Eisenstein's theories and films are a formative moment in cinema and media history, bringing together the ambitions of politicized film and modernist aesthetics. From the first, they were invoked by a range of radical theorists and filmmakers all the way from Brecht and Benjamin to Metz and Deleuze, as well as a variety of filmmaking practices such as militant documentary, third cinema and Godard. In this seminar, we will intensively study Eisenstein's theories, filmic practices and shifting historical contexts, from the heady days of the politically and aesthetically avant-garde 1920s, through the transformations of his theories in the 1930s and 1940s (many only available posthumously) and of his later film projects (several unfinished). We will also trace out some filiations and rereadings of Eisenstein within the history of politically conversant modernist film practices and theories. Permission required for undergraduates only; undergraduates seeking permission must attend the first class session.

MCM 2310D. The Idea of a Medium.

What is a "medium" (a term we often seem to take for granted)? An examination of issues of medium specificity, intermediality, convergence, formalism and the idea of a "post-medium era," in relation to the media of print, photography, film, television, and digital media. We will also investigate the role of the museum and alternative screening or exhibition spaces as well as "virtual space" in delineating reception of the media. Enrollment limited to 20. Primarily for MCM graduate students; other qualified graduate students and MCM seniors must obtain permission after the first class. Students MUST register for the lecture section and the screening.

MCM 2310E. TV Space and Time.

Explores television's temporal and spatial construction, considering how television demarcates time (regulating it through flow and segmentation, articulating work and leisure times, marking familial and national events, encouraging rhythms of reception) and space (mapping public and private space, defining a "global media culture" through local viewings, representing and enacting travel and exchange, creating imaginary geographies and communities). Enrollment limited to 20. Preferences given to graduate students. All others seek permission from the instructor. Students MUST register for the lecture section and the screening.

MCM 2310G. Cultural Studies and the Problem of Form.

This course examines the emergence and contemporary practice of "cultural studies" with a focus on concepts of form. We will consider cultural studies critiques of disciplines, canons, and the aesthetic; the politics of form; theories of reading and spectatorship; "popular" and "mass" forms; and competing definitions of culture as form arising in fields from visual and media studies to postcoloniality and queer theory. Readings from Williams, Hall, Mulvey, Althusser, Spivak, Deleuze, Hartman, Agamben, Sedgwick, Galloway. Instructor permission required. All students seeking permission must attend first class.

MCM 2310H. Television Realities.

How does television bring "real" events to us? How do we define or know what's "real"? What kinds of "realities" exist on television, and how do they operate (in relationship to one another, to TV fantasy, to social structures, and to our everyday lives)? This course will consider not only some specific "reality genres" (news, catastrophe coverage, "live" and "historical" programs, "surveillance programming," documentary and docudrama, talk and game shows, reality series and "docu-soaps") but the representational modes that define the reality of commercial television as a whole. This course is for Graduates only. Upperclass undergraduates require instructor's permission.

MCM 2310I. At the Limits: Media Representation of the Holocaust.

The Holocaust has been described as unimaginable, at the limits of representation. Yet there have been numerous attempts to imagine and represent it, across media (film, television, graphic novels), genres (documentary, melodrama, comedy, fantasy), and modalities (through history and memory, "high" and "low" culture, fiction and nonfiction, reporting and marketing). Considering such attempts to represent the unrepresentable and mediate the immediacy of trauma, this course will explore media texts and theoretical/philosophical reflections on the Holocaust. Enrollment limited to 12. This course is for Graduates only. Upperclass undergraduates require instructor's permission.

MCM 2310Q. Frequencies of Black Life (ARTS 2000)..

Interested students must register for ARTS 2000.

MCM 2310R. Media Compositions.

Media Compositions is a graduate practicum focused on generating, workshoping, revising, supporting, and finishing writing in forms relevant to media scholarship, teaching, and professionalization. Participants will set and propose scaffolding toward their own specific writing goals for the semester. As a collective, we'll analyze our own works-in-progress as well as examples published by scholars at various career stages for a range of audiences, from SCMS student writing awardees to public-facing arts criticism. Designed with the isolation of dissertation writing in mind, this course is intended to serve as a space of community as well as productivity and intellectual development.

MCM 2310T. Seminar Perform Study-TAPS2100.

Interested students must register for TAPS 2100.

MCM 2310U. Punk: Notes on Artist Rage.

In his seminal text *Subculture: The Meaning of Style* (1979), media theorist Dick Hebdige notes that punk subcultures present an indirect challenge to hegemony through noise and style as forms of interference. This seminar explores the music, fashion, film, literature and visual art of punk as a complex intersection of subculture, style and self-making; noise and disobedience; and collaboration and creativity in the face of annihilation. Since punk's arrival in the US and the UK in the 1970s, its subcultures and cultural productions have been associated with practices of dissent and refusal in the face of authoritarian political and cultural forces. Over the course of the semester, we attend to the unruly sounds, textures and manifestos of punk, with a particular emphasis on Black and Brown punk provocateurs, race, class and gender relations, collaboration, DIY practices, and creativity "underground."

MCM 2330. Critical Genres.

Introduces graduate students to specific aspects of the history, methods, and arguments of the academic interdiscipline known as "cultural studies." In a workshop forum, we discuss the conventions governing academic genres and consider the evidence, argumentation, rhetoric, and the construction of expertise.

MCM 2450. Exchange Scholar Program.**MCM 2500A. Film and Modernity.**

An examination of films and film movements from 1895 through the 1930s in relation to the rise of modernity, modernization, and modernism. We will analyze the films through the lenses of theories of technology, temporality, the avant-garde, and the emergence of mass culture. Readings in Gunning, Bergson, Simmel, Kracauer, Benjamin, Jameson, Hansen, and others.

MCM 2500C. Media Archaeology.

Provides an intellectual history of "Media Archaeology," focusing on contributions by the "Sophienstraße" departments of Humboldt University in Berlin and on the importance of Marshall McLuhan and Michel Foucault, amongst others, to its development. Readings in Friedrich Kittler, Wolfgang Ernst, Cornelia Vismann. Permission required for undergraduates only.

MCM 2500D. Archaeologies of the Projected Image.

Analysis of the history and theory of projected images from the magic lantern to IMAX. We will examine theories of scale, architecture, and perspective in order to consider the changing size of moving images, from the flip book to the cinema screen to the cell phone. We will also consider theories of mass culture, aesthetic technologies, the sublime, and public art. Readings in Jonathan Crary, Siegfried Kracauer, Sigmund Freud, Walter Benjamin, Henri Lefebvre, Jean-François Lyotard, Friedrich Kittler, Laurent Mannoni, Erkki Huhtamo, and others. Enrollment limited to 20 graduate students. Permission required for undergraduates only.

MCM 2500E. Temporality in/and the Cinema.

An examination of the cinema's historical and theoretical position as a mode of representing time. Is time recorded or produced by film? How can we analyze duration in the cinema? What is the cinema's relation to the archive and to modernity? We will read work by Bergson, Freud, Marey, Kracauer, Benjamin, Deleuze, and others. Films by Lumière, Griffith, Snow, Tsai Ming-Liang, Hitchcock, and others. Enrollment limited to 20. This course is for Graduates only. Upperclass undergraduates require instructor's permission.

MCM 2500H. Atmospheric Media.

If air is a medium, as the notion of "elemental medium" suggests, how does it mediate? What does it mean to think of air as a matter of mediation? Does it function like other media, such as photography and cinema, in expressing, communicating, and documenting life and experience? Following Eva Horn to consider air as "a medium of life," this graduate seminar explores the implications and possibilities in conception of atmospheric matters and conditions in relation to media history and theory. We propose the notion of "atmospheric media" as the center of our inquiry, approaching it both materially as atmospheric things (e.g., physicochemical compounds, movements, and reactions) and conceptually as atmospheric thinking (e.g., environmentality, immersion, and affect). Drawing from literatures in environmental science, media theory, ecocriticism, and decolonial thought, we hope to rethink air and media through their mutual entanglements.

MCM 2510A. Art Cinema as Transnational Textual Strategy.

In the 1960s, Antonioni, Bergman, Buñuel, Fassbinder, Fellini, Godard, Resnais, etc. achieved *international/global* prominence by bending mainstream narrative cinema conventions in the name of original *national* and artistic subjectivities. But such "art cinema" has pervaded film history, from the 1920s (e.g. German Expressionism) to the present (e.g. New Iranian Cinema). Investigation of art cinema's textual strategies, conceptual underpinnings, and historical functions. Enrollment limited to 20.

MCM 2510B. Cinema, State Violence and the Global.

Theoretical and political conceptions of state violence and global violence, posed against the history of cinema as representational apparatus, textuality and institution. Attention to the establishment of film as a global medium through World War I, and current work around textual norms and strategies for configuring violence, "global media culture," etc. Readings from sociopolitical theorists (e.g. Weber, Benjamin, Schmitt, Arendt, Fanon, Agamben, Foucault, Hardt and Negri) and cinema/media scholars (e.g. Virillio, Prince, L. Williams, Oppenheimer, Koch, etc.). This course is for Graduates only. Upperclass undergraduates require instructor's permission.

MCM 2510C. The Adventures of Dignity.

What is the ideological function of "dignity" as it is invoked in human rights discourses? What concepts of humankind and what fantasies of wholeness are assumed and reiterated? Readings include histories of human rights, treatises on dignity from Kant to Foucault, Elaine Scarry, and other theorists. Enrollment limited to 20. This class is for Graduates only. Upperclass undergraduates require instructor permission.

MCM 2510F. The Racial Lives of Affect (ENGL 2761F).

Interested students must register for ENGL 2761F.

MCM 2510I. Italian Thought: Inside and Out (HMAN 2400U).

Interested students must register for HMAN 2400U.

MCM 2980. Independent Reading and Research in Modern Culture and Media.

Individual reading and research for doctoral candidates. Not open to undergraduates. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Time dedicated to the project should fall within the recommended range for independent studies (13-20 hours per week).

MCM 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Music

Through multiple modes of inquiry and experience, the department advances new ways of understanding music as both creative expression and cultural practice throughout the world. The department promotes musical education, research, and engagement at the highest standards of excellence on an open and inclusive basis.

The study of music – a phenomenon known to all people in all ages – lies naturally at the heart of a liberal education. The Department of Music at Brown provides an ideal environment for such an education, with its integrated faculty of scholars, performers, composers/media artists, and theorists.

Our diverse curriculum combines creative courses in composition, technology, and performance with speculative studies in history, theory, ethnomusicology, philosophy, and musical aesthetics. Application merges with analysis, creation with cultural study, and multimedia experiments with broad meditations on sound, in a unique department that welcomes all.

For additional information, please visit the department's website: music.brown.edu (<https://music.brown.edu/>)

Music Concentration Requirements

The concentration in Music integrates theory, history, ethnomusicology, technology, composition, and performance. Upon completing two foundational courses in theory and musicianship, concentrators have the flexibility to craft an intellectual pathway based on their particular interests and goals. The curriculum is supported by the Orwig Music Library, a state-of-the-art facility with holdings of over 40,000 books and scores and an equal number of sound and video recordings. Concentrators are encouraged to participate in one or more of the departmentally sponsored performing organizations: Chorus, Orchestra, Jazz Band, Wind Symphony, Chamber Music Performance, Electroacoustic Ensemble, Old-time String Band, Javanese Gamelan, or Ghanaian Drumming.

Concentrating in Music

If you choose Music as a Concentration*, you will be expected to achieve well-rounded training as a musician, regardless of the genre(s) in which you specialize. This training is manifested in the following general components:

Fundamental skills are important for any musician, and therefore a minimum of two music theory/musicianship courses are required of all students who wish to Concentrate. Students have the opportunity to enter into various theory courses according to their interest and experience.

Historical and cultural knowledge of music is another key area from which Concentrators are required to complete courses. These courses may be studies of Western or non-Western forms of music.

The creation of music is also central to the Music Concentration. Students are encouraged to make music in a number of ways, including participation in ensembles, solo performance, composition, music production, and/or conducting.

Music faculty will be available to advise students on shaping the flexible parts of their Concentration and achieving their goal at Brown.

Concentration Requirements:

Music Theory

• Two courses in music theory, which may include one 400-level and one 500-level course, or two 500-level courses.		
MUSC 0400A	Introduction to Music Theory	1
MUSC 0400B	Introduction to Popular Music Theory and Songwriting	1
MUSC 0550	Theory of Tonal Music I	1
MUSC 0560	Theory of Tonal Music II	1
MUSC 0570	Jazz and Pop Harmony	1

Music Scholarship, Production and Advanced Theory

A minimum of four upper-level courses above 1000, must include:

- One upper-level course in musicology or ethnomusicology
- Any three upper-level courses, including graduate-level courses

Additional Electives (according to student interest)

Four additional elective courses, may include:

- Up to four half-credit courses in performance - AMP music instruction and/or Ensemble Participation (2 credits)
- Up to two courses outside of the department
- One music course below the 100 level

Senior Project

All music concentrators will choose a culminating experience for their senior year, either a capstone project or honors project. This may take the form of a performance, scholarly study, or original creative work. All students will have a primary advisor for their Senior Project. The work may be done independently of a course for credit, as an independent study, or within the framework of an existing course.

Additional Notes

All concentration substitutions and/or exceptions must be approved by the concentration advisor in consultation with the Director of Undergraduate Studies. A substitution or exception is not approved until specified in writing in the student's concentration file in ASK.

Honors in Music (optional)

Faculty Rules stipulate "Brown University shall, at graduation, grant honors to students whose work in a field of concentration has demonstrated superior quality and culminated in an honors thesis of distinction."

In order to apply for Honors in Music, at least half of the student's coursework in Music must be As or Ss with Distinction. Please note that Brown's transcripts do not indicate whether a student receives distinction in a S/NC course. ("S*" indicates that a course is mandatory S/NC.) This information must be obtained from the course instructor or the Registrar's Office.

Departmental Procedures:

The Department welcomes a variety of projects leading to Honors in Music. Theses in Music may involve research in musicology, ethnomusicology, or theory; performance; composition, computer music, studio production, or instrument design; or combinations of the preceding categories. Creative and performance projects should be accompanied by pertinent research and/or documentation. Students are encouraged to meet with prospective honors committee members in the junior year to craft a thesis project that is appropriate in scope.

NOTE: the term HONORS COMMITTEE refers to a student's honors thesis advisor and readers.

A student wishing to propose a project should proceed as follows:

1. An honors candidate must secure a faculty advisor and a second reader to serve as an honors committee during the third to last (typically sixth) semester. A declaration of intent (<https://forms.gle/VtceLXiC6waDs5d09I>) (Brown login required), consisting of a brief description of the proposed honors project and the names of the committee members, must be submitted to the Director of Undergraduate Studies by the last day of reading period in the third to last semester.
2. At the beginning of the penultimate (typically seventh) semester the student will submit a formal proposal describing the project to the honors committee for approval. Examples of recent honors proposals are available here (<https://drive.google.com/open?id=1aAScAWyJHTKplvJQoi8obPal0Fj1tZKg>) (Brown login required). The proposal must receive committee approval and be given to the department's Academic Student Affairs Coordinator for distribution to the full faculty by the first day of the first full week of classes of the semester. The department faculty will vote on the proposals at the next regularly scheduled meeting. Decisions will be based on the student's overall performance in music courses and on the quality of the proposal. The advisor will notify the student of the faculty's decision.
3. It is expected that honors projects will normally take two semesters to complete. Students pursuing honors may choose to register for MUSC 1970 in the Fall and/or in the Spring. If not enrolled in an independent study, the student should meet with the advisor at the beginning of the semester to make a plan for regular meetings. The

student is advised to meet with the secondary reader at least twice each semester before the thesis is formally submitted. By finals week of the penultimate semester, honors candidates must demonstrate substantial progress by submitting to the honors committee a partial draft of a paper or composition or, for performance projects, by playing a significant portion of the programmed repertoire. Failure to make sufficient progress may result in the termination of the honors project.

4. Last semester deadlines: Honors candidates must submit a complete draft to their honors committee by the first day of classes following the eighth week of the last semester. The committee will comment on the project and suggest revisions. Revisions must be completed, and the final project submitted to the honors committee by the first day of classes two weeks later. In the case of performance projects, this means that both the public performance and the scholarly component must have been completed by this date. In the case of research projects, all figures, notes, bibliography, and other critical apparatus must have been completed. Failure to make the deadline may result in the forfeiting of honors by the candidate, though the student may complete the project as a capstone project.
5. The honors committee will confer to determine their views on their projects. If the second reader is outside Music, the advisor may solicit a written recommendation about the merits of the project.
6. The advisor will deliver a copy of the completed thesis to the department's Academic Student Affairs Coordinator by the middle of the eleventh week of the last semester so that it may be made available for review by the full faculty.
7. During the twelfth week of the last semester, the advisor will report on the project at a meeting of the Department faculty for a vote. The advisor will notify the student of the faculty's decision.
8. Honors recipients will present their projects at a Department of Music Convocation held once annually during reading period in the Spring Semester.

1.

Music Graduate Program

The Department of Music currently offers the Ph.D. in Music in two areas of study: Musicology & Ethnomusicology (<https://www.brown.edu/academics/music/graduate/musicology/>) and Music & Multimedia Composition (<https://www.brown.edu/academics/music/graduate/composition/>). The long-standing doctoral program in Ethnomusicology, established in 1968, is one of the first in the country. It was combined with the study of Musicology in 2018. The Composition doctoral program had previously been known as Computer Music & Multimedia (or MEME) since it became a fully-fledged Ph.D. in 2004. The small size of both programs allows for significant cross-talk between the students.

For more information on admission and program requirements, please visit the following website:

<https://www.brown.edu/academics/gradschool/programs/music-and-multimedia-composition> (<https://www.brown.edu/academics/gradschool/programs/music-and-multimedia-composition/>)

<https://www.brown.edu/academics/gradschool/programs/musicology-and-ethnomusicology> (<https://www.brown.edu/academics/gradschool/programs/musicology-and-ethnomusicology/>)

Courses

MUSC 0021E. Good Vibrations: The Music of Everyday Objects.

This seminar will investigate the sonic properties of everyday objects and environments, and how they can transform into musical expression. Through a focus on listening and experimentation, the seminar will explore resonance, reverberation, field recording, feedback, circuit bending, archaeological acoustics, and other topics. Students will create individual and collaborative compositions and performance situations. No formal music background is required. Enrollment limited to 19 first year students. Instructor permission required.

MUSC 0021F. Popular Music and Society in Latin America.

This course examines how Latin American musics shape, and are shaped by, their social environment and the political histories of their homelands. Focusing especially on Cuban and Andean styles, it explores the way that sounds connect with the lived experiences of local audiences, the artistic and political goals that have motivated key performers, and the effect of their actions on broader social debates. Issues covered include the relationship between music, race, and national identity; sound as a medium for social politics; the roles of industrialization, migration, urbanization, and media dissemination in driving musical change. Enrollment limited to 19 first year students.

MUSC 0021H. Manifestos: Art, Politics and the Idea of Progress.

Ever since Karl Marx and Friedrich Engels wrote their "Communist Manifesto" (1848), artists, activists and politicians have used manifestos to announce radical change and justify provocative new ideas or practices. This seminar examines the manifesto as a genre of writing with a particularly strong influence on artistic movements in 20th century Modernism. Looking at examples by poets, musicians, and visual artists, we consider how they are informed by visions of progress, social action, political efficacy, and artistic or historical necessity. Authors include Russolo, Apollinaire, Schoenberg, Munch, Klee, Kandinsky, Stravinsky, Dali, Borges, Artaud, Frank O'Hara, Duchamp, Mallarmé, and Boulez. Enrollment limited to 19 first year students.

MUSC 0021J. Stephen Sondheim and the American Musical.

This seminar considers the theater shows of Stephen Sondheim in relation to the history of the American musical. Through close study of selected scenes and shows, we examine how and why Sondheim and his collaborators "reinvented" the genre. Special emphasis will be given to Sondheim's critical skepticism concerning the myths, characters, and ethos of social optimism that have been central to the Broadway tradition. We examine links between the shows and post-WWII historical contexts, and consider the political implications of the circumscribed social universe—predominantly white, urban, and affluent—within which most of his shows take place.

MUSC 0021M. Music, Sport, Games, Play.

This course uses the organizing figure of play to explore several forms of human activity, and to consider the relationship between them. Building on existing scholarly approaches to the role of play in human flourishing, it asks how play structures music, sports, and game in ways that are comparable, how the different modalities of each activity give rise to unique principles of play and competition, and how these three domains interact with one another. Topics will include musical improvisation and competition, in forums ranging from rap battles to air guitar; the role of sound in professional sports marketing and in-game experience design; the songs that enliven children's games and the soundtracks of video games; forms such as capoeira, which involve playful interaction in several different domains; and many more.

MUSC 0032. Music and Meditation (RELS 0032).

Interested students must register for RELS 0032.

MUSC 0033. From the Blues to Beyoncé: Popular Music in the U.S..

This course seeks to view U.S. cultural and social history of the last century through the lens of popular music. We will investigate the history popular music from its roots in the early twentieth-century to the present. We will examine the social, cultural and political contexts that gave birth to various genres of popular music by exploring the music through the lenses of race, class, gender, sexual orientation, advances in technology, and developments in the music business. No musical background is required. There are conference sections for this course that meet every week.

MUSC 0063. Contemplative Music of India.

Contemplative Music of India provides a comprehensive overview of many important traditions within the contemplative musical heritage of India, including a detailed exploration of Vedic hymnology, the classical musical traditions of both North and South India (Hindustani and Carnatic musics), the devotional music of the medieval bhakti mystics, and the ecstatic modes of the Sufi saints. With these varied practices in mind, the class will explore the myriad ways in which South Asians have used music as a vehicle to achieve and sustain contemplative states of mind. The class is open to everyone regardless of musical background. Enrollment limited to 20.

MUSC 0064. Honky Tonk Heroes.

This course explores country music from its origins to the present day. We will trace its development through the careers of foundational artists like the Carter Family, Hank Williams, Loretta Lynn, and Willie Nelson, and evaluate the way that their legacy is reflected in the work of contemporary artists like Corb Lund, Hayes Carll, and Neko Case. Beyond the individual creativity of these figures, we will consider the way that country music has been shaped by the recording industry, the relation it has to race, gender, and political identities, and the international spread of the American country sound.

MUSC 0068. Music in China Since 1900.

From the early 20th century until now, war, political movements, ideological and cultural shifts, and later economic booms have dramatically impacted music and musical life in China. This course examines various genres of music in China, both native and imported, including traditional instrumental music, propaganda songs, opera, ballet, standard and contemporary classical music, pop music, and communal activities like amateur choruses and calisthenics. This course will exercise critical listening and thinking and comparative analysis skills, with a mix of source readings, recordings, and historical background. No background in music or Chinese history is required.

MUSC 0070. 1000 Years of Listening.

This course aims to introduce you to a variety of music and a range of ways of listening to, and thinking, talking, and writing about music. The majority of music dealt with will be drawn from the so-called "Classical" repertory, from the medieval period to the present day. We cover canonic favorites, but we will also explore music you may have never have encountered before. We will become familiar with the technical workings of music, while at the same time thinking about—and rethinking—some of the stories we tell about the history of Western art music. This is a tradition which has kept some musics alive across centuries, but it has also excluded many voices. In this class, we will think about the idea of the musical canon, what it offers, and how it might change.

MUSC 0071. Opera.

A survey of the history, aesthetics, and politics of opera from 1600 to the present day. Analyzes operas and scenes by Monteverdi, Purcell, Mozart, Rossini, Verdi, Wagner, Strauss, and others. Ability to read music not required.

MUSC 0075. Jazz: Race, Power and History.

Explores jazz in relation to American history, discussing how economics, war conditions regional differences and race relations shaped the music and its public reception. With readings from A. Baraka, L. Levine, R. Ellison, L. Erenberg, E. Lott, G. Early, S. DeVaux and others, we address how jazz embodies social and political values or expresses national character. Open to non-musicians. Music proficiency preferred but not required. Enrollment limited to 60.

MUSC 0080. African Popular Music.

This course is a comprehensive overview of African popular music, highlighting its evolution and significance across the continent. We will explore the social and political contexts as well as the cultural influences that have shaped the diverse genres within African popular music. Students will engage with a wide range of styles from seminal genres like afrobeat, highlife, soukous, jùjú, Tuareg blues, and kwaito to contemporary styles such as afrobeats and amapiano. Key topics include the origins and development of the category, sonic characteristics of various genres, global interactions, and recent trends. In addition, we will examine the core concepts and theories essential to understanding and analyzing African popular music. Through lectures, listening sessions, and critical analysis, students will gain deep insights into the vibrant and dynamic world of African popular music and develop a nuanced appreciation of its diverse genres.

MUSC 0170D. Musical Youth Cultures (AMST 0170D).

Interested students must register for AMST 0170D.

MUSC 0200. Computers and Music.

Computers and Music examines the production, history and theory of music technology. The course tracks the development of musical inventions and their impact on musical thought and culture. Students completing Music 200 will gain a practical knowledge of electronic music based on first-hand experience with music production software for creative assignments. Students will also gain an appreciation for the pioneering work of inventors and musicians. Finally, students will become familiar with the literature of electronic music and learn about the impact of technology on popular and experimental genres. The course combines in-person lectures (Tuesdays) with synchronous online lectures (Thursdays) and small in-person labs. Although no special knowledge of music or technology is expected, students with previous production experience should enroll in lab sections L02-L04. Priority given to lower-level students and music concentrators. Upper-level students will be admitted as space allows.

MUSC 0220. MEME Ensemble: Collaborative Composition and Improvisation Ensemble.

The collaborative approach to sound creation often yields new possibilities, ideas, and perspectives on sound that can be later utilized in the creation of new music projects. In this course, students will have the opportunity to explore different types of improvisation in collaborative studio sessions, create their own music projects, and learn about existing "open score" repertoire. Students may engage in projects that also include video, audio recording, and, if it's of interest - theater and choreographic elements. The course will culminate in a public premiere performance of the newly created works.

MUSC 0221. MEME Ensemble: Sound To Color Improvisation.

Improvisation is more than just spontaneous creation, it is a sustained practice of thinking, making, and sensing otherwise. In this ensemble course, we will explore how we can make sense of ourselves, each other, and our environment through improvisation and collaborative performance. Students will explore contemporary and historical approaches to improvisation across multiple modalities, including but not limited to music, dance, writing, visual art, theater, and social/community practice. Classes will focus on readings, discussions, and sensory improvisation exercises. This will be a highly collaborative class where we will become creative researchers who collectively shape our class experience and artistic output. This highly collaborative framework using improvisation, mixed with research and writings on synesthesia, and more specifically chromesthesia, will be our foundation throughout the semester. The course culminates in a presentation of works devised and performed by the ensemble.

MUSC 0400A. Introduction to Music Theory.

An introduction to musical terms, elements, and techniques. Topics include notation, rhythm and meter, intervals, scales, chords, melody writing, harmonization, and form. Students will develop their musicianship skills, including sight-singing and keyboard, in labs which meet twice weekly. No prior musical experience is necessary. MUSC 0400A or 0400B may fulfill part of the theory requirement for the music concentration. Enrollment limited to 30. Permission granted based on questionnaire given in first class. Preference given to lower-level students.

MUSC 0400B. Introduction to Popular Music Theory and Songwriting.

An introduction to musical terms, elements, and techniques, with an emphasis on how they apply to Western popular music. Topics include notation, rhythm and meter, intervals, scales, chords, melody writing, harmonization, and form. Students will develop their musicianship skills, including sight-singing and keyboard, in labs which meet twice weekly. No prior musical experience is necessary. MUSC 0400A or MUSC 0400B may fulfill part of the theory requirement for the music concentration. Enrollment limited to 30. Permission granted based on questionnaire given in first class. Preference given to lower-level students.

MUSC 0450. On Songs and Songwriting.

A study of the art and craft of song from the perspective of the listener, writer, and performer. Students will examine a large range of music, from the middle ages to the present. Topics include: song and memory; declamation and delivery; melody and harmony; rhyme and rhythm; phrasing and form. Emphasis will be on both creation and interpretation as students develop their personal approach to songwriting. Some prior knowledge of music desirable. Course will culminate in a presentation of original songs by students enrolled in the class. Enrollment by application and limited to 19. Application form link: <http://www.soundidea.org/mu450/Music450-questionnaire.pdf>

MUSC 0505. The Humanities in Context: Literature, Media, Critique (HMAN 0800A).

Interested students must register for HMAN 0800A.

MUSC 0550. Theory of Tonal Music I.

Intensive study of the building blocks of tonal music traditions including western and popular music with focus on melody, harmony, counterpoint, keyboard skills, ear training, sight-singing from musical notation, and composition. Prior keyboard experience helpful but not required. A required placement exam is administered at first class meeting. Students who do not have experience reading music notation should take MUSC 0400 prior to MUSC 0550. MUSC 0550 is a prerequisite to many music courses and is a requirement for the music concentration.

MUSC 0560. Theory of Tonal Music II.

The objective of Music 560 is to advance the student's knowledge of the theory and practice of tonal music, with an emphasis on more advanced techniques of voice leading and harmony, such as modal mixture and chromaticism. Labs focus on mastery of related keyboard, score-reading, and aural skills. Form of tonal music will be studied, including sonata form. Exercises include four-part harmonization, analysis and composition in a variety of styles and genres. Compositional assignments are given in order to encourage musical creativity and to illuminate theoretical concepts in the process. A more substantial final compositional project is due at the end of the semester and will be performed in class. MUSC 0560 is designed as part of a year-long comprehensive course in the theory of tonal music. Prerequisite: MUSC 0550 or permission of the instructor.

MUSC 0570. Jazz and Pop Harmony.

For students with knowledge of rudiments of music, including scales, intervals, key signatures, rhythm and meter. Keyboard skills strongly recommended. Intensive study of chord scales, chord progressions, modulation, voice leading, melody writing, harmonization, reharmonization, chord symbols, and lead sheet construction. Lab sessions will focus on ear training, keyboard exercises, and sight singing. Emphasis will be on the vocabulary of jazz theory and the repertoire will be American popular song. Course section is limited to 25 students.

MUSC 0600. Chorus.

Half credit each semester. A practical study of choral literature, techniques, and performance practice from Gregorian chant to the present, offered through rehearsals, sectionals, and performance. Enrollment is by audition, based on voice quality, experience, and music-reading ability. Instructor permission required.

MUSC 0610. Orchestra.

Half credit each semester. A practical study of the orchestra repertoire from Bach to the present, offered through coaching, rehearsals, and performances. Enrollment is by audition. Students will be notified of audition results within the first seven days of the semester. Restricted to skilled instrumentalists. May be repeated for credit.

MUSC 0620. Wind Symphony.

Half credit each semester. A practical study of the wind band repertory from Mozart to the present, offered through coaching, rehearsals, and performances. Enrollment is by audition. Restricted to skilled instrumentalists. Instructor permission required.

MUSC 0630. Jazz Band.

Half credit each semester. A practical study of jazz from the 1920s to the present through coaching, rehearsals, and performance. Seminars on arranging, ear training, and improvisation are conducted for interested students but the focus is on performance. Enrollment is by audition. Restricted to skilled instrumentalists and vocalists. Instructor permission required.

MUSC 0640. Ghanaian Drumming and Dancing Ensemble.

A dynamic introductory course on drumming, dancing, and singing of Ghana and the diaspora. Students learn to perform diverse types of African music, including Ewe, Akan, Ga, and Dagomba pieces on drums, bells, and shakers. No prerequisites. May be repeated for credit. Enrollment limited to 15. Instructor permission required.

MUSC 0642. World Music Ensemble.

This ensemble focuses on global percussive and song traditions, especially those of the African diaspora (based on instructor's vast musical experiences). Here western instrumentalists fuse with traditional musicians from every culture: bongo, gyil, ukulele, tabla, etc. Students will grow and develop their musical skills by learning new techniques on their own instrument, exploring a range of repertoire representing genres such as highlife, reggae, salsa, afrobeat, Afro-jazz, and global fusions. There will be unique opportunities to work on improvisation taking influence from Steve Reich, Tito Puente, Randy Weston, Hugh Masekela, Paul Simon, Miriam Makeba, Ghanaba, and Milton Nasimiento.

MUSC 0646. Brazilian Choro Ensemble.

Half credit each semester. Students will play this popular Brazilian style, which emerged in the late 19th century and is often compared to early jazz. Classes run according to the traditional roda model, a structured jam session where performers read through, improvise upon, and hone their abilities to play familiar tunes. Prior familiarity with choro music not required, but some instrumental expertise is. Ability to read notation preferred. Typical instruments include guitar, cavaquinho (Brazilian ukulele), mandolin, flute, and pandeiro (Brazilian tambourine), but others may participate on instructor approval. Enrollment limited to 20.

MUSC 0650. Javanese Gamelan.

Half credit each semester. Instruction, rehearsals, and performances in the gamelan music of Java, on instruments owned by the department. No prerequisites. Enrollment limited to 18 students.

MUSC 0651. Javanese Gamelan.

See Javanese Gamelan, MUSC0650, for course description. Enrollment limited to 18 students.

MUSC 0670. Old-Time String Band.

Half course each semester. Instruction and ensemble playing. Music taught by ear. American (southern Appalachian Mountain) traditional music on violin (fiddle), 5-string banjo, mandolin, and guitar. Enrollment limited to 20 students.

MUSC 0680. Chamber Music Performance.

Half credit each semester. The practical study of the literature of chamber music through participation in a small ensemble. Regular rehearsals, coaching by department staff, and performances are required. Enrollment is by audition. Students will be notified of audition results within the first ten days of the semester. Restricted to skilled instrumentalists. May be repeated for credit.

MUSC 0695. Gospel Titans, Divas, and Dynasties (AFRI 0690).

Interested students must register for AFRI 0690.

MUSC 0810. Applied Music Program: Instruction in Vocal or Instrumental Music.

Half credit each semester. Restricted to skilled musicians. Openings are limited. Enrollment and re-enrollment is by audition and jury. Lessons are given by consultants to the Applied Music Program. A fee is charged for enrollment. Copies of the Applied Music Program Guidelines giving detailed information are available online at www.brown.edu/music. May be repeated up to four times for credit.

MUSC 0825. Social Justice and the Musical Afrofuture (RELS 0822).

Interested students must register for RELS 0822.

MUSC 0890. The Romantic Generation.

Beethoven's shadow looms large on the young romantic generation, setting off a collective anxiety of influence unparalleled in musical history. "what next?" seemed difficult to answer as Beethoven brought the abstract forms of sonata, symphony, and quartet to unreachable heights. The range of answers gave birth to a musical style that looked backwards into the Baroque for textural density and flow, abandoning the articulated symmetry of the classical phrase, while pushing the harmonic language, musical drama, and effect into new horizons. All the while, the search for alternative structures and points of musical departure, resulted in a new sort of interaction between music and other art forms. Schumann's E.T.A Hoffman's inspired character pieces, Berlioz's program music, the proliferation of the Lied, Liszt's Dante Sonata and Petrarca sonnets are telling examples of this search for a new musical style and context.

MUSC 0910. From Darkness to Light: Medieval and Renaissance Music.

Western Music 1000-1700 Topics addressed - among many others! How was music notated before the staff was invented? What repertoire developed when Notre Dame was built- 1099? What did the Crusaders sing? What is Polyphony? What was sung for the dedication of the Florence Duomo in 1440? How did the rise of printing change music? What music drove the Pilgrims to distraction? What did Bach hear as a child? Why did Opera develop, and what sort of music was written for its first 100 years? A few of the composers studied: Hildegard, Machaut, Dufay, Josquin, Palestrina, Byrd, Gesualdo, Schütz, Purcell, and Monteverdi.

MUSC 0920. Baroque and Classic Music.

A history of music of the Baroque Era in European society from Monteverdi's opera to Bach and Handel studied through texts, scores, CDs, DVDs, and YouTube. We'll spend most of our time on these composers: Bach, Handel, Purcell, Monteverdi and Lully. Prerequisite: MUSC0550 or equivalent.

MUSC 0930. Romantic and Modern Music.

A history of European and American art music from Beethoven to the Postmodernists. Prerequisite: MUSC 0550 or permission of instructor.

MUSC 1005. Arts Workshop for Practice and Practice-Oriented Research (LITR 1000).

Interested students must register for LITR 1000.

MUSC 1009. Black Music Performance (ARTS 1009)..

Interested students must register for ARTS 1009.

MUSC 1010. Advanced Musicianship I.

Training in advanced musicianship skills relevant to Western art music from the sixteenth Century to the present, including sight singing, ear training, score reading, keyboard harmony, improvisation, and musical transcription. Prerequisite: MUSC 0560 or MUSC 0570, or permission of the instructor.

MUSC 1011. Advanced Musicianship II.

Continuation of MUSC 1010. Prerequisite: MUSC 1010 or permission of the instructor.

MUSC 1020. Modal Counterpoint.

An introduction to contrapuntal techniques of the 16th century with particular attention to the music of Lassus and Palestrina. Two hours per week of ear training and sight singing. Prerequisite: MUSC 0560.

MUSC 1030. Tonal Counterpoint.

The contrapuntal techniques of the 18th century with emphasis on music of Bach. Written exercises in and analysis of several genres including fugue. Prerequisite: MUSC 0560 or permission of instructor.

MUSC 1040. Analysis of Romantic Musics.

This course introduces analytical approaches to both 19th-century Western European art music and more recent genres that have been influenced by its harmonic vocabulary and aesthetic aims. Building on students' previous study of music theory, the course comprises three broad units, respectively centered around theories of Romantic form, chromatic harmony and voice-leading, and rhythm and meter.

MUSC 1050. Advanced Music Theory II.

A study of theories of Western art music since Debussy. Exercises in analysis and composition, focusing on works of Debussy, Stravinsky, Schoenberg, Webern, Bartok and Ives. Students give presentations on selected later composers. Prerequisite: MUSC 0560 with grade of B, or the equivalent.

MUSC 1060. Analysis and Performance of Music.

Study of the implications of musical analysis for performance. Students prepare solo or chamber works for performance in a formal concert presented at the end of the course. Focuses on problems of interpretation and their resolution through analysis of musical structure. Short analytical assignments and an extended analytical project required. Prerequisite: MUSC 0560 or permission of the instructor and proficiency on a musical instrument.

MUSC 1100. Introduction to Composition.

Introduction to Composition explores a wide variety of compositional theories and practices with the goal of honing students' technical skills and developing their unique compositional styles. Through creative assignments, readings, and listening, students will have the opportunity to observe and reflect on various compositional practices that may in turn be applicable to their own work. We also will address questions of musical craft including notation, technology, and instruments. To merge the gap between theory and praxis, in addition to our normal coursework we will conduct several reading sessions with hosted guest musicians, and we will conclude the semester with a final in-class concert. Prerequisite: MUSC 0560 or MUSC 0570 or permission of the instructor. Enrollment limited to 20 students.

MUSC 1110. Seminar in Composition.

This is a seminar-based course with a creative component focusing on specific compositional techniques such as writing transitions and motivic development, and writing for specific kinds of ensembles. These techniques are applicable to all kinds of music, from concert music to popular genres. The course will also address aesthetic issues, trends and influences and how they affect living composers' individual voices. Besides studying notated repertoire from the concert tradition, we will also examine approaches to film scoring, improvisation, and environmental sound worlds outside of the traditional concert hall.

MUSC 1115. Advanced Projects in Composition.

This is a practice-based composition course in which students work on advanced projects in composition. Students meet in small groups with the instructors for individualize feedback and group discussion on their projects. Students meet in the group seminar meetings to present work and to listen to and discuss work by other composers. This course gives preference to students who are completing honors thesis or capstone senior projects in music composition. Students can take this before their senior year but must have taken MUSC 1110 previously.

MUSC 1120. The Technique of Orchestration.

The study of orchestration includes the ranges, sounds, and idiosyncrasies of the individual instruments, and the combination of those instruments into ensemble textures. A series of graduated assignments, including pieces for solo cello, string quartet, wind quintet, wind ensemble, and full orchestra, form the basis of this course. Prerequisite: MUSC0560 or permission of the instructor. Not open to first year students.

MUSC 1140. Classical Improvisation.

A historical and practical study of improvisation in western classical traditions from the middle ages to the 19th century, with emphasis on the common practice period 1700-1850. Students will apply theoretical knowledge in harmony and counterpoint to in-class improvisations, learning such skills as melodic ornamentation, chaconne-bass elaborations, variations, preluding, and free improvisation starting with simple exercises and gradually elaborating more complex pieces. These practices will be studied in relation to their historical contexts and shifting aesthetic purposes. Historical topics include cadenzas, harmonic experimentation, the relationship between oral and written transmission, and the social contexts of performance. MUSC0560 and consultation with instructor recommended. Prerequisite: MUSC 0550. Enrollment limited to 15.

MUSC 1150. Seminar in Improvisation.

This is a seminar with a strong creative component that explores the art of improvisation. It caters to musicians (incl. singers) and composers across genres - whether jazz, rock, classical, hip hop, folk, electronic music, etc. We will analyze the properties of improvisation while focusing on soloing, group improvisation, groove and time-feel, ideation, improvisation in composition, production, and on the bandstand. We will transcribe, deal with questions such as "how to play without sheet music," and address aesthetic issues, diverse lineages and context. We will analyze other artists' improvisations, learn how to improvise ourselves, and obtain the tools necessary to develop our craft independently. You will need your instrument, voice, and - most importantly - your ear. Music and instrumental proficiency is required. A questionnaire will serve as a prescreening. Access to the seminar will be given via override approval.

MUSC 1170. Classical Forms & Performance.

This course aims to examine the relationship between different kinds of analysis and the performance of large classical forms. Through a combination of secondary reading, score analysis and performance workshops we will tackle questions regarding bar structure and phrasing, tonal-harmonic relations and the musical narrative, the connection between texture and character as well as dramatic contrast and the evolution of the motivic material in the sonata and variations forms. Developing a heightened awareness of the inner forces in music and arguing that a deep reading of a musical work, as individualistic that reading may be, has to be rooted in a full grammatical understanding of the score.

MUSC 1200. Recording and Sound Design Techniques.

Music 1200 is a rigorous study of music production techniques taught in parallel with topics in psychoacoustics. Students will create original studio work while developing listening and technical skills for audio production. Technical topics include recording, signal processing and mixing software, microphone technique, and sound engineering fundamentals. Class size is limited and some prior experience with digital audio workstations is expected. Preference will be given to students who have successfully completed MUSC 0200 and are active in the music department. Admission is determined by an entrance questionnaire completed at the first class meeting.

MUSC 1210. Seminar in Electronic Music: Real-Time Systems.

Seminar in Electronic Music is a study of music employing electronic media, including real-time digital signal processing, multimedia, and live performance. Technical aspects of the course focus on programming using Max/MSP to create interactive projects and algorithmic compositions. Permission of instructor required. Interested students must come to the first class. Preference will be given to students who have completed MUSC 0200.

MUSC 1215. Site and Sound (VISA 1710).

Interested students must register for VISA 1710.

MUSC 1231. Multimedia Composition.

Students will explore the core principles of musical composition through contemporary digital creation practices, focusing on blending acoustic and electronic elements. Using modern music production tools students will master fundamental concepts of composition, including form, gesture, melody, and counterpoint. Students will learn to create various musical forms by manipulating pre-recorded sounds as the primary material for their compositions. When studying melody and counterpoint, the course will introduce MIDI mockup techniques, enabling students to create realistic virtual recordings of their compositions. As such we will explore technical aspects, creative possibilities, and limitations of using MIDI. As a final project, students will compose music to accompany visuals, such as film, video, or digital art. In this work students will demonstrate their ability to control musical material in a way that effectively supports and enhances the storyline, conveying emotions and narrative through music.

MUSC 1235. Exploration in Video Art (VISA 1730).

Interested students must register for VISA 1730.

MUSC 1235A. Black Protest Music (AFRI 1230).

Interested students must register for AFRI 1230.

MUSC 1240D. Experimental Musical Instrument Design (VISA 1800Q).

Interested students must register for VISA 1800Q.

MUSC 1240E. Experimental Data Representation (MCM 1700U).

Interested students must register for MCM 1700U.

MUSC 1240F. Circuit Bending and Hardware Hacking as Musical and Artistic Expression.

Creative experimentation with hardware electronics and re-appropriated technologies is the main focus of this course. No prior experience of electronics is required. Initially, we will build a range of simple electronic circuits and explore a variety of strategies to animate and interpret pre-existing electronic devices. Students will then develop individual instruments and/or performance environments and engage in a number of solo and collaborative projects. The aesthetics of handmade electronic music and post-digital performance practice will be foregrounded throughout. Permission of instructor is required.

MUSC 1240I. Building Musical Instruments.

In Building Musical Instruments, we will study and create expressive musical sound by building electronic instruments. Using sonic goals as inspiration for design features, we will build contact microphones, basic synthesizers, digital controllers, and physical enclosures, and we will consider the ways in which these distinct objects can unite to form a musical performance system. Topics include: musical listening and design, resonance of different materials, soldering, breadboarding, reading a basic schematic diagram, creating an enclosure, and expressive interaction with instruments. Override codes required; interested students must attend first day and complete questionnaire, only after which will override codes be distributed.

MUSC 1240N. Analog Practice.

Analog sound is uniquely tactile, expressive, and flexible. Through a series of solo, collaborative, recorded, and live-performed projects, this class explores the practice of creating analog sound. We will use a wide array of modular and semi-modular analog synthesizers, including the rare ARP 2500. Beginning with broad concepts of voltage flow and modulation, we will expand into considering the unique affordances of various synths, addressing questions such as tone color, ease of sound production and variation, and conduciveness to combination with other sound sources. Interested students strongly recommended to attend first day; final class list determined by questionnaire.

MUSC 1240R. Intro to Rap Songwriting.

This is an introductory production seminar in which students will explore various aspects of rap songwriting and performance. Over the course of the semester we will examine a range of poetic constructs, song structures, and storytelling approaches through deep listening sessions, class discussions, and lectures from invited guests. Creative assignments will be paired with materials that contextualize our work within the broader history of hip hop as a black cultural expression and locate certain songwriting trends within ongoing musico-cultural dialogues about authorship, race, gender, sexuality, and genre, among other topics. In lieu of a formal lab, there will be a minimum of four workshops per semester to provide a basic studio foundation for students without prior recording experience and a space for more advanced students to practice and share. Planning of these workshops will consider the group of enrolled students' schedules.

MUSC 1240S. Feminist Sonic Futures.

This course is a weekly discussion seminar that examines the intersections of feminist praxis and sound studies. Students will survey a range of feminist discourses that inform and are informed by various sonic practices—from the production of pop songs to the documentation of disappearing soundscapes. Over the course of the semester students will critically engage with the work of feminist and womanist scholars, activists, sound engineers, performers, and composers who are largely concerned with the ways in which the sonic is deeply implicated in the coproduction and resistance of categories of difference like gender, race, class, sexuality, and ability.

MUSC 1241. Genealogies of Noise.

You can't look directly at noise. It slips between your fingers. The moment any sense is made of it, maybe even the moment it's identified, it loses its real noisiness. It's the underbelly of prediction. Despite its obstinance, it's everywhere: musical/critical theories, medical/military practices, pastoral/urban mythologies, and architectural/neurological frameworks. Thinking with noise draws music history, and history history together, as it exposes the stakes of creative practice. This seminar takes up a theoretical and practical/experimental approach to this din that is the discourse around noise, as participants develop noise methodologies as modes of response. Background in music is not required, but a commitment to experimental practice (writing included) is. Topics: generative AI, fascist propaganda, ecological new materialisms, creolization, urban design, cybernetic theory, and aesthetic theories of the sublime. Overrides given the first day of class.

MUSC 1242. Sounding Gender: Music, Identity, and Sexuality.

This course concerns the wide range of relationships between music, gender, and sexuality across a host of musics and localities. Together we will explore how music informs and reflects cultural and social constructions of gender and sexuality. Drawing from examples that include popular music and Western art music, this course will investigate not only the methods by which music scholars have engaged with issues of gender and sexuality, but also how non-normative and sexualized subjectivities are negotiated, produced, and transgressed in and through musical practices. Students will come away with a firm sense for the questions that scholars have posed and the ways in which these questions have shaped and guided the relationships between gender, sexuality, and music. No prior knowledge of the subject material is required, nor will students need to have any knowledge of musical notation.

MUSC 1243. Listening and Sounding Identities.

Practice-based research questions the ontological precedence between scholarship and the arts by asking: what comes first, an artistic contribution or a theoretical framework? Instead of adhering to a hierarchical division, PBR posits that knowledge can be produced both for and from the arts. Thinking alongside various humanist theories, students in this course will be introduced to PBR and form creative reflections on the sonic articulations and implications of identity. Although they are personal, identities are always a part of a wide network of relations. As such, they are subject to various forms of audibility; some result from agency, while others are imposed. Throughout the semester, we will destabilize the line between creative and scholarly work to gain an interdisciplinary understanding of identities and their appearance in the sociocultural sphere.

MUSC 1245. Asian Americans in Music.

What role does music play in the lives of Asian Americans, in shaping their identities and experiences? What kinds of music do Asian Americans make? How do different musical genres and styles affect the different articulations of identity and experience? What does it mean to make, perform, listen, respond, and react to music as Asian Americans or as Asian in/from America? Through different readings grouped together by musical genres and styles such as pop, hip-hop, jazz, western classical, and taiko, we will explore concepts surrounding identity, history and memory, and issues of cultural politics including appropriation, representation, migration, and citizenship. Borrowing Christopher Small's term of musicking, I hope for us to reflect on our relationships to music, relationships formed through music, and music as something we do and how it might inform the way we move through the broader world.

MUSC 1250. Sound Design for Multimedia and Soundscapes.

This production seminar is a study of techniques and aesthetics used to create sonic environments and effects that enhance a variety of media including video, cinema, radio/podcasting, audio art, new media, theater, and installation art. Technical topics include audio production in multi-channel formats, advanced audio editing, mixing and synthesis techniques, and audio system design. Enrollment is limited. Preference will be given to students who have completed MUSC 1200 or have significant experience related to the course topics. Admission is determined by an entrance questionnaire completed at the first class meeting.

MUSC 1255. Sound Design - Synthesis and Spatialization.

Sound synthesis and spatialization techniques are fundamental to the history and contemporary practice of electronic and computer music. Music 1255 will examine synthesis techniques from the discipline's analog history through the latest software innovations. Through focused study of synthesis and spatialization technologies, MUSC1255 will explore sonic timbre and space as compositional materials. Students will gain fundamental understanding needed to successfully design original sounds in the many variations of software and hardware interfaces that exist. Spatialization techniques for working on a variety of systems - from binaural processing on headphones to concepts for working on multichannel systems - will be studied and explored for their musical and compositional value. Class size is limited. Preference will be given to students who have successfully completed other advanced electronic/computer music and music production courses.

MUSC 1255A. Making the 21st Century Musical (TAPS 1251A).

Interested students must register for TAPS 1251A.

MUSC 1260. Advanced Audio Techniques.

This course will focus on developing and reinforcing technical skills, musical concepts, and critical listening abilities associated with the practice of composition in electronic/computer music studios and software. These studies will be tied to a broad range of aesthetic approaches and discussions of sound processing, synthesis, spatialization, and recording techniques. Through projects and focused study, students will expand their knowledge and craft, and will provide each other with a forum for exploring their creative studio work. Class size is limited. MUSC 1200 is a prerequisite, and preference will be given to students who have also taken other music technology courses.

MUSC 1275. Sonic Practice Studio (VISA 1750).

Interested students must register for VISA 1750.

MUSC 1285B. The Creative Ensemble: Poetry in/to Performance (TAPS 1280B).

Interested students must register for TAPS 1280B.

MUSC 1290. Analog/Digital Hybrids.

This course is focused on advanced synthesis techniques and analog/digital hybrid systems. Students will engage with the university's hardware synth equipment and examine how digital tools, such as the "Max" programming language can be used to supplement them. Emphasis will be placed on generative "real time," systems in order to create complex, evolving synth patches capable of producing non-repeating musical gestures. We will also explore "feedback," and how it can be utilized as both an audio and control signal.

MUSC 1500. Major Masters and Repertoires of Music.

The advanced study of the music of selected composers. Prerequisites: MUSC 550 or permission of the instructor.

MUSC 1500A. The Genius of Bach.

An examination of the life and work of Bach, his vocal, orchestral, keyboard music, including its place in German society, views of his contemporaries and explanation of his performance venues, manuscript and publishing history.

MUSC 1500B. Messiaen.

Oliver Messiaen is one of the most influential and eclectic musicians of the 20th century, yet he remains a highly enigmatic figure. This seminar explores Messiaen's life, theoretical writings, and above all his music. Critical listening and analysis will focus on Messiaen's idiosyncratic harmonic and rhythmic language as well as performance practice issues. We will investigate Messiaen's use of color, plainsong, "modes of limited transposition," birdsong, serialism, and rhythm via representative works. We will also examine Messiaen's formation and his legacy as teacher/composer/performer. Prerequisite: MUSC 0560.

MUSC 1505S. Music and Sports in Americas (LACA 1503S).

Interested students must register for LACA 1503S.

MUSC 1510. Baroque and Classic Music.

A history of western music from Monteverdi's *Orfeo* (1607) to Beethoven's *Ninth Symphony* (1824). Prerequisite: MUSC 0550 or equivalent.

MUSC 1570. Jazz Harmony Applied To Bebop Improvisation.

Students will be able to play with improvisational variety from studying melodic harmony techniques and will have the ability to play with unity from studying motivic development techniques. This course will further improvisational knowledge and fluidity for performance and composition. This is a performance based course to benefit students in jazz combo groups, jazz big band ensembles, composition studies and anyone interested in developing improvisation skills.

MUSC 1610. Beethoven: Work, Biography, and Afterlife.

By the 20th century latest, Ludwig van Beethoven became the greatest icon in music history. His presence extends beyond the realm of classical music into history, politics and popular culture, which celebrates him as the embodiment of the humanistic artist figure. This course examines Beethoven in a field of tension between biography, work and contemporary history. The musical work always in focus, it traces his development from a young piano virtuoso writing for his own performances to the creator of late, highly abstract spiritual works that completely leave the realm of "performance music". Alongside a study of his highly dramatic life and spheres of influence, we will examine his early works and trace the development of his musical language within the different Genres.

MUSC 1640A. Opera, Politics, History, Gender.

The will to social order and the desire to transgress it: this conflict in modern culture has been negotiated dramatically in opera. This seminar concentrates on operas by Mozart, Wagner, Verdi, Debussy, and Puccini. Each opera will be placed into dialogue with historical and theoretical texts and analyze how opera engages power in relation to gender, nationalism, modernism, and crises of representation.

MUSC 1640C. Wagner's Ring.

This seminar will pursue a rigorous musical, textual, historical, and political analysis of Wagner's tetralogy *The Ring of the Nibelung*. It will include an analysis of production styles, with specific attention to the production currently in joint development at the Teatro alla Scala, Milan, and the Berlin State Opera, to be directed by Guy Cassiers. We will address themes such as globalization and its discontents, the interplay of music drama and visual technologies, and the contextual importance of serial novels such as those of Marcel Proust, Robert Musil, and Hermann Broch. Enrollment limited to 20 students. Instructor override required.

MUSC 1640D. Opera: History, Theory, Practice.

This seminar will analyze the history, theory, and practice of opera in its textual (words and music), and performative (in the theater and in society) dimensions. We will focus paradigmatic works of Mozart, Verdi, and Wagner alongside key works in philosophy, cultural theory, and gender/performance/opera studies. We will also discuss the genesis and implementation of key productions. In addition, each student will select a 20th or 21st-century work for individual research and presentation to the group.

MUSC 1640G. The Case of Wagner.

Richard Wagner (1813-83) changed forever the forms, meanings, and contexts of European music, especially the symphonic and operatic traditions. He transformed the way we listen to music written before him. This course will pay close attention to several major music dramas, especially *Lohengrin*, *The Ring of the Nibelung*, and *Parsifal*, focusing on music, words, and the history and variety of staged productions. We will also consider Wagner's relation to literature, philosophy, and history, including such issues as nationalism, modernism, anti-Semitism, and the persisting controversies around his work in Germany and Israel. This is an upper-level seminar but open to all.

MUSC 1641. History and Theory of Listening.

This upper-level seminar will explore the phenomenon of listening as related to musical works and musical experience. How do we listen to music, how do we understand musical works to be listening, and how do we listen to musical works as they seem to us to be listening to themselves, their pasts and their futures? We will examine spaces for music (architecture and acoustics) as well as cultures of listening including religious, psychological, and political contexts.

MUSC 1642. Text-to-Music: Writing for the Voice.

The voice has held a special place in music composition for millennia. As an instrument which emerges directly from the body, and conveying extra-musical meaning via text, the voice is unique in its ability to create drama, engender narrative, and address corporeality in sound. In this course, students will engage with the many modes in which the voice has been utilized in western classical music, from canonical forms such as opera, lieder/chansons, choral writing and narration to ancient forms such as chant and organum, as well as more recent innovations including extended techniques, electronic augmentation, and AI vocal models, all while exploring their own compositional technique for the instrument. This course will start as a seminar consisting of group analyses of vocal music, before shifting to a studio environment engaging in the critique of original work by students.

MUSC 1650. Adorno Goes to the Opera.

"Of all the tasks awaiting us in the social interpretation of music", wrote T.W. Adorno, "that of Mozart would be the most difficult and the most urgent." Using writings by Adorno on opera as a point of departure, this course goes on to a critical examination of selected Italian, German and French operas between *Fidelio* and *Wozzeck*. Finally, it takes up Adorno's challenge by reconsidering some of Mozart's mature operas, from *Figaro* though *The Magic Flute*, in terms of later opera history and theory.

MUSC 1660A. Mahler's Century.

This seminar will explore key works of Gustav Mahler in multiple contexts, including critical/interpretive traditions, conducting and performance practices, and the contexts of political, cultural, intellectual, and aesthetic history. Readings will include work of Sigmund Freud, Theodor Adorno, Carl Schorske, Julia Kristeva, Judith Butler, and others; we will think about problems such modernism, orientalism, Jewishness, montage, noise, shock, and melancholy.

MUSC 1663. Women in Music.

This course comprises a chronological survey of female composers and music creators from the ninth century to the present day. This will include the study of many pieces of music by women, accompanied by readings addressing the social, economic, cultural, and political circumstances that surrounded their composition. Additional readings address the larger context for women's composition and its reception over time as well as the development of a feminist perspective in music scholarship.

MUSC 1677. Music and Culture in Third Republic France.

This course explores musical and cultural life in France during the Third Republic (1870-1940). Topics include: works by Bizet, Saint-Saëns, Debussy, Ravel, and Stravinsky; folk music in the French provinces; cabarets, music halls, and music in everyday life; and jazz in interwar Paris. More broadly, we will consider the relationship between music and broader cultural phenomena and events, such as: the Franco-Prussian War and the Paris Commune; the Dreyfus Affair; nationalism, colonialism, and internationalization; gender politics; and "modernity" and "modernism" in their various manifestations. Prerequisite: MUSC 0550 (Theory of Tonal Music I) or permission of the instructor.

MUSC 1680. Musical Performance: Theatricality, Body, and Spectacle.

Explores the visual and theatrical dimensions of music performance—both recent and historical—through the analysis of live performances, video clips, and historical documents. Using the critical methods of performance studies, we seek to uncover those aspects of musical experience that have become transparent or normalized by their familiarity, and which are eluded by a traditional focus on music as "sound alone." We concentrate on five genres—rock, classical, pop, jazz, and experimental—and consider figures such as Arturo Toscanini, David Bowie, Jimi Hendrix, Louis Armstrong, Miles Davis, Pauline Oliveros, John Zorn, Diamanda Galás, Madonna and Michael Jackson. Enrollment limited to 24. First year students require instructor permission.

MUSC 1690A. Miles Davis: An Evolution in Jazz.

This seminar examines the life, music, and iconic status of Miles Davis, the most complex and varied figure in the history of jazz. From the mid-40s, when he emerged as a sideman to bebop virtuoso Charlie Parker, to his death in 1991, Davis was often on the cutting edge of jazz's evolution, spurring on the development of cool jazz, hard bop, progressive jazz, modal jazz, post-bop, and various forms of fusion. He was at the same a powerful though elusive personality who continues to inspire critical controversy. We will examine his creative evolution in the context of the history of popular music taste, race relations, gender roles, and social class in America. Readings include biographies, studies of his music, and collections of critical essays. There will be extensive listening assignments and occasional required video screenings.

MUSC 1700. Score Reading and Conducting.

The art of reading, analyzing, and conducting a musical score. Studies in clef reading, transposition, ear-training, and structural analysis to develop the skills needed for full comprehension of an orchestral score. Introduces the theory and technique of conducting with practice in the art of physical gesture. Selected repertoire from the Baroque through contemporary periods are studied and conducted in class. Prerequisite: MUSC 0550 or permission of the instructor.

MUSC 1701. Orchestral Conducting.

We will discuss, study and practice various technical approaches to conducting through the examination of standard repertoire. Students will develop skills in score reading and analysis. This course will provide a supportive workshop environment. Students will be given the opportunity to conduct an in class ensemble. Repertoire will small to large symphonic works from Händel through Stravinsky, depending upon the needs of each student and over all class level. Pre-Requisites: MUSC 0550-0560. Audition on the first day of class with Händel's Messiah Overture. Students will play for their colleagues. Prior knowledge of orchestration and instrumentation is helpful. Knowledge of transposition and C clefs is helpful. If you have placed out of music theory at Brown or have questions, please contact the instructor at: brandon_brown@brown.edu

MUSC 1710. Choral Conducting.

An introduction to the art of conducting, with emphasis on choral training. A study of the relationship of gesture to sound will be combined with a survey of the choral repertoire, beginning with Gregorian Chant and covering renaissance motets, masses and madrigals, Baroque works with instruments, excerpts from Mozart's vespers, 19th-century Romantic partsongs, and selected 20th-century. Issues of basic vocal production, warm-ups, rehearsal planning, editing, programming and concert production will also be included. Prerequisite: MUSC 0400 or 0550. Written permission required. May be repeated for credit.

MUSC 1810. Applied Music Program: Instruction in Vocal or Instrumental Music.

Half credit each semester. Restricted to skilled musicians. Restricted to skilled musicians demonstrating mastery of an advanced repertory in their fields. Openings are limited. Enrollment and re-enrollment is by audition and jury. Lessons are given by consultants to the Applied Music Program. MUSC 0830, 0840 is prerequisite to this course. A fee is charged for enrollment. Copies of the Applied Music Program Guidelines giving detailed information are available online at www.brown.edu/music. Prerequisite: MUSC 0400, or MUSC 0550, MUSC 0560. Written permission required. May be repeated up to four times for credit.

MUSC 1905A. Music and Cultural Policy.

What is to be done about music and the people who make it? All over the world, individuals, governments, NGOs, and other groups are making plans for music: to ensure its survival, to make it known to a wider public, or to use it as an engine of economic growth. This course will examine various social engineering projects involving music. Topics will include media and internet regulation; ownership of music and intellectual property law; the role of institutions such as UNESCO; music in war and peace; music, heritage, and cultural tourism; and conservation, stewardship, and sustainability. No prerequisites.

MUSC 1905B. Indigenous Music of the Americas (ETHN 1890D).

Interested students must register for ETHN 1890D.

MUSC 1905C. Open Source Culture (MCM 1700N).

Interested students must register for MCM 1700N.

MUSC 1905F. Latinx Music in the U.S. (LACA 1504E).

Interested students must register for LACA 1504E.

MUSC 1905K. Governing Culture: Music and the Arts in Political Life (HMAN 1974K).

Interested students must register for HMAN 1974K.

MUSC 1910. Music and Mind.

Explores music perception in terms of auditory and cognitive processes such as auditory perception, memory, and learning. Lectures, discussions, and demonstrations review and analyze a body of scientific research on the psychology of music. Problem sets and a collaborative laboratory project. Prerequisites: PY 1 (PSYC0010) and MU 1 (MUSC 0010) or permission of the instructor.

MUSC 1920. Music and Modern Life.

Examines topics related to the everyday use of music: the determinants of musical taste; music for emotional self-management (in the health club or Iraq War); "high" vs. "low" music; eclectic taste; popular music and the music industry; mp3blogs; new business models. Readings (in sociology, history, and cultural studies) and original field research by class members. Instructor permission required. Enrollment limited to 20.

MUSC 1921. Music, Nature, Ecology.

Explores how music mediates human relations to the natural world. Via case studies drawn from Western and non-Western societies, we will examine how theorists use sound to think through the difference between humans and non-humans; how composers and soundscape artists like Grieg, Ives, Westerkamp, and John Luther Adams shape listeners' perceptions of natural worlds and ecological systems; how people in Papua New Guinea, Mongolia, and the Bolivian Andes use sound to coordinate ecological awareness; how instruments are implicated in human relationships with the environment; and the ways that sound art helps to challenge longstanding distinctions between nature and its others.

MUSC 1923. Music in the Andean Countries.

This course provides an introduction to the music of South America's Andean countries. Through texts, listenings, and hands-on instruction, students will explore the social histories and stylistic principles of genres like Colombian and Peruvian cumbia, Afro-Peruvian festejo and landó, Chilean nueva canción, and the sikuri and huayno music of South Andean Quechua and Aymara peoples. Class sessions balance cultural analysis with opportunities to play. No experience is necessary, though inexperienced musicians can expect to focus on instrumental or vocal parts that present a lower bar to participation.

MUSC 1926. Gospel Music from the Church to the Streets (RELS 1650).

Interested students must register for RELS 1650.

MUSC 1930. Music of Indonesia.

The traditional music of Java, Bali, and Sumatra, with special attention to the bronze percussion orchestras (gamelan) and their use in ritual, dance, and drama. Topics include: music and trance; the impact of colonialism; nationalism, modernization, and tourism; and Indonesian music and "world beat." Theory and practice are integrated through extensive instruction on Brown's gamelan instruments. Enrollment limited to 20 students.

MUSC 1931. Music of Ireland.

An introduction to the traditional music of Ireland through readings, lectures, listening, and participation. The historical and cultural context of the music is considered as well as the instruments, genres, and styles.

MUSC 1933. Music of India.

A survey of the music cultures of India. Intensive study of the classical traditions as well as an introduction to folk, tribal, and urban popular musics. Reading, listening, and class discussions focus on theory, history, and aesthetics. Improvisation; music and the dramatic arts; the social organization of music-making; and music as an expression of class, culture, and subculture in modern India. Prerequisite: MU 55 (MUSC 0550) or permission.

MUSC 1935. Beyond Bossa Nova: Brazilian Music and Society.

With a musical culture that ranges from roots samba to favela funk, and from the music of indigenous Amazonian peoples to the neo-African sounds of candomblé ritual, Brazil's soundscape rivals its social and geographic diversity. This course provides an introduction to the "erudite," traditional, and mass-popular sounds of Brazil, emphasizing their role in creating and contesting visions of nationhood and Brazilian society over the twentieth century. There are no prerequisites, but a background in either music or Latin American studies will greatly aid students' progress in the course. Open to sophomores, juniors, and seniors.

MUSC 1936. Black Atlantic Musics in Rhode Island.

When we talk about musics of the African diaspora, we often think first about "roots" – where musics originate. But what happens when we look more closely at the complex "routes" that characterize the history and present of the African diaspora, and the development of Black musical traditions worldwide? Using Paul Gilroy's framework of "the Black Atlantic" (and at times critiquing it), this seminar-style class will delve into various Rhode Island-based, local manifestations of Afro-Black music-making – from the Nuyorican hip-hop technology nexus to the Afro-Brazilian martial art of capoeira to the melancholic Cabo Verdean morna – as a lens through which to study global processes of sonic racialization, colonial/imperial musical assemblage, and trans-diasporic creativity. In this course, we will open ourselves to aesthetic and intellectual encounter with the sonic traditions of local Black diaspora communities -- and their practitioners.

MUSC 1940. Applied Ethnomusicology.

Theory and practice in applying the cultural study of music outside the academic world and in the public interest. Students will research, document, interpret and present music from local and regional ethnic communities. Prerequisite: MU 5, 6, 120 (MUSC 0050, 0060, 1200), graduate standing, or written permission from the instructor.

MUSC 1950. Transcription and Analysis of Jazz.

Transcriptions from major jazz recordings are made by the students. The personal styles of the musicians are defined through analysis in the context of the various trends in jazz history. The transcriptions are analyzed within the parameters of rhythmic and harmonic structures, tone quality, motif design, and idiomatic performance. Singing, ear-training, and dictation are used to develop transcription skills. Instructor permission required.

MUSC 1960. Advanced Ghanaian Drumming and Dancing Ensemble.

Students with experience in African and related musical traditions perform drumming, dancing, and singing of Ghana and the diaspora. Focus on a more challenging repertoire with emphasis on multi-part, lead, and improvisational playing. Prerequisite: audition. May be repeatable for credit. Instructor permission required. Enrollment limited to 15 students.

MUSC 1970. Individual Independent Study.

Directed undergraduate research for advanced students. Prerequisite: permission of the instructor. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

MUSC 1971. Digital Media and Virtual Performance.

This seminar investigates digital media practices at the intersection of virtual and embodied experience, exploring overlapping genres of play, performance, pedagogy, and participatory culture. Topics include digital games, viral videos, online music and dance lessons, and the performative aspects of virtual communities. Theoretical approaches draw on scholarship in media ethnography, performance studies, human-computer interaction studies, gender studies, and ethnomusicology. We will give equal attention to production, circulation, and reception practices, and consider their contemporary convergence. The course requires critical engagement with a diverse range of media, genres, and cultural contexts, encouraging students to examine their own media practices. Registration permission granted based on questionnaire distributed at first class meeting.

MUSC 1973. "...from Topographic Oceans": Analyzing Progressive Rock.

Emerging out of late 1960s psychedelia, progressive rock deviates from the norms of mainstream popular music through its extreme stylistic contrasts, complex grooves, and extended song forms. Through close listening, transcription, and musical analysis, we'll discover how prog musicians play with listener expectations to realize their aesthetic ambitions while also exploring related socio-cultural and aesthetic concerns. Beginning with key exemplars of 1970s prog like King Crimson and Yes, we will also examine related musical styles (e.g., jazz fusion), more recent subgenres of prog (e.g., progressive metal), and prog's influence on video game and anime music.

MUSC 1975. Jazz & The Explosion Of Genre: Music, Culture, and History Between 1970 and Today.

This discussion seminar examines the diverse streams of jazz and improvised music, its history, culture, and entanglements across musical genres between 1970 and today. Why start in 1970? - Because this is where jazz history courses tend to end as jazz's avid fusing with allegedly contrasting styles such as rock, funk, hip hop, folk, and pop made the question of genre increasingly complex. The examination of one seminal album a week will serve as a course guide. We will build deep listening skills, listen in various settings, and use different playback devices (vinyl to digital) to critically reflect on and challenge our own habits of music consumption. Furthermore, critical readings and writing assignments accompany each album to prompt further exploration of topics surrounding genre, culture, identity, race, and the interplay between tradition and postmodernism. Music proficiency preferred but not required.

MUSC 1980. Group Independent Study.

Directed undergraduate research for advanced students. Prerequisite: permission of the instructor. Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

MUSC 1985. Research Practice and Discourse.

This half-credit workshop for seniors completing Music Honors / Capstones addresses questions including: What comprises musical research? How do different research practices - critical, creative, empirical, performative, etc - inflect one another and juxtapose to promote productive discourse? Through study of substantial music research projects, and discussion and workshare of student projects, we will examine the meaning of contemporary musical research. Preference given to music concentrators working on senior projects not linked to another class, but other students working on specific musical projects welcome. Interested students must attend first class; override codes are required and will be distributed after first class.

MUSC 2000. Theory and Method in Ethnomusicology.

This core seminar offers a graduate-level survey of the discipline of ethnomusicology and its history, building on previous coursework in ethnographic methods and the history of anthropological theory. Students will complete independent research projects as well as shorter assignments geared to professional development (e.g., exam field proposal, scholarly book review, historical investigation of the Society for Ethnomusicology).

MUSC 2010. Field Research in Ethnomusicology.

Introduction to the theory and practice of fieldwork with people who make music. Project design, interviewing, still and video photography, recording, ethics, the researcher's roles, relations with human subjects, and strategies for documenting music in its human context. Prerequisite: Graduate standing or written permission.

MUSC 2020. Interpretation in Ethnomusicology.

How to think and write about people making music. Ethnomusicological representation and authority; analytical, interpretive and experiential approaches; postmodern and postcolonial considerations; hypertext multimedia representations. Prerequisite: Graduate standing or written permission.

MUSC 2024. Collective Genius: Black Music Collectives from AACM to Odd Future.

