Space, Power: Postcolonial and Decolonial Histories of the Built Environment.

This seminar examines the state of the field in historical studies of modern colonialism and imperialism and built environments. By reading and discussing recent publications in architectural history, urban studies, anthropology, history, literary studies, and colonial and postcolonial studies, the course identifies new approaches in the field, including a focus on intersections between colonialism and ecological disaster, development and the redistribution of land during and after colonialism, distinctive forms of labor that emerged in colonial built environment contexts, consumption practices and their role in nurturing new markets and new social classes, and strategies for navigating the contemporary material legacies of colonialism such as monuments and toponymy. Our study revolves around two principal questions: How was the built environment leveraged to support and sometimes challenge colonial and imperial ideologies? In turn, how have postcolonial societies worked to transform colonial built discourses?

HIAA 2210. Asian Reprographics A Long History of Impression.

This seminar examines the early history of reprography in East Asia. Defining reprography broadly to encompass all pre-photographic technologies of graphic impression, it explores the transfers that occurred within and between piece-mold bronze casting, ceramic molding, sealing, rubbing, and woodblock printing as they developed in succession and tandem over the past four millennia. In particular, the seminar considers the extent to which technics of transfer facilitated the movement of images across medium and time.

HIAA 2212. The Pictured Text.

Writing makes language visible, and thus concerns images. Language also delimits the legibility of imagery. Turning words into images and images into words occurs at great speed around us. This course explores the relation of text and image across world traditions—Chinese, Mayan, Egyptian, Islamic, Greco-Roman, and others, extending up to the present. Topics include: calligraphy, context, scribal practice, the form and shape of writing, including typography, hidden or pseudo-writing, graffiti, and contemporary art.

HIAA 2214. Art & Architectural History Publishing Seminar.

Search online and you will discover a plethora of short courses, blogs, information about ChatGPT, and many types of advice about how to write well. This course will be tailored to graduate students in the history of art and architecture. It will offer individual support, critique and advice, bringing you into a community of academic writers. Wendy Laura Belcher's "Writing Your Journal Article in Twelve Weeks: A Guide to Academic Publishing Success," will provide structure to the course. A focus on methods will help identify the type of writing that both feels right for you and provides a suitable perspective for your research.

HIAA 2300B. Research Seminar in Roman Art and Architecture: Topography of Rome.

Major monuments of the city of Rome from the Republic to the rise of Christianity.

HIAA 2300C. Allegories/Symbols in Roman Art, Origins in Hellenistic Art, Augmentation in Early Christian Art.

Roman historical relief sculpture.

HIAA 2301. Finding the Viewer: The Reception of Ancient Art and Architecture.

This graduate seminar will explore the role of viewers in the creation of meanings for ancient art and architecture. The perspectives of the makers of a work of art, patrons and artists, tend to get greater attention in art historical inquiries, in large part because those agents leave more visible traces in the literary and material records. Yet the agency of viewers, although less apparent, can be recovered through careful examination of diverse types of evidence—textual, archaeological, visual—and by relying on viewer-centered theoretical models such as phenomenology and reception theory. A

HIAA 2400A. The Visual Culture of Medieval Women.

The course treats the history of women as commissioners, creators and subjects of medieval art. Case studies will be drawn from western Europe, Byzantium and Islam. Weekly seminars consider feminist perspectives in medieval history and art history; imaging of women in medieval art; archaeological approaches to gender and the analysis of gendered spaces; and the art and architecture of female spirituality.

HIAA 2402. Trace and Absence: Comparative Perspectives on the Past in Things.

Long before there were archaeologists, there were people who knew how to interpret traces of the past. Those traces have always been in flux, subject to changing cultural, environmental, and technological factors. While stone carvings, bones, ruins, and other durable objects have long encouraged reflections about the beings who created them, there are also those who have considered smells, flowers, dreams, and other seemingly ephemeral phenomena to be traces of distant pasts. What can be a trace of the past? How have people followed these traces? And how might the insights and oversights of these past ways of knowing the past inform our own efforts to identify or create traces for an uncertain future? This course explores some of the many ways in which individuals and communities have found and followed traces of earlier times.

HIAA 2410C. Representing the Past: Archaeology Through Image and Text.

The archaeological past exists for us through intermediaries that may be written or visual. Drawings, descriptions, photographs, graphs, charts and computer visualizations all display a considered image of the past. This seminar takes a critical look at the literature on visualization, and at the strategies by which scholars have re-presented the archaeological past of a range of cultures.

HIAA 2430B. The Afterlife of Antiquity.

Examines the survival and revival of classical art and architecture in the Middle Ages. Discussion focuses on selected case studies from across Europe and critically engages the secondary literature on classical revival.

HIAA 2440A. Recent Approaches to the Gothic Cathedral.

No description available.

HIAA 2440B. Architecture of Solitude: The Medieval Monastery.

Religious men and women, as well as their patrons, sought to establish places of devotion and learning across the medieval landscape. This course examines the rise and development of the medieval monastery from its late antique beginnings in the deserts of Africa to the rise of the preaching orders in early thirteenth-century Europe. Emphasis will be placed upon the material expressions of western monasticism and upon the notion of the monastery as an architectural, archaeological and historical research problem through examination of individual case study examples. Instructor permission required. Enrollment limited to 12.

HIAA 2440C. Recent Approaches to the Gothic Cathedral.

No description.

HIAA 2440D. Architectural Reuse: The Appropriation of the Past.

This seminar will consider the survival, revival and adaptive reuse of older objects, texts and built spaces in the visual and material culture of successor cultures. We will look critically at the literature on the archaeology of memory, "Renaissance and revival, spolia studies and adaptive reuse." The seminar will examine selected case studies, including the reuse of sculptural elements in the Arch of Constantine, the conversion of Pantheon into a church and Hagia Sophia into a mosque, appropriated elements in the Qutb mosque in Delhi and the adaptation of the Bankside Power Station as the Tate Gallery. Limited to 15.

HIAA 2450. Exchange Scholar Program.**HIAA 2540A. Book Illustration in the Early Modern Period.**

This course will examine book illustration in the early modern period, seeking to identify the ways visual information is produced and how it relates to information in the text. Relationships between decoration in illustration and in architecture and painting will also be explored with an eye to the roles of pattern and visual convention in overtly didactic visual material.

HIAA 2540B. Print Culture in Early Modern Europe.

Examines the uses of prints, book illustration, and other pictorial printed schema in the early modern period, seeking to explain some of the ways visual information was produced and reproduced. Relationships between the prints and other arts are explored, with an eye to the roles of visual convention in overtly didactic materials such as maps and charts.

HIAA 2540C. Illustrating Knowledge in Early Modern Europe.

We will look at the history of scientific illustration in the age of the first printed books, using works in special collections libraries to investigate the exchange of ideas and the development of specializations in the arts and sciences from about 1450-1800. Focusing primarily on Italian examples, comparative projects may be chosen from any country in which the student can read the language.

HIAA 2540D. The Theater that was Rome.

"The Theater that was Rome" is a digital research site uniting text and images to portray the development of Rome (1500-1800) in the flood of printed information that proceeded from interest in the physical and mythological city. Our goal is to provide historical and critical interpretation of these illustrated books and prints that created Rome as a theater for the most advanced technological and decorative feats of an international group of artists, architects, engineers, authors, and publishers, looking at their productive collaborations, and using original materials, often in languages other than English, at the Hay Library and on the website. For graduate students; qualified upper-level undergraduates should contact the instructor. Enrollment limited to 15.

HIAA 2550A. The Visual Cultures of Southern Italy.

A workshop devoted to the visual cultures of Southern Italy, a geographical location with an unstable ruling population and sense of cultural identity from the late medieval through the early modern period. Projects about any aspect of art/architecture of Italy from south of Rome to Sicily are welcome. Research requires reading ability in Italian, Spanish, or French.

HIAA 2550B. Art and Charity in the Renaissance.

This seminar looks at the roles of art and architecture in commissioning charitable works in the service of maintaining a healthy civic body, including the design and decoration of hospitals, orphanages, ghettos, homes for women, immigrants and the poor, in the context of institutional structures that provide for marginal people. Examples will be from Italy, but students may work in other areas.

HIAA 2550C. Color.

How do we understand color as an integral part of a visual object? How shall we think about the artist's decision and the viewer's responsibility? This seminar will look at color (and its purposeful repression) in painting, sculpture and the decorative arts of the early modern period, also considering the discourses of color in 20th-century painting and other eras, such as antiquity, when color was a profitable topic through which to discuss the senses. We will also look at the economy and science of pigments, and the value of color in different discourses and objects. Graduate students, or by permission.

HIAA 2600B. Flemish Art.

No description available.

HIAA 2600C. Rubens.

No description available.

HIAA 2600D. The Visual Culture of Religion in Antwerp: 1585-1794.

The seminar will study the central role of visual culture in Counter Reformation Antwerp.

HIAA 2600E. Jesuit Global Strategies in Art and Conversion.

The purpose of this seminar is to examine the first global strategy to use art for the purpose of persuasion and conversion. In Europe, Asia, and the Americas during the early modern period, the Jesuits adapted their messages of visual communication, in architecture, prints, paintings, maps, dress, and rituals, to meet what they calculated would be the conceptual frameworks and customs of their target audiences, whether Chinese court officials, Flemish peasants. The seminar will search for the deeper historical roots of this strategy which up to now have not been traced. Open to graduate students only.

HIAA 2620. Arts Between Europe and the World: 1500-1700.

How did arts and visual objects of all kinds mediate between Europe and regions of the world opened to contact through trade, conquest, religious conversion, and the exchange of knowledge? This seminar will search for the major contexts of these exchanges and for the best methods to understand their histories. What conditions enabled or prevented mutual recognition? How were foreign materials imported and integrated, as with Chinese porcelain in the Netherlands or European glass in China? What balances of power determined exchanges, from possible the colonial extinction of Pre-Columbian art to the adaptation of western perspective in Japanese prints?

HIAA 2621. Abolition Architecture.

This graduate/undergraduate seminar introduces students to histories of abolition through constructed environments and artistic, material, and spatial practices. We study abolition of slavery, prisons, and borders during a period from the eighteenth century to the present. Attending to the distinct social movements and discourses sparked by these very different abolitionist targets, we examine the political, ethical, and aesthetic intersections that emerge. We investigate these problems through architecture, landscapes, material culture, and art, studying primary works, secondary texts, and methods. The course emphasizes study through historical reasoning as well as analysis of sensorial and affective material. This multimodal approach is necessary in studying forms of injustice in order to comprehend unfreedom, a paradoxical concept that produces cognitive dissonance and counters liberal reason. (A)

HIAA 2650A. Visual Culture and Cicum-Atlantic Exchange in the Long Eighteenth Century.

This course examines art and other forms of visual representation that imaged the colonial exchange between Europe and the Caribbean from the late 17th through the early 19th centuries. Readings include current scholarship in postcolonial theory devoted to theorizing colonial relationships in terms of transculturation and exchange. Students are encouraged to select research topics that allow them to take advantage of the rich trove of primary resources at the John Carter Brown and John Hay libraries.

HIAA 2721. Real and Unreal Landscapes.

This seminar is about how artists imagine the land, and the relationship between people and the places that they inhabit. We will think broadly about how people have conceptualized "nature," the "landscape," and "colonization" from the eighteenth century to today as well as hone in on specific artistic traditions, including those in Africa, Europe, and South Asia and across the Atlantic, Indian, and Pacific oceans. This class will investigate materials that come from the land, such as oil, clay, and pigments; other aspects of the environment, like waterways and clouds; and other art forms, including music, fiction, and dance.

HIAA 2760C. Paris in the 1860s.

No description available.

HIAA 2780. Artists and the East India Company.

This collaborative seminar examines artists' innovations amidst the commercial ambitions of the East India Company at major ports and centers of trade across Asia. Within the period of the Company's relentless pursuit of profits, artists trained in India, China, and Britain forged relationships across cultures and experimented with materials and techniques to produce striking artworks. This course interrogates the relationship between these artists and a corporation. It asks whether "style" links such disparate arts through subjects of colonial interest—including portraits and ethnographic types, landscapes and architectural drawings, plants and animals—or if the description holds only through the terminology of "Company" art that developed as the British empire waned. Students will engage with these arts in Brown's collections, and in the exhibition, *Painters, Ports & Profits: Artists and the East India Company, 1760-1830*, at the Yale Center for British Art.

HIAA 2850A. Architectural Theory in the Nineteenth and Twentieth Centuries.

Examines key texts in the history of architecture since the 1800s. Contrasts texts by architects with their actual work and places them into the social, political, and art historical context of their time. Texts by Schinkel, Semper, Ruskin, Viollet-le-Duc, Louis Sullivan, Frank Lloyd Wright, Otto Wagner, Le Corbusier, Walter Gropius, Mies van der Rohe, Louis Kahn, Robert Venturi, and others.

HIAA 2850B. Architecture of Frank Lloyd Wright.

A seminar concentrating on the architecture of Frank Lloyd Wright and the surrounding critical discourse. Wright is usually considered the most important architect in American history. Selected scholarship serves as a paradigm for broader discussions about the history, contemporary roles, and shortcomings of architectural criticism and historiography. Examines the Frank Lloyd Wright Foundation's approach to critical scholarship and the commercialization of Wright's oeuvre.

HIAA 2850C. Architecture, Urbanism, and Post-Colonial.

This graduate seminar explores the relationship among architecture and urban design, colonial empire, and national development, via a comparative analysis of cultural interactions between Europe and its non-western "others" from ca. 1800 to the present. We will draw upon recent critical debates on orientalism, colonialism and empire, and politics of representation as well as interdisciplinary studies of modernity and identity.

HIAA 2850D. Ludwig Mies van der Rohe.

This seminar will explore the work of Ludwig Mies van der Rohe, one of the most influential architects of the 20th Century. While Mies has been continually discussed and exhibited (the Museum of Modern Art alone held 7 exhibitions about him since 1947, most recently in 2001), to this day, his work has neither been contextualized sufficiently nor has its reception been critically examined. Apart from studying and understanding Mies van der Rohe's work in its context, this seminar will explore responses by contemporary critics and compare those to later interpretations.

HIAA 2850E. Architectural History's Future.

Through readings of new, cutting edge texts, this graduate seminar will reconsider how we write and teach architectural history. We will explore provocative recent frameworks such as the "global," the shift from considering objects to thinking about processes, systems, networks, institutions etc. Our goal is to develop a self-reflexive praxis as historians, teachers, designers, and cultural workers.

HIAA 2860A. The Museum and the Photograph.

This graduate seminar examines the relationship between two rapidly evolving modern institutions: the history of photography and the modern art museum. Through readings, discussions, and independent research, we will look at how the history of photography has been affected by its unique association with the museum, and what this means for it as a field of intellectual inquiry. Enrollment limited to 18.

HIAA 2860B. Photographic Origins.

Through a series of directed readings and discussions, this seminar explores the origins and implications of photography's invention in the wake of Enlightenment philosophy, the industrial revolution, and Romanticism in Europe. No prerequisites, but background in the history of photography and/or 19th century Western art is encouraged.

HIAA 2860C. Roland Barthes.

In the past few decades, the ideas of the French philosopher Roland Barthes have been indispensable to our understanding of the photograph as a theoretical object. This graduate seminar will critically examine Barthes' writings on the subject, from *Mythologies* to *Camera Lucida*, placing them within the larger context of Barthes' structuralist project as a whole and contemporary analyses of photography and lens-based imagery.

HIAA 2860D. Photography and Objectivity.

From the moment of its arrival in Western culture, the photograph has been characterized as the product of a machine, of optics and chemistry. The mechanical nature of the medium seemed to guarantee it a special relation to its subject: the photograph showed something real, through an analog technology that was essentially objective. This graduate level seminar will investigate the notion of objectivity, as it has been analyzed in the history of science and other fields, and as it has been discussed in relation to photography. Enrollment limited to 15 graduate students.

HIAA 2860E. Topics in the History of Photography: Photography and Philosophy.

Throughout its history, the photograph has posed a special problem—and special opportunity—for thinkers. As a technology, an artform, and a ubiquitous aspect of modern culture, photography has also been an object of theoretical speculation; as a form of pictorial representation perceived to stand in unique relation to "truth" and "reality," the photograph has invited the attention of philosophers. This graduate seminar will survey the ways philosophy and critical theory have handled photography, from its origins in Enlightenment thought to the most recent speculations about its essence. Enrollment limited to 20.

HIAA 2860G. Photography in Theory and Practice.

Photography's advent in 1839 brought into the world two inventions: a practical, functional means of making images with a camera, and a suggestive idea. This idea took many overlapping forms—the concept of nature automatically reproducing itself, of a picture radically dissimilar from the hand-made art that preceded it, of an analogic trace of the real world. This graduate-level seminar will use selected readings and class discussion to interrogate the relationship of photography as it has been theorized with its actual deployment in society and the world. Issues like medium specificity, ontology, the "index," and cultural memory will be explored.

HIAA 2870H. What is Contemporary Art History.

Contemporary art history is a field in formation. As such, it is often contested and embraced, misunderstood and championed. Is contemporary art history a radical new field with a discrete set of practices, methodology and historiography? Or is contemporary art history simply a study of the present? Is the study of the contemporary relevant to other areas of art history? Is contemporary art history a model for other disciplinary approaches to the present? Throughout the term, this graduate seminar will discuss each of these questions. This course is open to students of all art historical periods.

HIAA 2880. Architecture and the Making of Human Difference.

This seminar will explore race—"a concept of human difference that established hierarchies of power and domination between Europe and Europe's others"—and architecture from its earliest appearance to the present. Architecture has long reinforced the hierarchies embedded in western epistemology and presented narrow visions of the world, reproducing cultural assumptions about space, place, city, comfort, etc., while assimilating race without acknowledging its impact. For its part, architectural history has largely uncritically conveyed the culture, norms, and values of architecture.

HIAA 2881. Criticality and Modern Art.

This seminar will interrogate a central way of understanding the politics of twentieth-century art: criticality. The notion that art's relationship to society is one of negation, diagnosis, and destabilization pervades modern art and its historiography. This seminar will trace the development of criticality as both an artistic practice and art-historical methodology. Alongside foundational texts on critique in philosophy and cultural theory, we will examine artists for whom criticality is paramount: Dada's ballistic mission, repetitions of the neo-avant-garde, antiart, institutional critique, critical postmodernism, art as undercommons. We will end with recent claims of critique's collapse and assess the viability of criticality in art of today.

HIAA 2920. Methods of Research and Art Historical Interpretation.

Required of first-year and second year history of art and architecture A.M./Ph.D. students. Enrollment limited to 12. Instructor permission required.

HIAA 2930. Museum of Possibilities.

The 2025 Practicum will consider the history and possibilities of the museum with the artist Dayanita Singh, a renowned photographer, book- and museum-maker. The course will refract from a simple question: what is a museum? Often a museum contains four qualities: a space defined by architecture, a valuable collection, a mechanism for display, and a reserve or storehouse for objects. From this framework, we will consider value, permanence, scale, curation, memory, archives, form, and intimacy, among other topics. Over the term, we will imagine what museums are and can be through a series of projects, including writing essays, making shoe-box museums, and developing a two-week syllabus on the museum. Our final project will culminate in an exhibition on the possibilities of museums, scheduled for the Cohen Gallery in Fall 2026.

HIAA 2930D. Graduate Practicum.

This practicum will be housed at the Center for Netherlandish Art of the Museum of Fine Arts, Boston. Its focus will be a series The Five Senses signed and dated 1650 by the Brussels painter Michaelina Wautier. Graduate Practicum course

HIAA 2940. Master's Qualifying Paper Preparation.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2980. Individual Reading (Single Credit).

Single credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2981. Individual Reading (Double Credit).

Double credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2982. Individual Reading for the Doctoral Candidate.

Single Credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2983. Dissertation Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2990. Preparation for Qualifying Examination.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

HIAA 2991. Dissertation Preparation.

For graduate students who are preparing a dissertation and who have met the tuition requirement and are paying the registration fee to continue active enrollment.

HIAA 2992. Master's Thesis Preparation.

For students preparing a terminal MA thesis, may be repeated in the following semester. Sign up for sections according to individual primary advisor.

HIAA XLIST. Courses of Interest to Concentrators.**Fall 2025**

The following related courses, offered in other departments, may be of interest to students concentrating in the History of Art and Architecture. Please see the course listing of the sponsoring department for times and locations.

Archaeology and the Ancient World

ARCH 0030: Art in Antiquity: An Introduction

Egyptology/Ancient Western Asian Studies

ASYR 1090 Iconoclasm: Destroying Images in the Near East and Beyond

Humanities

HMAN 2402E Trace and Absence: Comparative Perspectives on the Past in Things

Judaic Studies

Italian Studies

Italian Studies at Brown not only teaches language and literature to students but guides their research toward problems that are cross-disciplinary in both content and method, rather than merely confirming a fixed canon or predetermined field of study. To investigate these problems, we can draw at Brown on traditional alliances with Anthropology, Art History, Classics, Comparative Literature, History, Musicology, and Philosophy, but we also join forces with disciplines such as History of Science, Film Studies, Cultural Studies, and Gender Studies.

For additional information, please visit the department's website: <https://www.brown.edu/academics/italian-studies/>

Italian Studies Concentration Requirements

Inherently interdisciplinary, the Italian Studies concentration allows students to strengthen their language skills in Italian and deepen their knowledge of Italian literature, history, art, and culture. Most concentrators have some background in Italian language. However, it is possible to concentrate in Italian studies without having studied the language before coming to Brown, although doing so requires an early start. After fulfilling the language requirement by completing up to ITAL 0600 (or the equivalent), students enroll in a variety of advanced courses, reflecting the interdisciplinary nature of the concentration. Junior concentrators often study abroad in the Brown Program in Bologna. All senior concentrators participate in the "senior conference" by delivering brief presentations on academic topics of their choice in Italian Studies. Concentrators might also pursue capstone research, writing, or multimedia projects.

The concentration requires that students demonstrate proficiency in the Italian language by completing up to ITAL 0600 (or the equivalent in Bologna). ITAL 0400 is the first language course that counts toward the ten required courses for the concentration (except for students who

place out of ITAL 0400, who will need to complete a total of nine courses). At least four of the ten courses should be taken in Italian.

ITALIAN STUDIES COURSES

ITAL 0600	Advanced Italian II
ITAL 0750	Truth on Trial: Justice in Italy
ITAL 0751	When Leaders Lie: Machiavelli in International Context
ITAL 0950	Introduction to Italian Cinema: Italian Film and History
ITAL 0975	Let's Eat, Italy: Italian History and Culture through Food
ITAL 0981	When Leaders Lie: Machiavelli in International Context
ITAL 1000B	Reading Recent Italian Fiction
ITAL 1000D	Italian National Identity: Criticisms and Crises
ITAL 1000E	Masterpieces of Italian Cinema - Capolavori del cinema italiano
ITAL 1010	Dante in English Translation: Dante's World and the Invention of Modernity
ITAL 1029	World Cinema in a Global Context
ITAL 1030A	Fellini
ITAL 1320	Great Authors and Works of Italian Renaissance: Ariosto's Orlando furioso
ITAL 1340	The Panorama and 19th-Century Visual Culture
ITAL 1350A	Transmedia Storytelling and the New Italian Epic.
ITAL 1400B	Fascism and Antifascism: Culture and Literature between the Two World Wars
ITAL 1400D	Photography and Literature: Italian Examples of an Uncanny Relationship
ITAL 1400F	Twentieth Century Italian Culture
ITAL 1400H	Early Modern Italy
ITAL 1400M	Giorgio Agamben and Radical Italian Theory
ITAL 1400P	The Southern Question and the Colonial Mediterranean
ITAL 1420	Sex and the Cities: Venice, Florence, and Rome, 1450-1800
ITAL 1550	Italian Representations of the Holocaust
ITAL 1580	Word, Image and Power in Early Modern Italy
ITAL 1590	Word, Media, Power in Modern Italy
ITAL 1610	The Divina Commedia: Inferno and Purgatorio
ITAL 1620	The Divina Commedia: Dante's Paradiso: Justifying a Cosmos
ITAL 1920	Independent Study Project (Undergraduate)
ITAL 1990	Senior Conference
ITAL 2100	Introduction to Italian Studies
ITAL 2190B	Fascism and Antifascism: Culture and Literature between the Two World Wars
ITAL 2190G	Letteratura Italiana del Novecento
ITAL 2220	New Perspectives on Fascism

COURSES IN OTHER DEPARTMENTS

HIAA 0340	Roman Art and Architecture: From Julius Caesar to Hadrian
HIAA 0550	Painters, Builders, and Bankers in Early Modern Italy
HIAA 0560	Constructing the Eternal City: Popes and Pilgrims in Early Modern Rome

HIAA 1200D	Pompeii

HIAA 1560F	Topics in Italian Visual Culture: The Visible City, 1400- 1800
HIAA 1600C	Italian Baroque Painting and Sculpture
MUSC 0071	Opera

Italian Studies Concentration and the Brown Program in Bologna

Concentrators who enroll in the Brown in Bologna program should fulfill the requirements according to the following sequence: prior to departure, the student should complete the level of Italian language study required (ITAL 0300) and enroll in one of the courses in the four distribution areas -- Italian literature; Italian History; history of Italian art and architecture; film or performance. Upon return from Bologna, the student should enroll in at least one advanced course offered by the department, preferably a course taught in Italian. Any student returning from the Bologna program must enroll in a course above the language level of ITAL 0600.

Credits toward the Italian Studies concentration may also be transferred from the Brown in Bologna Program. Concentrators may count three courses per semester toward the concentration (or six courses total for the year), although the course content must focus on Italy if the student wishes to count the course toward the concentration requirements. Concentrators should consult the concentration advisor to know which courses may or may not transfer as credits toward the concentration.

Honors in Italian Studies

Concentrators are encouraged to expand their understanding of Italian language, history, or culture through independent research that will result in a thesis, a translation, or a multimedia project, developed in consultation with the undergraduate concentration advisor and the individual faculty member who will advise the student's project. The Honors thesis in Italian Studies is a two-semester thesis. Students who intend to complete an honors project should enroll for the first semester in ITAL 1920 (Independent Study), and have their project approved by their advisor by October 15. During the second semester, honors students enroll in ITAL 1990 and continue to work with their advisor to complete the project. ITAL 1990 does not count as one of the eight courses required for the concentration.

Capstone Experiences in Italian Studies

A Capstone experiences in Italian Studies would consist of a course or project that a student, in consultation with the undergraduate advisor, feels would integrate the various intellectual engagements of this interdisciplinary concentration, and constitute a culminating experience in Italian Studies at Brown. Such experiences are strongly encouraged, and should be arrived at through conversations with the concentration advisor or a professor in the department. This could include the Brown Program in Bologna, typically taken in the Junior year, and/or the honors thesis in the senior year. However, students may also apply early in the Fall or Spring semester of their senior year for permission to designate one of their courses (1000-level or above) a Capstone course. In consultation with the professor, students in Capstone courses complete an independent research, writing, or multimedia project that is well beyond the required assignment for the course. ITAL 1920 (Independent Study) may also be designated a Capstone course with the permission of the instructor.

Italian Studies Graduate Program

The department of Italian Studies offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree.

Italian Studies at Brown not only teaches language and literature to students, but guides their research toward problems that are cross-disciplinary in both content and method, rather than merely confirming a fixed canon or predetermined field of study. The interdisciplinary program in Italian Studies offers students the opportunity to study the literature, history and culture of Italy under the guidance of internationally renowned scholars in Anthropology, History, History of Art, Literature and Media. Our program draws on traditional alliances with Comparative Literature, Musicology, and Philosophy, but we also join forces with disciplines such as History of Science, Film Studies, Cultural Studies, Women's Studies, and the use of Computers for the Humanities. Recent Ph.D. graduates have consistently published their dissertations on topics ranging from medieval to contemporary literature and culture, and currently teach at such institutions as the University of Massachusetts, the University of Pennsylvania, Stanford University and Wellesley College.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/italian-studies>
(<http://www.brown.edu/academics/gradschool/programs/italian-studies/>)

Courses

ITAL 0100. Elementary Italian.

This first semester of a yearlong course emphasizes the development of speaking, listening, reading, and writing skills. When you have completed this course, you will be able to engage in some basic face to face and online interactions in Italian. You will be able to greet people and introduce people; you will know how to describe yourself, your life, and your likes and dislikes; you will be able to ask questions of and interact with others and you will have begun to learn how to describe events in the past. The course will introduce you to Italian culture through authentic materials including films, songs, videos, newspaper articles. Note: this is a yearlong course, no credit for one semester only.

ITAL 0105. Accelerated Elementary Italian.

This is an intensive elementary language course designed for students with no previous knowledge of Italian. Knowledge of another Romance language, although not required, is recommended. The course develops basic communication skills in Italian and explores practices, products, and perspectives of Italian culture. Four meetings a week plus one conversation hour. This course is ideal for students interested in fast-tracking their language learning to meet Brown-in-Bologna requirements. Enrollment is limited to 15. Students in the Remote Study / Study Abroad cohort may not enroll.

ITAL 0110. Intensive Elementary Italian.

Covers the same material presented in Italian 100-200. One semester equivalent to the standard two-semester sequence. Daily meetings plus audio and video assignments.

ITAL 0200. Elementary Italian.

See Elementary Italian (ITAL 0100) for course description.

ITAL 0300. Intermediate Italian I.

In this intermediate course we will draw on multiple authentic materials - short stories, songs, newspaper articles, movies - to place the language in a contemporary cultural context. By the end of the semester, you will have gained mid- to high-intermediate level of language proficiency. You will be able to communicate with greater fluency; you will be able to express your opinion on a variety of issues and defend your positions; you will have acquired a deeper and more sophisticated understanding of Italian cultural practices and products; you will be able to read and comprehend a wide variety of authentic texts. Stress on oral interaction in class plus weekly compositions, presentations, and a final paper. Prerequisites: ITAL0200 or ITAL0110, or placement by examination. Required for enrollment in the Brown-in-Bologna program.

ITAL 0400. Intermediate Italian II.

Review of specific grammar problems. Reading of one novel and newspaper articles. Compositions and oral presentations. Three Italian films. Prerequisite: ITAL 0300, or placement by examination.

ITAL 0500. Advanced Italian I.

This course will reinforce your linguistic abilities and cultural understanding using a variety of sources, including a novel, poems, short stories, newspaper articles, academic essays, and films. You will discuss these works in class and will reflect on them in essays. By the end of this course, you will have discussed global themes in the context of contemporary Italy and you will have learned to think critically about the notion of Italian Identity. Prerequisites: ITAL0400 or placement by examination. WRIT COURSE.

ITAL 0550. Gold, Wool and Stone: Painters and Bankers in Renaissance Tuscany (HIAA 0550).

Interested students must register for HIAA 0550.

ITAL 0560. Constructing the Eternal City: Popes and Pilgrims in Renaissance Rome (HIAA 0560).

Interested students must register for HIAA 0560.

ITAL 0600. Advanced Italian II.

A sixth semester course with intensive practice in speaking and writing. Short stories, poems, music, and movies will be used to discuss Italian Society from the Second World War through the present. We will explore some important themes—family, religion, gender, and politics. Class discussion, compositions, oral presentations, and a final paper. Prerequisite: ITAL 0500, placement by examination.

ITAL 0701. Simulating Reality: The (Curious) History and Science of Immersive Experiences..

Can an experimental approach enhance our critical-historical understanding of immersive experiences? We will look at the history of 3D vision from an interdisciplinary perspective combining the science of perception and the cultural history of technology. Through a series of collaborative activities and team experiments, we will learn how popular, pre-digital optical devices (such as camerae obscurae, magic lanterns, panoramas or stereoscopes) foreshadow contemporary VR, AR, or XR experiences designed for education and entertainment. Among the themes explored: virtual travel, social voyeurism and surveillance, utopian and dystopian imagination.

ITAL 0750. Truth on Trial: Justice in Italy.

This seminar analyzes controversial trials in Italy between 1500 and 1800. From the persecution of heretics to the trial of Galileo and the increasing use of courts by marginal members of society, the judicial arena was crucial in defining political, social, scientific, and religious truth. Were law courts successful sites for the resolving what constituted deviance, legitimate knowledge and individual rights?

ITAL 0751. When Leaders Lie: Machiavelli in International Context.

This course examines the writing of Niccolò Machiavelli, a Renaissance author praised and condemned for his insistence on analyzing the realities of politics, rather than the ideals of political behavior. Machiavelli's view of the tenuous relationship of ethics to politics has cast him as the founder of political science and the proponent of "consequential morality" or the notion that the ends justify the means. We will also examine precedents for his ideas in the Greek and Islamic world and conclude by examining the relevance of Machiavelli's insights for understanding political practices and ethics in the twenty-first century. Enrollment limited to 19 first year students. Instructor permission required.

ITAL 0810. Performing Italy - Body, Voice and Politics: a Journey within Italian Theatre.

How does performance comment on, interact with, and influence society? And to what extent is this question culturally specific? Performing Italy focuses on Nobel-prize-winner Dario Fo, Franca Rame, Commedia dell'Arte, and Teatro di Narrazione. Engaging with theatrical materials, we will conduct comparative work driven by the students' own experiences and explore how Italian theater intervened in historical and political discourses within Italian society between the 1960s and the 2000s. Topics will include: the years of lead (1970s terrorism); the influence of the Catholic church on Italian society; the Italian State and organized crime; gender and sexuality in modern Italian society.

ITAL 0820. Pinocchio Unstrung: Story of a Puppet in the New Millennium.

In this course we will first explore the historical background surrounding Pinocchio, including its publication history and the state of Italian children's literature in the unification period. We will then look at various approaches to the text, from (post)structuralist, psychoanalytic and theological interpretations, to then connect the novel to contemporary issues related to ecocriticism, animal studies, posthumanism, and the digital revolution. After reading the novel, the focus will shift to scrutinizing various modern and contemporary retellings, aiming to unravel the relevance of the "Pinocchio myth" today. This prompts an inquiry into the persisting presence of Pinocchio in Western culture and invites contemplation on the reasons behind its continual resurgence. Taught in English.

ITAL 0821. Opera: Italy Onstage and Backstage.

Opera is one of Italy's most enduring contributions to the cultural world – but just exactly what is opera? How does it work and how has it been used throughout history to propose, support, and undermine ideas about topics as broad as nationalism, race, gender, and class? Through a focus on some of the most influential operas written in Italian, we will consider how this unique art form is both in dialogue with itself and the world around it. This course has no prerequisites and does not require prior knowledge of music nor opera.

ITAL 0910. Italian EcoCinema Earth Ecologies and Cinema: The Anthro/Bio/Geo/Morphic Machine.

Starting from the recognition that human activity has indelibly altered the planet on a scale of geological epoch, constituting an existential crisis for all life forms, this course explores the theory and practice of cinema as artistic endeavor immersed in cultural discourse, human creativity, fossil fueled technology and its material carbon footprint. Contemporary Italian films will be addressed in the frame of eco criticism and feminism, sound ecology and affect theory. Through the work of major filmmakers (Michelangelo Antonioni, Matteo Garrone, Alice Rohrwacher) and transnational productions (the latest Disney Pixar's Luca directed by Enrico Casarosa) we will query the crucial (direct and indirect) agency of filmmaking to create, critique, alter and foster imaginaries of new/old ways to inhabit the earth in the twenty-first century.

ITAL 0950. Introduction to Italian Cinema: Italian Film and History.

How do we visualize the past? How has cinema influenced our understanding of contemporary history? The course will focus on how key moments of 20th-century History (Fascism, WWII, the Mafia and Terrorism) have been described or fictionalized by major Italian filmmakers (including Benigni, Bertolucci, Cavani, Fellini and Pasolini). Subtitled films, readings and discussion groups. Reserved for First Year students. Enrollment limited to: 19.

ITAL 0960. Bella Ciao: Resistances in Contemporary Italian Culture.

What does it mean to resist? This course explores the concept of resistance in its multiple cultural representations. Starting from the partisan Resistance against the Nazi-Fascist regime (1943-45), we will touch upon several historical uprisings: civil rights movements, feminist movements, the so-called Years of Lead, anti-mafia activism, anti-globalization movements, antiracist activism. From literature to film/tv series, from photography to visual art to poetry, artists have politically engaged, challenged and modified the idea of resistance embedded within the identity of contemporary Italians. We look at artistic expressions of resistance performed against different forms of power (nationalism, the colonial state, the patriarchal family, the Mafia, the Church, police violence). We interrogate how the idea of resistance comes to structure Italian culture today and how it reverberates in mainstream narratives of what it means to be Italian.

ITAL 0974. From No Food to Slow-Food: Famine and Feasting in Italian Culinary Culture.

In this team-taught, interdisciplinary seminar, we will sample and taste the symbolic and material history of Italian food, focusing in particular on literary, artistic and cinematic representations. How did famine and plenty inspire medieval poetry and Renaissance art? How was a single "Italian" cuisine born out of many "regional" ones? How did Italian migrants shape the image of Italian food around the world? What does Futurist cuisine look and taste like? How did an Italian-born food philosophy turn into a global environmentalist movement?

ITAL 0975. Let's Eat, Italy: Italian History and Culture through Food.

We are what we eat. This course focuses on Italian traditions and its daily culinary practices to understand how food shaped and continues to shape Italian culture and identity. We will explore the historical, economic and social factors that have influenced the development of a national cuisine. How does food connect memory and identity? Sources considered are family memoirs and cookbooks; political programs of Futurism and Fascism and their relationship to Italian foodways; food representations in literature and cinema. Course will look at Italian - American cuisine and its key role in shaping identities in the new world.

ITAL 0981. When Leaders Lie: Machiavelli in International Context.

This course examines the writing of Niccolò Machiavelli, a Renaissance author praised and condemned for his insistence on analyzing the realities of politics, rather than the ideals of political behavior. Machiavelli's view of the tenuous relationship of ethics to politics has cast him as the founder of political science and the proponent of "consequential morality" or the notion that the ends justify the means. We will also examine precedents for his ideas and conclude by examining the relevance of Machiavelli's insights for understanding political practices and ethics in the twenty-first century.

ITAL 0986. Race on Film. Italian Colonial and Empire Cinema.

This course examines a selection of ethnographic and documentary films seeking to comprehend the significance of the visual during the Italian colonial period. We will analyze the images, the message and the political dimension underlying the films. It is crucial the question of how we interpret the significance and the political ramifications of what the images denote, and how the films and their portrayal of the "colonized other" mirror the variations of the different phases of Italian colonial history. We will pay attention to the ways forms of power and privilege constructed racial and identity formations in the Italian African territories. To this aim, we will compare films from the earlier phase of colonialism to those released after the Italian-Ethiopic conflict. Conducted in English with the possibility for students interested in practicing Italian to do so in groups and sessions.

ITAL 0991. Intensive Language and Culture Proseminar.

The Intensive Language and Culture Proseminar is a mandatory course designed to prepare students enrolled in the Brown-in-Bologna program to function well within the academic and social context of Bologna and to deepen their knowledge of the political, cultural and social environment in which they will be living for the duration of the semester. The Proseminar includes three components: (1) Intensive Language and Culture; (2) Bologna hidden town; (3) a number of activities organized by the program throughout the semester and a number of individual mandatory activities. At the end of the Proseminar course students will attain an in-depth and experiential knowledge of the Italian society.

ITAL 1000B. Reading Recent Italian Fiction.

Readings of contemporary Italian fiction. The course aims to develop students written and oral expression in Italian. A broad range of themes will be discussed. Prerequisite: ITAL 0600, a semester in Bologna, or by placement.

ITAL 1000D. Italian National Identity: Criticisms and Crises.

This course investigates Italian identity since its inception in 1860 to the present through multiple perspectives: literature, history, politics, film, music and art. We will focus on important crisis points in this trajectory: the founding of the national state, the collapse of liberalism and the fascist experiment, the birth of the republic and Italy in the new Europe. In English.

ITAL 1000E. Masterpieces of Italian Cinema - Capolavori del cinema italiano.

The course will consist of a broad and varied sampling of classic Italian films. We will consider the works which typify major directors such as Rossellini, De Sica, Visconti, Fellini, Pasolini, Antonioni, Germi, Risi, Scola, Olmi, and Rosi. The aims of the course is offering a historical survey, and discuss the way how Italian cinema has reflected, amplified, and criticized important moments of Italian history, books and national identity. Classes will include close visual analysis of films, and its relations with the sister arts (literature, painting, music). The course will be taught in Italian. Prerequisite: ITAL 0600.

ITAL 1000F. 20th Century Italian Poetry.

This course examines representative poets and poetic movements of Italy from the late 19th through the 20th centuries within and cultural and historical context. We will read works by internationally renowned poets such as D'Annunzio, Montale, Quasimodo, Marinetti, Ungaretti and Pasolini, and look into the development of Italian poetry through the major literary and artistic movements of the 20th century, including Crepuscularism, Futurism, Hermeticism, Neo-Realism and the Neo Avant-garde. We will address issues related to the shaping of a literary canon and consider the ways in which poetry reflects and defines a culture. The course will also incorporate translation and composition exercises as a technique of text analysis. Intensive practice in spoken and written Italian is an essential component of this course. Conducted in Italian. Advanced knowledge of Italian required. Prerequisites: ITAL 0600 or permission by the Director of the Italian Language Program.

ITAL 1010. Dante in English Translation: Dante's World and the Invention of Modernity.

Primarily for students with no knowledge of Italian. Given in English. Concentrators in Italian should enroll in ITAL 1610; they are expected to read the material in the original. Close study and discussion of Dante's deployment of systems of retribution in the *Inferno* and rehabilitation in the *Purgatorio* with a view to imagining a society based on love and resistant to the effects of nascent capitalism and the money economy. Dante's work summarizes and transforms the entire ancient and medieval tradition of literature, philosophy, and science.

ITAL 1020. Boccaccio's Decameron.

In Boccaccio's *Decameron*, seven Florentine women and three men and leave their city, struck by the great plague of 1348, to tell tales in hillside villas; the hundred (and one) stories they relate over ten days form one of the most influential collections of short narratives in world literature. The devastation wrought by the plague is the backdrop to a deliberate re-imagining of civil society through the regime established by the tale-tellers, and through the interactions of the characters in the tales they tell. Each Day's group of stories, on a subject prescribed by the Queen or King of the day, is an ordered macrotext within the collection as a whole: the Day's themes emphasize how Fortune (II), love (III, IV-V, VII), verbal wit and trickery (I, VI, VII, VIII-IX), and moral virtue (X) shape human affairs.

ITAL 1029. World Cinema in a Global Context.

Introduction to World Cinema and history through an original lens: The Cinema Ritrovato film festival at the Cineteca of Bologna, one of Europe's most renowned film restoration centers. Looking at World Cinema as a polycentric global phenomenon, students will become acquainted with recently restored mainstream, art house, alternative, experimental and avant-garde films, ranging from the silent period to world classics and Italian neorealism. Students will also attend a production workshop at the Bologna Cineteca, with one of Italy's young award winning directors. Lectures and seminars in English by Brown and University of Bologna scholars and screenings.

ITAL 1030A. Fellini.

The career of one of the undisputed masters of 20th-century film, revisited on the 20th anniversary of his death: from his contributions to neo-realism (Oscar nomination as screenwriter of Rossellini's *Open City*) to the "magic" realism of the 1950s (Fellini's first of four Oscars for *La strada*); and from his modernist masterpieces (*La Dolce Vita*, *8 1/2*) to his meta-cinematic fictions (*Intervista*, *The Voice of the Moon*). In reviewing Fellini's oeuvre, we will focus on issues of authorship, art film and psychoanalysis, myth and memory, realism and hyperrealism. Taught in English with a discussion group in Italian.

ITAL 1030B. Modernity, Italian Style. Class, Gender, Race, Ideology in the Cinema of the Economic Miracle.

Grappling with migration, class struggle, ethnic, gender and generational conflicts, environmental upheavals, counter-cultural movements and a profound ideological polarization, Italy in the 1960s provides a striking historical laboratory for our contemporary predicaments. We will watch a selection of films from the golden decade of Italian cinema, focusing in particular on how modernist masters such as Antonioni, Fellini and Pasolini, and young auteurs such as Bellocchio, Bertolucci and Cavani, forged original styles and expressive techniques in order to capture and denounce the contradictions of a neo-capitalist society. Taught in English (an Italian discussion session will be activated if enough students enroll).

ITAL 1100. Fissare Il Tempo. Scrittura E Fotografia/Freezing Time. Writing and Photography.

With the invention of photography, writing too, whether philosophical or literary, inaugurates a new way of freezing time, looking at the world, and confronting memory. From Italo Calvino to Giorgio Agamben, from Leonardo Sciascia to Mario Praz, from Lalla Romano to Antonio Tabucchi or more recent authors (Helena Janeczek or Paolo Maurensig), writing negotiates with photographic images, thematizing them or incorporating them into its textual body. This course will seek to interrogate how enduring images of things are imprinted in writing or, conversely, how writing invents its own photographic gaze. This course will be taught in Italian. Prerequisite: Italian 0600, Brown in Bologna Program or placement. Contact the instructor to verify your proficiency if you have not taken Italian at Brown. WRIT. DIAP.

ITAL 1101. Scene Di Famiglia Nel Cinema Italiano Family Scenes in Italian Cinema.

This course aims to explore "family scenes" in Italian cinema. On the one hand, it will seek to illustrate the various representations that cinema offers of family groups and the kinship ties that constitute them. On the other hand, the expression "family scenes" can be understood in a different sense, that is, as the "scenata" or scene that the family makes and that cinema brings to the screen. From Luchino Visconti to Emma Dante, from Marco Bellocchio to Alina Marazzi, the course will focus on films that stage the family and its crisis, critically questioning the complex centrality of the female role, which is exposed at the heart of the family anomaly. Course taught in Italian. Prerequisite: Italian 0600, Brown in Bologna Program or placement. Contact the instructor to verify your proficiency if you have not taken Italian at Brown.

ITAL 1215B. Criticality and Modern Art (HIAA 1880).

Interested students must register for HIAA 1880.

ITAL 1215C. Illustrating Knowledge (HIAA 1101A).

Interested students must register for HIAA 1101A.

ITAL 1220. Nationalism and Nationalities (RUSS 1220)..

Interested students must register for RUSS 1220.

ITAL 1260. Truth on Trial: Justice in Italy, 1400-1800.

Why do we think that one human being can judge another? How did this activity, enshrined in legal and political systems, profoundly shape society? This course examines the changing face of justice, from the medieval ordeal to judicial torture; the expansion of inquisitorial and state law courts; and the critical role the judicial system played in shaping Italian society. Using Italy as a focus, the course explores how law courts defined social, political, scientific, and religious truth in the early modern period. Taught in English.

ITAL 1260A. Truth on Trial: Justice in Italy, 1400-1800 (HIST 1262M)..

Interested students must register for HIST 1262M.

ITAL 1262. Women, Gender, and Feminism in Early Modern Italy.

The variety of Italian women's histories, issues of genders and sexualities, and women's ingenious responses to circumvent the limitations placed upon them are the focus of this course. During a Renaissance of flourishing debate on women ranging from the theater of Machiavelli to the dialogue of Castiglione, women themselves transformed historical feminism, the intellectual and cultural movement that advanced the idea of equality and equal opportunity across genders. Materials include archival documents, treatises, letters, literature and the visual arts. This course is the same as HIST 1931L. (P) Taught in English.

ITAL 1320. Great Authors and Works of Italian Renaissance: Ariosto's Orlando furioso.

This class will read the most successful narrative poem of the Early Modern European period, Ariosto's *Orlando furioso* ("The Madness of Orlando," 1516-32), a work so popular it increased European literacy and rivaled the Bible in editions published. It combined the genres of chivalric romance, the crusading epic, and the classic heroic epic, but features ladies-errant along with knights and shrewdly satirizes hypermasculine late feudalism (the philosopher Hegel claimed it had destroyed chivalry). It helped drive Cervantes' *Don Quixote* mad, fueled a fierce debate in relation to Tasso's crusade epic *Jerusalem Delivered*, and in England influenced Sidney, Spenser, Shakespeare, Lord Byron, and Virginia Woolf (*Orlando*, 1928). Depending on enrollment, we will read/discuss in Italian and/or English. Readers in English will field-test a new translation by Ariosto scholar Albert Ascoli to be published by Oxford University Press.

ITAL 1340. The Panorama and 19th-Century Visual Culture.

Throughout the 19th-century, the Panorama was a wildly popular 'vision machine,' the model for many later attractions from theme park rides to immersive educational spectacles like IMAX movies. In this course, we will use 21st-century vision technology to study the role of these cultural artifacts, optical media and storytelling devices in the shaping of 19th-century "virtual reality." We will focus on three case studies: the Garibaldi panorama at the Brown library; the panorama of the Pilgrim's Progress at the Saco, Maine museum; and the Whaling Voyage 'round the world, at the New Bedford Whaling Museum. Taught in English.

ITAL 1350A. Transmedia Storytelling and the New Italian Epic..

Transmedia Storytelling and the New Italian Epic. "New Italian Epic" describes a network of stories blending fiction and non-fiction across a variety of media, from books to blogs and zines, from feature or documentary films to TV/YouTube series and video games. These Unidentified Narrative Objects often explore conflictual aspects of contemporary society, such as migration, organized crime, trafficking and corruption, environmental upheavals, from a militant perspective. We will look at the way these UNOs both exploit and evade technological and industrial constraints in order to shape their realistic, utopian or dystopian strategies. Sections in both Italian and English.

ITAL 1390. Modern Italy.

A look at the dramatic events that transformed Italy over the past two centuries and the ways that this history has been represented in film. For the nineteenth century, the focus is on the violent birth of the modern Italian nation-state. For the twentieth century, the course focuses on the drama of Benito Mussolini and the birth, life, and death of Italian Fascism. In addition to examining the transformation of Italian history, the course investigates the many issues involved in turning a book of history into a commercial film.

ITAL 1400B. Fascism and Antifascism: Culture and Literature between the Two World Wars.

Introduces and examines the most significant aspects of literary, cultural, and political life in Italy between the two world wars. The most significant tendencies in the various literary genres (novel, descriptive prose, mass market fiction, propaganda, poetry) are considered against the backdrop of a general historical and literary overview and situated in the context of the debate carried forward by the most important literary periodicals of the '20s, '30s, and '40s, from *La Ronda* to *Solari*.

ITAL 1400D. Photography and Literature: Italian Examples of an Uncanny Relationship.

The course will explore the interrelation of Italian Literature and Photography from early Modernism (Luigi Pirandello) to post- Modernism (Antonio Tabucchi). Major theoretical essays on photography (Sontag, Barthes) will set the stage for close readings of narrative texts by two of the most important authors of Twentieth Century Italian literature.

ITAL 1400F. Twentieth Century Italian Culture.

This course will explore the interweaving of literature and politics in modern and contemporary Italy. We will investigate the intricate ways in which literature reflects and shapes the nation's identity, addressing profound themes such as war, family, religion, race, and sexuality. Through the lens of both celebrated and lesser-known Italian authors like Elena Ferrante, Pier Paolo Pasolini, Elsa Morante, and Italo Calvino, we will delve into the narratives that have influenced Italy's sociopolitical landscape. Complementing our literary exploration, film adaptations offer a vivid counterpoint, illustrating the pervasive influence of literariness in Italian culture. From Italy's rapid industrialization to its experiences with democracy, totalitarianism, and imperialism, this course invites you to traverse the transformation of a nation and the powerful stories at its heart. This course is taught in Italian.

ITAL 1400H. Early Modern Italy.

A survey of Italian history between 1500 and 1800. Italy's varied political cultures from absolutism to republicanism; impact of Catholic reformation and the baroque; the woman's question and transformations in family life and the social order; the contribution of Italian writers to the debates of the Enlightenment and ordinary people to social change in the eighteenth century.

ITAL 1400M. Giorgio Agamben and Radical Italian Theory.

This course is dedicated to a close reading of the work of the Italian philosopher Giorgio Agamben and to an analysis of what has come to be known as "radical Italian theory." We will read the major works by Agamben, some key texts by other thinkers who were influential for Agamben (Carl Schmitt, Walter Benjamin, Michel Foucault etc), as well as other theorists who play an important role today in Italy: Roberto Esposito, Antonio Negri, Paolo Virno among others.

ITAL 1400N. Italian Orientalism(s).

The focus of the seminar is to investigate the concept of "orientalism" in the Italian and Mediterranean context, an urgent question because Italy is at the center of recent crisis of migration, emigration and immigration. In a reading of texts that are theoretical, historical and literary, we will explore the complexities of national identity, structures of exclusion and racism, and as well the subtending rhetoric that has made Italy into a complex formation. We will analyze complexities of the concept of "orientalism" in the context of the Mediterranean generally and Italy specifically. The course is also open to graduate students, who will fulfill requirements by writing a final research paper. Undergraduates will write two papers: the first at mid semester, the second at the end.

ITAL 1400P. The Southern Question and the Colonial Mediterranean.

This course examines Antonio Gramsci's interpretation of the Southern Question (questione) in an attempt to better understand the politics and culture informing the colonial Middle East. Through an analysis of Gramsci's critique of Southernism –the representation of Southern Italy as a semi-barbarous territory inhabited by "biologically inferior beings"– and his sociological description of pre-World War II Italy, we will acquaint ourselves with some of the key-concepts characterizing his political thought. Next, we will examine how critics of European colonialism in the Mediterranean have adopted this rich epistemological and analytical vocabulary.

ITAL 1400S. Il Femminismo in Italia/Italian Feminism.

From the first feminist wave to Rosi Braidotti's nomadic subject, from the work of Carla Lonzi to Adriana Cavarero, the course aims at covering the major texts of Italian feminist theory. Starting from the movement for the women's suffrage in the second half of the 19th century, we will look more closely at the themes that are at the core of the feminists' political struggles in the 20th century: abortion, divorce, labour, prostitution... Taught in Italian.

ITAL 1400T. From the Hypernovel to Paranoid Fiction.

How can storytelling help us cope with complexity? How can novels help us detect and debunk conspiracy theories? Is "paranoia" a delusional mental disorder or a vital critical tool, in the age of post-truth, fake news and infowars? We will dissect the double meanings of "plot" in major novels by Italian masters Italo Calvino (*If On A Winter's Night A Traveler*, 1979) and Umberto Eco (*Foucault's Pendulum*, 1988). We will then tackle the paradoxes of paranoid fiction and conspiratorial evidence, from literature to the internet: from Luther Blissett's Q (1999) to Q'Anon, Unfiction and ARG (Alternate Reality Games). Taught in English with a discussion section in Italian.

ITAL 1400U. L'aperto e Le Sue Chiusure / The Open and its Closures.

Echoing the confinement due to the Covid pandemic, this course will explore the idea of the "open" and its structural opposite, "closure," as they are expressed in Italian culture, between theory, literature, and cinema. From confinement (Boccaccio's Decameron) to prison (Gramsci's Prison Notebooks), from the sanatorium (Bufalino's Diceria dell'untore) to the psychiatric hospital (Basaglia), from the brothel (with the Merlin Law) to the border crossed by migrants, we will interrogate various figures of the open and its closures. The philosophical reflections of Agamben (The Open) and Esposito (on community and its immune closure) will accompany our path. Course is taught in Italian.

ITAL 1400V. Nationalism and Nationalities (RUSS 1220).

Interested students must register for RUSS 1220.

ITAL 1400W. Mammamia Figure Italiane Del Materno / Italian Figures of Motherhood.

The "mamma," with her strong and inborn maternal instinct, is so deeply rooted in our collective imagination that it ended up being a cliché we cannot separate from the Italian cultural context. This course will explore the historical and theoretical complexities of such a commonplace by focusing on various figures of motherhood in literature, feminist theory, psychoanalysis, and cinema. From the Virgin Mary to the surrogate mother in recent feminist debates, the course will inquire into the rhetorical strategies on which the myth of motherliness has been built.

ITAL 1400X. The Female Gaze in Italian Cinema.

Since the dawn of cinema, directing has been considered a predominantly male sphere. Italian cinema is certainly no exception: at the beginning of the twentieth century, directors such as Elvira Notari and Elvira Giallanella were considered anomalies. Only in recent decades has the presence of women become less rare, even though they remain a minority. Exploring the film corpus of various Italian directors (from the aforementioned Notari and Giallanella to Lina Wertmüller, Cecilia Mangini, Roberta Torre, all the way down to Emma Dante), the course will ask if there is such a thing as a female gaze, a specific way of looking at the world, at things, at people.

ITAL 1400Y. Representations of Italian Fascism.

This seminar is a Global Experiential Travel and Learning (GELT) course. There are no prerequisites. The first two weeks will be taught online, for now planned to meet between 12-2PM (EST). Two central questions drive this course: First: how did Italian fascism represent itself? And after its defeat: how was fascism represented by its critics and its supporters? Second: did Italian fascism produce consent, in the sense that it produced a culture? On the latter, many critics believe that fascism was an event produced from above, an imposition, and therefore without traces of a culture. This course will take on these questions, both in class and on the ground. At home we will delve into these problems analytically. In Rome, for a week, we will explore on the ground how Italian fascism imprinted itself in the past and the present.

ITAL 1411F. Medicine and Disability in Shakespeare and Early Modern Drama (COLT 1411F).

Interested students must register for COLT 1411F.

ITAL 1420. Sex and the Cities: Venice, Florence, and Rome, 1450-1800.

This course examines the politics of sexuality and the sexuality of politics in Italy between the Renaissance and the Enlightenment. Italy's urban settings saw the development of some of the most sophisticated political systems in Europe, and issues of gender identity and sexual practices figured prominently in the political symbolism, political criticism, legal and social orders of these regimes. Lectures and course discussions also explore everyday practices and their implications for defining and defying the social and political norms of gender and sexuality in early modern Italy. Suggested prerequisites are HIST 0010 or any Italian Studies course at level 1000 or above. No prerequisites are required. Lectures in English. Discussion groups in English and Italian.

ITAL 1431. Truth on Trial: Justice in Italy, 1400-1800 (HIST 1262M).

Interested students must register for HIST 1262M.

ITAL 1435. Theater, Spectacle and the City in Italy, 1400-1600.

Renaissance Italian playwrights adapted dramatic models from the ancient world for their comedies and tragedies. At the same time, designers and architects created spaces for drama that imitated ancient models but also adopted innovative concepts of pictorial space pioneered by 15th century painters. All the participants were in turn conditioned by the various social and political contexts in which the plays were conceived and produced. How the mutually conditioning factors of the play-text, the stage space, and the larger civic or court context work together will be the focus of the course.

ITAL 1550. Italian Representations of the Holocaust.

A survey of some of the most important texts (fiction, history, philosophy, films) that deal with both the Holocaust in Italy, and representations of the Holocaust by Italians. Readings include Levi, Bassani, Loy, Agamben; films those of Benigni, Cavani, Wertmüller. There will also be discussion of the aesthetic and political complexities regarding portrayals of the Holocaust, such as trauma, witnessing, historical truth, kitsch. Taught in English, with the possibility of a section in Italian.

ITAL 1550B. Topics in the Early History of Printmaking: Festival and Carnival (HIAA 1550B).

Interested students must register for HIAA 1550B.

ITAL 1560A. Italy and the Mediterranean (HIAA 1560A).

Interested students must register for HIAA 1560A.

ITAL 1580. Word, Image and Power in Early Modern Italy.

This undergraduate lecture class is designed to introduce cultural and historical perspectives on Italy from Siena in the Middle Ages to Renaissance Florence and the early modern Veneto. Team taught by professors of Italian Art History, History, and Literature, we will move across Italy and the centuries focusing on monuments of literature, art, architecture, and history through different disciplinary lenses. In English.

ITAL 1590. Word, Media, Power in Modern Italy.

The role of media (print, news, art, music, photography, cinema, radio, television) in shaping national identity, nationalistic agendas, imperial aspirations, democratic revivals and populist consensus in Italy, from the post-Risorgimento age to the Fascist regime, and from the post-WW2 renaissance to the "decadent" Berlusconi era. The most influential genres and trends in Italian culture, from opera to futurism, from neo-realist cinema and literature to post-modern fashion and industrial design, will be analyzed against the backdrop of the most important social and political turning points of Italian and European history.

ITAL 1610. The Divina Commedia: Inferno and Purgatorio.

A close reading of the first two canticles of Dante's poem in the light of contemporary European and American critical interpretations. Enrollment limited to 40.

ITAL 1620. The Divina Commedia: Dante's Paradiso: Justifying a Cosmos.

Close study of the third and final part of Divine Comedy, in which Dante unfolds how, in his view, the planetary and stellar spheres condition human life and fashion the Providential plan of history. There will be ancillary readings from Dante's other works: Convivio, the Monarchia, and the Epistles. In Italian. Prerequisite: ITAL 0500 or 0600, or instructor permission. Enrollment limited to 40.

ITAL 1800. Cultures of Fascism.

It has often been stated that fascism, as a totalitarian political system, could not produce a culture of its own but only propaganda or at best ideology. In this course we will explore this proposition by exploring some of fascism's products in texts, film, art and architecture through the lens of critics and theorists of fascism such as Arendt, Benjamin, Kracauer, Gramsci, Bataille, Primo Levi (among others). Our focus will be on the Italian and German examples.

ITAL 1920. Independent Study Project (Undergraduate).

Undergraduate Independent Study supervised by a member of the Italian Studies Faculty. Students may pursue independent research in order to prepare for their honors thesis or honors multimedia project, or they may enroll in the course in order to work individually with a faculty member on a specific area of Italian Studies not covered in the current course offerings. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ITAL 1990. Senior Conference.

Special work or preparation of an honors thesis under the direction of a member of the staff. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ITAL 2050. Microhistory.

Microhistory emerged in the 1970s in Italy, but was quickly embraced by scholars across the globe. Microhistory questioned totalizing explanations of historical change; rejected anachronism in all forms; and recovered the voices of individuals left out of traditional historical narratives. This course explores and critiques the method. Participants write an article in their area of interest, informed by microhistory. The course is taught in English.

ITAL 2100. Introduction to Italian Studies.

This seminar, a requirement for graduate students in Italian Studies, has three objectives: 1) to provide a panoramic view of the current research in the interdisciplinary field of Italian studies (literature, history, arts and media); 2) to provide a picture of the professional state of the field, within the framework of more global developments in academia and the job markets; 3) to provide useful information about the resources and the new tools and techniques for research available to students at Brown and elsewhere (special collections in the Brown libraries, digital resources such as data bases, electronic journals, web projects, etc.).

ITAL 2130A. Dante's *Paradiso*.

A close reading of the third canticle of the *Commedia* in its medieval context. While not essential, a knowledge of the *Inferno* and the *Purgatorio* would be desirable. Open to qualified undergraduates.

ITAL 2130B. The Lyric of Petrarch.

The style and structure of Petrarch's *Canzoniere* and *Triumphs* and their relationship to Latin and Romance precedents. In Italian.

ITAL 2150C. Monographic Studies in Major Sixteenth- and Seventeenth-Century Authors.

Renaissance thought. From Pico della Mirandola to Giordano Bruno.

ITAL 2160. Family History: Early Modern Methods and Sources.

This course examines the world's oldest institution during the early modern period (1500-1800). Italian scholars have been especially innovative in advancing our understanding of the early modern family, relying on legal, quantitative, religious, literary, and visual sources in their efforts. Students may concentrate in their longer essay on controversies in family history currently debated in or beyond the Italian context.

ITAL 2170A. Seminar on Giacomo Leopardi.

Word and image, thought and feeling in the poetry (*Canti*), dialogues (*Operette Morali*), and philosophical writings (*Pensieri*, *Zibaldone*) of one of the major figures of European Romanticism. In Italian.

ITAL 2170B. Italian Modernity and the Novel: Twelve Great Books from the Long Nineteenth Century.

This seminar is designed as a survey of the Italian contribution to the novelistic genre. The course will be structured around 11 great Italian novels in 12 weeks and supplemented by theoretical, methodological and historical considerations that pertain to questions of reading and interpretation, to the novel as a literary genre, and to those problems centered on the specificity of Italian modernity. We will read novels by Foscolo, Manzoni, Verga and Pirandello, among others. Reading knowledge of Italian required.

ITAL 2190A. Carducci, Pascoli and D'Annunzio.

Close textual reading of the poetic works of the three great Italian Victorians. In Italian.

ITAL 2190B. Fascism and Antifascism: Culture and Literature between the Two World Wars.

No description available.

ITAL 2190C. La Poesia del Novecento (Twentieth-Century Italian Poetry).

No description available.

ITAL 2190D. Non Fiction.

What is fiction and what is nonfiction? How to read a nonfictional text (diary, description, memoir, etc). Examples from well-known Italian writers (Campana, Ortese, Delfini, Calvino, Celati, Bompiani) and further examples from photo and documentary cinema. All texts, films, and lectures are in Italian.

ITAL 2190E. Problems and Figures from 1860 to the Present.

Modern Italian poetry.

ITAL 2190F. Reading Recent Italian Fiction.

"Reading" here implies a special kind of attention to the linguistic formulation of the text and the construction of an imaginary hypertext based on the stimuli the text provides. The instructor exemplifies the process and students construct hypertexts of their own based on the texts. Of particular interest is the openness and interpretive richness derived from the readers not belonging to the cultural context in which the texts were produced.

ITAL 2190G. Letteratura Italiana del Novecento.

In questo seminario, leggeremo e discuteremo alcune delle più significative opere di narrativa e poesia novecentesca, da Svevo a Calvino e da Montale a Zanzotto, sullo sfondo delle grandi trasformazioni della società e della cultura italiana, dal fascismo alla seconda Guerra mondiale e alla prima repubblica, alla luce delle teorie critiche più influenti, dal futurismo all'ermetismo e dal neo-realismo al post-modernismo. Taught in Italian.

ITAL 2220. New Perspectives on Fascism.

Examines the new light shed by recent research on Italian Fascism, placing Italy's Fascist ventennio (1922-45) in a larger European context. Among the questions to be addressed: What explains Mussolini's rise to power and his ability to stay in power? To what extent did Italians become Fascist? What role did force play in ensuring popular allegiance to the regime? What role did the Church play? Did Fascism remake concepts of gender? Attention will be paid to the role of the media, writers, intellectuals, and the arts. Comparison with Nazi Germany and other regimes labeled "Fascist" will be explored.

ITAL 2300. Seminar in Italian Literature, Culture, and Criticism.

Thinking Life: Italian Theory and Feminism. The notion of life is pivotal in Italian Theory, which one of its most prominent representatives, the philosopher Roberto Esposito, describes as a "living thought." This course will provide an introduction to the fundamental texts of Italian biopolitical thought (Agamben, Negri, Esposito) and confront them with a feminist tradition (Cavarero, Braidotti, Putino, Federici) that contributes an alternative conception of life to the philosophical debate. (Taught in Italian)

ITAL 2301. Emergence of the Vernacular: Prestige and Critique (Spanish & Italian).

Using pertinent sources drawn primarily from Latin, Spanish, Italian, and their early variants, this class will study the emergence and development of the vernacular from its beginnings through the Early Modern period. We will consider theorizations of vernacularity alongside some of its most pressing debates as they circulated throughout Spain, Italy, and the Americas, in particular. To this end, we will examine historical sources that exemplify the wide reach of the sociopolitical, linguistic, and identity anxieties and violences surrounding linguistic development, while concentrating our attentions on literary sources (prose, drama, poetry) and didactic manuals and epistles that directly comment upon the status of language(s), vilifying, defending, redefining, or reaffirming them. Students should be proficient in either Spanish or Italian, and have advanced reading abilities in the other.

ITAL 2450. Exchange Scholar Program.

ITAL 2540D. The Theater that was Rome (HIAA 2540D).

Interested students must register for HIAA 2540D.

ITAL 2550. Gender Matters.

This course examines the impact of gender as a category of analysis, focusing upon its varied repercussions on the study of history, with Italian history serving as one field of focus. Participants interested in other geographical, chronological, and disciplinary areas will have ample time to pursue their interests. The study of gender has profoundly shaped the practice of history in the last half century, and the course outlines its impact and its transformations. The course places in conversation diverse but overlapping historical developments: the impact of the study of gender on history; influences from beyond history that have shared or shaped historians' approach to gender and sexuality; the particular inflections of the study of gender in the case of Italy (1400-1800); the impact of the turn to the study of sexuality and queer studies. The course explores and critiques the limits of our gender constructs (theoretical, methodological, and modern) for explaining the culture of people in the premodern world and beyond the western hemisphere, fields of scholarship where the universality of contemporary notions of gender have been challenged. In English.

ITAL 2820. Italian Studies Colloquium.

The Italian Studies Colloquium is a forum for an exchange of ideas and work of the community of Italian scholars at Brown and invited outside scholars. Graduate students present their work in progress, and engage the work of faculty and visitors. They are expected to come prepared with informed questions on the topic presented. Presentations in both Italian and English. Instructor permission required.

ITAL 2900. Theory and Methods of Foreign Language Teaching.

Theory and practice of foreign language learning and teaching (theory of language, language learning and acquisition, approaches, methods and techniques, curriculum design, materials development, testing and evaluation). In English.

ITAL 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ITAL 2980. Reading and Research.

Courses on special subjects individually planned and supervised. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ITAL 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

John Nicholas Brown Center for Advanced Study

John Nicholas Brown Center (JNBC)

Effective July 1, 2023, the JNBC became a center for advanced study focused on promoting the broad public discussion and dissemination of academic research and scholarship across the full range of disciplines.

This new plan expands the JNBC's scope and mission significantly by transforming it from a center that offers programming and a degree in the field of public humanities to one that communicates the value of academic scholarship as such to the public at large. This new mission for the JNBC is designed to enhance Brown's reputation and visibility as a research university in the thematic areas that are targeted for investment in the *Building on Distinction* strategic plan while also positioning it as a leader in the vitally important effort to communicate the significance of this academic work to the general public.

A key component of the plan, which is to be implemented over the next two years, is the creation of a new Visiting Faculty Fellows Program. The JNBC will provide space in the Nightingale-Brown House and time for scholars from across the full range of academic disciplines to pursue their research and to interact among themselves and with their peers at Brown over the course of an academic year. The Visiting Faculty Fellows Program will be open to faculty working in all of the Integrative Scholarship themes included in *Building on Distinction*, from the arts and humanities to the social, physical, and biological sciences. Programming by the JNBC will be organized in collaboration with Brown faculty working in aligned fields, including colloquia, a monthly public lecture by one of the visiting faculty fellows, and workshops with experts and journalists from digital media and trade publications. The JNBC's new mission to promote the public dissemination of academic research and scholarship in Brown's specific areas of academic strength expands upon the JNBC's long-standing tradition of public engagement and brings it into alignment with the Building on Distinction strategic plan as well as with the recently approved Operational Plan for Investing in Research. The transformation of the JNBC emerged out of discussions conducted over the past year about Brown's ambitious goals for increasing the strength of its research enterprise across the humanities and the social, physical, and biological sciences. The new plan for the center was presented to the Academic Priorities Committee and Faculty Executive Committee earlier this fall for comment.

The first two years implementing the new plan for the JNBC will be devoted to robust programming (colloquia, lecture series, etc.) involving prominent visitors, along with internal and external discussions about the future of the center. Details of the new Visiting Faculty Fellows Program will be announced in the coming years. As this new program is developed, the JNBC will continue to support scholarship on American cultural history, and to manage, preserve and afford access to the Nightingale-Brown House.

Since its founding in 1979 as the JNBC, the Center has had a history of evolving and transforming to remain at the cutting edge of changes in Brown's approach to public engagement. This new plan for the JNBC represents the next chapter in the center's pursuit of this mission that expands and builds on its focus on public humanities over the past two decades.

Starting July 1, 2023 **Kevin McLaughlin**, former Dean of the Faculty at Brown and George Hazard Crooker Professor of English, Comparative Literature, and German Studies, was named the inaugural Director of the new JNBC. As Dean of the Faculty from 2011 to 2022, Professor McLaughlin collaborated with the senior leadership team of the University to grow and diversify the faculty and focused consistently on enhancing the academic strength of departments, centers, and institutes across the University. He will continue this work as the Director of the JNBC.

For additional information please visit the Center's website at: <https://jnbc.brown.edu/>

Joukowsky Institute for Archaeology and the Ancient World

The Joukowsky Institute for Archaeology and the Ancient World (JIAAW) is dedicated to the academic study and public promotion of archaeology and the ancient world. Archaeology pertains to the material study of the human past. The ancient world, as used here, refers to a wide temporal expanse of human history that encompasses the globe prior to the intensification of European colonialism in the sixteenth century. The nexus

of archaeology and the ancient world is at the core of the JIAAW's mission, particularly these areas pertain to the study of the ancient Mediterranean, Egypt, and southwest Asia (i.e., the Near East). Nevertheless, the JIAAW embraces all scholarship that advances archaeology in any time and place. Moreover, the JIAAW supports all methods that are engaged with advancing our understanding of the ancient world.

The goal of the Institute is to foster an interdisciplinary community of interest in archaeology and the ancient world. At Brown University this includes, but is not limited to, scholars from the Departments of Anthropology, Classics, Egyptology and Assyriology, History, History of Art and Architecture, and Religious Studies. The mandate of the JIAAW is to promote research, fieldwork, teaching, and public outreach, with the Institute's associated faculty, students, and facilities serving as a hub for this activity. While much of the research focus is oriented towards understanding the past, faculty and students associated with the JIAAW are also engaged with understanding how the past is (re)produced in the present and the broader social implications of the work that is performed by scholars of archaeology and the ancient world.

In order to promote archaeology and the ancient world, the primary activities of the JIAAW are: education, research, postdoctoral training, conferences and lectures, public outreach, and initiatives that collaboratively advance these activities in new directions.

For additional information, please visit the Institute's website: archaeology.brown.edu (<https://archaeology.brown.edu>).

Archaeology and the Ancient World Concentration Requirements

The undergraduate concentration in Archaeology and the Ancient World provides students with an opportunity to explore the multi-faceted discipline of archaeology, and encourages an interdisciplinary approach to engaging with the ancient world. While the core focus of Archaeology and the Ancient World at Brown University is archaeology and art of the ancient Mediterranean, Egypt, and the Near East, this concentration encourages students to reach beyond this geographic area, to engage with Brown's many strengths in history, epigraphy, art, ethics, engineering, religious studies, and the sciences – to name just a few. The concentration, with its three distinct but overlapping tracks, is intended to allow students flexibility in structuring their own path through this diverse field of study.

It is expected that, in completing the requirements for this concentration, students will incorporate courses that offer new perspectives on the complex dynamics of social inequity, exclusion, and difference, and which encourage engagement with the community – both by enrolling in classes designated as Race, Power, and Privilege (RPP) or Community-Based Learning and Research (CBLR), and through other classes that explore similar themes. Research opportunities, through summer fieldwork, internships, museum experience, or independent study projects, are strongly encouraged.

Within this concentration, the three tracks are:

- **Archaeology and the Ancient World:** the most flexible of the concentration tracks, allowing students to explore any region or time period, and to develop their own areas of focus, such as museum studies, ethics and politics of the past, engineering and materials analysis, cultural heritage, or environmental studies.
- **Classical Archaeology:** for those interested chiefly in the 'classic' civilizations of the Mediterranean (especially Greece and Rome), as well as for those interested in both earlier (prehistoric) and later (medieval) periods in that geographic region.
- **Egyptian and Near Eastern Archaeology:** for those interested chiefly in the cultures of Egypt and the ancient 'Near East' – Anatolia, the Levant, Mesopotamia – from prehistoric through Islamic times.

All three tracks begin with the same foundation. Students are then expected to experiment with and define their own areas of specialty, establishing expertise in topics such as cultural heritage, archaeological theory, or materials analysis, or in particular regions or time periods. The concentration is also designed to allow students to build progressively

upon what they have learned, moving from introductory courses to upper-level seminars.

The student must take a total of 10 courses, including:

CORE REQUIREMENTS:

All three tracks share four Core Requirements: two introductory courses providing an overview of archaeology's two central aspects (field methodologies, and art history); and two introductory courses in the core geographical focus of the Joukowsky Institute (Classical/Mediterranean archaeology and Egyptian/Near Eastern archaeology).

One introductory course in archaeological methodology and/or scientific approaches, preferably:

ARCH 0100	Field Archaeology in the Ancient World	
ANTH 0500	Past Forward: Discovering Anthropological Archaeology	

or a course that addresses similar methodological/scientific topics, which must be approved by the Director of Undergraduate Studies. Appropriate courses could include, for example:

ARCH 1900	The Archaeology of College Hill	

One introductory course in ancient art history, for example:

ARCH 0030	Art in Antiquity: An Introduction	
ARCH 0150	Introduction to Egyptian Archaeology and Art	

ARCH 0520	Roman Archaeology and Art	

One ARCH course in Egyptian or Near Eastern archaeology, art, and/or architecture, for example:

ARCH 0440	Archaeologies of the Ancient "Middle East"	
ARCH 0600	Archaeologies of the Muslim World	
ARCH 1625	Temples and Tombs: Egyptian Religion and Culture	

One ARCH course in Classical or Mediterranean archaeology, art, and/or architecture, for example:

ARCH 0230	Myriad Mediterraneans: Archaeology, Representation and Decolonization	
ARCH 0270	Troy Rocks! Archaeology of an Epic	
ARCH 0420	Archaeologies of the Greek Past	

TRACK REQUIREMENTS:

In addition to the Core Requirements above, each of the three tracks requires six additional courses, which allow students to define their own areas of geographic and/or topical specialty.

Archaeology and the Ancient World:

One ARCH course, of any level, that focuses on a particular thematic or theoretical topic pertaining to archaeology, for example:

ARCH 0315	Heritage In and Out of Context: Museum and Archaeological Heritage	
ARCH 0755	Engineering and Technology in the Ancient World	
ARCH 1774	Microarchaeology	

One ARCH course, of any level, that focuses on a part of the world OTHER than Mediterranean, Egyptian, or Near Eastern, for example:

ARCH 0160	Buried History, Hidden Wonders: Discovering East Asian Archaeology	
ARCH 0330	Archaeology Under the Volcano	
ARCH 0335	Archaeology of the Andes	

Two additional ARCH courses, on any aspect of archaeology and art, at the 1000 level (or above). Students are encouraged to use these upper-level courses to define a particular core specialty or track, such as a focus on archaeological theory, museum studies, archaeological ethics, materials analysis, cultural heritage, or climate change, for example:

ANTH 1720	The Human Skeleton	
ARCH 1792	The Archaeology of Slavery	
ARCH 1870	Environmental Archaeology	

Two non-ARCH courses which EITHER relate to the study of the ancient world OR to the discipline of archaeology. Outside courses are chosen with the approval of the Director of Undergraduate Studies from appropriate 1000 level (or above) offerings in other departments such as, but not limited to: Anthropology, Classics, Egyptology and Assyriology, Environmental Studies, Geological Sciences, History, History of Art and Architecture, Religious Studies. One term of language study, in any relevant (usually ancient) language, may also be counted toward this requirement.

Total Credits 10

1 All formally cross-listed courses, regardless of home department, can be considered ARCH courses and can fulfill the relevant concentration requirement(s). There is no limit on the number of cross-listed courses that can count toward the completion of a concentration.

2 Students who are doing a double concentration are allowed up to two courses that are also counted toward (i.e., overlap with) their second concentration to fulfill Archaeology concentration requirements.

Fieldwork and Study Abroad

Students are strongly encouraged to consider participating in a field project, most typically after sophomore or junior year. The Director of Undergraduate Studies and other faculty members can provide suggestions about how to explore and fund possible field projects.

With the permission of the Director of Undergraduate Studies, up to three successfully completed courses from relevant and accredited study abroad programs may be counted towards the concentration requirements. Field school courses that provide formal university transfer credit, and official transcripts, can be considered a form of study abroad and may also be used to fulfill concentration requirements.

Classical Archaeology:

One course in ancient Greek or Roman history, for example: 1

CLAS 1210	Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC	
CLAS 1220	The Fall of Empires and Rise of Kings: Greek History 478 to 323 BC	
CLAS 1310	Roman History I: The Rise and Fall of an Imperial Republic	
CLAS 1320	Roman History II: The Roman Empire and Its Impact	

One course in either Ancient Greek or Latin, at a level beyond the first year of study, for example: 1

GREK 0300/0400	Introduction to Greek Literature	
LATN 0300/0400	Introduction to Latin Literature	

Two courses in Mediterranean (prehistoric, Greek, Roman, medieval) archaeology and art, at the 1000 level (or above), for example: 2

ARCH 1125	Building an Empire: The Sacred and Civic Architecture of Ancient Rome	
ARCH 1155	Cities, Colonies and Global Networks in the Western Mediterranean	
ARCH 1250	Minoans and Mycenaeans: Greece in the Bronze Age	
ARCH 1765	Pandemics, Pathogens, and Plagues in the Greek and Roman Worlds	

One ARCH course, of any level, that focuses on a part of the world OTHER than Mediterranean, Egyptian, or Near Eastern OR focuses on a particular thematic topic pertaining to archaeology, for example: 1

ARCH 1490	The Archaeology of Central Asia: Alexander in Afghanistan, and Buddhas in Bactria	

ARCH 1515	The Fair Sex: Female Body and Sexuality in the Ancient World	

ARCH 1570	Cold Hard Cash: The Materiality of Money in Ancient and Modern Finance	

ARCH 1710	Architecture and Memory	

One non-ARCH course which EITHER relates to the study of the ancient world OR to the discipline of archaeology. Outside courses are chosen with the approval of the Director of Undergraduate Studies from appropriate 1000 level (or above) offerings in other departments such as, but not limited to: Anthropology, Classics, Egyptology and Assyriology, Environmental Studies, Geological Sciences, History, History of Art and Architecture, Religious Studies. 1

Total Credits 6

Egyptian and Near Eastern Archaeology:

Two courses in Egyptian and Near Eastern archaeology and art at the 1000 level (or above), for example: 2

ARCH 1616	Between Sahara and Sea: North Africa from Human Origins to Islam	

ARCH 1620	Conquest to Conversion: The Formation of the Islamic World	

ARCH 1630	Fighting Pharaohs: Ancient Egyptian Warfare	

ARCH 1642	Queering Ancient Egypt	

Two terms of course work in a pertinent ancient language (such as Akkadian, Coptic, Classical Hebrew, Middle Egyptian). 2

One ARCH course, of any level, that focuses on a part of the world OTHER than Mediterranean, Egyptian, or Near Eastern OR focuses on a particular thematic topic pertaining to archaeology, for example: 1

ARCH 0340	Bad Things: Archaeologies of New World Vices	

ARCH 1170	Community Archaeology in Providence and Beyond	

ARCH 1178	Archaeology and Social Justice: Undisciplining the Past, Changing the Present	

One non-ARCH course which EITHER relates to the study of the ancient world OR to the discipline of archaeology. Outside courses are chosen with the approval of the Director of Undergraduate Studies from appropriate 1000 level (or above) offerings in other departments such as, but not limited to: Anthropology, Classics, Egyptology and Assyriology, Environmental Studies, Geological Sciences, History, History of Art and Architecture, Religious Studies. 1

Total Credits 6

Honors Concentrations

An Honors concentration in any of these tracks requires the successful completion of all the standard requirements with the addition of an Honors thesis. In order to qualify for Honors, students must have received more A's than B's in concentration courses completed, and successfully complete an Honors thesis in their final two semesters at Brown. For the preparation of this thesis, students will ordinarily enroll in ARCH 1970 (<https://bulletin.brown.edu/search/?P=ARCH%201970>) during the first semester of the senior year and ARCH 1990 (<https://bulletin.brown.edu/search/?P=ARCH%201990>) during the second semester of the senior year. These courses may not be taken S/NC, nor may they be used to satisfy the standard requirements of the concentration.

Honors concentrations are recommended for students considering graduate work in the discipline of archaeology. Any student interested in a course of graduate study should speak to the Director of Undergraduate Studies and faculty members as soon as possible, not least for advice

about additional forms of preparation. Graduate work in the archaeology of the ancient world, for example, requires knowledge of appropriate ancient, as well as modern, languages. Students should start work on acquiring these skills as early as possible.

The Honors Thesis

The Honors thesis is an extended essay, usually of between 40 and 60 pages in length, researched and written under the supervision of a faculty advisor and second reader during the senior year (during which the student must be enrolled in ARCH 1970 (<https://bulletin.brown.edu/search/?P=ARCH%201970>) in the Fall and ARCH 1990 (<https://bulletin.brown.edu/search/?P=ARCH%201990>) in the Spring semester).

Students considering writing an Honors thesis should, in their junior year, identify a faculty member who will serve as thesis advisor, and a second faculty member to serve as second reader. Where appropriate, the advisor or the reader, but not both of them, may be in a unit other than the Joukowsky Institute for Archaeology and the Ancient World. During their junior year, students should also identify a specific topic and approach of the thesis, in consultation with the thesis advisor. A preliminary title and one page outline of the proposed Honors thesis is due to the Director of Undergraduate Studies and the thesis advisor by **May 15th** of the junior year.

In the Fall semester of their senior year (semester 7), students must register for ARCH 1970 (<https://bulletin.brown.edu/search/?P=ARCH%201970>): Individual Study Project in Old World Archaeology and Art, selecting the section taught by their thesis advisor. The schedule and frequency of meetings between the student and advisor should be determined during the first two weeks of classes. On **October 15th**, a complete outline of the thesis project and a detailed bibliography are due to the advisor and Director of Undergraduate Studies. A full chapter must be turned in to the advisor, second reader, and Director of Undergraduate Studies no later than **December 15th**. Students who do not meet the thesis deadlines in the Fall, or whose work is not considered worthy of Honors as determined by the thesis advisor, will not be able to register for ARCH 1990 in the Spring and will not be permitted to continue work on an Honors thesis.

In the Spring semester of their senior year (semester 8), students must register for ARCH 1990 (<https://bulletin.brown.edu/search/?P=ARCH%201990>): Senior Honors Thesis in Archaeology and the Ancient World, selecting the section taught by their thesis advisor. Students must turn in a complete draft of their thesis to their advisor, second reader, and the Director of Undergraduate Studies by **March 15th**. The revised, final version of the thesis is due to the advisor, second reader, and the Director of Undergraduate Studies by **April 15th**.

The completed thesis will be evaluated by the advisor and second reader, who will discuss its strengths and weaknesses in a joint meeting with the student; they will then make a recommendation concerning Honors, and also agree a grade for ARCH 1990 (<https://bulletin.brown.edu/search/?P=ARCH%201990>).

The Honors concentrators will be asked to make a short public presentation about their work, in a joint event usually occurring in early May.

An electronic version of the final thesis must be submitted to the Joukowsky Institute via email to joukowsky_institute@brown.edu and to the Director of Undergraduate Studies by **May 1st**. A printed and bound copy of the thesis must be delivered to the Joukowsky Institute by **May 15th**.

Evaluation

The Director of Undergraduate Studies will review the student's overall record, in addition to the thesis evaluations. If all requirements have been successfully met, the recommendation will be made that the student graduates with Honors.

Archaeology and the Ancient World Graduate Program

The Joukowsky Institute offers graduate study leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) in Archaeology and the Ancient World.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/archaeology-and-ancient-world-0> (<http://www.brown.edu/academics/gradschool/programs/archaeology-and-ancient-world-0/>)

Courses

ARCH 0030. Art in Antiquity: An Introduction.

What went into the creation of the Parthenon? Who lived in the Tower of Babel? Why do we still care? This course offers an introduction to the art, architecture, and material culture of the ancient world. Things of beauty and of power will be explored, from Egyptian pyramids and Near Eastern palaces, to the 'classical' art of Greece and Rome.

ARCH 0033. Past Forward: Discovering Anthropological Archaeology (ANTH 0500).

Interested students must register for ANTH 0500.

ARCH 0050. Archaeological Field Work.

Focuses on the aims, scope, and tools of field archaeology, and the nature of archaeological evidence. Emphasizes interdisciplinary field work techniques and the composition, function, and responsibilities of an excavation staff. Examines systematic versus ad hoc excavations and their respective problems of preservation. Students excavate model sites in a laboratory and present a team report upon completion.

ARCH 0100. Field Archaeology in the Ancient World.

Always wanted to be Indiana Jones? This course, focusing on the Mediterranean world and its neighbors in antiquity, interprets field archaeology in its broadest sense. In addition to exploring "how to do" archaeology - the techniques of locating, retrieving, and analyzing ancient remains - we will consider how the nature of these methodologies affects our understanding of the past.

ARCH 0113. Inequality in the Ancient World (RELS 0021)..

Interested students must register for RELS 0021.

ARCH 0150. Introduction to Egyptian Archaeology and Art.

An introductory survey of the archaeology, art and architecture of ancient Egypt, ranging in time from the prehistoric cultures of the Nile Valley through the period of Roman control. While the course will examine famous features and characters of ancient Egypt (pyramids, mummies, King Tut!), it will also provide a wide-ranging review of the archaeology of this remarkable land.

ARCH 0152. Egyptomania: Mystery of the Sphinx and Other Secrets of Ancient Egypt.

The pyramids, tombs, and mummies discovered during the first excavations in Egypt created a colorful but highly romanticized image of this Land of the Pharaohs. More recent archaeological research has unearthed new details about the daily lives of the workers who built those pyramids, or Egypt's cultural and economic connections throughout the Mediterranean. This course will explore how both early and recent archaeology has enriched our perception of the Gift of the Nile, while still leaving more mysteries yet to solve.

ARCH 0153. The Pyramids in Context: Archaeology of Life and Religion of Death in Old Kingdom Egypt (EGYT 0500).

Interested students must register for EGYT 0500.

ARCH 0154. Black Pharaohs: Nubian Kings and Queens of Ancient Egypt (EGYT 0550).

Interested students must register for EGYT 0550.

ARCH 0155. People Without History: Archaeology of Atlantic Africa and the Diaspora.

Too often 'Western' historical narratives consider Africans and African Diasporans as 'People Without History'. Such a notion also refers to peoples who cultures do not, or possess few formally written histories. This class employs archaeological evidence in order to dismantle the colonial library, exploring local histories that have been erased, silenced and marginalized, investigating histories of imperialism, colonialism, genocide, slavery, resistance and black nationalism. Enrollment limited to 50.

ARCH 0156. Architecture and Urbanism of the African Diaspora (HIAA 0770).

Interested students must register for HIAA 0770.

ARCH 0160. Buried History, Hidden Wonders: Discovering East Asian Archaeology.

What do Peking Man, human sacrifice, buried armies, lost cities, and silk routes have to do with one another? All are part of the rich and varied legacy of East Asian archaeology, which is today being re-written by spectacular new discoveries little known to the West. Beginning with Asia's earliest hominin inhabitants, this course will explore the origins of agriculture, early villages and cities, ancient writing systems, and changes in ritual practice through time. We will also discuss the current state of archaeological research in Asia, focusing on site preservation and the political roles of archaeology.

ARCH 0161. Arts of Asia (HIAA 0021).

Interested students must register for HIAA 0024.

ARCH 0162. Introduction to Chinese Art and Culture (HIAA 0040).

Interested students must register for HIAA 0040.

ARCH 0172. South Asian Art and Architecture (HIAA 0023).

Interested students must register for HIAA 0023.

ARCH 0200. Sport in the Ancient Greek World.

Athletics and sports were as popular and significant in the ancient Greek world as they are today, and so offer an excellent introduction to its archaeology and history. This class will discuss the development of Greek athletics, the nature of individual events, the social implications of athletic professionalism, women and athletics, and the role of sport in Greek education.

ARCH 0201. Sport in the Ancient Greek World (CLAS 0210O).

Interested students must register for CLAS 0210O.

ARCH 0201L. Who Owns the Classical Past? (CLAS 0210L).

Interested students must register for CLAS 0210L.

ARCH 0203. Who Owns the Past? (ANTH 0066D).

Interested students must register for ANTH 0066D.

ARCH 0207. Curators, Hoarders, and Looters: The Long and Curious History of Collecting (HIST 0150K).

Interested students must register for HIST 0150K.

ARCH 0220. Fake! History of the Inauthentic.

What is a fake? Who gets to decide what is authentic? Greek statues, Chinese bronzes, Maya glyphs. Have fraudulent objects always existed? Galileo's signature, a centaur's skeleton, Buddhas bearing swastikas. Are all fakes the same? If not, how are they different? Why do people make forgeries? This course revolves around the history of the inauthentic through a diachronic exploration of objects.

ARCH 0230. Myriad Mediterraneans: Archaeology, Representation and Decolonization.

As debates rage about the Classical roots of Western society, the ancient Mediterranean itself is largely overlooked and continues to be seen in stereotypes. Because the ancient Mediterranean was not just white, male and colonizing, this course will explore the extensive archaeological evidence for cultural, gender, ethnic, economic and other forms of diversity during the first millennium BCE. Can archaeology contribute to current debates about decolonization? Conversely, can contemporary debates about indigenous ways of being shine a fresh light on ancient evidence?

ARCH 0250. Intimate Stories, Imagined Landscapes.

Stories carry us to imaginary worlds other than our own. An arresting story engages us deeply, opening the doors to fantastic places and times. Such enthralling narratives have even shaped archaeology's assumptions about places and the people who inhabit them -- and, in turn, archaeological discoveries have influenced ideas about real landscapes through fiction. This course explores novels and narrative fiction as a way of understanding how people and cultures imagine landscapes and these places' roles in human lives past and present.

ARCH 0255. Monsters and Fantastic Creatures.

This course probes the origins and histories of creatures such as dragons, centaurs, mermaids, kappa, and nine-tailed foxes, using textual and material evidence from the ancient world. We survey the cultural domains in which these and similar monstrous creatures held sway, and we reflect about their impact on ancient (and modern) ideas about "nature", "race", "gender", "identity", and what it means to be "human".

ARCH 0270. Troy Rocks! Archaeology of an Epic.

What do Brad Pitt, Julius Caesar, Dante, Alexander the Great, and countless sports teams have in common? The Trojan War! This course will explore the Trojan War not only through the archaeology, art, and mythology of the Greeks and Romans but also through the popular imaginings of cultures ever since, to figure out what "really" happened when Helen ran off and Achilles got angry and the Greeks came bearing gifts. Enrollment limited to 19 first year students.

ARCH 0293. Postcolonial Matters: Material Culture between Colonialism and Globalization (ANTH 0066T).

Interested students must register for ANTH 0066T.

ARCH 0295. Crafts and Production in the Ancient World: Making Material Culture.

The manufacture of artifacts distinguishes us from all other species. However, archaeologists often struggle with interpreting material culture without understanding its origins and production. This course will examine how things are made, considering craftsmanship and agricultural production, from raw materials to finished objects: sculpture and mosaics, bricks and concrete, ceramic and glass, metallurgy, tanneries, oil, wine, and perfumes. Through case studies and hands-on activities, students will consider the importance of the technological processes that produce artifacts for archaeology's investigation of our human past.

ARCH 0297. Material Culture: Material Nature.

We are living in a material world (Madonna, 1984). Why do you love your phone, or car, or shoes so much? Each week this course explores a moment in the human experience: childhood and coming of age, marriage and divorce, home-making and transience, grief, death, and burial. In thinking about the material culture of past societies, we will challenge archaeological concepts of acculturation and cultural appropriation. And, in examining our own everyday objects we will contemplate how style impacts identity -- or vice versa.

ARCH 0300. 13 Things: Archaeology, Material Culture, Science Studies and Design.

The course will explore a range of approaches -- material culture studies, science studies, design studies, consumption studies, the sociology of technology, archaeology, phenomenology -- in dealing with 13 things: the wheel, a Neolithic Megalith, an Ancient Greek perfume jar, the castle of Acrocorinth, Greece, a Moroccan watermill, a map, the pocket watch, barbed wire, the light bulb, a surgical blade, the portable radio, a Leica IIIc 35mm camera, and the personal computer. Returning to the etymology of a thing, the course argues that things are best conceived as gatherings of achievements that are neither wholly exclusive to any single era nor any immediate set of relations.

ARCH 0302. Object Histories: The Material Culture of Early America (HIST 0550A).

Interested students must register for HIST 0550A.

ARCH 0303. tiny: Miniature Might and Meaning.

Egyptian pyramids, Roman aqueducts, Easter Island heads—colossal artifacts are immediately recognizable as embodiments of power. The diminutive—though less theorized among archaeologists, anthropologists, and art historians—is just as potent and alluring. Even across vast stretches of space and time, tiny things enchant and incite wonder. A microscopic Bible, a Renaissance micro-mosaic, a sculpture of hell complete with sinners carved out of a human tooth. This course is a cross-cultural exploration of the power of the miniature, the undersized, the teeny-weeny.

ARCH 0305. Glass from the Past: Glimpses into the History, Technology, and Artistry of Molten Material Culture.

Glass is unquestionably a fundamental part of modern life, but what is the story of glass and what makes it special? We will trace the 5000-year history of glass, from its discovery in the third millennium BC to its mass production in the 19th-20th centuries, exploring themes like technology, innovation, and craft. Archaeological and art historical evidence will be combined with anthropological and ethnographic approaches, including discussions with artisans, museum visits, and trips to the RISD "hot shop" to see glassblowers in action. Enrollment limited to 20.

ARCH 0307. Gold: The Culture of a "Barbarous Relic" (ANTH 0250).

Interested students must register for ANTH 0250.

ARCH 0309. Human Evolution (ANTH 0310).

Interested students must register for ANTH 0310.

ARCH 0310. Interactions with the Dead: Past and Present.

Eventually, face it, you are going to die. Death is an inevitable, and an inescapable component of life. There are, however, certain moments that bring the living closer to the dead, which this course will explore by analyzing interactions between the dead and the living in a range of contexts -- including religious, cultural, commercial, legal, and ethical. We will survey the diversity of human reactions to death and dead bodies by considering examples from the ancient and modern world.

ARCH 0311. Death and the Afterlife in the Ancient World (RELS 0750).

Interested students must register for RELS 0750.

ARCH 0312. History of Medicine I: Medical Traditions in the Old World Before 1700 (HIST 0286A).

Interested students must register for HIST 0286A.

ARCH 0313. Sacred Bodies (RELS 0420).

Interested students must register for RELS 0420.

ARCH 0314. The Body: Medieval Perspectives (MDVL 0360).

Interested students must register for MDVL 0360.

ARCH 0315. Heritage In and Out of Context: Museum and Archaeological Heritage.

We understand the past in part through a complex blend of artifacts, monuments, and landscapes. Yet each of these categories poses major issues regarding their preservation, conservation and curation, and how we use them to educate and to indoctrinate. This course will not preach any specific line, but encourage students to debate these highly complicated issues. Case studies will include the international diaspora of antiquities from the Enlightenment to the present, the impact of war and revolution, and numerous aspects of museum practice. Enrollment limited to 50.

ARCH 0317. Heritage in the Metropolis: Remembering and Preserving the Urban Past.

Urban heritage – from archaeological sites and historic architecture to longstanding cultural practices – is increasingly threatened by the exponential growth of cities around the globe. Most critically, the complex histories and lived experiences of the diverse communities who have inhabited and shaped cities are often in danger of being erased and forgotten today. This course examines how we might remember and preserve this urban past – and the tangible sites and artifacts that attest to it – in light of the social and political dynamics of cities in the present.

ARCH 0320. Media in Archaeology, or Archaeology in Media?.

Indiana Jones, Lara Croft, the Discovery Channel: media has, to an unprecedented degree, shaped public perceptions of the discipline of archaeology, its practices and its values. This course will build critical awareness of how the media uses archaeology and how archaeologists use the media, for good and ill. Students will create digital narratives from their own research, and become competent ambassadors for presenting archaeological research and work in a scientific and engaging way. Enrollment limited to 40.

ARCH 0322. Somewhere Back in Time: Archaeology, the Ancient World, and Heavy Metal Music.

Iron Maiden's "Alexander the Great", Ex Deo's "The Rise of Hannibal", Septic Flesh's "Prometheus" – few musical genres are as interested in history as heavy metal. The sounds, lyrics, images, films, and live performances of many bands from around the world center on stories and mythologies from past cultures. This class examines these phenomena from an archaeological and historical point of view, centering discussion on the music and its stories while contextualizing these modern elements within an archaeologically and historically accurate past.