"Collective Genius: Black Music Collectives from AACM to Odd Future" is a graduate-level / upper-level undergraduate discussion seminar that explores the impact and innovative contributions of black music collectives, from the Association for the Advancement of Creative Musicians (AACM) to groups like the Soulquarians and Odd Future. This course examines how these collectives have shaped the soundscape of music and culture through their experimental approaches, collaborative ethos, and socio-political commentary. Through in-class discussions, critical listening sessions, and guest visits, students will delve into the philosophies, artistic innovations, and cultural movements driven by these groups. Ultimately the course explores their strategies for navigating the music industry as rhizomatic structures distinct from but connected to the entity of the record label or "supergroup," alongside their efforts to build community and expand the sounds of black music.

MUSC 2026. Timbre.

This seminar takes as its starting point a collection of commonplace complaints in music studies around timbre: timbre is misunderstood; it is difficult to define; it is a woefully understudied musical parameter; it lacks a standardized theory and vocabulary; it needs more systematic analysis. At the same time, with the recent publication of books, edited volumes, and special issues devoted to timbre, people have also begun to speak of timbre studies as an emerging, discrete subfield. This seminar delves into this diverse literature in order to think critically about the concept of timbre and the struggles to understand it.

MUSC 2030. Modernizing Traditional Music.

This course examines two types of modernization: changes in the sounds of traditional music, and changes in its social-ideational contexts. We examine general theories of modernity, and the association of modernity with the urban, rational, secular, mobile, and technologically advanced. We then inspect the processes of modernization at work in four case studies taken from four very different societies. Prerequisite: Graduate standing or written permission.

MUSC 2040. Current Directions in Ethnomusicology.

The field of ethnomusicology has become increasingly interdisciplinary over the past decade, drawing inspiration from cultural studies, gender studies, popular culture studies, performance studies, psychology, phenomenology, postcolonial studies, and science and technology studies. In this seminar we will read major works of musical scholarship (most from the past ten years) that illustrate the key theoretical approaches alive in ethnomusicological research today.

MUSC 2050. Musical Thinking.

An ethnomusicological approach to the analysis of musical structures and processes. Case studies include jazz, Irish music, French-Canadian fiddling, North Indian singing, Javanese gamelan, African drumming, and Japanese court music. Topics include linguistic, psychological, and oral-formulaic theories; historical change; cross-cultural modal theory; improvisation; the nature of African rhythm; "insider" versus "outsider" accounts. Readings, discussion, and first-hand experience of selected musics. Facility with Western staff notation required.

MUSC 2060. The Efficacy of Music.

The power of music to influence the human body and mind is widely acknowledged but poorly understood. This course considers the efficacy of music in general and connections between music and altered states of consciousness in particular. Perspectives come from musical ethnography, participant observation, phenomenology, religious studies, and neuroscience.

MUSC 2070. Music and Identity.

From 19th-century European nationalism to 20th-century American multiculturalism, people have used music to affirm their identities. Drawing on anthropological and sociological theory, we examine the variety of connections between music and identity in several case studies. We consider the possible contributions of music to cross-cultural understanding, and discuss the ethics of musical border-crossing.

MUSC 2076. Global HipHop Cultures.

This course explores the global circulation of hip hop, focusing on its evolution from a localized movement in the Bronx to a cultural phenomenon that transcends geographical boundaries. From the streets of Johannesburg to the underground clubs of Tokyo, the vibrant scenes of Madrid, and the urban landscapes of Beirut, hip hop has been embraced as a form of entertainment as well as a powerful tool for self-expression and social change. Using specific countries as case studies and paying close attention to the various strategies for localization, we will examine how hip-hop has been reimagined and contextualized in diverse settings. By the end of this course, students will have a nuanced understanding of the global significance and resonance of hip hop in diverse cultural and social contexts.

MUSC 2080A. Music and Technoculture.

This seminar explores ethnographic and theoretical approaches to the study of music technologies in cultural and historical context. How do emergent technologies affect the nature of musical experience? What does technology have to do with ideologies of musical creativity, authenticity, virtuosity, and aesthetic value? We will give equal attention to production, distribution, and consumption practices (and their convergence). Major topics include "liveness" and recording, remix and remediation practices, interfaces/instruments, labor and property, virtual scenes, and digital gameplay. Prerequisite: graduate standing or written permission.

MUSC 2080B. Ethnography of Popular Music.

This seminar explores ethnographic work on popular music, including scholarship rooted in ethnomusicology, sociology, and performance studies. We will discuss case studies from around the world and will compare contemporary ethnographic research with other approaches to popular music (e.g., Frankfurt School critical theory, Birmingham School cultural studies, and text-oriented popular music studies). Prerequisite: graduate standing or written permission.

MUSC 2080C. Music and Memory.

This graduate seminar will investigate how music is bound up with human memory (individual and collective, cultural and cognitive). Readings will draw on scholarly work in ethnomusicology, anthropology, history, and cognitive science. Key themes include diaspora, nostalgia, oral and written transmission, ritual commemoration, and music's place-making potential. Students will undertake individual research projects. Prerequisites: graduate standing or written permission.

MUSC 2080D. Music, Nation, and Nationalism.

This course explores the relation between music and nationhood, as a historically particular form of collective identity, and a dominant political category in late modern societies. Students will work with key texts in the study of nationhood and nationalism, applying them to musical case studies from different world regions. Touching upon art and popular music, these cases will explore the use of nationalist rhetoric to draw citizens into state projects; the appropriation of minority expressions in defining a national self; efforts by postcolonial societies to forge national sentiment from the fragments left by decolonization; and the nation's fate after globalization.

MUSC 2080E. Historiography of Music and the Performing Arts.

This course introduces some of the most important directions, trends, and methodologies in current musicological scholarship. Most-- but not all-- readings are drawn from the last ten years. Weekly topics include: bodies and voices, disciplinarily, text and event, sound studies, materiality and technology, race and identity, mediation and networks. The workload is focused on weekly reading and small writing assignments. This course is open to undergraduates with permission.

MUSC 2080F. Music Beyond Borders: Transnational Sounds in Theory.

This course explores the effects that follow when music is set in motion beyond local spaces of creation. Bringing a variety of different theoretical perspectives to bear upon case studies from around the globe, it surveys the distinct social and technological networks that enable sounds to travel, and considers the way that methods of circulation give rise to different kinds of social groups. It explores the way that such processes challenge inherited cultural and political boundaries, and shows how technological changes present musicians and listeners with novel means to resituate musical meaning, in new contexts. Open to graduate students only.

MUSC 2080G. Sound Studies.

Explores sound studies through readings of exemplary texts and discussions of the key debates that enliven this interdisciplinary field of inquiry. Drawing on philosophical, musicological, anthropological, and other kinds of writings, it explores issues like the way that relations between sound, noise, silence, and music have formed in different cultures and different historical periods; ideological structures that determine the place of sound in artistic practice and in everyday life; the power relations that are implicated in the design of local soundscapes; and the place of aural perception within the sensorium, among other potential topics. Enrollment limited to graduate students.

MUSC 2080H. Key Concepts in Sociocultural Theory.

Ethnomusicology has always been interdisciplinary, and is becoming more so. The student today may encounter concepts from semiotics, linguistics, cultural studies, literary theory, political economy, sociology, cognitive psychology, media studies, sound studies, science and technology studies, organizational studies, and material culture studies, and other disciplines as well. We will examine some of the key concepts of these fields and consider their possible uses in the study of the performing arts. From 'affordances' to the 'type/token distinction,' from 'actor-network theory' to the 'third-person effect,' we will learn to apply (and criticize) concepts presupposed by much current socio-cultural theorizing.

MUSC 2086. Qualifying Exam Preparation (Musicology and Ethnomusicology).

This workshop-style course is designed for students preparing their third-year qualifying exams for the Ph.D. program in Musicology and Ethnomusicology. It provides a structured space for students to study and apply the reading, writing, and oral strategies that are necessary in preparing the kinds of review essays and course materials that the exams demand. It also provides a weekly forum for students to discuss and evaluate their progress on lists and essays, modeling the summary discussions that make up much of the exam essays, learning how to navigate questions about a field orally, and learning from one another's challenges and solutions. Peer feedback on draft materials is essential to the pedagogy of the course.

MUSC 2090A. Seminar in Ethnomusicology: Hypertext, Multimedia.

Instruction in, and critical discussion of, computer-based hypertext and multimedia representation and interpretation of people making music. Sounds, pictures, texts, animations, movies. Students will complete a non-linear, reflexive hypermedia project to take advantage of the experimental moment in musical ethnography. Prerequisite: graduate standing or permission of instructor.

MUSC 2090E. Black Feminist Sonic Praxes.

Black Feminist Sonic Praxes is a graduate-level sound studies discussion/production seminar that explores a range of sound-based methodologies that reflect and inform Black feminisms, from the early 20th century to the contemporary moment, with a particular focus on the sonic practices devised, examined, and espoused by black women, girls, trans* and non-binary folks based in the U.S. Students will critically engage with the creative and scholarly contributions of theorists, historians, artists, and/or other sound workers like Zora Neale Hurston, Moor Mother, and DJ Lynnée Denise to examine how we might use sound-based methodologies to attend to Black feminist and womanist notions of knowledge production, pleasure, care, wonder, and dis/respectability. The source material includes a mix of popular and academic texts, drawing from black studies, sound studies, gender and sexuality studies, and ethnomusicology among other fields of study.

MUSC 2100A. The Instrumental Sonatas of Beethoven.

An analytic survey of Beethoven's sonatas for piano, violin and piano, and cello and piano from a variety of perspectives, including: topical, semiotic, and hermeneutic analysis; Schenkerian analysis; historical and critical studies; and recent developments in theory of sonata form. Students who have taken MUSC 1040 may request permission to enroll in this course. Written permission required.

MUSC 2120. The Jazz Orchestra and Orchestral Approaches to Jazz.

This course offers several views of what it means to write for the "jazz orchestra." As the history of jazz tends to prioritize the contributions of individuals and small groups, what does it mean for composers who have ambitions that extend beyond typical expectations of instrumental forces, duration, and form? We will focus on specific examples that have challenged conventions and redefined idioms. From the innovations in orchestration and scale of the Duke Ellington Orchestra and the classic Gil Evans/Miles Davis albums, to the "progressive" experiments of Stan Kenton (and later Don Ellis), to the intergalactic theater of the Sun Ra Arkestra, to works for full symphony orchestra, we will examine complex issues of tradition, community, and race that have accompanied these collaborations, and the compatibility (or not) of musical challenges regarding improvisation, notation, and pedagogy.

MUSC 2180. Issues of Time and Space in New Music.

Time and space in music are rich and complex subjects of study. This seminar examines how these concepts complement and intertwine with one another in the music of contemporary composers such as Murail, Xenakis, and Brant. We will explore how composers have attempted to redefine musical temporalities and how they create acoustic and environmental spaces. We will consider how space is orchestrated, ways of engaging with the physicality of instruments, and how composers can use electronics to further convey and manipulate space and dimensionality. This seminar also considers the ways new experiments with increasingly complex timbral palettes changed compositions.

MUSC 2200. Composition Seminar.

A forum for graduate composers to share and critique current projects. Visiting artists and analysis of relevant outside repertoire will augment the group and one-on-one meetings. Enrollment is limited. Written permission required. May be repeated for credit.

MUSC 2210. Digital Performance.

A production seminar examining the artistic impact and creative potential of digital media in the context of live performance. Readings and analysis of work examine innovations in performance practice from dance, theatre, performance art and music. Collaborative assignments investigate video projection, sound design and interactive sensor technology, culminating in a final large-scale performance. Permission will be granted based upon a questionnaire given in the first class.

MUSC 2220. Designing and Playing Alternative Controllers.

This seminar will explore the science and aesthetics of designing alternate controllers for musical performance. Topics will include basic electronics and hardware prototyping, instrument construction, theories of gesture, human-computer interface issues, and the challenges of mapping sensor data to meaningful musical parameters. Previous experience with MaxMSP or other real-time programming required. Permission of instructor required.

MUSC 2221. Seminar in Computer Music and Multimedia Composition.

A weekly forum for graduate composers to share and critique current projects. Visiting artists and analysis of relevant modern repertoire will augment class discussion of student work. Individual private lessons - taught in addition to the three-hour seminar - help students focus on compositional technique and other problems of expression specific to their own projects.

MUSC 2230. Composing for Real-Time Systems.

This course examines complementary issues of time and space in 20th and 21st Century music, providing a nuanced discussion of how composers have attempted to redefine musical temporalities and portray or actively use acoustic or environmental spaces. From early spatialization experiments of Ives and Mahler to music that eschews traditional development - thus freezing temporality (Feldman) - or is in a constant state of transition (spectral music), we will also examine ideas of orchestrated spaces produced by timbral and material constructions of instruments, and advances in complex timbres and electronics. Enrollment limited to 15. Instructor's permission required for undergraduates.

MUSC 2240. Composing and Improvising with Real-time Systems.

This seminar will explore the use and creation of interactive computer music systems from the point of view of the performer/programmer. Using improvisation as a starting point, we will explore the aesthetics and philosophy of performance, designing real-time systems in MaxMSP that enhance the relation between action and event using network strategies.

MUSC 2245. Experimental Voice.

In Experimental Voice, we will study and undertake acoustic and electronic modifications of voice. We will consider applications of voice by diverse practitioners such as Jaap Blonk, Ami Yoshida, and Pamela Z. Using these pieces as inspiration, we will make creative and critical work aimed at challenging and broadening our notions of what voice and vocal performance can be. Students from all departments are welcome. Prerequisites: none. Permission required for undergraduates. Maximum enrollment: 12.

MUSC 2255. Sound Networks.

This graduate-level seminar explores the creative and critical underpinnings and ramifications of "networks" in mediated sound practice. We will study various extant approaches to networking, including transmission of audio signals and control information in musical ensembles and interactions with big data and corpus composition, and we will make new sonic works based on these techniques. We will also examine the institutional contexts of networks, relating to scholarly notions of liveness, community, scene, and genre. Override codes are required for enrollment, and will be distributed based on first-class attendance and questionnaire responses.

MUSC 2260. Topics in Computer Music Theory and Analysis.

Explores the science and aesthetics of designing alternate controllers for musical performance. Topics include basic electronics and hardware prototyping, instrument construction, theories of gesture, human-computer interface issues, and the challenges of mapping sensor data to meaningful musical parameters. Written permission required.

MUSC 2270A. Exploring Technologically Mediated Performance via Attali's 'Noise: The Political Economy of Music'.

This course configures Attali's notions of 'representing', 'repeating', and 'composing' as theoretical catalysts for the development of contemporary creative practice. The course is structured around seminars, collaborative ensemble work, and individual projects. We negotiate Attali's text in its entirety and realize appropriate responses in a variety of formats, including: performance, installation/intervention, audio/video documentation. Additional short readings and presentations enrich critical discussion and practical activity. This course is intended to follow on from various MEME courses such as 1210, 1240F, 1240G, 2220, 2230, 2280. Enrolment is restricted to fourteen. Permission of instructor is required.

MUSC 2270B. Performance in a Virtual World.

A co-taught production course exploring emerging technology in the context of live performance, focusing on techniques where the body appears both on stage and on screen. What does it mean to be "live" in a virtual world, and how does that impact movement, interaction and expression? Students participate in a series of hands-on workshops that examine embodied performance using projections, motion capture, video processing, and sound design, along with various interactive and immersive techniques. The course culminates in a public performance of new works created in collaborative groups. Open to graduate and advanced undergraduate students. Permission required.

MUSC 2280. Designing Large-Scale Projects.

A production seminar designed for students to create a single, large project in Multimedia, Video, Performance and/or Electronic Music. The course covers planning and implementation strategies, including brainstorming sessions, visual storytelling, and sketching. Each project receives group feedback at several points in the process, such as initial proposals, prototype presentations and work-in-progress. The proposal includes an annotated bibliography of research materials that students present on in class. The course culminates a public presentation of the projects. The class is open to graduate students and seniors working on a capstone or thesis project. Permission will be granted after the first class.

MUSC 2290. Seminar In Sonic Practice.

This studio and seminar course provides an exploration of contemporary sonic practice, facilitates the development of sound-based creative work, and encourages a critical approach to producing work in the field. Through discussion, reading, listening exercises, independent research, creative production and critiques, we will examine a number of intersecting areas of sonic practice including sound as a cultural, environmental, and artistic medium, phonography, sound installation, mobile audio, noise as strategy and material, linguistic and other sonic narrative structures. Students will develop sound-based pieces individually and in groups which function as creative research into the subjects areas of the course.

MUSC 2300A. Critical Improvisation Studies.

Advanced seminar exploring improvisation from various perspectives: historical, anthropological, philosophical, ethical, and creative. We study improvisation in diverse musical traditions, in other arts, and in problem-solving contexts such as business, technology, and games. Discussion topics include individual vs. group improvisation, the status of "freedom" in creative processes, and the social and artistic functions of improvisation. Instructor permission required.

MUSC 2405Z. Instruments and Instrumentalities (HMAN 2400Z).

Interested students must register for HMAN 2400Z.

MUSC 2450. Exchange Scholar Program.

MUSC 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

MUSC 2980. Reading and Research.

Directed graduate research. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

MUSC 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Pembroke Center for Teaching and Research on Women

The Pembroke Center at Brown University is a feminist research center devoted to critical scholarship on the struggles faced by people across national and transnational contexts, especially those whose gender identity or sexual orientation make them targets of violence. We believe that redress is inextricable from questions of social, political, racial, medical, environmental and economic justice and demands an interdisciplinary approach to scholarship that can enable transformational change.

For additional information please visit the Center's website at: <http://pembrokecenter.org/>

Gender and Sexuality Studies Concentration Requirements

Gender and Sexuality Studies is an interdisciplinary concentration that examines the construction of gender and sexuality in social, cultural, political, economic, and scientific contexts.

Each Gender and Sexuality Studies (GNSS) concentrator develops a well-defined topic or question and works closely with an advisor to design a program that rigorously investigates their focus area and supplements it with foundational courses in the relevant disciplines.

Graduates of GNSS have focused on topics such as intersex healthcare, trans memoir, queer archival practice, incest in the postbellum South, racial disparities in reproductive healthcare, sex positivity in the #MeToo era, comparative models of sex education, garment workers and environmental justice, and LGBTQ+ migration. Introductory and methodology courses in the discipline appropriate to the concentrator's research area provide knowledge of the principles grounding their research methods in order to deploy disciplinary tools or challenge disciplinary boundaries with intentionality.

More information is available on the Gender and Sexuality Studies website.

Requirements:

The concentration requires 10 courses, 12 for honors concentrators. No more than two courses may count for multiple concentrations.

1. GNSS 0120. Introductory course on gender and sexuality across the disciplines
2. Four-course focus on some thematic, theoretical, or historical aspect of gender and sexuality
3. Two introductory or methodology courses in disciplines pertinent to the focus
4. One course in gender history, women's history, or history of sexuality
5. One course in feminist theory or theory of sexuality
6. GNSS 1990. A senior seminar which counts as your capstone course. Senior seminar participants are expected to write a research essay. The senior seminar fulfills the second half of Brown's writing requirement.
7. Prior to Commencement, all graduating senior concentrators are required to give a short presentation of either their senior essay or thesis project.

Honors

Candidates for honors must apply to the program's director at the beginning of their seventh semester. Honors concentrators fulfill the regular requirements plus completing a two-semester thesis as their capstone project.

For more information, please consult the GNSS concentration webpage at <https://pembroke.brown.edu/academics/undergraduate-concentration> (<https://pembroke.brown.edu/academics/undergraduate-concentration/>)

Courses

GNSS 0090B. Bodies Out of Bounds.

In this seminar we will examine what happens to bodies - and the world around them - when they refuse to stay within "normal" boundaries. We will focus our readings on literature, essays, and memoir from the past two centuries, and use film and contemporary cultural theory for comparison and context. Readings range from Jeannette Winterson's *Written on the Body* to fiction by Octavia Butler. Enrollment limited to 19 first-year students.

GNSS 0090C. Reproductive Health: Science, Politics, and the Media.

Reproductive health issues such as contraception, abortion, sexually transmitted infections and gay and lesbian health are some of the most controversial and politically charged issues in the US today. After an introduction to the interpretation of medical literature we will explore scientific, political, religious and cultural aspects of these important public policy issues. Successful national and international programs will be discussed. Although all views are welcome, it is expected that students will be respectful of other's opinions and will incorporate the best available scientific data into their conclusions. Enrollment limited to 19 first year students.

GNSS 0091A. Documenting the Feminized Body: Literature, Photography, Science.

How are certain bodies made to express femininity, to satisfy the expectations of the gender binary? How can femininity be used to vilify or control people? How do these operations intersect with other complex identity categories, such as race and class? This first-year seminar introduces students to questions central to gender and sexuality studies. Reading twentieth-century American works (poems, novels, comics, and photographs) we consider the creative function of documentation. Highlighting the work of contemporary poets, Anne Carson, Claudia Rankine, and Ocean Vuong, this course introduces students to new ways of reading poetry beyond the lyric tradition. Students are encouraged to think critically about how knowledge and subjectivity are contextually produced. This course will provide an introduction to important critical traditions, including feminist theory, trans studies, Black feminism, and photography theory. This course satisfies the WRIT requirement.

GNSS 0092. Reading Reproductive (In)justice.

How might the representation of reproductive injustices in literature, visual art, and film inform our conceptions of and fight for reproductive justice? In this discussion-driven first-year seminar, we will consider artistic renderings of reproductive injustices from the nineteenth century to the present, alongside theories of gender and sexuality. In taking up the Black feminist framework of reproductive justice, we will attend to violations of not only the right to be a parent and the right not to be a parent, but also the right to parent in a supportive and safe environment. Through this work, we will better understand the debates over reproductive freedom, especially in relation to difference, and engage in the work of theorizing reproductive justice for ourselves. Texts include Toni Morrison's *Beloved*, Annie Ernaux's *Happening*, Thomas Hardy's *Tess of the D'Urbervilles*, and Alice Diop's *Saint Omer*.

GNSS 0100. Introduction to Feminist Theory.

An historical and cross-cultural introduction to the various strands of feminist theory. The course will cover a range of theoretical frameworks, examine the connections and discomforts between theory and activism, and explore the impact of feminist theories on contemporary thought.

GNSS 0120. Introduction to Gender and Sexuality Studies.

Explores the interdisciplinary fields of Gender and Sexuality Studies, considering the relation between formations of gender and those of sexuality across a range of historical and disciplinary contexts. Considers how both sexuality and gender are shaped in relation to race and ethnicity, economic inequality, and the postcolonial legacy.

GNSS 0610. Convulsive Beauty: Hysteria and the Arts.

Hysteria marks the presence of a traumatic memory that arouses wild bodily symptoms, treated psychologically by putting feeling into words. Often considered a particularly female ailment, hysteria has been read by feminist scholars as a deviant, desirous language of the female body. This course considers the boundaries of pain and pleasure, madness and lucidity, and the personal and the political.

GNSS 0620. Recording the Self: Gender Between Word and Image.

Why do we feel compelled to record our lives? To keep diaries and take photos of ourselves? How is our self-perception affected by how others see us? This seminar examines aesthetic approaches to self-writing and self-recording in literature, photography, film, comics, and online media. Together, we will theorize how these genres of self-documentation have become gendered, as well as how race, gender, and sexuality shape identity formation and self-observation. Rather than presume a coherent identity or "inner self" that is expressed through these works, we will consider how the self multiplies, blurs, fragments, or becomes divided through the meta-biographical process of self-recording. Exploring the various ways that text and image refract and relay in unexpected directions, we will investigate self-referentiality as an ongoing temporal problematic, rather than a simple reflection. This course satisfies the WRIT requirement.

GNSS 0630. Is This Working? Doing as Value.

This interdisciplinary course will consider the ways race, gender, ableism, transnational exchange, slavery, technology, immigration, environmental degradation, and the carceral state are implicated in the ways work is divided, practiced, and compensated. We will explore the ways productivity, citizenship, and respectability constellate around the idealized 40+-hour work week and the ways some bodies are used up and rendered debilitated by labor. Why are laziness, unproductivity, and dependence considered moral failings, and how do we define these traits? In the context of nearly two years of living with a pandemic, crushing student debt, rising inflation, and the monetization of everything, this course will toggle between questions of value and values, remuneration and fulfillment, exploitation and satisfaction. We will study a variety of written genres by authors such as DuBois, Graeber, Hochschild, Marx, Melville, Moshfegh, and Weeks.

GNSS 0640. Relatable Content?: Identification, Identity, and Difference.

What do we mean when we call something relatable? Which relations do we mean and between whom? And in what ways might this demand for relatability be gendered or even gendering? Moreover, does prizing relatability necessarily mean privileging the general over the specific, the familiar over the strange, the known over the unknowable? In other words, does centering relatability mean overwriting difference? Or, is rendering something relatable what enables connections to be forged across difference? Which ethical and political possibilities does this fantasy of sameness ("it me") open up and which does it foreclose? In this second-year seminar, we will take up these questions through an examination of aesthetic and theoretical works from the nineteenth century to the present. In so doing, we will analyze the ways in which works of art invite us to connect and to what ends.

GNSS 0710. Feminist Digital Humanities.

This course focuses on new feminist interventions in the digital humanities emerging from literary, archive, and game studies, as well as history, linguistics, and cultural studies. As an interdisciplinary field, feminist digital humanities bring together a wide range of methods including digital archiving and mapping, information visualization, online exhibitions, and social network mapping. Although the digital humanities are seen as an area of research with many new possibilities, there are many ethical concerns regarding consent, accessibility, privacy, and authorship. We consider how feminist digital humanities address these issues in theory and praxis. To gain an understanding of the many elements of feminist digital humanities, you are asked to participate in seminar discussions, complete small hands-on projects, and complete a final digital humanities project that is relevant to your research interests.

GNSS 0710A. (En)Gendering the Text: Gender & Sexuality in Latin American Literature and Film.

This course investigates films and literature within the context of Latin America since the later-half of the twentieth century, privileging works from the last two decades. It offers an overview of contemporary Latin American film and literature read through the theoretical lens of trans, queer and gender studies. The course focuses on how the films and literary works in question employ sex, gender and sexuality to contest and at times inadvertently reinforce dominant societal power structures. This course offers students an overview of theoretical readings focused on gender and sexuality, as well as the basics of formal film and literary analysis.

GNSS 0710B. Queer Comics.

Although comics have always been a little queer (Batman and Robin anyone?), not all superheroes wear capes. This class brings together queer studies, 20th century history, literary criticism, media, and comics studies to explore the cultural significance of queer comics as a form of activism from the late 1950s to the present day. Since comics often fail to stay within the confines of just one medium, will look at the ways in which comics have crossed over to film, musicals, and fashion. Our focus in this class will be mostly on the United States, but we will also consider the rich transnational culture of queer comics. You will have the opportunity to focus on specific topics of interest to you within queer comics in two short essays (3-4 pages) and a final essay (8-12 pages) or creative project.

GNSS 0710C. Queer Visual Activism.

This class is a space for thinking through some of the relationships between queer studies, visual culture, and activism. The topics covered are divided into two parts. Part 1 focuses on images (photography and print media) and Part 2 on moving imagery (documentary, narrative film, video art, online media). This class is not a comprehensive overview of these fields nor this particular collusion. Rather, we will focus on some key themes (affect, body, space) that have fueled the work of queer creators. To put our readings and discussions into practice, the main assignments for the class include a close reading of a photograph, film analysis, re-photography/video activist project, and a final activist project or essay that has the option of building on previous assignments. The final for this class can be done individually or as a small group project.

GNSS 0710D. Sapphic Arts: From Poetry to TikTok.

This course takes an intimate look at Sapphic culture from the late 19th century to present. Since its most recent renaissance in the mid-2010s, the Sapphic has emerged as an elusive disruptor; an umbrella term that welcomes lesbians, wlw, nonbinary and trans femmes and mascs. This seminar explores how the Sapphic functions not just as an identity category but a methodology (a way of reading, writing, looking, listening) and an aesthetic in art, design, fashion, and food. What are the ways in which the Sapphic works with/against lesbian and queer political identities? How does contemporary use of the Sapphic diverge from its past iterations in literature, literary criticism, and visual culture? How might we understand temporality in Sapphic expression (slow-burn, yearning)? Competency in Sapphic arts requires participation in seminar discussions, completion of 3 short essays, and a final essay/creative project.

GNSS 1070. On Both Sides of the Lens: Latin American Women Filmmakers.

Working from a selection of both feature films and documentaries, we will discuss how women filmmakers are employing and changing these two film genres. The class will endeavor to highlight the work of women filmmakers, and through the reading of these films, students will gain an understanding of some of the debates in the field of gender and sexuality, and acquire a grounding in some of the key moments of twentieth-century Latin American cinema, social, political and economic history. Additionally, students will acquire key technical knowledge of film form and the analytical apparatus necessary to critically view and debate film.

GNSS 1090W. Bodies Out of Bounds.

What happens to bodies--and the world around them--when they refuse to stay within "normal" boundaries? Against the backdrop of fiction written over the past four decades, and within the context of contemporary theory and film, we will look at what is considered normal in various locations and by whom. When are bodies we would consider "normal" somehow not suitable? How are bodies constructed/deconstructed/reconstructed? We will think about bodies in terms of gender, especially gender as it intersects with other markers of identity, including race, gender identity and expression, dis/ability, and hybridity.

GNSS 1101. A Gender Perspective on Women and Enterprise.

A distinctive pattern of economic inequality marks the female population of every nation, each with the same mechanisms standing behind the disadvantages. Everywhere, the barriers to women's economic engagement reach beyond work and salary to encompass property ownership, capital, credit, and markets. When considered as a whole, these barriers constitute economic exclusion, not just economic inequality. To date, policy, scholarship, and activism on the economic status of women have tended to focus on inequality in the formal workplace, but the full pattern is much more visible when women-owned businesses are examined.

GNSS 1201. Feminist Utopias and Dystopias.

From the religious overtones and abhorrence of heterosexual sex in the all-female world of Millenium Hall (1762), to the need for a new race of cyborg in Octavia Butler's Lilith's Brood Trilogy (1987-89), to the gender-inflected environmental apocalypse of Margaret Atwood's Oryx and Crake, feminist writers have used their utopian and dystopian fiction to imagine worlds where the standard system of male/female (or even human/machine) does not work. This course will examine feminist utopias and dystopias across historical periods and within the context of contemporary feminist and queer theory about gender, "race," sexuality, environmental justice, and interspecies communication. Sophomore seminar.

GNSS 1210. U.S. AIDS + HIV Activism in History, Theory, and Art.

The class focuses on AIDS activism in the United States from the early 1980s to present day. We will look at mainstream media coverage of the epidemic and queer activist response in publishing, art, film, photography, comics, poetry, and street action. This class is framed by three key themes: history, theory as art/art as theory, and AIDS activism in Rhode Island and at Brown University. Students will learn a variety of skills--from analyzing primary sources and visual media to conducting archival research.

GNSS 1300. Gender-Based Violence Prevention.

This course will introduce students to core concepts in understanding and preventing gender-based violence (GBV). GBV is violence that either targets people because of their perceived/actual gender identity (cis women, transgender people, non-binary people and others) or disproportionately impacts people with minoritized gender identities. This course takes an interdisciplinary approach to GBV prevention, grounded in public health but drawing on scholarship from gender and sexuality studies and related fields (social work, legal studies, and others). It does this as a means of both broadening and critiquing the way public health frames GBV. This CBLR-designated course requires students to participate in a team project grounded in community: teams will conduct community-based qualitative research and give a presentation on gender-based violence in the college population that will fill a knowledge gap at a community agency.

GNSS 1500. The Art of Being Cared For - Gender, Race, and The Politics of Humanitarianism.

This course will explore the nature and language of humanitarianism and its political and ethical effects. We will interrogate humanitarianism as a set of practices emerging from specific contexts and historical circumstances, rather than as a normative set of laws and rules. We will explore humanitarianism not as a triumphal project that transcends violence but as a mediated space that demands reckoning with the violence, uncertainties, and possibilities inherent in contemporary humanitarianism. We will examine cases throughout the world where humanitarianism simultaneously functions as a remedy for absent justice, a rationale for intervention, and an ally for state-sponsored violence.

GNSS 1510. Transnational Sexualities.

The goal of this course is to explore the formation of both normative and non-normative sexualities within the intertwining of local, national and global social contexts. Using historical and cross-cultural research on gender and sexuality, the course will explore how social forces such as global capitalism, citizenship, nationalism, human rights, securitization, neoliberalism, settle colonialism, tourism, mass media and migration shape and produce desires, sexual identities, sexual labor, sexual practices, bodies and genders.

GNSS 1510A. Reproductive In/Justice.

In this course, students will learn to use the lens of reproductive justice to interrogate the ways that some of our most pressing contemporary crises are rooted in long-standing histories of white supremacy and capitalism and are intimately related to reproduction and constraints against reproductive freedom. By taking up the reproductive justice movement's primary three principles, 1) the right not to have a child, 2) the right to have a child, and 3) the right to parent children in safe and healthy environments, this course welcomes junior scholars into a nuanced, interdisciplinary space for thinking through the historical and continued role of the US and Canadian governments in controlling reproduction, and reproduction's impact and reliance on seemingly disparate aspects of life in North America. Ultimately, this course invites students to collaboratively consider the question: "Is (racial/economic/gender/disability/environmental) justice possible without reproductive justice?"

GNSS 1520. Latin American Horror.

Latin American horror film is often overlooked within the world of film studies. This course will delve into the dark and intriguing world of the Latin American horror film genre. We will study Latin American horror cinema considering works across time periods, national contexts, and directors. This course will ask the following questions: How does the genre express individual and national anxieties in the cultural, social, political and economic realms? To what degree does horror film serve as a social barometer that explores, negotiates, and at times reifies social anxieties about difference, identity, sexuality, normativity, repression, technology, the environment, etc.?

GNSS 1530. Strange Things: Race, Gender, and Objecthood.

This course investigates the blurry divisions between persons and things, animate and inanimate beings, and human and non-human life in U.S. literature and media. This class brings together feminist theory, ethnic studies, queer theory, literary criticism, and film and media studies to explore how distinctions between the human and non-human are variously shaped and unsettled by race, gender, sexuality, class, and ability. What role do different media and technology play in producing, estranging, and transforming the meanings of persons and things? And how have these differences been structured by histories and legacies of empire and settler colonialism? To address these questions, we will read and view texts in a range of media from the nineteenth century through the present, with primary emphasis on African American and Asian American literary and cultural production from the late twentieth and early twenty-first centuries.

GNSS 1535. American Horror Stories: Race, Gender, and Institutions.

This course investigates the relationship between institutions and individuals, the general and the personal, and the normal and the monstrous in U.S. horror literature and media. How and why are so many institutions—prisons, hospitals, universities—described in terms of horror, as institutional nightmares? How do horror subgenres—Gothic fiction, body horror, psychological horror, monster stories, zombie narratives—function and what cultural work do they perform? How and to what effect are "monstrous" and "normal" figures racialized and gendered? To address these questions, we will read and view texts in a range of media with emphasis on Asian American and African American literary and cultural production from the late twentieth and early twenty-first centuries. We'll explore how horror is not only "about" patriarchal institutions and their fear and management of difference, but also a site of feminist critique and pleasure.

GNSS 1540. Bold Bodies: Race in Feminist & Queer Performance.

This course offers feminist/queer, minoritarian, and comparative perspectives to the study of race in performance. We will define minoritarian aesthetics in both content and style, underscoring the practices that remake the world from minor voices. This course understands theatre and performance as crucial for personal and community expression, political activism, and survival.

We will explore a variety of representation and performance techniques from the last sixty years—theatre and drama, modern dance, performance art, fashion, film, and music—from geographical areas including but not limited to the United States. Performances and theories will spur discussions on topics such as body politics and sexualities, representation and spectatorship, understandings of race, and uses/limitations of performance in feminist/queer activism. This course will broaden students' perspectives on what performance can do to advance racial and social justice through the subversive voices of minoritarian subjects.

GNSS 1550. Queer Asias.

While commonly understood as universal, gender and sexuality are deeply shaped by transnational and geopolitical dynamics of culture, place, and power. This seminar investigates the politics of non-normative gender and sexuality transnationally across contexts like Indonesia, Korea, the Philippines, and Pakistan. The course challenges the idea of North America as the center of authority on trans/queer knowledge and community. Readings will be organized topically and cover interdisciplinary ethnographic and theory-based scholarship on non-normative gender and sexuality in Asia, broadly conceived. We'll approach the terms "queer," "trans," and "Asia" as heterogenous, mobile, and changing concepts. We'll examine how they are constructed and contested, as well as how they intersect with dynamics of race, kinship, activism, migration, class, religion, and neoliberalism (among others). The course aims to complicate Euro-American epistemologies in disciplines like queer studies, anthropology, and the social sciences more generally.

GNSS 1551. Subjects of Sexuality: Bodies, Cultures, Psyches.

Cultural anthropology and psychoanalytic theory reframe sex and gender as cultural and psychic problems and open up ways of rethinking relationships between bodies, power, and culture. This seminar explores key currents in the anthropology of sex and gender, focusing on authors that draw on, elaborate, or contest psychoanalytic theory. How do sociocultural contexts shape sexual identities, desires, and practices? How are sexual normalization and subversion shaped by vectors of difference, like race, ethnicity, class, and religion? How do these debates relate to concepts such as violence, agency, capitalism, liberalism, sovereignty, and secularism? We'll consider historical and ethnographic materials across a range of contexts, including hormone science, sports scandals, ancestral rituals, factory work, beauty pageants, state-sanctioned violence, and psychotherapy. Case studies will be drawn from settler and indigenous North America, the Black diaspora, India, Thailand, Papua New Guinea, Greece, and Venezuela.

GNSS 1552. Human Nature: Theories, Narratives, Myths.

This course interrogates mainstream narratives of human nature by putting psychological anthropology into dialogue with a range of disciplines, including gender studies, queer theory, Black and Indigenous Studies, history of science, classics, philosophy, and literary criticism. We will explore social and cultural differences in aspects of human life that biologists, psychologists, linguists, and economists often frame as universal: namely, gender, sex, child rearing and development, reason, emotion, selfishness, sympathy, and aggression. What distinguishes between men, women, and those who fall into neither category? What does it mean to grow "up?" How do language and culture influence cognition? Are selfishness, sympathy, and aggression innate, learned, or neither? Topics include Maasai childhoods, gender roles in Papua New Guinea, counting in the Amazon, Ojibwe spirits, religious violence in India, and spirit possession in Greece, Mexico, and Morocco.

GNSS 1600. Embodying Feminisms/Feminist Embodiments.

For much of its history, feminism has revolved around and centered on the gendered body, whether in terms of the body contextualized within time, space, and culture; in terms of the mind and body as oppositional forces; in terms of health, reproduction, or representation; or in terms of the body as part of or outside "nature." This course will examine feminist relationships to the gendered body in terms of various social and historical locations, as well as in relationship to dis/ability, queerness, reproduction, and the "natural" and built environment.

GNSS 1610. Transnational Feminisms.

What constitutes transnational feminism(s)? How do activists in various parts of the world understand and articulate their relationships to feminism and feminist organizing? How do women and queer people in specific cultural contexts resist multiple forms of oppression and transform understandings of gender, citizenship, and nation? This course explores how feminism is understood throughout the world and examines struggles for gender equality in both a historical and transnational perspective. We will explore themes of colonialism, globalization, nationalism, immigration, representation, global economies, war and militarism, human rights, and politics of gender, race, class, and sexuality. Theoretical developments in transnational feminist and postcolonial theory and case studies of transnational feminist activism allow you to develop a framework to critically explore the intersections of feminism, transnationalism, and social justice and gain an understanding of intersecting inequities throughout the world.

GNSS 1620. Indigenous Feminisms: Environmental Justice and Resistance.

This course will introduce key concepts, methodologies, and arts from Indigenous feminist perspectives on environmental justice. To do this, we will examine five 21st century Indigenous environmental justice case studies from North America and Oceania: Idle No More, Mauna Kea, Sogorea Te', Standing Rock, and the Pacific Climate Warriors. Together we will explore critical theorizations that attend to a range of contemporary issues influencing Indigenous feminist thought today: land, water, and ecology; ceremony and genealogy; healing and care work; science and medicine; reparations and justice. Course texts will include film, podcasts, poetry, visual arts, essays, and more from Indigenous womxn and Two-spirit scholars, artists, and activists

GNSS 1651. Feminist Theory and Critiques of Capitalism.

Feminist theory has long been a central site of critique of the excesses and inequalities of capitalist modes of production and social relations, whether calling for reform or theorizing a revolution. In this course, we will examine feminist critiques of capitalism, focusing in particular on questions of labor, housework and reproduction, property, and the experiences of sexuality and pleasure. We will attend first to Marxist (and anti-Marxist) feminist theory before turning to feminist critique of capitalism in the contemporary era marked by biopolitics and neoliberal government. Finally, we will consider (feminist) alternatives to capitalism and examine the possibilities for post-capitalist politics.

GNSS 1700. Iranian Women's Resistance Strategies: Gender Discrimination and the Law Since 1979.

After the Islamic Revolution in Iran in 1979, the new government targeted women's legal rights in the name of Islam. Family Law, Criminal Law, and even Constitutional Law were designed or amended in ways that imposed gender discriminations on Iranian women's public and private lives. Iranian women from both secular and religious backgrounds have employed diverse strategies to resist these laws. Students will learn about the rules and regulations imposed on Iranian women and also the creative and innovative ways through which they overcome these discriminatory laws. Enrollment limited to 20.

GNSS 1710. Sex and the Law: Strange Bedfellows.

This class will examine legal debates about sexual activity and sexual speech generated by alternate, incompatible views of the source and function of laws and the role of the legal system in enforcing moral codes. We will look at works that see the law as given by God, later natural law traditions intended to enforce a common morality, and texts that see law as a human construct. Not open to first year students.

GNSS 1711. Speech and Silence, Trust, Rage and Fear: An Inquiry into the Possibility of Intimacy.

Seminar examines intimate relationships: problems that arise from failures of couples to speak to each other, when instead of silence, they fail to speak openly, honestly, from a position of equality -particularly about their feelings, needs and desires. We examine the moral agency of men and women as it is reflected in what couples do, say and think. We look at whether relationships fail when men or women consciously or unconsciously choose women who fall into oppressive, subordinate postures and examine whether men take advantage of these postures. Class material from literature, films, and readings from philosophical, literary, and legal essays.

GNSS 1712. Issues for Feminism in Ethics.

This seminar will examine some of the issues that seem to change the focus of the ethical when considered against a background of feminist values. The class will not attempt to examine all possible issues which should be addressed by the values of feminism, but will look at some which are relevant today and/or in which going forward feminist values appear to be at risk. We will examine issues in Consensual and Nonconsensual Sex; Honor Killing; Erotic Speech, Art and Pornography; Birth Control and Abortion; the Ethics of Care vs. Duty; Freedom and Risk in marriage and long-term committed partnerships.

GNSS 1720. Technologies of/and the Body: Mediated Visions.

The relationship between body and machinery, technology and biology is often thought in terms of the mechanical doll, the animated robot and other hybrid figures. Science fiction films for example offer double visions of the gendered body: women are masters/slaves of the technology and still symbolic bodies of biological surviving of the human species. We will explore mediated visions in films and other media of different kinds spanning a bridge between SciFi-films and performance art. We will also study theoretical texts (Donna Haraway et al.) on the problem of the merging of technology and body.

GNSS 1721. Cinema's Bodies.

The course explores the cinematic construction of bodies – female, male, animal, and other. Cinematic bodies do not stand alone as they are framed, cut, exposed, veiled, enlarged, distorted, and gendered. The body is screened and composed into an image of beauty, of death, of sex, of work. Cinematic devices like the close-up, camera angle, light are transform bodies into the body of the film and its specific style. This leads to the question of the spectator's body as a screen for the filmic body and to theoretical explorations of the embodied visions cinema entails and stimulates.

GNSS 1810. Independent Study and Research.

Independent reading and research for upper-level students under the direction of a faculty member. Please check Banner for the correct section number and CRN to use when registering for this course.

GNSS 1820. Independent Study and Research.

Independent reading and research for upper-level students under the direction of a faculty member. Please check Banner for the correct section number and CRN to use when registering for this course.

GNSS 1960C. Gender, Sexuality, and Science.

Examines how American and European science has naturalized differences in the human body and gendered the natural world from the seventeenth through the twenty-first centuries. Will consider historical changes in the scientific study of sex, gender, race, and sexuality, as well as the participation of men and women in scientific work. First-year students require an instructor override to register.

GNSS 1960D. Feminist Theory/Feminist Activism.

Some complain that feminist theory is "too academic", that it has no ties to social justice or activism. On the other hand, there are those in the academy who accuse gender/women's studies of not being sufficiently academic, of not being intellectually rigorous. With those two stereotypes in mind, we will read a variety of feminist theorists, some generally thought of as "academic", and some generally seen as "activist". Can academic theory be useful to political and social activists? Can activism inform academic theorizing? Prerequisite: one theory course, one gender and sexuality studies course, or permission of instructor.

GNSS 1960E. Advanced Feminist Theory.

Feminism and Poststructuralism are two major theoretical approaches to the understanding of society, politics, and culture. What do they have in common? Where do they part company? We'll examine their views on agency, the subject, language, and materiality; and their engagements in the "cultural wars." Readings include Butler, Deleuze, Derrida, Irigaray, Kristeva.

GNSS 1960K. Gender and the Modernist Self.

Are women more modern than men? In the early decades of the twentieth century it may have seemed so, for in these years the figure of woman came to stand as emblematic for modernity itself. In this course, we will read the literature of the turn-of-the-century (including Ibsen's *A Doll's House*, Grant Allen's *The Typewriter Girl*, Freud's *Dora*, Woolf's *A Room of One's Own* and *To the Lighthouse*) alongside the sociology, psychology, and philosophy from the same period to see how exaggerated portraits of hyper-modern women came to seem descriptive of a new, twentieth-century version of selfhood. Enrollment limited to 20.

GNSS 1960L. The Laws of Violence: Lawful Killings in Law Enforcement, Punishment, War and the War on Terror.

States kill: law enforcement officers kill to protect innocent victims and the military kills to protect the nation. This seminar explores the constitutive relation between law and violence. Since the rise of modern statehood, sovereignty depends on the ability of a state to hold monopoly over the legitimate use of violence and thus enforce its order. But without law, bare violence is incapable of establishing order, in the absence of order there is no sovereign. Without violence law has no enforcement power, in the absence of a coercive obligation, there is no law. Enrollment limited to 20. First year students require instructor permission.

GNSS 1960M. Sense and Scientific Sensibility: Beyond Vision, From the Scientific Revolution to Now.

Scientific inquiry is often considered an endeavor pursued using one's sense of vision: researchers peer into microscopes and telescopes and stare at graphs, diagrams, and computer screens. But on what other senses do scientists rely? Do they also gather evidence using senses of smell, taste, hearing, and touch? This class combines readings in the history, philosophy, and anthropology of science with primary sources to address questions such as: why non-visual senses historically have been devalued in the sciences, what a sensuous approach to scientific practice might be, and how attention to sensory epistemologies could contribute to feminist science studies. Enrollment limited to 20. First year students require instructor permission.

GNSS 1960N. Theories and Politics of Sexual Consent.

What is sexual consent good for? Does the language of sexual consent facilitate useful ethical interrogation? Or does it neutralize any worthwhile inquiry into power inequalities? This course interrogates sexual consent through surveying political theory texts, liberal and feminist legal scholarship, studies in sex and gender, court cases, and literature. We query how and to what effect the idea of consent organizes sexual politics and politicizes sex. We first consider consent in legal and political discourse; we next turn to modern theories and doctrines of sexual consent; we then explore case studies. The last weeks focus on youth. Enrollment limited to 20. Instructor permission required.

GNSS 1960O. Desiring the Nation: Gender and Nationalism in South Asia.

Examines the development and afterlives of nationalisms in South Asia to consider the attachments that tie citizens and subjects to the nation and to one another. What are the political, personal, and ideological commitments that allow or prevent individuals from belonging to the nation? Beginning with early 20th century anticolonialism, will trace multiple nationalist movements that lead up to the 1947 Partition of British India, and to the 1971 independence of Bangladesh. Through novels, short stories, and films, will examine the role of gender in anticolonial protest and in early nation-building in India, Pakistan, and Bangladesh. Enrollment limited to 20.

GNSS 1960P. Post-Colonial Technoscience and the Body.

This seminar examines the intersections of race, gender, culture, and sexuality with science and technology in colonial and post-colonial contexts. How is the body a site of contestation for power enacted through medical, scientific, or technological interventions? What are the social and historical dimensions of such encounters between the global North and South? Drawing on colonial-era primary sources and accounts by science studies scholars, post-colonial theorists, historians, and anthropologists, we analyze how the uneven flow of technoscientific experts, practices, objects, and knowledge reconfigures and transforms bodies, selves, and societies. The course's geographic focus is sub-Saharan Africa. Enrollment limited to 20.

GNSS 1960Q. On Love and Intimacy.

Love and Intimacy are terms that have a lot of cultural cache. In this course, we will analyze the ways in which intimacy has been embedded within certain discourses of privacy, rights, and individuality. In addition to the couple form, we will examine friendship, celibacy, therapy and relationships people form with pets and with objects to flesh out intimacy's multiplicities to see how these forces impact these affective tides. This course will bring together history, critical theory, and film to think through various expressions of intimacy and what it means to relate to the other. Enrollment limited to 20.

GNSS 1960R. Sensing Time: Affect and the Moving Image.

Through screenings and transdisciplinary readings, this film-philosophy seminar explores concepts of time, affect, death and subjectivity. We will examine the cinema's capacity to convey events and experiences of twentieth and twentieth-first century history. Philosopher Gilles Deleuze echoes Shakespeare: "The time is out of joint." What can this mean for cinema, thought and life? What is a 'time-image' and can filmic images of time reveal or heal past wounds, those scars that haunt all time to come? How does an image conceal or expose time? How do such images respond to intimate experiences, and even shape politics, history and cultural memory? Enrollment limited to 20.

GNSS 1960S. Media and Modern Childhood.

Will explore a range of key themes in children's media and material culture since the nineteenth century. Through readings, screenings, and the close analysis of media objects themselves (including books, toys, film, television, and digital media), the class will investigate a variety of constructions of and attitudes toward children as they are visible in these cultural forms. Will explore several methodological approaches to studying children's media, and will observe how particular values, economic and political interests, and assumptions about childhood are encouraged, discouraged, and variously position children as consumers, active agents, citizens and cultural participants. Enrollment limited to 20.

GNSS 1960T. Commodity Fetishism: Theoretical and Historical Perspectives.

This course will provide an introduction to critical theory focusing on Marx's mature analysis of capitalism as a social formation founded on the fetishism of commodities. Our examination of this analysis will serve as a point of departure for a wider discussion of the relationship between Marxism and other methodologies and modes of critique, including feminist theory, deconstruction and psychoanalysis. In addition, we will also consider the contemporary relevance and implications of Marx's conception of commodity fetishism from different disciplinary perspectives, including anthropology, aesthetics, postcolonial criticism and the philosophy of law. Enrollment limited to 20.

GNSS 1960U. Reinventing Cinema and Media in Post-Mao China.

Focuses on cinematic production and media culture in mainland China since the late 1970s. How was cinema reinvented beyond the conventions of socialist realism? How did cinema transform itself as a result of its intersections with other forms of media, such as television, cassette and video tape, video games and the internet? What does this mediascape tell us about the society of post-Mao China? How do we not only "see," but also "listen to" post-socialist culture? Examines films ranging from 1980s experimental and entertainment films to more recent documentaries, as well as gaming and internet culture-inspired video art. Enrollment limited to 20.

GNSS 1960V. The Communist Experience in Eastern Europe: Genres of Interpretation.

Almost twenty-five years after the disintegration of the communist regimes across Eastern Europe, the question of how to remember the communist experience is highly contested. This interdisciplinary course highlights the complexities of the collective memory of communism, which fluctuates between attempts to come to terms with communist crimes and tendencies to idealize state socialism. Focusing on a range of issues—such as nostalgia, consumer culture, sexuality, gender, violence, the legacy of repression, and attempts at transitional justice—we will explore the nature of communist and post-communist realities by discussing scholarly studies and weekly screenings of full-length feature and documentary films. Enrollment limited to 20.

GNSS 1960W. Fiction/Addiction.

In eighteenth-century Britain, the rise of global mercantile capitalism coincided with the novel's consolidation as a cultural form. Each in its own way poses questions about habit and volition: do we control what we consume, or does what we consume control us? This course explores aspects of narrative form and character representation in the early English novel with relation to the cultural history of addiction. To anchor our approach to 18th-century fiction (Defoe, Haywood, Lennox, Burney, Edgeworth), we will investigate discussions of appetite, reason, motivation, and compulsion in philosophy and critical theory (Plato, Locke, Johnson, Foucault, Derrida, Sedgwick, Gallagher).

GNSS 1960X. The Aesthetics of Color: History, Theory, Critique.

This course introduces undergraduate students to the central themes and debates in the vibrant history of color from antiquity through the present. While we focus on color in modern and contemporary visual art, design, and media, we begin with the premise that color—like the feminine—has long been subordinated and marginalized as the "Other" within Western culture. We then challenge this assumption using an interdisciplinary approach rooted in feminism, art, visual studies, film theory, fashion, and education. Through descriptive writing, responses to critical texts, and subjective encounters with color in art and culture, students learn the fundamental paradoxes and properties of color.

GNSS 1960Z. Hysteria's Women: Literature, Psychoanalysis, and Feminist Theory.

This course interrogates how psychoanalysis understands the relation between the sexuated body, femininity, knowledge, and desire. We will read texts at the intersection of literature and film, feminist studies, continental philosophy, and postcolonial studies to consider the specific challenges that feminism poses for psychoanalysis, particularly an international feminism that is attentive to class, race, and history. Readings will include texts by Freud, Lacan, Beauvoir, Irigaray, Gallop, Rose, Cornell, Spivak, and Djebbar. Films could include: "A Dangerous Method" (Dir. John Kerr), "Her" (Dir. Spike Jonze), and "Fire" (Dir. Deepa Mehta).

GNSS 1961A. The Matter of Abstraction: Feminism and the Arts.

How does feminist art help us think through the matter of abstraction? How does feminism's emphasis on the social constructiveness of needs, desires, bodies, and subjectivities affect - and resist - the terms of not only formal abstraction but also economic and political abstraction? This course considers the influence of feminist theories and practices in the arts, especially their impact upon debates about abstraction versus representation, formalism versus realism. We begin with feminist art in the 1960's, and proceed to the recent resurgence of abstraction in contemporary art alongside analyses of an ever more abstracted world of capital.

GNSS 1961B. Queer Discipleship.

"Queer theory" names both a set of reading practices and a series of reflections on the dangers, and the possibilities, of being taught. This course will pair fictions of discipleship with recent queer accounts of why we read and what we read for. As we encounter a range of leaders and followers, fans and teen idols, bad teachers and impressionable students, we will attend to the place of queer discipleship in the discipline of queer theory. Students will gain familiarity with this discipline's history and methods, as well as a critical vocabulary for the analysis of modern cultural forms.

GNSS 1961C. Radical Italian Feminisms and the Contemporary Politics of Refusal.

This course will assess 1970's and 80's radical Italian feminism as a blueprint for a new kind of networked and bodily-oriented form of political resistance. Often overlooked in favor of the French and American feminist traditions, the Italian militant tradition, a development within the workers' movement, has recently come to be recognized as a repository of innovative tactical and theoretical responses to various forms and imprints of contemporary domination. It has clear resonances within revolutionary contestation and the politics of refusal today. Thus, the course seeks to assess the implications of radical Italian feminist movements for contemporary resistance.

GNSS 1961D. Politics of Resistance.

States claim to benefit the people they represent. But the relationship between the state and the people is not always a happy one, nor devoid of conflict and violence. In this course, we will examine the conditions of state power and forms of resistance to it. We will explore these questions through a wide range of literature from Sophocles' *Antigone* to Martin Luther King's Letter from Birmingham Jail. Different examples of resistance around the world will be considered including anticolonial resistance, hunger strikes, conscientious objection, the civil rights movement in the US, and on women's agency in shaping these movements.

GNSS 1961E. Feminist Freedoms.

Because feminism understands itself to be fundamentally concerned with increasing liberty, specifically of women, this course will focus on the theme of freedom. We will consider 1) what it means to be a free political actor, 2) whether freedom is the highest political good, 3), whether, and how, freedom is compatible with other values, and 4) how different forms of government and political structures contribute to, or detract from, attempts to increase freedom. We will read contemporary works from a range of genres that ask what it means to exist on the 'margins' of politics, where freedom seems most tenuous.

GNSS 1961F. Local Color: Multi-Ethnic American Literature, 1880-1920.

American literary regionalism ushered in new stylistic forms focused on characters, dialect, customs, topography, and other features particular to specific regions. This "local color writing" emerged, in part, as a response to the rapid growth and changing face of an industrializing nation. This course positions itself at the center of this tense moment in America's history, reading works that pursue both diverse regional and ethnic interests. In particular, we will primarily read women authors and critics to focus on how gender and sexuality intersect with race as it relates to the question nation (re)building.

GNSS 1961G. Framing Gender in Middle Eastern Cinema.

This course examines how gender is framed in Middle Eastern cinema. Through weekly readings in film theory and culture, in-class discussion, and written and oral assignments, students will learn not only how to analyze cinema but also about gender in the modern and contemporary Middle East more generally. Most weeks students will also attend the screening of a film dealing in some way with gender in the Middle East. We will watch films from or about: Iran, Afghanistan, Egypt, Tunisia, Palestine, Israel, Iraq, Lebanon, and Canada.

GNSS 1961H. Literary Imaginations of the Law: Human Rights and Literature.

Did you know that Robinson Crusoe was critical for the drafting of the "Universal Declaration of Human Rights"? Or that autobiography has been a literary genre crucial for the articulation and propagation of both human and civil rights? Through a study of the relationship between human rights and literature, this course will explore forms of writing that enable the legal protocols, proceedings, and predicaments that make up human rights discourse. We will pair key human rights documents with literary and cinematic works that inspire and question the universal ideals of the law.

GNSS 1961I. Global America: Gender, Empire, and Internationalism Since 1890.

This course explores the cultural history of America's relationship to the world across the twentieth century with particular attention to ideas about gender and sexuality. We will locate U.S. culture and politics within an international dynamic, exposing the interrelatedness of domestic and foreign affairs. While exploring specific geopolitical events like the Spanish-American War, World War I and II, and the Global Cold War, this course emphasizes the political importance of culture and ideology rather than offering a formal overview of U.S. foreign policy. This course analyzes the processes through which Americans come to think and feel particular ways about the world.

GNSS 1961J. Make a Body Riot: Laughter, Resistance, and African American Literature.

How does what makes us laugh position us, either as audience or collaborator? What do comedy and performance have to show us about identity formation in relation to race, class, and gender? How might laughter—as release, as physical expression, as indicator of one's interior life, or as protest—help us understand aesthetic, thematic, rhetorical, and political aspects of African American literature? This course centers on the development of African American literature throughout the twentieth century—including the role of Black literature in society; the intersections of race, class, and gender; slavery's afterlives; the historical novel; and the role of humor in community formation.

GNSS 1961K. Art Against Empire: Aesthetics of the "New Man" circa 1968.

This course charts dissident aesthetic practices and theories that emerged along multiple transnational axes in the "long 1960s" under the banner of anti-imperialism. Organized from a global perspective, this class considers the contributions and collaborations of radical and militant artists, filmmakers, and thinkers in Africa, Asia, Europe, and the Americas. Our primary concern will be to analyze the masculinist dynamics of these movements. Above all, we will examine the deeply entrenched conceptions of gender and sexuality that frequently determined who could be seen on the front lines of these struggles, whether on the ground or in the field of representations.

GNSS 1961L. Postcolonial Horror: Political Specters in Non-Western Literature and Film.

This course explores the genre of "postcolonial horror" in contemporary non-Western literature. How are world writers and filmmakers utilizing elements of horror—including shock, supernaturalism, gore, and psychological realism—to derange viewers' relationships to everyday life? Can horror capture controversial themes like war, genocide, and human rights crimes without exploiting violence? Or does horror merely objectify human suffering to reproduce sexist, racist, homophobic, and xenophobic stereotypes? We will take a transnational, decolonial feminist approach to supernatural motifs, including ghosts, zombies, aliens, witches, vampires, demons, and psychopaths, in films and fiction from Africa, Latin America, the Caribbean, and South Asia.

GNSS 1961M. Humanity or Nah? Blackness, Gender, Resistance, and Memory in Monuments, Maps, and Archives.

This course explores the liberatory archaeologies of racialized, gendered, and sexual memory(-ies) articulated by Xicanx, Latinx, Native American, and African scholars, artists, activists, and cultural workers that resist regimes of antiblackness, colonialism, and white supremacy. Students will engage scholarly and artistic works that exemplify how Blackness rejects, while simultaneously marking in many ways, the limits and logic of gender and sexuality, exposing the colonial underpinnings of "Man" and modern ideas of "human." This course focuses on monuments, maps, and archives as three distinct sites where antiblackness, colonialism, and white supremacy are both sanctioned and defied in the public sphere.

GNSS 1961N. Scenes of Instruction: Pedagogy, Punishment, Perversion.

This course investigates the interrelation between pedagogy, sexuality, and violence. It seeks to investigate the classroom as a site of violent interaction and a potentially sexualized space. Appraising the erotic dimension of the production and transmission of knowledge, the course will critically trace a discourse of the utmost actuality and relevance: from campus rape culture, via the prominent question of consent, through current debates around Title IX, the connection between learning and sex marks a highly problematic dimension of our academic environments deserving of scholarly attentiveness and critical scrutiny.

GNSS 1961O. Masquerade as Critique.

Critique is most often figured as an act that reveals a reality that was previously hidden, as though one were pulling back a curtain or lifting a veil. But, as the critic Craig Owens points out, "in a culture in which visibility is always on the side of the male, invisibility on the side of the female...are not the activities of unveiling, stripping, laying bare...unmistakably male prerogatives"? This seminar develops an alternate genealogy of critique informed by feminist and queer of color perspectives. It eschews the modernist drive toward transparency, instead examining masquerade, mimicry, code-switching, duplicity, fugitivity, passing, and appropriation.

GNSS 1961P. Poetics of the World: The Making and Unmaking of the African Diaspora.

This course critically engages with the meaning and making of African Diaspora literature by examining a range of novels, poetry, and memoirs, as well as theoretical texts. Part of the work of this course will be to examine the genre of Afro-diasporic literature. What does it mean to belong to a diaspora? How do writers from across the diaspora communicate with one another? What unexpected models of sociality and community does this literature produce? How do writers engage with one another across national boundaries? Our discussions will delve into themes of opacity, entanglement, identity, race, gender, and sexuality.

GNSS 1961Q. Conversations in Trans/Feminisms: Theories, Cultures, & Politics.

This course explores the bridges and tensions between trans* and feminist movements through academic & activist literature/cultural production. How & why did transfeminism as a critical intervention in relation to feminist theory & politics arise, & why are transfeminist discourses & theories fiercely relevant from the 1960s to the present. How does trans*, as an infinite spectrum of categories, theories, & identities rupture, and/or transcend the gender binary? We will explore the ways that trans* scholars, artists, and organizations contest gendered meanings, borders, & hierarchies within systems of oppression such as anti-blackness, white supremacy, settler colonialism, homophobia, and xenophobia.

GNSS 1961R. Sex and Money: The History of Paris since 1750.

Paris, seen through the rose-tinted glasses of Hollywood, is the city of love. How did this come to be? And what does this image hide? Across the modern period, shopping and women's work were sexualized, prostitution was normalized, regulated, and made "safe" for bourgeois clients, nude women performed on music hall stages, and gay cultures emerged in new commercial venues. This class will examine how sexual commerce shaped the identity of the city, how the commercial spaces of the city shaped sexual identities, and how discourses about sexuality contributed to the legitimization of capitalism. We will engage with topics ranging from the construction of gender difference and the emergence of mass media, to the relationship between the expansion of global capitalism and the rise of moral panics.

GNSS 1961S. Boom Towns: Finance and Literature in Latin America.

Studying the works of Gabriel García Márquez (Colombia), Clorinda Matto de Turner (Peru), Jorge Luis Borges (Argentina), Rosario Castellanos (Mexico)... this class explores the implications of using this financial metaphor to refer to the cultural production of the region since the nineteenth century. We will examine the relationship between finance and writing by looking at, among other things, the literary creation of three fictional boom towns: Killac, Macondo, and Tora. Through the invention of these places, literature in Latin America has sought to give sense to its 'peripheral' position within the capitalist world-system and challenged common-sense narratives about economic development, progress, and social structures. Students will thus learn about economic cycles and financial crises in Latin America from a cultural perspective. Emphasis on the role of finance in the reproduction of gender, race, class inequalities, and ecological impacts.

GNSS 1961T. Transpacific Femininities.

As theoretical framework, archival method, activist practice, transpacific femininities places gender and sexuality at the center of Asian American literature, culture, and Pacific Rim geopolitics. Since at least the 19th century, femininity has played a critical role in the material and discursive mediation of transpacific relations: from the circulation of feminized Asian commodities and the migration of sex workers, care workers, and other female laborers to the idea of the Orient as the feminine counterpart to the masculinized West. Yet, because Asian and Asian American women have been subject to extensive and aggressive fantasizing in the American imagination, they remain, in many ways, proximal to dominant narratives, occluded by the abstract significations they carry. We will test the parameters of transpacific femininities as an approach for contending with complex networks of relations within and between multiple competing nations and empires.

GNSS 1961U. Women of Color Feminisms.

This course interrogates the constructs of race, gender, sexuality, and class from the standpoint of women of color feminist writers and thinkers. We will draw from a range of materials, including Black feminist theory, literature, memoir, and film in order to examine how social differences are fundamentally entangled and co-produced. We will explore how systemic oppressions (such as racism, economic exploitation, and sexism) interact and rely upon one another to produce different social identities in particular geographic and historical contexts. The course will cover texts that have become foundational to intersectional feminist thought as well as texts that reflect how new generations of feminists are reinterpreting and expanding intersectional politics in order to think about oppression and resistance and establish what real human liberation might ultimately entail. Writers and thinkers might include Angela Davis, Octavia Butler, Gayatri Spivak and Kim Tallbear.

GNSS 1961V. Black on Earth: Race, Gender, and the Environment.

This seminar operates on the notion that white supremacy and environmental degradation are historically related—and that Black Americans have long confronted the two together. In this course, we will interrogate how different Black thinkers and activists have done so, from the Antebellum period to the present day. We will begin by considering how enslaved people drew from nature in their resistance to slavery and the Middle Passage. We will investigate the role of pollution, toxics, environmental disasters, gentrification, and more in the formation of a twentieth-century Black radical tradition. We will identify its constituent strands—feminism, communism, nationalism, and more—and their respective visions of liberation. Toward the end of the course, we will explore the environmental justice movement and Black-led responses to climate change. Weekly readings will include one or more primary sources in addition to secondary readings.

GNSS 1961W. Feeling Race.

This advanced research seminar examines how emotion factors into a longer history of race, racism, and resistance in the United States. Using the tools of affect studies, ethnic studies, queer theory, and American literature and film, we will explore the racial politics of feeling, both as a noun and as a verb. What do emotions like rage, melancholy, shame, and irritation—as well as states of unfeeling or disaffection—afford for subjects marginalized by their race, gender, and sexuality? How do feelings include or exclude people of color, especially queer people of color, from projects of U.S. nation-building? Over the course of the semester, we will ask how feeling might reorient our relationship to troubled pasts, help us politically engage with a racist present, and imagine alternative futures.

GNSS 1961X. Black Women Ruin Everything: Utopia, Dystopia, and the Future (Ends) of the World.

This seminar is grounded in three premises. The first is that "the world" is founded on anti-blackness (though not anti-blackness alone). The second is that Black feminists write with an awareness of this fact and a desire to imagine the world otherwise. The third is that as a result Black feminism is a form speculative fiction. This course considers how contemporary afrofuturist texts written by Black feminists critique the gendered anti-blackness that effects black peoples' life chances. It also considers how these texts go beyond imagining a future predicated on enrolling Black being into existing hierarchies of Man. Put otherwise, this course will investigate how Black feminist writers have used "speculative fiction" to image not only their own freedom but also the freedom of all beings arranged within the social and political hierarchies built upon their supposed abjection.

GNSS 1961Y. Gaps and Silences: In and Out of the Archives.

This research seminar examines archives and considers how classification systems are central in addressing knowledge gaps, gendered and racialized silences created by colonialism, slavery, wars, and displacement. We will engage with archival theories informed by Black, Indigenous, and Asian American studies, feminist and postcolonial theories, and visual studies. What is archival metadata and what role does it play in historical research? How might we imagine new links between descriptive information, records, affect, and embodied knowledge found in and out of archives? Our discussions will be guided by concepts including "critical fabulation" (Hartman), "queering archives" (Arondekar), "imagining the impossible," (Gilliland & Caswell), and "silences and silencing" (Trouillot). For the final assignment, students will create their own digital archival project. It will be based on their research interests and direct engagement with the Pembroke Center Archives focused on women and feminist theory.

GNSS 1961Z. Black Trans Studies.

This course introduces students to significant strands of thought in the field of Black trans studies. Some suggest that the scope of Black trans studies is too narrow; this course seeks to illustrate otherwise. As Susan Stryker argues, "the field of transgender studies, far from being an inconsequentially narrow specialization dealing only with a rarified population of transgender individuals, or with an eclectic collection of esoteric transgender practices, represents a significant and ongoing critical engagement with some of the most trenchant issues in contemporary humanities, social science, and biomedical research." Black trans studies offers a framework for approaching some of society's most critical topics. We'll explore intellectual genealogies that give rise to Black trans studies, trans narratives and the racialized history of medicine, coalition and community building, violence and policing, representations of Black transness, and debates about today's movement priorities.

GNSS 1962A. Asian/American Feminisms: Power, Expressive Culture, and the Cold War.

The course follows Asian and Asian American feminist thinkers navigating history and its uses – particularly the present history of the Cold War. Reading interdisciplinary Asian/American feminist theory and expressive culture, this course marks the Cold War as more than just the historical period between the end of WWII and the fall of the USSR (also cast as the preeminent dominance of US democratic and imperial order as the good life). Rather, we will unpack the Cold War as an interpretive framework, a lineage of powerful institutions, a persistent emotional landscape, and (in short) a knowledge project that continues to shape and direct political life, imaginative capacities, and formations of power inhering in race, gender, nation, sexuality, ability, class. Assessing this global knowledge project, we'll ask after the resources of Asian/American feminist visions of time, power, and liberatory potentiality.

GNSS 1962B. Woman*, Life, Freedom: Global Feminist Liberation Movements.

This course puts its keywords—woman*, life, freedom—in conversation to explore how an avowal of woman and life has been and will remain prerequisites to liberation, particularly in our tumultuous present. We start by looking at the roots of the revolutionary slogan of the uprising that overtook Iran following the 2022 death of Jina (Mahsa) Amini while in state custody, to understand its indebtedness to Kurdish women's struggle against authoritarianism in Turkey; ISIS extremism in Iraq/Syria; and now, resistance to patriarchal fundamentalism and military oppression in Iran. In studying the slogan's centering of women/counter-hegemonic bodies and desires, and broadening our scope to the global stage, we will ask: Which genealogies of feminist, queer, and liberationist thought/practice does this slogan allow us to ascertain? What are the throughlines of our contemporary sociopolitical practices of liberation, particularly among Global South, women*-led movements?

GNSS 1962C. Art of Survival.

We will explore the art of continuing to exist despite accident or ordeal. What creative strategies make life livable within sickness, incapacity, and loss? How does survival (or its absence) alter time and space, producing its own aesthetic preoccupations and concerns? Our arts of survival focus on racial and sexual difference as determining factors in living and dying, while considering the labors of sustenance, the affects of suffering, the aesthetics of ruination, and the (im)possibility making the unbearable bearable. Students will develop a comprehensive view of interdisciplinary art practice (including performance, installation, sculpture, memoir, fiction, and poetry) while exploring their own arts of endurance, memorialization, and medicine.

GNSS 1962D. Visual Art and Black Feminist Theory.

This course argues that black women disturb, dissolve, and give definition to the concepts of gender and racialization that shape the modern human. We will closely analyze black feminist theory alongside a wide-ranging survey of significant painting, sculpture, performance, photography, and installation art made by black women in the 19th to 21st centuries. Theoretical concepts representing the singular modes of dispossession that ensnare black femininity, as well as black femininity's re/production of the modern world—concepts such as black flesh, ungending, fungibility, black mater, plasticity—will be applied to analysis of artworks and the artworks will in turn flesh out these concepts. We will utilize close textual analysis, visual analysis, and art historical context to interrogate the ways that black female artists illuminate, critique, and intervene on hegemonic constructions of gender and sexuality and art historical ideologies.

GNSS 1962E. Wet Ethnographies.