ARCH 0325. Dead White Guys: Greco-Roman Civilization and American Identity.

Why does classical antiquity matter? How did a group defined as white and European come to represent America's ancestors? And by emphasizing this "heritage," who do we exclude? This course looks at film, popular non-fiction, education policy, public art, architecture, and archaeology, to understand how the myth of Greco-Roman origins was adopted by America's founders, and how this affects issues of race and belonging today.

ARCH 0330. Archaeology Under the Volcano.

Disasters, lava, explosions! Communities from around the world throughout the history of our species have had to contend with the hazards, risks, and benefits of living in the shadow of active volcanoes. This class will take you on a tour of some of the most exciting and archaeologically important examples of human-volcano interactions from around the world – including Pompeii, of course! Students will be introduced to the anthropological, archaeological, and scientific methods that have been utilized to study human-volcano interactions, beyond just doomsday scenarios.

ARCH 0332. Classic Mayan Civilization (ANTH 0520).

Interested students must register for ANTH 0520.

ARCH 0334. Introduction to South American Archaeology (ANTH 0505).

Interested students must register for ANTH 0505.

ARCH 0335. Archaeology of the Andes.

Provides a survey of the archaeology of the Andean region of South America (parts of modern-day Peru, Bolivia, Ecuador, Chile, Colombia, and Argentina). From the arrival of the first Americans to the transformation of indigenous societies under Spanish rule, the course will introduce vital "new World" civilizations such as the Moche and Inka. The course will also explore the politics and practice of archaeological research in the region today. Enrollment limited to 55.

ARCH 0338. An Archaeology of Native American Art (ANTH 0066U).

Interested students must register for ANTH 0066U.

ARCH 0340. Bad Things: Archaeologies of New World Vices.

Drinking, smoking, prostitution, gambling, chocolate, and witchcraft – this may sound like a lot of fun, but are these bad things? Since the first European contact in the Americas, colonists were introduced to new substances, practices, and worldviews and brought their own vices to new territories. This course will use material culture to analyze the everyday lives of these New World inhabitants who were so good at being so bad; we will also discuss how colonial discourse and histories affect our lives today.

ARCH 0351. Introduction to the Ancient Near East (ASYR 0800).

Interested students must register for ASYR 0800.

ARCH 0353. Thunder-godsDragon-slayers: Mythology + Cultural Contact - Ancient MediterraneanNear East(ASYR 0310).

Interested students must register for ASYR 0310.

ARCH 0360. East Meets West: Archaeology of Anatolia.

The crossroads between East and West in the ancient Mediterranean, Anatolia (modern Turkey) gave rise to the great Hittite Empire, the legendary kings Croesus and Midas, and was the scene of battles between Greeks, Persians, Romans, Byzantines, and Turks for world supremacy. In this course, we survey the archaeological history of human settlement in Anatolia from the Ice Age to the Middle Ages, tracing changes in art, economy, landscape, and religion.

ARCH 0370. Before the Islamic State: The Archaeologies of Ancient Mesopotamia.

Front-page news stories report the often-horrific actions and assertions of the Islamic State of Iraq and Syria (ISIS). This part of the world -- ancient Mesopotamia, the "cradle of civilization" -- is home, however, not only to modern geopolitical conflict, but to the world's often equally violent earliest states and empires. This class introduces students to the archaeology and history of this extraordinarily rich region, whose cultures also pioneered the development of writing, astronomy, mathematics, urbanism, and beer.

ARCH 0372. Meeting with Mesopotamia.

This is a class about first impressions. Since the 19th century, excavations in and around Iraq have provided us with significant finds that both enlighten us and challenge us with new insights on life in the ancient world. Using some of these finds, such as the Code of Hammurabi and the Cyrus Cylinder, this class will explore thousands of years of Iraq's culture, power relations, religion, and science. We will also discuss how these finds have been used and abused in modern contexts, and how our own experiences color our understanding of their world.

ARCH 0380. Archaeology of Iran.

An archaeological survey of the origins and development of the Iranian civilizations. Analysis of settlements, history, art, architecture, and characteristics of specific archaeological sites and their artifacts ranging from prehistoric to the Hellenistic period.

ARCH 0382. Pre-Islamic Empires of Iran (HIAA 0031).

Interested students must register for HIAA 0031.

ARCH 0390. Archaeology of Palestine.

Traces the prehistory of Palestine (modern Israel, Syria, Lebanon, Jordan) from its beginnings in the Paleolithic to end of the Byzantine period. Surveys history of archaeological research in this area, emphasizing significant excavations and their artifacts. Develops an understanding of the art, architecture, and modes of life of humankind from age to age, the changes introduced from one period to another, and causes and effects of those changes.

ARCH 0396. Sacred Spaces: Synagogues, Churches, Mosques (JUDS 0050P).

Interested students must register for JUDS 0050P.

ARCH 0400. City and Sanctuary in the Ancient World.

Examines the physical dimensions of the ancient city and the ancient sanctuary through archaeological evidence with special attention to aesthetic planning, urban planning and management, and the concept of public monumental art as developed in the ancient world.

ARCH 0402. Muslims, Jews and Christians in Medieval Iberia (HIAA 0460).

Interested students must register for HIAA 0460.

ARCH 0404. Cathedrals and Castles (HIAA 0420).

Interested students must register for HIAA 0420.

ARCH 0405. State of Siege! Walls and Fortifications in the Greek and Roman World.

Warfare was endemic in the ancient world, and walls were therefore ubiquitous. This course will examine the most spectacular fortifications of the Graeco-Roman world, from Bronze Age citadels in Greece to the Roman frontiers. We will learn how to build walls and fortresses, how to defend them, and how to breach them by studying some of the best walls and famous sieges of Antiquity. Enrollment limited to 50.

ARCH 0407. Hadrian's Wall: Soldiers and Civilians on Rome's Northern Frontier.

Explore the archaeology of one of Great Britain's grandest monuments, Hadrian's Wall, and follow its path through the history and archaeology of Roman Britain. Using the fortification as both inspiration and guide, students will learn about the life on Rome's northern frontier, from Rome's first occupation in the Iron Age to Roman withdrawal centuries later. The wall's symbolic and real impact will illuminate the tangible ways archaeology can teach us about religion, race, the military, politics, art, architecture, and the everyday lives of people in one of Rome's most distant provinces.

ARCH 0410. Mediterranean Bronze Age.

Snake goddesses and bull leaping, labyrinths and gold masks, Linear B and Homeric heroes: these are only some of the most famous things about the Minoan and Mycenaean cultures of Bronze Age Crete and Greece. This class will also explore questions about the historicity of the Trojan War, trade and exchange; ritual landscapes; the origins of writing; death and burial; the eruption of the Thera volcano; and the collapse of the Mycenaean palaces.

ARCH 0412. From Gilgamesh to Hector: Heroes of the Bronze Age.

Swift-footed Achilles, god-like Hector, and Gilgamesh the tall, magnificent, and terrible! They are heroes of the Bronze Age, which produced the world's first cities, empires, and texts. This class explores the concept of "hero" by placing it within its eastern Mediterranean Bronze Age context, using archaeological evidence alongside contemporary and later textual evidence.

ARCH 0420. Archaeologies of the Greek Past.

The Onion once reported that ancient Greek civilization was a complete modern fraud, since obviously no one culture could have invented so much, not least all that Great Art and Architecture. But they did. This course will explore the material world of ancient Greece, from the monumental (the Parthenon) to the mundane (waste management), and everything in between. Enrollment limited to 50.

ARCH 0423. Monuments and Monsters: Greek Literature and Archaeology (COLT 0811H).

Interested students must register for COLT 0811H.

ARCH 0424. Greek Mythology (CLAS 0900).

Interested students must register for CLAS 0900.

ARCH 0425. The Agora: History at the Heart of Athens.

Part city hall, part church, part mall, part stadium, part law court, part red light district, the Agora of ancient Athens has seen it all, from Neolithic to modern times. This "marketplace" is most famous for its Classical history, when figures such as Pericles, Socrates, and Demosthenes walked and talked there. This course, however, will consider the long life and impact of this civic space, including its ongoing and often problematic archaeological heritage. Enrollment limited to 50.

ARCH 0440. Goats, Grains, and Gilgamesh: Archaeology of the Ancient Near East.

Ziggurats of forgotten gods, epics in lost languages, cosmopolitan cities bustling with traders from distant lands: the ancient Near East features the world's earliest agriculture, writing, and empires. From these developments grew diplomacy and commerce -- but also inequality and conflict. This course offers an introduction to the ancient Near East through art and archaeology spanning modern Turkey, Iraq, Iran, the Arabian Peninsula, and Central Asia. It also explores the influence of archaeology within modern nationalism, colonialism, Orientalism, memory, geopolitics, and the use of Near Eastern antiquity in contemporary pop culture.

ARCH 0446. War and Peace in the Hebrew Bible and its Environment (JUDS 0670).

Interested students must register for JUDS 0670.

ARCH 0450. Archaeology of Jerusalem.

Examines the archaeology of the city of Jerusalem from David's conquest in ca. 1000 B.C.E. through the Crusaders' defeat in 1187 A.D. The contemporary literary sources as well as the more recent scholarly debates and discoveries help us understand the material remains of the relevant periods.

ARCH 0520. Roman Archaeology and Art.

Anyone who has ever watched 'Gladiator', 'Spartacus', 'Life of Brian' or 'Bugs Bunny: Roman Legion Hare' has some image of Rome, the Romans and their empire. This course, while exploring and assessing these influential popular preconceptions, introduces a more balanced view of Roman archaeology and art, examining not only the 'eternal city' of Rome, but its vast and diverse imperial domain.

ARCH 0523. Roman Art and Architecture: From Julius Caesar to Hadrian (HIAA 0340).

Interested students must register for HIAA 0340.

ARCH 0524. Art and Architecture of the Roman Empire (HIAA 0032).

Interested students must register for HIAA 0032.

ARCH 0525. The Other Side of Rome: Daily Life in the Roman Empire.

What did the Romans ever do for us? Toilets, bars, firefighters, and dry cleaning, to name just a few things. Surprisingly, daily life in the Roman empire was not too different from our own. This course will examine numerous aspects of Roman life – including housing, street life, shopping, military, sanitation, and even sex – largely from the perspective of the archaeological evidence, especially from some of the best preserved cities, Rome and Pompeii.

ARCH 0526. Behind Closed Doors? Domestic Life in the Roman World.

This course explores the archaeological remains of domestic life across the Roman world from Pompeii to Britain to Syria and attempts to reconstruct the private lives of Romans, particularly the women, children, servants, and slaves who were less visible in more public spheres. We will consider the methodological complexities of interpreting artifact assemblages and reflect on our own houses and notions of private lives both as sources of inspiration and stumbling blocks for understanding Roman domestic life as we open doors and re-people Roman houses.

ARCH 0528. Living on the Edge: The Archaeology of Frontier Communities in the Roman Empire.

The Roman Empire was surrounded by over 3,100 miles of frontier that marked the end of Roman territory. These regions are often discussed solely from a military standpoint, but soldiers were only a small part of a much larger frontier community that included women and children, locals and foreigners, and Romans and non-Romans. This course explores how these communities, often marked by asymmetrical power relationships between the Roman State and local communities, developed, investigating social structures, religion, art and architecture, and economies in order to understand what it was like to live on the edge of the Roman world.

ARCH 0529. Swords, Sandals, and Saunas: The Roman Army in War and Peace.

The Roman legionary is often seen as synonymous with the power of the Roman Empire: heavily armored, spear and shield in hand, marching unrelentingly forward against enemies. But the military was more than a menacing State institution, and this class shifts the focus to the lives of the men who filled the ranks, exploring their languages, religions, clothing, equipment, and fighting styles. We will draw upon evidence of all sorts, including archaeological material from fortifications and battlefields, inscriptions on tombstones and other monuments, and iconographic depictions.

ARCH 0529A. The Roman Army in Peace and War (CLAS 0529).

Interested students must register for CLAS 0529.

ARCH 0530. Hannibal ad portas! Fact and Fiction on Carthage and the Punic World.

"Hannibal stands at the gates": Roman parents would terrify their children with these words. And many others have been haunted by Hannibal Barca: the Carthaginian general still fascinates the European imagination, not least his epic trek over the Alps with three dozen elephants. This course explores fact and fiction about Hannibal and his world, holding up historical and mythical records against hard archaeological evidence. Enrollment limited to 50.

ARCH 0535. Labor and Technology in the Roman World.

Recent television programs like the History Channel's "Engineering an Empire" depict the Romans as geniuses pursuing a "remarkably advanced" lifestyle, but who were the people behind these technological accomplishments and what were the implications for the average Roman? This course investigates the implications of Roman technology on daily life and labor. Topics include transportation and trade, agriculture, crafts production, mining, sanitation, and warfare. We will also explore issues concerning ancient and modern perspectives on Roman technology and labor. Enrollment limited to 20.

ARCH 0537. Making and Unmaking the World: Ancient Empires and Their Aftermath.

The Romans built a world of their own: they constructed infrastructure that spanned the empire, built cities, roads, aqueducts, and monuments, and even reshaped the natural environment itself – often at great cost. By looking at the impact of such imperial projects on the built environment and the natural world, this course highlights the costs of building ancient civilizations and the aftermaths they left behind. We will learn about how these features were built, what they became after the empire's fall, and how they changed the world for better... or worse.

ARCH 0540. Ancient Rome: Art, Archaeology and Civic Life from the End of the Republic through the Early Empire.

This survey course will familiarize students with the art and architecture of Rome during the early Imperial era (ca. 40 BC – AD 140), through investigation of significant sites, monuments and museum collections in Rome and locations throughout southern Italy. Items considered will include both monumental and domestic architecture, wall painting, mosaics, sculpture, coins, epigraphic evidence, as well as maps and ancient sources.

ARCH 0542. The Visual Culture of Early Modern Rome (HIAA 0560).

Interested students must register for HIAA 0560.

ARCH 0550. Late Roman and Early Christian Art and Architecture.

An introduction to the relationship between Roman art and the art of emerging Christianity. The course begins with the Pantheon and ends with the Hagia Sophia.

ARCH 0563. Toward a Global Late Antiquity: 200-800 CE (HIAA 0321).

Interested students must register for HIAA 0321.

ARCH 0600. Archaeologies of the Muslim World.

Muslim societies are built upon a rich archaeological heritage that spans a region from Spain to China. Since the spread of Islam in the 7th century, its legacy of cities, monuments, and artifacts trace more than a millennium of cultural transformations among the various peoples and traditions of the Mediterranean, Middle East and beyond. Through discussion of major sites and hands on work with a collection of artifacts this course explores that heritage for what it can tell us about the social practices and historical processes that have formed the Muslim world.

ARCH 0643. The Architecture of Islam (HIAA 0041).

Interested students must register for HIAA 0041.

ARCH 0650. Islamic Civilizations.

This introduction to early Islamic civilization will examine the interrelationship between the emerging Islamic religious tradition and the development of specifically Muslim social institutions, the role of ethnic and religious minorities, and the flowering of Islamic thought and material culture. Students will study archaeology, political and social histories, visual arts, and textual traditions to explore the evolution and institutionalization of Islam from Spain to Central Asia.

ARCH 0666. Cult Archaeology: Fantastic Frauds and Meaningful Myths of the Past.

The pyramids and Stonehenge built by aliens? The power of the Mummy's Curse? These myths couldn't be true... or could they? Cult Archaeology examines popular and fantastic interpretations of archaeological remains presented in the press and popular media. This course finds the logical flaws in pseudoscientific explanations and the biases that underlie them. Discover the "truth" about archaeology!

ARCH 0676. Pirates of the Caribbean: Scalawags, Sailors, and Slaves.

Avast ye scurvy dogs! Come study the barbarous buccaneers that roved the high seas of the Caribbean from the sixteenth to the eighteenth century: their daily lives and plundered goods, their ships and hideaways. We will explore the havoc piracy caused, and the legends left behind -- Blackbeard, Captain Morgan, and even Captain Jack Sparrow. Just as importantly, we will investigate the economics and geopolitics behind the rise of piracy, with an emphasis on the trans-Atlantic slave trade.

ARCH 0677. Pirates! Archaeologies of Piracy in the Atlantic World (ANTH 0515).

Interested students must register for ANTH 0515.

ARCH 0678. Underwater in the Mediterranean: An Introduction to Maritime Archaeology.

Shipwrecks, sunken cargoes, coastal ports: all contribute to our understanding of the maritime world of the past, not least that of the Mediterranean Sea. This course will explore the Mediterranean's ancient seafaring heritage over time, in particular by studying ancient ships and harbors as remarkable examples of social and technological innovation and enterprise. The methodological challenges faced by archaeologists working on underwater and coastal 'sites' will also be examined. Enrollment limited to 50.

ARCH 0679. The Ocean in Global History (HIST 0150J).

Interested students must register for HIST 0150J.

ARCH 0680. Water, Culture and Power.

Water is the source of life. In the midst of global climate change, environmental crises over water resources, and increasingly ubiquitous political debates over water, we are beginning to recognize humans' complete dependence on water. This course investigates our long-term attachment and engagement with water from the point of view of archaeological, environmental, visual, literary, and historical sources. From flowing rivers to churning seas and from aqueducts to public fountains, we will explore the cultural and environmental aspects of water in the Near East, Mediterranean, and Europe beginning with the Last Ice Age and ending in the modern day.

ARCH 0682. Powering the Past: Environmental Histories of Energy Use and Social Change (ENVS 0710).

Interested students must register for ENVS 0710.

ARCH 0683. From Fire Welders to Empire Builders: Human Impact on the Global Environment before 1492 (HIST 0270A).

Interested students must register for HIST 0270A.

ARCH 0717. Architecture of the House Through Space and Time (HIAA 0081).

Interested students must register for HIAA 0081.

ARCH 0720. Pilgrimage and Travel in the Ancient World.

From Canterbury to Mecca, Rome to Lake Titicaca, throughout history people have traveled far and wide, often under difficult conditions, to visit sacred places. But who were these people, where and why did they go, and how did they get there? This course will explore the practice and pragmatics of pilgrimage, relying on material and literary evidence from modern and ancient case studies around the world. Enrollment limited to 20.

ARCH 0730. The Secrets of Ancient Bones: Discovering Ancient DNA.

New analyses of ancient DNA preserved for millennia in bones and soils have revolutionized the field of archaeology. Suddenly, archaeologists have gained new insight into human origins and migrations, diseases, agriculture, and even the slave trade. Recent genetic case studies will provide a lens for learning about the archaeology of diverse world regions and time periods, from Oceania to Mesoamerica and from the Paleolithic through recent history. Topics will include: genetic relationships between humans, Neanderthals, and Denisovans; the peopling of the globe; diasporas; extinction and de-extinction; and plant and animal domestication.

ARCH 0740. Revolutions and Evolutions in Archaeology.

Humankind has had a revolutionary past -- or so archaeology would lead us to believe. The earliest evidence for language, ritual, and the arts -- dating back to the extinction of the Neanderthals -- is known as the "Human Revolution". The time when hunter-gatherers became farmers? The "Neolithic Revolution". And when they started living in cities? The "Urban Revolution". This course will explore the historical reasons for these revolutionary labels, and consider instead these "revolutions" as gradual processes (or evolutions). Enrollment limited to 50.

ARCH 0750. Women in the Ancient Mediterranean World.

Women represent half of humanity, but they have been greatly underrepresented in studies of past cultures. This course examines not only what women of the Near East, Egypt, Greece, and Rome actually did and did not do, but also how they were perceived in society. Focusing on material and visual cultures, but also incorporating historical and literary evidence, we will investigate the complexities of women's lives in the ancient Mediterranean, as well as the roots of modern conceptions and perceptions of women.

ARCH 0755. Engineering and Technology in the Ancient World.

Enter the world of Greek and Roman engineers whose monumental works and technologies impressed audiences, both ancient and modern. Explore the technologies of art and construction that led to some of the most extensive building programs undertaken by pre-modern states. Through case studies ranging from particular structural elements and technologies (e.g. columns, domes, cranes, catapults) to overall structural systems (palatial complexes, temples, infrastructure), this class investigates the history of materials, methods, and knowledge behind ancient innovations, and the role of art, architecture, and engineering in shaping socio-cultural and political identity.

ARCH 0760. Palaces: Built to Impress.

Ancient palaces capture the imagination as grand, breathtaking manifestations of power and wealth. These were the residences of kings, queens, and courtiers, built to impress with their echoing halls, exquisite paintings and statuary, fragrant gardens, and sumptuous reception rooms. This course explores the palaces of ancient Egypt, Sudan, Syria, Israel, Turkey, Greece, and beyond, delving into how these monumental structures manipulated the senses, the body, behavior, and the mind. We also visit "palaces" in and around Providence, exploring firsthand how such architecture is designed to inspire awe, respect, and subservience.

ARCH 0763. The Private Life of the Privy: A Secret History of Toilets.

It's usually unspoken, but we all know the truth: everybody poops. This class starts with some basic questions: what is poo; what are toilets, cesspits, and latrines; and how have these changed over time. But where we go, what "equipment" we use, what goes into the loo, and the morals and ideals imbued in that act vary vastly between cultures -- touching on complex questions of gender, religion, disease, technology, and science. Combining advanced scientific approaches with material and cultural analyses, this course will demonstrate that even a seemingly simple biological act can reveal a culture's most fundamental secrets.

ARCH 0767. Aromas of Antiquity: The Fragrant World of the Ancient Mediterranean.

Have you ever wondered how something as unassuming as smell can shape entire civilizations? Through scent walks, hands-on experiences, and chemical experiments, students in this course will discover how fragrance shapes our daily lives and contemporary ideas about medicine, relationships, and wealth. We'll then shift to the ancient Mediterranean, exploring how the ancient Egyptians, Mesopotamians, Early Christians, Greeks, and Romans perceived scent and examining its entanglement with their belief systems, social lives, and power dynamics.

ARCH 0770. Archaeology of Eating and Drinking.

Everybody eats -- but patterns of eating and drinking vary dramatically from culture to culture. This course will examine the social roles and meanings of eating and drinking from prehistory to the present, using case studies from the Mediterranean and other parts of the world. How are identity, gender, and power negotiated through food and drink? What are the roles of the body, the senses, and memory? What does a history of humanity look like from the point of view of the consuming body?

ARCH 0771. Anthropology of Food (ANTH 0680).

Interested students must register for ANTH 0680.

ARCH 0775. Farm to Table: Foodways and Gastro-Politics in the Ancient Near East.

This course provides an introduction to the culture, economy, and politics of food in the ancient Near East. We will not only investigate the day-to-day mechanics of food production, cooking, and consumption; we will also develop an appreciation for changing food fashions, for the etiquette of eating and drinking, and for the complex world of gastro-politics. We will even explore the ancient kitchen using our own hands, mouths, and stomachs as a guide.

ARCH 0785. Of Dice and Men: Games in Human Societies Past and Present.

From ancient dice games, marathons, and gladiator battles to virtual worldbuilding and mobile phone games, students in this course will explore the roles of competition and play in cultures. But, equally importantly, students will play games! We will consider games through the lenses of anthropology, archaeology, psychology, and philosophy. And by playing games, both ancient and modern, students will question how games are a distinctly human phenomenon and play essential parts in human lives, in ways that are not entirely obvious or expected.

ARCH 0800. Alexander the Great and the Alexander Tradition.

This course focuses on a single historical figure, Alexander the Great, using him as a point of departure for exploring a wide range of problems and approaches that typify the field of Classical Studies. How knowledge of Alexander has been used and abused provides a fascinating case study in the formation and continuous reinterpretation of the western Classical tradition.

ARCH 0801. Alexander the Great and the Alexander Tradition (CLAS 0810A).

Interested students must register for CLAS 0810A.

ARCH 1049. Settler-Colonial Placemaking: From Vikings to the Homestead Act (HIAA 1626)..

Interested students must register for HIAA 1626.

ARCH 1050. Old World and New World Perspectives in Archaeology.

This course examines how archaeologists working on different sides of the world study the past. Archaeology in the Old World and New World has developed on parallel, but separate, trajectories. While these approaches share methods and theories, they often interpret archaeological data in alternative or even contradictory ways. In this course we will view archaeological topics from both perspectives, using examples from the Mediterranean and Mesoamerica, to try to better understand, and perhaps bridge the gap between, some of our differences. Prerequisite: An introductory course in archaeology, either through the Joukowsky Institute or the Anthropology department.

ARCH 1051. Archaeology of Settler Colonialism (ARCH 1622).

Interested students must register for ANTH 1622.

ARCH 1051A. Settler Colonial Cities: Indigenous Histories, Presents, and Futures (HMAN 1977D)..

Interested students must register for HMAN 1977D.

ARCH 1052. Global Historical Archaeology (ANTH 1620).

Interested students must register for ANTH 1620.

ARCH 1053. Global Origins of Plant and Animal Domestication (ANTH 1670).

Interested students must register for ANTH 1670.

ARCH 1054. Indians, Colonists, and Africans in New England (ANTH 1624).

Interested students must register for ANTH 1624.

ARCH 1056. Indigenous Archaeologies (ANTH 1125).

Interested students must register for ANTH 1125.

ARCH 1100. Archaeology in the Age of Augustus.

Rome's first Emperor, Gaius Octavian Augustus, ruled an empire stretching from Spain to Syria, from Britain to Egypt. Students will explore the social, artistic, and political successes and failures of this "golden age" of Rome's past. The course will assess a broad range of topics -- such as the creation of empire, art as propaganda, and the role of women -- within the context of Augustan ideology and history.

ARCH 1101. Age of Augustus: Topography, Architecture, and Politics (CLAS 1120T).

Interested students must register for CLAS 1120T.

ARCH 1105. The Face of Power: Representing Roman Emperors.

The infallible Augustus; Nero fiddling as Rome burns; Constantine the Christian emperor: the roster of Roman rulers includes some of ancient history's most beloved and notorious characters. Meet the men (and women!) who ran the Roman state, discover how art and architecture were used to craft a public impression of imperial power, and learn how material and literary sources have shaped emperors' post-classical reputations. This course will give special attention to how emperors attempted to appeal to diverse factions at home, while ensuring their power was legible to enemy competitors abroad.

ARCH 1107. Spectacle! Games, Gladiators, Performance, and Ceremony in the Roman World (HIAA 1304).

Interested students must register for HIAA 1304.

ARCH 1108. Politics and Spectacle in the Arts of Ancient Rome (HIAA 1307).

Interested students must register for HIAA 1307.

ARCH 1109. Games and Spectacles of Ancient Greece and Rome (CLAS1120N)..

Interested students must register for CLAS 1120N.

ARCH 1120. Under Pompeii's Ashes: Contesting Roman Identities.

Everybody knows Pompeii, the city that was buried under the ashes of the Vesuvius in AD 79. No site, it seems, preserved the daily life of the Romans as well. But how "Roman" was Pompeii? This course will challenge existing views on Roman cultural and social identities and material remains, using Pompeii as a case study. Pompeii, in fact, offers a unique playground to test ideas about the relationships between material culture, style, and societies in the past and the present.

ARCH 1120L. Archaeology of Feasting (CLAS 1120L).

Interested students must register for CLAS 1120L.

ARCH 1121. Pompeii: Art, Architecture, and Archaeology in the Lost City (HIAA 1303).

Interested students must register for HIAA 1303.

ARCH 1122. Pompeii: Life and Death in the Shadow of Vesuvius (CLAS 1750S).

Interested students must register for CLAS 1750S.

ARCH 1125. Building an Empire: The Sacred and Civic Architecture of Ancient Rome.

The Colosseum, Pantheon, and imperial palaces loom large in our impression of Roman civilization. Roman architecture set the standard for some of the most iconic buildings in the West. This course will examine the rise and development of Roman architectural principles and analyze how they were employed to create such a lasting image of empire. We will consider technological advancements and territorial expansion, as well as the shifting political and religious dynamics that shaped Rome's buildings.

ARCH 1127. Arts of Memory in Ancient Rome (ARTS 1127)..

Interested students must register for HIAA 1308.

ARCH 1128. The Long Fall of the Roman Empire (HIST 1205).

Interested students must register for HIST 1205.

ARCH 1130. A Burglar's Guide to Rome.

The Roman city, epitome of order or a burglar's delight? On the surface we see grid-planned cities with demarcated city centers governed by endless rules: who was allowed in a space, what time one could use the baths, drive down main streets, and on and on. What if we take a different view? This course explores Roman cities through the eyes of those who broke the rules and lived off the grid. From sneaking in to steal a trinket to sacking an entire city, the burglars of the ancient world show how cities functioned and where they broke down.

ARCH 1140. The Death of the Ancient City? Roman Cities After the Fall of Rome.

As in our own increasingly urban-based world, cities were the engines driving the political and economic success of the Roman empire. But what happened to such places after the empire disintegrated and "fell"? This course will explore the varied fate of Roman cities in Late Antiquity (4th-7th centuries C.E.), a period witnessing numerous changes — from political fragmentation and "barbarian" invasion to "Christianization" — that directly impacted both the roles of cities and the organization of urban space.

ARCH 1143. Experiencing the Roman Empire: Life in the Roman Provinces (CLAS 1120P).

Interested students must register for CLAS 1120P.

ARCH 1150. Cities and Urban Space in the Ancient World.

Using contemporary approaches to cities and urban space, this course will explore cities of the ancient Near Eastern and Mediterranean world. What makes a city and how do we define "urban"? How do cities start? Do cities die? What are the primary factors that affect their development? We will analyze not only how the development of cities responded to specific historical and geographical conditions, but also how cities in different times and places were surprisingly similar in form and social activity.

ARCH 1151. Provisioning Cities.

Urbanism goes hand-in-hand with increased population and demand for provisions, so how did cities feed their residents? This course explores subsistence strategies used by residents of ancient urban areas through case studies that span the Old and New Worlds. We explore topics such as sustainable food raising, the role of markets in cities, water management, trash disposal, cuisine as environmental adaptation, and diet as identity. We will also investigate cities as multispecies biomes, in which urban dwellers shared their space with the animals and plants that eventually landed on their plates.

ARCH 1152. Bandits and Barbarians: Exploring Subaltern Resilience and State Power (ANTH 1145).

Interested students must register for ANTH 1145.

ARCH 1153. Cities by the Sea: An Economic, Structural, and Social Examination of Mediterranean Ports.

Athens, Alexandria, Carthage, Ostia. Ports circled the ancient Mediterranean, and the sea infused these cities' hierarchies, structures, and daily patterns. This course will analyze the architecture and economy of key harbor cities of the Roman Empire by discussing their genesis or antecedents, their dynamics, and their role in the imperial era. To contextualize urban maritime landscapes across both time and space, we will consider issues pertaining to urbanism, trade, production, infrastructure, epigraphy, and iconography. Students will evaluate the traditional "port model" and other theoretical approaches, to reach a more complex understanding of these cities by the sea.

ARCH 1155. Cities, Colonies and Global Networks in the Western Mediterranean.

How did cities develop? This course will explore the connections between colonialism and urbanism in the West Mediterranean of the first millennium BCE. Should we see the profound changes in Iron Age societies of the western Mediterranean primarily as a response to external contacts and colonial interference, or did they represent long-term indigenous developments? How can we understand regions, where urban development was much more limited or absent?

ARCH 1160. The World of Museums: Displaying the Sacred.

This course will examine critically the collection and display of ancient objects, especially those of a sacred nature. Through functional, historical, material and aesthetic lenses an analysis of the relationships between the cultural contexts of objects will be examined. Case studies, guest lectures and site visits (virtual and real) will be used to demonstrate evolving theory, practice, and ethical implications of displaying archaeological objects. Enrollment limited to 15 undergraduates.

ARCH 1161. Museum Collecting and Collections (AMST 1510).

Interested students must register for AMST 1904U.

ARCH 1162. Anthropology in/of the Museum (ANTH 1901).

Interested students must register for ANTH 1901.

ARCH 1163. The Art of Curating (MCM 1700R).

Interested students must register for MCM 1700R.

ARCH 1164. Methods in Public Humanities (AMST 1550).

Interested students must register for AMST 1550.

ARCH 1167. Museum Histories (AMST 1903I).

Interested students must register for AMST 1903I.

ARCH 1170. Community Archaeology in Providence and Beyond.

Modern archaeology is about far more than just digging in the dirt. During this seminar, we will discuss how archaeologists can engage with the public—including collaborations with indigenous and local communities, increased multivocality in interpretations, the mass media, museums, educational outreach programs, and the use and abuse of the past by governments and others in power. Much of the learning for this course will come as part of hands-on projects undertaken in collaboration with community partner organizations. These engaged scholarship projects are designed to link students with community members and practitioners as co-learners and co-creators to create positive change in our community, and to help students form deep ties to Providence and Rhode Island beyond the walls of Brown University, and to offer students a hands-on perspective on how archaeology can effect change in our communities.

ARCH 1175. Archaeology Matters! Past Perspectives on Modern Problems.

This is not the first era to face many of today's global problems — rising temperatures, sea-level change, sustainability, pollution, fire, water scarcity, urban blight, social violence, and more. Archaeology is more than the understanding of peoples long ago and far away, but a discipline whose long-term perspective could offer potential solutions to current crises. Through case studies and discussion of key issues, this class asks how archaeology — and archaeologists — might just change the world.

ARCH 1177. Occupy Archaeology! Interrogating Inequality, Past and Present.

We are the 99%! Black Lives Matter! These rallying cries bring inequality to the front-and-center of western political and media discourses. Yet a social system dividing the haves and have-nots is hardly a modern phenomenon. This course considers injustice diachronically and on a global scale, examining ways in which the material world studied by archaeologists creates — and is created by — social divisions, and critiquing the ways that archaeology as a discipline is a part of the problem.

ARCH 1178. Archaeology and Social Justice: Un-disciplining the Past, Changing the Present.

The contemporary world is at a breaking point. Deepening social inequality, environmental crises, and neo-colonialism exacerbate global injustices. The stories that archaeologists tell about the past, more often than not, contribute to these injustices. In this course, we will use global case studies to explore the possibilities for other, decolonial archaeologies which can liberate the material past from its colonial/racial disciplinary straightjacket, and at the same time provide essential tools for the necessary struggles for social justice today.

ARCH 1200A. Early Italy.

Focuses on the Bronze Age background to the emergence of Greek, Roman, and Etruscan Italy in the Iron Age. Emphasizes the results of recent excavations, the problems of contact between the Aegean and Tyrrhenian areas in the Bronze Age, Greek colonization, and the urban development of the Etruscan/Latium region.

ARCH 1200B. Pompeii (HIAA 1200D).

Interested students must register for HIAA 1200D.

ARCH 1200C. Roman Iberia.

The archeology, art, and architecture of Iberia during the Roman presence from the Punic Wars to the beginning of the Arab conquest. The artifacts and monuments discussed will not only represent artistic production from Roman administrative expressions, but also a mixture of styles between indigenous art (such as Celtic) or expressions of syncretism or other cultural symbioses.

ARCH 1200E. Topography and Monuments of Rome.

Rome has been the scene of notable recent discoveries. This course will concentrate on the evidence for the so-called "regal period" but other topics, among them commemorative arches, the topography of the Campus Martius, and Christian basilicas, will also be taken up. A reading knowledge of Italian is highly recommended.

ARCH 1200F. City and the Festival: Cult Practices and Architectural Production in the Ancient Near East.

This course will explore urbanization, formation of urban space, and architectural projects in relation to cult practices and commemorative ceremonies in the Ancient Near East. Investigating case studies from early cities of fourth millennium BC Mesopotamia to Iron Age Syria and Anatolia, we will study the processes of the making of urban and extra-urban landscapes in the socio-religious context of festivals.

ARCH 1200G. Arabia and the Arabs: The Making of an Ethnos.

This course will survey the archaeology and history of the Arabs and Arabia from before their emergence in the historical record to the modern period. Our particular focus concerns their relationship with the rise of Islam as well as the imperial politics of the pre-Islamic Near East. A major issue that frames these inquiries is the concept of ethnicity and its projection into the past.

ARCH 1200H. Islamic Landscapes: Cities, Frontiers and Monuments.

This course will examine the built environments of the Islamic Period Middle East through the growing archaeological and historical record of its cities, monuments, and other spaces. We will explore what these landscapes tell us about the diverse nature of Muslim societies, relations between Muslim and non-Muslim inhabitants, and ways in which cultures engage with space and place through their physical, emotional, and intellectual resources. Prerequisites: At least two courses in either archaeology, anthropology, art history, or Middle East studies.

ARCH 1200I. Material Worlds: Art and Agency in the Near East and Africa.

This course investigates technological processes of artifact production in the material culture of ancient and contemporary Near East and Africa. Archaeological and ethnographic case studies will be explored to understand the social relations behind skilled craftsmanship in architecture and "art". Circulation of craft knowledge, cultural biography of artifacts, constitution of cultural identities and memory through material processes will be central topics. Enrollment limited to 20.

ARCH 1209. The Visual Culture of Medieval Women (HIAA 1430A).

Interested students must register for HIAA 1430A.

ARCH 1211. The Body and the Senses in Medieval Art (HIAA 1440E).

Interested students must register for HIAA 1440E.

ARCH 1213. The Medieval Monastery (HIAA 1440B).

Interested students must register for HIAA 1440B.

ARCH 1214. The Viking Age (HIST 1210A).

Interested students must register for HIST 1210A.

ARCH 1220. Byzantine Archaeology and Art: Material Stories of a Christian Empire.

The world of Byzantium is often considered as a dark age separating the glories of Rome and the Renaissance. Yet Byzantium was among the longest living empires in world history, with an artistic and cultural impact felt far beyond its borders. The course will introduce students to a series of art works, architectural masterpieces, and archaeological discoveries that illuminate our understanding of the much underestimated, and much misunderstood, Byzantine Empire. Enrollment limited to 50.

ARCH 1231. Kings, Courts, and Aristocracy (ANTH 1231).

Interested students must register for ANTH 1231.

ARCH 1232. The City, the Maroon and the Mass Grave (ANTH 1630).

Interested students must register for ANTH 1630.

ARCH 1233. Ancient Maya Writing (ANTH 1650).

Interested students must register for ANTH 1650.

ARCH 1234. Lost Languages: The Decipherment and Study of Ancient Writing Systems (ANTH 1820).

Interested students must register for ANTH 1820.

ARCH 1235. Vertical Civilization: South American Archaeology from Monte Verde to the Inkas (ANTH 1505).

Interested students must register for ANTH 1505.

ARCH 1236. Maize Gods and Feathered Serpents: Mexico and Central America in Antiquity (ANTH 1640).

Interested students must register for ANTH 1640.

ARCH 1237. Pre-Columbian Art and Architecture: A World That Matters (ANTH 1030).

Interested students must register for ANTH 1030.

ARCH 1238. Classic Mayan Civilization (ANTH 1031).

Interested students must register for ANTH 1031.

ARCH 1242. Amazonia from the Prehuman to the Present (HIST 1360).

Interested students must register for HIST 1360.

ARCH 1250. Minoans and Mycenaeans: Greece in the Bronze Age.

This class offers an introduction to the archaeology and art of the civilizations that arose on mainland Greece, Crete, the Aegean and Cyprus in the third and (especially) the second millennium B.C. The principal emphasis is on understanding the rise and collapse of palatial/state-level societies in these regions, with consideration of their sociopolitical, ideological and economic organization, and their interactions with neighboring cultures.

ARCH 1278. Greeks and 'Others' in the Mediterranean (CLAS 1120S).

Interested students must register for CLAS 1120S.

ARCH 1282. Mediterranean Culture Wars: Archaic Greek History, c. 1200 to 479 BC (CLAS 1210).

Interested students must register for CLAS 1210.

ARCH 1283. The Fragility of Life in Ancient Greece (CLAS 1130).

Interested students must register for CLAS 1130.

ARCH 1287. Holy Places and Sacred Spaces in Ancient Greece (CLAS 1750R).

Interested students must register for CLAS 1750R.

ARCH 1300. Greek Architecture.

This course will trace the history of Greek Architecture from the Bronze Age through the Hellenistic Period. Emphasis is placed on the Archaic and Classical Periods and on the formation and implementation of the three major Greek orders (Doric, Ionic, Corinthian). Importance is placed on understanding construction techniques and the intricate relationship between form and function of the Greek orders.

ARCH 1305. Myth and Narrative in Greek Art.

From Homeric epics to Athenian tragedies, masterpieces of mythological narrative form the backbone of Greek literature. But myth and storytelling were also powerful forces in Greek art — from vase painting to monumental sculpture. This class asks how myth in art responded to social realities or political developments, and what was the role or agency of the artist as a creator of content? How did myths evolve over time or take on new meanings in different contexts? Our class will look at many mythological stories in art and learn to "read" Greek visual narrative within its artistic, social, economic, and political setting.

ARCH 1310. Ancient Painting.

Examines selected topics in ancient painting with emphasis on the remains of ancient fresco decoration. Topics are Palaeolithic Painting, Aegean Bronze Painting, Etruscan Painting, Greek Painting of the Fifth and Fourth Centuries (text evidence), Roman Painting, Roman Painting as reflected in Mosaic.

ARCH 1430. The Philistines.

The Philistines were long considered to be trouble-makers and uncultured; however, recently their true character has been revealed. The origin, culture, social organization, political affiliations, religion, artwork, and technology of the Philistines, who inhabited Palestine during the Iron Age (ca. 1200-734 B.C.E.), will be elucidated through the examination of archaeological data and some textual evidence and pictorial representations.

ARCH 1434. Jews, Chrstns, Muslm (UNIV1003).

Interested students must register for UNIV 1003.

ARCH 1436. The Archaeology of Jerusalem: From the Origins to the Ottomans (JUDS 1610).

Interested students must register for JUDS 1610.

ARCH 1437. The Archaeology of Palestine (JUDS 1615).

Interested students must register for JUDS 1615.

ARCH 1438. Jerusalem since 1850: Religion, Politics, Cultural Heritage (JUDS 1620).

Interested students must register for JUDS 1620.

ARCH 1439. Jerusalem Divided: Politics and Cultural Heritage (URBN 1870K).

Interested students must register for URBN 1870K.

ARCH 1440. Synagogues, Churches, and Mosques.

Reviews the discoveries and related scholarship of ancient synagogues, churches, and mosques in ancient Palestine. Focuses on their architectural and decorative as well as their spiritual and religious characteristics, and examines how those institutions influenced each other throughout their history of development.

ARCH 1441. Ancient Synagogues, Churches, and Mosques in Palestine (JUDS 1670).

Interested students must register for JUDS 1670.

ARCH 1443. Pilgrimage and Sacred Travel in the Lands of Islam (RELS 1520).

Interested students must register for RELS 1520.

ARCH 1448. Digging for the Bible: Science, Religion, and Politics (JUDS 1974).

Interested students must register for JUDS 1974.

ARCH 1450. Qumran and the Dead Sea Scrolls.

Examines the scholarly interpretations of the site and the scrolls. Attempts to determine the relationship between the archaeological and textual evidence.

ARCH 1475. Petra: Ancient Wonder, Modern Challenge.

The rose-red city of Petra in southern Jordan is a movie star (Indiana Jones and the Last Crusade). It is a tourist mega-hit (over half a million visitors annually). It was recently voted one of the New 7 Wonders of the World. This class will explore the history and archaeology of Petra and debate how best to present and preserve the site, as well as discussing (and planning!) Brown's ongoing fieldwork at this beautiful, but fragile, place. Enrollment limited to 15. Not open to first or second year students.

ARCH 1481. The Silk Roads, Past and Present (HIST 1974A).

Interested students must register for HIST 1974A.

ARCH 1482. Power, Profit, and Pillage: The Rise and Fall of Trading Kingdoms in Asia (ANTH 1540).

Interested students must register for ANTH 1540.

ARCH 1484. Attachment to Objects in Chinese Literature (EAST 1950P).

Interested students must register for EAST 1950P.

ARCH 1486. The Bureaucracy of Hell: Envisioning Death in East Asian Art (HIAA 1213).

Interested students must register for HIAA 1213.

ARCH 1487. Environmental History of East Asia (HIST 1820B).

Interested students must register for HIST 1820B.

ARCH 1490. Ancient Central Asia in the Shadow of Alexander.

Popular imagination frames Central Asia as a marginal area whose relevance emerged only after the conquest of Alexander the Great – a faulty interpretation influenced by Orientalist bias. In contrast, this course turns its focus to the global and lasting impact of ancient indigenous cultures of Central Asia – Afghanistan and the former Soviet Republics – before and after the arrival of Greco-Macedonian colonialism, through the lenses of archaeology, art, and history. We will also consider Central Asia as a case study for broader approaches to issues around state power, identity, migration, resilience, and inequality in the ancient world.

ARCH 1492. The Priest-Kings and Village Life of Ancient Pakistan and India.

The Indus Civilization was the largest culture in the Bronze Age, extending over Pakistan and much of India. It produced sculptures of priest-kings and dancing girls, seals imprinted with magical beings, vast water systems, and monumental structures. But it remains such a mystery that archaeologists can't even read its texts: the Indus script is still undeciphered. This course will look at the remarkable material culture of the Indus and famous sites like Harappa and Mohenjo Daro, but will also introduce current research examining grassroots change effected by villagers in their daily lives.

ARCH 1494. Southeast Asia's Entangled Pasts: Excavated, Curated, and Contested.

Behind the caricature of Southeast Asia as an exoticized land of temples and tradition lies a conflicted past entangled with competing claims to power, identity, and territory. This course explores the history of that region (Indonesia, Singapore, Malaysia, Thailand, Myanmar, Cambodia, Laos, Vietnam, and the Philippines), examining how ancient ruins were used to justify postcolonial national states; how museums and monuments have bolstered authoritarian regimes and sparked democratic protests; and how circulation of artifacts and artworks sets off diplomatic disputes and connects diasporic communities. Students will also engage with relevant material cultures and artistic practices in the Providence area.

ARCH 1500. Classical Art from Ruins to RISD: Ancient Objects/ Modern Issues.

Our class will use RISD Museum's ancient Greek and Roman collection as a framework to discuss art history, museum studies, heritage management, and world affairs. We will move beyond the pleasing aesthetics of classical art to grasp the objects' social and cultural contexts, and their role in structures of power, privilege, and colonialism – particularly examining issues of race, class, gender, sexuality, migration, and cross-cultural contact. What are the ethical responsibilities of museums – and universities – within this discourse?

ARCH 1501. Islamic Art in the RISD Museum: Thinking With Objects (HIAA 1418).

Interested students must register for HIAA 1418.

ARCH 1515. The Fair Sex: Female Body and Sexuality in the Ancient World.

Maidens, wives, goddesses, prostitutes, monsters. This course examines constructed concepts and stereotypes of "femininity", "gender", and "sexuality" and considers how – or even whether – they might be applied to art, archaeology, and literature of the ancient Mediterranean and Near East. Topics include representations of the female body and sexuality in art; notions of aesthetics, beauty, and perfection; nudity and taboo; women in myth, literature, and ritual; burials and funerals; gender roles and tropes of femininity; zones of female agency and authority; and multiply marginalized women (immigrants, enslaved workers).

ARCH 1517. Growing Up Ancient: Childhood, Gender, and Identity in the Ancient World.

How were childhood and femininity culturally constructed in the ancient world? How did factors like class, race, religion, and imperialism shape the actual bodies and perceived identities of women and children?

This course will explore these questions by incorporating perspectives from archaeology, biological anthropology, and social history. Through analyses of ancient material culture and texts, readings from contemporary scholarship, and hands-on activities, students will draw connections between women and children of the past and present, in diverse cultural contexts. Case studies range from the Wari and Inca to the Roman world, medieval Europe, and Indigenous North America.

ARCH 1518. Women and Families in the Ancient Mediterranean (HIAA 1302).

Interested students must register for HIAA 1302.

ARCH 1520. Encountering the Foreign: The Archaeology of Diplomacy.

Human societies have long been both intrigued and frightened by the foreign and exotic, from objects, peoples, and practices that appear "different". Out of these encounters with the unknown evolved a way to manage these interactions: what we now call diplomacy. This course focuses on the earliest forms of diplomacy in the societies of the Bronze Age eastern Mediterranean, examined through the lens of material culture, texts, and art, while also considering how disciplines such as sociology, psychology, and anthropology might expand our understanding.

ARCH 1525. Struggle and Domination in the Prehistoric Mediterranean: Sex Power God(s).

Humans seek to survive, adapt, develop, and thrive. Yet our species is also prone to power struggles, violence, and domination. This strife can be seen in the findings of the latest archaeological and ethnographic research – which casts doubt on the peaceful, egalitarian societies sometimes imagined in the prehistoric past. This course will examine power and inequality in the prehistoric Mediterranean, considering such vectors as religion, human-nonhuman relationships, monument building, technological innovations, death, and sexuality.

ARCH 1536. Archeological Ethnographies: Heritage and Community in the Mediterranean (ANTH 1126).

Interested students must register for ANTH 1126.

ARCH 1538. Heritage Under Fire: From Conflict to Understanding, Memory, and Reconciliation.

This course examines the intricate relationships among the past, politics, and contemporary archaeology in conflict zones, particularly in the Middle East and North Africa regions. Discussions will include the political and moral agendas entangled in cultural heritage advocacy, the biases inherent in interpreting cultural heritage, and the use of history and archaeological evidence to legitimize societal divisions, as well as how factors such as colonialism, nationalism, terrorism, and armed conflicts impact heritage. How can archaeology contribute to fostering reconciliation and healing?

ARCH 1540. Cultural Heritage: The Players and Politics of Protecting the Past.

From Antarctica to Zimbabwe, cultural heritage encompasses the very old and the still in use, the man-made and the natural, the permanent and the ephemeral – even the invisible and the edible. This course will explore issues of modern threats to cultural heritage such as tourism and development, questions of authenticity and identity, and archaeology's intersection with law, ethics, public policy, and economics.

ARCH 1541. Cultural Heritage in Crisis (HIAA 1010).

Interested students must register for HIAA 1010.

ARCH 1543. Decolonizing Classical Antiquity: White Nationalism, Colonialism, Ancient Material Heritage (MGRK 1220).

Interested students must register for MGRK 1220.

ARCH 1544. Heritage in the Metropolis: Remembering and Preserving the Urban Past (URBN 1871A).

Interested students must register for URBN 1871A.

ARCH 1549. Art and Crime: The History and Hazards of Collecting the Classical (HIAA 1306).

Interested students must register for HIAA 1306.

ARCH 1550. Who Owns the Classical Past?

The purpose of this course is to offer a forum for informed discussion of a variety of difficult questions about access to the classical past, and its modern-day ownership and presentation, seen primarily from the perspective of material culture (archaeology, art, museum displays, etc.).

ARCH 1570. Cold Hard Cash: The Materiality of Money in Ancient and Modern Finance.

Now more than ever we are in need of new perspectives on the value and meaning of money. This course examines the origins of a metal-based financial system in ancient Mesopotamia and the development of finance over time -- including not only the valuation of metal but also of gifts and other commodities. We will prioritize archaeological and anthropological approaches as a way to offer both time depth and insight into today's troubled financial climate. Enrollment limited to 50.

ARCH 1572. Economy of Ancient Greece: New Approaches (CLAS 1930E).

Interested students must register for CLAS 1930E.

ARCH 1575. Lost and Found: Coinage and Culture in the Roman Empire.

Coins tend to be overlooked as sources of information about the ancient world, being used principally to date other objects. This is quite short sighted, for coins are themselves rich and revealing archaeological artifacts. Evidence of how coins were made, used, and lost will be explored during the seminar, in connection with recent debates about the ancient economy, the expression of identity through material culture, Roman colonialism and ethics of collecting cultural property.

ARCH 1600. Archaeologies of the Near East.

Writing, urbanism, agriculture, imperialism: the ancient Near East is known as the place where earliest agriculture flourished, cities were developed and writing was invented. This course offers a detailed examination of the region's archaeological history and current archaeological practice, in connection with its political engagements including Western colonialism and the formation of nation states. The social and cultural history of the Near East from prehistory to the end of Iron age (300 BC) will also be discussed. Studying the material remains of the ancient past, we will investigate various interpretive approaches and concepts used within Near Eastern archaeology. The main goal of the course is to develop a critical understanding of ancient societies and their material culture from an interdisciplinary, post-colonial perspective.

ARCH 1602. The Age of Empires: The Ancient Near East in the First Millennium BC (ASYR 1300).

Interested students must register for ASYR 1300.

ARCH 1603. Color and Culture in the Ancient Near East (ASYR 1160).

Interested students must register for ASYR 1160.

ARCH 1604. Borderlands: Art and Culture between Rome and Iran (HIAA 1432).

Interested students must register for HIAA 1432.

ARCH 1605. Holy Spirits: Ancestor Worship in the Ancient Near East and Beyond.

Looking at ancestor veneration in both the ancient and the modern world – from Mesopotamia and Egypt, to the Classical World and the Americas – this course will focus on three different angles: individual, communal, and material. We will consider grief, mourning, loss, and death's impact on families, kin, or elites. How did ancestors shape communities' social memories, identities, and religious practices? Finally, we will explore spirits' material traces, examining specific ancestral monuments and landscapes.

ARCH 1606. Imagining the Gods: Myths and Myth-making in Ancient Mesopotamia (ASYR 1100).

Interested students must register for ASYR 1100.

ARCH 1609. Ancient Babylonian Magic and Medicine (ASYR1500).

Interested students must register for ASYR 1500.

ARCH 1612. The Persian Empire and Achaemenid Culture (CLAS 1230).

Interested students must register for CLAS 1230.

ARCH 1615. Art/Artifact: The Art and Material Culture of Africa.

The course introduces students to the central ideas and controversies in African art and material culture (pre-colonial, colonial and post-colonial). We will explore visual and spatial representations of Africa, such as personal adornment, utilitarian objects, sculpture, textiles, painting, masquerade, rock art, and architecture. Paying attention to issues such as identity, religion, politics, collecting practices, and activist art, students will examine African material culture through the multiple lenses of cultural biography, primitive art, tourist art, heritage ethics, and repatriation. Students will have the opportunity to study, handle, and curate African objects from the Haffenreffer Museum's collections. Enrollment limited to 20. First year students require instructor permission to enroll.

ARCH 1616. Between Sahara and Sea: North Africa from Human Origins to Islam.

From the early stages of human evolution to the present, this course explores the deep past of North Africa. Rejecting the colonialist perspectives typical of the study of the region, we will study its indigenous peoples and their long-term relationships with the Mediterranean, the Near East, the Sahara and Tropical Africa. Students are encouraged to bring their own interests (art, music, literature, technology) to their experience of the class.

ARCH 1618. Barbarians, Byzantines, and Berbers: Early Medieval North Africa, AD 300-1050 (HIST 1963L).

Interested students must register for HIST 1963L.

ARCH 1620. Conquest to Conversion: The Formation of the Islamic World.

How did the Arabs, originally a small group of tribes, come to conquer and rule a vast region from Spain to Iran? And how did their faith – Islam – become a major world religion? Moving between past to present, we will use the evidence of texts, landscapes, architecture and images to examine how an Arab state emerged, to explore what it meant to be Muslim and/or Arab, and to follow the spread of Islam.

ARCH 1621. Pyramids, Power, Propaganda: Ancient Egyptian History to 1300 BCE (EGYT 1430).

Interested students must register for EGYT 1430.

ARCH 1623. Ancient Egyptian Art and Architecture (EGYT 1500).

Interested students must register for EGYT 1500.

ARCH 1624. Ancient Egyptian Art II (EGYT 1510).

Interested students must register for EGYT 1510.

ARCH 1625. Temples and Tombs: Egyptian Religion and Culture.

Religion was central to life in ancient Egypt, and this course will examine Egyptian religion through its material culture. Students will explore temples and tombs as the physical settings for priestly ritual and private devotion, including feeding and clothing the gods and communication with the dead. The course will also address evidence for private domestic cult and the overlap between religious and magical practice.

ARCH 1627. Daily Life In Ancient Egypt (EGYT 1465).

Interested students must register for EGYT 1465.

ARCH 1630. Fighting Pharaohs: Ancient Egyptian Warfare.

When and why did the ancient Egyptians engage in war? Who was fighting? What were their weapons like and what were their military strategies? What were the political situations that caused them to go to war? How did warfare impact Egyptian society? In studying Egyptian history and society through the pervasive motif of war, we will gain an understanding of the forces that shaped Egyptian culture. Enrollment limited to 55.

ARCH 1633. Black Pharaohs: Nubian Rule over Egypt in the 25th Dynasty (EGYT 1455).

Interested students must register for EGYT 1455.

ARCH 1635. The Great Heresy: Egypt in the Amarna Period.

At the height of Egypt's power in the New Kingdom, King Amenhotep IV initiated a religious revolution that affected all aspects of Egyptian high culture. Declaring the sun-disc, Aten, to be the sole god, this king changed his name to Akhenaten and moved the capital city to a new site at Amarna. Along with this move came massive shifts in everything from temple worship to art, international relations to funerary religion. This course will set the Amarna period in its context, examining remains from the reign before Akhenaten to the restoration of traditional Egyptian religion under his immediate successors, including King Tutankhamun. Enrollment limited to 50. Not open to graduate students.

ARCH 1636. Collapse! Ancient Egypt after the Pyramid Age (EGYT 1030).

Interested students must register for EGYT 1030.

ARCH 1637. Egypt After the Pharaohs: Archaeology and Society in the Coptic and Early Islamic Periods (EGYT1470).

Interested students must register for EGYT 1470.

ARCH 1642. Queering Ancient Egypt.

Queering history is a means of challenging heteronormative narratives of the past. In this course, we will critically examine the archaeological evidence for concepts such as gender, sexuality, and the body in ancient Egypt. The goal of this class is to discover what archaeology can reveal about identity formation in the past, but also to explore how modern conceptions of identity impact our writing of history. Thus, this course will address both the marginalization of gendered identities in historical research about ancient Egypt, as well as the reception of ancient identities in contemporary society.

ARCH 1650. The Etruscans: Italy before the Rise of the Romans.

The Etruscan people dominated the Italian peninsula for centuries before the Romans became a Mediterranean power, but left behind little textual evidence of their culture. Focusing on architecture, artistic production, and funerary practice, we will study the "enigmatic" Etruscans and their contacts with the Greeks and early Romans, and consider their impact on Rome and on modern Italian archaeological scholarship.

ARCH 1666. Archaeologies Out of the Mainstream: Representing the Past from Ancient Aliens to Modern Nationalism.

Have you ever wondered what's beyond academic archaeology? Have you ever watched "Ancient Aliens" or "Searching for the Lost Giants", or read "Chariots of the Gods"? "Alternative" archaeologies are the most popular form of presenting the human past. This course will take a critical look at different types of alternative archaeologies, both past and present, to understand how they intersect and interface with academic understandings of archaeology and human history. Be prepared to quell academic prejudices and rattle your comfort zone.

ARCH 1670. The Beginning of the End? Neolithic "Revolutions" and the Shaping of the Modern World.

How did the first farmers and settled human communities live their lives? How did they reshape the landscape, invent new forms of elaborate dwelling, and establish new relationships with plants and animals? And are the roots of some of our contemporary problems, including social inequality and patriarchy, to be found in the Neolithic? These are some of the questions we will be exploring in this course, using material from the European and Anatolian Neolithic and other, global, contexts.

ARCH 1700. Architectural Sculpture of Ancient Greece and Rome.

What would Times Square or Rockefeller Center have looked like in antiquity? What would have been advertised, and by whom? This course examines the themes, style, and contexts of the sculptural programs that decorated public buildings from the Greco-Roman world, their connections to other visual media and to the landscape, and their reflections of different cultural, civic, and elite identities.

ARCH 1703. Water and Architecture (HIAA 1910D).

Interested students must register for HIAA 1910D.

ARCH 1703A. Water and Architecture (HIAA 1101C).

Interested students must register for HIAA 1101C.

ARCH 1705. The Palaces of Ancient Rome (HIAA 1301).

Interested students must register for HIAA 1301.

ARCH 1707. Seven Wonders of the Ancient World (CLAS 1120Q).
Interested students must register for CLAS 1120Q.

ARCH 1708. Sacred Sites: Law, Politics, Religion (RELS 1610).
Interested students must register for RELS 1610.

ARCH 1709. Places of Healing: Memory, Miracle, and Storytelling (HMAN 1970D).
Interested students must register for HMAN 1970D.

ARCH 1710. Architecture and Memory.
Buildings and monuments have been mediators of the past, with their powerful presence and often turbulent histories. Stories cling to their stones, which become residues of the human lives that shape them. Memories, imaginations and experiences, collectively shared or individual, give meaning to architectural spaces. This course explores the intersections of memory and architecture through various archaeological case studies from the ancient world.

ARCH 1711. Iconoclasm: Destroying Images in the Near East and Beyond (ASYR 1090).
Interested students must register ASYR 1090.

ARCH 1713. Architectural Reuse: The Appropriation of the Past (HIAA 1440F).
Interested students must register for HIAA 1440F.

ARCH 1715. Building Big! Supersized Architectural and Engineering Structures From Antiquity.
Sometimes size does matter. The need and desire to "build big", to create colossal architectural or sculptural things, was a constant feature of antiquity, from temples to portraits, from tunnels to fortifications. Who and what lay behind this apparent architectural megalomania? What practical challenges to construction had to be overcome? And how have such monuments affected our understanding, both of the ancient world and of modern means of self-representation? Enrollment limited to 50.

ARCH 1720. How Houses Build People.
Archaeologists usually worry about how people in the past built houses. This course will flip the question on its head and ask: how do houses build people? Just what is a 'house'? What is a 'home'? Making use of an array of regional case studies, from different time periods, we will question how cultural values and norms can be extracted from, and explore the idea of the domestication of humans through architecture. Enrollment limited to 50. Not open to first year students.

ARCH 1764. Under the Microscope: 250 Years of Brown's Material Past.
An archaeologist will tell you that to learn a university's history, you must uncover and investigate its treasures, trash, tools and toys. An engineer will tell you that to understand such objects, you must study how these things were made, in what materials and with what technologies. This co-taught course unites these two disciplines for a unique exploration of Brown's past, combining interdisciplinary discussions, hands-on laboratory work, and individual historical and material analysis of an artifact selected from 250 years of life on College Hill.

ARCH 1765. Pandemics, Pathogens, and Plagues in the Greek and Roman Worlds.
Terror of mass illness is nothing new; as long as there have been humans, there has been disease. These pandemics and plagues have had mortal impacts on past societies, much as contemporary plagues affect today's economies, social and political structures, and populations. This class considers disease and society in the ancient Greek and Roman worlds, beginning with the Plague of Athens in 430 BC and continuing to the outbreak of the 'first pandemic' of bubonic plague in AD 541. We will examine these case studies through archaeological material, written accounts, DNA analysis, palaeoclimate reconstruction, and palaeopathology.

ARCH 1768. Death in the West (CLAS 1420).
Interested students must register for CLAS 1420.

ARCH 1769. Unearthing the Body: History, Archaeology, and Biology at the End of Antiquity (HIST 1835A).
Interested students must register for HIST 1835A.

ARCH 1770. Grave Matters: The Archaeology of Death, Decay, and Discovery.

How do archaeologists study coffins, tombs, and human remains to learn about ancient societies? This course will explore the theory and practice of the archaeology of death. Topics will include the inference of social organization from mortuary remains, the experience of death and dying, social memory, identity, and others. Students will learn approaches to mortuary excavation and consider the politics and ethics of conducting burial archaeology globally. Enrollment limited to 55. Not open to first year students.

ARCH 1771. Archaeology of Death (ANTH 1623).
Interested students must register for ANTH 1623.

ARCH 1772. The Human Skeleton.
More than simply a tissue within our bodies, the human skeleton is a gateway into narratives of the past -- from the evolution of our species to the biography of individual past lives. Through lecture and hands-on laboratories, students will learn the complete anatomy of the human skeleton, with an emphasis on the human skeleton in functional and evolutionary perspective. We will also explore forensic and bioarchaeological approaches to the skeleton. By the course's conclusion, students will be able to conduct basic skeletal analysis and will be prepared for more advanced studies of the skeleton from medical, forensic, archaeological, and evolutionary perspectives.

ARCH 1773. Bioarchaeology and Forensic Anthropology (ANTH 1750).
Interested students must register for ANTH 1750.

ARCH 1774. Microarchaeology.
Sediment -- informally called 'dirt' or 'soils' -- is a rich source of untapped information on ancient natural, animal, and human activity: the foundations of microarchaeology. This course will introduce students to key microarchaeological concepts including site-formation processes, human-environmental interactions, and chemical and microremain assemblages. Case studies will include the geoarchaeological fingerprints of destruction; lifeways in cave shelters, pastoral encampments, and urban households; origins of agriculture and use of fire; and -- everyone's favorite topic -- what can be learned from human and animal excrement. Hands-on archaeological experiments, field collection, and laboratory methods will be introduced.

ARCH 1775. Animals in Archaeology.
Food, foe, friend: animals play all these roles, and more, in their relationship to humans, in the past as well as the present. This course will explore how zooarchaeology -- the study of animal remains (bones, teeth, and shells) -- allows us to reconstruct ancient human-animal-environmental interactions. We will cover a range of topics and analytical techniques, including hands-on sessions for the identification and quantification of faunal remains. Additional topics will include ancient DNA in zooarchaeology, bone stable isotope analyses, human-caused extinctions, animal domestication, bone artifact production, and animal sacrifice. Enrollment limited to 20. Not open to first year students.

ARCH 1776. Animal Acts (ERLY 1150).
Interested students must register for ERLY 1150.

ARCH 1777. Animals in the Ancient City: Interdependence in the Urban Environment (ERLY 1155).
Interested students must register for ERLY 1155.

ARCH 1778. Animal, Vegetable, Mineral: Environmental Histories of Non-Human Actors (HIST 1976C).
Interested students must register for HIST 1976C.

ARCH 1780. Violence and Civilization: A Deep History of Social Violence.
Why do we do violence to one another? This course will foster a sustained and critical reflection on social violence, history and humanity. We will explore social orders through time, together with their practices and moral economies of permissible and impermissible violence. Different conceptions of violence ("symbolic," "structural," and "routine") will be considered, in conjunction with their intersections with the many, ambivalent meanings of "civilization." No prerequisites required.

ARCH 1787. Alcohol in the Ancient World.

From the earliest Neolithic experiments with fermentation to the elaborate drinking cultures of the Classical world, alcohol has infused and influenced social life for thousands of years. This course provides an introduction to the production and consumption of beer, wine, and other beverages in the ancient world. Case studies from across the globe demonstrate that alcohol was (and is) a uniquely potent form of material culture, embedded within complex webs of social, political, economic, and ritual activity.

ARCH 1790. The Nature and Culture of Disaster.

Our view of nature forms the basis of environmental studies, ecotourism, heritage management, and contemporary debates over global warming that impact both public policy and the very way we lead our lives. This course draws from theorists (such as Douglas, Latour, Strathern and Spivak), as well as recent anthropological test cases from Amazonia, Papua New Guinea, and South Africa to look at how humans in the 21st century view nature in terms of stability, instability and disaster. How should we assess the 'risk culture' in which we currently live?

ARCH 1791. Slavery, Materiality, and Memorialization (AFRI 1050X).

Interested students must register for AFRI 1050X.

ARCH 1792. The Archaeology of Slavery.

No one would question that slavery leaves invisible and painful marks on all individuals and societies touched by it. But slavery leaves behind many physical, recoverable traces as well: plantations, slave forts, slaving wrecks, burial grounds. From such evidence, this course will explore four centuries of slavery in the Atlantic world, asking not only about how people coped in the past, but about the legacy of slavery in our world today.

ARCH 1793. Slavery in the Ancient World (CLAS 1120E).

Interested students must register for CLAS 1120E.

ARCH 1794. Questions of Remembrance: Archaeological Perspectives on Slavery in the New World (ANTH 1625).

Interested students must register for ANTH 1625.

ARCH 1795. Living and Material Landscapes of the African Diaspora (HIAA 1191).

Interested students must register for HIAA 1191.

ARCH 1797. A Migration Crisis? Displacement, Materiality, and Experience (MGRK 1210).

Interested students must register for MGRK 1210.

ARCH 1800. Contemporary Issues in Archaeological Theory.

Why does archaeology matter? Archaeology, the study of the human past through the analysis of material remains, has historically been entangled with various social or political agendas. Who "owns" the past? What is an "expert"? Theory allows us to clarify the lenses through which we view the past to account for subjectivity in our research as we work to answer such questions. In this course, we engage with multiple theoretical approaches, such as queer theory, phenomenology, agency, and post-colonialism, as a means for understanding archaeology's impact across disciplines.

ARCH 1805. The Archaeology of Us: A Material Approach to the Contemporary World.

Archaeology is traditionally seen as exclusively concerned with the past. However, the budding field of contemporary archaeology considers that our own material culture and built environment are equally important to examine archaeologically. This course explores materially-oriented approaches to analyzing our contemporary world, from the study of garbage to the destruction of heritage sites by ISIS. Course material will examine geopolitical crises including migration, militarism, inequality, and environmental devastation. Students will engage with local communities and the Providence area.

ARCH 1810. Under the Tower of Babel: Archaeology, Politics, and Identity in the Modern Middle East.

Present-day political ideologies profoundly impact our understanding of the past. Here we will explore the use and abuse of archaeological pasts in the modern nation states of the Middle East. What do pharaohs mean to modern Egyptians? Why did Saddam Hussein consider himself the last Babylonian king? This course will explore the role of imagined ancient pasts and cultural heritage in the making of collective identities and state ideologies.

ARCH 1816. The Ancient Body: Past Ideas about Human Physicality (ANTH 1660).

Interested students must register for ANTH 1660.

ARCH 1817. Ancient Christianity and the Sensing Body (RELS 1300).

Interested students must register for RELS 1300.

ARCH 1821. (De)Constructing the Other: The Subjectivity of Objects.

Archaeologists rely on interpretation of material remains to construct conceptions of humans in the past. This course explores this creation of archaeology's subjects, with a critical eye toward the inherently political nature of this inventive process. Topics include the deconstruction of the "pots to people" analogy, racial and gendered disciplinary bias, and exposing the problems of unequal representation in the discipline. In connecting past, present, and future, this course seeks to develop strategies for building a more equitable and inclusive brand of archaeological method and thought.

ARCH 1822. Anthropology of Place (ANTH 1910B).

Interested students must register for ANTH 1910B.

ARCH 1830. Fake! History of the Inauthentic.

What is a fake? Who gets to decide what is authentic? Greek statues, Chinese bronzes, Maya glyphs. Have fraudulent objects always existed? Galileo's signature, a centaur's skeleton, Buddhas bearing swastikas. Are all fakes the same? If not, how are they different? Why do people make forgeries? This course revolves around the history of the inauthentic through a diachronic exploration of objects. WRIT

ARCH 1835. Inventing the Past: Amulets, Heirlooms, Monuments, Landscapes.

Long before archaeology and art-history were academic disciplines, individuals and communities manipulated the physical traces of the past in order to imagine and explain their own antiquity. Who cared about these objects and why? What did pre-modern excavations, catalogues, and collections look like and what do they tell us about our own engagements with antiquities? This course delves into the origins of antiquarianism and archaeology, from pre-history to the Renaissance. Enrollment limited to 50.

ARCH 1850. Comparative Empires and Material Culture.

The political, military, and cultural unit of "empire" has, by now, been the subject of numerous and varied studies. This seminar will explore the tangible effects of empires, that is, the art and architecture created when societies are engaged in what can be viewed as asymmetrical power relationships. In order to understand how conditions specific to empire influence the creation, dissemination, and reception of material culture, this course will examine the artifacts of a range of different empires -- the Roman, the Chinese, the British, and the American -- and their unique political, social, and cultural contexts. Enrollment limited to 25.

ARCH 1852. Material Culture Practicum (ANTH 1621).

Interested students must register for ANTH 1621.

ARCH 1854. Handmade: An Archaeological Exploration of Materials and Making.

This interactive course provides an introduction to the archaeology of materials and making. With the goal of developing an embodied appreciation for the archaeological record, we will engage in a series of hands-on activities, each dedicated to the exploration of a different type of material (e.g., clay, stone, wood, and bone). We will also examine theoretical perspectives on the topic and archaeological case studies that highlight the range of techniques employed to transform these materials into objects of use and value. Enrollment is limited to 15.

ARCH 1855. Archaeology and Craft: Experimental Archaeology and the Materials Science of Ancient Technologies.

How did people in the past make the things that archaeologists find today? How can archaeologists learn about processes of design, engineering, and technological change from ancient objects? Students will approach production questions cross-culturally through firsthand involvement with craft processes and materials analysis - from raw materials to finished objects. Practicums will range from participation in blacksmithing and kiln design to learning about pyrotechnology, mechanical properties, and archaeometric techniques. The final class project will be an exhibit affiliated with the Haffenreffer Museum. Enrollment limited to 15. First year students require instructor permission.

ARCH 1860. Engineering Material Culture: An Introduction to Archaeological Science.

Unlikely bedfellows? No way! This course demonstrates how well archaeology (the humanities) and engineering (the hard sciences) can do business together. An introduction to the world of archaeological science, presented from the dual perspectives of material culture studies and materials science. Students will be introduced to a range of methodologies, instrumentation, and interpretive approaches through a combination of hands-on laboratory work, guest lectures, and interdisciplinary group research. Student must have already completed at least two university courses in archaeology, engineering, or any related discipline. Enrollment is limited to 20. Priority will be given to admitting a proportional number of students from archaeology, engineering and related fields.

ARCH 1865. Environmental Amnesia: How to Navigate Losses in Nature by Looking at the Past (ENVS 1879)..

Interested students must register for ENVS 1879.

ARCH 1867. Pastoralism and Power: Lush Lives of Arid Landscapes.

Deserts are often viewed as harsh, unwelcoming landscapes. However, human activity flourishes on these arid margins of civilization. Beginning with the physical landscape – the geology, geography, and hydrography – this class will then trace its influence on deserts' social and political landscapes: communities, kinship and tribes, pastoral nomadism, trade, and territorial power struggles. Through case studies from the Negev, Sinai, and Arabian Deserts, we will explore how archaeology and archaeological science inform us about desert people, their world views and ideologies, and their strategies for thriving in arid landscapes.

ARCH 1868. River Histories (HIST1974D).

Interested students must register for HIST 1974D.

ARCH 1870. Environmental Archaeology.

From Neanderthals on the brink of extinction to the smog of the Industrial Revolution, humans have been impacted by the environment for millions of years. How has climate change affected the development of human society? How have people adapted to their environments in the past? What does "sustainability" mean over the long term? Environmental archaeology is the study of these questions through the use of scientific techniques to analyze soils, plants, artifacts, and human and animal remains from ancient archaeological contexts. These methods will be introduced with an eye toward how they allow us to interpret human-environmental interactions in the past, as well as the present and future.

ARCH 1873. Imperialism and Environmental Change (HIST 1976I).

Interested students must register for HIST 1976I.

ARCH 1874. The Anthropocene: The Past and Present of Environmental Change (ENVS 1910).

Interested students must register for ENVS 1910.

ARCH 1875. Sustainability - Past and Present.

Our daily lives -- and our national politics -- are increasingly impacted by both fears and effects of global warming and climate change. However, ours is not the first society that has struggled with issues of conservation, governance, infrastructure, and resilience. This course will introduce students to the social and ecological challenges of sustainability, past and present, through the lenses of archaeology and political ecology -- including scientific, technological, and social strategies. This includes asking, "sustainable for whom?" -- who benefits from (or is harmed by) environmental policies and transformations?

ARCH 1877. The Pictured Text (ANTH 1830).

Interested students must register for ANTH 1830.

ARCH 1878. Illustrating and Interpreting the Past: Visual Representation in Archaeology (ANTH 1470).

Interested students must register for ANTH 1470.

ARCH 1879. A World in Color: Seeing and Experiencing Colors in Ancient Times.

Filtered through the lens of western aesthetics, history books often describe the past in black and white. Scholars even receive death threats for asserting that marble statues were not pristine white in antiquity. But imagining the ancient world in all its colors is to see a fuller picture of the art, fashion, values, and struggles of the past. This class investigates the meaning of color as a culturally mediated and charged phenomenon, using not just art historical approaches, but contemporary critical theory, linguistics, and economics.

ARCH 1880. Archaeo-Geophysical Survey and Visualization.

Geophysical survey data act as primary information for locating archaeological sites, and contribute new perspectives when investigating existing sites. This course will develop students' understanding of basic geophysical processes, through hands-on field-based data acquisition with ground penetrating radar, magnetometry, and resistance survey techniques. We will also experiment with approaches to data management and visualization. The course will conclude with students conducting a comprehensive multi-technique field survey of an archaeological site. Enrollment limited to 20 juniors, seniors, and graduate students.

ARCH 1881. Introduction to Geographic Information Systems and Spatial Analysis (ANTH 1201)..

Interested students must register for ANTH 1201.

ARCH 1882. Introduction to Geographic Information Systems for Environmental Applications (EEPS1320)..

Interested students must register for EEPS 1320.

ARCH 1883. Global Environmental Remote Sensing (GEOL 1330).

Interested students must register for GEOL 1330.

ARCH 1884. Remote Sensing of Earth and Planetary Surfaces (EEPS 1710).

Interested students must register for EEPS 1710.

ARCH 1887. Illustrating Knowledge (HIAA 1101A).

Interested students must register for HIAA 1101A.

ARCH 1892. Non-Destructive Archaeology: Reconstructing the Past from Geophysics to Drones.

Archaeology is not just digging! As archaeologists have become more cautious about excavation, technological developments have transformed our ability to detect the past. We can now analyze entire settlements through the aid of drones, spy satellites, magnetometers, and ground penetrating radar. Yet such technologies come at a social and ethical cost -- particularly pertaining to indigenous rights, private property, and mass surveillance. Through hands-on training, lectures, and discussion, this course explores the methods and theory behind archaeological remote sensing and geophysics, and the legal framework and ethical issues around these approaches.

ARCH 1900. The Archaeology of College Hill.

A hands-on training class in archaeological field and laboratory techniques. Topics include the nature of field archaeology, excavation and survey methodologies, archaeological ethics, computer technologies (such as GIS), and site and artifact analysis and conservation. Students will act as practicing archaeologists (i.e., actually dig and analyze the results!) through the investigation of local historical and archaeological sites in the College Hill area (e.g. the First Baptist Church of America and Brown University's Quiet Green).

ARCH 1902. Material Culture Practicum (ANTH 1621).

Interested students must register for ANTH 1621.

ARCH 1970. Individual Study Project in Old World Archaeology and Art.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ARCH 1990. Senior Honors Thesis in Archaeology and the Ancient World.

Honors students in Archaeology and the Ancient World who are completing their theses should enroll in this course in their final semester. The subject of the thesis and program of study will be determined by the needs of the individual student. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ARCH 2000. Mediterranean and Near Eastern Archaeologies: Research Traditions and Practices.

This course offers an overview of the history and practice of archaeology in and of the Mediterranean and Near East for the past two centuries. What impact have national and linguistic boundaries, foreign schools, and colonialism had on the archaeology of the region? Through surveys of research and analysis of original publications (site reports, syntheses, autobiographies, etc.) and primary documents (personal letters, diaries, photographs, sketches, notes, etc.), students will be exposed to the theories, methods, and purported goals of archaeological endeavors in the Mediterranean, as well as to the major academic and political debates that have shaped the field.

ARCH 2006. Principles of Archaeology (ANTH 2501).

Interested students must register for ANTH 2501.

ARCH 2010A. Ancient Numismatics.

Deals with problems in ancient numismatics from these topics: introduction of coinage, major coinages of archaic Greece, coinage of 4th C.B.C. in the Greek west and Roman coinage of 3rd C.B.C.

ARCH 2010B. Approaches to Archaeological Survey in the Old World.

Recent decades have witnessed a marked development of interest in regional approaches to the ancient world and its landscapes. This seminar will explore the history of this development, as well as survey's impact on the work of both ancient historians and archaeologists. Topics to be covered include survey design and methodology, and the wider implications and lessons of regional analysis.

ARCH 2010C. Architecture, Body and Performance in the Ancient Near Eastern World.

This seminar investigates the relationship between bodily practices, social performances, and production of space, using case studies drawn from ancient Mesopotamia, Anatolia, and Syria. Employing contemporary critical theories on the body, materiality, and social practices, new theories of the making of architectural spaces and landscapes will be explored with respect to multiple geographical, historical contexts in the Ancient Near East.

ARCH 2010D. Archaeology and Religion: Excavating the Sacred from Prehistory to Islam.

This course explores methodological approaches and theoretical underpinnings of scholarly (and sometimes unpopular) interpretations of the archaeological record as evidence for the religious life of past societies, considering how archaeologists have treated the analytical categories of ritual, religion, ideology, and the sacred. These discussions will be examined through Mediterranean case studies as a key region in the archaeology of religion.

ARCH 2010E. Archaeology in the Information Age.

Archaeology must circulate the material past in two dimensions. The right combination of image (maps, plans, photographs) and text has long defined professional archaeology. However, the current explosion of digital media has spurred profound shifts in all domains of archaeological practice and documentation. This course encourages reevaluation of archaeological media, which pertains to information technology across the humanities and sciences.

ARCH 2010F. GIS and Remote Sensing: Advanced Applications in Archaeology.

Geographical Information Systems (GIS) and various forms of remote sensing are increasingly essential components of good archaeological practice. This advanced course is intended primarily for students with some background in GIS software, and who have evolved a relevant research project to develop over the course of the term. Less advanced graduate students may enroll with permission of the instructor and will be provided with additional tutorial instruction.

ARCH 2010G. Ethical Issues in Archaeology.

Graduate students will certainly confront ethical, legal, and professional issues in the course of their own doctoral research and subsequent careers. This seminar offers a forum for open, but well-informed, discussion of a variety of significant ethical problems and dilemmas currently facing the discipline of archaeology worldwide. We will give attention to practical matters arising from archaeological field research, as well as a wide range of difficult questions concerning ownership and presentation of the past. Open to graduate students only.

ARCH 2020A. Greek Vase Painting.

No description available.

ARCH 2020B. Topography of the City of Athens.

No description available.

ARCH 2020D. Greek Painting.

Major developments in the history of Greek painting with special emphasis on archaic and classical Greek culture as reflected in vase painting. There will be field trips to area museums which may take longer than class time.

ARCH 2020E. Economy and Trade in the Later Bronze Age Aegean and East Mediterranean.

Beginning with an examination of the workings of the Mycenaean palace economy, including the evidence of Linear B documents, this seminar will then turn to a more inclusive consideration of trade and exchange involving Aegean states and their counterparts further east, and of the nature and extent of cultural interaction between them during the later Bronze Age (ca. 1600-1100 BC).

ARCH 2030A. Late Roman and Early Christian Mosaics.

Study of Christian, Jewish, and secular mosaics of the Late Roman period.

ARCH 2030G. Wall Paintings from Pompeii.

Interpretations of Campanian frescoes.

ARCH 2040D. Genealogies of Complexity in East Asia (3000-221 BCE).

Despite East Asia's rich archaeological and historical record, its early political (pre)histories have been more sites for theoretical projection than theoretical innovation. Focusing on mainland East Asia, we will engage political theory and its applications in case studies from the Neolithic to the first Empires. Topics will range from mortuary rituals to practices of social violence and sources include both material culture and text.

ARCH 2040E. International Cultural Heritage: Creating a Future for the Past.

From the Parthenon to Puccini to pizza, cultural heritage can be defined as places, objects, and ideas from the past that have survived to the present. This course will examine the theories, methods, and questions that shape the effort to protect and interpret cultural heritage today as well as responses to them. We will explore issues such as current threats to cultural heritage, the role of tourism and impacts of development, questions of authenticity and identity, international law, ethics, and emerging and non-traditional areas of the field.

ARCH 2040F. Public Culture and Heritage in Postapartheid South Africa.

This course examines the complex processes whereby issues of culture, race, identity/ subjectivity, globalization, memory and heritage are being reframed and rethought in post-apartheid South Africa. We will be guided by three broad themes: public histories; archives and knowledges; and questions of performance. Of all possible settings, post-apartheid South Africa may present one of the most challenging - at times troubling - contexts through which to consider such public negotiations and meanings.

ARCH 2040G. Designing Heritages: From Archaeological Sensibilities to Relational Heritages (AMST 2654).

Interested students must register for AMST 2654.

ARCH 2040H. Imperial Cities.

What does Athens have to do with Jerusalem? Tenochtitlan with London? Beijing with Rome? Cuzco with Persepolis? All are capital cities of imperial systems, each shaping and reflecting the nature of the empire, its ruling ideology, and its social and economic infrastructure. The category of "imperial cities", however, must extend beyond these primate centers, to consider the urban networks in play across each empire's territorial reach, and beyond.

ARCH 2041. Mesoamerican Archaeology and Ethnohistory (ANTH 2520).

Interested students must register for ANTH 2520.

ARCH 2100. Things! The Material Worlds of Humanity.

This course explores the relationships between people and things. From archaeology to material culture studies, from philosophy to science studies, we will examine a wide variety of approaches to the world of objects, artifacts, and material goods. Perspectives will include materialist approaches, consumption studies (including notions of fetish), phenomenology, social constructivism, cognitive approaches, actor-network-theory, and more.

ARCH 2101. Material Matters (ANTH 2515).

Interested students must register for ANTH 2515.

ARCH 2103. Trace and Absence: Comparative Perspectives on the Past in Things (HMAN 2402E).

Interested students must register for HMAN 2402E.

ARCH 2105. Ceramic Analysis for Archaeology.

The analysis and the interpretation of ceramic remains allows archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within anthropological contexts are the focus of this seminar. This course will include hands-on, lab-based materials analysis of ceramics and their raw materials.

ARCH 2110F. Greek Palaeography and Premodern Book Cultures (GREK 2110F).

Interested students must register for GREK 2110F.

ARCH 2112. Roman Epigraphy (LATN 2120A).

Interested students must register for LATN 2120A.

ARCH 2114. Archaeologies of Text (ASYR 2800).

Interested students must register for ASYR 2800.

ARCH 2140. The Marriage of Archaeological Science and Social Theory.

What do ceramics, lithics, building materials and metals tell us about the people who used them? Do high-tech analytical methods contribute to a deeper understanding of the past or simply muddy the waters? Theoretically, we will challenge the objectivity of 'science' and the value of archaeological taxonomies, as they relate to the construction of archaeological narratives. The ultimate objective in this course is to access the symmetrical social relationships between people and things, through the medium of the archaeological materials, as understood through the application of scientific techniques. Enrollment limited to 15.

ARCH 2141. Biomolecular Approaches in Archaeology.

This seminar will focus on the key principles of biomolecular techniques used in archaeological research. Topics will include residue analysis, collagen fingerprinting, stable isotopes, and ancient DNA. We will discuss recent advancements in these scientific methods, best practices for collecting samples, how to build collaborations between archaeologists working in the field and in the laboratory, and new possibilities for using cutting-edge methods to address archaeological and anthropological research questions.

ARCH 2143. Asian Reprographics A Long History of Impression (ARCH 2143).

Interested students must register for HIAA 2210.

ARCH 2145. Technology and Production in Archaeology: Anthropological Foundations and Contemporary Theory.

An intensive focus on theoretical approaches to technology and production that have shaped archaeological thinking over the past century and have formed the basis of many of the contemporary issues in the field. Students will read and critically assess key works about concepts of production and technology in various cross-cultural archaeological contexts. Seminar themes include political economy, specialization, technology transfer, cross-craft production, power dynamics, ritual, and tool use. Enrollment limited to 20 seniors and graduate students.

ARCH 2150. Theoretical Issues in Archaeology.

The goal of this seminar is to examine the state of archaeological theory, with special emphasis on archaeological practice and interpretation in the Mediterranean, Egypt and ancient western Asia. While providing some measure of historical overview, the class chiefly offers an opportunity for students to read and critique recent writings that exemplify the variety of contemporary approaches to this subject.

ARCH 2151. Slow Archaeology: Thinking Things through in Archaeological Theory and Philosophy.

This course questions the so-called paradigm shifts in archaeology -- "the spatial turn", "the material turn", or the "the ontological turn" -- and analyzes the way archaeological theory has developed in our discipline. Students will explore theoretical angles other than the "usual suspects" in archaeological theory to creatively rethink individual research. We will take a philosophical approach to critically and carefully discuss academic archaeology and our roles, our engagement, and future as scholars within an institutional culture that often seems to be dominated by individual achievement, speed, and efficiency. What ideas might emerge if we all just slowed down?

ARCH 2153. Archaeological Ethnography: A Multi-Temporal Contact Zone.

In this course, we will examine the emerging field of archaeological ethnography, a shared space of interaction between social anthropologists and archaeologists, and between scholars and the various local communities around archaeological sites. Our main focus will be the Sanctuary of Poseidon on the island of Poros in Greece, the epicenter of a long-term archaeological ethnography project, started in 2007. We will place the site in global comparative perspective, and debate together the challenges in producing an archaeological ethnography monograph.

ARCH 2155. History, Anthropology, and Archaeology: Disciplinary Dialogues.

Archaeology has always occupied an uneasy space between the fields of anthropology and history. This seminar examines the interplay of theories and methods in all three spheres of scholarship, with an emphasis on current inter- and trans- disciplinary research. Several fundamental 20th century dialogues between anthropologists and historians will be reviewed, and key topics in contemporary archaeology explored in relation to those debates.

ARCH 2157. Subaltern Communities: Archaeological Perspectives Beyond Domination and Resistance.

Mediterranean (pre)history is usually cast in terms of an inexorable rise of state domination and colonial exploitation under the euphemistic label of 'social complexity'. This seminar will examine and highlight the role of 'people without history' not by simply pitching them as rebels against dominant powers but by exploring the subtle and manifold connections that interweave subaltern communities with hegemonic groups.

ARCH 2160. The Archaeology of Democracy: Social Transformations in Ancient Greece, ca. 900-323 BCE.

Between 900 and 600 BCE, profound social transformations took place in Greece, setting the stage for a revolution in political form: by 500, Athens was collectively governed by its citizen body. This course engages with the everyday materialities underlying Greek democracy of this era. Focusing on relationships among people and things, students will reassess the composition of the demos from the ground up.

ARCH 2165. The "Second Sophistic": Archaeological and Literary Approaches.

The cultural phenomenon of the "Second Sophistic" affected both the material fabric and the intellectual life of the eastern Roman empire of the second/third centuries CE. This course will examine how awareness of "Greek" learning (*paideia*) and the "Greek" past informed people's literary and artistic tastes, as well as their responses to changing political and religious pressures, affecting everything from civic coinage to elite dining habits and even bodily comportment. Enrollment limited to 15.

ARCH 2170. Archaeology of Greek and Punic Colonization.

This course investigates cultural interaction at local and regional scales between 'colonists' and locals, introducing students to a range of case study material across the Mediterranean. This will focus on material from the eighth to sixth centuries BC from Iberia, France, Italy, North Africa, and the Black Sea. Examples of Etruscan colonization will also be explored. The concept of 'colonization' will be critically examined, along with how it has been treated by archaeologists and ancient historians over the past century. Enrollment limited to 15 juniors, seniors, and graduate students.

ARCH 2176. The World of Late Antiquity (CLAS 2100G).

Interested students must register for CLAS 2100G.

ARCH 2178. Architectural Reuse: The Appropriation of the Past (HIAA 2440D).

Interested students must register for HIAA 2440D.

ARCH 2180. Memory and Materiality.

What is the difference between memory, facts, and knowledge? This course uses memory as a lens through which to view recent critical theory and questions how theories of memory and materiality can be used by archaeologists to better understand the past.

ARCH 2184. Material Culture and the Bodily Senses: Past and Present.

How do the senses shape our experience? How many senses are there? How do ancient and modern art and material culture relate to bodily senses? What is material and sensorial memory, and how does it structure time and temporality? Using media and objects, including archaeological and ethnographic collections at Brown and beyond, this course will study how a sensorial perspective on materiality can reshape and reinvigorate research dealing with past and present material culture. Furthermore, we will explore how sensoriality and affectivity can decenter the dominant western modernist canon of the autonomous individual.

ARCH 2185. Sensing Antiquity: New Approaches to Ancient Aesthetics and Sensoria.

How did the Greeks and Romans perceive and discuss the beautiful and the ugly? The fragrant or malodorous? The ticklish and the tart? These may seem like difficult questions, even bizarre, and yet, in many ways, those past opinions inform our own experience of the world. This course is an exploration, through archaeological and literary primary sources, of the many ways in which ancient men and women interacted through their senses with the world around them and how they reflected upon that interaction.

ARCH 2225. Beyond Decline and Fall: New Perspectives on the Late Antique Mediterranean.

This seminar will examine the Mediterranean from the fall of Rome to the Arab conquests (AD400-700), interrogating models of decline, catastrophe and transformation through the most recent archaeology of the region. We will explore key themes such as decline and fall, post-Roman state-formation, urbanism, rural settlement, Christianization and ethnic, social and religious identities, and compare the different trajectories of Europe, Northern Africa and the Eastern Mediterranean in this period.

ARCH 2232. Moving in the Mediterranean: Mobility in Archaeology, Science, and Text.

Human mobility presents one of the key issues for archaeology — not to mention contemporary culture and politics. This seminar will explore theoretical and methodological approaches to the study of human mobility and its role for Mediterranean societies, from long-distance migration to intra-regional population circulation. We will do so through a multidisciplinary lens incorporating material-based, scientific, and textual approaches, to grapple with the question of how different sources of information — collected, analyzed, and theorized — can be integrated. Case studies such as Greek "colonization", mercenaries in Egypt, and businesswoman in the Aegean will guide our discussions.

ARCH 2235. One Sea for All: Economic, Social and Artistic Interaction in the Medieval Mediterranean.

This seminar explores the phenomenon of interaction in the Medieval Mediterranean. We will study how, even in times of conflict, Byzantines created and maintained networks of ideological, commercial and artistic communication with the Arabs, the Slavs, the Latins, and the Ottomans. How did such encounters, among people of such different faiths, languages, and world-views, influence the political, economic and social transformations of the Medieval world? Enrollment limited to 15 juniors, seniors, and graduate students.

ARCH 2240. Key Issues in Mediterranean Prehistory.

This course's scope is the entire Mediterranean basin, from its first peopling until ca. 500 BC. The focus is on key transformations in economic, social, and political structures and interactions; on explanations for these changes; and on current issues where fresh data or new approaches are transforming our understanding. This seminar is intended for students both with and without prior knowledge of this field, and particularly for those preparing for the Joukowsky Institute's Mediterranean Prehistory field exam. Enrollment limited to 15 juniors, seniors, and graduate students.

ARCH 2245. Rural Landscapes and Peasant Communities in the Mediterranean.

The aim of this course is to explore rural settlement and agrarian production in the Mediterranean, both in the ancient and the recent past. The archaeological starting-point is provided by the numerous scatters of surface remains that archaeological surveys across the Mediterranean have collected and that are usually interpreted as 'farmsteads' broadly datable to Classical Antiquity. We will look beyond these scatters to examine the social and economic significance of rural settlement through comparison with ethnographic and historical rural studies from across the Mediterranean and to explore household and community organisation and agrarian production in Classical Antiquity. Enrollment limited to 15.

ARCH 2250. Island Archaeology in the Mediterranean.

The Mediterranean is a world of islands, *par excellence*, and the island cultures that have developed there over the millennia have great archaeological distinctiveness. This seminar will consider the concept of insularity itself, in cross-cultural archaeological, anthropological, and historical perspective. We will then turn to the rich, specifically Mediterranean literature on island archaeology (exploring issues of colonization, settlement, interaction).

ARCH 2255. Coastal Values: Archaeology and Paleoecology of Coastal and Island Environments.

People like to live by the water. What characteristics (social, economic, environmental) make coastal environments so attractive? What are the effects of human settlement on these environments? How do societies adapt (or not) to changing coastal environments? This seminar takes an interdisciplinary approach to these questions, applying the lessons of the past to the challenges of the present through an explicitly diachronic, cross-cultural, and data-driven approach to examining human-environmental interaction in coastal settings. Enrollment limited to 15.

ARCH 2265. Nature and Society in the Ancient World.

What is 'nature'? Is human society separate and distinct from the 'natural' world, or a closely-entwined part? Historical investigations often simplify this relationship to one-sided explanations of social or environmental determinism, missing the lived reality of people in their landscapes. This class explores the ecological reality of the 'natural' world in Antiquity, using archaeological, historical, and palaeo-environmental data to investigate these questions, focusing especially on the Roman and late-Roman periods.

ARCH 2300. The Rise of the State in the Near East.

A seminar on the origins of food production and complex societies in the period from ca. 9000 to 2200 B.C. Topics will include: the first domestication of plants and animals, the earliest village communities in the Levant, Anatolia, and Mesopotamia, and the economic and social transformations accompanying the emergence of urbanized state societies in fourth and third millennia B.C. Mesopotamia.

ARCH 2310. Cities in the Sand: The Archaeology of Urbanism in Mesopotamia.

Images of legendary Mesopotamian cities, now wired with explosives or pockmarked with looters' pits, flit daily across our screens. For more than a century, archaeologists have been working to uncover these early urban centers in Iraq and Syria, where the very idea of the city was first imagined. This seminar offers an introduction to the archaeology of urbanism and a detailed examination of the cities of Mesopotamia – from Uruk and Ur to Babylon and Baghdad.

ARCH 2320. Household Archaeology in the Ancient Near East and Beyond.

House, home, household, family: defining these terms is not as easy as it might seem, especially across space and through time. After introducing the principles of household archaeology, this class will explore the state of this growing archaeological subfield in the Near East and eastern Mediterranean. We will also draw on developments in New World archaeology in analyzing the potential and problems of household archaeology and in articulating its future directions.

ARCH 2330. Roman Asia Minor: The Empire Goes East.

If one is curious about the dynamics of life within the Roman empire, the province of Asia makes an excellent case study. Its numerous urban centers and rural landscapes were socially and economically differentiated and frequently monumentally elaborated, as an increasing amount of varied archaeological data reveal. Asia offers a rich laboratory for exploring issues of provincial development, and ultimately decline, over the course of the empire.

ARCH 2335. In the Wake of Empire: Anatolia After the Hittites, Before Alexander.

Kings Croesus, Midas, and the much lesser known Warpalawas... Who were these people, when and where did they rule, and why does any of this matter? During the first millennium BCE, Anatolia was an astonishingly varied, multicultural and multilingual environment. This course will tackle head on the myriad archaeological, historical, and even linguistic challenges posed by this fascinating, but often-overlooked period in the history of the region. Enrollment limited to 15 juniors, seniors, and graduate students.

ARCH 2340. The Archaeology of the Assyrian Empire: Cities, Landscapes and Material Culture.

Ritual, war and conquest! The Assyrian Empire was a powerhouse in the ancient Near East with fearsome military expeditions, sumptuous cult festivals, grand cities, and complex governing systems. This course investigates the archaeology of Assyria from the trading center of Ashur in the second millennium BCE to the collapse of the empire in the 7th c. BCE. Using published excavations, surveys, and texts, we will explore Assyria's material culture, landscape, cult practices and state ideology. Enrollment limited to 15 seniors and graduate students.

ARCH 2350. Archaeology of the Caucasus.

The goal of this seminar is to provide students with an overview of the long-term archaeological record from the Caucasus and its near neighbors, as well as an understanding of the history of research in this area during Imperial Russian, Soviet, and contemporary times. Readings will cover a range of periods, prehistoric and historic, following the interests of the class.

ARCH 2400. Sacred Space: Archaeological and Religious Studies Perspectives.

Innumerable cultures, past and present, have singled out specific locales and even whole landscapes as powerful vectors for communicating with the divine. This course will analyze such spaces for their ability to transform body, escape the material plane, and reconstitute social relations and bodily practice. Case studies will largely be drawn from the Mediterranean world and will employ an archaeological attention to the materiality of these sacred spaces. Key concepts will include: ritual practice, landscape production, memory and agency. Prerequisites: three upper-level courses in Archaeology and the Ancient World, Religious Studies, or Anthropology.