Recent experimental ethnographies explore the relationship between research and writing, textual strategies, and the politics of ethnography. Experimental methods provide tools to think and write about projects of coloniality and capital and how they shape the material environment. This course introduces students to experimental ethnographies that take place in environments where the boundaries between water and land get blurred in deltas, river embankments, swamps, mangroves, and reclamation areas that carry signs of both enabling and challenging former and continuing colonial projects of empire or capital. We will critically read and examine ethnographic works that tackle “wetness” and “fluidity” as theoretical tools for understanding fluidity, circulation, and flow to challenge linear development projects from a feminist ethnographic perspective. The course will focus on practicing attunement to more than human life and materialities of soil, water, and land/seascape through experimental ethnographic methods.

GNSS 1962F. Reading In Depth: Deep Time in Theory, Literature and Visual Art.

This course considers the humanities and deep time—time stretched out beyond the human lifespan. The challenge that deep time poses to the human imagination has grown more urgent to address in light of our current environmental crisis. What can the humanities teach us about deep time? We will approach this question in three ways: 1) by looking beyond conceptions of space as female and passive and foregrounding non-binarized conceptions of space that are agentive and dynamic, 2) by examining human and non-human relationships in diverse cultural traditions, and 3) by considering how artists and writers worldwide create their own scales of deep time and inscribe rhythms of human and non-human life into their works. The course will run as a workshop and will be primarily concerned with actively testing research methods and artistic practices to better understand deep time.

GNSS 1962G. Designing Public Memory: Race, Gender & the Creation of the American Commemorative Landscape.

How have monuments shaped our understanding of who and what deserves a place in American memory? How do memorials, museum exhibits, and other forms of commemoration get made? Who creates public memory in America? How have our approaches to these questions changed over time? This course examines the evolution of how we see public commemorative space in the United States, and the outsize role gender has played in shaping national memory. We'll begin with the heavily masculine history of the National Mall in Washington, D.C. and shift to examples of local memorials, walking tours, digital histories, and museums across the U.S. that seek to restore the voices of other Americans to our memorial landscapes. Students will work throughout the semester to design their own commemorative space grounded in historical research and shaped by the many questions we will explore together.

GNSS 1962H. Is It Me or Is It Meme?: Blackness and Memes.

This course explores memes as sites of black cultural production. How do we conceptualize a relationship between memes and blackness? How do representations of blackness come to inform the creating and circulation of memes? How do digital interactions complicate notions of collective consciousness, authenticity, ownership and citation? We will ground our exploration of memes in various genealogical and methodological formations of queer of color critique, black studies and cultural studies. The course will investigate aesthetic, affective, imaginative and cultural dimensions of digital black cultures, paying particular attention to questions of relationality (self and collective), circulation and world-making potentialities. We will analyze how race, gender, and sexuality are embedded in the production and proliferation of memes (for example: girl dinner, girlmath, trad wife, i'm just a girl). The course examines frameworks including affectability, visual culture, virality, performance, identity, disidentifications, and blackness.

GNSS 1962J. Trans Studies of Gender and Sexuality.

This course will explore how trans studies has rethought the big-picture questions of Gender and Sexuality Studies. We will begin with an introductory unit on the fraught historical relations between transfeminisms and dominant traditions of feminist theory and activism. Each subsequent unit of the course will home in on what trans scholarship has contributed to the study of one or more major categories of intersectional feminist theorizing: gender and sexuality; race; and class. Beyond an introduction to trans studies, students will learn how dominant relations of power might be understood differently by starting from trans perspectives. By reading trans theory alongside works of trans literature and film, students will develop their own trans studies of gender, sexuality, race, and class.

GNSS 1970. Directed Research and Thesis.

Independent research under the direction of a faculty member, leading to a thesis. Required of honors candidates. Open to seniors only. Instructor permission required.

GNSS 1980. Directed Research and Thesis.

Independent research under the direction of a faculty member, leading to a thesis. Required of honors candidates. Open to seniors only. Instructor permission required.

GNSS 1990. Senior Seminar.

A research seminar focusing on the research and writing of the participants. Required of senior concentrators; open to other advanced students by permission.

GNSS 2000. Method, Evidence, Critique: Gender and Sexuality Studies across the Disciplines.

Gender and Sexuality Studies is by its very nature interdisciplinary. Can we speak of any single methodology that ties GNSS together? How might scholars working on gender/sexuality acknowledge disciplinary boundaries and use disciplinary training effectively? We will start with the premise that studies in gender and sexuality are tied together by questioning foundational assumptions within a given field of knowledge and taking account of our own subject positions vis-à-vis our objects of study. By studying canonical theoretical texts alongside disciplinary studies characterized by a feminist and/or queer focus, we will investigate how gender and sexuality are constructed in various contexts, what kind of work they do, and how standards of evidence are marshaled in particular disciplines. Particular attention will be given to the role of critique, affect, and materialisms, including the materiality of language, in gender and sexuality studies.

GNSS 2010D. The Power and Mystery of Expertise.**GNSS 2010E. Pembroke Research Seminar: The Question of Consent.**

No description available. Instructor's permission required.

GNSS 2010G. Pembroke Research Seminar in Feminist Theory: Socialism and Post-Socialism.

An advanced feminist research seminar in feminist theory and gender studies. Presentations made by Brown faculty, Pembroke Center fellows, visiting scholars, and students. Offered in conjunction with the Pembroke Seminar. Enrollment limited to 8.

GNSS 2010S. Pembroke Research Seminar – The Civic Work of Monuments.

This seminar grapples with monuments as forms of “public speech” and “scriptive things”: elements of material culture that structure human actions but whose meaning is also contested. How do monuments shape political imaginations and civic practices? Whose stories have we told and to what effects? How have citizens experienced, ignored, or contested public commemoration at local and national levels, in universities and other locations? What should we do about oppressive monuments and disparities in public commemoration? Drawing on a variety of fields and disciplines, from political theory, philosophy, history, art and art history, visual culture, anthropology, etc., as well as the work of artists, philanthropic institutions, activists, and local and national governments, we will explore histories of commemoration and contestation, keeping in mind that public monuments are palimpsest of memory that seek to tell some stories and drown out others.

GNSS 2020D. The Power and Mystery of Expertise.**GNSS 2020E. Pembroke Research Seminar: The Question of Consent.**

No description available. Instructor's permission required.

GNSS 2020G. Pembroke Research Seminar in Feminist Theory: Socialism and Post-Socialism.

An advanced feminist research seminar in feminist theory and gender studies. Presentations made by Brown faculty, Pembroke Center fellows, visiting scholars, and students. Offered in conjunction with the Pembroke Seminar. Enrollment limited to 8.

GNSS 2020S. Pembroke Research Seminar – The Civic Work of Monuments.

This seminar grapples with monuments as forms of “public speech” and “scriptive things”: elements of material culture that structure human actions but whose meaning is also contested. How do monuments shape political imaginations and civic practices? Whose stories have we told and to what effects? How have citizens experienced, ignored, or contested public commemoration at local and national levels, in universities and other locations? What should we do about oppressive monuments and disparities in public commemoration? Drawing on a variety of fields and disciplines, from political theory, philosophy, history, art and art history, visual culture, anthropology, etc., as well as the work of artists, philanthropic institutions, activists, and local and national governments, we will explore histories of commemoration and contestation, keeping in mind that public monuments are palimpsest of memory that seek to tell some stories and drown out others.

GNSS 2450. Exchange Scholar Program.**GNSS 2720. Graduate Independent Study.**

Section numbers vary by instructor. Instructor's permission required.

GNSS XLIST. Courses of Interest to Concentrators in Gender and Sexuality Studies.**Fall 2025**

The following courses have a primary focus on women or gender or make significant use of modes of feminist or queer analysis. They may count toward the concentration in Gender and Sexuality Studies through the Pembroke Center. Please check with the sponsoring department for times and locations.

Africana Studies

AFRI 0090 An Introduction to Africana Studies

Philosophy

The Philosophy Department takes a special pleasure in contributing to the teaching and training of undergraduates, as part of Brown's overall commitment to a liberal education. The Department offers a range of courses, from introductory to advanced, which cover contemporary subject areas such as ethics, metaphysics, epistemology, the philosophies of science, religion, language, literature, and more, as well as various periods and figures in the history of philosophy.

For additional information, please visit the department's website: <http://www.brown.edu/Departments/Philosophy/>

Philosophy Concentration Requirements

The Philosophy concentration offers courses covering subjects from ethics to the philosophies of science and literature. It also provides survey courses on various periods in the history of philosophy. Concentrators can expect to acquire a broad competence in philosophy itself, including ancient European and early modern philosophy, logic, ethics or political philosophy, and epistemology or metaphysics. The concentration also teaches, and stresses, skills in critical thinking and writing. There is also a related, but separate concentration in physics and philosophy.

Standard Concentration

10 courses total, of which no more than one may be below PHIL 0100, and at least three must be at or above PHIL 0990.

Five Area Requirements:

One course in Ancient Philosophy, e.g.	1
PHIL 0110 Ancient Greek Philosophy	
PHIL 1110 Plato	
PHIL 1120 Aristotle	
One course in Early Modern Philosophy, e.g.	1
PHIL 0210 Early Modern Philosophy	
PHIL 1210 Locke, Berkeley, Hume and Others	
PHIL 1220 17th Century Continental Rationalism	
PHIL 1230 Kant: The Critique of Pure Reason	
One course in Epistemology or Metaphysics, e.g.	1
PHIL 1735 Metaphysics	
PHIL 1705 Epistemology	
PHIL 1800 Philosophy of Mind	
PHIL 1850 Philosophy of Language	
One course in Ethics or Political Philosophy, e.g.	1
PHIL 0410 Moral Philosophy	
PHIL 0560 Political Philosophy	
PHIL 1470 Ethics in the Novel	
PHIL 1430 Moral Theories	
PHIL 1440 The Nature of Morality	
One course in Logic, e.g.	1
PHIL 0640 Logic	
PHIL 1630 Mathematical Logic	
PHIL 1635 Advanced Deductive Logic	
One Seminar: either an undergraduate seminar from the 099X series, a course numbered 1XXX that is designated as a seminar, or a graduate seminar numbered 2XXX.	1
Four additional courses	4
Total Credits	10

Note:

Up to two appropriate courses from departments other than Philosophy department may be included among the ten courses required for the Concentration. Appropriate courses must be sufficiently philosophical. Courses listed on the Philosophy XLIST on Courses@Brown will always count; students can petition for other courses to be counted. Courses

from other departments may not be counted toward fulfillment of the area requirements.

Capstone Requirement

Every philosophy concentrator must complete a capstone project. The capstone will be normally be completed in a student's last undergraduate year, and it should make use of a significant portion of what the student has learned in their undergraduate education, broadly interpreted. There are three options for the capstone course in philosophy:

1. A Senior Thesis: A substantial paper, typically about 40-60 pages, that is researched and written over the course of the senior year under the supervision of a faculty advisor. Typically, students writing a thesis will enroll in PHIL 1995, Senior Thesis, both semesters. (In order for a student to be permitted to write a Senior Thesis, they must have completed at least six courses in the concentration and have received a grade either of A or of Satisfactory with Distinction in more than half of them.)
2. An Independent Study: A one-semester reading course (PHIL 1990) under the direction of a faculty advisor, leading to a substantial research paper, typically 15-25 pages.
3. A Special Project undertaken in connection with a philosophy course at or above 0990: Examples include a more-in-depth final paper than is otherwise required or a presentation of some of the material to the class, though students are encouraged to make creative proposals, as well. The specific project should be discussed with, and must be approved by, the instructor of the relevant course.

Every philosophy concentrator must file the Declaration of Capstone Project by the end of shopping period in their final semester. For further details on the Honors Thesis and Capstone Requirement, see "Senior Capstone" and "Senior Thesis" on the Department's website.

Honors Requirements:

To qualify for Honors, a student must:

1. Have grades of either A or Satisfactory with Distinction in more than half their philosophy courses and any courses from outside the department that they are counting towards the concentration.
2. Successfully complete a Senior Thesis that, in the judgment of the advisor and second reader (to be appointed by the Director of Undergraduate Studies), is worthy of an Honors recommendation.

Physics and Philosophy Concentration Requirements

The Physics and Philosophy concentration is for students with a deep interest in physics who do not need to acquire the laboratory and computational skills of a professional physicist. The concentration allows students to grapple with computational problems and deepen their investigation of conceptual and epistemological issues. By the end of the program, concentrators possess an excellent conceptual understanding of the most philosophically interesting physics, relativity and quantum mechanics.

This concentration should prepare a student either for graduate study, especially in a history and philosophy of science (HPS) program, or for employment in science education or journalism. Other professions such as law and medicine will look favorably on such concentrators for having versatile interests and being able to master difficult material. The concentration may serve as an excellent preparation for a law school since physics and philosophy both exercise a rigorous approach to problems of immediate relevance to life but at the same time assume two complimentary and sometimes competing viewpoints.

Advising

Concentration advisors from the Departments of Physics and Philosophy will guide students working towards the A.B. degree.

Curriculum

The curriculum builds around the fields of physics that have had the biggest impact on philosophy, especially Quantum Physics, and the fields of philosophy most relevant for physics, such as Epistemology, Metaphysics and Philosophy of Physics. It is strongly recommended that students complete at least one relevant history course.

There are 11 required courses (5 in Physics, 5 in Philosophy or History, one course in mathematics) and a final project. The choice of the courses is dictated by the following considerations. The field of physics with both deepest philosophical implications and deepest influence on the rest of physics is Quantum Mechanics. Thus, a 1000-level course in Quantum Mechanics or a closely related field such as Statistical Mechanics is indispensable. The second field of physics most relevant for the concentration is Relativity. This field touches upon and serves as a foundation for a broad list of subjects with major philosophical implications of their own, for example: PHYS 1170, PHYS 1280, PHYS 1510, PHYS 1100. This requires another 1000-level physics course in the concentration. 1000-level Physics courses cannot be taken without certain preliminary work, most importantly, PHYS 0470, which serves as a prerequisite for most higher-level physics courses and which relies in turn on PHYS 0160 or PHYS 0060. Another lower-level physics course is necessary for a student to develop familiarity with the tools which have been employed in producing the physics knowledge.

A natural introduction into philosophy of physics comes from a course in Early Modern Philosophy. To a large extent, Early Modern Philosophy was shaped by scholars who combined interest in philosophy and physics (e.g., Rene Descartes, Blaise Pascal, Gottfried Wilhelm Leibniz). The influence of the XVII century physics revolution on other central figures such as Kant is unquestionable. Early Modern Philosophy sets an intellectual stage for many subsequent developments in the Philosophy of Physics and directly addresses some of the most perplexing issues like the connection (or lack thereof) between physics and religion. The core of the Philosophy requirement involves two courses in Epistemology, Metaphysics and Philosophy of Science. One course in this field would not be sufficient due to its very broad nature. Students are strongly advised to take a relevant History course. This requirement can be substituted by an additional philosophy course to reflect interests of those students who want a deeper background in Epistemology, Metaphysics and Philosophy of Science or have other related interests such as Ancient Natural Philosophy.

In addition to the above philosophy courses, PHIL 0210 (Science, Perception, and Reality) serves as a gateway into the concentration. It may be substituted by other relevant courses such as PHYS 0100 (Flat Earth to Quantum Uncertainty: On the Nature and Meaning of Scientific Explanation).

A course in calculus is a prerequisite for most physics and some philosophy classes.

Required courses for the A.B. degree are listed below:

Physics Courses

Select one of the following introductory courses in Modern Physics:	1
PHYS 0060	Foundations of Electromagnetism and Modern Physics
PHYS 0160	Introduction to Relativity, Waves and Quantum Physics
One course in Special Relativity and Classical Field Theory:	1
PHYS 0470	Electricity and Magnetism
Select one of the following in Methods of Experimental and Theoretical physics:	1
PHYS 0500	Advanced Classical Mechanics
PHYS 0560	Experiments in Modern Physics
Select one of the following in Quantum Mechanics and its applications	1
PHYS 1410	Quantum Mechanics A

PHYS 1530	Thermodynamics and Statistical Mechanics	
One more 1000-level Physics course		1
Philosophy Courses		
Select one of the following gateway courses:		1
PHIL 0210	Early Modern Philosophy	
PHIL 0060	Modern Science and Human Values	
PHIL 0640	Logic	
Select one of the following courses in Early Modern Philosophy:		1
PHIL 0210	Early Modern Philosophy	
PHIL 1210	Locke, Berkeley, Hume and Others	
PHIL 1220	17th Century Continental Rationalism	
PHIL 1230	Kant: The Critique of Pure Reason	
Select two of the following courses in Epistemology, Metaphysics and Philosophy of Science:		2
PHIL 1705	Epistemology	
PHIL 1735	Metaphysics	
PHIL 1755	Philosophy of Science	
PHIL 1775	Philosophy of Quantum Mechanics	
PHIL 1780	Time	
History Courses		
Select one of the following courses in History of Science:		1
HIST 0522N	Reason, Revolution and Reaction in Europe	
HIST 1825M	Science at the Crossroads	
HIST 1976I	Imperialism and Environmental Change	
Calculus		
Select one of the following:		1
MATH 0180	Multivariable Calculus	
MATH 0200	Multivariable Calculus (Physics/Engineering)	
MATH 0350	Multivariable Calculus With Theory	
Final Project		
Select one of the following:		1
PHIL 1990	Independent Studies	
PHYS 1990	Senior Conference Course	
A course from the PHIL 0990 Senior Seminar series		
Any graduate seminar in Philosophy		
Total Credits		12

¹ Or one more Philosophy course.

Honors

Seniors wishing to earn honors by presenting a senior honors thesis should consult their concentration advisor during their sixth semester or at the start of the seventh semester concerning procedures and requirements. Students may earn honors by presenting a senior thesis judged to be of honors quality by two readers. In addition to completing the usual nonhonors requirements, the student should also have a grade point average of over 3.4 in physics, philosophy and history of science courses (of which at least five must be taken for a letter grade). Honors theses are usually prepared over a period of two semesters with an advisor from the Department of Physics or the Department of Philosophy.

Philosophy Graduate Program

The department of Philosophy offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) Degree. The A.M. degree is only awarded as part of the Ph.D. program.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/philosophy> (<http://www.brown.edu/academics/gradschool/programs/philosophy/>)

Courses

PHIL 0010. The Place of Persons.

We'll concentrate on some fundamental moral and metaphysical issues concerning ourselves as persons: What (if anything) gives us a moral status different from that of other animals? Do we have the sort of free will required for us to be morally responsible for our actions? What makes you one individual person or self at a particular time? What makes you today the same individual person as that obnoxious 5-year old who went by your name a few years back?

PHIL 0011. Freedom and Equality.

In this class, we will explore perhaps the two most fundamental political ideas in modern liberal societies: that humans are (or should be) free, and that they are (or should be) equals. We will explore different conceptualizations of these two important but essentially contested concepts, reading a range of views of how freedom and equality are to be defined and what (if anything) makes them morally important, before applying these views to concrete questions like the role of race and gender in our society, how our political institutions should be organized, and whether economic inequities are morally permissible.

PHIL 0012. Knowledge and Reality.

An introduction to some central issues in epistemology and metaphysics. Topics include the nature of knowledge; skepticism and contemporary responses; and the nature of space and time. Questions we may consider: What is the nature of knowledge? How do you know that radical skeptical hypotheses are false? What is our experience of (and the nature of) space and time like?

PHIL 0013. Paradoxes.

Paradox arises when claims we take to be obviously or necessarily true lead us to conclusions that seem obviously false or incoherent. Avoiding and resolving paradox is, then, a vitally important philosophical task. Attempting to do so leads us to some surprising conclusions about such wide-ranging topics as linguistic practice, the behaviors of space and time, what it is to be rational, and even the nature of truth itself. In this course, we will survey some of the most famous paradoxes in the philosophical literature, and discuss what they tell us about the world and our way of thinking.

PHIL 0014. Philosophy of Religion.

This course introduces the main issues and debates in the Philosophy of Religion. It divides into four modules. We begin with the traditional arguments for God's existence: Did God cause the universe? Is the universe designed? Should we believe in miracles? Then we will consider the traditional arguments against God's existence: Can there be an all knowing or all power being? Does evil in the world show there is no God? After this, we consider questions regarding faith: What is faith? Is faith without evidence rational? Is belief required for faith? Finally, we consider the topic of religious pluralism: is there only one correct religion, or are different religions compatible with each other?

PHIL 0015. Introduction to Philosophy.

This course will introduce the student to the how, what, and why of philosophical enquiry through engagement with some of the major themes, and major figures, of the field. We will follow our wonder about the world around us, ourselves and about how we should act in it, using classical as well as contemporary writings. Through a combination of lectures, readings, class discussions, and assignments the student will develop their ability to understand and engage with philosophical texts, evaluate arguments, and express their critical and reflective opinions in writing.

PHIL 0016. Language, Thought, and Reality: Themes in the Analytic Tradition.

What is the nature of the relationship between the mind and the external world? What is the relation between thought and language? And how does language enable us to capture, carve up, organize or impose order upon the world around us? These questions reflect themes that have been central to analytic philosophy since its inception near the turn of the 20th century. In this course, we will examine these questions, as well as their relevance for philosophy, by exploring and evaluating various answers and approaches advanced by prominent figures in the analytic tradition.

PHIL 0017. Animal Ethics.

This course is an introductory survey of philosophical issues in animal ethics. We affect the lives of non-human animals in myriad ways. What moral obligations do we have towards them? For example, is it wrong to eat meat? To experiment on animals? To keep pets? Should we try to reduce predation? How (morally) important is it that we save endangered species? Some take these to be among the most important ethical questions of our time. We will start with a brief overview of animal minds; then we'll examine several contemporary theories of animal ethics. Along the way, we'll pay careful attention to the implications of philosophy for everyday life.

PHIL 0018. Social Contract Theory.

A central feature of states is that they can back up their commands with force. What makes the use of force wrong when wielded by individuals, but permissible when wielded by the state? What limits are there on the commands governments can give, or the force they can employ? Is it ever permissible to employ force in resistance to the state? One important perspective on these questions is social contract theory, which sees the legitimacy of the state as resting on consent. In this course, we will trace the history of social contract theory from its first rise and fall in the early modern period to its twentieth century revival, with an eye on how it answers the questions above, and how the answers it offers may be relevant to how we think about political issues today.

PHIL 0019. Implicit Bias: What is it, Who is to Blame and What's Next?

In daily life, we might experience or exhibit various forms of implicit bias, e.g. experiencing anxiety when walking past individuals from certain racial groups, or being surprised by female students' achievement in science classes. How should we understand implicit bias? What's the mechanism of it? In this course, we will explore two fundamental aspects of implicit bias, i.e. its nature and its corresponding moral blameworthiness. This course is designed to be interdisciplinary and to equip students with the ability to critically analyze the everyday phenomena of implicit bias and rethink about the moral blameworthiness of implicit bias in real life cases.

PHIL 0020. Science, Perception and Reality.

It is implausible that scientific discoveries could make us give up commonsensical beliefs. It is even less plausible that commonsense could make us reject established scientific theories. So when science and commonsense appear to clash, as they do over colors, solidity, mental content, values, and death, serious philosophical problems arise. We will investigate possible responses to these problems.

PHIL 0021. Living the Sage Life: A History of Chinese Ethics.

How does a sage live their life? What do we have to do to become sages? Chinese philosophers throughout history have answers to these questions. In this course, we investigate the ethics of (ancient) Chinese sagehood and how they relate to a good and moral life, with a special focus on different variations of Confucianism and Daoism. We will start with Confucius, Mencius, and Zhuangzi in the Warring States, to Laozi in the Western Zhou Dynasty, and end with Wang Yang Ming in the Ming Dynasty. Crucially, the course involves an experimental element: students will be asked to not only think about sagehood, but also experiment with living like a sage. We will thus be experimenting with several meditation methods, reflection methods, and discussion methods. This course will also involve a field trip to an art museum.

PHIL 0022. Nietzsche's Zarathustra.

Friedrich Nietzsche is one of the most profound and influential thinkers in the history of philosophy, but also one of the most misunderstood. In particular, the work Nietzsche himself considered his magnum opus – Thus Spoke Zarathustra – has been the subject of intense debate and speculation owing to its literary style and evocative, cryptic imagery. In this course, we will spend the semester reading Thus Spoke Zarathustra. Together we will attempt to answer key questions such as “Who is Zarathustra, and what does he represent?”, and explore some of Nietzsche's most famous ideas, including eternal recurrence and the overman (Übermensch).

PHIL 0023. Gender Metaphysics from Marginalized Perspectives.

What is the relationship between gender, sex, and sexuality? What distinguishes one gender or gender identity from another, especially when two of them might look very similar from an “outside” perspective? How internal is the process of identifying with a gender? This course explores these and other questions primarily from the perspective of the so-called “border zones” where lines between different identities, labels, and experiences are more obscure. In particular, we will consider how to define amorphous yet deeply significant concepts like “masculinity” in a way that is compatible with and accounts for the wide variety of people who identify with them - including, for instance trans men, some cisgender lesbians, and some people who don't fit neatly into the categories of “man” or “woman”.

PHIL 0024. Philosophy of AI.

Recent breakthroughs in artificial intelligence have already begun to reshape our world, raising a host of new practical and theoretical challenges. Do Large Language Models generate and understand text as humans do? Or might contemporary AI present a new and radically alien form of intelligence? Could artificial systems ever become conscious? And how might we foresee and forestall potential negative impacts of AI, including the spread of misinformation and the replication of human biases in artificial systems? In this course, we will explore these and related philosophical questions as we trace the rise of artificial intelligence from the days of Alan Turing to today's cutting edge deep neural networks.

PHIL 0025. Capitalism versus Socialism.

Capitalism is the world's dominant economic system. Billions live under it; arguably, the majority of us do, and even those who do not are affected by it. Yet many wish we did not. Historically, the greatest opposition has come from those who have described themselves as socialists. While socialism underwent a loss of popularity in the latter part of the 20th century and the beginning of the 21st due to the failures of self-described socialist regimes, it appears to be regaining popularity, at least among younger generations. But which is in fact better: capitalism or socialism? The question can still provoke heated debate. In this course, we will explore the ethical arguments for and against these economic systems, as well as ethical questions that each system raises. The goal will be to equip you to compare the systems.

PHIL 0026. Introduction to Classical Chinese Philosophy.

Ancient China was a cauldron for much philosophical innovations and sophistications. In this course, we will introduce you to some of the major schools of philosophical thought in this period, with a focus on the ethical thought. In particular, we will work through the ethical debates between the Confucian, the Mohist, the Daoist, and the Legalist. We will read classical texts such as the Analects of Confucius, Mengzi, Xunzi, Mozi, Zhuangzi, Laozi, Hanfeizi, supplemented by secondary scholarships on these texts. The questions we will ask include: What is the good person? What is “etiquette”, and what is its relation to morality? Is the human nature inherently good or evil?

PHIL 0027. Ethics of AI.

Artificial intelligence has already begun to reshape our daily lives and the structure of the society in which we live. This course is a philosophical introduction to ethical issues posed by AI. We will start with topics of traditional interest to computer scientists and regulators: what would it take for an algorithm, or its use, to be fair and transparent? Are these worthy goals? Then we will look at accountability and the question of what we may ask an AI to do for us—apologize, kill? After that, we will examine some social consequences of deep learning: privacy, copyright, deepfakes, and the future of work. We will conclude with a look at existential risk and the prospects for AI consciousness and moral status.

PHIL 0030. Skepticism and Knowledge.

What is knowledge? What is the extent and basis of one's knowledge about physical objects, other people, oneself, the future, morality, and religion? No overrides will be granted for this course.

PHIL 0040. Critical Reasoning.

Critical reasoning is the art of recognizing, analyzing, composing and evaluating arguments. In this course, students will acquire skills that are needed not only to understand and evaluate complex arguments, but also to construct strong arguments themselves. Topics that will be covered include: validity and soundness, argument decomposition and construction, deductive and inductive arguments, and fallacious reasoning. After solidifying their critical reasoning skills, students will apply those skills to a number of challenging philosophical debates, touching on themes such as free will, skepticism, and morality.

PHIL 0051. Philosophizing Politics and Economics: An Introduction to PPE.

Like most subjects, politics and economics started as offshoots of philosophy: famous economists such as Adam Smith and Karl Marx, and famous political theorists such as Hobbes and Locke, were all philosophers. Political science and economics have since become disciplines in their own right, each helping us understand key aspects of society. But perhaps something is lost when these are separated from the philosophical point of view... In this course, we take on that point of view and seek to understand politics and economics, and think about how our politics and economics should be organized, by approaching these subjects and their intersection as philosophers. This doesn't mean we will only be reading philosophers. But I am a philosopher, and so our study of the intersection of these subjects will be done in a philosophical manner.

PHIL 0060. Modern Science and Human Values.

Modern science has taught us surprising new things and modern technology has given us extraordinary new abilities. We can now prolong life in extraordinary ways, artificially enhance our physical and cognitive abilities, and radically reshape the natural environment on local and global scales. This course is an introduction to philosophical reasoning with a focus on philosophical questions that have been raised or informed by this newfound information or these newfound abilities. In particular, we will give special attention to questions arising in connection to recent developments in computer science and artificial intelligence.

PHIL 0061. Ethical Themes in the Contemporary American Short Story.

Do you like to read short stories and discuss the ethical issues they raise? In this seminar, we will discuss contemporary American short stories in terms of ethical issues involving love, envy, kindness, cruelty, pride, pity, grief, obligation, charity, and other areas. How can such discussions offer fresh perspectives on fiction as well as on ethics? This is an in-person seminar with all sessions available for remote participation by students who have valid reasons for not being able to attend in person. In addition, all sessions will be recorded.

PHIL 0065. Contemporary Moral Problems.**PHIL 0080. Existentialism.**

An introduction to philosophical thinking through the study of existentialist themes, including being oneself, loving others, the limits of morality, and the meaning of life in the face of suffering and death. Readings are drawn primarily from Schopenhauer, Dostoyevsky, Nietzsche, Kierkegaard, Heidegger, Sartre, de Beauvoir, and Camus.

PHIL 0088. Good Persons.

In this course, we will explore what makes a person good in various aspects. Especially, we will focus on what is a good person's moral psychological outlook. Goodness of a person is not limited to their actions, but also their emotional dispositions, who and what they care about, etc. Topics in this course may include friendship, caring, anger and revenge. We will discuss questions such as "Is it morally problematic to have a bad person as a friend", "what does a good person care about", "Is anger ridiculous", etc.

PHIL 0090A. Food and Philosophy.

This course will deal with questions about the epistemology, metaphysics, aesthetics, ethics and politics of food: how we should reason about the things we eat, what makes them tasty or artistic, and what we ought and ought not to eat and how we ought to structure the environment in which food is produced and distributed. This seminar is meant as a general introduction to philosophy, in which you will familiarize yourself with long-standing kinds of philosophical questions and modes of reasoning. Food will be our anchor topic, the subject matter that gives us the occasion for such philosophical reflection.

PHIL 0091. Does Humanity Have a Future, and If So, How Bad Will It Be?

There are a number of reasons for worry about the future of humanity. Some of these reasons concern threats with fairly low probability, such as collisions with giant meteors, but others are concerned with possibilities that seem quite close at hand. The latter threats include climate change, of course, but also runaway AI, nuclear war, lethal viruses (both natural and designed), and loss of essential features of our humanity due to genetic engineering. This course will consider the consequences of such threats, should they become actual, and also estimates of their probability. For the most part, however, we will be concerned with moral, political, and metaphysical questions that they pose. Do future generations have any claim on us? If so, why?

PHIL 0101. Critical Reasoning.

Critical reasoning is the art of recognizing, analyzing, composing and evaluating arguments. In this course, students will acquire skills that are needed not only to understand and evaluate complex arguments, but also to construct strong arguments themselves. Together we will cover topics such as: validity and soundness, argument decomposition and construction, deductive and inductive arguments, and fallacious reasoning. After solidifying their critical reasoning skills, students will apply those skills to a number of challenging philosophical debates, touching on themes such as free will, skepticism, and morality.

PHIL 0110. Ancient Greek Philosophy.

This course will introduce students to the major concerns of Greek philosophy, and how they are addressed by the Presocratics, Plato, Aristotle, and the Stoics. We will have two related ends: historical and critical. On the one hand, we will get clear so far as we are able what it is that these thinkers thought; on the other, it is important to evaluate their arguments. This course will emphasize the identification of the problems and the solutions to them that seemed pressing to these thinkers, especially if such problems seem alien to us.

PHIL 0200H. Contemporary Ethical Issues.

Are we morally obligated to reduce greenhouse gas emissions? Do we have moral obligations toward nature, animals and other people, for instance future generations and refugees? Is abortion morally wrong? Is legalization of drugs the right thing to do? In this course we will explore these and other contemporary ethical issues in the context of important moral theories; utilitarianism, virtue ethics, and the social contract theory. This course will serve as an introduction to applied ethics and normative ethics.

PHIL 0208. Feminist Philosophy.

This course uses the tools of analytic philosophy to investigate a diverse range of feminist issues. The course begins by asking metaphysical questions. What is gender, sex, sexual orientation, disability? Second, we investigate topics in feminist epistemology. What is the relationship between social identity and knowledge? Can this both constrain and enable what one is in a position to know? Third, we consider issues in feminist philosophy of language. What can speech act theory tell us about consent? Last, we consider feminist issues in moral and political philosophy. What is bodily autonomy? Should sex work be legal? Is abortion morally permissible?

PHIL 0210. Early Modern Philosophy.

An introduction to central themes in Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and Kant. Major topics include: reason, experience, and knowledge; substance and the nature of the world as it really is; induction, causation, and the origin of our ideas; skepticism, realism, and idealism. Connections are made with the scientific revolution of the 17th century. There will be discussion and advice on ways to approach philosophical reading, research and writing.

PHIL 0211. Modern Political Philosophy.

The course aims to provide an introduction to some themes and thinkers in modern political philosophy. Many of the philosophers we will read are engaging in a debate about important political questions: What reasons do people have for establishing or submitting to the authority of a state? Does participation in a political community limit our freedom or enhance it? What rights do agents have in a pre-political state of nature and within a state? We will discuss the influence this discussion had on philosophical attempts to understand the Enlightenment, Karl Marx's critique of capitalism, and arguments supporting the rights of women.

PHIL 0212. Relativism (In Ethics and Epistemology).

The term "relativism" is used to talk about a cluster of views, which claim that what is the case in a given subject matter depends on the culture, community, or agent that is assessing the subject matter. The term is often used loosely in contemporary debates, though it shows up in arguments to controversial conclusions. Throughout this course we will (A) informatively and precisely characterize possible relativist doctrines, making sure to distinguish between them and (B) critically evaluate them and assess their plausibility in light of arguments for and against them.

PHIL 0290. Introduction to Philosophy.

Philosophy is concerned with the deepest most basic questions about the universe. We'll concentrate on some fundamental moral and metaphysical questions: What is the right thing to do? Is morality objective? Do we have moral obligations toward people other than those we know and care about? Do we have moral obligations toward future generations? Do we have moral obligations toward animals? Is your mind identical to your brain? What is consciousness? Do we have free will? Does free will matter for morality? What is personal identity?

PHIL 0295. Logic.

This course is an introduction to deductive logic. The course is intended for students who have not taken a logic course before. The course starts with sentential logic, then moves on to natural deduction, quantifiers and predication, and truth trees. The course will include some related topics: vagueness, conditionals or counterfactuals.

PHIL 0351. Nietzsche's Zarathustra.

Friedrich Nietzsche is one of the most profound and influential thinkers in the history of philosophy, but also one of the most misunderstood. In particular, the work Nietzsche himself considered his magnum opus – Thus Spoke Zarathustra – has been the subject of intense debate and speculation owing to its literary style and intense, cryptic imagery. In this course, we will spend the semester reading Thus Spoke Zarathustra. Together we will attempt to answer key questions such as "Who is Zarathustra, and what does he represent?", and explore some of Nietzsche's most famous ideas, including eternal recurrence and the overman (Übermensch).

PHIL 0401. Ethics of Digital Technology.

As the capacities of digital technology have increased, it has entered (almost) every domain of our lives. Algorithmic models, Artificial Intelligence, and everyday processing of vast amounts of data increasingly shape both our private choices and opportunities, and also our interactions in the public sphere. These developments raise new ethical and normative political questions and prompt us to examine the role of values such as freedom, autonomy, equality, and privacy in the digital sphere. How should a self-driving car behave when a crash is unavoidable? Are engineers responsible for the decisions of artificially-intelligent systems? What is the value of privacy in a world that increasingly depends on large amounts of data about customers, citizens, or patients? How does the algorithmic curating of content relate to freedom of expression? These and other topics will be the focus of this course.

PHIL 0402. Moral Pluralism.

Moral pluralism is an unmistakable characteristic of modern liberal societies. Even though the dire conflicts of religion which fuelled wars and civil unrest appear to be a thing of the past, fundamental moral disagreements are still plentiful today. Now as then, these disagreements expose tensions among the core of ideas upon which liberal societies are built. This course explores moral pluralism through the lens of classic and contemporary works in political philosophy and engages with questions such as: should the state be neutral in relation to different religious and moral convictions? Are there some values which we can expect all citizens to share despite their deep disagreements? How should citizens engage with each other when they debate controversial moral questions in the public forum?

PHIL 0403. Ethics and Politics of Data.

Persona data is ubiquitous: with the proliferation of digital technology, our lives and bodies have become increasingly observable, quantifiable, and interconnected. This generates new opportunity for the state, private companies, and other individuals to act on us. Data makes us more powerful but also more vulnerable. This course focuses on the new ethical and political challenges of lives permeated by the creation, collection, and processing of personal information. Do we own data? Is there a right to be forgotten? Should we use data to predict and manipulate individual behaviour? What responsibilities do we have to others whose data is intertwined with ours? These and other related topics will be the focus of this course.

PHIL 0410. Moral Philosophy.

What is the right thing to do? What should a good person be like? More generally, what determines what is right and wrong, good and bad, virtuous and vicious? In this course, we will consider three greatly influential moral theories – utilitarianism, Kantianism, and Aristotelian virtue ethics – as well as feminist perspectives on morality. Towards the end, we'll also consider more general questions that any moral theory faces. For instance: Does morality depend on God? Is morality relative or subjective (whatever that's supposed to mean)? And why should we care about being moral in the first place?

PHIL 0412. Climate Change Ethics.

Climate change is commonly said to be one of the defining issues of the 21st century. Calls for, and movement towards, significant action seem to be growing. Yet what ought to be done? This is a moral question as much as, if not more so, than an economic, political, or scientific question. In this course, then, we will consider climate change from the point of view of moral philosophy.

PHIL 0420. Introduction to Aesthetics.

This is an introductory course on aesthetics, giving an overview of the history of (western) aesthetics and of contemporary debates in analytic aesthetics. Among the historical figures to be read are Plato, Aristotle, Kant, Nietzsche, and Adorno. Some of the contemporary debates concern the right theory of art (representationalism, the expression theory, formalism), the definition of art, and the ontology of works of art. We will consider some general criticisms of western aesthetics. Students will be introduced to prominent positions in aesthetics, but they will also learn how to engage in rigorous philosophical argumentation in the face of those positions.

PHIL 0450. The Meaning of Life.

This is an introductory course in ethics, with a focus on the question of what is the nature of the human good, or of a life lived well. Readings will be from classical sources (Aristotle, Epicurus, Kant, Nietzsche, Camus) as well as from contemporary authors. In investigating this question, the course will also introduce students to some of the main problems and positions in moral philosophy. Central concepts such as obligation, responsibility, pluralism, and moral knowledge will be discussed, but in the larger context of what is the nature of the good life. No prior work in philosophy will be presupposed.

PHIL 0460. Contemporary Ethical Issues.

Are we morally obligated to reduce greenhouse gas emissions? Do we have moral obligations toward nature, animals and other people, for instance future generations and refugees? Is abortion morally wrong? Is legalization of drugs the right thing to do? In this course we will explore these and other contemporary ethical issues in the context of important moral theories; utilitarianism, virtue ethics, and the social contract theory. This course will serve as an introduction to applied ethics and normative ethics.

PHIL 0470. Environmental Ethics.

In the first half of the course, we will ask what sorts of things have value. Does the realm of moral consideration extend past human beings to include animals, plants, and nature itself? How does environmental concern figure into the worthwhile life? What role do consumer goods play in a good life? How do we know? Good intentions are not enough to make good policy. Thus, in the second half of the course, we will try to determine what sorts of policies actually help to protect the environment. We will learn what economics and other social sciences tell us about human behavior and how to shape institutions. We will examine issues in wildlife management, human population, resource use, and more.

PHIL 0480. Plagues, Principles, and Policy: An Introduction to Philosophical Bioethics.

If you're reading this, you survived a pandemic. If you have lingering ethical questions about the social response, this course is for you. It's designed to offer a rigorous introduction to the field of bioethics. Bioethics is a key field of study for anyone considering a career in healthcare. But it's also an important field for anyone who is interested in learning more about – and engaging in – the application of ethical theories to real-life quandaries involving health. When pandemics happen, bioethicists are called upon to guide hospitals, civil society, doctors, and the state in grappling with tough choices. They aim to give principled answers to questions like: how should scarce medical resources like ventilators and vaccines be distributed? When are mandatory lockdowns and community quarantines justified? And what duties do we have to safeguard health in future societies?

PHIL 0491. Ethical and Political Issues From George Orwell's Essays and Novels.

This course will discuss ethical and political issues in a selection of George Orwell's essays and novels and will demonstrate that Orwell has much more to offer than the familiar political warnings, although we will be discussing those too.

PHIL 0500. Moral Philosophy.

What is the right thing to do? What should a good person be like? More generally, what determines what is right and wrong, good and bad, virtuous and vicious? In this course, we will consider three greatly influential moral theories – utilitarianism, Kantianism, and Aristotelian virtue ethics – as well as feminist perspectives on morality. Towards the end, we'll also consider more general questions that any moral theory faces. For instance: Does morality depend on God? Is morality relative or subjective (whatever that's supposed to mean)? And why should we care about being moral in the first place?

PHIL 0510. Psychology and Philosophy of Happiness.

The course explores four fundamental questions about happiness: What is happiness—pleasure, life satisfaction, something else? How is happiness achieved—what are the myths and realities about what conduces to happiness? Can happiness be achieved—are we naturally well suited to be happy? Why pursue happiness—is it sufficient, or even necessary, for a good life? The course examines classic contributions from philosophy and psychology, the two disciplines that have studied happiness most extensively. Team-taught by professors from both philosophy and psychology, it invites students to compare and combine both approaches.

PHIL 0520. Global Justice.

Is it unjust that people in some countries have less wealth, worse health, etc., than those in other countries? Does this depend on whether the better off countries partly caused the disparity? Does it depend on whether the worse off are poor, or is it enough that they are relatively worse off? If there are global injustices, what obligations are there, and on whom do they fall, to remedy them? We will study (mostly) recent philosophical work on such questions, including attention to special contexts such as immigration, climate change, poverty, colonialism, secession, intervention, and war.

PHIL 0530. Marxism.

In the first part of the course, we will examine Marx's economic, political, and philosophical writings, focusing on his analysis of capitalism, his critique of liberal democracy, and his theory of history. Then in the second part, we will look at some recent attempts to renew and extend the Marxist tradition.

PHIL 0532. Consumer Ethics.

This course is an attempt to come to grips with how to consume ethically (if such a thing is even possible). We'll address several related questions, such as: Do we have any obligations as consumers? If so, what obligations might we have? What is the source (or sources) of those obligations? Do we have an obligation to investigate the provenance of the consumer products that we purchase? Do we have an obligation to engage in "ethical consumerism"? Or might such behavior itself be somehow illicit? Are we complicit in the bad acts of the corporations from whom we purchase products? How might we respond, as consumers, to the problems of consumer ethics?

PHIL 0550. Free Speech.

Freedom of speech is a challenging and controversial ideal. Legal questions are central, but the issues range into moral and political philosophy as well. We will study John Stuart Mill's influential 19th century treatment of the idea, and then concentrate mostly on discussions within the last fifty years, including much that is on the cutting edge of current thinking about freedom of speech. Topics will vary, including such things as: political speech, art and offense, pornography, hate speech, protest, copyright, internet and new media, and campaign finance laws.

PHIL 0555. Choice, Commerce, and Conflict: An Introduction to PPE.

This interdisciplinary course provides an overview of some of the core conceptual tools used to analyze issues at the intersection of philosophy, politics, and economics (PPE). A range of theoretical topics are covered, including: game theory, property, markets, distributive justice, public choice theory, voting, and more. We will read classical and contemporary sources on these topics as well as explore their applications to contemporary social problems (including: climate change, healthcare rationing, price gouging, universal basic income, pharmaceutical regulations, and others).

PHIL 0560. Political Philosophy.

An analytic investigation of some central problems and topics in political philosophy, including political obligation and civil disobedience, liberty, rights, equality, and democracy. Readings are drawn from recent work in the field, along with a few classics.

PHIL 0561. Love: A Survey in the History of Philosophy.

This course will be a survey in the history of philosophy on the question of what it is to love another person. We love our friends, we love our family, we love our romantic partner(s). But what is it that we do, or what kind of state are we in, so to speak, when we love them? Moreover, what are the differences between these kinds of love, or are they essentially the same? This course will survey these questions by reading some philosophers in the past who wrote on the subject matter. We will begin the course with the writings of the Ancient Greeks, particularly Plato and Aristotle, and then we will move on in the chronological order, and read the writings of Cicero, Montaigne, Bacon, Kierkegaard, among others.

PHIL 0570. Topics in Feminist Philosophy.

This survey course is designed to introduce students to core issues of feminist philosophy. We will investigate foundational and topical questions of feminist theory, by both classic and contemporary authors. Topics include: the nature of gender, oppression, masculinity and femininity, objectification, and the relationship between social inequality and knowledge. Emphasis will be placed on understanding these issues in relation to social categories such as race, sexuality and (dis)ability.

PHIL 0575. Philosophy of Sex.

Sex is an important part of human experience, and questions about it have been central to literature, politics, religion, etc. It also gives rise to characteristically philosophical questions. What exactly is sex? How are sexual activities, desires, interests, and attractions related to one another? What makes such things 'sexual'? What sorts of ethical considerations arise in the case of sexuality? Is consent always required if sexual activity is to be ethical? Is sex between consenting adults always guaranteed to be morally unobjectionable? What exactly is wrong about rape? And is fantasizing about rape itself wrong? How do disparities due to race, gender, disability, and the like affect the ethical character of sexual interactions? Does pornography objectify or otherwise demean women, members of certain racial groups, and/or disabled people? And what exactly is objectification? Why should it be thought problematic?

PHIL 0590. Do the Right Thing: Value Theory for PPE (Philosophy, Politics and Economics).

PPE researchers (those working at the intersection of philosophy, politics, and economics) think seriously about how to solve problems of social coordination. In doing so, they often draw tools from philosophical value theory: applying ideas about justice, the common good, ethics, and welfare in their efforts to reform or improve social institutions (e.g. an economy that maximizes utility, a constitution that enshrines rights). In order to do this work, scholars and practitioners of PPE need to develop familiarity with key concepts and distinctions from value theory. This course will familiarize participants with these tools and train them in their application. It will show how value theory can better equip us to respond in a reasoned and defensible way to hotly disputed questions of public policy in areas such as water rights allocation, migration, climate governance, and antitrust law.

PHIL 0630. Aesthetics and the Imagination.

This course aims to provide an overview of both central themes in aesthetics and more recent work on the imagination and aesthetic experience. We will begin by focusing on the question "What is Art" and then discuss the nature of taste and aesthetic judgement. We will next focus on several puzzles concerning the connection between imagination and aesthetic response. How is it the case that we can experience strong emotions from fiction while simultaneously believing that the characters and events depicted in these fictional works do not exist? Why do we find seeing unpleasant or grotesque events depicted in horror pleasurable? Can or should we separate morally problematic artists from their aesthetic creations? In addition to reading historical and contemporary works on aesthetics, we will also look at films, literature, and works of visual art that illustrate relevant philosophical themes.

PHIL 0640. Logic.

An introduction to perhaps the most fundamental tool of rational thought: deductive logic. Course begins with basic sentential logic, then moves on to deduction, quantification, and predication. Argumentation and reasoning may also be addressed at times. No previous experience with logic or philosophy is required.

PHIL 0651. Contemporary Political Philosophy.

What makes laws legitimate? What rights do immigrants have? How much can the government interfere in the economy? Can revolution be permissible? Is democracy really the best form of government, and if it is, why? In this course, we will consider these and similar questions as they have been addressed in anglophone political philosophy of (mostly) recent decades. We will also consider issues of philosophical methodology: how are questions in (political) philosophy best answered? What makes for a good argument?, etc.

PHIL 0652. Introduction to Continental Philosophy: Self, Society, Science.

In this course, we will read some of the most influential European philosophers of the 20th and late 19th centuries, including Jean-Paul Sartre, Hannah Arendt, Martin Heidegger, and Friedrich Nietzsche. Our aim will be to get a general understanding of the major themes and ideas of these enduringly influential figures, as well as to see how we might apply their ideas in our own lives. To structure our studies, we will concentrate on questions about the self and our freedom: are there natural laws of the mind, or of societies? Are we who we choose to be, or who we are born to be? Can science help answer these questions, or are they beyond its limits? In taking up these questions, we will join one of the most exciting and extensively studied philosophical conversations of the last hundred years.

PHIL 0692. The Gödel Incompleteness Theorems.

The two incompleteness theorems proved by Kurt Gödel in 1931 are among the greatest results in the history of logic. We'll study them in detail, reading Gödel's original paper and other sources. Prior experience with logic will be helpful but is not required. A strong background in mathematics is required, as most of the course will deal with proofs. Sophomores may be allowed to enroll if there is room and should contact the instructor for an override after pre-registration.

PHIL 0720. Social Epistemology.

This course is an introductory survey of philosophical issues in social epistemology. Many of our beliefs are formed on the basis of testimony—by reading or hearing about facts that we have not directly observed. One of the central questions of social epistemology is how we ought to treat testimonial evidence. Should we accept testimony at face value, or should we require further evidence that the testimony comes from a trustworthy source? How can we determine that a source is trustworthy? Questions about testimony naturally lead to questions about epistemic injustice. Do we unfairly inflate or discount the testimony of an individual based on their gender, race, or class? Do current epistemic practices and institutions unfairly advantage or disadvantage particular bodies of knowledge? How can we ameliorate these injustices?

PHIL 0751. Problems of Irrationality: Self-Deception and Weakness of Will.

This is an historical and systematic introduction into the nature of self-deception and weakness of will. There's little agreement among philosophers about the correct description, much less the explanation of these phenomena. Historically, they've been approached primarily as moral failings, while contemporary philosophers have focused more on conceptual issues: Is it always irrational to act against your better judgment? Does self-deception require an intentional effort to disbelieve some home truth? And more broadly: What do these phenomena tell us about sound, rational belief and action? What do they tell us about the sorts of creatures we are?

PHIL 0850. Introduction to the Philosophy of Language.

Discussion of the nature of linguistic meaning and other topics, such as vagueness; metaphor; and language, thought, and culture.

PHIL 0870. The Nature of Fiction.

This course is concerned with philosophical questions arising from the concept of fiction. Topics will include: What makes a story a fiction? What are fictional characters? Are fictions "created"? Are fictions physical things, like books? How do fictions make us care about things we don't even believe in? How do fictions affect our moral beliefs.

PHIL 0990F. Perception.

This is an undergraduate seminar on the philosophy of perception intended primarily for junior and senior concentrators. Topics include: naive realist versus representational theories of sensory experience, the possibility that sensory experience is massively illusory (so that we already occupy a kind of "virtual reality"), the role of the brain in shaping sensory experience, and the alleged foundational role of sensory experience in knowledge. The focus will be on vision but we will also discuss other sense-modalities. Prerequisite: at least 2 previous courses in philosophy.

PHIL 0990T. Paradox and Infinity.

This course will focus on several important paradoxes that arise within philosophy and mathematics. We will use these paradoxes to investigate central issues in metaphysics, the philosophy of language, decision theory, physics, mathematics, and logic. Among the paradoxes we will discuss are Zeno's paradoxes of space, time, and motion; the paradoxes of set theory; the paradoxes of truth and reference; the sorites paradox; and paradoxes of rational action and rational belief. Enrollment limited to 20.

PHIL 0990V. Current Questions About Rational Belief.

We'll study some "hot topics" in epistemology. Some possible questions: (1) What's the relationship between rational belief and logic? (2) Is belief best thought as all-or-nothing, as coming in gradations, or both? (3) Can the same evidence support divergent belief-states? (4) Is rational belief completely determined by evidence, or also by values or practical interests? (5) Are graded beliefs best seen as coming in precise degrees, or as more "spread-out"? (6) Can I have rational beliefs I know are denied by others just as intelligent, unbiased, well-informed, etc., as I am? Enrollment limited to 20 juniors and seniors.

PHIL 0990X. Conditionals.

In this seminar we will look at different theories of what "if" means. Is it a truth-functional connective, like the material conditional used in logic? Do sentences of the form "If P, then Q" even have truth conditions? Some logic will be very helpful; some familiarity with philosophy of language also helpful. Enrollment limited to 20 juniors and seniors.

PHIL 0991C. Reasons and Oughts.

Contemporary philosophical problems of the fundamental deontic concepts. Topics will include: ought implies can, 'backpassing' accounts of value, narrow and wide scope requirements, subjective and objective reasons (and ought). Enrollment limited to 20.

PHIL 0991M. Mental Representation.

Discussion of contemporary philosophical and scientific work on intentionality and mental representation. Topics will include: types of mental representation (language of thought, spoken language, perceptual states, images, cognitive maps, trees, object files, etc.), relations between mental representations and the world (reference, informational semantics, teleological semantics), the nature of perceptual content, the differences between perceptual representation and conceptually grounded representation, philosophical theories of concepts, psychological theories of concepts, theories of belief, ethological work on animal beliefs and concepts, and the nature of conscious thought (particularly, evidence pro and con the theory that thought consists of auditory imagery and articulatory imagery).

PHIL 0991U. Reductionism.

Exploration of reductive approaches in contemporary metaphysics and philosophy of science. The question of whether there is a deep sense in which all the complexity of reality reduces to some more limited class of fundamental features.

PHIL 0992A. Puzzles of Rationality.

What is it to be rational? This course takes up that question by looking at a number of intriguing puzzles. For example: Is it irrational to not believe in God? Is it irrational to settle for less now when you could have more later? Is it irrational to intend to do something that you don't believe you'll do? Can it be rational to do what you hope you won't? When is it rational to be random? Is it ever rational to be irrational? Along the way, we will learn Bayesian probability theory, decision theory, game theory, and social choice theory.

PHIL 0992C. Iris Murdoch.

Murdoch started as a Philosopher of Mind and Language, with Wittgensteinian sympathies, attacking forms of behaviourism in the Oxford philosophy of the 1950s. She turned for more fruitful ideas initially to Continental Phenomenology and Existentialism and wrote a book on Sartre, but was disappointed there too: and became a moral philosopher in some ways close, in some ways quite different from Anscombe and Foot, developing a kind of moral realism that (as redeveloped by John McDowell) went on to make a huge impact. We will study her, with a selection of major influences including Simone Weil, Plato, Kant, Kierkegaard, Marx and Freud.

PHIL 0992D. Law, Morality, and Justice: Topics in the Philosophy of Law.

In this course, we will study the relationship between law, morality, and justice. We will focus, in particular, upon four questions: (1) What makes a law authoritative? (2) What is the relationship between moral and legal responsibility? (3) What should we do when confronted by immoral laws? And (4) how should we deal with those who break the law? In pursuing answers to these questions, we will read and engage with the theoretical work of philosophers, jurists, and criminals. We will gain familiarity with some of the major ideas and questions that have characterized the philosophy of law to date. And we will engage with real legal cases, in order to better understand the practical import of our philosophical labors.

PHIL 0995. Free Will and Moral Responsibility.

This seminar introduces the problem of free will and moral responsibility as seen by contemporary philosophers. Do we have free will? What would it be like to have free will? What kind of freedom, if any, is required for humans to be blameworthy or praiseworthy for their actions? What other things might be required? Can there be moral responsibility if everything that happens is causally determined? Can there be meaningful lives if everything is determined? And what is one to make of the typical "scientists prove there is no free will" newspaper headline? We will explore these questions and possible answers through readings in analytical philosophy.

PHIL 0999. Feminism, Fetishes, and Objectification.

There seems to be lots of "fetishes" in our society. There are "fetishes" for dating people of a certain race; there are "fetishes" one can acquire for certain cultural aesthetics. However, what makes something a morally objectionable fetish, rather than a morally innocuous preference? For example, how is having an Asian fetish fundamentally morally different from being heterosexual? Perhaps a plausible answer is that fetishes essentially involve objectifying a group of people, which is morally wrong. On the other hand, preferences do not involve such objectification. But what exactly is objectification? Why is it morally problematic? In this class, we will explore the concepts of fetish and objectification, and observe their roles in current issues regarding gender, racial, and other injustices. Potential topics will include the male gaze, cultural appropriation, and romanticisation of disability.

PHIL 1003. Inquiry and Ignorance.

Is it possible to inquire well in a warped environment when the very information you are meant to take as evidence may be distorted, thereby leading you to a false belief? This course will address this expansive and loaded question by unpacking the nature of inquiry and ignorance. What is inquiry? What is ignorance? Can ignorance make a line of inquiry better or worse? These are the core questions of the course. We will aim to clarify these questions in a seminar format with readings from epistemology, social and moral philosophy, and psychology.

PHIL 1005. Punishment and Justification.

A central concern in legitimizing our criminal justice system is the justification of punishment. Given the objectionable nature of the intentional imposition of harm, a failure to adequately justify the practice can call into question its persistence. For democratic societies in particular, the question of whether punishment can be adequately justified is of special concern. This course will survey the major philosophical justifications for legal punishment. Special focus will be placed on the expressive dimensions of punishment, the punishment of adolescent offenders and the possibility of their incarceration with adults, as well as arguments for and against the abolition of incarceration as a form of punishment.

PHIL 1012. Climate Ethics.

Climate change challenges our way of life and our institutions. The impact of climate change is not the same all over the globe. Developing countries may suffer worse consequences than wealthier countries. At the same time wealthier countries are responsible for most of the greenhouse gas emissions. Maybe we can mitigate or adapt to climate change, but the question whether we should do something about climate change is an ethical question. The ethical question is complex. Who is morally responsible for climate change? Individuals? States and nations? Can past generations be held responsible for their greenhouse gas emissions? Do we have moral obligations toward future generations? Should all countries bear the burden of climate change equally?

PHIL 1110. Plato.

A close reading of Plato's major dialogues from a philosophical perspective. Topics may include his ethics, politics, metaphysics, epistemology, philosophy of mind, philosophy of language, or aesthetics. Readings are from original sources (in translation) and contemporary secondary literature. (Students wishing to read the texts in the original Greek should make arrangements with the instructor.)

PHIL 1118. Plato's Republic.

In Plato's Republic, Socrates and his companions inquire into why it is better to be just than unjust. The ensuing conversation ranges widely, addressing the best way to set up a city, the parts of the soul, knowledge and its objects, pleasure, poetry, and many more topics besides. This seminar-style class is a close reading of the dialogue, supplemented with recent secondary literature.

PHIL 1120. Aristotle.

This is an introduction to the hugely influential philosophy of Aristotle, covering his natural philosophy, philosophy of mind, metaphysics, and ethics. We will closely read some of Aristotle's most famous works as well as a selection of contemporary secondary literature. The goal of the course is both historical and philosophical: On the one hand, students will familiarize themselves with Aristotle's philosophical positions, on the other hand, they will further develop their philosophical skills in analyzing Aristotle's arguments for those positions. The course will combine lecture and discussion.

PHIL 1125. Aristotle's Ethics.

An investigation of Aristotle's ethical views as they are expounded in the Nicomachean Ethics, with an emphasis on the place of virtue and what (if anything) might make Aristotle's account distinct from others on offer, including consequentialism and deontology. Topics include happiness and human flourishing, moral education, the virtues of character (including details of specific virtues), the nature of human action, the virtues of thought, weakness of will, pleasure, and friendship. Readings from Aristotle will be supplemented with selections from contemporary accounts of virtue ethics and scholarly work on Aristotle's writings.

PHIL 1150. Plato's Theaetetus.

Theaetetus is in many ways Plato's most modern dialogue. The central question is: what is it to know something? Is knowledge some sort of skill? Is it perception? True judgment? Some sort of account together with true judgment? We will read the dialogue in Greek and discuss Plato's fascinating investigation of knowledge.

PHIL 1153. Phenomenology of Time.

Time, as St. Augustine famously observed, is something we all know perfectly well, right until we are asked to explain it. In this seminar, we will explore this difficulty. Our main focus will be on the descriptions of temporal experience found in the phenomenological tradition: those of Husserl, Heidegger, and Merleau-Ponty. Two important questions for us will be: can this first-personal analysis of time be reconciled with a third-person or scientific perspective? And, is our language up to the task of performing this analysis, and if not, what have these authors accomplished? Prior experience in philosophy is strongly recommended.

PHIL 1155. Hellenistic Ethics.

The philosophers we'll read in this course have a lot of advice for us. Epicurus recommends that we "[g]et used to believing that death is nothing to us" (Letter to Menoeceus, trans. Inwood and Gerson). Epictetus tells us: "Do not seek to have events happen as you want them to, but instead want them to happen as they do happen, and your life will go well" (Handbook 8, trans. White). Lucretius describes at length the "ills" that are "experienced in love that is steadfast and supremely successful"—and adds that "when love is frustrated and unrequited, the miseries you can spot with your eyes shut are countless" (On the Nature of Things 4, trans. Ferguson Smith). What are we to make of all this advice? And what's behind it?

PHIL 1160. Medieval Philosophy.

Since the Renaissance, medieval philosophy has often been unjustly dismissed as arcane and irrelevant, despite impressive innovations in ethics, philosophy of mind, metaphysics, and logic. Instead of surveying so vast a field, the course focuses on one or two sets of problems, such as the problem of evil, the freedom of the will, the existence of God, universals, substance, mind and meaning.

PHIL 1210. Locke, Berkeley, Hume and Others.

A detailed study, both historical and critical, of central issues in Locke, Berkeley, and Hume. Topics include a selection from: innate ideas; substance; personal identity; abstract ideas; theory of language; perception, materialism, and idealism; induction and causation; and skepticism. Also includes some discussion of later critics of classical empiricism.

PHIL 1220. 17th Century Continental Rationalism.

In this course, we will read and discuss some 'greatest hits' of Leibniz's metaphysics. Topics include Leibniz's revolutionary theory of possible worlds, his idealist account of bodies, the fairytale that is the monadology, as well as other weird and wonderful ideas from the mind of the 17th century polymath.

PHIL 1230. Kant: The Critique of Pure Reason.

This course is an introduction to the mature philosophy of Immanuel Kant. Since the 18th century, few philosophers have more profoundly impacted the disciplines of metaphysics, epistemology, philosophy of mind, and moral philosophy than Kant. We will be reading Kant's magnum opus, the Critique of Pure Reason (1781/1787). Topics discussed will include: the nature and possibility of metaphysics, the relation between mind and world, knowledge and justification, the nature of space and time, causation, freedom and causal determinism, and self-consciousness.

PHIL 1231. British Empiricists.

Locke, Boyle and Margaret Cavendish. A detailed study both historical and critical. Topics include a selection from: innate ideas; substance; personal identity; language, classification; chemistry, 'corpuscles', and the nature of matter; challenges and hopes for natural philosophy; perception, skepticism

PHIL 1232. Kant's Critique of Judgment (Aesthetics and Teleology).

A study of Kant's Critique of the Power of Judgment. Topics will include Kant's theory of aesthetic judgment, including his account of the beautiful and the sublime; teleology, organic life, and the limits of mechanical explanation; and the relationship between ethics, aesthetics, and teleology.

PHIL 1240. Kant's Moral Philosophy.

An introduction to the central themes of Kant's moral philosophy, including autonomy, freedom, happiness, obligation, and virtue. Kant's position in the history of moral philosophy will also be considered. Readings to include all of Kant's major writings in this field, thus Groundwork for the Metaphysics of Morals, Critique of Practical Reason, Religion within the Boundaries of Mere Reason, and Metaphysics of Morals, as well as several essays and lectures. Work will include two short papers and one term paper.

PHIL 1320. Schopenhauer's Ethical Thought.

The course offers a comprehensive introduction to Schopenhauer's ethical thought. It covers the following areas: relevant epistemological and metaphysical views; philosophical psychology—pleasure and pain, character, and freedom of the will; the nature and possibility of well-being—subjectivism, pessimism, the ethical significance of aesthetic contemplation, and the concept of complete resignation; metaethical views: practical reason, deliberation, and the critique of unconditional obligation and intrinsic value; the nature of morality—critique of Kant, egoism, the theory of compassion, and the relation between morality and well-being.

PHIL 1340. Nietzsche.

The course will focus on Nietzsche's famed critique of Christian morality. We will consider a broad range of his writings, but we will pay special attention to the most pivotal and influential of his works, *On the Genealogy of Morality*. We will explore the distinctive approach to the analysis and critique of morality this book offers—in particular, the interaction between morality and affectivity. The course is open to advanced undergraduate students and graduate students. Special weekly discussion sessions will be organized for graduate students taking the course.

PHIL 1350. Nineteenth-Century Philosophy.

This course will treat 19th century German philosophy. We will examine the development leading from German Idealism to Nietzsche. Starting and focal point of all debates in 19th century German philosophy is the work of Immanuel Kant. Therefore basic ideas of Kant's philosophy will be discussed first. The German idealists criticized Kant for what they called his "dualism" which they thought splits up life's unity into unrelated aspects. A special concern brought up was Kant's alleged negligence of both what is different from reason and what is beyond its scope. In this context we will be reading Jacobi's famous letter to Fichte in which he raised the issue of impending nihilism, parts of Hegel's *Faith and Knowledge*, and Schelling's *Philosophical Investigations into the Essence of Human Freedom*. Arthur Schopenhauer passionately opposed the systems of German Idealism (though his own philosophy has quite a bit in common with them). He emphasized the limitations of reason's power. We will be studying selected pieces from his main work *The World as Will and Representation*. Thus prepared, we will move on to Nietzsche who reflects and criticizes all the tendencies of 19th century philosophy, casting doubt on traditional conceptions of reason, morality, truth, and religion. The threat of nihilism reappears, even stronger and even more provocative. We will be studying Nietzsche's analyses as well as his answers.

PHIL 1360. Twentieth-Century Analytic Philosophy.

This course provides an introduction to major philosophers and movements within the analytic tradition. Our focus will be on the groundbreaking work done in the first few decades of the 20th century. We will read selected works of Gottlob Frege, G. E. Moore, Bertrand Russell, Ludwig Wittgenstein, and A.J. Ayer. We will discuss central issues in the philosophy of language, metaphysics, epistemology, and metaethics. One recurring theme will be the nature and correct methodology of philosophy itself.

PHIL 1370. Twentieth-Century Continental Philosophy.

The course will focus on the main figures of the German tradition—Husserl, Heidegger, Cassirer, Gadamer, Adorno, Habermas, and Tugendhat, with emphasis on their efforts to rethink such key concepts as consciousness, history, reason, and the self. Some attention will be paid to points of intersection with German-language philosophers standardly considered "non-Continental"—Frege, Wittgenstein, and the Vienna Circle.

PHIL 1420. Philosophy and Poetry.

An examination of philosophy and poetry as rival avenues to the apprehension of truth, as well as an introduction to the basic problems of aesthetics. Philosophical readings will range from Plato to Hegel to contemporary writers. The focus of the course will be three philosophical poems: Lucretius' *On the Nature of Things*, Wordsworth's *Prelude*, and Eliot's *Four Quartets*. One previous course in philosophy is recommended.

PHIL 1430. Moral Theories.

A systematic examination of the main alternative normative moral theories: consequentialism; moral rights; moral duties; moral virtues. Focuses on the principal issues in the formulation of the different theories, on the main points of conflict between them, and on the critical evaluation of each. Readings are drawn mainly from contemporary work in moral philosophy.

PHIL 1440. The Nature of Morality.

Investigates major theories and issues concerning the nature of moral value. Readings from 20th-century authors. Issues include naturalism, supervenience, moral motivation, subjectivity/objectivity of value, skepticism, moral relativism, and moral realism.

PHIL 1450. Aesthetics.

This course will treat Kant's contribution to philosophical aesthetics. We will study his theory of the beautiful as well as his theory of the sublime; the latter one has been particularly appreciated in post-modern debates. Our work will be centered upon two guiding issues: (1) Kant's distinction between aesthetics and ethics on the one hand, and his exploration of their deep-rooted connection on the other hand; (2) the importance of the reflective power of judgment within the scope of Kant's overall philosophical project. Both issues lead to the question of what it means for human beings to be capable of approaching the world aesthetically.

PHIL 1460. The Problem of Free Will.

If everything we do is causally determined, is there still moral responsibility? Is there still meaning in life? Is there still a sense in which we can be said to choose our actions? These and related questions will be discussed through the writings of contemporary philosophers.

PHIL 1470. Ethics in the Novel.

Consideration of novels in terms of their treatment of such ethical themes as love, friendship, envy, deterioration, death, courage, pride, faith, integrity, betrayal, responsibility to others, revenge, justice, and mercy. The course uses twentieth-century and twenty-first-century novels (by Ernest J. Gaines, Lisa Genova, Mary Gordon, Andrea Lee, Randy Susan Meyers, and George Orwell) and also uses the fifteenth-century writer Sir Thomas Malory. No prerequisites. T Th 1:00-2:20. The course will be conducted entirely as online synchronous sessions via Zoom. All sessions will be recorded for asynchronous access as well.

PHIL 1475. Fiction as a Vehicle for Considering Ethical Issues in Education.

Do you like to read and discuss fiction? Are you interested in discussing ethical issues in education? You can combine these things in this course, whose readings include fiction and poetry as well as philosophy and social science. Topics include: What are appropriate aims and methods for different types of education? What are appropriate student-teacher relationships? How should selective schools select students? How much, if at all, should schools concern themselves with students' and teachers' non-academic lives? How should schools deal with politically charged topics like race and gender and with current controversies? How have the Covid pandemic and its aftermath affected education? What special issues are involved in online teaching? In order to include participants with varied backgrounds, this course has no prerequisites.

PHIL 1480. History of Ethics.

The project of British moral philosophers after Hobbes was to rebut what they all perceived as an ethics based solely on enlightened self-interest with one based on disinterested concern for others. We will examine the early responses to Hobbes of Richard Cumberland and the Earl of Shaftesbury; the moral sense theorists Francis Hutcheson, Joseph Butler, David Hume, Lord Kames, and Adam Smith; and the rationalists Ralph Cudworth and Samuel Clarke. This course is recommended preparation for PHIL 1240, Kant's Practical Philosophy.

PHIL 1485. The Quantified Self.

Self-quantification is ubiquitous. From smart watches that track biometrics and sleep quality to productivity trackers which tell us how we actually spend our time, modern digital technologies provide us with the tools to observe, measure and collect data about ourselves at great levels of detail. But does this data really help us understand ourselves better? Is the kind of knowledge those technologies offer worth having? Does a quantified self lead to a happier self? In this course, we will explore self-quantification through a range of philosophical perspectives and debates from ethics and political philosophy to epistemology.

PHIL 1501. Well-Being.

In this course, we map out and examine the various dimensions of the domain of prudential value, or what pertains to well-being. We begin with important features of the concept of prudential value itself, such as subject-relativity, the experience requirement, and the categories of prudential value (e.g., subjectivist and objectivist). We examine classic theories of well-being: hedonistic, desire, and eudaimonistic theories, as well as new theoretical options (internalist and constitutivist theories). Then we consider different varieties of prudential goods, including happiness, meaningfulness, achievement. Finally, we look at questions of the proper scope of prudential value, in particular whether it is best understood as a property of a whole life.

PHIL 1502. Philosophy of Race and Gender.

In this course we will explore the topics race and gender in contemporary analytic philosophy. Topics that will be discussed include: What are the concepts of race and gender? Do race and gender exist? Are race and gender social constructions? We will also discuss issues within political and moral philosophy, for instance, justice, integration, reparations, agency and consent. Finally, we will discuss the power of language, i.e. hate speech, stereotypes, generics and slurs. This course serves as an introduction to the philosophy of race and gender.

PHIL 1530. Feminist Philosophy.

A rigorous philosophical examination of five topics addressed in contemporary feminist writing: justice and gender; gender justice and developing countries; the social construction of gender, sexuality, and sexual orientation; the claim that women reason differently and have different ways of knowing and arguing; and radical feminism on pornography, rape, and intercourse. Prerequisite: one semester course in philosophy.

PHIL 1560. Philosophy of Law.