ARCH 2406. The Body in Medieval Art and Architecture (HIAA 2440E).

Interested students must register for HIAA 2440E.

ARCH 2407. Lived Bodies, Dead Bodies: The Archaeology of Human Remains (ANTH 2560).

Interested students must register for ANTH 2560.

ARCH 2410. Archaeologies of Place.

Places are understood as sites of human interaction in and with the material world. This course explores how archaeological and ethnographic research addresses material complexities and cultural meanings of places in the context of broader landscapes. We will investigate critical theories of place and landscape, while working with fieldwork data from the ancient Near East, particularly Hittite Anatolia. Enrollment limited to 20.

ARCH 2412. Space, Power, and Politics (ANTH 2590).

Interested students must register for ANTH 2590.

ARCH 2425. In Ruins: Traces of the Past in the Present.

Ruins -- the debris and skeletons of monuments from the past -- constitute the leftovers of people and places that once were. Yet archaeologists have not thought critically about this seemingly essential concept. Ruins and ruination are fundamental to deeper understandings of culture contact, the rise and fall of civilizations, state power and political factionalism, urbanism, colonialism, capitalism, and deindustrialization. This course will examine, across a broad geographic and temporal scope, ruins as things, as well as ongoing processes, that affect the landscape.

ARCH 2450. Comparative Empires and Material Culture.

The political, military, and cultural unit of "empire" has, by now, been the subject of numerous and varied studies. This seminar will explore the tangible effects of empires, that is, the art and architecture created when societies are engaged in what can be viewed as asymmetrical power relationships. In order to understand how conditions specific to empire influence the creation, dissemination, and reception of material culture, this course will examine the artifacts of four different empires - the Roman, the Chinese, the British, and the American - and their unique political, social, and cultural contexts. The creation of a "virtual exhibit" of a range of illustrative artifacts is currently envisioned as an outcome of the class.

ARCH 2500. Art and Archaeology of Civic Identity.

Every urban community in the Greco-Roman world presented itself in a specific way to other communities and to foreign entities. Looking at coins, public monuments, programmatic sculpture, and epigraphic and textual evidence, we will address different concerns related to the formation and propagation of civic identities. Comparative material from other historical periods and theoretical and anthropological literature on group identity, social cohesion, and empire will contextualize the visual and archaeological evidence. Prerequisites: three previous courses in Archaeology and the Ancient World.

ARCH 2501A. Problems in Archaeology: Archaeology of Colonialism (ANTH 2500A).

Interested students must register for ANTH 2500A.

ARCH 2501C. GIS and Remote Sensing in Archaeology (ANTH 2500C).

Interested students must register for ANTH 2500C.

ARCH 2502. Historical Archaeology: From Colony to City (ANTH 2540).

Interested students must register for ANTH 2540.

ARCH 2535. The Levant and Egypt: Cultural Contacts and Connections.

A land steeped in story and history, the Levant (now Syria, Lebanon, Israel, Palestine, and Jordan) was a dynamic crossroads of ancient civilizations, from Mesopotamia and Anatolia and stretching across Europe. But this region is nearly always viewed through the lens of its larger, well-known neighbor: Egypt. This course will shift this viewpoint by exploring the nature and agency of trade, colonization, diplomacy, migration – and even war – between the Levant and ancient Egypt, paying particular attention to the archaeological record in reconstructing these interactions and cultural interconnections.

ARCH 2540. Roman, Byzantine and Early Islamic Jerusalem.

Jerusalem constitutes one of the most important archaeological sites connected to the origins of Judaism, Christianity, and Early Islam. Early and recent studies and discoveries, as well as old and new theories, will be examined in the seminar with special emphasis on the Roman, Byzantine, and Early Islamic periods. Prerequisite: knowledge in archaeological methodology.

ARCH 2550. Qumran and its Archaeological Context.

This course is structured as a seminar on the archaeology of Qumran and the Dead Sea Scrolls. The site will be examined in its larger geographical, historical, and archaeological context. The goal is to become familiar with the different scholarly interpretations of the site. Prerequisites: solid background in at least one of three fields: archaeology, Judaism, and Early Christianity.

ARCH 2551. Archaeological Research Methods, Theory and Practicum (ANTH 2550).

Interested students must register for ANTH 2550.

ARCH 2552. Museums in Their Communities (AMST 2220D).

Interested students must register for AMST 2220D.

ARCH 2553. Introduction to Public Humanities (PHUM 2010).

Interested students must register for PHUM 2010.

ARCH 2554. Decolonizing Public Humanities: Intersectional Approaches to Curatorial Work + Community Organizing (AMST 2694).

Interested students must register for AMST 2694.

ARCH 2555. Museum Interpretation Practices (PHUM 2014).

Interested students must register for PHUM 2014.

ARCH 2556. Museum of Possibilities (HIAA 2930).

Interested students must register for HIAA 2930.

ARCH 2557. Critical Approaches to Architectural Preservation and Cultural Heritage (AMST 2685).

Interested students must register for AMST 2685.

ARCH 2558. Methods in Public Humanities (PHUM 2020).

Interested students must register for PHUM 2020.

ARCH 2559. Finding the Viewer: The Reception of Ancient Art and Architecture (HIAA 2301).

Interested students must register for HIAA 2301.

ARCH 2600. Gender and Sexuality in Roman Art.

The study of the body and embodiment in Roman art encourages us to make use of multiple theoretical models for interrogating both the art and the bodies involved. Gender and sexuality provide the lenses through which this course will explore a variety of topics (for example, the homoerotic gaze, sexualized spectacles of pain, gendered architectural typologies, and the body in rabbinic imagery) in Roman imperial art. Open to graduate students only.

ARCH 2601. Approaching Women and Gender in Roman Culture.

Gender as a hierarchical concept was a fundamental basis of Roman culture, but women often played active roles in shaping political, religious, and social ideologies in both public and private contexts. Drawing on material, visual, and literary evidence, as well as theoretical concepts of gender in the ancient world, this course will examine not only how the concepts of women and gender were constructed and perpetuated, but also how they were simultaneously resisted and subverted.

ARCH 2610. From Hilltop to Caput Mundi: The Archaeology of the Roman World.

From an iron age village atop a hill overlooking the Tiber to the largest land empire prior to the Mongols of the 13th century, Rome has a deep and storied past. This class examines the current methods, theories, and major debates in Roman archaeology. We especially focus on material from outside the city of Rome and emphasize the geographical and chronological breadth of the Roman Empire. Topics may include colonialism, imperialism, Romanization, settlement, economy, religion, environmental change, violence, technology, and military life.

ARCH 2620. All Italia: City and Country in Ancient Italy.

This seminar approaches the urban and rural landscapes of peninsular Italy from the Early Iron Age until the Gothic Wars, with the goal being to examine key points of intersection (and departure) between the spheres of 'town' and 'country'. Overall the seminar aims to contextualize Italian landscapes across both time and space and to that end we will consider issues pertaining to urbanism, economy, production, infrastructure, administration, architecture, and iconography. Enrollment limited to 20 seniors and graduate students.

ARCH 2622. Roman Topography (CLAS 2010B).

Interested students must register for CLAS 2010B.

ARCH 2635. An Empire without Bounds: The Roman Empire in Its 'Global' Context.

The Roman world did not stop at the Empire's borders; its influence spread through sub-Saharan Africa, the Middle East, India, central Asia, China, and northern Europe – and these interactions shaped the Roman Empire, in turn. This course aims to de-center the Roman and Mediterranean experience of Antiquity by considering archaeological and historical evidence from places as far-reaching as Parthian Mesopotamia, Kushan India, and Han China, as well as the Saharan oases, the Indian Ocean monsoon routes, and the many intertwined land routes of the 'Silk Road(s)' across central Asia.

ARCH 2640. Hispania: the Making of a Roman Province.

How were Roman provinces created and incorporated into the Roman Empire? What traces exist in the archaeological record of the bonds between the provinces and the metropolis? This course approaches the complex issue of colonialism, material culture, change and continuity in connection with the Roman conquest of new territories in the Mediterranean, taking as an example the impressive pool of new archaeological data available from Roman Spain. Restricted to Juniors, Seniors, and Graduate students.

ARCH 2710. The Archaeology of Nubia and Egypt.

Egypt and Nubia share the distinction of ancient civilizations along the Nile river, but Nubia remains much more poorly known than Egypt. This seminar will examine the archaeology of Nubia, including its relationship to Egypt, from the introduction of ceramics and agriculture to the medieval period. This long-term perspective will allow comparative study of issues such as state formation, imperialism and religious change. Enrollment limited to 15 graduate students.

ARCH 2720. Abydos: The Layered Pasts of a Sacred Site.

The site of Abydos in southern Egypt played a pivotal role at almost every period of Egyptian history: burial place of the first kings, location of the earliest monumental temples and — centuries later — beautifully decorated New Kingdom temples, pilgrimage site for followers of Osiris, an urban center, nurturing home for early Christian monasticism. This seminar allows students to learn deeply the material culture of a single place of singular importance over time, to examine the layered effects of various pasts upon the ideas and practices around the study of ancient Egypt.

ARCH 2725. The Making of Egypt.

In the late 4th millennium, a state and culture recognizably pharaonic in structures rose in the Nile Valley. How was Egypt made, and how can we study the process? This seminar will examine this exceptional convergence of the development of monumental architecture, writing, canonical art, and kingship during Egypt's formative centuries from c. 3200-2600 BC. We will study the rapid changes at the start of the First Dynasty in the context of state formation over the longer span of late-Predynastic to Old Kingdom Egypt.

ARCH 2740. Social Life in Ancient Egypt.

This course will draw upon recent discussions in anthropology and sociology that explore issues of identity by examining hierarchies of difference - age, sex, class, ethnicity. We will focus on linking theory with data and on discussing modern and ancient categories of identity. Taking the lifecycle as its structure, the course covers conception to burial, drawing on a range of data sources, such as material culture, iconography, textual data and human remains. The very rich material past of ancient Egypt provides an excellent framework from within which to consider how identity and social distinctions were constituted in the past.

ARCH 2741. Social Life in Ancient Egypt (EGYT 2510)..

Interested students must register for EGYT 2510.

ARCH 2851. Skills Training in Material Culture Studies I.

When dealing with material culture, one must possess a solid foundation in a range of skills. How does one document and analyze artifacts, architecture and landscapes; what techniques are appropriate in what cases? How should all this information be securely stored and promulgated? This "hands on" class, intended for students in multiple disciplines, will consider the study of particular types of material or bodies of evidence (e.g., pottery, lithics, epigraphy, numismatics). This is a half-credit course, meeting for the first seven weeks of the semester only. S/NC.

ARCH 2852. Skills Training in Material Culture Studies II.

When dealing with material culture, one must possess a solid foundation in a range of skills. How does one document and analyze artifacts, architecture and landscapes, what are the appropriate techniques? How should all this information be securely stored and promulgated? This "hands on" class, intended for students in multiple disciplines, will revolve around techniques of documentation and analysis (e.g. architectural drawing, GIS [Geographic Information Systems], data bases and digital media). This is a half-credit course, meeting for the first seven weeks of the semester only. S/NC.

ARCH 2950. Intensive Readings in Ancient Language for Archaeologists.

In this course, students with some previous training in an ancient language will have an opportunity to hone their linguistic skills while reading ancient texts that are specially relevant to archaeologists. The primary purpose of the course is to prepare students to take doctoral ancient language exams and to identify weak spots in individuals' knowledge of the ancient language. Emphasis will be placed on identification and justification of morphology and syntax, as well as on reading comprehension and idiomatic translation.

ARCH 2970. Preliminary Examination Preparation.

Reading, research, and preparation of one of the three Preliminary Exam Essays required for doctoral students in Archaeology and the Ancient World. Students are expected to enroll in this course three times, each with the appropriate instructor by topic. Can be taken three times for credit. Section numbers vary by instructor. Please check course listings for the correct section number and CRN to use when registering for this course.

ARCH 2975. Primary Field Exam Preparation.

Reading, research, and preparation for, and completion of, the Field Exam in the primary field of study for doctoral students in Archaeology and the Ancient World. Section numbers vary by instructor. Please check course listings for the correct section number and CRN to use when registering for this course.

ARCH 2976. Secondary Field Exam Preparation.

Reading, research, and preparation for, and completion of, one of the two Field Exams in a secondary field of study for doctoral students in Archaeology and the Ancient World. Students are expected to enroll in two sections of this course, each with the appropriate instructor by topic. Section numbers vary by instructor. Please check course listings for the correct section number and CRN to use when registering for this course.

ARCH 2980. Individual Reading.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ARCH 2981. Thesis Research.

Individual reading for the Master's degree. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ARCH 2982. Individual Reading for Dissertation.

Reading leading to selection of the dissertation subject. Single credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ARCH 2983. Dissertation Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ARCH 2990. Thesis Preparation.

For graduate students who are preparing a thesis and who have met the tuition requirement and are paying a registration fee to continue active enrollment.

Judaic Studies

The Program in Judaic Studies provides students with an excellent opportunity to explore a wide range of social, cultural, political, religious, and psychological concerns reflected in the historical development of Jewish civilization throughout the ages. Christianity and Islam have deep roots in Judaism, and the Western world has been profoundly shaped by deep and abiding interactions with both Jewish religious traditions and the Jewish communities in its midst. Therefore, the Program includes the study of relations between Jews and non-Jews in the ancient, medieval, and modern periods. The analysis of texts, from the Hebrew Bible to contemporary Israeli literature, from the Kabbalah to modern Jewish autobiography, from philosophical treatises to communal record books, is central to courses offered by the Program. In the Program in Judaic Studies courses students develop their understanding of a wide variety of disciplines which our faculty members practice in their study of Jews and Judaism—history, philosophy, religious studies, literary studies, and archaeology—and how those disciplines facilitate the growth of knowledge. The history and culture of Israel and its place in the Middle East is another focus of study in the Program. Students are given the opportunity to study up to six semesters of modern Hebrew with the goal of fluency in the language. A two-semester sequence of courses in biblical Hebrew is also offered. These course sequences enable students to develop the skills necessary to make use of Hebrew as a means of understanding Jews and Judaism throughout history.

For additional information, please visit the department's website: <http://www.brown.edu/academics/judaic-studies/> (http://www.brown.edu/Departments/Judaic_Studies/)

Judaic Studies Concentration Requirements

Jews have lived and flourished over thousands of years in a variety of social contexts, stretching from the Land of Israel and the eastern Mediterranean to Asia, Africa, Europe, and the Americas. Concentrators will have the opportunity to study Jews in these contexts, getting to know their social structures, and what they have created. The subjects of study cover an astonishing range, including history and society, Jewish law and philosophy, and Jewish literature and ritual. Students will learn to unlock this wealth in both the ancient and the modern worlds through a number of academic disciplines - History, Religious Studies, and Literature. These

also provide tools for studying and analyzing human societies and cultures in general, for which Jewish experiences provide an important perspective.

Program in Judaic Studies

Required Coursework

A concentration in Judaic Studies includes the following requirements:

1. All students are required to take a total of 10 courses that count toward the concentration.
2. All students must take one full year of modern Hebrew (two of the 10 required courses for the concentration) or fulfill the Hebrew requirement through examination. Usually, the Hebrew requirement is fulfilled by taking HEBR 0100 and HEBR 0200. Fulfillment of the Hebrew requirement through examination does not reduce the total number of 10 courses required for the concentration.
3. Students choosing to continue with Hebrew language study may count up to two additional Hebrew courses (HEBR 0300, HEBR 0400, or HEBR 0500) toward fulfillment of the concentration requirements. HEBR 0600 is counted as a regular, non-language course for the purposes of fulfilling concentration requirements.
4. Of the courses required for a concentration in Judaic Studies, students must fulfill both a historical and a methodological breadth requirement. For example, students primarily studying ancient Judaism must enroll in at least one course in medieval or modern Judaism, and students studying primarily modern Judaism must enroll in at least one class focusing on the ancient or medieval period. In addition, at least one course should offer training in a discipline different from the student's primary disciplinary interest (e.g., a student whose main interest is Jewish history will take at least one course in Jewish thought, literature or religion). These two breadth requirements ensure that the student gains a broader perspective on Judaic Studies as an interdisciplinary/multidisciplinary field of study concerned with Jews and Judaism over three millennia of history.
5. Subject to the approval of the concentration adviser, up to two courses outside of Judaic Studies that relate directly to the concentration may be counted toward the concentration (e.g., a course on a particular historical context, in a particular discipline, or on a relevant topic, including courses taken abroad that are approved by Brown for transfer credit).
6. After consultation with the concentration adviser, each senior concentrator who is not writing a senior thesis in Judaic Studies to fulfill the capstone requirement will designate an advanced course (1000 level) in Judaic Studies as that student's capstone course. Alternatively, seniors may choose to do an independent study with a Judaic Studies faculty member that will function as the capstone course. Within the context of the capstone course, the student will conduct independent research and write a substantial paper of 20-25 pages on a topic in Judaic Studies that displays in an appropriate way the theoretical and methodological approaches, as well as the interpretive issues, most of interest to the student, thereby engaging the student's particular disciplinary focus/foci in a serious and substantive way. The student, in consultation with the capstone instructor, will complete the capstone form by the end of the second week of classes of the semester during which the capstone will be undertaken and submit the form to the concentration adviser for final approval. The form includes questions about the capstone course, the topic of the paper, the disciplinary approach(es) the student intends to utilize, and how the paper will fulfill the goals of the capstone. The capstone is an opportunity for students to hone their writing skills, to enhance their ability to undertake independent research, to learn more about and experience Judaic Studies as an interdisciplinary/multidisciplinary field, to make well-considered choices with regard to the topic or problem to be examined and the disciplinary approach(es) to be utilized, and to make use of language skills where appropriate.
7. Double concentrators may count up to two courses that deal with Jewish history, society, culture or religion that they have used to complete the requirements of their other concentration toward their Judaic Studies concentration.
8. Each student who opts to write a senior thesis to fulfill the capstone requirement will approach a potential thesis adviser in Judaic Studies before the end of the second semester of the junior year and secure

that faculty member's agreement to advise the thesis. The thesis will be written over two semesters during the senior year and constitute two of the 10 required courses for the concentration. By the end of the second week of classes of the senior year, the student will present the concentration adviser with a succinct thesis plan approved by the thesis adviser. The second reader of each thesis will be chosen by the concentrator in consultation with the thesis adviser before the end of September of the senior year. Once the second reader has agreed to participate, the second reader will read a draft of each chapter of the thesis and provide feedback after it has been approved by the thesis adviser. In no case will the second reader be invited to participate after the thesis has been completed.

9. Study Abroad or Elsewhere in the US: Students who study at other institutions, either in the United States or abroad, may apply up to two topical courses (non-language study) toward completion of the concentration's requirements as long as Brown approves the courses for transfer credit. These approved courses will count as the two courses taken outside Judaic Studies. Students who study in Israel are required to enroll in a one month Summer/Winter Ulpan (a Hebrew language and cultural immersion course) prior to the beginning of the semester as well as a Hebrew language course during their semester in Israel. Students will receive one transfer credit toward the concentration for both of these language courses combined. Students whose level of proficiency allows them to enroll in a university course conducted in Hebrew are exempt from the Ulpan requirement.

1.

Student Goals

Students in this concentration will:

- Have an opportunity to explore aspects of the history, culture, literature, religion, politics, thought and societies of the Jews from ancient times to the present
- Acquire at minimum an elementary proficiency in Hebrew
- Complete a capstone course or honors thesis
- Have an opportunity to explore some of the ways in which more than one discipline contributes to the study of Jews and Judaism through time and space
- Have an opportunity to learn about the often complex dynamics characteristic of the interactions of Jews with others in their larger environment as well as the reciprocal influences of Jewish and non-Jewish cultures.

Further Information

Students who are interested in further information about the concentration should contact the Judaic Studies Office at 163 George Street to make an appointment with the undergraduate concentration advisor. [Tel: 401.863.3910] or judaic@brown.edu.

Courses

Biblical Hebrew

BHBR 0100. Introduction to Biblical Hebrew.

An intensive introduction to the fundamentals of biblical Hebrew grammar and vocabulary intended to prepare students to read biblical texts in the original language. For students with little or no prior knowledge of Hebrew.

BHBR 0200. Readings in Biblical Hebrew.

An introduction to the reading of biblical texts in Hebrew. Reading of selected texts from narrative, law, and poetry in the Hebrew Bible, with a few texts in post-classical Hebrew (the Dead Sea Scrolls and the Mishnah) introduced late in the semester. Intended for students who have completed BHBR 0100; others should consult the instructor.

Hebrew

HEBR 0100. Elementary Hebrew.

An introduction to the skills of reading, writing, and conversing in contemporary Israeli Hebrew. Students also read Hebrew texts adapted for their level of Hebrew based on biblical, rabbinic, and modern Hebrew literature, which introduce them to the approaches of Hebrew writers in various periods and to a variety of cultural issues. If registration is closed, please contact the professor and a wait list will be created. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special permission. Enrollment limited to 20.

HEBR 0200. Elementary Hebrew.

This is the second half of a year-long course, an introduction to the skills of reading, writing, and conversing in contemporary Israeli Hebrew. Students also read Hebrew texts adapted for their level of Hebrew based on biblical, rabbinic, and modern Hebrew literature, which introduce them to the approaches of Hebrew writers in various periods and to a variety of cultural issues. Prerequisite: HEBR 0100. Students must have taken HEBR 0100 for credit to receive credit for this course. Exceptions must be approved by both the academic department and the Committee on Academic Standing. Enrollment limited to 20.

HEBR 0300. Intermediate Hebrew.

Develops the skills of reading, writing, and conversing in contemporary Israeli Hebrew at the intermediate level and of reading Hebrew texts of the biblical, rabbinic, and modern periods (biblical stories, rabbinic legends, modern Hebrew poems, stories, essays, newspaper articles). Discussions and compositions focus on the psychological, cultural, political, and social issues reflected in the Hebrew sources that we study. Prerequisite: HEBR 0200 or equivalent. Enrollment limited to 20. If unable to enroll because of closed registration, please contact the professor and a wait list will be created.

HEBR 0400. Intermediate Hebrew.

Develops the skills of reading, writing, and conversing in contemporary Israeli Hebrew at the intermediate level and of reading Hebrew texts of the biblical, rabbinic, and modern periods (biblical stories, rabbinic legends, modern Hebrew poems, stories, essays, newspaper articles). Discussions and compositions focus on the psychological, cultural, political, and social issues reflected in the Hebrew sources that we study. Prerequisite: HEBR 0300 or equivalent. Enrollment limited to 20. If unable to enroll because of closed registration please contact the professor and a wait list will be created.

HEBR 0500. Writing and Speaking Hebrew.

Enables students to improve their skills in speaking and writing Hebrew on a variety of topics. Features advanced work on language structure and active language practice in the classroom. Class discussions of Israeli current events draw on Israeli stories, poems, television programs, and films and on the Israeli press. Students also compose essays and stories in Hebrew. Prerequisite: HEBR 0400 or equivalent. Enrollment limited to 20.

HEBR 0600. Issues in Contemporary Israeli Society, Politics, and Culture in Hebrew.

An exploration of current issues in contemporary Israeli society, politics, and culture: the Israeli-Palestinian conflict, tensions between ultra-orthodox and secular Jews, religion and state, Israel as a Jewish and democratic state, the economic gap between rich and poor, the integration of citizens from a variety of backgrounds (Jews of Middle Eastern, North African, Russian, and Ethiopian origin; Arab citizens of Israel), gender relations. Sources include films, television programs, Internet news, works of literature. Conducted in Hebrew. Emphasizes strengthening Hebrew reading, writing, and speaking skills. Prerequisite: HEBR 0500. Students who have not taken HEBR 0500 should see instructor for permission to enroll.

Judaic Studies

JUDS 0050A. Believers, Agnostics, and Atheists in Contemporary Fiction and Memoirs.

In recent decades, there has been a resurgence of religiosity in contemporary society, while at the same time many have been skeptical and even hostile to religious belief and practice. Others are just not sure what to believe. We will study selections of fiction and memoirs by writers of Christian and Jewish background that explore such situations as the affirmation or negation of the existence of God, the role of religious ritual in a person's life, and the positive and negative impacts on society of religious institutions and the clergy who lead them. Enrollment limited to 19 first-year students.

JUDS 0050E. From Amsterdam to Istanbul: Christians, Muslims, and Jews.

This course combines text, picture, and music to study the history of Europe and the wider world in the early modern period through the eyes of a minority. Examines the new Jewish centers in the Atlantic world, the Ukrainian steppe, and the Middle East from 1500-1800, and how they shaped these environments. Students study cultural revolutions, such as the spread of printing, the renaissance and new religious movements. See how the development of the modern state and the blurring of social, religious, and gender boundaries created new definitions of religious and cultural identity. Enrollment limit: 19 first year students.

JUDS 0050H. Israel's Wars.

Israel's history has unfolded under the shadow of its prolonged conflict with the Palestinians and its Arab neighbors. This first year seminar will survey the military aspect of this conflict. The major aim of the course is to present an historical survey of the Israeli-Arab wars and Jewish-Palestinian encounters in the 20th century. This will provide some of the necessary background for understanding the present phase of the Arab-Israeli conflict in the Middle East, and help in comprehending the roots and causes of contemporary controversies between Israel and the Palestinians and/or its Arab neighboring states. Enrollment limited to 19 first year students.

JUDS 0050J. Friendship in the Ancient World (RELS 0090F).

Interested students must register for RELS 0090F.

JUDS 0050K. Hope, Despair, and Longing in Jewish Thought.

What does messianism try to name in Jewish thought? From the divergence with Christianity, to the disappointed expectation of the 17th-century messiah Sabbatai Zvi and the rise of Hasidism and its reverence for the saintly (zaddik); from questions of justice, equality, and revolution to the interpretation of Jewish Statehood through the lens of supernal redemption, the messianic idea provides a window onto how Jews have made sense of exile and suffering, hope and longing. This class will introduce students to the history of Jewish thought through the lens of messianism, asking about the emotions and attachments that have become identified with the messianic idea and how this idea might help us understand political and ethical despair and longing in a world of human suffering.

JUDS 0050L. The Jew in the Modern World.

How have Jews come to terms with dynamic nature of the Modern World? How has life in new places and new times affected Jewish life? We will look at the changing structures of Jewish identity in the modern period as the Jews came to terms with their new, and ever changing situation in society. Each week a different form of Jewish identity will be examined in its specific historical setting. Among others we will look at a Court Jew, an Enlightened Jew, a Jewish Nationalist, a Jew in a Nazi Ghetto, an Israeli Jew, and a contemporary American Jew. Enrollment limited to 19 first year students.

JUDS 0050M. Difficult Relations? Judaism and Christianity from the Middle Ages until the Present.

Jewish and Christian identity in Europe has traditionally been closely connected to the ways the two religions view each other. Mutual admiration, influence, and hatred have combined together in a difficult relationship, fundamental to European history. In this course, we will survey that relationship, examining some key issues and events which shaped it. The Jews' attitudes and actions will be examined alongside those of their Christian neighbors. Topics covered include: medieval revulsion and attraction; early modern re-evaluations of Judaism and Christianity; modern Christian anti-Semitism, Jewish diplomacy, and the Holocaust; the effects of Vatican II; Israel and the contemporary Christian world.

JUDS 0050N. Death and Afterlife in the Biblical Tradition (RELS 0090J).

Interested students must register for RELS 0090J.

JUDS 0050P. Sacred Spaces: Synagogues, Churches, Mosques.

In this seminar we will examine the architecture and art of synagogues, churches, and mosques from antiquity through the present. We will learn how different building traditions evolved over time, and how sacred spaces reflect beliefs and practices of Jews, Christians, and Muslims. Of interest will be both unique regional and chronological trends—characteristics that are indicative of a specific religious community—but also the parallels and shared features common to all Abrahamic religions. Special attention will be given to questions of gendered space and the role of patriarchy and women's agency in shaping religious architectures.

JUDS 0060. The Bible and Moral Debate.

How was the Bible employed in past moral debates that divided American society, e.g., debates over the legitimacy of slavery? How is the Bible used in contemporary moral discourse, e.g., concerning abortion, capital punishment and gay rights? What does the Bible really have to say about such issues? This course will consider these and other questions through a close reading of pertinent texts which address topics such as abortion, homosexuality, capital punishment, immigration, gender, family violence, race and slavery, disability, genocide, the environment and inequality of wealth. No prerequisites.

JUDS 0061. Foreigners, Refugees, and the Ethics of Minority.

This class interrogates the legal and ethical definitions of persons and homelands by examining the relationship between concepts of native and foreigner, hospitality and neighbour, refuge and exile, minority and majority. We will adopt historical, philosophical, and legal perspectives and take the Jewish historical experience of exile and minority as a jumping off point for discussing the contemporary refugee and migration crisis. The goal of this class is to contextualize liberal democratic debates over rights to migration and mobility with historical religious and moral sources as well as to explore the possibilities for social integration of difference within pluralism.

JUDS 0062. Intro to the New Testament (RELS 0022).

Interested students must register for RELS 0022.

JUDS 0063. Antisemitism: A History.

Antisemitism is sometimes called the "longest hatred," and from Pittsburgh to Paris it is on the rise. This course will examine the history of antisemitism and antisemitic tropes; theoretical approaches to its persistence; and individual case studies. Topics will include: Christian and Muslim anti-Judaism; racism; economic stereotypes; and modern manifestations in the U.S. and Europe.

JUDS 0064. Angels and Demons: Past and Present.

What are angels and demons, what roles do they play in religious thought, and how do their roles change or remain consistent over time? These are only a few of the questions this course seeks to address. Texts to be considered include the Hebrew Bible (Old Testament), the New Testament, the Dead Sea Scrolls, rabbinic literature, the Kabbalah, records of the Salem Witch Trials, Milton's *Paradise Lost*, Goethe's *Faust*, the Book of Mormon, contemporary Evangelical literature and New Age writings, and representations of angels and demons in film and television. No prior knowledge of the Bible, Judaism or Christianity is assumed.

JUDS 0065. Ancient Israelite and Jewish Narrative and Artistic Image.

Ancient Israel produced a great body of narrative art that is preserved in the Bible—Genesis, Exodus, the warriors of Judges, the story of David's founding of Israel and the succession to Solomon. The Jewish culture that followed extended the story-telling tradition in new directions—Daniel, the "novel women" of Esther, Susanna, and Judith. These brilliant and powerful stories inspired equally powerful images in art and sculpture. Both story and image still affect us. This course will explore the ancient narratives as story and the art they inspired as visual image.

JUDS 0066. The Lower East Side and Beyond: American Jewish History 1880-2000.

In this course we will explore the forces that have shaped American Jewry and made it what it is today. We will ask how the Jews who came to America as immigrants created a unique form of Jewish life that combined the political and social traditions of their old countries with the ethos and values they found here. Another key question is the place of American Jews in the Jewish world prior to World War II and how this affected the American Jewish public arena. We will then examine the post-Holocaust years focusing on the creation of a new American Judaism, as well as the cultural, literary and ideological accomplishments of American Jews. We will also examine the complex relationship between American Jews and the State of Israel and how it has shaped Jewish life in the United States.

JUDS 0067. Jesus (RELS 0014).

Interested students must register for RELS 0014.

JUDS 0068. Happiness and the Pursuit of the Good Life (RELS 0010).

Interested students must register for RELS 0010.

JUDS 0069. Exodus: Freedom in the Modern Black and Jewish Religious Imaginations (RELS 0085A).

Interested students must register for RELS 0085A.

JUDS 0071. Jews and Muslims: Their Contacts through the Ages (RELS 0089).

Interested students must register for RELS 0089.

JUDS 0080A. Ethics After Auschwitz?

Can we still speak of a "human condition"—a moral term—when human beings are capable of genocide? Does ethical responsibility have meaning if another's death can be manufactured by the state? Can traditional morality and religion still find a place in a world of which it cannot make sense? In this class, we will take the Holocaust as the beginning of a tragic account of contemporary humanity and examine the possibilities for human life and morality in light of the social and political orchestration of mass killing and oppression. Authors include, Adorno, Agamben, Arendt, Fackenheim, Foucault, Levi, and Levinas.

JUDS 0090C. Intermediate Biblical Hebrew.

An intermediate course for those who have completed JUDS 0090A and 0090B, the introductory level courses. Focus on reading a single biblical book (translation, grammar and syntax, interpretation).

JUDS 0090D. Intermediate Biblical Hebrew II.

An intermediate course, the continuation of JUDS 0090C. Focuses on reading a single biblical book (translation, grammar and syntax, interpretation). Intended for students who have completed JUDS 0090C; others should consult the instructor.

JUDS 0601. Authority and Autonomy.

This course will introduce the history of Jewish thought, focusing upon the problems of authority and autonomy, normativity and agency, law and freedom. We will investigate the relationship between legally mandated actions and an individual's responsibility to tradition and community and question whether the concept of revealed "law" imposes a "necessary" obligation upon ethical agency or rather serves a pedagogical function (virtue). By focusing upon Jewish philosophical critiques and endorsements of the modern conception of autonomy, we will ask whether "I" am the legitimate authority of my own actions or whether I require tradition or community to set an example.

JUDS 0602. Gender in Early Jewish and Christian Texts (RELS 0195).

Interested students must register for RELS 0195.

JUDS 0603. Race, Religion, and the Secular (RELS 0817).

Interested students must register for RELS 0817.

JUDS 0606. Gender in Early Jewish and Christian Narratives.

Many of the favorite narratives of Jews and Christians in the ancient period (for this course, about 400 BCE to 300 CE) featured women characters or emphasized issues of gender: Esther, Judith, and Susanna; Mary Magdalene and other gospel women, or Thecla, the perhaps legendary companion of Paul. Both Jewish and Christian texts used gender to explore new ways of constructing heroic women and men that either re-inscribed or challenged traditional roles. This seminar takes up a close reading of narrative texts, compared also with wisdom texts (Proverbs, Ben Sira, Wisdom of Solomon, Avot).

JUDS 0607. Defense Against the Dark Arts in the Ancient World (RELS 0290H).

Interested students must register for RELS 0290H.

JUDS 0608. The Parting of the Ways?: Questioning Jewish/Christian Difference.

How did a small apocalyptic Jewish movement from the backwaters of the Roman Empire turn into something that “we” might call Christianity? In other words, how and when did Judaism and Christianity “part ways?” While such questions might present themselves as straight-forward investigations into a historical event, they are not, in fact, as innocent as they might first appear. In this course, we will not seek to answer the question of the “Parting of the Ways” as much as we will critique it. Our aim is to reframe this crucial question by reflecting on the categories of religion, conversion, origins, narrative, and history, among others. We will read through a wide variety of ancient literature (including canonical and non-canonical Christian texts, rabbinic literature, Jewish poetry) and broach modern forms of “Jewish Christianity.”

JUDS 0609. American Jewish History from the Great Migration to the Contemporary Resurgence of Antisemitism.

In this course we will explore the forces that have shaped American Jewry and made it what it is today. We will ask how the Jews who came to America as immigrants created a unique form of Jewish life that combined the political and social traditions of their old countries with the ethos and values they found here. We will explore the place of American Jews in the Jewish world prior to World War II and how this affected the American Jewish public arena. Our examination of the post-Holocaust years will focus on the creation of a new American Judaism, as well as the cultural, literary, and ideological accomplishments of American Jews. Finally, we will discuss the development of antisemitism in the US from the 1920s to its contemporary resurgence.

JUDS 0617. Jewish Women: Between Conformity and Agency.

This undergraduate seminar studies Jewish women in different temporal and geographical contexts, internally within their own communities and externally with other neighboring religious groups. Visual and material sources (iconography, artefacts, architectures, film) are examined in dialogue with texts (biblical and Talmudic writings, medieval and modern commentaries, contemporary literature) to explore the binary of male authority and female agency. Case studies will encompass the Middle East and Europe from antiquity to the present. Two field trips will complement the visual and theoretical focus in class.

JUDS 0625. Israelite Religion (RELS 0320).

Interested students must register for RELS 0320.

JUDS 0630. The Old Testament/Hebrew Bible and Its World.

An introduction to the historical-critical study of the Hebrew Bible and a reconstruction of the history of Israel to the end of the Persian period (332 B.C.E.). Topics include biblical source criticism; Israel's obscure origins; reconstructing the settlement period; an imperial Israel under David and Solomon; institutions-law and authority, covenant, prophecy, temple cult and priesthood. All readings in translation. No prerequisites.

JUDS 0651. Race, Sexuality, and the Jews.

This seminar offers an interdisciplinary and intersectional examination of the historical and contemporary experiences of Jews from antiquity through the present. We will learn about social and cultural constructions of race, ethnicity, gender, and sexuality, focusing on Jews and other neighboring minority and majority communities; we will study how in different geographical and temporal spheres these communities have defined or blurred boundaries, shaping both distinctly visible and invisible characteristics; we will examine how perceptions of race and ethnicity have changed over time and across circumstances and how the traditional binary of men and women has been reinforced throughout but also how it has been challenged and altered in various contexts.

JUDS 0670. War and Peace in the Hebrew Bible and its Environment.

An examination of the role of war and peace in the Hebrew Bible and in texts and art of ancient Israel's neighbors. Topics include divine beings, war and peace-making; peace treaties; explaining defeat and victory; ideologies of warfare; the treatment of prisoners, corpses and captured bones; the warrior as masculine ideal; civil war and coups; treaty obligations; ritual dimensions of war and peace (e.g., mourning, animal sacrifice, child sacrifice, divination, memorializing war); visual representations of war as propaganda; the idea of a future, eschatological war between the forces of good and the forces of evil. No prerequisites.

JUDS 0671. Sex and Gender in Ancient Israel.

An investigation of Israelite views of the sexes, restrictions on sexual expression, and the construction of gender as evidenced by biblical sources and archeological data. Topics include creation stories on human origins and the human condition, including the origin of the two sexes and reproduction; marriage and family life (inheritance, intermarriage, divorce, the widow, status of the fetus); sexual boundaries (adultery, rape, incest, prostitution, homoeroticism); purity and sexual expression; male and female religious professionals and votaries; constructing gender: masculine and feminine behaviors.

JUDS 0680. Judaism, Christianity, and the Bible.

No book in human history has exercised as much influence as the Bible. Over the past 2,000 years, people have killed and died for the Bible, and it continues to exercise a powerful if contested role in modern politics. Yet how did it achieve this power? This course will trace the development of the Hebrew Bible (Old Testament) from its origins in ancient Israel to its development about five hundred years later as a foundational text of both Judaism and Christianity. The focus will be on how Jews and early Christians throughout antiquity understood and ascribed authority to the Bible.

JUDS 0681. Great Jewish Books.

A survey of classic Jewish texts, from the Bible to modern literature. Each text will be discussed from the perspective of both its own historical and social context and its engagement with earlier ones. Attention will be paid on how these authors address perennial issues of human concern and how their answers are shaped by their experience as Jews.

JUDS 0682. How the Bible Became Holy.

Over the past 2,000 years, people have killed and died for the Bible, and it continues to exercise a powerful if contested role in modern politics. Yet how did it achieve this power? This course will trace the development of both the Hebrew Bible (Old Testament) and the New Testament, from their origins to their status of foundational texts of Judaism and Christianity. The focus will be on how Jews and early Christians throughout antiquity understood and ascribed authority to the Bible. No prior knowledge necessary.

JUDS 0682A. Bible became Holy (RELS0325).

Interested students must register for RELS 0325.

JUDS 0683. Jews and Money.

In the West, there has always been a complicated relationship between Jews and money. In the first part of this course, we will examine, both theoretically and empirically, the complex relationship between Jews, capitalism, socialism, nationalism, and anti-Semitism. In the second part of the course, we will return to the one aspect of the "cultural capital" that is sometimes said to have helped Jews to prosper: their religious tradition. We will put these religious teachings into conversation with pressing modern questions such as: What is "wealth" and "ownership"? Do the rich and poor have obligations to each other?

JUDS 0684. Great Jewish Books (RELS 0323).

Interested students must register for RELS 0323.

JUDS 0685. Judaism, Christianity, and Islam (RELS 0088).

Interested students must register for RELS 0088.

JUDS 0703. From Margins to Center: Jews and Whiteness in America.

From being a minority suffering religious and ethnic discrimination in eastern Europe, the Jews who came to America underwent a process of integration towards becoming white Americans. Taking as its point of departure the fact that Jews have not always been considered "white people," this class will explore the history of the Jews in America through the following lenses: How did white America's attitude towards the Jews develop and change? How did American Jews negotiate their attitude to race and their relations with non-white minorities? What roles did antisemitism play in these processes?

JUDS 0820. The Language of Religious Faith.

A course on the ways poetry provides a language of religious faith that emerges from the sense of a divine presence in human experience. We will explore how this language of religious faith expresses a wide range of both negative and positive responses by those seeking a relationship with this divine presence, including fear, doubt, guilt, abandonment, ecstasy, gratefulness, hopefulness, and security. Our study of this phenomenon will yield insights into the relationship between psychology and spirituality. Sources will include the biblical books of Psalms and Job and contemporary Jewish and Christian poetry.

JUDS 0830. The Bible as Literature.

Explores how methods of literary analysis can be applied to the reading of narratives of the Old Testament/Hebrew Bible (in English translation). Also compares the ways that modern writers have transformed biblical stories into new interpretive literary works. For students interested in an introduction to the Bible, as well as students with a knowledge of the Bible who want to deepen their understanding of biblical narratives and investigate the influence of the Bible on modern literature. All readings in English.

JUDS 0831. Holocaust Literature.

Readings in works of prose and poetry by victims and survivors of the Holocaust that portray experiences in ghettos, in concentration camps, and in hiding. Exploration of the moral, psychological, religious, and cultural dimensions of the Holocaust and what it can teach us about human nature.

JUDS 0840. "Coming Out" Jewish, Gay or Black: Mistaken Identity in Literature from USA and Brazil (POBS 0820).

Interested students must register for POBS 0820.

JUDS 0901. Brothers Betrayed: Jews and Poles from 1500 until Today.

Jews have lived on Polish lands for some nine hundred years. In that time, they and their non-Jewish neighbors have interacted in a wide range of ways, from friendship and co-operation to hatred and violence. In this course, we examine this centuries long relationship, focusing particularly on how peaceful co-existence between Poles and Jews could rapidly change to bitter hostility. Topics include: Jews and the early-modern nobility; the nineteenth-century "Polish-Jewish Brotherhood"; the exclusionary politics of the interwar Polish republic; Poland's role in the Holocaust; the post-war Communist regime and the Jews; Polish-Jewish relations following the collapse of communism.

JUDS 0902. History of the Holocaust.

Explores questions raised by the Holocaust regarding how such barbarism erupted in our so-called civilized and enlightened age. Attempts to analyze the meaning of the Holocaust from three vantage points: that of European, and more particularly, German history; that of Jewish history; and that of those states and religious institutions which shared responsibility. Enrollment limited to 40. If unable to enroll because of closed registration please contact the professor and a wait list will be created.

JUDS 0980K. Contested and Ambivalent Belonging in Modern Israel: Questions of Ethnicity and Citizenship.

This course explores how belonging in Israel is shaped by deep ambivalence and contestation—within the state and in its relationship to the Jewish diaspora. We examine how ethnicity, religion, race, and migration histories intersect to produce inclusion, exclusion, and layered forms of citizenship. Drawing on ethnographic, historical, and sociological texts, students will analyze the lived experiences of diverse communities, including Mizrahim, Palestinians, Ethiopian and Russian Jews, and diasporic visitors or returnees. The course also probes Israel's evolving stance toward global Jewry—embracing, instrumentalizing, or distancing itself from diasporic Jewish identities—while many Israeli citizens carry their own diasporic pasts. Through critical engagement with these dynamics, the course offers tools to think beyond binary framings of belonging and to understand how nationhood, memory, and identity are continuously negotiated in the Israeli context.

JUDS 1002. Targumic Aramaic.

A systematic study of the grammar of Targumic Aramaic followed by readings from Targum Onqelos to the Book of Exodus. Prerequisite: knowledge of the grammar of a Semitic language (preferably Hebrew). Open to undergraduates and graduate students with the necessary background. Regular attendance and thorough preparation are mandatory for all students in this class. By the end of the semester, we will have translated at least four chapters of the Onqelos Targum to Exodus. This course will serve as a foundation for any further work students intend to do with Aramaic (e.g., Old, Imperial, Biblical, Talmudic).

JUDS 1530. Prophets and Priests in Exile: Biblical Literature of the 6th Century BCE.

The exile of Judah's elite to Babylon elicited profound and conflicting literary responses. We will undertake a literary and historical analysis of a number of the most important works produced in response to the crisis of exile, including Jeremiah, Ezekiel, Second Isaiah, Lamentations, Psalm 137, the Priestly Writing, and the work of the exilic deuteronomists. Enrollment limited to 20.

JUDS 1600A. Race, Religion, and Ethnicity in the Study of Antiquity (RELS 1600A).

Interested students must register for RELS 1600A.

JUDS 1601. Jewish and Christian Identity in the Ancient Period.

The modern engagement with the many ways that we construct identity has been matched by a similar wave of studies about identity construction in the ancient world. In this course we will discuss the rise of "Judaism" and "Jewish identity" in the ancient period (looking at roughly 400 BCE-200 CE), and compare it with the movement of the followers of Jesus as a negotiation of a new identity within Judaism (roughly 30 CE-200 CE). We will conclude with the question of the "Parting of the Ways" of these two groups.

JUDS 1602. Mishnah and Tosefta.

An examination and close reading of the Mishnah and Tosefta, two third-century CE documents foundational to rabbinic Judaism. The class will focus on both contemporary scholarly understandings of these texts and readings, in the original Hebrew, of the text itself. Knowledge of Hebrew (biblical, rabbinic, or two years of modern or its equivalent) required.

JUDS 1603. On the Margins of the Bible: Jewish and Christian Non-Canonical Texts.

Ancient Jews and Christians produced many texts that were not canonized in the Bible, texts often as interesting, beautiful, or theologically rewarding as those later canonized. Why were they not also included? What was the process of canonization, and who was in charge? What were the contexts that produced the non-canonical texts? Were the texts omitted at odds with the mainstream, or even dangerous? What value did they have in the ancient world, and what value do they hold today for historical understanding? We will study some of the best of these texts, comparing them to biblical texts.

JUDS 1604. The Life and Afterlives of the Apostle Paul (RELS 1330A). Interested students must register for RELS 1330A.

JUDS 1605. Social World of the Early Christians (RELS 1320). Interested students must register for RELS 1320.

JUDS 1606. Educating Bodies in Ancient Christianity (RELS 1325A). Interested students must register for RELS 1325A.

JUDS 1607. The Ten Commandments.

A history of the Ten Commandments from the Bible to today. How have the commandments been understood by Jews and Christians throughout time? What symbolic importance have they had?

JUDS 1610. The Archaeology of Jerusalem: From the Origins to the Ottomans.

Jerusalem earned a special eminence among the world's famed ancient cities. Its sanctity to Jews, Christians, and Muslims made the city a focus of discussions and controversies regarding the evolving and changing identities throughout its long urban history. 1700+ archaeological excavations and surveys in and around the Old City have been conducted over the last 150 years. Examine the material remains of the city from the beginnings in the Chalcolithic period through the Ottoman period, 1917 CE. The contemporary literary sources as well as the more recent scholarly debates and discoveries help us understand the material remains of the relevant periods.

JUDS 1611. The Dead Sea Scrolls.

The Dead Sea scrolls have been rightly celebrated as changing our fundamental understanding of ancient Jewish and Christian history as well as the Bible. But what is in them, and why do they matter? In this course we will read through most of the scrolls in English translation and cover topics such as: authorship; historical context; religious practice; and scripture and its interpretation. The course will develop skills in analytical writing, close reading, and historical reasoning. Enrollment limited to 20.

JUDS 1613. Religion and Postcolonialism.

When eighteenth- and nineteenth-century Western scholars turned their gaze toward the East they began fetishizing the wonders and mysteries of the "Orient". This powerful myth of the Orient helped to reimagine the Jews of Europe as an "internal colony" and also helped justify the colonization of and Christian missionizing among peoples abroad. This course will examine the social, political, and scholarly representations of religious and cultural otherness of Jews, Muslims, and Hindus who experienced Christianity as both a colonizing force as well as a model for imagining the nationalist projects of their post-colonial states.

JUDS 1614. The Political Theology of the "Jewish Question".

This class explores the theologico-political predicament of European modernity: the modern problem of negotiating seemingly insoluble social and political tensions often rooted in purportedly absolute norms and claims. Tracing the interwoven problems of race, religion, and secularism in the European "Jewish Question," we will inquire into the possibilities for alternative, fugitive modes of being for racialized people. Authors include Arendt, Carter, Derrida, Du Bois, Fanon, Sartre, Schmitt, Strauss and Wilderson, Wynter.

JUDS 1615. The Archaeology of Palestine.

Palestine constitutes one of the most important archaeological regions connected to the origins of Judaism, Christianity and Islam. In this class we will examine the material remains of the region beginning in pre-historic times until the end of the Ottoman period in 1917. Literary sources as well as the more recent scholarly debates and discoveries help us understand the material remains of the relevant periods.

JUDS 1616. Adam and Eve in Early Biblical Interpretation (RELS 1144).

Interested students must register for RELS 1144.

JUDS 1617. Jewish Women: Between Conformity and Agency.

This seminar studies Jewish women in different temporal and geographical contexts, internally within their own communities and externally with other neighboring religious groups. Visual and material sources (iconography, artifacts, architectures, film) are examined in dialogue with texts (biblical and Talmudic writings, medieval and modern commentaries, contemporary literature) to explore the binary of male authority and female agency. Case studies will encompass the Middle East and Europe from antiquity to the present.

JUDS 1625. Problems in Israelite Religion and Ancient Judaism.

A series of topics in Israelite religion and ancient Judaism which are of current scholarly interest are explored in a seminar setting. Students are encouraged to read widely and pursue individual research interests. The course assumes a basic knowledge of biblical literature and scholarly criticism. Enrollment limited to 20.

JUDS 1630. The Talmud.

Written from the first - seventh centuries CE, the Talmud (which runs to 20 volumes) contains law, lore, theological speculation, and complex argumentation. We will read a selection in depth and examine both traditional and modern critical (e.g. historical and literary) approaches to this fundamental text. No prerequisites; all texts in English translation. Enrollment limited to 20.

JUDS 1635. Problems in Israelite History.

Topics of recent and current debate among specialists in the field of Israelite history. Problems include (1) the historicity of the patriarchs and matriarchs; (2) the historical evidence relevant to the question of an exodus; (3) the nature of Israel's settlement in Canaan; (4) the 10th century, era of empire or literary fiction? (5) the land of Judah after the Babylonian conquest. Enrollment limited to 20.

JUDS 1640. Judaism: History and Religion.

Surveys the major practices, traditions, and beliefs of the Jews, with an emphasis on modern Jewish communities. How does a Jewish community shape its practices and beliefs against its own specific historical circumstances to create a coherent and meaningful religious system? What is "Judaism," and how do scholars of religion explain and interpret it?

JUDS 1645. Jews and Judaism in the Greco Roman Mediterranean.

An advanced survey of the evidence for Jews and Judaism in the Greco-Roman Mediterranean (Egypt, Asia Minor, Rome, North Africa, etc.). Sources include synagogue mosaics, burial and donor inscriptions, personal documents, and references in non-Jewish writers, including Christians. Also considers what theoretical models best enable us to reconstruct the identity, practices and beliefs of the ancient diaspora Jewish communities. Enrollment limited to 20.

JUDS 1650. Religion and Sexuality.

For millennia, religious thinkers have wrestled with the nature of sexuality. This class will examine how these thinkers have dealt with the essential questions that sexuality raises. Why do humans have sexual desire? Are there proper limits to sexual activity? While the focus of this class will be on Judaism and Christianity from antiquity to the present, we will also discuss Hindu, Muslim, and Tantra views. Topics to be addressed include: the nature and purpose of human sexual desire; contraception; adultery; homosexuality; abortion; and masturbation. No prerequisites.

JUDS 1654. Russian Jewish Literature and Film (RUSS 1900).

Interested students must register for RUSS 1900.

JUDS 1655. Religion in the Dead Sea Scrolls (RELS 1150).

Interested students must register for RELS 1150.

JUDS 1665. Imposing Orthodoxy: "Jews," "Pagans" and "Heretics" when Constantinian Christianity Won (HMAN 1970I).

Interested students must register for HMAN 1970I.

JUDS 1670. Ancient Synagogues, Churches, and Mosques in Palestine.

Reviews the discoveries and related scholarship of ancient synagogues, churches, and mosques in ancient Palestine. Focuses on their architectural and decorative as well as their spiritual and religious characteristics, and examines how those institutions influenced each other throughout their history of development.

JUDS 1675. Parting of the Ways: The Separation of Judaism and Christianity.

Jesus may have been Jewish, but for many centuries, Jews and Christians alike have considered their religions and their self-identifications to be mutually exclusive. When, why and how did these differences become definitive? Some modern scholars argue that "the ways parted early": others contend that they never parted at all! We focus on the period before Christianity becomes the official religion of the Roman Empire (late 4th century C.E.), with attention to persons in antiquity who contested these distinctions, and even to some in our own time ("Hebrew Christians," "Messianic Jews," and "Jews for Jesus"). Enrollment limited to 20.

JUDS 1676. Jerusalem Divided: Politics and Cultural Heritage (URBN 1870K).

Interested students must register for URBN 1870K.

JUDS 1680. The Archaeology of Qumran and the Dead Sea Scrolls.

Qumran is one of the most prominent archaeological sites in the world. Its fame derives from its proximity to a series of caves in which some 800 ancient scrolls were found. Scholars have debated the relevance of this site to the histories of Judaism and Christianity. This seminar will examine the debates regarding the character of Qumran through the material finds from old and new excavations conducted at the site itself and in the Dead Sea region. The lectures and readings are intended to stimulate a discussion about how to use texts and material culture for reconstructing the past. Enrollment limited to 20.

JUDS 1690. Prophets and Priests in Exile: Biblical Literature of the 6th Century BCE.

The exile of Judah's elite to Babylon elicited profound and conflicting literary responses. We will undertake a literary and historical analysis of a number of the most important works produced in response to the crisis of exile, including Jeremiah, Ezekiel, Second Isaiah, Lamentations, Psalm 137, the Priestly Writing, and the work of the exilic deuteronomists. Enrollment limited to 20.

JUDS 1695. Philo (RELS 1130).

Interested students must register for RELS 1130.

JUDS 1696. Kabbalah: An Introduction to Jewish Mysticism (HMAN 1971U).

Interested students must register for HMAN 1971U.

JUDS 1701. Jews and Revolutions in the 20th Century.

The 20th century was an age of revolutions, both political and social, in which Jews played pivotal roles. The student uprisings of the 1960s, the Feminist revolution, and the rise of the LGBTQ movement were crucial moments of change in the development of the western world. We will discuss the Jews' roles in all these revolutionary movements, as well as in the great political revolutions of the time.

JUDS 1702. Creating the Global Economy: Entrepreneurial Jews, 1690-2010.

What can the experience of the Jews teach us about the growth of the modern economy in the era of globalization? What were the economic, political, and cultural conditions that allowed Jewish bankers to create the economic networks that helped underpin the modern world? We will answer these questions by examining the careers and interactions of the major Jewish bankers and banking dynasties such as the Rothschilds, Jacob Schiff, and Gerson Bleichroder. We will see how these Jewish economic networks helped create - and were exploited by - the modern European economic systems of Europe, the United States and Israel.

JUDS 1705. Modernity's Crisis: Jewish History from the French Revolution to the Election Donald Trump-HIST 1974.

Interested students must register for HIST 1974P.

JUDS 1711. History of the State of Israel: 1948 to the Present.

This course surveys the history of Israel from its Proclamation of Independence in 1948 until today. Israel's history has unfolded under the shadow of its prolonged conflict with the Palestinians and its Arab neighbors. At the same time, an entirely new, vibrant and dynamic society and culture has developed there. This course aims to familiarize the student with the major outlines of Israel's development, and with different narratives and interpretations of that history. The reading materials and class discussions will examine not only the Arab-Israeli conflict, but also its influence on Israeli politics, society and culture.

JUDS 1712. History of Zionism and the Birth of the State of Israel.

Examines the history of the Zionist movement within the context of the history of European nationalism and as one of numerous Jewish political responses to rising antisemitism. Explores the ideological and political foundations of the Zionist movement until Israel's establishment as well as broader concerns of Jewish politics in the late 19th and early 20th centuries.

JUDS 1713. Introduction to Yiddish Culture and Language.

Yiddish was the language spoken by most Jews in Eastern Europe and the countries to which they emigrated (including the U.S., England, South Africa, South American countries, and Israel) from the nineteenth century until after the Holocaust. It was the basis for a transnational Jewish culture and literature, and it played a central role in modern Jewish political life. We will explore the history of Yiddish culture and the development of the Yiddish press, literature, and cinema. The connection between Yiddish and modern Jewish politics will also be discussed. Students in this course will also have the opportunity to develop a basic knowledge of the Yiddish language.

JUDS 1714. Memoirs and Memory: The Individual Experience of Modern Jewish Life.

By comparing memoirs from the early modern period through contemporary times and from widely divergent geographical settings such as eastern, central and western Europe, North Africa, the U.S., and Palestine/Israel, this course considers how Jews in different historical settings have understood their "Jewishness" and their relationship to their past, as well as the historian's role in this relationship. Enrollment limited to 20.

JUDS 1715. Women and Gender in the Modern Jewish World.

This course will focus on Jewish women's encounters with modernity in a variety of contexts: Western and Eastern Europe, United States, and Israel. The goal of this course is to uncover the experiences of Jewish women and to use gender analysis as a means of enriching our understanding of Jewish life. Students will consider how gender has shaped Jewish women's experience in the context of immigration, assimilation, religious observance, home, work, motherhood, family, and feminism.

JUDS 1716. The End of Modern Jewish History.

This course addresses the changes to the Jewish diaspora throughout the second half of the twentieth century. It begins by considering the constellation of processes that defined modern Jewish history from the 1750s until the 1940s, including demographic growth; geographic spread; the struggle for political and legal emancipation; cultural, social, and economic integration; and the birth of modern anti-Semitism. The course then asks in what ways the Holocaust and the birth of Israel transformed Jewish life in the diaspora, positing that in the 1940s a new era of Jewish history began.

JUDS 1721. Making Sparks Fly: Mysticism and Politics in the History of Hasidism.

Hasidism was a social movement founded on mystical ideas. Using the texts of its greatest masters, we will learn how revolutionary new ideas about God and the world became a powerful movement for social change. We will examine Hasidism's kabbalistic background, and the mystical ideology of the Ba'al Shem Tov and his followers. We will focus on the development of the *Zaddik* and the Hasidic Court, as well as their conflicts with the rabbinic and community establishments in the eighteenth and nineteenth centuries. The seminar will involve critical reading of primary sources in translation and class discussions of historiography.

JUDS 1722. Money, Power, Sex and Love: Gender and the Family in Modern Jewish History.

Traditional Jewish society was patriarchal, though the forms this power took changed over time. It was also limited, even subverted, by various roles played by women. Since Jewish family life was very much under the control of Jewish women, the family was another place where women were able to wield power. Examining the history of gender and family allows us to examine the limits of patriarchal control and construct a new, often surprising picture of how Jewish society actually functioned. It also sheds new light on how the various forms of modern Jewish family we recognize today grew and developed.

JUDS 1723. Jews and Muslims.

This course considers interactions between Muslims and Jews in various historical settings from the early Islamic world, to Medieval Spain, to contemporary Europe and the Middle East. The goal is to move beyond simplistic histories of interfaith utopia, Islamic persecution, and Zionist domination to consider the complexities of ethno-religious interaction in a variety of social, cultural, economic and political contexts.

JUDS 1726. Jewish Humor and Commercial Entertainment in Early 20th-Century Europe and America.

The seminar explores the relationship between humor, popular culture and Jewish ethnic identity in early 20th-century Europe and America. It argues that self-deprecating humor and satiric performance of Jewish stereotypes were not expressions of self-hatred, but complex cultural gestures that led to integration within mainstream society. Topics to be considered are: the joke as a social gesture; the Jewish music hall as an urban institution; the politics of blackface in American Vaudeville; the East-European Jews in Hollywood.

JUDS 1728. Slavery in the Early Modern World (HIST 1964L).

Interested students must register for HIST 1964L.

JUDS 1729. Revolution and Romanticism in 19th Century Europe (HIST 1230A).

Interested students must register for HIST 1230A.

JUDS 1730. The Lower east side: Immigration and Memory.

For many, Manhattan's Lower East Side symbolizes the immigrant Jewish experience in America. Its image is highly romanticized: descriptions of everyday life and commerce as well as Jewish cultural and political life present the L.E.S. as a thriving center of authentic Jewish experience. The reality however was more complex. Most American Jews never lived in the Lower East Side and those who did found life there extremely difficult and challenging. This class will explore Jewish immigrant experience in the United States and trace the ways in which the L.E.S. has become part of the American collective memory.

JUDS 1731. A Commonwealth of Many Nations? Early Modern Poland-Lithuania (HIST 1551).

Interested students must register for HIST 1551.

JUDS 1732. New York, Warsaw, Tel Aviv, Buenos Aires: Transnational Jewish Cultures in the 20th Century.

Being a diasporic people without a nation-state until the mid-20th century, the Jews in Eastern Europe created Jewish cultures that were also influenced by the non-Jewish environment. How did these cultures develop in the age of mass migrations? How did the new Jewish cultures express the ideas of "homeland" and "diaspora?" Was the Jewish/Hebrew culture created in Israel part of the Jewish cultural discourse, or did it define itself separately? During the course, we will explore Jewish culture in four cities, also examining their relations with each other, in order to understand the transnational nature of these unique Jewish cultures. Enrollment limited to 40.

JUDS 1733. Early Modern Globalization: Jewish Economic Activity, 1500-1800 (HIST 1974M).

Interested students must register for HIST 1974M.

JUDS 1734. German Jews and Capitalist Markets in the Long Nineteenth Century (GRMN 1660L).

Interested students must register for GRMN 1660L.

JUDS 1736. Early Modern Globalization (HIST 1974M).

Interested students must register for HIST 1974M.

JUDS 1739. Kabbalah: An Introduction to Jewish Mysticism (HMAN 1971U).

Interested students must register for HMAN 1971U.

JUDS 1740. Kabbalah: Jews, Mysticism, and Magic.

What are the relationships between Man, God, and the World? Over the centuries, Jewish mystics have sought and found many different answers to this question. In doing so, they created new spiritual formations for Judaism to supplant rational philosophy as bearer of the truth about the Cosmos. We will examine the most important mystical texts produced by Jews to understand this crucial strand of Jewish - and Human - religious, spiritual, and cultural development. Among other books, we will read from the Zohar, Lurianic Kabbalah, the false messianic testimonies of the Sabbathean movement, Hasidism, and the thought of Martin Buber. Enrollment limited to 20.

JUDS 1742. Modern Jewish History and Society.

The study of Jews in their historical and contemporary communities of western and eastern Europe, the U.S., and Israel. Major themes include emancipation and assimilation; secularization and new religious expressions; the Holocaust and modern anti-Semitism; Zionism; immigration, ethnicity, and nationalism; family and intermarriage; education, Jewish culture, and politics.

JUDS 1743. American Jewish History.

By the mid-20th century, the U.S.'s Jewish population was one of the world's largest and most important. In 1654, however, when 23 Jews landed in New Amsterdam, their position was far from assured. The history of American Jewish settlement is considered by exploring the interaction between the political, social, and cultural environment and successive waves of Jewish migrants.

JUDS 1745. History of the Holocaust.

Explores questions raised by the Holocaust regarding how such barbarism erupted in our so-called civilized and enlightened age. Attempts to analyze the meaning of the Holocaust from three vantage points: that of European, and more particularly, German history; that of Jewish history; and that of those states and religious institutions which shared responsibility. Enrollment limited to 50. If unable to enroll because of closed registration please contact the professor and a wait list will be created.

JUDS 1746. Renewal in 20th Century Europe (HIST 1230C).

Interested students must register for HIST 1230C.

JUDS 1750. Jews in the World of Islam.

This course introduces students to Jews in the Islamic World from the beginnings of Islam through the modern era. Topics include the legal and social status of Jews under Islam, the structure and schisms of the Jewish community in Islamic empires, Jewish-Muslim relations, the intellectual transformations of Judaism under the impact of Islamic and Arabic culture, and historiographic perspectives. Students will be exposed to a range of primary and secondary source materials and have an opportunity to pursue a research topic in depth.

JUDS 1751. Jews Between Christians and Muslims in the Early Modern World.

What were the different experiences for Jews living among Christians and Muslims? How did Islam and Christianity affect the development of Jewish society and culture? Examine these questions by looking at two flourishing Jewish centers from 1500-1800: one in the Muslim Ottoman Empire, the other in the Christian Polish-Lithuanian Commonwealth. Topics to be discussed include: Christian and Muslim attitudes towards Jews and the Jews' response to them; Jewish communities in Polish and Ottoman towns; the development of Jewish law in both settings; Christianity, Islam, and anti-Jewish violence; the interactions of Jewish, Muslim, and Christian mystical movements. Enrollment limit: 20.

JUDS 1752. Zionists Anti Zionists and Post Zionists: Jewish Controversies in the 20th Century.

In Jewish historical memory, Zionism is seen as the dominant Jewish national ideology throughout the 20th century. However, emerging in 1897, the Zionist movement aroused significant Jewish opposition. Many different Jewish ideologies developed, ranging from non-Zionism to anti-Zionism. This course will discuss the different arguments used by both Zionists and their opponents. We will look at the various options: Zionism, Diaspora Nationalism, Socialism and Communism, and Reform Judaism (before 1967), as well as Israeli Zionism and the opposition it aroused from Post-Zionists. Our focal question will be: why did Zionism evoke so much opposition among different Jewish groups.

JUDS 1753. Blacks and Jews in American History and Culture.

African Americans and American Jews have interacted throughout the history of the United States. Through readings, images, and films, this course will explore this complex, sometimes tortured relationship in its religious, cultural and political aspects. It will discuss the role of Jews in the slave trade, the contributions of both groups to American popular culture, both groups' involvement in the struggle for the Civil Rights Act of 1964, the rise of Black Power, attitudes to Zionism, affirmative action and more. We will try to answer the question how the experiences of both groups both overlapped and led to conflict.

JUDS 1755. Mizrahi Jews: Migration to Israel from Muslim Lands.

This seminar course offers a comprehensive study of the history, culture, and present-day experiences of Mizrahi (Oriental) Jews who participated in the immigration (aliyah) from Muslim countries to Mandatory Palestine and then Israel before and after 1948. The course fosters a more comprehensive understanding of global Jewish history that extends beyond the European Ashkenazi narrative hegemony and experience to include the diverse histories of Jewish immigrants (olim) from the Middle East and North Africa. Against this backdrop, the course will consist of robust discussion on the histories, politics, hardships, and integration strategies of first, second, and third-generation Mizrahi Jews on their long and winding road from second class citizens into the mainstream of the Israeli society.

JUDS 1756. Ethnic, Religious, and Gender Identities in Modern Israel.

This course offers the opportunity to explore the dynamics of the intersection of ethnic, religious, and gender identities in modern Israel. Central themes of the course will include social hierarchy among identity groups in Israel, the challenges of integrating new immigrants into Israeli society, conflicts in values among members of the population, prejudice, and discrimination. The course will focus on a variety of identity groups, including Jews of European origin, Jews of Middle Eastern and North African origin, recent Jewish immigrants from Russia and Ethiopia, Palestinians, Bedouins, Druze, Ultra-Orthodox Jews, Religious Zionist Jews, the religious-secular divide, LGBTQ+ identities, and feminism.

JUDS 1801. Jewish Magic.

This course is designed to introduce you to a wide variety of texts representing magical beliefs and practices found in mainstream and marginal Jewish life from the biblical and rabbinic through the early modern periods (with some present-day comparison). It is also designed to acquaint you with some of the kinds of literature (legends, liturgical compositions, chronicles, exempla, amulets, magic recipe books) that describe magical practices with varying degrees of sympathy. One question we will ask in our discussions is how the literary representations of magic relate to actual magical beliefs and practices of their time.

JUDS 1810. Israeli Literature in Hebrew.

For students interested in reading selections of Hebrew fiction, drama, and poetry. Concentrates on major issues of the State of Israel, for example: the relationship between modernity and tradition, responses to the Holocaust, the Arab-Israeli conflict, and other cultural, social, and political issues. Israeli feature films are viewed and discussed. Conducted in Hebrew. Emphasizes strengthening Hebrew reading, writing, and speaking skills. Prerequisite: JUDS 0500. Students who have not taken JUDS 0500 should see instructor for permission to enroll.

JUDS 1820. Holocaust Literature.

Readings in works of prose and poetry by victims and survivors of the Holocaust that portray experiences in ghettos, in concentration camps, and in hiding. Additional readings in works of the post-war era by survivors and their offspring. Discussion of the moral, psychological, religious, and cultural dimensions of the Holocaust and its ongoing impact on humanity.

JUDS 1830. Esthers of the Diaspora (POBS 1500H).

Interested students must register for POBS 1500H.

JUDS 1840. The 'New Jew' and the Diaspora: Voices from Israel, Brazil and America (POBS 1500W).

Interested students must register for POBS 1500W.

JUDS 1933. Early Modern Globalization (HIST 1974M).

Interested students must register for HIST 1974M.

JUDS 1970. Individual Study Projects.

Section numbers vary by instructor. Please see Banner for the correct course reference number (CRN) to use when registering for this course.

JUDS 1974. Digging for the Bible: Science, Religion, and Politics.

Archaeological exploration in the "Holy Land" began in the mid-19th century and was motivated by the quest to discover the biblical sites. This region features among the most important visual and material remains connected to the origins of Judaism, Christianity, and Islam. This seminar will explore the relevant material remains from the Bronze Age through the end of the Ottoman period, and examine how these finds and their interpretations were shaped by religious and political motivations from the earliest endeavors to the present day.

JUDS 1975. Honors Thesis Semester I.

First of two semesters working with a faculty member in the Program in Judaic Studies to complete an honors thesis. Instructor permission required.

JUDS 1976. Honors Thesis Semester II.

Second of two semesters working with a faculty member in the Program in Judaic Studies to complete an honors thesis. Instructor permission required.

JUDS 2040. Yiddish for Research.

This is a course in Yiddish reading for research purposes designed primarily for advanced undergraduates and graduate students. This means that the emphasis will be on learning how to read and decipher a range of texts in modern Yiddish in different genres written. We will read the Yiddish classics and discuss their language, style and content, as well as newspaper articles published at the beginning of the 20th century and various historical documents. We will learn to read and understand non-standard pre-1930s Yiddish as well as American and Soviet Yiddish. Participation in this course requires the instructor's permission. Enrollment limited to 40.

JUDS 2060B. Methods in Ancient History (HIST 2970I).

Interested students must register for HIST 2970I.

JUDS 2450. Exchange Scholar Program.

Center for Language Studies

The Center for Language Studies fosters a community interested in researching and exploring cultures through a deep knowledge of and engagement with languages. The Center encompasses two unique units - the Center for Languages Studies (CLS) and World Languages and Cultures (WLC). CLS supports and promotes the work done by all language faculty and students at Brown. WLC is the home department for Arabic, ASL, English for International Graduate Students, Hindi, Persian, Turkish, Swahili, Urdu, and Yoruba.

The Center supports the teaching and learning of all languages and cultures at Brown and promotes the importance of intercultural dialogue and competence in contemporary society. By offering opportunities to reflect on language fluency, cultural fluency, to develop professionally and to stay updated regarding teaching and language pedagogy, we remain committed to helping faculty and graduate students excel. We foster a community of undergraduates who are invested in a sincere and critical dialogue with their peers by learning languages that represent a multiplicity of cultures and traditions. We coordinate academic and cultural events,

professional development for faculty and graduate students, as well as co-curricular learning opportunities for undergraduates and graduates.

For additional information please visit the Center's website at: <https://cls.brown.edu/>

Intercultural Competence Certificate Requirements

The Center for Language Studies' (CLS) Certificate in Intercultural Competence acknowledges that in an ever more interconnected world and society, with more opportunities for collaboration as well as situations of conflict, students need to understand and respect other cultures. By approaching language study, area studies courses and experiential learning through a critical lens focused on developing intercultural competence, students prepare themselves for a future after Brown working with people from all over the world, be it in industry, business, the university or in social justice work, anywhere where multicultural and multilingual groups work together.

Certificate Requirements:

Core Courses

1.5

LANG 0800	Theory and Practice of Intercultural Competence

Prerequisite for LANG 1800

To be completed alongside the internship or study away experience. The experiential learning component must focus on the same language community as the elective coursework. All prerequisite assignments are made available for asynchronous completion in Canvas.

LANG 1800	Capstone Seminar in Intercultural Competence

Language Study: Choose 2 courses taught in the same language and in the language needed for the experiential learning component from the list of electives. Courses listed below represent the minimum level required to fulfill the language requirement. Courses at higher levels must be taught in the target language.

2

ARAB 0400	Second-Year Arabic (and above*)

CZCH 0400	Intermediate Czech (and above including independent studies*)

GRMN 0300	Intermediate German I (and above*)

HISP 0600	Advanced Spanish II (and above*)

HNDI 0400	Intermediate Hindi-Urdu (and above*)

LANG 0150S	Swahili I (and above*)

NAHU 0100	Beginning Nahuatl (and above*)

PLSH 0300	Intermediate Polish (and above*)

POBS 0600	Topics in Portuguese-Speaking Cultures (and above*)

PRSN 0300	Intermediate Persian Language and Culture (and above*)

RUSS 0300	Intermediate Russian (and above*)

SIGN 0400	American Sign Language IV (and above*)

TKSH 0300	Intermediate Turkish (and above*)

VIET 0300	Intermediate Vietnamese (and above*)

YORU 0200	Introduction to Yoruba II (and above*)

Independent Studies related to language learning. These may be in various languages and students must take two semesters of the same language. Please consult with the CIC Advisor for initial approval.

Area Perspectives Course: Please choose 1 course to deepen your knowledge of one area and/or to bring together your interest in languages with other relevant academic interests. This course can be in any language.

1

ANTH 0800	Sound and Symbols: Introduction to Linguistic Anthropology

ANTH 0805	Language and Migration

ANTH 1131	Indian Issues in Anthropological Perspective

ANTH 1810	Language and Power

ARAB 0700 and above	

CZCH 1000	Dimensions of Czech Animation: Contexts, Interpretations, and Dialogs with the East

GRMN 0500 and above	

HIAA 1850H	Berlin: Architecture, Politics and Memory

HIST 0243	Modern Middle East Roots: 1492 to the Present

HIST 1968V	America and the Middle East: Histories of Connection and Exchange

Additional courses may count towards the area perspectives requirement, please see the CIC faculty advisor for approval.

Experiential Learning Component

Students are encouraged to consult with the CIC Faculty Advisor to gain approval before the start of the Experiential Learning Component. Students may however gain credit after completion with appropriate approval. Students will need to keep track of time and present documentation from a supervisor of hours completed. Students choose one of the following experiential learning opportunities:

International internships require use of the language students are studying for the language study elective and must include engagement with the community. The internship must be of at least 4 weeks and equal a total of 60 hours.

Study Abroad in a country in which a language other than English is used, must be at a university where courses are offered in the language the student has chosen for their language study elective, must include enrollment in at least one course taught in the language the student has chosen for their elective and must be for a period of one semester or at least 4 weeks in the summer.

Domestic internships require use of and significant exposure to the language the student is studying for their language study elective. Students will intern for one semester or at least 4 weeks in the summer for a minimum of 60 hours.

Total Credits

4.5

For a list of languages currently participating in the certificate, please see the CLS Website (<https://cls.brown.edu/certificate-intercultural-competence/>). Students may not pursue this certificate in the same language as their concentration.

Courses

American Sign Language

SIGN 0100. American Sign Language I, II.

An immersive approach using authentic communication inside and outside of the classroom will be used to develop introductory communicative skills in American Sign Language. Authentic materials from diverse sources will provide an overview of the American Deaf community. Basic media literacy skills will be taught.

This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade at the end of the course work in SIGN 0200 covers the entire year and is recorded as the final grade for both semesters.

SIGN 0200. American Sign Language I, II.

Introduces basic ASL conversation. Features core vocabulary, common signing phrases, non-manual components (facial expression, body postures), signing space, fingerspelling, numbers, loan signs, cultural protocols, rules of ASL grammar and structure. Deaf cultural behavior is introduced in the classroom and through readings, videotapes, and Deaf community events.

This is the second half of a year-long course. Students must have taken SIGN 0100 to receive credit for this course. If SIGN 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

SIGN 0300. American Sign Language III.

This course will use an immersive approach incorporating authentic communication to develop intermediate communicative skills in American Sign Language. Through authentic materials from diverse sources, students will engage in classroom discussion and produce media to explore Deaf cultural topics related to family dynamics, language and literacy, and education. Prerequisite SIGN 0200 or placement interview. Additional 1 hour session held through Zoom every week to discuss cultural topics.

SIGN 0400. American Sign Language IV.

Intensive use of expressive and receptive skills in complex grammatical structures, advanced classifiers, dialogues, and storytelling techniques. Discussion of social factors that give rise to code-switching; regional and ethnic sign variations; social, political, and cultural evolution of U.S. Deaf community. Interaction with Deaf community in directed and non-directed activities. Prerequisite SIGN 0300 or placement interview. Additional 1 hour session held through Zoom every week to discuss cultural topics.

SIGN 0500. American Sign Language V.

This course increases American Sign Language skills by introducing advanced vocabulary and grammar in various registers and settings, including informal and formal discussions, presentations, and storytelling. Through authentic materials from diverse sources, students will explore American Sign Language literature and oral traditions. Prerequisite SIGN 0400 or placement interview. Additional 1 hour session held through Zoom every week to discuss cultural topics.

SIGN 0610. American Sign Language VI.

Intensive use of expressive and receptive skills, with a focus on advanced linguistic structures, will be introduced and practiced. Colloquial and discourse features are also explored. The course emphasized advanced structures and classifiers, as well as complex grammatical forms across various registers and setting, including advanced presentation and storytelling techniques. Current events are discussed in American Sign Language, providing students with opportunities to apply their linguistic cultural knowledge while engaging in open discussions. Through authentic materials from diverse sources, students will explore the depth of American Sign Language literature. Prerequisite SIGN0500 or placement interview. Enrollment limited to 18. Written permission required. Prerequisite SIGN 0500 or placement interview.

SIGN 0900. Introduction to Deaf Studies.

Introduction to the Deaf Community and Deaf Culture. Discussion of similarities to, and differences from, mainstream hearing culture. Supplemental videotapes focus on aspects of the culture including Deaf education and history, autobiographical sketches, Deaf norms and values, and Deaf literature, art and folklore. Theoretical issues of culture and linguistics applied to Deaf culture, American Sign Language, and the variety of cultural perspectives of the Deaf community. Students also engage in a research project related to course content. Voice interpreter will be provided; all students are welcome; no previous knowledge of American Sign Language or Deaf Studies is needed.

SIGN 1910. Independent Study in Sign Language/Deaf Studies.

Independent study in an area of special interest to the student, with close guidance by a member of the faculty, and leading to a major paper/project. Required of candidates for honors, and recommended for third year students. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Prerequisite: SIGN 0500 or instructor permission.

Arabic

ARAB 0100. First-Year Arabic.

Builds basic listening, speaking, reading, and writing skills, introducing the Arabic language in its cultural environment. Four contact hours per week, with an emphasis on grammar and communication, plus written, audio, and video assignments outside of class. This is the first half of a two-semester sequence course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade at the end of the course work in ARAB 0200 covers the entire year and is recorded as the final grade for both semesters. If course is full, please request an override. Enrollment limited to 18.

ARAB 0110. Egyptian Arabic.

This course will introduce students to one of the major colloquial variants of contemporary Arabic. The native language of Egyptian citizens, used predominantly in everyday communication, has long since become widely understood throughout the Arab world, since popularized by the media and pop culture. The beginning oral proficiency that students will acquire in this course, by examining a range of sources, from textbooks to short stories, movies, social media posts and personal accounts by guest-speakers, and by practicing conversation in class, will facilitate their communication with native speakers of Arabic in a variety of informal situations. Prerequisite: ARAB 200. Enrollment limited to 18.

ARAB 0120. Intensive Summer Arabic.

This intensive summer course (Equal to ARAB 0100 and ARAB 0200) is an introductory course designed to build basic listening, speaking, writing, and reading skills in Arabic. MSA is the medium of formal oral and written communication used throughout the Arab world, and the course will mainly focus on this form of the language. This course will introduce essential colloquial vocabulary and grammar necessary for understanding and conducting simple acts of communication with native speakers.

ARAB 0200. First-Year Arabic.

Builds listening, speaking, reading, and writing skills, at the low intermediate level of Arabic proficiency. Five contact hours per week, with an emphasis on grammar and communication, plus written, audio, and video assignments outside of class. This is the second half of a year-long course. Students must have taken ARAB 0100 to receive credit for this course. If ARAB 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing. Enrollment limited to 18.

ARAB 0300. Second-Year Arabic.

Develops listening, speaking, reading and writing skills at the intermediate level of language proficiency through extensive use of various texts and multimedia. Promotes better understanding of Arabic cultural traditions. Five contact hours weekly, plus written, audio, and video assignments outside of class. Prerequisite: ARAB 0200. This is the first half of a year-long course. Neither semester may be elected independently without special written permission. The final grade at the end of the course work in ARAB 0400 covers the entire year and is recorded as the final grade for both semesters.

ARAB 0320. Intermediate Arabic.

This course (equal to ARAB 0300 and ARAB 0400) builds on the skills acquired in ARAB 0100 and ARAB 0200. In addition to al-Kitaab, Parts One and Two, coursework will incorporate poetry, prose, music, and films, to broaden your vocabulary, underpin complex grammatical norms, and increase your understanding of contemporary Arab culture. Colloquial usages are naturally integrated in conversation practice. This course will also introduce you to important figures and ideas associated with the cultural history and present of Arab societies. Elements of classical Arabic will be presented, preparing you to access the literary and cultural heritage of the Arab peoples.

ARAB 0400. Second-Year Arabic.

Develops listening, speaking, reading and writing skills at the intermediate level of language proficiency through extensive use of various texts and multimedia. Promotes better understanding of Arabic cultural traditions. Five contact hours weekly, plus written, audio, and video assignments outside of class. Prerequisite: ARAB 0300. This is the second half of a year-long course. Students must have taken ARAB 0300 to receive credit for this course.

ARAB 0450A. Beginning Levantine Colloquial.

Parting from the solid foundation built in MSA during the first two years of Arabic studies, this course will accelerate students' advancement toward language proficiency by introducing them to Levantine Colloquial, one of the major varieties of Arabic. In preparation for class meetings, we will view and read a variety of media from the Levant. Oral communication and understanding Levantine cultures and contemporary societies will be the focus of our meetings. At the end of the semester, students will gain confidence to function in an ample variety of social and cultural environments and access a wider range of media.

ARAB 0500. Third-Year Arabic.

This course offers comprehensive training in listening, speaking, reading, and writing at the advanced proficiency level. It will accelerate students' advancement toward language and cultural proficiency by integrating the study of Modern Standard Arabic and Colloquial Arabic, the latter of which will be the main form of oral communication in class discussions. Thematic units will include selections from the classical and modern traditions of Arabic writing, contemporary film and media, and various art forms with the goal of broadening students' understanding of Arab societies and their cultures. Through this integrated approach, students will gain confidence to function in an ample variety of social and cultural environments and access a wider range of media. Prereq: ARAB0400 or equivalent

ARAB 0600. Third-Year Arabic.

Offers comprehensive training in listening, speaking, reading, and writing with grammar review as needed. Broadens students' perspective of Arabic culture with selections from the classical and modern traditions of Arabic writing and various art forms. Four contact hours weekly. Prerequisite: ARAB 0500.

ARAB 0700. Advanced Arabic: Tales of the City.

The Arab city, current site of a major political upheaval, is the central theme of this integrated-skill language and culture course. Images of cities, as multifaceted as the people who inhabit them, animate cinema screens and daily news reports, inspire masters of writing, artists, and musicians, arouse political activism. By engaging the complex representation of the urban theme in contemporary discursive and art forms, this course will enhance students' understanding of the dynamics of urban politics and culture in the Middle East, while building a content-specific lexicon and advanced communicative ability. Prerequisite: ARAB 0600, or an equivalent. Enrollment limited to 12.

ARAB 0800. Advanced Arabic: Language & Culture through Cinema.

This integrated-skill language and culture course stresses oral interaction in class. We will view and discuss films from the Arab World as vehicles to understanding the cultural and linguistic diversity of Arabic-speaking countries. Our selection of films will focus on issues of economic inequality, family dynamics, and gender, as well as the effects of war and immigration on society. By engaging the complex representation of these themes in contemporary cinema, this course will enhance students' understanding of Middle Eastern culture, while building a content-specific lexicon and advanced communicative ability. Prerequisite: ARAB0600, or an equivalent. Enrollment limited to 12.

ARAB 0850. Advanced reading and composition in Arabic: Kalila wa-Dimna.

This course aims to introduce students with advanced proficiency in Arabic to Classical Arabic exemplified by the stories of Kalila wa-Dimna, one of the most popular medieval Arabic folk tales, told through a cast of personified animals. While written originally in Sanskrit in the fourth century CE, the Arabic translation of Ibn al-Muqaffa—one of the most influential prose writers in the history of Arabic literature—is what made it a classic in Arabic. It also allowed it to travel to other parts of the globe through various translations based on Ibn al-Muqaffa's.

Students will also have an opportunity to engage with a modern version of the stories, by Munther Younes, developing further their ability to read critically authentic Arabic texts of different historical periods, sharpening their analytical skills, and expanding their perspective of the language evolution through the ages. Advanced level in Arabic is required.

ARAB 0950. Advanced Reading and Composition: Arabic Fiction in the West.

This course explores themes of exile, nostalgia, and identity in works written in Arabic by Arab authors living in the West. The course aims to improve the students' skills in critical reading and writing through studying and analyzing original texts in their linguistic, cultural and historical contexts. Students read short stories and novels in Arabic by writers including Houda Barakat, Hassouna Mosbahi and Abdul Hadi Saadoun. All readings and discussions in Arabic.

ARAB 1100. Love, Revolution and Nostalgia in Modern Arabic Poetry.

This course aims to introduce students to the most prominent Arabic poets of the 20th and 21st century. Students will strengthen their language skills while reading and discussing texts by major modern poets from the Middle East and North Africa, including Nizar Qabbani, Darwish and Adonis.

Through the works of these poets, they will explore a range of themes from politics and oppression, to love and eroticism, personal freedom and women's liberation.

Conducted in Modern Standard Arabic; designed for students with advanced language skills. Prerequisite: Four years of Arabic, or by instructor permission.

ARAB 1990. Special Topics in Arabic Language, Literature, and Culture.

Advanced level integrated skill course focusing on specific reading and writing topics derived from the traditions and arts of the Arabic language. Course prerequisites include advanced capacity in Arabic grammar and reading comprehension. Enrollment limited to 10.

ARAB 1990B. Advanced Egyptian Arabic: Displacement and Diaspora in a Modernizing Egypt.

This is a course offered to students with at least six semesters of language study experience. Students must be comfortable with the script, sounds, structure and grammar of the language. The course will familiarize students with one of the major colloquial variants of contemporary Arabic. Egyptian Arabic is the dialect of Egyptian citizens and is used predominantly in everyday communication. Students will acquire proficiency by examining content-based sources related to its theme of displacement. Sources will range from books and articles to video clips, social media posts and accounts by speakers and guests.

ARAB 2450. Exchange Scholar Program.**Catalan****CATL 0100. Introduction to Catalan Language and Culture.**

Students in this course will learn the basics of Catalan, a language spoken by 10 million people. Its culture is internationally renowned in many fields, like cinema, literature, music, theatre, gastronomy, sports, and architecture. This course is designed to provide students with little or no knowledge of the Catalan language with the communicative skills they need, especially oral and cultural, to develop and manage any communicative circumstance, if they need to travel or study abroad in Barcelona or in any Catalan region where the language is spoken. Required: given the fact that this is a language course, students must attend two live online sessions each week, which are likely to be held on Tuesdays and Thursdays at 2pm EST. The schedule may be subject to change based on the availability of students.

CATL 0200. Catalan Language and Culture.

An intermediate course which introduces students to Catalan culture and allows them to review and extend their knowledge of all basic patterns (e.g. grammar, vocabulary, phonetics, sociocultural norms) of the language. Students will develop their oral and written skills by describing, narrating, and presenting arguments. They will work with texts and audio-visual material that will provide them with a deeper understanding of Catalan literature, culture, and contemporary society. Classes will be conducted in Catalan. Therefore a basic knowledge of Catalan literature is a prerequisite or students may request the instructor's permission to take the course.

CATL 0300. Catalan Language and Culture.

This course continues to develop and strengthen students' proficiency in the Catalan language. The cultural component plays a central role in these classes, as a means to access diverse uses of the language within a cultural context. Varied cultural sources will be explored, such as Catalan cinema, music, artistic expressions, sociocultural elements and literature. These will play a role in enhancing the student's confidence in their knowledge of the Catalan language and the context in which it is inserted. Students can expect to develop their language skills further, and to be active agents in their learning process.

CATL 1910. Independent Study in Catalan.

An open content course, which may be offered each semester. Offered as an Independent Study, this course will be adapted to students' needs that are not currently covered by our curricular offerings.

English for Internationals**EINT 2100. Academic Discourse for Internationals.**

This course develops the English skills of first-year international graduate students who are preparing to be teaching assistants. Students improve their listening comprehension and fluency in conversational interactions typical of academic settings. Areas of spoken English that are addressed include pronunciation, stress patterns, intonation, vocabulary, and structure. Instructor permission required.

EINT 2200. Academic Interactions.

This course develops the English language skills of first-year international graduate students who are preparing to be teaching assistants. Students improve their fluency and expression of complex ideas in a variety of linguistic situations typical of classroom interactions. Students also increase their control of vocabulary, pronunciation and listening comprehension when communicating with American undergraduates. Instructor permission required.

EINT 2300. Negotiating an American Classroom.

In this course, international graduate students increase their abilities to communicate accurately and fluently in English with American undergraduates. International students develop their ability to interact, in culturally appropriate ways, in a variety of teaching situations common to an institution of higher education, where they are responsible for expressing and explaining complex information and ideas in English. Instructor permission required.

EINT 2400. Speaking Professionally for Internationals.

This course develops the English communication skills of international graduate students with an emphasis on intelligibility of speech and clarity of expression in a variety of teaching and professional situations (e.g. presenting material, responding to questions, directing discussions). Students develop increased facility of English in extended discourse when they are the authority in a teaching or other professional context. Instructor permission required.

EINT 2500. Advanced Articulation Tutorial.

This course is an advanced pronunciation tutorial for international graduate students who have achieved a near-native speaker level of fluency in English, but who require greater precision of English articulations, pronunciation, fluency and/or expression. Instructor permission required.

Hindi-Urdu**HNDI 0100. Beginning Hindi or Urdu.**

Introduces conversation, reading, and writing of modern standard Hindi and the Devanagari script. Those who already know Devanagari but have rusty conversation skills may join the class second semester; obtain instructor's permission during the first semester. Those who prefer to learn Urdu and the Persian script should contact the instructor.

HNDI 0200. Beginning Hindi or Urdu.

Introduces conversation, reading, and writing of modern standard Hindi and the Devanagari script. Those who already know Devanagari but have rusty conversation skills may join the class second semester; obtain instructor's permission during the first semester. Those who prefer to learn Urdu and the Persian script should contact the instructor. Prerequisite: HNDI 0100.

HNDI 0300. Intermediate Hindi-Urdu.

A continuation of HNDI 0100-0200, which is a prerequisite. Introduces the variation of the Arabic script used for Urdu. Prepares students to communicate in written and spoken language. Activities are conducted in Hindi/Urdu. Meets four hours weekly.

HNDI 0400. Intermediate Hindi-Urdu.

A continuation of HNDI 0100-0200. Introduces the variation of the Persian script used for Urdu. Prepares students to communicate in written and spoken language. Activities are conducted in Hindi/Urdu. Meets four hours weekly. Prerequisite: HNDI 0300.

HNDI 1080. Advanced Hindi-Urdu.

Each student follows an independent reading list determined in consultation with the instructor. The readings may include folk tales, journalistic prose, 20th-century literature, classical Urdu poetry of the 17th to 19th centuries, or subjects in nonfiction. The class meets together three hours weekly for discussion. Each student also spends one hour weekly with the instructor. Prerequisite: HNDI 0400.

Language Studies

LANG 0150S. Swahili I.

Students successfully completing this beginner's course in Swahili Language and Culture will be able to communicate in Swahili in a culturally-appropriate way. Students will practice skills in an integrated fashion in order to reach some proficiency in speaking, reading, listening, and writing. Course content includes language, culture, history and music. Heritage speakers may place into the course depending on their language level. Like English, Swahili is not a tonal language, and considered to be one of the easier African languages to learn. Whether you are interested in Swahili in order to study and work in Africa or to engage with Swahili speakers in other parts of the world, this beginners course will prepare you well!

LANG 0250S. Beginning Swahili II.

Students successfully completing the second semester of this beginner's course in Swahili Language and Culture will be able to communicate in Swahili in a culturally-appropriate way. Students will practice skills in an integrated fashion in order to reach an intermediate low level of proficiency in speaking, reading, listening, and writing. Course content includes language, culture, history, music and children's literature. Heritage speakers may place into the course depending on their language level. Like English, Swahili is not a tonal language, and considered to be one of the easier African languages to learn. Knowledge of Swahili will assist you in order to study and work in Africa (Kenya and Tanzania) and to be able to engage with Swahili speakers in other parts of the world.

LANG 0710. Protest and Dissidence in Iran.

The anti-authoritarian Woman, Life, Freedom movement arose as a reaction to protests, incarceration and death in Iran in the fall of 2022. In this first-year seminar, you will learn about Iran, a country of 87 million people bordered by Iraq and Afghanistan. We will discuss historical events such as the 1979 Iranian Revolution and how they still affect Iran's relationship to the West. Through a broad selection of texts, film and art, we will explore topics that include corruption, authoritarianism, multiculturalism, race, social class, religion and gender relations in today's Iranian culture and society. In English.

LANG 0750. Identity and Languages in Contemporary Africa.

When you think of contemporary Africa, what's the first thing that comes to mind? IS it a megacity? Africa is the most rapidly urbanizing continent in the world. It is home to three of the world's megacities (populations of 10 million). It is also home to one-third of the world's languages and over 2000 languages are spoken in Africa. What is daily life within them like, and what kinds of linguistic, cultural, economic, and political roles do they play in our world? In this interdisciplinary class, we'll look for answers to these questions in articles and mixed media, including Instagram posts, op-eds, TED Talks, YouTube music videos, sci-fi short stories, documentary photography, and more. What we'll find might surprise you. Along the way, we'll also do some critical reflection and self-examination: what shapes the ways we think about Africa and why?

LANG 0760. Language and Film Discourse in Africa.

Africa is home to one of the biggest film industries in the world, Nollywood. In this course, we will watch and analyze selected scenes in films. We will also examine the language used in films to express speech acts (that is, an utterance considered an action) such as advice, apologies, compliments, gratitude, greetings, refusals, requests, and sympathies. Moreover, we will analyze the linguistic, contextual, and social phenomena in African films made in African languages within the past five years. In addition, we will consider language, context, power relations, proverbs, political discourse, and medical discourse in the African film ecology.

LANG 0800. Theory and Practice of Intercultural Competence.

What is intercultural competence? What are its benefits in our globalized society? Through readings, discussions, videos and visuals students will learn the theory behind intercultural competence as well as practical aspects about gaining and honing the skills needed for IC. Students will experience how the implementation of IC enhances study, work and internships carried out both globally and domestically. Limited to 40 students. This course is open to all students. It is also the foundational course required of students participating in Brown's Certificate of Intercultural Competence.

LANG 1000A. Living in Translation: Trans/national Mobilities and Multilingualism.

Current and historical voluntary, forced, and induced migrations demand we reflect on how we think about languages, as well as the persistent changes we make to language. Translation is one of the changes we encounter daily. This course discusses the ways that thinking in/of translation alters and facilitates our reading, writing, and interpretation. It considers multilingualism alongside the cannibal, a disruptor and figure of linguistic alterity. Our aim is to think about the authors' and texts' trans/national movements as we generate questions about mobilities, language, and decoloniality, as well as how they manifest in cultural productions. Materials include novels, short stories, essays, musical recordings, visual art, and film. Authors include Edwidge Danticat, Haruki Murakami, Emine Sevgi Özdamar, Binyavanga Wainaina, and Gloria Anzaldúa among others, with texts in transit between Brazil, Germany, Haiti, Japan, Kenya, Malaysia, Puerto Rico, Turkey, etc.

LANG 1200. Archipelagic Thinking with Global Literatures.

Islands and archipelagos have long been disparaged for their openness, blending, and fluidity. Around the globe today, this form of continental thinking continues to provoke nationalist policies and efforts to curb human migrations and refugee movements. This course reconsiders these ideas. In learning to think archipelagically, we will read and watch work by Edwidge Danticat, Rosario Ferré, Isaac Julien, Craig Santos Perez, Ai Weiwei and more. This will include discussing how practices of language, translation, and multilingualism are lived and theorized archipelagically.

LANG 1800. Capstone Seminar in Intercultural Competence.

This course serves as the final capstone course for the Certificate in Intercultural Competence. Students will connect the skills, attitudes and knowledge developed throughout the course work and experiential learning component of the Certificate to their future goals. Students will work on synthesizing all components of the Certificate through weekly discussions, simulations and case studies. Research topics and group discussions are designed to continue conversations that extend the work that began in the required foundation course LANG0800 The Theory and Practice of Intercultural Competence. Students will prepare a multi-modal presentation, and have the option of presenting a portfolio in a digital format, a podcast or a video, of the work they have completed along their journey towards intercultural competence. Students will participate in a public presentation session in order to share their work and engage the wider language-learning community on-campus.

LANG 1900. Independent Study in Languages.

This course will meet the needs of students who are not studying one of the languages offered by the CLS faculty. Beginner, Intermediate or Advanced integrated skill course focusing on specific reading and writing topics selected by the faculty advisor and the student. Enrollment limited to 10.

LANG 2450. Exchange Scholar Program.**LANG 2900. Seminar in Language Pedagogy and Second Language Acquisition.**

This course prepares graduate students in modern languages to understand theories of language pedagogy and second language acquisition. Students will gain both practical knowledge to incorporate into everyday teaching as well as an understanding of which approaches to teaching might be more effective than others in various classroom contexts and why. Undergraduates may enroll with permission of the instructor.

LANG XLIST. Courses of Interest to Students pursuing the Certificate in Intercultural Competence.**Nahuatl****NAHU 0100. Beginning Nahuatl.**

Once the lingua franca of the Aztec Empire, Nahuatl is the most widely spoken indigenous language in Mexico and in North America as a whole, with 1.7 million speakers and 30 variants. As the vehicle of centuries-old knowledge transmitted orally, Nahuatl offers an entry point into the cultures and worldviews of various indigenous communities today, both in Mexico and its diaspora. This online course offers an introduction to Nahuatl (Huasteca variant) through an immersive methodology focused on developing your speaking, listening comprehension, reading and writing, while fostering your cultural sensibility and competence. Ability to understand Spanish is desirable. Language of instruction is Nahuatl and Spanish.

NAHU 0200. Beginning Nahuatl II.

Once the lingua franca of the Aztec Empire, Nahuatl is the most widely spoken indigenous language in Mexico and in North America as a whole, with 1.7 million speakers and 30 variants. As the vehicle of centuries-old knowledge transmitted orally, Nahuatl offers an entry point into the cultures and worldviews of various indigenous communities today, both in Mexico and its diaspora. This online course offers an introduction to Nahuatl (Huasteca variant) through an immersive methodology focused on developing your speaking, listening comprehension, reading and writing, while fostering your cultural sensibility and competence.

NAHU 0300. Intermediate Nahuatl.

Intermediate Nahuatl offers students the opportunity to learn new themes and cultural practices of the Nahua communities of Chicontepec after NAHU 0100 and NAHU 0200. The approach is geared towards developing communication skills at an intermediate level. These skills will also allow students to explore colonial documents written in classical Nahuatl. The teaching method employs a communicative and cultural approach designed to develop both language proficiency and cultural competence. This is achieved through activities related to specific functions, contexts, grammar, and vocabulary relevant to everyday life situations in an indigenous community. Sessions are highly participatory and interactive, and small group work is often used. The course is mostly taught in Nahuatl to encourage its use and practice in classes.

NAHU 0400. Nahuatl II.

Nahuatl II or intermediate offers students the opportunity to learn new themes and cultural practices of the Nahua communities of Chicontepec after NAHU 0100, NAHU 0200 and NAHU 0300. The approach is geared towards developing communication skills at an intermediate level. These skills will also allow students to explore colonial documents written in classical Nahuatl. The teaching method employs a communicative and cultural approach designed to develop both language proficiency and cultural competence. This is achieved through activities related to specific functions, contexts, grammar, and vocabulary relevant to everyday life situations in an indigenous community. Sessions are highly participatory and interactive, and small group work is often used. The Nahuatl II course is mostly taught in Nahuatl, to encourage its use and practice in classes.

NAHU 0500. Advanced Nahuatl.

Nahuatl III or advanced is a course that offers students the opportunity to learn new themes and cultural practices of the Nahua communities of Chicontepec after NAHU 0100, NAHU 0200, NAHU 0300 and NAHU 0400. The approach is geared towards developing communication skills at an advanced level. These skills will also allow students to explore colonial documents written in classical Nahuatl. The teaching method employs a communicative and cultural approach designed to develop both language proficiency and cultural competence. This is achieved through activities related to specific functions, contexts, grammar, and vocabulary relevant to everyday life situations in an indigenous community. Sessions are highly participatory and interactive, and small group work is often used. The Nahuatl III course is mostly taught in Nahuatl, to encourage its use and practice in classes.

NAHU 0600. Advanced Nahuatl II.

Advanced Nahuatl II offers students the opportunity to learn new themes and cultural practices of the Nahua communities of Chicontepec after NAHU 0100, NAHU 0200, NAHU 0300, NAHU 0400 and NAHU 0500. The approach is geared towards developing communication skills at an advanced level. These skills will also allow students to explore colonial documents written in classical Nahuatl. The teaching method employs a communicative and cultural approach designed to develop both language proficiency and cultural competence. This is achieved through activities related to specific functions, contexts, grammar, and vocabulary relevant to everyday life situations in an indigenous community. Sessions are highly participatory and interactive, and small group work is often used. The Advanced Nahuatl II course is mostly taught in Nahuatl to encourage its use and practice in classes.

Persian**PRSN 0100. Basic Persian.**

Persian (Farsi) is a Middle Eastern language spoken by millions of people across Iran, Afghanistan, and Tajikistan. This fast-paced course for beginners stresses the acquisition of Persian alphabet and basic grammatical patterns, beginning levels of speaking, listening, reading, and writing. Strong emphasis on the links between language and culture. One additional hour completed asynchronously by enrolled students.

PRSN 0105. Accelerated Persian.

Persian (also called Farsi, Dari, or Tajiki) is a thriving modern language spoken by over 110 million people across Iran, Afghanistan, and Tajikistan. This course is designed for beginners in Persian who are already familiar with the script from other Middle Eastern or South Asian languages (such as Arabic, Urdu, Ottoman Turkish, or Punjabi), or who have some basic proficiency in the language. It may also be suitable for heritage speakers – please consult the instructor. After this course, students will move directly to PRSN 0300 Intermediate Persian Language and Culture.

PRSN 0200. Basic Persian.

Fast-paced course for beginners. Course stresses acquisition of Persian alphabet and basic grammatical patterns, beginning levels of speaking, listening, reading, and writing. Strong emphasis on the links between language and culture. This is the second half of a year-long course. Students must have taken PRSN 0100 to receive credit for this course. If PRSN 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing. One additional hour in consultation with instructor and enrolled students.

PRSN 0300. Intermediate Persian Language and Culture.

Expands students' proficiency in modern Persian language and culture; develops listening, speaking, reading and writing skills at the intermediate level through various texts and multimedia. Prerequisite: PRSN 0200. One additional hour in consultation with instructor and enrolled students.

PRSN 0400. Intermediate Persian Language and Culture.

Expands students' proficiency in modern Persian language and culture; develops listening, speaking, reading and writing skills at the intermediate level through various texts and multimedia. Prerequisite: PRSN 0300. One additional hour in consultation with instructor and enrolled students.

PRSN 0500. Advanced Persian Language and Culture I.

For students who have completed PRSN 0400 or have acquired language skills above the intermediate level through contact with Persian in other ways. The main goal of this course is to improve speaking, listening, reading and writing skills and promote exposure to the culture. It will enable students to expand their knowledge of the language by studying samples of modern and classical Persian literature in order to advance toward mastery of contemporary literature. The course will motivate students to communicate both in written and spoken Persian by utilizing the adequate grammatical order and correct vocabulary. Prerequisite: PRSN 0400.

PRSN 0600. Advanced Persian Language and Culture II.

Designed for students who have completed PRSN 0500 or have acquired language skills above the advanced level through other means. The main goal of the course is to improve speaking, listening, reading and writing skills and promote exposure to the language and culture through in depth study of samples of Persian literature, history, journals, newspapers, radio and TV material to advance toward mastery of contemporary literature. Students will be motivated to communicate both in written and spoken Persian by utilizing adequate grammatical order and vocabulary. Activities will include poetry reading, informal gatherings and translation from and into Persian. Prerequisite: PRSN 0500.

PRSN 0720. Modern Iran: Literature, Media & Pop Culture.

From the world-famous novels of Shahmroush Parsipour to the subversive rap lyrics of Hichkas; from the Oscar-winning films of Asghar Farhadi to state-sponsored TV propaganda of the Islamic Republic – this course takes a wide-ranging approach to understanding contemporary Iranian culture and society. Through a broad selection of sources translated into English, students will familiarize themselves with recent historical events in Iran and become more acquainted with various aspects of Iranian culture. The chronological focus will be from the 1979 Iranian Revolution to the present and will be organized around a number of social and political themes, including corruption, authoritarianism, multiculturalism, race, social class, religion and gender relations. No proficiency in Persian (Farsi) is required to enroll; however a separate discussion will be offered for students with Persian proficiency. No prior knowledge of the Middle East needed to enroll.

PRSN 1100. Reading Persian for Research.

Through a broad range of historical and academic texts in Persian, students will prepare to read and interpret Persian with the help of a dictionary at a level sufficient for carrying out academic research. In this course, students will engage with great thinkers, jurists, poets, and chroniclers of the Persian-speaking world: from the bold, multivalent poems of Jahan Malek Khatun, to the philosophical insights of Ghazali, the Machiavellian stylings of Hossein Va'ez Kāshefi, and the surprisingly candid memoirs of Qajar princess Taj al-Saltaneh. As the course is focused on preparing students for graduate language exams and research, it will not be actively working on students' speaking or listening skills in Persian. It is designed for students who have completed the Intermediate Persian language sequence at Brown, or who have attained a similar proficiency level elsewhere.

PRSN 1100A. Reading Persian for Research.

Through a broad range of historical and academic texts in Persian, students will prepare to read and interpret Persian with the help of a dictionary at a level sufficient for carrying out academic research. In this course, students will engage with great thinkers, jurists, poets, and chroniclers of the Persian-speaking world: from the bold, multivalent poems of Jahan Malek Khatun, to the philosophical insights of Ghazali, the Machiavellian stylings of Hossein Va'ez Kāshefi, and the surprisingly candid memoirs of Qajar princess Taj al-Saltaneh. As the course is focused on preparing students for graduate language exams and research, it will not be actively working on students' speaking or listening skills in Persian. It is designed for students who have completed the Intermediate Persian language sequence at Brown, or who have attained a similar proficiency level elsewhere.

PRSN 1150. Persian Historical Texts & Codicology.

Through a broad range of historical texts in Persian, students will prepare to read and interpret Persian at a level sufficient for carrying out academic research (with the help of a dictionary). In this course, students will engage with historical chronicles, literary texts, philosophical treatises and other documents of historical interest from the Persian-speaking world. Where possible, students will also grapple with the original manuscript tradition for the texts in question, learning to decipher handwriting and the general standards for creating a critical edition of a premodern text. As the course is focused on preparing students for graduate language exams and research, it will not be actively working on students' speaking or listening skills in Persian. It is designed for students who have completed the Intermediate Persian language sequence at Brown, or who have attained a similar proficiency level elsewhere.

PRSN 1200. Iranian Cinema: Before and After the Islamic Revolution.

This course provides an overview of Iranian Cinema in general and explores in detail Iranian cinema after the Iranian revolution. It explores the politics, history, techniques and the art of cinema of the past several decades in Iran. Classes consist of screenings, discussions and lectures. Conducted in English, open to all students. Enrollment limited to 25.

PRSN 2980. Reading and Research.

Work with individual students in connection with special readings, problems of research, or preparation of theses. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Turkish**TKSH 0100. Introduction to Turkish Language and Culture I.**

This is a proficiency oriented introductory course to Turkish Language and Culture. It adopts an integrated skills approach and is designed for students with little or no prior knowledge of Turkish. The course combines an emphasis on the development of communicative competences with an understanding of language structures and grammar as well as insights into Modern Turkish society and culture. The aim is to introduce students to basic linguistic structures and develop the ability to comprehend and produce text, as well as to speak and understand speech, in a variety of contexts and registers. Graduate students should contact the instructor to register.

TKSH 0110. Intensive Elementary Turkish Language and Culture.

This intensive elementary Turkish course is designed for students who have no prior familiarity with Turkish. It introduces students to the grammar and vocabulary of the Turkish language via speaking, listening, reading, and writing, with a special focus on speaking and listening. Students will also learn about Turkish-speaking cultures. They will be exposed to adapted Turkish audio-visual materials, situational survival phrases, and some authentic reading and audio-visual materials, and will be able to produce basic narratives and texts in the language. This course will be equivalent to one academic year of Turkish. Students will be able to continue to the 300 level Turkish course upon completion of this intensive Turkish course.

TKSH 0200. Introduction to Turkish.

This is the second semester of a proficiency oriented introductory course to Turkish Language and Culture. It adopts an integrated skills approach and is designed for students who have taken Turkish 0100 or have placed into the class after consultation with the instructor or a placement exam. The course combines an emphasis on the development of communicative competences with an understanding of language structures and grammar as well as insights into Modern Turkish society and culture.

TKSH 0300. Intermediate Turkish.

This course focuses on both communicative skills and the language structures of modern Turkish. Students will learn about Turkish society, culture, and traditions. Course materials include Turkish films, podcasts, radio programs, as well as authentic and adapted Turkish written texts. New students can place into the course depending on their language level. Class will be scheduled for three times a week synchronously in consultation with students and the instructor. There will also be one hour of asynchronous instruction.

TKSH 0400. Intermediate Turkish II.

TKSH 0400 is designed for students who have taken TKSH 0300 and already studied Turkish language to develop proficiency at an advanced level. New students can place into it, after special arrangements with the instructor. The course places equal emphasis on further developing four skills (reading, listening, speaking, and writing) at an advanced proficiency level as well as advanced compound and subordinate structures in grammar. It combines an emphasis on the development of communication skills with an understanding of the language and insights into Modern Turkish society and culture. There will be one additional hour TBD in consultation with the instructor and students.

TKSH 0500. Advanced Turkish I.

This course builds upon the linguistic and communicative points covered in TKSH 0400, and it is designed for students who are interested in Turkish language and culture. New students can place into it, after special arrangements with the instructor. The course is based on the development of four integrated skills: speaking, listening, reading, and writing. Students will learn about modern Turkey, Turkish society and culture by reading, watching, and listening to authentic and adapted Turkish texts including articles, news pieces, short stories, poems, movie clips, and songs.

TKSH 0600. Advanced Turkish II Online.

This course builds upon the linguistic and communicative points covered in TKSH 0500, and it is designed for students who are interested in Turkish language and culture. New students can place into it, after special arrangements with the instructor. The course is based on the development of four integrated skills: speaking, listening, reading, and writing. Students will learn about modern Turkey, its political and cultural issues by reading authentic Turkish articles and literary work, and watching and listening to authentic Turkish texts such as news, podcasts, video clips etc.

TKSH 0720A. Understanding Modern Turkey Through Film and Literature.

This course will introduce students to modern Turkey and offer a wide range of perspectives on the society and its culture. Each week, we will focus on a single theme such as: family and gender; social classes and their interaction with each other; Istanbul and its neighborhoods; Turkey's role within Europe; ethnic identities and their recognition by Turkish society; Turkish media and entertainment; modernism and political Islam; important events in the very recent history of Turkey including the Hrant Dink assassination, terror attacks, and the 2016 coup d'état attempt; education and academic freedom; modern literature; specific cultural practices and rituals; foreigners' perspectives on Turkish society; and modern Turkish sensory experiences including music and cuisine.

TKSH 0720B. Istanbul, Global Metropolis.

This course will introduce Istanbul as a global metropolis, by examining a wide range of issues and challenges facing the city and its people. Each week, we will focus on a single aspect such as: a brief historical outline of the city; the Istanbulites of the past and today; the power distribution between elites and underdogs; the struggles of the city's minorities and refugees; the effects of urbanization and rapid economic development; the uniqueness and interconnection of Istanbul's neighborhoods; cultures and their politicization; social movements and city squares as symbols of social resistance; architecture of the everyday and the city's architectural masterpieces; the representation of Istanbul in cinema and Turkish TV Series; and imagining Istanbul in modern Turkish literature.

TKSH 1100. Introductory Ottoman Turkish I.

This course is open to both graduate and undergraduate students. This introductory course aims to develop learners' Ottoman Turkish reading and understanding skills written in the Ottoman Turkish (Arabo-Persian) alphabet. Students will practice reading Ottoman Turkish starting with simple separate words, and they will gradually move to studying longer texts. Simultaneously, students will review the main grammatical features of Ottoman Turkish including simple Arabic and Persian grammatical elements in the texts. Students will also practice how to solve problems encountered in the texts with use of dictionaries. In this introductory course students will mainly study the printed Ottoman Turkish texts published after the Second Constitutional Era (1908), and then they will be introduced to the texts of the 'New Ottoman Turkish' era (1839-1908). Minimum B2 level of Turkish is required for this class. Please email me if you have any questions about your Turkish language level.

TKSH 1100A. Understanding Modern Turkey Through Film, Literature, and Media.

This course introduces students to modern Turkey and offers a wide range of perspectives on its society and culture. Themes include family and gender in Turkish society; Turkish social classes; Istanbul and its neighborhoods; Turkey's role within Europe; ethnic identities and their recognition by Turkish society; Turkish media and entertainment; modernism and political Islam; important events in the very recent history of Turkey including the Hrant Dink assassination, terror attacks, and the 2016 coup d'état; education and academic freedom; modern literature; specific cultural practices and rituals; foreigners' perspectives on Turkish society; and modern Turkish sensory experiences including music and cuisine.

Yoruba**YORU 0100. Introduction to Yoruba I.**

Students successfully completing this beginner's course in Yoruba Language and Culture will have the facility to speak in proper tones and patterns and to understand Yoruba used in common everyday situations. Students will practice skills in an integrated fashion in order to reach some proficiency in speaking, reading, listening, and writing. Course content includes Yoruba culture, literature, theater and music. Heritage speakers may place into the course depending on their language level.

YORU 0110. Introduction to Yoruba.

This is a Yorùbá language and culture course. This course is designed especially for Brown University students who would like to enroll in Introduction to Yoruba but have (had) issues with time conflicts. Students with some background in Yoruba who wish to review and master Yoruba are also welcome. This course covers topics in Introduction to Yorùbá (YORU0100 and YORU0200), which are taught in the fall and spring semesters. After completing this course, students will be prepared to enroll in YORU0300. Freshmen coming to Brown can take this course or take YORU0100 and YORU0200 in Fall 2024 and Spring 2025 respectively. Please email Victor Alabi at victor_alabi@brown.edu for any questions.

YORU 0200. Introduction to Yoruba II.

Students successfully completing this beginner's course in Yoruba Language and Culture will have the facility to speak in proper tones and patterns and to understand Yoruba used in common everyday situations. Students will practice skills in an integrated fashion in order to reach some proficiency in speaking, reading, listening, and writing. Course content includes Yoruba culture, literature, theater and music. Heritage speakers may place into the course depending on their language level.

YORU 0300. Intermediate Yoruba I.

Students will learn to speak, read and write Yorùbá at an intermediate level. Classroom time focuses on speaking; homework includes work with the textbook and vocabulary learning. Texts include a variety of materials from BBC including films and audio materials. Learners will also be introduced to some current affairs, social, artistic and cultural events and issues in Nigeria. Learners will work on a paper in Yorùbá about their exposure to the language and culture as a final project.

YORU 0400. Intermediate Yoruba II.

This intermediate course expands on the work done in YORU0300. Focus continues to be on speaking while also learning to write longer texts in Yorùbá with tones. Students will become more familiar with the tradition of Yorùbá proverbs. Themes of the course include aspects of African culture such as education, fashion, music, business, film, and politics.

Latin American and Caribbean Studies

The Center for Latin American and Caribbean Studies (CLACS) at Brown University facilitates the study of this dynamic region from a multidisciplinary perspective. CLACS organizes academic conferences, lectures, and cultural programming, and supports our over 100 faculty affiliates as well as graduate and undergraduates interested in the region. The undergraduate concentration was first approved in 1973 and was later incorporated into the Center for Latin American Studies (eventually renamed CLACS) after its establishment in November of 1984.

For additional information, please visit the department's website: <http://www.watsoninstitute.org/clacs/>

Latin American and Caribbean Studies Concentration Requirements

The concentration in Latin American and Caribbean Studies (LACA) leads to a strong, interdisciplinary understanding of culture, history, and contemporary issues in Latin America, the Caribbean, and the Latinx diaspora.

Requirements are intentionally broad and flexible to accommodate the focused interests of students in understanding the diverse reality of this region. Concentration requirements include four themes: language, area studies, research, and internship or service work. A wide selection of courses from departments across the University expose students to the methods and materials of different disciplines and provide a background in the contemporary and historical contours of Latin American, Caribbean, and Latinx societies. For more information, contact the Director of Undergraduate Studies, Professor Daniel Rodriguez.

Concentration Requirements

1. Ten courses on Latin American, Caribbean, and/or Latinx subjects.

These may be explicitly designated as LACA classes, but do not need to be. Up to two of these courses can be language learning classes. Relevant courses from study abroad may count toward this total. For double concentrators, up to two classes can count toward the course requirements of both LACA and another concentration. At least two different academic disciplines should be represented in the ten courses. Courses in which the student did substantial work on a Latin American, Caribbean, or Latinx subject may count toward this total, even if the course as a whole has a more general subject matter. Concentrators should periodically update their courses on ASK and confirm with the Director of Undergraduate Studies that they are on track to meeting the coursework requirement.

The courses must include at least one survey course providing a comprehensive and comparative view of the region. Examples include the following:

LACA 0500	Around Latin America in 80 Days: An Historical and Cultural Journey
LACA 1504G	Arts of the Environment in the Americas
LACA 1510I	Urban Latin America
LACA 1630	Engaged Humanities: Storytelling in the Americas
HISP 0730	Encounters: Latin America in Its Literature and Culture
HISP 1330Z	Tropical Fictions: Geography and Literature in Latin American Culture
HIST 0234	Modern Latin America
HIST 1966Q	Colonial Encounters and the Creation of Latin America
POLS 1210	Latin American Politics
POBS 0280	Mapping Food, Eating Meaning, Making Community: A Welcome to the Lusophone world

2. Competence in a Latin American and/or Caribbean language.

Competence in Spanish, Portuguese, French, Haitian Kreyol, Kaqchikel Maya, etc. may be demonstrated through a departmental test, AP credit, language courses at Brown or elsewhere, study abroad, etc; please contact the concentration advisor to confirm. (If the student's primary area of study is the Anglophone Caribbean, a field language is not necessary.)

3. An internship or volunteer service, located in the U.S. or overseas, for one semester or one summer. Work completed during study abroad may count toward this requirement. The service work will connect theory to practice, applying scholarly knowledge to social challenges. Students are encouraged to consult with the Swearer Center for Public Service for assistance finding a volunteer placement. Students should also meet with the DUS by the beginning of junior year to discuss their work plan

for their service component. Upon completion of the internship or service work, students fill and submit via ASK the Internship, Work or Volunteer Service Form, available online in the LACA Undergraduate Concentration webpage (<https://watson.brown.edu/clacs/education/undergraduate>) (<https://watson.brown.edu/clacs/education/undergraduate/>). In addition they are expected to submit via ASK a short letter from a supervisor confirming the completion of the work.

4. A capstone project. This may be a senior honors thesis or creative project, supervised by a primary advisor and a secondary reader; a non-honors research paper; or a reflective paper about non-academic work (such as service or foreign study) related to Latin America, the Caribbean or the Latinx experience.

The project may be completed for honors if the student is eligible (see Honors, below).

All concentrators are required to enroll in LACA 1900 during their junior or senior year to complete their Capstone project requirement (capstone project or honors thesis). In addition to this course, students may also elect to enroll in one or two semesters of independent study (LACA 1990, LACA 1991) with their thesis/project advisor. All Honors Candidates are expected to attend the Annual Concentration Research Day and to give a 10-minute oral presentation of their honors thesis project followed by a short Q&A.

Writing Requirement

To satisfy Brown's writing requirement as a LACA concentrator (which must be completed by the end of the 7th semester), students are encouraged to consider courses that have an emphasis on revision and feedback such as the following:

LACA 1900	Preparation for Honors and Capstone Projects on Latin American and Caribbean Topics
ETHN 1200D	Latinx Literature
LACA 0500	Around Latin America in 80 Days: An Historical and Cultural Journey
LACA 1504G	Arts of the Environment in the Americas
LACA 1630	Engaged Humanities: Storytelling in the Americas
COLT 0710I	New Worlds: Reading Spaces and Places in Colonial Latin America
HISP 0730	Encounters: Latin America in Its Literature and Culture
HIST 0233	Colonial Latin America
HIST 1977I	Gender, Race, and Medicine in the Americas

Engaged Scholars Program

The concentration also allows students to pursue the Engaged Scholars Program (<http://watson.brown.edu/clacs/node/654/>). The Engaged Scholars Program (ESP) in Latin American and Caribbean Studies (LACA) is designed for LACA concentrators who are especially interested in making deeper connections between their academic work and local communities in Providence and beyond. Engaged Scholars combine hands-on experiences such as internships, public service, humanitarian, and development work with their academic learning in order to develop a deeper understanding of, and appreciation for, social engagement.

Honors

Qualified undergraduates may work towards the A.B. in Latin American and Caribbean Studies with Honors.

Requirements to graduate with Honors:

1. Maintenance of at least an A- average in the ten courses counting for the Latin American and Caribbean Studies concentration
2. Maintenance of at least a B+ average in all course work at Brown
3. Completion of a senior honors thesis or project with a grade of A

Grades of S do not negatively affect the eligibility for honors.

Graduating seniors with Honors in Latin American and Caribbean Studies are eligible for an award administered by the concentration for Outstanding Senior Thesis or Project.

Senior Honors Thesis or Project Timeline:

For Senior-Year Students-

- **By the end of sixth semester:** Students fill and submit a one page proposal to the concentration advisor the Honors Thesis Declaration Form available online in the LACA Undergraduate Concentration webpage (<https://watson.brown.edu/clacs/education/undergraduate> (<https://watson.brown.edu/clacs/education/undergraduate/>)). In the form, they are expected to indicate their thesis or project title and short description. The Honors Thesis Declaration Form must be signed by a primary advisor. Students who study abroad spring semester junior year may apply for admission to the Honors Program but must meet the application deadline. Students in this position should start thinking about a proposal and contact advisors well in advance.
- **By January 15:** Students submit the first section of their thesis or project to their research advisor for review. They should agree with their advisor on the schedule for the remaining portions.
- **By March 15:** A draft of the entire thesis or project is due to the primary advisor and the secondary reader for review and feedback.
- **By 5 pm EST on April 15:** The final, complete senior honors thesis or project is due.
- Students submit one copy each to the primary advisor and the secondary reader.
- Students submit one paper copy and one electronic copy to the concentration advisor and one electronic copy to the Brown Library Digital Repository (BDR).

For Mid-Year Completers:

Mid-year completors must apply for the Honors Program their 6th semester, as 2nd semester Juniors. They undertake the thesis in their 7th and 8th semesters, allowing them to complete the following Honors course sequence:

- **By the end of the 6th semester:** Students fill and submit to the concentration advisor the Honors Thesis Declaration Form available online in the LACA Undergraduate Concentration webpage (<https://watson.brown.edu/clacs/education/undergraduate> (<https://watson.brown.edu/clacs/education/undergraduate/>)). In the form, they are expected to indicate their thesis or project title and short description. The Honors Thesis Declaration Form must be signed by a primary advisor.
- **By September 15:** Students submit the first section of their thesis or project to their research advisor for review. They should agree with their advisor on the schedule for the remaining portions.
- **By October 15:** A draft of the entire thesis or project is due to the primary advisor and the secondary reader for review and feedback.
- **By 5 pm on November 15:** The final, complete senior honors thesis or project is due.
- Students submit one copy each to the primary advisor and the secondary reader.
- Students submit one paper copy and one electronic copy to the concentration advisor and one electronic copy to the Brown Library Digital Repository (BDR).

Latin American and Caribbean Studies Graduate Program

Brown offers no advanced degree in Latin American Studies, but our faculty work closely with interested graduate students in other departments such as Hispanic Studies, History, Economics, American Civilization, Anthropology, Sociology, Political Science, Portuguese and Brazilian Studies, and the A.M. in Development Studies. Information about these degrees may be obtained directly from these departments or programs.

Courses

LACA 0021F. Popular Music and Society in Latin America (MUSC 0021F).

Interested students must register for MUSC 0021F.

LACA 0030. Health of Hispaniola (PHP 0030).

Interested students must register for PHP 0030.

LACA 0066N. People and Cultures of Greater Mexico (ANTH 0066N).

Interested students must register for ANTH 0066N.

LACA 0090A. The Border/La Frontera (ETHN 0090A).

Interested students must register for ETHN 0090A.

LACA 0100A. Beginning Nahuatl (NAHU 0100).

Interested students must register for NAHU 0100.

LACA 0190A. Islands of Empire (ETHN 0190A).

Interested students must register for ETHN 0190A.

LACA 0200. Beginning Nahuatl II (NAHU 0200).

Interested students must register for NAHU 0200.

LACA 0210. Afro Latin Americans and Blackness in the Americas (AFRI 0210).

Interested students must register for AFRI 0210.

LACA 0232. Clash of Empires in Latin America (HIST 0232).

Interested students must register for HIST 0232.

LACA 0233. Colonial Latin America (HIST 0233).

Interested students must register for HIST 0233.

LACA 0234. Modern Latin America (HIST 0234).

Interested students must register for HIST 0234.

LACA 0253A. Colonial America: A Global History (HIST 0253A).

Interested students must register for HIST 0253A.

LACA 0255A. Mexican American History (HIST 0255A).

Interested students must register for HIST 0255A.

LACA 0256. Introduction to Latinx History (HIST 0256).

Interested students must register for HIST 0256.

LACA 0271. Introduction to Latina/o History (ETHN 0271).

Interested students must register for ETHN 0271.

LACA 0281. Digital Dress: Brazil Cinema on the World Stage (POBS 0281).

Interested students must register for POBS 0281.

LACA 0500. Around Latin America in 80 Days: An Historical and Cultural Journey.

This course is constructed as a journey throughout the complex and diverse region of Latin America. Students will explore some critical junctures and personalities that have defined Latin America as a transnational, and multilingual area of the globe from an interdisciplinary perspective, combining insights from literature, film, gender studies, visual arts, and social sciences.

The languages of instruction will be Spanish and English. During class discussions and assignments, students will be permitted to use the language of their choice. However, when English translations of the reading material are not available, they will be expected to conduct the readings in Spanish*.

LACA 0510F. Fidel Castro and Che Guevara: The Men and the Myths (COLT 0510F).

Interested students must register for COLT 0510F.

LACA 0510R. War and the Arts: Guantanamo, Twenty Years On (COLT 0510R).

LACA 0537A. Popular Culture in Latin America and the Caribbean (HIST 0537A).

Interested students must register for HIST 0537A.

LACA 0537B. Tropical Delights: Imagining Brazil in History and Culture (HIST 0537B).

Interested students must register for HIST 0537B.

LACA 0540. Language and Education Policy in Multilingual Contexts (EDUC 0540).

Interested students must register for EDUC 0540.

LACA 0550. Intermediate Spanish for Heritage Speakers (HISP 0550).

Interested students must register for HISP 0550.

LACA 0552A. A Textile History of Atlantic Slavery (HIST 0552A).

Interested students must register for HIST 0552A.

LACA 0558C. LatinX Social Movement History (HIST 0558C).

Interested students must register for HIST 0558C.

LACA 0577B. The US – Mexico Border and Borderlands: A Bilingual English – Spanish Seminar (HIST 0577B).

Interested students must register for HIST 0577B.

LACA 0580M. The Age of Revolutions, 1760-1824 (HIST 0580M).

Interested students must register for HIST 0580M.

LACA 0610. Mapping Portuguese-Speaking Cultures: Brazil (POBS 0610).

Interested students must register for POBS 0610.

LACA 0610E. Crisis and Identity in Mexico, 1519-1968 (COLT 0610E).

Interested students must register for COLT 0610E.

LACA 0630A. The Nature of Things: An Object-Oriented Approach to Lusophone Studies (POBS 0630A).

Interested students must register for POBS 0630A.

LACA 0630B. Lusophone Cities in Literature, Film and Music (POBS 0630B).

Interested students must register for POBS 0630B.

LACA 0646. Brazilian Choro Ensemble (MUSC 0646).

Interested students must register for MUSC 0646.

LACA 0650. Advanced Spanish Through Literature and Film (HISP 0650).

Interested students must register for HISP 0650.

LACA 0670. Global Black Radicalism (AFRI 0670).

Interested students must register for AFRI 0670.

LACA 0673A. Colonial Encounters in the Early Atlantic (HIST 0673A).

Interested students must register for HISP 1371I.

LACA 1371L. Take My Breath Away: A Cultural History of Air in Modern Latin America's Imagination and Literature.

Latin America has been conjured up from opposing aerial images. On the one hand, Amazonia has been represented as the "lungs of the earth"; on the other, its megalopolis as polluted places where breathing is hazardous. From Neruda's poetic journey to Machu Picchu, passing through eco-feminist gothic fictions, all the way through accordion, flute and Caribbean music, flight narratives and space films, this course explores what "aire" allows us to recount—or choke—to scent—or to smell—about being in place or traveling. The languages of instruction will be Spanish and English.

LACA 1371S. Science w/ an Accent-HISP1371S.

Interested students must register for HISP 1371S.

LACA 1371U. Posthuman Latin America: Contemporary Imagination and Visions of the Future (HISP 1371U).

Interested students must register for AFRI 1441.

LACA 1500M. Queer Aesthetics and Intimacies en español (HISP 1500M).

Interested students must register for HISP 1500M.

LACA 1501A. Exclusion, Gender and Respect: Understanding Youth Violence in Latin American Cities.

Urban crime and fear is perhaps the most important concern for Latin Americans in countries across the region such as Colombia, Brazil, Mexico, and Venezuela. In this course we will develop a thorough analysis of youth violence departing from the structural forces that drive youths to violent lifestyles. We will then pass through cultural dispositions associated with gender identities and the lived experience of violence, youth subjectivities and emotions expressed (such as the sense of hopelessness engendered by these experiences). Finally we will discuss the possibility of alternatives to violence for youths.

LACA 1501G. Remembering and Forgetting the Portuguese Colonial Empire (POBS 1501G).

Interested students must register for POBS 1501G.

LACA 1503F. Art and the Global City: Buenos Aires, Rio de Janeiro and Mexico City.

This seminar studies recent literature and visual art through a strategic focus on the cities of Buenos Aires, Rio de Janeiro and Mexico City. Artistic inquiry and evolving issues in contemporary art are discussed. The very limits of literary forms are also explored, inviting questions on the intersections of images and words, or art and literature. Although the history of key artworks and movements in 20th-century Latin America will provide a foundation for our seminar, special attention will be paid to the present. We will examine recent experimentation, looking into the ideas that animate art practices today.

LACA 1503G. Music, Gender + Sexuality in the Americas.

This course studies popular music as a space in which gender and sexuality are performed, focusing on the ways in which popular music has both reflected and challenged gender constructs and norms. The course is structured as a series of case studies illustrating a range of popular music styles from throughout the Americas (Cuban, Mexican, and Puerto Rican bolero, Argentine tango and cumbia, and United States R&B, disco, and pop duets), and the performance of a rainbow of gender and sexual identities (including heterosexual femininity and masculinity, gay and lesbian identities, and queer subjectivities).

LACA 1503H. Sexuality, Human Rights and Health: Latin American Perspective and Brazilian Experiences.

This course is presented in 4 sections. Section 1. Provides an overview on how sexuality and health, both defined by biological paradigms, met social constructionism and human rights perspectives which flourished in Latin America. Section 2. Provides an overview of the human rights based health approach and provide Brazilian cases. Section 3. Provides an overview to the multicultural human rights based approach to sexuality education. Section 4. Expands the dialogical approach of this course by discussing sexuality research and human rights health based interventions in relation with students brought cases.

LACA 1503I. Fiction and Methods in Social Research: Debates on Inequality, Poverty, and Violence.

In this course, students will read, comment, and discuss renowned novels on inequality, exclusion, poverty, and (political, religious, racial, and gender) violence in cases as diverse as Nigeria, India, and Afghanistan.

These novels will submerge students in some of the complexities and richness of the selected cases. By reading them, students will explore and discuss concepts, stories and historical context, political and socioeconomic processes, the roles of characters, and arguments.

LACA 1503J. Latin American Urban Interventions.

This seminar engages with narratives of modernization and their relation to time and space in Latin America through cultural artifacts that represent urban interventions designed to improve "the human condition." Is there an informal Latin American mode of modernity? Are urban interventions condemned to reproduce social exclusion? We review literature on Latin American urban complexes and a case study on a massive residential and commercial complex built in downtown Caracas in the 1970s called Parque Central, including original brochures, shorts stories, poems, excerpts from novels, photos, artwork, films, plays, songs, and performances. Readings will be in English and Spanish and the course will be conducted in Spanish.

LACA 1503K. Mosquito: Performing Epidemics in Latin America and the Caribbean.

This course offers an anthropological overview of the *Aedes aegypti* mosquito and its epidemics in Latin America and the Caribbean. Yellow fever, dengue, Zika and chikungunya fever are the mosquito-borne diseases. For almost two centuries, they have been the focus of scientific controversies and state health department actions for the control, prevention or surveillance of humans, animals, artifacts, and environment. Moreover, this course examines how epidemics, biosurveillance and their health public policies have been performed from the global infrastructures of science, technology, and their international corporations involving local and ecological entanglements. Class is taught 80% in Portuguese and 20% in English.

LACA 1503L. History of Central America from the 16th Century to the Present.

This seminar examines the history and cultures, from the 16th century to the present, of Central America, a region ethnically diverse but with economic and political elements in common. We will center on the resistance, contradictions, and history of the region and its people. We begin with an overview of the appreciation of rich cultural diversity of Central America starting with the time before the Spanish Conquest, moving on to the impact of Spanish colonialism, the independence movements, and the obstacles of the twentieth century.

LACA 1503M. Indigenous Resistance and Contradictions in Latin America.

This seminar examines Indigenous People's knowledge through community resistance and social movements to consider the multiple ways in which globalization impacts their lives. The objective of the course is to achieve an in-depth appreciation of Indigenous resistance through the experiences of specific countries of Latin America, and learning how those practices vary according to each region and circumstance. Across the semester, we will develop critical perspectives on diverse academic approaches. Students will read and analyze path breaking documents that marked several indigenous peoples' histories and that at times come from voices historically marginalized.

LACA 1503N. Race, Racism, and Indigeneity in the Americas.

This upper division seminar focuses on the history and cultures of Latin America's indigenous peoples, emphasizing the impact of colonial rule, capitalism, and twentieth- and twenty-first century transformations on indigenous communities. Students will trace the effects European conquest and colonization through Latin American history ending with the displacement and emigration of indigenous people from their communities as result of social upheaval and neoliberal policies. Students will frame the experiences of indigenous immigrants through a transnational lens, analyzing how indigenous peoples navigate racial and social institutions in both the U.S. and Latin America.

LACA 1503O. Networked Movements. Mobilizations for change in Latin America in the 21st century..

Networked Movements examines the characteristics of social movements emerging in Latin America since 2007. These movements combine the non-violent occupation of public spaces and the intensive use of digital technologies for autonomous political communication. The course starts with foundations of networked social movement theories. Topics will include: the social appropriation of technological innovations; the construction of collective identity and the movement's aesthetics; collective action for the occupation of public space; counter-public or counter-hegemonic political action; dynamics of social capital combining strong and weak ties; small-world structure of the movement networks; and mobilizing ideas by information cascades and network contagion.

LACA 1503P. Consuming the Cold War in the Caribbean.

How was the Cold War experienced in the Caribbean? How did refrigerators, automobiles, washing machines, stereos, and blue jeans become proxies of the world superpowers and mechanisms of impersonal rule in the hands of local regimes? How were Caribbean populations transformed by modernizing and developmentalist policies, and how did they resist the marketed allure of empires? Consuming the Cold War in the Caribbean answers these questions, exploring the politics of modern material and visual regimes in Cuba and the region during the post WWII era, addressing such regimes as mechanisms of soft power, impersonal rule, political critique, and resistance.

LACA 1503Q. Politics of Indigeneity in Brazil.

This course examines the politics of indigeneity in Brazil. First, it examines the relationship between native peoples and settlers, especially the Jesuits, Portuguese colonists, and the Portuguese Crown. Our purpose is to understand images of savagery and innocence as part of colonial imaginary in Brazilian's imaginary about natives. Next, we will explore how indigenous peoples were understood by scientists and naturalists, and how these discussions are important in understanding notions about race in Brazil. Finally, we examine the relationships between native peoples and the State during the Republic, with a focus on contemporary issues, such as development, the environment, and social movements.

LACA 1503R. Researching Social Movements in Latin America.

In this course students will learn about Latin American social movements while conducting research on them. As such, it is a creative course, as it combines social movement theory, Latin American social movements, and students' creativity to design innovative research projects. We will begin the course reviewing the main social movement theories. Then, we will review basic concepts and research design methods. Third, we will survey some of the most influential social movements in Latin America in the last 30 years to learn what issues, motivations, and political contexts have mobilized individuals to take up the streets, launch democratizing campaigns, and defend their rights contentiously.

LACA 1503S. Music and Sports in the Americas.

This course explores how music mediates sports experiences in the Americas. Examining case studies including Bob Marley's relationship with sports, soccer fandom throughout the region, and Shakira and Jennifer Lopez's Super Bowl Halftime performance, we will discuss how genres, sports, and fandoms have conjointly shaped and have been shaped by varied sociocultural dynamics in Latin American and Caribbean countries and diasporas. Through readings, listenings, and viewings we will examine the musicality and athleticism of fans, artists, and sportspersons as well as the promises and dangers of sports and music as spaces for sociality, politics, and expression.

LACA 1503T. Caribbean Feminisms.

This course is a study of the emergence and reconfiguration of Caribbean feminisms through the region's history of women's and gendered oppressions, subversions and resistances, taking into consideration colonialism, indigeneity, slavery and indentureship, transnationality, and race, ethnicity, sexuality, and class. Attention is also paid to strategies for knowledge production that have been utilised for studying Caribbean gender and sexuality and to the types of research these have produced. Threaded through the course will be an ongoing focus on a recent InterGuyanas feminism initiative that spans the Dutch, English and French-speaking Guyanas.

This course is intended for juniors and seniors, but others may be given special permission to register. Students should have some prior knowledge of the Caribbean and/or Gender Studies.

LACA 1503U. Caribbean Migrations: Circulations, Diasporization and Return.

The Caribbean is noted for the way in which migration has profoundly shaped the culture and identity of the region and how it continues to have significance for its peoples wherever they live today. The aim of this course is to examine the role of migration for the Caribbean through history into the present and to consider how human movements to, within, and from the Caribbean are tied to colonialism, globalization and nationalisms. It also brings into view the complex reasons for human migration more generally. Attention is given throughout the course to the ways in which gender and race influence the migrations, and how national policies and borders configure the 'desirable' Caribbean migrant. A primary emphasis in the course is on the English-speaking Caribbean, although some attention is given to Spanish-, French- and Dutch-speaking territories.

LACA 1503V. Health of Hispaniola.

Two developing countries, Dominican Republic and Haiti, have widely differing health outcomes despite centuries of shared experience on the Caribbean Island of Hispaniola. This course will examine the history, politics, economics, culture, international relations, demography, and geography, as well as epidemiology and health services, to demonstrate that multiple factors, both recent and long-standing, determine the present health of these populations. Enrollment limited to 19 first year students. Instructor permission required.

LACA 1503W. Migration and Gender in Latin America: Crossing Borders and Bridging Disciplines.

In this course, students will be introduced to the field of international migration with a special focus on the Latin American context. They will explore the different migratory systems from the Latin American region and will engage in an effort to dismantle the dominant myths regarding the movement of people. Students will be introduced to transnational perspectives and scholarly literature on borders and gender studies, particularly the ethnographic and qualitative approach. The concept of intersectionality will be fundamental to the course, as it enables us to engage in a deeper discussion of gender, race, ethnics/nationality, generation and social class relations when it comes to singular migrations.

Language of instruction: Spanish. Readings will be assigned in both English and Spanish. Students may submit written assignments in English or Spanish.

LACA 1503X. Regulating Bodies: Migration, Race, and Colonial Legacies in Central America.

This course examines the colonial roots of forced migration and the contemporary immigration policy that affects the lives of Central Americans. We will begin by studying the ways that race and gender hierarchies emerge through colonialism and how these hierarchies connect to recent histories of state violence that determine who may move freely in the Americas. Then we will connect the recent armed conflicts in Central America to the forced migration we recognize today. Building on this foundation, we will trace colonial and conflict-time ideologies about race and gender to learn about contemporary immigration policies like Safe Third Country agreements, coordinated repression of migrant caravans, the Migrant Protection Protocols, and Zero Tolerance. The end of the course will look to the political futures of transnational immigration regulation through the lens of migrant justice activism.

LACA 1503Y. Latin America in Motion: Migration and Crisis in the Post-globalization Era.

This course introduces students to migratory systems in Latin America with a focus on case studies and analyses. We will explore key concepts related to international migration to debunk commonly held myths and beliefs. We will also examine other categories associated with the movement of people, such as refuge, asylum, and forced displacement. The topics that we will address include public policies on migration and the role of international and regional organizations in the management of migration. Students will analyze the unique experiences of each country, considering sub-regions, borders, and their territorial context. The course will also include the analysis of South-South migration. In this context, we will rethink the link between migration and crisis and notions of global and local and will consider the impact of the pandemic and post-pandemic periods on regional movements.

LACA 1503Z. Neoliberalism and cross-border regions in Latin America and the Caribbean.

This course examines international borders from the perspectives of economic changes, social relationships, identities, human mobility, and politics. In Latin America, cross-border territories that span arbitrary lines have developed around elements that are crucial to understanding the region, including indigenous identities. This course offers students the opportunity to engage in a critical and interdisciplinary exploration of these socio-cultural phenomena using case studies. The course takes on an interdisciplinary approach, focusing mainly on the social sciences and humanities. It is based on a methodology that combines lectures and practical exercises in which students acquire knowledge through the analysis of visual media – photos, videos, maps – related to specific case studies. These exercises will be the main basis for student assessment.

LACA 1504A. Violence and Urban Poverty in Latin America: Ethnographic and Qualitative Perspectives.

Living in a barrio, favela, villa, or colonia means living in a state of emergency, caught in the middle of armed confrontations between state and non-state actors. This course has three main objectives: 1) to understand urban violence from the perspective of people living in poor and marginalized areas; 2) to analyze how ethnographic and interpretive research on urban violence in Latin America is presented; and 3) to consider the ethnographic narrative, the voice of the ethnographer and the challenges of conducting research in violent settings where the research itself is a social problem.

LACA 1504B. Indigenous Politics in Latin America.

Indigenous peoples began participating politically in Latin America in the early 1990s, and have dramatically changed the political dynamics of most countries in the region ever since. In the last two decades, Latin America has experienced mass indigenous mobilizations and the rise of ethnic parties. This course covers a wide range of issues related to ethnicity in Latin America, including indigenous movements and parties, ethnodevelopment and environmental politics, ethnic radicalization and violence, transnational ethnic activism, and indigenous groups and gender politics, among others. This class introduces students to the main empirical and theoretical debates about indigenous politics in Latin America.

LACA 1504C. Representation and Governance in the Federations of Latin America.

This course analyzes the relationships between federalism and four large topics: political stability in plural societies, economic development, democratic representation, and equality. The discussion focuses on the evolution of Latin American federations. Students will learn where federations come from, what they do, and why it matters. They will be able to compare alternative approaches to federalism and to recognize the normative problems at stake in the organization of federations. The course is intended for advanced undergraduate students in political science or international relations. It could also be useful for students majoring in economics, sociology and history.

LACA 1504D. The Art of Revolution in Latin America.

This course considers the role of the arts—visual, literature, music, film, and performance—in Latin American social movements. We will study the work of artists and activists in the Mexican Revolution, Cuban Revolution, Nicaraguan Revolution, South American dictatorship resistances, and contemporary social movements such as the Chilean student movement and narco-trafficking. We will trace the use of the arts in organizing, social critique, collective action, and propaganda, and how they have shaped ideology and culture in Latin America and beyond. We will study a range of political art through comparative, interdisciplinary approaches including literary, cultural and performance studies, and art criticism.

LACA 1504E. Latinx Music in the U.S..

This course considers U.S. Latinx experiences by examining diverse musical genres associated with Latinx peoples, including salsa, corrido, rock, and reggaeton. We will take a critical lens to understanding the transformations of Latinx musics, investigating the processes by which they became central to Latinx identity. Over the course of the semester, we will explore the connections between music and cultural, social, and political forces including the entertainment industry, race, migration, and language. The course focuses on ethnographic and historical approaches as a context for understanding current trends. Prior coursework in music, Latin American studies, American studies, or cultural anthropology preferred.

LACA 1504F. Latin American Authors Encounter the Sciences.

This course offers a scientific and literary journey through diverse Latin American landscapes and societies. The readings are focused on the period 1830-1950. We will trace how natural, social, and medical sciences such as geography, psychiatric, ethnology, and archaeology, have discursively created territories and peoples as part of their own process of disciplinary characterization. We will then explore how writers embraced, discussed, and confronted these scientific discourses on topics such as nature, illness, progress, and indigenous people, among others.

LACA 1504G. Arts of the Environment in the Americas.

Latin America is one of the regions where the worldwide environmental crisis has manifested itself most forcefully over the past decades—with high levels of environmental toxicity, endangered species, and habitat loss. This course will introduce students to how artists, filmmakers, and writers are representing and raising awareness about key environmental issues in the region. The course is structured around five case studies: the desert, agriculture, oil extraction, water pollution, and waste management. Our focus on the environment will serve as a base for larger discussions about the representation of queer, Latinx, and indigenous communities, the aftermath of political violence in post-conflict societies, and the current immigration crisis at the U.S.-Mexico border.

LACA 1504H. Andean-Caribbean Dialogues of Negritude.

This course illustrates the connectedness of Latin American and Caribbean Studies, African diaspora, and political thought by exploring the mutual influences of Nicolás Guillén's (1902-1989) and Nicomedes Santa Cruz's (1925-1992) intellectual work on Cuban and Peruvian Negritude. The course will address essays, books and videos that discuss Afro-descendants' struggles for recognition in Latin America, focusing on their redefinition of Afro-descendant identities and their visions for the democratic transformation of Latin American societies. The course objective is to analyze the scope, limits, and contradictions of their proposals on Afro-Latino recognition, citizenship, social justice, gender, biraciality, and interculturality. Finally, the course will evaluate the validity of their approaches within the current struggles of Afro-descendant citizens in Cuba and Peru. The course instruction and primary readings will be in Spanish and English. Students may submit work in English, Spanish or both.

LACA 1504I. Different But Equal: Debates in Schooling of Indigenous and Afro-Descendants in South America.

This course will be devoted to the current debate on the education rights of Indigenous and Afro-descendant citizens in South American. Throughout the 20th century, most Latin American states have conceived of public education as a means of western standardization of their societies. This has mainly led to the educational marginalization of Indigenous peoples and Afro-descendants. In this course, we will examine the cultural, political, and economic implications of this marginalization. In addition, we will review intercultural education projects in Bolivia, Brazil, Chile, Colombia, Ecuador and Peru focused on reversing this situation. Sessions will be conducted in Spanish, but students may participate using English, Spanish, Portuguese, or all three. Similarly, student texts may be written in any or all of these languages. The course will include two guest-lectures offered by education activist-scholars from the field.

LACA 1504J. Reimaging Resistance: Debates in Contemporary Art from Latin America.

This course introduces students to problems and questions addressed in contemporary Latin American art. We will discuss a wide range of productions that include theoretical texts, exhibitions, manifestos, videos, installations, paintings, and performances. We will explore how art rethinks social constructs of gender, race, national imaginaries, or the relationship with the non-human world. The languages of instruction will be Spanish and English. Intermediate knowledge of Spanish is required for conducting readings and class discussions. This course is appropriate for students who have taken AP Spanish, heritage speakers, and students who have taken or placed in 500-level Spanish language classes at Brown.

LACA 1504K. Trumpism in the Tropics: Far-Right Movements in Brazil and Latin America.

The ongoing wave of far-right populists across the hemisphere is making Latin American politics look more like the United States'. Contemporary far-right movements such as Bolsonarism in Brazil have been largely built around ideas and strategies imported from US far-right groups. That includes paleolibertarians, Christian fundamentalists, and alt-right supremacists. Moreover, the Latin American far right has become transnational in essence, operating across national borders and exchanging material and symbolic resources with one another. They all have embraced Trumpism and US-inspired culture wars as role models to construct a new political reality at home. The language of instruction will be English. This course will be a trilingual learning experience, reading and discussing opinions in Spanish, English, and Brazilian Portuguese.

LACA 1504L. Personal Worlds / Political Bodies: Art Archives from Latin America.

Art archives in Latin America have undergone profound transformations over the last 30 years. These changes include a new institutional landscape; novel processing and accessibility technologies, including the emergence of digital archives; an expansion of private collections focused on documents; the development of market-oriented archives; and a greater presence of documents in art exhibitions. At the same time, archives have played a central role in the transformation of social art history, allowing the expansion of knowledge about artists and artistic scenes that have been excluded from the art historical canon.

LACA 1504M. In-Transit Identities: Migration in Contemporary Latin American Literature and Popular Culture.

This course introduces students to issues of migration in contemporary Latin America. Topics to be covered include migrant subjectivities inside and outside national borders; discussions about identity and migrant heritages that will focus on issues such as race, gender, and country of origin; exile and political repression; and bilingualism and migrant childhoods. Students will read, watch, and listen to a selection of fictional narratives, testimonials, poetry, films, podcasts, and songs, exploring the bonds between literature and popular culture. We will conceive of Latin America as a region that both produces and receives migrants, and will focus on specific case studies such as the Venezuelan diaspora, Japanese migration in Peru, and Palestinian migration in Chile. The languages of instruction will be Spanish and English. When materials are not available in English, students are expected to read or listen to them in Spanish.

LACA 1504N. Writing the Amazon and the End of the World: Gender, Care, and Cosmopolitics.

The purpose of this course is to look at the present-day world and its ends through a perspective informed by feminist, anti-racist, anti-colonial, speculative, anthropological, and extra-academic knowledge. We are constantly exposed to explanations, emotions, and data about the End of the World. But which World and worlds are ending? For whom? From which perspective? When did the end of the world begin, and when will it end? We will contextualize these discussions with a focus on the Amazon, and the experience of the Amazon as a point of view and as a Latin American metaphorical space. The Amazon is not merely a natural region perfectly circumscribed by multiple state borders. It is a magnificent political and mythical, gendered, colonial invention and "a World of many worlds." An intermediate knowledge of Spanish is required for this course for conducting readings and class-discussion. Knowledge of Portuguese is a plus but is not required.

LACA 1504O. Re-thinking Latin American Geographies through Social Mapping.

Maps are important tools for our daily activities and spatial imaginaries; however, the ways in which official and dominant Western maps organized the information about the world occludes other ways of knowing territories. How are these "other" geographies represented? How are maps re-designed and appropriated to visualize different spatialities? In this course, students will be introduced to key themes and design practices in social cartography in Latin America. These reflect on collective or individual mapping practices to represent and increase the visibility of social issues and ways of knowing and being in this region. Intermediate knowledge of Spanish is required for conducting readings and class-discussion. This course is appropriate for students who have taken AP Spanish, heritage speakers, and students who have taken or placed in 500-level Spanish language classes at Brown. Previous knowledge of maps not required.

LACA 1504P. The Amazon, Climate Change, and Conservation.

This course delves into pivotal environmental discussions reshaping our perception of the Amazon's past and future. Through firsthand accounts from key figures such as Amazonian indigenous peoples, scientist, philanthropists, and government officials, we will gain insights into the profound transformations occurring in these landscapes and their associated politics. Designed as an interdisciplinary exploration, the course begins by examining the role of Indigenous Peoples in the environmental history of the Amazon. We will explore the archaeological findings that are reshaping our understanding of this biome and the cultures that thrived there. Moving through the colonial histories of the Amazon to its republican present, we explore evolving political dynamics, regional perspectives, and distinctive viewpoints emerging from this culturally rich region. We analyze these aspects from anthropological and sociological standpoints, providing students with a comprehensive understanding that goes beyond a single national tradition.

LACA 1504Q. The War On Drugs From the Latin American Perspective: Current Issues and Possible Alternatives.

This course aims at both, critically looking at the impact that the traditional focus of the war on drugs has caused in Latin America -particularly for countries with cocaine production, and to evaluate possible alternatives regarding the drug policy including a context of conservative claims, alternatives face huge political resistance, radical violence from criminal organizations and economic pressure. The study of alternatives will be focused on two main fields: criminal policy and alternative development. Referring to new criminal law strategies, restorative justice, gender-based programs, as well as environmental policies, holistic responses to economic transition of vulnerable communities, other uses of the coca leaf, and other challenges for Latin America and, in general, for the world.

LACA 1504R. Environmental politics in Latin America: Indigenous Peoples and Afro-descendants' perspectives.

This course offers a comprehensive examination of principal environmental issues that local communities, Indigenous Peoples and Afrodescendent Peoples of Latin America have to face, in particular regarding food systems, energy transition, water scarcity and adaptation to increased extreme weather events. Employing a social science framework, the course will analyze case studies illustrating the policy instruments employed by Latin American states and the diverse networks of actors influencing and contesting these processes.

LACA 1504S. The Knowing Body: Memory, Grief, and the Practice of Listening.

In Latin America, initiatives to address violent pasts, authoritarian regimes, and civil wars through accords and peacebuilding have prompted calls from public historians to integrate historical analyses into transitional justice processes and public debate. Their objective is to intervene in a dominant narrative and establish solid routes into reparation. Through this interdisciplinary approach and a practice-as-research methodology, students will develop a performative project exploring memory, affect, and the history of grief and resilience in Latin American historical contexts. Students are given the option to select the specific socio-political violence, reconciliation, and restoration experience in the Latin American region with which they wish to engage and produce their final collective project. Rather than representing a case, students will perform an embodied translation of the complexity of memory making, grief, and listening in a specific case study.

LACA 1504T. Latin American Feminisms.

This course offers an interdisciplinary overview of Latin American feminisms from the 19th century to the present, focusing on the political, intellectual, and social movements led by women and feminist collectives. It will explore the political demands during the emerging republics, feminist struggles within proletarian movements, resistance to civic-military dictatorships, transnational expropriations, sexual dissident struggles, and the critical approaches linking class, sex, racialization, and gender as the focus of socio-political domination and exploitation. The course will also examine current challenges posed by the emergence of conservative far-right movements in the region. Students will be encouraged to develop their own proposals through scientific or creative research questions. This course is taught entirely in Spanish.

LACA 1505. Vertical Civilization: South American Archaeology from Monte Verde to the Inkas (ANTH 1505).

Interested students must register for ANTH 1505.

LACA 1505A. Haunting Childhood and Social Justice in Latin America.

We will explore literature and cinema featuring child figures to study the central social, political and cultural debates shaping Latin American societies throughout the 20th and 21st centuries. By focusing on genres such as the supernatural, fantastic and horror, we will analyze stories of hauntings to problematize childhood as a state of innocence and violence, ignorance and insight, happiness and dread. We will approach childhood as an entryway into investigating debates surrounding transitional justice, armed conflict, migration, race, gender identity and illness to explore how child figures offer perspectives that challenge hegemonic discourses in Latin America. By examining the child's relationship with the mysterious, frightening and inexplicable, we will explore childhood as an alternative mode of communication and a metaphorical state through which we can discuss recent political, social and literary histories. Taught in English, Spanish, and Spanglish.

LACA 1510B. Environment and Development in Latin America.

This seminar introduces a "developmental challenges approach" to thinking about resource-based development. The approach is critically used to survey the development of extractive industries and other environmental issues in Latin America.

The main questions to be examined are:

Is resource abundance a curse?

Is Latin America too poor to be green?

Do institutions end up defining these issues, and how?

Assignments will help students develop a research project to study one case or a set of cases in comparative perspective (countries or sub-national units).

LACA 1510C. Ethnicity and the Politics of Development in Latin America.

Over the past decades, the realities of ethnicity and the politics of development have repeatedly presented themselves for reflection in Latin America. This course seeks to identify the interfaces and interactions among the two. During the semester, we will examine four questions: First, why is ethnic inequality so persistent in the region? Second, why and how do ethnic boundaries become politicized in the region? Third, can national development and local and indigenous livelihoods coexist? Fourth, is ethnic and environmental contentious politics driving institutional transformation in Latin America?

LACA 1510D. Popular Music and Social Change in Latin America.

This course is designed to illuminate the many ways that popular musicians shape, and are shaped by, the broader social milieu within which they act. Focusing largely on twentieth-century case studies from Cuba, Brazil, and Peru, it illustrates how social dynamics particular to Latin America have constrained popular musicians' efforts to communicate, circumscribed their artistic and political goals, and enabled them to intervene in sociocultural debates in specific ways. Issues to be considered include the sanctioning of musical styles as national symbols; the harnessing of music to project promoting racial diversity; its use as a medium of political protest as well as a vehicle for populist politics; the shifts in style wrought by industrialization, migration, and urbanization; the importance of media dissemination and commercialization, both in driving musical change and in determining its scope of influence; and the ambivalent role of the processes variously dubbed "westernization," "Americanization," and "globalization."

LACA 1510E. Race, Music and Literature in the Spanish Caribbean.

The course provides an interdisciplinary approach to racial representations in the Literature and Popular Music of the Spanish Caribbean. It explores the different definitions and representations of the Spanish Caribbean cultures and identities from a comparative view of the Anglo and French Caribbean writers.

LACA 1510F. Institutions of Justice and Democracy in Latin America.

The course will examine the relationship between democracy building and the performance of Institutions of Justice in Latin America. We will address issues of human rights violations, globalization and its threats, and the Challenges that Latin American regimes faces to build democratic institutions and the rule of Law. The course will focus will be both on the normative and sociological and analysis of the institutions of Justice in Latin America.

LACA 1510G. Literature and Popular Culture in Latin America.

Latin American cultures were built on the humanistic and intellectual perspectives exposed by José Enrique Rodó and José Martí, among many others, which propose the artistic aesthetic as a social ideal and the spreading of education as a sign of progress. But these cultural and national projects were developed in "the era of mechanical reproduction" and their literary project soon was menaced by the "cultural industry." This course explores the dialogues and tensions between what has been branded as the "lettered" and the "real city" in Latin American societies in a selection of literature, film, television, and popular music. This course will be given in Spanish.

LACA 1510H. Shaping the Brazilian Nation through Music.

This course provides an introduction to the music of Brazil, with a particular emphasis on its role in creating and contesting visions of nationhood during the twentieth century. Focusing upon a limited number of musical practices, from different regions and periods, it is not intended to provide a comprehensive survey. Rather, using a small set of case studies, it highlights key dynamics that have shaped the relation between Brazilian music and Brazilian society more broadly. Topics range from traditional practices, such as candomblé and folias de reis; to samba, bossa nova, and Northeastern regional styles; to the work of composer Heitor Villa-Lobos; to the contemporary hip hop scene of São Paulo. There are no prerequisites, but it is recommended that students have either some knowledge of Latin American culture and/or history, or some musical background. Enrollment will be limited to twenty people, with preference given to those matching these criteria.

LACA 1510I. Urban Latin America.

This course provides an introduction to the study of cities and urban life in modern Latin America. We will explore major themes in the past 200 years of Latin American urban life, with a particular focus on the perspectives of overlooked and subaltern actors. Some of the topics we will examine are urban slavery, informality, populism, migration and immigration, urban environments and ecology, queer/LGBTQ+ urban studies, urban planning and modernism, and social movements. By exploring cities during this broader historical period, we will trace the debates and shifting politics that have influenced urban research across multiple disciplines.

LACA 1510J. The Making of Modern Brazil.

Will focus on the building of the Brazilian nation and the meanings of social phenomena involved in this process. Based on studies of contemporary Brazilian society, it will analyze different aspects of that country: urbanization, popular culture, revival of tradition, hybridization, imageries, symbolic aspects of money and consumption, popular music.

LACA 1510K. Human Rights in Twenty-First Century Latin America.

Course offers a multidisciplinary introduction to the key advances in and challenges for the protection of human rights in contemporary Latin America. In contesting autocratic governments in the 1970's and 1980's, Latin America social movements and non-governmental organizations (NGOs) played a central role in the creation of the institutions and norms that constitute the international human rights system today. Enrollment limited to 20.

LACA 1510L. The Politics of Latin America: Dilemmas and Opportunities.

A survey course on the politics of Latin America which aims at exploring the transformations experienced by the region in the last few decades. The course combines the discussion of themes (the emergent economic realities, the quality of democracy) with a more detailed look at countries of particular relevance because of their importance (Brazil, Mexico, Argentina) their unique trajectories (Chile, Cuba) and their relationship with the United States (Venezuela). Enrollment limited to 20.

LACA 1510M. New Latin American Populisms in Comparative Perspective: Bolivia, Argentina, Venezuela + Ecuador.

Seminar: this course is based on the notion that there is more to populism and old dichotomies such as rational/irrational, rural/urban or modern/traditional. It will discuss and identify a more precise definition of populism, characterize the "new Latin American populism" and compare it with the classic populisms of the Post War era and the "neo-populisms" of the nineties. It will discuss the commonalities and differences of these regimes in terms of their coalitions of support and their public policies. Limited to 25 juniors and seniors.

LACA 1510N. Political Systems and Political Parties in Latin America.

This course will explore the seemingly contradictory reality of Latin American political systems and political parties. The goals of the course are to analyze the transformations of the political parties and the political party systems in Latin America from the year 2000 to the present day and to highlight the manner in which the party systems transformations had to do the transformations in the representative linkage between the political parties and the civil and political societies that they are rooted in.

LACA 1520. Latin American Horror (GNSS 1520).

Interested students must register for GNSS 1520.

LACA 1560. Economic Development in Latin America (DEVL 1560).

Interested students must register for DEVL 1560.

LACA 1570. The Economics of Latin Americans (ECON 1570).

Interested students must register for ECON 1570.

LACA 1600. Caribbean Popular Culture: Reggae, Dancehall, and Calypso (AFRI 1600).

Interested students must register for AFRI 1600.

LACA 1601A. Latin American Literature in an Era of Globalization.

This course will explore the impact of globalization on contemporary Latin American Literature. We will analyze novels, short stories and critical discourses produced by Latin American writers in the past thirty years and shed light on how the awareness of the globalized world has transformed writing practices as well as the setting and the construction of narratives. The course will examine the trade-offs associated with the process of globalization, highlighting the beneficial aspects of hypermobility, fluidity, and transnationalism, as well as the dark sides of globalization linked to the rise in inequality and the intensification of narcotrafficking and illegal migration.

LACA 1601K. Early Modern Global History at the John Carter Brown Library: A Research Workshop (POBS1601K)..

Interested students must register for POBS 1601K.

LACA 1620B. Latin America and the Caribbean: Challenges of the Global South.

This course will explore contemporary political, cultural, and ethnic challenges that characterize Latin America and the Caribbean. It will be structured around five themes (1. Hunger and poverty, 2. Slums and environmental degradation, 3. Political regimes and human rights, 4. Race and indigeneity, 5 Global market and cultural subalternity). The course will adopt an interdisciplinary perspective, based on a variety of cultural productions and scholarly contributions. The languages of instruction will be Spanish and English. Students will be expected to conduct their readings in Spanish. During class discussion they will be permitted to use the language of their choice.

LACA 1621. Material Culture Practicum (ANTH 1621).

Interested students must register for ANTH 1621.

LACA 1630. Engaged Humanities: Storytelling in the Americas.

This course explores the role of storytelling in the transmission of cultural narratives across societies in Latin America, the Caribbean and Latinx diaspora. We will examine a wide variety of stories as well as mediums (e.g., podcasts, photos, art works, textiles, and music) that are exemplary of this cultural transmission, and we will be exposed to practitioners from the local and international community who will share with us their insights. Students will be engaged in the art of storytelling through collaborative workshops, and will create their original narratives inspired by social and cultural issues of Latin American and Caribbean countries.

LACA 1631. Authority, Identity, and Visual Culture in Colonial Latin America (HIAA 1631).

Interested students must register for HIAA 1631.

LACA 1650. Ancient Maya Writing (ANTH 1650).

Interested students must register for ANTH 1650.

LACA 1666. ¡Qué miedo! El cine hispánico de horror (HISP 1666).

Interested students must register for HISP 1666.

LACA 1700. Beyond Sun, Sea and Sand: Exploring the Contemporary Caribbean (DEVL 1700).

Interested students must register for DEVL 1700.

LACA 1700B. Rhythm and Silence: A Creative Writing Workshop (HISP 1700B).

Interested students must register for HISP 1700B.

LACA 1700K. Race in the Americas: A Hemispheric Perspective (AMST 1700K).

Interested students must register for AMST 1700K.

LACA 1700X. Global Macho: Race, Gender, and Action Movies (AMST 1700X).

Interested students must register for AMST 1700X.

LACA 1701. Drug War Politics (IAPA 1701).

Interested students must register for IAPA 1701.

LACA 1701W. The Cold War in Latin America (IAPA 1701W).

Interested students must register for IAPA 1701W.

LACA 1702M. The U.S. War on Drugs: From History to Policymaking and Beyond (PLCY 1702M).

Interested students must register for PLCY 1702M.

LACA 1703A. Youth Politics and Culture in the Americas: Explorations through Ethnography (PLCY 1703A).

Interested students must register for PLCY 1703A.

LACA 1710O. Décolonisation (FREN 1710O).

Interested students must register for FREN 1710O.

LACA 1711N. Monsters in our Midst: Reading Spaces and Places in Colonial Latin America (ENGL 1711N).

Interested students must register for ENGL 1711N.

LACA 1750A. Immigrant Social Movements: Bridging Theory and Practice (ETHN 1750A).

Interested students must register for ETHN 1750A.

LACA 1750I. Indigeneity, Sustainability and Resistance in Food Politics (ETHN 1750I).

Interested students must register for ETHN 1750I.

LACA 1750L. Latina Feminisms (ETHN 1750L).

Interested students must register for ETHN 1750L.

LACA 1762M. Caribbean Literature (ENGL 1762M).

Interested students must register for ENGL 1762M.

LACA 1765. Education Policy and Program Evaluations in Low- and Middle-Income Countries (EDUC 1765).

Interested students must register for EDUC 1765.

LACA 1800C. Constructing Men, Projecting Masculinity: Questioning Gender, Sex, Sexuality in Brazil (POBS 1800C).

Interested students must register for POBS 1800C.

LACA 1800E. The Brazilian Puzzle: Confronting the Post-Colonial Legacy (POBS 1800E).

Interested students must register for POBS 1800E.

LACA 1800F. The Lusophone World and the Struggle for Modernity (POBS 1800F).

Interested students must register for POBS 1800F.

LACA 1802S. Human Security and Humanitarian Response (PHP 1802S).

Interested students must register for PHP 1802S.

LACA 1803R. Bringing Small States In: How and Why They Matter (DEVL 1803R).

Interested students must register for DEVL 1803R.

LACA 1803S. US-Mexico Borderlands (INTL 1803S).

Interested students must register for INTL 1803S.

LACA 1803W. Roots of Crisis in Central America (INTL 1803W).

Interested students must register for INTL 1803W.

LACA 1804H. Early History of the CIA (IAPA 1804H).

Interested students must register for IAPA 1804H.

LACA 1804N. Democracy and Capitalism in the Post-colonial World (IAPA 1804N).

Interested students must register for IAPA 1804N.

LACA 1814A. Roots of Crisis in Central America (IAPA 1814A).

Interested students must register for IAPA 1814A.

LACA 1822. Dada and Surrealism: Anarchy, Exile, Alterity (HIAA 1822).

Interested students must register for HIAA 1822.

LACA 1825S. Latino Politics in the United States (POLS 1825S).

Interested students must register for POLS 1825S.

LACA 1890T. Writing Latinx Lives: The Memoir (ETHN 1890T).

Interested students must register for ETHN 1890T.

LACA 1900. Preparation for Honors and Capstone Projects on Latin American and Caribbean Topics.

This workshop is designed for junior and seniors in any concentration who are researching and writing about Latin America and the Caribbean. It will help students to enhance their research and organization skills, refine their research or creative projects, and develop or complete a Capstone Project (e.g. honors thesis, honors project, substantial research paper).

LACA 1900I. Latina/o Cultural Theory (AMST 1900I).

Interested students must register for AMST 1900I.

LACA 1923. Music in the Andean Countries: From Cumbia to Carnavalito (MUSC 1923).

Interested students must register for MUSC 1923.

LACA 1935. Beyond Bossa Nova: Brazilian Music and Society (MUSC 1935).

Interested students must register for MUSC 1935.

LACA 1958A. Archives of Desire: Non-Normative Genders and Sexualities in the Hispanophone World (HIST 1958A).

Interested students must register for HIST 1958A.

LACA 1961L. Postcolonial Horror: Political Specters in Non-Western Literature and Film (GNSS 1961L).

Interested students must register for GNSS 1961L.

LACA 1961S. Boom Towns: Finance and Literature in Latin America (GNSS 1961S).

Interested students must register for GNSS 1961S.

LACA 1966Q. Colonial Encounters and the Creation of Latin America (HIST 1966Q).

Interested students must register for HIST 1966Q.

LACA 1967C. Making Revolutionary Cuba, 1959-Present (HIST 1967C).

Interested students must register for HIST 1967C.

LACA 1967E. In the Shadow of Revolution: Mexico Since 1940 (HIST 1967E).

Interested students must register for HIST 1967E.

LACA 1967F. The Maya in the Modern World (HIST 1967F).

Interested students must register for HIST 1967F.

LACA 1967L. Politics and Culture Under the Brazilian Military Dictatorship, 1964-1985 (HIST 1967L).

Interested students must register for HIST 1967L.

LACA 1967T. History of the Andes from the Incas to Evo Morales (HIST 1967T).

Interested students must register for HIST 1967T.

LACA 1972C. Picturing Paradise: Art and Science in the Americas (HMAN 1972C).

Interested students must register for HMAN 1972C.

LACA 1974U. Race, Incarceration, and Freedom in the Americas (HIST 1974U).

Interested students must register for HIST 1974U.

LACA 1976H. Environmental History of Latin America 1492-Present (HIST 1976H).

Interested students must register for HIST 1976H.

LACA 1977I. Gender, Race, and Medicine in the Americas (HIST 1977I).

Interested students must register for HIST 1977I.

LACA 1979E. Wise Latinas: Women, Gender, and Biography in Latin History (HIST 1979E).

Interested students must register for HIST 1979E.

LACA 1979L. Urban History of Latin America (HIST 1979L).

Interested students must register for HIST 1979L.

LACA 1990. Individual Thesis Preparation.

For Latin American + Caribbean Studies concentrators writing senior projects or honors theses.

LACA 1991. Individual Thesis Preparation.

For Latin American + Caribbean Studies concentrators writing senior projects or honors theses.

LACA 1992. Senior Seminar: Interpreting Latin America and the Caribbean Today.

This seminar serves as a capstone course for the Latin American and Caribbean Studies concentration. Its purpose is to enable students to synthesize the diverse material covered throughout their interdisciplinary coursework in the concentration and to reflect on overarching questions, issues, and concepts related to Latin America and the Caribbean. Open to senior Latin American Studies concentrators. Instructor permission required.

LACA 1993. Senior Seminar: Interpreting Latin America and the Caribbean Today.

This seminar serves as a capstone course for the Latin American and Caribbean Studies concentration. Its purpose is to enable students to synthesize the diverse material covered throughout their interdisciplinary coursework in the concentration and to reflect on overarching questions, issues, and concepts related to Latin America and the Caribbean. Open to senior Latin American Studies concentrators. Instructor permission required.

LACA 1994. Independent Readings in Latin American and Caribbean Studies.

For upper-division students interested in pursuing topics in Latin American and Caribbean Studies not currently taught in the Brown curriculum. Students must have significant prior coursework, language skills, and sufficient background knowledge to put together a comprehensive reading list and to produce a final paper that meets the research requirement in the LACA concentration. Course restricted to S/NC.

Class requirements include weekly meetings with the instructor, reading responses submitted before each meeting, and a self-assessment at the end of the semester by the student. The independent study will culminate in a research paper of sufficient depth and sophistication to meet the research requirement for the concentration in Latin American and Caribbean Studies.

Registration requires a comprehensive reading list developed by the student in consultation with the faculty member and a written agreement on course requirements. The concentration advisor's approval is required if the course is to count toward the concentration.

No more than two (2) semesters of LACA 1994/1995 may be used toward concentration requirements in Latin American and Caribbean Studies.

LACA 1995. Independent Readings in Latin American and Caribbean Studies.

For upper-division students interested in pursuing topics in Latin American and Caribbean Studies not currently taught in the Brown curriculum. Students must have significant prior coursework, language skills, and sufficient background knowledge to put together a comprehensive reading list and to produce a final paper that meets the research requirement in the LACA concentration.

Class requirements include weekly meetings with the instructor, reading responses submitted before each meeting, and a self-assessment at the end of the semester by the student. The independent study will culminate in a research paper of sufficient depth and sophistication to meet the research requirement for the concentration in Latin American and Caribbean Studies.

Registration requires a comprehensive reading list developed by the student in consultation with the faculty member and a written agreement on course requirements. The concentration advisor's approval is required if the course is to count toward the concentration.

No more than two (2) semesters of LACA 1994/1995 may be used toward concentration requirements in Latin American and Caribbean Studies.

LACA 2030B. History and Fiction: Literature of the 15th Century (HISP 2030B).

Interested students must register for HISP 2030B.

LACA 2080F. Latin in America (LATN 2080F).

Interested students must register for LATN 2080F.

LACA 2250O. Desterrados: Escapes and Homecomings in Latin American Literature (HISP 2250O).

Interested students must register for HISP 2250O.

LACA 2350H. The History of Wonder in Colonial Spanish American Lettres (HISP 2350H).

Interested students must register for HISP 2350H.

LACA 2500B. Portuguese Overseas-POBS2500B.

Interested students must register for POBS 2500B.

LACA 2520L. Latin American Existential Literature (HISP 2520L).

Interested students must register for HISP 2520L.

LACA 2600I. Modern and Contemporary Brazilian Poetry (POBS 2600I).

Interested students must register for POBS 2600I.

LACA 2620O. Authorship and Authoritarianism in Spain and Latin America (HISP 2620O).

Interested students must register for HISP 2620O.

LACA 2971E. Latin American Historiography (HIST 2971E).

Interested students must register for HIST 2971E.

LACA 2971T. Colonial Latin America (HIST 2971T).

Interested students must register for HIST 2971T.

LACA 2980. Graduate level independent study.

This course is meant for graduate students completing a specially designed MA program in Development Studies, Latin American and Caribbean studies and related disciplines. Instructor permission is required for enrollment.

Linguistics

Brown Linguistics faculty and students study such topics in a wide range of languages from across the globe and using a wide range of empirical methodologies. Particular strengths of our program include the study of language variation (within a language, across languages, and within society), and the study of meaning, communication, mind and the role of information in the ways languages are structured.

For additional information, please visit the department's website: <https://linguistics.brown.edu/>

Linguistics Concentration Requirements

Language is a uniquely human capacity that enables us to communicate a limitless set of messages on any topic. While human languages can differ greatly in certain respects, all are intricate, complex, rule-governed systems. Linguistics is the scientific study of these systems, their use for communication in rich social settings, and their cognitive underpinnings. The linguistics concentration at Brown introduces students with the basic concepts in linguistics that are necessary to describe human languages and theorize about them: how sound is organized in language, how sounds and gestures combine to form meaningful units, and how language is used for communication. It encourages students to acquire an appreciation of the different kinds of variation in human languages: what is common to different languages, how languages can differ from one another, and how speech communities and individuals vary in their use of language. It familiarizes students with a wide variety of topics in linguistics, including psycholinguistics, language change, language and society, computational approaches to language, and philosophy of language. Furthermore, the concentration lets students acquire hands-on experience in understanding and solving open-ended questions in linguistics, which would include comparing the merits of competing theoretical approaches, and teaches them how to communicate linguistic arguments effectively in writing and in presentations.

Students who wish to pursue one or more aspects of Linguistics in greater depth than required by the Bachelor of Arts, and to focus on some of the more technical, computational, and/or experimental areas of the field may choose to take a Bachelor of Science in Linguistics instead. Students will form a collection of classes that combines expertise in linguistics and in adjacent fields. For instance, students may combine their interest in linguistics with classes in cognitive science, philosophy, or computer science, with approval from the concentration advisor.

A.B. Requirements (10 courses)

Students are expected to fulfill both breadth and depth requirements. Breadth requirements let students reach common ground understanding of topics in linguistics, and include an introductory gateway course, a class that focuses on phonetics / phonology, a class that focuses on syntax / morphology, a class that focuses on semantics / pragmatics, and a class on language variation. Depth requirements expect students to gain more specialized knowledge in specific domains, by taking additional courses, some of which must be methods / advanced courses, as described below.

Gateway Course	1
LING 0100	Introduction to Linguistics
Phonetics/Phonology Courses	1
LING 1200	Phonology
LING 1210	Phonetics
Syntax Courses	1
LING 1310	Introduction to Syntax
LING 1311	Linguistic Variation and Universals
Semantics/Pragmatics Courses	1
LING 1410	Lexical Semantics
LING 1440	Compositional Semantics
LING 1412	Pragmatics
Linguistic Variation Courses	1
LING 1500	Sociolinguistics
LING 0511	Language and Gender
LING 1311	Linguistic Variation and Universals
CPSY 0800	Language and the Mind
CPSY 1650	Child Language Acquisition
CPSY 1660	Learning Compositional Language
CPSY 1800	Language Processing
CPSY 1850	Language Processing in Humans and Machines
CPSY 1890	Laboratory in Psycholinguistics

5 additional appropriate electives forming a thematically related set to be determined in consultation with the Concentration Advisor. At least one of these must be drawn from the list of advanced courses listed below, and we strongly recommend that at least one course be an appropriate methods and a topics course. No more than 2 of these courses may be drawn from below 1000 level courses. The electives can be drawn from any of the above courses, or any of the other linguistic/language related courses in the program. Electives may also be drawn from courses in other departments in consultation with the Concentration Advisor; a list of courses which standardly count towards the Linguistics Concentration (provided they form part of the thematically related set) is appended below.

CPSY 1650	Child Language Acquisition
SLAV 1300	Language and Politics in East Europe and Russia

Advanced and Methods Courses

LING 1440	Compositional Semantics
LING 1771	Introduction to Corpus Linguistics
LING 1870	Linguistic Field Methods
CSCI 1460	Computational Linguistics
CPSY 1890	Laboratory in Psycholinguistics

NOTE: This is NOT an exhaustive list of courses that can be applied towards the Linguistics Concentration requirements.

Total Credits **10**

Independent study is encouraged for the A.B. degree. Students should sign up for LING 19XX with a faculty advisor who is a member of the Program in Linguistics. Arrangements should be made in Semester 6 for students expecting to do independent study during Semesters 7 and/or 8.

Honors (12 courses)

Candidates for Honors in Linguistics must meet all of the requirements above, write an Honors thesis, and take two additional courses. One course is normally LING 19XX (Directed Research in Linguistics) - intended for work on the Honors thesis.

Three of the total 12 courses must be drawn from the advanced list above (the Directed Research course counts as one of the advanced courses).

Refer to the Program in Linguistics webpage for detailed information about the Linguistics Honors program.

ScB Requirements (16 courses)

Students who wish to pursue one or more aspects of Linguistics in greater depth than does the A.B., and to focus on some of the more technical, computational, and/or experimental areas of the field may choose to take an Sc.B in Linguistics. Students will choose a focus pathway, in consultation with the Concentration Advisor / Director of Undergraduate Studies, which will direct their choices.

Students are expected to fulfill both breadth and depth requirements. Breadth requirements let students reach common ground understanding of topics in linguistics, and include an introductory gateway course, a class that focuses on phonetics / phonology, a class that focuses on syntax / morphology, a class that focuses on semantics / pragmatics, and a class on language variation. Depth requirements expect students to gain more specialized knowledge in specific domains, by taking additional courses, some of which must be methods / advanced courses, as described below. Unlike the AB, ScB students are also expected to take electives outside of linguistics, and to complete a capstone course.

Gateway course	1
LING 0100	Introduction to Linguistics
At least one course in phonetics / phonology, such as:	1
LING 1200	Phonology
LING 1210	Phonetics
At least one course in syntax, such as:	1
LING 1310	Introduction to Syntax
LING 1311	Linguistic Variation and Universals

At least one course in semantics / pragmatics, such as: 1

LING 1410	Lexical Semantics
LING 1412	Pragmatics
LING 1440	Compositional Semantics

At least one course in linguistics variation, such as: 1

LING 1311	Linguistic Variation and Universals
CPSY 0800	Language and the Mind
CPSY 1650	Child Language Acquisition
CPSY 1660	Learning Compositional Language
CPSY 1800	Language Processing
CPSY 1890	Laboratory in Psycholinguistics

Three electives specifically in the focus area, such as: 3

LING 1741	Information Theory in Language
LING 1771	Introduction to Corpus Linguistics
CSCI 1460	Computational Linguistics
CPSY 1800	Language Processing
CPSY 1850	Language Processing in Humans and Machines

LING 1310	Introduction to Syntax
CPSY 0800	Language and the Mind
CPSY 1385	Topics in Language Acquisition: Language Acquisition and Cognitive Development
CPSY 1650	Child Language Acquisition
CPSY 1660	Learning Compositional Language
CPSY 1890	Laboratory in Psycholinguistics
LING 1270	Laboratory in Phonetics
LING 1311	Linguistic Variation and Universals
LING 1410	Lexical Semantics
LING 1412	Pragmatics
LING 1440	Compositional Semantics
PHIL 0990X	Conditionals

Or many other courses

Four non-linguistic focus area electives, such as: 4

APMA 1650	Introduction to Probability and Statistics with Calculus
CSCI 0220	Introduction to Discrete Structures and Probability
CSCI 1410	Artificial Intelligence
CSCI 1420	Machine Learning
CSCI 1951A	Data Science
PHP 1560	Using R for Data Analysis
MATH 0520	Linear Algebra
CPSY 0950	Introduction to programming
CPSY 2908	Multivariate Statistical Techniques
CSCI 1460	Computational Linguistics
NEUR 0680	Introduction to Computational Neuroscience
PHIL 1770	Philosophy of Mind
CPSY 0200	Human Cognition
CPSY 0400	Cognitive Neuroscience
CPSY 0610	Children's Thinking: The Nature of Cognitive Development
CPSY 0900	Statistical Methods
CPSY 1492	Computational Cognitive Neuroscience
CPSY 1610	Cognitive Development
CPSY 1620	Developmental Cognitive Neuroscience
CPSY 1900	Research Methods And Design
MATH 0750	Introduction to Higher Mathematics
PHIL 0990T	Paradox and Infinity
PHIL 1630	Mathematical Logic

CPSY 0700 Social Psychology

Or many other courses

Three additional electives in Linguistics, preferably outside the main focus area, such as: 3

LING 1311	Linguistic Variation and Universals
LING 1440	Compositional Semantics
LING 1870	Linguistic Field Methods
ANTH 1800	Sociolinguistics, Discourse and Dialogue
SLAV 1300	Language and Politics in East Europe and Russia
CPSY 1660	Learning Compositional Language
CPSY 1850	Language Processing in Humans and Machines
LING 1771	Introduction to Corpus Linguistics
LING 1741	Information Theory in Language
CPSY 1800	Language Processing

Or many other courses

One independent study / capstone requirement 1

LING 19XX: Directed Research

Total Credits 16**Honors (17 courses)**

The Honors program requires one additional elective, which will typically be a second LING 19XX Directed Research course during the senior year (thus leading to a full year of Directed Reading or Directed Research). Admission to the honors program requires a majority of A grades in the concentration. The student's work will culminate in an Honors' thesis on an approved topic (learn more about regulations regarding Honors' theses at <https://linguistics.brown.edu/concentrations> (<https://linguistics.brown.edu/concentrations/>)), written under the direction of one or more faculty members, and read by a committee of at least two faculty members (one of whom may be from another department).

General Guidelines

Do Foreign Language Courses Count?

Foreign language courses will generally not count towards the concentration requirements, except those that focus on the structure or history of the language. Students are, however, advised to gain familiarity with a foreign language, and are encouraged to take at least one course which deals with the structure of a language other than English.

Choice of Electives

When it comes to the choice of electives, students can complement LING classes with classes that have substantial linguistics content in other departments. However, the specific choice of electives depends on the other classes the student is taking. Students should consult with the concentration adviser / the director of undergraduate studies regarding their specific choices. Additionally, no more than two electives can be 0-level courses.

Overlapping Classes

Linguistics allows students to double-count at most two classes with other concentrations.

NOTE: Please refer to the undergraduate Linguistics concentration site for updates not listed here.

Courses

LING 0100. Introduction to Linguistics.

The ability to speak and understand a language involves having mastered (quite unconsciously) an intricate and highly structured rule-governed system. Linguists seek to model that rule system. This course introduces students to the areas of phonetics (speech articulation and transcription), phonology (the principles that govern how sounds are put together), morphology (the principles governing word structure), syntax (the rule system governing sentence structure), and semantics (the system that relates sentences to meanings).

LING 0130. Playing with Words: The Linguistic Principles Behind Word Games and Puzzles.

In this course, we explore the use of language in a domain which is fairly unlike ordinary communication: the use of language in wordplay, alternate languages, games, and puzzles. At one level, understanding aspects of linguistic theory can provide insight into the internal workings of these various forms of wordplay. On another level, wordplay and puzzles often intentionally subvert the grammar and other rules of ordinary language use and therefore can provide a unique lens into typically implicit grammatical knowledge speakers possess and deploy in all domains of language.

LING 0131. Constructed Languages.

This course introduces students to the field of linguistics and language typology (the study of crosslinguistic variation and universals) through the project of creating their own constructed languages—conlangs. Students will learn about linguistic phenomena from a variety of diverse languages across the world, serving as inspiration for various aspects of their own conlangs. Broad topics include phonetics and phonology (the study of speech sounds and how they combine), morphology (the structure of words), syntax (the structure of sentences), semantics (how linguistics forms express meanings), historical linguistics (how language changes over time), and writing systems. We will also cover the history of the art of constructed languages. The course culminates in a descriptive sketch grammar of the new language, which will be gradually built up with regular assignments throughout the semester based on the topics discussed in class.

LING 0511. Language and Gender.

In this course, we will explore the relationship between language and gender: how ideologies about gender shape language, and, conversely, how language is used to construct gender and gendered identities. To accomplish this, we will pair the tools of linguistic analysis with social theory on gender. Topics include historical developments in the field of language and gender, speech act theory and performativity, grammatical gender, and sociolinguistic style and indexicality. Throughout the course, we will consider how intersections with other social identities – such as race, class, sexuality, and age – inform how people construct gender through language and how these intersections impact which communities have historically been prioritized in research in this area.

LING 0530. Diversity in American Languages.

This course provides an overview of the history, structure, and diversity of languages in the United States, focusing on four categories: indigenous, colonial, immigrant, and new languages. It explores how these languages reflect and constitute cultural identity, and the ways in which they are shaped by social, political, and educational factors. The course includes topics like Native American languages, African American English, and American English dialects, including the dialects of New England, and critically examines the connections between language, race, power, and privilege. This is an introductory course and no prior linguistics training is required.

LING 0580. Bad Grammar: Language, Power, and Society.

This first-year seminar in linguistics gets meta about the norms of academic language. Why are some linguistic practices considered “bad” or “incorrect” and others “standard” or “appropriate”? How is language used to create, reinforce, and contest existing social structures? We’ll consider the consequences of language and dialect differences in institutions like schools, the legal system, workplaces, and medical settings. Other topics include linguistic prescriptivism and (dis)ability, taboo language and euphemisms, and what it means to be “polite” (from a linguistic perspective).

LING 0810. Englishes of Postcolonial Africa.

English is spoken by various groups worldwide. In postcolonial contexts, such as Africa, there are four distinct types of English: pidgin, creole, second-language, and first-language varieties, all part of global Englishes. This course surveys the linguistic variations in African Englishes and their divergence from other global English varieties, including African American English (AAE). We will explore different forms and pronunciations and examine the historical, political and social contexts of these varieties, including speakers’ attitudes, identity construction, and connections to other global English identities. Additionally, we will discuss how multilingualism influences English use in Africa and how English use affects language choice and policy in sectors such as education and governance across the continent. Overall, we will gain a comprehensive understanding of the linguistic diversity of African Englishes and their impact on language, identity, and policy across the continent.

LING 1140. Evolution of Human Language.

Where did the human capacity for language come from and why does language have the properties it does? We’ll consider and evaluate several hypotheses for the biological and cultural evolution of language, drawing on evidence from emergent languages across modalities (spoken and signed), other species, genetics and language disorders, experimental methods, and computational models. This course has no pre-requisites and is appropriate for students new to linguistics and evolutionary theory as well as those with strong backgrounds in these areas.

LING 1200. Phonology.

Examines some of the classic and current issues regarding sound structure in the world’s languages and introduces the theoretical tools needed to solve them. After an introduction to articulatory phonetics and phonemic analysis, it focuses on phonological analysis of different languages, and discusses rule-based and constraint-based approaches to phonology. Implications for language learning and language change are discussed. Prerequisite: LING 0100.

LING 1210. Phonetics.

In this class, we will focus on the physical properties of language. Beginning with articulatory phonetics, we will explore how speech sounds are produced in the vocal tract and how signs are produced using facial and manual articulators. In studying acoustic phonetics, we will consider the form that sound takes in the acoustic medium. Through auditory phonetics, we will focus on how listeners process the speech signal. We will conclude by exploring applications of phonetic principles to related domains, including perceiving speech in unfamiliar accents, studying language change over time, and the development of computer technologies for speech synthesis and recognition.

LING 1270. Laboratory in Phonetics.

This course is an introduction to phonetics, covering articulation, acoustics, and perception. Students will gain basic skills in experimental phonetics, focusing on instrumental analysis of speech and behavioral responses in listening tasks. The first unit will provide training in methods of acoustic analysis using phonetic software (Praat), as well as looking at the relationship between articulation and the resulting speech sounds. The second unit will look at physiological and cognitive aspects of speech perception. The final unit will cover a selection of advanced topics in phonetics, including connections between perception and production and issues in the interface of phonetics and phonology.

LING 1280A. Topics in Phonetics and Phonology: How Phonetics Shapes Phonology.

Rule-based and constraint-based descriptions of phonological systems predict the existence of phenomena that are never observed in human language. What constrains which sound systems, rules and phonological constraints would exist in a language? What makes a phonological rule natural and other rules unnatural? We will discuss several different approaches that integrate phonetic insights into phonology.

LING 1280B. Topics in Phonology: Lenition.

Consonant shortening, voicing, and deletion are just a few of many phonological processes that are considered to be lenition (softening, weakening) processes. But is lenition a valid category? What functional forces are capable of causing such a wide variety of different processes, and what do they have in common? In this class we will study and criticize the different meanings of the term lenition and discuss several functionally-motivated causes for lenition.

LING 1280C. Topics in Phonetics and Phonology: Psycholinguistics of Phonetic Perception.

This course examines how perception of acoustic input is shaped by phonological systems, lexicons, and other aspects of linguistic representations. Many factors play a role in phonetic perception; some primary aspects that will be discussed are the role of memory, interactions between perception and production, and effects of top-down and bottom-up processing. Additional topics include individual variation in perception and production, social influences, and mechanisms driving the initiation and spread of sound changes. We will look at studies addressing these issues, examining what sorts of patterns exist, how to approach psycholinguistic questions in phonetic perception, and how to interpret data.

LING 1310. Introduction to Syntax.

An in-depth investigation of natural language syntax, an intricate yet highly organized human cognitive system. Focuses primarily on the syntax of English as a means of illustrating the structured nature of a grammatical system, but the broader question at issue is the nature of the rule system in natural language syntax. Prerequisite: CLPS 0030.

LING 1311. Linguistic Variation and Universals.

As anyone who has tried to learn a foreign language knows, languages differ from one another in numerous ways both superficial and profound. Although there are many different ways in which syntactic structure varies across languages, this variation is not limitless; it is subject to principled constraints, and different logically independent dimensions of variation often turn out to be highly correlated with one another. This course explores language universals and the range of cross-linguistic variation in the domain of morphosyntax, what limits this variation appears to have, and what functional, formal, and semantic principles underlie this variation.

LING 1312. Morphology.

What are words? Is there evidence for them having internal structure? What is the relationship between what can intuitively be understood as "forms of the same word"? Is there a distinct word-building module of the grammar, or do words simply arise from the interaction of the syntax and phonology? These are the kinds of big-picture questions that morphologists ask. This course offers an in-depth introduction to the field of linguistic morphology, which investigates the form of "words"—whatever those are. We will investigate a number of morphological phenomena in a diverse sample of languages (e.g. allomorphy, suppletion, syncretism, inflection and derivation, morphemes, paradigmatic structure, lexicalism, bracketing paradoxes, the relationship between morphology and syntax/phonology, "ABA phenomena, etc.), culminating with an introduction to Distributed Morphology, a current and highly-influential theory of morphology and the architecture of the grammar.

LING 1410. Lexical Semantics.

The representation of word meaning and generalizations about the way in which meanings are packaged into words. Topics include: "fuzzy" meanings, natural kind terms, how word meanings are decomposed. Special emphasis on how temporal properties are encoded, on the status of "thematic relations," and on how the fine-grained structure of word meanings impacts on the syntax. Recommended prerequisite: CLPS 0030.

LING 1412. Pragmatics.

Any time we utter a sentence in conversation, the perceived meaning of that sentence interacts with the discourse context in a rich variety of ways. On the one hand, aspects of a sentence's meaning are "filled in" or enriched by the prior conversation as well as non-linguistic context. On the other hand, utterances shape the future of the conversation in various ways too. This course is an introduction to the scientific study of such phenomena. Specific topics include: presupposition, implicature, speech acts, deixis, anaphora, (in)definiteness, and information structure.

LING 1440. Compositional Semantics.

Model-theoretic approaches to the study of the semantics of natural languages. Develops the tools necessary for an understanding of classic formal semantic results in linguistics and in philosophy (lambda calculus, intensional logic, Montague's treatment of quantification, etc.). These tools are then applied to detailed descriptions of natural language semantics, including binding and pronouns, modification, scope, focus etc. as well as other recent developments in semantic theory. Prerequisite: some familiarity with syntax or semantics or basic set theory and logic.

LING 1480A. The Boundary of Semantics and Pragmatics.

This course will examine some phenomena with an eye to the question of how much is actually encoded in the grammar vs. what sorts of facts can be accounted for by pragmatics. We begin by focussing on recent controversies regarding the question concerning the status of so called "Gricean inferences". We will also look at some facts surrounding negation, as well as certain constructions which appear to require an idiosyncratic grammatical account with an eye to explaining the idiosyncrasies. Prerequisite: LING 1410, CLPS 1340 or LING 1412. Enrollment limited to 40.

LING 1481A. Topics in Syntax and Semantics: The Syntax, Semantics and Processing of Ellipsis.

Ellipsis' is the phenomenon whereby a short expression is understood as a longer paraphrase. An example: "Lindsay can ski that course, but Bode can't". The second part is understood as "And Bode can't ski that course". How are such cases handled by the grammar (is there 'silent linguistic material interpreted by the semantics')? And how do language users process these? These questions have been debated for decades, and because ellipsis constructions interact with many other phenomena, the analysis of this domain is central in grammatical and processing theory. This seminar examines this with respect to several constructions and theories.

LING 1500. Sociolinguistics.

This course is a comprehensive introduction to theoretical frameworks and methods of analysis in sociolinguistics. We will examine how language variation and change can reflect social structures, construct diverse social identities, and allow us to make sense of our surrounding social landscapes. We will first learn how linguistic variation corresponds to large-scale social categories like gender, age, ethnicity, and class. Then, we will turn our attention to how individual speakers use language to construct identities, portray stances, and achieve interactional goals. Throughout the course, we will consider how ideologies about linguistic variation have been used to invalidate particular ways of speaking and disempower speakers of these varieties, and how language can reflect, reinforce, or contest social inequalities.

LING 1512. Language and Ethnicity.

This course explores historical, cultural, and theoretical perspectives on the relationship between language and ethnicity, and related concepts such as race, with a special focus on the United States. It centers on class discussions informed by readings that examine how language reflects and defies ethnic boundaries and how ideas about ethnicity influence the ways people use and construe language. The course covers topics such as ethnicization, racialization, authentication, linguistic repertoire, style shifting, mocking, ideology, and the concept of the listening subject. Requirements include attendance, participation, essays, class presentations, and a final paper. Students will gain experience in collecting and interpreting linguistic data and enhance their ability to write about language from a social scientific perspective, with the opportunity to incorporate feedback into their writing. Prerequisites: LING 0100/CLPS 0300, LING 0511/CLPS 0340, or LING 0530/CLPS 0370.

LING 1570. Research Practicum: Language Variation and Change in Rhode Island.

This course introduces students to the study of variation and change in large speech communities, using Providence as a focal site. We will build theoretical knowledge on place identity and its relationship to other social identities (class, ethnicity, gender) and to linguistic change. Students will collect and analyze sociolinguistic data in Providence and, through a series of in-class workshops, work through the research process from design to implementation and analysis. As an RPP course, students will consider how hierarchical structures impact linguistic variation and the research methods used to study it. As a COEX course, students will gain hands-on experience with sociolinguistic research methods and complete a final project analyzing an aspect of the class's aggregated data.

LING 1615. Sociolinguistic Cognition.