Philosophical examination of the chief classical and contemporary theories of the nature and function of law. Topics include the definition of law, the nature of legal systems, the logic of legal reasoning, the analysis of basic legal conceptions (e.g., of right and duty), legal rules and principles, law and justice, and law and morality.

PHIL 1561. Are We Doomed? Ethics, Economics, and the Future.

We stand at a precipice. The decisions we make now may significantly impact how the future of humanity will unfold—and whether there is a future for humanity at all. This course surveys important social, political, and ethical issues regarding our present moment (e.g., climate change, AI safety, etc.), and delves into philosophical issues underlying our concern for the future of humanity. What do we owe future generations? Do we have an obligation to ensure that humanity avoids extinction? Do considerations about the long-term future outweigh present concerns? And how should we evaluate the long-term future, given how uncertain it is?

PHIL 1570. Philosophy and Psychoanalysis.

The course proposes a philosophical examination of a variety of psychoanalytical theories beginning with classical Freudian theory and including ego psychology, various relational theories (object relations, intersubjectivity, and attachment theories), and self psychology. The course might also consider some of the philosophical sources of psychoanalytic theory, its interaction with recent developmental research, and its applications in literary and cultural studies.

PHIL 1576. Pornography.

What should we think about pornography? Is it a harmless form of entertainment? It is a pillar of sexist oppression? Has pornography become sex education and, if so, what does that mean? How does pornography shape socio-sexual norms and practices? If some pornography misshapes them in ways that are harmful, could it also help to reshape them in ways that were helpful? Readings will come from philosophy, sexuality studies, film studies, sociology, and related fields. Films will be screened and discussed.

PHIL 1580. Philosophy of Sex.

Sex is an important part of human experience, and questions about it have been central to literature, politics, religion, etc. Sex also gives rise to characteristically philosophical questions. What exactly is sex? How are sexual activities, desires, interests, and attractions related to one another? What makes such things "sexual"? What sorts of ethical considerations arise in the case of sexuality? How do power disparities due to race, gender, disability, and the like affect the ethical character of sexual interactions? Is objectification always morally problematic? And what exactly is objectification anyway? Is sex between consenting adults always morally unobjectionable? Or are there cases in which even consensual sex is morally problematic? What makes rape the horrible violation that it is? Are rape fantasies themselves morally problematic? We'll explore these and similar questions throughout the course.

PHIL 1592. Status Anxiety.

The course explores a cluster of issues gravitating around the concept of status. First, we circumscribe the concept of status, and focus on status when it is constituted by the recognition of others. Second, we examine the character and forms of recognition: recognition is an evaluative stance, which come in three main forms, respect, esteem, and love. Third, we turn to the importance of status: why the preoccupation with the recognition of others is a source of profound anxiety. Fourth, we attempt to gain further insight into the character and importance of status by considering two primary forms of status anxiety—the experience of a threat to one's status—namely, shame and resentment. Finally, we consider some of the social and psychological pathologies status anxiety may cause.

PHIL 1593. Seminar on Bioethics Through Fiction: Disability, Illness, and Death.

This seminar uses fiction as well as conventional bioethical material as a vehicle for philosophical discussions of disability, illness, and death. Topics include the following: What is disability? What is illness? What do healthy and able-bodied people owe sick, disabled, or dying people, and vice versa? Should we "accept" death, stave it off, or does this depend (on what)? How can fiction enrich philosophical discussions of such questions? In order to include students with a wide range of interests and backgrounds, this seminar has no prerequisites. It is an in-person seminar with all sessions available for remote participation by students who have valid reasons for not being able to attend in person, although the two weeks on quadriplegia will be fully remote to familiarize you with the educational feature of such classes, including their advantages for many disabled people.

PHIL 1610. Decision Theory: Foundations and Applications.

Decision theory is a formal apparatus for analyzing preferences and choices. Students learn the formal theory and then examine its foundations and philosophical implications. Specific topics: the role of causation in decision problems, the status of the axioms of the theory, problems of infinite utility, rudimentary game theory, social choice functions, utilitarianism as a theorem.

PHIL 1630. Mathematical Logic.

This course provides a rigorous introduction to the metatheory of classical first-order predicate logic. Topics covered include the syntax, formal semantics, and proof theory of first-order logic, leading up to the completeness theorem and its consequences (the compactness and Lowenheim-Skolem theorems). There will be some discussion of philosophical issues, but the focus of the course will be on the technical material. This course provides a more rigorous and mathematical treatment of material covered in PHIL 0640. No previous familiarity with logic is required, but it may be taken after 0640.

PHIL 1635. Advanced Deductive Logic.

This course provides an introduction to the metatheory of first-order logic. We will prove the completeness of first-order logic. We then move on to the major "limitative" results, including the undecidability of first-order logic, the Gödel incompleteness theorems, and the undefinability in arithmetic of arithmetical truth. Prerequisite: PHIL 0540 or instructor's permission.

PHIL 1645. Incompleteness.

Gödel's two incompleteness theorems are among the most important results in the history of logic. We will study these results, and explore related topics, by working through some of the classic papers on the subject. Authors to be read include Gödel, Tarski, Feferman, and Visser. Prerequisites: PHIL 0640 or PHIL 1630, or special permission from instructor.

PHIL 1655. Philosophical Logic.

An examination of various philosophical issues arising in the foundations of logic, such as the following: existence, definite description, reference and truth, semantic paradoxes, implication and presupposition, modalities and "possible worlds," logical truth, the nature of logical knowledge, and logic in natural language.

PHIL 1665. Modal Logic.

Modal logic concerns the logic of necessity and possibility. In this course, we will look at formal systems that have been developed to handle these and related notions. We will cover three topics: propositional modal logic, quantified modal logic, and the logic of counterfactual conditionals. We will discuss philosophical issues, but the main focus of the course will be on the technical material. No official prerequisite. It is strongly recommended that students have taken PHIL 0540 or have a working knowledge of elementary logic.

PHIL 1675. Set Theory.

Set theory is a mathematical theory of collections, taken as objects in their own right. According to folklore, set theory provides a foundation for all of mathematics. Its central concepts are also widely employed in other fields, such as in philosophy and linguistics.

The main goals of the course are (i) to introduce you to the theory of sets in an axiomatic setting, and (ii) to equip you to engage in philosophical reflection on set theory and its applications.

Some topics we will tackle include: how to "construct" various mathematical objects in set theory; cardinals and ordinals; controversial axioms (e.g., choice, replacement, and so-called "large cardinal" axioms); how we might justify our choices of axioms.

PHIL 1680. Theories of Truth.

Philosophers have been worrying about truth for just about as long as there've been philosophers. They've worried about what truth is; about what kinds of things are true; about what it is for one of these things to be true; about how its being true is related to our knowing or thinking that it is true; and so on. We'll discuss these issues and also the so-called Liar Paradox, which threatens to show that there's an inconsistency lurking in the very notion of truth.

PHIL 1705. Epistemology.

We'll concentrate on several issues involving knowledge and rational belief. What is knowledge, and how does it relate to rational or justified belief? Does a person's knowing something depend on non-evidential factors such as the practical importance of the person's being correct? Does the justification of a person's belief depend just on facts internal to the person—or might it depend on her environment? And what can we learn from thinking about the skeptical position which claims that we're not justified in believing even the most ordinary things about the world around us? Pre-req: Must have taken one course in Philosophy.

PHIL 1735. Metaphysics.

A survey of some major topics in metaphysics, with a particular focus on radical metaphysical arguments – arguments that call into question our most basic beliefs about the world. Topics covered may include: What is personal identity? Does personal identity matter? Do personal identity and consciousness matter? Is there right and wrong and objective value? Is there free will? Are there any good arguments for God? Prerequisite: at least one course in philosophy (2 or more preferred).

PHIL 1755. Philosophy of Science.**PHIL 1770. Philosophy of Mind.**

Questions concerning the nature of mentality and its relation to the body. Selections from the following topics: mind and behavior, mind as the brain, mind as a computing machine, thought and language, action and mental causation, intentionality and consciousness. Prerequisite: at least one course in philosophy (2 or more preferred).

PHIL 1775. Philosophy of Quantum Mechanics.

An examination of philosophical issues informed by elementary quantum mechanics; topics include the measurement problem, superposition, non-locality, and competing "interpretations" of the textbook formalism.

PHIL 1780. Time.

This course will survey the major topics in the philosophy of time from Augustine's Confessions and the Leibniz-Clarke correspondence to contemporary philosophical work on the possibility of time travel. Although the main focus will be on philosophical theories of time, and students will be learning to read, think, and write like philosophers, we will also consider the portrayal of time in various works of fiction, and the role of time in various scientific theories.

PHIL 1785. Philosophy of the Environment: Environmental Utopias.

Environmentalists have often faced criticism for wallowing in pessimistic, even apocalyptic, "doom and gloom." This seminar in environmental philosophy will explore a variety of more-or-less optimistic, more-or-less "utopian," possible human-environmental futures, exploring a variety of questions about political economy, environmental justice, and the conservation of non-human nature. We will draw on multiple philosophical and scholarly traditions, as well as science fiction and popular literature, to imagine this plurality of "ecotopias," considering ideas like the Green New Deal, ecosocialism, degrowth, decolonization, reparations for environmental injustice, interspecies democracy, and rewilding. Along the way we will examine issues in environmental and political philosophy about the relationships between environmental degradation and dominant political-economic and social-cultural systems.

PHIL 1791. Philosophy of Mind & Epistemology.

The first part of the course will explore the nature of mental representations with particular focus on the representations involved in the attitude of belief. The second part of the course will explore some of the shortcomings of standard, unified models of belief to motivate the development of fragmented models. Such models strive to provide a more accurate accounting of agents who might occupy (globally) incoherent or inconsistent states of mind. Exploring such models draws attention to previously underdeveloped normative questions.

PHIL 1800. Philosophy of Mind.

Questions concerning the nature of mentality and its relation to the body. Selections from the following topics: mind and behavior, mind as the brain, mind as a computing machine, thought and language, action and mental causation, intentionality and consciousness. Prerequisite: at least one course in philosophy (2 or more preferred).

PHIL 1825. Consciousness.

Topics will include: (i) the different features of various types of consciousness; (ii) dualist, physicalist, and representationalist theories of experience; (iii) the nature of pain and other bodily sensations; (iv) the nature of conscious thought; (v) the qualitative dimension of perception; (vi) introspection; (vii) the roles of attention and working memory in perceptual consciousness; (viii) blindsight, inattention blindness, hemineglect, and related phenomena; (ix) the unconscious; and (x) what it is for a state of consciousness to be unified.

PHIL 1850. Philosophy of Language.

How is language used both to express and to communicate our beliefs and other thoughts? What is the relation between the meaning of a sentence and the meanings of the words that comprise it? We will discuss philosophical work on these and related questions including, potentially: the meanings of metaphors; the way meaning depends upon context; the nature of slurs and hate speech.

PHIL 1855A. Compositional Semantics.

Model-theoretic approaches to the study of the semantics of natural languages. Develops the tools necessary for an understanding of classic formal semantic results in linguistics and in philosophy (lambda calculus, intensional logic, Montague's treatment of quantification, etc.). These tools are then applied to detailed descriptions of natural language semantics, including binding and pronouns, modification, scope, focus etc. as well as other recent developments in semantic theory. Prerequisite: some familiarity with syntax or semantics or basic set theory and logic

PHIL 1860. Sense and Reference.

Introduction to issues in philosophy of language and mind relating to sense and reference, including: definite descriptions, proper names, rigid designation and the description theory of names, the internalism--externalism debate, demonstratives ("this", "that"), and indexicals ("I", "here"). At least two prior courses in philosophy strongly recommended.

PHIL 1881. Philosophical Logic.

This course is intended for anyone with some background in formal logic who would like to (i) expand their knowledge of formal logical systems beyond first-order logic and (ii) engage in sustained philosophical reflection on the value and applications of these other logical systems. Particular systems we will study in this course include: many-valued logics (in both paracomplete and paraconsistent versions), supervaluations, free logic, and secondorder logic (both classical and free).

PHIL 1890J. Conditionals.

In this course, we will look at different theories of what "if" means. Is it a truth-functional connective, like the material conditional used in logic? Do sentences of the form "If P, then Q" even have truth conditions? Some logic will be very helpful; some familiarity with philosophy of language also helpful. This course is a seminar.

PHIL 1890K. Philosophical Foundations of Cognitive Science.

This course surveys the rise of cognitive science as an interdisciplinary study of mind, examining conceptual foundations across philosophy, psychology, linguistics, neuroscience, computer science, and AI. The first half traces the historical developments that converged into the computational view of mind and established cognitive science as a field. The second half explores central debates: how much of cognition is innate versus learned; whether behavioral or neural data offer better starting points for investigating cognitive processes; whether the human mind is more like a classical computer or an artificial neural network; and how rational human thought is. Additional topics include philosophical questions raised by large language models, the Turing Test, embodied cognition, animal minds, and consciousness. Students will engage with foundational texts and current research while developing their own philosophical analyses. No prerequisites.

PHIL 1900. Philosophy of Biology.

This course introduces philosophy of biology through engagement with historical and contemporary philosophical and scientific texts. We will ask epistemological questions about evolutionary biology, that seek a broader understanding of the status of biology as a science, and about fundamental concepts and categories of biological theory. We will ask whether and how biological knowledge (e.g. about health, "human nature," or ecosystems) might be relevant to philosophical or ethical claims. Relatedly, we will ask questions about the roles of social values in biology. For example: How have concepts of 'race' and racial difference been theorized in philosophy and biology, and how has scientific racism mischaracterized human diversity? Students will leave the course with an appreciation for the relevance and importance of philosophical debates both within and about the life sciences.

PHIL 1990. Independent Studies.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHIL 1995. Senior Thesis.

An elective for students writing a thesis. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHIL 2000. Graduate Proseminar.

Will cover classics of philosophy from the end of the 19th century to the end of the 20th; including ethics as well as metaphysics, epistemology and philosophy of language.

PHIL 2010. Third Year Workshop.

No description available.

PHIL 2011A. Reductionism.

Exploration of reductive approaches in contemporary metaphysics and philosophy of science. The question of whether there is a deep sense in which all the complexity of reality reduces to some more limited class of fundamental features.

PHIL 2020. Dissertation Workshop.

Course for graduate students during their 4th year or above.

PHIL 2020R. Recent Topics in the Philosophy of Mind.

We will begin by providing some basic background in the philosophy of mind. Then we will turn to topics of recent interest. Topics covered may include: the evolution of consciousness, animal minds, the role of language in thought and the "language of thought" hypothesis, large language models like Chat-GPT and their philosophical significance, and recent issues in the philosophy of perception (e.g. representational format, conceptualism, emotional perception, Molyneux's question).

PHIL 2030C. Moral Psychology.

This seminar will examine in depth some problems associated with morality, rationality, and the human psyche. Possible topics: acting for reasons, moral responsibility, practical reasoning, moral character, love, modesty, being too good, moral luck, desire, weakness of will. Undergraduates require instructor permission to enroll.

PHIL 2090C. Structural Injustice.

What is structural injustice, and what is unjust about it? "Structural racism" (or sexism) is often said to be a kind of racism that can be present even without any racists (or sexists). Natural disasters can obviously be bad, but they are not (it seems) wrong. If structural injustice is not a species of (any configuration of) individual moral wrongs, then how is it wrong and not (only) bad in the manner of a natural disaster? In this class we will study these and related questions through discussion of recent philosophical literature.

PHIL 2100P. Structural Injustice.

What is structural injustice, and what is unjust about it? "Structural racism" (or sexism) is often said to be a kind of racism that can be present even without any racists (or sexists). Natural disasters can obviously be bad, but they are not (it seems) wrong. If structural injustice is not a species of (any configuration of) individual moral wrongs, then how is it wrong and not (only) bad in the manner of a natural disaster? In this class we will study these and related questions through discussion of recent philosophical literature.

PHIL 2104. Plato's Theaetetus.

We will read Plato's Theaetetus on the question: What is knowledge? Like many Socratic dialogues, the Theaetetus ends in aporia (doubt) without a solution. We'll discuss the three main proposals, that knowledge is perception, true judgment, and true judgment with an account. We'll also discuss a fourth possibility introduced at the outset, that knowledge is expertise (technē). Of all Plato's works, the Theaetetus is the most appealing from a contemporary philosophical perspective, because its final section has been taken to propose a popular 20th century view of knowledge—as justified true belief—and to state difficulties with that proposal. Much else in the dialogue will be discussed: e.g., Socrates' midwifery, Protagorean relativism, the famous Digression interrupting the critique of relativism; parts and wholes; and the notion of logos (account). Readings will be in English.

PHIL 2120M. Recent work in metaphysics and philosophy of science.

An introduction to central topics in metaphysics and philosophy of science, through focused engagement with new writings in these areas.

PHIL 2132. Physicalism.

This seminar will examine the thesis of physicalism about the natural world: roughly, the idea that everything is fundamentally physical. We will start by looking at a very austere form of physicalism, "identification physicalism", that offers an attractively simple and uniform picture of nature. This kind of physicalism, or something like it, has been defended by David Lewis, Ted Sider, and Cian Dorr. We will consider some new arguments against identification physicalism that are off the beaten path: arguments from the special intentional character of consciousness, arguments from the epistemic and normative significance of consciousness, and arguments based on the ease with which we can determinately think and talk about our own conscious states.

PHIL 2140I. Skepticism about the A Priori and A Posteriori.

Most of us have believe a host of ordinary claims—both claims about the external physical world, and about a priori domains such as logic, mathematics, and morality. Skepticism of the most interesting sort denies that we're rational in giving more credence to these ordinary claims than to the alternative claims that figure in various skeptical hypotheses. We'll look at some contemporary responses to skepticism. Roughly half of the course will deal with skepticism in the empirical domain, and the other half will deal with skepticism about a priori matters. This course is intended for graduate students in philosophy. Others may take the course with the instructors' permission.

PHIL 2141. The Philosophy of Roderick M. Chisholm.

Roderick Chisholm was one of the most important American philosophers during the second half of the 20th century. This seminar is organized around the work of Chisholm, but it is not just about him. Chisholm had distinctive positions on most of the major topics in epistemology, metaphysics, and the philosophy of mind, positions that were subsequently built upon or challenged by others. Tracing his views and the responses to them can thus serve as something of a history of metaphysics and epistemology over a 50-year period, leading up to contemporary debates and providing background for them. My plan is to pair the reading by Chisholm each week with one or more readings by other philosophers who subsequently expounded his work, built on it, criticized it, or set forth competing positions.

PHIL 2150J. Aristotle's De Anima.

A close reading of Aristotle's *De Anima*, supplemented with recent secondary literature and other relevant Aristotelian texts. Topics include the nature of the soul, nutrition, perception, thought, imagination, and desire.

PHIL 2170L. Shame.

We will examine the emotion of shame, relying on relevant literature in philosophy and psychology from recent decades. Topics include the relation between shame and self-consciousness, shame and self-esteem, shame and autonomy, shame and social standing (including the connection between shame and honor), shame and identity, and shame and power. We will discuss controversies about shame, such as: Is shame an essentially social emotion? Is shame essentially heteronomous? Is shame essentially an emotion of self-assessment? Can shame be an appropriate moral emotion? And we will compare and contrast shame from affective states closely associated with it, such as guilt and self-regarding regret, or feeling self-conscious and feeling embarrassed.

PHIL 2410. Moral Psychology.

This seminar will examine in depth some problems associated with morality, rationality, and the human psyche. Possible topics: acting for reasons, moral responsibility, practical reasoning, moral character, love, modesty, being too good, moral luck, desire, weakness of will. Undergraduates require instructor permission to enroll.

PHIL 2450. Exchange Scholar Program.**PHIL 2505. Fiction as a Vehicle for Considering Ethical Issues in Education.**

This online seminar uses fiction as well as philosophy and social science in considering ethical issues in education. Topics include: What are appropriate aims and methods for different types of education? What are appropriate student- teacher relationships? How should selective schools select students? How much, if at all, should schools concern themselves with students' and teachers' non-academic lives? How should schools deal with sensitive topics such as racism? What special issues are involved in online teaching (which this online seminar puts us in a good position to explore)? In order to include participants with varied backgrounds, this seminar has no prerequisites.

PHIL 2900. Thesis Preparation.**PHIL 2970. Preliminary Examination Preparation.**

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

PHIL 2980. Research in Philosophy.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHIL 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

PHIL XLIST. Courses of Interest to Philosophy Concentrators.**Fall 2025**

There are many courses that look at philosophers or philosophical questions in other departments, including Africana Studies, Classics, Cognitive and Linguistic Sciences, French Studies, German Studies, Judaic Studies, Mathematics, Modern Culture and Media, Political Science, and Religious Studies. They include:

Religious Studies

COST 0120 The Classical Chinese Philosophy of Life
COST 1082 Me, Myself, and I: Exploring Senses of Self from a Multidisciplinary Perspective

Cognitive and Psychological Sciences

CPSY 0550 Science of Consciousness
CPSY 1680F Topics in Development: The Developmental and Evolutionary Origins of Mind

Data Science/b>**DATA 0080 Data, Ethics and Society****French and Francophone Studies/b>****FREN 17100 Décolonisation! German Studies****GRMN 2663A Identification: On the Mark(s) of the Same in Literature, Philosophy, and Psychoanalysis****Italian Studies****ITAL 1010 Dante in English Translation: Dante's World and the Invention of Modernity****Linguistics****LING 1440 - Compositional Semantics****LING 1630 Meaning and Cognition****Political Sciences****POLS 1085 Injustice**

Physics

The department aims to develop in its students a comprehensive grasp of the principles of physics, together with a productive capacity in research. The courses of study are flexible in subject matter and are conducted by means of lectures, seminars, laboratories, and colloquia. Undergraduate as well as graduate students have opportunities to carry out research in fields of current interest.

The principal research fields of the department are condensed matter physics, elementary particle physics, low-temperature physics, nonlinear optics, physical acoustics, astrophysics, biological physics, and cosmology. Interdisciplinary study and research, coordinated with other departments, is encouraged for students interested in brain and neural science, semiconductor physics, geophysics, physics of solid continua, polymer physics, and computational physics, as well as other fields.

For additional information, please visit the department's website: <http://www.brown.edu/academics/physics/>

Physics Concentration Requirements

Physics is the scientific study of the fundamental principles governing the behavior of matter and the interaction of matter and energy. Mathematics is used to describe fundamental physical principles, the behavior of matter, and the interactions of matter and energy. As the most fundamental of sciences, physics provides a foundation for other scientific fields as well as the underpinnings of modern technology. The Physics department is unique because of the breadth of its faculty expertise and research, and the relatively intimate size of its classes above the introductory level. Physics concentrators may choose to pursue either the A.B. or the more intensive Sc.B. degree. Course work on either path covers a broad base of topics (for example, electricity and magnetism, classical and quantum mechanics, thermodynamics, and statistical mechanics). The Sc.B. degree requires additional advanced topics as well as a senior thesis project.

Standard concentration for the A.B. degree

Select one of the following Series:	2
PHYS 0030 Basic Physics A or PHYS 0050 Foundations of Mechanics or PHYS 0070 Analytical Mechanics	
PHYS 0040 Basic Physics B or PHYS 0060 Foundations of Electromagnetism and Modern Physics or PHYS 0160 Introduction to Relativity, Waves and Quantum Physics	
Take each of the following:	5
PHYS 0470 Electricity and Magnetism	
PHYS 0500 Advanced Classical Mechanics	
PHYS 0560 Experiments in Modern Physics	
PHYS 1410 Quantum Mechanics A	
PHYS 1530 Thermodynamics and Statistical Mechanics	
One additional 1000-level course or a mathematics course beyond the introductory level.	1
Total Credits	8

Standard program for the Sc.B. degree

Prerequisites:

Select one of each:	2
PHYS 0050 Foundations of Mechanics or PHYS 0070 Analytical Mechanics	
PHYS 0060 Foundations of Electromagnetism and Modern Physics or PHYS 0160 Introduction to Relativity, Waves and Quantum Physics	
Select one of the following:	1
MATH 0190 Single Variable Calculus, Part II (Physics/Engineering) or MATH 0090 Single Variable Calculus, Part I or MATH 0100 Single Variable Calculus, Part II	

Program:	8
PHYS 0470 Electricity and Magnetism	
PHYS 0500 Advanced Classical Mechanics	
PHYS 0560 Experiments in Modern Physics	
PHYS 1410 Quantum Mechanics A	
PHYS 1420 Quantum Mechanics B	
PHYS 1510 Advanced Electromagnetic Theory	
PHYS 1530 Thermodynamics and Statistical Mechanics	
PHYS 1560 Modern Physics Laboratory	

Take one additional 1000 or 2000 level Physics course or upper level course in related fields of science chosen by the student with the agreement of his or her advisor.	1
Four Mathematics courses beyond MATH 0190 or 0090, 0100 including choices from Applied Mathematics ¹	4
PHYS 1990 Senior Conference Course ²	1
Total Credits	17

¹ In addition, courses in computer programming are recommended.

² A senior thesis is required. This is to be prepared in connection with PHYS 1990 under the direction of a faculty supervisor. The topic may be in related department or of interdisciplinary nature. In any event, a dissertation must be submitted.

Astrophysics Track for the Sc.B. degree

Prerequisites:

Select one of each:	2
PHYS 0050 Foundations of Mechanics or PHYS 0070 Analytical Mechanics	
PHYS 0060 Foundations of Electromagnetism and Modern Physics or PHYS 0160 Introduction to Relativity, Waves and Quantum Physics	
PHYS 0270 Astronomy and Astrophysics	1
Select one of the following Series:	2
MATH 0170 Single Variable Calculus, Part II (Accelerated) & MATH 0180 and Multivariable Calculus	
MATH 0190 Single Variable Calculus, Part II (Physics/Engineering) & MATH 0200 and Multivariable Calculus (Physics/Engineering)	
MATH 0350 Multivariable Calculus With Theory (or equivalent)	
PHYS 0470 Electricity and Magnetism	1

Program:

MATH 0520 Linear Algebra or MATH 0540 Linear Algebra With Theory or PHYS 0720 Methods of Mathematical Physics	1
Select one of the following Math courses:	1
APMA 0330 Methods of Applied Mathematics I	
APMA 0340 Methods of Applied Mathematics II	
APMA 0350 Applied Ordinary Differential Equations	
APMA 0360 Applied Partial Differential Equations I	
MATH 1110 Ordinary Differential Equations	
MATH 1120 Partial Differential Equations	
PHYS 0500 Advanced Classical Mechanics	1
PHYS 0560 Experiments in Modern Physics	1
PHYS 1410 Quantum Mechanics A	1
PHYS 1530 Thermodynamics and Statistical Mechanics	1
Three of the following:	3
PHYS 1100 General Relativity	
PHYS 1250 Stellar Structure and the Interstellar Medium	
PHYS 1270 Extragalactic Astronomy and High-Energy Astrophysics	
PHYS 1280 Introduction to Cosmology	

Two additional 1000- or 2000-level courses in physics or a related field which are not listed as requirements. 2

PHYS 1990	Senior Conference Course ¹	1
Total Credits		18

¹ A senior thesis is required. This is to be prepared in connection with under the direction of a faculty supervisor. The topic may be in a related department or of interdisciplinary nature. In any event, a dissertation must be submitted.

Biological Physics Track for the Sc.B. degree

Foundations of Physics

PHYS 0070	Analytical Mechanics	1
or PHYS 0050	Foundations of Mechanics	
or ENGN 0040	Engineering Statics and Dynamics	
PHYS 0160	Introduction to Relativity, Waves and Quantum Physics	1
or PHYS 0060	Foundations of Electromagnetism and Modern Physics	
PHYS 0470	Electricity and Magnetism	1
PHYS 0500	Advanced Classical Mechanics	1
PHYS 1410	Quantum Mechanics A	1
PHYS 1530	Thermodynamics and Statistical Mechanics	1

Select one of the following Series: ¹ 1-2

Series A

PHYS 0720	Methods of Mathematical Physics

Series B

Select one of the following:

APMA 0330	Methods of Applied Mathematics I
APMA 0350	Applied Ordinary Differential Equations
MATH 1110	Ordinary Differential Equations

And select one of the following:

MATH 0180	Multivariable Calculus
MATH 0200	Multivariable Calculus (Physics/Engineering)
MATH 0350	Multivariable Calculus With Theory
MATH 0520	Linear Algebra
MATH 0540	Linear Algebra With Theory

Basic Biology and Chemistry

BIOL 0200	The Foundation of Living Systems (or placement out of BIOL 0200)	1
BIOL 0500	Cell and Molecular Biology	1
CHEM 0330	Equilibrium, Rate, and Structure	1

Advanced Biophysical Topics and Techniques

PHYS 1610	Biological Physics	1
PHYS 1990	Senior Conference Course	1

Elective Courses (four chosen from the following list, with at least two 1000-level courses, or additional courses approved by the concentration advisor): 4

APMA 0360	Applied Partial Differential Equations I
APMA 0410	Mathematical Methods in the Brain Sciences
APMA 0650	Introduction to Probability and Statistics
APMA 1070	Quantitative Models of Biological Systems
APMA 1080	Inference in Genomics and Molecular Biology
BIOL 0280	Biochemistry
BIOL 0470	Genetics
BIOL 1050	Biology of the Eukaryotic Cell
BIOL 1200	Protein Biophysics and Structure
BIOL 1270	Advanced Biochemistry

BIOL 1870	Techniques and Clinical Applications in Pathobiology	
CHEM 0350	Organic Chemistry I	
CHEM 0360	Organic Chemistry II	
MATH 0090	Single Variable Calculus, Part I	
MATH 0170	Single Variable Calculus, Part II (Accelerated)	
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	
MATH 1620	Mathematical Statistics	
MATH 1210	Probability	
PHYS 0560	Experiments in Modern Physics	
PHYS 1510	Advanced Electromagnetic Theory	
PHYS 1560	Modern Physics Laboratory	
PHYS 2620F	Selected Topics in Molecular Biophysics	
PHYS 1990	Senior Conference Course ²	1
Total Credits		17-18

¹ Select Series A alone or two from Series B as indicated.

² A senior thesis is required. This is to be prepared in connection with under the direction of a faculty supervisor. The topic may be in a related department or of interdisciplinary nature. In any event, a dissertation must be submitted.

Mathematical Physics Track for the A.B. degree

Prerequisites:

MATH 0090	Single Variable Calculus, Part I	1
or MATH 0100	Single Variable Calculus, Part II	
or MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	
PHYS 0050	Foundations of Mechanics	1
or PHYS 0070	Analytical Mechanics	

Mathematics Courses ¹

MATH 0180	Multivariable Calculus	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra	1
or MATH 0540	Linear Algebra With Theory	
MATH 1110	Ordinary Differential Equations	1
Select at least one of the following:		1
MATH 1060	Differential Geometry	
MATH 1120	Partial Differential Equations	
MATH 1210	Probability	

Physics Courses ¹

PHYS 0060	Foundations of Electromagnetism and Modern Physics	1
or PHYS 0160	Introduction to Relativity, Waves and Quantum Physics	
PHYS 0470	Electricity and Magnetism	1
PHYS 0500	Advanced Classical Mechanics	1
PHYS 0560	Experiments in Modern Physics	1
Select at least two of the following:		2
PHYS 1410	Quantum Mechanics A	
PHYS 1420	Quantum Mechanics B	
PHYS 1510	Advanced Electromagnetic Theory	
PHYS 1530	Thermodynamics and Statistical Mechanics	

PHYS 1560	Modern Physics Laboratory	
Total Credits		12

¹ Concentrators are required to take at least one course in mathematics and one in physics in each of their last two semesters.

Mathematical Physics Track for the Sc.B. degree

Prerequisites:

Select one of the following series: 2

PHYS 0050 Foundations of Mechanics
or PHYS 0070 Analytical Mechanics

PHYS 0060 Foundations of Electromagnetism and Modern Physics
or PHYS 0160 Introduction to Relativity, Waves and Quantum Physics

Select one of the following: 1-2

MATH 0190 Single Variable Calculus, Part II (Physics/Engineering)

MATH 0090 Single Variable Calculus, Part I
& MATH 0100 and Single Variable Calculus, Part II

Required courses:

PHYS 0470 Electricity and Magnetism 1
PHYS 0500 Advanced Classical Mechanics 1
PHYS 0560 Experiments in Modern Physics 1
PHYS 1410 Quantum Mechanics A 1
PHYS 1530 Thermodynamics and Statistical Mechanics 1

MATH 0180 & MATH 0200 Multivariable Calculus and Multivariable Calculus (Physics/Engineering) 1-2
or MATH 0350 Multivariable Calculus With Theory

MATH 0520 Linear Algebra 1
or MATH 0540 Linear Algebra With Theory
or PHYS 0720 Methods of Mathematical Physics

MATH 1460 Complex Analysis 1

Four additional 1000 or 2000 level Physics courses 4

Two additional 1000 or 2000 level Math courses 2

PHYS 1990 Senior Conference Course ¹ 1

Total Credits **18-20**

¹ A senior thesis is required. This is to be prepared in connection with under the direction of a faculty supervisor.

Physics and Philosophy Concentration Requirements

The Physics and Philosophy concentration is for students with a deep interest in physics who do not need to acquire the laboratory and computational skills of a professional physicist. The concentration allows students to grapple with computational problems and deepen their investigation of conceptual and epistemological issues. By the end of the program, concentrators possess an excellent conceptual understanding of the most philosophically interesting physics, relativity and quantum mechanics.

This concentration should prepare a student either for graduate study, especially in a history and philosophy of science (HPS) program, or for employment in science education or journalism. Other professions such as law and medicine will look favorably on such concentrators for having versatile interests and being able to master difficult material. The concentration may serve as an excellent preparation for a law school

since physics and philosophy both exercise a rigorous approach to problems of immediate relevance to life but at the same time assume two complimentary and sometimes competing viewpoints.

Advising

Concentration advisors from the Departments of Physics and Philosophy will guide students working towards the A.B. degree.

Curriculum

The curriculum builds around the fields of physics that have had the biggest impact on philosophy, especially Quantum Physics, and the fields of philosophy most relevant for physics, such as Epistemology, Metaphysics and Philosophy of Physics. It is strongly recommended that students complete at least one relevant history course.

There are 11 required courses (5 in Physics, 5 in Philosophy or History, one course in mathematics) and a final project. The choice of the courses is dictated by the following considerations. The field of physics with both deepest philosophical implications and deepest influence on the rest of physics is Quantum Mechanics. Thus, a 1000-level course in Quantum Mechanics or a closely related field such as Statistical Mechanics is indispensable. The second field of physics most relevant for the concentration is Relativity. This field touches upon and serves as a foundation for a broad list of subjects with major philosophical implications of their own, for example: PHYS 1170, PHYS 1280, PHYS 1510, PHYS 1100. This requires another 1000-level physics course in the concentration. 1000-level Physics courses cannot be taken without certain preliminary work, most importantly, PHYS 0470, which serves as a prerequisite for most higher-level physics courses and which relies in turn on PHYS 0160 or PHYS 0060. Another lower-level physics course is necessary for a student to develop familiarity with the tools which have been employed in producing the physics knowledge.

A natural introduction into philosophy of physics comes from a course in Early Modern Philosophy. To a large extent, Early Modern Philosophy was shaped by scholars who combined interest in philosophy and physics (e.g., Rene Descartes, Blaise Pascal, Gottfried Wilhelm Leibniz). The influence of the XVII century physics revolution on other central figures such as Kant is unquestionable. Early Modern Philosophy sets an intellectual stage for many subsequent developments in the Philosophy of Physics and directly addresses some of the most perplexing issues like the connection (or lack thereof) between physics and religion. The core of the Philosophy requirement involves two courses in Epistemology, Metaphysics and Philosophy of Science. One course in this field would not be sufficient due to its very broad nature. Students are strongly advised to take a relevant History course. This requirement can be substituted by an additional philosophy course to reflect interests of those students who want a deeper background in Epistemology, Metaphysics and Philosophy of Science or have other related interests such as Ancient Natural Philosophy.

In addition to the above philosophy courses, PHIL 0210 (Science, Perception, and Reality) serves as a gateway into the concentration. It may be substituted by other relevant courses such as PHYS 0100 (Flat Earth to Quantum Uncertainty: On the Nature and Meaning of Scientific Explanation).

A course in calculus is a prerequisite for most physics and some philosophy classes.

Required courses for the A.B. degree are listed below:

Physics Courses

Select one of the following introductory courses in Modern Physics: 1

PHYS 0060 Foundations of Electromagnetism and Modern Physics

PHYS 0160 Introduction to Relativity, Waves and Quantum Physics

One course in Special Relativity and Classical Field Theory: 1

PHYS 0470 Electricity and Magnetism

Select one of the following in Methods of Experimental and Theoretical physics: 1

PHYS 0500	Advanced Classical Mechanics	
PHYS 0560	Experiments in Modern Physics	
Select one of the following in Quantum Mechanics and its applications		1
PHYS 1410	Quantum Mechanics A	
PHYS 1530	Thermodynamics and Statistical Mechanics	
One more 1000-level Physics course		1
Philosophy Courses		
Select one of the following gateway courses:		1
PHIL 0210	Early Modern Philosophy	
PHIL 0060	Modern Science and Human Values	
PHIL 0640	Logic	
Select one of the following courses in Early Modern Philosophy:		1
PHIL 0210	Early Modern Philosophy	
PHIL 1210	Locke, Berkeley, Hume and Others	
PHIL 1220	17th Century Continental Rationalism	
PHIL 1230	Kant: The Critique of Pure Reason	
Select two of the following courses in Epistemology, Metaphysics and Philosophy of Science:		2
PHIL 1705	Epistemology	
PHIL 1735	Metaphysics	
PHIL 1755	Philosophy of Science	
PHIL 1775	Philosophy of Quantum Mechanics	
PHIL 1780	Time	
History Courses		
Select one of the following courses in History of Science: ¹		1
HIST 0522N	Reason, Revolution and Reaction in Europe	
HIST 1825M	Science at the Crossroads	
HIST 1976I	Imperialism and Environmental Change	
Calculus		
Select one of the following:		1
MATH 0180	Multivariable Calculus	
MATH 0200	Multivariable Calculus (Physics/Engineering)	
MATH 0350	Multivariable Calculus With Theory	
Final Project		
Select one of the following:		1
PHIL 1990	Independent Studies	
PHYS 1990	Senior Conference Course	
A course from the PHIL 0990 Senior Seminar series		
Any graduate seminar in Philosophy		
Total Credits		12

¹ Or one more Philosophy course.

Honors

Seniors wishing to earn honors by presenting a senior honors thesis should consult their concentration advisor during their sixth semester or at the start of the seventh semester concerning procedures and requirements. Students may earn honors by presenting a senior thesis judged to be of honors quality by two readers. In addition to completing the usual nonhonors requirements, the student should also have a grade point average of over 3.4 in physics, philosophy and history of science courses (of which at least five must be taken for a letter grade). Honors theses are usually prepared over a period of two semesters with an advisor from the Department of Physics or the Department of Philosophy.

Chemical Physics Concentration Requirements

Chemical Physics is an interdisciplinary field at the crossroads of chemistry and physics and is administered jointly by the two departments. The concentration provides students with a broad-based understanding in fundamental molecular sciences, as well as a background for graduate studies in physical chemistry, chemical physics, or molecular engineering. Concentrators are required to take twenty courses in chemistry, physics, and mathematics, although approved courses in applied mathematics, biology, computer science, geological sciences, or engineering may be substitutes. Chemical Physics concentrators are also advised to take at least six courses in the humanities and social sciences. Chemical Physics concentrators at all levels (first-year through seniors) are actively involved in research with faculty members in both departments.

Standard program for the Sc.B. degree

Twenty-one semester courses¹ in chemistry, physics, and mathematics, with a minimum of four semester courses in mathematics. The expectation is that courses required for a concentration in Chemical Physics will be taken for a letter grade. Core courses are:

CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1
CHEM 0500	Inorganic Chemistry	1
CHEM 1140	Physical Chemistry: Quantum Chemistry	1
PHYS 0070	Analytical Mechanics	1
PHYS 0160	Introduction to Relativity, Waves and Quantum Physics	1
PHYS 0470	Electricity and Magnetism	1
Select one of the following laboratory courses:		1
CHEM 1160	Physical Chemistry Laboratory	
PHYS 0560	Experiments in Modern Physics	
PHYS 1560	Modern Physics Laboratory	
Select one course in statistical mechanics:		1
CHEM 1150	Physical Chemistry: Thermodynamics and Statistical Mechanics	
PHYS 1530	Thermodynamics and Statistical Mechanics	
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
MATH 0520	Linear Algebra	1
Seven courses, primarily at the 1000 or 2000 level, in chemistry or physics.		7
Select two semesters of independent study:		2
PHYS 1990	Senior Conference Course	
CHEM 0980	Undergraduate Research	
Total Credits		21

¹ Other approved courses in applied mathematics, biology, computer science, geological sciences, or engineering may be substituted for some of the twenty-one. Students are advised to take at least six courses in the humanities and social sciences.

Requirements for Honors

All Chemical Physics concentrators who have grades of A or S with distinction in a majority of their concentration courses will be considered for Honors; no separate application is necessary.

The requirements for Honors in Chemical Physics are:

* Grades of A or S with distinction in a majority of courses taken for the concentration.

* Two semesters of Independent Study (CHEM 0980 or equivalent. Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (<http://www.brown.edu/academics/chemistry/undergraduate/>).

* A Thesis in a form approved and recommended by the research advisor. Additional information about thesis guidelines will be provided to seniors by the Concentration Advisor.

* A Poster presentation at the chemistry department's spring undergraduate poster session.

Engineering and Physics Concentration Requirements

The program is designed to ensure that students take a significant portion of the usual curriculum in Engineering and Physics, obtain substantial laboratory experience, and take several upper-level elective courses, focusing on applied science. Students may take either the standard Physics or Engineering programs during their first and second years and then switch to this combined program. The Sc.B. degree program in Engineering and Physics is not accredited by ABET and is mostly intended to prepare students for graduate study in applied science and engineering. Since the requirements include both quantum mechanics with the physics concentrators and analog electronics with EE concentrators, as well as more mathematics than either Physics or Engineering, it is one of the more demanding programs at Brown.

The following standard program assumes that a student begins mathematics courses at Brown with MATH 0100 or MATH 0190. Students who begin in MATH 0200 can substitute an additional science, engineering or higher-level mathematics course for the MATH 0190 requirement. To accommodate the diverse preparation of individual students, variations of the following sequences and their prerequisites are possible with permission of the appropriate concentration advisor and the instructors involved. We recommend that each student's degree program be submitted for prior approval (typically in semester four) and scrutinized for compliance (in semester seven) by one faculty member from the Department of Physics and one faculty member from the School of Engineering.

Select one of the following two course sequences:

ENGN 0040 & ENGN 0030 or ENGN 0032	Engineering Statics and Dynamics and Introduction to Engineering Introduction to Engineering: Design	2
PHYS 0050 & PHYS 0060	Foundations of Mechanics and Foundations of Electromagnetism and Modern Physics	
PHYS 0070 & PHYS 0160	Analytical Mechanics and Introduction to Relativity, Waves and Quantum Physics	
MATH 0190 or MATH 0100	Single Variable Calculus, Part II (Physics/ Engineering) Single Variable Calculus, Part II	1
MATH 0200 or MATH 0180 or MATH 0350	Multivariable Calculus (Physics/ Engineering) Multivariable Calculus Multivariable Calculus With Theory	1
Select three additional higher-level math, applied math, or mathematical physics (PHYS 0720) courses.		3
CSCI 0111 or APMA 0160 or CSCI 0150	Computing Foundations: Data Introduction to Scientific Computing Introduction to Object-Oriented Programming and Computer Science	1
or CSCI 0170 or CSCI 0190	Computer Science: An Integrated Introduction Accelerated Introduction to Computer Science	
ENGN 0510	Electricity and Magnetism	1

or PHYS 0470	Electricity and Magnetism	
ENGN 1690 or PHYS 1510	Photonics Devices and Sensors Advanced Electromagnetic Theory	1
PHYS 0500 or ENGN 1370	Advanced Classical Mechanics Advanced Engineering Mechanics	1
PHYS 1410	Quantum Mechanics A	1
PHYS 1420	Quantum Mechanics B	1
PHYS 1530 or ENGN 0720	Thermodynamics and Statistical Mechanics Thermodynamics	1
ENGN 1620	Analysis and Design of Electronic Circuits	1
CHEM 0330 or ENGN 0310 or ENGN 0810 or PHYS 1600	Equilibrium, Rate, and Structure Mechanics of Solids and Structures Fluid Mechanics Computational Physics	1
ENGN 0410 or ENGN 1560 or PHYS 0560	Materials Science Applications in Microwave Communications Experiments in Modern Physics	1
PHYS 1560 or ENGN 1590	Modern Physics Laboratory Semiconductor Devices	1
or an approved 2000-level engineering or physics course.		
A thesis under the supervision of a physics or engineering faculty member:		1
PHYS 1990 or ENGN 1970 or ENGN 1971 or ENGN 1972 or ENGN 1973	Senior Conference Course Independent Studies in Engineering Independent Study in Engineering Independent Study in Engineering Design Independent Study in Engineering Design	

* Students are also encouraged to take courses dealing with the philosophical, ethical, or political aspects of science and technology.

Total Credits **19**

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Astronomy Concentration Requirements

Along with Greek, Latin, and Mathematics, Astronomy counts as one of the oldest continuously taught subjects in the Brown curriculum. It is the study of the properties of stars, galaxies, and the Universe, and as such combines elements from the disciplines of both Physics and Planetary Geology. Students pursuing this concentration complete introductory coursework in classical mechanics, relativity, and astrophysics, along with mathematics and electromagnetism. They go on to complete courses in stellar and extragalactic astrophysics as well as cosmology. Facilities available to concentrators include the historic Ladd Observatory.

Standard concentration for the A.B. degree

Eleven or twelve courses are required (depending on the satisfaction of prerequisites).

Prerequisites

PHYS 0070	Analytical Mechanics	1
PHYS 0160	Introduction to Relativity, Waves and Quantum Physics	1
PHYS 0270	Astronomy and Astrophysics	1
Select one of the following Series:		1-2
MATH 0170 & MATH 0180	Single Variable Calculus, Part II (Accelerated) and Multivariable Calculus	

MATH 0190 & MATH 0200	Single Variable Calculus, Part II (Physics/ Engineering) and Multivariable Calculus (Physics/ Engineering)	
MATH 0350	Multivariable Calculus With Theory (or equivalent)	
PHYS 0470	Electricity and Magnetism	1
Program		
Select one of the following mathematics courses:		1
MATH 0520	Linear Algebra	
MATH 0540	Linear Algebra With Theory	
PHYS 0720	Methods of Mathematical Physics	
APMA 0330	Methods of Applied Mathematics I	
APMA 0340	Methods of Applied Mathematics II	
Select two of the following astrophysics courses:		2
PHYS 1100	General Relativity	
PHYS 1250	Stellar Structure and the Interstellar Medium	
PHYS 1270	Extragalactic Astronomy and High-Energy Astrophysics	
PHYS 1280	Introduction to Cosmology	
Three additional 1000- or 2000-level courses in physics or a related field, suggestions:		3
APMA 1670	Statistical Analysis of Time Series	
EEPS 0810	Planetary Geology	
EEPS 1710	Remote Sensing of Earth and Planetary Surfaces	
EEPS 1810	Physics of Planetary Evolution	
ENGN 1860	Advanced Fluid Mechanics	
MATH 1060	Differential Geometry	
PHYS 0500	Advanced Classical Mechanics	
PHYS 0560	Experiments in Modern Physics	
PHYS 1410	Quantum Mechanics A	
PHYS 1510	Advanced Electromagnetic Theory	
PHYS 1530	Thermodynamics and Statistical Mechanics	
PHYS 1560	Modern Physics Laboratory	
Total Credits		11-12

¹ PHYS 0050 and PHYS 0060 can be taken in lieu of PHYS 0160

Physics Graduate Program

The Department of Physics offers graduate programs leading to the Master of Science (ScM) degree and the Doctor of Philosophy (PhD) Degree. For more information on admission and program requirements, please visit the following website: <http://www.brown.edu/academics/gradschool/programs/physics>

Master of Science (ScM)

The Sc.M. degree recognizes a significant level of academic achievement beyond an undergraduate degree. A total of 8 credits in 2000-level courses form the main requirement for the Sc.M. degree in Physics. Of the eight required courses, four will be selected from the six core courses of the Ph.D. program (PHYS 2010, 1720 or 2020**, 2040, 2050, 2060, 2140). Four additional credits at the 2000 level are required. These courses are to be selected from the remaining core courses or the large number of other upper-level Physics courses. With pre-approval of the DMP, up to two of these additional credits, also at the 2000 level, can be taken in another department. Preparation of a Master's thesis is recommended, as it forms an important pillar of professional training.

****Please note:** 2030 can be taken instead of 1720 or 2020 if the student has passed the entrance exam.

Students with less rigorous physics backgrounds will be advised to take a mixture of 1000-level and 2000-level courses during their course of study, necessitating a 3- or 4-semester track to completion.

Course selection and registration for recently admitted students are held in September after a faculty advising session during orientation. Registration remains open for the first two weeks as a 'shopping period' during which students can make final course decisions.

Core Courses

PHYS 2010	Techniques in Experimental Physics
PHYS 2030	Classical Theoretical Physics I
PHYS 2040	Classical Theoretical Physics II
PHYS 2050	Quantum Mechanics
PHYS 2060	Quantum Mechanics
PHYS 2140	Statistical Mechanics

Four additional credits at the 2000 level are required. These courses are to be selected from the remaining core courses or the large number of other upper level physics courses. Up to two of these can be taken in research, or taken in another department with prior approval of the program director.

PHYS 2020	Mathematical Methods of Engineers and Physicists
PHYS 2070	Advanced Quantum Mechanics
PHYS 2170	Introduction to Nuclear and High Energy Physics
PHYS 2280	Astrophysics and Cosmology
PHYS 2300	Quantum Theory of Fields I
PHYS 2320	Quantum Theory of Fields II
PHYS 2340	Group Theory
PHYS 2410	Solid State Physics I
PHYS 2420	Solid State Physics II
PHYS 2430	Quantum Many Body Theory
PHYS 2470	Advanced Statistical Mechanics
PHYS 2600	Computational Physics
PHYS 2620H	Quantum Computation, Information, and Sensing
PHYS 2620J	Statistical Physics in Inference and (Deep) Learning
PHYS 2980 or PHYS 2981	Research in Physics Research in Physics

Doctor of Philosophy (PhD)

Core Courses:

PHYS 2010	Techniques in Experimental Physics
PHYS 2030	Classical Theoretical Physics I
PHYS 2040	Classical Theoretical Physics II
PHYS 2050	Quantum Mechanics
PHYS 2060	Quantum Mechanics
PHYS 2140	Statistical Mechanics

Beyond the core courses, PhD candidates are expected to pass four additional advanced courses. At least one of the courses must fall outside the student's research area. These courses are to be selected from the following:

PHYS 2020	Mathematical Methods of Engineers and Physicists
PHYS 2070	Advanced Quantum Mechanics
PHYS 2100	General Relativity

PHYS 2170	Introduction to Nuclear and High Energy Physics
PHYS 2280	Astrophysics and Cosmology
PHYS 2300	Quantum Theory of Fields I
PHYS 2320	Quantum Theory of Fields II
PHYS 2340	Group Theory
PHYS 2410	Solid State Physics I
PHYS 2420	Solid State Physics II
PHYS 2430	Quantum Many Body Theory
PHYS 2470	Advanced Statistical Mechanics
PHYS 2600	Computational Physics
PHYS 2630	Biological Physics

Courses

PHYS 0030. Basic Physics A.

Survey of mechanics for concentrators in sciences other than physics-including premedical and life science students. Students with more advanced math training are advised to take PHYS 0050, which covers the same topics in physics. Lectures and laboratory. Six hours of attendance.

PHYS 0040. Basic Physics B.

Survey of electricity, magnetism, optics, and modern physics for concentrators in sciences other than physics-including premedical students or students without prior exposure to physics who require a less rigorous course than PHYS 0050, 0060. Lectures, conferences, and laboratory.

PHYS 0050. Foundations of Mechanics.

An introduction to Newtonian mechanics that employs elementary calculus. Intended for science concentrators. Potential physics concentrators, who do not have adequate preparation for PHYS 0070, may enroll, but are urged to continue with PHYS 0160 rather than PHYS 0060. Lectures, conferences and laboratory. Six hours of attendance. Recommended: MATH 0090 or MATH 0100.

PHYS 0060. Foundations of Electromagnetism and Modern Physics.

An introduction to the principles and phenomena of electricity, magnetism, optics, and the concepts of modern physics. Recommended for those who wish to limit their college physics to two semesters but seek a firm grounding in the subject, including but not limited to those with some previous knowledge of physics. Lectures, conferences, and laboratory. Six hours of attendance. Prerequisite: PHYS 0050. Recommended: MATH 0100.

PHYS 0070. Analytical Mechanics.

A mathematically more rigorous introduction to Newtonian mechanics than PHYS 0050. For first-year students and sophomores who have studied physics previously and have completed a year of calculus. Lectures, conferences, and laboratory. Six hours of attendance. Prerequisites: high school physics and calculus or written permission. S/NC

PHYS 0100. Flat Earth to Quantum Uncertainty: On the Nature and Meaning of Scientific Explanation.

Physics has had a dramatic impact on our conception of the universe, our ideas concerning the nature of knowledge, and our view of ourselves. Philosophy, sometimes inspired by developments in physics, considers the impact of such developments on our lives. In this seminar, students will explore how classical and modern physical theory have affected our view of the cosmos, of ourselves as human beings, as well as our view of the relation of mathematical or physical structures to 'truth' or 'reality.' Through a study of physics as well as selected philosophical readings, we will consider how we can know anything, from seemingly simple facts to whether a machine is conscious. Enrollment limited to 19 first year students. Instructor permission required.

PHYS 0110. Excursion to Biophysics.

This new course aims at freshmen with good preparation in high school physics, chemistry and biology, but who have not had a set mind what specific disciplines to focus on in their college study at Brown. The course will introduce important physics concepts and techniques relevant to biology and medicine, such as diffusion and transport of molecules and intracellular components, Brown motion and active swimming of microbes, motion of particles confined by a harmonic potential, Boltzmann distribution, exponential growth or decay, and statistics of single molecule behavior. The goal of the course is to cultivate interest and provide essential basics for more rigorous study of biological physics as a branch of interdisciplinary science. Enrollment limited to 19 first year students. Instructor permission required.

PHYS 0111. Are There Extra Dimensions Under Your Bed?

Discusses some of the most exciting questions confronting contemporary physical science in a fashion suitable for both humanists and scientists. What are particles, antiparticles, superstrings, and black holes? How are space and time related? How are mass and gravity related to space and time? Do we live in a three-dimensional world, or are there extra dimensions? The seminar will address such questions with conceptual explanations based upon current research on campus, and highlight the experiments at the energy frontier, being carried out by the world's largest scientific instrument to-date, the Large Hadron Collider, located in Geneva, Switzerland. Enrollment limited to 19 first year students.

PHYS 0112. Extra-Solar Planets and the Search for Extraterrestrial Life.

The course will cover the significant developments in the detection and characterization of extra-solar planetary systems in the past almost 30 years. We will study the techniques for detecting planets outside of our solar system, the properties of the exoplanets discovered so far, and the prospects for future discoveries, with an emphasis on the search for "Earth-analogues" and the implications for astrobiology.

PHYS 0113. Squishy Physics.

A freshman seminar to explore everyday applications of physics. It offers practical training on project based learning. The course involves hands-on experimentation, data analysis and presentation. The course is designed for students interested in any field of science with no pre-requisite. The topics covered include motion, forces, flow, elasticity, polymers, gels, electricity, energy, etc. Students will be guided to work on several projects over the semester. They are required to report their projects in both written and oral reports. There is no exam for the course. Students are required to register for one of the labs.

PHYS 0114. The Science and Technology of Energy.

Energy plays fundamental roles in society. Its use underlies improvements in the living standard; the consequences of its use are having a significant impact on the Earth's climate; its scarcity in certain forms is a source of insecurity and political conflict. This course will introduce the fundamental laws that govern energy and its use. Physical concepts to be covered: mechanical energy, thermodynamics, the Carnot cycle, electricity and magnetism, quantum mechanics, and nuclear physics. Technological applications include wind, hydro, and geothermal energy, engines and fuels, electrical energy transmission and storage, solar energy and photovoltaics, nuclear reactors, and biomass. Enrollment limited 19.

PHYS 0120. Adventures in Nanoworld.

Richard Feynman famously said, "There's plenty of room at the bottom," about the possibility of building molecular-size machines operating according to Quantum Mechanics. Scientists are now learning the art, and students in this course will use basic physics and simple mathematical models to understand the phenomena and materials in the nanoworld. Non-science concentrators and potential science concentrators alike will learn about important classes of nanosystems such as macromolecules, nanotubes, quantum dots, quantum wires, and films. We will learn how people make nanosystems and characterize them. We will consider existing and potential applications of nanotechnology, including molecular motors, nanoelectronics, spintronics, and quantum information. Enrollment limited to 19 first year students.

PHYS 0121. Introduction to Environmental Physics: The Quantum Mechanics of Global Warming.

We will use basic physics and simple mathematical models to investigate climate change, energy and entropy, the dispersal of pollutants, solar power, and other aspects of environmental science. Lectures will be supplemented with demonstrations of key physical principles. Emphasis will be placed on quantitative reasoning.

PHYS 0150. The Jazz of Modern Physics.

This course, aimed at both students in the humanities and sciences, will explore the myriad surprising ways that jazz music is connected to modern physics. No background in physics, mathematics or music is required, as all of these foundational concepts and tools will be introduced.

The Jazz of Physics has three interconnected components:

- (1) Using concepts and analogies from music and acoustics to explore the key conceptual ideas in modern physics such as quantum mechanics/information, general relativity, particle physics, dark energy and big bang cosmology.
- (2) Exploring the parallels between jazz and physics through the lens of 20th century physics and jazz history, as well as key innovations in both fields with an eye towards future innovations.
- (3) Students will learn the tools of signification in physics and develop group projects with a final product.

The course will consist of lectures, related homework sets, weekly discussion meetings, and a final study where groups of students will select a topic of interest.

PHYS 0160. Introduction to Relativity, Waves and Quantum Physics.

A mathematically rigorous introduction to special relativity and quantum mechanics. The second course in the three-semester sequence (PHYS 0470 being the third) for those seeking the strongest foundation in physics. Also suitable for students better served by an introduction to modern physics rather than electromagnetism. Lectures, conferences, and laboratory. Six hours of attendance. Prerequisite: PHYS 0070 or 0050. Recommended: MATH 0180 or 0200. S/NC

PHYS 0180. Physics for Non-Physicists: An Introduction to Classical and Modern Physics.

This course is an introduction to many major concepts in physics. It is intended for a general audience, and calculus is not required. Along the way, we will address the question "what goes into making a scientific theory?" using the works of Euclid, Galileo, Newton and others as examples. Concepts range historically from planetary motion (addressed at least as early as Ancient Greece) to modern physics topics that are still under debate today. These concepts include (but are not limited to) motion, forces, energy, electricity and magnetism, special relativity and quantum mechanics.

PHYS 0220. Astronomy.

An introduction to basic ideas and observations in astronomy, starting with the observed sky, coordinates and astronomical calendars and cycles, the historical development of our understanding of astronomical objects. Particular emphasis is placed on the properties of stars, galaxies, and the Universe as a whole, including the basic ideas of cosmology. The material is covered at a more basic level than PHYS 0270. Knowledge of basic algebra and trigonometry is required, but no experience with calculus is necessary. The course includes evening laboratory sessions.

PHYS 0270. Astronomy and Astrophysics.

A complete survey of basic astronomy, more rigorous than is offered in PHYS 0220. Requires competence in algebra, geometry, trigonometry, and vectors and also some understanding of calculus and classical mechanics. Laboratory work required. This course or an equivalent required for students concentrating in astronomy. The course includes conferences and evening laboratory sessions.

PHYS 0470. Electricity and Magnetism.

Electric and magnetic fields. Motion of charged particles in fields. Electric and magnetic properties of matter. Direct and alternating currents. Maxwell's equations. Laboratory work. Prerequisites: PHYS 0040, 0060, or 0160; and MATH 0180, 0200 or 0350. Labs meet every other week.

PHYS 0500. Advanced Classical Mechanics.

Dynamics of particles, rigid bodies, and elastic continua. Normal modes. Lagrangian and Hamiltonian formulations. Prerequisites: PHYS 0070, 0160 or 0050, 0060 and MATH 0180 or 0200; or approved equivalents.

PHYS 0560. Experiments in Modern Physics.

Introduction to experimental physics. Students perform fundamental experiments in modern quantum physics, including atomic physics, nuclear and particle physics, and condensed matter physics. Visits to research labs at Brown acquaint students with fields of current research. Emphasizes laboratory techniques, statistics, and data analysis. Three lecture/discussion hours and three laboratory hours each week. Required of all physics concentrators. Prerequisites: PHYS 0070, 0160 or 0050, 0060; 0470.

PHYS 0720. Methods of Mathematical Physics.

This course is designed for sophomores in physical sciences, especially those intending to take sophomore or higher level Physics courses. Topics include linear algebra (including linear vector spaces), Fourier analysis, ordinary and partial differential equations, complex analysis (including contour integration). Pre-requisites: PHYS 0060 or 0160, MATH 0180, 0200 or 0350, or consent of the instructor.

PHYS 0790. Physics of Matter.

An introduction to the principles of quantum mechanics and their use in the description of the electronic, thermal, and optical properties of materials. Primarily intended as an advanced science course in the engineering curriculum. Open to others by permission. Prerequisites: ENGN 0040, APMA 0340 or equivalents.

PHYS 1100. General Relativity.

An introduction to Einstein's theory of gravity, including special relativity, spacetime curvature, cosmology and black holes. Prerequisites: PHYS 0500 and MATH 0520 or MATH 0540 or equivalent, or permission of the instructor. Recommended: PHYS 0720. Offered every other year.

PHYS 1170. Introduction to Nuclear and High Energy Physics.

A study of modern nuclear and particle physics, with emphasis on the theory and interpretation of experimental results. Prerequisites: PHYS 1410, 1420 (may be taken concurrently), or instructor permission.

PHYS 1250. Stellar Structure and the Interstellar Medium.

This class is an introduction to the physics of stars and their environment. The course covers the fundamental physics that set the physical properties of stars, such as their luminosity, size, spectral properties and how these quantities evolve with time. In addition, it includes a study of the physics that takes place in the gaseous environment surrounding stars, the InterStellar Medium (ISM). The ISM is very important because it contains a wealth of information on the evolutionary history of galaxies, their composition, formation and future. Prerequisites: PHYS 0270, PHYS 0470, or instructor permission. PHYS 1530 (perhaps taken concurrently) is strongly recommended but not required.

PHYS 1270. Extragalactic Astronomy and High-Energy Astrophysics.

This course provides an introduction to the astrophysics of galaxies, their structure and evolution, with an emphasis on physical introduction of the observations. Underlying physics concepts such as radiative transfer, nuclear reactions and accretion physics will be introduced. Intended for students at the junior level. Prerequisites: PHYS 0270 and PHYS 0470, and either MATH 0190 or MATH 0200, or instructor permission.

PHYS 1280. Introduction to Cosmology.

The course presents an introduction to the study of the origin, evolution and contents of the Universe. Topics include the expansion of the Universe, relativistic cosmologies, thermal evolution, primordial nucleosynthesis, structure formation and the Cosmic Microwave Background. Prerequisites: PHYS 0160, MATH 0190, MATH 0200, or MATH 0350, or instructor permission.

PHYS 1410. Quantum Mechanics A.

A unified treatment of quanta, photons, electrons, atoms, molecules, matter, nuclei, and particles. Quantum mechanics developed at the start and used to link and explain both the older and newer experimental phenomena of modern physics. Prerequisites: PHYS 0500 and 0560; and MATH 0520, 0540 or PHYS 0720; or approved equivalents.

PHYS 1420. Quantum Mechanics B.

See Quantum Mechanics A, (PHYS 1410) for course description.

PHYS 1510. Advanced Electromagnetic Theory.

Maxwell's laws and electromagnetic theory. Electromagnetic waves and radiation. Special relativity. Prerequisites: PHYS 0470; and MATH 0180, 0200, or 0350; or approved equivalents.

PHYS 1530. Thermodynamics and Statistical Mechanics.

The laws of thermodynamics and heat transfer. Atomic interpretation in terms of kinetic theory and elementary statistical mechanics. Applications to physical problems. Prerequisites: MATH 0180 or 0200 or 0350. Corequisite: PHYS 1410.

PHYS 1560. Modern Physics Laboratory.

A sequence of intensive, advanced experiments often introducing sophisticated techniques. Prerequisites: PHYS 0470, 0500 and 0560; and MATH 0520, 0540 or PHYS 0720; or approved equivalents.

PHYS 1570. Physics of Climate and Energy.

How does Earth's climate system work and how is it changing as carbon dioxide levels increase in the atmosphere? How can energy be produced and transformed without releasing carbon dioxide? Can the damage that we've done to the climate system be repaired? Students in the course will use physics to investigate these questions. The course will be taught from a physics perspective that emphasizes fundamentals such as the second law of thermodynamics, blackbody radiation, fluid dynamics, etc. Advanced topics such as waves of topological origin and machine learning for climate modeling may be touched upon if there is time. The course is aimed at undergraduate physical science concentrators, physics ScM and PhD students, and students in the new ScM program offered by the Initiative for Sustainable Energy who have taken the prerequisites.

PHYS 1590. Semiconductor Devices.

An introduction to semiconductor device physics and basic electronic properties of semiconductors, including junctions, heterojunction, and fundamental device building blocks. Current and proposed semiconductor devices: field effect transistors, bipolar transistors, quantum-effect devices, and optoelectronic devices. A brief fabrication lab will introduce junction fabrication in the cleanroom. Advanced topics, such as heterojunction bipolar transistors and silicon-on-insulator FETs, are included in the graduate version.

PHYS 1595. Laser and Nonlinear Optics.

This is a second course on optics and photonics, intended for juniors (and beyond) interested in more advanced topics in modern optics who have already completed ENGN1690 (or equivalent). Topics to be covered include some topics in linear optics (Fourier optics, coherence) and lasers (fundamentals of laser operation, gain and gain saturation, resonators, transient laser phenomena). We will then discuss light-matter interactions in the nonlinear regime, relying on a classical or semi-classical treatment. Topics will include frequency conversion via mixing or parametric processes, and degenerate third-order self-induced effects. Time permitting, we will discuss some of the most recent breakthroughs in optically-driven nonlinear processes such as the generation of attosecond pulses (physics Nobel Prize 2023).

PHYS 1600. Computational Physics.

This course provides students with an introduction to scientific computation, primarily as applied to physical science problems. It will assume a basic knowledge of programming and will focus on how computational methods can be used to study physical systems complementing experimental and theoretical techniques. Prerequisites: PHYS 0070, 0160 (or 0050, 0060) and 0470 (or ENGN 0510); MATH 0180 or 0200 or 0350; the ability to write a simple computer program in Fortran, Matlab, C or C++.

PHYS 1610. Biological Physics.

Introduction on structures of proteins, nucleotides, and membranes; electrostatics and hydration; chemical equilibrium; binding affinity and kinetics; hydrodynamics and transport; cellular mechanics and motions; biophysical techniques including sedimentation, electrophoresis, microscopy and spectroscopy. Suitable for undergraduate science and engineering majors and graduate students with limited background in life science. Prerequisites: MATH 0180.

PHYS 1640. Introduction to Computational Physics and Data Analysis.

This course introduces upper undergraduate and graduate students to computational methods in physics and data analysis techniques. It covers programming in Python and Mathematica, computational physics fundamentals, and fundamental data analysis methods including statistics, data fitting, and background estimation. The course will use the discovery of the Higgs boson as a case study. Students will engage in practical assignments and a final project to apply learned concepts. Extensive use of Google Colab and Mathematica notebooks will be made to facilitate learning and application. Students are encouraged to bring their laptops to the lectures to perform the examples with the instructor.

PHYS 1670. Soft Matter.

This course provides an introduction to soft matter: polymers, elastomers, liquid crystals, and colloids. Students in physics, engineering, chemistry and applied mathematics may find this course useful. Familiarity with classical statistical mechanics (PHYS1530) is required. We will use scaling arguments and simple physical pictures as much as possible.

PHYS 1720. Methods of Mathematical Physics.

Designed primarily for sophomore students in physical sciences. Basic elements of and practical examples in linear algebra, the solution of ordinary and Partial Differential Equation, Complex Analysis and Application to Contour Integrals. Intended to prepare students for the mathematics encountered in PHYS 0500, 1410, 1420, 1510 and 1530. Pre-requisites: PHYS 0060 or 0160, MATH 0180, 0200 or 0350, or consent of the instructor.

PHYS 1790. Quantum Optics.

An introduction to the fundamental theory, mathematical formalism, and applications of quantum optics, the study of light and its interactions with matter at microscopic scales. Topics will include: an introduction to quantum mechanics using the bra-ket (or Dirac) notation, quantization of the electromagnetic fields, generation and detection of single photons, non-classical quantum states (single-mode states, Fock or number states, coherent and squeezed states), phasor diagrams, number-phase uncertainty, quantum theory of photoionization/photodetection, quantum description of mirrors, beam splitters, Mach-Zehnder interferometers, spontaneous emission and parametric downconversion, as well as interaction-free measurements. The course is intended for graduate and senior undergraduate students who would like to understand more advanced concepts in emerging fields, such as quantum computing. The material is self-contained, therefore students who do not have a deep background in quantum mechanics or optics will also be able to take the course proficiently

PHYS 1840. Group Research Project.

No description available.

PHYS 1931S. Medical Physics.

Medical Physics is an applied branch of physics concerned with the application of the concepts and methods to the diagnosis and treatment of human disease. It allies with medical electronics, bioengineering, health physics. Students will familiarize with major texts and literature of medical physics and are exposed to imaging and treatment techniques and quality control procedures. Students will acquire physical and scientific background to pose questions and solve problems in medical physics. Topics include: Imaging -imaging metrics, ionizing radiation, radiation safety, radioactivity, computed tomography, nuclear medicine, ultrasound, magnetic resonance imaging, and Radiation Therapy -delivery systems, treatment planning, brachytherapy, image guidance.

PHYS 1970A. Stellar Physics and the Interstellar Medium.

No description available.

PHYS 1970B. Topics in Optics.

Introduction to optical principles and techniques. Offered to students who have a foundation in physics and are especially interested in optics. The course covers the interaction of light with matter, geometric and wave optics, polarization, fluorescence, and optical instruments (e.g. interferometer, spectrometer, microscope and telescope). Recommended are one physics course (PHYS 0040, PHYS 0060, or ENGN 0040) and one calculus course (MATH 0180, MATH 0200, or MATH 0350), or per instructor's permission.

PHYS 1970C. String Theory for Undergraduates.

This course will concentrate on String Theory. It will be given at introductory/intermediate level with some review of the background material. Topics covered will include dynamical systems, symmetries and Noether's Theorem; nonrelativistic strings; relativistic systems (particle and string); quantization, gauge fixing, Feynman's sum over paths; electrostatic analogy; string in curved space-time; and supersymmetry. Some advanced topics will also be addressed, i.e., D-Branes and M-Theory. Recommended prerequisites: PHYS 0470 and 0500, or 0160.

PHYS 1970D. Statistical Physics in Inference and (Deep) Learning.

In this course students will explore the statistical physics principles underlying probabilistic inference and various neural network architectures. The course is designed to bridge the gap between teaching approaches to modern statistical physics that are either purely theoretical, or focus largely on its applications in data analysis. To that end, there will be a conscious effort to study topics such as: MaxEnt principle, variational methods, Hebb's rule, bias-variance tradeoff, regularization, and others with analytical derivations as well as worked-out code examples in Jupyter notebooks. The course will also provide a space for students to interrogate and reflect on the ethical, political, and policy frameworks that are urgently needed in the age of deep learning.

PHYS 1970F. Quantum Information.

Quantum information is the modern study of how to encode and transmit information on the quantum scale in many ways fundamentally different from classical information. This course will connect a standard treatment of Quantum mechanics with information theory. The first part of the course will focus on the quantum gates and universal sets, and how it is used for quantum computation. Then the question of measurements and control of quantum states in order to perform quantum computation will be addressed. The actual problems and limitations will be discussed and an introduction to quantum error correction will be given. To finish the course, the subject of quantum sensing will be introduced and its link with quantum information.

PHYS 1970G. Topological Matter.

Topology is a study of the robust properties of geometry, the global stuff that survives wiggles. Topological matter is matter that possesses robust properties that can survive a bit of crud, to the delight of its discoverers. It has breathed new life into topics that have been in textbooks for 75 years. Topics covered include Band Theory, Berry Phase, Topological Insulators, and the Quantum Hall Effect.