In this course, we will explore how language meets social information in the mind. We will address questions like: How do we infer who someone is from the way that they speak? How do our social expectations influence speech perception? How do our social experiences, stereotypes, and attitudes mediate how we speak and how we listen? How does our knowledge of linguistic variation interact with cognitive processes like attention and memory? And how much control do we have over these phenomena? Students will gain both a theoretical understanding of research in these areas as well as practical knowledge related to formulating research questions and designing studies on sociolinguistic topics.

LING 1630. Meaning and Cognition.

This course examines two prongs of the relationship between linguistic meaning. The first is the "Linguistic Relativity" hypothesis: that differences in the way languages encode/express meanings have some effect on cognition. While this is a popular hypothesis it is often phrased without attention to what is meant by 'cognition': what aspects of the cognition of its speakers might be shaped by the particulars of a language's structure or vocabulary? The second prong is to examine the cause and effect in the other direction: How do facts about human cognition in general shape language, and how can commonalities across languages be explained by non-linguistic facts about cognition? Of course these are both very broad questions; we will explore them with respect to specific domains such as pronoun systems, the expression of time, the encodings of differences between substances and objects, etc.

LING 1631. Bilingualism.

This course explores key questions about the linguistic competence of bilinguals in comparison to monolinguals. Although many linguistic models assume a monolingual speaker, most of the world's population is bi- or multilingual. What does it mean to be bilingual rather than monolingual? How does knowing two languages shape linguistic behavior? What are the consequences of bilingualism for both language use and broader cognitive abilities? How do these realities align—or clash—with social attitudes and public policy? Drawing on data from a wide range of bilingual communities, students will engage with research from psycholinguistics and sociolinguistics to begin addressing these questions. Topics include language comprehension and production, acquisition, the mental representation of dual language knowledge, and the cognitive effects of bilingualism. We will also examine the social context of bilingualism, the advantages and disadvantages of bilingualism, and their implications for linguistic theory.

LING 1741. Information Theory in Language.

Information theory is used to study the abstract properties of communication systems. Can it improve our ability to understand language? We will examine how the need to communicate predicts several linguistic phenomena. We will discuss information theoretic effects on multiple levels of linguistic analysis, including phonetics, phonology, and syntax. We will contrast concepts such as frequency, predictability, informativity, and functional load, and see how they can each apply to existing linguistic questions.

LING 1771. Introduction to Corpus Linguistics.

The study of Linguistics relies on language production data. Language corpora contain various sources of such data, often annotated to include additional information such as syntactic, semantic and phonological properties. Such databases often complement or even replace data sources used in other disciplines. This class aims to train students in the use of some of the tools that are commonly used to access and evaluate data in linguistic corpora. Prerequisite: CLPS 0030. Enrollment limited to 25.

LING 1810. Historical Linguistics.

This course is a survey of the basic mechanisms of how languages change over time and of the methods used to reconstruct these developments. We examine phonological change, morphological change, syntactic change, and semantic change, as well as interactions between these types of changes. Students will learn about types of evidence in reconstruction of change and about theoretical models of change. We will cover language relationships and the methods of establishing familial groupings, and we will compare patterns due to familial descent, language contact, and borrowing. Examples will be drawn from a variety of languages, both ancient and modern.

LING 1870. Linguistic Field Methods.

A lab/practicum course introducing the methodologies needed to collect, manage, and interpret primary data pertaining to the phonetic, phonological, morphosyntactic, semantic, and pragmatic properties of an understudied language. The course takes a hands-on approach, with students working in groups and individually with a native speaker consultant of an unfamiliar language. Students will learn how to test hypotheses about the language as well as construct grammatical descriptions. In addition, the course will cover a variety of practical, technological, interpersonal, cultural, and ethical issues typically encountered in fieldwork.

LING 1970. Independent Research in Linguistics.

This course is to facilitate students conducting independent research on a research question or area advised by a faculty member. This includes research for honors theses, but also other independent research and reading as determined in consultation with the relevant faculty member.

LING XLIST. Courses of Interest to Concentrators in Linguistics.

Literary Arts

Since 1968, Literary Arts at Brown University has been a creative and intellectual center for the U.S. literary avant-garde. Along with a handful of other writing programs nationwide, Brown provides a home for innovative writers of fiction, poetry, digital language arts and cross-disciplinary. Established in the mid-1960s by poet, translator and critic Edwin Honig, Literary Arts at Brown continues its tradition of hiring and retaining a faculty comprised of nationally and internationally known authors. Each year, the program offers 60 – 70 classes, awards the M.F.A. degree to approximately 12 graduate student writers, and confers Honors on about 35 talented seniors who will have completed the undergraduate concentration in Literary Arts.

For additional information, please visit the department's website: <http://brown.edu/academics/literary-arts/home/literary-arts> (<http://brown.edu/academics/literary-arts/home/literary-arts/>)

Literary Arts Concentration Requirements

Brown's Department in Literary Arts provides a home for innovative writers of fiction, poetry, playwriting, screenwriting, literary translation, digital/cross-disciplinary and mixed media. The concentration allows student writers to develop their skills in one or more genres while deepening their understanding of the craft of writing. Many courses in this concentration require a writing sample; students should consult a concentration advisor or the concentration website for strategies on getting into the appropriate course(s).

Candidates for the Bachelor of Arts degree with concentration in Literary Arts will be expected to complete the following course work:

1. At least four writing workshops from among the following series: LITR 0100A, LITR 0100B, LITR 0110A, LITR 0110B, LITR 0110D,

LITR 0110E, LITR 0110H the various courses under LITR 0210, LITR 0310/0311, LITR 0610, LITR 1010, LITR 1110, LITR 1150/1151/1152 and LITR 1410. At least two genres must be covered within the four workshops taken. An independent study in literary arts (LITR 1310 and LITR 1510) may count toward the workshop requirement. Other writing-intensive courses may also count, at the discretion of the advisor.

2. Six elective reading and research in literary arts courses, which must include:

- a course in literary theory or the history of literary criticism
- a course that primarily covers readings and research in literary arts created before 1800
- a course that primarily covers readings and research in literary arts created before 1900
- a course that primarily covers readings and research in literary arts created after 1900

These courses, selected in consultation with a concentration advisor, may come from (but are not limited to) the following departments: Africana Studies, American Civilization, Classics, Comparative Literature, East Asian Studies, Egyptology, French Studies, German Studies, Hispanic Studies, Italian Studies, Judaic Studies, Linguistics, Literatures and Cultures in English, Middle East Studies, Modern Culture and Media, Music, Portuguese and Brazilian Studies, Slavic Studies, South Asian Studies, Theatre, Speech and Dance, Visual Arts. With approval from the concentration advisor, courses covering pre-20th century time periods may be distributed in a variant manner, so long as they cover two distinct literary time periods that precede the 20th century

3. Among the ten required courses, at least four must be at the 1000-level or above. At least six classes (workshops and reading/research courses) that shall count toward the concentration must be taken at Brown through the Literary Arts Department; up to one of the six LITR courses may be a course taken in another department but cross-listed by Literary Arts. No more than two of the ten required courses for the concentration may also count toward fulfilling a second concentration.

4. During the senior year, all students must take at least one course within the Literary Arts course offerings (courses with LITR designation by the Registrar, or courses approved by the concentration advisor).

Honors in Creative Writing: Course requirements are the same as those for the regular concentration (four workshops, six elective literature-reading courses), with the following changes and additions: honors candidates must include two 1000-level workshops or independent studies among their courses; and complete a thesis. Students in their seventh semester who are enrolled in or have completed at least one 1000-level workshop (or independent study) may submit honors applications to the Literary Arts Department from the first day of the fall semester to 25 September; and from 1 through 25 February in the spring. Interested students should obtain information from the office of the Literary Arts Department.

Honors in Literary Arts Production: Course requirements are the same as those for the regular concentration (four workshop, six literature-reading courses), with the following changes and additions: honors candidates must include two 1000-level workshops, production courses or related independent studies among their courses; and complete a production capstone project. Students in their seventh semester who are enrolled in or have completed at least one 1000-level workshop, production course or independent study, may submit honors applications to the Literary Arts Department from the first day of the fall semester to 25 September; and from 1 through 25 February in the spring. Interested students should obtain information from the Literary Arts Department.

Literary Arts Graduate Program

The Graduate Program in Literary Arts offers a Master of Fine Arts (M.F.A) degree with courses in fiction, poetry and digital/cross-disciplinary practices.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/literary-arts> (<http://www.brown.edu/academics/gradschool/programs/literary-arts/>)

You are required to complete nine courses to earn an MFA: two courses in semesters 1 and 4 of study; and 2.5 courses in semesters 2 and 3 of study. In semesters 1, 2 & 3, you are expected to take the graduate workshop in your track (or if in the digital/cross-disciplinary track, a relevant workshop agreed upon by you and the Director of Graduate Studies); and in semester 4, you are expected to complete the thesis independent study. In semesters 2 & 3, you are expected to take the half-credit course offered in pedagogy training. In all four semesters, you are expected to take one elective.

Which may be found at:

<https://literaryarts.brown.edu/handbook/choosing-courses> (<https://literaryarts.brown.edu/handbook/choosing-courses/>)

Courses

LITR 0100A. Introduction to Fiction.

A workshop for first year students, introducing them to the art of writing fiction. This course is reading and writing intensive. Enrollment limited to 17. S/NC required.

LITR 0100B. Introduction to Poetry.

A workshop for first year students, introducing them to the art of writing poetry. This course is reading and writing intensive. Enrollment limited to 17. S/NC required.

LITR 0105A. Fiction, An Introduction.

A workshop for first year students and sophomores, introducing them to the art of writing fiction. This course is reading and writing intensive and will investigate the component parts of the story through review of various literary traditions. Enrollment limited to 17. S/NC required.

LITR 0110A. Fiction I.

A workshop for students who have little or no previous experience in writing fiction. Enrollment in the spring and fall is limited to 17 per section. Enrollment in the winter is limited to 12 per section. This course is limited to undergraduates. S/NC.

LITR 0110B. Poetry I.

A workshop for students who have little or no previous experience in writing poetry. Enrollment limited to 17 per section. This course is limited to undergraduates. S/NC.

LITR 0110C. Playwriting I (TAPS 0100).

Interested students must register for TAPS 0100.

LITR 0110D. Digital Language Art I.

Project-oriented workshop for writers, visual/sound artists, filmmakers and programmers who wish to explore digital media techniques. No experience working in this field (or with computer programming) required. You'll learn through doing, reading, talking and collaborating on works in various traditions. Enrollment limited to 17. S/NC.

LITR 0110E. Screenwriting I.

Screenwriting I introduces the fundamentals of short-form screenwriting through viewings, readings, exercises and assignments. Areas of particular focus include the short as a fully developed and distinctive work of art; visual storytelling, pacing and flow; effective screenwriting techniques, optimizing every word; articulating your personal voice and vision; creating structures that best suit your content and intentions. In class, we will review your writing, lookbooks and group presentations; view and discuss short films; discuss readings; and do writing exercises. Assigned readings include theory, essays, treatments and screenplays. Films will also be assigned for viewing outside of class. This course is limited to undergraduates. S/NC. Enrollment limited to 17.

LITR 0110H. Digital & Cross-Disciplinary Language Arts 1.

Project-oriented workshop for writers and language artists who want to integrate practices from other disciplines as they devise, compose, and make their work. Those with little or no prior interdisciplinary or digital media experience are welcome. Learning is through making, reading, discussion, group projects, collaboration, and research presentations. Enrollment limited to 17. S/NC.

LITR 0200Z. Faking It: Literature in the Age of the Hoax.

How is society simultaneously constructed and undermined by the persistence of fakes? With its cousins the hoax and the forgery, the fake plays the straw man in much of political, religious, and philosophical discourse, but the fake's insistence on re-conceiving notions of originality and purity is more substantial. Pursuing a definition of the fake, we will consider its many forms in contemporary society alongside novels that parody and complicate the history of these particular deceptions. Authors include: Borges, Bolano, Ishiguro, Byatt, and McCarthy. Enrollment limited to 17.

LITR 0210A. Fiction Writing II.

Topics often include stylistic matters related to tone and point of view, and structural matters like controlling switches in time. See general course description above for course entry procedures for all intermediate workshops. Enrollment limited to 17. Instructor permission required. S/NC.

LITR 0210B. Poetry Writing II.

Emphasis is placed on verse strategies, meter, rhythm, imagery and rhyme. Writing includes frequent exercises in various poetic traditions. See general course description above for course entry procedures for all intermediate workshops. Written permission required. S/NC.

LITR 0210C. Playwriting II (TAPS 0200).

Interested students must register for TAPS 0200.

LITR 0210D. Digital Language Art II.

Project-oriented workshop for writers, visual/sound artists, filmmakers, and programmers wishing to explore techniques for effective and innovative use of text in digital media. Topics include hypertext narrative, kinetic poetry, and recombinant and computer-generated texts. Collaboration encouraged. Work sample (writing, programming, website) due on first day of semester. Enrollment limited to 17. Instructor permission required. S/NC.

LITR 0210E. Screenwriting II.

Emphasis is placed on filmic devices, such as dialogue, voice-over, montage and time. Writing includes frequent exercises. See general course description above for course entry procedures for all intermediate workshops. This course is limited to undergraduates. Enrollment limited to 17. Instructor permission required. S/NC.

LITR 0210H. Digital & Cross-Disciplinary Language Arts II.

Project-oriented workshop for writers and language artists who want to integrate practices from other disciplines as they devise, compose, and make their work. Welcoming those who have taken the introductory course or have some prior interdisciplinary and/or digital media experience. Learning is through making, reading, discussion, group projects, collaboration, and research presentations. Enrollment limited to 17. S/NC.

LITR 0310A. Poetry in Service to Schools and the Community.

We shall be reading, writing and talking about poetry and letting this medium reflect back on other artistic practices -- what it means to live, work & think (in) this way; another key component will be an engagement with community practice through bringing poetry to local schools, a direct personal and enlightening exchange of enlightening ideas and experience. Participants will work independently, in groups, in classes (including this one); you produce, and work with others to produce, art individually as well as communally; you are the gaffer, you are also, and simply, a member of the guild. This feels more like a teacher's enterprise, though I call it, simply, community practice-- what happens when people just put themselves in the position to give their gifts, while allowing, at the same time, others to give equally of themselves. Limited to 17. S/NC. Permission will be granted by the instructor after the first class session.

LITR 0310B. City/Spaces: An Introduction to Psychogeography.

Psychogeography is an artistic discipline concerned with the subconscious ways in which we respond to and interact with the physical environment of the city. This course will focus on the intersection of psychogeography and text--both narrative and non-narrative-- and the possibilities for walking to inform text and narrative.

LITR 0310C. Ethnic Writing (ETHN 0300).

Interested students must register for ETHN 0300.

LITR 0310D. Imagining the City: Visions from Film and Literature.

This course will look at representations of urban space both in films and fiction, and through the lens of critical writings on the intersections between city space, architecture, film, and narrative. How do cities affect us aesthetically and emotionally? How have film and fiction examined, reinvented and revolutionized urban space in the twentieth century? What is the future of cities? These are some of the questions we'll address through readings, screenings, and discussion. As a class we will do weekly creative writing exercises inspired by the films and designed to explore the ways in which poetic space might be evoked through text.

LITR 0310E. Making the Written Word.

While our primary focus will be on language, we shall explore its relationship to sound, video, and performance. Although no prerequisites are required, students should be competent in visual and language arts — we shall work with equal sensitivity in both. Works created shall interrogate the space between image and text as a single composite medium, therefore illuminating advantages and pitfalls of each. We'll consider works by Linda Montano, Jenny Holzer, Lyn Hejinian, Susan Sontag. Required lab sessions in new technologies (Final Cut Pro, Audacity, Logic, Processing) will provide skills necessary to produce conceptually driven works of digital language art. Enrollment limited to 17.

LITR 0310F. Visual Poetry.

This interdisciplinary workshop explores the visual possibilities of language. Considering the page as a starting point, we'll create new works between writing and visual art. Through researching early writing systems, concrete poetry, asemic writing and contemporary works, students will gain a deeper understanding of their own practices. We'll examine the works of Dieter Roth, Carl Andre, Sol Lewitt, Aram Saroyan, Kenneth Goldsmith, Rosmarie Waldrop and more. All visual media welcome. "[Blank space on a page means] freedom. The possibility of anything happening. Every mark on that paper is an interruption, an insertion into a kind of peace." -Susan Howe

LITR 0310G. COMIX: Words + Image.

In this course we will be exploring the expansive genre of comics. You will learn how to read, analyze, compare, and create/write sequential art. This will be done through a variety of readings, in class exercises, discussions, and assignments. We will apply these reading and writing forms to the digital.

LITR 0310H. Art of Film: An Introduction to Filmmaking.

This is a course in the art of film writing, directing, editing picture and sound, and producing, be it narrative or avant-garde. Students will engage the theory and practice of the art of filmmaking via readings, viewings, writings, and making their own films. S/NC required.

LITR 0310I. Exploding the Book: An Introduction to Hybrid + Cross-Disciplinary Poetry.

How might poetry exist in three dimensions? In four? How might it interact with images? With sound? With performance? This course invites students to reimagine the ways in which human beings experience text. Exploding The Book is both an introduction to hybrid/cross-disciplinary poetry—poetry intersected with other media including image, sound, video, etc.—as well as a writing workshop. Students will be introduced to hybrid poets and text-based visual artists challenging the possibilities for where and how text exists. Additionally, students will develop a hybrid and experimental writing practice of their own.

LITR 0310J. The Voice of Text.

The Voice of Text will explore the voice as mediator among text, sound and performance. The vocal instrument will be thoughtfully investigated with examination of extreme and unorthodox iterations of voice/text/sound, including: castrati repertoire, extended technique ranging from Diamanda Galas to black metal, coded shortwave radio transmissions, electronic vocal synthesis and the ecstatic speech of glossolalia. Additionally, voiced text will be given historical context through fiction and poetry, film, theater and music. Through individual and collaborative projects, students will explore a variety of techniques and technologies, harnessing the expressive potential of the voice across a wide variety of disciplines.

LITR 0310K. The Web Video: Narrative Installed in the Screen.

Godard once joked, "I have a secret ambition...to be put in charge of the French newsreel." He imagined a digestible form of consumption that blended text with pictures, documentation with advertisement, intimacy with objectification. And now we have it. The computer allows access to thousands of newspapers, also television shows, social media sites, email, reddit, first person shooting games, everything really. Looking at artists like Hito Steyerl, Jenny Holzer, Harun Farocki, Young Hae Chang Heavy Industries, Trinh Minh Ha, Sondra Perry, Angela Washko, Douglas Kearney, Xu Bing and others, we'll explore narrative in the on screen video format.

LITR 0310L. Coding for Language: An Introduction.

In a time when almost every word and sentence will become digitized by computers, language becomes programmable. In this project centered workshop we are going to explore what possibilities, questions and challenges programming bring to language, especially in reading and writing practices. For students who are interested in language, coding, poetics, and creative writing, you'll learn through doing, reading, discussing and collaborating on works in programmable media. Some previous experience with programming is desirable. If you have a basic understanding of programming and are willing to spend more time to code for language, this course is for you.

LITR 0310M. Refusing Objecthood: Web-Based Language Art as Site.

This studio course addresses the history and practice of web-based language art, or literature/art made for and inseparable from the web. Web-based language art is space/place/landscape/setting/site; it is not held or beheld, but filled and inhabited. We focus on what this means for web-based language artists, especially those who occupy bodies that have not historically tended to own or control physical sites. Supplementary readings consider other site-building or site-altering language art practices and the materiality of the internet. Final projects will be web-based language artworks, for which participants are encouraged but not required to learn to code for the web.

LITR 0310N. Machine Learning and Language Arts: Approaches to AI Art Practice.

We'll consider the question: what does the rise of so-called artificial intelligence mean for the language and for arts practice in general? Contemporary artists in fields as diverse as music, architecture, cinema, poetry and painting use machine learning tools to support their work. Through technical workshops, project critiques and critical discussions, we'll grapple with the anxiety and catharsis AI tools can bring to the arts. Students will be expected to work on projects using multiple machine learning tools. No coding experience is required for this course. A writing sample will be due in the front hall of the Literary Arts building (located at 68 1/2 Brown Street) by 4 pm on the first day of classes. Interested students should also complete the survey here: <https://www.brown.edu/academics/literary-arts/survey-litr-0210-310-and-1010-workshops>.

LITR 0310O. Narrative Nonfiction.

This is a class in crafting engrossing and essential stories. True stories need to be told, and deserve to be told well. What's the difference between story and subject? How can narrative and careful structuring maximize the impact of investigative reporting? How do you properly pace a longform story? How do you pitch, report, outline, and edit one? And, most importantly, why do you write it in the first place? Class meetings will include a magazine-style editorial meeting, discussing weekly pitches and, later, story drafts followed by a discussion of reading that explores various approaches to structure, voice, and genre.

LITR 0310P. WIND in the CANE: Or, poetry in the "black outdoors".

Are poems set on urban streets landscape poems? Can a poem shot through with mistrust of, and alienation from, the land and other natural bodies constitute a nature poem? How do our notions of dwelling in the body inform our notions of dwelling on land? In this cross-disciplinary workshop, we'll consider what informs our prevailing views of the natural world; we'll investigate the language we use to describe the spaces we inhabit, haunt, cross over, and take as refuge; and we'll attune to the body and its material culture, which shapes our experience and enables our relationship to the land.

LITR 0310Q. Speculative Digital Utopias in a Time of Planetary Crisis.

'Social distancing' has driven us to spend more of our waking life in the virtual world than ever before. In class, we will confront the "reality of the virtual" in our present moment and make active steps to decolonize our imaginations and cultivate new ways of relating to reality, technology and the future. How do our avatars and virtual ecosystems reflect / parallel / interact with our physical reality? How can critical fabulation open portals to possible futures? What roles can language, imagination and art play as guiding forces toward a decolonized utopian future? Students will explore these questions through readings, conversation, experimentation and play. Over the semester, students will create several works of language driven digital art using sound, video, installation + networked media.

LITR 0310R. The Earned First Person.

Writing in the first person is a familiar mode for many of us. But when does it add to a reported, longform story and when does it detract from it? This is emphatically not a memoir class. In fact, at every turn, we will interrogate whether the first-person is merited. The first person can be used to bear witness or take us on a quest or build an argument. Other times, it's navel-gazing and gratuitous. We'll focus on how to use the first-person to create engrossing, well-structured narratives with unique perspectives.

LITR 0310S. The Earned First Person.

Writing in the first person is a familiar mode for many of us. But when does it add to a reported, longform story and when does it detract from it? This is emphatically not a memoir class. In fact, at every turn, we will interrogate whether the first-person is merited. The first person can be used to bear witness or take us on a quest or build an argument. Other times, it's navel-gazing and gratuitous. We'll focus on how to use the first-person to create engrossing, well-structured narratives with unique perspectives.

LITR 0310T. Metaforaging.

To forage is to explore and gather that which supports and sustains you, without depleting the nuanced systems that provide them. In this language art workshop, we will move through multi-disciplinary practices to understand how our worlds interrelate, how our senses extend and entangle each other. We will tune our attention to the abundance around us, drawing materials from personal and natural sources across disciplines into our language art practices. This course will stay within the poetic while moving from the literal – foraging for experiences and objects in our environment – to the speculative. Learning is through writing, noticing, sharing, making, reading, discussion, collaboration, and research presentations. Enrollment limited to 17. S/NC.

LITR 0310U. Hydropoetics: writing with and as water.

This poetry workshop takes its inspiration from the word hydrography. Etymologically, hydrography means water writing. As a science, hydrography concerns itself with surveying bodies of water especially for the purpose of safe navigation. We will consider ourselves as literary hydrographers, surveying a number of hydrospheres and returning the word to its parts. We will think, read, experience, and write about water in many dimensions and scales and we will attempt to write with and as water, as watery bodies. Together we will encounter the work of many theorists of water, including selections from poets, hydrofeminists, ecocritics, urbanists, sound artists and others. We will conduct written and auditory experiments grounded in oceans, rivers, lakes, pools, and ponds of our choosing.

LITR 0310V. Spaces and Places.

Project-oriented workshop for language artists who want to integrate practices from a variety of disciplines as they devise, compose, and make their work. Those with little or no prior interdisciplinary or digital media experience are welcome and encouraged to take this course. Learning may be through making, reading, discussion, group projects, collaboration, and research presentations. Enrollment limited to 17. Instructor permission required. S/NC.

LITR 0310W. Digital Utopias In A Dystopian Time Of Planetary Crisis.

What roles can language, imagination and art play as guiding forces toward a decolonized utopian future? In this class, we will confront the reality of our present moment and make steps to decolonize our imaginations and cultivate new ways of relating to technology and the future. How do our avatars and virtual ecosystems reflect / parallel / interact with our physical reality? How can critical fabulation open portals to possible futures? Students will explore these questions in depth, through readings, engaged conversation, experimentation and play. Over the semester, students will produce the digital artifacts of their own speculative utopias by creating language driven digital art using sound, video and new media. Students should expect weekly assignments and readings that will nourish a final project.

LITR 0310X. Experiments in Film and Poetry: An Interdisciplinary Workshop.

In this interdisciplinary creative workshop, we will explore the interplay of film and poetry. Students will gain insight into a variety of strategies and concerns of artists, writers and filmmakers who work with images and language (be it text or voiced) in tandem. Some topics of exploration will include montage theory and collage, essay films and essay poems, text-based images, image-based texts, experimental documentary poetics, neo-benshi works and collaborative processes. Each week, we will watch and read relevant work and discuss it together in class. Students will also have individual and collaborative creative prompts of their own, and a chance to receive feedback on their work. Students with existing creative practices and video editing skills are encouraged to apply, but no prior experience is required, only a desire to engage, experiment and create in community.

LITR 0310Z. Oblique Strategies: Process, Chance and Play in Cross-Disciplinary Literary Artmaking.

Building on the musician Brian Eno's concept of "oblique strategies", this course will introduce students to a variety of tactics to shift the burden of literary and artistic creation away from the conscious ego and towards a constraint and process-based approach. The first part of the course will focus on self-knowledge as a foundation for artistic practice, using generative writing exercises to generate raw material for subsequent projects. In the second part, we will introduce concepts of instructional, constraint and process-based art and experiment with a variety of strategies to decenter the creative ego with the goal of generating first drafts in a free and unselfconscious manner. The final part of the course will focus on constraint-based strategies for importing that same freedom into the editing process.

LITR 0311A. Juicy Carcasses, Abundant Futures: Detritus as Nourishment.

This course challenges students to listen to the wisdom of scavengers, and transform that which is discarded. It explores how those in the margins can reconstruct new worlds from the still active, reeking remains of (post)coloniality. It considers carefully Homi Bhabha's idea of the Third Space, and Fred Moten's idea of Noise and fugitive listening, that calls us to cease resisting dominant hegemonies with the tools of their making, and instead find each other outside of the binary of oppression/resistance, within a space of our own invention. This course explores what we can pick at from these juicy carcasses of colonialism and its many forms, and what dreams and futures we can imagine with them, all the while drawing inspiration from non-human detritivores.

LITR 0311B. Image Text Interval: Experiments in Film and Poetry.

Our explorations in this interdisciplinary creative workshop will center around the interplay of image and text in film and video. We will tend to the space between words, between images, the movements from one to another, what's alive in the cracks. How might poetic devices be transposed to image sequences in film? How can film theory inspire our writing? What are the myriad ways text, voice and the moving image can layer and entwine? This project-based workshop is for students interested in interdisciplinary practices that live and migrate between poetry and the moving image. Together we will consider essay films, cinepoetry, video art, and neo-benshi performance. We will learn about filmmakers, artists and writers who engage creatively with poetics, text and voice in moving image works such as Sky Hopinka, Suneil Sanzgiri, Mona Hatoum, Trinh T Minh-ha, Jordan Lord, Wu Tsang, and Douglas Kearney.

LITR 0311C. Little Landscapes: A Workshop in Very Short Fiction.

Daily writing and weekly reading, to inform and inspire. We'll practice and reflect on skills necessary to very short fiction, such as, but not limited to, compression, constraint, understatement, particulars over broad strokes. We'll consider how a very short story can be a trickster: a whole meal dressed as a snack. Great focus will be placed on image, feeling, moments, titles, words, sentences, openings and endings, paragraphs, transitions, voice, style, rhythm, and breath, among other things. We'll defamiliarize and decenter ourselves in relation to stories. We'll test what a story can be, what it can hold. Experimentation, fun, and play will be foregrounded. Much of what we'll practice and explore are necessary to all forms of writing. It's all the same. It's all paying attention.

LITR 0311D. Experiments in Storytelling: Essays, Art, and Games.

We tell stories everyday, we construct narratives for events, for our understandings of the people around us, for our own identities. Who are we and how do we fit into the world? Storytelling is at the heart of our human experience and it is unlimited in the forms it can take. This online seminar will explore a selection of storytelling traditions, both in and out of the creative writing space. Students will investigate the strategies employed by writers, artists, playwrights, game designers and will test these strategies out for themselves in their own storytelling. The aim is not for students to prioritize one style or strategy, but to approach the act of creation with a philosophy of radical play and discovery. No prerequisites required.

LITR 0311E. On Photographic Remembrance.

"On Photographic Remembrance" is an introductory course to mixed-media fiction writing. This course will delve into how archival photographs are a medium for experimental storytelling and lost personal histories. Students will develop their analytical skills of historical and "found" photographs from the Prelinger Archives, a public resource containing thousands of film footage and photographs featuring never-before released war documentation, 60's televised films, and home videos. Students will use this resource as inspiration for their own speculative fiction: how can the interplay of photography and prose represent fragmented time and memory? We will explore how various contemporary authors, multimedia artists, and filmmakers use structural, visual, and literary devices to imbue their works with a sense of both realism and mystery.

LITR 0311F. Geopoetics: reading+writing rocks, geo-glyphs, tectonic gestures.

This workshop engages in cross-disciplinary language arts via geologic matter. How might reading, writing, and making with stone extend what Ursula K. LeGuin calls, "the meter of eternity"? How might fossil, tectonic plate, and planet show us new spatial and temporal scales of inscription, elegy, and literary possibility beyond the Anthropocene? In this course, we will create language art projects both on and off the page, with the options to work with digital media, artist books, and multi-sensory art works. Through reading, journaling, and projects, we will engage geologic and geopolitical themes, beginning with ecopoetics, moving through extractivism, and extending into the politics of territory markers and lines. Students with all amounts of writerly and artistic experience are welcome.

LITR 0311X. Other Ghosts.

From personal and national memory, we mourn, witness and become implicated in its retelling. Is it possible to mold language into the shape of usefulness, as Claudia Rankine attempted, and can we shape a memory, or life, into Albert Murray's elegant form? We shall consider how genre and medium can augment personal and political stories through weekly reading discussions, workshops. We shall read and discuss interdisciplinary literature (which combines genres of poetry, fiction, criticism, memoir), visual arts (including cinema, sculpture, installation), music and short essays. We'll make use of the workshop environment to build a practice of constructive feedback and revision as students develop their individual voice. Students will submit a piece for workshoping at least twice in the semester, and submit a final project on the last day of class. Students are encouraged to work in various mediums.

LITR 0311Y. Experiments in Storytelling: Essays, Art, and Games.

We tell stories everyday, we construct narratives for events, for our understandings of the people around us, for our own identities. Who are we and how do we fit into the world? Storytelling is at the heart of our human experience and it is unlimited in the forms it can take. This online seminar will explore a selection of storytelling traditions, both in and out of the creative writing space. Students will investigate the strategies employed by writers, artists, playwrights, game designers and will test these strategies out for themselves in their own storytelling. The aim is not for students to prioritize one style or strategy, but to approach the act of creation with a philosophy of radical play and discovery.

LITR 0510A. Masters and Servants.

We will consider the relationship between servants and masters as portrayed in fiction and films. We shall examine the basic relation of servitude to sovereignty, extrapolating to the broader power dynamics of two-person relationships. Beginning with the Hegelian dialect of the master and the servant, and building as well on a philosophical framework provided by Nietzsche, Kojève and Bataille, we shall look at the complexities of the relationship between masters and servants, exploring the psychological, social and ethical dimensions of two-person relationships that value each person differently. We shall focus on issues of class and power and look at literature and film in which there are explorations of several complicated manifestations of servitude and mastery: overlaps into gender power dynamics and fetishism, power dynamic reversals both to comic and tragic effect, and questions of boundaries and violation of social propriety and human communication. Core texts will include work from Ishiguro, Wodehouse, D.H. Lawrence, Miabeau, Richardson, Bronë, and Stanley Crawford, and film texts will include Joseph Losey's *The Servant* and Luis Bunuel's *Diary of a Chambermaid*.

LITR 0510B. Into the Machine.

Starting from Turing's work on artificial intelligence, we shall examine the cultural and artistic ramifications of the rise of the machine, using Marx and Walter Benjamin to provide a framework. We will look at how machines generate anxiety, with special emphasis on robots, puppets and automatons; and we shall also consider utopian and dystopian images of machines, and visions of near and distant futures. Finally we will look at authors who utilize machine models of operation to generate artistic work. Authors and filmmakers include: Capek, E.T.A. Hoffman, Asimov, Lem, Breton, Redonnet, Fritz Lang, Chaplin, Tati. Enrollment limited to 20 first year students.

LITR 0510C. The Pleasures of the Text.

Enter the radiance of literature, music and film through devotional readings, viewings and listening experiences that will result in a series of weekly creative writing experiments. Dissolve into a narrative or sound or image the way a writer might and return from these experiences inspired and changed. Be prepared for the awe and wonder that only art can afford. Texts may include stories, poems and/or novels by Adler, Baldwin, the Bible, Coetzee, Cortazar, Gluck, Muller, Munro, Morrison, Pancake, Rankine, Schwartz, Wolf and others. Films by Akerman, Anderson, Kurosawa and Herzog. Music by classical, jazz and hip-hop artists.

LITR 0510D. Why Don't We Fall In Love?

How do we fall in love? Why? The title of our seminar was inspired by the 2002 summer pop-hit, written and produced by Rich Harrison, and famously performed by Amerie Rogers. Through poetry, film, and music, we will be critical, clinical, and sometimes implicated observers of the dynamics which structure erotic desire, the selfless (or selfish) ambition of love, and its representations.

LITR 0510E. Fiction v. Non-Fiction.

In bookstores, "Fiction" and "Non-Fiction" are separate, even antithetical, categories. In the minds of writers, though, they exist on a continuum. "Fiction" is heavily informed by fact; "Non-Fiction" applies the techniques of fiction. In this course, we will study authors who deftly employ both forms, in order to ask: when does a writer choose to shape his/her/their material as fiction or non-fiction? What are the benefits of each form? How are authors trying to break and merge these categories?

LITR 0610A. Unpublishable Writing.

This workshop explores writing projects which do not fit into conventional avenues of print publication (i.e. books). Through a series of prompted artistic projects we will explore how writing can interweave in new relationships with time, materials, sequence, procedural approaches, performance, and collaboration. Independent research will support your creative projects throughout the semester. Enrollment limited to 12. S/NC.

LITR 0610B. Fiction Through Poetry.

This course is designed for poets, fiction writers, and cross-genre enthusiasts interested in looking at narrative as it occurs at the level of the sentence, even the level of the word. We will use a variety of poetic texts as well as other fractured content as a means to think about fiction and the borderlands of storytelling. Students will be given weekly writing exercises. Enrollment limited to 12 first year students. S/NC.

LITR 0610C. Books By Hand.

We shall explore small press publishing and bookmaking from historical, contemporary and hands-on perspectives. Students will be asked to design and carry out small creative projects throughout the semester as well as research particular concerns in the field. Enrollment limited to 12 first year students. S/NC.

LITR 0610D. Four Performance Texts.

Performance studies is a capacious, interdisciplinary field that can traverse theater, visual art, music, literature, and dance, as well as aspects of lived life that are not necessarily considered art: ritual, sporting event, political protest. It is time-based, and thus for the most part, ephemeral. An artist may stage, orchestrate, or frame a set of behaviors, actions, events or even just intentions – they may or may not be the actual performer. Because of the embodied nature of performance, aspects of identity such as race, gender, and sexuality often play a visible role in the dynamics of the work.

The documentation of performance can exist in a wide range of formats, and usually endure for much longer than the performance itself. In this course, we will engage a "deep dive" on four distinct books that document performance. We will consider them both as records of the past, as well as a vehicle loaded with possibility for future actions – and we will perform some of those actions ourselves. This course will be a combination of the study of texts, the activation of texts, and the creation of texts. Individual and group work is expected.

LITR 0610E. To Gather, To Sever, To Mix, To Turn.

This highly generative workshop's goal is to stimulate and provide students with formal tools to develop a chapbook-length series of poems by the term's end. Students will bring materials to be transformed through processes including but not limited to collage, erasure, and translation. Such materials could be self-generated or found, and may include journal entries, dream logs, letters, text messages, images, archival matter, and much else. As examples of procedural approaches we will read poets such as Jen Bervin, Caroline Bergvall, Lyn Hejinian, Christian Hawkey, Susan Howe, Tyehimba Jess, Tan Lin, Claudia Rankine, and Stacy Szymaszek.

LITR 0610F. Choose Your Own Adventure.

This game is lit. I mean this Lit is a game. How do the design elements of a novel resemble the design elements of a game? And to what extent have interactive [video] games been designed with novelistic conceits? Your adventure begins here, starting with what lies at the dark heart of the literary adventure genre (Defoe, Conrad, Behn). We'll sojourn at contemporary indie video games (Undertale, Walking Dead, Broken Age, Gone Home), along the way analyzing how "choice" is utilized to build reciprocal fictions. We will also undertake semester-long projects—creating our own "Choose Your Own Adventure"s.

LITR 0710. Writers on Writing Seminar.

Offers students an introduction to the study of literature (including works from more than one genre) with special attention given to a writer's way of reading. This course will include visits to the course by contemporary writers who will read to the class and talk about their work. Enrollment limited to 19 first year students.

LITR 0710R. Poetry and Science (ENGL 0710R).

Interested students must register for ENGL 0710R.

LITR 0900A. Classic Short Stories.

This course introduces you to a selection of works by important writers of the short story. We shall explore the richness and diversity of short fiction through close reading and discussion, affording you an appreciation of the short story in general and of our writers' countries and histories in particular. Our focus will be on authorial strategies and themes explored. Artistic and political movements will be introduced as they impact the works. Furthermore, you will learn the appropriate terminology as tools for textual and critical analysis. Finally, this course will to develop your capacity for self-expression.

LITR 0900B. How to Win the Nobel Prize in Literature.

The history of the world's most famous literary prize, the Nobel Prize in Literature, is one of scandal, secrecy, and prestige. Does the Nobel Prize really reward writers who confer the "greatest benefit on mankind"? What might the Nobel Prize teach us about reading and writing in our contemporary moment? In this seminar we will read texts from the most recent Nobel laureates: Kazuo Ishiguro, Olga Tokarczuk, Peter Handke, Louise Glück, and Abdulrazak Gurnah. We will examine how these diverse authors engage in creative writing and world-making through topics like migration, history, myth, culture, and ethnicity. We will also think broadly about the politics and value of literary prizes, world literature, translation, and the global literary marketplace.

LITR 0999. Graphic Novels and Comic Masterworks.

Focused on the influence of graphic novels and comic art, this course examines graphic novels and comic art from seminal texts like Art Spiegelman's *Maus* through a range of mainstream and independent comics from Marjane Satrapi, Grant Morrison, Alan Moore, David B., Lynda Barry, Daniel Clowes, Frank Miller, and many others, including graphic memoir, reportage, and Indie and DIY zines. The course explores image and language in collaboration, seeking a better understanding of this influential genre. Assignments are critical and creative, both individual and collaborative, and will involve daily reading and writing assignments. Enrollment limited to 20.

LITR 1000. The Arts Workshop for Practice and Practice-Oriented Research.

This collaborative course will provide a forum for discussing in-progress creative research and practice. Offered jointly by the Brown Arts Initiative and Brown's arts departments, the weekly workshop will host an interdisciplinary group of faculty, graduate students, and undergraduates. Each participant will apply with a specific creative practice/research project to be workshoped and developed during the course of the semester. In the semester following the seminar, participants will have access to production assistance from the BAI for further project development. The course requires an online application process, and successful applicants will be provided with instructor permission to enroll.

LITR 1010A. Advanced Fiction.

The writing of short stories or longer works in progress in regular installments, along with appropriate exercises and reading assignments. See general course description above for course entry procedures for all advanced workshops. Written permission required. S/NC. During the registration period, up to eight LITR concentrators with any one of the listed prerequisites may register. For open slots at the start of the semester, the instructor will share guidelines at <https://literaryarts.brown.edu/undergraduate/1000-level-course-registration>

LITR 1010B. Advanced Poetry.

Course work includes a body of exercises, close reading of poetry, workshop conversations and conferences. See general course description above for course entry procedures for all advanced workshops. Instructor permission required. S/NC. During the registration period, up to eight LITR concentrators who have fulfilled any one of the prerequisites listed below may register for the course. For open slots at the start of the semester when the course meets, details on how those slots will be filled will be made known via <https://literaryarts.brown.edu/courses/undergraduate-courses>.

LITR 1010C. Advanced Playwriting (TAPS 1500H).

Interested students must register for TAPS 1500H.

LITR 1010D. Advanced Digital Language Arts.

An advanced writing working for which participants produce, individually or in collaborative arrangements, a significant work of language-driven, digitally-mediated art in networked and programmable media. This work will be given historical and critical context, as participants become more aware of what it is they are doing when they use digital systems to write, or when they create instruments for and of writing. Throughout the course — and especially before final projects become the focus — there will be seminar-style reading and discussion: readings from other works of digital language art and from selected critical writing in the field.

LITR 1010E. Advanced Screenwriting.

Screenwriting for feature-length and episodic works. Participants should already have experience writing short screenplays and be prepared to develop a longer piece. See the Literary Arts Department website for course entry procedures for all advanced workshops. Work sample and instructor permission required. S/NC.

LITR 1010F. Advanced Translation.

Translation draws from many fields including linguistics, comparative literature, literary studies, anthropology, cultural studies, cognitive science, and creative writing. While we consider different theories and approaches to translation, students will embark on a semester-length translation project. Expect to read and energetically discuss readings, to give a presentation on your ongoing translation, and to write a critical essay and numerous translation exercises on your way toward completing a manuscript in translation (the length of which will be determined by the work itself and an agreement between professor and student). Enrollment limited to 12. Instructor permission required. S/NC.

LITR 1010G. Writing3D.

An advanced experimental workshop for writing in immersive 3D, introducing text, sound, spatial poetics, and narrative movement into Brown's Legacy Cave (now house in the Granoff Center for the Creative Arts) with links to the YURT (Yurt Ultimate Reality Theater in the Center for Computation and Visualization). An easy-to-learn and easy-to-use application allows non-programmers to create projects on laptops and then to run them in immersive 3D audiovisuality without the necessity for specialist support. Broadly interdisciplinary, the course encourages collaboration between students with different skills in different media, who work together to discover a literary aesthetic in artificially rendered space.

LITR 1010H. Advanced Digital & Cross-Disciplinary Language Arts.

Project-oriented workshop for writers and language artists working to integrate practices from other disciplines as they devise, compose, and make their work. Recommended for students with some prior interdisciplinary practice or digital media experience. Learning is through making, reading, discussion, group projects, collaboration, and research presentations. Enrollment limited to 12. S/NC.

LITR 1011F. Literary Translation Workshop (COLT 1710C)..

Interested students must register for COLT 1710C.

LITR 1110B. American Political Drama.

What exactly is an American political play? We'll examine issues of personal freedom, community rights, and the positioning of public power. Are we different from the myths of America? Political theater enables us to see our moral choices and aspirations. From Aristophanes to Suzan-Lori Parks, we will look at various political texts while we attempt to create new approaches to the writing of American Political Theater.

LITR 1110E. Innovative Narrative.

Stereotexts: a project-driven writing workshop focused on innovative multidimensional approaches to narrative. Projects using two or more media such as print and digital formats or texts and sound, filmed text, hyperfictions, narratives with multiple voices or even multiple spaces, text installations, fictions that put contraries into play, etc., are all welcome. Writing samples and project descriptions required.

LITR 1110F. Narrative Strategies.

A course essentially geared to the creative and critical writer interested in experimenting with some of the narrative structures suggested by the great films. To include films of Akerman, Antonioni, Eisenstein, Hou Hsiao, Hsien, Goddard, marker, Tarkovsky and others and texts by Duras, Sebald and Vittorini. Instructor permission required.

LITR 1110G. Narrative Voice: Fact and Fiction.

No description available.

LITR 1110J. The Short Story.

Experiments in writing; extensive reading in traditional and experimental collections of fiction in shorter forms. Writing samples of no more than ten pages should be left at 68 1/2 Brown Street on the first day of the semester. Instructor permission required. S/NC.

LITR 1110L. Aspects of Contemporary Prose Practice.

Using Chimamanda Ngozi Adichie's *Purple Hibiscus*, Tayeb Saleh's *The Wedding of Zein and Other Stories*, Luis Bernard Honwana's *We Killed Mangy Dog*, and *Our Sister Killjoy*, this course will look at prose narrative in contemporary African Literature, for a background to general narrative practice. Among areas of special interest, the course will examine the contents and structure of the short story, not as an abbreviated novel, but as an autonomous genre. We shall also look at literature in translation, and discuss what the reader loses in the process if anything, and how much that matters, if at all. Students will be expected to work on short stories and novel chapters. Instructor permission required. Enrollment limited to 12. S/NC.

LITR 1110M. Stereotexts: Experimental Multidimensional Fiction Workshop.

A project-driven writing workshop focused on innovative multidimensional approaches to narrative. Projects using two or more media such as print and digital formats or text and sound, filmed text, hyperfictions, narratives with multiple voices or even multiple spaces, text installations, fictions that put contraries into play, etc., all are welcome submissions.

LITR 1110N. Workshop for Potential Literature.

A novel without the letter "E", 100,000-billion sonnets by permutation and texts that take the shape of a Mobius-Strip-- all this time and more, as workshop participants try their hands in writing in response to problems created by and inspired by a group of writers engaged in strange constraints and procedures. Instructor permission required. S/NC.

LITR 1110O. Hybrid Texts, Hybrid Thinking.

In neither being fiction, poetry, memoir, theory, nor art writing but a crossing of these genres, the hybrid text proffers an open and complexly layered environment for engaging questions of perception, knowledge and articulation. In this course, we will study exemplary works of literature and venture briefly into visual art. Both critical and creative responses will be required.

LITR 1110P. Alternative Scriptwriting: Writing Beyond the Rules.

This course will consider various screenwriting genres and how to write against genre or extend the traditional screenwriting forms. Students applying must have already completed either a 90+ page screenplay or have taken Advanced Playwriting (LITR 1010C) or Advanced Screenwriting (LITR 1010E) at Brown. S/NC.

LITR 1110R. Performance Dimensions of Text.

Poets Theater is an online seminar/workshop in which students will read and "rehearse"/perform the poems, scripts and scores by writers who extend the possibilities of dramatic language. Modeled as an "atelier," students will explore the relationships between the performative and the printed/textual, asking how the page serves as a blueprint for sound, video, movement, and theatrical practice. Students will write "in conversation" with assigned readings by innovators such as Augusto Boal, Adrienne Kennedy, Ntozake Shange, Richard Foreman, Douglass Kearney, Tracie Morris, Cecilia Vicuna, August Wilson, Fiona Templeton, Kevin Killian, and others. As an interdisciplinary workshop, this course invites students from all backgrounds. S/NC. Instructor's permission required. Enrollment limited to 12.

LITR 1110S. Fiction into Film.

A study of various directors' attempts to transfer masterpieces of fiction into film. Concerning both genres we will ask Gertrude Stein's question: What are masterpieces, and why are there so few of them? Includes fiction by Austen, Bierce, Carter, Cowley, Doyle, Faulkner, Forster, Fowles, Kesey, Joyce, McCullers, Morrison, Nabokov, O'Connor, Thompson, Walker, Spielberg, Woolf, Yamamoto as directed by Burton, Forman, Fellini, Gilliam, Huston, Jordan, Kurasawa, Lee, Potter, and others. Class and weekly screenings. Enrollment limited to 12. S/NC.

LITR 1110T. Script to Screen.

Script to Screen is an intensive production course designed for students with some proficiency in screenwriting and little to no directing or filmmaking experience. The course aims to serve as a two-way bridge, opening writing students up to possibilities for production, while also investigating how production experiences can inform future writing. Activities include shooting and editing video exercises, working with actors, and filming practice scenes. A local casting director will conduct a workshop and bring in actors for scene work. A highly acclaimed guest director will work with students over three classes, conducting an acting workshop and critiquing scene work.

LITR 1110U. Script to Screen: Fundamentals of Filmmaking.

This course explores ways in which a series of short filmmaking exercises can serve both first-time filmmakers, providing a solid foundation, and more experienced ones, providing low-stakes avenues for creative experimentation. Students who have some proficiency in screenwriting or poetry are especially encouraged to apply. The course aims to open writers up to the possibility of making films, while also investigating how production experiences can inform future writing projects. Assignments involve a variety of filmmaking techniques and tools to investigate visual language and its interplay with sound (with and without dialogue), and can be tailored to students with all levels of experience.

LITR 1110V. Script to Screen: Scene Work.

This intensive script development and directing workshop is designed for students who have some proficiency in screenwriting, and little to no directing experience. Basic shooting and editing skills are helpful, or will be learned in the first half of the semester. The course aims to serve as a two-way bridge, opening screenwriting students up to the possibility of directing their work, while also investigating how acting and directing experiences, and workshopping material with actors, can inform future screenwriting. Activities include learning acting and directing techniques, scene analysis, writing and revising scenes, casting and working with actors, creating a scene through improvisation, and filming practice versions of scenes. Guests will join us for workshops and final reviews.

LITR 1110W. Losing Record.

These past few years have forced us all to confront some harsh truths about our place on this planet. In this creative non-fiction course we will grapple with what it means to lose. More than just the agony of defeat, loss is a universal condition of entropic grief or enlightening relief, often as a result of forces beyond our control. We will examine first what it means to lose things, then people, and finally our place(s). We'll also explore the ways melancholy, grief, and non-attachment have been variously treated—all in effort to archive our own losing records. What can we do to keep from forgetting? And is it possible to forgive without forgetting (injury, trauma, theft)? When is it appropriate, or even desirable, to forget? In-class prompts will include transcendental meditations, journaling, and object histories.

LITR 1110X. Generative Poetry Workshop.

This intensive generative poetry workshop combines in-class workshops, reading and review assignments, craft talks, in-class writing exercises and course portfolios/packets. The in-class workshops will focus on work brought in for discussion and review and will also include in class writing workshops responding to prompts. The course is designed to encourage the generation of new poetry by students and to develop good reading practices to engender good poetry-writing craft.

LITR 1110Y. Verse Africa: A Critical Reading & Writing Workshop.

In this course we will critically engage the poetry and poetics of contemporary African, African American and Caribbean poets to examine the incredibly diverse aesthetic trends as well as their intersections. Students will also produce both critical and creative responses to the texts we read and will have the opportunity to regularly workshop their own poems influenced by the works we engage.

LITR 1110Z. Why YA?

"All American fiction is young adult fiction," claims cultural critic A.O. Scott. Is he right? Does it matter? In this course, we'll undertake a survey of American young adult literature as we attempt to answer a few central questions: Can anyone actually define what "young adult" literature is? What do writers hope to accomplish through the use of young protagonists? Who gets to be "young"? And how are our cultural beliefs about "youth" – and its comrades "time" and "mortality" – expressed through these works? To explore these questions, we'll read works by Jamaica Kincaid, Sandra Cisneros, Neal Shusterman and Akwaeke Ezeze, among others. We'll also attempt our own experiments with some of the aesthetic modes and thematic questions that have come to define the genre.

LITR 1150A. Ecopoetics in Practice.

What we have perpetrated on our environment has certainly affected a poet's means and material, thinking and life. Can poetry embody values that acknowledge the economy of interrelationship between human and non-human realms? How might poetry register the complex interdependency that draws us into a dialogue with the world, moving beyond theme and reference? In this class, we will think-with ecoscapes, ecotones, and Animalia (ourselves included, along with our humanimal contexts), and other life and nonlife forms, via the lapping possibilities of poetic language. We will write, read, discuss, create, think, experience. Do be prepared for some "field work". S/NC

LITR 1150B. The Foreign Home: Interdisciplinary Arts.

Project-centered workshop for exploration beyond one's "home" genre, whether in video, poetry, fiction, music, performance or visual arts. Contemporary and art-historical interdisciplinary works will ground our investigation into the tension between expertise and "beginner's mind". Collaborative and individual work expected. See general course description above for entry procedures for all special topics workshops/seminars. Written permission required. S/NC.

LITR 1150C. Unpublishable Writing.

Before becoming the dominant form of book-marking, "the codex" meant a tree stump where criminals were tied. After examining conventions of western print culture, we will explore literary practices which are performative, sculptural, multimedia, or out-scale. Through the course is primarily for creative projects, critical research will also be expected.

LITR 1150E. Strange Attractors: Adaptations/Translations.

A workshop for students from all genres and disciplines to explore adaptation as creative process. Adaptation can be between any genres and from any source. See general course description above for entry procedures for all special topics workshops/seminars. Written permission required. S/NC.

LITR 1150F. Home and Abroad.

This course combines seminar and workshop sessions for students with special interest in the writing of novels and short fiction. Attention will be given to the ways certain English and American writers - Herman Melville, Joseph Conrad, E. M. Forster, Graham Greene - have interpreted the lives of people in other and foreign cultures. These are classic examples of the meeting of insiders and outsiders in the house of fiction. Instructor permission required. Enrollment limited to 12.

LITR 1150G. Books by Hand.

As both a seminar and workshop, this course will explore small press publishing and bookmaking from historical, contemporary and hands-on perspectives. Students will be asked to design and carry out small creative projects throughout the semester as well as research particular concerns in the field. See general course description above for course entry procedures for all special topics workshop/seminars. Written permission required. S/NC.

LITR 1150H. Latin American Poetry Live.

We focus on 18 essential poets from Latin America. If you do not weep and run naked shouting through the streets of Providence you will not have read the poems closely. Bilingualism is not a prerequisite, but all the texts are bilingual and we will consider translation issues in a way that is accessible to and engaging for everyone. Several of the poems we consider are book length magisterial works. The poems are political, erotic, domestic, colloquial, innovative, or incendiary, and sometimes all at once. This section does not require permission from instructor.

LITR 1150I. The Lyric Essay.

Advanced level workshop for graduates and undergraduates to explore the possibilities of creative nonfiction in a radical or hybrid mode. See general course description above for course entry procedures for all special topics workshop/seminars. Written permission required. S/NC.

LITR 1150J. The Cinematic Essay.

A creative writing seminar in which we take the Essay Film as the primary inspiration for weekly writing exercises. Works by Marker, Godard, Ivens, Resnais, Varda, Akerman, Herzog, Morris, Su Friedrich, Sadie Benning and Trihn Mon-Ha to be included. Also writing by Cannetti, Gass, Handke, Cha, Hong Kingston and more. See general course description above for course entry procedures for all special topics workshop/seminars. Written permission required. S/NC. Students MUST register for the lecture section and the screening.

LITR 1150M. Short Fiction Experiments.

A course in fiction which pushes against the very definitions of stories and fictions. Using short forms, we will examine our habits and assumptions of story telling and engage in willful adventures of mind, spirit, and language. Prerequisites include a passion for trying everything and anything once. No prior writing experience needed. Written permission required.

LITR 1150N. The Novella: An Adventure in Writing.

In this workshop/seminar, we will explore the ever elusive world of the novella - how to think of this work, what the rules are, where the boundaries lay. Alongside their reading of writers such as Marguerite Dumas and Michael Ondaatje, students will embark on their own novella-writing journeys. Written permission required. S/NC.

LITR 1150P. John Cage and Meditative Poetics.

Primarily an interdisciplinary literature course, we will experience the writing and thinking of John Cage in the context of a wider exploration of creative process with a basis in american and european interpretations of Buddhist practice and thought. We will explore the work of contemporary artists such as Bill Viola, Philip Glass, Meredith Monk, Allen Ginsberg and Anne Waldman, as well as Samuel Beckett and others. Students in the course will be expected to write in both creative and critical modes. Instruction in basic meditation practice is recommended but optional throughout the semester. Written permission required.

LITR 1150Q. Reading, Writing and Thinking for the Stage.

Composed of contemporary dramatic literature for playwrights. Contemporary texts are studied. Use of each author's dramatic techniques, the influence of the times on his drama, his themes, the demands of market driven theater and popular art considered. Simultaneously students will write an original 60-page manuscript. Students applying must have already completed plays of 60 pages or have advanced playwriting experience. Written permission required. S/NC.

LITR 1150R. Exemplary Ancient Fictions.

We shall discuss and examine a selection of pre-Gutenberg narratives from *Gilgamesh* and *Genesis* through Ovid and fairytales and medieval romance, with a focus on the ancient art of narrative. We shall also try our hands at exercises in the alternative fictional strategies these works suggest. Course entry based on the submission of a writing sample (and in-class writing in response to an assignment) at the first class session.

LITR 1150S. What Moves at the Margins.

A multi-genre seminar/workshop based on fiction, non-fiction and dramatic literature that has been banned or otherwise marginalized because it is critical, interrogative and alternative. Weekly writing exercises based on readings and discussions in class. A term project is required. For students who love literature. For admission, students may submit fiction, non-fiction or drama. Enrollment limited to 12. S/NC.

LITR 1150T. Foreign Home.

Project-centered workshop for exploration beyond one's "home" genre, whether in video, poetry, fiction, music, performance or visual arts. Contemporary and art-historical interdisciplinary works will ground our investigation into the tension between expertise and "beginner's mind". Collaborative and individual work expected. Instructor's permission required.

LITR 1150U. Prose City: The Making of Spatial Texts.

In this workshop/seminar, we will explore, through selected reading and writing exercises, some basic questions of "writing city": how is place captured, encompassed; how can the city emerge in language as a character, an event, as reflective space; how do we enter the city; how do we recognize its borders? Students will be asked to create a portfolio of texts for an imagined city, as well as to think through concepts such as "structure," "location," "encounter," and "identity" as they occur in the paragraph. Instructor's permission required.

LITR 1150V. The Novel in Brief.

This workshop/seminar takes the novel form on a wild ride as it investigates concepts such as compression, fragmentation, miniaturization, and sequencing in the construction of narratives. Students will be required to write their own brief novel over the course of the semester. Writing sample due at first class session. Instructor permission given after review of manuscripts. Enrollment limited to 12.

LITR 1150W. Clown Aesthetics.

Clown as literary structure and trope as well as character will be our focus. We will ask if this "clown aesthetic" exists, could exist, should or might continue to exist -- in fiction, performance, and film in particular. Clowning of all kinds considered from history, theory, literary and performing arts. Graduate and undergraduate students from all disciplines invited. This workshop course includes individual research as well as collaborative projects. Come to first class for permission. Enrollment limited to 12. S/NC.

LITR 1150X. Reading, Writing and Thinking.

We will explore various ways to engage with a work of art in order to fuel one's imagination and projects. Close textual reading of several books with writing assignments based on the readings. Writers will include Woolf, Stein, Beckett, Coetzee, Kertesz and others. Writing samples due at first class session. Instructor permission given after review of manuscripts. Enrollment limited to 12. S/NC.

LITR 1150Y. Fiction Through Poetry.

This course is designed for poets, fiction writers, and cross-genre enthusiasts interested in looking at narrative as it occurs at the level of the sentence, even the level of the word. We will use a variety of poetic texts as well as other fractured content as means to think about fiction, and the borderlands of storytelling. Instructor permission required (bring a writing sample to the first class meeting). Enrollment limited to 12. S/NC

LITR 1150Z. Reading for Writers.

We will look closely and deeply and with a writer's passion and agenda to the various formal decisions used in a variety of astonishing and evocative texts with the objective of utilizing some of these strategies in weekly compositions of our own. Writers include: Aria, Berssenbrugge, Coetzee, Kertesz, Kincaid, Lispector, Mueller.

LITR 1151B. Figures of Thought.

What can you say about what can't be said, and what form does such a saying take? From the gnostic gospels to Agamben, Yeats to Yves Bonnefoy, we'll follow these fleeting figures of thought and their messages. We will read a variety of writings from the deep past to the present. These writings will come in a variety of forms but illuminate a path ahead of the one we daily follow. Students will keep journals that respond to the world and writing and bring these as material for discussion in class. Each one will give a presentation during the term.

LITR 1151C. Virginia Woolf: Four Novels.

This is a class for writers and will entail close devotional readings of the texts and weekly writing experiments based on methods, motions, patterns, rhythms, abstractions and other narrative strategies employed by the novels. We'll read the following books by Woolf: *Jacob's Room*, *Mrs Dalloway*, *To the Lighthouse*, and *Between the Acts*. S/NC required. Writing samples due at first class meeting.

LITR 1151D. Art of Film.

This is a course in the art of film writing, directing, editing picture and sound, and producing, be it narrative or avant-garde. Students will engage the theory and practice of the art of filmmaking via readings, viewings, writings, and making their own films. Each student will complete four films from initial conception to the final film in a collaborative environment.

LITR 1151E. Latin American Death Trip.

Death is the subject of many of the greatest (most moving, innovative, funny, haunting, political, oneiric) Latin American poems of the 20th century, from Gorostiza's *Death without End* to Villaurrutia's *Nostalgia for Death* to Saenz' *The Night*. What particularities of culture, gender, age, faith or experience might account for the visionary clarity of death as constant companion or permeable border, etc.? What makes the poems great? Our class will read classic Latin American books in bilingual editions (so Spanish literacy is not a requirement, but we will talk about translation issues).

LITR 1151F. Choose Your Own Adventure.

This game is lit. I mean this Lit is a game. How do the design elements of a novel resemble the design elements of a game? And to what extent have interactive [video] games been designed with novelistic conceits? Your adventure begins here, starting with what lies at the dark heart of the literary adventure genre (Defoe, Conrad, Behn). We'll sojourn at contemporary indie video games (*Undertale*, *Walking Dead*, *Broken Age*, *Gone Home*), along the way analyzing how "choice" is utilized to build reciprocal fictions. We will also undertake semester-long projects—creating our own "Choose Your Own Adventure's".

LITR 1151G. Everything Emily.

This is a course that wallows in Emily Dickinson—one of the most important poets at the foundations of American poetry and, still today, one of our most exacting and most experimental practitioners. No one in the ensuing 150 years has surpassed her radical modes of expression, invention, and vision. We will engage with her poetry, her letters, her biography, and many of the works of criticism, visual art, film, and poetry that her work has inspired, as well as exploring the Dickinson collections in Brown's Hay Library and visiting her Amherst home.

LITR 1151H. Discomfort.

Comfort is overrated! This course is an invitation to leave our comfort zones and dive into texts that invite us to rethink the way we view history, the world, fiction, writing, race relations etc. We will read recommended texts and discuss them in class. Discussions will include but not be limited to the narrative techniques employed by the writers and our response to the texts, both as readers and as writers.

LITR 1151I. Remaster + Remix.

This workshop/seminar will use the intuition, logic and esthetics of popular music forms such as punk, house, dub step, reggae and blues to delve into the complex connections between a selection of classic novels and versions of these novels retold. What tensions get reset when writers on an empire's margin write back? What assumptions get shifted when women refocus a novel's concerns? What are the possibilities and dangers in reconstructing classics while trying to mash them up? And why are we breathless when a stylist riffs? French Antillean notions of *créolité* will offer guidance. Main guide—the books.

LITR 1151J. Bob Marley: Lyrics and Legend.

Bob Marley is one of the most accomplished songwriters of all time. We're going to engage with the lyrics of this postcolonial Caribbean writer; contemplate him as a subject of memoirs, biographies and documentaries; and explore him as a figure in the creative imaginations of novelists and poets such as Marlon James and Lorna Goodison. We're also going to look at reggae as an important literary esthetic. And of course listen to a lot of his music. Special attention will be paid to the albums and singles produced under the guidance of Lee "Scratch" Perry.

LITR 1151K. Art of Assemblage: Collage, Reportage + Re-Appropriation.

In this class we will examine works of literature that challenge and re-imagine the poetic form using re-purposed text, research, fragment and image to enter into conversation with history and contemporary culture, and illuminate the every day realities of life. We'll explore the use and effect of collage in visual work and music, and investigate how the form operates when transformed for the page through reading, class discussion, and creative writing exercises.

LITR 1151L. World Tour: Recent Poetry in Translation.

This is a reading, writing, translation, and discussion class. Commit to a vigorous combination of all four. Some translation theory will be reviewed, but the emphasis of the course is upon models of translations. Texts will include translations of books by Laszlo Krasznahorkai, Jean Fremon, Yoshimasu Gozo, Kim Hysoon, Anja Utler, Adonis, and others. Enrollment limited to 12. S/NC

LITR 1151M. Cross-Fertilizations: Text-Based Performance.

Gabrielle Civil is a conceptual and performance artists whose stated aim is to "open up space." With that in mind, the aim of this course is to open up -- and engage -- multiple spaces of language as it operates in the interstices of poetry, visual art, music, performance, shamanism, documentation, and activism. Among the texts we shall read are those by Theresa Hak Kyung Cha, Guillermo Gómez-Peña, Yoko Ono, LaTasha N. Nevada-Diggs -- through them, we shall consider how performed language can activate various forms of engagement, perception, dissemination and understanding.

LITR 1151N. Zoologic: Wild Animals in the Surveillance State.

This interdisciplinary course asks students to research and deeply engage with the current status of wild animals in various states of surveillance (either through conservation and preservation, or for entertainment), trafficked for the pet trade, or living essentially as "refugees" in the human world. Original critical research will result in creative and collaborative projects. Site visits to animal sanctuaries, and lectures from people working with animals in a number of disciplines will be featured. Selection will prioritize seniority and relevant experience (any discipline.)

LITR 1151O. Ideas of Narration Before Don Quixote.

We shall read fictional narratives (and some narrative poetry) from the first moments of preserved literature up to Don Quixote, for clues about how earlier writers thought about form and narration. Of what was narrative fashioned before "omniscience" was a relevant term? Before there was a science of psychology that could speak to the protagonists? What can we say about the diversity and unpredictability of early narrative writing, and how does that contrast with the more consistent look and feel of the nineteenth century? How can these "ancient fictions" inform an interest in narrative innovation and formal ingenuity today?

LITR 1151P. Documentary Poetics.

This course will explore 20th and 21st century documentary poetic texts to provide points of discussion and inspiration for our own investigative poetry. We'll look at a range of works, from those confronting the legal record to those creating their own record of the infraordinary quotidian (Perec's term), and discuss the various aesthetic, ethical, social, and procedural questions raised. Participants will be asked to develop and create their own final documentary poetry projects. Readings will include works by Reznikoff, Niedecker, Williams, M. NourbeSe Philip, C.D. Wright, Bernadette Mayer, Cole Swensen, Raúl Zurita, Anne Carson, Cristina Rivera-Garza, and many others.

LITR 1151Q. Great Adventure.

This hybrid seminar/prose workshop will take you to Antarctica, Japan, France, Cambodia, outer space—and to other places too. But much of your writing will be about yourself. Your cross-genre wandering through novels, essays, and indefinable hybrid works by a fascinating list of thinkers and stylists, will lead to questions about your own sense of place, belonging, contextual otherness, and the pleasures, powers and implications of your gaze. You'll search for answers through the medium of your own creative work—lyric essays, fictional vignettes, pictures.

LITR 1151R. Ecstatic Alphabets: Poetry by Other Means.

How to do things with words? How to do words with things? The latter is a question whose answers might prove as—if not more—compelling than its familiar inverse. Both are at the core of this course focusing on interdisciplinary works for which notions intrinsic to poetry serve as either springboard or endpoint. We will study contemporary examples as well as historical antecedents, and will experiment with producing genre-defying works that animate the written word. Among the strategies we will cover are verbivocovisual works, cut-ups and collage, sound poetry and concrete poetry, happenings, agitprop, poets theater, and dance.

LITR 1151S. Fan_Fic.

Fan fiction is a thing, right? And, let's be honest, we all secretly love this kinda thing! O, to relive those Microsoft '95 nights spent reading semi-romantic Legend of Zelda fan fiction... What compels us to reinvent the stories we're already attached to? The texts we might consider fan fiction exist on a spectrum somewhere between high literary and kitsch, between Milton and My Immortal. If not a proper genre, let's imagine that fan fiction is a particular (perhaps ancient) practice of literary mimesis. The question is whether it's possible to create a wholly original derivative.

LITR 1151T. Poetry for Healing Territories.

The texts we'll be reading in this seminar/workshop address the will to heal and recuperate after loss. These are poets with courage enough to reclaim lost territory—and from their reclamations, we too are given permission to claim that which we've lost, that which has been taken, and that which is constantly pursued and harassed in us. How are these poets able to write through dissolution in a way that substantiates healing? What is gained in every/any instance of loss?

LITR 1151U. Literatura Puertorriqueña: Cruce-Ficciones y Contra-Poemas.

The purpose of this course is to analyze the myriad ways Puerto Rico and the United States have influenced each other through literature, music, and art. In 1898, the island was ceded to the U.S. by Spain following the Spanish American war. Since then, an ongoing exchange (often one-sided) regarding the political status of the island and its people has informed a wealth of literary materials, musical hybridity, and radically avant-garde arts.

LITR 1151V. Black Box Poetics.

We live in an age when most of the language we read and write runs through proprietary digital systems we do not understand. Accordingly, this course approaches poetry in terms of code[s], data collection, overflow, opacity, and one-way mirrors. We will consider ununderstandability itself as an aesthetic property, discuss compositional strategies of selective clarity and obscurity, and use poetics to probe the unknowable. We will look closely at source code, but our purposes will be more conceptual than technical. No coding experience is required.

LITR 1151W. The Restless Desk: Hybrid Writing, Performance, Collaboration.

Immersion in a range of writing possibilities linked to performance and collaboration. Assigned readings will explore multiple genres, theory, and engage writing prompts that are "experiments of attention", working with voice, instrumentation, movement, visuals, improvisation. We will invoke "documentary poetics" as a method that engages inquiry and research and consider historical and contemporary literary performance practices. Students will design semester-long creative projects out of these multiple trajectories. Several guest musicians, performers, writers will be visiting. We will have use of the University's recording studio and prepare a final class performance.

LITR 1151X. Interdisciplinary Arts Workshop: Translation of Concept.

Art-making is an act of translation – a thought, process, question, object, declaration, desire, system, or intention is filtered through the artist and subsequently finds new existence in the form of art. This project-centered workshop is a cross-genre exploration of that filter, where participants working in differing genres will be asked to engage a wide range of materials to "translate" into their art-making process. Please be prepared to write, dance, sing, mix, draw, ask, reach, and fail, in and out of your comfort zone. Individual and collaborative work expected. For writers, dancers, architects, musicians, painters, digital artists, "non-artists." Written permission required.

LITR 1151Y. Against Genre.

An experimental workshop in creative writing hybridized with other forms—not only literary work that does not adhere to traditional genres, like prose-poetry, but writing that includes video, or music, or collage, and which includes practices like appropriation and non-traditional distribution. Including weekly reading assignments (Gabrielle Civil, Yoko Ono, Jack Halberstam, Claudia Rankine, Kate Durbin, Rick Moody, Mary-Kim Arnold, Shelly Jackson, and others), weekly writing prompts, one oral presentation.

LITR 1151Z. Paysagisme and the Art of Eco-Responsibility.

Though the French word *paysagisme* is usually translated as "landscaping," "landscape design," or "landscape architecture," the field also incorporates many land-based issues, including urban planning, public space use, sustainable agriculture, land reclamation, botany, ecology; also, it has provided a pronounced aesthetic element in garden and park design, and overlaps with late 20th-century and contemporary art movement known as land art. This course seeks to make this alternative way of viewing the environment available to students at Brown, emphasizing the way that *paysagisme* and its inclusive gesture of bringing art, aesthetics, and land use together, fosters new modes of ecological responsibility. This intensive half-credit course begins half-way through the semester, starting on October 25. Students **MUST** register by the deadline for adding a class; the course still operates within the academic calendar and students will not be able to attend class prior to registering for the course. Contact the instructor with any questions.

LITR 1152A. Survey of the Historic Avant-Garde.

The avant-garde is a famously slippery category; the definition we'll be working from, more or less, is the series of movements and individuals from 1900 to 1940, based mostly in Europe, that led culture and the arts in directions that talked back to power, pushed aesthetic limits outward, and explored ways to give the arts social and political weight. While largely focused on writers, we'll also spend a lot of time with visual artists and other media and will address questions such the line between Modernism and the Avant-Garde and the roles of women in these movements.

LITR 1152B. Ekphrasis in Action.

Ekphrasis, according to its most basic definition, is simply poetry that addresses art; we'll be stretching that definition, making it into a way of interacting with art, of living with art, and even of looking at things in ways that make them into art. We'll be both reading texts in which others stretch the definition of ekphrasis and visiting sites on or quite near the Brown campus to engage in on-site exploration and writing. It's a course about discovering and exploring the ways that we represent and therefore create and recreate the world.

LITR 1152C. Writers-in-the-Community Training & Residencies.

This course will operate mostly "in the field." We will spend some weeks discussing pedagogical approaches to teaching creative writing in community settings. We will thereafter train in residence, observing a poetry residency at a local elementary school, with visits to other community settings as well (sites to be determined). We will continue to discuss pedagogy, classroom practices and management, administrator-writer relations, and all other necessary logistical planning throughout the semester. By week 7, students will engage in their own writing residencies in pairs or small teams, working in a community setting of their choosing (K-12 school, shelter, library, etc.).

LITR 1152E. Between the Seams: Hybrid Works.

Michael Ondaatje's *The Collected Works Of Billy The Kid* is part novel, poetry sequence, and visual collage; Anne Carson's *Autobiography of Red* is novel and poem. If, as Georges Bataille has put it, literature is a series of dislocations rather than a continuum, these "hybrid" works and others mark important breaks in the literary status quo. We will take inspiration from writing in which structures rub up against each other. Using poetry and prose, we'll seek intuitive logics in juxtaposition of text and image, and look at writers using hybrid forms as models for documenting ways of knowing and unknowing.

LITR 1152F. The Shape of Longing.

What are some of the formal shapes longing takes in poetry and fiction, film and music? Through a devotional experience with great works of art, creative pieces will be generated by the students and shared in class. Texts shall include Wagner, Sappho, Tagore, Rumi, St John of the Cross, Desnos, Kawabata, Woolf, Frisch, Valentine, Howe, Pessoa, Vuong, Angelopoulos, Weerasethakul, Kieslowski, Chacon, Jenkins, Coltrane and West.

LITR 1152G. Rebuilding the Book.

In the face of digital and other emergent technologies, where is the book today—what are its limits? Conversely, what is its essence? We'll blend the history of the book and its relationship to the visual arts with the creation of inventive book structures. Slide lectures and discussions will cover the emergence of writing and its gradual incorporation into book structures from tablet through scroll to codex, focusing on the development of the relationship between text and image, with a focus on late 19th century *livre d'artiste*, the "democratic multiple" (1960s); and two contemporary developments: the sculptural book and the altered book.

LITR 1152H. Writing from the Archives/In the Subjunctive Mood.

Memory, history, and trace haunt the present, perception, and the cultural contexts in which we live. When we turn to the archival record, we note its focus on the powerful, and its critical exclusion of Black, Brown, Indigenous, and LGBTQ people, people with disabilities, and "wild" women.

A growing number of writers employ new means to open the lens to render the present more clearly through counter-narrative, critical fabulation, and reparative technique.

We will read and write in this vein toward a new poetics of archive and study methods that give attention to the "unrecorded" incident, emotion, image, and music.

LITR 1152I. Poets' Tour of the Essay.

In this advanced workshop seminar, we will read essays that draw us into the question of art and evidence, surveying prose forms that fall across the spectrum. A sub-genre of nonfiction with the ability to shapeshift across forms, essays' elastic, bridging and blurring qualities span memoir, epistle, catalog, argument, observation, travelogue and more. We will read essays written in the past that demonstrate as much ingenuity as the post-modern, and contemporary essays that straddle genre. We will discuss the "poetics" of the essay as we look for innovation within the form to examine what new insight is gained through experiment. Interested students should bring a literary writing sample to the first class meeting. The instructor will announce at the first class the date/time that a class list and waitlist will be posted (typically a few days after the first class meeting).

LITR 1152J. Hybrid Writing Workshop: The Long Engagement.

In this course we will explore the tradition and possibilities of open-form hybrid writing via extended engagement with other works of literature and artworks, as well as with the writing practice itself. We will read a range of writers' such engagements and class time will largely be devoted to reading discussion, workshop, and occasional in-class writing exercises. In weekly writing assignments we will work across genres, with chance procedures and exploratory modes designed to extend, deepen and complicate our writing practices. Students' final project will be a long engagement with the work of another writer of their choosing.

LITR 1152K. The Shape of Longing.

This class will examine a variety of formal strategies that artists, writers, composers and mystics have used to render longing palpable, present and felt in works of art. Through a series of writing assignments, students will make their own explorations into this charged, expansive, and elusive terrain. A rigorous class of risk and experimentation.

LITR 1152L. I'm Feeling Myself: The Black Female Body as Its Own Utopia.

Audre Lorde described sensuality as an immense, untapped power within each of us "that lies in a deeply female plane." What would that power, generated by a Black woman's body, look like? By focusing solely on the poetry, art, and music of Black women, we explore the Black female body as its own utopia. Weekly readings include Lorde, Jordan, hooks, Morrison, and Dove, alongside the artwork of Mickalene Thomas and Wangechi Mutu, and the music videos of Rihanna, Janet Jackson, and Beyoncé. By re-centering the western gaze on the Black feminine erotic, we discover a poetics of the impolite body.

LITR 1152M. Speculative Fiction and the Literature of Imagination. Speculative Fiction and the Literature of Imagination is a seminar in the development of speculative fiction as a form over the last generation, its role in articulating political counternarratives, especially in the case of Afrofuturism, its reliance on imagination as a creative strategy, and its position as a particularly uncompromising outpost of experimental writing. The class will consist of weekly readings, as well as frequent creative assignments on issues raised by particular texts, and will include one presentation on a speculative work by each participant. Readings will include Mary Shelley, Sun Ra, Ursula LeGuin, Octavia Butler, William Gibson, N. K. Jemisin, and Ted Chiang, etc.

LITR 1152N. Ecopoetics in Action.

What we have perpetrated on our environment has certainly affected a poet's means and material, thinking and life. Can poetry embody values that acknowledge the economy of interrelationship between human and non-human realms? How might poetry register the complex interdependency that draws us into a dialogue with the world, moving beyond theme and reference? In this class, we will think-with ecoscapes, ecotones, and Animalia (ourselves included, along with our humanimal contexts), and other life and nonlife forms, via the lapping possibilities of poetic language. We will write, read, discuss, create, think, experience. Do be prepared for some "field work".

LITR 1152O. G-d Dream.

What, historically and aesthetically, constitutes an oracular vision, a clairvoyant revelation, a sign from another dimension? In this class we will explore a variety of ecstatic visions, from the Revelations of John of Patmos and Dream of the Rood, to Timothy Leary and L. Ron Hubbard, all in an effort to hone our own innervations of what exists beyond. In this multimedia workshop we shall be free to experiment with language, sound, light, pigment. Can our own creative endeavors become expressions of "...the substance of things hoped for, the evidence of things not seen."?

LITR 1152P. Structuring and Revising Reported Narrative Nonfiction.

This is a class in crafting and structuring essential, reported stories for maximum impact. How do you properly pace a longform story? How do you pitch, report, outline, and edit one? With the collapse of newspapers and magazines around the country, how can we still beautifully tell some of the critical stories that are going untold? The first half of class will run like a magazine editorial meeting, discussing weekly pitches grounded in a particular region—and, later, drafts, which will workshop. The second half of class, we will discuss reading that explores various approaches to structure, voice, and genre.

LITR 1152Q. Land Arts.

This ekphrastic workshop/seminar overflows the traditional definition of Land Art to encompass a much greater range, including contemporary modes of ecologically-oriented art. The class will be broken down into five thematic sections: 1) interventional land art, in which the earth is sculpted, excavated, or augmented; 2) ephemeral land art; in which elements from the landscape are worked into impermanent works; 3) kinetic land art, in which artists participate in the land, rather than making an object of or from it; 4) growing land art, in which plants and trees are grown into constantly changing and yet permanent forms; and 5) ecologically-oriented art, in which a variety of materials and practices are engaged to underscore contemporary issues of ecological importance.

LITR 1152R. Money!

"Money, it's a crime/Share it fairly, but don't take a slice of my pie..." So begins the end verse of Pink Floyd's dad-rock classic "Money". We'll explore financial literacy, class and identity, market trends, consumer demands, and alternative forms of currency—all by way of literary realism. At the beginning of the semester, you will be randomly assigned a character with their own income, assets, and debts. From week to week you will tell their story in real time, tracking their investments (if any) in state-sanctioned markets (and/or other channels). What will your single mother do with an inheritance after the untimely passing of her father? Whether coming from a hyper-capitalist or Marxist-Lacanian perspective, we'll reckon with the many ways (implicit and explicit) that money has come to define our lives—and perhaps, how and where it should never come between us.

LITR 1152S. Race and the Making of Art (ARTS 1004).

Interested students must register for ARTS 1004.

LITR 1152T. Memory's Imagination.

Taking inspiration from the autobiographical work of newly minted Nobel Laureate, Annie Ernaux, we will examine and produce works of fiction, creative narrative non-fiction and hybrid texts that cleave, in that good old double-sense, to personal experience and/or personal passions. Works by Marcel Proust, Virginia Woolf, James Baldwin, Michael Ondaatje, John Keene, Jessica Au and Svetlana Alexievich will be on the menu to inform and inspire. Students can expect a substantial weekly reading load and should come to each class prepared to discuss the assigned texts and linked creative assignments. Up to eight undergraduate or graduate students may register for this course during the registration period. Open slots (up to 12 for full enrollment) will be filled by the instructor at the start of the semester. Details to be provided as that time approaches.

LITR 1152V. The Space Crone and Her Children: Queer Reproductions in Science Fiction.

Rockets and Martian terraforming are frequent themes in the news. Less mentioned is human reproduction. Given humans must reproduce in space to actualize grand narratives of extraterrestrial exploration, this is a curious omission. Fortunately, science fiction does not neglect these matters. Sexuality, gender, and birth are of great interest to speculative writers; the future is an exciting place to live erotic lives. This is a course about possible genders, possible sexualities, possible ecologies. Reading queer feminist science fiction—e.g., Octavia Butler, Irene Clyde, Samuel Delany, N. K. Jemisin, Ursula Le Guin, Joanna Russ—we will consider how cycles of life might (already) be otherwise and interrogate current events re: reproductive and LGBTQIA+ rights, thinking both analytically and imaginatively. Participants will develop their own speculative prose.

LITR 1152W. Cinema Poetics.

We shall study the poetics of cinema and how the video-poem can expand, deepen, rescue, extend our writing and writing practices. We'll watch a panoply of poem-films, video art, and "poetic" feature length films to discern their basic components of sound + text + motion, their principles of composition and editing techniques. Our texts will explore concepts of diaspora and memory, documentary poetics, footage and sound recordings from which students will assemble video poems or essays of their own. Students will need access to a video editing application such as iMovie, Adobe Premiere, Premiere Rush, Stop Motion Studios, DaVinci Resolve, Canva, for instance.

LITR 1152X. Writing with the Family Archives.

VHS tapes, recipes, birth and immunization records, letters, heirlooms, passports, a shoebox of photographs, old laptops — these are among the tangible artifacts that make up the family archive. Amid the tangible, we recognize the intangible and ephemeral matter, such as oral histories, songs, missing records, objects lost in migration now only filed in memory. how do we open a creative space for these often undervalued inventories? In this class we shall read several texts of poetry and hybrid nonfiction that grapple with familial documents & materials, while, at the same time, beginning our own archival projects. We shall raise questions about the kind of research this project entails, the ethics of writing about kin, how to work creatively with photographs, audio, objects and documents, and how to write into that empty gap of what's missing from the archive.

LITR 1152Y. Curatorial Considerations: Writing Magical Realism.

This semester, we'll give your forays into the unusual the airtime and love they deserve, and nurture these evolutions toward the realms of absurdism, fabulism and magical realism. We will discuss the alteration of realism as a way of putting the narrative at hand to its highest use. We'll also examine music and artwork that pushes the boundaries of the "real" in terms of form. While not a 1:1 correlation in terms of the departures we make in literature, they're worth considering as interdisciplinary paradigms that push the envelope. We'll discuss the music/artwork briefly at the beginning of each course session. You need not write anything formal about these pieces—just note how they defy expectation to affect your understanding.

LITR 1152Z. Creative Process Workshop.

Creative Writing can be understood as a method of turning ideas, sounds, images, snippets, fragments, dreams, research -- and any and all of life's materials -- into fully realized literary works. The "work" of literary works is hidden when we read books and published authors, and thus our sense of how unique and wondrous work is achieved can be underdeveloped or perfectionistic. In other words, when we rely on only a reader's perspective to guide us as artists, it provides little to no sense of artistic path. This workshop is for writers of all levels to explore several works-in-progress in more depth. The result will be an enhanced relationship to the works (and to process) and to a lifelong and sustainable creativity. Becoming a more curious and helpful reader of others is another tangible and valuable outcome. Open to all.

LITR 1153A. The Illiberal Imagination: Fictions of Disinformation, Conspiracy, and Control.

What do an artist and a politician have in common? One person might say that they both make things up. Another might claim that both aim to tell truths that unite audiences. Bearing this genre-related ambiguity in mind, this course will explore the description of illiberal and anti-progressive political ideals and systems—particularly, although not exclusively, in narrative fiction. This class is therefore also about the strategies politicians, novelists, and others use to shape our sense of what is real and to argue for particular accounts of what is valuable, just, and possible, as well as how human life should be led. We will consider the work of Margaret Atwood, Octavia Butler, Philip K. Dick, Bret Easton Ellis, Colleen Hoover, R.F. Kuang, George Orwell, Thomas Pynchon, Ayn Rand, and the Marquis de Sade, among others, attending to the ways in

LITR 1153C. The Weak Novel.

The "weak" novel has been with us for a long time. The weak novel is a novel that partly or wholly fails to be a novel, at all. This is the confessional novel, the documentary novel, the novel that includes material from other genres of writing and fields of knowledge, the non-narrative novel, the unoriginal novel, the novel that plays with its status as a material object or book. It is possible that no novel exists without its allegedly weak(er) cousins, and that no novel—no matter how big, strong, or novelistic—is without its moments of weakness. We will read such authors as Kathy Acker, Percival Everett, David Foster Wallace, Robert Glück, John Keene, and Eileen Myles and compose our own gloriously "weak" fictions.

LITR 1153D. Conjuring God.

Is there a place for capital-G God in contemporary fiction? If so, how might the concept of God help us explore our individual and collective search for meaning? And what might narratives about encounters with the divine tell us about the idiosyncrasies of belief (in God, in ideas, in the self)? As we read works by Albert Camus, Graham Greene, Shusaku Endo, Marilyn Robinson and Ursula Le Guin, among others, we'll discuss why writers still attend to notions of the sacred and divine decades after "the death of God."

LITR 1153E. The God Part: Setting Your Fiction, Building Your World.

How do writers bring readers into their worlds in such a way that readers see all that writers project on the walls of the imagination? How do they then contextualize that world on all levels, from plot construction to sociopolitical commentary? This course will examine different writers' uses of both time and place to make sense of the fictional worlds they are creating. We will discuss foreign-set works as well as works from regions like Appalachia, which are underrepresented in the American literary ballroom. This course is split into two different components: reading, and workshoping. While we are here to read and discuss the forementioned texts, we are also here to discuss the ways in which you incorporate setting into your own works of fiction, and to nurture your evolutions in both realms, technical and holy.

LITR 1153F. Reading and Making with Large Language Models.

Large Language Models can be used to generate text with a facility that some of us hail as 'human-level.' Informed by theory -- chiefly linguistic and language philosophical -- this workshop seminar allows its participants to explore what we mean when we say that artificial intelligence reads and writes; and what is implied for our own processes of literary or language-art making when we agree or intend to read and write with (and/or against) such systems. Apart from its reading-informed discussion, the workshop will provide time and critique for its participants' projects, which will engage and experiment with the seminar-generated ideas and actual machine-learned techniques.

LITR 1153G. Against Mastery.

In "A Black Poetics: Against Mastery" Dawn Lundy Martin argues against mastery as a creative, compositional mode. She writes that mastery "is an attempt to dominate the artwork." In this hybrid workshop/craft seminar we will investigate Martin's assertion in the context of decolonial (and) queer poetics. How might poets' negotiations of mastery speak to the intersection of their aesthetic, linguistic, cultural, historical, and political concerns? How do poets materialize a rejection or reconfiguration of mastery within decolonial practices attentive to craft and concept? The texts we will primarily engage are African, Arab(ic), and Native American, by authors at home(s) and in diaspora. Class time will blend workshop, discussion, and writing. Assignments include a group presentation, book review, and a final portfolio.

LITR 1153H. MICRO-UTOPIAS.

This special topics workshop/seminar explores our capacity as poets, writers, and multi-disciplinary artists to dialogue with the world around us through a socially engaged practice. During this course we will study utopian and dystopian literature, world-making poetry, theoretical frameworks, and a variety of social philosophies and creative practices that, in the words of Carol Becker, create micro-utopias: artistic interventions that "attempt to create physical manifestations of an ideal 'humanity' in an inhumane world." We will workshop and activate our creative ideas in a laboratory-like atmosphere. All art-makers are welcome. Be prepared to move, discuss, risk, play, theorize, and revise.

LITR 1153J. The Poetics of Mysticism.

How does one speak the unspeakable? What rhetorical and rhythmical strategies can the poet use to write the ineffable? How can the practice of writing be used not only to document mystical experience, but to cultivate ceremonial attentiveness? This poetry workshop/seminar explores the intersection of mysticism and poetry. We will investigate how writers across traditions (Islamic mysticism, Christian mysticism, Neoplatonism, pantheism, atheistic mysticism) and eras use language to approach the divine. Through a combination of close reading, seminar-style discussion, and creative workshop, students will engage with core mystical concepts (apophysis, union, ecstasy, divine madness, love, the body, suffering, horror) and draw on these themes and strategies for inspiration into their own creative work.

LITR 1153K. Microfiction.

Novels unravel years, decades, or even generations, while short stories culminate in singular, brilliant moments of epiphany. Short shorts, paradoxically, are heavily theme-based and thus tend to cover eternity. In this course, we will discuss the thematic underpinnings of micro fiction, and we will visit with the ways in which short shorts are structured differently from longer stories. We will examine the idea of pacing, as it is rendered in micro fiction, so that we might learn how to use such economy of words in our own micro fiction or traditional-length fiction. Each student will turn in at least three pieces of micro fiction or magical realism, and as final projects, you will revise two of these.

LITR 1200. Writers on Writing.

Offers students an introduction to the study of literature (including works from more than one genre) with special attention given to a writer's way of reading. This course will include visits to the course by contemporary writers, who will read to the class and talk about their work. Enrollment is limited to 30 students.

LITR 1220A. History and Practice of English Versification.

An opportunity to study through reading and imitating poems that represent a variety of poetic eras and traditions. S/NC.

LITR 1220B. Samuel Beckett.

This course will mark the centenary of the author by reading and discussing a range of works from Samuel Beckett's substantial output of fiction, poetry, drama and translation.

LITR 1220C. The Cantos in their Environment.

A reading of Pound's Cantos, with attention to their origin and developments, their background and their influence.

LITR 1220D. The Bible as Literary Source.

A survey of the English Bible and its presence in English and American literature. Students will learn to notice and account for Biblical echoes in a wide variety of writings from several cultures.

LITR 1220E. Dada and Surrealism.

Two of the most famous modernist movements, studied through their writings, their visual arts, their performances, and their manifestoes; their origins and influence; their place in history. S/NC.

LITR 1220F. Restoration Drama.

A survey of English drama and theatrical practice from the reopening of the theaters at the Restoration to the early eighteenth century. Works of the major playwrights, including Dryden, Congreve, Wycherly, Gay. S/NC.

LITR 1220G. The Waste Land and After.

We shall examine Eliot's poem, and then deal with early poems by W.H. Auden and the work of Charles Williams and David Jones. S/NC

LITR 1220H. Gertrude Stein and What Comes After (ENGL 1711M).

Interested students must register for ENGL 1711M.

LITR 1220I. Zoopoetics (ENGL 1900J).

Interested students must register for ENGL 1900J.

LITR 1220K. Asian American Avant-Garde (ENGL 1762X).

Interested students must register for ENGL 1762X.

LITR 1230C. Poetry Newly in Translation in English.

This is a reading, writing, translation, and discussion class. Commit to a vigorous combination of all four. Some translation theory will be reviewed, but the emphasis of the course is upon models of translations. Texts will include works by Iva Blatny, Inger Christensen, Luljeta Lleshanaku, David Huerta, Takashi Hiraide; new translations of Rimbaud and Baudelaire and others. Enrollment limited to 20. S/NC

LITR 1230D. Poetry, Mind, World.

How does the poetic mind negotiate between an account of itself and an account of the world? How have poets used landscape as a model of mind, as an erotics, as elegy? Merleau-Ponty, Hardy, Houle, Alexander, Dewdney, Hass, D'Aquino, Audubon and others. Presentation, several short essays, a poem, and one final essay.

LITR 1230E. Form and Theory of Fiction.

"Form and Theory of Fiction" offers an exploration of narrative theories directed particularly at creative writers, in conjunction with a hands-on examination of contemporary fictional narrative practices. Theoretical readings include historical essays on fiction and work by Gaston Bachelard, Mieke Bal, Gilles Deleuze, and others. Enrollment limited to 20.

LITR 1230F. Writing, Reading City.

In this course, we will explore correlations, points of convergence, and possible mimesis between city and text. Students will be expected to keep a weekly journal, to have a city in question, and to write both imaginatively and critically in response to readings and class discussion.

LITR 1230G. Master Poets of Apartheid Streets: Sterling Brown, Robert Hayden, Margaret Walker, Gwendolyn Brooks.

With the theme of "Slavery and Justice" in recent Brown University review, [4] "Master Poets of Apartheid Streets: Perpetual Resistance against de jure and de facto Segregation" is the formal and precise embouchure as Critical Realism which legislates as antidote to pernicious social, economic and educational racism: the aesthetic stance of this seminar is "An Integer Is a Whole Number." Through close attention to the conventions of poetry as praxis by these four master poets, in social context, the modality of this study is poetic discourse (what Frederick Douglass called "a sacred effort" in Douglass' description of President A. Lincoln's 'Second Inaugural.' Peripheral insights will be provided by Brown University researchers of the past: Charles H. Nichols, Winthrop Jordan, Richard Slotkin, in their three dissertations, and James R. Patterson's most recent book on "Brown v. Board of Education." Written permission required. Enrollment limited to 20. S/NC.

LITR 1230H. Being in Time.

In this discussion-based course, we will examine the many roles time plays in the building of narratives as well as its impact on contemporary concepts of self. We will use both literary and philosophical texts to explore the spaces between time and perception, time and memory, time and experience, and time and grammar. Written permission required.

LITR 1230I. The Documentary Vision in New Literature of the Americas.

A study of genre-defiant works, lyric treatments, atypical narratives, film poems, etc., including works by Anne Carson, Elena Poniatowska, W.S. Merwin, Maggie Nelson, Raoul Zurita and others. Enrollment limited to 20.

LITR 1230J. Writing: Material Differences.

An exploration of practices that make a material difference to writing, that may change what writing is in specific cultural circumstance and locations. We will look for such differences through transcultural and translingual experiments with writing, beginning "West" and moving "East." We will engage with a selection of widely divergent writers and genres, with emphases on poetics - particularly a translated rendition of Chinese poetics (such as was taken up by Pound and became influential in English literature) - and on theories that we can use for our practice, from: Fenollosa, Foucault, Derrida, and others. Enrollment limited to 20.

LITR 1230K. Latin American Death Trip.

Death is the subject of many of the greatest (most moving, innovative, funny, haunting, political, oneiric) Latin American poems of the 20th century, from Gorostiza's *Death without End* to Villaurrutia's *Nostalgia for Death* to Saenz' *The Night*. What is up with Latin Americans and death? What particularities of culture, gender, age, faith or experience might account for the visionary clarity of death as constant companion or permeable border, etc.? What makes the poems great? We shall read classic Latin American books in bilingual editions (so Spanish literacy is not a requirement, but we'll talk about translation issues). Students will be expected to participate in literary discussions, to write essays and a death poem. Enrollment limited to 20.

LITR 1230L. Eros: Hot and Sour.

Literature, early and late, distant and near, at the intersection of love and loathing. A seminar on selected texts deriving their blood from poetry, their flesh from fiction, their anatomy from form and theory. Including works by Rikki Ducornet, Anne Carson, Roland Barthes, Helen Cixous, Gertrude Stein, Catullus, Henry Miller, et al. Enrollment limited to 20.

LITR 1230M. Poetry and Ethics (COLT 1812J).

Interested students must register for COLT 1812J.

LITR 1230N. Robert Coover -- Foremost Storyteller.

We shall examine the works of contemporary American fiction writer, Robert Coover. During his long, celebrated career, Coover has imaginatively responded to writers and forms that have come before him. We'll investigate how Coover appropriates earlier traditions and think about how he simultaneously preserves and subverts literary traditions. We shall consider such concepts as myth, religion, and history, and determine how Coover applies these. We'll focus on authorial strategies and themes explored. Furthermore, we'll define literary terminology as a tools for textual and critical analysis. Finally, through this experience you can develop or refine the capacity for self-expression and communication. Enrollment limited to 20.

LITR 1230O. Suppression and Invention in Modern Persian Literature.

This course begins with symbolic elements from classical mystic Persian literature and journeys into pre- and post-revolution Persian short fiction and poetry. We shall analyze creative responses to restricted expression, study efforts to modernize in a variety of genres, and finish with the rise of the woman writer in Iran. Enrollment limited to 20.

LITR 1230P. The New Wave in Iranian Cinema.

We shall explore this movement that produced remarkable award-winning films in Iran. Applying author (auteur) theory, we will study new Iranian movies, analyzing "signs and meaning" in their cinematic language, also investigating effects of Iranian culture on this new artistic wave. Enrollment limited to 20. S/NC

LITR 1230Q. London Consequences.

This course focuses upon a selection of British prose from the 1960s and 1970s, and gives particular attention to post-war literary history in Britain, autobiographical fiction and the legacy of neo-modernism. We'll consider the work of, among others, Anna Kavan, J.G. Ballard, Nicholas Mosley, Muriel Spark, Christine Brooke-Rose, Stefan Themerson, Ann Quin and B.S. Johnson, along with (if available) *London Consequences*, a collaborative novel co-edited by Johnson.

LITR 1230T. The Origins of the Detective Story.

This class will explore the development of the Detective genre, focusing on its roots in the 19th century and considering more broadly how genres develop and change. Readings include E.T.A. Hoffmann's "Mademoiselle de Scudery", Edgar Allan Poe's Auguste Dupin stories, Wilkie Collins, Arthur Conan Doyle, Martin Hewett, and selections from *Detection by Gaslight* and *The Penguin Book of Gaslight Crime*. We will also look at theoretical texts, including Franco Moretti's "Clues". This course fulfills Literary Arts' pre-20th century literature requirement. Enrollment limited to 20.

LITR 1230U. Samuel Beckett.

This course will examine the works of Samuel Beckett--novels, plays and stories--from the beginning of his career to his death. We will read the majority of Beckett's work, with a major focus on his novel trilogy (*Molloy*, *Malone Dies*, and *The Unnamable*) and on the other work Beckett published between 1948 and 1961 (especially *Endgame* and *How It Is*).