PHYS 1970J. Introduction to Fluids.

An introduction to fluids from the perspective of a physicist, this course will use discussion-based, small-group, and interactive pedagogy to explore and learn fundamental aspects of fluids: ideal, viscid, and planetary flows as well as turbulence, boundary layers, and waves. Student preference and feedback will be a major component in determining the topics to be covered as well as how class time is spent. This is recommended as an advanced undergraduate course for Physics majors who have completed their core coursework.

PHYS 1980. Undergraduate Research in Physics.

Designed for undergraduates to participate, individually or in small groups, in research projects mentored by the physics faculty. Students must have taken one year of college level physics. An average of 8 to 10 hours per week of guided research is required as are weekly meetings with the supervising faculty member. Students should consult with faculty to find a mutually agreeable research project and obtain permission to enroll. Section number varies by instructor (students must register for the appropriate section).

PHYS 1990. Senior Conference Course.

Preparation of thesis project. Required of candidates for the degree of bachelor of science with a concentration in physics. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHYS 2010. Techniques in Experimental Physics.

No description available.

PHYS 2020. Mathematical Methods of Engineers and Physicists.

An introduction to methods of mathematical analysis in physical science and engineering. The first semester course includes linear algebra and tensor analysis; analytic functions of a complex variable; integration in the complex plane; potential theory. The second semester course includes probability theory; eigenvalue problems; calculus of variations and extremum principles; wave propagation; other partial differential equations of evolution.

PHYS 2030. Classical Theoretical Physics I.

No description available.

PHYS 2040. Classical Theoretical Physics II.

No description available.

PHYS 2050. Quantum Mechanics.

No description available.

PHYS 2060. Quantum Mechanics.

No description available.

PHYS 2070. Advanced Quantum Mechanics.

No description available.

PHYS 2100. General Relativity.

This graduate course in general relativity and cosmology will cover the principles of Einstein's general theory of relativity, differential geometry, the first order formulation of general relativity (Einstein-Cartan theory), experimental tests of general relativity and black holes. The second half of the course will focus on relativistic cosmology with a focus on its interface with field theory.

PHYS 2140. Statistical Mechanics.

No description available.

PHYS 2170. Introduction to Nuclear and High Energy Physics.

No description available.

PHYS 2270. Advanced Astrophysics and Observational Cosmology.

This course introduces key concepts in astrophysics (star formation and evolution, galactic structure, large-scale clustering, cosmological parameters), key statistical and observational techniques (correlation functions and power spectra, interferometry, high energy particle detection) and physical processes (thermal and non-thermal radiation, radiative cooling, scattering and dynamical processes) that form the backbone of experimental research in astrophysics and cosmology. The course is intended for graduate students interested in astrophysics and cosmology and advanced undergraduates who have completed the undergraduate astrophysics offerings.

PHYS 2280. Astrophysics and Cosmology.

This course serves as a graduate-level introduction to modern cosmology, including current topics of research on both observational and theoretical fronts. Topics include relativistic cosmology, inflation and the early Universe, observational cosmology, galaxy formation. Prerequisites for undergraduates: PHYS 1280 and PHYS 1530.

PHYS 2300. Quantum Theory of Fields I.

No description available.

PHYS 2320. Quantum Theory of Fields II.

No description available. Instructor permission required.

PHYS 2340. Group Theory.

Offered every other year.

PHYS 2410. Solid State Physics I.

No description available.

PHYS 2420. Solid State Physics II.

The goal of the course is to explain the effects of interactions between the electrons on the properties of quantum materials. In particular, upon completing the course you will acquire deep understanding of the physics of conductors, symmetry broken phases and strongly interacting topological phases such as Hall effect. We will particularly concentrate on the phenomenology of these systems.

PHYS 2430. Quantum Many Body Theory.

No description available.

PHYS 2450. Exchange Scholar Program.**PHYS 2470. Advanced Statistical Mechanics.**

No description available.

PHYS 2550. Applied Machine Learning and AI.

This graduate-level course explores the integration of machine learning (ML) and artificial intelligence (AI) techniques in various branches of physics. With a focus on practical applications, students will gain hands-on experience in leveraging ML and AI to solve complex problems, enhance data analysis, and optimize experimental design in the context of particle physics, astrophysics, and condensed matter physics.

PHYS 2570. Physics of Climate and Energy.

How does Earth's climate system work and how is it changing as carbon dioxide levels increase in the atmosphere? How can energy be produced and transformed without releasing carbon dioxide? Can the damage that we've done to the climate system be repaired? Students in the course will use physics to investigate these questions. The course will be taught from a physics perspective that emphasizes fundamentals such as the second law of thermodynamics, blackbody radiation, fluid dynamics, etc. Advanced topics such as waves of topological origin and machine learning for climate modeling may be touched upon if there is time. The course is aimed at undergraduate physical science concentrators, physics ScM and PhD students, and students in the new ScM program offered by the Initiative for Sustainable Energy who have taken the prerequisites.

PHYS 2590. Semiconductor Devices.

An introduction to semiconductor device physics and basic electronic properties of semiconductors, including junctions, heterojunction, and fundamental device building blocks. Current and proposed semiconductor devices: field effect transistors, bipolar transistors, quantum-effect devices, and optoelectronic devices. A brief fabrication lab will introduce junction fabrication in the cleanroom. Advanced topics, such as heterojunction bipolar transistors and silicon-on-insulator FETs, are included in the graduate version.

PHYS 2595. Laser and Nonlinear Optics.

This is a second course on optics and photonics, intended for juniors (and beyond) interested in more advanced topics in modern optics who have already completed ENGN1690 (or equivalent). Topics to be covered include some topics in linear optics (Fourier optics, coherence) and lasers (fundamentals of laser operation, gain and gain saturation, resonators, transient laser phenomena). We will then discuss light-matter interactions in the nonlinear regime, relying on a classical or semi-classical treatment. Topics will include frequency conversion via mixing or parametric processes, and degenerate third-order self-induced effects. Time permitting, we will discuss some of the most recent breakthroughs in optically driven nonlinear processes such as the generation of attosecond pulses (physics Nobel Prize 2023).

PHYS 2600. Computational Physics.

This course provides students with an introduction to scientific computation at the graduate level, primarily as applied to physical science problems. It will assume a basic knowledge of programming and will focus on how computational methods can be used to study physical systems complementing experimental and theoretical techniques. Prerequisites: PHYS 2030, 2050, 2140; the ability to write a simple computer program in Fortran, Matlab, C or C++.

PHYS 2610A. Selected Topics in Modern Cosmology.

Aims to provide a working knowledge of some main topics in modern cosmology. Combines study of the basics with applications to current research.

PHYS 2610B. Theory of Relativity.

No description available.

PHYS 2610C. Selected Topics in Condensed Matter Physics.**PHYS 2610D. Selected Topics in Condensed Matter Physics.**

The objective of this course is to introduce recent development in condensed matter physics. Selected topics include: nanoscale physics, materials, and devices; spintronics and magnetism; high temperature superconductivity; strongly correlated systems; Bose-Einstein condensate; and applications of condensed matter physics. In addition to discussing physics, some experimental techniques used in current research will also be introduced. The course will help students broaden their scope of knowledge in condensed matter physics, learn how to leverage their existing background to select and conduct research, and develop a sense of how to build their professional career based on condensed matter physics.

PHYS 2610E. Selected Topics in Physics of Locomotion.

This special topics graduate course deals with the physical processes involved in the locomotion of organisms, with a particular focus on locomotion at small scales in fluids. Topics include mechanisms of swimming motility for microorganisms, fluid mechanics at low Reynolds number, diffusion and Brownian motion, physical actuation, hydrodynamic interactions, swimming in complex fluids, artificial swimmers, and optimization. Prerequisites: (PHYS0470 or ENGN0510) and (PHYS 0500 or ENGN0810 or ENGN1370), or permission of the instructor.

PHYS 2610F. Selected Topics in Collider Physics.

The course will cover basic aspects of conducting precision measurements and searches for new physics at modern high-energy colliders, with the emphasis given to physics at the Large Hadron Collider. The course will cover major aspects of conducting physics analysis from the underlying theory to experimental methods, such as optimization of the analysis, multivariate analysis techniques, use of statistical methods to establish a signal or set the limit. There will be reading assignments, in-class student presentations, and hands-on exercises offered as the part of the course. Prerequisite: PHYS 1170 or 2170. Open to graduate students in Physics and Math.

PHYS 2620A. Astrophysical and Cosmological Constraints on Particle Physics.

No description available.

PHYS 2620B. Green's Functions and Ordered Exponentials.

No description available.

PHYS 2620C. Introduction to String Theory.

No description available.

PHYS 2620D. Modern Cosmology.

No description available.

PHYS 2620E. Selected Topics in Quantum Mechanics: Fuzzy Physics.

No description available.

PHYS 2620F. Selected Topics in Molecular Biophysics.

No description available.

PHYS 2620G. The Standard Model and Beyond.

Topics to be covered will include: Yang-Mills theory, origin of masses and couplings of particles, effective field theory, renormalization, confinement, lattice gauge theory, anomalies and instantons, grand unification, magnetic monopoles, technicolor, introduction to supersymmetry, supersymmetry breaking, the Minimal Supersymmetric Standard Model, and dark matter candidates. Prerequisite: PHYS 2300.

PHYS 2620H. Quantum Computation, Information, and Sensing.

This course introduces the theory and practice of quantum computation and quantum information with the focus on quantum algorithms. The topics that will be covered are quantum mechanics from the quantum computing perspective, quantum measurement, quantum sensing, quantum gates, quantum algorithms, quantum error correction codes, quantum entanglement and applications in quantum communication. To demonstrate the ability to perform independent research and literature review, students will write a final report on quantum computing/quantum information topics.

PHYS 2620J. Statistical Physics in Inference and (Deep) Learning.

In this course students will explore the statistical physics principles underlying probabilistic inference and various neural network architectures. The course is designed to bridge the gap between teaching approaches to modern statistical physics that are either purely theoretical, or focus largely on its applications in data analysis. To that end, there will be a conscious effort to study topics such as: MaxEnt principle, variational methods, Hebb's rule, bias-variance tradeoff, regularization, and others with analytical derivations as well as worked-out code examples in Jupyter notebooks. The course will also provide a space for students to interrogate and reflect on the ethical, political, and policy frameworks that are urgently needed in the age of deep learning.

PHYS 2630. Biological Physics.

The course is the graduate version of Phys 1610, Biological Physics. The topics to be covered include structure of cells and biological molecules; diffusion, dissipation and random motion; flow and friction in fluids; entropy, temperature and energy; chemical reactions and self-assembly; solution electrostatics; action potential and nerve impulses. The graduate level course has additional pre-requisites of Phys 0470 and 1530, or equivalents. It requires homework assignments at the graduate level. The final grades will be assigned separately from those who take the course as Phys 1610, although the two groups may be taught in the same classroom.

PHYS 2640. Introduction to Computational Physics and Data Analysis.

This course introduces upper undergraduate and graduate students to computational methods in physics and data analysis techniques. It covers programming in Python and Mathematica, computational physics fundamentals, and fundamental data analysis methods including statistics, data fitting, and background estimation. The course will use the discovery of the Higgs boson as a case study. Students will engage in practical assignments and a final project to apply learned concepts. Extensive use of Google Colab and Mathematica notebooks will be made to facilitate learning and application. Students are encouraged to bring their laptops to the lectures to perform the examples with the instructor.

PHYS 2670. Soft Matter.

This course provides an introduction to soft matter: polymers, elastomers, liquid crystals, and colloids. Students in physics, engineering, chemistry, and applied mathematics may find this course useful. Familiarity with classical statistical mechanics (PHYS1530) is required. We will use scaling arguments and simple physical pictures as much as possible.

PHYS 2710. Seminar in Research Topics.

Instruction via reading assignments and seminars for graduate students on research projects. Credit may vary. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHYS 2711. Seminar in Research Topics.

See Seminar In Research Topics (PHYS 2710) for course description. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHYS 2790. Quantum Optics.

An introduction to the fundamental theory, mathematical formalism, and applications of quantum optics, the study of light and its interactions with matter at microscopic scales. Topics will include: an introduction to quantum mechanics using the bra-ket (or Dirac) notation, quantization of the electromagnetic fields, generation and detection of single photons, non-classical quantum states (single-mode states, Fock or number states, coherent and squeezed states), phasor diagrams, number-phase uncertainty, quantum theory of photoionization/photodetection, quantum description of mirrors, beam splitters, Mach-Zehnder interferometers, spontaneous emission and parametric downconversion, as well as interaction-free measurements. The course is intended for graduate and senior undergraduate students who would like to understand more advanced concepts in emerging fields, such as quantum computing. The material is self-contained, therefore students who do not have a deep background in quantum mechanics or optics will also be able to take the course proficiently

PHYS 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

PHYS 2970F. Quantum Information.

Quantum information is the modern study of how to encode and transmit information on the quantum scale in many ways fundamentally different from classical information. This course will connect a standard treatment of Quantum mechanics with information theory. The first part of the course will focus on the quantum gates and universal sets, and how it is used for quantum computation. Then the question of measurements and control of quantum states in order to perform quantum computation will be addressed. The actual problems and limitations will be discussed and an introduction to quantum error correction will be given. To finish the course, the subject of quantum sensing will be introduced and its link with quantum information.

PHYS 2980. Research in Physics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHYS 2981. Research in Physics.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHYS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Political Science

Traditionally, political science splits into four subfields: (1) the study of politics in the United States (American politics); (2) the comparative study of different political systems and individual nations around the globe (comparative politics); (3) the study of relations among states and peoples (international relations); and (4) the philosophical study of political ideas (political theory). What particularly moves us at Brown are the big questions about political life – both at home and around the world. We look at topics like democracy, authoritarianism, war, climate, rights, freedom, justice, the Constitution, and social movements. We engage these topics in a wide range of different political contexts, often in ways that cross between the traditional subfields. We also pay particular attention to how our analyses touch the real world of people and politics.

You'll find us involved all around the campus: at the Taubman Center American Politics and Policy and American Institutions, the Watson Institute for International and Public Affairs, the Center for Philosophy, Politics, and Economics, Saxena Center for Contemporary South Asia, the Center for Middle East Studies, Climate Solutions Lab, China Initiative, Center for Latin American and Caribbean Studies, Pembroke Center, Cogut Center for the Humanities among many others.

For additional information, please visit the department's website: <https://polisci.brown.edu/>

Political Science Concentration Requirements

Why and how does democracy flourish -- or decline? Just what is democracy? How do emotions shape our political behavior? Would less government lead to more social justice? What is social justice? How does smuggling (of drugs, guns, and people) reshape international relations? How does climate change affect politics? Do states or multinational corporations call the shots in the global economy?

Political science is about questions like these. You can grapple with every one of them -- and many more -- in the classrooms of the Brown Political Science Department. We study how people -- nations, regions, cities, communities -- live their common lives. How people solve (or duck) their common problems. How people govern themselves. How they think, talk, argue, fight, and vote. We seek to develop understandings of institutions, ideas, practices, and relations that constitute public life, and modes of inquiry that promote citizenship.

Ten courses are required overall from within the Department of Political Science. If you satisfy the methods requirement outside the department then you will need to add another POLS course. If you double count a course for two requirements, then you will also need to add a POLS course. You must always take ten distinct courses from the Department of Political Science.

Requirements:

Two introductory courses from the following:		2
POLS 0010	Introduction to the American Political Process	
POLS 0110	Introduction to Political Thought	
POLS 0200	Introduction to Comparative Politics	
POLS 0400	Introduction to International Politics	
One course in Political Theory taught by a Political Science theory professor¹		1
One methods course from Political Science:²		1
POLS 0500	Foundations of Political Analysis	
POLS 1600	Political Research Methods	
One Senior Capstone course taken from the POLS 1820 / 1821 / 1822 / 1823 / 1824 / 1825 offerings, or the independent studies sequence POLS 1970 / 1971, or the honors sequence POLS 1910 / 1920. The capstone course must be taken at Brown during the senior year. However, with exceptional circumstances and with permission and approval of the course from the DUS, a non-Brown course may fulfill this requirement.		1
Five additional courses from within Political Science and/or taught by a Political Science faculty member¹		5
Total Credits		10

¹ Faculty information can be found here:

<https://polisci.brown.edu/people/faculty-by-subfield>
<https://polisci.brown.edu/people/faculty-by-subfield> (<https://polisci.brown.edu/people/faculty-by-subfield/>)

² A comparable course from an outside department (APMA 0650, ANTH 1940, CPSY 0900, ECON 1620, ECON 1630, EEPs 1320, PHP 1501, SOC 1100 or SOC 1120) may also be used. **If the methods requirement is fulfilled by an outside department course, it will not count as one of the 10 required courses.**

Honors

The Honors Program involves writing a year-long senior thesis in close conjunction with a faculty member. Students with an outstanding academic record apply in the late spring of their junior year. Students must complete the methods requirement prior to applying to the Honors program. During their senior year students complete an honors research project and take POLS 1910 and POLS 1920. POLS 1910 and POLS 1920 will count as **one** credit towards the ten required Political Science courses for the concentration.

Political Science Graduate Program

The department of Political Science offers a 5-th year Masters (A.M.), a Master of Arts (A.M.) Degree* and a Doctor of Philosophy (Ph.D.) Degree.

Completion Requirements

5-th year Masters (A.M.):

The 5th-Year Master's Degree option allows Brown undergraduates to continue at the University for a master's degree after completing their bachelor's degree.

- Eight 2000 level Political Sciences courses are required
- Students can take up to two graduate level courses during their undergraduate studies
- POLS courses must be completed with a grade of B or better
- A minimum of six semester courses must be taken during 5th year

- Courses taken as an undergrad cannot count for both concentration and the masters program

Students must apply for this program before they complete their undergraduate studies. They do so through the Graduate School's online application system. Admission must be approved by the Political Science department and by the Graduate School.

Master of Arts (A.M.) Degree:

***The Political Science department does not have a separate master's program; graduate students can earn the A.M. on the way to the Ph.D.** This A.M. requires passing eight 2000-level Political Science courses with a grade of B or better.

Doctor of Philosophy (Ph.D.) Degree:

- Pass fourteen graduate level (2000-level) courses with a grade of B or better, though A grades are expected
 - Twelve courses must be within the Political Science department
 - For those in the American Politics, Comparative Politics, and International Relations Subfields:
 - Research Methods POLS2000 or POLS2400
 - Quantitative Research Methods I POLS2580
 - Two field proseminars (choose two of four - POLS2100 American, POLS2110 Comparative, POLS2120 Theory or POLS2130 IR)
 - One theory course
 - For those in the Political Theory Subfield:
 - Research Methods POLS2000 or POLS2400 or POLS2580
 - Both political theory field proseminars (POLS2120 and POLS2360)
 - One other field proseminar (POLS2100 American, POLS2110 Comparative, or POLS2130 IR)
 - The Prospectus Writing sequence POLS2050 and POLS2051 which counts as one course
 - The Professionalization sequence POLS2052 and POLS2053 which counts as one course
- Pass written and oral preliminary examinations in two subfields
- Written and oral presentation of a dissertation proposal
- Written and oral presentation of a dissertation
- A minimum of two semesters as a teaching assistant

For more information on admission and program requirements, please visit the following website

<https://graduateprograms.brown.edu/graduate-program/political-science-phd> (<https://graduateprograms.brown.edu/graduate-program/political-science-phd/>)

Courses

POLS 0010. Introduction to the American Political Process.

This course is designed to be an introduction to the American political process, broadly defined. We will cover topics including but not limited to: Constitution, Federalism, Federal Budget, Congress, Presidency, Bureaucracy, Judiciary, Civil Rights, Civil Liberties, Public Opinion, Media, Interest Groups, Political Parties, Campaigns, Elections, and Participation.

POLS 0110. Introduction to Political Thought.

What is justice? What is freedom? What is the basis of political authority? What is the nature of the best regime? Why should we obey the laws? When may we legitimately resist? These and other perennial questions of political life are explored. Readings includes Aristotle, Machiavelli, Hobbes, Locke, Rousseau, Marx, and J.S. Mill.

POLS 0200. Introduction to Comparative Politics.

Introduces students to the sub-field of comparative politics or politics within states. Topics include types of regimes (i.e., democratic, authoritarian-with-adjectives, totalitarian); transitions to democracy; collapse of democratic regimes; democratizing, revolutionary and ethnic challenges to the state; and globalization. The course also pays attention to modes of analysis in comparative politics. Cases will be drawn from various regions, including Western and Eastern Europe, Asia, Africa, the Middle East, and Latin America.

POLS 0220. City Politics.

Bosses, reformers, states, bureaucrats, politicians, the poor, the homeless, and the citizen. An introduction to the major themes of urban politics.

POLS 0400. Introduction to International Politics.

This course provides a basic introduction to the central theoretical perspectives and debates in international relations. The second part of the course applies these models to current problems in international relations, including globalization, state failure, humanitarian intervention, NGOs, terrorist networks, environmental issues, and possible future change in international politics.

POLS 0500. Foundations of Political Analysis.

This course provides an introduction for undergraduate students to the methods that political scientists (and other social scientists) use to generate and answer questions about the world around us. This course will provide you with the tools to evaluate critically social science research, and it will improve your ability to pose and answer research questions of your own. Both quantitative and qualitative approaches are covered. Not open to first year students.

POLS 0600. Introduction to Modern South Asia (SAST 0700).

Interested students must register for SAST 0700.

POLS 0820A. American Presidency.

The origins and evolution of the current presidency and the role of the presidential institution in the American political and policy-making system. Evaluation of the present role of the office and critical examination of recent administrations.

POLS 0820B. The Politics of Leadership.

Many people are placed in leadership positions but most never become real leaders. What separates leaders and non-leaders? What are the characteristics of a real leader? The course will focus on American politics and investigate two institutional arenas: the presidency and congress. Several case studies will be investigated where people use different skills to perform leadership roles. Among the factors to be considered are; personal qualities, prior preparation, selection of a challenge and the use of rhetorical skills. Enrollment limited to 19 first year students.

POLS 0820D. Freedom.

What is freedom? Is it important? How do we know? What should we do about it? We will analyze the different conceptions of liberty - liberal egalitarian, classical liberal, Marxist, and fascist views. We will determine how the various aspects of freedom - political, personal, psychological, economic, and moral - are complementary, and determine what sorts of institutions promote or undermine these aspects. Enrollment limited to 19 first year students.

POLS 0820E. Slavery and Political Philosophy.

This course looks at the various ways in which the experience of slavery has shaped political philosophy and political thinking from its origins. In what ways has the experience of freedom not just been tied to but presupposed the slavery of others? What ways of thinking about freedom are or are not compatible with the external enslavement of others? What kinds of ideas had to change for a systematic critique of slavery to develop? Have we overcome all forms of slavery or are their forms that are still with us?

POLS 0820F. Politics of Aviation.

Who are the key players in aviation conflicts? Congress and congressional committees, bureaucratic agencies and pressure groups. Governmental regulation of airlines; past, present and future. Current market trends examined. Two dominant themes in aviation politics: avoid safety failures (crashes); avoid security problems (terrorism). How 9-11 changed the industry.

POLS 0820G. Race and Political Representation.

While representation is a central tenet of democracy, much disagreement exists over what political representation means and the best way to ensure equitable representation for all citizens. We will study representation and its various forms. We will then use these concepts to examine research on how well American democratic institutions capture the interest of racial and ethnic minorities. Enrollment limited to 19 first year students.

POLS 0820H. Race and Visions of Justice.

This course is both an introduction to and critical assessment of the tradition of liberalism and its ability or inability to address racial inequality. We will explore the re-emergence of liberalism in the 20th century and move on to critical accounts of the tradition by scholars of race, inequality, and social movements. Given that liberalism remains a fundamental aspect of our political lives in the United States, we want to know whether it is capable in theory and practice to address the on-going question for racial justice.

POLS 0820I. Crime, Mafias and Prison.

Will develop framework for analysis of criminal behavior in a variety of contemporary and historical settings. Examines the rationality behind criminal choices, how governments seek to control crime, alternatives to state-enforcement of criminal law, origins and operation of organized crime and mafia groups, and how crime affects regions characterized by failed or weak states. Study crime in a variety of contexts, including in the Sicilian Mafia, 18th century piracy, contemporary drug and sex markets, and prison gangs. Will develop tools that can be used to understand the observed variation in criminal activity, the organizational structure of criminal activity, and their broader consequences.

POLS 0820L. Philosophy of the American Founding.

In framing our political system in the Constitution, who did the Founders rely on for their theoretical framework? In this course, we will explore the works of Montesquieu, Adams, Franklin, Jefferson, Madison, Hamilton, and other contributors to the Constitution. Enrollment limited to 19 first year students.

POLS 0820N. Political Thinking for a Global World.

This course will consider how we should think, and act, in a world increasingly marked by global interconnectedness. We will devote our attention to the intellectual and epistemological issues raised by cross-cultural exchange, and survey how theorists in both "the West" and elsewhere have thought about and formulated responses to issues like citizenship, human rights, feminism, and cultural identity.

POLS 0820P. Fourth Branch of Government.

Administrative agencies have been called the fourth branch of government. They write regulations that have the force of law and they are responsible for the implementation of virtually all public policies. How do these agencies fit into our constitutional form of government? How do they relate to the other branches of government? This course traces the rise of the administrative state and it examines the basic elements of command-and-control regulation, along with various alternatives to regulation. Written permission required.

POLS 0820Q. Politics of American Federal Holidays.

Why were ten national holidays created? The answer requires a review of key events in American political history from 1775 to 1983. Why was the Civil War pivotal? Which presidents were most important in generating support for special days? Conflicts occurred not only in creating the day but which day would be the holiday. Enrollment limited to 19 first year students.

POLS 0820R. Global Governance.

"Global governance" denotes the myriad ways in which states, institutions, networks, and associations help administer global affairs. In this seminar, we will explore who governs the world and how, and we will evaluate different normative theories of global governance, including the liberal/political, cosmopolitan democratic, and republican approaches. We will focus on the values and the global structure that their proponents deem most desirable. What values, if any, ought to govern the practice of global politics? And how should such values be institutionalized? Are there any good reasons for favoring a centralized global authority akin to a world state, or should we prefer a different global institutional arrangement? What role do we envision for the nation-state?

POLS 0820S. Capitalism For and Against.

What is capitalism? What are its defining traits and institutions, and the roles of the market and the state? How should individual rights and social responsibilities be balanced? What are capitalisms' strengths and weaknesses? Are capitalist societies or other types of systems the best way to achieve justice, promote excellence, and provide freedom, happiness, and material well-being? What are the coherent criticisms of and alternatives to capitalism? This course will study some of the seminal philosophical arguments about capitalism, focusing especially on Smith, Locke, Rousseau, Marx, and Hayek. Enrollment limited to 20 freshmen and sophomores.

POLS 0820T. Women's Work and Welfare in Global Perspective.

The seminar looks at how welfare systems structure women's participation in the workplace, family and society, including: women's roles in domestic economies; migration flows from poor to rich states, gendered divisions of labor; human trafficking; and pro-natalist responses to population decline. Attention is devoted to policies that support women and families, including welfare, work-and-family reconciliation; micro-financing, conditional income support programs; and the growing role of women's and non-governmental organizations in welfare policy. Cases are drawn from Europe, Latin America, Asia, Russia and the United States.

POLS 0820U. Drug War Politics.

This seminar examines the politics, practice, and consequences of government efforts to regulate mind-altering substances since the early 20th century. Although much of the focus is on the contemporary United States and Latin America, the coverage is broadly historical, comparative, and global. The main drugs focused on are cocaine, opium, and cannabis, but will include alcohol, tobacco, and synthetics. The course also evaluates policy alternatives and the obstacles to policy reform. The course draws on readings from fields such as political science, anthropology, criminology, and history. The seminar is reading intensive, and is designed to cultivate critical writing and presentation skills. Enrollment limited to 19 first year students.

POLS 0820V. Land and Conflict.

This first-year seminar considers the connection between land and political conflict. Disputes over territory have been a primary cause of war for centuries. Likewise, other types of conflicts over land continue to be a major factor in political struggles worldwide. Why, how, and when does territory become the subject of violent—or non-violent—conflict? The seminar will begin by thinking broadly about how land has factored into political conflict, both historically and today, and then we will move on to a series of case studies of recent or ongoing conflicts, including Israel/Palestine, Kashmir, the South China Sea, the Arctic, and global farmland.

POLS 0820W. Bleeding Heart Libertarianism.

What is libertarianism? In what sense can libertarians claim to combine the best of the "right" with the best of the "left?" Why do libertarians emphasize private property? Why are they skeptical of political agency? Are libertarians anti-democratic? Can they care about social justice? How do libertarians approach problems such as racism, sexism, militarism, state surveillance, global inequality, and environmental sustainability? This course will explore such questions, as illuminated by a variety of texts in the libertarian tradition, classical and contemporary.

POLS 0820X. Introduction to Modern South Asia.

The seminar aims to introduce South Asia in terms of a plurality in ways of being. It shall study themes beginning with colonialism and ranging from the colonial mapping of tradition; anticolonial ethics; partition and the creation of a separate state; communalism; democracy; secularism; nationalism; welfare; and the global war on terror. The seminar will be an intensive reading and writing experience that transgresses academic disciplines. Writings include important tracts and speeches of intellectuals and thinkers of South Asia; writings of scholars and activists; and literary and artistic works. There are no prerequisites for taking this course.

POLS 0820Y. The Politics of Race and the Criminal Justice System.

This course examines the politics of race and the criminal justice system in the U.S. It proceeds in three parts. First, it examines the political origins and consequences of racial disparities in citizens' interactions with the police, courts and prisons. Next, it considers how the public, the media, and politicians relate and respond to these issues. Finally, the course concludes by examining the prospects for reform and the consequences of inaction.

POLS 0820Z. Is Privacy Dead? Privacy, Surveillance, and Freedom in the Digital Age.

If someone is listening to our phone calls and reading our emails but we never find out, do we have reason to complain? If we do, how do we say that the snooping affected us? Does it make a difference if it's a neighbor, a lover, the state, or an algorithm listening in? What if we're the ones posting the information on Facebook, or if instead of Orwell's Big Brother watching one's every move it's the audience of CBS's reality show "Big Brother"? In this course students will examine these questions and more, and in the process will develop their own answers by drawing on the field of theories about privacy and surveillance. Students can expect to leave this course with a sharper view of the ethical and political problems facing their own era of rampant technological change.

POLS 0821A. Reimagining Capitalism.

Debates over capitalism and its alternatives date back centuries. Proponents say that market institutions have enabled extraordinary productivity growth and life-saving innovations. Trade and the division of labor have been central to human progress in recent centuries. Capitalism's critics point out that the growth of market economies has often had unacceptable consequences. The course is organized around four main challenges facing market economies today: environmental degradation, labor exploitation, inequality, and crisis. Can capitalism be reformed to solve the problems that it has helped generate, or is a market system unequipped to grapple with social and environmental challenges?

POLS 0821B. Ethics and International Affairs.

This first-year seminar offers an introduction to the role of ethics in international affairs. It begins with an examination of key conceptual approaches to the study of morality and ethics in international politics. The bulk of the course will then analyze a number of contemporary issues, such as what we owe the people of Afghanistan and Ukraine, the morality of nuclear deterrence, the ethics of drone warfare, our obligation to the world's poorest citizens, and our duties and responsibilities to the environment. Upon completing this course, you will have learned some of the key concepts and theoretical approaches to the study of ethics and international affairs, and considered some central moral issues in international politics. This course will also enable you to identify the strengths and weaknesses of different arguments, perspectives and viewpoints.

POLS 0821C. Political Violence.

Why do civil wars begin and end? Which people join rebellions? Why do states and non-state groups hurt civilians? What are the differences between rebel groups, terrorist organizations, and organized criminal groups? The seminar-based class aims introduce students to theories about and cases of political violence. It primarily draws on research in Political Science, though it also includes work from Economics, History, and Philosophy.

POLS 0821F. Politics and Nature.

This first-year seminar investigates the politics of the relationship between people and the earth; examines the environmental consequences of this relationship as it currently exists in many contemporary democracies, as well as its impact on human justice and freedom; and explores alternative political practices and institutional forms that might generate more ecological ways of living, evaluating their implications for sustainability, justice, and freedom. In considering the political relationship between human beings and the earth, we examine (and problematize) core political concepts including domination, freedom, agency, sovereignty, democracy, justice, liberalism, rights, representation, and the political. We also explore the relationship between politics and ethical life. The readings reflect a diversity of methodological approaches and normative commitments; the approach is highly collaborative. No prerequisites are required.

POLS 0920A. Bleeding Heart Libertarianism.

What is libertarianism? In what sense can libertarians claim to combine the best of the “right” with the best of the “left?” Why do libertarians emphasize private property? Why are they skeptical of political agency? Are libertarians anti-democratic? Can they care about social justice? How do libertarians approach problems such as racism, sexism, militarism, state surveillance, global inequality, and environmental sustainability? This course will consider such questions from a variety of texts in the libertarian tradition, contemporary and classical.

POLS 0920B. Introduction to Indigenous Politics with Pacific Islander Focus.

This introductory course in Indigenous political thought engages with critical Indigenous thinkers in order to understand Indigenous political praxis, resurgence and decolonization. Because Indigenous study is place-based and kinship relationships to land and all existents of that land are fundamental to understanding Indigenous political thought, Indigenous politics must be studied in the context of particular indigenous peoples. To that end this course focuses on political movements of contemporary Kanaka Maoli (Native Hawaiian). In addition to developing a fuller understanding of Indigenous political thought, this class also explores what it means to move beyond colonial relationships with the State.

POLS 0920C. Media and Democracy.

What role should media play in democracy? What impact do media forms such as social media have on democracy? As Americans increasingly get their news through social media and a wide variety of partisan online sources, they face an array of new challenges in gathering the information necessary of citizenship. The 2016 election and its aftermath added to a long list of worries about how media interacts with democracy—from Russian trolls to partisan bubbles to fake news to manipulative social media algorithms. Yet, at the same time, social media has enabled citizens to participate in shaping and contesting their informational environment in previously unimaginable ways—from #BlackLivesMatter to #MeToo.

POLS 0920E. Moral Pluralism.

Moral pluralism is an unmistakable characteristic of modern liberal societies. Even though the dire conflicts of religion which fuelled wars and civil unrest appear to be a thing of the past, fundamental moral disagreements are still plentiful today. Now as then, these disagreements expose tensions among the core of ideas upon which liberal societies are built. This course explores moral pluralism through the lens of classic and contemporary works in political philosophy and engages with questions such as: should the state be neutral in relation to different religious and moral convictions? Are there some values which we can expect all citizens to share despite their deep disagreements? How should citizens engage with each other when they debate controversial moral questions in the public forum?

POLS 0920F. The Passions in Modern Political Thought.

We love. We hate. We are proud of ourselves. We are envious of others. Misery triggers sympathy. Fury triggers fear. These psychological phenomena appear natural to human beings. We can't help experiencing them. We try to understand ourselves and our world through them. We act accordingly and in this way make a difference to ourselves and the people around us, for better or worse.

All these phenomena can be linked to one concept: passion. But what is passion? Why does it matter to politics and society? This course examines several passions (sympathy, self-love, fear, resentment, etc.) and their social and political implications.

POLS 0920G. US Populism in Comparative Perspective.

When Donald Trump won the United States presidential election in 2016 with an unconventional “outsider” campaign, academics and journalists sought answers for the unexpected victory, examining explanations including attitudes of racial anxiety, deindustrialization, and growing economic inequality. This course introduces students to these debates through offering a wider comparative perspective on instances of populist movements and leaders around the world. We will work to build an understanding of the causes and consequences of this complicated phenomenon by comparing current and historical cases of US populism with those in Europe and Latin America.

POLS 0920H. Origins of American Policing.

This course situates contemporary problems of policing in the long sweep from the Boston Massacre to modern times. Drawing on work by historians and social scientists, as well as primary sources, the course traces the development of policing with a consideration of three origin stories: (1) state-building and political order, (2) the protection of racial hierarchy, and (3) the construction of class boundaries. Topics include criminal enforcement in the American Revolution; the birth of urban police forces; law enforcement's role in slavery, Reconstruction, and Jim Crow; 20th century reformers and anti-vice crusades; the FBI, national security state, and immigration control; and the bipartisan war on crime in the 1980s and beyond.

POLS 0920I. The Politics, Ethics, and Art of Corruption.

What explains variation in corruption across and within democratic countries? What motivates the citizens and officials who engage in corrupt acts? Is there such a thing as a “culture of corruption”? In order to understand these questions (and attempt to answer them), this course takes a somewhat unconventional approach. While we use the analytical approach of the social sciences as our foundation, we also draw on films (documentary and fiction), interviews, and journalistic reporting to understand the individual and systemic causes and consequences of corruption, as well as the narratives citizens create surrounding corruption. Some weeks we focus on a particular country, while in other weeks we take a thematic approach. Throughout the course, we will draw on examples from across the globe, including Latin America, Africa, Europe, and Asia.

POLS 0920J. Transformations of American Liberalism.

At least since the Civil War, the dominant meaning of American liberalism has undergone significant transformations. This course considers the contested development of American liberalism, broadly construed, as a political vision as well as a practical governing program. A conventional account of ideological development complements the trajectory of state-building, from a nineteenth-century outlook championing contracts, private property, and free trade to a program favoring social mobilization and welfare during the Progressive Era and New Deal— followed by the late twentieth-century breakdown of this activist liberalism in favor of an individualist neoliberalism supportive of tax cuts, deregulation, and privatization. The readings and discussions will critically consider this narrative. Aside from the standard themes of political economy, topics will include criminal justice, foreign policy, civil rights, partisan realignments, and the relationship between political culture and ideology.

POLS 0920N. Music, Politics, and Power.

This discussion-based seminar explores the intersection of music, politics and power in comparative and international perspective. Drawing broadly from works in the social sciences and the humanities focusing on different historical periods, political systems and cultural contexts, the course considers how music has served as a tool for forging and maintaining collective identities, resisting authority, and projecting political power. The course also looks at the transnational role of music in the exercise of “soft power,” for example through cultural diplomacy. Empirical material, including playlists of songs and performances exemplifying protest movements, state-sponsored music, and national and revolutionary anthems, will be drawn widely from across the globe.

POLS 1010. Topics in American Constitutional Law.

This course will examine major constitutional controversies within the context of wider debates in political and legal theory. Readings from Supreme Court cases and prominent texts in political/legal theory. Each year we will focus on a different theme and set of constitutional issues. Topics might include a mix of federalism, separation of powers, privacy, free speech, and abortion. We will also focus how political and legal theory helps us to consider these topics in tandem

POLS 1015. Politics and Nature.

Examines the relationship between human beings and the earth as it has been conceived in the tradition of Western political thought from the ancient Greeks to the present day. The first part of the course draws from the history of political thought to understand the background against which our contemporary environmental problems have evolved and the conceptual resources that current theory draws from. The second part of the course investigates environmental political theory at the cutting edge today, engaging a wide range of perspectives and methods in the field.

POLS 1020. Politics of the Illicit Global Economy.

This course is about the "underside" of globalization. It introduces key sectors of the illicit global economy, including the clandestine flow of drugs, arms, people, body parts, arts and antiquities, endangered species, and toxic waste. The course compares these illicit sectors across time and place, and evaluates the practice and politics of state regulatory efforts. Particular attention is given to the role of the U.S. in the illicit global economy.

POLS 1030. Modern Political Thought.

What is justice? In a just society how would wealth be distributed? Would such distribution respect property rights? Does the state have the exclusive right to punish and if so why? Should the family be regarded as beyond justice? Is there a tension between democratic self-governance and freedoms from coercion? With an emphasis on both lectures and Socratic dialogue, this course is designed to engage students in conversations with the most important work in modern and contemporary political thought and to get them to engage with the most fundamental questions faced by our polity. We will draw on canonical modern and contemporary writers to see understand the most important debates of the modern period and as importantly to help us dig deep into fundamental questions of justice and legitimacy. Readings from Hobbes, Locke, Rousseau, Marx, Rawls, Okin, Cohen and others. Some prior work in political theory or philosophy suggested.

POLS 1035. Democracy and Its Nineteenth Century Critics.

What exactly is democracy, or 'the rule of the people'? Our unreflective support for democracy often blinds us to the fact that historically, democracy has not always been viewed favorably, but rather, with skepticism—particularly as it was rising to the forefront of political life in the United States and Western Europe in the 19th century. This course investigates claims about democracy through historical and philosophical readings. What exactly is democracy? How is it justified (or not)? How is democracy related to representation, gender, and class? We investigate these questions through Burke, Paine, Wollstonecraft, deTocqueville, Marx, Mill, Taylor, and Nietzsche.

POLS 1040. Ancient Political Thought.

The Greeks stand at the beginning of the Western tradition of political philosophy, yet their thought is somehow foreign. What was the special perspective from which they viewed political life? In what ways does their perspective vitalize, contest, deepen, or affirm our own thinking on justice, politics, and the good life? This course will examine these and other questions with a special emphasis on the works of Plato and Aristotle.

POLS 1045. American Political Thought.

This course will explore key themes that have (re)defined life in this country since its beginning, such as liberty, democracy, religion, and race. We will read core documents like the Declaration of Independence, along with important works by thinkers like John Winthrop, the Founding Fathers, Tocqueville, Lincoln, and more recent authors like Robert Dahl. Our goal is to understand what they thought the American enterprise was and should be. Can the country meet their expectations? This course assumes a basic familiarity with American government and history, that is, with important dates and events, as well as certain concepts and institutions.

POLS 1050. Ethics and Public Policy.

What are the ethical dimensions of public service? How should people act when faced with ethical dilemmas in public life? This course will engage those broad questions beginning with an examination of five modern day political scandals: Watergate, Iran-Contra, the Keating Five, the Clinton impeachment, and the investigation of Russian interference in the 2016 elections. We will then consider various issues in regulating ethics from nepotism and conflicts of interest to the revolving door and financial disclosure. Finally, we will consider several ethical values that are relevant to public service, including loyalty, honesty, and the role of official disobedience.

POLS 1055. From Strike to Revolution: The Politics of Work and Work Refusal.

What role does work play in society? Is work necessary for human survival? Does it promote human flourishing? Or is work merely a "mechanism by which individuals are incorporated into the capitalist mode of cooperation" (Kathi Weeks)? Do the demands of the productive process constrain what is politically possible, or can political action radically transform working conditions? How can refusal of work give shape to revolutionary politics? Beginning with a survey of theoretical perspectives on the function of work in society, the course then considers sociological, historical, and literary studies of workers and resistance to work including Black domestic workers in the post-Civil War U.S., Italian factory workers in the mid-20th century, and workers in the contemporary U.S. healthcare sector. Topics examined include racialized and gendered divisions of labor, the effects of automation on work, and the general strike.

POLS 1060. The Political Economy of U.S. Monetary Policy.

This course will utilize political economy models of American political institutions to explain the relationship between politics and U.S. monetary policy. The course will provide a foundational understanding of how branches of the U.S. government relate to one another and how they relate to the Federal Reserve. We will explore several eras of monetary policy decisions in American history concluding with the recent financial crisis. In addition to providing a deeper understanding of American political institutions and the history of American monetary policy the course will explore how the Federal Reserve operates internally and how that impacts U.S. monetary policy. Instructor permission required.

POLS 1070. Rights.

Investigates the moral and political foundations of rights through a reading of classical and contemporary theories of rights. Readings include Hobbes, Locke, Tocqueville, Kant, J.S. Mill, Burke, Marx, Nozick, Waldron, Okin, Ignatieff, and others. Topics include rights and justice; multiculturalism and group rights; human rights in the global context; animal rights and environmentalism; communitarian and postmodern critiques of rights; and rights in the context of American citizenship.

POLS 1075. Ancients and Moderns.

Examines the political thought of Plato and Aristotle and three modern thinkers who were especially animated by these ancient views of politics: Machiavelli, Rousseau, and Nietzsche. Topics include the ends of politics and the nature of good government; the meaning of justice; the value of equality and of hierarchy; the nature of freedom; the role of virtue in political life; and the relationship between philosophy and politics. In reading these ancient and modern thinkers together, we gain a richer understanding of both the quarrels and the continuities between ancient and modern political thought – and the dynamic relationship between them.

POLS 1080. Politics of Transportation Policy.

Three transportation modes are emphasized: planes, trains, and automobiles. Three sets of actors are studied: Congress, pressure groups, and governmental agencies. The focus is on historical patterns of usage and current policy questions including airlines vs. airports, problematic drivers, and cars vs. transit. Background in the rudiments of American politics is desired.

POLS 1085. Injustice.

How should we respond to injustice? Violently or non-violently? Lawfully or disobediently? Should we try legal channels first or are some injustices too severe and urgent? When do we have an obligation to join those already resisting injustices? History presents us with an enormous repertoire of ways people have resisted injustice: conscientious refusal, passive resistance, non-violent direct action, sabotage, civil disobedience, strikes, mass protests, and revolution. This course will read works of political philosophy next to signature events of our own time, such as Arab Spring, Black Lives Matter Movement, the Tea Party, and labor strikes, to discuss the above questions.

POLS 1090. Polarized Politics.

Focus will be on growing partisan polarization in American politics. Existence of polarization in institutions like House of Representatives, Senate, the presidency, federal courts, media, and religion will be examined. Emphasis will include the roles of political elites, non-elites, lobbyists, money in politics, red states/blue states, House and Senate rules, particular pressures created by budget, domestic, foreign policy, defense and homeland security issues. Requires extensive reading, detailed paper, take-home final exam and active class participation. Expectation to remain informed about current events as they apply to partisan polarization and to weigh the impacts of polarized politics on a democratic nation.

POLS 1100. U.S. Congress.

The Founders established the U.S. Congress in Article I of the Constitution. It created that body as guardian of the nation's purse strings and empowered it to "make all laws necessary and proper." Will examine the Congress's structure, rules and procedures, traditions, precedents, campaigns, elections, parties, budget process, Member's constituencies and role in the system of checks and balances with the president and the courts. The impact of procedure on policy outcomes and the impacts of the 2020 election on the House and Senate will be explored. The course will consistently relate the characteristics and history of Congress to current events.

POLS 1110. Mass Media.

Dramatic changes are unfolding in the structure and operations of the U.S. media. We discuss how the media have changed over history; what the changes mean for American culture, society, and politics; and how we should evaluate the contemporary media.

POLS 1120. Campaigns and Elections.

This course will focus on both historical and contemporary elections at the congressional, state and local and presidential levels, emphasizing the 2020 elections. Topics include campaigns, parties, candidates, voting behavior, public opinion, polling, campaign finance, voting rights, the electoral college, gerrymandering and the media.

POLS 1130. The American Presidency.

The origins and evolution of the Presidency in the American political and policy-making system. Special emphasis on the impact of presidential policies from Franklin Delano Roosevelt through Donald Trump; the presidential nomination and general election system with special focus on the 2020 election; and an exploration of the future challenges facing the winner of the 2020 Presidential election. The course will consistently relate the characteristics and history of the presidency to current events.

POLS 1140. Public Opinion and American Democracy.

Public opinion is an essential component of democracy. Considering the lack of familiarity about current events, how does public opinion affect public policy? Perhaps more importantly, should it? To assess these questions, we will explore how to measure public opinion and what polls tell us. We will then assess the roots of public opinion and analyze the public policy and representational impact of people's preferences.

POLS 1150. Prosperity: The Ethics and Economics of Wealth Creation.

What is prosperity? Whom does prosperity benefit? Which institutions and attitudes produce prosperity? What is the relation of prosperity to other values such as efficiency, happiness, equality, fairness, religious faith or personal freedom? This course explores the problem of prosperity from a variety of disciplinary perspectives: philosophical, economic, historical, religious, and literary. No Prerequisites. Freshmen welcome.

POLS 1160. Constitutional Law: Governmental Powers.

This course examines governmental powers under the United States Constitution, addressing the powers of Congress, the President, and the courts, as well as the relationship between the national and state governments. The primary reading materials will be leading Supreme Court cases, supplemented by additional reading materials on history and legal theory. The course will consider the role of the courts in enforcing constitutional principles in a democratic system, as well as theories of constitutional interpretation and constitutional change.

POLS 1170. Constitutional Law: Individual Rights.

Examines the scope of individual rights under the United States Constitution and will focus on equal protection, due process, free speech, and religion. The primary reading materials will be leading Supreme Court opinions interpreting and applying the First and Fourteenth Amendments, supplemented by readings on legal history and theory. The course will consider the role of the courts in protecting individual rights in a constitutional democracy, as well as theories of constitutional interpretation and constitutional change.

POLS 1180. Feminist Thoughts for a Heated Climate.

The ecological crises - the "sixth extinction," "global warming," "the eruption of Gaia" - have forced many humans to challenge contingent boundaries drawn in more or less compelling ways in the Western world. Dualisms opposing nature to culture, the human and the nonhuman, the natural and the technological, the feminine and the masculine, seem more destabilized than ever. When geologists came up with a new epoch called the "Anthropocene," feminist theory was well equipped to problematize this allegedly omnipotent "anthropos." Reciprocally, queer, post-colonial, and feminist theories have re-thought the never so normative, hardly stable, greatly unknown, nature of nature.

POLS 1185. Environmental Political Thought.

In our context of ecological crises, Environmental Political Theory (or Ecosophy) has boomed, attesting of the need for new concepts with which to think our unprecedented situation. Ecosophers think of nuclear energy, GMOs, climate change, the 6th extinction, etc., in terms of responsibility toward future generations, "de-growth," sustainability, the anthropocene, Gaia, etc. This course will survey some major schools of thought within Ecosophy, highlighting the diversity of the environmentalist movement. We will focus on one common thread weaving eclectic ecosophical currents and concepts: the question of humans' relationship to the nonhuman.

POLS 1190. The Politics of Climate Change.

In 1992, the international community committed itself to the goal of preventing dangerous anthropogenic climate change. Taking stock more than a quarter century later reveals a still-warming world well and seemingly little progress. Why do we collectively find ourselves in this dangerous position? The purpose of this course is to provide a set of answers to this question from the perspective of political science. Our focus will be on exploring the range of our collective governance efforts from the international regime on down. Is there a pathway to successful climate governance?

POLS 1200. Reimagining Capitalism.

Debates over capitalism and its alternatives date back centuries. Proponents say that market institutions have enabled extraordinary productivity growth and life-saving innovations. Trade and the division of labor have been central to human progress in recent centuries. Capitalism's critics point out that the growth of market economies has often had unacceptable consequences. The course is organized around four main challenges facing market economies today: environmental degradation, labor exploitation, inequality, and crisis. Can capitalism be reformed to solve the problems that it has helped generate, or is a market system unequipped to grapple with social and environmental challenges?

POLS 1210. Latin American Politics.

Focuses on political and economic transformation in contemporary Latin America. Special attention is given to the processes of market-oriented economic reforms and democratization that have swept the region during the last twenty-five years. Includes in-depth country case studies where key themes can be discussed and elaborated.

POLS 1215. Fiction and Methods in Social Research: Debates on Inequality, Poverty, and Violence.

In this course, students will read, comment, and discuss renowned novels on inequality, exclusion, poverty, and (political, religious, racial, and gender) violence in cases as diverse as Nigeria, India, and Afghanistan. These novels will submerge students in some of the complexities and richness of the selected cases. By reading them, students will explore and discuss concepts, stories and historical context, political and socioeconomic processes, the roles of characters, and arguments.

POLS 1220. Politics in Russia and Eastern Europe.

How do Putin and other leaders in Eastern Europe maintain political power? Why did some states democratize after communism's collapse, and why are successful democratizers (Hungary, Poland) now moving toward semi-authoritarian populism? Why has Ukraine become a battleground between Russia and the West? We will study how international economic integration, the European Union, and the migrant crisis have affected the region's domestic politics. Focus will be on the Russian Federation, Ukraine, and Poland. Background in social sciences recommended.

POLS 1225. Nuclear Weapons.

This advanced undergraduate lecture course examines the history and politics of the world's most destructive weapons. It is an introduction to the nuclear age, including how nuclear weapons work, the causes and consequences of the spread of nuclear weapons technology, and the basic strategies of the nuclear powers. Students will emerge with a working knowledge of the role of nuclear weapons in international politics and the future of managing this dual-use technology.

POLS 1240. Politics, Markets and States in Developing Countries.

How can we explain fundamental differences in economic performance and policy across developing countries in the face of Globalization? Why are some countries praised as economic "miracles," yet others seem mired in inescapable stagnation? This course addresses these questions by introducing the basic topics, concepts, and theoretical approaches that comprise the field of political economy of development. The course draws on case studies from Asia, Africa, and Latin America.

POLS 1250. Capitalism, Democracy, and Geopolitics in Europe.

As the home of parliamentary democracy in the era of mass politics, Europe is today contending with the new challenges of twenty-first century politics. This course begins by examining how different versions of capitalism and the welfare state emerged in Europe. It then asks which new forces reinforce and which undermine democratic politics in Europe today. Topics include immigration, religious diversity, technology competition, military conflict on Europe's perimeter, and underlying changes in European geopolitics.

POLS 1260. Maps and Politics.

How do maps affect politics, and vice versa? Maps fundamentally shape the way that we see our world and how we interact politically, economically, and socially, but maps are also shaped by political actors, interests, and institutions. This course will consider historical and contemporary issues that link maps and politics, including the connections between mapping and nation-states, colonialism, warfare, democratic politics, and indigenous rights. The course is suitable for all students with an interest in the topic.

POLS 1265. States, Society and Economy in East Asia.

Will discuss present-day government and politics of South Korea, Taiwan and the Philippines as well as the decades leading up to democratic transitions in these countries. Will discuss economic miracles in Japan and the four "Asian tigers," and democratization in these high-growing regions. Throughout, reference will be made to similarities and differences – and implications thereof – between the "rules of the game" in these countries and in other new democracies. We will focus on several areas of policy that have been at the center of political science and economics debates concerning policy making in Korea, Taiwan and the Philippines.

POLS 1270. Middle East Politics.

For decades, the Middle East was widely perceived as a bastion of authoritarianism and a hotbed of identity politics and political violence. What has sustained these perspectives and how has the Arab Spring challenged them? This course combines analytical approaches with concrete case studies to provide an overview and critical understanding of regional developments. Students will gain insights on key questions and debates in Middle East politics. Topics include "persistent authoritarianism" in the Middle East, Political Islam, sectarian violence, economic development, and social mobilization. The course is suitable for students with all levels of knowledge on the region.

POLS 1280. The Rise of India: History, Politics, Economics and Society.

This course will concentrate on three aspects of the "Indian experience": democracy, ethnic and religious diversity, and political economy. With a brief exception, India has continued to be democratic since 1947. No developing country matches India's democratic record. Second, remarkable cultural, ethnic and religious diversity marks India's social landscape, and influences its politics. Third, Indian economy has of late been going through a serious economic transformation, drawing comparisons with China. Is the comparison valid?

POLS 1285. Quality of Democracy in Latin America.

Focus on democratic quality in modern Latin America, its failures as well as its successes. Topics include police violence, the rule of law, indigenous movements, gender and gay rights, anti-poverty policy, and direct democracy. Will draw on material from across the Spanish and Portuguese speaking democracies in the region. We will engage with different theories of what makes democracies representative and accountable to their citizens. Not open to first years.

POLS 1290. The Rise of China.

This course examines the causes and consequences of China's societal transformation and emergence as a global power. Employing perspectives from comparative politics, international relations, and economics, the course explores the connections between China's domestic transformation and its integration with the global system. Lectures and readings cover the historical antecedents of China's rise, the contemporary relationship between state and citizen, the nature of China's global competitiveness, and likely future avenues for socio-political change.

POLS 1295. The Politics of Health and Disease.

Despite remarkable advances in medical research and treatments during the twentieth century, we continue to confront grave challenges from infectious diseases. In addition to their human toll, infectious diseases can exact enormous economic costs, threaten social stability and, trigger political crises. Why are some more effective at countering the same infectious disease? Why have disease-controlling technologies met with such divergent responses? Why has the same state been relatively successful in countering certain diseases but has struggled with others? This course will pose and seek to advance our collective understanding of these critical questions about the politics of health and disease.

POLS 1300. Latino Politics and Public Opinion.

Over 50 million Latinos reside in the United States today, making them the largest minority group in the country. The current population size, projected growth trajectory, and population density of Latinos in many political battleground states have made this group a favored topic among politicians, interest groups and mass media. Yet, what do we really know about the politics and opinions associated with the diverse and expanding Latino population? How are Latinos incorporated into American political life? What difference does it make to be of Latino descent in the U.S.? This course presents an in-depth examination of this important population.

POLS 1310. African American Politics.

Focuses on the contemporary African American politics in various spheres of the American political environment. Examines also how the concept of an African American community has evolved and shifted historically. We will pay particular attention to the growing diversity within the African American community and discuss what these changes mean for black political participation, representation, and organizing.

POLS 1315. Diversity & U.S. Minority Politics.

In this course, students examine the politics of social groups in order to gain a broader perspective of the American political process. Topics can vary, and include a review of the major developments in American politics for historically discriminated groups including women.

POLS 1320. Urban Politics and Urban Public Policy.

This course is designed as an introduction to the politics of the United States' central cities. A central theme of the course is that city politics in the United States arises from the intersection of governmental power and private resources. The first section of the course describes the emergence of urban America. The second section of the course focuses on the variety of theoretical perspectives and analytical concepts that have evolved to explain the politics of America's major cities. The goal is to compare the major theories in urban politics that purport to explain power and decision-making. The final section inquires into the nature of the urban condition with particular emphasis on the political and economic challenges faced by city residents and city government in the post-industrial city. The course is designed for first-year and second-year students.

POLS 1321. Urban Politics and Urban Policy (URBN 1270).

Interested students must register for URBN 1270.

POLS 1325. Political Organizations and Social Change in America.

Will examine efforts to create significant policy change in contemporary political and social life in United States. We examine strategies of social change; explore the characteristics of advocacy organizations; and consider how organizations can expand their political toolkits as they seek to create social change. In addition, we will examine the relationship between organizations, members, and activists. Why do so many organizations lack active members? What does it take to turn members into activists? Among the cases we examine are the Civil Rights Movement, the Tea Party, Alinsky organizations, Black Lives Matter, the Koch Brothers Network, Dreamers, and organized labor.

POLS 1350. Chinese Foreign Policy.

The People's Republic of China is one of the most important actors in international politics today. This undergraduate lecture examines China's role in global affairs. It applies broad theoretical perspectives on international relations to understand China's choices across a broad range of foreign policy topic. What explains why China has increased its defense spending? When is it more likely to resort to military force? What explains patterns in China's trade and investment abroad? What accounts for China's changing approach to climate change? To what extent does China seek to reshape the international order and what would this mean for the prospects for global peace and stability?

POLS 1355. Women in Politics.

In this course, we explore the various ways in which gender as a social and political category has impacted politics in the United States. We examine the history of the women's suffrage movement and the development of feminist theory. Through Carole Pateman's *The Sexual Contract* and Shatema Threadcraft's *Intimate Justice*, we reassess core questions of justice, equality, and freedom. We examine Kimberlé Crenshaw's theory of intersectionality and other developments in legal theory as we investigate the relationship between the body, identity, and the law. Students will also participate in a mock-debate on a contemporary issue of relevance.

POLS 1360. U.S. Gender Politics.

This course covers the politics of U.S. women as activists, voters, candidates, and elected officials. What explains the emergence of the modern-day women's movement? How do women win political seats? Do women legislate differently than men? How did women become legislative and party leaders? How does sexuality and gender affect U.S. electoral politics? This course will also consider the ways in which social class, race-ethnicity, marital status, parenthood, feminism, religiosity, political orientation, and cultural beliefs or stereotypes influence women's public policy and social beliefs. To what extent does gender define all women's political and social viewpoints?

POLS 1365. 21st Century Social Movements.

In this course, we explore theoretical and empirical research on social movements, defined as collective mobilizations that are either large scale or remain organized for at least one year, & aim to instigate political change. During the semester we examine and debate a range of scholarship, both theoretical and case-based, across the disciplines of political science, sociology, psychology and other relevant fields that address the dynamics of radical imagination, movement emergence, the process of organizing, the process of professionalization, the process of demobilization/abeyance, and the phenomenon of political acceptance. We also endeavor to assess the different political impacts social movements make in politics and policy in the United States and beyond.

POLS 1380. Ethnic Politics and Conflict.

Course focuses on the politics of rising national consciousness and the development of ethnic conflicts. It covers sources of contemporary nationalism; nationalist political mobilization; emergence of conflicts; impact on societies of internal strife and wars; international interventions; explanations for resolution or persistence of conflict; politics of post-conflict states. The course combines analytical texts and case studies. Cases from Eastern and Western Europe, North America, South Asia, and Africa.

POLS 1390. Global Governance.

Examines the institutions and the processes by which states and other actors seek to provide "governance" in the international system. The class explores the history of, and various theoretical perspectives on, the role of the UN and other international organizations in the state system. It also considers their roles in a range of political, military, economic, environmental, and humanitarian issues. Pre-requisite: POLS 0400

POLS 1400. North Atlantic Politics after the Cold War.

Explores the contours of North Atlantic international politics through a variety of theoretical lenses. Examines the grand outlines of European, American, and transatlantic international affairs; the politics and legacies of the Cold War; and the history, theory, and politics of European integration. Then turns to North Atlantic affairs and transatlantic relations post-Cold War, and to Europe and America in the (twenty-first century) world to come.

POLS 1410. International Security in a Changing World.

Analyzes the most pressing global security problems today utilizing current theories of international politics. Examines the changing nature of security threats and considers the likely challenges we will face in the future. Issues covered include the causes of war and peace, weapons proliferation, terrorism and insurgencies, the role of technology, pandemics, humanitarian intervention and human security, and alliances and collective security. The course will include an international security simulation exercise. Pre-requisite: POLS 0400.

POLS 1415. Classics of Political Economy.

Traces the most important classical statements of political economy through consideration of the major contributions to the "political" study of the economy from the seventeenth century to the present; Locke, Ricardo, Smith, Rousseau, Mill, Bentham, Marx, Mill, Marshall, Keynes, Hayek, Friedman, and Lucas. By mapping the parallel evolution of the liberal/capitalist economy and the liberal/democratic notion of the individual, both a product of and a producer within this economy, the course will demonstrate the political nature of economics and the economic bases of politics. First year students require instructor permission.

POLS 1420. Money and Power in the International Political Economy.

Examines how the interaction of states and markets create distinct global monetary and political orders. Class analyzes the shift from the classical liberal Gold Standard through the Post-War Bretton Woods arrangements through to the globalized IPE of today.

POLS 1430. Roots of Radical Islam.

Why has radical political Islam emerged as a global threat in our lifetime? This course examines potential domestic sources, such as repressive governments and poverty, as well as international sources, such as U.S. foreign policy, with a special emphasis on the various strategies that governments of states with predominantly Muslim populations have taken toward political Islam. Instructor permission required.

POLS 1435. Politics of Climate Change.

Climate change is arguably the most important global challenge in the 21st century. It will reshape weather patterns, storms, sea levels, and agricultural output worldwide. Mitigating climate change will require massive economic transformations, affecting energy, transportation, and industrial sectors. What are the politics of that transformation? What are the political forces obstructing it? How do social movements, institutions, and economic interests interact to shape the national and global response to climate change? This course offers answers and insights, primarily from the perspective of political science. It also draws on knowledge from other disciplines.

POLS 1440. Security, Governance and Development in Africa.

Some of the fastest-growing economies in the world now lie in sub-Saharan Africa. Yet Africa is also home to some of the world's most corrupt and violent states. This course will provide a variety of lenses through which to view these and other paradoxes on the continent, with a focus on security, governance and economic development. Topics will include the long-term consequences of colonialism and the slave trade; the politics of independence; the causes and effects of crime, violence and civil war; democracy and democratization; the promise and pitfalls of foreign aid; and the challenges of building strong, stable states.

POLS 1445. Contemporary African Politics.

This course introduces students to the study of contemporary African politics. The questions that motivate the course are: How did authoritarian regimes arise in most countries after African independence? Why have some African countries become democratic, while others have remained authoritarian? What accounts for patterns of conflict and civil war across countries? Throughout the semester, we will see that there is significant variation within Africa in the strength of states, levels of economic growth, and respect for democratic institutions; we will aim to explain these variations. We will primarily study events in particular African countries, but will also examine broad patterns across countries and use social science concepts and methods to try to explain them. In our exploration, we will mostly build on the work of political scientists but also draw heavily on work by journalists, psychologists, economists, and historians.

POLS 1450. Development in Theory and Practice.

Focuses on the political economy of development and underdevelopment. Topics include comparisons of state and market building among "early" and "late" developers, theories of development, prescriptions for development and their shortcomings, and the challenges for developing countries in the context of a globalizing economy.

POLS 1455. Crime, Punishment, and Politics.

This class uses theories and tools from the social sciences to understand criminal behavior in a variety of settings. It examines whether we can use rational choice theories to explain patterns of offending and the organization and operation of illicit markets. We will investigate the different way that governments seek to control crime, as well as, non-state alternatives to public safety. Organized crime groups have significant influence in communities both historically and today, so we study why they exist and how they organize. Finally, we look at how political institutions affect crime and the operation of the criminal legal system, including persistent problems of racial disparities at all points in the system.

POLS 1460. International Political Economy.

An introduction to the politics of international economic relations. Examines the history of international political economy and theoretical approaches to understanding it. Also analyzes several key contemporary issues in international institutions such as the International Monetary Fund and World Trade Organization, globalization and its consequences, and challenges in foreign economic policy-making.

POLS 1465. Introduction to Political Economy.

This class provides an introduction to topics in political economy with a focus on using basic models to understand both individuals and groups facing a variety of social dilemmas. Simple formal models will provide a framework for understanding problems in politics and political economy, including the collective action problem, prisoner's dilemma, coordination problems, and more generally the importance of formal and informal institutions in guiding social outcomes. The class surveys major thinkers in political economy and uses their ideas to understand major changes in society, markets, and states from an historical perspective.

POLS 1470. International Negotiation and Conflict Resolution.

Analyzes negotiation process in international relations. Emphasizes how the negotiation process impacts the relations among states, non-state actors, and multilateral institutions in international politics. Deals explicitly with the 'art and science' of negotiations as a means to resolve the conflicts and misunderstandings that are a ubiquitous feature of international relations. Includes simulation exercises and case discussions, drawing on issues ranging from formal diplomatic negotiations to the role of non-governmental organizations in promoting the resolution of international conflicts and on issues such as national and international security, as well as economic, environmental, and humanitarian concerns. Primarily for students with some prior background in the field of international politics. Prerequisite: POLS 0400 or instructor permission.

POLS 1475. War and Peace.

Why is armed force used in international politics? What are the causes of war, the preconditions for peace? How do political, moral and legal discourse shape the possibilities for peace? What is the role of violence in the formation of modern statehood and the contemporary international order? What are the interrelations between war and peace within a continuum of violence: what justifies both war and peace? When is military violence a solution to conflict, how is peace sustained? What are the psychological, social and economic effects of military conflict? What is the nature of military violence in peacetime?

POLS 1480. Theory of International Relations.

Provides an overview of basic thinking about international relations. Focuses on the conceptual fundamentals, grand intellectual traditions and main theoretical trajectories, and key scholarly disagreements that have shaped the discipline of international relations over the past century and on the principal theoretical fault lines that define it today. Also scrutinizes a number of central topics in contemporary international affairs. Prerequisite: POLS 0400 recommended but not required.

POLS 1485. Global Justice.

Traditionally, in a world formed by states, moral responsibilities of governments, private corporations and individuals have been confined within national boundaries. Today, economic and ecological interdependence as well as global migrations of capital, goods, people, ideas and diseases challenge the Westphalian distinction between the domestic and the international. Moreover, global problems challenge the traditional inter-state organization of the world. Does globalization also enlarge our moral responsibilities beyond state borders? If governments, private corporations and peoples begin to accept moral responsibilities beyond the boundaries of nation-states, how should the Westphalian inter-state structure be transformed to make room for cosmopolitan duties?

POLS 1490. Building a Better World: Film and Social Change.

This class explores some of today's key policy challenges: economic development and poverty alleviation, the provision of basic public services, corruption, management of natural resources, environmental protection, intergroup violent conflict, and related issues. For each topic, the course (1) presents the problem, (2) reviews potential solutions, (3) discusses failed approaches, and (4) identifies concrete successes. Examples are drawn from around the world. Instructor Permission required.

POLS 1495. Institutions, Incentives, and Ideas: Advanced Topics in Philosophy, Politics, and Economics.

This course offers an advanced exploration of core themes in philosophy, politics, and economics, with a focus on how institutions structure cooperation, conflict, and the distribution of power and resources. Students will examine models of strategic interaction—including collective action problems, signaling, and social choice theory—alongside normative frameworks for evaluating legitimacy, justice, and institutional design. Readings and case studies span historical and contemporary contexts, and special attention is given to topics such as information cascades, preference falsification, market failures, the carceral state, and inequality. The course emphasizes interdisciplinary reasoning and the integration of formal, empirical, and philosophical tools to analyze real-world social and political systems.

POLS 1500. The International Law and Politics of Human Rights.

Introduces students to the law and politics of international human rights; examines the construction of an international human rights regime and its influence on international politics. Will survey the actors and organizations involved in the promotion of human rights around the globe, as well as the obstacles. Will review competing conceptions of human rights, whether human rights are universal, problems of enforcement, and the role of human rights in foreign policy. Major topics include civil and political rights; economic, social and cultural rights; genocide, torture, women's rights, humanitarian intervention, and the international criminal court. POLS 0400 strongly encouraged as a prerequisite.

POLS 1520. Introduction to Feminist Theory.

This course explores the history of feminist political thought. It provides an overview of the dominant approaches to feminist theory, and to the emergence and development of feminist movements in the U.S. and elsewhere. We will pay particular attention to the way intersectional feminist thinkers have challenged the centrality of gender in feminist analysis, and will assess the future of feminist praxis and theorizing. The course is organized around significant themes and debates within feminist theory, including but not limited to: early feminist approaches (such as liberal, Marxist, radical, and standpoint feminism); the theoretical implications of critiques of early feminist theory by black, indigenous and other intersectional feminists; and contemporary feminist formations such as trans and abolition feminisms.

POLS 1530. Gender, Slavery, and Freedom.

Will examine how gender shaped slavery in the Americas. How did the experiences of enslaved men and women differ? Did the experiences of enslaved women result in specific practices that formed the basis for resistance to slavery and dehumanization? How did gendered experiences of slavery in turn affect the notions of freedom that were developed in post- emancipation societies? We will also consider how practices or ideas developed during slavery have contributed to the "afterlife" of slavery after official emancipation. We will analyze slavery as a concrete set of practices that were experienced and negotiated differently by enslaved men and women.

POLS 1540. Politics of Nuclear Weapons.

Nuclear weapons have occupied a central role in international politics since their introduction in 1945. As weapons of overwhelming destructive power, their use today would be widely regarded as a disaster, yet nations continue to rely on them for security and deterrence, as well as associate them with status and prestige. The advent of nuclear weapons has challenged traditional conceptions of power, security, defense, and even morality. Vast disagreements continue to exist about many aspects of these weapons. Today, nuclear weapons pose a major global governance challenge for the world.

POLS 1550. War and Politics.

This course provides an examination of the intersection between political ends and military means. This includes an overview of theories of military strategy and combat tactics including challenges related to terrorism, insurgency and counter-insurgency. The bulk of the class will cover, in depth, historical details of specific conflicts from the Peloponnesian War through the recent wars in Iraq and Afghanistan. Detailed discussion of the evolution of specific weapon systems and their impact on military tactics will be included. Student will be required to watch several films as part of the course requirements.

POLS 1560. American Foreign Policy.

This course provides an overview of American Foreign Policy since World War I. The emphasis will be on defense and security policy, and not on foreign economic policy. This course covers significant historical events and personalities over the course of the twentieth century. When events dictate, part of any given daily class may be devoted to current events in American Foreign Policy, with emphasis on their historical source and context. Prerequisite: POLS 0400.

POLS 1570. International Law (INTL 1700).

Interested students must register for INTL 1700.

POLS 1600. Political Research Methods.

Introduction to quantitative research methods in political science. Topics include research design, descriptive statistics, statistical hypothesis testing, and bivariate and multivariate regression. By the end of the course, students will have the requisite skills to intelligently consume and produce basic quantitative social science research. Enrollment limited to 24 sophomore, junior, and senior Political Science, International Relations, or Public Policy concentrators.

POLS 1730. Politics of Globalization.

This is the ultimate PPE course (Philosophy, Politics, and Economics). Will explain the big changes in world politics and political economy over the last two hundred years. Why did slavery end? Why did European imperialism and colonialism fade away? Why did World Wars happen? Why did the great powers set up a system of international trade and finance and who benefits from that system? What are the politics of migration? How do global oil politics work? Course is designed to provide students with a broad introduction to the field of international political economy to help address questions like these ones.

POLS 1740. Politics of Food.

How do politics and public policy shape the nature of farming and the price of food in the US? What is the extent of hunger and malnutrition in the country, and how to politics and public policy shape the responses to these issues? How well does government regulate the safety and healthfulness of food? This course will draw on a combination of case studies and scholarly work to examine these questions. The significance of globalization will also be considered but the emphasis of the course will be on American politics and policy. The course is not open to first-year students. This course is not capped but TA allocations are made based on pre-enrollment and the course might be closed the first day, depending on the availability of TAs beyond the original allocation.

POLS 1750. Black Political Leadership.

This course uses black political thought to understand historical and contemporary forms of black political leadership. It explores the diversity of voices, ideologies, and strategies adopted by black leaders to address an array of political and social challenges. It also focuses on how shifting goals, political contexts, and generational changes shape black leadership. Certain black leaders such as W.E.B. DuBois and Barack Obama are used to understand the different types of black political leadership.

POLS 1760. Infrastructure Policy.

The focus is on transportation infrastructure: roads, bridges, rail, transit and airports. How has our infrastructure developed over the past two centuries? Which presidents have been leaders? How does Obama compare with his predecessors? Who are the key actors in congress and bureaucracy that control the distribution of money? What are the key interest groups?

POLS 1770. Education, Inequality, and American Democracy.

How are public schools and the educational programs they offer products of political inequality? How might public schools remedy those inequalities or exacerbate them? This course examines the ways in which education contributes to democratic governance; how the development of American public schools builds on and reproduces political, economic and social privilege and inequality; and the promise and limitations of various types of reforms designed to redress inequality, including the Common Core. This course focuses primarily on the United States, but looks to other democracies, including Canada and Mexico, to understand the intersection of education, inequality and democratic governance.

POLS 1780. Use of Symbols in American Politics.

What do a flag, Martin Luther King, Jr. and socialized medicine have in common? They are all political symbols that have produced a strong public response. The political process is complicated beyond the understanding of most. But it becomes manageable when converted into sets of conflicting symbols. How does the public learn about political symbols? What is their role in the policy making process? Three types of symbols will be considered: community, regime and situational symbols. Course coverage limited to American domestic politics.

POLS 1820A. American Political Development.

No description available. Enrollment limited to juniors and seniors.

POLS 1820B. Roots of Radical Islam.

Why has radical, political Islam emerged as a global threat in our lifetime? This course examines potential domestic sources, such as repressive governments and poverty, as well as international sources, such as U.S. foreign policy, with a special emphasis on the various strategies that governments of states with predominantly Muslim populations have taken toward political Islam.

POLS 1820C. The Political Theory of the Economy.

What is an economy? Is an economy different from government? Or is 'the economy' a special way of governing people? Is capitalism an economy or a form of government? If the latter, what is distinctive about the ways of governing that are said to define capitalism? What principles should be invoked for the defense or criticism of a capitalist society? How should it be compared to its alternatives? This course asks these questions historically by pairing central figures in the history of political economy with important interpreters of them.

POLS 1820D. Civil Liberties: Moral, Political and Legal Approaches.

This course will examine major constitutional controversies within the context of wider debates in political and legal theory. Readings from Supreme Court cases and prominent texts in political/legal theory. Topics include free speech, privacy, abortion, takings and capital punishment. Prior course work in political theory or philosophy recommended. Enrollment limited to 20 juniors and seniors concentrating in Political Science.

POLS 1820E. Pragmatism in Black and White: Race, Domination, and Democratic Faith.

This course interrogates the emergence of the 19th century philosophical movement known as pragmatism, focusing on William James and John Dewey, and investigates its intimations and resonances in African American intellectuals such as Anna Julia Cooper, W. E. B. Du Bois, Alain Locke, and James Baldwin. We explore the crisis of religious certainty, and pragmatism's attempt to provide an alternative framework for thinking about democratic governance. We also investigate the persistence of racism that politicized a group of thinkers who, in various ways, overlapped with pragmatists as they offered a normative vision of democracy to address domination.

POLS 1820F. Black Protest: Theory and Praxis.

This course explores the theory and praxis of black protest in the Americas, which were formulated in response to the different racial orders that developed in the U.S. and Latin America. We will analyze how black populations mobilized to escape slavery, resist racial terror and white supremacy, gain rights from the state, protect black life, and overcome various forms of dehumanization. Examples will include anti-lynching campaigns in the U.S., the civil rights and other black movement of the 1960s, the Black Lives Matter movement, and mobilizations against "black genocide," police violence, and displacement in Brazil and other Latin American countries.

POLS 1820G. Politics and Nature.

This course investigates the politics of the relationship between people and the earth; examines the environmental consequences of this relationship as it currently exists, as well as its impact on human justice and freedom; and explores alternative political imaginaries and institutional forms that include the non-human, evaluating their implications for sustainability, justice, and freedom. In the course of considering the political relationship between human beings and the earth, we examine core political concepts including domination, freedom, agency, sovereignty, democracy, justice, liberalism, rights, representation, and the political. We also explore the relationship between politics and ethical life.

POLS 1820H. Contraband Capitalism: States and Illegal Global Markets.

This course explores the clandestine side of the global economy (including flows of drugs, people, weapons, and money) and state policing efforts. We will examine the organization of these activities, how they intersect with the state and legal economy, their relationship to armed conflicts, and how they shape (and are shaped by) domestic and international politics. Enrollment limited to 20 juniors and seniors concentrating in Political Science or IAPA. Course is not open to students who have taken POLS 1020.

POLS 1820I. Indigenous Politics in Hawai'i: Resurgence and Decolonization.

Because kinship relationships to land and all existents of that land are fundamental to Indigenous Peoples, resurgence and decolonization must be studied in the context of specific Indigenous Peoples and the ways they resist colonial violence and build resurgent practices. This course then focuses on these issues with respect to Kanaka Maoli (Native Hawaiians). We will read works from Kanaka Maoli scholar/activists in order to understand the genealogy of Kanaka Maoli resistance and resurgent practices. We also engage with critical Indigenous thinkers in order to understand Indigenous political praxis that is shared across difference and those that are not.

POLS 1820J. Dynamics of Agenda Building.

How do new issues make the political agenda? Why aren't elections crucial? Who are the "problem pushers" and "solution savers?" How are they linked? What factors determine the life of an issue? The key processes include problem identification, conflict expansion through issue redefinition, the role of institutional actors and issue activists. Focus limited to domestic American politics. Prerequisite: POLS 0010. Enrollment limited to 20 juniors and seniors.

POLS 1820N. International Relations in Europe.

Reviews central issues in European international affairs from a variety of theoretical and analytic perspectives. Substantive issues considered include the politics of European integration, "Europeanization," European foreign and security policy, Europe as part of the North Atlantic world and transatlantic relations, issues of European identity and Europe in the world to come. Time also allocated for discussions of course participants' research. Designed mainly for advanced undergraduates, but graduate students are welcome. Enrollment limited to 20 juniors and seniors concentrating in Political Science or International Relations.

POLS 1820O. Adam Smith: Philosophy, Politics and Economics.

Referred to as the "father of economics" or "father of capitalism," Adam Smith was a moral philosopher, political thinker, and social scientist of the Scottish Enlightenment. A deep exploration of his major works including *The Theory of Moral Sentiments* and *The Wealth of Nations*, as well as the *Lectures on Jurisprudence* and his essays on philosophical subjects. We will grapple with big questions such as, "What is the nature of virtue and morality, and how do individuals learn moral behavior?", "What makes some societies rich and others poor?", and "What are the political preconditions and moral consequences of economic growth?"

POLS 1820R. Extralegal Governance and the Problem of Social Order.

This class studies cases of extra-legal governance to understand how people who cannot, or who choose not to, rely on strong, effective states facilitate social and economic order. The class does not cover or engage with normative and philosophical arguments. The entire focus is on a positive, social scientific question and the requisite engagement with empirical facts that this entails. The class will examine and test claims about whether it is possible for extra-legal governance to produce human flourishing.

POLS 1820S. Two Liberal Traditions: English and French.

What does it mean to be a liberal? In America, we regularly take our "liberal heritage" for granted, so much so that liberal principles are simply accepted as political necessities, even truisms. Many of these principles come to us from English thinkers like John Locke and John Stuart Mill. Yet theorists in the French tradition offered an equally rich, though distinct perspective on these values. We will consider the "two liberal traditions," Anglo-American and French, to gain a better grasp of liberalism's beginnings and its legacy. Can the study of liberal thought teach us anything about contemporary politics and economics?

POLS 1820T. Race, Crime, and Public Policy.

This course will provide students with an in-depth analysis of the social and political connections between criminal justice policies and race. The first section of the course will cover the concepts of race and ethnicity and the social construction of target populations. Secondly, students will learn what public policy is, how it is made, and methods of analysis. Next, we will cover the history of the criminal justice system and the creation of mass incarceration. Lastly, we will cover specific criminal justice policies and practices and their ramifications for the civil liberties and rights of racial minorities.

POLS 1820V. Institutions: Questions of Power and Democracy.

Institutions are constraints that structure political, economic, and social interactions. They consist of both informal and formal rules, evolve incrementally, connecting the past with the present and the future; history in consequence is largely a story of institutional evolution in which the historical performance can only be understood as a part of a story. Institutions shape the role of the state over time and are repeated patterns of behavior around which beliefs are deposited. Institutions are also political actors. Multiple disciplinary perspectives, careful scholarly analysis, and the search for recurrent historical patterns inspire this course offering and serve as its framework.

POLS 1820W. Market Liberalism: Origins, Principles and Contemporary Applications.

What is liberalism? What are the differences between capitalist, democratic and socialist versions of liberalism? Is it true that liberal theory has undergone a form of moral evolution between its "classical" and its "modern" forms? Are there common moral values that all liberals---capitalist, democratic and socialist---affirm? If so, by what dimensions of value are these rival liberal traditions to be distinguished? Enrollment limited to 20 juniors and seniors; all others require instructor permission.

POLS 1820X. Democratic Erosion.

This course explores the causes and consequences of democratic erosion in comparative and historical perspective. The course will provide an opportunity for students to engage, critically and carefully, with the claims they have doubtlessly already heard about the state of democracy in the US and Europe; to evaluate whether those claims are valid; and, if they are, to consider strategies for combating democratic erosion here and abroad. The course will be taught simultaneously at roughly two dozen universities, with a number of cross-campus collaborative assignments.

POLS 1820Z. The Rise of Populism and Illiberalism in East-Central Europe.

Why are Poland, Hungary, and other East-Central European (ECE) States moving away from democracy, market economies and the European Union toward populist politics? After the collapse of Communism in 1989, ECE states embraced democracy, liberal economics and their 'return to Europe' after decades of Soviet domination. By 2007 all had entered the European Union, and political scientists viewed most as 'consolidated' democracies. In the years since, populist parties have emerged, won elections, and promoted illiberal, nationalistic and anti-EU policies. The class focuses on explaining this dramatic political change, focusing on economic pressures, identity politics, societal welfare, and other factors.

POLS 1821C. Economic Freedom and Social Justice.

Can capitalists care about social justice? This course considers the proposition that capitalists can, and should. Readings include a variety of classical and contemporary sources about the idea of economic freedom and its relationship to social justice. Enrollment limited to 20 seniors.

POLS 1821G. Representation, Parties and Interest Groups.

Examination of the role of political parties and interest groups in translating the will of citizens into policy outcomes. Covers the extent to which voters use party as a guideline, the possibility of a viable third party at the Presidential level, the effect of parties on Presidential/Congressional relations, and the interaction of interest groups and parties in politics. Enrollment limited to 20 juniors and seniors concentrating in Political Science and Public Policy.

POLS 1821H. Authority and Legitimacy.

What gives people in power the right to make and enforce laws? The course examines classic and contemporary conceptions of political authority and legitimacy. What is authority and when is it legitimate? Does legitimate authority depend on the consent of citizens, or on the justice of decisions? Can the people hold ultimate authority over the law, or is this merely empty rhetoric? Authors include Hobbes, Rousseau, Weber, Schmitt, Arendt, Althusser, Wolff, Nozick, and Habermas. Enrollment limited to 20 juniors and seniors.

POLS 1821I. Issues in Democratic Theory.

This seminar engages contemporary issues in democratic theory. Topics explored include the meaning of democracy (and the political consequence of different answers to that question); representation and citizenship; democracy and rights, (free speech, religious freedom, and privacy); democracy and judicial review; deliberative democracy. We will read works of political theory and United States Supreme Court cases. Enrollment limited to 20 juniors and seniors concentrating in Political Science.

POLS 1821J. Rhode Island Government and Politics.

Students participate in an approved internship in Rhode Island State Politics. Students will be expected to work 8-10 hours a week in an office of state government and, at the end of the semester, reflect on what they've learned. Enrollment limited to 20.

POLS 1821K. Just War Theory.

Survey of just war theory, with emphasis on ancient, medieval Christian, and contemporary thinkers. What standards should we use to judge the justness or rightness of a war and of conduct during war? Should our judgments on these separate phases of war be related? Who is the relevant agent? Where does its moral authority come from? Are there any post-war obligations? How has the ideal of the warrior/soldier changed over time and why? Prior coursework in the humanities or social sciences is required.

POLS 1821L. International Relations of Russia, Europe and Asia.

What role does Russia seek to play in the contemporary international system? Can NATO hold together as an effective military alliance willing and able to defend its member states? How is the rise of China affecting Russia, Europe and the international system? The seminar will discuss these and related questions, considering Russia's evolving relations with the centers of global power West and East, its efforts to retain control in the former Soviet space and to extend its reach into the Arctic; its agendas in trying to influence US and European domestic politics through 'soft' power, and related topics.

POLS 1821M. War in Film and Literature.

This course introduces students to a study of warfare, and some of the central issues raised in war, through the use of movies and novels. Central themes include civil-military relations, leadership, the role of women in war, managing the homefront as well as issues related to battlefield tactics and strategy. Students will be encouraged to address these topics in applications related to World War I, World War II, and Vietnam in particular. This course will take place in a seminar format which stresses discussion of the relevant materials. Enrollment limited to 20 juniors and seniors concentrating in Political Science.

POLS 1821N. Political Journalism.

Exploration of the development of political reporting and analysis of contemporary public affairs reporting. Will address key elements of the best political journalism, as well as the manner in which political journalism affects public opinion, political attitudes, and campaigns and elections. Enrollment limited to 20 junior and senior Political Science concentrators.

POLS 1821O. Politics of Economic Development in Asia.

It is accepted that development is not an economic phenomenon. Political processes are tied with economic development. Does the political system affect development? Does democracy slow down economic growth? If countries embrace political freedoms and market-oriented economic reforms, should one expect both to succeed equally? Since the Second World War, an enormous amount of intellectual effort has gone into understanding these issues. Asia has been at the heart of much of this literature. Emphasis will be on China, India and South Korea. Enrollment limited to 20 juniors and seniors concentrating in Political Science or International Relations.

POLS 1821Q. The United States in World Politics.

Examines major aspects of American foreign policy after the Cold War and 9/11 in terms of domestic and international challenges. Discussions of the United States as 'empire' and 'republic,' with independent research and a foreign policy game. Emphasis is on the connections between the processes of policy making and the substance of policies pursued. Pre-requisite: POLS 0400. Open to senior Political Science and International Relations concentrators.

POLS 1821R. Sovereignty, War, and the Modern International System.

How does international law regulate states' behavior regarding the use of international force? How should international law affect domestic politics and authority? What kinds of international rules, regulations and norms exist? What authority do they have? Should states obey international law even when it conflicts with their interests and that of their citizens? Is a law-governed order attainable in a world of sovereign states? This seminar explores the evolution of international law, its relation to state sovereignty, and how these factors shape the modern international system. Topics will include the historical emergence of sovereignty, the evolution of human rights, the politics of laws governing the resort to the use of international force, and the Responsibility to Protect. Enrollment limited to 20 juniors and seniors.

POLS 1821S. Women and Politics.

How has the importance of gender in politics changed over time? Must women represent women? Can men also represent women? Do women and men participate politically in different ways? Why is there a persistent gender gap in political leadership? Do women campaign differently than men? What are "women's issues"? Do they affect all women equally? This course explores these and other questions, drawing on a range of literature from political science and public policy. We will also examine contemporary political debates and investigate varying ways in which the categories of gender, race and ethnicity, and other politically-relevant categories intersect. Enrollment limited to 20 juniors and seniors.

POLS 1821T. Criminal Justice System.

An examination of police, criminal courts, and prisons in the contemporary United States. Major topics include police discretion, plea bargaining, and theories of punishment. We will also examine the politics of crime, including federal efforts to influence these traditional state functions. Major assignments are based in the Rhode Island criminal justice system. Enrollment limited to 20 juniors and seniors concentrating in Political Science or Public Policy. Instructor permission required.

POLS 1821U. Democracy and its Critics.

To what degree does democracy help realize or impede important goals of social justice and prosperity? How much democracy do we really want, all things considered? Readings might include: Rousseau, Joshua Cohen, Alasdair MacIntyre, Jeffrey Stout, Diana Mutz, Bryan Caplan. Enrollment limited to 20 juniors and seniors.

POLS 1821V. Democracy and Inequality in American Cities.

Explores the relationship between democracy and inequality in contemporary American cities. The seminar considers different kinds of inequality - economic, political and group/horizontal - from the standpoint of national politics in the United States. The focus then shifts to the literature on urban politics in the United States, assessing the major contrasting theoretical perspectives on the causes of local inequalities in American cities. Finally, we focus on unequal access to public safety and justice. Over the course of the semester, students will be expected to carry out "fieldwork" involving first-hand observation of local inequalities in the Greater Providence area.

POLS 1821W. The Politics of Race and Gender.

Politicians and scholars make a number of predictions about political life based on assumptions about race and gender. This course examines the roles of race and gender in American politics with a particular emphasis on women of color. The course focuses in social movements, political participation, and political representation. Enrollment limited to 20 juniors and seniors.

POLS 1821X. The Politics of Social Welfare in the Middle East.

This seminar explores the politics of social welfare in the Middle East. The first section of the course examines the concept and origins of welfare systems in developing countries as well as the relationship between the state, NGOs, civil society and informal networks in social service provision. This segment of the course also provides an overview and brief history of welfare regimes in the Middle East as well as concepts of charity and justice in Islam. Enrollment limited to 20 juniors and seniors concentrating in Political Science and International Relations. Preference for remaining spots given to concentrators in Developmental Studies and Middle East Studies.

POLS 1821Z. Peacekeeping and Statebuilding after Civil War.

What can the international community do to keep peace in countries wracked by civil war? Why does peacekeeping succeed in some countries but not others? How has peacekeeping evolved over the past 50 years, what lessons have been learned, how can those lessons be applied to better anticipate, prevent and mediate civil wars in the future? This senior seminar addresses these questions through a combination of case studies, in-class discussions and debates, and readings from a wide variety of academic, policy and philosophical sources. While there are no prerequisites for the course, familiarity with quantitative data analysis will be useful.

POLS 1822A. Nuclear Weapons and International Politics.

This seminar explores the causes and consequences of nuclear weapons proliferation in international politics. Each week we will explore a different dimension of nuclear proliferation, drawing on academic theory and historical evidence. Specific topics examined include the causes of nuclear proliferation, nonproliferation and counterproliferation policies, nuclear strategy, the effect of nuclear weapons on international conflict, and nuclear terrorism. Enrollment limited to 20 junior and senior Political Science or International Relations concentrators.

POLS 1822B. Foundations of Political Economy.

This course is both historical and theoretical and overlaps with the disciplines of political science, history, economics, and political theory. Based around an in-depth reading of "the classics" of political economy, the course traces the evolution of political economy through a consideration of some of its major contributions from the seventeenth century to the present; Locke, Ricardo, Smith, Rousseau, Mill, Bentham, Marx, Keynes, Kalecki, Hayek, Friedman, Lucas and Minsky shall be examined.

POLS 1822C. Congress.

Takes a comprehensive view of the U.S. Congress, its structure, procedures, elections, parties, constituencies and its interactions with the president and the courts. The Constitution establishes the Congress as the first branch and guardian of the nation's purse strings. This course will examine the strengths and vulnerabilities of the modern Congress with its highly polarized political parties. Requires extensive reading, a detailed paper and active class participation. Students are expected to pay careful attention to current events in the U.S. Congress. Enrollment limited to 20 juniors and seniors in Political Science.

POLS 1822D. Democracy and Education – A Focus on Jackson, MS.

The primary purpose of this course is to immerse students in the history, culture, and politics of Jackson, MS, while developing research skills that help us better understand the current state of public education in Jackson. As a result, the course will draw on two different types of research. First, the course will cover humanistic research that informs us about the history and culture of Mississippi. Second, the course will also explore social science research that describes the way in which political and public schooling institutions of MS behave both in theory and in practice. Students will spend 7 days in Jackson, MS.

POLS 1822E. Islam and Democracy in the Middle East.

This course covers key questions, arguments, and debates concerning the relationship between Islam (as a rubric for identity and mobilization) and democracy (as a political form and value) in the Middle East. The course is organized around major topics concerning the history, culture, and politics of the Middle East since the end of World War I: Islam and modernity, nationalism and independence, authoritarian state building, the European imperial legacy, revolution and fundamentalist resurgence, political Islam and democracy, democracy promotion, and the future prospects for democracy in the region. Enrollment limited to 25 juniors and seniors.

POLS 1822F. Social Movements and Struggles for Justice.

Social movements struggle for many things: policy change, changes in social relations, fundamental changes in the structures of government. We will focus on how social movements struggle to achieve justice, and specifically consider how social movements interact with efforts to strengthen the accountability of states and the rule of law. We will examine the central debates of scholars who look at how social movements and the law interact, and reflect on whether and under what circumstances we think law is a useful tool for social movements, and when it may hinder the achievement of justice.

POLS 1822G. The Political Economy of Hard Policy Problems.

Will tackle the "hard problems" governments sometimes have to deal with. For example, while governments are often cajoled and enjoined to produce economic growth, especially during recessions, do something about economic inequality and social mobility, and improve the life chances of millions through purposive action, actually delivering these things is incredibly hard. These areas constitute "hard problems" for two main reasons. Economically, we don't really have much of a clue about how to do many of these things. Politically, there are powerful interests that like these areas of policy just as they are, and they work to keep them "hard problems."

POLS 1822H. Corruption and Governance Across Democracies.

In recent years, the issue of "governance" has attracted increasing attention. Why are some countries more corrupt than others? Why do some governments distribute government programs equitably, while others manipulate them for political ends? The purpose of this class is to characterize, examine, and, to the extent possible, explain the persistence of these "bad governance" practices in many democracies in the developing world. We will draw on examples from Latin America, Africa, and Asia, and we will also make comparisons with appropriate current and historical cases from Western Europe and the United States. Enrollment limited to 20 junior and senior Political Science concentrators.

POLS 1822I. Geopolitics of Oil and Energy.

Oil is the single most valuable commodity traded on global markets. This course is designed to introduce students to the international political economy and security dimensions of oil and energy. The course explores the industry's many impacts on politics and economics, including: Dutch disease and the resource curse; the relationship between oil, authoritarianism, and civil wars; the role of the rentier state; the influence of oil on international warfare; global energy governance (e.g., OPEC); political differences within OPEC; US energy policy and energy security. The materials focus primarily on the political economy of oil-exporters, especially those in the Middle East.

POLS 1822J. Ethics of War and Peace.

While killing another human being is widely considered a wrong, war - a social institution that involves such killing on a massive scale - is an accepted practice that brings honor to those who carry it out on behalf of their respective political communities. This course explores the ethical dimensions of this paradox: how and why institutionalized violence is sometimes conceived of as moral action and what moral distinctions make this conception possible. The course will investigate a range of ethical approaches to these issues - including just war, pacifist, feminist, and poststructuralist approaches - treating them both sympathetically and critically. Enrollment limited to 20 juniors and seniors.

POLS 1822K. Laws of Violence.

States kill. Law enforcement officers may kill to protect innocent victims. The military kills to protect the nation. And a handful of states still impose the death penalty. These are all lawful killings. This seminar introduces the basic elements of conventional theories of law and state, and explores the centrality that legalized violence plays in both the constitution of law and the state. The goal of the seminar is to identify and examine the constitutive though unstable relation between law and violence. Enrollment limited to 20 juniors and seniors.

POLS 1822L. Comparative Constitutional Law.

An introduction to constitutional law of other countries and a comparison of their constitutional law to U.S. constitutional law. We will read court cases and other materials from most of the G-20 countries including: Britain, France, Germany, Italy, Japan, India, Canada, Australia, Brazil, South Africa, Indonesia, the European Court of Human Rights, and the United States. Topics include: constitutionalism, judicial review, separation of powers, federalism, free speech law, freedom of religion, criminal procedure, rights to property or welfare, rights of privacy and human dignity, judicial policing of the political process, states of emergency, and constitutional amendment processes.

POLS 1822M. Capitalism: For and Against.

Is capitalism just, or is it exploitive? Does the value we place on freedom create a negative right to own property free from interference, or a positive right to a certain level of subsistence? Does capitalism ennoble culture, or debase it? Does it empower individuals, or alienate them? To what extent, if any, can capitalism's downsides be mitigated through redistributive schemes? This course will examine these questions through study of some of the seminal philosophical arguments for and against capitalism, from its origins to the present day.

POLS 1822N. Freedom.

This course examines the meaning and conditions of human agency and freedom with a special focus on the experiences of those who are marginalized. What do these experiences tell us about the social practices, political institutions, and self-understandings that are necessary to sustain individual freedom? How do ostensibly free societies such as the U.S. instantiate freedom successfully and where do they fail? How can we enhance the experience of individual freedom today, especially for members of marginalized or oppressed groups? Enrollment limited to 20 juniors and seniors.

POLS 1822O. The Presidency.

The individual who occupies the office of the President of the United States is one of the most powerful individuals in the world. The consequences of presidential leadership are enormous and well worth of study from multiple dimensions. This seminar will survey the origins of the modern presidency; leadership attributes of the chief executive; and how presidents have initiated, reacted, and managed domestic and foreign affairs. Topics include nominations, elections, staff and bureaucracy, rhetoric, public relations, the party system, the "imperial presidency," congressional relations, policies, and political science theories of the presidency. Enrollment limited to 20 junior and senior concentrators in Political Science and Public Policy.

POLS 1822P. Defenses of Capitalism.

The moral justification for laissez-faire capitalism accepted in late eighteenth century came under attack in the nineteenth. Will examine four schools of thought that arose to defend capitalism: schools of free-market economists, Protestants and Catholics, Ayn Rand's followers, and libertarians. We will find the differences between these schools are as charged and fundamental as any between capitalism and its critics. Primary sources (including Ayn Rand's *Atlas Shrugged*) will provide the bulk of our reading. The course will conclude with an application of the rival theories to a few current public policy issues. Enrollment limited to 20 juniors and seniors.

POLS 1822Q. Identity Politics in Global Perspective.

This course is designed to provide students with an overview of major theories and empirical approaches to the study of identity politics. Throughout the semester we will read a combination of the classics and cutting-edge research in political science, economics, psychology, exploring a range of topics with implications for politics and societies around the world. These topics include: how identity should be conceptualized and measured; why some forms of identity are activated, mobilized, and contested; how identities are represented politically; how racial and ethnic identities intersect with other salient identities; how social diversity and civil society are interrelated; what factors affect the integration of immigrants; and which varieties of democracy enable the flourishing of plural identities. Readings for these topics will focus on the United States and the other parts of the world, including Africa, Asia, Europe, and Latin America.

POLS 1822R. The Politics of Food Security.

There is enough food on the planet to feed everyone, and yet currently approximately 875 million people go hungry. Why is this the case? This course explores the politics of international food security, dividing the semester into four sections to examine food through the lens of development, human rights, governance, and security concerns.

POLS 1822S. The Politics of Urban Transformation.

This seminar examines political economic change in U.S. cities. The seminar considers various external forces that act upon the city, principally: (a) migration patterns, (b) economic and technological change, and (c) public policy. We will also consider how various groups and political leaders respond to these forces and on what resources they draw. The seminar pays special attention to political and economic change in Providence, Rhode Island. Enrollment limited to 20 juniors and seniors in Political Science, Public Policy, and Urban Studies.

POLS 1822T. Politics of Health in the Global South.

Public health poses some of the most pressing challenges of our times. Explores the political factors that shape health and access to health care in the Global South. How does the nature of the state and welfare policies and institutions shape health and access to health care? What is the role of non-state actors, whether NGOs, religious charities, "terrorist" organizations, or other groups, in assuring the basic health needs of populations in developing countries? How do ethnic or religious social divisions affect health and health systems? Why do some health crises capture the attention of powerful global actors? Instructor permission required.

POLS 1822U. War and Human Rights.

This seminar will begin by studying the rise and spread of the notion of human rights, examining some of the core debates over human rights, including their enforcement in times of war. It will then turn to the laws of war, focusing especially on the 1949 Geneva Conventions and the challenges posed to the Conventions by the rise of non-state actors wielding significant violence. Topics include child soldiers, war crimes, humanitarian intervention, torture, targeted killings, humanitarianism, and the international justice. Enrollment limited to 20 juniors and seniors concentrating in Political Science or International Relations.

POLS 1822V. Pluralism and Democratic Imagination.

In this course, we will investigate the contours of historical debates about pluralism and democracy in the public imagination. Our goal will be to make the terms "pluralism" and "democracy," which simultaneously serve as hollow tropes in contemporary political discourse and as the basis for a secular religious faith for many on the left and the right, more difficult. Rather than cleansing these terms of their complications, we will strive to see them from all sides, interrogating their maddening paradoxes and ugly undertones while never losing sight of their awesome possibilities. Enrollment limited to 20 juniors and seniors.

POLS 1822W. Congressional Investigations.

This seminar will explore the role that Congressional investigations have historically played at the intersection of politics, public policy, tension between the executive and legislative branches, law and media, focusing on certain of the seminal Congressional investigations that both reflected and re-shaped the politics of the day. These will include the Pecora investigation into the 1929 stock market crash, the Truman Committee investigation into defense contracting during World War II, the House Un-American Activities Committee, the McCarthy hearings, Watergate, the Iran-Contra hearings and the Senate Permanent Subcommittee on Investigations hearings into the financial services industry.

POLS 1822X. Technology and International Politics.

This seminar examines the connections between technological change and international politics. Technologies have always been central to how states conduct war, cooperate with one another, and rule their subjects. We will consider this connection both theoretically and through a number of historical and contemporary case studies of technological changes and their relationship to international politics, including the technologies of warfare, communication, and transport. It is strongly recommended that students have taken the introductory international relations course (POLS 0400) before enrolling in this seminar. Enrollment limited to 20 juniors and seniors.

POLS 1822Y. Nuclear Nonproliferation.

This seminar focuses on the challenges to the security of states and peoples posed by the spread of weapons of mass destruction and on efforts to control these weapons. The class will review the history and technology of weapons of mass destruction and will examine different explanations for arms control and nonproliferation outcomes. The course will analyze key contemporary issues including the prospects for the nuclear nonproliferation regime, global nuclear inequality, nuclear terrorism, nuclear energy, democratic control of nuclear weapons, and disarmament. Much of the course will focus on nuclear weapons but we will also consider chemical and biological weapons.

POLS 1822Z. Social Attitudes and their Impact on U.S. Politics.

The course first documents trends and sources of change in social attitudes. It then evaluates the debate between psychological, sociological and political explanations for opposition to social rights policies. We then transition from the policy realm to the impact of ethnic and gender attitudes on electoral politics. In this half of the class we will study how social attitudes have influenced present-day partisan and presidential politics, how parties and politicians use gender and ethnic appeals for electoral gain, how these attitudes affected presidential candidates in a post-social rights United States. Enrollment limited to 20.

POLS 1823A. Constitutional Theory.

Will introduce the key theories that have been put forward in the last 100 years in Constitutional interpretation and how the Supreme Court exercises the power of judicial review. We will read and study key works by famous constitutional theorists of the past like James Bradley Thayer, Alexander Bickel, Charles Black, and John Hart Ely as well as reading the works of contemporary theorists such as Ronald Dworkin, Richard Posner, Robert H. Bork Antonin Scalia, Richard Fallon, Larry Kramer, and Jack Balkin. We will devote one week to each theorist and class participation in discussions is expected. Open to juniors and seniors concentrating in Political Science and Public Policy. Prerequisite: POLS 1160 or 1170.

POLS 1823B. Reforming the State in New Democracies.

This course analyzes the politics and reform of the administrative state in new democracies. Our general focus will be on how electoral, legislative, and bureaucratic institutions affect the nature of governance in advanced and developing democracies. We will then focus specifically on the extent to which elected politicians are able to control bureaucrats. Finally, we will turn to several policy areas – civil service reform, regulatory and administrative procedural reforms and fiscal policy – and discuss the politics of each in comparative and theoretical terms. Enrollment limited to 20 juniors and seniors.

POLS 1823C. Ancient Political Thought.

What is the purpose of politics? Who should rule? What is justice? Plato and Aristotle instigated the tradition of political philosophy in the West, and our modern democracy is deeply indebted to their ideas. Yet their answers to many of the fundamental questions of politics differ dramatically from our own. Among other things, they valued virtue over personal freedom, duties over rights, and nobility of soul over equality of access. In this course we reflect critically on the value and implications of their ideas, and we evaluate our own modern political principles and practices in light of what they taught. Enrollment limited to 20.

POLS 1823D. War and Peace in International Society.

The decline in the frequency of interstate war and the illegality of international aggression are among the most significant changes in international relations in the last century. However, international violence has not disappeared from the world. This class charts and analyzes the changes in warring and peacemaking up to and through the twentieth century. How has the nature and practice of war changed? Are we entering an era of global peace? Other topics covered include mercenaries, plunder, peace treaties, and robots. Enrollment limited to 20 juniors and seniors in International Relations and Political Science.

POLS 1823E. Market Democracy in Chile.

Market democracy is a political philosophy that combines concern for social justice with concern for private economic liberty, a fusion of left and right ideologies in which governments and societies do not need to choose between social justice and economic freedom, but to strongly endorse both. Class discussions will focus on how to apply this model at the public policy level in Chile by examining a variety of texts in the libertarian tradition, classical and contemporary from both North and South American perspectives. Instructor permission required.

POLS 1823F. Between Colonialism and Self-Determination: A History of the International Order.

Explores the encounter between 'Europe' and the 'non-Western' world. The ways in which the Western international order has conceived and managed the encounter with the 'non-Western,' 'developing' or 'Third World.' This encounter has been fraught with violence and war. From the Spanish conquest of the 'New World' to the scramble for Africa in the 19th century, Western states have sought to extend their rule overseas by force. International order sanctioned violent colonial dispossession, recognizing titles to Western states – redefining overseas territories as terra nullius – and providing a general justification to colonialism. Enrollment limited to 20 juniors and seniors.

POLS 1823G. Women and War.

This course provides an examination of the links between the security of women and the security of nations. It explores the productive and reproductive roles of women in society from an evolutionary feminist perspective which identifies the female body as a site of important societal contestation. It investigates the reciprocal relationship between individual and societal choices and structures in areas as diverse as family law, development, education and the sex trade. Students will be required to watch several films as part of the course requirements. Enrollment limited to 20 juniors and seniors.

POLS 1823H. Public Opinion.

We will examine public opinion on a variety of current issues. The course's principal objective is to help students understand the role of public opinion in democratic governments. In addition, students learn how to integrate data analysis into their analysis of public opinion trends. Enrollment limited to 20 juniors and seniors concentrating in Political Science and Public Policy.

POLS 1823I. Urban Politics and Policy.

In this course, students examine the politics of urban America, and the causes and consequences of urban poverty and inequality. Enrollment limited to 20.

POLS 1823J. Freedom, Work, Leisure.

When are we most free, at work or at leisure? Is work the same as paid employment? Is leisure the same as idleness? When, in turn, are we unfree at work, and what kinds of unfreedom are we subject to that are peculiar to modern life? Such questions press with particular urgency at a time when both unemployment and overwork are major complaints, and when many people find that work takes up the majority of their day yet is unsatisfying. Readings will include philosophers like Aristotle, Bertrand Russell, G.A. Cohen and Charles Taylor, and writings from the sociology of work. Enrollment limited to 20 juniors and seniors.

POLS 1823K. Are there Universal Political Values?

Does one standard of goodness or rightness apply everywhere? Are political values local or relativistic? Are there different standards of justice and rightness, and so attempting to evaluate them all is simply hubris. Or might there be a spectrum with options somewhere between these two? Do such universal values exist and how to evaluate such values in the context of particular societies that change over time. We will read a number of texts on issues relating to liberalism, relativism, multiculturalism, and pluralism. Will focus on Montesquieu, whose insights raise fascinating questions as well as discuss contemporary issues.

POLS 1823L. Human Rights: For and Against.

Should, or do, human rights exist? If so, have they always existed? If not, where did they come from? We will search for historical and philosophical answers to these questions. Natural law and rights were invoked in the aftermath of the Conquest of the Americas, in the American, French and Haitian Revolutions, and in the founding of the United Nations. Yet, inalienable rights have not only had friends but also foes such as Jeremy Bentham or Karl Marx. We will examine how contemporary proponents and critics of human rights view their value and impact on domestic and international politics. Enrollment limited to 20 juniors and seniors.

POLS 1823M. Democracy Among the Ruins.

In 19th century US, certain kinds of motion/mobility were a new experience which, to some, meant freedom, and to others -- the end of meaning. Democracy was identified WITH speed, mobility, and destruction, specifically, the destruction of established public goods, social arrangements, traditions, laws of land inheritance, identities, and patterns of work. These day, these same things are identified with neoliberalism and are seen as threats to democracy, which is now often identified with slowness, deliberation, and procedure. In this seminar, we read two classic texts that explore these issues: Tocqueville's *Democracy in America* and Melville's *Moby-Dick*. Enrollment limited to 20 juniors and seniors.

POLS 1823N. Nationalism: Problems, Paradoxes and Power.

This seminar examines nationalism's historical evolution and reconstructs its role in contemporary political life. Drawing from a broad, interdisciplinary range of materials—from political philosophy to history and political science—the class interrogates the relationship between nationalism and other ideas considered constitutive of “modernity,” like capitalism and popular sovereignty. In so doing, the class aims to understand the sources of nationalism's enduring power. Despite predictions of nationalism's demise, we are currently witnessing its revival in the developed democracies of the West. What explains nationalism's persistence? What are the roots of nationalism's continued imaginative appeal and political potential?

POLS 1823O. The Political Economy of Renewable Energy.

Given the challenges presented by climate change, environmental degradation, and resource scarcity, virtually everybody agrees that “business as usual” in energy production and consumption is no longer tenable. Global-scale innovation has become imperative, particularly in the area of renewable energy. Costs must come down, new solutions must be developed, and new opportunities for deployment must be opened up. But there is more than just technology involved. As this course will demonstrate, energy systems involve the intersection of technologies, markets, domestic political institutions, interest groups, commercial strategies, and international competition. Enrollment limited to 20 juniors and seniors concentrating in Political Science and International Relations, others by instructor permission.

POLS 1823P. Politics and Philosophy of Ayn Rand.

This seminar will examine the political and philosophical thought of Ayn Rand (1905–1982). We will begin with her political ideology and continue to the philosophical foundations she claims justify that ideology. The latter quarter of the seminar will explore applications of her philosophy to foreign affairs, religion, current events, and areas of student interest. Our sources will include Rand's non-fiction essays, her novel *Atlas Shrugged*, the main exposition of her work *Objectivism: The Philosophy of Ayn Rand*, and criticisms by Robert Nozick and others. Enrollment limited to 20 juniors and seniors.

POLS 1823Q. Democratic Theory and Globalization.

What should democracy require in a globalized world? Is there a human right to democracy, so that all people should be governed democratically, or are there other legitimate forms of government? Should the United Nations and other international organizations be reformed to become more democratic? What does democracy call for when we affect the lives of people outside of our country? In this course, students will examine the leading ethical debates about democratic theory in an international context. It begins with three influential theories of democracy – the competitive, participatory, and deliberative – and applies them to important global issues. Enrollment limited to 20 juniors and seniors.

POLS 1823R. Greek Tragedy in Politics, Philosophy, Theater and Film (MCM 1504C).

Interested students must register for MCM 1504C.

POLS 1823S. Crafting Citizens: Democratic Theory and Civic Education.

How should liberal democracies educate members for citizenship? What is the appropriate role of the state in defining an appropriate civic education? Students will develop well-researched normative arguments on civic education policy. Will examine the tension in contemporary democratic theory between value pluralist calls for restraint on the part of the state and a liberal-democratic insistence on the need to promote and sustain allegiance to core values. Will draw on current empirical insights and controversies, will consider ways in which pressing needs for social action to counteract inequitable social dynamics may complicate a normative liberal democratic vision for civic education.

POLS 1823T. Democracy and Crisis in Political Theory: Freedom, Order and Emergency Politics.

What becomes of individual freedom, political equality, and the accountability of government to its citizens when a crisis breaks? What pressures are these core political values, and the institutions built to uphold them, placed under when our leaders have to tackle extraordinary circumstances where the security, integrity and perhaps survival of our societies are at stake? Can our representatives act outside the rules when protecting liberal democracy, without fatally undermining it? How can (and should) we think about and shape our political institutions and public debate to ensure our best chance of staying both free and safe?

POLS 1823U. Individual Liberty and Mass Incarceration.

Many of the most renowned theorists of classical criminologists were in fact self identified political economists and political philosophers amidst the classical liberal and enlightenment tradition. Patterns of crime and punishment have significantly changed since the enlightenment period. This course asks simply: what would the enlightenment classical liberals have to say about today's unique trends? Whereas Adam Smith was fascinated by and arguably successful in comprehending why some countries are rich and others poor; we borrow his analytical tool kit to investigate why some societies incarcerate more than others.

POLS 1823V. Politics of Ethnic Conflict.

Course looks at the politics of identity-based contention and conflicts. Why do some multi-ethnic states remain politically stable for decades, then collapse into conflict, while others end deep and violent divisions with peaceful resolutions? Why do authoritarian regional hegemony encourage or repress ethnic consciousness? Why are democratic federations under strain, and when does ethnic polarization result in genocide? The course addresses these questions through analytical case studies of recent and contemporary contention in post-Yugoslav states, Ireland, South Africa, Rwanda, China, Russia, and Iraq. We conclude with intensive case studies of the conflict in Ukraine and recent Scottish independence referendum.

POLS 1823W. American Political Thought.

This course surveys the various ideas and practices associated with the term “democracy” in the course of American political history. Its chief purpose is to give you an idea of how contested this term was in the course of our political tradition, as a means of situating our present political disputes in historical context. We examine rival conceptions and applications of democracy in the Revolutionary era, at the Founding, in Jacksonian and antebellum America, during the Civil War, in the Gilded Age and the Progressive era, through the New Deal, the 1950s, the 1960s, and the 1980s.

POLS 1823X. Survey of Comparative Politics.

Why do some countries develop authoritarian regimes, while others build democracies? Why do people protest only under some conditions? How do only some countries seem to thrive with a diverse, multiethnic society? These questions are among the most pressing within comparative politics yet we struggle to understand the underlying phenomena that yield the political behavior and institutions we observe across the globe. We will look at the methodological approaches comparative politics utilizes to answer these questions. As we do so, we will keep a critical stance as to what the field neglects or heralds as a concrete finding.

POLS 1823Y. Global Governance.

This seminar explores the changing nature of global governance. Governance refers to the systems of authoritative rules, norms, institutions, and practices by means of which the international community manages its common affairs. Emphasizing in-depth readings of sustained arguments, this seminar examines key global governance processes and how they differ across different issue areas. It explores the variety of actors involved in managing global issues, surveys emerging trends, and explores possible ways of improving the capacity of the international community to deal with global challenges. Key issues examined include the global economy, nuclear weapons, the global environment, and human rights and justice.

POLS 1823Z. Gender and Public Policy.

How do political institutions, political communication, and policy making processes operate in gendered ways? What kinds of gendered disparities emerge in education, health, employment, and social policies? This course examines how gender combines with sexuality, race and ethnicity, social class, immigration status, and ideology to yield disparate political and policy experiences. It also considers pathways forward to address these disparities. The course focuses on the U.S., and looks to other countries for models.

POLS 1824A. Counterinsurgency and Civil War.

Since the end of World War II, civil wars have killed vastly more people than interstate wars. Oftentimes, these conflicts have taken on the character of insurgencies, with rebels utilizing guerrilla tactics against more powerful state opponents. The goal of this course is provide students with a theoretical and historical understanding of this increasingly dominant form of conflict. Specific topics explored include the causes of civil war, mobilization and recruitment into rebel groups, patterns of violence, counterinsurgency, war termination, conflict recurrence, and the aftermath of civil war. Enrollment limited to 20 junior and senior Political Science or International Relations concentrators.

POLS 1824B. Post Conflict Politics.

What, if anything, can the international community do to keep peace in countries wracked by civil war? Why does international intervention succeed in some countries but not others? How can war-torn societies overcome the myriad challenges inherent in post- conflict politics, including disarmament, demobilization and reintegration of ex- combatants; repatriation of refugees; transitional justice; and reconciliation of wartime adversaries. This senior seminar addresses these questions through a combination of case studies, in-class discussions and debates, and readings from a wide variety of academic, policy and philosophical sources. While there are no prerequisites for the course, some familiarity with quantitative data analysis will be useful.

POLS 1824C. Political Communication.

This course will focus on the importance of written and oral communication in public decision-making, particularly in the Congressional context. The course will examine the impact on political interactions, and the influencing of public policy decisions and outcomes. The course will emphasize some of the practical tools for producing relevant, useful material in the professional policy and the political communications arenas. The course requires several writing assignments focusing on different public policy analyses and political communications tools as well as active class participation including oral presentations.

POLS 1824D. Power and Prosperity in Urban America.

Over the past twenty years, many American cities have experienced comebacks: growing numbers of upper- income residents have relocated to cities; downtowns have been transformed into lively arts and entertainment districts; and crime has fallen. How did cities achieve these transformations? Why were some cities more successful than others? How has the revitalization of cities affected the urban poor? The course will also examine the impact of the "Great Recession" on cities. Did the recession jeopardize recent gains in urban prosperity? How have cities coped with the fiscal strains presented by reduced tax revenues and limits on state and federal assistance?

POLS 1824E. Liberalism.

Liberalism is a political theory about the limitation of state power based on basic constitutional rights. These institutional mechanisms have been justified on a liberal philosophical outlook. This course examines the central values of the liberal worldview including freedom, equality, toleration, individualism, secularism, pluralism, constitutionalism and the public and private divide. The course offers a philosophical analysis of the main tenets of liberalism as well as critical and competing interpretations of each of the liberal values examined. The purpose of this philosophical and conceptual exploration is to understand the justificatory basis of liberalism and eventually assess its achievements and limitations.

POLS 1824F. Meritocracy.

First we will discuss the role of merit in politics. In a democracy, the most popular candidate wins. Often this is not the most competent candidate. Is that a problem? Could we justifiably constrain the democratic process in order to get more meritorious people in government? What are the theoretical limitations, and the benefits, of democracy? Second, we will consider how wealth and income should be distributed. In a meritocracy, citizens are not guaranteed equal prosperity, but they are guaranteed an equal opportunity to pursue prosperity. How efficient is such a society? And how just?

POLS 1824G. Farms, Fisheries, and Politics.

This seminar compares and contrasts the politics of agriculture and the politics of fisheries in the United States. The course examines the rise of the farm bloc and the agricultural welfare state, along with the evolving politics of the farm bill. It then turns to the governance of fisheries and the apparent disconnect between fisheries management and "fish as food." The final part of the course is devoted to a synthesis of perspectives on food and fisheries, including case studies developed through student research. Limited to Political Science concentrators.

POLS 1824H. Minority Political Behavior.

This seminar is meant to examine the history and contemporary role of minority groups in the U.S. political system. We will focus on political relationships between several minority groups and their relationship to political participation, party affiliation, voting coalitions, and public opinion, in addition to other groups. Throughout American history, the United States passed laws to restrict the rights of racial and ethnic minorities to purposely keep them outside the political system. In recent years, there has been a growing trend by political parties and politicians to court minority voters and promote diversity. We will explore the current state of racial and ethnic politics in the U.S.

POLS 1824J. Culture, Identity and Development.

There is a consensus, in scholarly and policy circles, on the importance of cultural processes and identity for a range of development outcomes across the world. There is far less understanding of how culture and identity influence development. The aim of this course is to develop this understanding. We will draw on readings across the social sciences as well as an analysis of development interventions across the globe to gain a comprehensive understanding of the ways in which culture and identity, conceptualized as actively constructed and changing, influence a range of outcomes including health, sanitation, education, inequality and economic development.

POLS 1824K. The American Welfare State in Comparative Perspective.

Will examine the development of social policy in the United States and the political conflicts that drive contemporary debates. We begin by identifying the distinctive features of American public policy, limited spending on the poor and the use of tax expenditures to achieve social goals. How the politics of race, immigration, gender, and federalism have shaped American approaches to social welfare. We will explore the role of public opinion, interest groups, and partisan polarization in shaping the agenda and outcome of reform efforts. Topics include diverse forms of public assistance, employment policy, health care, and social security.

POLS 1824L. Environmental Political Thought.

In our context of ecological crises, Environmental Political Theory (or Ecosophy) has boomed, attesting of the need for new concepts with which to think our unprecedented situation. Ecosophers think of nuclear energy, GMOs, climate change, the 6th extinction, etc., in terms of responsibility toward future generations, "de-growth," sustainability, the anthropocene, Gaia, etc. This course will survey some major schools of thought within Ecosophy, highlighting the diversity of the environmentalist movement. We will focus on one common thread weaving eclectic ecosophical currents and concepts: the question of humans' relationship to the nonhuman.

POLS 1824M. The Politics of Race and the Criminal Justice System.

This course examines the politics of race and the criminal justice system in the U.S. It proceeds in three parts. First, it examines the political origins and consequences of racial disparities in citizens' interactions with the police, courts and prisons. Next, it considers how the public, the media, and politicians relate and respond to these issues. Finally, the course concludes by examining the prospects for reform and the consequences of inaction.

POLS 1824N. Feminist Theory for a Heated Planet.

The ecological crises - the "sixth extinction," "global warming," "the eruption of Gaia" - have forced many humans to challenge contingent boundaries drawn in more or less compelling ways in the Western world. Dualisms opposing nature to culture, the human and the nonhuman, the natural and the technological, the feminine and the masculine, seem more destabilized than ever. When geologists came up with a new epoch called the "Anthropocene," feminist theory was well equipped to problematize this allegedly omnipotent "anthropos." Reciprocally, queer, post-colonial, and feminist theories have re-thought the never so normative, hardly stable, greatly unknown, nature of nature.

POLS 1824O. Democracy.

In this course we will seek to understand the evolution of democracy as a word, as a regime type, as a decision-making mechanism, as a *modus vivendi*, and as an essentially contested concept. We will also probe the relationships between democracy and law, democracy and peace, and democracy and sovereignty.

POLS 1824P. Markets Without Limits.

In the last sixty years, the market economy has experienced a unique triumph across the globe. The main goal of this seminar is to analyze the moral boundaries of the marketplace. In particular, we will focus on getting a better understanding of which conditions make it morally permissible for modern societies to rely on markets to meet individual needs and to achieve social goals. In order to get a better understanding of the limits of the market, this course will focus on a few complex examples, such as the organ trade, prostitution, sweatshops, and surrogacy.

POLS 1824Q. The International Politics of Climate Change.

Addresses the problem of climate change from the perspective of political science, and in particular its international dimensions. Will provide students a chance to discuss the current state of affairs and to ultimately be able to form an opinion of what can and should be done to address the problem. Broadly, the course has two parts. The first part is a three-week introduction to the subject matter, addressing basic themes, mechanisms, and institutions. The second part is a seven week set of three units, each addressing a set of issues: common solutions to climate change, geopolitical debates, and future controversies.

POLS 1824R. Democracy, Race and Education.

This course is to be an in-depth investigation of the relationship between democracy and public education. We will explore different normative theories of democracy in education. We will highlight the centrality of race to education politics and policy. We will also analyze different forms of governance structure and key policy areas where questions of democracy become vital. The material covered in this course includes: political theory, empirical studies of political science, and applied studies of policy.

POLS 1824S. The Politics of Migration.

Managing migration waves is one of the big challenges of our time, one that is destined to increase in importance as climate change, conflicts, and economic inequality continue pushing people to move. This course provides an overview of cutting-edge research on the causes and consequences of migration. We will evaluate some of the common beliefs about migration using scientific studies: Is it true that most migrants are poor? Do restrictive policies discourage migration? Are immigrants good or bad for the economy? We will discuss the questions at the center of the political debate on migration and critically evaluate each argument based on scientific knowledge. Our discussions will be rooted in specific country cases (Ukraine, Syria, Bangladesh, East Africa, Pacific Islands,...), which we will use to learn about migration episodes and as a basis for a fact-based discussion.

POLS 1824T. US-China Relations.

Relations between the United States and China are one of the most important aspects of international politics in the modern world. This undergraduate seminar explores the dramatic changes in US-China relations since the Cold War through the lens of political science. The seminar briefly exposes students to theories of competition and cooperation and historical background on US-China relations. The bulk of the course offers students an in-depth examination of the evolution of the bilateral relationship from 1989 to the present. The readings feature a range of primary sources from both the United States and China, while class discussions will host guest speakers who participated in the events under examination.

POLS 1824U. Bleeding Heart Liberalism.

What is libertarianism? In what sense can libertarians claim to combine the best of the "right" with the best of the "left?" Why do libertarians emphasize private property? Why are they skeptical of political agency? Are libertarians anti-democratic? Can they care about social justice? How do libertarians approach problems such as racism, sexism, militarism, state surveillance, global inequality, and environmental sustainability? This course will explore such questions, as illuminated by a variety of texts in the libertarian tradition, classical and contemporary. Instructor permission required.

POLS 1824V. Women in Western Political Thought.

Much of the tradition of western political philosophy has either ignored or justified the subordination of women, despite elucidating principles of alleged universality. This course challenges the traditional "canon" of western political thought by recovering a long—and often forgotten—history of debates, ideas, and texts written by, about, and for women. This course is intended for upper-division undergraduate students. Its methodological approach emphasizes close readings of texts in their historical context, but also draws on the approaches of contemporary feminist political philosophy as a framework for discussion and debate.

POLS 1824W. Political Violence.

This course explores the main debates on the causes and consequences of political violence. We will focus on three major topics: civil wars, state-sponsored violence, and terrorism. Since the end of World War II, domestic conflict has largely outpaced international wars as the dominant type of violence. But what makes civil wars so prevalent in recent years? What are the conditions under which a state decides to attack its own citizens? Why do some groups resort to terrorism while others use nonviolent tactics?

POLS 1824X. People and populism: constructions, discourses and critique.

Populism and populist politics are everywhere. However, it is far for being entirely clear what populism is and what this category ought to include. Prominent philosophical paradigms conceive populism as an ideology, as a discursive frame, as a strategy of mobilization, as a special configuration of political power inside and (maybe) outside liberal democracies. By combining sources from history of political thought and ideology critique with the most recent developments in the field, this seminar looks at how the people has been constituted, re-constituted, constructed and de-constructed in modern and contemporary times.

POLS 1824Y. The Political Development of Taiwan.

With growing risk of superpower conflict in the Taiwan Straits, Taiwan – home today to 23.4 million people – has become a major focus for global attention. This seminar is premised on three ideas – that to understand Taiwan, one must go beyond the geopolitical, and instead delve deeply into Taiwan's multi-century political evolution; that doing so will offer insights into some of the most significant macro-political phenomena in human history (e.g., settler colonialism, imperialism, authoritarianism, democratization, etc.); and, that doing so will also offer greater understanding of, and a wider range of potential solutions for, contemporary geopolitical concerns. Topics include Taiwan under Dutch rule, Taiwan as part of the Qing Empire, Taiwan's socio-political evolution under Japanese colonial rule, the building of the KMT state on Taiwan, authoritarianism and the "White Terror," Taiwan's democratization, and post-democratization identity formation.

POLS 1824Z. Ancients and Moderns: Quarrels and Continuities.

Examines the political thought of Plato and Aristotle together with three modern thinkers whose work was especially animated by engagement with their views of politics: Hobbes, Rousseau, and Nietzsche. Topics include the ends of politics and the nature of good government; the meaning of justice; the relationship between public and private; the value of equality and of hierarchy; the nature and role of freedom; the place of virtue in political life; and the relationship between philosophy and politics. In reading these moderns through the lens of Plato and Aristotle, we gain a richer understanding of both the quarrels and the continuities between ancient and modern political thought – and the dynamic relationship between them.

POLS 1825A. Political Economy of Development.

This course is an introduction to the political economy of development intended for upper level undergraduate students. Throughout this course, by drawing on readings from economics, political science, and beyond, we will try to find answers to important questions such as: Do political institutions matter for economic growth? What role does democracy play in economic development? Are present-day differences in development across the world a historical legacy? Are natural resources a blessing or a curse for development? Is foreign aid the solution to the problems of the developing world?

POLS 1825B. The Politics of the Laws of War.

From the wars that befell ancient Sumerian city states to contemporary armed conflicts raging in countries such as Ukraine, Syria, and Ethiopia, laws and norms have shaped combatants' behavior. What are the laws of war? What explains how this body of laws evolved? Why do some combatants adhere to the laws of war, whereas others intentionally target civilians, torture detainees, recruit child soldiers, and perpetrate sexual and gender-based violence? In this seminar, students will probe these questions from different angles: as political scientists, historians, international legal scholars, and policy practitioners. Students will develop expertise in the content of the contemporary laws of war, explore the politics of how the laws of war operate (or fail to operate) during wartime, and engage with the current landscape of legal and political issues inherent in armed conflicts today.

POLS 1825C. Crime, Violence, and Policing in Latin America.

Latin America is the most violent region in the world and the region that spends the highest share of their budget on public security. Despite the high spending, international drug cartels and prison gangs still subvert the rule of law and even govern residents in some areas. Public security policies at times exacerbate rather than solve problems: high levels of police violence and corruption have led citizens to fear or have little trust in law enforcement. Upon taking a closer look, we see stunning variation in the patterns of violence, types of criminal groups, and the state's crime-fighting strategies across the region. What explains variation in violence across and even within countries in Latin America? Why does organized crime look so different from place to place? And what explains why some public security policies work better than others?

POLS 1825D. The Politics of International Development.

This course explores the politics of international development. Why are some countries rich and other countries poor? The seminar investigates the structural constraints, historical legacies, and political institutions that account for differences in development across and within countries. Furthermore, the seminar critically analyzes the relationship between development and economic growth. After examining accounts offered by different theories of development, students will analyze the institutions and norms governing international development, particularly foreign aid. The final section brings students up to date on current research on how the rise of China and other emerging powers is shifting the international development landscape.

POLS 1825E. Health Care Politics and Policy.

This seminar will explore the interplay between politics and policy in the American health care system. Why has the United States struggled to achieve universal health insurance? How well does the US health care system reflect the values of its citizens? Does the United States spend too much on health care—or too little? Topics include: health equity and disparities; the strengths and weaknesses of the US response to COVID; the political battle over the Affordable Care Act; the politics of Medicare and Medicaid; public opinion on health issues; health care spending, cost control and the quality of care; cannabis legalization; climate change and health impacts; the political power of doctors, drug companies, and other medical interest groups; and international health systems and the differences between those systems and the American approach.

POLS 1825F. Moral Pluralism.

Moral pluralism is an unmistakable characteristic of modern liberal societies. Even though the dire conflicts of religion which fuel wars and civil unrest appear to be a thing of the past, fundamental moral disagreements are still plentiful today. These disagreements expose tensions among the core of ideas upon which liberal societies are built. This course explores moral pluralism and engages with questions such as: should the state be neutral in relation to different religious and moral convictions? Are there common values? How should citizens engage with each other when they debate controversial moral questions in the public forum?

POLS 1825G. Race, The Classics and Democratic Theory.

Rather than looking establishing wholly new traditions, many black political thinkers have chosen to engage with ancient narratives and concepts to arm contemporary struggles. Political theorists often overlook this strange choice. After all, these concepts have been used to justify anti-black assumptions. In this course we explore a series of black 'classical receptions' in which authors take up key classical concepts and enrich and extend them in their critiques of the US racial order. We will discuss this approach as well as the broader implications it has for democratic theory.

POLS 1825H. Race, Political Categorization, and Political Activism in the United States.

Will trace American political, economic, and cultural institutions as both products of race and contributors to racial formation. The course proceeds chronologically, exploring race formation in the antebellum period, the Civil War, the long civil rights movement, and the post-civil rights era. Students will learn the role that race plays in American politics, and of the role American politics plays in shaping race. How do we best theorize race in the United States? Can race be separated from American liberalism? What federal and state institutions make race politically salient? Which institutions have proved to be helpful in combating that salience?

POLS 1825I. The Politics of the Harlem Renaissance.

The Harlem Renaissance was a social and cultural movement that attempted to gain recognition of the humanity and equal dignity of African Americans through arts and letters. Leaders argued over whether self-expression or propaganda ought to be the priority of artists in the movement, while figures opponents offered competing political visions. We will evaluate the intersections between key artists and figures of the movement and political activism in the time period. Will look at the role of civil rights organizations such as the NAACP and the Urban League as well as the shape that politics took for those in marginalized positions.

POLS 1825K. Good Government.

This is an applied ethics and public policy course focused on institutional issues in ethical government in the United States. The concept of "good government" connotes a normative and ideally nonpartisan view about the structural features that promote good public policy. The course surveys major scandals that have shaped public discourse about ethics and government, including Watergate, Iran-Contra, the Clinton impeachment, the Keating Five, and the Russian interference in the 2016 elections. We will also examine institutional responses to concerns about public ethics, from special prosecutors to disclosure requirements and ethics regulation. This course is intended for junior and seniors concentrating in the American Politics track. Enrollment will be limited to POLS concentrators.

POLS 1825L. Work, Exploitation, and Freedom.

This course provides an entry point for some of the crucial political and moral questions regarding the social organization of human labor and the distribution of its products. We will approach these questions through a survey of some of the key theorists of capitalism. The course will introduce students to the thought of classical political economists such as Adam Smith and David Ricardo, Karl Marx's critique of political economy, theorists of racial slavery and the gendered division of labor, and contemporary thinking about possibilities for the future of work and leisure.

POLS 1825M. The Politics of Finance and Financial Crises.

We explore politics around management of international money and financial crises. Although it has been argued that management of money is best left in the hands of dispassionate, technocratic experts, we explore the political foundations of national money and international monetary affairs. The course begins with an introductory overview of national and global currencies, monetary policy choices and recent history of international monetary system. The second half of the semester will focus on crisis events, starting with causes of financial crises, and moving to key crisis moments Latin American debt crises, emerging market crises of the 1990s, 2007-8 Global Financial Crisis and the Euro crisis. The last weeks of the course reflect upon the current crisis that has emerged with the Covid-19 pandemic, and its implications for the global political economy and future of the dollar in the international monetary

POLS 1825N. Military Power and Effectiveness.

The threat and use of military force are an important component of state power and influence. In international relations theory, military power is often argued to be a primary determinant of international outcomes. But what is military power, and how do states actually translate it into effectiveness in war? This course seeks to explain why some states develop highly effective militaries that are proficient fighting machines, whereas others seemingly cannot execute the simplest tasks. Students will survey concepts and theories of military effectiveness and apply them to historical and contemporary issues in the use of military force. They will learn about the factors that determine military performance at all levels of war—tactical, operational, strategic, and political. Given the ongoing war in Ukraine and the threat of conflict over Taiwan, I expect such a seminar could be attractive to the student body.

POLS 1825O. Embodying Race and Gender.

This course will explore how race and gender are mapped on to our bodies by others, and how we use our bodies to express gender and race in our everyday lives and relations. We will think about how the body moves, how the body is perceived by others, and how our bodies impact the overall shape of the environments that we inhabit with others. To think about the raced and gendered body, we will read the works of feminists (Iris M. Young and Linda Alcoff), black feminists (Hortense Spillers and Toni Morrison) and queer theorists (C. Riley Snorton and Gayle Salamon) to name a few. Graduate students are also welcome to take this course.

POLS 1825P. Politics of Ocean Governance.

Governing the oceans is one of the most important challenges in the 21st century. 90 percent of world trade is carried by sea, and three billion people rely on the "blue economy" for their livelihoods, the vast majority in developing countries. The oceans are also crucial for global biodiversity and to sustain the world's ecosystem. Yet marine systems are increasingly threatened by human activities. Ocean health has declined rapidly in recent years due to pollution, overfishing, and climate change, while piracy and great power competition threaten trade and undermine the "Blue Economy". This course investigates the global ocean governance architecture. The course 1) provides an overview of economic, security, and environmental challenges at sea, 2) maps the actors affected by these problems, and 3) analyzes the institutions that they have created to govern maritime problems.

POLS 1825Q. Capitalism and Democracy in Europe.

Europe is widely viewed as the birthplace of industrial capitalism and mass democracy. Despite pioneering these two key forms of governance, Europeans are today questioning whether democratic capitalism can respond to the challenges of demographic diversity, inequality, climate stress and geopolitics. After decades of political stability, countries are contending with extremist, anti-democratic parties. After decades of growth, Europeans have experienced repeated bouts of economic turbulence. And more recently, Europe confronts the dangers of fundamental geopolitical change. How, in these circumstances, can Europe integrate growing numbers of migrants? Will Europe remain an engine of economic growth and a source of geopolitical stability? Should Europe's democracies respond to these challenges individually by sharpening their national identities. Or does a better future lie in collectively strengthening the institutions of supranational governance through the European Union?

POLS 1825S. Latino Politics in the United States.

Latines have often been described as the sleeping giant of United States politics. Although Latines make up nearly one in five people in the United States, the group has the lowest political participation rates of all the racial/ethnic groups in the United States. During this course, we will consider how Latines interact with United States politics. We begin by discussing Latine ethnicity and analyzing the extent to which Latines have politicized identities. We will examine historical and demographic trends, including immigration patterns and Latine social/labor movements, to see whether historical trends explain present behavior. We will also discuss topics related to Latine public opinion, voting patterns, and political representation. We will use what we learn during the course to discuss what role, if any, Latines will play in the future of United States politics.

POLS 1825T. Contemporary Challenges to Democracy.

As a whole, the world is more democratic than at nearly any point in history. Yet the news is full of countries, including democracies, experiencing crises: migration, disinformation, insecurity, inequality, corruption. To what extent do current events pose a threat to democracy? In this class, students will learn what constitutes a democracy. After briefly reviewing how we came to this current period in world history, we will then spend the majority of the semester identifying and assessing various potential threats to contemporary democracy. Students will then apply these same analytical tools in their final papers, combining in-class readings with additional sources.

POLS 1825V. The Legislative Process.

As the first branch of the government, Congress is the heart of political power at the federal level. While Congress has become known for its partisan infighting and resulting gridlock, it is still the arena in which politicians and their networks fight to pass bills that will help their home districts and communities. Following POLS1100, this course is designed to take a closer look at political actors' incentives at various stages of the legislative process. Throughout this course, students will engage in several in-class simulations to research and debate student-written bills. Students will be able to use their experience in the simulation to research a bill in the current session of Congress and recommend solutions for how to overcome the bill's sticking points in the legislative process. Students will develop skills that are necessary to become effective participants on Capitol Hill.

POLS 1825W. Monuments, Citizenship, and Belonging.

Struggles over racist monuments—from defacement, to unsanctioned removal by protesters, to laws passed to "protect" statues—raise important questions about the political impact of commemoration. From the perspective of political theory, this course will analyze the civic work of monuments. Some of the key questions we will grapple with include: Do monuments matter? What civic function do they serve? When should they be removed? Thinking critically about monuments will allow students to consider how public memory is produced, whom it should represent, and what forms of commemoration are appropriate in diverse democratic societies.

POLS 1825X. Slavery and Freedom: Selections from African American Political Thought.

This course grapples with the problem of slavery and its connection to the political and psychological logic of white supremacy. Students will critically interrogate America's attempt to grapple with black pain and white guilt. The course will also explore and critically evaluate the various responses African Americans have offered in their quest to realize freedom. We will see that African American political thought is not exclusively a response to social and political domination, but also contains a rich philosophical vision of human fulfillment, self-governance, and the good life. NO PREREQUISITES REQUIRED.

POLS 1825Z. The University.

What is the purpose of the American university? If the university has a highest end, is it the pursuit of knowledge or social justice? To what degree are the goals of student learning and student activism compatible? (For example: how do the student attitudes required for one compare with the attitudes required for the other?). What is knowledge, and what are the institutional prerequisites for its pursuit? Is justice a form of knowledge? If so, should universities pursue it? We will examine such questions from a variety of perspectives—disciplinary, historical, and ideological. Instructor's permission required.

POLS 1826A. Space, Time and Society.

The way in which the temporality of social life is categorized and understood varies across epochs and groups. One means through which we temporally sequence the world around us is through the built-environment. Our lives are framed by the spatial distribution of individuals and activities, and the choices made in the production and ordering of space communicates ideals on power relations and social structures. Civic architecture in particular functions as a political instrument mobilized by the state in order to materialize and reproduce ideologies. The first section 'Time' develops an account of collective memory and political imagination, in order to consider constructions of temporality and how they mediate socio-political understandings. The second section 'Space' considers the relation between architecture, collective memory, and political imagination. Finally, 'State & Society' applies these analytic tools in the context of monuments, courthouses, and penitentiaries.

POLS 1826B. Political Economy of Development.

This course introduces the political economy of development. In 1776, the Scottish philosopher Adam Smith published "An Inquiry into the Nature and Causes of the Wealth of Nations." In this course, we will follow in the footsteps of Smith and, through readings and class discussions, strive to understand why some countries are rich while others remain poor. The answers are far from obvious. Through our joint exploration of selected research from economics, political science, and beyond, we will seek to understand why development varies across nations. Along the way, we will grapple with important questions, such as: What is the role of political institutions in economic development? What role does democracy play? Is present-day development a historical legacy? Are natural resources a blessing or a curse? Or, is foreign aid the solution to the problems of the developing world?

POLS 1826C. Participating American Publics.

In this seminar, we explore reasons that civic and political participation are important for democracy and self-determination as well as the multiple possible pathways - many of which are beyond the ballot box - for engaging in participation. We will also examine who participates, who's participation is impeded and why, as well as what social structures are, what barriers to participation exist, how such barriers can be understood as systematic, and what happens in democracies when people are denied the opportunity to participate or - for a variety of reasons - refuse to participate. This course is premised on the conviction that democracy requires an active citizenry but that the activity of people in communities does not have to be entirely limited or circumscribed by existing institutional arrangements and distributions of power but may also require organized efforts to alter those

POLS 1826D. Everyday Political Theory.

Everyday Political Theory will enable you to analyze and evaluate the stuff of everyday life: Your coffee shop, living situation, TikTok feed, and favorite subreddit. The job that you love (or hate). The congregation down the street. The library, co-op, and trail. There are all potential arenas for politics: shared meaning and action. You will acquire analytic skills to explore relationships between membership, cooperation, and value. Each topic in class will involve an 'us' (membership), some goal we want to achieve or problem to solve (value), and strategies for solving the problem (cooperation). While larger-scale problems matter, we will focus on areas of life you are likely to directly experience. You'll gain critical skills in seeing like a citizen: see the order of things, evaluate what is important, and chart a course for change.

POLS 1826E. Education and Citizenship in Modern and Contemporary Political Thought.

In recent years, there has been a renewed interest in civic education among political theorists, politicians, and educators, with most insisting that we need to devote more time and resources to preparing students for citizenship. Yet, there are significant disagreements over what students should learn and what end(s) this learning should serve. This course will examine perennial debates at the intersection of education and citizenship in modern and contemporary political thought. What knowledge, capacities, and dispositions are necessary for citizenship in liberal democracies? How should they be taught and by whom? What is the proper distribution of educational authority between parents, children, and the state? Should civic education promote "patriotism?" What are the effects of socio-economic inequality on civic education and citizenship? How do the philosophical, economic, and political views of various thinkers influence their approaches to education for citizenship?

POLS 1826F. Game Theory and Politics.

This course, intended for upper-division undergraduate students, offers an introduction to the tools of rational choice and game theory for analyzing politics. In addition to basic mathematical analysis of these models, we will develop a conceptual understanding of rationality and strategic behavior and apply these concepts to real-world political behavior and institutions. We will draw on examples from American politics, including electoral competition, Congress, and the bureaucracy. Although the course is primarily lecture based, participation in structured games and strategic interactions during class will allow students to apply the theoretical frameworks discussed in the course firsthand. We will conclude with a discussion of the strengths and limitations of rational choice and game theory to explain political behavior, especially through the lens of experimental studies.