LITR 1230V. Why Don't We Fall in Love?

We focus here on intersections of the erotic and poetry. How do we fall in love? Why? We will explore joy and happiness, love and lust, devotion and seduction. We will also, unfortunately, explore longing, heartbreak, jealousy, unrequited love. We will explore, through literature and film, the ageless enigma that prompted Ruth Stone to proclaim, "there is no choice among the voices / of love..."

LITR 1230W. Spectroscopy: [Identifying] Black Bodies in Narrative.

We shall focus on character development and narrative structure through the formation and presence of textual and cinematic black bodies. Our discussions will focus on the identification of that which is not allowed to speak -- the prototypical foil (Caliban), the other (Man Friday), the black body (Jim). How are narratives (how are we) shaped by that which cannot be acknowledged?

LITR 1230X. The New Long Poem.

An energetic study of powerful, book-length poems recently published in English, including texts as core to 20th c. literature as Juan Rulfo's *Pedro Paramo* to books as archly exacting as John Ashbery's *Flow Chart*, as affably innovative as Lyn Hejinian's *My Life*, as ingeniously formal as Inger Christensen's *alphabet* and as unruly as Frank Stanford's *The Battlefield Where the Moon Says I Love You*. Also: Bernadette Mayer's *Midwinter Day*, Evan S. Connell's *Notes Found in a Bottle on a Beach at Carmel*, W.S. Merwin's *The Folding Cliffs*, and the intra-genre Cecilia Vicuña's *Spit Temple*.

LITR 1230Y. Structuring (and De-Structuring) Novels: Special Topics Literature Seminar.

How to structure a novel? This is a question most novelists approach with dread, because, a) all the good plots and structures have been used up; b) plots can feel annoying anyway, like a capitulation to cinema or theater; and c) nevertheless, it is impossible to write in total darkness. We'll dispel this darkness by reading works by a range of novelists. How do these authors strike a balance between complex thought and elegant/unusual structure? And how can we, as writers, maintain narrative coherence over the course of hundreds of pages?

LITR 1230Z. Syncretic Gods.

Is it possible to kill a God? What happens within a generation to change the face of a God? To change the nature of a God itself? In this course we will research the various transformations of the myths of Yoruba deities as they too traverse middle passage in the suffocating holds of merchant ships. We will commit to the (subversive) task of imagining and re-imagining the myths of the Orishas. Using as a foundation the seventeen drawings in Cuban artist Alberto del Pozo's *Orichas* series, we will cover the storied lives of these our immortal and syncretic Gods.

LITR 1231A. Time Mechanics: Poetry as Translation.

This seminar focuses on experimental translations and transcreations in the spirit of Spicer's claim in *After Lorca*: "A poet is a time mechanic not an embalmer." Various approaches to leading a text across the time and space divide will be studied. If for Pound to "make new" is to look elsewhere, for Zukofsky it's to listen closely. If Hawkey's *Ventrakl* posits the poem's decomposition over time, Bang gives us a current, self-obsolencing version of Dante's hell. And while Hsia Yü's poems stage the clash of analogue and digital transmission technologies, Brandon Brown offers contemporary readers *Fleur du mal* version 2.0.

LITR 1231B. The Enchantment of Re-Imagining.

The author, Sam Leith, likened the recent Jane Austen project (in which six authors are tasked with rewriting Jane Austen for a modern audience) to "writing fiction as literary criticism." In this course, we are invited to think more speculatively about the role of re-imagination in literature and society by reading texts which do not only re-imagine the past by reframing history but which also re-imagine life and the present to offer us an alternate view. In some cases, these texts re-write existing classics. We will engage closely with the texts and relevant works of criticism.

LITR 1231C. Experimental Poets of Color.

In this course we'll read and critically engage with contemporary experimental poets of color writing in English in the US and Canada. Exploring the intersection of poetics, aesthetics, critical race (and mixed race) theory, and social justice activism in the arts, we will question the modernist and post-modernist assumptions that experimentation and innovation are exclusively the domain of whiteness. We will explore how racism, colonialism, and other contemporary systems of oppression condition responses to poets of color, and consider how poets of color respond to and engage with these systems both overtly and through their aesthetic experimentation.

LITR 1231D. Narrative Possession: spirits, shamans and the walking dead.

Narrative Possession offers a creative and critical investigation of the nature of possession as it manifests in film, fiction, and theory, exploring narrative depictions of possession across a wide range of international cultural practices including shamanism, voodoo, Spiritualism and séance. We will explore the theoretical and political ramifications of possession as it pertains to embodiment, sovereignty, private property and personal identity. Texts include works by Toni Morrison, Muriel Spark, Antoine Volodine, Zora Neal Hurston, Lafcadio Hearn, Ishmael Reed, Cesar Aira, kobo Abe, Derrida, Sartre, and De Certeau. Films include works by Cocteau, Camus, Tourneur, and Russell.

LITR 1231E. Rereading Writing.

We will study writing and, more generally, language art in terms of reading, both reexamining theories and practices of writing — in linguistics, the philosophy of language, and in the actual making of literature — and also by proposing that reading is constitutive of language regardless of its medium. What is reading, historically, theoretically, and in the digitally mediated future of culture? If reading brings language into being, then how should we read and what should we compose to be read? Readings from Saussure and Ong to Hayles, Derrida, and beyond. Optional critical-creative project.

LITR 1231F. Listening/Voicing.

"How you sound??" the poet Amiri Baraka once asked. This seminar is concerned with acts of communication as pertains to voicing and listening. How do poets sound out in the world, and to whom? We will explore notions of voice as more than a site of identity production, looking at, for example, the various fractures possible in Sappho's "voice" and what is carried to us through history, while also considering forms of singular and collective sounding via a range of poets and writers. On the other side of voice, we'll read into and experiment with acts of deep listening.

LITR 1231G. Traditions of Rupture: the Latin American Avant-Garde.

We will read and write creative responses to poetry and hybrid works by the generation of early 20th-century Latin American writers who shaped a distinct corpus owing as much to the European tradition as to the region's postcolonial history and vernacular: Huidobro, Vallejo, Neruda, Borges, and Guillén, and the Brazilian Modernists. We will also study postwar innovators—Berenguer, di Giorgio, Paz, Pizarnik, Parra, and the Brazilian Concrete Poets—as well as contemporary writers' contributions to the expansion of the field. Special focus will be devoted to translation matters, indigenous writing, and ecopoetics. Knowledge of Spanish and/or Portuguese is not necessary.

LITR 1231H. New York City 1965-2001.

NYC's a city constantly in crisis. It's a city in protest, turning over its own history, its fatal oversights. A place where missteps made in the blink of an eye might mean death—or sliding into the dark groove between princes(ses) and peasants. We're looking for NYC's story from 1965 to 2001. Why these years as bookends? Why this city made of boroughs held together by a sticky substance of uncertain origin we might call pride or ideology...? More importantly, what does it take to write historical fiction? To write about the places most important to us?

LITR 1231I. The Sacred & Profane: Dante, Milton, Rushdie.

We will explore a variety of sacred texts in the Abrahamic tradition to better understand the major works of four radical makers (in chronologic order): Dante Alighieri, John Milton, Charles Mingus, and Salman Rushdie. We will read supplementary texts by Durkheim, Eliade Mircea, Simone Weil, Carl Jung, and Edward Said.

LITR 1231J. Histories.

Historical figures like Herodotus, Hannibal, Billy the Kid and Calamity Jane have all served as energy nodes around which writers have built significant works of prose. In this seminar we will examine texts like Michael Ondaatje's *Coming Through Slaughter*, Toni Morrison's *Beloved* and W.G. Sebald's *The Emigrants* as part of an exploration of that prose which, if we can kick awake that poor overworked pearl, posits the historical as its grain of sand. Students can expect a substantial weekly reading load of primary and secondary source material and should come to each class prepared to discuss the assigned texts.

LITR 1231K. Innovations in Indian Literature.

Modern Indian literature developed in the shadow of colonialism and the birth of the nation state. Indian writers working in English and vernacular languages were forced to confront a sudden—and fragmented—modernity. What innovative narrative and literary strategies did they embrace in response to this historical and cultural pressure? Do these techniques have application beyond the Indian context? In general, how do cultural and political forces precipitate formal innovation?

LITR 1300. Independent Study in Reading, Research, and Writing About Literature.

Provides advanced students with an opportunity to pursue tutorial instruction oriented toward a literary research topic.

LITR 1310. Independent Study in Creative Writing.

Offers tutorial instruction oriented toward some significant work in progress by the student. Typically taken by honors or capstone candidates in the antepenultimate or penultimate semester. See instructor to seek permission during the semester before undertaking the course of study. One advanced-level workshop is prerequisite. S/NC.

LITR 1410A. Fiction Honors.

A workshop setting for the completion of theses by advanced writers of fiction. See general course description above for course entry procedures for all honors workshops. Instructor permission required. Enrollment limited to 12 senior Literary Arts concentrators. S/NC.

LITR 1410C. Playwriting Honors.

A workshop setting for the completion of theses or capstone projects by advanced writers of dramatic literature. See general course description above for course entry procedures for all honors/capstone workshops. Written permission required. S/NC.

LITR 1510. Honors Independent Study in Creative Writing.

Provides tutorial instruction for students completing their theses or capstone projects. Typically taken by honors or capstone candidates in their final semester. See instructor to seek permission during the semester before undertaking the course of study. S/NC.

LITR 2010A. Graduate Fiction.

Advanced practice of the art: a writing seminar, limited to graduate students in Literary Arts. Emphasis is placed on developing a better understanding of the creative process, strategies and forms. Written permission required. S/NC.

LITR 2010B. Graduate Poetry.

Advanced practice of the art: a writing seminar, limited to graduate students in Literary Arts. Emphasis is placed on developing a better understanding of the creative process, strategies and forms. Written permission required. S/NC.

LITR 2010C. Graduate Playwriting.

Advanced practice of the art: a writing seminar, limited to graduate students in Literary Arts. Emphasis is placed on developing a better understanding of the creative process, strategies and forms. Written permission required. S/NC.

LITR 2110A. Theatrical Styles on Stage and Page.

An investigation of theatrical forms and for collaborations among actors, directors and playwrights. This course is limited to participants in the MFA programs in acting, directing and playwriting. Instructor permission required. S/NC.

LITR 2110C. Reading, Writing and Thinking.

A course for graduate prose writers. We will explore various ways to engage with a work of art in order to fuel one's imagination and projects. Close textual reading of several books with writing assignments based on the readings. Writers will include Woolf, Stein, Beckett, Coetze, Kertesz and others. Written permission required. S/NC.

LITR 2110E. The Foreign Home: Interdisciplinary Arts.

Project-centered workshop for exploration beyond one's "home" genre, whether in video, poetry, fiction, music, performance or visual arts. Contemporary and art-historical interdisciplinary works will ground our investigation into the tension between expertise and "beginner's mind". Collaborative and individual work expected. Written permission required. S/NC.

LITR 2110F. Essays Without Borders.

A workshop for writing, performing, or media artists exploring essay or non-fiction forms in any genre. No project too strange, no essay too fanciful. Readings and research into experimental non-fiction. Individual and group work as well as critical and artistic projects. Literary Arts MFAs will be given priority. Come to first meeting for permission. Enrollment limited to 12. Permission required. S/NC.

LITR 2110G. Writing The Novel.

For advanced fiction writers who wish to work in long form. Through this course, participants will read a selection of novels and investigate the form; the primary emphasis will be placed on the work being undertaken by the members of the workshop itself. S/NC.

LITR 2110H. Embodying the Book.

What are the limits of the book? How far can it go? Alternatively, what is its essence? What is absolutely essential to it? This collaborative class brings writers together with RISD industrial designers and graphics artists to consider these questions and to create inventive book structures. Focus will be on collaboration itself, with texts addressing various aspects, such as the ethics of cooperation and group dynamics, as well as on the history and nature of the book as a cultural tool and force. Working in teams of three, students will invent their own structures and work together to embody them.

LITR 2110K. Deep Rivers, Lost Roads, Bent Symbols: Poets and Poetry Outside the Frame.

Geographically and/or aesthetically suspect, often shelved under the wrong rubric. Word-works by hermits and wanderers, sots and sot nots, whose language confirm, as Sister Rosetta Tharpe sang: Strange Things Happening Every Day. Including work by Besmilr Brigham, Wong May, Bernadette Mayer, Mary Reufle, Frank Stanford, David Fisher, a new translation of Beowulf (by an American! A Woman!), and others. There may also be music.

LITR 2110M. Challenging the Single Story: Reading Africa.

In recent years, there has been an explosion of new writing from Africa on the international scene, even as the single narrative of the continent persists. In this course, we will engage with fiction published in the last 15 years as well as critical texts and essays. Students will read fiction written in different genres. We will examine, among other things, how these writers negotiate their themes without compromising the integrity of their craft with a view to excelling in our own writing.

LITR 2110O. Dialogue, Monologue, & Dialect.

This hybrid workshop/seminar for graduate students will use works of fiction, cinema, theater, and narrative poetry as beginning points for experiments and discussions centered on a wide range of concepts and practices designed to widen how they hear and see the possibilities of voice and body language in their work. Special attention will be paid to regional and international, especially hybrid, forms of English.

LITR 2110P. World of Echoes: The Poet as Translator.

How is a poet's translation different from other translations? What factors determine a poet's choice to translate a specific author? For this seminar we will read innovative poetry recently translated by a diverse group of poets. Examples include Jennifer Scapettone's rendering of Amelia Rosselli's *Locomotrix*, Sawako Nakayasu's translations of Chika Sagawa, and Daniel Borzutzky's version of Raúl Zurita's *The Book of Planks*. Besides the translated materials, we will consider their relationship to the translator/poets' own works and the politics of cultural transmission. Students may engage in translation projects themselves or respond creatively to the materials, thereby also engaging in translation.

LITR 2210A. House Language.

We shall explore the house and its adjacent places and categories, with a focus upon narrative mannerism, terror and the grotesque, and the creation of literary form. We'll discuss stories, essays, household artifacts and etiquette, architectural plans and dangerous parlor games. Works by, among others: Georges Perec, H.G. Wells, Shirley Jackson, Isabella Beeton, Alain Robbe-Grillet, Frank Lloyd Wright, Rube Goldberg and Edith Wharton.

LITR 2230. Graduate Independent Study in Reading, Research, and Writing About Literature.

Provides graduate students with an opportunity to pursue tutorial instruction oriented toward a literary research topic.

LITR 2310. Graduate Independent Studies in Literary Writing.

Offers tutorial instruction oriented toward some significant work in progress by the graduate student. S/NC.

LITR 2410. Graduate Thesis Independent Study in Literary Writing.

Provides tutorial instruction for graduate students completing their graduate creative theses. Typically taken in the final semester. See instructor to seek permission during the semester before undertaking the course of study. S/NC.

LITR 2450. Exchange Scholar Program.**LITR 2600. Seminar in Teaching Creative Writing.**

A course focused on how to design and lead a creative writing workshop. Reading, writing and laboratory workshop sessions. Designed for first-year Literary Arts graduate students. S/NC.

LITR 2700. Pedagogy Seminar.

The Pedagogy Seminar examines ideas about teaching in a literary arts/creative writing environment. The pros and cons of the "workshop"-style will be discussed alongside alternative models, and general topics of exploration will include: creative process pedagogy, writing-to-learn, multi-genre approaches, uses of readings/research, and general classroom management. Designing an inclusive classroom and syllabus as well as exploring generative and innovative practices will be covered as well. A special emphasis will be on preparing students to feel confident and to explore a range of creative process issues. Personal writing as well as syllabus design will be expected.

LITR 2710. Literary Arts Pedagogy in Practice.

The Pedagogy in Practice Seminar examines ideas about teaching in a literary arts/creative writing environment. The pros and cons of the "workshop"-style will be discussed alongside alternative models, and general topics of exploration will include: creative process pedagogy, writing-to-learn, multi-genre approaches, uses of readings/research, and general classroom management. This is a hands-on forum to provide guidance on how to build an inclusive, pedagogically effective meeting space. A special emphasis will be on preparing instructors to feel confident and explore a range of creative process issues. There will be opportunities to develop personal writing, especially in response to student work.

LITR 2780. Graduate Independent Study in Professional Development.

This half-credit course is for a Literary Arts graduate student not enrolled in a pedagogy seminar. Through this independent study, the graduate student will work with a faculty advisor to prepare for the post-MFA experience. This may include a focus on aspects of teaching, but may also focus on related professional pursuits, such as working in literary agency, publishing and professional writing.

Mathematics

The Mathematics Department at Brown balances a lively interest in students and teaching with a distinguished research reputation. Our several strong research groups, Analysis, Algebraic Geometry, Geometry and Topology, and Number Theory, all have active seminar schedules that draw local and international speakers. The undergraduate program in mathematics is designed to present students with challenging courses that will train them for any future they desire, be it in the economy, the government, or academe. We are also quite flexible in placing students; our goal being to discover a student's level of competence and then offering a stimulating course.

We support 40+ graduate students in a Ph.D. program whose graduates populate top mathematics departments and prominent positions in industry. Our joint graduate courses and seminars with the adjacent Division of Applied Mathematics add to the breadth of offerings available to our graduate students.

For additional information, please visit the department's website: <https://www.brown.edu/academics/math/>

Mathematics Concentration Requirements

Mathematics is a grouping of sciences, including geometry, algebra, and calculus, that study quantity, structure, space, and change. Mathematics concentrators at Brown can explore these concepts through the department's broad course offerings and flexible concentration requirements. The concentration leads to either the Bachelor of Arts or Bachelor of Science degree (the latter is strongly recommended for students interested in pursuing graduate study in mathematics or related fields). Concentrators begin their learning with multivariable calculus, linear algebra, and abstract algebra. Beyond these prerequisites, students take a variety of advanced topics on the 1000 level based on their interests. After sufficient preparation and with permission of the instructor, students may also take courses on the 2000 level. Students also have the option of completing a thesis project.

Concentrators in mathematics should complete the prerequisites by the end of their sophomore year. It is strongly recommended that students take MATH 1010 before taking MATH 1630, (formerly MATH 1130).

Prerequisites:

Multivariable calculus and linear algebra (choose one of the following sequences): 2

MATH 0180 & MATH 0520 Multivariable Calculus and Linear Algebra

MATH 0180 & MATH 0540 Multivariable Calculus and Linear Algebra With Theory

MATH 0200 & MATH 0520 Multivariable Calculus (Physics/Engineering) and Linear Algebra

MATH 0350 & MATH 0540 Multivariable Calculus With Theory and Linear Algebra With Theory

Or the equivalent

Program:

MATH 1530 Abstract Algebra 1
Five other 1000- or 2000-level Mathematics courses. The year-long sequence 0750/0760 may be substituted for one of these course credits. 5

Total Credits 8

Honors

Honors degrees may be recommended for students who have exhibited high achievement in mathematics. Candidates must complete at least eight mathematics courses at the 1000 or 2000 level with sufficiently good grades and must write an honors thesis under the guidance of a faculty member. The honors thesis is usually written while the candidate is enrolled in MATH 1970. The candidate should consult with the concentration advisor for the precise grade requirements.

Concentrators in mathematics should complete the prerequisites by the end of their sophomore year. It is strongly recommended that students take MATH 1010 before taking MATH 1630, (formerly MATH 1130).

Standard program for the Sc.B. degree

Prerequisites:

Multivariate calculus and linear algebra (choose one of the following sequences): 2

MATH 0180 & MATH 0520 Multivariable Calculus and Linear Algebra

MATH 0180 & MATH 0540 Multivariable Calculus and Linear Algebra With Theory

MATH 0200 & MATH 0520 Multivariable Calculus (Physics/Engineering) and Linear Algebra

MATH 0350 & MATH 0540 Multivariable Calculus With Theory and Linear Algebra With Theory

Or the equivalent

Program:

MATH 1630	Real Analysis I (formerly MATH 1130)	1
MATH 1640	Real Analysis II (formerly MATH 1140)	1
MATH 1530	Abstract Algebra	1
MATH 1540 or MATH 1560	Topics in Abstract Algebra Number Theory	1
Four other 1000- or 2000- level Mathematics courses. The year-long sequence 0750/0760 may be substituted for one of these course credits.		4
Four additional courses in mathematics, science, economics, or applied mathematics approved by the concentration advisor.		4
Total Credits		14

Honors

Honors degrees may be recommended for students who have exhibited high achievement in mathematics. Candidates must complete at least eight mathematics courses at the 1000 or 2000 level with sufficiently good grades and must write an honors thesis under the guidance of a faculty member. The honors thesis is usually written while the candidate is enrolled in MATH 1970. The candidate should consult with the concentration advisor for the precise grade requirements.

Those interested in graduate study in mathematics are encouraged to take:

MATH 1630	Real Analysis I (formerly MATH 1130)
MATH 1640	Real Analysis II (formerly MATH 1140)
MATH 1460	Complex Analysis (formerly MATH 1260)
MATH 1710	Topology (formerly MATH 1410)
MATH 1540	Topics in Abstract Algebra

Mathematics-Computer Science Concentration Requirements

Students may opt to pursue an interdisciplinary Bachelor of Science degree in Math-Computer Science, a concentration administered cooperatively between the mathematics and computer science departments. Course requirements include math- and systems-oriented computer science courses, as well as computational courses in applied math. Students must identify a series of electives that cohere around a common theme. As with other concentrations offered by the Computer Science department, students have the option to pursue the professional track of the ScB program in Mathematics-Computer Science.

Requirements for the Standard Track of the Sc.B. degree.

Prerequisites

Three semesters of Calculus to the level of MATH 0180, MATH 0200, or MATH 0350		3
MATH 0520	Linear Algebra	1
or MATH 0540	Linear Algebra With Theory	
or CSCI 0530	Coding the Matrix: An Introduction to Linear Algebra for Computer Science	

Core Courses

MATH 1530	Abstract Algebra	1
Select one of the following series:		2
Series A		
CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms	
Series B		
CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms	
Series C		

CSCI 0190	Accelerated Introduction to Computer Science (and an additional CS course numbered 200 or above not otherwise used to satisfy a concentration requirement; a Foundations course, or a 1000-level CS course)	
Series D ¹		
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms	
Foundations Courses: Two courses, touching two different Foundations areas:		2
a. Algorithms/Theory Foundations		
CSCI 0500	Data Structures, Algorithms, and Intractability: An Introduction	
b. AI/Machine Learning/Data Science Foundations.		
CSCI 0410	Foundations of AI	
c. Systems Foundations. Concentration credit for only one of 300/330		
CSCI 0300	Fundamentals of Computer Systems	
or CSCI 0320	Introduction to Software Engineering	
or CSCI 0330	Introduction to Computer Systems	
Three 1000-level Mathematics courses		3
Three courses in Computer Science at the 1000-level or higher. One of these can be an additional 100-level Foundations course or a CSCI non-technical course, as defined by the concentration handbook.		3
Three additional courses different from any of the above chosen from Mathematics, Computer Science, Applied Mathematics, or related areas ⁴		3
A capstone course in Computer Science or Mathematics ⁵		1
Total Credits		19

¹ Students wishing to go directly from CSCI 0111 to CSCI 0200 will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200.

² These must be CSCI courses at the 1000-level or higher. Credit will only be given for one of CSCI 410, CSCI 1410, CSCI 1411, and only one credit for CSCI 300, CSCI 330. See current handbook for list. <https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>

³ Concentration credit will be given for only one of APMA 1650, APMA 1655, and CSCI 1450. These must be approved by a concentration advisor.

⁴ A one-semester course, taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth. A senior thesis which involves two semesters of work may count as a Capstone. Course-based capstones are currently only available through CS. Approved capstone courses and instructions may be found in the CS concentration handbook (<https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-handbook/>)

Requirements for the Professional Track of the Sc.B. degree.

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Mathematics-Economics Concentration Requirements

The Mathematics Economics concentration is designed to give a background in economic theory plus the mathematical tools needed to analyze and develop additional theoretical constructions. The emphasis is on the abstract theory itself. Students may choose either the standard or the professional track, both award a Bachelor of Arts degree. If you are interested in declaring a concentration in Mathematics Economics, please refer to this page for more information regarding the process.

Standard Mathematics-Economics Concentration Honors:

Economics

ECON 1130	Intermediate Microeconomics (Mathematical) ¹	1
ECON 1210	Intermediate Macroeconomics	1
ECON 1630	Mathematical Econometrics I	1
Two courses from the "mathematical-economics" group: ²		2
ECON 1170	Welfare Economics and Social Choice Theory	
ECON 1225	Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies	
ECON 1255	Unemployment: Models and Policies	
ECON 1470	Bargaining Theory and Applications	
ECON 1490	Designing Internet Marketplaces	
ECON 1545	Topics in Macroeconomics, Development and International Economics	
ECON 1560	Economic Growth	
ECON 1640	Mathematical Econometrics II	
ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1750	Investments II	
ECON 1770	Crisis Economics	
ECON 1805	Experimental and Behavioral Economics	
ECON 1820	Theory of Behavioral Economics	
ECON 1860	The Theory of General Equilibrium	
ECON 1870	Game Theory and Applications to Economics	
One course from the "data methods" group: ²		1
ECON 1301	Economics of Education I	
ECON 1310	Labor Economics	
ECON 1315	Health, Education, and Social Policy	
ECON 1330	Gender and Development	
ECON 1340	Economics of Global Warming	
ECON 1345	Climate Change and the Commons	
ECON 1355	Environmental Issues in Development Economics	
ECON 1360	Health Economics	
ECON 1375	Inequality of Opportunity in the US	
ECON 1385	Intergenerational Poverty in America	
ECON 1400	The Economics of Mass Media	
ECON 1410	Urban Economics	
ECON 1430	The Economics of Social Policy	
ECON 1510	Economic Development	
ECON 1530	Health, Hunger and the Household in Developing Countries	
ECON 1629	Applied Research Methods for Economists	
ECON 1640	Mathematical Econometrics II	

ECON 1660	Big Data	
ECON 1670	Advanced Topics in Econometrics	
ECON 1680	Machine Learning, Text Analysis, and Economics	
ECON 1825	Behavioral Economics and Public Policy	
ECON 1830	Behavioral Finance	
Two additional 1000-level economics courses ³		2
Mathematics		
Calculus: MATH 0180 or higher		1
Linear Algebra - one of the following:		1
MATH 0520	Linear Algebra	
MATH 0540	Linear Algebra With Theory	
Probability Theory - one of the following:		1
MATH 1210	Probability (Formerly MATH 1610)	
MATH 1620	Mathematical Statistics	
APMA 1650	Introduction to Probability and Statistics with Calculus	
Analysis - one of the following:		1
MATH 1010	Analysis: Functions of One Variable	
MATH 1630	Real Analysis I (Formerly MATH 1130)	
MATH 1640	Real Analysis II (Formerly MATH 1140)	
Differential Equations - one of the following:		1
MATH 1110	Ordinary Differential Equations	
MATH 1120	Partial Differential Equations	
One additional course from the Probability, Analysis, and Differential Equations courses listed above		1
Total Credits		14

¹ Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required

² No course may be "double-counted" to satisfy both the mathematical-economics and data methods requirement.

³ Students may apply, at most, one Economics course whose number is in the range of 1000 to 1099 toward the concentration. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, ECON 1620 and ECON 1960 can be used for university credit and up to two 1970s may be used for university credit.

⁴ MATH 1630 (formerly MATH 1130) is a prerequisite for MATH 1640 (formerly MATH 1140).

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites.

Professional Track:

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradproftrack/>

Mathematics Graduate Program

The Math Department PhD program is intended for students with a solid background in undergraduate mathematics and a strong interest in research. Most of our students intend to pursue academic careers or find other kinds of positions, for example in industry or finance.

We aim to provide a supportive environment for teaching, learning, and creating mathematics. The relatively small size (about 40+ graduate students and 25+ faculty and postdocs) allows for close contact with faculty and a sense of community. The program is flexible enough to

accommodate a range of levels of preparation. More than 85% of students admitted receive their PhD.

For more information on admission and program requirements, please visit the following website:

<https://www.brown.edu/academics/math/graduate> (<https://www.brown.edu/academics/math/graduate/>)

5th Year Masters Program

The program is only available as a 5th year masters program and only open to current Brown undergraduates, who must apply before graduating.

To earn a fifth year masters degree, the student must complete eight 2000-level courses with a grade of B or higher.

Students must complete at least three of the following "core" courses, which are offered in the fall.

MATH 2110	Introduction to Manifolds	1
MATH 2210	Real Function Theory	1
MATH 2250	Complex Function Theory	1
MATH 2410	Topology	1
MATH 2510	Algebra	1

Other eligible courses, beyond the minimum three core courses from above, are the following spring term courses:

MATH 2010	Differential Geometry	1
MATH 2220	Real Function Theory	1
MATH 2260	Complex Function Theory	1
MATH 2420	Algebraic Topology	1
MATH 2520	Algebra	1

There are also the below advanced graduate courses. In order for one of these to be counted toward the fifth year Master's, it must be taken for "qualifying credit". This means that the student must notify the instructor in advance that he/she desires to earn qualifying credit, and then the instructor will assign suitable written work or an oral presentation.

MATH 2050	Algebraic Geometry	1
MATH 2060	Algebraic Geometry	1
MATH 2370	Partial Differential Equations	1
MATH 2380	Partial Differential Equations	1
MATH 2530	Number Theory	1
MATH 2540	Number Theory	1
MATH 2630	Probability	1
MATH 2640	Probability	1

A course in the 2710-2720 Topics Series

With permission of the Director of Graduate Studies, up to two graduate level courses in Applied Mathematics may also be counted.

A Master's thesis is not required, nor are there any additional exams beyond the final exams for each of the courses.

Up to two of the eight courses may be graduate-level Mathematics courses which the student has already taken as an undergraduate.

Courses

MATH 0010A. First Year Seminar: A Taste of the Infinite.

The concept of infinity occurs in many disciplines - philosophy, mathematics, physics, religion, art, and so on. This class will focus on the mathematical aspects of infinity, surveying some of the ways that the infinite arises in mathematics. Topics will include: the sizes of infinity, rates of growth, computational complexity, construction of the real numbers, the notion of compactness, geometric spaces, transcendental numbers, and fractal sets. I will not assume any prior knowledge of mathematics beyond a good grounding in high school algebra and geometry.

MATH 0010B. Exploring the Fourth Dimension.

This interdisciplinary seminar explores all the mathematics students have seen or ever will see, concentrating on an engaging topic that begins with elementary geometry and branches out to literature, history, philosophy, and art as well as physics and other sciences. Guideposts to the fourth dimension include Salvador Dali's *Corpus Hypercubicus*, Edwin Abbott Abbott's *Flatland*, and Jeff Weeks' *The Shape of Space*. Students will investigate new mathematical topics such as combinatorics, regular polytopes, topology, and non-Euclidean geometry. Although students will use computers for visualization, no computer experience is required. There are no specific mathematical prerequisites except curiosity and a willingness to participate actively. Students considering concentrations in humanities, social sciences, and the arts are especially invited to this first-year seminar. Enrollment limited to 19 first year students.

MATH 0010C. From 'Flatland' to the Fourth Dimension.

No description available. Enrollment limited to 15 first year students. Instructor permission required, after initial placement of students.

MATH 0050. Analytic Geometry and Calculus.

MATH 0050 and 0060 provide a slower-paced introduction to calculus for students who require additional preparation. Presents the same calculus topics as MATH 0090, together with a review of the necessary precalculus topics. Students successfully completing this sequence are prepared for MATH 0100. S/NC only.

MATH 0060. Analytic Geometry and Calculus.

A slower-paced introduction to calculus for students who require additional preparation. Presents the same calculus topics as MATH 0090, together with a review of the necessary precalculus topics. Students successfully completing this sequence are prepared for MATH 0100. Prerequisite: MATH 0050 or written permission. May not be taken for credit in addition to MATH 0070 or MATH 0090. S/NC only.

MATH 0070. Calculus with Applications to Social Science.

A survey of calculus for students who wish to learn the basics of calculus for application to social sciences or for cultural appreciation as part of a broader education. Topics include functions, equations, graphs, exponentials and logarithms, and differentiation and integration; applications such as marginal analysis, growth and decay, optimization, and elementary differential equations. May not be taken for credit in addition to MATH 0060 or MATH 0090. S/NC only.

MATH 0081. Math Teaching Fellows Program.

The Math Teaching Fellows Program is a semester-long certificate program that provides UTAs with the skills and knowledge required to be an effective UTA in the Math Department. Admission into the program is by application only; participants will hold a UTA appointment in a Mathematics course approved by the Teaching Fellows Coordinators and must therefore be eligible for student employment at Brown during the term. Participants should have completed at least one of Math 0100, 0180, 0190, 0200, 0350, 0520, 0540.

MATH 0090. Single Variable Calculus, Part I.

An intensive course in calculus of one variable including limits, differentiation, maxima and minima, the chain rule, rational functions, trigonometric functions, and exponential functions. Introduction to integration with applications to area and volumes of revolution. MATH 0090 and MATH 0100 or the equivalent are recommended for all students intending to concentrate in the sciences or mathematics. May not be taken for credit in addition to MATH 0060 or MATH 0070. S/NC only.

MATH 0100. Single Variable Calculus, Part II.

A continuation of the material of MATH 90 including further development of techniques of integration. Other topics covered are infinite series, power series, Taylor's formula, polar coordinates, parametric equations, introduction to differential equations, and numerical methods. MATH 90 and 100 or the equivalent are recommended for all students intending to concentrate in mathematics or the sciences. MATH 100 may not be taken in addition to MATH 170 or MATH 190.

MATH 0170. Single Variable Calculus, Part II (Accelerated).

This course, which covers roughly the same material and has the same prerequisites as MATH 100, covers integration techniques, sequences and series, parametric and polar curves, and differential equations of first and second order. Topics will generally include more depth and detail than in MATH 100. MATH 170 may not be taken in addition to MATH 100 or MATH 190.

MATH 0180. Multivariable Calculus.

Three-dimensional analytic geometry. Differential and integral calculus of functions of two or three variables: partial derivatives, multiple integrals, Green's Theorem, Stokes' theorem, and the divergence theorem. Prerequisite: MATH 100, MATH 170, or MATH 190, or advanced placement or written permission. [MATH 180 may not be taken in addition to MATH 200 or MATH 350.]

MATH 0190. Single Variable Calculus, Part II (Physics/Engineering).

This course, which covers roughly the same material and has the same prerequisites as MATH 100, is intended for students with a special interest in physics or engineering. The main topics are: applications and techniques of integration; sequences, series, and power series methods; parametric equations and polar coordinates; additional topics at instructor's discretion. MATH 190 may not be taken in addition to MATH 100 or MATH 170.

MATH 0200. Multivariable Calculus (Physics/Engineering).

This course, which covers roughly the same material as MATH 180, is intended for students with a special interest in physics or engineering. The main topics are: geometry of three-dimensional space; partial derivatives; Lagrange multipliers; double, surface, and triple integrals; vector analysis; Stokes' theorem and the divergence theorem, with applications to electrostatics and fluid flow. Prerequisite: MATH 100, MATH 170, or MATH 190, or advanced placement or written permission. [MATH 200 may not be taken in addition to MATH 180 or MATH 350.]

MATH 0350. Multivariable Calculus With Theory.

This course provides a rigorous treatment of multivariable calculus. Topics covered include vector analysis, partial differentiation, multiple integration, line integrals, Green's theorem, Stokes' theorem, and the divergence theorem. MATH 0350 covers the same material as MATH 0180, but with more emphasis on theory and on understanding proofs. Prerequisites: MATH 0100, MATH 0170, or MATH 0190, or advanced placement or written permission. [MATH 0350 may not be taken in addition to MATH 0180 or MATH 0200.]

MATH 0420. Introduction to Number Theory.

An overview of one of the most beautiful areas of mathematics. Ideal for any student who wants a taste of mathematics outside of, or in addition to, the calculus sequence. Topics include: prime numbers, congruences, quadratic reciprocity, sums of squares, Diophantine equations, and, as time permits, such topics as cryptography and continued fractions. No prerequisites.

MATH 0520. Linear Algebra.

A first course in linear algebra designed to develop students' problem solving skills, mathematical writing skills, and gain facility with the applications and theory of linear algebra. Topics will include: vector spaces, linear transformations, matrices, systems of linear equations, bases, eigenvalues, and additional topics at instructor's discretion. Applications may include differential equations, difference equations, least squares approximations, and models in economics and in biological and physical sciences. MATH 0520 or MATH 0540 is a prerequisite for all 1000-level courses in Mathematics except MATH 1260 or MATH 1610. Recommended prerequisite: MATH 0100 or equivalent. May not be taken in addition to MATH 0540.

MATH 0540. Linear Algebra With Theory.

This course provides a rigorous introduction to the theory of linear algebra. Topics covered include: matrices, linear equations, determinants, and eigenvalues; vector spaces and linear transformations; inner products; Hermitian, orthogonal, and unitary matrices; and Jordan normal form. MATH 540 provides a more theoretical treatment of the topics in MATH 520, and students will have opportunities during the course to develop proof-writing skills. Recommended prerequisite: MATH 100, MATH 170, or MATH 190. [MATH 540 may not be taken in addition to MATH 520.]

MATH 0550. Problems from the History of Mathematics.

This course presents a history of mathematics through the lens of famous mathematical problems. Beginning in Ancient Greece and Babylon and continuing to the present, we discuss the problems that shaped the development of modern mathematics. Sample topics include the impossible constructions of Ancient Greece, paradoxes from the birth of calculus, the problems that gave rise to graph theory, and the rise of computer-assisted proofs.

MATH 0580. Mathematical Forms in Architecture.

This project will explore and advance innovative applications of mathematics to architecture using computational methods. Historically, architecture has been guided primarily by an intuitive creative process. In contrast to the end-results of intuitive design, many "optimal" forms--i.e. geometric shapes and configurations that satisfy extremal conditions--are unique because they are the result of systematic physical experiments or explicit mathematical study in addition to imaginative input. Classic questions for which human intuition alone has been incapable of finding a solution include: What is the exact shape of the optimal arch?, or What is the shape of a child's slide that minimizes the time of travel? The use of computational methods to generate solutions to these problems will be made considerably simpler via optimization libraries in Mathematica. The application to architecture in this project will provide students a unique concrete backdrop to visualize solutions to these problems.

MATH 0750. Introduction to Higher Mathematics.

This semester-long class will expose students to several fundamental areas of mathematics. It will be team taught by three members of the faculty. Topics, which will vary from year to year, will be chosen from logic and set theory, number theory, abstract algebra, combinatorics and graph theory, analysis, and geometry. Approximately 4 weeks will be devoted to each of the selected topics.

MATH 0760. Introduction to Higher Mathematics.

This year-long class will expose students to six fundamental areas of mathematics. It will be team taught by six members of the faculty. Fall topics will include logic, combinatorics, and analysis. Spring topics will include number theory, algebra, and geometry. Approximately 4 weeks will be devoted to each topic.

MATH 1000. The Art of Writing Mathematics.

Math 1001 is an introduction to proof-writing designed to prepare students for further exploration of rigorous mathematics. Students will be trained to identify and employ a variety of proof-techniques such as direct proof, proof by contradiction, proof by induction, and proof by cases, to name a few. Mathematical topics covered include samplings of set theory, logic, and number theory, with additional topics chosen at the instructors discretion if time permits. Recommended Prerequisites: MATH 0520, MATH 0540, MATH 0100, MATH 0190, MATH 0180, MATH 0200, or MATH 0350. Students with little proof writing experience are encouraged to take MATH 1001 prior to taking, or concurrently with, other 1000-level Mathematics courses.

MATH 1010. Analysis: Functions of One Variable.

Completeness properties of the real number system, topology of the real line. Proof of basic theorems in calculus, infinite series. Topics selected from ordinary differential equations. Fourier series, Gamma functions, and the topology of Euclidean plane and 3-space. Prerequisite: MATH 0180, 0200, or 0350. MATH 0520 or 0540 may be taken concurrently. Most students are advised to take MATH 1010 before MATH 1630.

MATH 1030. Graph Theory.

This course covers important material about graph theory, such as spanning trees, network flow problems, matching problems, coloring problems, planarity, Cayley graphs, spectral theory on graphs, and Ramsey Theory. The emphasis will be on a combination of theory and algorithms. Depending on the instructor, connections to such fields as combinatorics, geometry, or computer science might be emphasized. Prerequisite: MATH 0180, 0200 or 0350 and MATH 0520 or 0540 are recommended.

MATH 1040. Fundamental Problems of Geometry.

This class discusses geometry from a modern perspective. Topics include hyperbolic, projective, conformal, and affine geometry, and various theorems and structures built out of them. Prerequisite: MA 0520, MA 0540, or permission of the instructor.

MATH 1060. Differential Geometry.

The study of curves and surfaces in 2- and 3-dimensional Euclidean space using the techniques of differential and integral calculus and linear algebra. Topics include curvature and torsion of curves, Frenet-Serret frames, global properties of closed curves, intrinsic and extrinsic properties of surfaces, Gaussian curvature and mean curvature, geodesics, minimal surfaces, and the Gauss-Bonnet theorem.

MATH 1080. Cryptography.

This course focuses on the mathematics underlying public key cryptosystems, digital signatures, and other topics in cryptography. A sampling of mathematical topics, such as groups, rings, fields, number theory, probability, complexity theory, elliptic curves, and lattices, will be introduced and applied to cryptography. No prior knowledge of these topics is assumed, nor is prior programming experience needed; any programming knowledge required will be covered in class.

MATH 1110. Ordinary Differential Equations.

Ordinary differential equations, including existence and uniqueness theorems and the theory of linear systems. Topics may also include stability theory, the study of singularities, and boundary value problems.

MATH 1120. Partial Differential Equations.

The wave equation, the heat equation, Laplace's equation, and other classical equations of mathematical physics and their generalizations, discussion of well-posedness problems. The method of characteristics, initial and boundary conditions, separation of variables, solutions in series of eigenfunctions, Fourier series, maximum principles, Green's identities and Green's functions.

MATH 1150. Machine Learning for Scientific Modeling: Data-Driven Discovery of Differential Equations.

This junior/senior level course will explore the use of Machine Learning to automate the discovery and calibration of models involving differential equations directly from data. After introducing the basic machine learning tools (Gaussian Processes and Neural Networks) we will see how they can be combined with ODE and PDE computational methods to generate models in physics, medicine, and finance. The course will progress to a survey of recent research works on the topic. No prior knowledge of machine learning is required.

MATH 1210. Probability.

Basic probability theory including random variables, distribution functions, independence, expectation, variance, and conditional expectation. Classical examples of probability density and mass functions (binomial, geometric, normal, exponential) and their applications. Stochastic processes including discrete and continuous time Poisson processes, Markov chains, and Brownian motion.

MATH 1220. Mathematical Statistics.

Frequentist and Bayesian viewpoints and decision theory principles. Concepts from probability, including the central limit theorem and multivariate normal distributions, and asymptotic estimates. Inferences from independent, identically distributed sampling: point estimation, confidence intervals, and hypothesis testing. Analysis of variance (ANOVA) and generalized linear models of regression.

MATH 1270. Topics in Functional Analysis.

Infinite-dimensional vector spaces with applications to some or all of the following topics: Fourier series and integrals, distributions, differential equations, integral equations, calculus of variations. Prerequisite: At least one 1000-level course in Mathematics or Applied Mathematics, or permission of the instructor.

MATH 1460. Complex Analysis.

Examines one of the cornerstones of mathematics. Complex differentiability, Cauchy-Riemann differential equations, contour integration, residue calculus, harmonic functions, geometric properties of complex mappings. Prerequisite: MATH 0180, 0200, or 0350. This course does not require MATH 0520 or 0540.

MATH 1530. Abstract Algebra.

A proof-based course that introduces the principles and concepts of modern abstract algebra. Topics will include groups, rings, and fields, with applications to number theory, the theory of equations, and geometry. Previous proof-writing experience is not required. MATH 1530 is required of all students concentrating in mathematics. It is strongly suggested that potential mathematics concentrators make MATH 1530 one of the first thousand level mathematics classes that they take.

MATH 1540. Topics in Abstract Algebra.

Galois theory together with selected topics in algebra. Examples of subjects which have been presented in the past include algebraic curves, group representations, and the advanced theory of equations. Prerequisite: MATH 1530.

MATH 1560. Number Theory.

Selected topics in number theory will be investigated. Unique factorization, prime numbers, modular arithmetic, arithmetic functions, quadratic reciprocity, finite fields, and related topics. Prerequisite: MATH 1530 or written permission.

MATH 1630. Real Analysis I.

A rigorous introduction to real analysis, this course treats topics in point set topology, function spaces, differentiability of functions on Euclidean spaces, and Fourier series. Among the many topics and theorems we investigate in detail will be connectedness and compactness, the Arzela-Ascoli theorem, the inverse and implicit function theorems, and L^2 and pointwise convergence of Fourier series. It is recommended that a student take MATH 1010 before attempting MATH 1630.

MATH 1640. Real Analysis II.

A second course in real analysis, in this class we study measure theory and integration as well as Hilbert spaces. Among the many topics we study will be abstract measure and integration theory, Fourier transform, linear functionals and the Riesz representation theorem, compact operators, and the spectral theorem. The course may also include additional material of interest to the students and instructor.

MATH 1710. Topology.

Topology of Euclidean spaces, winding number and applications, knot theory, fundamental group and covering spaces. Eulercharacteristic, simplicial complexes, classification of two-dimensional manifolds, vector fields, the Poincaré-Hopf theorem, and introduction to three-dimensional topology. Prerequisites: Abstract Algebra (Math 1530) and Real Analysis (Math 1010 or Math 1630).

MATH 1720. Manifolds.

Manifolds are a basic concept that unite ideas from linear algebra, multivariable calculus, geometry, and topology. Math and physics research require a familiarity with manifolds. Topics covered include the definition of a smooth manifold either as a smooth subset of $\mathbb{R}^n$ or as an abstract manifold, coordinating charts, and transition functions. The course will cover concrete examples: e.g. surfaces and 3-manifolds. Other topics include tangent vectors, vector fields, tensors, exterior algebra, differential forms, change of coordinates, Stokes' Theorem and the basics of De Rham cohomology.

MATH 1810A. Applied Algebraic Topology.

Topology is a powerful tool for identifying, describing, and characterizing the essential features of functions and spaces. In the recent years some of these methods have been adapted to study the shape of data collected from a range of different fields, including graphics and visualization, computational biology, etc. This course is an introduction to the basic concepts and topological structures behind these developments, focusing on persistent homology and mapper. Projects will involve using these methods to analyze and describe the shape of concrete data sets.

MATH 1810B. A Second Course in Linear Algebra.

This is a course in linear algebra for students who have had a standard first course (vector space, linear map, characteristic polynomial). We'll emphasize coordinate-free constructions and universal properties as much as possible. Among the topics we'll study are sum, product and quotient spaces; duality (kernel, cokernel); tensor product (Hilbert's third problem, differential form); homological algebra (exact sequence, snake lemma); normal forms (Frobenius, Weyr, Smith) and invariant factors. If there are sufficient time and interest, we might explore other topics, such as geometric algebra, control theory (pole placement) and/or tropical linear algebra.

MATH 1810C. Artificial Intelligence and Euclidean Geometry.

This course explores the exciting field of automated reasoning systems for complex mathematical problems, inspired by Google DeepMind's AlphaGeometry. We'll delve into the mathematical foundations of such systems, starting with the essentials of Euclidean geometry from Euclid's Elements, including axioms and deductive reasoning. The course structure combines theoretical learning with hands-on experience. We will also focus on the practical application of building a Euclidean geometry reasoning system. Students will work in groups throughout the semester to develop their own system to solve geometry problems. **Admission into this class is by application only. Please contact the Instructors for more information**

MATH 1820A. Introduction to Lie Algebras.

Lie groups and Lie algebras are important, because they are the symmetries of structures such as quadratic forms, differential systems and smooth manifolds. The prototype of a Lie algebra is the space of 3-vectors together with their cross product, which is closely related to the Lie group of rotations. We will see how this basic example generalizes, mostly in the context of matrices. We'll examine special types of Lie algebras, such as nilpotent, solvable and semi-simple, study root systems and their diagrams, explore some representation theory, and end with the classification of the simple Lie algebras. Prerequisite: MATH 1530.

MATH 1970. Honors Conference.

Collateral reading, individual conferences. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

MATH 2010. Differential Geometry.

Introduction to differential geometry (differentiable manifolds, differential forms, tensor fields, homogeneous spaces, fiber bundles, connections, and Riemannian geometry), followed by selected topics in the field. Pre-reqs: MATH 2110 and undergraduates require permission from the instructor.

MATH 2050. Algebraic Geometry.

Complex manifolds and algebraic varieties, sheaves and cohomology, vector bundles, Hodge theory, Kähler manifolds, vanishing theorems, the Kodaira embedding theorem, the Riemann-Roch theorem, and introduction to deformation theory. Pre-reqs: MATH 2510 and MATH 2520 and undergraduates require permission from the instructor.

MATH 2060. Algebraic Geometry.

See Algebraic Geometry (MATH 2050) for course description.

MATH 2110. Introduction to Manifolds.

Inverse Function Theorem, manifolds and submanifolds, tangent and cotangent bundles, transversality, flows and vector fields, Frobenius Theorem, vector bundles, tensors and differential forms, Sard's Theorem, introduction to Lie groups. Pre-reqs: MATH 1060, MATH 1140 and preferably MATH 1410 and undergraduates require permission from the instructor.

MATH 2210. Real Function Theory.

Real numbers, outer measures, measures, Lebesgue measure, integrals of measurable functions, Holder and Minkowski inequalities, modes of convergence, L^p spaces, product measures, Fubini's Theorem, signed measures, Radon-Nikodym theorem, dual space of L^p and of C , Hausdorff measure.

MATH 2220. Real Function Theory.

The basics of Hilbert space theory, including orthogonal projections, the Riesz representation theorem, and compact operators. The basics of Banach space theory, including the open mapping theorem, closed graph theorem, uniform boundedness principle, Hahn-Banach theorem, Riesz representation theorem (pertaining to the dual of $C_0(X)$), weak and weak-star topologies. Various additional topics, possibly including Fourier series, Fourier transform, ergodic theorems, distribution theory, and the spectral theory of linear operators.

MATH 2250. Complex Function Theory.

Introduction to the theory of analytic functions of one complex variable. Content varies somewhat from year to year, but always includes the study of power series, complex line integrals, analytic continuation, conformal mapping, and an introduction to Riemann surfaces.

MATH 2260. Complex Function Theory.

See Complex Function Theory (MATH 2250) for course description.

MATH 2370. Partial Differential Equations.

The theory of the classical partial differential equations; the method of characteristics and general first order theory. The Fourier transform, the theory of distributions, Sobolev spaces, and techniques of harmonic and functional analysis. More general linear and nonlinear elliptic, hyperbolic, and parabolic equations and properties of their solutions, with examples drawn from physics, differential geometry, and the applied sciences. Semester II concentrates on special topics chosen by the instructor.

MATH 2380. Partial Differential Equations.

The theory of the classical partial differential equations; the method of characteristics and general first order theory. The Fourier transform, the theory of distributions, Sobolev spaces, and techniques of harmonic and functional analysis. More general linear and nonlinear elliptic, hyperbolic, and parabolic equations and properties of their solutions, with examples drawn from physics, differential geometry, and the applied sciences. Semester II of this course concentrates on special topics chosen by the instructor.

MATH 2410. Topology.

An introduction to algebraic topology. Topics include fundamental group, covering spaces, simplicial and singular homology, CW complexes, and an introduction to cohomology. Pre-reqs: MATH 1410, MATH 1530, and MATH 1010 and/or MATH 1130 and undergraduates require permission from the instructor.

MATH 2420. Algebraic Topology.

This is a continuation of MATH 2410. Topics include cohomology, cup products, Poincaré duality, and other topics chosen by the instructor.

MATH 2450. Exchange Scholar Program.**MATH 2510. Algebra.**

Basic properties of groups, rings, fields, and modules. Topics include: finite groups, representations of groups, rings with minimum condition, Galois theory, local rings, algebraic number theory, classical ideal theory, basic homological algebra, and elementary algebraic geometry. Pre-reqs: MATH 1530 and MATH 1540 and undergraduates require permission from the instructor.

MATH 2520. Algebra.

See Algebra (MATH 2510) for course description. Pre-reqs: MATH 2510 and undergraduates require permission from the instructor.

MATH 2530. Number Theory.

Introduction to algebraic and analytic number theory. Topics covered during the first semester include number fields, rings of integers, primes and ramification theory, completions, adeles and ideles, and zeta functions. Content of the second semester varies from year to year; possible topics include class field theory, arithmetic geometry, analytic number theory, and arithmetic K-theory. Pre-reqs: MATH 2510 and undergraduates require permission from the instructor.

MATH 2540. Number Theory.

See Number Theory (MATH 2530) for course description.

MATH 2630. Probability.

Introduces probability spaces, random variables, expectation values, and conditional expectations. Develops the basic tools of probability theory, such fundamental results as the weak and strong laws of large numbers, and the central limit theorem. Continues with a study of stochastic processes, such as Markov chains, branching processes, martingales, Brownian motion, and stochastic integrals. Students without a previous course in measure theory should take MATH 2210 (or APMA 2110) concurrently.

MATH 2640. Probability.

See MATH 2630 for course description.

MATH 2710A. Probability, Quantum Field Theory, and Geometry.**MATH 2710B. Solitary Waves.****MATH 2710C. Gluing Constructions in Differential Geometry.****MATH 2710D. Lie Groups and Lie Algebras.****MATH 2710E. Arithmetic Groups.****MATH 2710F. Stable Homotopy Theory.**

No description available.

MATH 2710H. Topics in Complex and p-adic Dynamics.

No description available.

MATH 2710I. Topics in Effective Harmonic Analysis.

Graduate topics course in Harmonic Analysis.

MATH 2710P. Harmonic Analysis on Polytopes and Cones.

Graduate Topics course in harmonic analysis.

MATH 2710R. Problems of the Uncertainty Principle in Harmonic Analysis.

Graduate Topics course in Harmonic Analysis.

MATH 2710T. Random Walks, Spanning Trees, and Abelian Sandpiles.

This is an advanced level discussion seminar for specific topics in probability. We will study random walks on networks, the uniform spanning tree model, and the abelian sandpile model of self-organized criticality, and their connections to one another. Using these connections, we will derive properties of these objects on large graphs. We will also cover related topics such as the random walk loop soup.

MATH 2720A. Topics in Harmonic Analysis.**MATH 2720B. Multiple Dirichlet Series.****MATH 2720C. Curves on Surfaces and the Classification of Finitely Generated Kleinian Groups.**

This is a course in the study of geometry and topology of hyperbolic 3-manifolds.

MATH 2720D. Piecewise Isometric Maps.

This class will cover a variety of topics, all more or less related to dynamical systems that are defined by piecewise isometric maps. Topics may include: polygonal billiards and flat cone surfaces; outer billiards; interval exchange maps; The Gauss map and continued fractions; aperiodic tilings, such as the Penrose tiling; cut and paste theorems about polyhedra; and Ashwin's conjecture about piecewise rotation maps. A fairly large part of the class will be devoted to the explanation of the instructor's proof of the Moser-Neumann conjecture for outer billiards. For this part, the instructor will use his book on the subject. For other parts of the course, a variety of sources will be used.

MATH 2720E. Advanced Topics in Mathematics.**MATH 2720F. Topics in Geometric Analysis.**

No description available.

MATH 2720G. Introduction to Hodge Structures.

No description available.

MATH 2720H. Discrete Groups, Ergodic Theory and Hyperbolic Geometry.

No description available.

MATH 2720I. Automorphic Representations for $GL(2)$.

Graduate topics course in automorphic representations for $GL(2)$.

MATH 2720N. Groups Acting on Trees.

This course will be an introduction to geometric group theory from the viewpoint of groups acting on trees. Some topics that may be covered included Bass-Serre theory, R-trees and the Rips machine and groups acting on quasi-trees.

MATH 2720O. Equivariant Homotopy Theory.

This course will serve as an introduction to equivariant homotopy theory, with an emphasis on intuition and with a grounding in concrete computations. We will begin with the homotopy theory of equivariant spaces, seeing what can be said here that mirrors the non-equivariant cases, before introducing stabilization and discussing the kinds of problems stabilization works to solve. Here, we have lots of choices for how we stabilize, and we will spend a little time discussing this and the consequences. Having developed the foundations, the end of the course will focus on student-led presentations on applications of equivariant homotopy theory.

MATH 2720P. Stability Problems in Non-collisional Kinetic Theory.

We will cover the local and global well-posedness for solutions to the Vlasov-Poisson problem, consider steady solution and move on to their stability, starting with the stability of vacuum, we will move on to homogeneous equilibrium and the connection to Landau

MATH 2970. Preliminary Exam Preparation.

No description available.

MATH 2980. Reading and Research.

Independent research or course of study under the direction of a member of the faculty, which may include research for and preparation of a thesis. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

MATH 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

MATH XLIST. Courses of Interest to Students Majoring in Mathematics.**Spring 2026**

The following courses may be taken for credit by graduate students majoring in Mathematics. Please check with the sponsoring department for times and locations.

Applied Mathematics

AMPA 2240 Partial and Differential Equations Applied

Medieval Studies

The program in Medieval Studies offers a concentration in Medieval Cultures with two tracks with distinct foci: one in Medieval Cultures and the other in Late Antique Cultures. **Medieval Cultures** focuses on the 6th-15th centuries, combining interdisciplinary perspectives with in-depth study of one or two related disciplines.

Late Antique Cultures deals with the 3rd-9th centuries, when ancient cultural forms were still in place but medieval cultures were beginning to take shape simultaneously. The first undergraduate degree of its kind in this country, Late Antique Cultures studies the changing relation of cultural practices, social patterns, political and economics forms, and artistic and literary traditions in this important transition period.

A traditional area of study in Medieval Cultures is Western Europe in the High Middle Ages, but students are encouraged to work comparatively in Byzantine, Islamic, Judaic, Slavic, and/or East Asian cultures in the middle ages.

For additional information, please visit the department's website: http://www.brown.edu/Departments/Medieval_Studies/

Medieval Cultures Concentration Requirements

The program in Medieval Studies offers a concentration in Medieval Cultures with two tracks with distinct foci: one in Medieval Cultures and the other in Late Antique Cultures. Medieval Cultures focuses on the 6th-15th

centuries, combining interdisciplinary perspectives with in-depth study of one or two related disciplines.

Late Antique Cultures deals with the 3rd-9th centuries, when ancient cultural forms were still in place but medieval cultures were beginning to take shape simultaneously. The first undergraduate degree of its kind in this country, Late Antique Cultures studies the changing relation of cultural practices, social patterns, political and economics forms, and artistic and literary traditions in this important transition period.

A traditional area of study in Medieval Cultures is Western Europe in the High Middle Ages, but students are encouraged to work comparatively in Byzantine, Islamic, Judaic and/or Slavic cultures in the middle ages.

Medieval Cultures Track

It is recommended that prospective concentrators take the introductory course, Medieval Perspectives, during their freshman or sophomore year.

Requirements

Ten courses approved by the Program in Medieval Studies, including two courses in medieval history and one 1000- or 2000-level course that uses primary texts in a medieval language other than Middle English. Interested students are invited to discuss their plans with an appropriate faculty member of the Program. A concentration proposal should be prepared in consultation with the faculty advisor and submitted to the Program Chair for approval.

JUDS 0050M	Difficult Relations? Judaism and Christianity from the Middle Ages until the Present

GREK 2110F	Greek Palaeography and Premodern Book Cultures
ENGL 2360Q	Manuscript, Image, and the Middle English Text

Honors

This is awarded to students who present a meritorious honors thesis in addition to completing the required courses of the concentration. The thesis permits the student to synthesize various disciplines or interests, or to pursue a new interest in greater depth. To be eligible for Honors, candidates must complete a minimum of six approved courses in Medieval Studies by the end of their third year with more grades of A than B. Students should apply for admission to Honors and should meet with their faculty advisor(s) no later than spring of the junior year to plan the thesis project. Accepted candidates write the thesis in a two-semester course sequence under the supervision of a director and second reader drawn from the Medieval Studies faculty.

Interested students should contact the concentration advisor for further details or consultation (863-1994).

Late Antique Cultures Track

One course in Roman history:	1
CLAS 1310	Roman History I: The Rise and Fall of an Imperial Republic
CLAS 1320	Roman History II: The Roman Empire and Its Impact (recommended)
One class in medieval history	1
One course at the advanced level (numbered at least 1000) in one approved language	1
Six other courses drawn from appropriate offerings and with the approval of the concentration advisor. These courses should support a concentrational area of special interest.	6

Total Credits **9**

¹ The language in most cases will be Latin, but students will present different competencies and interests; other languages, such as Greek, Hebrew, or one of the medieval vernaculars can be substituted for Latin, with the approval of the concentration advisor and in conjunction with a clearly articulated program of study.

Under the supervision of the director of the program, students may choose courses from the following:

CLAS 0660	The World of Byzantium
CLAS 1120G	The Idea of Self
CLAS 1120V	The Age of Constantine: The Roman Empire in Transition
CLAS 1750L	Erotic Desire in the Premodern Mediterranean
COLT 0510K	The 1001 Nights
COLT 1813P	Captive Imaginations: Writing Prison in the Middle Ages
ENGL 0100D	Matters of Romance
ENGL 0150C	The Medieval King Arthur
ENGL 0300F	Beowulf to Aphra Behn: The Earliest British Literatures

ENGL 0310F	Prose Sagas of the Medieval North
ENGL 1310T	Chaucer
ENGL 1310V	Chaucer: The Canterbury Tales
ENGL 1311H	Sagas Without Borders: Multilingual Literatures of Early England
ENGL 1311L	From Mead-Hall to Mordor: The Celtic and Germanic Roots of Tolkien's Fiction
ENGL 1360F	Quest, Vision, Diaspora: Medieval Journey Narratives
ENGL 1360H	Introduction to the Old English Language
ENGL 1360J	Middle English Literature
ENGL 1360U	Europe in the Vernacular
ENGL 1361D	Women's Voices in Medieval Literature

Courses

MDVL 0015. Sacred Stories (RELS 0015).

Interested students must register for RELS 0015.

MDVL 0024. Arts of Asia: Beginnings to 1300 (HIAA 0024).

Interested students must register for HIAA 0024.

MDVL 0025. Wealth: Religious Approaches (RELS 0025).

Interested students must register for RELS 0025.

MDVL 0041. The Architectures of Islam (HIAA 0041).

Interested students must register for HIAA 0041.

MDVL 0050M. Difficult Relations? Judaism and Christianity from the Middle Ages until the Present (JUDS 0050M).

Interested students must register for JUDS 0050M.

MDVL 0063. Antisemitism: A History (JUDS 0063).

Interested students must register for JUDS 0063.

MDVL 0089. Jews and Muslims: Their Contacts through the Ages (RELS 0089).

Interested students must register for RELS 0089.

MDVL 0100D. Matters of Romance (ENGL 0100D).

Interested students must register for ENGL 0100D.

MDVL 0110. Christianity (RELS 0110).

Interested students must register for RELS 0110.

MDVL 0150. Islam: An Introduction (RELS 0150).

Interested students must register for RELS 0150.

MDVL 0150B. The Philosopher's Stone: Alchemy From Antiquity to Harry Potter (HIST 0150B).

Interested students must register for HIST 0150B.

MDVL 0150C. The Medieval King Arthur (ENGL 0150C).

Interested students must register for ENGL 0150C.

MDVL 0150E. Skill: From the Medieval Workshop to the Maker Movement (AMST 0150E).

Interested students must register for AMST 0150E.

MDVL 0290D. Women, Sex and Gender in Islam (RELS 0290D).

Interested students must register for RELS 0290D.

MDVL 0300F. Beowulf to Aphra Behn: The Earliest British Literatures (ENGL 0300F).

Interested students must register for ENGL 0300F.

MDVL 0300L. The Global Middle Ages (ENGL 0300L).

Interested students must register for ENGL 0300L.

MDVL 0300M. Medieval Gender (ENGL 0300M).

Interested students must register for ENGL 0300M.

MDVL 0310F. Prose Sagas of the Medieval North (ENGL 0310F).

Interested students must register for ENGL 0310F.

MDVL 0310G. Gender and Genre in Medieval Celtic Literatures (ENGL 0310G).

Interested students must register for ENGL 0310G.

MDVL 0321. Toward a Global Late Antiquity: 200-800 CE (HIAA 0321).

Interested students must register for HIAA 0321.

MDVL 0360. The Body: Medieval Perspectives.

In this course, we will explore bodies from a wide range of disciplines in medieval studies. The body has been always an object of imagination, literature, science, philosophy, and religion, it is the vehicle of both the divine and the profane, and it is at the center of debates on sexuality, gender identities, race, and politics. In this course, we look at how different views on the body and on sexuality developed and changed throughout the medieval period and how they influenced and were influenced by the religious doctrines, medical theories, and the intellectual environment of different groups of people. Finally, we will explore bodies both physical and metaphorical.

MDVL 0410. Christianity in Late Antiquity (RELS 0410).

Interested students must register for RELS 0410.

MDVL 0415. Ancient Christian Culture (RELS 0415).

Interested students must register for RELS 0415.

MDVL 0420. Sacred Bodies (RELS 0420).

Interested students must register for RELS 0420.

MDVL 0432. Pilgrimage Art and Architecture in the Middle Ages (HIAA 0432).

Interested students must register for HIAA 0432.

MDVL 0460. Muslims, Jews and Christians in Medieval Iberia (HIAA 0460).

Interested students must register for HIAA 0460.

MDVL 0510K. The 1001 Nights (COLT 0510K).

Interested students must register for COLT 0510K.

MDVL 0521A. Christianity in Conflict in the Medieval Mediterranean (HIST 0521A).

Interested students must register for HIST 0521A.

MDVL 0600. Literary Worlds of Late Antiquity (CLAS 0600).

Interested students must register for CLAS 0600.

MDVL 0620. Muslims, Jews, and Christians in Medieval Iberia.

The cultural diversity of medieval Spain and Portugal is proclaimed by their Christian cathedrals, Islamic palaces, and Jewish synagogues. The three distinct cultures that produced these buildings lived together for centuries in medieval Iberia, sometimes in peace, sometimes not. This *convivencia* of Jews, Muslims, and Christians will be examined from the perspectives of literature, art, architecture, archaeology and history.

MDVL 0640. Dying to Be With God: Jihad, Past and Present (RELS 0640).

Interested students must register for RELS 0640.

MDVL 0660. The World of Byzantium (CLAS 0660).

Interested students must register for CLAS 0660.

MDVL 0681. Great Jewish Books (JUDS 0681).

Interested students must register for JUDS 0681.

MDVL 0682. How Bible Became Holy (JUDS 0682).

Interested students must register for JUDS 0682.

MDVL 0683. Jews and Money (JUDS 0683).

Interested students must register for JUDS 0683.

MDVL 0710D. History of the Spanish Language (HISP 0710D).

Interested students must register for HISP 0710D.

MDVL 0711L. The Quran and its Readers (COLT 0711L).

Interested students must register for COLT 0711L.

MDVL 0750E. Topics in Hispanic Culture and Civilization (HISP 0750E).

Interested students must register for HISP 0750E.

MDVL 0750N. Muslims, Christians, and Jews in Medieval Spain (HISP 0750N).

Interested students must register for HISP 0750N.

MDVL 0812H. Literary Bestsellers of the Islamic World (COLT 0812H).

Interested students must register for COLT 0812H.

MDVL 0910. From Darkness to Light: Medieval and Renaissance Music (MUSC 0910).

Interested students must register for MUSC 0910.

MDVL 0980G. The Search for King Arthur (HIST 0621B).

Interested students must register for HIST 0621B.

MDVL 1010. Dante in English Translation: Dante's World and the Invention of Modernity (ITAL 1010).

Interested students must register for ITAL 1010.

MDVL 1019. The Cathedral as a Living Object (HIAA 1019).

Interested students must register for HIAA 1019.

MDVL 1020. Decameron: Technologies of Representation, Medieval to Modern (ITAL 1020).

Interested students must register for ITAL 1020.

MDVL 1020A. Boccaccio's Decameron (ITAL 1020).

Interested students must register for ITAL 1020.

MDVL 1030. The Long Fall of the Roman Empire (HIST 1030).

Interested students must register for HIST 1030.

MDVL 1100C. Medieval Arabic Philosophy (PHIL 1100C).

Interested students must register for PHIL 1100C.

MDVL 1110B. Augustine, Confessions (LATN 1110B).

Interested students must register for LATN 1110B.

MDVL 1110F. Fortunatus (LATN 1110F).

Interested students must register for LATN 1110F.

MDVL 1110G. En Marge: Exilés et Hors-la-Loi au Moyen Age (FREN 1110G).

Interested students must register for FREN 1110G.

MDVL 1110H. Literature at the Court of Charlemagne (LATN 1110H).

Interested students must register for LATN 1110H.

MDVL 1110L. Medieval Latin Lyric (LATN 1110L).

Interested students must register for LATN 1110L.

MDVL 1110Q. Greek Erotic Literature: From Plato to the Medieval Romances (GREK 1110Q).

Interested students must register for GREK 1110Q.

MDVL 1110T. Rhetors and Philosophers: Intellectual Thought and Sophistic Style in the Ancient World (GREK 1110T).

Interested students must register for GREK 1110T.

MDVL 1120C. Survey of Late and Medieval Latin (LATN 1120C).

Interested students must register for LATN 1120C.

MDVL 1120D. Alcuin (LATN 1120D).

Interested students must register for LATN 1120D.

MDVL 1120G. The Idea of Self (CLAS 1120G).

Interested students must register for CLAS 1120G.

MDVL 1120V. The Age of Constantine: The Roman Empire in Transition (CLAS 1120V).

Interested students must register for CLAS 1120V.

MDVL 1205. The Long Fall of the Roman Empire (HIST 1205).

Interested students must register for HIST 1205.

MDVL 1210A. The Viking Age (HIST 1210A).

Interested students must register for HIST 1210A.

MDVL 1210C. History of the Spanish Language (HISP 1210C).

Interested students must register for HISP 1210C.

MDVL 1210E. History of Romance Languages (HISP 1210E/FREN 1020B).

Interested students must register for HISP 1210E or FREN 1020B.

MDVL 1210F. History of the Spanish Language (HISP 1210F).
Interested students must register for HISP 1210F.

MDVL 1211. Crusaders and Cathedrals, Deviants and Dominance: Europe in the High Middle Ages (HIST 1211).
Interested students must register for HIST 1211.

MDVL 1211A. Imperial Diadem to Papal Tiara: Analyzing the Sources for History of Europe, 476 to 1215(HIST 1211A).
Interested students must register for HIST 1211A.

MDVL 1213. Memories of the Medieval in the Age of White Supremacy(HIST 1213).
Interested students must register for HIST 1213.

MDVL 1220. Byzantine Art and Archaeology: Material Stories of a Christian Empire (ARCH 1220).
Interested students must register for ARCH 1220.

MDVL 1260D. Living Together: Muslims, Christians, and Jews in Medieval Iberia (HIST 1260D).
Interested students must register for HIST 1260D.

MDVL 1280. Death from Medieval Relics to Forensic Science (HIST 1280).
Interested students must register for HIST 1280.

MDVL 1300. Ancient Christianity and the Sensing Body (RELS 1300).
Interested students must register for RELS 1300.

MDVL 1310E. A Classical Islamic Education: Readings in Arabic Literature (COLT 1310E).
Interested students must register for COLT 1310E.

MDVL 1310T. Chaucer (ENGL 1310T).
Interested students must register for ENGL 1310T.

MDVL 1310V. Chaucer: The Canterbury Tales (ENGL 1310V).
Interested students must register for ENGL 1310V.

MDVL 1311E. History of the English Language (ENGL 1311E).
Interested students must register for ENGL1311E.

MDVL 1311H. Sagas Without Borders: Multilingual Literatures of Early England (ENGL 1311H).
Interested students must register for ENGL 1311H.

MDVL 1311L. From Mead-Hall to Mordor: The Celtic and Germanic Roots of Tolkien's Fiction (ENGL 1311L).
Interested students must register for ENGL 1311L.

MDVL 1311P. Medieval Drama (ENGL 1311P).
Interested students must register for ENGL 1311P.

MDVL 1325C. The Virgin Mary in Christian Tradition (RELS 1325C).
Interested students must register for RELS 1325C.

MDVL 1325D. Desire and the Sacred (RELS 1325D).
Interested students must register for RELS 1325D.

MDVL 1325E. Ecotheology in Ancient Christianity (RELS 1325E).
Interested students must register for RELS 1325E.

MDVL 1330A. Life/After Apst Paul-RELS1330A.
Interested students must register for RELS 1330A.

MDVL 1330T. El amor en español (HISP 1330T).
Interested students must register for HISP 1330T.

MDVL 1360F. Quest, Vision, Diaspora: Medieval Journey Narratives (ENGL 1360F).
Interested students must register for ENGL 1360F.

MDVL 1360H. Introduction to the Old English Language (ENGL 1360H).
Interested students must register for ENGL 1360H.

MDVL 1360J. Middle English Literature (ENGL 1360J).
Interested students must register for ENGL 1360J.

MDVL 1360U. Europe in the Vernacular (ENGL 1360U).
Interested students must register for ENGL 1360U.

MDVL 1361D. Women's Voices in Medieval Literature (ENGL 1361D).
Interested students must register for ENGL 1361D.

MDVL 1361J. Seminar in Old Norse-Icelandic Language and Literature (ENGL 1361J).
Interested students must register for ENGL 1361J.

MDVL 1361K. Seminar in the Old English Language II (ENGL 1361K).
Interested students must register for ENGL 1361K.

MDVL 1361Q. Medieval Race (ENGL 1361Q).
Interested students must register for ENGL 1361Q.

MDVL 1401. Objects of Devotion in the Middle Ages (HIAA 1401).
Interested students must register for HIAA 1401.

MDVL 1420B. Mirror for Romantic-COLT1420B.
Interested students must register for COLT 1420B.

MDVL 1430B. Art and Exemplarity in Medieval and Early Modern Literature (COLT 1430B).
Interested students must register for COLT 1430B.

MDVL 1440. The Ottomans: Faith, Law, Empire (HIST 1440).
Interested students must register for HIST 1440.

MDVL 1440B. Architecture of Solitude: The Medieval Monastery (HIAA 1440B).
Interested students must register for HIAA 1440B.

MDVL 1440E. The Body and the Senses in Medieval Art (HIAA 1440E).
Interested students must register for HIAA 1440E.

MDVL 1520. Pilgrimage and Sacred Travel in the Lands of Islam (RELS 1520).
Interested students must register for RELS 1520.

Interested students must register for RELS 1530.

MDVL 1530D. Islamic Sectarianism (RELS 1530D).
Interested students must register for RELS 1530D.

MDVL 1560A. Italy and the Mediterranean (HIAA 1560A).
Interested students must register for HIAA 1560A.

MDVL 1600. Astronomy Before the Telescope (ASYR 1600).
Interested students must register ASYR 1600.

MDVL 1610. The Divina Commedia: Inferno and Purgatorio (ITAL 1610).
Interested students must register for ITAL 1610.

MDVL 1620. The Divina Commedia: Paradiso (ITAL 1620).
Interested students must register for ITAL 1620.

MDVL 1630. The Talmud (JUDS 1630).
Interested students must register for JUDS 1630.

MDVL 1744. Difficult Relations? Judaism and Christianity from the Middle Ages until the Present (JUDS 1744).
Interested students must register for JUDS 1744.

MDVL 1750L. Erotic Desire in the Premodern Mediterranean (CLAS 1750L).
Interested students must register for CLAS 1750L.

MDVL 1801. Jewish Magic (JUDS 1801).
Interested students must register for JUDS 1801.

MDVL 1813P. Captive Imaginations: Writing Prison in the Middle Ages (COLT 1813P).
Interested students must register for COLT 1813P.

MDVL 1815. On the Edges of the Roman World (CLAS 1815).
Interested students must register for CLAS 1815.

MDVL 1835A. Unearthing the Body: History, Archaeology, and Biology at the End of Antiquity (HIST 1835A).
Interested students must register for HIST 1835A.

MDVL 1900Y. Medieval Manuscript Studies: Paleography, Codicology, and Interpretation (ENGL 1900Y).

Interested students must register for ENGL 1900Y.

MDVL 1963L. Barbarians, Byzantines, and Berbers: Early Medieval North Africa, AD 300-1050 (HIST 1963L).

Interested students must register for HIST 1963L.

MDVL 1963Q. Sex, Power, and God: A Medieval Perspective (HIST 1963Q).

Interested students must register for HIST 1963Q.

MDVL 1968M. The Worlds of Crusading (HIST 1968M).

Interested students must register for HIST 1968M.

MDVL 1970. Independent Study.

Tutorial instruction on an approved topic in Late Antique and/or Medieval cultures, supervised by a member of staff. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. May be repeated once for credit.

MDVL 1971U. Kabbalah: An Introduction to Jewish Mysticism (HMAN 1971U).

Interested students must register for HMAN 1971U.

MDVL 1972H. Sex, Power, and God: A Medieval Perspective (HIST 1972H).

Interested students must register for HIST 1972H.

MDVL 1975R. Religion from Below (HMAN 1975R).

Interested students must register for HMAN 1975R.

MDVL 1976R. Early Modern Globalization: Jewish Economic Activity, 1500-1800 (HIST 1976R).

Interested students must register for HIST 1976R.

MDVL 1979H. Prostitutes, Mothers, + Midwives: Women in Pre-modern Europe and North America (HIST 1979H).

Interested students must register for HIST 1979H.

MDVL 1990. Honors Thesis.

Independent research and writing on a topic of special interest to the student, under the direction of a faculty member. Required of candidates for honors. Permission should be obtained from the Director of the Program in Medieval Studies.

MDVL 2030B. History and Fiction: Literature of the 15th Century (HISP 2030B).

Interested students must register for HISP 2030B.

MDVL 2030D. Fifteenth-Century Sentimental Romances and Celestina (HISP 2030D).

Interested students must register for HISP 2030D.

MDVL 2040D. Arts du récit, 1100-1400 (FREN 2040D).

Interested students must register for FREN 2040D.

MDVL 2110F. Greek Palaeography and Premodern Book Cultures (GREK 2110F).

Interested students must register for GREK 2110F.

MDVL 2360Q. Manuscript, Image, and the Middle English Text (ENGL 2360Q).

Interested students must register for ENGL 2360Q.

MDVL 2520T. Critical Disability Studies (Medieval and Early Modern) (HISP 2520T).

Interested students must register for HISP 2520T.

MDVL 2970A. New Perspectives on Medieval History (HIST 2970A).

Interested students must register for HIST 2970A.

MDVL 2971I. New Perspectives on Medieval History (HIST 2971I).

Interested students must register for HIST 2971I.

Center for Middle East Studies

The Center for Middle East Studies (CMES) at Brown University promotes greater understanding of the cultural, social, and political dynamics that have impacted and continue to impact the Middle East and the people who inhabit it. MES seeks to increase knowledge and informed discussion

of the region and its societies through research, teaching, and public engagement.

Since 2012, Middle East Studies has grown from an undergraduate concentration into one of the top centers in the country. Eschewing the hothouse legacy structures of the conventional Oriental and Area Studies models, CMES is driven by thematic research initiatives that tap into Brown's tradition of interdisciplinary, critical, and engaged scholarship. Organized through partnerships, CMES seeks to integrate Middle East and Islamic Studies into the larger streams of intellectual life at Brown University by building a cutting-edge research community, producing innovative programming, and offering an exciting array of courses and opportunities for undergraduate and graduate students.

For more information please visit: <http://middleeastbrown.org> (<http://middleeastbrown.org/>)

Middle East Studies Concentration Requirements

The concentration in Middle East Studies (MES) seeks to build a strong, interdisciplinary understanding of historical and contemporary issues within the Middle East, broadly defined. Requirements are intentionally flexible to accommodate the focused interests of students in understanding the diverse dynamics, histories, and societies of this region. A variety of courses from departments across the University, addressing subjects from antiquity to the present day, expose students to methods and materials of different disciplines and help them build a framework for understanding the Middle East in historical and contemporary context. Concentration requirements are structured around four major cornerstones: language, foundational knowledge and methods, multidisciplinary area studies, and research.

A semester-by-semester roster of courses eligible for MES elective credit can be found on the Center for Middle East Studies (<http://middleeastbrown.org/>) website.

Foundational Course: All MES concentrators are expected to take the following foundational course. The foundational course requirement cannot be fulfilled via independent study, study abroad, or transfer credits.

HIST 1968A	Approaches to the Middle East	5
Electives: Students must take at least five elective courses chosen in consultation with the Director of Undergraduate Studies (DUS) from among the courses listed by MES as approved electives on its website (https://watson.brown.edu/cmec/academics/undergraduate-concentration/course-listing/all-courses). Students may apply up to two Middle Eastern language credits (beyond those that fulfill the language requirement: see below) to the MES electives requirement. To allow for exposure of different disciplinary approaches to the Middle East, students must take at least one course in the humanities (offered within the departments of Archaeology and the Ancient World, Classics, Comparative Literature, History of Art and Architecture, Modern Culture and Media, Philosophy, or Religious Studies) and at least one course in the social sciences (offered within the departments of Anthropology, History, International Relations, Political Science, Sociology, or Urban Studies). Some examples of recent courses that would fulfill these requirements include:		
Humanities		
ARCH 0150	Introduction to Egyptian Archaeology and Art	
ARCH 0230	Myriad Mediterraneans: Archaeology, Representation and Decolonization	
ARCH 1630	Fighting Pharaohs: Ancient Egyptian Warfare	
ASYR 0300	Babylon: Myth and Reality	
ASYR 0310	Thunder-gods and Dragon-slayers: Mythology + Cultural Contact - Ancient Mediterranean and Near East	
ASYR 0320	The Origin(s) of Science	

ASYR 0800	The Cradle of Civilization? An Introduction to the Ancient Near East	RELS 1500	From Moses to Muhammad: Prophets of the Ancient World
ASYR 1100	Imagining the Gods: Myths and Myth-making in Ancient Mesopotamia	RELS 1530B	Heresy and Orthodoxy in Islamic Thought
ASYR 1300	The Age of Empires: The Ancient Near East in the First Millennium BC	RELS 1530H	Problems in Islamic Studies: Shaking up the Study of the Islamic World
ASYR 1600	Astronomy Before the Telescope	TKSH 0720A	Understanding Modern Turkey Through Film and Literature
BHBR 0100	Introduction to Biblical Hebrew	TKSH 0720B	Istanbul, Global Metropolis
BHBR 0200	Readings in Biblical Hebrew	Social Sciences:	
CLAS 0660	The World of Byzantium	ANTH 1150	Middle East in Anthropological Perspective
CLAS 1230	The Persian Empire and Achaemenid Culture	HIST 0244	Understanding the Middle East: A Modern History
COLT 0510K	The 1001 Nights	HIST 0150D	Refugees: A Twentieth-Century History
COLT 0610Q	Before Wikipedia	HIST 0246	The Ottoman Empire and Modern Middle East
COLT 0711L	The Quran and its Readers	HIST 1202	Formation of the Classical Heritage: Greeks, Romans, Jews, Christians, and Muslims

TKSH 0300	Intermediate Turkish
TKSH 0400	Intermediate Turkish II
TKSH 0500	Advanced Turkish I
TKSH 0600	Advanced Turkish II Online
Through advanced reading and writing courses in that language. Recent examples include:	
COLT 1310J	The Arab Renaissance
COLT 1431B	Modern Arabic Poetry
JUDS 1810	Israeli Literature in Hebrew
- Through taking courses in a second Middle Eastern language. - Or through courses in a non-Middle Eastern language to be used in a senior capstone project (for example, Spanish for the study of Andalusia or French for the study of North Africa).	

Capstone/Honors Project: MES requires all concentrators to conduct a capstone project within their senior year (i.e., in their last two semesters before graduation). The purpose of the capstone is to synthesize and apply the skills and knowledge that MES concentrators have acquired through the MES curriculum—including disciplinary perspectives, methodological and theoretical approaches, background in the historical and contemporary dynamics of the region, and language competency—to particular interests developed through the concentration. Capstones offer students the opportunity to integrate and build upon their experiences within the concentration, while demonstrating intellectual creativity, research skills, and effective communication, and should serve in some sense as a culmination of or reflection on what one has gained in the concentration. All students are expected to present their capstone research in the final semester before graduation. Presentations of honors theses will be approximately twenty minutes long, and those of non-honors capstone projects will be approximately ten minutes long, both followed by a question-and-answer session. Capstone projects must fulfill the following requirements:

- Must be taken in the final two semesters before graduation (excluding summer and winter sessions)
- Must incorporate research in a Middle Eastern language.
- Must be approved or overseen by a MES or MES-affiliated faculty member.
- Must be presented in the final semester before graduation.

Capstones can take one of three forms:

- A Middle East–focused research paper of at least 20 pages for an existing concentration-eligible (MES-coded or X-Listed) course, undertaken with the permission and supervision of the instructor.
- An independent study or project (artistic, research, or otherwise), approved by the DUS and supervised by at least one faculty member for at least one semester under the MES 1970 - Independent Study designation.
- A two-semester honors thesis, completed under the supervision of a primary reader (who is an MES or MES-affiliated faculty member) and a secondary reader (who can be from other Brown departments and programs), and in coordination with the DUS.⁴

- ¹ For concentrators graduating before 2023, courses designated “Foundational Courses” under previous concentration requirements may be used to fulfill this requirement. Please meet with the MES Director of Undergraduate Studies (DUS) to discuss any such arrangements.
 - ² Previously HIST 1968 or HIST 1968A: Approaches to the Middle East. Any student who has taken HIST 1968 or HIST 1968A: Approaches to the Middle East, will have fulfilled this requirement.
 - ³ Concentrators are encouraged to discuss options for fulfilling language requirements with the DUS.
 - ⁴ Two semesters of Independent Study (MES 1970 & MES 1971) are required for honors and will raise the number of required courses to 13. One of these Independent Study courses should take the form of a thesis writing workshop supervised by the DUS or other designated MES faculty during the first semester of thesis writing. Students must declare their intention to write an honors thesis and submit a thesis prospectus (to include a thesis proposal, research plan, proposed thesis outline, initial literature review, and initial bibliography) by April 25th of their junior year (for May graduates) or November 20th of their junior year (for December graduates).
- * **Study Abroad**
Concentrators may apply up to two courses per semester of study abroad toward their MES concentration requirements, with a maximum of four courses (for two semesters abroad). Students must meet with their advisors and have them sign off on their specific course selections prior to embarking upon their program. Study abroad transfer credits may only be applied toward fulfilling elective and language requirements. Study abroad transfer credit may not be used to fulfill foundational course requirements.
- ** **Dual Concentrators**
Middle East Studies concentrators may apply up to two courses that fulfill MES concentration requirements toward fulfilling the requirements of another concentration. Language courses do not count toward this two-course limit on overlapping courses.

Honors

Students may graduate with honors in MES by completing an undergraduate honors thesis in MES. To be eligible for honors, students will have earned an ‘A’ (or ‘S’ with distinction) in the majority of courses for the concentration and will have submitted a thesis prospectus and secured a faculty advisor by the end of their junior year. Honors theses are substantial research projects driven by a deep interest in engaging with a selected topic of study. They require a time commitment and coordination between students, advisors, and the DUS to ensure completion. Honors students will undertake two semesters of thesis writing in their senior year, the first in a thesis writing workshop (MES 1971) supervised by the DUS or other MES faculty, followed by a second semester of Independent Study (MES 1970) to complete the thesis under the guidance of the thesis advisor. This is typically done during senior year and will raise the total number of required courses to 12.

Courses

MES 0100. The Middle East: Cultures & Societies.

This course highlights major cultural, social, and political developments in the amorphous region known, since the 20th century, as the Middle East. Covering expanses of space and time, this course attends to a diversity of peoples and polities, and considers different regional concepts that include some or all of the territories normally included in the Middle East (including the Fertile Crescent, the Mediterranean world, the Indian Ocean world, the Arab world, and the Muslim world) and addresses the region's coherence in terms of shared historical and political experiences, religious and cultural references or practices, and/or socialities and ways of being.

MES 0155. Cultures of the Contemporary Middle East.

In our exploration of Middle Eastern social movements, this course addresses the role of culture and art in social change; the relationship between faith and politics; as well as the impact of national, regional, and transnational discourses on identity, ethics, and citizenship. The study of social movements in the region will address the impact of technology, media, women's rights and LGBT movements, as well as economic liberalization, entrepreneurship, and the politics of oil. Finally, we will trace the emergence and consequences of the "Arab Spring."

MES 0165. How Did We Get Here: Middle East City from Antiquity to the Present.

This course examines the origins, evolutions, and radical transformations of Middle Eastern cities. By combining essential and original texts in religion, law, and politics with studies of architectural form and urban morphology we explore the cultural significance and ethical claims from historically situated cities. From the ancient Levantine household to the contemporary Gulf megalopolis, analysis of the relationships between subtle and articulated cultural meanings and corresponding concrete architectural embodiments reveals rich depth in each case. While we might see ancient hierarchies long buried by modernity's desire for a capitalist city, our analysis shows they are very much alive and struggling.

MES 0170. Visual Expressions of Social Change in the Contemporary Middle East.

This course explores the relationship between the visual arts and social change in the contemporary Middle East. With a specific focus on visual art, architecture and cinema we examine how visual creativity expresses the desires of social and political groupings and, existing within historic traditions, give form and shape to larger social-political movements across the area. From the 20th century, we see the intertwining religious, political, and social movements, large and small, nationalist and separatist, embodied in visual expressions. This interdisciplinary course will uncover the iconographic origins of contemporary art to understand how visual expressions convey meanings in shaping our world.

MES 0750. Forced Displacement: History, Ecologies and Impacts.

Course covers the basis, processes and consequences of forced displacement in an interdisciplinary and historical perspective. Forced displacement is unintended mobility of humans in large groups who move out of their place of origin for extended periods or often permanently. It has played a vital role in shaping our modern world. Drivers of forced displacement have persisted while others subsided. Wars, religious persecution and targeting of specific ethnic groups displace millions annually. Forced displacement is implicated in the creation of nation states, altering group identities and organizing people, and the responses of the host community, the state and wider world.

MES 0825. From Blind Owls to Mute Dreams: A Introduction to Modern Iranian Literature (in translation).

This is a survey of the modern Persian literature of Iran (in translation) for students who have little to no background in the topic. Starting in the early twentieth century and continuing until the present day, we will examine the major themes and aesthetic techniques of some of the most important writers who have shaped modern Persian literature throughout the twentieth century, paying significant attention to the socio-political context and formal characteristics of texts. Prose-fiction (novels and short stories) will be the focus, also read a number of poems, essays and memoirs. All readings will be available in English translation.

MES 0850. The Wall, the Drone and the Tunnel-Theaters of Sovereignty and Resistance.

Israel/Palestine is a site for experimenting with technologies of security and warfare, including those serving resistance and insurgency. The seminar examines three technologies: drones used for collecting intelligence and "targeted killings;" heavily surveilled separation walls used to enforce a strict regime of movement; tunnels used by insurgency forces for undercover movement. We will study these technologies' modes of operation; the discourse that represent and justifies their actual deployment; the local and global economy of violence in which they are embedded; the system of state sovereignty which they enable or undermine; and the political regime which they help reproduce or destabilize.

MES 0950. Cultures, Societies and Resistance in the Arab World.

This course examines the manifestations of counter-hegemony, resistance and dissent in the Middle East and North Africa. It studies the ways in which dominant forms are countered in cultural production and every day cultural practices, analyzing how subcultures, social movements and individuals have negotiated with, subverted and resisted these forms of social and political hegemonies through the use of art forms such as writing, poetry, music, political film, political posters and pamphlets, performance art and public art and the mixed outcomes of many of these struggles. The readings cover major issues in cultural theory, cultural sociology, cultural studies.

MES 1000. Tradition and Protest: Persian and Iranian Music.

Examines Persian and Iranian musical approaches to tradition and protest. First half focuses on traditional Iranian music. Students will learn the basic cultural and musical traditions underpinning Persian/Iranian musical styles. Through directed reading and listening, and occasional in-class performance by the instructor, students will learn the primary characteristics of Iran's classical music traditions and instruments; relevant musical concepts and terminology, and develop critical listening skills. Second half examines how modern Iranian musicians are disrupting these traditional concepts as a form of protest, making the music relevant to modern listeners while fundamentally changing conceptions of classical poetry in the process.

MES 1001. Revolution and Poets: Content and Form in Iranian Poetry.

Explains classical rules of Persian poetry and development of poetic content by several different modern Iranian poets. Examines how modern poets such as Shamlou, Akhavan, and Forough have been influenced by Nima Yooshij, the father of modern poetry in Iran. We will explore different formalistic approaches to poetry in Iran from the 1960's to present, and examine various literary movements and their relation to the Islamic Revolution and post revolutionary context. We will examine the new postmodern poets from the 1990's to present and the ways in which classical form is repurposed to achieve social commentary in subversive ways.

MES 1050. Israel/Palestine: A Critical Lexicon.

This is an introductory course to the question of Israel/Palestine. The course uses a series of alphabetically ordered and carefully selected concepts as a way to cut through the dense history of the region and the conflicting forces that shape its present. From "Colonialism" to "Zionism", each concept will be surveyed with respect to its history, the pattern of its present usages, the discursive formations to which it belongs, and its political impact, taking into account the inevitable, conflicting ideological biases and discursive constraints of the many kinds of knowledge about Israel/Palestine.

MES 1051. Israel-Palestine: Public Humanities.

This seminar will engage current debates on heritage, traditions, and history in Israel-Palestine with a focus on shared as well as antagonistic cultural and artistic spheres. It will explore how contested narratives can produce diverse perspectives and positions with regard to past and current events. The focus will be on cultural productions in Israel-Palestine and on diasporic Israeli and Palestinian communities in Europe and the US. In addition, examples from the visual and performing arts, museums and public spaces, film and media will illustrate how cultural expressions and events can foster dialogue. Students will work individually and together to design and implement a public event for the Brown and larger Rhode Island community and beyond on the subject of Israel-Palestine, bridging the divides of the region's diverse ethnic and religious populations through cultural dialogue.

MES 1055. Zionism and some of its Jewish Critics: Political, Philosophical, and Theological Perspectives.

Zionism is an idea, an ideology, a national movement that sought to solve "the Jewish question" in Europe, a political project that morphed into a political regime, a mighty colonial force, a form of Jewish secularization and an engine for religious revival. As such Zionism has been accompanied with criticism from its inception. The first part of the seminar will study of Zionism through the eyes of some of the major thinkers who shaped its ideology and practices. The second part will look at Zionism through the eyes of some of its (more and less sympathetic) Jewish critics.

MES 1100. Between the River and the Sea: Political Concepts from Israel/Palestine.

This course will introduce some of the main aspects of the Israel-Palestine conflict, its history, and the recurring patterns of the unending violence that permeates it by paying close attention to some of the key concepts used to grasp and explicate the reality and history shared by those who were engaged in it. Our concepts – e.g., nationalism, colonialism, statelessness – will be drawn from the writings of engaged scholars, ideologues, and other participants. These concepts will be problematized twice: first, by the actors involved in the ongoing conflict who question their capacity to capture, illuminate, and make sense of the complex reality at stake, and second by us, as critical observers inquiring how these concepts have been used not only to understand and explain but to construct and reconstruct reality.

MES 1111. The Modern Middle East: Struggles for Power and Justice.

This course is an introduction to the modern Middle East, spanning from the 18th century to the present. It focuses on struggles—individual and collective—for power and justice. At times, these struggles overlap: when groups seek to overthrow the existing authority and install a more just one in its place. Other times, they diverge: when groups or individuals seize power for their own interests, or seek justice by reforming the existing order (rather than toppling it). These struggles illuminate the shifting material and ideological conditions within the Middle East over the past three centuries or so: in other words, over what are people struggling, and why? By focusing on struggles for power and justice, this course emphasizes the Middle East as a dynamic region shaped by numerous stakeholders and challengers, rather than a space with an essential or homogenous character.

MES 1120. Art, Culture, and Society in Tehran.

This course explores the city as physical and metaphorical space and aggregator of possibilities. It focuses on Tehran, in its historical, geographical, artistic and virtual specificity, and artists who have lived there, including: Kamal-al-molk (and his followers in the early twentieth century); artists associated with Saqqakhaneh (modern school of art) at mid-twentieth-century, artists of the Revolution and the Iran-Iraq war in the 1980s and 1990s, and contemporary urban and transnational artists. By examining urban participation, aesthetics, and politics in Tehran across more than a century, the course provokes critical reflection on experience and representations of urban space, citizenry and creativity.

MES 1150. Labor and the Long Downturn in the Middle East.

This course examines the question of labor in the contemporary Middle East. The 1970s saw a global economy defined increasingly by deindustrialization, intensified competition, financialization, and squeezes on profitability. For workers, these changes meant that technological development, agrarian change, debt, and increasing precarity have transformed who works, where they work, and the sorts of politics that work (or its absence) gives rise to. This course examines these wider concerns within the context of the Middle East. Through a focus on social history and ethnographic accounts, it illuminates the ways different groups of workers experience and grapple with these broader transformations.

MES 1151. Middle East in Anthropological Perspective (ANTH 1150).

Interested students must register for ANTH 1150.

MES 1170. Iranian Art: Sites and Sights.

This course introduces students to the modern and contemporary history of art in Iran, including architecture, visual art, cinema, theatre, and politics. It starts with the transition from the Qajar period (1781-1925) and its visual culture to the modern 20th-century nation-state, addressing: processes of urbanization; spread of modern technologies; revolutionary sentiment of 1979; displacement and formation of diasporic communities after the Islamic revolution; and the emergence of Internet technology in the 21st century. This historical backdrop informs investigation into artistic milieus, platforms, and the ever-changing notion of creativity. Course readings consist of excerpts from primary sources in addition to textbook assignments.

MES 1171. Ethics and Politics of Intimacy in the Middle East.

Intimacy is often a synonym for proximate, close relations, connected with the interior and the personal: sexual and romantic relations. It is associated with private embodied life, the realm of psychology, desires and emotions. Intimacy as an analytical concept in social sciences draws on these micro-level (private) meanings, but also introduces macro-level (public) socio-economic, cultural, and political dimensions, including power relations. This course explores the ethics and politics of intimacy in contemporary Middle Eastern societies. We examine these transformations in a comparative manner, including various countries (Afghanistan, Egypt, Jordan, Iraq, Israel, Lebanon, Palestine, Saudi Arabia, Syria, Tunisia, Turkey, UAE, etc.), though Iran will be our main geographical focus. We will discuss marriage, family, kinship, gender, and sexuality and evaluate the impact of modernity, globalization, capitalism, and individualism on shifting notions of romantic love and companionate marriage in Muslim societies.

MES 1172. Iranian Cinema: History, Aesthetics, and Politics.

Iranian cinema presents a striking paradox: while Iranians are often demonized globally, their films have garnered international acclaim for moral depth and humanistic vision. Drawing on Persian poetry, Sufism, and Islamic philosophy – while also influenced by modern movements like Italian neorealism and the French New Wave – Iranian cinema stands out for its sophistication and artistic originality. This course surveys its evolution from the 1960s to today, examining how major cultural and political events, from the 1979 Revolution to the Woman, Life, Freedom uprisings (2022–2023), have shaped cinematic expression. Students will explore themes of censorship, gender relations, sexualities, intimacy, love, and friendship, analyzing how filmmakers navigate moral and political constraints to create profound works of art. All films are subtitled; no knowledge of Persian required.

MES 1198. Reflections on "The Jewish Question".

In the mid-19th century, "the Jewish Question" became a galvanizing topic of debate among European thinkers with diverse political and theological orientations. In the wake of the French Revolution, and in an era of "questions" of minorities of all kinds, kindled by ideas of emancipation and equality, "the Jewish Question" centered on promoting or blocking Jewish "assimilation" and was driven by interpretations of Jewish otherness, the possibility of its transformation, and its meaning as a metonym for/ a symptom of a secularized civil society. The goal of this seminar is to become acquainted with the history of "the Jewish Question" to reframe it for the contemporary historical moment; to do so without adopting the terms of the 19th century's Question; and to understand the ways and meaning of asking "the Question" today without necessarily offering it any "solutions."

MES 1199. Anti-Semitism, Racism, Anti-Zionism: Debates, Contexts, Stakes.

Over the last two decades negative perceptions, conceptions, and treatment of Jews, and the effort to preempt and suppress them have been marked by fierce debates about "antisemitism." Everything about the term – what it designates, its historical, theological, and scientific origins, its current targets, how to trace and fight it, and its relation to racism, colonialism and anti-colonial struggles, anti-Zionism, and Islamophobia – is disputed among scholars, educators, and political actors, creating odd alliances and dividing old communities. The seminar offers a study of contemporary antisemitism in the context of these debates and their historical background, theoretical presuppositions, and political stakes.

MES 1200. Ways of Seeing: The Arab World in Global Perspective.

The course examines visual politics in contemporary Middle Eastern society and grapples with fundamental debates in the study of cultural politics and visual cultures of the Arab region in a global context. We will contextualise the region's contemporary visual cultures within wider debates and scholarship on the construction of subjectivities, the distribution of power, the formation of identity and belonging, and culture and representation. Emphasis is on translation and reception in a global context and transnational frame by focusing on how states and security, conflicts and displacements, social movements and revolution, aesthetics, art and global media are linked, characterized, analyzed.

MES 1221. Palestine: A Comparative Ethnic Studies Approach.

This course examines Palestine and the Palestinians through interdisciplinary ethnic studies optics and frameworks. The course begins by examining the Palestinian struggle from a historical and geographically contextual lens. It then engages the question of Palestine from an ethnic studies approach centering theories and ideas on indigenous sovereignty, transnational social movements, racial carcerality, sexual and gender politics, displacement and refugeehood, apartheid and international law. We will also examine Palestinian relationships with communities and causes of the global South in the past and present. Students with backgrounds training in Middle East studies, ethnic studies, and/or gender/sexuality studies are especially encouraged to enroll in this course. Students interested in intersectional and interdisciplinary to Middle East and ethnic studies are also encouraged to enroll. There are no prerequisites for this course.

MES 1222. Modern Palestinian History.

This course examines the origins of one of the longest running and most significant settler colonial realities in modern history. It explores social dynamics in late-Ottoman Palestine; the birth of the Zionist movement; the establishment of British imperial rule; the Palestinian revolt of 1936-39; the 1948 Nakba; the creation of the state of Israel; the dispossession of the Palestinian refugees; and the 1967 occupation and its aftermath. Students will consider questions of social, demographic, and cultural transformation as well as political dynamics. Using a range of primary sources, they will reflect upon the period in question on its own terms and search for the voices of its protagonists. This subject has attracted lively debate and contributed to major theoretical approaches such as post-colonialism and comparative settler-colonial studies. The course will engage these approaches and major historiographical debates in the field.

MES 1235. Policing and Imprisonment in the Modern Middle East.

Policing figured prominently in recent events, from the self-immolation of Tunisian street vendor Mohamed Bouazizi to the rise of the Islamic State. Repressive regimes relied heavily on police, prisons, and criminal law to maintain power and authority. This course examines recent uprisings and ongoing conflicts, and questions of state and non-state violence. Major topics are: the role of Islam in law and criminal justice; the imposition of European colonial rule; the rise of police states; the production and maintenance of a gendered social order; non-state and informal mechanisms of maintaining "law and order"; and the role of law and security.

MES 1240. Middle East as Global History: Comparing and Connecting Theories and Approaches.

This seminar explores a global history perspective to the Middle East and a Middle Eastern perspective to global history since the late eighteenth century to the twentieth century and beyond. This is a time in which shifting global orderings and ties between regions of the world become reconfigured around newly visible, large-scale processes and shifting flows of power: statesmen, thinkers, revolutions, war and migration render themselves to new forms of global imagination beyond imperialism and colonialism. The seminar intends to provide a rich expose on new trends in history writing focus on global history and transnational perspectives.

MES 1243. Understanding Palestine-Israel: Ideologies and Practices.

"Palestine-Israel" is a name designating a territory between the east shores of the Mediterranean Sea and the Jordan River. In addition to the two national movements that fight over this territory, the Jewish (Zionist) and the Palestinian, this land is a matter of ongoing engagement, investment, and entanglement for foreign powers, religious orders, and international organizations. This course will introduce main aspects of this ongoing struggle, its history, and its recurring patterns. Each of these perspectives will be part of what needs to be narrated and explained, not imposed as a framework for the narrative and the explanation at stake.

MES 1244. Orientalism and the Question of Palestine: Theory, History, Literature.

Edward Said's ground breaking work, *Orientalism*, was published in 1978 and soon became a founding moment for the field of postcolonial theory and a pivotal point of return within it. A year later, Said published *The Question of Palestine*. This was one of the first comprehensive accounts of the Palestinian condition as a stateless nation. The book's explicit goal was to present the Palestinian story and cause to an American and European audience, with a special effort to reach out to Jewish American intellectuals. The seminar first task will be to highlight and explore explicit and tacit links and divergences between the two books. The goal is to identify two, not entirely compatible frames for studying "Palestine," as a piece of land, a homeland, and above all a set of historically changing conditions of Jewish-Palestinian co-existence and co-habitation.

MES 1250. Palestinians and Kurds: The Condition of Statelessness.

This seminar seeks to achieve three interrelated goals: to introduce students to the condition of statelessness experienced by two ethnic groups in the Middle East, the Kurdish and Palestinian peoples; to examine the contours and potency of, and the problematics associated with, the concept of statelessness; and to offer the production and management of statelessness as a viable perspective for the study of the modern Middle East. We look for analogies and distinctions between the two cases, and qualify and multiply the condition of statelessness for each, guided by categories of Nation, State, Nationalism, Colonization, Settler Colonialism, Citizenship, and Precariousness.

MES 1265. Culture and Politics in the Modern Middle East.

This seminar examines the various cultural and artistic manifestations of protesting histories of violence in the Middle East. By studying the ways in which dominant understandings are countered in cultural production and everyday cultural practices, it will analyse how collective and personal memories have been appropriated by artists, writers and filmmakers throughout the region to protest social and political hegemonies. The readings cover major issues in cultural theory, cultural sociology, cultural studies and visual cultures. The seminar will theorize themes such as the aesthetics of resistance, memory, dissensus, social movements and global culture through specific case studies.

MES 1270. Histories of Watching and Surveying.

How are surveillance practices historically embedded in social fabric? How have surveillance technologies altered social life throughout history? This course explores these questions by mapping the complex ways that technologies and societies interact to produce security, fear, control, and vulnerability. Some of the areas covered include close-circuit television (CCTV) in public and quasi-public spaces, biometric technologies on the border, and a host of monitoring technologies in cyberspaces, workplaces, and the home. Readings are drawn from the critical theories in visual culture, science-fiction, and popular media.

MES 1290. War and Cultural Representation in the Modern Middle East.

This is an overview of contemporary Arabic and Persian literatures and cinemas through war in literature and film originating from the Eastern Arab World, Iran and Afghanistan. Using contemporary works of prose fiction, poetry and film, we interrogate the various ways in which the people of the region have grappled, through literature and film, with some of the most brutal conflicts that the world has witnessed in the late twentieth and early twenty-first centuries. We will explore the Lebanese Civil War, the Israeli-Palestinian conflict, the Iran-Iraq War, Iraq since 1991, Afghanistan since 1979 and the current Syrian Civil War. While this course is open all students it is especially geared towards students concentrating in MES and who have upper-level reading/ translations ability in Persian or Arabic. Students at the advanced language level will do translation in lieu of a second paper.

MES 1291. Jerusalem Divided: Politics and Cultural Heritage.

In 2016, UNESCO's director-general stated: "The heritage of Jerusalem is indivisible, and each of its communities has a right to the explicit recognition of their history and relationship with the city. To deny, conceal or erase any of the Jewish, Christian, or Muslim traditions, undermines the integrity of the site, and runs counter to the reasons that justified its inscription on the UNESCO World Heritage list." This reflects the reality of Jerusalem's Old City's intertwined historical, cultural, and religious legacies, but does not address the geopolitical conflict, in which ideological and territorial claims produce diverging heritage narratives. This seminar examines how Israeli, Palestinian, and international interests shape competing heritage narratives. It explores archaeological exploration, discovery, and interpretation in Jerusalem in the contexts of social, political, and religious debates from the mid-nineteenth century to the present, emphasizing its urban landscape.

MES 1299. Rural Palestine: Natives, Peasants, and Revolutionaries.

This course looks at how the inhabitants of rural Palestine were seen (and saw themselves) as natives, peasants, and revolutionaries. Over the 19th and 20th centuries, rural Palestine was understood as both isolated and globalized; timeless and transforming; unchangeable and critically vulnerable to forces of modernity. The native, the peasant, and the revolutionary emerged as different actors—European missionaries and Palestinian activists, international NGOs and local cooperatives, village cultivators and urban CEOs, seed banks and financial banks—draw on rural practices, knowledges, and histories. How, then, does the rural past become the basis for claims on, and struggles for, Palestine's future?

MES 1300. Intellectual Change: From Ottoman Modernization to the Turkish Republic.

A critical survey of Ottoman intellectual history in the 19th and early 20th centuries. Modernization, formation of the modern state and issues of nationalism and other ideologies of the time form the main framework, analyzing their political, social and cultural impact on intellectual production in the Ottoman Empire and through the making of Republican Turkey. It is a history of mentalities organized around thematic/chronological modules, each representing a set of concepts, ideas, movements as well as facts and problems, which will be compared to the larger world of modern state formation both in thought and practice.

MES 1301. Interventions and Activism in the Contemporary Middle East.

It is not uncommon to hear simplifying perspectives when it comes to analyses of politics and everyday lives of people in the Middle East. Instead of reducing lived experiences into binary categorizations (success or failure, authoritarian or democratic), this course examines the intricate relations between top-down political decisions, interventions and bottom-up resistance movements. It raises questions about the connections among economy, crises, democracy, and humanitarianism, and introduces diverse stories and perspectives. Using comparative historical and social scientific analysis, we will discuss topics ranging from struggles against colonial containment to the role of urban movements in social change; from the impacts of Global North-induced crises on Islamic mobilization to the use of humanitarianism as a governance tool; from LGBTQ+ movements to artistic and digital unrest; and from "Arab" Spring to the intersectionality of struggles across identities.

MES 1350. Israel/Palestine: The One State Condition.

This course follows the formation and transformation of the Israeli Regime, since its inception in the last years of the British Mandate in Palestine. At the theoretical level, we shall explore the difference between State and regime, ask what is a political regime, how to classify types of regimes and how to determine the regime of any given state. At the historical level we shall reconstruct and question the structural transformations and continuities of the Israeli regime, giving special attention to the impact of Palestinians' civic status and almost half a century of "occupation" of Palestinian territories.

MES 1400. The Middle East in Berlin: Urban Spaces and Voices.

This seminar explores the physical and human landscapes of post-war Berlin: its steadily expanding urban fabric and how it engages with the rapidly changing population make-up. The focus will be on the tension between past and present histories, new German identities, the recent massive migrations, anti-Semitism and Islamophobia, and how these social and geopolitical phenomena interact with the city's urban spaces and monuments. As case studies we will explore the relationship among Germans and three other significant communities: Turks, Israelis, and Palestinians.

MES 1401. Strange Powers: Energy in the Modern Middle East.

Do energy needs determine the shape of society, or the other way around? Is there such a thing as an energy transition, and if so, what drives such a change? What is the relationship between our ways of thinking and the energy regimes that have prevailed at different points in history? This course reframes the Middle East in modern global history (1750–present) from the perspective of different energy sources: water, wood, coal, oil, gas, wind, and sun. It highlights the production, circulation, and consumption of energy in processes of capitalist development; state construction (and destruction); imperialism, mass politics, and cultural difference; formation and maintenance of citizenship and migration regimes; and authoritarian rule. If global heating will render much of the Middle East uninhabitable by the end of the century, how did we get here and what does the future hold?

MES 1450. The Archival of Gestures.

Often people think about archives as static spaces. How to develop a gestural archive able to translate instances and desires of justice? This course provides students with a theoretical and practical background on the archival of gestures in performance and the role that artists-archivists can play in contributing to change through exploring and problematizing social and political memories. We explore how Arab artists have sought and investigated this role after the "Arab Spring" and of civil disobedience against Arab regimes. We then look closely at a series of performance works, by Arab, Israeli and international artists. No dance experience required.

MES 1501. The Palestinian Revolution, 1948-1982.

The phenomenon generally referred to in Arabic as the Palestinian Revolution (al-Thawra al-Filastiniya) was momentous by any standard. Unfolding over several decades between 1948 and 1982, it had profound implications for the history of Palestine, the Middle East, and global anti-colonialism. Traditionally, it is studied using top-down state, diplomatic and military themes in history and politics. In contrast, this course focuses on the grassroots level, approaching Palestinian revolutionaries as subjects, rather than objects, of politics and history. While taking account of the role of external historical forces, the focus here is on Palestinian popular structures, movements, cadres, philosophies, feminist initiatives, songs, poetry, art, tactics, and strategies. As such, the course explores the development of collective agency, political production, and active engagement with history. It also addresses transnational connections that bound the Palestinian revolution with other anti-colonial struggles and solidarity movements worldwide.

MES 1550. Non-Jews in the Jewish State: A Study in the Constitution of Otherness.

This course approaches multiple aspects of otherness by examining major sites where the work of "othering" takes place: debates relating to the "Jewishness" of the Jewish State; the legal and theological debates over the question who is a Jew; immigration and naturalization law; the regulation of marriage, burial, and religious conversion, and the recent racialization of non-Jewish aliens. The course materials are drawn from Zionist thinkers, legal documents, news items and analyses, and academic studies, as well as from literary and cinematic works. Students may concentrate on the more theoretical texts, the legal documents, or the literary and cinematic works.

MES 1591. People & Ruins (Studio): Remapping Demolished Spaces & Narratives.

How do Palestinians revive and rebuild their identities and remain resilient around the physical remains of their demolished and displaced heritage? This course is a multi-disciplinary studio that integrates digitization and visualization with political, historical, and planning analysis to explore contested spaces, uncover hidden histories, restore lost heritage, spatialize oral histories, and visualize the narratives and practices of Palestinian communities facing ongoing dispossession. The studio employs digital methods, mapping, filmmaking, and visual arts to generate geospatial data and conduct qualitative analysis of texts, plans, legislation, perceptions, oral histories, archives, and visual materials. We will engage with theories, studies, and data on restorative, decolonial, and Indigenous justice in urban environments, combining discourse and political analysis with spatial digitization and visualization to reveal the tragedy, resilience, and narratives of Palestinians, with a particular emphasis on Haifa.

MES 1650. The Pen and the Gun: Literature and the Political Body.

This course will examine the sphere and influence of literature and film as vehicles of expression and memory reconstruction during and following periods of dictatorship. We will explore themes such as history and/as fiction, the structuring of truth and national narrative, the intersection of human rights and medicine, and discourse of the nation as a body. Taking a transnational and cross regional approach, we will include prominent writers from Latin America (with a focus on the political 'disappearances' of the 1970's), Africa (post-colonial and civil war texts), and the Middle East (writing of, within, and through the Arab Spring).

MES 1968. Approaches to the Middle East (HIST 1968A).

Interested students must register for HIST 1968A.

MES 1970. Individual Research Project.

Limited to juniors and seniors. Section numbers vary by instructor. Please check Banner for the correct section and CRN to use when registering for this course. Required: all proposals for independent study must be approved by the faculty sponsor and the MES program director. Students should not register for any section of MES 1970 without this approval.

MES 1971. Senior Honors Thesis.

The purpose of this course is to guide you through the development and construction of your senior thesis project. It will provide you with empirical, methodological, and theoretical toolkits, as well as practical writing strategies, to help you bring your thesis to fruition. Open only to Senior students pursuing honors in Middle East Studies. Instructor permission required.

MES 1985. Understanding Modern Iran.

This course examines the history of modern Iran through primary historical documents, secondary studies and cultural production, beginning with an historical overview and attempts at historical narrative in the modern era, from the latter half of the Qajar dynasty (~1850) until today. Topics include modernist reform in the late-nineteenth and early twentieth centuries, Iranian identity, attempts at political reform, women's movement and foreign affairs. The course emphasizes the debates of Iranian intellectuals and artists and how cultural representations of major historical events and socio-political changes contribute to and challenge historical narratives and how contemporary history and politics affects cultural representation.

MES 1990. Middle East Studies Pro-Seminar.

This course explores the current state of Middle East Studies scholarship with an eye to its current moment of crisis. We will begin by situating MES within its institutional history, then survey classic works from its core disciplines. The second half of the course will trace contemporary debates over the significance and origin of political Islam.

MES 1993. Middle East Politics.

The Middle East and North Africa has consistently dominated global headlines as one of the most penetrated regional state systems in the world. Analyses of the MENA region are often bound by this monolithic rubric that has shaped how we view and understand state-society relations across the region. We examine historic and contemporary dynamics that have shaped domestic, regional, and international politics and analyze issues relating to comparative politics and international relations of the region, issues relating to colonialism and state formation, institutional configuration, authoritarianism and regime typologies, the politics of oil, identity politics, and social and economic development.

MES 1994A. Islamic Economics.

Despite the fact that the scriptural and early historical legacy of Islam is widely considered to be market-friendly, debates about the relationships between Islam and capitalism abound. This course moves beyond simplistic concerns of compatibility or conflict, and delves into the diverse ways by which Muslims from around the globe have devised a range of social, cultural, religious, legal and fiscal strategies that enable them to both remain true to their faith and live in today's swiftly-evolving economic context.

MES 1995. Zionism: Political, Philosophical, and Theological Perspectives.

Zionism has been an idea, an ideology, a national movement, a political project morphed into a political regime, and a colonial force that transformed the history of the Middle East and the landscape of Palestine. It was a Jewish response to the persecutions of Jews in Europe, a renaissance of the Hebrew language and Jewish culture, and a form of Jewish secularization that has yielded religious revival and transformation. The ideology and practice of Zionism, its politics and political theology will be studied from the perspectives of four great thinkers: Martin Buber, Hannah Arendt, Edward Said and Judith Butler.

MES 1995B. Israel/Palestine: Holy Land – Profane Spaces.

Seizing land in Israel/Palestine, colonizing it, shaping its boundaries, and reconstructing it as a governed space have played a major role in the struggles between Jews and Palestinians. Space has been a medium of domination and resistance, a scene of dispossession, construction and destruction, and its governmentalization has become a powerful state apparatus. Using concepts drawn from political theory, human geography, and postcolonial studies we shall examine and contrast the mental geographies and actual government of land and space(s) in Israel/Palestine and use space as a privileged perspective for understanding the history and structure of the Land's political predicament.

MES 1996A. The Anglo-Arab Novel.

This course examines a new development in the contemporary novel: the rise of the Arab-British novel from the late 1980s onwards. The aim is to understand this emerging genre in its historical and aesthetics specificity, and to determine how Arab immigrant writers responded to a time of profound cultural and political change. At the intersection of such processes, and in a literary culture marked by postmodernism and cosmopolitanism, does the Anglo-Arab novel develop a distinctive aesthetic form? Writers studied are: Ahdaf Soueif, Jamal Mahjoub, Leila Aboulela, and Hisham Matar.

MES 1997A. Islam and Human Rights.

Are Islam and human rights compatible? Both human rights and Islam raise universal claims that may conflict in some cases. We will consider various attempts by religious and legal theorists to reconcile these claims through reinterpreting Islam or deriving human rights from Islamic sources. We will explore the practical side of these issues by examining legal documents and legal practices in various Muslim countries, paying special attention to the status of women and non-Muslim minorities. We will examine tensions arising from Muslims living in Europe and N.America, such as recent debates over secularism and religion, multiculturalism and the scope of tolerance.

MES 1997B. Visualizing the Middle East.

How has the capacity to visualize been both an enabling and limiting condition in relation to the post-colonial production of knowledge in the Middle East? The act of seeing is taken up in its practical dimension in the ways that it requires one to pay attention to the cultural and historical specificity of mechanisms of visibility and modes of representation. Through readings and discussions, we will take heed of the following questions: What is allowed to be seen? By whom? Under what circumstances? How is the visible structured?

MES 1997C. Ethnographic Perspectives of Islam: Tradition, Religiosity and Modernity.

Media coverage presents two ways of thinking and approaching modern Islam. One assumes Islam to be an entire way of life and single set of religious beliefs with compulsive adherence to the Quran and the Prophetic Sunna. The other reduces Islam to a set of essentialist principles, rules and spiritual values that even many Muslims have trouble grasping.

Recent anthropological scholarship makes every-day practical interpretations, practices and living social relationships central towards understanding Islam. This class will explore socio-historical and cultural specificities by which Muslims grapple with their faith, and how they shape these resources into every-day beliefs and practices.

MES 1997D. The Politics of Heritage, Tradition and Culture in the Middle East.

Western media has pervasively portrayed the Middle East as "a-historical", "timeless", an "Other" that is beyond the logic of modern time. Simultaneously, it is also considered the cradle of "Western Civilization" where vital elements of "world" patrimony may be traced. But how do those who inhabit the region relate to their past and what are the various ways by which its discourses are drawn upon to embody different socio-political and ethical life-worlds? This course explores recent texts on heritage and memory while offering insights of ways in which modalities of history and memory have shaped the postcolonial dynamics of this region.

MES 1998. The Arab Spring.

The Middle East has witnessed significant socio-cultural, political, and economic transformations in recent decades. This seminar will explore the role of both state and non-state actors in these processes. In the face of globalization, liberalization, democratization, conflicts, and regional instability, what social movements have emerged and in what specific contexts? Additionally, how have civil society, mass media, global discourses, and Islamist groups and ideologies shaped the contemporary reality? What are the prospects for security, prosperity, and pluralism in the region? These are central questions we will attempt to address in this course.

MES 1999. Arab Youth: Movements, Cultures, and Discourses.

"Youth" has become a central social concept in the contemporary global economy. In the wake of 9/11, the discussion of "youth" in the Arab world became a global priority. This course takes an anthropological and sociological approach to studying youth. Why has "youth" become a focus of concern now? How does this shape our thinking about social, economic, political, and historical issues in the Arab world, and what issues does it obscure? The course examines the historical emergence and transformation of categories of "youth," "teen" and "adolescent" in the contexts of capitalist industrialization, nationalism, post/colonialism, state formation and globalization. Enrollment limited to 20.

MES 1999A. Cultures of Neoliberalism in the Middle East.

The course focuses on debates in the social sciences in the Arab world around contradictions of the cultures of neoliberalization in contemporary Arab culture(s), society (ies) and economy (ies). We will explore the relevance of neoliberalism to the increasing relevance of consumption and consumerism, for citizens and scholars alike, in shaping selfhood, society, identity and even epistemic reality, the concomitant eclipse of such modernist categories as social classes, the burgeoning importance of generation, ethnicity, gender, identity and social movements. Also covered, the relation of political Islam to neoliberalism, and the rise of labour migration in/out of the Arab world.

MES 1999B. Colonialism and Human Rights.

Are anti-colonial struggles human rights struggles? Is emancipation the objective of these struggles? Where and when do anti-colonial and human rights discourses converge and diverge? What is the role of violence in the moral, political and discursive trajectories of anti-colonialism and human rights? This course takes up these questions, starting with the reconstruction of the historical relationship between colonialism, anti-colonial struggles and the post-World War II formation of the international human rights regime. We then turn to discuss different authors who developed their anti-colonial thought and dealt with, appropriated or ignored human rights in their different conceptions of anti-colonial justice.

MES 1999C. Elites in Arab Culture and Society.

Social science studies the marginalized while ignoring elites and their role. This is especially the case with "Arab" Elites. Yet, to understand the conditions of the poor and marginalized, one must study elites. Elites are a lens to historically understand class formation in the Arab World, and influences beyond. We will consider how and why we study elites, different theories and methodologies of studying elites, and focus on elites in Arab societies. The course will deal with elites in the mandate period and early independence. The last part of the course will focus on elites in contemporary Arab society.

MES 1999D. Anthropology /Sociology of Development in the Arab World.

After the Second World War, questions of economic growth, poverty, and inequality were internationalized, leading to the rise of national and international agencies which aimed to promote development in the "Third World." This course examines the anthropological study of development. Touching on development theory (and the political context of each model), we examine connections to anthropological models of socio-cultural change, and consider the relationship between anthropology and the development industry. How can cultural relativist and applied anthropology approaches be reconciled? Can anthropologists and anthropological knowledge contribute to improving development interventions and outcomes, or are they merely critical of such interventions?

MES 1999E. Displacement and Refugees in the Middle East.

Displacement and refugees constitute one of the most significant sources of upheaval, instability, and uncertainty in our time. In 100 years, the Middle East saw waves of displaced persons, with no singular explanation and no end in sight: Armenians, Circassians, Palestinians, Iraqis, Yazidis, Kurds, and Syrians. The impetuses for displacement include wars, fall of empires and nations, crafting of new states, and modernization attempts and environmental disasters. These stories of displacement are distinctive for their multitude of causes and protracted defiance of resolutions. They challenge the narratives of the durability of nation-states, ascendancy of capitalism, and emplaced, "timeless" Arab populations.

MES 2000A. Decolonizing the Racialized Female Subject: Black and Indigenous Women's Self-Making Under Empire.

This study grapples with conceptions of freedom and humanity emergent in Black and Indigenous women's practices under empire. Colonialism is prefaced on construction of an "other." Aimé Césaire refers to this as "thingification," whereby colonial subjects are dehumanized and the colonizer "decivilized". Totalizing dehumanizing forms are resisted by praxes and epistemologies which challenge the prevailing symbolic order and assert the humanity of those regarded as subhuman. We will examine how epistemological and political contestations of the human inform discourses on freedom and sovereignty and interrogate how various categories of identity refract and re-frame conceptions of humanity, freedom, and sovereignty.

MES 2002. The World “After Gaza”.

Many observers, horrified by the ongoing carnage in Gaza, interpreted “the world’s response” to Israel’s war against Hamas after the attack of October 7, 2023, as a symptom for an end of an era in international relations. Taking these observations seriously and critically, this seminar asks what this international order was – or was imagined to be – and why the war in Gaza is seen to epitomize this order’s dismantling. While making Gaza the perspective from which this international order, and its image, will be studied, the seminar will focus on three key concepts: Holocaust, Genocide, and Settler Colonialism. We will examine how each concept is used to make sense of the violence in Gaza, to conceive the international order whose end Gaza marks, and to recognize the dismantling of this order, or its image.

MES 2091. People & Ruins (Studio): Remapping Demolished Spaces & Narratives.

How do Palestinians revive and rebuild their identities and remain resilient around the physical remains of their demolished and displaced heritage? This course is a multi-disciplinary studio that integrates digitization and visualization with political, historical, and planning analysis to explore contested spaces, uncover hidden histories, restore lost heritage, spatialize oral histories, and visualize the narratives and practices of Palestinian communities facing ongoing dispossession. The studio employs digital methods, mapping, filmmaking, and visual arts to generate geospatial data and conduct qualitative analysis of texts, plans, legislation, perceptions, oral histories, archives, and visual materials. We will engage with theories, studies, and data on restorative, decolonial, and Indigenous justice in urban environments, combining discourse and political analysis with spatial digitization and visualization to reveal the tragedy, resilience, and narratives of Palestinians, with a particular emphasis on Haifa.

Modern Culture and Media

Modern Culture and Media (MCM) is committed to the study of media in the context of the broader examination of modern cultural and social formations. Our curriculum proposes a distinctive subject matter, stresses comparative analysis and theoretical reflection, and highlights the integration of theory and practice, creative thought and critical production. In research and teaching at both the graduate and undergraduate level, MCM combines the analysis of diverse texts — visual and verbal, literary and historical, theoretical and popular, imaginative and archival — with the study of contemporary theories of representation and cultural production and creative practice in a range of media. Through studying MCM, students will become critically sophisticated and knowledgeable about the theory, history, and analysis of media and cultural forms. They will also learn to produce innovative work — whether in theory, media practice, or historical scholarship — that interrogates and transforms conventional understandings of these forms.

For additional information, please visit the department’s website: <http://www.brown.edu/academics/modern-culture-and-media/>

Modern Culture and Media Concentration Requirements

Modern Culture and Media (MCM) is an interdisciplinary concentration that explores the ties between media and broader cultural and social formations. We stress creative thinking and critical production: comparative analysis and theoretical reflection, as well as work that integrates practice and theory. We thus bring together aspects of modern culture that are normally separated by departmental structures such as film and media studies, fine art, literature, literary arts and philosophy. This concentration offers the student a range of possible specializations.

A student might decide to focus on the critical study and production of a certain type or combination of media (print, photography, sound recording, cinema, video, television, and digital media); or they might focus on certain cultural, theoretical and/or social formations (for example, gender/sexuality in post-Cold war television, postcolonial theory and film, the changing form of the novel, theories of subjectivity and ideology, video games and theories of representation). These paths are united by a commitment to critical thinking/practice: rather than reproducing conventions, MCM

concentrators learn how conventions emerge, what work they do, and explore ways to change them.

Theory Based concentrators may choose to study a particular historical moment, a medium, or a mode of textual production, in combination with theoretical studies that examine the categories of cultural analysis: for example, the distinction between high and low culture. Examples of areas of interest include but are not limited to film, gender/sexuality, digital media, television, post-coloniality, the novel, modern thought, the modern arts, sound, and theories of ideology and subjectivity. Productive work in some modern medium or textual mode is encouraged for all concentrators. MCM’s approach to production recognizes the inextricable link between theory and practice, and the possibility of a fruitful complicity between them. Production, in the sense defined here, is a theoretically informed sphere or practice, one within which acknowledged forms of cultural creation are tested and extended in close complementarity with the analyses conducted elsewhere in MCM.

The Practice Based concentration combines production courses with the critical study of the cultural role of practice. It aims to engage students in the analysis of theories of production elaborated within philosophical, artistic, and technological traditions, while encouraging them to produce works that interrogate these traditions.

Theory Based

Theory Based consists of 11 courses.

Core courses

MCM 0150	Text/Media/Culture: Theories of Modern Culture and Media	1
Select two of the following: ¹		2
MCM 0220	Print Cultures: Textuality and the History of Books	
MCM 0230	Digital Media	
MCM 0240	Television Studies	
MCM 0250	Visuality and Visual Theories	
MCM 0260	Cinematic Coding and Narrativity	
MCM 1110	The Theory of the Sign	

Additional courses

One must be an upper level course from the MCM 1200 series		5
Two must be senior seminars from the MCM 1500 or MCM 1700 series		
Two must be at any level in MCM above MCM 0260		
Three additional courses. These courses must be in MCM or in related departments. ²		3

Total Credits

11

¹ No more than three courses from this list may count for concentration requirements.

² The specific courses must be approved by an MCM concentration advisor as part of a coherent program of study.

Other Requirements:

1. Focus Area: Of the 11 courses required for the concentration, at least 3 courses must be in a focus area approved by a concentration advisor. These courses may be MCM courses, related courses, or a combination of the two, and they must represent a focus on some aspect of modern literature, theory, media, art or culture. Examples of possible focus areas are: mass/popular culture, gender/sexuality, language/representation/subjectivity, narrative, digital media, film, modern thought, television, the modern arts, the novel, colonialism and post-colonialism. This is **not** an exhaustive list. Production courses may be in the focus area but must be in addition to the minimum 3 courses.
2. Production: Work in production is encouraged but not required for Theory Based concentrators. Of the 11 courses required for concentration, as many as 3 may be in production. These may be production courses offered by MCM (film, video, digital media) or

courses in creative writing, painting, photography, journalism, etc., provided they do not bring the total number of concentration courses taken outside MCM to more than 3.

Practice Based

Practice Based consists of 11 courses:

Two core courses:

MCM 0150	Text/Media/Culture: Theories of Modern Culture and Media	1

Select one MCM Introductory Practice course (MCM0700 series). Introductory practice courses in other disciplines may fulfill this requirement and should be selected in consultation with the concentration advisor. Possible disciplines include Literary Arts, Music, Theatre Arts and Performance Studies, Visual Art.

MCM 0700A	Introduction to the Production Image	1
MCM 0710A	Introduction to Filmic Practice: Time and Form	
MCM 0730A	Introduction to Video Production: Critical Strategies and Histories	
MCM 0750A	Art in Digital Culture	

One additional course from the following:

MCM 0220	Print Cultures: Textuality and the History of Books	1
MCM 0230	Digital Media	
MCM 0240	Television Studies	
MCM 0250	Visuality and Visual Theories	
MCM 0260	Cinematic Coding and Narrativity	
MCM 1110	The Theory of the Sign	

Three additional courses from the MCM 1200 or MCM 1500 series ¹

Four practice courses selected in consultation with an advisor. ²

One Senior Seminar from the MCM 1700 series or other equivalent in production

Total Credits **11**

¹ At least one must be from the MCM 1500 series.

² Courses can be in any medium or combinatory sequence of media from the following departments: Modern Culture and Media, Visual Art, Music, Literary Arts, Theatre Arts and Performance Studies, Computer Science, Engineering, supplemented by approved courses at Rhode Island School of Design and study abroad. This list is not exhaustive.

The honors program in MCM is designed for students who wish to integrate their skills in a special project. Students who qualify for Honors in the Theory Based track are eligible to apply to do an Honors project or thesis. Students should submit a letter of intent in their 6th semester, and a formal proposal by the first day of their 7th semester. Applications will be screened by the MCM Honors Committee. (Application forms are available in the MCM office.) If approved, a student must then register for MCM 1980 (taken in the 7th semester), a one-credit course which can count towards their Focus Area requirements, and MCM 1990 (taken in the 8th semester), a one-credit thesis course in which they complete the Honors project/thesis.

Modern Culture and Media Graduate Program

The department of Modern Culture and Media offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. There is no terminal Master's program, but students who enter the doctoral program only with an undergraduate degree may earn an A.M. en route to the Ph.D.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/modern-culture-and-media> (<http://www.brown.edu/academics/gradschool/programs/modern-culture-and-media/>)

Courses

MCM 0110. Theory and Analysis of Modern Culture and Media.

An introduction to critical theory, cultural studies, and media analysis that addresses print, photography, film, television, and digital media. We will examine these media in relationship to influential theoretical approaches such as structuralism and post-structuralism, ideological analysis and psychoanalysis, feminist and queer theory, critical race theory and theories of post-colonialism and globality, and media and technology studies.

MCM 0150. Text/Media/Culture: Theories of Modern Culture and Media.

This introductory course will explore its three key terms "modern," "culture," and "media" through a variety of theories, historical narratives, and media objects. We will ask how different media—such as print, photography, cinema, television, digital art, online video, archival practices, and social media—yield distinct modes of seeing, thinking, and feeling, structure the ways we act and engage with the common world, and communicate and collaborate. We will read semiotic theory, critical race studies, feminist, post-colonial, queer and political theory, and examine concepts such as textuality, viscosity, and networks. Open to undergraduates only.

MCM 0220. Print Cultures: Textuality and the History of Books.

Print media are ubiquitous, appearing in myriad forms, material configurations, and genres. This course investigates the concept of print as a mass medium, the first produced by means of mechanical reproduction. We will give particular attention to the theoretical problematics that govern its analysis and to competing concepts of print as a form. The course will trace the emergence of mass literacy and reading habits, print culture and the public sphere, the rise of the novel and history of the book, as well as concepts of literariness and representation, mediation and signification, narrativity and virtuality, the work and the text.

MCM 0230. Digital Media.

This course introduces students to the critical study of digital media: from surveillance to activism, from cyberpunk fiction/films to art installations, from social media to video games. We will analyze the aesthetics, politics, protocols, history and theory of digital media. Special attention will be paid to its impact on relation to social/cultural formations, especially in terms of new media's "wonderful creepiness," that is, how it compromises the boundaries between the public and private, revolutionary and conventional, work and leisure, hype and reality.

MCM 0240. Television Studies.

Introduces students to the rigorous study of television, concentrating on televisual formations (texts, industry, audience) in relation to social/cultural formations (gender, generational, and family dynamics; constructions of race, class, and nation; consumerism and global economic flows). That is, this course considers both how television has been defined and how television itself defines the terms of our world. Students MUST register for the lecture section, the screening, and a conference section. Open to undergraduates only.

MCM 0250. Visuality and Visual Theories.

How do we see the world? Not only through our own eyes but through the eyes of others and with the mediation of technologies, perspectives, and points of view, giving us an embedded language to interpret what we see. In the last centuries, this construction of our visual field has been heavily indebted to imperial and racial capitalist modes of production. We will examine these constructions through a variety of technological devices: the camera obscura, panorama, photography, and cinema, and their use in processes of colonization and decolonization, drawing on the case of Algeria and other cases as well.

MCM 0260. Cinematic Coding and Narrativity.

Introduces students to rigorous study of the structural and ideological attributes of cinema, concentrating on the dominant narrative model developed in the American studio system and alternatives to that model. Attention to film theory in relation to questions of representation, culture, and society. Students become conversant with specific elements and operations of the cinematic apparatus (e. g. camerawork, editing, sound-image relations) and how they produce discursive meanings. Open to undergraduates only.

MCM 0700. Introduction to the Moving Image.

The purpose of this course is to provide a basic introduction to film and video production and to begin to consider the kinds of texts that might be produced using these media. Students are expected to work in an intelligent manner, take risks with the content and form, engage in empirical research of the medium, and in so doing, examine common presumptions about media production. Students will utilize 16mm non-sync film cameras and small format video to produce a series of short projects emphasizing the creative use of these media in various social and visual arts contexts. Classes will consist of screenings and discussion of a wide variety of works, basic technical demonstrations, and critiques of student work. No previous production experience necessary. Prerequisites (two of the following or equivalent): MCM 0100, 0150, 0230, 0240, 0250, 0260, 1110. Application required. Enrollment limited to 15. Written permission required. Mandatory S/NC.

MCM 0700A. Introduction to the Production Image.

The course will provide students with a basic introduction to digital sound and image acquisition and post-production, and to consider the particular capabilities of these digital technologies, especially as these relate to the production of meaning. Of particular interest will be the representational limits of these technologies at the intersection of science and art. Classes will be organized as workshop environments where extensive class time will be devoted to hands-on learning with digital film cameras, lighting, and digital sound recorders. There are no prerequisites for this class.

MCM 0700B. Mediating the Live: Making and Documenting Performance Art.

This course focuses on performance art and how artists use recording technologies to document their acts. We will look at key examples of performance art from the past five decades to understand how artists have explored gesture, movement, conduct, speech, embodiment. Documentation is especially important to performance because of the ephemeral nature of the art form. While the performance document is not the same as the performance, it is central to our understanding of the medium and often intrinsic to the works themselves. Students will experiment with various presentation platforms and recording technologies to understand their relationship to performance art.

MCM 0700C. Screenwriting I (LITR 0110E).

Interested students must register for LITR 0110E.

MCM 0700D. Introduction to Film Preservation and Restoration.

This course will give students practical experience with film preservation and restoration in an active film archive at Brown University: The MCM Film Archives. Students will gain the ability to understand and recognize film elements in a variety of gauges (8mm, Super 8mm, 9.5mm, 16mm, Super 16mm, and 35mm). The class will undertake and complete film preservation projects for 16mm films. Students will learn to apply best preservation practices and archival standards to take a preservation project from start to finish, creating both film and digital preservation masters. Previous experience with film is not required. All students will acquire the film handling skills needed to complete a successful preservation project over the course of the semester. Public health rules permitting, the final projects will be presented in a public restoration showcase organized by the students and supported by MCM.

MCM 0700E. Introduction to DJ Culture.

Drawing on histories and subcultures of electronic dance music, alongside theories of sampling, mixing, remixing and postproduction, this practice-based course offers a basic introduction to DJ and production technologies as well as an exploration of world making tactics via the manipulation of sound and space. How do DJs manipulate sound to stitch together a unique sonic narrative? How is DJing itself a kind of theorizing through sound? Topics include the history of the DJ from the early 20th century to the rise of DJ-focused dance musics, from hip-hop to techno. Students will have hands-on experience with CDJs and throughout the semester, students will work on a series of short sound exercises and a final or collaborative project. There are no prerequisites for this class.

MCM 0710A. Introduction to Filmic Practice: Time and Form.

A studio-style course on working with time based media, focused specifically on the technology of 16mm film production. With its focus on photographic and montage processes, as well as lighting and sound, the principles established in this course provide a solid foundation for all subsequent work in media, whether cinematic, video or new media, and it is strongly advised as a foundation level, skills oriented media course. Students produce a series of short, non-sync films. No previous experience required. Screenings, demonstrations and studio work.

MCM 0720. Intermediate Filmmaking: Cinematic Space.

Introduces more sophisticated film production techniques, including sync sound and lighting technique. Explores the influence of digital technologies on cinematic practice. Studio work supplemented by screenings, demonstrations, and discussions. Group and individual projects. Prerequisite: MCM 0710. Application required. Application is available in the MCM office or from <http://www.brown.edu/Departments/MCM/>. Students must bring a completed application to the first class to be considered for admission. Class list will be posted 2 days after the first class meeting. Enrollment limited to 12. Instructor's permission required. S/ NC.

MCM 0730A. Introduction to Video Production: Critical Strategies and Histories.

Provides the basic principles of independent media production through a cooperative, hands-on approach utilizing digital video. Emphasizes video as a critical intervention in social and visual arts contexts. A major project, three shorter works, and in-class presentations of work-in-progress required. Weekly screenings contextualize student work. No previous experience required.

MCM 0730B. TV/Not TV: Theory and Practice.

This course examines both commercial television and non-commercial media forms, considering the dialogue and/or tensions between them. What are the critical potentials and political stakes of viewing TV and of making independent media? How can we re-write TV's cultural codes by stimulating alternative readings, fostering new interpretive practices, creating different texts, or developing diverse modes and sites of distribution? Combining theory and practice (media studies, televisual and anti-televisual screenings, and simple production assignments using available technologies), this course encourages students to read and critique commercial television through both analysis and their own creative media practices.

MCM 0730C. Foundation Media (VISA 0120).

Interested students must register for VISA 0120.

MCM 0740. Intermediate Video Production: Sound, Image, Duration.

Expanded principles of independent video production utilizing small format video (Mini DV). Emphasizes video as a critical intervention in social and visual arts contexts. A major project (10-20 minutes) and a class presentation concerning your project are required. Prerequisite: MCM 0730. Application required. Application is available in the MCM office or from <http://www.brown.edu/Departments/MCM/>. Students must bring a completed application to the first class to be considered for admission. Class list will be posted 2 days after the first class meeting. Enrollment limited to 15. Instructor's permission required. S/NC.

MCM 0750A. Art in Digital Culture.

This course traces the relationship between art and technology to now, a time when our relationship with computers permeates nearly every aspect of visual culture. How does this relationship relate to human history and what technologies will come next? In this course we examine the impact of these technologies on our everyday lives and ultimately in the arts. An emphasis will be placed on resourceful and creative use of technologies, to make new things or subvert existing tools. We will examine projects by artists who use digital media to produce art or, inversely, use conventional media to explore the digitized condition of contemporary life. Throughout the semester, students will work on a series of short works, and a final individual or collaborative project.

MCM 0750C. Subtle Machines: Designing for Engagement and Response-Ability.

We will build novel individual and collaborative extensions enabling engagement in dialogues and in structures of communication otherwise difficult due to social, political, technological, habitual, and/or unavowable circumstances. Students will develop individual and collective hypotheses, project plans, built apparatuses and systems, actions and performances. We will read and discuss excerpts from Donna Haraway's *Staying with the Trouble*, Maurice Merleau-Ponty's *Phenomenology of Perception*, D. W. Winnicott's *Playing and Reality*, and Karen Barad's *Meeting the Universe Halfway*. We will build with familiar and experimental electronic and other materials. Work may occasion collaboration with multiple departments at Brown as well as more broadly.

MCM 0750D. Dynamic Futures: Speculative Media.

In this co-learning course we will articulate the effects rapid adoption of AI has in culture to speculate possible actions, technologies, systems, and performances for futures which value ethical relationships. What contributions can artists uniquely bring to cybernetics? Can we reach beyond the limits of technological "fixes" and the veil of novelty 'clout' or 'influencer' culture? How do we design for the benefit of differently abled bodies? Can artists reconcile systems designed for endless growth on a finite planet? This course will be driven by readings and discussions as we build to present collaborative proposals for dynamic holistic futures.

MCM 0750E. Listening Beyond the Browserscape.

If field recordings document audio of a given location and time, what do the sounds of our digital environments tell us? This production course offers a foundational understanding of electronic as well as computer-based means of audio capture and production. We will explore many aspects of sonic culture, technologies, and theory while developing our own experimental compositions, field recordings, and environmental soundscapes. An emphasis will be placed on deep listening inside, outside, and beyond the browserscape as we engage in listening sessions, discussion, workshops, & critique.

MCM 0750G. Sonic Visions: The Art of Music Video Making.

This course will explore the music video format as art while providing an introduction to basic digital video and audio editing skills for the purpose of creative output. As a production course, ample time will be allotted to the workshops and studio time leading toward a final project. We'll also look at avant-garde film and video which have influenced the visual language of music videos and we'll analyze the technical components as well as the cultural context of these works. Music videos are often found at the intersection of technology, dance, fashion, and culture so we can anticipate rich discussion around these topics.

MCM 0760. Intermediate Digital Media Production.

How do technologies enabling new forms of media and communication reconfigure notions of geography, location, speed, presence, community, autonomy, public, private, and one's ability to participate in culture? This class is an exploration of how artists and other cultural producers use these new technologies and new conditions to activate networks, form communities, create access, self-publish, proliferate, draw attention to context, demand agency, redefine property, and develop spaces for exchange and play.

MCM 0780A. Soundtracks: Sound Production and Visual Media.

A production course that examines the role of sound in film, video, and installation forms. The listening assignments and visual media screenings will foreground the usage of audio in the works of selected artists/filmmakers. The course also considers works of sound art. Readings by sonic theorists and producers will examine the possibilities of sound production as a key register of modern social and aesthetic experience. Class members should have completed at least one time-based media class. Students are expected to be competent technically.

MCM 0790. This is a Public Service Announcement.

This course will examine the broad mission of "public service" media in its various iterations, both in commercial broadcast television, state run television, and in numerous forays by artists and collectives into public space. Students will produce a series of short video and/or installation projects that will explore critically the content and form of the Public Service Announcement and its historical precedents. In addition, the class will also collectively design, shoot, and produce, in collaboration with the RI Department of Education, their own Public Service Announcement that will air on local television stations. This will be a rare opportunity for undergraduate students not only to gain hands-on production experience, but also to think about and exhibit work outside of the University classroom context. Prerequisite: MCM 0700, MCM 0710, MCM 0720, MCM 0730, or MCM 0740.

MCM 0800A. Agency and Representation.

Agency is one of the most popular concepts across the disciplines today, but its definitions are often far from satisfactory in relation to representational forms such as literature and film. Using both fictional and theoretical texts, this course will examine some common assumptions about agency and develop a range of possible interpretations that will make the term viable in the study of artistic representation. For first year students only.

MCM 0800B. Freshman Seminar on Visuality.

An examination of the key texts (from such diverse fields as philosophy, visual arts, cultural studies) which describe the historical transformation of personal and social visual space. We will explore, for example, Renaissance and Cartesian optics, the mechanization of vision in the late nineteenth century and recent hypotheses around machine-centered visuality. For first year students only.

MCM 0800C. Marx, Nietzsche, Freud: History of Theory.

Many of the most pressing theoretical issues addressed by contemporary cultural analysis were first investigated in the works of these three groundbreaking intellectuals. This course will survey some of their major works, with attention to such concepts as ideology and the commodity; the will to power and truth in language; the unconscious and sexual difference. For first year students only.

MCM 0800D. Sound for A Moving Image.

A production/seminar. An examination of the role of sound in the works of five exemplary artists/filmmakers while we produce sound works for filmic projects. For first year students only.

MCM 0800E. Race and Imagined Futures.

Why is race so important to imagining utopian or dystopian futures - to signaling world peace or Malthusian disaster? What do these imaginings tell us about contemporary anxieties over / desire for multiculturalism and globalization? This course responds to these questions by examining speculative, science and utopian fiction and films by African-, Asian- and Euro-American authors/film makers. Readings will be theoretical, as well as literary. Enrollment limited to 19. Students MUST register for the lecture section and the screening.

MCM 0800F. The Face in Cinema.

Cinema has always been obsessed with the thematics of the human face. The close-up is most frequently associated with a revelation of intense human signification, with a rendering legible of the face as the signifier of the soul, and with the face as the privileged signifier of individuality, truth, beauty, and interiority as well as the most basic support of intersubjectivity. We will examine the face in the cinema in relation to the star system, theories of desire and affect, and a history of representation of the face (Darwin, Galton, Duchenne, etc.). Films by Dreyer, Hitchcock, Warhol, Wiseman, and others. Students must register for the primary meeting and one film screening. Enrollment limited to 19 first year students.

MCM 0800H. TV/Not TV: Theory and Production.

This freshman seminar examines both commercial television and non-commercial media forms, considering the dialogue and/or tensions between them. What are the critical potentials and political stakes of viewing TV and of making independent media? How can we re-write TV's cultural codes by stimulating alternative readings, fostering new interpretive practices, creating different texts, or developing diverse modes and sites of distribution? Combining theory and practice (media studies, televisual and anti-televisual screenings, and simple production assignments using available technologies), this course encourages students to read and critique commercial television through both analysis and their own creative media practices. Enrollment limited to 19 first year students.

MCM 0800I. Victim Testimonies.

This seminar will explore primarily first person narratives and historical and other accounts that seek to recreate victim's voices (of the Jewish Holocaust, Stalin's terror, the Algerian War, the Rwandan genocide) in order to understand the cultural contexts and narrative styles that fashion victims, shape readers' views of them, and lead us to take some more seriously than others. Enrollment limited to 19 first year students.

MCM 0800J. The Revolution is Being Photographed.

The course will examine the following idea: revolution is not an epoch making event but a dialect, a genre and grammar of practices and gestures. Images and moving images will be read as the "written" signs of this dialect, which document more and less known revolutionary moments. The recurrent familiar gestures repeated by the demonstrators will be studied as components of a language rather than planned actions carried out to achieve a given goal. The recurrence of the same idioms and gestures in various parts of the world requires questioning the universal and regional dimension of this language. Enrollment limited to 19 first year student.

MCM 0800K. Pirates!

This course examines the figure of the pirate and understandings of piracy from Treasure Island and Pirates of the Caribbean to Pirate Bay and the WTO—that is, from sea-faring pirates and early print culture to the Internet and "pirate modernity." What do pirates do, mean, stand for, teach us? Readings, discussions and screenings will focus on both the history of pirates and piracy as well as the contemporary (media) pirate and issues related to creativity and originality, intellectual property rights and global governance, participatory cultures and democratization, information feudalism and the pirate modernities of the Global South, enclosures and the common. Enrollment limited to 19 first year students.

MCM 0800L. "I Don't Even Know Why They Call It Color TV": Television and Race in America.

Our era has been called both "post-televisual" and "post-racial," yet images that define and are defined by (mis)understandings of race fill our screens (whether on TV sets or other means for disseminating TV). Formations of television and race not only remain pressing concerns but are intertwined, mutually constructing one another. This course thus explores how notions of race have been mediated and how media have figured race. Topics include: stereotype analysis; race in television history; scandal and crisis; intersections of gender and sexuality; consumerism and commodification; racial representation across TV genres (comedy, drama, sports, reality TV), and new media possibilities.

MCM 0800M. The Terrible Century (ENGL 0150U).

Interested students must register for ENGL 0150U.

MCM 0800N. Hitchcock! (ENGL 0151A).

Interested students must register for ENGL 0151A.

MCM 0800O. Global Anime.

This course provides a systematic introduction to the forms, history, and culture of Japanese animation (anime). Surveying the historical developments, artistic styles, major themes and subgenres of anime under both the national context of Japan and a wider trajectory of globalization, this course focuses on analyzing the forms and idioms of anime in relation to changing technological conditions and their cultural ramifications. The students are expected to relate anime culture with their experience of new media technologies, and to expand their artistic interest in anime to wider theoretical questions such as posthumanism, globalism, techno-orientalism, and media convergence.

MCM 0800P. Introduction to Italian Cinema (ITAL 0950).

Interested students must register for ITAL 0950.

MCM 0800Q. Hitchcock: the Auteur.

Hitchcock is not only one of the most famous auteurs in the history of cinema, he is the one for whom the term was invented. Most of you can recognize him from the few lines of a caricature drawn in profile and know him immediately by his sobriquet, "the master of suspense." But what does this nickname mean; what is Hitchcockian about the way suspense escalates in his films? What are the identifying marks of a Hitchcock film? One of the most compelling features of his films is that they work on two levels at once, while telling a story they also pose questions about cinema and our fascination with it. It is no wonder that not only film enthusiasts but philosophers as well are drawn to Hitchcock's films.

MCM 0800R. Transnational East Asian Cinemas: Local Ghosts, Global Monsters.

This freshman seminar comparatively studies the forms and histories of East Asian cinemas in the context of transnationalism and globalization. The course revisits the theoretical debates on the concept of national cinema by exploring the transnational connections among different film cultures in China, Taiwan, Hong Kong, Japan, and South Korea. We will emphasize as much the local diversities and specificities as the stylistic, generic, thematic, and industrial conjunctions across national/cultural boundaries. While surveying major genres and auteurs in East Asian cinemas, such as Wong Kar-Wai, Hou Hsiao-Hsien, Ozu, Kurosawa, and Bong Joon-ho, through the theoretical frameworks of nationalism, transnationalism, post-colonialism, and globalization, the course will particularly focus on the shifting representation of identities of gender, class, race, and ethnicity in the rapidly changing social, political, and cultural environments in the region.

MCM 0800S. Film after Film: An Introduction to Digital Cinema.

"Is the age of Cinema over? This seminar explores work by historians, theorists, and filmmakers responding to this question. From debates over an emergent "post-cinematic" medium proposing a fundamental rupture with the classical cinema of the 20th century, to investigating works that suggest a continuity between the earlier analog cinema and its contemporary digital component, we will interrogate film form, history, and theory with an eye to placing these changes within their proper socio-political context. In doing so, we will place 21st century film culture within the global paradigm opened up by new modes of distribution theorized by digital, postcolonial, and transnational film scholars. In doing so we will ask: Is Netflix cinema? Has filmmaking collapsed into a heterogeneous media environment through the rise of the global internet? What distinguishes 21st century film language from what came before?"

MCM 0800T. Hitchcock! (ENGL 0151A).

Interested students must register for ENGL 0151A.

MCM 0800U. Hyper/Pop.

Hyperpop: a meme, a subculture, a Spotify playlist, a mashup of disparate sounds, a sense of street style, a glitch, a microgenre and an anti-genre noted for its brashness, intensity, and maximalist take on pop. This first year seminar will provide an introduction to the study of contemporary popular culture through the lens of hyper/pop as a queer and trans aesthetics of intensity, maximalism and excess. Readings, discussions and screenings will engage theories of gender, punk, fashion, the glitch, postmodernism, remixing and hacking, and students will engage with examples of hyper/pop from music, contemporary art, fashion, film and television. Overall, this course investigates the aesthetics of a "hyper" popular culture, with a particular focus on queer and trans artists pushing the limits of form.

MCM 0800W. Transnational Cinemas in East Asia.

This first-year seminar comparatively studies the forms and histories of East Asian cinemas in the context of transnationalism and globalization. As the notion of nation-state has increasingly been problematized, the concept of "national cinema," which frames cinematic works according to their countries of origin, has come into question. This course revisits this theoretical debate by exploring the transnational connections among different film cultures in China, Taiwan, Hong Kong, Japan, and South Korea. The course will emphasize as much the local diversities and specificities as the stylistic, generic, thematic, and industrial conjunctions across national/cultural boundaries. While surveying major genres and auteurs in East Asian cinemas, such as Wong Kar-Wai, Hou Hsiao-Hsien, Ozu, Kurosawa, Park Chan-wook and Bong Joon-ho, through the theoretical frameworks of nationalism, transnationalism, post-colonialism, and globalism, the course will particularly focus on the shifting representation of identities of gender.

MCM 0800Y. DIY: Notes from the Underground.

DIY: Notes from the Underground explores DIY and alternative creative practices, communities and subcultures through the potentiality of the "underground" as a site of radical making. But what, exactly, do we mean by "underground"? Readings, discussions and screenings will engage theories of situationism, hacking, the remix, subculture and opacity alongside histories of DIY creative communities, punk, zines, fashion, and the garage as a site of creativity. Students will engage with "underground" subcultural productions across music, contemporary art and performance, fashion, film and television. Overall, this course is an exploration of DIY as a critique of cultural production under capitalism, with an emphasis on experimentation and creativity "underground."

MCM 0900A. Cinema and Stardom: Image/Industry/Fantasy.

Focuses on the star within the "machinery" of Hollywood cinema: how stars function in the film industry, within cinematic and extra-cinematic texts, and at the level of individual fantasy and desire. Including screenings of films which exploit, foreground, or critique star images, also considers the ideological implications and cultural consequences of stardom.

MCM 0900B. Global Cyberpunk.

Examines how cyberpunk functions both as a global phenomenon and as a way to imagine the global. Texts include American science fiction by authors such as Octavia Butler and Neal Stephenson; anime such as *Akira* and *AD Police Force*; feature films such as *Blade Runner*; as well as theoretical texts on globalization, science fiction, and animation.

MCM 0900F. Real TV.

This course will investigate the construction of reality on U.S. television, considering not only specific reality genres (news and "magazine" programs, crisis coverage, docudrama, talk and game shows) but the discursive and representational modes that define the "reality" of commercial television as a whole. Issues include: "liveness"; social relevancy; therapeutic discourse; TV personalities; media simulation; independent television; and new technologies/realisms.

MCM 0900G. Representing the Internet.

Investigates popular representations of the Internet (many of which precede the WWW) from cyberpunk to Supreme Court decisions, from mainstream film to Internet map sites. Considers the relationship between representation, ideology, culture, and technology. All written work for the seminar will be digital.

MCM 0901C. Photography/Film/Art: Memory, History and Ruin.

Questions of the nature of the photographic image have come to the fore in some of the most exciting modern art, such as the work of Cindy Sherman and Andy Warhol. In particular, the question of how the photograph relates to film and history has generated important questions about art and media. This course will analyze these questions through the work of such artists as Jeff Wall, Jean-Luc Godard, and Hiroshi Sugimoto. We will examine these in relation to writings that theorize the relationship of photography to film and art after World War Two. Readings include Benjamin, Barthes, and Krauss. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 undergraduates.

MCM 0901D. Film Comedy.

What makes some films so funny? This course will investigate many different forms of film comedy-- from slapstick physical gags involving hapless men and umbrella-wielding matrons, to eccentric verbal character, to parodies that subvert state politics using puppet characters. Instead of treating film comedy as "just mindless escapism," we will study how comedy's complex and slippery devices are central to the history of cinema. Readings in critical discourses about comedy, film history and film theory, e.g. Freud, Bergson, Benjamin, Rob King, Miriam Hansen, and Kathleen Rowe. Screenings range from silent slapstick, to communist satire, to romantic comedy, to political mockumentary. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20.

MCM 0901E. The Fantastic in Contemporary Cinema.

This course addresses the idea of the Fantastic from its definition to its articulations in contemporary cinema. Focusing more on form than on content, we will privilege a reading of the Fantastic as an effect rather than a genre or a theme: specific attention will be given to the relationships between filmic texts, spectatorship and the production of meaning. Screenings will include popular Hollywood cinema as well as European and independent films. We will discuss works by directors such as Lynch, Nolan, Fincher, Spielberg, Gondry, Cronenberg and Haneke. Readings will range from literary theory and psychoanalysis to film theory and semiotics. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 undergraduates.

MCM 0901F. "America" in Diaspora Literatures.

How have diasporic and immigrant writers come to see the United States? How do these writers negotiate dominant understandings of race, gender, ethnicity, religion, and language that come to define "the nation"? Is all immigrant/minority writing necessarily (auto)biographical? How are notions of history, memory, and futurity taken up by writers of diasporic and hybrid cultures in the US? These are some of the questions that this course will take up through a close reading of canonical and contemporary African-American, South/Asian-American, and Arab-American texts. This course is ideal for students interested in minority literatures, diaspora studies, and Ethnic Studies.

MCM 0901G. Digital Culture and Art after 1989.

How can we contextualize new media art alongside earlier forms of media such as photography and cinema? Is its relation to the "outside world" primarily conceived as representation, or as process? What are the cultural effects of this mediatic shift? Taking as our starting point the fall of the Berlin Wall and the resulting spread of capitalism as a near-global political-economic system, we will "read" a variety of works of art and culture from several contemporary theoretical perspectives. Topics include digital media, the Internet, European cinema, and popular music. Readings from Galloway, Fukuyama, Deleuze, Hardt and Negri, Freud, Jameson, etc. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20.

MCM 0901H. Uncomfortable Media.

Why are we often addicted to that which disgusts us? This course analyzes why "uncomfortable media" – media that plays with notions of the perverse, the abject, and the taboo – remain so popular in the American cultural imaginary. Studying a variety of popular television programs and films, this course will approach these viscerally transgressive media texts through analyzing representation (how cultural taboos appear in popular culture) and analyzing spectatorship (how viewers perform discomfort). We will examine how developments in genre and narrative form, affect studies, performance studies, and queer theory have contributed to theorizing the perverse. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20.

MCM 0901I. Body Count: Technologies of Life and Death.

From the War on Terror and the global obesity crisis to self-help reality TV and new biotechnologies, questions of life and death have come to center stage of contemporary politics. This course investigates the theoretical and historical contexts under which "life itself" has emerged as a key arena of social, cultural, and technological importance. We will read critical studies of race, media, embodiment, and the state, tracing how distinctions between life and its others have structured the distribution of death, risk, and freedom in modernity. Topics include biocolonialism, cyborgs and swarms, U.S. prison regime, computer viruses, "bugchasing," suicide bombing. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20.

MCM 0901J. Adaptation Culture: New Media <---> Traditional Theatres (TAPS 0080).

Interested students must register for TAPS 0080.

MCM 0901K. Statelessness and Global Media: Citizens, Foreigners, Aliens.

What is citizenship? What does it mean to be granted or refused state protection within the global system? To better understand how nation-states govern subjects, we will consider the condition of refugees, displaced persons, illegal residents, undocumented aliens, and stateless persons. We will read the representations of non-citizenship in global media texts (humanitarian graphic narrative, migrant diary, atrocity photography, world cinema, war fiction, crowdsourced crisis mapping). This course will place a special emphasis on how perpetual warfare, territorial re-mappings, and nationality legislation continue to generate sliding scales of non-citizenship. Readings include Arendt, Balibar, Chatterjee, Foucault, Lowe, and Said. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20.

MCM 0901L. African American Media Visibility: Image, Culture, Crisis.

This course explores the "problem" of the black image in 20th - 21st century U.S. film and television. What is the role of spectacle and scandal in (re)presenting blackness to the public? Emphasis placed on the tension between invisibility and (hyper)visibility of the black subject in relation to gender and sexuality as well as the political, ethical, social, and psychical implications of such varying degrees of visual exposure. Topics include the aesthetics of black celebrity from Josephine Baker to Beyoncé, cinematic practices from filmmakers Spike Lee to Tyler Perry, and televisual blackness from *The Cosby Show* to *Flavor of Love*. Prerequisite: MCM 0110, 0220, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20.

MCM 0901M. Ishiguro, Amongst Others (ENGL 0710L).

Interested students must register for ENGL 0710L.

MCM 0901N. Body/Gesture/Cinema.

Antonin Artaud once called the body "a language to which it seems we no longer have the key." This course is an attempt to take up his challenge in light of our experience at the cinema. Two questions will guide our investigation: Do the bodies on film "signify"? If so, how does this signifying practice trigger our own corporeal unconscious? We will explore a wide range of texts across film studies, theatre, anthropology, linguistics, and critical theory. Topics include gesture, ethnography, disability, violence, horror, and phenomenology. Readings include Didi-Huberman, Benjamin, Ricoeur, Merleau-Ponty, Kristeva, Shavero, Sobchack, Naremore, Clover, Linda Williams, etc.

MCM 0901O. Reinventions of Life: Aesthetics, Biopolitics, and the Avant-Gardes.

The impulse to connect art with life runs through the avant-gardes of the early and mid-twentieth century. Yet recently, the question of what constitutes life itself has emerged with increasing persistence. In this course, we will reconsider the history of the avant-gardes – and avant-garde cinema particularly – in relation to this question. Drawing broadly on theories of how contemporary forms of life have been managed and made productive, we will explore the links between the avant-garde's aesthetic and political practices and its ongoing efforts to redefine and reinvent social existence. Readings include Benjamin, Foucault, Lacan, Fanon, Debord, Mulvey, and Agamben.

MCM 0901Q. Governing Sex: Citizenship, Violence, Media.

From the photographs of Abu Ghraib, to Tyler Clementi's suicide, and the rise of "revenge porn," contemporary media have been central to understanding the ways in which sexuality, law, and citizenship are negotiated in our present moment. This course will take these moments of public crisis as instances from which to understand the politics of belonging within the framework of the contemporary nation-state. We will examine the inter-related problematics of sexuality as a site of state governance, and the anxieties about sexual violence as national crises. Assigned readings will include queer of color critique, critical race theory, feminism, and postcolonialism.

MCM 0901R. Altered Cinema: The Cultural Politics of Film Revision.

Repetition and variation define contemporary cinema texts. Media producers create multiple "cuts" of the same picture for domestic/international theater, television and home video markets. Meanwhile, consumers use new technologies to create their own textual variations and share them using informal distribution channels. This is a primary concern of *Altered Cinema*, which examines the history and culture of film revision from multiple perspectives, including originality, authorship, censorship, globalization, preservation, translation, copyright, fandom, new media and piracy. Screenings compare and contrast different editions, including director and fan cuts, of *Metropolis*, *Star Wars*, *Dune* and *Night Watch* among others.

MCM 0901S. Mediating Reproduction: Feminism, Art, Activism.

How have feminist artists and activists imagined and transformed the politics of reproduction? This course explores the complex meanings of "reproduction" across media, performance, and public culture, with a focus on questions of sexuality, race, labor, and aesthetic practice. Situating reproduction in an expanded frame, we will consider the relationship between biological reproduction and the gendered labor of reproducing social life (e.g., domestic labor, sex work, care work). Throughout, we will pay special attention to the entanglements of artistic labor with women's reproductive labor. Topics include: eugenics, housework/welfare activism, art workers movements, biotechnologies, queer kinship, and feminist utopias.

MCM 0901T. Shakespeare: The Screenplays (ENGL 0310E).

Interested students must register for ENGL 0310E.

MCM 0901U. What is Colonialism - Archives, Texts and Images (COLT 0812B).

Interested students must register for COLT 0812B.

MCM 0901W. The Space Within: Contemporary Borderland Moving Image Practice.

In this course we will examine post-NAFTA moving images that take as their subject the culture and politics of the Mexico-US Borderlands. We will tackle problems such as globalization, neoliberalism, the drug war, securitization, migration, biopolitics, and femicide. To make our claims we will place importance on film form as we unpack how the films figure and/or represent the bodies and spaces of the Borderlands. More, we will think seriously about how the concepts we adopt—including that of "border" itself—function as epistemological tools. This will be a course for those invested in Borderland issues and political moving image practice.

MCM 0901X. Digital Cinema and the Inhuman.

From the incursions of biopolitics to the specter of ecological collapse, the problem of how life is organized, sustained, and functionalized strikes at the heart of contemporary society. And yet to whom or what "life" belongs remains an open and evolving question. This course examines contemporary digital cinema as a textual, technological, and political site to rethink the concept of "the human." Drawing on theoretical traditions that investigate the nature of vitality, automation, and the distinction between human and nonhuman, we will study how bodies, identities, and categories of thought are troubled and transformed by moving images.

MCM 0901Y. Puzzle Films.

This course explores a group of diverse and increasingly popular films termed "puzzle" or "mind game" films. The first unit of the course focuses on a sample of the debates surrounding post-classical cinema and its stylistic and institutional features. We will then explore these films against the background of the economic and political shift to Post-Fordism and Neoliberalism. Since many of these films explicitly with philosophical issues, we will also examine these. The topics will include skepticism and its relation to a changing and expanding media environment, and the importance of speculation in neoliberal economics and culture.

MCM 0901Z. Reading Practices: An Introduction to Literary Theory (ENGL 0800R).

Interested students must register for ENGL 0800R.

MCM 0902A. Cultures, Societies, and Resistance (MES 0950).

Interested students must register for MES 0950.

MCM 0902B. Film Classics: Greeks on the Silver Screen (MGRK 0810).

Interested students must register for MGRK 0810.

MCM 0902C. Digital Media in the Time of Ecological Crisis.

In a time characterized by anthropogenic climate change, militaries forecast climate refugees, scientific communities broadcast the end of 'nature' while politicians engineer influence in a media ecosystem. What are the politics of how media represents science, the environment and ecological crisis? This course considers the historical emergence of digital media alongside ecology. By studying the exchange between scientific knowledge, digital technology and the communication of environmental crises at local and global scales, we will attempt to establish an interpretive framework for the matrix of politics, power, inequality and violence that accompanies the historical and temporal conditions consistent with climate change.

MCM 0902D. The Visual Culture of Suffering.

This seminar explores how suffering is constructed as a visual phenomenon. Through close analysis of photographs, films, monuments, and exhibitions, we will explore how suffering has been deployed, and the sort of meanings it has been assigned. We will examine four specific scenes of historical suffering: Lynching and Reconstruction, The Holocaust, Hiroshima, and 9/11.

MCM 0902E. In Design: Layouts of Modern Media and Design.

This course aims to engage with media and design by thinking critically about them and asking questions about their relationship to the larger culture. We will survey design elements and principles and show how they construct products and media. Beginning from the basics, we will move onto systems to demonstrate how they lay out the rules of design. We will then move to digital media in which the design elements are re-organized by new uses of old principles and inventions of new ones. Readings include: Ranciere, Latour, Flusser, Bloch, and Baudrillard, alongside with Lupton, Buchanan, Papanek, Dunne and Raby.

MCM 0902F. Post Cinema? Histories and Politics in the "Digital Revolution".

The rapid influx of digital technology and so-called "new media" around the new millennium has led some to suggest that Cinema—conceived of as a photochemical technology experienced publicly as a mid-twentieth century cultural phenomenon—is dead or dying. This course explores the political and historical stakes of this claim, taking an archaeological and genealogical approach to problematize notions of technological progress and periodization. Rather than seeking to "rescue" cinema, we will instead explore how "the cinematic" has been adopted and dismantled by the logics of neoliberal governmentality, and what it can still offer for modes of political resistance.

MCM 0902G. Visual Cultures of Repair and Resistance.

This seminar will explore the poetics and politics of cultural production that engages war, state violence, and intersecting social inequalities through processes of repair and resistance. Using methodologies of visual culture analysis, we will examine how images shape the political imagination, paying special attention to the politics of looking, witnessing, and (not) being seen. Addressing various historical and political contexts, we will focus on a few primary loci: Afrofuturism and what Saidiya Hartman calls "critical fabulation" in the "afterlife of slavery"; acts of witnessing and speculation in Palestine-Israel; and transnational resistance to surveillance, drone warfare, and global networks of control.

MCM 0902H. Cinema and Revolution: A Global Perspective.

This course provides a critical introduction to the history and theory of revolutionary cinema. Students will be exposed to a range of filmic modes and textual practices that mediated the political idea of revolution, including such celebrated movements as Soviet formalism, Surrealism, 60s Counter Cinema, and Third Cinema. We will investigate the role of film in the revolutionary renewal of life, the dialectic of repetition and emergence that structures revolutionary temporality and the modernist work of art, the compulsive drive to reconstruct revolutions as cinematic events, and the political antagonisms that prevent the revolutionary project from achieving representational closure.

MCM 0902I. Never Work! History, theory and media of work and its refusal.

This course attempts to clarify some of the intricacies of the category of work and examine the role of media in its articulation. We will explore the characterization of historical epochs and articulation of theoretical binaries that have contributed to a contemporary understanding of labor and productivity: the transition from feudalism to capitalism, idleness and leisure, productive and reproductive labor, etc. Throughout the course we will explore both media produced with the intent to glorify, enforce and structure work as well as media intended to reflect critically on conditions of labor and instigate work refusal.

MCM 0902J. The Humanities in Context: Literature, Media, Critique (HMAN 0800A).

Interested students must register for HMAN 0800A.

MCM 0902L. Film Classics: The Greeks on the Silver Screen (MGRK 0810).

Interested students must register for MGRK 0810.

MCM 0902M. The end of politics as we know it? New Media & Political Imagination.

Technical inventions have always spawned utopian visions of total social amelioration, followed closely by dystopian fears and moral panics. Digital information technologies are no different. Producing the full range of reactions—from celebrations of "networked protests" to wild accusations of "fake news"—responses to today's media environments proclaim the end of politics as we know it. Reading works by political theorists alongside scholars of the digital, this course will question both triumphant digital utopianism and fatalist assumptions of ubiquitous manipulation, and instead engage in more complex readings of the ways media shapes and is shaped by subjects and communities alike.

MCM 0902N. Intro to Surveillance Studies, or, You're So Paranoid, You Probably Think This Class is About You.

What does it mean to identify as? Or to be identified as? Identification is a practice of self-making, a way that we communicate to ourselves and to others who we are. It is also a practice of surveillance, a way that institutions – from the Department of Education to the CIA drone program, from the doctor to the data consultant – determine who we are. This course takes up these tensions within identification to consider its effects – technological, theoretical, and political – on our contemporary moment. Examining practices of surveillance – or identification technologies – through digital media studies, trans studies, and Black studies, we will reflect critically on concepts such as subjectivity, visibility, and opacity, and on popular representations of surveillance, from the expressions “flying while Muslim” or “walking while trans” to the viral “FBI agent” meme.

MCM 0902O. Neural Media: A Cultural History of Machine Learning.

After decades at the fringes of computer science, neural networks are now recognized as one of the most effective models for machine learning. A key object of study for media studies, these systems provide a privileged entry into the history and epistemology of computing machines, digital cultures, and the supposedly “objective” data practices underpinning them. Readings works from media studies, history of science, and postcolonial theory, this course will link the historical emergence of neural networks to the remediation of broader ideals and practices of knowledge related to the classification, management, and regulation of individuals and populations.

MCM 0902P. Digital Media on Trial.

Digital Media on Trial explores the traffic between media, technology, and the law. We are familiar with lamentations over the law's struggle to keep up with rapid technological change. We are also familiar with claims of the law's ‘timeless’ or even ‘universal’ principles. This course troubles both of these dominant conceptions of the law's relationship to technology through media. How do courts of law and of public opinion respond to seemingly accelerating cycles of obsolescence? How is technological ‘innovation’ shaped by legal discourses in return? How might a focus on digital media and technology throw these questions into sharper relief?

MCM 0902Q. Literally Occult: Hidden Imaginaries in Media and Theory.

From the printing press to digital computation, mediating technologies have long been associated with ghosts, demons, magic. Emerging media are often touted as enabling unprecedented access to information, yet this also beckons a fascination with that which necessarily remains hidden. This course examines how hidden — or, “literally occult” — operations, techniques, frequencies, and figures pervade popular media and media scholarship. We will focus on themes of the occult read in and through critical theory, media archaeology, and software studies. What remains hidden in photographs, films, songs, maps, webpages, books? And how might the occult help us comprehend the (literally) occult?

MCM 0902R. In Real Time: Mediation and the Lives of "Liveness."

"In Real Time: Mediation and the Lives of 'Liveness'" will examine the concept of "liveness" across media from an interdisciplinary, theoretical perspective. Liveness is given a great deal of attention in theater and performance studies, yet the term's meaning is underexplored and/or contested in sound, radio, television, and digital media studies. This course will look at how a sense of "liveness" is constructed vertically and horizontally for various media, and how ideas about what constitutes "liveness" have changed over time. As "liveness" becomes an integral part of a given medium, does it still refer to a relation between event and spectator in "actual" time and space? What is lost when the potential for preservation is opened, and how is the ephemeral quality of some media retained? What does this imply for our very notions of media, liveness, history, and living?

MCM 0902S. Celluloid Deaths.

Exploring major themes in film theory, aesthetic theory, affect theory, queer theory, and post-colonial theory, this course asks the question, why do movies matter today? What does cinema have to do with life—and with death? From the operations of the cinematic apparatus (incorporating a process of mechanical indexicality that employs a shutter to block out light as often as it opens to it) to the marginalized, overlooked stories and audiences to which cinema connects us, film, an inert object, animates us upon its projection. Movies about multiple kinds of deaths and filmic representations of deaths—including social death, archival absences, labor exploitation, and killing—are the focus of this course. Yet we might be enlivened by cinema as well; understanding the complex situation of films within capitalism allows us to envision opportunities for subversive participatory spectatorship.

MCM 0902T. Media Epistemologies: Propaganda, Conspiracies, and Other Ways of (Not) Knowing.

How do we evaluate claims to the truth? Who and what do we consider legitimate sources of facts and opinions? What assumptions guide how we interact with media, our institutions, and each other? In our current age, seemingly dominated by fake news, conspiracy theories, and a crisis of “truth”, these questions are more important than ever. This is not a course about theories of media reception, but rather a course that takes the ways that media have been imagined within the process of knowledge production as its object of study. Drawing from a wide variety of fields including media studies, cultural theory, Black critical thought, and feminism, this course will examine how knowledge is configured, debated, and defended in our hypermediated landscape.

MCM 0902U. Inventing Spaces: Theories of Spaces as Cultural Creations.

This course will trace the cultural production of spaces from tourist landscapes, to urban architecture, to the making of maps, to the plantation. It will consider the theorization of space broadly, working with theorists traditionally affiliated with the field (Henri Lefebvre, Yi-Fu Tuan) and theorists who think with spaces but are associated with other disciplines (Krista Thompson, Karin Amimoto Ingersoll). Photographs, films, television, and works of art will be used to analyze how spaces are represented, and how representations and imaginings of spaces relate to their built construction. In studying the influence of visual culture in (re)making spaces, it can be observed that spaces are not neutral but are instead culturally determined and are often imbued with violences. With this notion in constant consideration, we will critically examine how we exist within, move between, remember, and reinforce spaces.

MCM 0902V. Imperial Visions/Decolonial Practices: From Palestine to Turtle Island.

How do we look at ourselves, and how do we look at others? From where do these distinctions emerge, and how can we trace the, at times, blatant and at other times, insidious trajectories of imperial formations of looking that have shaped enduring configurations of race, class, citizenship, sex, gender, and ethnicity in our shared world? In this course we will trace the operations of the imperial gaze and (settler) colonial visibility, using different cultural, political, intellectual, and critical engagements with decolonial practices, focusing on such concepts as “resistance,” “refusal,” “resurgence,” “repair,” and “return.” In dialogue with weekly readings, screenings, and student-led discussions, we will work together to unpack these methods and approach them from different perspectives that center Black feminist, Critical Indigenous, and Palestinian theories anchoring our approaches in the geopolitical and imaginative terrain of Palestine and Turtle Island.

MCM 0902W. Simulating Reality: The (Curious) History and Science of Immersive Experiences (ITAL 0701).

Interested students must register for ITAL 0701.

MCM 0902X. Italian EcoCinema Earth Ecologies and Cinema: The Anthro/Bio/Geo/Morphic Machine (ITAL 0910).

Interested students must register for ITAL 0910.

MCM 0902Y. Screenshot: Remediation, Transmediation, and Digital Media.

Drawing on a range of case studies from film, television, and social media and thinking with larger cultural and political contexts, this course will consider remediation of the digital (social media, phone screens, computer screens) as an aesthetic and narrative form. Interrogating transmediations of new media, the course will consider the stakes of these representations. How are gender, sexuality, and race considered in both remediation and transmediation? How do ideas of the digital function on film and television? What aesthetic features have shifted to depict YouTube, Twitter, Instagram, TikTok, and other social media platforms in "old" forms of media? Considering texts interested in online connections (mutual, romantic, transactional, parasocial, paranormal, etc.), theories of remediation, transmediation, digital media will guide discussions concerning the aesthetic and narrative function of our cultural obsession with new media.

MCM 0902Z. Theories of Cinema, Trauma, and Sex.

This course introduces students to various theories of cinema, trauma, and sex. Our primary question will be: What is "trauma" as a historical, structural, and sexual concept? What and how does cinema tell us about "trauma"? We will consider the filmic depiction of traumatic events as a formal and epistemological problem to be interrogated rather than as something that we can take at face value. We will survey a broad range of approaches to these issues, from "classical" trauma theory and psychoanalysis to critical race studies and feminist/queer studies. Weekly screenings will be put into conversation with these diverse methodologies and film theory. We will analyze films wherein cinematic form tells us something about trauma as an ontological issue. How cinematic form poses and exposes the limits of knowledge around individual and collective traumas will thus be our focus.

MCM 0903A. Let's Get Physical: Histories and Theories of Fitness.

Did you know that the treadmill originated as a prison torture device? Or that aerobics videos are credited with giving rise to the popularity of the VCR? "Let's Get Physical: Histories and Theories of Exercise" will examine the body and technology, as well as fitness cultures across media from an interdisciplinary, theoretical perspective. Through readings in critical theory, media studies, gender studies, disability studies, and science and technology studies, students will explore the spaces and instruments of fitness, as well as the cultures that have emerged around them. By looking at a variety of texts, including treadmill patents, aerobics videos, and live-streamed Peloton classes, we will ask what the history of exercise tells us about gender, perceptions of health and disability, and our relationship to technology.

MCM 0903B. Visions of Algeria: Revolution, Visuality, and the Potentialities of History.

"Christians go to the Vatican, Muslims go to Mecca, revolutionaries go to Algiers" Amílcar Cabral, guinean revolutionary. What is Algeria? A country, a nation, a flag, a history, but also a narrative, a potentiality and, until recently, an ideal, a blueprint, and a paradigmatic example for anticolonial and liberation movements of the Global South in the 20th Century. In this class, we will ask the question of Algeria beyond the simple area study or historical inquiry, as a way to explore such vast concepts as visibility, colonialism, nationalism, revolution, and the writing of history. We will question the value of looking at images in order to unpack and untangle how places like Algeria became fraught emblems of many concepts, myths, and opposing visions.

MCM 0903C. Surveillance Media.

Surveillance media surround us; we are watched by CCTV cameras and satellites and tracked by our cellphones and computers. In this course, we will examine surveillance media as technologies of power that do not neutrally perceive but actively produce subjects. This course focuses on government surveillance, looking at drones, border surveillance and war media, but extends to other sites such as the factory and workplace. Key threads here will be the origins of contemporary surveillance in capitalism, colonialism, and empire. Throughout the semester we will attend to how some are disproportionately targeted according to race, gender, sexual orientation, class, disability, religion, and citizenship. We will also ask what it means to resist surveillance, with particular attention to surveillance in contemporary visual culture. This entails asking what it means to look back and how not to be seen.

MCM 0903D. Diagnostics, Media and the Making of Experience.

What does it mean to interpret and "diagnose"? How do we interpret and diagnose others, and how do we interpret and diagnose ourselves? What forms of self-discovery are enacted? And what forms of violence might take place instead? In this course, we will explore "diagnostics" and "diagnostic media" as a specific way media is used to build meaning about others and ourselves. This course will be shaped around two key facets of diagnostics: diagnostics as a media form, and diagnostics a mode of encounter. We will pay close attention to the ways empire, race, gender, sexuality, and ability are intertwined in these discussions, and how we create worlds about our experiences, and the experiences of others.

MCM 0903E. Capitalism, Computers, and the Era of A.I..

What is the relation between capital and the computer? To answer this question, this course attends to the particulars of the computer as a mathematical proposition, to its claim to legitimacy as a logic of superior military and political organization, and to its elaboration as something of a natural philosophy in scientific practice. In doing so, we will formulate a conceptual basis to critically assess the glittery promises of current discourse invoking Artificial Intelligence (A.I.), which sees near-total automation as inevitable and the threat of sentient Artificial General Intelligence (A.G.I.) as nigh. We will establish a critique of the computer as a structure (as a philosophical arrangement with a specific and persistent imagination) to think critically about popular ideologies associated with A.I., often put forward by those with capital stake in its commercial success.

MCM 0903F. Black Love: Slavery and Sexuality on Screen.

Is love a luxury in the time of racial terror? Does war render romance obsolete or out-of-touch? This course explores the worth, role, and work of love in the afterlives of slavery through attention to its tele-visual and cinematic presences. Together, we will look for narrative forms and aesthetic gestures that—rather than simply pointing us back to the antebellum period or evidencing its contemporary vestiges—unconceal racial slavery's sexual and romantic present. We question the role of screen cultures in popular knowledge-production around African diasporic enslavement and trouble common sense notions of sexual pleasure and intimacy as they pertain to histories of racial representation and repression. Through critical cultural analysis, concept-tracing, and ideology critique, this course deploys blackness as a framework and mode of enfolded existence by which to assess modern experiences of the erotic insofar as love remains a site

MCM 0903I. Take Me Apart: The Body As Myth Between Literature, Film, and Theory.

Through various media such as novels, films, and performance art, together we will interrogate our primary question: what is a body? 'The Body As Myth' explores the work of artists and scholars across disciplinary fields that have discussed and dissected the concept of the body as an amalgamation of biological, sociocultural, psychological, and/or philosophical schemas rather than the pure instrument of Cartesian dualism. Topics that we will encounter over the course of the semester include horror and the tortured body, phenomenology, the libidinal self, race and the body, feeling and cinema, and more. This course has required asynchronous film screenings each week.

MCM 0903J. The Dancer and The Muse.

It has by now become a cliché to assert—rightfully so—that aestheticians and philosophers have neglected dance by reducing the female dancer to a muse. In this course, rather than insisting on this fact, we will unpack the relation between the dancer and her proximity to the concept of a muse. We will read canonical and contemporary texts on the philosophy of dance, and watch dance performances and films, to reinterpret this provocative, elusive concept and follow the unconventional path it opens up for the criticism and interpretation of contemporary dance and cinema. Students who have not fulfilled the prerequisite may apply for permission to enroll by requesting an override in Courses@Brown.

MCM 0903K. Mediated Anxieties, Anxious Mediations.

What is anxiety? Far from constituting merely a fleeting feeling, a negative emotion, or a “minor affect” (Ngai), anxiety lies at the very foundation of modernity’s structures of spectatorship, theories of subjectivity, and interpretive methods. Bridging the history and philosophy of medicine, film studies, and digital media theory, this course will take anxiety as a conceptual lens through which to examine current debates in media studies and critical theory. We will ask: is anxiety particular to current subject formations and media ecologies within what is called ‘modernity’ and its afterlives, or is it a transhistorical phenomenon constitutive of subjectivity itself? How does anxiety emerge from and destabilize ideological formations? We will engage theoretical and cinematic texts as well as paintings, photographs, and digital platforms. Authors covered include Kant, Nietzsche, Freud, Benjamin, Simmel, Heidegger, Lacan, Fanon, Barthes, Bazin, Derrida, Sedgwick, Kornbluh.

MCM 0903L. Between Media and Ecology: Life, Technology, and Inhabitation.

This course examines the entwinement between media and ecology, exploring how they affect, structure, and shape living systems. We understand “ecology” not just as a thematic concern of media content or as a scientific and cultural narrative on media platforms. Instead, we approach it as a critical framework to rethink perception, relationality, embodiment, and systems of meaning. We analyze the material conditions—geophysical resources, labor, and infrastructures—that enable media technologies and explore “media” as a dynamic process of “mediation” and networks of technologies of power. In an era of climate crises, we ask how ecological and media systems coconstitute subjectivity, community, and political agency. Our texts and media objects will prompt us to challenge the very concepts of “media” and “ecology,” as we think through our situated, material conditions of being and relationality.

MCM 1110. The Theory of the Sign.

A survey of three late twentieth-century theorists: Louis Althusser, Jacques Derrida, and Michel Foucault. Our analyses will focus on these figures as they emerge from and reorient the broad field of semiotics, with particular attention to the evolution of each oeuvre, the continuities and discontinuities that distinguish their theoretical claims, and their diverging legacies. Readings will include Althusser’s Reading Capital and “Contradiction and Over-determination,” Derrida’s Of Grammatology and Spurs; and Foucault’s This is Not a Pipe and History of Sexuality. Critical concepts to be examined include signification, reading, discourse, subjectivity, power, historicism, archaeology, the supplement, and difference.

MCM 1200D. African Cinema.

Subsaharan African cinemas 1960-present, primary emphasis on narrative films. We will analyze cultural and aesthetic strategies, (cinematic style, narrative, and subjects). in the context of postcolonial African and international film histories. Themes include: anticolonial resistance/nationalist ideologies; third cinema/international art cinemas; oral aesthetic culture and cinematic style; political critique (e.g., gender, state politics); media globalization and resistance; the struggle for a mass audience. Enrollment limited to 50. Previous coursework in MCM, Africana Studies, or related areas highly recommended.

MCM 1200G. Cinema and Stardom: Image/Industry/Fantasy.

This course focuses on the role of the star within the “machinery” of Hollywood: how stars function in the film industry, within cinematic and extra-cinematic texts, and at the level of individual fantasy and desire. The paradoxes posed by stars—represented as like yet unlike us, public yet privately known, commodities yet (super)human—suggest complex formations and implications of the star system. We will read film theories and histories and investigate films in which star images are foregrounded to explore these issues.

MCM 1200K. Hollywood as Global Cinema.

Commonly treated as a U.S. national cinema, Hollywood film has long been a global institution dominating worldwide distribution. We reread U.S. narrative filmmaking and its products in relation to its global ambitions. Topics include: internationalizing the history of U.S. cinema; rethinking theories of the classical and anticlassical text; local, national and global spectatorship; concepts of cultural imperialism and cultural globalization; etc. Students interested in the class who have not fulfilled the prerequisite may apply to the instructor for permission to enroll. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50. Students must register for the primary meeting and one film screening.

MCM 1200Q. Publicity and Surveillance.

Investigates the converging technologies and practices of publicity and surveillance. Considers phenomena such as webcams, face recognition technology and networked art, as well as concepts such as enlightenment, paranoia and exhibitionism. Theoretical, historical and legal readings.

MCM 1201C. Imagined Networks, Glocal Connections.

This course examines emergent “imagined networks” (Arab Spring activists, global anti-globalization networks, global climate and financial systems) impacted by new media technologies and applications. Emphasis will be placed on understanding the changing relationship between the local and the global, and how “glocal” phenomena affect national and personal identities. Readings will be theoretical, historical, political and literary. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1201E. Feminist Theory and the Question of Sexual Subjectivity.

Many contemporary theories of sexual subjectivity have to do not with the body but with gender. Gender is seen to have liberated people from the dictates of biology. But there are other feminist theories that see sexual subjectivity as reducible neither to anatomy (biologically male/female) nor to gender (culturally male/female/other). We’ll look at current debates among theorists and will ask what these debates have to do with the canonical work of earlier feminist film theorists on questions of spectatorship. Readings include Butler, Copjec, Freud, Lacan, Irigaray, Kristeva, Mulvey, Doane, and others. Prerequisites: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1201J. Aesthetics and Politics (ENGL 1900E).

Interested students must register for ENGL 1900E.

MCM 1201K. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).

Interested students must register for ENGL 1900R.

MCM 1201O. Global Media/Global War.

The 20th Century has been called the age of total war. Alongside the globalized military conflicts of the past 100 years is a corresponding globalization of visual media technologies. This course is a study of the links between the technologies, strategies, tactics and technologies of the military and those of various media industries. Topics include “target markets”; flight simulators; Google Earth; “the logistics of military perception”; the bombing of television and radio stations in Serbia and Iraq; the global presence of U.S. military bases and their role in the Americanization of global culture; and Michael Bay’s Pentagon contracts. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50. First year students require instructor permission.

MCM 1201P. Freedom in Africana Political Thought (AFRI 1020B).

Interested students must register for AFRI 1020B.

MCM 1201R. Music and Modern Life (MUSC 1920).

Interested students must register for MUSC 1920.

MCM 1201T. Russian Cinema (RUSS 1250).

Interested students must register for RUSS 1250.

MCM 1201W. Modernity, Italian Style (ITAL 1030A).

Interested students must register for ITAL 1030A.

MCM 1201X. Global Media: History, Theory, Production (INTL 1800N).

Interested students must register for INTL 1800N.

MCM 1201Y. Reading Michel Foucault.

This course will explore Foucault's work and impact primarily through his own writings, but also by exploring the transformation his thought has effected on traditional ways of approaching state and society, the body, social discipline, and a number of other areas of study. In short, this course seeks to put his work in the context of ideas he meant to challenge and how those challenges have been met and incorporated in current thought about politics, society, and culture. We will follow Foucault's trajectory from what he termed "archaeology" to "genealogy." Prerequisites: MCM 0110, 0230, 0240, 0250, 0260 or 1110. Enrollment limited to 50 Sophomores, Juniors and Seniors.

MCM 1202A. The Poetics of Confession (ENGL 1561J).

Interested students must register for ENGL 1561J.

MCM 1202B. Literature and Politics (ENGL 1900D).

Interested students must register for ENGL 1900D.

MCM 1202C. Camera Works: The Theory and Fiction of Photography (ENGL 1900V).

Interested students must register for ENGL 1900V.

MCM 1202D. China Through the Lens: History, Cinema, and Critical Discourse (EAST 1270).

Interested students must register for EAST 1270.

MCM 1202E. Extreme Asian Cinema: Contemporary Genre Cinemas in an East Asian Context.

Since the late 1990's, a discourse of "extreme Asian cinema" has gained traction among aficionados of global cinema, transforming our understandings of "national cinema." In this course, we will interrogate the spectacular aesthetics of "extremity," with its violence, polymorphous perversion, and grotesquerie, in relation to social and cultural phenomena in contemporary East Asia. By analyzing the genres of the gangster film, the revival of wuxia (heroic martial arts genre) and samurai films, horror, revenge films, and techno-dystopia and ecological disaster anime, we will explore "extreme Asian cinema," as a response to cultural shifts in global identities and film experience. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1202F. Science Fiction Cinema.

Although it raises compelling philosophical, aesthetic, and socio-historical questions, science fiction cinema has been underrepresented in scholarly literature and the academic curriculum. This course surveys the modern science fiction film from experiments in the silent era through the contemporary science fiction blockbuster (with particular emphasis on the latter). Covers various thematic concerns (disaster, post-apocalypse, the future, simulation, space travel and inhabitation, future cities, alien arrivals/invasions, posthumanity) and is international in scope. Films by Kubrick, Cameron, Scott, Verhoeven, Gilliam, Bigelow, Boyle, Emmerich, and others. Readings in theory, philosophy, cultural studies, film studies, gender studies, and fiction. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50. Not open to first-year students.

MCM 1202H. French Cinema: The First Fifty Years (FREN 1150C).

Interested students must register for FREN 1150C.

MCM 1202I. Warriors, Gangsters, and Misanthropes: Violence and Sociality in Asian Genre Cinemas.

By analyzing films from a variety of popular genres, from war to horror, gangster, action-thriller, and disaster films, we will consider the problem-solving function, visual pleasure, visceral thrills, and ethical stakes of multiple forms of film violence, including state violence, gendered violence, heroic and anti-heroic violence, and spectacular, extreme, or fantasmatic violence. Further, we will ask what forms of sociality or intersubjective relations these differing modes of violence posit or problematize, to gain insight into broader questions concerning the anti-sociality of violence and the prevalence of film violence in the social, cultural, and historical contexts of contemporary East Asia. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1202J. Faking Globalization: Media, Piracy and Urbanism.

This course explores issues related to media, piracy, and development—centering on two entangled processes: faking and globalization. It asks: how do we understand globalization? And what does it mean to fake, forge or fail at it? We will examine theories of globalization and global media as well as challenges to dominant models of neoliberal modernity. Key examples include "pirate modernity," "information feudalism," parasites, terrorists, copycats and other markers of excess or imitation. Rather than dismissing alternative or counter-globalization practices as aberrations, the course examines how faking globalization enables both new forms of control and capacities in political society. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1202K. Garibaldi Panorama: the Invention of a Hero (from pre-cinema to digital) (ITAL 1340).

Interested students must register for ITAL 1340.

MCM 1202L. The Many Faces of Casanova (ITAL 1400J).

Interested students must register for ITAL 1400J.

MCM 1202M. Issues in Contemporary Hollywood Cinema.

How can we begin to think about contemporary Hollywood? This course examines Hollywood filmmaking from the end of the studio era through the present. It interrogates the concept of "classical Hollywood cinema" as it persists, develops, and/or attenuates outside of its natural habitat under the studio monopolies, addressing topics and areas like genre revisionism, New Hollywood, technological development, postmodernity/simulation, digitization, corporatization, merchandising, globalization, Vietnam, counterculture, Reaganism, 9/11, etc. Films by the likes of Sirk, Fuller, Hitchcock, Peckinpah, Kubrick, Scorsese, Coppola, Cassavetes, Polanski, Malick, Spielberg/Lucas, Carpenter, Bigelow, Cameron, Scott, Verhoeven, Lynch, Nolan, Peter Jackson, Jonze, P.T. Anderson, Rian Johnson, Winding Refn. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1202N. Global Theatre and Performance: Paleolithic to the Threshold of Modernity (TAPS 1230).

Interested students must register for TAPS 1230.

MCM 1202P. Fellini (ITAL 1030A).

Interested students must register for ITAL 1030A.

MCM 1202Q. Word, Media, Power in Modern Italy (ITAL 1590).

Interested students must register for ITAL 1590.

MCM 1202R. Rhetorics of New Media.

Digital technologies have shaped culture, but they've also shaped how we talk about culture, and about art, bodies, and communities. Is there political potential in the trend toward computerization? Or might technophilia and technocracy obstruct collective betterment? We'll study the legitimizing rhetorics of our increasingly digital present, and read electronic literature, print sci-fi, film, games, and art, along with cultural theory spanning the past half century. Historically arrayed, our topics range from globalization to the aesthetics of code, the newness of new media, technics-out-of-control, gamification of war, technologies of race and gender, digital narratology, and the ideology of computationalism. Prerequisite: MCM 0110, 0220, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 50 sophomores, juniors, and seniors.

MCM 1202S. Click Here to Continue: Bodies, Identities and Practices in a Digital Age.

Why is the notion of 'post-racial' synonymous with this digital age? How are political and social effects visible not only in the practice of digital technology, but in the underlying structure itself?

Crossing the fields of digital humanities, critical theory, feminist theory, race studies, and new media studies, this course considers how technology is a constant reflection of fantasies and fears. We will consider the interplay between users, humans, bodies, avatars, code and systems as we simultaneously practice and critique the prevalent forms of digital technology in our lives today. Readings include work by Nakamura, Gonzalez, Haraway and Coleman.

MCM 1202T. Perverse Cinema (ENGL 1762A).

Interested students must register for ENGL 1762A.

MCM 1202U. Sex and Sexuality in American Film.

What is the connection between "sex" and "sexuality," and how do these terms intersect in film and theory? In this course, we take a long historical view of both mainstream and experimental American film. We look at how sex and sexuality have been depicted on screen, while exploring cinema's role in the construction of diverse, often radical, identities and practices. We test a range of critical approaches—deconstruction, feminism, close reading, queer historiography—to the theory of sexuality, and read major figures in film from Greta Garbo, Orson Welles, and Rock Hudson to Lizzie Borden, Divine, and the Brokeback cowboys.