POLS 1826G. The Politics of Socialism.

Is Socialism a political or fundamentally anti-political doctrine? Does it seek the realization of real democracy or the abolition of political life itself? Is it a theory of the organization of politics or of work? Does it require transforming work or abolishing it? What is the 'social' element in socialism anyhow? What is the relationship between socialism and communism? This course examines these and related themes through an examination of key historical and contemporary texts. We begin by laying out some of the historical development of socialist ideas from their origin around the moment of the French Revolution to their high point in the era of the Russian Revolution. Then we look at two sets of questions from contemporary authors: how should socialists think about the organization of work and what does socialism mean after the historic decline of Marxism.

POLS 1826I. Politics of Poverty in America.

This course will examine various measures of poverty, debates about the nature of poverty, perspectives on what causes poverty, the characteristics of poverty in America, how the federal government uses policy to fight poverty, particularly since the War on Poverty began in 1964. The course will discuss recent trends in American poverty, and focus on the political effects of poverty and anti-poverty policy in the United States. This course will examine the relationships between poverty & civic participation, poverty & public opinion, poverty & race, poverty & health, and poverty & education.

POLS 1826J. The History of Liberalism.

Liberalism, we often hear today, is in crisis. Yet, do we know what 'liberalism' is? In this course, we will study liberalism's origins, development and legacy. Students will encounter a series of well-known and less well-known figures such as Montesquieu, Benjamin Constant, Tocqueville, Mill, Hayek and Raymond Aron. Four questions will guide our thinking: (1) are there different ways of justifying individual liberty? (2) What are the institutional conditions under which liberty can be preserved? (3) Is liberalism 'democratic'? (4) Do liberals require a certain type of morality from citizens?

POLS 1910. Senior Honors Thesis Preparation.

Concentrators who have given evidence of superior work in political science may be admitted to honors seminar on the basis of an application submitted in the spring of their junior year. Application and guidelines may be obtained on the Department of Political Science website. Prerequisite: Fulfillment of Methods requirement. Enrollment limited to 20 senior Political Science concentrators. Instructor permission required.

POLS 1920. Senior Honors Thesis Preparation.

This course is a continuation of POLS 1910. Political Science Honors students who are completing their theses should enroll. Prerequisite: POLS 1910. Instructor permission required.

POLS 1924C. Political Communication (PLCY 1702F).

Interested students must register for PLCY 1702F.

POLS 1970. Individual Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POLS 1971. Individual Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POLS 2000. Strategies of Inquiry and Research Design.

Introduction to research methods common in political science research. Topics include theory development, problems of explanation and causation, problem identification, research design, and other fundamentals of empirical research. FIRST YEAR POLITICAL SCIENCE GRADUATE STUDENTS ONLY. Enrollment limited to 14.

POLS 2010. Politics of Futurity.

In this course, we explore approaches to political theory and practice that go beyond what Iris Young calls "the distributive paradigm" of both liberalism and 20th century socialisms and seek to understand what a 21st century paradigm that centers the politics of care might include. We will discuss how political horizons are constructed in popular discourse and political action; the structural relations of race, coloniality, and indigeneity and what it would take to change those relations; abolition democracy; the politics of gender; disability justice; and the political economy of degrowth. The purpose of the course is to explore ideas that might shape the politics of the 21st century (and beyond) as well as the political consequences and possibilities implied by their pursuit.

POLS 2015. Political Behavior.

This seminar is designed for Political Science PhD students. It will serve as an introduction to the vast literature surrounding public opinion and mass political behavior. The topics that we will cover in the class include public opinion, vote choice, political participation, and elite political behavior, among other things. The assigned readings for this class include literature from both the American politics and Comparative politics subfields.

POLS 2020. American Political Development.

No description available.

POLS 2025. American Social Policy in Comparative Perspective.

This course provides a graduate-level survey of the politics that shape social and redistributive policies in the United States. We will consider what is distinctive about American social policy compared with social protection in other advanced economies. Will begin with different approaches to understanding variation in welfare states. Will examine distinctive features of American policy including reliance on tax benefits, federalism, racial politics, politics of gender, strategies of privatization, and housing in economic security. We conclude by considering factors that will shape the future of social policy including the politics of retrenchment, social investment, and racial and ethnic diversity.

POLS 2030. Seminar in the History of Modern Political Thought.

An advanced seminar in the history of modern political thought from Machiavelli to Foucault. Themes include the nature of political sovereignty and the basis of civil authority; the emergence of liberal constitutionalism; democratic, socialist and aristocratic critiques of liberalism; the meaning of freedom; the relation between liberty and equality; and the ideas of social progress and individual development. Graduate students only; qualified undergraduates with instructor's permission.

POLS 2040. Institutions, Crime, and Violence.

Will examine relationships and interactions among institutions, criminal actors, and violence. State-based institutions play an important role in explaining the level of disorganized or organized crime. Organized crime groups, in turn, influence both state-based institutions (for example, through corrupting officials) and other criminal activity, often by creating the "rules of the game" by which other criminals can act. Finally, both state-based and criminal actors and institutions influence the level of violence in society. Each of these three influences, and is influenced by, the others. This course offers the opportunity to better understand how these three factors relate to each other.

POLS 2045. American Public Policy.

This graduate seminar surveys the literature on the politics of public policy. While the primary focus is the contemporary US policy state, the course also examines American policymaking in cross-national perspective. Policymaking is a complex process in which outcomes are shaped by the interplay of interests, ideas, and institutions. To understand these outcomes, the course draws on theories of policymaking, public administration, public law, and institutionalism as frameworks of analysis. Substantive topics include the US welfare state, legislative politics, federalism, the influence of racial politics in policymaking, policy feedback, the consequences of partisan polarization for governance, and government as a problem-solving institution.

POLS 2050. Preparing the Prospectus I.

This course covers selected topics in research design and methodology and is designed to help students enrolled in the Political Science PhD program to write and defend a prospectus in their third year of study.

POLS 2051. Preparing the Prospectus II.

This course covers selected topics in research design and methodology and is designed to help students enrolled in the Political Science PhD program to write and defend a prospectus in their third year of study. Prerequisite: POLS 2050.

POLS 2052. Becoming a Political Scientist: Professionalization and Strategies for Thriving.

This full-year course (half-credit each semester) is designed for 3rd year PhD students in Political Science and covers a range of topics that are crucial to students as they transition from the course phase to the research phase of their careers. Topics include practical and substantive issues related to planning and carrying out research, collaborating with others, teaching, ethics, obtaining external funding, and providing feedback to other scholars. Course only open to Political Science PhD students.

POLS 2053. Becoming a Political Scientist: Professionalization and Strategies for Thriving.

This full-year course (half-credit each semester) is designed for 3rd year PhD students in Political Science and covers a range of topics that are crucial to students as they transition from the course phase to the research phase of their careers. Topics include practical and substantive issues related to planning and carrying out research, collaborating with others, teaching, ethics, obtaining external funding, and providing feedback to other scholars. Course only open to Political Science PhD students.

POLS 2060. International Relations and History.

This graduate seminar considers history both as a topic and as a method of international relations scholarship, and in other subfields of political science as well. We will read and discuss works that fall at the intersection of history and international relations, on topics including the sources of interstate conflict, the origins of the nation-state, and colonialism and postcolonialism. Open to Political Science Graduate students only.

POLS 2070. U.S. Public Opinion.

This class provides an introduction to the major theoretical approaches and applied research in the study of U.S. public opinion. We examine opinions on a variety of topics. Enrollment limited to 14 Political Science graduate students.

POLS 2075. Social Groups in U.S. Politics.

This class provides an introduction to the major theoretical approaches and applied research in the study of the role of social groups in U.S. politics. This course surveys a number of social groups, including ethnics, non-ethnic women, and other social groups, including the poor. This course will identify the theoretical perspectives that structure the research on social groups in U.S. politics. What are the strengths and weaknesses of the methodological approaches used? Also, how could research in this area be improved? What are the major implications of the findings for public policy, policymakers, and democratic theory?

POLS 2080. Market Democracy.

Social democracy was the progressive political program of the 20th Century. Social democracy treats economic liberty as morally less important than civil or political liberty. Social democracy is often contrasted with libertarianism, a political system that treats the economic liberties of citizens as moral absolutes. Between social democracy and libertarianism there is conceptual space for a third view: market democracy. Market democracy treats economic liberty as on a par with civil and political liberty. This course examines the moral foundations of social democracy, libertarianism, and market democracy. Could market democracy be a progressive political program for the 21st Century? Graduate students only; qualified undergraduates with instructor's permission.

POLS 2090D. Models of Excellence in Comparative Research: Classic Works and the Scholars Who Produced Them.

Explores major works that span the range of theoretical approaches and intellectual styles in modern comparative research. Includes in-depth interviews with leading scholars where they reflect on their intellectual formation, their works and ideas, the nuts and bolts of the research process, and the evolution of the field. Enrollment limited to 14. Graduate students only; qualified undergraduates with instructor permission.

POLS 2090G. Readings in American Institutions.

This course is designed as a readings and research course for graduate students and advance undergraduate students. Students will be required to read and analyze the latest work political science in the subfields of American politics, including but not limited to: public opinion, voting behavior, presidency, racial politics and representation, legislative institutions, political economy, and bicameralism. Open to graduate students only.

POLS 2090H. Readings in Comparative Politics.

A research and readings course on political behavior -from voting to violence, which applies rational choice theory, the Michigan model, the social logic of politics, and other theoretical perspectives.

POLS 2090I. American and Comparative Political Behavior.

This course is designed for graduate students to explore the core theoretical concepts and empirical research in the fields of political behavior and political participation in the American and Comparative context.

POLS 2100. Proseminar in American Politics.

Introduction to broad issues in American politics. Topics include the interplay of political institutions in the American setting, public opinion formation, the process of policy-making, and voting behavior. Enrollment limited to 14. Graduate students only; qualified undergraduates with instructor permission.

POLS 2110. Proseminar in Comparative Politics.

Provides a survey of major approaches, issues, and debates in the field of comparative politics. Topics: state formation, revolutions and civil wars, ethnic conflict and nationalism, state-market relations; systems of representation, hegemony and domination, etc. Works of theoretical importance on each topic, focusing on authors' arguments and controversies within the literature. Open to graduate students only.

POLS 2111. Comparative Politics Grad Research Workshop.

The Comparative Politics Research Workshop will be a new core element of the doctoral program in the Political Science department aimed at helping students transition effectively from the coursework phase of the PhD to doing their own independent scholarship and presenting it in a public forum. The course will be required for all Political Science PhD students working in the area of comparative politics, will also be an available resource for doctoral students in other social science departments who are conducting research on topics relating to the politics, political economy, and society of countries around the globe.

POLS 2112. Comparative Politics Grad Research Workshop.

This course is a continuation of POLS 2111.

POLS 2120. Proseminar in Political Theory.

An overview of central debates in political theory today. Readings include contemporary writings on justice, liberalism, democratic theory, critical theory, feminism, power, multiculturalism, and citizenship and political economy. Enrollment limited to 14 graduate students in Political Science; advanced undergraduates may enroll with permission of the instructor.

POLS 2121. Writing and Methods in Political Theory I.

The study of politics requires historical and analytic, interpretive and normative, critical and genealogical, humanist and post-humanist methods. We will first look at reading and discussing assigned methodological material on language, interpretation, causality, history, gender, and genre, all relevant to the various approaches to political thought. Second will be the circulation, presentation and critique of graduate student papers. Each participant will be expected to present a pre-circulated, article length paper, and respond to a designated discussant, as well as field questions from seminar participants. The aim is to help students learn how to prepare their work for publication.

POLS 2122. Writing and Methods in Political Theory II.

The study of politics requires historical and analytic, interpretive and normative, critical and genealogical, humanist and post-humanist methods. We will first look at reading and discussing assigned methodological material on language, interpretation, causality, history, gender, and genre, all relevant to the various approaches to political thought. Second will be the circulation, presentation and critique of graduate student papers. Each participant will be expected to present a pre-circulated, article length paper, and respond to a designated discussant, as well as field questions from seminar participants. The aim is to help students learn how to prepare their work for publication.

POLS 2130. Proseminar in International Relations.

Surveys the main theoretical trajectories and intellectual disagreements that define International Relations as a discipline today. Positions examined include varieties of rationalism and constructivism; realism-liberalism-sociological approaches; and systemic and subsystemic theories. Also considers debates about the contours of contemporary world politics, America and the world, moral issues, and the links between theory and policy. Enrollment limited to 14. Not open to undergraduates.

POLS 2131. Politics of Gender.

Topics include gender and personal identity; the impact of gender on moral reasoning and political agency; feminism in relation to liberalism and radical democracy, feminism and the law; the gendering of political institutions and interstate relations; and the implications of multiculturalism for feminist politics. Open to qualified undergraduates with permission of the instructor.

POLS 2135. International Order.

This course investigates the roots of international conflict and security, with a special emphasis on political economy factors. As a field, international relations has gradually separated into two fairly distinct sub-fields, international political economy and international security. This course seeks to bridge the two. Special attention will be paid to understanding macro-historical shifts, such as the end of empire and the emergence of the Long Peace after World War II.

POLS 2140. Contemporary Security Issues.

This graduate seminar explores the transformed security landscape of the 21st century. We will cover prominent contemporary security issues and debates in the field of international relations, including internal war and international intervention, American primacy and the rise of China, the privatization of security, nuclear proliferation, cross-border crime and border security, and terrorism and counterterrorism in the aftermath of 9/11. Enrollment limited to 14. Graduate students only; qualified undergraduates with instructor permission.

POLS 2145. Transnational Governance in the Global Economy.

Will examine an array of transnational governance schemes which seek to address social and environmental problems in a globalized world. Whether it is global warming, deforestation in the Amazon, inhumane working conditions in Asian factories of global supply chains, limited access to medicine, or child poverty – the elaboration of cross-border institutions that potentially can help to resolve these problems is likely to require the involvement of variety of actors with different types of information and knowledge from geographically and socially distant parts of the world.

POLS 2150. Democratic Theory, Justice, and the Law.

This course will examine contemporary and historical work in the area of democratic political and legal theory. Topics include the relationship between democracy and individual rights, deliberative vs. aggregative conceptions of democracy, the substance/procedure controversy, and the role of judicial review in a democracy. Open to graduate students only.

POLS 2155. The Political Economy of Labor and Development: The Future of Work.

This seminar explores the relationship between work and technological change. New technologies have enabled machines to perform predictable (and in some cases unpredictable) tasks with increasing skill. The widely discussed improvements of “machine intelligence” have the potential to reshape labor markets across the world. Reactions among scholars, policymakers, and the public have varied from optimism about the social and economic benefits of these innovations to fears about the joblessness and inequality that might result. How can we understand the impact of new technological developments on the labor market, the experience of working, and the identity of workers?

POLS 2160. International Political Economy.

Graduate seminar that surveys the subfield of international political economy. Outlines the historical development of the subfield as it moved from questions of US decline to issues of international cooperation and compliance and back to issues of US decline. Places the US research agenda in comparison with schools of IPE in the rest of the world. Topics covered include globalization and distribution, development, IGOs and NGOs in the IPE, Public and Private Authority, the rise and fall of nations. Open to POLS PhD graduate students only.

POLS 2165. Territorial Conflict.

This graduate seminar examines the relationship between territory and conflict. Territorial claims have been central to numerous violent and intractable disputes, both between states and within them. Why, how, and when does territory become the subject of violent conflict? Topics covered in this seminar include the origins of territoriality, historical and contemporary territorial disputes, and theoretical explanations for these conflicts. Graduate students only.

POLS 2170. Market-Liberalism: Origins, Principles and Contemporary Applications.

This course explores the relationship between economic freedom and social justice. The economic liberties of capitalism have often been said to be in tension with the moral ideal of distributive justice. What are the economic liberties of capitalism and what moral value, if any, do they have? What does a commitment to social justice require? Why are libertarians traditionally skeptical of social justice as a moral ideal? How do liberal conceptions of social justice compare to socialist ones? Can capitalists care about social justice? Should they? Enrollment limited to 14. Open to graduate students concentrating in Political Science.

POLS 2175. Ideas, Institutions and Politics.

A Graduate level survey of the literatures on institutions and ideas in political science, and on occasion, in related fields. These literatures are often seen as rival bodies of literature. These literatures are in fact compliments, with much empirical work combining both approaches in a productive manner. The point engaging the literature in this way is to question the presumption that interests should remain the most popular conceptual tool for political science explanation. This is a puzzle when one considers that interests are always formed within, and are causally affected by, both institutional environments and the ideas that they enshrine.

POLS 2180. Business-State Relations in the Advanced Industrial Countries.

This seminar provides an introduction to debates in comparative political economy, focusing on the creation, evolution and reform of market institutions. Readings emphasize the affluent democracies, it covers debates that have direct implications for other regions, which be explored by interested students through related readings. We begin by surveying the classic works in political economy, including those of Smith, Marx, Polanyi, and Gerschenkron. We then examine the central historical challenges precipitated by economic growth over the last two centuries. Topics include the Great Depression, postwar reconstruction, inflation, corporate governance, social protection, economic development, post-socialist transformation, and the globalization of competition.

POLS 2185. Political Theory of the American Constitution.

This course will examine major constitutional controversies within the context of wider debates in political and legal theory. Readings will come from Supreme Court cases and prominent texts in political/legal theory. Topics will include free speech, privacy, abortion, and capital punishment. Our aim is two fold. We want to understand the basic framework and content of the United States constitution as it has been elaborated by the Supreme Court. But we also want to go beyond this legal understanding and to challenge existing jurisprudence. To this end we draw on classic and contemporary texts in political theory.

POLS 2190. Contemporary Democratic Theory.

This course is concerned with tracing debates and concepts in contemporary democratic theory. The 21st century has seen resurgent authoritarianism and democratic backsliding in both so-called “advanced” liberal western nation-states and more fragile democracies, as well as vibrant democratic insurgencies grounded in popular uprisings and social movements animated by economic inequality, denial of political freedom, climate change, racial justice, etc., that nevertheless appear unable to overcome sclerotic institutions and dislodge current distributions of political power. Is democracy dying? Or has democratic politics always been bound up with inequality despite its aspirations to egalitarianism? This course will focus on the work of twentieth and twenty-first century democratic thinkers, paying particular attention to the perspectives elaborated by democracy’s ‘others’: black thinkers in the U.S., feminist theorists, queer theorists, etc.

POLS 2195. The Politics of Love and Friendship.

What is the relationship between love, friendship, and politics? To what extent do the desires for care, affection, and companionship make themselves felt in political life? To what extent does politics require channeling or repressing them? This course examines prominent thinkers in the history of political thought who have dealt with these questions. By considering their compelling and contrasting perspectives on relationship between politics and the various forms of affection, love, and longing that are present in political communities, the course aims to equip students to think carefully about the proper place of love and friendship in politics today.

POLS 2200. Fundamentals of Security Studies.

This seminar surveys foundational and cutting edge research in the security studies subfield. The course largely takes a traditional view of the subfield in that it (1) focuses on the threat or use of military force, and (2) examines interstate rather than intra-state dynamics. The first four weeks of the course are devoted to reading and discussing several "great books" in the subfield, while the remainder of the course will expose students to a large number of classic and contemporary studies on various subtopics within security studies. Enrollment is limited to graduate students.

POLS 2210. Governing Federal Systems.

Federated systems of government present opportunities and challenges for democratic accountability, managing collective action problems, economic stability, and distribution of goods and services. Course will take up the theory and practice of governing federated systems using a comparative approach that examines federated systems in several countries including the United States, Canada, Germany, Brazil, and India. Questions this course will examine include: What helps explain the emergence, persistence, and erosion of federalism? What are the implications of federalism for democratic accountability? What are the implications of federalism for fiscal stability? What are the implications of federalism for political, social, and economic inequality?

POLS 2220. Urban Politics.

Covers a number of topics linked to urban politics and urban public policy. Topics include the politics of urban education, affordable housing, downtown development. Examines how state and federal policy actions have contributed to the nature of the urban condition; and how race, class and ethnicity are interwoven with urban politics and urban public policy. Enrollment limited to 14. Graduate Students only; all others by permission only.

POLS 2230. Political Loss.

This course will explore the concept of political loss as it has been sketched by political theorists. Questions of grief and grievance have been at the center of contemporary political debates in the U.S. and elsewhere, even as political theorists have begun to pay increasing attention to the relation between affect and politics more generally, and to the role of mourning and loss in political life specifically. While the course explores the concept of loss generally, it is particularly concerned with the central role narratives of loss have played in debates about racial justice.

POLS 2235. Disobedience and Resistance.

Should we to obey the laws that states make? Unsurprisingly, there are numerous counter-theories, practices of disobedience: revolution, mass strikes, sabotage, civil disobedience and conscientious objection. Other kinds of resistance – like mass protests, political strikes, and boycotts – hover on the border of disobedience itself. This course begins with a brief examination of theories of political obligation before moving to a discussion of different, concrete examples of disobedience and the political ideas that they produced. We will discuss revolution, mass strikes, and civil disobedience as paradigm cases of the political problems raised by actually existing, illegitimate laws and governments.

POLS 2245. The International Political Economy of Global Finance.

This class gives graduate students a thorough grounding in the Architecture and Plumbing of Global finance. The Architecture is the foundations of money and the institutions and policies that manage it. This includes the production of money, Central Bank and Treasury basics, Bond Markets, Balance of Payments, Public and Private Markets and currency hierarchies. The second half of the course deals with the plumbing, which is how politics influences money in the real world. This includes issues of financial governance, financial sanctions, inflation and the offshore financial system. Although finance is now more prominent in IPE research it remains at the frontier of research topics in mainstream IPE. As such, it is an excellent area to conduct research since it remains, to steal a line from one of the field's pioneers, Susan Strange, an 'open range' of inquiry.

POLS 2250. Extreme Politics: How Radicals Affect Political Change.

Scholarship has increasingly focused on why radical groups emerge. Yet, there is little research to date on how and whether these groups actually have a socio-political impact. This course will examine the mechanisms whereby and the conditions under which political extremists affect political and/or social change across time and space. We will base our analysis on several historical case studies that deliberately vary radical groups according to important characteristics such as: the degree of their prominence in social and political discourse; the extent of their lifespan in a particular country; and whether their tactics include the use of violence. Graduate students only; qualified undergraduates with instructor's permission.

POLS 2255. States, Societies and Development.

This graduate seminar draws on classic and contemporary writings towards understanding how states and societies interact with each other in particular in the realm of development

POLS 2260. Comparative Politics and China.

Will explore the main theoretical, empirical, and methodological approaches to the study of contemporary Chinese politics. Will relate these approaches to broader analytical issues in the field of comparative politics. What phenomena are generally studied in Chinese politics, and how are they studied? How are arguments made, and how could they be made more effectively? What is not studied that should be? How should regionally-focused empirical research be structured? What are the most effective ways to integrate area studies, broader comparative approaches, and theory? Course will prepare graduate students for dissertation research on China specifically and comparative politics more generally.

POLS 2265. International Security.

This graduate seminar examines contemporary scholarship on international conflict. The course seeks to familiarize students with salient theoretical perspectives and debates, with an eye toward assisting students in conducting original research. Course topics include rationalist and psychological frameworks, domestic institutions, leaders and advisers, international institutions, norms and culture, technology, diplomacy, and power transitions. Course readings include a range of qualitative, quantitative, and experimental methods.

POLS 2266. Authoritarian Politics.

This graduate seminar examines contemporary scholarship on authoritarian politics. The course seeks to familiarize students with salient theoretical perspectives and debates, with an eye toward assisting students in conducting original research. Course topics include elite politics, coups and leadership challenges, revolutions, power sharing institutions, repression, propaganda, and censorship. Course readings focus on recently published book manuscripts, which include a range of qualitative, quantitative, and experimental methods. Many of the readings center on authoritarian regimes in Asia, particularly modern China.

POLS 2270. Political Economy of Industrial Development.

Will explore the mechanisms by which assets, institutions, and governance interact to shape patterns of industrial development across the world. The seminar has four main objectives: 1) to review competing schools of thought on why some countries have attained the cutting edge of industrial development and upgrading while others have not, 2) to examine the relationship between evolving structures of industrial production and evolving conditions of politics in particular national settings, 3) to consider how conditions of globalization affect the developmental challenge for industrializing nations, and 4) to consider how new concerns surrounding environmental sustainability affect the process of industrialization.

POLS 2280. Ecology and Political Theory.

Explores the field's most important recent contributions to the study of political theory and the environment with a focus on several core questions: (1) What are the political challenges that current environmental issues generate today, and what challenges can we expect in the near future? (2) What obligations do we have to the natural world, including non-human animals and the inanimate environment? What are our obligations to other human beings and to ourselves in relation to environmental matters? (3) What political principles, institutions, and practices might best enable us to meet these obligations? Readings reflect diverse perspectives and methodological approaches.

POLS 2285. Language and Politics.

Will study Wittgenstein's text in the philosophy of language, Philosophical Investigations, connecting to contemporary work on the phenomenology of voice, race, gender, and gesture by Elaine Scarry, Robert Gooding-Williams, Adriana Cavarero, Judith Butler, Jose Munoz. Approach Wittgenstein in context, reading other classics in the philosophy of language: Locke's Essay on Human Understanding, Merleau-Ponty's *The World of Perception*, J.L. Austin's *How To Do Things With Words*, Jacques Derrida's "Signature Event Context," and Stanley Cavell's *Must We Mean What We Say?* We ask: what does it mean to be a linguistic creature? Is language a cut that agentifies, a rupture that alienates, a practice that humanizes, an ideological fortress that concretizes relations of inequality, or a game? Will include films: Guy and Madeline on a Park Bench (Chazelle), Sorry to Bother You (Riley), and *Dancer in the Dark* (von Trier).

POLS 2290. Particularism in Latin America and Comparative Perspective.

This course will characterize, examine, and explain the use of particularistic practices in today's democracies in Latin America and in comparative perspective. Among these practices, we pay most attention to the phenomenon known as clientelism. Graduate students only; qualified undergraduates with instructor's permission.

POLS 2300. Latin American Political Thought.

Latin American political thinkers, who have been tremendously influential in their own region, remain marginal to the canon of Western political thought. This course is an overview of the various traditions in the history of Latin American political thought. It examines the answers Latin American thinkers have given to some of the fundamental preoccupations of political theory from the perspective of the region's social and political realities. The course will introduce students to figures in Latin American political thought—such as Bartolomé de las Casas, Simón Bolívar, Domingo F. Sarmiento, José Martí, José Vasconcelos, José Carlos Mariátegui, and contemporary Latino political theorists.

POLS 2315. Nuclear Proliferation and International Security.

This graduate seminar examines classic and contemporary scholarship on nuclear strategy and proliferation. The course will familiarize students with salient theoretical perspectives and arguments, with an eye toward conducting original research and contributing to contemporary debates. Course topics include the spread of nuclear weapons technology, the evolution of nuclear strategy, the role nuclear weapons play in international politics, the risks posed by nuclear arsenals, and the policies and strategies in place to mitigate those risks. Course readings include a range of qualitative, quantitative, and experimental methods; as well debates over the best scholarly methods to answer nuclear questions.

POLS 2320. Ethnic Conflict.

What is ethnicity? What does it share with nationalism and in what respects is it different? Why do ethnic groups fight violently and kill wantonly, especially after living peacefully for a long time? Under what conditions do they manage their relations peacefully? Do people participate in ethnic insurgencies because of greed or grievance? Will ethnic groups disappear as modernity proceeds further? These questions will guide our intellectual journey over the semester. Graduate students only; qualified undergraduates with instructor's permission. Enrollment limited to 14.

POLS 2330. Politics in India.

This seminar will present Indian politics in a comparative and theoretical framework. It will focus on four themes: British India and Indian Nationalism; India's democratic experience; politics of ethnic and religious diversity; and political economy, concentrating especially on India's economic rise. Readings include the classics of the subfield of Indian politics and political economy, but also quite a lot of recent scholarship. Enrollment limited to 14 graduate students.

POLS 2340. Political Philosophy of W. E. B. Du Bois.

Through close readings of Du Bois's texts, we will explore the relationship between his political philosophy and his conceptualization of race at different stages of his intellectual and activist career as well as his understanding of democratic politics, the place of the black masses therein, and the status of women. We will also pay attention to Du Bois's retrospective self-criticisms, to his reliance on fictional and other artistic genres of writing to advance philosophical claims. Drawing on reflections by Du Bois and Locke, we will reflect on how to think about art as a site of moral and political transformation in matters of race.

POLS 2345. Eco-Democracy.

In this course we explore the field's most important recent contributions to the study of political theory and the environment. We investigate the basis and scope of our obligations to the natural world; our obligations to one another with respect to the exploitation, degradation, and preservation of the natural environment; and our obligations to ourselves as individuals with respect to the natural environment. We then consider what political principles, institutions, and practices might best enable us to meet these obligations. Readings include Jane Bennett, Melissa Lane, John Dryzek, Cass Sunstein, Martha Nussbaum, Wendell Berry, Peter Singer, and others.

POLS 2350. Freedom.

Examines the meaning of freedom together with the self-understandings, social practices, and political institutions that underlie and constitute it. Considers literature on freedom from the contemporary liberal, republican, and democratic traditions, including Berlin, Pettit, Arendt, Butler, and others. Open to graduate students only.

POLS 2354. Hannah Arendt's Eichmann in Jerusalem: Theater, Complicity, Evil, Refusal.

Seminar on Hannah Arendt's "Jewish Writings," Rahel Varnhagen, "We Refugees," "The Jew as Pariah," Origins of Totalitarianism, Vol 1: Anti-Semitism, Eichmann in Jerusalem (3 weeks on this text). Themes: theatricality, complicity, genre, evil, state violence, and the politics of refusal. Other texts: Lindsey Stonebridge (We are free to change the world: Hannah Arendt's Lessons in Love and Disobedience), Lori Marso (Politics with Beauvoir, on two trials reported on by Beauvoir and Arendt), Noga Rotem ("World-Craving: Rahel Varnhagen, Daniel Paul Schreber, and the Strange Promise of Paranoia," 2020), Timothy Snyder (On Tyranny: Twenty Lessons from the Twentieth Century, 2017), Deborah Nelson (Tough Enough: Arbus, Arendt, Didion, McCarthy, Sontag, Weil, 2017), Judith Butler ("Hannah Arendt's Death Sentences"), Joe Litvak (The Un-Americans: Jews, the Blacklist, and Stoolpigeon Culture), Judith Shklar, Ordinary Vices, Aeschylus' Eumenides, Butler lecture on Aeschylus, and Shakespeare's Othello.

POLS 2355. Tragedies of Remarriage: Stanley Cavell's Film Philosophy in Focus.

Will use Stanley Cavell's film philosophy and his invention of a new genre – “comedies of remarriage” – as occasions to think deeply about the raced, gendered and imperial politics of marriage, specifically in connection with an iteration of Cavell's new genre: tragedies of remarriage. We will follow Cavell to look into the film/politics of citizenship through themes of marriage and seriality, asking how race, gender, sexuality, seriality and automation conspire together to build a citizenship that is both nationalist (nation-centered) and exclusionary (re-centered by masculinity and race). Will ask if remarriage, whether comic or tragic, figures amendment and ask: what are the politics of the pun between Constitutional amendment and the moral/political practice of making amends? How might the temporalities of seriality and/or freedom presuppose sequence/interruption and rely on - or contest -- political practices of reparation and forgiveness?

POLS 2360. Proseminar in Political Theory II.

Examines the political thought of Plato and Aristotle together with three modern thinkers whose work was especially influenced (or animated) by engagement with these ancient views of politics: Machiavelli, Rousseau, and Nietzsche. In exploring these moderns in particular, we also get a view of early modern, high modern, and postmodern receptions of the ancients. Enrollment limited to 14. Open to graduate students.

POLS 2365. The Social and Political Thought of Karl Marx.

A careful reading of Karl Marx's work, with special emphasis on Marx as a philosopher of freedom and on his relevance today. The core of the class gives substantial attention to Capital, Marx's unfinished magnum opus, but will also look at earlier works to understand what Marx understood by a 'critique of political economy.'

POLS 2370. Political Philosophy and Economic Theory.

Political philosophy relates to economic theory in two ways. It takes primary texts of economic theory and draws out their philosophical, ethical, and political implications. It also begins from normative theory, like theories of justice, and brings these independently developed principles to bear on economic concerns. This class takes both approaches. The first half will attempt read foundational economic thinkers (e.g. Jevons, Keynes, Schumpeter, Hayek, Polanyi) as political philosophers. The second half will take an external approach, looking at how competing libertarian, socialist, post-socialist, classical liberal and high liberal traditions (e.g. Smith, Friedman, Rawls, Cohen, Tomasi) think about economic freedom. Enrollment limited to 14.

POLS 2390. Black Political Thought.

Black thinkers have made important yet often unrecognized contributions to political theory and philosophy. This course examines the history of black political thought, focusing on the answers black thinkers have formulated to key questions in political theory, such as: What is justice? What is freedom? What are the conditions of possibility for democracy? How should we theorize race? What is racial justice? More than other intellectual traditions, black political thought has been centrally concerned with racism and inequality, but also black refusal and black life. We will pay special attention to the distinctive concepts and modes of theorizing developed by black thinkers, particularly how they conceive the relationship between race, class, gender, sexuality, etc. Rather than providing an overview of black political thought in all times and places, the course will focus on close readings of a few key thinkers.

POLS 2400. Qualitative and Mixed Methods Research.

This graduate seminar offers an introduction to the design and implementation of social science research that deploys qualitative data and analysis in conjunction with other methods of inquiry. We explore the set of tools that is conventionally considered to comprise qualitative methods, including case studies, small-N comparisons, process tracing, sequential analysis, interviews and participant observation. Starting from the premise that each research method has its strengths and weaknesses, we also consider how qualitative methods can be combined productively with other methods of inquiry, including “large-N” quantitative analysis, experiments, spatial/geographic analysis, and multilevel analysis spanning different scales.

POLS 2450. Exchange Scholar Program.**POLS 2580. Quantitative Research Methods I.**

This course introduces students to statistical theory and quantitative methods commonly used in political science and public policy. The course focuses on statistical inference using multiple techniques of regression analysis and gives students opportunities to become proficient users of the statistical software package R as they develop statistical models and analyze their data. Enrollment limited to 14. Open to graduate students in Political Science only.

POLS 2581. Quantitative Research Workshop I.

This 0.5 credit course covers selected topics in research design and applied statistics and is designed to offer students a workshop in which to develop and present quantitative, empirical projects. The two semester sequence course will provide an overview of current best practices for the design, implementation, analysis, and presentation of empirical research with a particular emphasis on ways to enhance the transparency, reproducibility, and credibility of such work.

POLS 2582. Quantitative Research Workshop II.

This 0.5 credit course covers selected topics in research design and applied statistics and is designed to offer students a workshop in which to develop and present quantitative, empirical projects. The two semester sequence course will provide an overview of current best practices for the design, implementation, analysis, and presentation of empirical research with a particular emphasis on ways to enhance the transparency, reproducibility, and credibility of such work.

POLS 2590. Quantitative Research Methods II.

An intermediate statistics course for graduate students. Topics include multiple regression, statistical inference, categorical dependent variable models, instrumental variable models, and an introduction to time series. Course readings and applications examine models used in different fields of political science and public policy including American institutions, comparative politics, and international relations. Open to graduate students concentrating in Political Science or Public Policy.

POLS 2600. Survey Research.

Public opinion is an essential element in politics. Understanding how and what mass publics think is critical for assessing the capacity of mass electorates to participate politically and how well political institutions represent mass interests. To understand public opinion we rely on the sample survey which allows us to make inferences about populations from representative subsets. But how should we design survey questionnaires, identify and properly construct survey samples, and analyze these data? This course addresses these topics and more.

POLS 2605. Quantitative Research Methods III.

Advanced Quantitative Research Methods is the third course in the methods sequence for graduate students in political science and an intermediate-level course in statistics and applied econometrics for graduate students in political science and public policy. Topics will include causal inference, difference-in-differences designs, instrumental variable approaches, regression discontinuity designs and hierarchical models. The course will be applied, focused on grasping the use of these methods in practice and facing practical data limitation challenges. Special focus will be given to understanding the most recent advances in the literature on each of the strategies studied. I expect that most of you have already taken POLS2580 and POLS2590, and that all of you are familiar with core statistical and econometric concepts. Our sessions will be divided between lectures, group work and data analysis in Stata and/or R.

POLS 2610. Quantitative Research Methods IV.

Quantitative Research Methods IV (Social Science Experiments and Replication) is an advanced seminar for graduate students in political science focusing on how research in the social sciences can be improved through experimentation and replication. The course is comprised of two key components: The first incorporates lectures that cover various topics in experimental design and analysis as well as critique and discussion of recent cutting-edge experimental or quasi-experimental scholarship across subfields of political science and adjacent disciplines. The second component will focus on the replication of work-in-progress by visiting non-Brown faculty members, where a team of graduate students will reanalyze the data and propose further robustness tests and extensions. This is an opportunity for graduate students to engage with scholars from leading departments, take a deep dive into work-in-progress, and pick up new tools and best practices for research.

POLS 2970. Preliminary Examination Preparation.

An independent study directed by a tenure-line faculty member of the Department of Political Science. Only second-year graduate students may register for the course; it is intended to provide a framework to help prepare for preliminary examinations.

POLS 2971. Preliminary Examination Preparation.

An independent study directed by a tenure-line faculty member of the Department of Political Science. It is intended to provide a framework to help prepare for preliminary examinations. This course is open to second and third year graduate students only.

POLS 2975. Research Design.

This course introduces students to statistical theory and quantitative methods commonly used in political science and public policy. The course focuses on statistical inference using multiple techniques of regression analysis and gives students opportunities to become proficient users of the statistical software package R as they develop statistical models and analyze their data. Enrollment limited to 14. Open to graduate students in Political Science only.

POLS 2976. Field Survey and Research Design.

An independent study directed by a tenure-line faculty member of the Department of Political Science. Only third-year graduate students may register for the course; it is intended to provide a framework for producing a formal research design modeled on the dissertation prospectus.

POLS 2980. Individual Reading and Research.

An independent study course directed by a tenure-line faculty member in the Department of Political Science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POLS 2981. Individual Reading and Research.

An independent study course directed by a tenure-line faculty member in the Department of Political Science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POLS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

POLS 2991. Thesis Research and Preparation.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Population Studies and Training Center

The Population Studies and Training Center (PSTC) is a multidisciplinary unit organized to promote and support innovative research on the causes and consequences of population size, composition, distribution, and well-being in the U.S. and globally. Its more than seventy faculty associates are primarily from the Departments of Sociology, Economics, and Anthropology, while others are affiliated with the School of Public Health, the Department of Education, the Department of History, Institute at Brown for Environment and Society, the Department of American Studies, the Watson Institute for International Studies, and the Spatial Structures in

the Social Sciences initiative. This breadth and diversity of expertise has yielded an extraordinarily dense network of collaborations both within and across disciplines. Our scholars are committed to population science that recognizes that people and places are connected, and that health and well-being are intertwined with social, economic, and political systems.

The PSTC is a source of infrastructure and research support for associated scientists, and the nexus of intellectual activity for empirically driven and theoretically grounded scholars with population interests at Brown. The PSTC is highly regarded in and outside of Brown for its interdisciplinary community. It is a leader among population centers in several areas, including anthropological demography, innovative approaches to multi-method data collection and analysis, and global population health. Current research themes include Migration and Urbanization; Population, Development, and Environment; Children, Families, and Health; Social Foundations of Health Disparities; and Reproductive Health and HIV. Scholars also conduct research in other areas.

The PSTC provides a competitive interdisciplinary training program in demography conducted in cooperation with PhD programs in Sociology, Anthropology, Economics, and the School of Public Health. The program is designed to prepare demography trainees to be successful scholars in their respective disciplines, and to give students the skills to successfully participate in the broad intellectual community of population studies. Degree requirements are described under the departmental listings, although all trainees are required to complete selected methods and interdisciplinary course requirements. Many PSTC students receive funding for their studies through Center training awards. Students who are not supported by PSTC fellowships obtain funding through research assistantships and support from the Graduate School. PSTC students also have an excellent record of obtaining competitive external support for their studies and research.

Those interested in learning more about research and training activities at the PSTC should visit the Center's website at www.pstc.brown.edu (<http://www.pstc.brown.edu>).

Portuguese and Brazilian Studies

The Department of Portuguese and Brazilian Studies has a national and international reputation for excellence in research and teaching on the Portuguese-speaking world — a vast geographical area encompassing eight different countries on four continents (Brazil, Portugal, Angola, Cape Verde, Mozambique, Guinea-Bissau, São Tomé and Príncipe, and East Timor), and including the long-standing immigrant communities in the United States.

The department's programs focus on the global nature of the Portuguese-speaking world, as well on specific geographical areas: Continental and Insular Portugal, Brazil, Lusophone Africa, and Luso-America. Undergraduate and graduate students are able to work with a distinguished faculty committed to both research and teaching, and to take advantage of the extensive resources on the Portuguese-speaking world at the Rockefeller, John Hay, and John Carter Brown libraries.

In addition to offering academic programs in Portuguese language, Portuguese and Brazilian literature, history, and culture, the Department of Portuguese and Brazilian Studies extends its resources beyond the immediate university community by organizing a varied program of cultural events such as lectures, concerts, and symposia, exchanges with Brazilian and Portuguese universities, and the publication of books and scholarly journals.

For additional information, please visit the department's website: <https://www.brown.edu/academics/portuguese-brazilian-studies/>

Portuguese and Brazilian Studies Concentration Requirements

Portuguese and Brazilian Studies examines the Portuguese-speaking world, a large and diverse geographical and cultural area spread over five continents. Inhabited by two hundred fifty million people, this area includes Brazil, Continental and Insular Portugal, Lusophone Africa and

Luso-America. Although concentrators are encouraged to examine the global nature of the Portuguese-speaking world, typically they focus on one of the specific geographical entities mentioned above. Concentrators will strengthen their Portuguese language skills (Portuguese 400 or the equivalent is a pre-requisite) and explore relevant Lusophone literature, education, history and social science. The concentration offers one program in language and literature and another that is interdisciplinary. Some concentrators study abroad in either Brazil or Portugal.

Requirements

POBS 0630 series	Topics in Portuguese-Speaking Cultures ¹	1-2
POBS 1030	Portuguese Stylistics: Advanced Language Study and Creative Writing	1
POBS 1800B	<i>Lusofonia</i> : National Identities and Transnational Challenges ²	1
or POBS 1800C	Constructing Men, Projecting Masculinity: Questioning Gender, Sex, and Sexuality in Brazil	
or POBS 1800E	The Brazilian Puzzle: Confronting the Post-Colonial Legacy	
or POBS 1800F	The Lusophone World and the Struggle for Modernity	
Five (or four, if two POBS 0630 courses were completed) additional courses from Portuguese and Brazilian Studies and/or related departments, such as History, Africana Studies, Political Science, Anthropology, Sociology, Music, and the Watson Institute. These courses are intended to develop students' specific interests within the concentration.		5-4
Total Credits		8

¹ Up to two courses in the POBS 0630 series may be counted toward concentration requirements, provided they are on different topics.

² Conducted in Portuguese, the seminar brings the concentrators together for an interdisciplinary consideration of key topics in the Portuguese-speaking world. A research paper written in Portuguese is required.

Senior Project (optional)

In addition to taking a POBS 1800-series concentration seminar, students may choose to complete a senior project attached to any course in Portuguese and Brazilian Studies and related fields, including the Concentration Seminar, the latter possibility to be made at the discretion of the instructor. The advisor of the senior project is the professor of the course from which the project stems. Projects are not limited to papers, and may include short documentaries, a visual arts project, or an oral history project.

Portuguese and Brazilian Studies Graduate Program

The department of Portuguese and Brazilian Studies offers the Doctor of Philosophy (Ph.D.) in Portuguese and Brazilian Studies.

For more information on admission and program requirements, please visit the following website: <http://www.brown.edu/academics/gradschool/programs/portuguese-and-brazilian-studies> (<http://www.brown.edu/academics/gradschool/programs/portuguese-and-brazilian-studies/>)

Courses

POBS 0100. Elementary Portuguese.

Designed for students with little or no preparation in the language. Stresses the fundamental language skills of understanding, speaking, reading and writing. Aspects of Portuguese and Brazilian culture are also presented. Uses a situational/natural approach that emphasizes communication in Portuguese from the very first class. A year course; only in exceptional circumstances is credit given for one semester alone.

POBS 0105. Accelerated Portuguese.

This course serves as an accelerated introduction to Portuguese, one of the most widely spoken languages in the world. It is also an introduction to the diverse cultures of Portuguese-speaking societies. Specifically, the course will look into the ethnic, racial, social, and gender diversity in these cultures. Designed for students who have no prior knowledge of Portuguese, POBS 0105 meets five hours per week.

POBS 0110. Intensive Portuguese.

A highly intensive course for students with little or no preparation in the language. Stresses the fundamental language skills of understanding, speaking, reading, and writing. Aspects of Portuguese and Brazilian culture are also presented. Uses a situational/natural approach that emphasizes communication in Portuguese from the very first class. A two-semester sequence in one semester with ten contact hours each week. Carries double credit and covers the equivalent of two semesters. This course should be chosen, in the fall, by students beginning the study of Portuguese as sophomores who would like to participate in the Brown-in-Brazil Program as juniors. Offered every semester.

POBS 0200. Elementary Portuguese.

Designed for students with little or no preparation in the language. Stresses the fundamental language skills of understanding, speaking, reading and writing. Aspects of Portuguese and Brazilian culture are also presented. Uses a situational/natural approach that emphasizes communication in Portuguese from the very first class. A year course; only in exceptional circumstances is credit given for one semester alone. Prerequisite: POBS 0100.

POBS 0280. Mapping Food, Eating Meaning, Making Community: A Welcome to the Lusophone world.

This course explores the Lusophone world vis-à-vis the local, regional, and national culinary traditions of Brazil, Portugal, Luso-Africa, and Goa. Through a broad selection of cultural materials (music, film, television series, short stories, poems, visual art, etc) about cuisine in the Lusophone world. Students will gain introductory knowledge of Portuguese through brief instructional lessons. The class meets every 3-4 weeks to prepare and cook a class meal based on regional cuisines. This course focuses on creating: from a class zine to creative projects. The class will be taught in English with elements of Portuguese. No previous Portuguese language experience required.

POBS 0281. Digital Dreams: Brazil Cinema on the World Stage.

This course focuses on contemporary Brazilian cinema. New Brazilian Cinema emerged in the mid-nineties to international critical acclaim with films such as *Central Station* (Salles 1998) and *City of God* (Meireles/Lund 2002). Subsequently, Brazilian cinema has contended at the Oscars with *Neighbouring Sounds* (Filho 2012), *The Second Mother* (2015), documentaries: *The Edge of Democracy* (Costa 2019), *Waste Land* (Walker 2010), and controversial non-selected *Aquarius* (Filho 2016). This course posits Brazilian in its context socio-historical context and broaches social and political questions such as race, gender, urban space... Class is conducted in English and films have English subtitles.

POBS 0400. Writing and Speaking Portuguese.

Designed to improve the students' ability in contemporary spoken and written Portuguese. Using such cultural items as short stories, plays, films, videos, newspaper and magazine articles, and popular music, students discuss a variety of topics with the aim of developing good communication skills. Attention also given to developing writing ability. A systematic review of Portuguese grammar is included. Prerequisite: POBS 0105, or POBS 0110, or placement. Conducted in Portuguese. Completion of POBS 0400 is the minimum requirement for participation in the Brown-in-Brazil Program. Offered every semester.

POBS 0610. Mapping Portuguese-Speaking Cultures: Brazil.

Selected literary and cultural texts that serve as vehicles for a deeper understanding of Brazilian society. Literary materials will be taken from several genres and periods with special attention to contemporary writings. Other media such as film and music will also be included. Considerable emphasis on strengthening speaking and writing skills. Prerequisite: POBS 0400, placement or instructor's permission. Conducted in Portuguese.

POBS 0620. Mapping Portuguese-Speaking Cultures: Portugal and Africa.

Selected literary and cultural texts that serve as vehicles for a deeper understanding of Portuguese and Luso-African societies. Literary materials will be taken from several genres and periods with special attention to contemporary writings. Other media such as film and music will also be included. Considerable emphasis on strengthening speaking and writing skills. Prerequisite: POBS 0400, placement or instructor's permission. Conducted in Portuguese.

POBS 0630A. The nature of things: an object-oriented approach to Lusophone studies.

This course addresses aspects of history, culture, politics, literature, and the arts in seven Portuguese-speaking countries: Angola, Brazil, Cabo Verde, Guinea-Bissau, Mozambique, Portugal, and São Tomé and Príncipe. The course is designed to give students a hands-on approach to the study of Lusophone cultures: each week a country will be introduced by two objects paired with critical readings and short literary texts, music, or movies. We will be particularly mindful of objects that question and complicate the idea of "Lusophone," against the backdrop of colonialism and postcolonialism, networks of design, production and consumption, extractivism and the environment, and creative industries. Conducted in Portuguese. Prerequisites: POBS 105 or POBS 0110 and POBS 0400 (or instructor's permission)

POBS 0630B. Lusophone Cities in Literature, Film and Music..

Description: Rio de Janeiro, Luanda, Lisbon, Macau: the cities of the Portuguese-speaking world are more than just post-card images. They are microcosms of social activity and repositories of historical memory which offer up endless avenues for exploration. In this course we deconstruct urban spaces in Lusophone Africa, Lusophone Asia, Brazil, Portugal and the diaspora, via analyses of works of literature, film, music and more. Some of the topics to be explored include: social and racial inequality; colonialism and urbanization; cityscapes and memory. Beyond this, the course aims to improve oral and written fluency in Portuguese and build knowledge of Lusophone cultures. Conducted in Portuguese.

POBS 0630D. A Luta Continua: African, Asian, & Indigenous Responses to Coloniality in the Lusophone World.

In this course we will examine the reverberations of anticolonial movements in Portuguese-speaking African and Asian territories, as well as in Indigenous movements in Brazil. Focusing on political, social, and cultural dimensions of emancipation, we will ask: How have African, Asian, and Indigenous writers and artists imagined emancipatory endeavors for their peoples, their countries, and their worlds? What is the role of cultural expression in world-sharing and world-building in response to centuries of colonialism and its legacies? We will broach these questions by reading a broad range of texts, watching films and documentaries, and looking at works of art that respond to manifestations of colonial power. This course also aims to build written and oral proficiency in Portuguese and develop knowledge of the diverse cultures of the Portuguese-speaking world. Conducted in Portuguese.

POBS 0630E. Gender and Sexuality in the Lusophone World.

This seminar will introduce students to a diverse range of literary figures and cultural producers from the Portuguese-speaking world, ranging from the nineteenth century to the present day, from Machado de Assis to Pablo Vittar, with a specific focus on gender and sexuality, and their intersections with race and class. Covering a wide selection of genres from novels and novellas to short stories, television, film, and music, we will examine the role of literature and art in reinforcing and challenging norms of gender and sexuality. Students will engage with some key ideas from Gender Studies and Queer Theory and consider concepts from the Global South with regards to expressions of gender and sexuality in the Lusophone world. Topics will include conceptions of nuclear families, sexual deviance, homosociality, militant masculinity, queer representation, trans visibility, intersectionality, and colonial legacies. Taught in Portuguese.

POBS 0630F. Unveiling Herstories - Feminist Decolonial Perspectives in Literature and Arts in Portuguese.

This interdisciplinary course immerses students in the rich and diverse artistic expressions of women from Portuguese-speaking countries, encompassing literature, film, music, and visual arts. The main question in this course is: How does women's creative production contribute to building Herstories in a transnational Portuguese-speaking context? The course explores how these women contribute to a feminist decolonial approach, delving into the construction of Herstories through their art, challenging and reshaping historical narratives within their respective countries. Notably, the course sheds light on the conditions, or lack thereof, for producing a traditionally designed history, particularly emphasizing the often overlooked contributions of Black women in this context. The course aims to engage students in formulating and discussing questions regarding the crucial protagonism of women in cultural production within Portuguese-speaking regions. Conducted in Portuguese.

POBS 0630H. Futuridades Cuír/Queer: Reimagining the Portuguese-Speaking World Through Fiction.

This interdisciplinary course invites students to explore the potential of queer/cuір fictional media throughout the Portuguese-speaking world, focusing on how these media envision alternative notions of futurity, collective approaches, and worldmaking. Through conversations, collaborations, and community-building, we will analyze fictional media practices that offer new possibilities, challenging the concepts of time, space, identity, nation, and borders. Central to this course are key concepts such as cuірidade (queerness), futurity, fiction, and worldmaking. We will investigate how these concepts intersect and unfold within the cultural and political contexts of Lusophone countries, examining how these practices can transgress traditional notions of nationhood and borders. Portuguese proficiency required.

POBS 0673A. Colonial Encounters in the Early Atlantic (HIST 0673A).

Interested students must register for HIST 0673A.

POBS 0710. Modern Brazil Goes to the Movies.

Looks at Brazil through the eye of the camera and focuses on topics such as migration, race relations, gender and family dynamics and social inequities in contemporary Brazilian culture and society. Students will read articles and critical essays relating to the themes of each film as they develop their oral and written language skills. Conducted in Portuguese.

POBS 0710A. (En)Gendering the Text: Gender & Sexuality in Latin American Literature and Film (GNSS 0710A).

Interested students must register for GNSS 0710A.

POBS 0720. Racial and Gender Politics in Contemporary Brazil (AFRI 0710A).

Interested students must register for AFRI 0710A.

POBS 0810. Belonging and Displacement: Cross-Cultural Identities.

Focuses on the representation of immigrants, migrants and other "border crossers" in contemporary literature from Brazil and other countries. How do people respond to the loss of home and the shift to a new culture? Is "going home" possible? How do individuals deal with their dual or triple identities? Piñon, Lispector, Scliar, Rushdie, Salih, Cristina Garcia, V. S. Naipaul and others. Conducted in English. Enrollment limited to 19 first year students.

POBS 0820. "Coming Out" Jewish, Gay or Black: Mistaken Identity in Literature from USA and Brazil.

Understood as the opposite of passing or assimilating, "coming out" evokes socio-psychological and cultural tensions between public and private identities that are becoming increasingly blurred. Ambivalent identities incite concerns about belongingness, marginalization, citizenship, dislocation, and diaspora. Feeling unfamiliar or displaced as a manifestation of cultural alterity can also lead to situations of mistaken identity. Recognizing today's shift away from essentialisms, this seminar will read fiction from the USA and Brazil by applying the tropes of "coming out" and belonging to illustrate the complex formations and ambiguous practices of identity construction. Enrollment limited to 19 first year students. Conducted in English.

POBS 0830. Shipwrecks and Castaways in History and Literature.

What do shipwrecks and the tales of suffering, death, and survival that they inspire reveal about human schemes in the face of larger-than-human forces? This course considers historical, literary, and visual texts that deal with disasters at sea to ask questions about how people across different cultures, from the deeper past to more recent times, have encountered and made sense of maritime crossings gone terribly wrong. Students will be introduced to aspects of medieval, early modern and modern maritime traditions across different cultures, using the Portuguese empire and its legacies across the Indian and Atlantic Ocean worlds as a frame for considering a global history of shipwrecks. Class conducted in English.

POBS 0850. Comparative Approaches to the Literatures of Brazil and the United States.

Brazil and the United States have much in common: continental territories, huge natural resources, dynamic economies and multi-ethnic populations. Yet, their histories and cultures are distinctive and unique, as suggested in Vianna Moog's classic symbolic contrast between the Brazilian bandeirante and the American pioneer. We will undertake a comparative study of the two countries' literatures over the past eighty years with an eye towards exploring contextual, thematic and technical analogies as well as differences. Faulkner, Ramos, Lispector, Morrison, Rosa, Scliar, DeLillo, Carvalho, and Doctorow. Some attention to music, film and the visual arts. Enrollment limited to 15. Conducted in English.

POBS 0910. On the Dawn of Modernity.

We will analyze how a new mindset that would later be called modernity slowly emerged from the medieval world and how the trials and errors of the 15th and 16th century navigators helped shape that transformation. The seminar is interdisciplinary insofar as the readings will include developments in astronomy, geography, shipbuilding, mathematics, philosophy, as well as what could be called early anthropology, as stepping stones to the first scientific revolution. Conducted in English. Enrollment limited to: 19. Reserved for First Year students.

POBS 0915. On Cultural and Personal Identity.

A close analysis of concepts such as cultural and personal identities by means of a variety of interdisciplinary readings, including a combination of essays and a set of works of literature by diverse authors from various countries and cultures.

POBS 0970. Tropical Delights: Imagining Brazil in History and Culture (HIST 0537B).

Interested students must register for HIST 0537B.

POBS 0990. Mapping Cross-Cultural Identities.

How do we construct our own identity as life becomes a multitude of narrative threads intersecting and overlapping like roadways on a map? How do we reconfigure identities vis-à-vis those who surround us? We will investigate the ever-changing map of cultural identities and its repercussions on human existence via contemporary literature and a series projects that incorporate the arts (visual, digital, literary) and oral history. Some of the writers include Julia Alvarez, Kiran Desai, Junot Diaz, Milton Hatoum, Chang-Rae Lee, Clarice Lispector, Dinaw Mengestu, Nérida Piñon, Salman Rushdie, Taiye Selasi and others. No experience in the arts necessary.

POBS 1020. Anthropocene with Many Accents: Environmentalizing the Afro-Luso-Brazilian Triangle.

This course explores finer aspects of the cultural, social, ecological, and artistic landscapes of three historically interconnected Atlantic spaces: Angola, Portugal, and Brazil. Inspired by the concept of "Afro-Luso-Brazilian triangle" by the late Brown Professor Anani Dzidzienyo, we will foreground the intersectionality of struggles for the environment, racial and social justice, and gender equality, while introducing different perspectives on environmental thought. By acknowledging that we can learn from the experiences, testimonies, and fictional creations of local communities, literature, performance and the arts are central to this course. Conducted in English.

POBS 1025. The Future of the Past: 21st-Century Fiction from the Portuguese-Speaking World.

About a sixth of the twenty-first century is already over. What perspectives have contemporary writers of the Portuguese-speaking world brought to bear on the burning issues of the new century? How do literary narratives mold our thinking about the challenges of the present and the burdens of the past? What can the writing and reading of fiction do to change the way we see ourselves and each other? Readings and films from Angola, Brazil, Guiné-Bissau, Mozambique, and Portugal. One previous course in literature recommended. Conducted in English.

POBS 1070. Plugging into Brazil: Print, Television, and the Internet.

We will investigate the many nuances of the Brazilian media in its various forms and discuss Brazil using newspapers, leading magazines, current television broadcasts and the Internet. What are the characteristics of the Brazilian media? How does the media shape the views of Brazilians living in Brazil and those abroad? What is the role of the Brazilian media in a globalized world? Conducted in Portuguese. Prerequisite: One of the following: POBS 0610, 0620, 0710, or consent of the instructor.

POBS 1070A. On Both Sides of the Lens: Latin American Women Filmmakers (GNSS 1070).

Interested students must register for GNSS 1070.

POBS 1080. Performing Brazil: Language, Theater, Culture.

Designed to deepen the students' understanding of Brazilian culture and society through the performing arts. Students will read a series of plays and respond to them in a variety of ways: in writing, verbally, and through performance. The course will include poetry and music as these can also be performed. Throughout the semester students will also be working on creating their own performance pieces. Conducted in Portuguese.

POBS 1090. Portuguese-speaking Cultures Via Film.

We will view and discuss films from Brazil, Lusophone Africa, Portugal and other regions as vehicles to understand the cultural diversity of Portuguese-speaking countries. Readings will include related fiction and non-fiction focusing on immigration, gender, race, family dynamics and social inequality. Students will write a series of short papers and develop a final project in consultation with the instructor. Particular attention will be paid to contemporary Brazilian cinema. Prerequisite: POBS 0610, 0620, 1030, or 1080, or instructor permission. Enrollment limited to 20. Conducted in Portuguese.

POBS 1210. Afro-Brazilians and the Brazilian Polity (AFRI 1210).

Interested students must register for AFRI 1210.

POBS 1370. US and Brazil: Tangled Relation (HIST 1370).

Interested students should register for HIST 1370.

POBS 1500A. African Literatures of Portuguese Expression.

A survey of representative African narrative literature of Portuguese expression (Cape Verde, Guinea-Bissau, São Tomé e Príncipe, Angola, and Mozambique). The selections will cover the periods before and after the independence of these former Portuguese colonies. Conducted in Portuguese. Enrollment limited to 40.

POBS 1500B. The Azores – A World through Literature.

For 500 years, the Azores – a nine island archipelago in the middle of the North Atlantic, have been a mandatory connecting entrepot between the world at large and Portugal and between the Western Hemisphere and Europe. The archipelago has produced an impressive body of literature that, particularly in the last century, has evolved into a body of works that reflects a collective personality with distinctive features. The course will analyze the most significant works of literature produced in the islands and in the Portuguese-American communities. Conducted in Portuguese.

POBS 1500C. Brazilian Literature in Translation: Clarice Lispector-a Woman of Spirit.

As Brazil's foremost woman writer of the XXth century, Clarice Lispector has received critical attention from French, Brazilian and American feminists. With the aim of appreciating her work comparatively, this course will examine four novels and four story collections from the following theoretical perspectives: existentialist, feminist, poststructuralist and Jewish hermeneutics. Conducted in English.

POBS 1500D. Brief Encounters: Modernist and Postmodernist Brazilian Short Fiction.

With Modernism and Postmodernism as the primary theoretical frames, we will examine the aesthetics of short fiction by discussing short stories and novellas from the 1920s to the 1990s that foreground the characteristics of these literary currents and their respective regional and urban expressions. As images of Brazil, this fiction will also be read within the context of feminist, hybrid, subaltern, and postcolonial stances. Conducted in Portuguese.

POBS 1500E. Contemporary and Brazilian Fiction: New Paths and New Perspectives.

Selected prose narratives from the 1970s to the present are read with the aim of identifying new paths and perspectives in contemporary Brazilian literature and culture that challenge traditional literary and cultural hierarchies as well as canonized aesthetics. Milton Hatoum, João Gilberto Noll, Caio Fernando Abreu, Marilene Felinto, Sônia Coutinho, Roberto Drummond, Sérgio Sant'Anna, Rubem Fonseca, and others. Conducted in Portuguese.

POBS 1500F. Contemporary Portuguese Women Writers.

Analyzes women's discourse and proposes an interpretation of female characters in the works of six contemporary Portuguese women writers: Maria Velho da Costa *Maina Mendes*, Maria Teresa Horta *Ana*, Agustina Bessa-Luís *O Mosteiro*, Teolinda Gersão *Paisagem com Mulher ao Fundo*, Lídia Jorge *O Jardim sem Limites*, and Ivetta Centeno *Os Jardins de Eva*. By way of contrast, Mário Ventura's *A Revolta dos Herdeiros* is discussed as an example of how a male writer fictionalizes a woman as narrator.

POBS 1500G. Cultural Politics of Hybridity in Modern Brazilian Fiction.

Explores Brazilian fiction that manifests intersections between erudite, popular and mass cultures. With the aim of challenging unnatural polarities that separate these forms of cultural expression, the theme of hybridity will be examined in prose fiction from the 1960s to the present within the context of the development of the modern Brazilian novel and recent theories on cultural hybridization. Readings will focus on the socio-political and cultural implications of hybridization in prose fiction by such authors as Caio Fernando Abreu, Ivan Ângelo, Ignácio de Loyola Brandão, Roberto Drummond, Rubem Fonseca, Clarice Lispector, José Agrippino de Paula, Adélia Prado, Sergio Sant'Anna, and others. Conducted in Portuguese.

POBS 1500H. Esthers of the Diaspora: Female Jewish Voices from Latin America.

Fiction by and/or about Jewish women from Brazil, Argentina, Venezuela, Mexico, Chile, and Cuba. Evoking the image of the biblical Queen Esther who lived between two worlds, these Jewish voices will be discussed from the perspectives of feminist, hybrid, diasporic, and transcultural theories. Special attention to Brazil's Clarice Lispector. The expression of the role of women vis-à-vis the immigrant experience will also be discussed. Conducted in English.

POBS 1500I. Fiction and History (COLT 1810G).

Interested students must register for COLT 1810G.

POBS 1500L. Prophets in the Tropics-Latin American Jewish Writing.

Compares the differences and the parallels between the narratives of the Jewish diaspora in Brazil, Argentina, Mexico, and Peru. As decentered dissenters in literature, these writers invariably address their diasporist situation vis-à-vis the larger society via such issues as immigration, cultural diversity, exile thinking, nationalism, discrimination, and postcolonialism. Prose by female and male writers, along with background materials in history, biography, memoirs, essay, and film. Conducted in English. Prerequisite: one 100-level literature course.

POBS 1500M. Rereading Colonial Brazil.

In the first part of the course we will discuss major literary and artistic achievements in Brazilian society during the first three centuries after Brazil's "discovery." In the second part of the course we will consider how novelists, poets (including song writers), filmmakers, visual artists and social scientists since Independence have reassessed the colonial period from a post-colonial position. Conducted in Portuguese.

POBS 1500O. The "I" of the Beholder: Self-Examination and Self-Display in Modern Brazilian Fiction.

This course will address the first-person impulse in modern Brazilian fiction with the aim of analyzing the process of self-consciousness vis-à-vis national identity, individualism, memorialism, authoritarianism, and subjectivity. The course will also consider the first person in the context of realism, modernism, regionalism, and postmodernism. Discussion will center upon prose by Mário de Andrade, Rachel de Queiroz, Antônio Olavo Pereira, Clarice Lispector, Lygia Fagundes Telles, Nélida Piñon, Ivan Ângelo, Rubem Fonseca, and others.

POBS 1500P. The Personal Dynamics of Witnessing: Self-Interpretation in Brazilian Autobiographical Fiction.

Analyses first-person narration and the ethics of self-examination, self-display, and self-invention. First-person narrators are read as self-chroniclers who become subject and object, or spectator and spectacle, of their own lives. Readings from such writers as Mário de Andrade, José Lins do Rego, Cyro dos Anjos, Antóio Olavo Pereira, Clarice Lispector, Lygia Fagundes Telles, Nélida Piñon, Rubem Fonseca, and Sérgio Sant'Anna. Conducted in Portuguese.

POBS 1500Q. The Sage of Suspicion: The Skepticism of Machado de Assis.

Focuses on the major novels and short stories of Brazil's foremost realist. Presentations and discussions address character and narrative distrust as well as skepticism related to unreliable narrators and ironic voices. Also explores the sociopolitical picture of Brazil in the second half of the 19th century in the context of Machado's *Human Comedy*. Conducted in Portuguese.

POBS 1500R. Twentieth-Century Portuguese Prose.

Reading and textual analysis of some significant writers from Portugal, along with information related to their historical context. José Saramago, Lídia Jorge, Vergílio Ferreira, Helder Macedo, Agustina Bessa-Luís, and Rosa Lobato de Faria. Conducted in Portuguese.

POBS 1500U. The Leaping Chameleon: Reconfiguration of Self-Identity and Culture in Contemporary Brazilian Fiction.

Focuses on reconfigurations/redefinitions of concepts of identity -- personal and cultural in Brazilian prose fiction from the 1980s to the present. Protean forms and unstable subjectivities become apparent in fictional portrayals of aberrant and disfigured beings in liminal spaces, these serving as vehicles critical of urban strife, cultural instability, estrangement, and social segregation, written by authors such as André Sant'Anna, Bernardo Carvalho, Lilian Fontes, Marcelino Freire, Cíntia Moscovitch, Ivana Arruda Leite, Luiz Ruffato, and others. Conducted in Portuguese.

POBS 1500V. Modern Brazilian Theater: Nelson Rodrigues and the Dynamics of Performance.

Reading the psychological, mythical and Carioca plays by Nelson Rodrigues will serve to define modern Brazilian theater. Exploring influences from Greek tragedy to Freud, discussions will focus upon social rituals and taboos Rodrigues dramatized to unmask Brazilian society. Film/taped performances and criticism will be studied for interpreting modes of performativity and as tools for cultural analysis to understand the distance between self and behavior. Conducted in Portuguese.

POBS 1500W. The 'New Jew' and the Diaspora: Voices from Israel, Brazil and America.

Studies Jewish identity and belongingness in Israel and the Jewish Diasporas of Brazil and America within the context of multiple homelands. If the concept of the 'New Jew' suggests alternative Jewish universes in which Israel is not the center, does this imply the end of the Jewish Diaspora? This course will debate this question via novels and short stories by some of the representative writers from the above three nations. Conducted in English. Enrollment limited to 20.

POBS 1500X. Modern and Contemporary Brazilian Poetry: From Text to Performance.

Introduces students to Brazilian poetry from modernists like Oswald de Andrade, Murilo Mendes, Cecília Meireles, Carlos Drummond de Andrade, and João Cabral de Melo Neto to contemporaries such as Augusto de Campos, Francisco Alvim, Arnaldo Antunes, and Ricardo Aleixo. In addition to the reading and discussion of significant works by a variety of poets and literary critics, the course includes a workshop component, in which participants will be encouraged to share their oral interpretation of poems of their choice. The course concludes with a poetry performance by the course members and other interested parties. Conducted in Portuguese. Enrollment limited to 15.

POBS 1501A. Out of Portuguese Africa: Deconstructing Portuguese Colonialism in Literature.

Examines both fictional narratives written in Portuguese by African authors and fictional works by Portuguese authors that focus on the colonial experience of Angola, Mozambique, and Cape Verde. Aims in particular at the critical analysis of Portuguese colonialism as a means to verify its specificity or lack thereof within the larger context of overarching European colonialisms. Conducted in Portuguese.

POBS 1501B. Brazilian Biographies (HIST 1313).

Interested students must register for HIST 1313.

POBS 1501C. Interwar Fascisms and the Portuguese Estado Novo (1932-1945).

Focusing on the interwar period and, this course studies the political nature of the Salazar's dictatorship (the so-called Estado Novo, New State) in its various facets: nationalism, political representations, repression, social policy, Church and State relationship). The Portuguese history will be placed within a wider context, privileging transnational connections and comparative approaches. Was the Portuguese regime a fascist one? What are the affinities and distinctiveness in terms of contemporary dictatorships (Fascism, Nazism and Francoism)? To what extent those regimes were connected? Conducted in English.

POBS 1501D. Pathways of Brazilian Narrative.

The seminar investigates Brazilian narrative from Modernism to the present, at relevant moments from 20th to 21st centuries. Modernism and modernization have dismantled the romantic emphasis on narrative forms and themes as a unitary vision of social and cultural identity. Macunaima (1928), by Mario de Andrade opened to Brazilian literature a new kind of fiction that considers the multiplicity of a hybrid nation process of identification; a new paradigm re-using themes of exile, mobile identities, violence, terrorism, and interaction between the national and the global environments. Conducted in Portuguese.

POBS 1501E. Histories of Global Health from Lusophone Africa: Biomedical Actions in Angola, Mozambique, Guinea.

To explore histories of health, disease and global public health actions in Lusophone Africa: Angola, Mozambique, Guinea-Bissau. A broad approach to health considers sociocultural, economic, political and environmental factors. The anthropological take draws students' attention to the existing links between global structures, historical processes and power relations and patterns of ill-health, epidemics and biomedical responses or research in urban areas or in remote African villages in this part of the global south (c.1880s-2015). It unveils a century-old (western) morality underlying in public health programs, eradication visions, humanitarian actions, development discourses, security preparedness or other global health actions/mantras. Conducted in English.

POBS 1501F. The Enlightened Censor.

In this course we will follow the trajectories of 18th century Portuguese censors as they permit or forbid books by Voltaire, Rousseau or Locke, but also sermons, plays and dissertations. Is it possible that the censorship of the 18th century has shared with the Enlightenment so many key elements that it could be regarded more as an enlightened censorship than as an anti-Enlightenment censorship? The answer to this question will allow us to better understand the difficult birth of modernity and pluralism and the challenges both face today. In English.

POBS 1501G. Remembering and Forgetting the Portuguese Colonial Empire Public Memory.

This course explores the public memory and forgetting of the Portuguese colonial empire, from the colonial to the postcolonial period. Concentrating on the construction and reproduction of an official memory about the empire in the public space of Portugal, the course will also highlight the entangling between the former imperial metropolis and its former colonies. Also, broader connections will be established between the Portuguese-speaking world and wider European and global contexts. The purpose is to draw attention to the many ways in which colonial legacies are present today as a field of hegemony and ideological disputes.

POBS 1501I. Luso-African Literature in a Post-Colonial Context: A Decolonial Reading of the West.