MCM 1202X. Twentieth-Century Western Theatre and Performance (TAPS 1250).

Interested students must register for TAPS 1250.

MCM 1202Y. World Cinema in a Global Context (ITAL 1029).

Interested students must register for ITAL 1029.

MCM 1202Z. Native Americans in the Media: Representation and Self-Representation on Film (ETHN 1890G).

Interested students must register for ETHN 1890G.

MCM 1203A. Gaming of the Oppressed: Theory and Design.

This course gives an overview of various types of "serious games" or "anti-oppressive games" that range from videogames to immersive transmedia storytelling games. We will explore issues of why gaming is so enticing and the potential games have through their history, procedure, and design. We will then examine the role games play in our everyday lives and games' potential for understanding motivation, education, and labor. Students will also work with complimentary theories of race formation, queer theory, and gender identity. At the end of the semester, students have the opportunity to create their own game.

MCM 1203B. Politics + Aesthetics of Hollywood.

Hollywood is an industry, a cultural bellwether, and a globally distributed artform. This course will consider these functions together, asking how Hollywood's aesthetics connect to its ideology and commerce. Focusing on the post-studio life of Hollywood, and on Hollywood's preoccupation with sex and violence, we'll pay special attention to the genres of melodrama and crime film, 1945-2000. We'll read film theory, "Hollywood novels," and documents of film culture, and watch films by filmmakers who were central to the industry (like Hitchcock and Minnelli) as well as by those at its margins (from Lupino and Waters to Burnett and Cronenberg).

MCM 1203C. Tv Time Machine: History, Representation, Politics.

How does television both document and represent historical events? This course examines American history "as seen on TV": how viewers watch noteworthy events live; how television archives crucial moments and time periods; and how genres such as the news, period drama and sitcom, and reality TV differ in their representations. We consider what makes television a unique medium for which to study history, particularly focusing on questions of gender, class, race, and sexuality. Utilizing approaches including the study of collective memory, historiography, aesthetic and textual analysis, and media theory, we will assess the imbrication of American history and popular culture.

MCM 1203D. Back to the Future: Nostalgia and Futurity in Contemporary Sci-Fi TV and Telefantasy.

How do contemporary science fiction and fantasy television programs not only imagine our future, but also our past? How do visions of the future from the past inform both of these genres today? And what does contemporary TV's nostalgic longing for futures past suggest about where the medium is headed? This course addresses these and other related questions while providing students with an overview of contemporary English-language sci-fi and fantasy television. The course combines elements of both the lecture and seminar, and will include screenings of such varied programs as *Babylon 5*, *True Blood*, and *Dr. Who*.

MCM 1203E. Intellectual Life and Culture in the Post-Western World.

No one alive today has experience of a world in which the United States is not the leading economic power. This is the world we shall all encounter, however, very soon. Such headlines are small indices of an emerging post-Western future. We will investigate the intellectual, political and aesthetic culture of this future. What will change when Judaeo-Christian societies no longer monopolize global conversation? When societies that have historically rejected Western capitalism come to dominate it? What new ideas will be unleashed in such a world, and what will their consequences be for our thinking about politics, economy and identity? This is a half-credit course.

MCM 1203F. The Aesthetics of Political Cinema: Montage, Political Modernism, and Beyond.

In the 1920s, Russian filmmakers with political concerns blended mass cinema and innovative avant-garde and modernist filmmaking styles. Their most famous filmmaker, Sergei Eisenstein, elaborated his concept of montage to explain his ideas of cinema. This course will examine the heritage and strategies of political filmmaking which draws on modernist aesthetics, beginning from the montage filmmaking of the 1920s. Some emphasis on 1920s-30s and 1960s-70s, but not limited to those years. Work by filmmakers such as Eisenstein, Vertov, Brecht, Ivens, Capra, Godard, Marker, Oshima, Bertolucci, Tavianis, Kluge, Fassbinder, Akerman, Rainer, Mulvey, Solanas, Hondo, Gerima, M. Moore, Oppenheimer, and/or others.

MCM 1203G. East Asian Internet Cultures.

This course examines the social, cultural, and aesthetic dimensions of internet life in China, Japan, and South Korea. Our focus will be on the formal diversity of internet use (including websites, social media, mobile phones, blogs, gaming, and streaming video); the relationship between the internet and other media (literature, film, animation, documentary); and interdisciplinary methods for studying online life. By considering how the internet has developed in each country and how it has reshaped identity, sociality, politics, public space, and aesthetic form, we will work towards building a conceptual and critical vocabulary for the comparative study of internet cultures.

MCM 1203H. The Visual Culture of Freedom.

Organized around three classics of anticolonial thought by M.K. Gandhi, C.L.R. James, and Frantz Fanon, this course aims to formulate the relationship between visual media and the pursuit of freedom across the globe. We will critically examine various forms of resistance, from insurgency to civil disobedience, from fugitivity to refusal, in the theatre of colonialism. Through visual materials like the monster film, human rights photos, and new wave cinema, we will consider the cultural mechanisms of othering, stereotyping, removal, and exoticization that constitute the history of colonial rule and determine the course of resistance against it.

MCM 1203I. Media, or Affect.

The concept of affect—what we feel, what our bodies do and can do—is now at the center of vibrant theoretical debates. This course selectively surveys the "affective turn," focusing on four related areas: 1) the philosophy of Baruch Spinoza and its influence today; 2) the work of Deleuzian theorist Brian Massumi, who rejects the very concepts of media and mediation; 3) developments in film theory and new media theory following from Spinoza, Deleuze and Massumi; 4) psychoanalytic accounts of affect that endeavor to reaffirm mediation, representation, and sexuation against affective immediacy. Films by Malick, Cronenberg, Resnais, and others.

MCM 1203J. Anime Studies.

The scholarly study of anime has rapidly matured over the past few years, and now represents a key site for debates over the social status of drawn characters, the role of animation within larger media ecologies, and the transnational reach of Japanese popular culture. Through close engagement with the central books in anime studies and the major works of anime history, this course examines how anime has forced the rethinking of gender, sexuality, labor, intellectual property, narrative form, and the convergence of on and off-screen space.

MCM 1203L. Media and Everyday Life in Japan.

This course examines how media use intersects with the aesthetics of everyday life in modern Japan. We will examine the role of mediation through Japan's tumultuous modern history, from the early 20th century to the early 21st, drawing on accounts from a range of creative works and critical studies. In the process, we will map out shifts in the circulation of emotion, the border between private and public, the deployment of routine and habit, and the objective design of the ordinary.

MCM 1203N. The Collapse of the Nation-State System: An Intellectual Preparation.

The century-long dominance of the nation-state idea is ending. Radical Islamic internationalism, at war with twentieth-century state divisions, has created post-national forms of personal identity which bewilder the old archetypes. Russia and China are reverting to a nineteenth-century model of regional empires. Even the most stable nations are contorted by global currents which increasingly undermine the national sense in favour of new forms of localism, regionalism and internationalism.

Looking at theory and contemporary culture we will consider the long dominance of the nation-state idea, and study the emerging territorial concepts with which a world "after nations" might organise itself.

This course begins half-way through the semester. The first screening will start, before the lecture begins, on Sunday, March 5, 2017. The first lecture will begin on Thursday, March 9, 2017 and the last lecture will be Thursday, May 4, 2017. The instructor, Rana Dasgupta, will make contact with all students via email in the first half of the semester to establish the rapport of the group and answer any queries students may have. Contact information: rana@ranadasgupta.com

MCM 1203O. Modernity, Italian Style. Class, Gender, Race, Ideology in the Cinema of the Economic M(ITAL 1030B).

Interested students must register for ITAL 1030B.

MCM 1203P. Fashion as Technology.

The course explores the interplay between fashion, subjectivity and technology, tracing a genealogy of clothing and adornment as a fundamental tool for gendering and racializing subjects – from analog prosthetics to the Click-and-Buy apps of today, from tattooing to the burkini. Central to the course will be the status of the material body (along with its cosmetic and pharmacological appendages and enhancements) in an increasingly digital world. We will gain critical literacy in the history of fashion and luxury, assessing the role of dress in fabricating sexual difference and holding it into place, as well as fashion's potential for subversion.

MCM 1203R. Visual Politics in Contemporary Middle East (MES 1200).

Interested students must register for MES 1200.

MCM 1203S. New Waves from Paris to Hollywood (FREN 1150G).

Interested students must register for FREN 1150G.

MCM 1203T. Digital Masculinities.

Masculinity has historically been associated with agency over objecthood. What happens, then, to masculinity's strategies of survival within a context of perpetual digital representation? This course examines the ways male and masculine bodies – cis, trans, queer – perform themselves online, and how the digital may threaten masculinity's undoing whilst revealing its modus operandi in unprecedented ways. Through digital media theories, queer theory and psychoanalytic concepts, we investigate the various virtual, fleshly and fantasmatic assemblages that prop up phallic power in late capitalism: from trolling and online misogyny to drone warfare, from racial and gender passing to digitally enabled terrorist networks.

MCM 1203U. East Asian Cinemas in a Global Frame.

Arguably, cinema has political value because it manipulates the texture of our collective imaginations, shaping how the world, races, nations and regions appear before globally differentiated audiences. By analyzing films from Hollywood, the PRC, Japan, Korea, Hong Kong and Taiwan, this course charts how "East Asia" emerged cinematically as a textured cultural and geopolitical entity within the framework of a broader global circulation of images. Topics covered include Hollywood Orientalisms, Japanese Empire, postsocialist China, and New Korean Cinema.

MCM 1203W. Social Media Networks: From Local to Global.

Social media networks have played an increasingly conspicuous role in national and transnational politics, from the Arab Spring uprisings, to the 2013 Gezi Park demonstrations in Turkey, to the viral spread of fake news leading up to the 2016 US election. In this course, we will discuss how media connect people across the globe to an unprecedented degree, as well as the stark divisions and borders they reveal, complicating any utopian visions of a "global village." We will explore how individuals' networked identities and national and global scales of social media communities are mutually constituted.

MCM 1203X. Digital Bodies: Cyborgs, Biometrics, and Corporeal Data.

In this course we will learn about the ways human bodies interface with digital technologies. Medical scans, prosthetic limbs, and technologies like the Pacemaker promise to protect and supplement the human body, and feminists and disability scholars have at times embraced the empowering potentials of the cyborgian body. Yet the ways in which the human body is digitized—its data harvested, charted, and merged with technologies—also have more dystopian valences. We will discuss how medical technologies, CGI, phone apps, and corporations have translated and used the data of the human body, and how this changes definitions of "human."

MCM 1203Y. Rhythm Beyond Music (MUSC 1240L).

Interested students must register for MUSC 1240L.

MCM 1203Z. Race, Ethnicity, and American Film.

This course asks what a study of selected American films offers to our understanding of "race," "ethnicity," "power" and "resistance." We ask how cinema participates in shaping our collective sense of race and ethnicity, of racialization, and of racial and ethnic identity. We seek to answer our questions by attending to cinematic productions that offer insights in the history and contemporary situations of African Americans, Asian Americans, Chicanos and Latinx, Native Americans, and European Americans. An aim is to work towards a comparative analysis of racialization that reveals not only differences between these groups, but also commonalities among them.

MCM 1204B. China Modern: An Introduction to the Literature of Twentieth-Century China (EAST 1070).

Interested students must register for EAST 1070.

MCM 1204C. Ways of Seeing: The Arab World in Global Perspectives (MES 1200).

Interested students must register for MES 1200.

MCM 1204D. Politics of Chinese Cinemas.

Focusing on films produced since 1949, this course explores how "Chinese cinema" delimits a field of political contest, a global arena for antagonism over the meaning of revolution, the definition of art, the reach of propaganda, the articulation of gender, and the boundaries of culture. We begin with an examination of cinema in the Maoist PRC, moving on to a discussion of China's international Cold War presence, and finally to contemporary themes of independent film production, women's and queer cinema, and the place of Hong Kong and Taiwan in the shadow of the PRC's "rise."

MCM 1204E. The Politics of Perspective: Post-war British Fiction (ENGL 1711K).

Interested students must register for ENGL 1711K.

MCM 1204F. Critical Video Game Studies.

This course serves as a gateway into the study of video games from an analytical humanities perspective. Because reception, design, and, ultimately, interpretation are intimately entwined in gaming culture today, students will also engage the popular and corporate discourses surrounding gaming, particularly as they address issues of social justice, gender, race, and sexuality. Over the course of the semester, students will fine-tune interpretive skills that have been developed in other humanities courses for the unique challenges presented by video games and other interactive texts.

MCM 1204I. On Both Sides of the Lens: Latin American Women Filmmakers (GNSS 1070).

Interested students must register for GNSS 1070.

MCM 1204J. A New Black Gaze.

What is a 'black gaze'? The title of this course is a provocation that poses the question of whether we can identify the existence of a black gaze, while asserting the transformative potential such a gaze both promises and portends. Starting from a close examination of theories of the gaze, we will engage the relationship between contemporary black visibility and what constitutes a black gaze in the twenty-first century. Focusing on a select group of black contemporary artists, we will explore how their work challenges traditional notions of what constitutes the power/politics of the gaze.

MCM 1204K. From Analog to Analogue: Digitality and Ephemerality in Audiovisual Archives.

This seminar explores histories of moving image archives in relation to social movements, technological change, and philosophies of cultural memory that dictate the content of archives and shape perceptions of their use value. We begin by exploring archives as physical entities (buildings), structures of information (catalogs, databases, finding aids), arbiters of meaning (collections). We also consider enterprises that present themselves as archives of our contemporary selves and collective existence: Instagram, YouTube, Twitter, Tumblr, Snapchat, TikTok. We explore these issues historically and theoretically, and visit local archives to engage in hands-on activities with analog and digital moving image media.

MCM 1204L. Transmedia Storytelling and the New Italian Epic (ITAL 1350A).

Interested students must register for ITAL 1350A.

MCM 1204M. Latin American Horror Film (GNSS 1520).

Interested students must register for GNSS 1520.

MCM 1204N. TV and/as Popular Culture.

TV and/as Popular Culture is a broad critical exploration of U.S. television, broadcasting, popular culture, and media convergence from the 19th century to the current day. Students will explore the roles of industry, advertising, representation, and technology in the development of broadcast media, and learn to analyze these texts within their cultural and historical contexts. Special attention will be paid to issues of class, gender, race, and reception.

MCM 1204O. Post-1989 Chinese Media: The Culture and Politics of Control.

1989 is a dramatic turning point in China's recent history, when the crackdown of the democratic movement in Tiananmen Square led to profound socio-political changes that significantly transformed the nation's media culture. This course maps the history, politics, and culture of contemporary China through the changing lenses of post-1989 Chinese media including film, television, digital videos, visual arts, and the Internet. The focus is the culture and politics of control in post-1989 China. We will examine the controlling mechanisms in Chinese media in public and commercial domains, as well as the counter-control practices among media artists and general audience.

MCM 1204P. Nationalism and Transnationalism in Film and Fiction (COLT 1440P).

Interested students must register for COLT 1440P.

MCM 1204R. Memory, Identity, and the Archival Paradigm.

As 'alternative facts' proliferate, archive-based evidence is valued for its ability to document the histories and perspectives of diverse peoples, cultures, and movements. The inter-relationship of archives, memory, and identity was predicated on theories of power relations in archives. Today, archives are increasingly considered "memory prostheses." Audiovisual archives have inherently problematized these theories due to issues of provenance. This class questions the archival paradigm as it relates to community, celebration, reclamation of identities, artistic re-use of archives, and social activism. Students are encouraged to imagine new paths of access to media archives and to create new works using archival materials.

MCM 1204S. Asian Extreme: Beauty and Violence in Korean Media (EAST 1504).

Interested students must register for EAST 1504.

MCM 1204T. What Happened to the Future? Nostalgia After the End of History.

Many critics have suggested that contemporary popular culture is mired in a nostalgic mode, one that responds to tumultuous and traumatic changes in the world with a retreat into the safety of past styles and aesthetics. As Mark Fisher has suggested, it is as if the future itself has been "slowly cancelled." This course asks why this contemporary wave of nostalgia emerges when it does and how we might read media symptomatically to better understand what has happened to conceptions of the future in an age of media change, economic crises, and the looming threat of environmental collapse.

MCM 1204U. Slow Cinema.

In the wake of the increasingly frantic pace of 21st century life, a loose, international movement known as "slow cinema" has gained a significant following in the last two decades. But what do we mean by "slowness," and can these films reveal anything about our current moment of crisis and economic contraction? Are they simply a nostalgic repetition of earlier art cinemas, or are they capable of engendering new, oppositional modes of spectatorship? We will attempt to answer these questions while grounding our inquiry firmly in a close, formal analysis of key slow films.

MCM 1204V. Global Theatre and Performance: Paleolithic to the Threshold of Early Modernity (TAPS 1230).

Interested students must register for TAPS 1230.

MCM 1204X. Rereading Writing (LITR 1231E).

Interested students must register for LITR 1231E.

MCM 1205. ITALY: World Cinema in a Global Context.

This fully immersive, intensive and project-oriented summer course introduces students to World Cinema and its histories through an original contextualized approach centered around the Cinema Ritrovato Film Festival, hosted every summer by the Cineteca of Bologna.

MCM 1205A. What We Talk About When We Talk About Horror.

The killer, their victims, the 'terrible place,' the 'final girl': components like these, associated with 1970s American slasher films, tend to dominate popular accounts of the genre—but the cinema of fear and sensation is a dynamic mode of contemporary filmmaking, transnational in its origins and circulation, and thematically and formally eclectic. This course will study the horror genre through scholarly and critical debates, emphasizing the ways both experts and enthusiasts have theorized horror's significance and social urgency, the unique properties of horror spectatorship, and the formal attributes of individual films. Each week will focus on a specific conceptual area, including monstrosity, the uncanny, Otherness, excess, allegory, haunting, and abjection.

MCM 1205B. Screening Capital.

We are living through an era of profound change in the global economy, from the post-industrial turn to economic crises large and small, transformative digital technologies, supply chain shortages, and the return of labor unrest and organization. These issues and more have led many scholars to argue that capitalism is facing if not merely an important period of transition, then a serious historical crisis. This course asks how popular culture—from cinema to television and digital media—has dealt with these myriad changes, from attempts to represent changes in the global capitalist economy to their very impact on creative industries. In the process, we will unite approaches of contemporary film theory with World Systems Theory, with screenings ranging from Hollywood blockbusters to art films and television.

MCM 1205C. Global Anime.

This course provides a systematic introduction to the forms, history, and culture of Japanese animation (anime). Surveying the historical developments, artistic styles, major themes and subgenres of anime under both the national context of Japan and a wider trajectory of globalization, this course focuses on analyzing the forms and idioms of anime in relation to changing technological conditions and their cultural ramifications. The students are expected to relate anime culture with their experience of new media technologies, and to expand their artistic interest in anime to wider theoretical questions such as posthumanism, globalism, techno-orientalism, and media convergence.

MCM 1205D. Dimensions of Czech Animation: Contexts, Interpretations, and Dialogs with the East (CZCH 1000)..

Interested students must register for CZCH 1000.

MCM 1205F. Black Queer Diasporas.

This course serves as an introduction to critical theories of race, gender, and sexuality across selected sites in the African diaspora and on the African continent. We will begin the semester with some broad theoretical considerations about Black queer and trans lives and then we will discuss critical writings and analyze literary texts, films, and musical practices about Black queerness and transness in order to understand the complex ways Blackness and shapes marginalized genders and sexualities across the globe.

MCM 1205G. The Politics of Contemporary Black Popular Music.

This course provides an introduction to the history of black popular music since the 1970s, focusing primarily on sound cultures from the US, Caribbean, and Western Europe. We will begin by studying the mixing techniques developed in Reggae (dub), Disco (remix), and Hip-Hop (scratching and sampling) to discuss how they have shaped popular music since the 1970s. We will then survey these genres as well as the histories of R&B, House and Techno and some of their many offshoots (Jungle & Afrobeats, for instance) have developed over the last 30 years to ask how popular music functions as one of the main channels of communication among the cultures of the African diaspora. Overall, this course investigates the aesthetic, political, cultural, and economic dimensions of black popular music, paying particular attention to questions of gender, sexuality, class, nation, language, and technology.

MCM 1205I. Queer Nightlife.

What do we want from a night out? What is possible in this "queer" time? And what are we wearing to the function? This seminar explores the connections between and among nightlife, queer worldmaking, and other unruly subcultural practices. Rather than a linear history of nightlife and club culture, in each week we venture to a new theme/destination. We explore the spaces, the dancing, the outfits, the laws and legal gray areas, the drag, the cruising, and the rumbling bass, textures, and frequencies of queer nightlife. Through close readings, guest speakers, site visits and sustained cultural analysis, we acquire a critical understanding of the potentialities of queer "after hours" in the making of subcultural identity and emerging aesthetic practices. The course melds theory and practice and includes site visits to Providence area venues as well as a CDJ workshop.

MCM 1205K. Emplaced Art in the Americas : Creating Change Through Materiality.

What does it mean to think about art, place, history and meaning making in the Americas? What kinds of visualities, imaginaries, and memories guide how we imagine South America, Chile? What are the roles of art, video, performance, and memorials as sites of emplacing memory, collective witness, creating future possibilities? Our thinking, making, and engagement is guided by social, cultural, feminist, and environmental movements and explore modes of sensing, creating, feeling and being with the land through Indigenous, migrant, "expert" and local knowledge and place. How are these projects raced and gendered? What kinds of aesthetics and art projects inform our own understandings of emplaced learning? This course invites us to think with creators and place. It will support and guide you towards making and living with art as a way to perceive with and beyond neoliberal and colonial logics.

MCM 1205L. Angels and Monsters: Queer and Trans Religion (RELS 1600C)..

Interested students must register for RELS 1600C.

MCM 1205N. Aesthetics at War.**MCM 1205O. Polish Cinema: Uneven Histories, Uneasy Aesthetics (PLSH 1050).**

Interested students must register for PLSH 1050.

MCM 1205Q. ¡Qué miedo! El cine hispánico de horror (HISP 1666).

Interested students must register for HISP 1666.

MCM 1205R. Mise en Scene (TAPS 1380).

Interested students must register for TAPS 1380.

MCM 1205S. Late Modern and Contemporary Theatre and Performance (TAPS 1250).

Interested students must register for TAPS 1250.

MCM 1205T. Global Theatre and Performance: Paleolithic to the Threshold of Modernity (TAPS 1230).

Interested students must register for TAPS 1230.

MCM 1205U. Spain on Screen: 80 Years of Spanish Cinema (HISP 1290J).

Interested students must register for HISP 1290J.

MCM 1205V. Let's Get Physical: Histories and Theories of Fitness and Wellness.

Did you know that the treadmill originated as a prison torture device? This course will examine the body and technology, as well as exercise and wellness cultures across media. Through readings in critical theory, media studies, gender studies, disability studies, and science and technology studies, students will explore the spaces and instruments of fitness, as well as the cultures that have emerged around them. Looking at a variety of texts, including treadmill patents and live-streamed Peloton classes, we will ask what the history of exercise tells us about gender, perceptions of health and disability, and our relationship to technology. Utilizing different research methods, including interviewing an Instagram fitness influencer and conducting autoethnography at the Nelson Gym, we will interrogate theories of "fitness," from eugenics up through contemporary wellness fads such as biohacking, polygenic embryo screening, and "Make America Healthy Again."

MCM 1205W. The Black Outdoors (HMAN 1977O).

Interested students must register for HMAN 1977O.

MCM 1500C. Archaeology of Multimedia.

A historical and theoretical study of "multimedia" from magic lanterns to the Internet. Examines the ways in which media have always been multiple and have always impacted on each other, as well as the ways that various media discourses constitute an "archive" of the knowable and sayable.

MCM 1500D. Contemporary Film Theory.

Major arguments in film theory from the late 1960s to the present, contextualized by contemporaneous intellectual tendencies and selected films. Some key issues: cinematic specificity and signification, the politics of form and style, subjectivity/spectatorship, gender/sexuality, postmodern media, digital theory and cinema. Readings from figures such as Baudry, Bordwell, Deleuze, Doane, Elsaesser, Gunning, M. Hansen, Heath, Jameson, Koch, Manovich, Metz, Mulvey, Pasolini, Rodowick, L. Williams, Willemen, Wollen, etc. Enrollment limited to 15. Prerequisite: one MCM core course.

MCM 1500J. Feminist Theory and the Problem of the Subject.

Readings in contemporary feminist theory and 20th-century theories of subjectivity. Topics include interpellation, modes of address, apostrophe, positionality; texts include Butler, Haraway, Spillers, Spivak. Previous work in feminist theory strongly recommended.

MCM 1500K. Film and the Avant-Garde.

An examination of film's historical relations with various avant-garde movements from surrealism, French Impressionism, German Expressionism, and Dadaism to the theoretically informed independent film of the 1970s and beyond. However, the goal of the course is not a historical survey but the investigation of various conceptualizations of "avant-gardism" and its relation to modernity, mass-culture, and technology.

MCM 1500L. Film Theory.

Major positions in the history of film theory, contextualized by both contemporaneous filmmaking and intellectual approaches (phenomenology, Marxism, structuralism/poststructuralism, feminism, etc.) Key issues include: cinematic specificity, cinematic representation and the real, the politics of form and style, cinema and language, subjectivity and spectatorship, film and postmodern "media." Readings in Munsterberg, Arnheim, Kracauer, Bazin, Balázs, Metz, Heath, Mulvey, Williams.

MCM 1500O. Film Theory: From Classical Film Theory to the Emergence of Semiotics.

Readings from earliest film theory through the emergence of cinema semiotics, with awareness of contemporaneous filmmaking and underlying philosophical and ideological tendencies. Some key issues: cinematic specificity and relations to other media; the politics of cinema; filmic representation and the real; cinema, modernity, and modernism; mass culture debates; cinema, language and signification. Readings drawn from Adorno, Arnheim, Balázs, Bazin, Benjamin, Bergson, Debord, Eco, Eisenstein, Epstein, Kracauer, Lukács, Merleau-Ponty, Metz, Munsterberg, Pasolini, Sartre, Wollen, etc. Enrollment limited to 20 juniors, seniors and graduate students.

MCM 1500S. In the Public's Eye: Publicity and Surveillance.

Investigates the converging technologies and practices of publicity and surveillance. Considers phenomena from the paparazzi to digital surveillance, from the commodification of privacy to reality television, in order to analyze this convergence's impact on theories of public sphere. Theoretical and historical readings. Class hours include viewing time.

MCM 1500X. Middlemarch and the Sopranos.

The world of *The Sopranos* has been called "a postmodern *Middlemarch*, whose inhabitants' moral and spiritual development (or devolution) unfolds within a parochial social milieu." This course offers a comparative analysis of Eliot's 1871-72 novel and HBO's (continuing) television drama, juxtaposing these two very popular, very powerful serializations in formal, thematic, ideological and narrative terms.

MCM 1501B. Nation and Identity: The Concept of National Cinema.

Comparative study of constructions of nationhood in films and written texts about cinema. Interrogation of the discursive, political and epistemological power achieved by different version of the concept "national cinema" and the kinds of collective identities they imagine, from early cinema to globalized media. Readings by theorists, historians and filmmakers. Screenings from pertinent contexts (e.g. Weimar Germany, U.S. classical cinema, Japanese 1930s, third cinema, New German Cinema, New Chinese cinema, multinational corporate cinema, etc.)

MCM 1501C. National Cultures/Global Media Spheres.

Contemporary cultural practices and media processes are often described as being implicated in "globalization," but this is a linkage that may well predate the present. This course examines theoretical, historical, and critical texts that conceive of media culture through notions of globalization, with attention to the status of nation and cultural identity in a transnational context.

MCM 1501I. Reading Marx.

What is it to read Marx now? We will begin with a group of key texts written by Marx drawn from different points in his development, including the first volume of *Capital* and sections from the other volumes. We will study influential later reinterpretations and commentaries on Marx that argue for his contemporary importance (drawn from figures such as Althusser, Balibar, J. Butler, Derrida, Haraway, Hardt, Negri, Virno, Zizek, etc.).

MCM 1501K. Seeing Queerly: Queer Theory, Film, Video.

While cinema has typically circumscribed vision along (hetero) sexually normative lines, can film also empower viewers to see "queerly"? How do we, as sexual subjects (gay and straight), "look" in the cinema, in both senses of the word? How have sexual desires been portrayed across film history, and how might audiences wield the look, appropriating or creating imagery with which to (re)formulate subjectivity and sexuality? This course addresses such questions as it considers both "mainstream" and "alternative" productions. Enrollment limited to 20 juniors, seniors and graduate students. Prerequisite: MCM 0110, 0230, 0240, 0260, or 1110, or instructor permission. Students MUST register for the lecture section and the screening.

MCM 1501N. Television Time and Space.

Explores television's temporal and spatial construction, considering how television demarcates time (regulating it through flow and segmentation, articulating work and leisure times, marking familial and national events, encouraging rhythms of reception) and space (mapping public and private space, defining a "global media culture" through local viewings, representing and enacting travel and exchange, creating imaginary geographies and communities).

MCM 1501O. Television, Gender, and Sexuality.

Television, across all the screens on which we view, has an enormous impact on society—including on relations of gender and sexuality—just as it is impacted by those relations in turn. This course investigates how television produces and reproduces constructions of gender and sexuality through its institutional form (as it maps relations between public and private, domestic and social, familial and defamiliarized), narrative patterns (as it circulates family romances, links gender and genre, and mediates sexual and social tensions), and spectatorial relations (as it variously addresses viewers as sexed and gendered subjects, consumers and commodities, "mainstream" and marginalized).

MCM 1501Q. The Close-Up: Theory and Practice.

An examination of the use of the close-up in film and theory, from the "primitive" cinema to IMAX and from Münsterberg to Aumont and Deleuze. Special attention to the way in which the close-up has been associated insistently with the face and its heightened cultural significance, with the advent of a "cinematic language," and with questions of cinematic space and scale.

MCM 1501W. The Rhetoric of New Media.

An examination of contemporary theories and practices of "new media," but in particular cyberspace; investigates the ways in which information technologies are challenging our inherited ideas about knowledge and ethics. All written work for the seminar will be digital. Application required. Occasional screenings to be announced during semester.

MCM 1502B. Publicity and Surveillance.

Investigates the converging technologies and practices of publicity and surveillance. Considers phenomena such as webcams, face recognition technology and networked art, as well as concepts such as enlightenment, paranoia and exhibitionism. Theoretical, historical and legal readings.

MCM 1502C. Race And/As Spectacle.

Theoretical and historical examination of race and/as spectacle, from 19th century world fairs and exhibitions to 20th century media events. Focuses on the productive relationship between race and media, from early cinema to the Internet.

MCM 1502E. Theories of the Photographic Image.

Examines the history of attempts to assimilate the photographic image to a theory of representation. Will analyze theories of photography, chronophotography, film with respect to issues of time, subjectivity, historicity, the archive. Will also address the rise of the digital image and its potential threat to photography. Readings in Kracauer, Benjamin, Bourdieu, Barthes, Batchen, Marey, Bazin, Aumont and others.

MCM 1502H. Information, Discourse, Networks.

What is information and how can we understand its relation to narrative, networks and power? this course offers a historical and theoretical examination of the rise of information and networks. Key issues include: the relationships between cybernetics and humanistic theories, information and language, the rise of big data, questions of gender, sexuality and race.

MCM 1502J. Race as Archive.

Examination of the importance of race to the logic and practice of biological, technological and cultural archives. Engaging the similarities and differences between the categorization of race in these fields, the course will focus on race as a justification for archives more broadly, and race as an archival trace "evidence" of a biological or cultural history. Readings will be theoretical, historical and literary. Preferences given to students in Modern Culture and Media, Art-Semiotics, Modern Culture and Media- German, Modern Culture and Media-Italian, Semiotics-French, Ethnic Studies, and Science & Technology Studies. All others seek permission from the instructor.

MCM 1502K. Real TV.

How does television bring "real" events to us? How do we know what's "real"? What kinds of "realities" exist on television, and how do they operate (in relationship to one another, to TV fantasy, and to our everyday lives)? This course will consider not only some specific "reality genres" (news, catastrophe coverage, "surveillance programming," documentary and docudrama, talk and game shows, reality series and "docu-soaps") but the representational modes that define the reality of commercial television as a whole. Issues to be addressed include: TV "liveness," crisis and scandal, therapeutic discourses, "surveillance society," media simulation, realism and anti-realism, civic and commercial discourses, and television's construction of history and knowledge. Preference given to graduate students, seniors, and juniors in Modern Culture & Media and Art-Semiotics. Prerequisites - two of the following: MCM 0100, 0150, 0230, 0240, 0250, 0260, 1110. Interested students who cannot pre-register should come to the first day of class for an application for admission by instructor permission.

MCM 1502N. Derrida and Telecommunications.

Derrida famously proclaimed that writing preceded speech, rendering all communications a form of writing, but he also argued that the history of psychoanalysis would have been different if Freud had used e- instead of snail-mail. Tracing Derrida's thought re. telecommunications from Grammatology to Writing Machines, as well as engaging his interlocutors (Samuel Weber, Avital Ronell, etc.), this course examines the importance of medium-specificity to post-structuralism. Prerequisite - two of the following: MCM 0100, 0150, 0230, 0240, 0250, 0260, 1110. Preferences given to juniors and seniors in Modern Culture and Media, Art-Semiotics, Modern Culture and Media-German, Modern Culture and Media-Italian, Semiotics-French, Science Studies, Anthropology, Comparative Literature, English, Gender Studies, and Philosophy. All other seek permission from the instructor.

MCM 1502P. Nation and Identity in Cinema.

Comparative study of constructions of nationhood in films, different cinematic strategies, and written texts about cinema. We will examine the discursive, political and epistemological power achieved by different versions of the concept of "national cinema" and the kinds of collective identities they imagine, from early cinema to current globalized media. Readings by theorists, historians and filmmakers. Screenings from pertinent contexts (for example, Weimar Germany, U.S. classical cinema, Japanese 1930s, third cinema, New German Cinema, New Chinese cinema, multinational corporate cinema, etc). Enrollment limited to 20 juniors, seniors and graduate students. Prerequisite: MCM 0110, 0230, 0240, 0260, or 1110, or instructor permission. Students MUST register for the lecture section and the screening.

MCM 1502T. Film Noir: Femmes Fatales, Urban Space, and Paranoia.

An examination of film noir, concentrating on the classic films of the 1940s and 1950s, but also investigating film noir's relation to German Expressionism as well as remakes and reincarnations of the genre such as Blade Runner. We will discuss various methodologies: psychoanalysis, ideological analysis, close textual analysis, the historiography of noir. Films by Lewis, Tourneur, Wilder, Hawks, Lang, Pabst, Welles, Preminger, Hitchcock, Ray. Readings in Copjec, Zizek, Naremore, Dimendberg, Vernet, Jameson. Enrollment limited to 20. Primarily for MCM senior concentrators and MCM graduate students; other qualified students must obtain permission from the instructor.

MCM 1502U. Media and Memory: Representing the Holocaust.

The Holocaust has been described as unimaginable, at the limits of representation. Yet there have been numerous attempts to imagine and represent it, across media (film, television, graphic novels), genres (documentary, melodrama, comedy, fantasy), and modalities (through history and memory, "high" and "low" culture, fiction and nonfiction, reporting and marketing). Considering such attempts to represent the unrepresentable and "mediate" the immediacy of trauma, this course will explore media texts and theoretical/philosophical reflections on the Holocaust. Enrollment limited to 20. Prerequisite: one of the following: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Preference given to juniors, seniors, and graduate students. All others seek permission from the instructor.

MCM 1502V. Theories of the Body and the Limits of Constructionism.

Scholars currently argue that cultural constructionism went too far, that theories of subjectivity that dominated the academy for over two decades neglected the materiality of the body. We will examine these criticisms as well as what it means to theorize the body. Readings include Merleau-Ponty (phenomenology), Freud and Dolto (psychoanalysis), Damasio (neurology), Fausto-Sterling (biology), Butler, Grosz, Kirby, Moore, Wilson, etc. Enrollment limited to 20. Prerequisite: one related MCM course.

MCM 1502X. Race and/as Technology.

This course asks: to what extent can race be considered a technology? That is, not an identity that is true or false, but rather a technique that one uses, even as one is used by it? Ranging from contemporary cyborgs to early 20th century eugenics, it investigates what race does, regardless of what we think it is. Readings will be theoretical, historical and literary. Enrollment limited to 20 juniors, seniors and graduate students. All other seek permission from the instructor. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110.

MCM 1502Y. Simulation Speed Implosion: Theories of Media Technology.

Jean Baudrillard and Paul Virilio are generally regarded as two of media studies most notorious pessimists and hyperbolists. Yet they are also theorists who treat the media as technological systems that transcend the traditionally held boundaries of the cultural, economic, social and political. This course will place Baudrillard and Virilio in a context of media theory and technology studies rooted in the work of Harold Innis and Marshall McLuhan while demonstrating important differences between these figures. We will engage in close readings of Baudrillard's and Virilio's major works as well as some of the writings of their interlocutors. Enrollment limited to 20 juniors, seniors and graduate students. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110.

MCM 1502Z. Art Cinema and Its Legacy.

Art cinema is associated with directors who achieved international prominence after World War II, with unconventional narrative films that were understood as expressions of original artistic subjectivities and film movements like the French New Wave (e.g., Antonioni, Bergman, Fellini, Godard, Resnais, and many others). Art cinema defined how many imagined non-Hollywood cinema in a global context, but was neither avant-garde nor necessarily political. Its legacy persists to the present, for example, in the reception of recent Iranian cinema and New Taiwanese cinema. We will study its aesthetic and textual strategies, its significance in global film history, and its theoretical implications. Enrollment limited to 20 juniors, seniors, and graduate students. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110.

MCM 1503A. The Ethics of Romanticism (ENGL 1560Y).

Interested students must register for ENGL 1560Y.

MCM 1503B. Jane Austen and George Eliot (ENGL 1560A).

Interested students must register for ENGL 1560A.

MCM 1503C. "Terrible Beauty": Literature and the Terrorist Imaginary (ENGL 1760I).

Interested students must register for ENGL 1760I.

MCM 1503D. W. G. Sebald and Some Interlocutors (ENGL 1761Q).

Interested students must register for ENGL 1761Q.

MCM 1503E. Aesthetic Theory/Cultural Studies.

Aesthetic thought has a long and varied history, but aesthetic categories have recently become a central concern of cultural studies. This course combines readings in the history of aesthetics; twentieth-century work on aesthetics from various philosophical and disciplinary perspectives (from the "anti-aesthetic" to "a return to aesthetics"); and recent scholarship addressing (while not necessarily celebrating) the reemergence of aesthetic questions in cultural and media studies and the evolving relationship of the aesthetic to categories such as ideology, form, and virtuality. Readings from Schiller and Kant to Adorno, Berube, Foster, Ranciere, and Spivak.

MCM 1503F. Critical Methodologies: Contemporary Literary Theory (ENGL 1900I).

Interested students must register for ENGL 1900I.

MCM 1503G. Representations of Suffering in History and Media.

This course will explore accounts of suffering in works on slavery, genocide, as well as extra-legal violence (lynching, gay bashing) in order to explore debates about the representation of violence and the use of new technologies of representation. Readings include historians, critical and legal theorists, and journalists. We will also explore recent debates around images of suffering and the reemergence of "shame" as a topic in the context of combatting violence and asserting identity in queer theory. Enrollment limited to 20 juniors, seniors and graduate students. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110, or instructor permission.

MCM 1503H. Literature and the Ideology of the Aesthetic (ENGL 1950B).

Interested students must register for ENGL 1950B.

MCM 1503I. Digital Media and Race: Ethnicity, Technicity, Embodiment.

Are we becoming post-racial in the digital age? This course questions what constitutes "race" through exploration of the ways technology affects identity. Turning to examples from new media art, World of Warcraft, cyborgs and cyberculture, the role of race in the "natural" body, and the formation of identity in online communities, we will explore the relationship between race and digital media. We draw upon critical race theory, critical theories of new media and technology, postcolonial theory and posthumanism to provide a clear and nuanced understanding of race and identity, situating it within the digital culture of our increasingly virtual world. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 juniors and seniors.

MCM 1503J. Film Authors and Authorship.

Who is the "author" of a film? Drawing on readings about authorship from literary theory, semiotics, poststructuralism and film studies, and close attention to films by major American and international directors (e.g. Hitchcock, Welles, Mizoguchi, Antonioni, Tarkovsky, Godard, Akerman, Jodorowsky, Deren, Brakhage, Malick, Scorsese, Lynch, Kiarostami, Aronofsky, Nolan, Bigelow), this course examines theories and practices of film authorship and the historical development of the idea of film directors as authors within film criticism and theory. Film authorship will also be considered in relation to other formations such as genre, national cinema, gender, race, coloniality, etc. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 juniors and seniors.

MCM 1503K. Memory and Modern Media: Permanence and Presence in Film and Digital Media.

Film and digital media, often claim to remember or preserve our experiences. But what does it mean to capture, catalogue and archive experiences by such media? How are mediated memories encoded within a larger cultural order? How do these media make fleeting moments permanent, lend an air of truth to the image, compose an archive of experiences? We will study key examples in photography, experimental and mainstream cinema, video art, and new media, which engage with memory and visuality. Readings include key critics and theorists concerned with these issues. Screenings will include Marey, Brakhage, Kurosawa, Tarkovsky, Frampton, and Marker. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 juniors and seniors.

MCM 1503L. South Korean Cinema: From Golden Age to Korean Wave (EAST 1950U).

Interested students must register for EAST 1950U.

MCM 1503O. Market Economy, Popular Culture, and Mass Media in Contemporary China (EAST 1950G).

Interested students must register for EAST 1950G.

MCM 1503Q. Communication Culture and Literary Politics.

A common concept of "medium" ties communication culture to art and literature. But what's a medium? Is it basic material for a work of art, like a sculptor's clay? Is it a communications device, like a telephone? Or is it a means to share information, like a network? The course explores the social ramifications of these questions, while also considering how politics can mediate art and technology, not just the other way around. Materials include novels by Delany, Yamashita, Mackey, and LeGuin; video art; and media and community theory by Nancy, Terranova, Rancière, Riley, Mattelart, and Liu. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 juniors and seniors.

MCM 1503S. Cinema and Memory.

This course investigates some of the major ways in which cinema has been associated with memory from the late nineteenth century to the present day. Drawing from the history of cinema practice and criticism, as well as from key theories of memory, it provides multiple frameworks for making sense of cinema as a technology of memory. While we will examine popular films, emphasis is also placed on local, minority, non-theatrical, and small-scale cinemas. Topics to be covered include film archives, prosthetic memory, trauma, community and home movies, race, migration, nostalgia, and postmodernism. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110. Enrollment limited to 20 juniors and seniors.

MCM 1503T. Sensing Time: Affect and the Moving Image (GNSS 1960R).

Interested students must register for GNSS 1960R.

MCM 1503V. Reading Michel Foucault.

A study of Foucault's work from his early texts through his last. We will look at the ways Foucault challenged conventional thinking with his theories of discourse, epistemic rupture, disciplinary formations, power, sexuality, biopolitics, governmentality, and the care of the self. We will examine the questions and tensions that drive Foucault's work internally and will consider the ways his thinking has been both used and perhaps abused. Enrollment limited to 20 juniors and seniors. Prerequisite: MCM 0110, 0230, 0240, 0250, 0260, or 1110.

MCM 1503W. Getting Emotional: Passionate Theories (ENGL 1560W).

Interested students must register for ENGL 1560W.

MCM 1503X. The Ekphrastic Mode in Contemporary Literature (ENGL 1762B).

Interested students must register for ENGL 1762B.

MCM 1503Z. Dialogues on Feminism and Technology.

This experimental course asks students to reexamine the critical practices and discourses of science and technology through a feminist lens.

"Dialogues on Feminism and Technology" is part of a worldwide network of feminist scholars, artists, and activists called femtechnet. We will ask students to consider how feminist thought contributes to computing, hacker culture, new media, nanotechnology, surrogacy, genetic culture, bioart, and a wide range of related topics. Students will be expected to participate in the discussion of the class both online and in person, give short presentations, write a research paper, and complete a creative assignment outlined in the syllabus. Limited to 20 juniors and seniors.

MCM 1504B. Democracy Among the Ruins (POLS 1823M).

Interested students must register for POLS 1823M.

MCM 1504G. Chinese Women, Gender, and Feminism from Historical and Transnational Perspectives (EAST 1950B).

Interested students must register for EAST 1950B.

MCM 1504H. The Panorama and 19th-Century Visual Culture (ITAL 1340).

Interested students must register for ITAL 1340.

MCM 1504I. Image, Music, Text (ENGL 1762C).

Interested students must register for ENGL 1762C.

MCM 1504J. Kubrick (ENGL 1762D).

Interested students must register for ENGL 1762D.

MCM 1504L. Radical Poetics + World Cinema.

"Cinema is a language," so they say. But what kind of language? Is it prose, telling stories about the world? Or is it poetry, with no formal rules but those it imposes upon itself, and with enough creative energy to remake or shatter the world? As we'll see, "film poetry" has, since cinema was born, been a watchword to filmmakers and theorists for whom cinema might deform the world's grotesque structures of power. We'll read manifestoes of radical poetics and "film poetry"—authors range from Glissant and Kristeva to Ruiz and Pasolini—and watch political films from all seven continents.

MCM 1504M. The Politics and Practices of Digital Media.

Crossing the fields of digital humanities, critical theory, feminist theory, race studies, and new media studies, this course considers how technology is a constant negotiation of fantasies and fears, politics and practices. We will consider the negotiation between users, bodies, code and systems as we simultaneously practice and critique the prevalent forms of digital technology. We will address questions such as: how are political and social effects visible not only in the practice of digital technology, but in the underlying structures themselves? How are digital technologies both producing and produced by certain forms of sociality and cultural discourse?

MCM 1504Q. Reading Narrative Theory (ENGL 1950G).

Interested students must register for ENGL 1950G.

MCM 1504R. Iranian Cinema.

The emergence in the 1990s of Iranian cinema onto the world stage caught many by surprise. This cinema has, however, had a long and illustrious history. While attempting to provide an historical survey of these films, we will focus primarily on those produced in the last two decades. We will pay close attention to cinematic form but will also examine the ways the films intersect with cultural-political events, including the Revolution and the subsequent Islamicization of the culture, the institutionalization of the "modesty system," and the alteration of divorce laws.

MCM 1504S. 1948 Photo Album: From Palestine to Israel (COLT 1440F).

Interested students must register for COLT 1440F.

MCM 1504T. Literature and Judgement (COLT 1813Q).

Interested students must register for COLT 1813Q.

MCM 1504V. Technologies of/and the Body: Mediated Visions (GNSS 1720).

Interested students must register for GNSS 1720.

MCM 1504X. Landscape and Japanese Cinema.

This class explores what a hundred years of Japanese cinema can reveal of the shifting meanings, emotions, and values ascribed to human and non-human landscapes. What role has film played in crafting our collective imagination of landscape and lived space? How does the meaning of "landscape" shift across time and culture? Engaging with a range of interdisciplinary approaches to these questions (including cultural studies, environmental history, philosophy, geography, and film theory), this seminar pairs an introduction to key works of Japanese film with a close look at the shifting landscapes at the base and the "background" of this cinema.

MCM 1504Y. Spatial Audio: Envelopment & Immersion.

Spatial Audio: Envelopment and Immersion investigates historical and contemporary theories and creative sound practices involving the perception, interpretation, and production of auditory space. Course participants analyze and explore how the sensation of space is activated in the listener through soundscapes, built environments, and audio technologies. Readings from psychology, philosophy, the arts, and sound studies support class discussions and students' writings and projects that examine the reception and composition of works that exploit acoustic phenomena to create immersive experiences. Spatial audio techniques are introduced including the use of multichannel loudspeaker arrays, binaural and surround sound formats, reverberation effects, and recording strategies.

MCM 1505B. Hitchcock: The Theory.

The films of Hitchcock often overwhelm the compelling narratives for which they are widely appreciated by threading them through meta-cinematic reflections on the nature of cinema itself. This peculiar method of construction has piqued the attention not only of film theorists, who look to Hitchcock to teach them about technique, but also philosophers, who look to him to help them think more clearly about the nature of thinking, promising, doubting, and obsession. We will not only examine the films themselves alongside the speculations they have inspired, but also attempt to define the complex pleasures – somatic, cinematic, and cerebral – they elicit from viewers.

MCM 1505C. Cinema's Bodies (COLT 1440T).

Interested students must register for COLT 1440T.

MCM 1505E. Theory and Practice of the Essay: Word/Image/Remix.

This course will approach the art of the essay in its written and cinematic renditions as we experiment with – and critique – the interactive and remix configurations of essayistic thinking in contemporary digital culture. What is (in) an essay? How do we write essays for the digital era? The goal is to develop essayistic literacy through the crafting of ideas in various platforms (word, image, interaction), highlighting the maker's subjective position while finding new ways of enjoying the pleasures of argumentation. How do we choose the technologies to best support and perform our thinking?

MCM 1505F. The Child and the Digital: Queer Theory, Psychoanalysis and New Media.

The child as victim and master of digital technology; the trans-national child; the fetishized child; the queer child as a redundancy; the child as site of futurity and panic, anxiety and eroticism... We will explore the intersections and frictions between queer theory and psychoanalysis in the face of new media through the figure of the child. What's the role of Desire in the formation of new media objects, i.e. toys for adults and children alike? We will develop a strong literacy in psychoanalytic and queer theory as we utilize digital technologies to complicate them.

MCM 1505I. Writing and the Ruins of the Empire (ENGL 1561D).

Interested students must register for ENGL 1561D.

MCM 1505J. Oppositional Cinemas.

This seminar explores the ways in which cinema is mobilized in the service of "opposition," that is critique, revolution, resistance, and the invention of alternative pleasures. It asks how films and their spectatorship become matters of political urgency. The arc of our screening itinerary moves at a deliberate pace from the historical avant-garde's interest in the revolutionary potential of cinema as a new industrial medium to an examination of the themes of realism, gender, race, geopolitics and temporality. Discussions and readings will emphasize close reading, theoretical concerns, and historical contexts of production, distribution and exhibition.

MCM 1505K. Blackness and the Cinematic.

This course equips students to think creatively and well about what might be encountered under the categories of "Blackness" and "cinematic reality" even as it aims to expose students to how "Blackness" and "legibility" have been thought in selected recent scholarly and expressive works. Our emphasis will be on Black diasporic audio-visual culture. We will consider scholarship in the cinema and media studies, performance studies, art history, and visual studies. Though most of the material we will consider was published recently, we will strive to understand the ideas and expressions that have created the fundament for our present concerns.

MCM 1505L. Framing Gender in Middle Eastern Studies (GNSS 1961G).

Interested students must register for GNSS 1961G.

MCM 1505M. From Nanobots to Space Probes: Media and Scale.

Bridging science studies and media studies, this course asks how media represent and make accessible scales of time and space that are otherwise outside the scope of human perception. We will cover how media translate nano, micro, somato, local/global, cosmic scales of space, addressing scientific visualizations and questions of representation and exhibition across media forms (including cinema, electron microscopes, radio telescopes, video games, IMAX, Planetariums, space probes, and more). We will also discuss media representations of diverse scales of time. This will involve the exploration of speculations, simulations, and questions of visualizing and narrating "deep time," both past and future.

MCM 1505N. Gender, Sexuality and the Imagination.

This seminar is designed to encourage students to think creatively and well about what might be encountered under the categories of "gender," "sexuality," and "media." We will take up "the Imagination" as a concept that has a history and therefore a discernible (even if contradictory) set of politics and as an injunction to create from within existing paradigms. Please note, this course is not a survey of existing scholarship, nor is it an engagement with or production of a canon. It is instead an opening to the possibility that gender, sexuality, and media might be thought otherwise.

MCM 1505O. Does Utopia Still Exist? Media, politics and the hope of something else.

Why, in so many of our fantasies, do we leave behind a ruined earth in search of new planets? Is it really easier to imagine the end of all life on earth than to imagine the end of capitalism? In this course we examine Utopia—its philosophical architecture and its media history—in an attempt to diagnose (and overcome?) our present inability to think ourselves into any world better than this one. This is a global course, in which we journey through theory, literature, cinema and art from all over the world.

MCM 1505P. Channeling Race: Television and Race in America.

Our era has been called both "post-televisual" and "post-racial," yet images that define and are defined by (mis)understandings of race fill our screens (whether on TV sets or other means for disseminating television). Formations of television and race not only remain pressing concerns but are intertwined, mutually constructing one another. This course explores how notions of race have been mediated and how media have figured race. Topics include: stereotype analysis (and beyond); televising Civil Rights; intersections of gender and sexuality; consumerism and commodification; crisis and scandal; racial representation across TV genres (comedy, drama, sports, reality TV), and new media possibilities.

MCM 1505S. Cinema and Imperialism.

This seminar examines how cinema has been utilized in the service of and in opposition to imperial projects from the twentieth century to the present. We will consider the close kinship between the capture of moving images and practices of imperial war and domination. We will also explore how movements such as Third Cinema have sought to create oppositional space within global culture industries. Films we will discuss include non-fiction such as U.S. Information Agency shorts and the work of Harun Farocki, as well as narrative features such as *Apocalypse Now*, *Zero Dark Thirty*, *Battle of Algiers*, and *Perfumed Nightmare*.

MCM 1505U. The 60s: Film Countercultures (ENGL 1901H).

Interested students must register for ENGL 1901H.

MCM 1505V. Reading Sex (ENGL 1900K).

Interested students must register for ENGL 1900K.

MCM 1505W. Queerness & Games.

This advanced seminar introduces students to the intersection of LGBTQ issues and video games, or "Queer Game Studies," a growing area of interest for scholars, game developers, critics, and artists. Both an overview of a field in formation and an invitation to participate in the creation of this new area of critical theory and practice, this course asks students to familiarize themselves with games, books, and articles in the field, to engage critically through game design and scholarly writing, and to (virtually) attend the Queerness and Games Conference, an annual event which will be held this year in Montreal Canada.

MCM 1505X. TRANS/MEDIA: Transgender Studies and (Trans)Media Narratives.

The field of transmedia studies addresses the travel of intellectual properties across the world and across media platforms, conceptualizing the "trans" prefix through transnational, transmedia intertextuality (Kinder 1991), and transmedia storytelling (Jenkins 2006). Yet new work in film and media studies on transgender film and media authorship also demands attention to the work of trans media producers in this transmedia landscape. This course asks a set of questions to address the need for representation of trans media producers in transmedia studies. Is transmedia trans? Is trans media transmedia? What would happen if we understood transgender as central to transmedia?

MCM 1505Y. In Order to Write About the Twenty-First-Century City, We First Have to Imagine It (ENGL 1160L).

Interested students must register for ENGL 1160L.

MCM 1505Z. Kiarostami: What is an Image?.

In the history of cinema, a small number of directors have been treated as if their work stood for cinema itself. Abbas Kiarostami is one of these. Yet while his films foreground the act of cinema, they also address questions of reality to which the "neorealist" label cannot respond. To existing attempts to analyze his films in this light, we will add a *principia domestica*. Our question is this: how is it that the mystical, Islamic background from which Kiarostami invents is able to respond to current debates about reality in compelling, modern terms?

MCM 1506A. Digital Media and Virtual Performance (MUSC 1971).

Interested students must register for MUSC 1971.

MCM 1506E. Rethinking Black Visuality.

As part of the Cogut Institute for the Humanities Black Visualities Initiative, this course will engage practices and theories of black visibility that refuse traditional definitions of visibility that function to refuse blackness itself. Each year, the seminar will focus on a selected genre of visual texts, artistic works, and/or embodied performances and use them to develop an keen understanding of how black artists/thinkers/writers/practitioners articulate the multi-sensory frequencies of black life. Key to our discussions is a rigorous theorization of the complex practices of black refusal and futurity that structure these works.

MCM 1506I. Fanon and Spillers (ENGL 1901J).

Interested students must register for ENGL 1901J.

MCM 1506J. Representing Sexuality and Gender on Screen.

Representing Sexuality and Gender On Screen explores the relationship between censorship and self-expression, with a particular focus on queer and feminist readings of Hollywood cinema and the history of the adult film and video industry in the United States. Students will learn queer and feminist reading strategies, performative strategies of resistance, and artistic movements including the New Queer Cinema within the histories of regulation that shaped them, from the Motion Picture Production Code, to the ratings system, to SESTA-FOSTA.

MCM 1506K. Image, Spectacle, Everyday Life.

In 1967, Guy Debord famously declared that we inhabit a "society of the spectacle," a society in which images dominate everyday life. In the decades since, this state of affairs seems only to have intensified. Yet how exactly might we understand spectacle today? How, given our current social and political climate, might we conceive spectacle's role in shaping our ideas and perceptions? Foregrounding cinema but also examining television and new media, we will consider these questions in broad historical perspective, emphasizing in turn both the wide-ranging political implications of spectacle and the critical counter-practices that have arisen to contest it.

MCM 1506L. Small Screens.

While television is often called "the small screen," digital distribution finds TV, film, video, and games coexisting on the small screens of mobile devices, and the big, HD screens of home entertainment systems. Yet smallness persists in aesthetic modes of the everyday, toy, mobile, cute, viral, indie, trashy, and pirated. Small Screens (MCM 1506L) is an advanced seminar exploring the theory and aesthetics of the small. It considers film, video, television, video games, and digital media within global distribution networks, and the changing meaning of media reception in the home.

MCM 1506M. Art, Culture and Society in Tehran (MES 1120).

Interested students must register for MES 1120.

MCM 1506N. From Pathogens to Memes: Media, Pandemics, and Globalization.

Plagues and epidemics have fueled narratives, imaginations, and media events when rumors and gossip spread as fast as germs and viruses. The fear and fascination with pathogens have also revised our understanding of the technology and culture of global media that are often metaphorically described as "contagious" or "viral." This seminar explores the historical and theoretical intersection between media and pandemics. Conjoining media studies, postcolonial criticism, and the history of medicine and public health in an interdisciplinary approach, we will critically examine how power, body, machines, chemicals and bio-organisms are mediated in the contexts of colonial expansion and global migration.

MCM 1506O. Technologies of/and the Body - Mediated Visions.

The relationship between body and machinery, technology and biology is often thought in terms of the mechanical doll, the animated robot and other hybrid figures. Science fiction films for example offer double visions of the gendered body: women are masters/slaves of the technology and still symbolic bodies of biological surviving of the human species. We will explore mediated visions in films and other media of different kinds spanning a bridge between SciFi-films and performance art. And we will study theoretical texts (like Haraway et al.) on the problem of the merging of technology and body.

MCM 1506P. From Hypernovel to Paranoid Fiction (ITAL 1400T).

Interested students must register for ITAL 1400T.

MCM 1506Q. Whites, Whites Jews and Us: Radical Black, Arab & Jewish Thinkers (COLT 1610W).

Interested students must register for COLT 1610W.

MCM 1506S. Iranian Art: Sites and Sights (MES 1170).

Interested students must register for MES 1170.

MCM 1506T. Freud: Writer and Reader (COLT 1810N).

Interested students must register for COLT 1810N.

MCM 1506V. The Listener: Literature, Theory, Film (COLT 1440U).

Interested students must register for COLT 1440U.

MCM 1506X. Love Hurts: Romance, Media, Masochism.

The widespread popularity, profitability, and critical derision of mainstream romance media, from ABC's prolific *The Bachelor* franchise to *Fifty Shades of Grey*, affirms masochism—the enjoyment of what is painful—as a key subject for film and media studies. This course will pair a range of film and television romance texts—from global art cinema to Hollywood rom-coms to reality TV—with conceptual frameworks at the intersections of pain, personhood, and performance. We'll survey the critical lenses media studies offers for the contemplation of historically derided objects, including genre studies (melodrama, pornography), platform analyses (reality, soap), to critical theory (including queer and affect-based approaches), working collectively to historicize and defamiliarize contemporary mediations of amity, intimacy, and identity.

MCM 1506Y. Croenberg/Lynch (ENGL 1901L).

Interested students must register for ENGL 1901L.

MCM 1506Z. Medium(s) of Animation: Plasticity, Labor, Technology (STS 1705).

Interested students must register for STS 1705.

MCM 1507E. Black Queer Life (AMST 1906X).

Interested students must register for AMST 1906X.

MCM 1507F. Market Economy, Popular Culture and Mass Media in Contemporary China (EAST 1931).

Interested students must register for EAST 1931.

MCM 1507G. Virtual Bodies: Play, Power, Performance (AMST 1906V).

Interested students must register for AMST 1906V.

MCM 1507H. Chinese Women, Gender and Feminism from Historical and Transnational Perspectives (EAST 1932).

Interested students must register for EAST 1932.

MCM 1507I. The Jewelers of the Ummah: The Jewish Muslim World is not History (MCM 1507I).

Interested students must register for HMAN 1975U.

MCM 1507Q. Colonialisms on Trial (COLT 1441).

Interested students must register for COLT 1441.

MCM 1507R. Practices of Autofiction (ENGL 1901T).

Interested students must register for ENGL 1901T.

MCM 1507T. Oceanic Planet: Colonial Transits and the Submerged Otherwise.

Ocean acidification, bleached corals, and the general diminishment of biodiversity currently defines our planet's oceans. Yet in the discussion of the ocean's degradation, too often we write out racial and extractive capitalism from our current understanding of the Anthropocene, the era of human-led disaster. When we speak of the oceans as diminished, or a site for resource extraction, we also write out the dynamism of the sea as a protagonist in the history of the human. This course places the ocean at the center of our analysis to understand the root causes of its deterioration, centrally engaging with the unequal histories of colonialism and their afterlives. By exploring the comparative histories of the Trans-Pacific, Trans-Atlantic, Indian Ocean, Arctic, and Southern Ocean, we address the colonial roots of biodiverse diminishment and extinction, beyond mere land-based or anthropos-centric perspectives.

MCM 1507U. In the Cut.

The technique of film editing has been a source of enduring fascination for theorists, propagandists, digital cinephiles, and avant-garde experimenters alike. This film studies seminar aims to deep dive below the line into editing in terms of theory and practice, and art and labor. We will read theoretical accounts of editing techniques and effects; we will mine practitioners' craft discourse for conceptual insights; and we will comparatively analyze pairs of films for formal traces of editing's function and potency. This course is openly suited to theory concentrators interested in historical accounts of how film editing works (both within films and on spectators), and practice concentrators interested in historicizing and contextualizing the compositional choices they make and consume. Students of both persuasions will have an opportunity to develop creative as well as critical projects.

MCM 1507W. Genealogies of Noise (MUSC 1241).

Interested students must register for MUSC 1241.

MCM 1507X. Animatedness: History and Theory of Animation.

This course explores the history and theory of animation through the notion of "animatedness," a concept raised by Sianne Ngai to describe a racialized feeling of being moved both physically and emotionally, an affect that is deeply rooted in the forms and techniques of animation. We will examine animation's historical development and stylistic possibilities, from the earliest stop-motion animations to the latest computer graphic techniques, exploring the aesthetics of animation as a fertile ground to interrogate the relationship between changing technological conditions and often-racialized bodily experience in modern society marked by mobility, fragmentation, and demarcation. It is also meant to give you a different way to think about the basic concepts in film history and theory, moving away from the assumption of an essentially photographic medium to consider different ways in which moving images are produced, received, and appreciated.

MCM 1507Y. Politics and Film 3: Adaptation.

Beginning with examples of repetition, adaptation, or re-making in feminist, literary, or political theory, cinema studies and philosophy, legal studies and history, (eg., Butler, Cavell, Douglass, Morrison, Spillers) this seminar will study the re-do: looking at filmic remakes/adaptations in political/cultural contexts as iterative, citational, augmentative/aspirational or perfectionist. The aim is to consider such efforts in connection with debates in the fields of Adaptation Studies, structuralism/post structuralism, Classics' "reception studies." The focus is on adaptation as a site of contestation. Is it conservative reclamation? or radical reform/abolition of contemporary norms, genders, institutions, and politics? Final projects can be essays or performance pieces, adaptations or analyses. All will be shared collectively in the final class.

MCM 1507Z. Writing: Material Differences (LITR 1230J).

Interested students must register for LITR 1230J.

MCM 1508A. Bad, Mad, and Sad: Misbehaving Femmes in Literature (ENGL 1761J).

Interested students must register for ENGL 1761J.

MCM 1508B. Gift and Debt (COLT 1611C).

Interested students must register for COLT 1611C.

MCM 1700A. Approaches to Digital Cinema.

An advanced seminar for students of film and video production. Examines the impact of digital technologies on the forms and practices of time-based media. A production seminar in which students undertake a semester-long project. Requires technical competence and completion of an intermediate level production class. Projects may include digital films, video, installations, and other media-based works. Application required.

MCM 1700B. Approaches to Narrative.

A production seminar for intermediate to advanced students in film and/or video production. Students complete a substantial media project in the course of the semester. Class meetings will focus on close readings and critical feedback of students' work during all phases of production. Texts related to narrative theory and production will be discussed. Screenings of exemplary works will supplement the class. Class members should have completed at least one time-based media class. Students are expected to be competent technically. An application will be completed during the first class session and the final class list will be determined after this meeting, with permission of the instructor. S/NC

MCM 1700D. Reframing Documentary Production: Concepts and Questions.

An advanced seminar for students of video and/or film production. Focuses on the critical discussion and production of documentary media. A major project (10-20 minutes), three shorter works, and in-class presentations of work-in-progress required. Readings on the theory and practice of the form and weekly screenings augment the presentation of student work. Class members should have completed at least one time-based media class. Students are expected to be competent technically.

MCM 1700F. Theory for Practice / Practice as Theory.

This advanced seminar explores the tensions between theory and practice in contemporary media and art works. The course examines how recent creative practices use theoretical concepts, and how practices today often include textual production or crucial theoretical implications. Requirements include: a major production project, short papers, presentations of work-in-progress, and weekly readings and screenings. Application required. Application is available in the MCM office. Students must bring a completed application to the first class to be considered for admission. The final class list will be determined after this meeting, with permission of the instructor. Enrollment limited to 20. S/NC.

MCM 1700J. Tv/Tv: Commercial and Alternative Television.

Given the centrality of commercial television in our culture, what possibilities exist for independent television viewing and/or independent television production? How might we re-write TV, either by stimulating alternative readings and new interpretive practices or by creating alternative texts and new modes of transmission? Combining theory and practice (television studies and video production), this course will encourage students to critique commercial television through both media analysis and their own video work. Enrollment limited to 20. Preference given to advanced students (graduate students, seniors, juniors) in Modern Culture & Media, Art-Semiotics, MCM German, MCM Italian, Semiotics French and Visual Arts. Prerequisites: any two previous MCM courses. Interested students who cannot pre-register should come to the first day of class to fill out an application for admission by instructor permission.

MCM 1700M. Techniques of Surveillance.

In the decades since George Orwell wrote 1984, Big Brother has evolved from a menacing specter of government power into a form of entertainment—a reality TV show that makes a game of the camera's watchful eye. Yet from NSA wiretapping to Facebook, our images and words are relentlessly tracked and profiled. This production seminar investigates surveillance as an object of cultural fascination and as a means of production in cinema, television, social software, and media art. Students give presentations and produce media art projects. Readings include Michel Foucault, Gilles Deleuze, and Laura Mulvey. Enrollment limited to 20. S/NC

MCM 1700N. Open Source Culture.

Where do we draw the line between sampling and stealing? What would it mean to call a urinal a work of art? This production seminar explores the tension between artistic appropriation and intellectual property law, considering open source software as a model for cultural production. We will trace a history of open source culture from Cubist collage and the Readymades of Marcel Duchamp through Pop art and found footage film to Hip Hop and movie trailer mashups. Students give presentations and produce media art projects. Readings include Roland Barthes, Nicholas Bourriaud, and Rosalind Krauss. Enrollment limited to 40. S/NC

MCM 1700P. Radical Media.

Walter Benjamin wrote that in the age of mechanical reproduction art ceases to be based on ritual and "begins to be based on another practice—politics." What is the relation between art and politics in an age of digital distribution? This course explores the nexus of media production and political action from the films of Sergei Eisenstein to WikiLeaks. Students give research-based presentations produce media art projects. Readings include Walter Benjamin, Jacques Rancière, and Claire Bishop. The final class list will be determined by the instructor. Enrollment limited to 40. S/NC

MCM 1700Q. Approaches to Media Form.

A production seminar for advanced students, organized around the completion of a substantial film or video project. Screenings and discussions will emphasize alternative approaches to media practice. Students will conduct a series of presentations on their own work as it progresses. Intermediate level production class required. Application required. Applications (available at the MCM department) should be completed and returned. Decisions will be posted on the MCM office door at the beginning of pre-registration. Enrollment limited to 20. Instructors permission required. S/NC. Students MUST register for the lecture section and the screening.

MCM 1700R. The Art of Curating.

It is sometimes said in contemporary art circles that curators are the new artists. Curating involves a wide range of activities, including research, selection, commissioning, collaboration with artists, presentation, interpretation, and critical writing. This production seminar considers curatorial practice as a form of cultural production, paying particular attention to questions of audience, ethical responsibility, and institutional context. Students give presentations, develop exhibition proposals, curate online exhibitions, and collaborate on gallery exhibitions, screenings, performance art presentations, or public art programs. Visiting curators present case-studies on recent projects. Readings include Pierre Bordieu, Douglas Crimp, and Boris Groys. Enrollment limited to 40. S/NC

MCM 1700S. Narrative and Immersion.

A production course examining the potentials for engagement in new media installations. The course draws on techniques of narrative to establish engagement in immersive environments. Students will be introduced to cinematic concepts, interactive technologies, multi-channel video and surround sound environments. Classes meetings will consist of viewing and analysis of exemplary work, discussion of readings, and critiques of student projects. An additional 1-hour technical workshop will be devoted to learning Jitter. Class members should have completed advanced work in film/video, digital sound, and/or creative writing. Open to upper-level undergraduate students and graduate students. The final class list will be determined after the first class meeting, by permission of instructor. Lab times to be announced. S/NC

MCM 1700T. Approaches to Narrative.

A media production course concerned with practical and conceptual aspects of narrative in contemporary film and dv cinema. After attention to technique (use of 16mm film and digital cameras, lighting, sound and editing), the second half of the semester will be devoted to individual projects and discussion of them. Screenings and close analysis of contemporary narrative films from the current global renaissance in narrative cinema, involving filmmakers in China, Thailand, the Philippines, Argentina, Greece, Portugal, etc. — partly led by feature filmmakers with backgrounds in the art world. Requirements include a group project and an individual, advanced level project in film/video. Application required. Application is available in the MCM office. Students must bring a completed application to the first class to be considered for admission. The final class list will be determined after this meeting, with permission of the instructor. Enrollment limited to 20 juniors and seniors. S/NC

MCM 1700U. Experimental Data Representation.

Experimental Data Representation (EDR) focuses on generatively composed, multimedia experiences utilizing the large-scale, video wall within the Digital Scholarship Lab. This interdisciplinary course brings together students from Brown and RISD to explore the creation of screen-based visualizations via programs authored by course participants. EDR provides a platform for students to examine and design ways in which experiential variables (as output) may be algorithmically determined by data sets (as input). Readings and projects will engage areas such statistical graphics, cartography, multimodal interaction, data visualization, sonification, and media art. Instruction will be offered in programming environments: NodeBox, Processing, Max/MSP, and Pure Data. Enrollment limited to 20.

MCM 1700V. The Place of the Moving Image.

Our experience of moving image-based media is intimately connected to our experience of place. Moving images have a unique ability to record, document, and archive places, and to alter or even produce the experience of place itself. Through readings, screenings, and production work, this hybrid production/theory course confronts place as a dynamic process, as more than the backdrop against which concrete actions and concepts form. Readings in philosophy, critical theory, and media theory. Screenings from popular, art, and experimental film/media. Students will produce three media projects related to questions of place. Previous production experience and technical competence are required.

MCM 1700W. History, Theory and Practice of Storytelling Using Stereoscopic ("3D") Motion Pictures (HMAN 1971C).

Interested students must register for HMAN 1971C.

MCM 1700X. New Genre: Site and Sound (VISA 1710).

Interested students must register for VISA 1710.

MCM 1700Y. Expanded Storytelling: Capture, Share and Expose.

How can we shoot a documentary inside an online videogame? How can we transform a historical archive into a dynamic narrative platform? How can we tell a story together with hundreds of other people? How can we create portraits with data retrieved from the Internet/mobile companies about ourselves? In this production course we will explore how emerging technologies and new habits of image making/sharing are challenging traditional forms of storytelling. In particular, we will focus on collaborative authorship, citizen journalism, fictional online persona creation, big data, and digital archives editing. Includes screenings, readings, technical-workshops (video/lighting/editing/coding), assignments, and a final project.

MCM 1700Z. What is Happening to Narrative?

An advanced media production seminar about the impression of digital technology on the practice of media based storytelling. We begin with questions: are we still interested in telling stories? What kinds of stories do we tell? Are there narratives specific to particular technics? What happens when technology makes things "easier?" We explore forms that work well online, on smart devices, or in theaters and TV. This workshop includes group experiments and a major individual project that may be linear, installation, or interactive in format. Projects should function as a stimulus and a challenge to conventional practices of duration-based narrative.

MCM 1701A. Art/Gender/Technology.

This production course explores and actively engages digital media and art practices that investigate questions of technology, gender, sexuality, and the body. Key topics include: cyberfeminism, gaming and virtual worlds, the social and the deep web, health apps and the datafication of the body, gendered social media bots, and affective digital labor. Technical workshops (on video/editing/coding/live-video-performance), guest speakers, and in-depth analysis of relevant case studies will provide students with the necessary skills and theoretical understanding to develop their own artworks during the course. This class is a Distributed Open Collaborative Course networked with FemTechNet.

MCM 1701B. Hearing Image, Seeing Sound.

This course explores how composers, filmmakers, painters, and others have forged connections between sound and image, and how we might learn from them to create our own meaningful creative work. Our readings and screenings will dig deep into the genealogies of film sound, and students will create their own imaginative combinations of sound and image throughout the semester. Final projects will be screened, performed, and/or exhibited publicly at the end of the semester. Note: although there will be a few labs, students should have experience with media production of some kind, be it sonic or visual.

MCM 1701C. Advanced Digital Language Arts.

Interested students must register for LITR 1010D.

MCM 1701D. Writing3D (LITR 1010G).

Interested students must register for LITR 1010G.

MCM 1701E. Experimental Narrative.

With film well into its 2nd century, a large body of work has emerged that plays with, around, and against conventions of classical cinema. Specifically, what we understand to be traditional narrative structures, such as drama, documentary, and action films. In fact, experimental narrative now has some of its own genres, which are to be found in both mainstream and fringe media. The goal of this class is to investigate some of these forms of experimental narrative. It is predicated on a basic understanding of narrative conventions, and designed to encourage students to make work that challenges those conventions.

MCM 1701G. Text in Time-based Art.

Semiotics has taught us to regard each film as a text. What, then, is the role of written text in film? This advanced production seminar explores the interplay of film's desire to image language and language's desire to produce images, not to mention the temporal constraints placed on reading when it is no longer a private, self-regulated activity. We will consider text as a purely visual character, the impact of subtitles, television's gluttonous use of text, and film's appropriation of literary forms. In addition to screenings and readings, students will create their own instantiations of written language in time-based art.

MCM 1701H. Finalizing Your First Documentary Feature: Content Creation from Script to Screen (ARTS 1013B).

Interested students must register for ARTS 1013B.

MCM 1701I. Digital Worlding: Terraforming Future, Fact, Fiction and Fabulation.

Inspired by Marilyn Strathern's concept of 'worlding' this production course will speculate on technologies of the future as a way to address the present. We'll work primarily with the Godot Engine and Adobe Photoshop to fabricate and co-create our worlds. Although not a gaming course, tools, theories, and vernaculars of game design may be utilized/subverted. Expect readings, discussions, technical workshops, and weekly assignments leading to a final project. "Art in the biological, ecological, and cyborg modes are all aspects of worlding. We cannot denounce the world in the name of an ideal world" - Donna Haraway

MCM 1701J. Data Visceralization and Climate Change.

The body - our biological corpus, and its social, environmental, and technological extension - grounds our ability to sense and make sense. In ever-changing ways, the sensing and acting body is extensible. Apparatuses, networks, patterns, and affects are central in sculpting consciousness, addressability, and accountability. In contrast to Data Visualization, in which perspectival representations of data are arranged and optically received, Data Visceralization foregrounds information via translations that are physically experienced. In this course, students will focus on climate change and will develop individual and collective hypotheses, projects, and actions disrupting habitual procession and enabling active engagement.

MCM 1701K. AS ABOVE, SO BELOW: Spatial Relations in Film Practice.

We commonly watch most time-based media through a rectilinear frame, and just as commonly acknowledge that what we are seeing are two-dimensional representations of three-dimensionality. However, it is less common to examine closely the functions of scale, perspective, distortion, and proprioception in the cinematic image. This course proposes to delve deeply into the myriad manifestations of how spatial relations impact our viewing experience. Since this is a production seminar, students will make a series of short videos that attend to various aspects of our investigations, completing the semester with a longer piece on a relevant topic of their choosing.

MCM 1701L. Time Deformation (VISA 1740).

Interested students must register for VISA 1740.

MCM 1701M. Advanced Screenwriting.

Interested students must register for LITR 1010E.

MCM 1701O. The Arts Workshop for Practice and Practice-Oriented Research (LITR 1000).

Interested students must register for LITR 1000.

MCM 1701P. Advanced Digital Language Arts (LITR 1010D).

Interested students must register for LITR 1010D.

MCM 1701Q. Script to Screen (LITR 1110T).

Interested students must register for LITR 1110T.

MCM 1701S. Anti-Social Reproduction: Art, Activism and the Question of Reproductive Labor.

Combining art making with the close reading of scholarly texts and media objects, this course engages with the categories of 'reproduction' and 'reproductive labor' as complex and contradictory sites of activist and aesthetic involvement. We explore 20th and early 21st century traditions of feminist, queer and anti-colonial activism and aesthetics for what they teach us about the uneasy status of the 'social' and its reproduction as a semi-autonomous realm. How might we represent the realm of reproduction and reproductive labor when it is at once culturally devalued and obscured even as its representatives are idealized (or vilified) in highly classed, raced and gendered terms—as selfless mothers, prostitutes, mummies, 'essential workers,' etc.? Such questions demand a variety of approaches and students may choose to engage the course primarily through written assignments, artistic projects or a combination of both.

MCM 1701T. Advanced Digital and Cross-Disciplinary Language Arts (LITR 1010H).

Interested students must register for LITR 1010H.

MCM 1701U. Advanced Projects in Film and Video.

This course is designed to accommodate the needs of our advanced students (Juniors and Seniors). It provides a structured environment in which to create longer, more ambitious films, while at the same time exploring little-examined topics within the practice of filmmaking. Students will work on a project of their choosing throughout the semester, using class meetings to critique their works in progress at regular intervals. In between screenings of student work, we will examine topics such as the relationship between still photography and the moving image, non-narrative experimental films from the canon, and the essay film. Essentially a studio course, class meetings will be long, combining discussions of student work, readings, and screenings.

MCM 1701V. The Cloud Beneath the Ground, Under sea:.

'The cloud' has become a part of our daily lives, but what exactly is it? As of late 2021, there are approximately 436 submarine cables sending internet data to servers around the world*. While marketing language reinforces an image of ephemerality, this course is an attempt to reveal its physicality and networked relations behind the screens. We will sift through the cloudiness of metaphor by taking a look at the ground beneath us and learn to recognize some of the networked structures hiding in plain sight and their antecedent industrial infrastructures. Readings, lectures, workshops, and field trips will guide us in our discussions regarding the geopolitical economic, social, and climate effects of massive data centers being built to support cloud computing. How do we as digital artists reconcile this gap? What work will emerge as a response to this information?

MCM 1701X. CS for Social Change (CSCI 1951I).

Interested students must register for CSCI 1951I.

MCM 1701Y. Future Ancients of the Pluriverse.

If today's digital technologies are built upon yesterday's fictions, it matters which fictions we embrace and it matters how we speculate future technologies. Imagination may be our greatest resource for liberating technologies from an ideology of 'technosolutionism.' In this production course we'll work primarily with moving image formats such as video installation, video essay, video performance. We'll employ a science fiction lens to co-create futures which value ethical, equitable, and sustainable relationships. Expect readings, discussions, technical workshops, and weekly assignments leading to a final project. We'll also examine works by artists, activists, and science fiction authors that engage community with care, cast light on climate injustice, mass resource extraction, racial bias in tech, and surveillance capitalism.

MCM 1701Z. Performance Practice Workshop (ARTS 1007).

Interested students must register for ARTS 1007.

MCM 1702A. Nonbinary Thought and Elemental Media Practices.

Engaging what Denise Ferreira da Silva has called "elemental cinema", this class pauses in the interval of the false binary between theory and practice in the arts. We will read texts, view or listen to artwork, and craft responses in multiple materialities. Readings in Black feminist thought, transmedia, tidalectics, decolonial method, poethics, and new materialisms will accompany our engagement with artworks that challenge the habits and limits of screenal, embodied, or narrative forms (Bellmore, Shonibare, Whittle, Cassils, Warhol, Jaffa, Vo, Lemon, Gumbs, Rosenbach/Nauman, Bey among others). On class days without assigned reading/viewing students will share their own creative responses, collaborative or solo, in their chosen visual, object, textual, sonic, or performance-based work.

MCM 1702B. Artist@Work: Kym Moore (ARTS 1910C)..

Interested students must register for ARTS 1910C.

MCM 1702D. Opening the Archives: The “Stuff” of (Un)Making, (Re)Pairing, and (Re)Imagining.

Archives and archivists have been described as agents with the power to control, privilege, and marginalize collections and their histories. This power can be wielded to determine the shape and direction of historical scholarship, collective memory, and identities, thereby impacting how we know ourselves as individuals, groups, and societies. These links are further complicated in archives where the provenance of collections is unclear. Students will gain a greater understanding of archival organization and authority, and are encouraged to imagine new modes of access to archives forging their own openings into/beyond the archives: making material traces and connections to produce critically engaged, creative works. Projects may take many forms: historiography; speculative, revisionist, or historical fictions; live or recorded performances; site-specific installations; single or multi-channel AV works, or curated programs.

MCM 1702E. Animals and Film.

In this advanced production seminar, we will address fundamental questions about the status of representation—of the animal and of ourselves—in the age of biomechanical reproduction. Through the study and production of time-based media, our aim will be to rethink animality. Students will make a series of filmic assignments about animals, with multiple screening and readings, including *Electric Animal: Toward a Rhetoric of Wildlife*, by Akira Mizuta Lippit; *The Companion Species Manifesto*, by Donna Haraway, and *Animal Liberation*, by Peter Singer.

MCM 1702F. Producing Your First Documentary Film In Theory And Practice (ARTS 1013A)..

Interested students must register for ARTS 1013A.

MCM 1702G. Body as Medium: Queer Lineages of Duration, Resonance, and Excess (ARTS 1012)..

Interested students must register for ARTS 1012.

MCM 1702I. Advanced Digital & Cross-Disciplinary Language Arts Workshop (LITR 1010H).

Interested students must register for LITR 1010H.

MCM 1702J. Experimental Video and Emerging Media.

This production course explores experimental video and media practices that challenge conventional cinematic forms and modes of storytelling. Each week, we will engage with the aesthetic and critical dimensions of a range of experimental approaches, including essay films, video poetry, elemental and immersive media environments, video game documentaries, and forms of micro-cinema—such as internet memes and animated GIFs—as well as critical engagements with generative AI. Through hands-on workshops in video and image-making, alongside screenings and discussions, students will complete short creative assignments and develop a major final project. Guest lectures by invited artists and filmmakers will provide insight into current moving-image practices. The course will culminate in a group screening and exhibition at the MCM-Carriage House.

MCM 1702K. Activating the Archive: Contemporary Film Practice.

This film and media production course explores historical and contemporary archives as sites of both artistic and critical intervention. Engaging with questions of inscription, memory, erasure, and historical re-imagining, students will examine how artists and filmmakers repurpose archival materials to craft counter-histories and speculative narratives. Through workshops in video and image-making, screenings, discussions, and guest lectures by invited artists and filmmakers, students will engage with archives as spaces for critical inquiry and poetic retrieval. Each student will select one or more archives to develop a major project that reinterprets, recontextualizes, or reimagines the retrieved material. The course will culminate in a final group exhibition and screening at the MCM Carriage House.

MCM 1702L. TV/Video: Theory/Practice.

This course examines both commercial television and independent video forms, considering their connections and/or tensions and the dialogue between them. Combining theory and practice (involving readings in media studies, TV and video screenings, critical writing, and media production assignments using available technologies), this course will give students an understanding of television and independent video histories and forms, encourage students to critique commercial media, and allow them to produce alternatives through their own creative practice. In this way, students will gain a broad understanding of televisual/videographic media, from the mainstream through the marginalized, and have an opportunity to engage with and intervene in media formations and histories in both scholarly and creative ways.

MCM 1970. Independent Study in Modern Culture and Media.

Section numbers vary by instructor. Please check Courses @ Brown for the section number and CRN to use when registering for this course or contact the MCM office if you need a section number created for an instructor that's not listed. Time dedicated to the project should fall within the recommended range for independent studies (10-20 hours per week). Instructor's permission required.

MCM 1980. Honors Thesis/Project Research in Modern Culture and Media (Part 1).

Independent research under the direction of a faculty member leading to an honors thesis/project. MCM 1980 is the first of two courses required of MCM honors candidates and is taken in the 7th semester. Instructor's permission required.

MCM 1990. Honors Thesis/Project in Modern Culture and Media (Part 2).

Independent research and writing a thesis or creating/producing a project under the direction of a faculty member leading to an honors thesis/project. MCM 1990 is the second of two courses required of MCM honors candidates and is taken in the 8th semester. Instructor's permission required. Prerequisite: MCM 1980.

MCM 2100A. Contemporary Feminist Theory and the Problem of the Subject.

Recent feminist theory represents the persistence of identity politics and the problem of the subject in various forms: through the "intersectionality" of race, class and gender; in the idioms of psychoanalysis; in terms of the "queer" subject. We will examine these often conflicting theories and the subjects of feminism they invoke with particular attention to the modes of address.

MCM 2100B. Culture and Criticism in Marxist Theory.

Readings in major 20th and 21st century texts, with emphasis on Western Marxist thought, from Lukács through the present. Focus on problems in the conception and reading of culture and cultural texts, with some attention to cinema and other media where possible. Where appropriate, consideration of interaction with other major theoretical frameworks (such as aesthetics, phenomenology, semiotics, psychoanalysis, feminism, postcolonial criticism, globalization theory, affect theory etc.) Readings may include figures such as Lukács, Benjamin, Eisenstein, Bakhtin, Adorno, Sartre, S. Hall, Haraway, Heath, Mouffe, Virno, Spivak, Lazaratto, Jameson, Zizek, etc. Some screenings.

MCM 2100G. Freud and Lacan.

Readings of major texts by Freud and Lacan will stress the relations between language, subjectivity and sexuality and the feminist use and/or critique of psychoanalytic concepts. We will also look at texts by other theorists (e.g. Melanie Klein, Heinz Kohut) and investigate the clinical implications of various approaches. Familiarity with semiotic and poststructuralist theory required. Enrollment limited to 20. Primarily for MCM graduate students; other qualified graduate students and MCM seniors must obtain permission from the instructor.

MCM 2100J. Space and Time in Media Discourse.

The course asks how space and time are conceptually, socially and aesthetically constructed thru different media. Perspectival constructions of space and time were always in the center of analysis when it came to cultural representations of the subject. Here will be the main focus of the course: Reconstructing the discourses on perspectivism (Nietzsche), pictorial perspective (Renaissance perspective) and temporalities of media like seriality, repetition, duration etc. During the course we will look on concepts of narrative and temporal perspectives in the context of general theories of time as well as in the context of specific media as photography and film.

MCM 2100L. Metals, Mining, and Jewelry: Making the World Anew (HMAN 2402D).

Interested students must register for HMAN 2402D.

MCM 2100M. Signification, Subjectivity, Mediation.

This course considers some key texts in theorizations of signification, subjectivity, and mediation, tracing an intellectual history by reading authors from a number of disciplines (linguistics, psychoanalysis, literary studies, media studies, Marxist theory, feminist theory, critical race theory, queer theory, decolonial theory); media screenings supplement and intersect with course readings. At the same time, we will subject many of the very terms in the above description ("author," "history," "discipline," "read," "text," "theory," "supplement," "media") to interrogation. What do we do when we read a text ("key" or otherwise)? Within what cultural formations and social institutions does this practice take place? What knowledges and/or ignorances are produced? What positions are activated or constructed? These are some of the questions we will address as we investigate ways in which signification, subjectivity, and mediatization have been approached within critical and cultural theory.

MCM 2100O. Queer Theories.

This course will engage with possibilities and problems of queer theorizing, from the emergence of queer theory, through its (precarious) institutionalization, to its multiplied interventions. Rather than understanding queer theory as a unified approach, we will consider a range of queer theoretical work as well as challenges within queer analysis itself. Issues to be explored include formations of gender and sexuality, race and nation, epistemology and ethics, politics and communities, subjectivities and socialities, identifications and disidentifications, bodies and pleasures, publics and privates, and the temporalities and locations of our world. Preference given to graduate students; all others seek instructor permission.

MCM 2100V. Sex. What is it? Why does it matter?.

The binary opposition between the sexes is a thing of the past. Or is it? This seminar will attempt to show that far from being the bastion of simple opposition and hetero-normativity, the psychoanalytic theory of sexuality still offers the most powerful critique of same to date. It is the sex of sexual difference that gets lost in contemporary mis-readings of psychoanalysis. And affect theory, far from making up for this loss, has become a further clean-up operation, intent on white-washing the messiness of sex.

MCM 2100Y. Solidarities: Sharing Freedom, Inventing Futures (HMAN 2971H).

Interested students must register for HMAN 2971H.

MCM 2101B. Black Critique (AFRI 2300).

Interested students must register for AFRI 2300.

MCM 2101D. Postcolonial Theory (ENGL 2900X).

Interested students must register for ENGL 2900X.

MCM 2101F. What is (Called) Thinking? (HMAN 2401N).

Interested students must register for HMAN 2401N.

MCM 2101I. Mending What is Broken: Repair, Debt, and Reparations (HMAN 2402G).

Interested students must register for HMAN 2402G

MCM 2101K. Hannah Arendt's Eichmann in Jerusalem: Theater, Complicity, Evil, Refusal (POLS 2354).

Interested students must register for MCM 2101K.

MCM 2110B. Freud and Lacan.

This course will stress the relations between language, subjectivity and sexuality and the feminist use and/or critique of psychoanalytic concepts. Familiarity with semiotic and poststructuralist theory required. Additional readings in Laplanche, Weber, Žižek, Gallop, Butler.

MCM 2110G. Language and Politics (POLS 2285).

Interested students must register for POLS 2285.

MCM 2110M. Literary Theory I: Continental Aesthetics and the Questions of Politics (COLT 2650M).

Interested students must register for COLT 2650M.

MCM 2110N. Literary Theory II: Post-Structuralism and the Problem of the Subject (ENGL 2901B).

Interested students must register for ENGL 2901B.

MCM 2110S. Ethical Turns in Psychoanalysis and Literature (ENGL 2900N).

Interested students must register for ENGL 2900N.

MCM 2110W. Seminar in Performance Studies and Theatrical Theory (TAPS 2100).

Interested students must register for TAPS 2100.

MCM 2110Z. Language and Politics (POLS 2285).

Interested students must register for POLS 2285.

MCM 2111E. Twenty-first Century Critical Theory (ENGL 2901T).

Interested students must register for MCM 2111E.

MCM 2120A. Media Archaeology.

Provides an intellectual history of "Media Archaeology," focusing on contributions by the "SophienstraBe" departments of Humboldt University in Berlin and on the importance of Marshall McLuhan and Michel Foucault, amongst others, to its development. Readings by Friedrich Kittler, Wolfgang Ernst, Cornelia Vismann.

MCM 2120B. New Media Theory.

An interdisciplinary investigation of "New Media Theory," bringing together historically significant texts from the fields of media, film, literary, music, visual, HCI and cultural studies, with more recent texts in new media studies. As well as exposing students to the canon (from hypertext theory to software studies, HCI to media archaeology), the course will also address the question: what is at stake in the creation of this canon and this discipline? This course is for Graduates only. Upperclass undergraduates require instructor's permission.

MCM 2120C. Cinema, State Violence and the Global.

Theoretical and political conceptions of state and global violence posed against the theory and history of cinema, as representational apparatus and as instruction. Special attention to the establishment of film as global medium around World War I; current issues around the global, state, and biopower; "postmodern media culture;" etc. Readings from sociopolitical theorists (e.g. Weber, Schmitt, Arendt, Foucault, Agamben, Hardt and Negri, etc.) and media scholars/theorists (e.g. Virillio, Prince, L. Williams, Miller, etc.) Enrollment limited to 20. Permission required for undergraduates only.

MCM 2120D. Derrida and Telecommunications.

Derrida famously proclaimed that writing preceded speech--rendering all communications a form of writing--but he also argued that the history of psychoanalysis would have been different if Freud had used e-instead of snail-mail. Tracing Derrida's thought re. telecommunications from Grammatology to Writing Machines, as well as engaging his interlocutors (Samuel Weber, Avital Ronell, etc.), this course examines the importance of medium-specificity to post-structuralism. Enrollment limited to 20 graduate students. Permission required for undergraduates only.

MCM 2120E. Cinema, Media Culture and Political Theory: Rancière and Others.

There is a strand of contemporary thinkers concerned with political theory, in whose writings media and especially film play significant roles. Jacques Rancière has produced a major body of work on political theory, on aesthetics, and on film as well as media culture. This class will focus on a close examination of his political theory, his conceptions of film and media, and relations between the two fields in his writings. For comparison, we will also look at smaller samples of texts on political theory and film drawn from figures such as Agamben, Badiou, Jameson, etc. Enrollment limited to 20. This class is for Graduates only. Upperclass undergraduates require instructor permission.

MCM 2120F. Concepts of Space and Time in Media Discourses (HMAN 2970C).

Interested students must register for HMAN 2970C.

MCM 2120H. Objects of (and in) Animation.

The course focuses on the notion of animation as a general concept. This includes more than just the genre of animation films. It also includes the animation of objects that are neither organic nor alive: The animation of the machine. The technical object plays here an important role. The focus will be on the discussion of concepts of film as medium of animation per se and on different procedures of animating. Our debates here will cover: cartoon, the digital, experimental and animated effects in film. The aim is to gain a deeper understanding of the animated character of film.

MCM 2120I. Why and How We are Looking for the Comical? Theories and Objects.

The course focuses on the notion of the comical as a general concept. This includes more than just different genres and techniques of comedies. We will start with a close reading of old and new theories of the comical in philosophy, psychoanalysis, and poetics. Why and about what are we laughing? This is a general question that concerns the specific cinematic and visual strategies in film. Along film theoretical and analytical texts we will further focus on visibility and vision and on picture/language gaps as media for filmic jokes, wit and humour. Course is for Graduates only. Upperclass undergraduates require permission.

MCM 2120J. Realism - Concepts, Forms and Styles.

The course focuses on the notion of realism as a general concept. Realism is a philosophical concept that defines the relationship between the external world and the subject and the media involved establishing this connection. At the same time, it is in the center of many artistic styles with many aesthetic and political consequences (cp. Italian neo-realism). Bringing this two dimensions together opens the field of attention to the borders between fact and fiction, fiction and documentary etc. The aim of the course is to enhance a broader understanding of the notion by exemplifying the problem. Enrollment limited to 12. This course is for Graduates only. Upperclass undergraduates require instructor's permission.

MCM 2120K. Deleuze and Cinema.

This seminar is devoted to reading Gilles Deleuze's two volume work on cinema, Cinema 1: The Movement-Image, and Cinema 2: The Time-Image, and assessing its impact on and continuing relevance to the study of film and culture. We will screen selected films of significance to Deleuze's own study of cinema, as well as a few not referenced by him that nonetheless might prove relevant to or provocative in the context of a sustained study of Deleuze's cinema book. We will read selections from work that influenced Deleuze as well as from the secondary literature on Deleuze and cinema.

MCM 2120N. Critical Theories of Mass Media.

The rise of mass media from print to social media was accompanied by critical discourses that emphasized both euphoric acclamation for the new media and emphatic warnings about the dangers. We will discuss how these critiques are conceptualized in terms of culture, media and of mass in three blocks, each based on the emergence of a specific medium and its technology. The main focus is the reconstruction of basic notions in the critique of mass media and the analysis of specific works by Adorno, Benjamin, Kracauer, Dewey, Lippman and others.

MCM 2120O. Concepts of Technology and Media.

Media and technology are often used as if they were interchangeable. What is named today 'German Media Theory' is based on the philosophy of technology. In this course we will start to discuss the problem of the connection between technology and media in two blocks. 1. We study the concepts of technology, technique, techné.

2. We study their impact in the definition of media and the impact of those understandings for media analysis, e.g. we practice on concrete cases in film, TV, music, theatre and Internet.

The aim is to learn how to conceptualize and analyze technology based mass media.

MCM 2120U. Biology of the Mind.

In 1979 Frank Sulloway wrote a well-regarded biography of Freud, which maintained that the father of psychoanalysis never surrendered his first calling as a biologist. Indeed, Freud never stopped thinking of himself as a scientist who wished, as he put it, to "leave his psychoanalytic calling card" with the biologists. What does this mean? What happens to biology when it is retrofitted with an unconscious? We will examine various texts of Freud, Lacan, Canguilhem, Bergson, and Deleuze, among others and sort out their intricacies by reading them in relation to the paintings of Francis Bacon, films as *The Cow* (Merjui, 1969), the works of the bizarre architect, Patrick Geddes.

MCM 2300A. Real TV.

This course will investigate the construction of reality on U.S. television, considering not only specific reality genres (news and "magazine" programs, crisis coverage, docudrama, talk and game shows) but the discursive and representational modes that define the "reality" of commercial television as a whole. Issues include: "liveness"; social relevancy; therapeutic discourse; TV personalities; media simulation; independent television; and new technologies/realisms.

MCM 2300B. Television, Gender and Sexuality.

Television, across all the screens on which we view, has an enormous impact on society—including on relations of gender and sexuality—just as it is impacted by those relations in turn. This course investigates how television produces and reproduces constructions of gender and sexuality through its institutional form (as it maps relations between public and private, domestic and social, familial and defamiliarized), narrative patterns (as it circulates family romances, links gender and genre, and mediates sexual and social tensions), and spectatorial relations (as it variously addresses viewers as sexed and gendered subjects, consumers and commodities, familial and defamiliarized viewers).

MCM 2300C. After Postmodernism: New Fictional Modes (ENGL 2760X).

Interested students must register for ENGL 2760X.

MCM 2300D. Historicism/Photographic Media: From Kracauer and Benjamin to the DEFA Documentary (GRMN 2660H).

Interested students must register for GRMN 2660H.

MCM 2300E. Things Not Entirely Possessed: Romanticism and History (ENGL 2561B).

Interested students must register for ENGL 2561B.

MCM 2300F. Animation.

The course focuses on the notion of animation as a general concept. This includes more than just the genre of animation films. We will start with an introduction into the tradition of the notion of 'livelihood' and the concept of the soul (e.g. anima): How is the spectator animated by film? Further we will proceed to texts that are discussing anthropological meanings of animation in the sense of animism. The main focus will then be on the discussion of general concepts of film as medium of animation per se and on different procedures of animating of and in film. Enrollment limited to 20.

MCM 2300I. Popular Music Studies (AMST 2220R).

Interested students must register for AMST 2220R.

MCM 2300J. Film Philosophy: Tragedies of Remarriage (POLS 2355).

Interested students must register for POLS 2355.

MCM 2310C. Eisenstein and Political Modernism.