According to Franz Fanon, decolonization is a historical process that can only be understood when it becomes transparent to itself as the historicizing movement that gives it form and content is discerned. Literature offers approaches that allow a deeper understanding of the post-colonial context and its social and cultural effects. We will examine Luso-African literature from Portugal, Angola, and Mozambique, analyzing it through themes such as race, identity, language, and ancestry. We will perform a decolonial investigation of this literary corpus by working with a theoretical apparatus that will help us to engage in reflections on post-coloniality and its relationship with the West. The course will be taught in Portuguese.

POBS 1520. Latin American Horror (GNSS 1520).

Interested students must register for GNSS 1520.

POBS 1600A. The Afro-Luso-Brazilian Triangle (AFRI 1020C).

Interested students must register for AFRI 1020C.

POBS 1600B. Colonialism, Nationalism and Gender in Portuguese India.

This seminar focuses on Portuguese rule and discourse in India, from an anthropological and historical perspective. Colonialism and nationalism in India will be studied in relation to former Portuguese colonies in Africa as well as to other experiences in India under the British raj. Gender issues will also be addressed. Attention to the case of the *devadasi* (ritual dancers). Conducted in English.

POBS 1600C. Cross-Cultural Perspectives on Education: Education and the Portuguese-Speaking World.

A comparative education course focusing on schooling in Brazil, Portugal, Cape Verde, and these Portuguese-speaking populations in the U.S. The role of education in these diverse societies, as well as theories and methodologies for cross-cultural research and analysis, are explored from both historical and contemporary perspectives. Conducted in English.

POBS 1600D. Portuguese Discoveries and Early Modern Globalization.

Introduces the study of global early modernity through the lens of the Portuguese empire c. 1400-1700. Maps out the origins, motivations, and nature of Portugal's imperial expansion. Establishes the patterns of the Portuguese presence in the Atlantic and Indian Ocean. Emphasizes the dependence of the Portuguese empire on other societies, its institutional fragility, its social complexity, and the difficult relations between ideology and economy. Explores the idea of an early "cultural globalization" in religion, art and politics from Iberia to Japan via Brazil, Africa and India. Avoids the traditional idea of an exceptionality of the Portuguese overseas experience. Conducted in English.

POBS 1600H. Politics and Culture under the Brazilian Military Dictatorship 1964-85 (HIST 1967L).

Interested students must register for HIST 1967L.

POBS 1600J. Conflicts, Diasporas and Diversities: Religion in the Early Portuguese Empire.

Focuses on the history of the early modern Portuguese religious world, covering such topics as religious diversity and oppression, the Portuguese Jews and their experiences of persecution and Diaspora, the role of the Inquisition, the establishment of the Society of Jesus in Portugal and the creation of a network of Jesuit missions in the Portuguese world, the Counter-Reformation and the evangelization of so-called gentiles and infidels, and messianic beliefs in the Kingdom of God. Primary sources include works by Portuguese chroniclers in translation, as well as the original editions housed at the John Carter Brown Library. Conducted in English.

POBS 1600K. On the Dawn of Modernity.

A look at the emergence of modernity and its conflicts with the classical world view as revealed in the writings of the Portuguese navigators (XVth and XVIth centuries) on their encounters with the non-European world. Readings will focus on fields such as astronomy, cartography, geography, shipbuilding, and anthropology, as stepping stones to the first scientific revolution. This literature has been practically unknown to non-Portuguese readers. Conducted in English.

POBS 1600O. Displacement: Colonialism, Migration and Transnationalism in Lusophone Societies.

"Displacement" will be the starting point for the study of a range of classic and contemporary debates on colonialism, migration, slavery, plantation systems, gender inequities, racism, urbanization, transnationalism and global health issues. We will mostly refer to cases related to Portuguese colonialism and contemporary Portuguese-speaking societies - Brazil, Portugal, Cape Verde, Mozambique, Angola, the Asian enclaves and lusophone diaspora.

POBS 1600P. The Last Empire: Portuguese Colonialism and Decolonization in Comparative Perspective.

Adopting a comparative perspective, the course gives special emphasis to political, ideological and military dimensions of colonial rule in Africa. The first part deals with the evolution of Portuguese colonialism since World War II. The second part focuses on the process of decolonization after 1974, integrating the dissolution of the Portuguese Empire in the international context of the Cold War. Conducted in English.

POBS 1600Q. Perceptions of the Other and Ethnographical Writing in Early Modern Portugal.

Focuses on the privileged situation of Portugal as far as the knowledge of extra-European cultures in early modern Europe is concerned. The course examines agents, instruments and mechanisms of information gathering and diffusion of the "outer world" in Europe via Lisbon. The most important *topoi* of these Portuguese ethnographical representations will be discussed through a close analysis of a wide range of contemporary texts and visual records. Conducted in English.

POBS 1600R. The Lusophone Black Atlantic: Cultures and Religions Across the Ocean.

Addresses the cultural unity and differentiation within the Lusophone Black Atlantic, with a special focus on mobility, diaspora, and transnationalism. After a general introduction on the historical and cultural construction of the triangular relations between Portugal, Brazil, and Africa, including the consideration of such issues as luso-tropicalism, "creolization," and colonialism, we will move into the topic of Afro-Brazilian religions like Umbanda and Candomblé as a way to analyze how a matrix civilization was transported across the Atlantic to Brazil and back to Portugal. The issue of the transnationalism and mobility of such religions, accompanying the diaspora of Africans and Brazilians to Portugal over the last 20 years, will provide the basis for further discussion of the notion of "lusophone black cultures." The course bibliography includes anthropological texts as well as current Luso-African and Brazilian literature. Conducted in English.

POBS 1600S. 17th Century Portuguese World.

Analyzes the major historical events that influenced the Portuguese world under Habsburg rule and during the baroque movement. To question definition of Empire, nation, national identity, colonial spaces. It will examine Brazil during the Dutch invasion; the expectations of a future independence from the yoke of Spain; political, economic and religious situation after the Portuguese restoration in 1640; political and economic struggle that followed; the Portuguese Inquisition and the missionary efforts undertaken in Brazil; the prophetic and messianic expectations of the Iberian world (Catholic and Jewish); and the political and cultural aspects of seventeenth-century Ibero-American baroque culture. Conducted in Portuguese.

POBS 1600X. Urban Latin America (LAST 1510I).

Interested students must register for LAST 1510I.

POBS 1600Z. The Making of Modern Brazil (LAST 1510J).

Interested students must register for LAST 1510J.

POBS 1601A. The Birth of the Modern World: A Global History of Empires.

A multidisciplinary comparative analysis of the role of empires in the formation of the modern world and globalization since the 'new' imperialism of nineteenth century to the end of the colonial empires in the second half of the twentieth century. Case studies from several empires (Portuguese, American, Soviet, French and British) offer a global history of imperialism and colonialism. The links between imperialism, internationalism, nationalism, and modern racism; the relationship between imperial and colonial societies and cultures; the role of international and transnational institutions in the transformation of imperialism and the global emergence of human rights. Conducted in English. Enrollment limited to 40.

POBS 1601B. Defying the Wind of Change: Portugal, Rhodesia and South Africa, 1961-1980.

Examines the political, military, intelligence and economic ties between Portugal, Rhodesia (before and after its Unilateral Declaration of Independence in 1965) and apartheid-era South Africa as the three countries resisted calls for equal political representation for men and women of all races while exploiting their growing financial muscle as well as the circumstances of the Cold War. The bloc was undone by the Portuguese revolution of April 1974, which led to the independence of Angola and Mozambique, and left Rhodesia's borders exposed. Extensive use of recently declassified material gathered in Lisbon and Pretoria. Conducted in English. Enrollment limited to 25.

POBS 1601C. From Dictatorship to Democracy in the Iberian Peninsula: Transformations and Current Challenges.

Studies the origins and nature of the Franco and Salazar dictatorships, outwardly similar and largely concurrent, but in fact different in their aims, outlook and methods. Special attention to the personalities of the two dictators as well as the legacy of Spain's Civil War and Portugal's colonial Empire as elements of differentiation between the two regimes. The creation of democratic regimes in Spain and Portugal in the mid-1970s in the aftermath of prolonged dictatorships and the current political and economic challenges faced by these two countries are also considered in detail. Conducted in English. Enrollment limited to 25.

POBS 1601E. Travels and Exhibitions: Writing, Collecting + Displaying the World in the 19th + 20th Centuries.

To explore a cultural and intellectual history of the Portuguese-speaking world, concentrating on the circulation of objects, images, ideas and people within Brazil, Angola, Goa and different European spaces, from Lisbon to Paris. To discuss the history of science, the relationship between knowledge and colonial contexts, the interdependence between ideological agendas and exhibitions, the affirmation of national and imperial identities through spaces of visual and material knowledge. Through a series of comparative and transnational case studies this course will promote the crossing of contemporary theoretical questions engaging with historical written and visual sources. Conducted in English.

POBS 1601G. The Politics and Government of Lusophone Countries.

Ranging from regional powers to small island states, from consolidated democracies to hybrid regimes, from good governance to weak states and petro-states, the Lusophone world represents a diverse and stimulating political context. This course provides a systematic analysis of Lusophone political institutions and behavior, while considering the wider implications of the Lusophone experience. It is organized thematically, with topics including democratization; state structures; political institutions and culture; clientelism; and party systems. Each topic focuses on a set of Lusophone countries. While all Lusophone countries are considered, the cases of Portugal, Brazil, Cape Verde, Guinea-Bissau and Angola are particularly emphasized.

POBS 1601H. Contemporary Migrations: Movements, Experiences and Policies of Belonging.

Addresses theme of contemporary migrations, its visibility and strategic relevance (social, economic, political, demographic and cultural). Drawing on plural theoretical contributions, as well as empirical results from research carried out with Portuguese migrants in various sites and with diverse migrant populations based in Portugal, discussing: Contemporary global migration present and future trends; Portugal as an emigration and immigration context (particularities, tendencies, potentialities, obstacles); Daily-life aspects and experiences of migration (work, family, domestic life, culture consumption practices, transnational networks of belonging, association life); Identity, belonging and cultural (re)production strategies, tools and products. Approach to contemporary migration, emphasizing the discussion of data emerging from qualitative research.

POBS 1601I. Media + Propaganda in Contemporary History.

This course intends to study what was the role of the media and propaganda in the construction of the political reality by means an interdisciplinary and empirical analysis of several paradigmatic cases of the contemporary history in the lusophone and Iberian worlds. Special attention is paid to the following relevant topics: the historical evolution of the Portuguese media in the United States of America; the creation of the New State of Salazar in Portugal and the New Spain of Franco; the Portuguese diplomacy in the Spanish Civil War; or the transition to democracy in the Iberian Peninsula. Conducted in English.

POBS 1601K. Early Modern Global History at the John Carter Brown Library: A Research Workshop.

Gain firsthand experience developing your own research project at the world-renowned John Carter Brown Library! The JCB houses thousands of rare books, maps, and manuscripts pertaining to the diverse histories and cultures of the early Americas. With opportunities to learn from a wide range of professional curators, conservators, librarians, and researchers in residence, students will approach the JCB collection as a site for research into colonial histories and as a subject of study in its own right. Class will be conducted in English, but a reading knowledge of Portuguese and/or Spanish is recommended. Most readings will be in English, and students will be able to develop research projects with JCB material in language(s) of their choosing.

POBS 1601M. Migrants, Political Activism and the Racialization of Labor.

Histories of white nationalism in US law and discourse to criminalize, marginalize and racialize migrant progressive politics and labor activities are explored through first-hand and secondary sources, discussions and site visits. Migrants challenging limitations on civic rights as a result of fluid and contradictory intersections of racial and ethnic categorizations are examined through a primary case example of Portuguese-speaking workers in North America over the 20th century from Europe, Atlantic Islands and Africa. Topics include socialist and communist labor movement; anti-immigrant laws; industrial capitalism's exploitation of migrant workers and role in racial marginalization; migrant agency and action for change. In English

POBS 1601N. Politics of Indigeneity in Brazil (LACA 1503Q).

Interested students must register for LACA 1503Q.

POBS 1601O. The Portuguese Estado Novo. Visual Propaganda, Public Use of Past and Self-Representation.

Starting with Pierre Nora's concept of *Lieux de Memoire* – places where the exhausted capital of collective memory condenses and is expressed – this course explores from two perspectives, the history of Portuguese Estado Novo. It embarks upon a chronological study of the period following the economic, political, and social transformations that had affected Portugal. Scrutinize how the Estado Novo created, used and re-adapted some Portuguese *Lieux de Memoire* in order to legitimize itself; shape the way Portuguese understand their country; generate a favorable image in Portugal and abroad. Conducted in English.

POBS 1601P. Global Decolonization in Africa and Asia: the Portuguese Case in a Comparative Perspective.

This course provides a critical, comparative assessment of the global decolonization momentum, taking the Portuguese case as the key case-study. It does so by exploring diverse historiographical problems and historical processes that shaped the multiple trajectories of decolonization after 1945. As a consequence, the course also addresses the role of international and transnational networks, movements and institutions in the global histories of decolonization, as major players in the demise of European colonialism. The historical legacies of late colonialism in politics, society and culture, both in former colonies and metropolises, will also be assessed. Conducted in English.

POBS 1601Q. Portuguese and Lusophone African Literature and Cinema.

The course aims to study the relationship between literature and cinema in the context of renowned Portuguese authors and Portuguese-speaking Africa. Thus, students will study a varied group of great novelists (José Saramago, José Eduardo Agualusa, Mia Couto) and notable filmmakers (João Botelho, Ivo M. Ferreira, Teresa Prata, Lula Buarque de Hollanda) who chose to direct films from the texts of these writers. And, due to their importance, unavoidable filmmakers (Paulo Rocha, Manoel de Oliveira and Miguel Gomes, Flora Gomes) will also be approached. Conducted in Portuguese.

POBS 1601R. Beyond the Masterpiece Tradition: Mining the Archive for Alternative Histories of Portuguese Cinema.

Drawing on anthropology, new film history and media archaeology, this course takes the moving image archive as a departure point to revisit, reconceptualise and expand Portuguese film history and historiography. We will consider the works and formats that have been neglected – actualities, utility films, newsreels, amateur films, domestic footage and film fragments – to revise theoretical and historiographical assumptions and recover parallel, interrupted and non-teleological film histories that have hitherto failed to be written. We will also examine the appropriation of archival footage by other film productions and discuss the impact of the 'digital turn' on film archives. Conducted in English.

POBS 1601S. Environment, Health and Colonial Society in Africa-19th and 20th Centuries.

This course seeks to build an understanding of how environment and health intersected in colonial Africa in the late 19th and 20th centuries by looking diachronically at a varied set of cases that reveal important aspects about changing disease ecologies and knowledge production, about environmental change and human agency, but also about power and inequalities in colonial societies. Though guided by a comparative cross-national and cross-imperial dimension, the course also seeks to fill the gap in the study of environment, health and imperialism by bringing to the fore the cases of Angola, Cape Verde, São Tomé e Príncipe, Mozambique and Guiné-Bissau, territories under Portuguese colonial rule until the 1970s. Open to all students, this course is also intended as complementary to other courses offered at Brown, namely on the History of Africa and the History of STEaM.

POBS 1601T. Regimes of Contention in Southern Europe.

This course takes Portugal, in the context of the southern European semi-periphery, as a case-study for exploring the contentious dynamics between institutions and movement actors from the 1960s onwards. The course is divided in three parts: (1) the research problems associated with this course; (2) Portugal's semi-peripheral position; (3) social movements historical analysis in Portugal, considering the state-party-movement nexus, as well important critical junctures such as 1974 Revolution and the 2010 austerity period. Even though the course is to be taught chronologically for pedagogical reasons, in order to understand its historical evolution in a global context, students will be required to develop insights that cross the various topics under study. As such, this course will provide them with an in-depth reading and historical understanding of the Portuguese mobilizations from below in the European context.

POBS 1601U. International Solidarity and the Struggle for Independence of Portuguese Colonies.

This course introduces students to an overview of the international solidarity with the struggle for independence of Portuguese colonies, including the myriad ways through which states, non-state actors and individual activists engaged with the liberation movements. Building on existing scholarship, the course will center on the role played by international solidarity in fueling anticolonial and anti-racist discourses for foreign audiences and attracting material and non-material resources for the liberation movements.

POBS 1601V. Salazar's Dictatorship in Comparative Historical Perspective: From the Fascist Era to Decolonization.

This course provides a critical approach to the principal themes in the history of the Salazar dictatorship (Estado Novo) from a comparative perspective. It covers the entire span of the regime and incorporates its main dimensions – nationalism, colonialism, repressive apparatus, Church/State relations, system of political organisation. Particular emphasis is placed on the wider international context, highlighting the importance of transnational connections and comparative approaches in the process of historical understanding. To what extent did the regime provide a unique response to the interwar crisis of liberalism? How did Salazarism influence the rise of authoritarian regimes in Europe and South America? Was Salazarism different from Fascism? How useful is the concept of normalization in defining the experience of everyday life under the regime? Providing answers to these questions will require drawing from the variegated inputs of political, social and cultural history.

POBS 1601W. Challenging the Colonial Complex: Theory and Praxis in the Portuguese-speaking world.

This course maps anti-colonial, postcolonial and decolonial critique and praxis in the Portuguese speaking world. It investigates a wide range of writings, while bringing forth an array of artistic, cultural, and media practices of resistance. The course is designed to claim the centrality of these voices and to encourage students to think visually – through not just about images, through not just about art. Reading, watching, listening, and discussing intensely and with care will be the basis of our academic work as we explore the meanings and practices of decolonization in the Portuguese-speaking world. Reading knowledge of Portuguese is required.

POBS 1601X. Media, Entertainment and Politics in the Lusophone World.

The main goal of this course is to provide students with an in-depth understanding of the relationship between the realms of politics, media and entertainment in different national contexts sharing a common official language: Portugal, Brazil, and the African Portuguese-speaking countries. This knowledge is essential for understanding the contextual features of political action, social dynamics and cultural and artistic production in these countries. The course starts with a series of lectures aimed at fostering theoretical knowledge and critical thinking on political regimes, media systems and the relationship between entertainment and politics. Subsequently, the course acquires a more empirical nature: after depicting the general political features of the countries under analysis, sessions will be devoted to the discussion of media systems, media and politics dynamics and the relationship between entertainment and politics in Portugal, Brazil, and African Portuguese-speaking countries.

POBS 1601Z. Art and Visual Culture from the Lusophone Black Atlantic: A Decolonial and Comparative Approach.

The course aims to introduce students from various levels and backgrounds to the visual cultures of the Portuguese-speaking world, with an emphasis on Atlantic historical and contemporary circulations between Portugal, Angola, Mozambique, Cape Verde, Guinea-Bissau, São Tomé and Príncipe and Brazil, and a focus on the visual, performative and material knowledge production coming from modern and contemporary art, curating/exhibition histories and visual culture at large. Course instructor: Ana Balona de Oliveira

POBS 1602A. Portugal: The Journey from "Welcoming" Policies to Anti-Immigration Mobilization.

The course examines the shift in Portugal's migration landscape, from a colonial legacy of openness to cultural diversity to the rise of anti-immigration movements. It explores how Portugal's national myth of a country open to diversity, shaped by its colonial past, obscures issues of racism and migration. The course traces how migration policies have evolved in a postcolonial context, analyzes media's role in perpetuating stereotypes, and investigates the rise of far-right anti-immigration mobilization. It also highlights immigrant resistance to these changes. Using Paulo Freire's critical pedagogy, the course encourages collaborative learning and participatory practices, fostering dialogue and decolonizing methodologies in migration studies. Students will engage actively in discussions, readings, and reflections, contributing to an exchange of ideas among students, faculty, and guest lecturers. Taught in English, course instructor: visiting FLAD professor, Thais França

POBS 1602B. Além do extrativismo: reconfigurações de gênero na produção cultural brasileira.

From "Agro é tech, agro é pop, agro é tudo" (Rede Globo) to Denilson Baniwa's "O agro não é pop!" to Gabeu's Agropoc, extraction has become a central point of contention within the texts, images and sounds of contemporary Brazilian cultural production. This course looks at how extraction has been imposed upon, impacted, and defined bodies—human and other than human. We will ask how contemporary artists are contesting and transforming discourses of extraction by expanding, reshaping & queering/curing expressions of gender and sexuality.

POBS 1670. History of Brazil (HIST 1310).

Interested students must register for HIST 1310.

POBS 1671. Brazil: From Abolition to Emerging World Power (HIST 1312).

Interested students must register for HIST 1312.

POBS 1694. Comparative History of Abolitionism in the Atlantic World.

To develop a transnational approach to the rise of abolitionism in the Atlantic world. In a comparative framework, tracing the rise of abolitionism in Europe, Americas, and Africa, examining the suppression of the transatlantic slave trade, the rise of colonialism in Africa, and the growth of forced labor in the wake of transatlantic slave trade. Deals with key debates in the literature of African, Atlantic history, including causes and motivations of abolitionism, relationship between the suppression of the slave trade and the growth of forced labor in Africa, the historical ties between abolitionism and the early stages of colonialism in Africa.

POBS 1740. Artful Teaching: Intersecting the Arts with Foreign and Second Language Acquisition.

How can we create meaningful experiences for those learning a foreign or second language? What makes the creative arts (art)iculate so powerfully and naturally with foreign and second language acquisition? How do the arts enable students to become aware of surrounding cultures while simultaneously acquiring a new language? This course will explore connections between the arts—visual, literary and performing—and language acquisition in a combined workshop and seminar approach. Readings will include authors Sheridan Blau, Augusto Boal, Shirley Brice Heath, Paulo Freire, Jan Mandell, Twyla Tharp, Jeffrey D. Wilhelm and others.

POBS 1800A. "Que país é este?" Twentieth-Century Definitions of Brazil and Brazilianness.

Focuses on three major areas: the portraits of Brazil from the late 1930s to the early 1960s, mainly by left-leaning intellectuals; the economic and political model of Brazil imposed by the military regime of 1964-1985; and the subversion of the official definitions of Brazil in the "anti-histories" of the *Abertura* period (1975-1985). Materials drawn from the social sciences, history, literature, and film. Authors include Sérgio Buarque de Holanda, Gilberto Freire, Vianna Moog, Paulo Freire, Golbery do Couto e Silva, Roberto da Matta, Caio Prado Jr., Richard Morse, and others. Conducted in Portuguese.

POBS 1800B. Lusofonia: National Identities and Transnational Challenges.

The creation of the Commonwealth of Portuguese-Speaking Countries has reignited debate concerning the roots, history, contemporary developments, and future prospects of the Portuguese-speaking world. This seminar focuses on key issues regarding the identities of the Portuguese-speaking nations, their interrelations, and their interactions with the wider world. A. de Quental, T. de Pascoais, Pessoa, G. Freyre, S. Buarque de Holanda, Vianna Moog, A. Sérgio, E. Lourenço, A. Cabral, and R. DaMatta. Conducted in Portuguese.

POBS 1800C. Constructing Men, Projecting Masculinity: Questioning Gender, Sex, and Sexuality in Brazil.

In this course we will examine how contemporary Brazilian cultural production – particularly literature and cinema – (re)formulates/questions/preserves traditional configurations of male gender identity. We will discuss constructions and representations of the male subject within contemporary cultural production, particularly focusing on the later-half of the twentieth century. More specifically, employing ideas of gender as a form of performance we will question gendered stereotypes and their intersections with race and socio-economic position, destabilize binary gender constructions / understandings, and offer queer readings of a multiplicity of texts. Conducted in Portuguese.

POBS 1800E. The Brazilian Puzzle: Confronting the Post-Colonial Legacy.

Brazilian intellectuals have often attempted to understand and explain the challenges in modern Brazilian society (political, economic, racial, educational) by pondering Brazil's Iberian roots and assessing the legacy of Portuguese colonialism. Manuel Bonfim, Sérgio Buarque de Holanda, Paulo Prado, Gilberto Freyre, Vianna Moog, Caio Prado, Celso Furtado, Paulo Freire, Oswald the Andrade, Roberto DaMatta. Attention to film, music and the visual arts. Conducted in Portuguese.

POBS 1800F. The Lusophone World and the Struggle for Modernity.

A study of classical writings from the Portuguese-speaking world dealing with the issue of modernity, focusing particularly on the Counter-Reformation and Baroque paradigms versus the Enlightenment. Portuguese, Brazilian and African writers such as Antero de Quental, Sérgio Buarque de Holanda, Vianna Moog, Amílcar Cabral and others will be read critically and in a comparative approach. Conducted in Portuguese. Enrollment limited to 40.

POBS 1967L. Politics and Culture Under The Brazilian Military Dictatorship, 1964-1985 (HIST 1967L).

Interested students must register for HIST 1967L.

POBS 1970. Reading and Guided Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POBS 1990. Research and Preparation of Honors Projects.

This independent study course is designed for students working on honors projects. Written permission of the concentration advisor (Prof. Sobral) is required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POBS 2120B. Practicum in English as a Second Language.

The practicum in ESL is an integrating and culminating experience in the Master's Program in ESL and Cross Cultural Studies. The course provides a review of the theories and concepts related to English as a Second Language. Throughout the course students apply what they have learned about teaching English language learners and reflect on their assessment, planning and implementation of second language teaching through group discussions and seminars. To participate in this course students must have access to ELs in a classroom setting.

POBS 2120C. Cross-Cultural Practices: Children and Families.

This course focuses on child development and family practices from a cross-cultural perspective. Readings give the participants a broad view of the diversity of environments in which children develop physically, cognitively, socially and emotionally. Course participants explore the environment of childhood throughout the world and analyze child-rearing practices in various western and non-western societies. Participants also study and discuss the development and status of various ethno-linguistic groups of children in Rhode Island, and examine the implications for community-school relationships, teaching and learning. This course is taught in English.

POBS 2450. Exchange Scholar Program.**POBS 2500B. Portuguese Overseas Encounters.**

A critical analysis of some classic Portuguese travel writings from the 15th to the 20th century. The readings include Zurara, Camões, Fernão Mendes Pinto, *História Trágico-Marítima*, Ramalho Ortigão, Raul Brandão, as well as the contemporary Pedro Rosa Mendes. Conducted in Portuguese.

POBS 2500E. Portuguese Cultural and National Identity.

A critical reading of some key issues in Portuguese intellectual history regarding Portuguese national identity. Classical authors such as Verney, Antero de Quental, Teixeira de Pascoais, Fernando Pessoa, Antonio Sérgio, and Eduardo Lourenço are read along with contemporary theoretical works on the issue of cultural and national identity. Conducted in Portuguese.

POBS 2500F. Tales of the "Sertão".

The reality and mythology of the "sertão" have long been a source of inspiration for Brazilian writers, visual artists, and filmmakers. This seminar considers the transformations of the "sertão" motif since the second half of the nineteenth century. Fiction by José de Alencar, Euclides da Cunha, Graciliano Ramos and João Guimarães Rosa. Films by Glauber Rocha and Sandra Kogut. Conducted in Portuguese.

POBS 2500G. Nation and Narration.

The invention and transformation of the idea of Brazil as a nation narrative texts since the middle of the 19th century. Manuel Antônio de Almeida, José de Alencar, Adolfo Caminha, Machado de Assis, Monteiro Lobato, Mário de Andrade, Adalzir Bittencourt, Antônio Callado and João Ubaldo Ribeiro. Theoretical texts by Benedict Anderson, Homi Bhabha, Edward Said, Eric Hobsbawm, Frantz Fanon, Roberto Schwarz and others. Conducted in Portuguese.

POBS 2500H. The City and the Street: Tradition, Modernity and Human Subjectivity in Brazilian Urban Literature.

From Machado de Assis's streetcar chronicles, João do Rio's belle-époque flâneur crônicas, and modernists' views of São Paulo down to the urban paranoia of Rubem Fonseca's crime narratives and the destabilizing subjectivities of contemporary writers, this seminar examines diverse urban bodies and cartographies for understanding spatial and temporal relationships between the city and bodies, sexual cultures, gender roles, violence, peripheries, and metropolitan apocalyptic tensions. Conducted in Portuguese.

POBS 2500I. The Portuguese Essay.

Focuses on some key themes of Portuguese social, political and cultural life that have been dealt with in the essay form, in the 19th and 20th century, such as Portugal's decline, modernization, regeneration and national identity. Special attention to literature on the essay as a genre. Readings include Antero de Quental, Oliveira Martins, Silvino Lima, Joaquim de Carvalho, Antonio José Saraiva, Eduardo Lourenço and others. Conducted in Portuguese.

POBS 2500K. Senses and Sensibilities in the Nineteenth Century Portuguese Novel.

The works to be read are representative of the main literary trends in 19th century Portuguese literature. They will be analyzed with a focus on literary aesthetics, but also on meanings (or senses), both culturally and personally, by exploring the textual construction of emotions, i.e., the engagement of sensibilities in the written word. Authors to be studied include Almeida Garrett, Camilo Castelo Branco and Eça de Queirós. Conducted in Portuguese.

POBS 2500L. Latin American Historiography (HIST 2971E).

Interested students must register for HIST 2971E.

POBS 2500N. Got Rights? Human Rights and Contemporary Brazilian Literature.

Portuguese sociologist Boaventura de Sousa Santos states that nowadays, there is a "global hegemony of human rights as a discourse of human dignity" (2015: 22). Nonetheless, Sousa Santos observes that this hegemony is challenged by a reality of widespread human rights abuses. What then, is the value of human rights and what role does literature play in the discursive construction and the praxis of human rights? This course examines how contemporary Brazilian literature conceptualizes human rights through topics such as authoritarianism, class, race, urban space. The course also establishes connections between human rights in Brazilian and select Spanish American texts.

POBS 2500P. Ways of Belonging in Portuguese Literature.

Based on works by twentieth- and twenty-first century Portuguese authors, this course proposes to explore ways in which Portuguese literature presents itself as a spatial practice that shapes a sense of belonging around certain cultural landscapes. Starting from the idea that environmental perceptions are intertwined with cultural legacies, this course aims to trace a journey through a variety of cultural landscapes that link the present to the past and open space for a critical reflection that brings together local solidarities and transformative worldviews. Readings include authors from the 19th, 20th and 21st centuries, such as Camilo Castelo Branco, Antero de Quental, Raul Brandão, Miguel Torga, Agustina Bessa-Luís, Eduardo Lourenço, José Mattoso, Maria Filomena Mónica, Miguel Esteves Cardoso, Álvaro Domingues, Alexandra Lucas Coelho, Hugo Gonçalves, and Djaimilia Pereira de Almeida. We will also look at music, cinema, and visual arts.

POBS 2500R. Soundscapes of Lusophone Literature and Film.

This interdisciplinary course explores how sound (both listened and imagined) shapes the cultural, historical, and emotional landscapes of the Portuguese-speaking world. Moving across different geographies we will analyze how literature and film construct acoustic environments to evoke memory, identity, gender, race, class, sensory experience and belonging. Bringing together literary and cinematic works, we will explore different concepts and areas of study within sound culture (soundscape, listening, noise, silence, voice, etc). Key questions include: How does sound function as a narrative device, a mode of resistance, or a bearer of collective memory? How do soundscapes reflect or challenge colonial and postcolonial realities? How do Lusophone artists use sound to bridge the oral and the written, the seen and the heard? This course engages with fiction, poetry, film, and theoretical texts from sound studies, literary and film theory. Conducted in Portuguese.

POBS 2600A. Medieval and Renaissance Portuguese Literature.

An analysis of Portuguese literature from the Middle Ages to the 16th century. Special attention given to the poetry of the Cancioneiros, Fernão Lopes, Gil Vicente, and Luís de Camões. Conducted in Portuguese.

POBS 2600B. Saramago and His Contemporaries.

Focuses mainly on the "oeuvre" of José Saramago, the recently deceased Portuguese Nobel Prize winner. Four other well-known Portuguese writers (Vergílio Ferreira, Agustina Bessa-Luís, António Lobo Antunes, Lídia Jorge) are also studied as a way of contextualizing Saramago's work but, more importantly, for their own merit as outstanding novelists. Complementary readings will mostly consist of theoretical texts concerning an approach to contemporary novels based on the nexus between history and fiction on the one hand, and the construction of emotions in literature on the other. Conducted in Portuguese. Enrollment limited to 25.

POBS 2600C. Foundations of Literary Theory.

Designed to provide a solid foundation on the development of literary theory from its ancient roots in Plato, Aristotle, Horace and Plotinus to the contemporary period. Includes Kant, the Russian Formalists, Lukács, Jakobson, Bakhtin, Barthes, Derrida, Ricoeur, Said and others. Conducted in English.

POBS 2600D. Brazilian Fictions of the Self.

Focuses on representations of the self as a "supreme fiction" in Brazilian novels since the late 19th. century. Machado de Assis, Raul Pompeia, Raquel de Queiroz, Graciliano Ramos, Clarice Lispector, Lúcio Cardoso, Lygia Fagundes Telles, Raduan Nassar, Sérgio Sant'Anna and João Gilberto Noll. Open to advanced undergraduates with permission from the instructor. Conducted in Portuguese.

POBS 2600E. António Lobo Antunes and his contemporaries.

The course aims to offer a knowledge of contemporary Portuguese literature centered around the works of António Lobo Antunes, the most prestigious writer in Portuguese literature today, essential to understand the collective Portuguese memory and the collective experience of the Portuguese people over the last 40 years. This course is also about other outstanding contemporary authors, in order to make the student aware of other voices of Portuguese literature, especially those from the most recent generation of writers. Conducted in Portuguese.

POBS 2600F. Histories and Cultures of the Medieval and Early Modern Lusophone World.

This course introduces students to foundational primary and secondary texts (historical, literary, visual) for studying the diverse societies of Europe, Latin America, Africa, and Asia that came into contact with agents of the Portuguese empire between c. 1400-1800. Students will gain research competency in interpreting medieval and early modern Lusophone texts in light of classic and more recent scholarship. Reading comprehension in Portuguese is encouraged but not required. Class will be conducted in English

POBS 2600G. Decolonizing Brazil: The Postcolonial Dilemma of "Not Being And Being Other".

Considering the "ambivalent construction of the Brazilian's cultural existence" as the basic stance for reexamining Brazil from a revised postcolonial approach, this seminar will contextualize the Brazilian postcolonial from the viewpoints of diversity, difference, hybridity, and heterogeneity. Authors to be read are Manuel Antônio de Almeida, Machado de Assis, Adolfo Caminha, Oswald de Andrade, Graciliano Ramos, Samuel Rawet, Silviano Santiago, and Lygia Fagundes Telles. Conducted in Portuguese.

POBS 2600I. Modern and Contemporary Brazilian Poetry.

An intensive reading of selected Brazilian poets of the past eighty years, including Carlos Drummond de Andrade, João Cabral de Melo Neto, Mário Faustino, Paulo Leminski, Ana Cristina Cesar, the "concretistas", and Salgado Maranhão. Each student will be responsible for an oral presentation about an additional poet, to be chosen in consultation with the instructor. Conducted in Portuguese.

POBS 2600J. The "I" of the Beholder: The Autobiographical Mode in Modern Brazilian Fiction.

Analyzes first-person fictional narration and the ethics of self-examination, self-display and self-invention. Examines questions of truth in fiction, the self and the other, autobiographical theory, and the concept of witnessing and reporting in relation to self-representation. Mário de Andrade, Cyro dos Anjos, Antônio Olavo Pereira, Clarice Lispector, Lygia Fagundes Telles, Helena Parente Cunha, Rubem Fonseca, Sérgio Sant'Anna and Bernardo de Carvalho. Conducted in Portuguese.

POBS 2600M. The Word in the Dark: Passion, Quest and Identity in the Universe of Clarice Lispector.

This seminar will examine the major novels, short story collections, and crônicas by the Brazilian writer Clarice Lispector and analyze the development of her literary voice and her unique use of language. Reading her work through and beyond the existential, feminist and poststructuralist views manifested in the best critical and theoretical analyses of her work, this seminar will focus especially upon her passionate struggle with language as well as her genre-breaking narratives, alongside her ontological quest for narrative subjectivity. Seminar presentations and papers will explore these issues with the aim of understanding Clarice's spiritual and philosophical impulses as well as her original linguistic contribution to Brazilian and World Literatures. Conducted in Portuguese.

POBS 2600N. Transgressing Gender: Female Voicing in Modern Brazilian Literature.

This seminar looks at theoretical and critical essays on gender and beyond in relation to the fiction of three major Brazilian female writers: Rachel de Queiroz, Lygia Fagundes Telles, and Clarice Lispector. Discussion addresses issues of gender identity and ambiguity, female voicing, gender politics, alterity, feminist consciousness, as well as power and resistance. Readings include two or more works by each of the three writers. Conducted in Portuguese.

POBS 2600O. The Sage of Suspicion: Machado de Assis and the Agencies of Narrative.

Novels and short stories of Machado de Assis within the context of the socio-political reality of nineteenth-century Brazil. Attention to the ideologies of Brazil's ruling class, its self-image and views on national identity, class and race; the issue of fiction vs. reality; and/or such topics as irony, symbolism, and narratology. Conducted in Portuguese.

POBS 2600P. Fernando Pessoa and Co.

An analysis of key writings by the major Portuguese Modernist poet Fernando Pessoa, as well as by his more important heteronyms, particularly Alvaro de Campos, Alberto Caeiro, Ricardo Reis, and António Mora. The course will emphasize the recurrent themes of identity, divided self, meaning, disquietude, and displacement. Conducted in Portuguese.

POBS 2600W. Contemporary Brazilian Women Writers in the Culture of Money: A Literature of Their Own.

This advanced seminar will study, comment and debate seven contemporary Brazilian novels and two collections of short stories written by women during the last thirty years. Some of the main subjects to be addressed are fear, love, loneliness and exclusion that characterize current turning points for women. The literary works stemming from this kind of environment tend to lead to a labyrinth that maps their characters' and society's emotional behavior, thereby transforming meaning and redirecting the pathways of aesthetic form, while modifying the conventions that shed light upon the authors' construction of their stories.

POBS 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

POBS 2980. Reading and Guided Study.

Reading in Portuguese language, literature, civilization, and bilingual studies. Conducted via Portuguese readings and discussions. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

POBS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Center for the Study of Race and Ethnicity in America

The Center for the Study of Race and Ethnicity in America was established in 1986 as one of the nation's earliest academic centers dedicated to research scholarship, and community-building around issues of race and ethnicity.

Today, CSREA continues this charge by supporting and generating rigorous and accessible research, performance, art, and scholarship on a broad range of issues. The Center's timely events and programs include fellowship opportunities for faculty and artistic practitioners, grants for course innovation, signature lecture series that bring groundbreaking academics to campus, and much more.

Through this work, the Center aims to build intellectual communities, develop and enhance research networks, foster generative public conversations on pivotal issues, and contribute meaningfully to the creation of a more just society.

To learn more about the Center, please visit <https://www.brown.edu/academics/race-ethnicity/>

Religious Studies

The Department of Religious Studies at Brown University provides students with an understanding of diverse religious traditions, an exposure to a variety of approaches employed within the academic study of religion, as well as an opportunity to explore diverse intellectual, social-theoretical, and ethical issues that arise when one considers the various manifestation of religion in human affairs. While the graduate program in religious studies, with select areas of concentrated strength, is one of the finest in the world, the undergraduate program is broad and creative, serving a large number of students both inside and outside the concentration.

For additional information, please visit the department's website: <http://www.brown.edu/academics/religious-studies/>

Religious Studies Concentration Requirements

The concentration in Religious Studies cultivates understanding of societies and cultures throughout the world by exploring religious thought and practice in various historical, geographic, and political contexts. Concentrators discover new ways of engaging the complex world in which they live by studying the public and private concerns that the study of religion highlights, including understandings of self, community, good, evil, authority, and inequality. Equipped with interdisciplinary skills of interpretation and analysis, students learn how political affairs, institutions, conflicts, and social spheres commonly recognized as secular have taken shape through the formation and transmission of religious beliefs, behaviors, values, and rituals. These skills include: close analysis of texts, images, artifacts, artistic works, and other social data; synthesis of research through written and verbal expression; interpretation of the past and present through multiple forms of evidence; and engagement with contemporary social issues and communities.

1. Basic Requirement

A concentration in Religious Studies includes a minimum of nine semester-long courses. Those nine courses include RELS 1000 (a seminar in theories and methods in the study of religion), RELS 1995 (the senior capstone seminar) and seven other concentration courses, which must satisfy the concentration's distribution requirements. Students who transfer to Brown or study abroad must complete at least five courses in Religious Studies at Brown.

2. Distribution of Introductory, Intermediate, and Advanced courses:

Among the seven concentration courses, no more than four courses can be at the introductory level (0001-0199). The plan of study must include at least two advanced-level courses (above 1000), in addition to RELS 1000 and RELS 1995.

3. Distribution of Focus and Approach:

Concentrators are encouraged to develop a broad understanding of religious activity as well as a deep understanding of particular forms of religion. A concentrator's course plan should include courses that examine a variety of geographic and cultural contexts, through a variety of

approaches. The seven concentration courses (that is, the courses other than RELS 1000 and RELS 1995) must:

1. examine more than one religious tradition or culture;
2. reflect more than one primary approach to the study of religion (e.g., philosophical, historical, textual)
3. include at least one course designated as examining Race, Power, and Privilege (RPP). The RPP curricular program highlights courses that examine issues such as structural inequality, racial formations, disparities of power, and autocritique of academic disciplines. In addition to RELS 1000, many Religious Studies courses bear this designation.

To help students create a program of study that balances breadth of focus and approach with attention to the concentrator's particular interests and objectives, concentrators will meet with the Director of Undergraduate Studies (or an approved advisor from within the department) when declaring the concentration to discuss their intellectual priorities and provisional course plans. (In the concentration declaration form, concentrators will describe their priorities and plans.) Through these initial discussions as well as advising meetings in subsequent semesters, concentrators and their advisors will work together to recognize and cultivate each concentrator's theoretical, interpretive, or thematic interests.

4. Courses in Other Departments

Courses cross-listed from other departments and courses listed in other departments but taught by Religious Studies faculty count toward the program of study. Up to two courses taught by faculty in other departments also can count toward the program (pending approval by the DUS) if relevant to the student's program of study. Students who transfer to Brown, study abroad, or otherwise petition to include Brown courses not cross-listed with Religious Studies must complete at least five courses in Religious Studies at Brown.

5. Capstone Project

In the final year of study, all concentrators enroll in the department's Senior Capstone Seminar. Concentrators undertake a capstone project that builds upon a student's previous work in the department and provides a culminating focus for a student's concentration. In extenuating circumstances, a student may petition the DUS to fulfill the capstone within an existing course (subject to approval by its instructor) or an independent study; a concentrator must still enroll in at least nine courses total. Concentrators also may satisfy the capstone requirement by undertaking an honors thesis. Whichever context concentrators choose to complete their capstone within, they will develop a plan for their project no later than the end of the spring semester of the junior year, in consultation with the Director of Undergraduate Studies and other faculty as appropriate.

Honors Thesis (Optional)

A thesis is an opportunity for students to conduct extended independent research under the guidance of faculty. If a student chooses to write an honors thesis, in addition to completing the typical seven concentration courses (in addition to RELS 1000) the student will enroll in RELS 1995 during Fall and RELS 1999 during Spring semester of the senior year. Whether or not a student receives honors, RELS 1995 will serve as the student's capstone course. To be eligible to write a thesis, a student must have earned a grade point average of greater than 3.5 (A=4, B=3, C=2) on courses that count toward the concentration. Additionally, to be eligible for honors, concentrators may take no more than two of the concentration courses with the "S/NC" option, after declaring a Religious Studies concentration. (Note: if a student is philosophically committed to taking the majority of her or his courses at Brown as "S/NC," that student may petition the Department to waive this "S/NC" limit.) Writing the thesis is a necessary, but not sufficient, condition for receiving Honors. In order to receive Honors, the student's thesis must earn an A from its two readers, and the student must have earned a grade point average of greater than 3.5 in the concentration and satisfied all other concentration requirements.

Jason Protass, Director of Undergraduate Studies
Tina Creamer, Departmental Administrator

Contemplative Studies Concentration Requirements

The concentration in Contemplative Studies investigates the underlying philosophical, psychological, and scientific bases of human contemplative experience. Students pursue a "third person" academic approach drawn from the humanities and sciences to analyze the cultural, historical, and scientific underpinnings of contemplative experiences in religion, art, music, and literature. This is developed in combination with a "critical first-person" approach based in practical experience of contemplative techniques and methods to provide an integrated understanding of the role of contemplative thought and experience in societies and on the individuals who constitute them.

Concentration Core (6 courses including the Senior Concentration Seminar)

COST 0100	Introduction to Contemplative Studies	1
Two introductory science courses addressing the biological, psychological, and neurological functioning of the human body/ mind complex with health implications, and how contemplative practices affect it.		
Select one from the following list:		1
BIOL 0200	The Foundation of Living Systems	
CPSY 0200	Human Cognition	
CPSY 0500	Perception and Mind	
NEUR 0010	The Brain: An Introduction to Neuroscience	
Others with approval		
Select one from following list:		1
COST 0200	Meditation and the Brain	
COST 1020	Cognitive Neuroscience of Meditation	
Two humanities courses that present important themes that can emerge from bringing a Contemplative Studies perspective to the study of contemplative religious traditions and to the philosophical analysis of the key questions of human existence.		2
ANTH 1240	Religion and Culture	
CLAS 0990	Karma and Free Will: The Self in Indian Philosophy	
CLAS 1120G	The Idea of Self	
COST 0040	Great Contemplative Traditions of Asia	
or RELS 0040	Great Contemplative Traditions of Asia	
COST 0145	Karma, Rebirth and Liberation: Life and Death in South Asian Religions	
or RELS 0145	Karma, Rebirth and Liberation: Life and Death in South Asian Religions	
COST 0450	Stages of the Contemplative Path	
PHIL 0010	The Place of Persons	
PHIL 0015	Introduction to Philosophy	
PHIL 0510	Psychology and Philosophy of Happiness	
PHIL 1800	Philosophy of Mind	
PHIL 1825	Consciousness	
RELS 0056	Spiritual But Not Religious: Making Spirituality in America	
RELS 0065	On Being Human: Religious and Philosophical Conceptions of Self	
RELS 1370B	Philosophy of Mysticism	
Others with approval		
COST 1950	Senior Concentrators' Seminar	1
Students must complete six additional courses in either a Science or Humanities track.		6

Total Credits

12

Track Requirements (6 additional courses Including a Capstone Course)

Students must complete either a Science or Humanities track in addition to the concentration core.

Science Track

The Science track in Contemplative Studies gives concentrators a foundational understanding of the scientific methods used to investigate the biological, psychological, and neurological effects of contemplative practice and their potential implications on physical and mental health both for individuals and for the general public. Students will be taught how to critique current research as well as how to develop, operationalize, and test hypotheses related to contemplative practice. Students will become well-versed in how to study first-person reports related to the *phenomenology* of contemplative experience as a foundation for formulating third-person tests of the effects of practice on brain function and behavior. The Contemplative Studies Science Track trains students to investigate these types of questions not only for academic scholarship, but also to provide a method of self-inquiry that can be used to augment any area of life.

Five thematic science courses, including a Capstone Course, drawn primarily from BIOL, COST, NEUR, CLPS, and PHP, at least one of which must include laboratory work and two of which must be 1000-level; and one Statistics course for a total of six courses.

The Capstone Course is intended to be a culmination of the students' concentration in which they will bring to bear what their interests have been in developing their focused work in the program. The Capstone course can be either:

- a. A one semester Independent Reading and Research course, either COST 1910 or 1920 OR BIOL 1950 or 1960, depending on the semester; OR
- b. A special project done within an existing Contemplative Studies core or related course at the 1000-level in which the student brings to bear the larger concerns of her concentration on a problem or issue within the course. It is expected that such Capstone research papers will be more substantial than a term paper.

BIOL 0280	Biochemistry (lab)
BIOL 0470	Genetics (lab)
BIOL 0530	Principles of Immunology
BIOL 0800	Principles of Physiology (lab)
BIOL 1880	Comparative Biology of the Vertebrates
CPSY 0700	Social Psychology
CPSY 0710	The Psychology and Philosophy of Happiness
CPSY 1193	Laboratory in Genes and Behavior
CPSY 1194	Sleep and Chronobiology Research
CPSY 1291	Computational Methods for Mind, Brain and Behavior
CPSY 1400	The Neural Bases of Cognition
CPSY 1490	Functional Magnetic Resonance Imaging: Theory and Practice
CPSY 1492	Computational Cognitive Neuroscience
CPSY 1570	Perceptual Learning
CPSY 1590	Visualizing Vision
CPSY 1791	Laboratory in Social Cognition
COST 0200	Meditation and the Brain
COST 1020	Cognitive Neuroscience of Meditation
NEUR 1020	Principles of Neurobiology
NEUR 1030	Neural Systems
NEUR 1540	Neurobiology of Learning and Memory
NEUR 1600	Experimental Neurobiology
NEUR 1940I	Neural Correlates of Consciousness

PHP 1600	Obesity in the 21st Century: Causes, Consequences and Countermeasures
PHP 1920	Social Determinants of Health
Others with approval	
One statistics course (others with approval)	
APMA 0650	Introduction to Probability and Statistics
APMA 1650	Introduction to Probability and Statistics with Calculus
BIOL 0495	Statistical Analysis of Biological Data
CPSY 0900	Statistical Methods
PHP 1501	Essentials of Data Analysis

Humanities Track

The Humanities track explores the origin and development of contemplative practices within specific religious, cultural, and historical contexts and gives students a foundation in the Philosophy of Mind relevant to the scientific study of contemplative practice. Students will choose a concentration program that includes three intermediate and three advanced seminars drawn from the two areas below. While it is recommended that students focus primarily on one of these two areas, the precise balance of the individual concentration program for each student will be established with the concentration advisor when the student applies to enter the concentration, normally in their fourth semester of study.

Six courses, including a Capstone Course, from across the two areas below:

The Capstone Course is intended to be a culmination of the students' concentration in which they will bring to bear what their interests have been in developing their focused work in the program. The Capstone course can be either:

- a. A one semester Independent Reading and Research course, either COST 1910 or 1920 OR BIOL 1950 or 1960, depending on the semester; OR
- b. A special project done within an existing Contemplative Studies core or related course at the 1000-level in which the student brings to bear the larger concerns of her concentration on a problem or issue within the course. It is expected that such Capstone research papers will be more substantial than a term paper.

Contemplative Religious Traditions

CLAS 0210Y	The Philosophy of Classical Indian Yoga
CLAS 0820	Epics of India
CLAS 0850	Mythology of India
CLAS 0990	Karma and Free Will: The Self in Indian Philosophy
CLAS 0995	India's Classical Performing Arts
CLAS 1140	Classical Philosophy of India
CLAS 1160	Love and Devotion, Power and Poverty: India's Literary Classics
COST 0145	Karma, Rebirth and Liberation: Life and Death in South Asian Religions
COST 0535	Self Transformation and Transcendence in Later Daoist Contemplative Traditions
COST 0550	Tibetan Buddhism and the West
COST 1420	The Contemplative Foundations of Classical Daoism
EAST 1420	The Confucian Mind
RELS 0045	Buddhism and Death
RELS 0100	Buddhist Thought, Practice, and Society

PHIL 1430	Moral Theories
PHIL 1705	Epistemology
PHIL 1735	Metaphysics
PHIL 1755	Philosophy of Science
PHIL 1800	Philosophy of Mind
UNIV 1520	The Shaping of World Views
Others with approval	

Honors Requirement

Students with a minimum GPA of 3.5 in the concentration may apply for entrance into the Honors program in the middle of their sixth semester. To apply, students submit a proposal for a senior thesis project describing the work to be undertaken and its relevance to the field of Contemplative Studies, along with a copy of their academic transcript. Students accepted into Honors must complete the required Capstone seminar, UNIV 1010, and enroll in an additional semester of independent study in their advisor's department. Students must complete an Honors Thesis to the satisfaction of their advisor and present the results of their studies in formal talks or poster sessions open to all interested faculty and students.

Religious Studies Graduate Program

The graduate program in Religious Studies at Brown is one of the finest in the nation. From among a large pool of highly qualified applicants, the department admits around four to six doctoral students a year. Our students receive six years of full funding; additional funding is possible but not guaranteed. The department's graduates have an excellent placement record, teaching in such institutions as Harvard, Stanford, Indiana University, University of California, Brooklyn College, Reed College, Haverford, University of Pennsylvania, and University of Wisconsin (Madison). Current graduate students have distinguished themselves by presenting papers at international conferences and earning recognition and support from prestigious external funding organizations.

We offer a fifth year Master's Degree for current Brown undergraduate students:

Eight graduate level courses are required, including RELS 2000A, "Method and Theory in the Study of Religion: Historicizing the Discipline" and RELS 2000B, "Method and Theory in the Study of Religion: Interpreting Religion." Students must demonstrate competency in modern research languages (usually French and/or German) as well as in whatever other languages are relevant to their research. A thesis is required.

We offer Ph.D. studies in four areas:

1. Asian Religious Traditions (ART) (<http://www.brown.edu/academics/religious-studies/graduate/doctoral-tracks-phd/asian-religious-traditions-art/>)
2. Islam, Society and Culture (ISC) (<https://www.brown.edu/academics/religious-studies/graduate/doctoral-tracks-phd/graduate-study-2/>)
3. Religion and Critical Thought (RCT) (<http://www.brown.edu/academics/religious-studies/graduate/doctoral-tracks-phd/religion-and-critical-thought-rct/>)
4. Religions of the Ancient Mediterranean (RAM) (<http://www.brown.edu/academics/religious-studies/graduate/doctoral-tracks-phd/religions-ancient-mediterranean-ram/>) (including Ancient Judaism, early Christianity, early Islam, and numerous others)

For more information on these programs, please click on the program link above.

[\(http://www.brown.edu/academics/gradschool/programs/religious-studies/\)](http://www.brown.edu/academics/gradschool/programs/religious-studies/)

For general questions about applications, how and when to apply, information for international applicants, application fees, waivers, and any other general inquiry please consult the Brown Graduate School's main information page, and especially the Application Information menu on the left-hand side of the page:

<https://www.brown.edu/academics/gradschool/application-information>
[\(https://www.brown.edu/academics/gradschool/application-information/\)](https://www.brown.edu/academics/gradschool/application-information/)

Courses

Contemplative Studies

COST 0030. Sound, Song and Salvation in South Asia.

Sound, Song and Salvation in South Asia explores both the theoretical formulations and the performative expressions that constitute the inextricable nexus of sound, music and religious practice in South Asia. By investigating fundamental concepts such as *nāda*, *rāga*, *bhakti* and *rasa*, this course historicizes the ongoing discourse on the soteriological underpinnings of several genres of South Asian music from Vedic chanting to Hindustani and Carnatic music traditions.

COST 0032. Music and Meditation.

Music and Meditation explores the contemplative nature of sonic experience from humanistic, artistic and scientific perspectives. By drawing from various traditions across both time and space, and by engaging with a variety of disciplinary methodologies from Contemplative Studies, Ethnomusicology, Religious Studies and Cognitive Science, we will seek to better understand how diverse religious communities have used music as a meditative tool, a mystical philosophy, a communal exercise, a ritual performance, and more. We will examine the philosophies of thinkers, scientists and musicians to investigate music making as both an instrument, and a goal, of contemplative practice.

COST 0034. Dharma: A History of Classical Indian Civilization.

Dharma—a Sanskrit word encompassing duty, ethics, law, and religion—is a common thread running through the cultures of premodern India. This course offers a history of Indian civilization from its origins up through the end of the classical period. Drawing on a rich array of textual, material, and expressive cultures, we trace the arc of human history on the subcontinent, paying special attention to the intersections of religion and politics. The sources at hand reveal the dynamic interplay between tradition and innovation, and attest to human efforts to redefine what it means to live a life according to dharma.

COST 0035. Saints and Mystics of India.

Saints and Mystics of India explores the rich variety of religious experience in India as expressed in the inspired poetic productions of several mystics through time. By critically listening to these powerful voices of the past, we will endeavor to understand how mystical poems from divergent Indian traditions exhibit multiple points of interaction, influence and convergence. Our investigation will draw on the spontaneous literary outpourings of several mystics including but not limited to: Nammalvar, Andal, Kabir, Mahadeviyakka, Nanak, Mira, Tukkaram, Caitanya, Ramakrishna and Ramana Maharshi.

COST 0036. Love and War in India.

Love and War in India explores two fundamental cultural tropes that have significantly shaped the religious, literary, social and political life of South Asia. Building on the ancient Tamil conceptions of *aham* (love/interiority) and *puram* (war/exteriority), and the Sanskrit ideas of *kama* (desire), *dharma* (duty) and *ahimsa* (non-violence) we will investigate a variety of texts on religious devotion, ethical behavior and political theory in order to contextualize the concepts of love and war within multiple arenas of Indian social and cultural life.

COST 0037. Sensing the Sacred: Sensory Culture in South Asian Religions.

This course explores South Asian religions through the body, the senses, and aesthetics. Drawing on Hindu, Buddhist, and Jain traditions, and concentrating on embodied practices such as meditation, chanting, eating, sex, asceticism, ritual, possession, and performance, we will examine experiences of the sacred in India, past and present. How has sensory culture shaped lives, practices, and doctrines? What place do the senses have in South Asian traditions? Drawing on premodern law codes, erotic handbooks, and medical treatises; and integrating new media from ethnographic films to graphic novels, we will plunge into the rich sense-worlds of religions in South Asia.

COST 0040. Great Contemplative Traditions of Asia.

Introduction to the critical study of contemplative practices and experiences emphasizing philosophical and scientific analyses of works from the major Asian contemplative traditions of South and East Asian Buddhism and Chinese Daoism in historical context. Theoretical studies of mysticism and studies from the psychological sciences will be included. Additional weekly meditation lab section.

COST 0041. Contemplation, Mysticism and Action in Christianity.

While Eastern traditions like Buddhism are well-known for meditation, contemplative practices within Western traditions often remain underexplored. This course aims to fill that gap by focusing on Christian contemplation and mysticism. Contemplative practices have long played a vital role in spiritual development, guiding individuals toward a deeper connection with the Divine. From the early Desert Fathers and Mothers to influential figures like Ignatius of Loyola, Teresa of Avila, Saint John of the Cross, and modern voices such as Thomas Merton, these practices have offered powerful tools for inner transformation and social engagement. This course will examine the intersection of contemplation, mysticism, and action in the world from both historical and contemporary perspectives. It will also introduce the emerging field of neurospirituality, exploring how contemplative and mystical experiences can affect the brain and contribute to psychological, emotional and spiritual well-being.

COST 0067. Divine Drugs: Psychedelics, Religion, and Spirituality.

From LSD to magic mushrooms, mescaline to ayahuasca, psychedelics are drugs that alter consciousness and perceptions of reality. This course investigates the central role that religion and spirituality have played in the long, tangled history of psychedelics, from colonial eradication of psychedelics as indigenous sacraments, to psychedelic modes of expanding consciousness in 1960s counterculture; from the moral panic around these substances as a tool of mind control, to their present scientific investigation as a panacea for mental health, addiction, and self-realization. Interweaving primary sources and scholarly accounts on psychedelics, our inquiry will use an interdisciplinary approach, blending religious studies, philology, anthropology, the history of science, and art history. To explore this varied terrain, we survey the history of divine drugs around the world, even as we ruminate on the wisdom and philosophy they have inspired over the ages.

COST 0100. Introduction to Contemplative Studies.

Introduction to the new field of Contemplative Studies focusing on identifying methods human beings have found, across cultures and across time, to concentrate, broaden and deepen conscious awareness. We will study what these methods and experiences entail, how to critically appraise them, how to experience them ourselves, and how they influence the development of empathy, health, and well-being. Prerequisites: None. Enrollment limit is 40.

COST 0120. The Classical Chinese Philosophy of Life.

An introduction to the origins and early development of the indigenous religious thought of China from the oracle bone divination of the Shang Dynasty to the ethical philosophy of Confucianism and the cosmology and mysticism of Daoism. The course will seek to identify and elucidate the basic elements of the distinctive Chinese world view and demonstrate how they have shaped the nature of religious practice and experience and how they have been shaped by them. Works of interpretive scholarship will be used to supplement the primary texts in translation that will form the course. Optional lab section.

COST 0140. Food, Religion and Politics in South Asia.

Why study food? What can food tell us about religion, politics, and culture? Food in South Asia often shapes identity, social status, ritual purity, religious belonging, and political activism—the notion that you are what you eat has wide currency. Whatever form it takes, food embodies histories of migration, trade, empire, colonialism, and ethics. Through reading primary texts and ethnographic articles, watching films, and (of course) eating delicious food, we will explore the rich foodways of South Asia and their social, religious, and political ramifications.

COST 0145. Karma, Rebirth and Liberation: Life and Death in South Asian Religions.

Karma, Sanskrit for the "action" that makes up a human life, has been a central concern for the religious traditions of South Asia throughout their history. Hinduism, Buddhism and Jainism share the belief that after death people are reborn, taking on lives according to their actions in lives previous. In these traditions, liberation from the cycle of rebirth becomes the ultimate goal of human existence. This course examines the ideas of karma, rebirth and liberation in Hinduism, Buddhism and Jainism from historical, cosmological, ritual, narrative, iconographic and theological points of view. We also look at these ideas in Western culture.

COST 0200. Meditation and the Brain.

This course provides an exploration and critique of psychological and neuroscientific research on meditation by situating the current applications of meditation in the West in the broader historical context of the development of Buddhism. In this course, we will critically evaluate the findings of scientific and clinical studies of meditation in terms of their methodological rigor, implicit assumptions, and biases. We will also study the transmission of Buddhism from Asia to the West in order to understand the influence of Buddhism norms and worldviews on contemporary applications of meditation. This course will also feature first-person experiential learning in select meditation practices.

COST 0440. Contemplation and the Natural World.

The course begins with an examination of contemplative practices in select Buddhist and Christian contexts and their associated goals, values, and worldviews. Particular emphasis will be placed on the significance of nature as a context for or object of contemplative practices. The course then turns to modern Western naturalists and nature writers to uncover the contemplative dimensions to their craft. Throughout, the course investigates how human relationships to the natural world are defined and influenced by the cognitive, perceptual, and emotional dimensions of human experience. The course includes contemplative practice labs and field trips to the natural world.

COST 0450. Stages of the Contemplative Path.

One common metaphor for human life and self-transformation is the journey or the path. Contemplative traditions have also employed this image, offering both concise and expansive maps of the stages of practice and anticipated end goals of the contemplative life. The study of path structures allow us to carefully compare the relationship between specific cognitive, affective, and somatic practices, their resultant states and traits of human experience, and the meaning and value ascribed to them in different historical and cultural contexts.

COST 0480. Buddhist Ethical Theory.

Discussions of ethical questions in the classical Buddhist philosophical literature focus not only on how one should act, but also – perhaps more fundamentally – on which habits of mind and heart should be cultivated. In this course, students will (1) gain an understanding of Buddhist approaches to ethical questions, (2) learn to compare Buddhist approaches to ethical questions and ethical theorizing with prominent approaches in Western philosophy, and (3) examine whether and how classical Buddhist approaches to ethical questions might improve on and move forward contemporary discussions in the philosophical literature on ethics, and in society more broadly.

COST 0520. Tai Chi, Qigong, and Traditions of Energy Cultivation in China.

In recent years Taijiquan (Tai Chi) and Qigong have become increasingly popular forms of exercise, alternative medicine and contemplative practice. This course aims to provide students with a foundation for understanding these practices through an exploration of their roots in Chinese medicine, philosophy and religion, as well as their more recent history in modern China and the rest of the world. In addition to studying historical and scholarly interpretations of these practices, students will also have the opportunity to learn basic Qigong and Taijiquan in weekly labs.

COST 0525. The History and Practice of Yoga in India and Beyond.

From its roots in premodern India to its current popularity worldwide, yoga has a rich a complex history. As a practice of the mind, body, and spirit, yoga has taken many forms—meditation, chanting, breath control, postures—in order to achieve a range of goals: liberation from rebirth, supernatural powers, strength, pleasure, peace, wellness. As its reputation and commodification have increased, yoga has attracted deep interest, debate, and even controversy. In this course we will study yoga from its earliest texts to its status in the modern world, addressing its historical, religious, social, and political ramifications in many different contexts.

COST 0526. This Whole World is OM: Mantras in Indian Religions.

A mantra is a syllable or formula used in ritual and meditation. Mantras are central to Indian religions—not only Hinduism, but also Jainism, Buddhism, Sufism, and Sikhism. Some mantras are made up of words and language—usually in Sanskrit—while others are sound fragments with no semantic meaning. The sacred syllable OM, now a global symbol of Eastern spirituality, exemplifies the power and authority of mantra. What are mantras? What do they accomplish? How do they shape identities, beliefs, and practices? Engaging with sacred utterance in various media, this course explores the world of mantras in India and beyond.

COST 0535. Self Transformation and Transcendence in Later Daoist Contemplative Traditions.

Who are we? How do we fit in the universe? Like many other systems of thought around the world, the Daoist tradition approached these questions both through the creation of texts, teachings, and theory, and through the development of at times extremely complex embodied contemplative practices. Starting from a perspective of a person not as a unitary, monolithic entity, but rather as a composite of energies and influences, these practices seek to harmonize, balance, and transform the person. This course will explore how the possibilities of personal transformation were expressed in Daoist contemplative literature from the first centuries CE up to the modern day. Contemplative practice labs will also offer students an opportunity to explore the ideas in the texts through direct experience. No prerequisites.

COST 0550. Tibetan Buddhism and the West.

This course traces the history and development of the various lineages of Tibetan Buddhism from its origins in Indian Buddhism through to encounters between Tibet and the West in the modern period. The course investigates the religious, political, and geographical conditions in Tibet that influenced the development of some of the unique characteristics of the lineages of Tibetan Buddhism. The course explores key doctrines, practices, institutions, and religious leaders of the major lineages, and delves into key events in the modern period, beginning with the age of missionaries and explorers and ending with the Cultural Revolution and subsequent diaspora.

COST 0555. Zen: An Introduction.

"Zen" has become a common trope in modern North American Culture but few people know what the term really means. This course will study Zen's origins in Indian Perfection of Wisdom teachings, follow its meanderings through China from the legend of Bodhidharma through the Five Houses of Chan, and chart its arrival and developments in Japan and eventual transplanting to the West. We will focus on several important Zen teachers: Huineng and Linji in China, Dōgen, Bankei and Hakuin in Japan. We will also explore the essential technique of kōan meditation and the practice of "just sitting."

COST 0560. Contemplation and Social Action.

The spiritual path is often called an inward journey. Practices like contemplation, renunciation, meditation and seclusion are often experienced in isolation with the mind drawn towards the self. This may seem counterproductive to social action, almost selfish, but exemplary spiritual aspirants from across time and space have demonstrated how contemplation can be a powerful medium of social change. By exploring key historical movements (Indian Independence, Abolitionism, Civil Rights) and transformational figures who have embodied the ideals of engaged contemplation (Gautama Buddha, Mohandas K. Gandhi, Martin Luther King, Jr., Thich Nhat Hanh and the Dalai Lama), this course seeks to elucidate relevant ways in which contemplative philosophies and practices can challenge, critique, and ultimately transform the world in which we live by way of peaceful, inclusive and socially engaged means.

COST 0650. Psychology and Philosophy of Happiness (PHIL 0650).

Interested students must register for PHIL 0650.

COST 0725. Psychedelics in Religion, Science, and Healing.

Psychedelics are in the midst of a renaissance of public attention. Though used for millennia in indigenous ceremonies and religious rites, it is only in the last century that they have played a role in Western science, medicine, and culture. Literally "manifesting the soul," psychedelics have been both stigmatized and hyped, remaining illegal or controversial in many contemporary contexts even as they are marketed as the "next big thing" in mental health care. This course compares and contrasts the cultural and ontological contexts for psychedelic use from indigenous and religious ceremonies to contemporary scientific clinical trials and neuroscience. Along the way, pressing questions within the psychedelic field will be investigated from an interdisciplinary lens and with an appreciation for history and context.

COST 0855. The Bhagavad Gītā (CLAS 0855).

Interested students must register for CLAS 0855.

COST 0990. Concepts of the Self in Classical Indian Literature (CLAS 0990).

Interested students must register for CLAS 0990.

COST 1020. Cognitive Neuroscience of Meditation.

Buddhist philosophy describes a model as to how the mind works. Neuroscientists have begun to study the impact of meditation on brain structure and function, often using Buddhist philosophy to guide their hypotheses. We will review neuroscientific literature and discuss how it relates to Buddhist philosophy, using the four foundations of mindfulness as the primary framework. The course will be a mixture of lecture, discussion of a primary scientific paper that is assigned each week, and presentations by students. Pre-Requisites: NEUR0010 or Declared Contemplative Studies Concentration.

COST 1030. The Contemplative Science of Compassion.

This course will focus on the historical foundations and science of contemplative-based compassion trainings, with a particular focus on Buddhist psychology. We will critically examine clinical and social science literature while reviewing potential mental health (e.g., depression, posttraumatic stress disorder) and social benefits (e.g., "re-humanization," reducing intergroup bias) as well as drawbacks and limitations, adverse effects, controversies, and important unasked questions and perspectives. Alongside teachings from the Compassion Cultivation Training, developed by Dr. Thupten Jinpa, a historical lens will be integrated throughout. We will draw from literatures in contemplative science, history, psychological and neurosciences, public health, and religious studies.

COST 1080. Meditation, Mindfulness and Health (PHP 1880).

Interested students must register for PHP 1880.

COST 1082. Me, Myself, and I: Exploring Senses of Self from a Multidisciplinary Perspective.

Human beings have long puzzled over how precisely to conceptualize and understand what and how it is that we are. Questions about the nature of the self have informed the speculations of philosophy, the soteriologies of religion, the trajectories of self-cultivation in contemplative traditions, and the therapeutics of psychology. Recently, cognitive science and phenomenology have developed new explanations for how multiple senses of self shape lived experience and give rise to various self-concepts. Students in this course will engage with dimensions of selfhood that we often take for granted by studying senses of self from multidisciplinary and cross-cultural perspectives.

COST 1090. The Craving Mind.

We are creatures of habit. Driven by biological processes set up to help us survive, our minds are constantly craving experiences and substances—from smartphones to romance to alcohol—and this craving leads to habit formation. This course will explore the behavioral and mental processes that foster craving and consequent habit formation, the impact these have on individual and societal health, and how we can “hack” our own neurobiological reward circuitry using practices such as mindfulness, to foster greater health and wellbeing.

COST 1420. The Contemplative Foundations of Classical Daoism.

Introduction to classical Daoism, one of the two indigenous religions of China, through the history, philosophy, and contemplative practices found in its foundational works the Daodejing and the Zhuangzi. Through careful study of these texts, we will attempt to reconstruct the intellectual and experiential elements on which this tradition was based.

COST 1442. The History, Philosophy, and Practice of Rinzai Zen Buddhism.

An advanced seminar that considers Rinzai Zen Buddhism from origins in India to developments in China to its transmission to Japan and eventual transplanting to the West. Course will examine the nature of cultural and historical influences on the practices and adaptations through the Asian and American contexts, including the secular pedagogy of Contemplative Studies. Pre-Requisite: Any of the following courses: COST 0040/RELS 0040; RELS 0045; RELS 0100; COST 0100; COST/RELS 0125; COST/RELS 0145; COST/RELS 0555; RELS 1425; RELS 1440. Meditation lab: T/Th at 11:00- 11:50 PM.

COST 1520. Consciousness (PHIL 1520).

Interested students must register for PHIL 1520.

COST 1700A. The History, Philosophy, and Practice of Rinzai Zen: Zen Master Hakuin Ekaku.

Explores Japanese Rinzai Zen Buddhist tradition by focusing on its seminal figure, Hakuin Ekaku (1686-1769). Examines his biography, core practices, and key philosophy by looking at selections from his essential autobiographical and philosophical writings as well as his artwork. Focuses on the following aspects of Hakuin's importance in the history of Japanese Buddhism: Hakuin as reviver of Rinzai Zen, especially kōan practice; Hakuin as a meditation master; Hakuin as talented artist; Hakuin as social critic. Readings will be primary sources in translation.

COST 1705A. Principles and Practices of Contemplative Studies.

Advanced study of the distinctive methods of the field of Contemplative Studies that includes third-person, second-person, and critical first-person perspectives. Will focus on the study of meditative practices in their cultural contexts and on essential scientific research on their nature and effects. Prerequisite: COST 0100 or Permission of Instructor. Meditation Lab to be scheduled

COST 1870. Neuroethics (SCSO 1700P).

Interested students must register for SCSO 1700P.

COST 1885. Measuring Mindfulness.

Recently, the cover of Time magazine declared a “mindful revolution” due to its popularity and growing body of research suggesting that mindfulness may help to treat a number of health-related problems from general stress to anxiety to addiction. However, little is known about the underlying mechanisms of how it works. This course will investigate the many ways that mindfulness is measured (e.g. self-report, behavior, EEG, fMRI etc.), and use these as a doorway for our own experiential exploration of what mindfulness is for ourselves.

COST 1890. The Craving Mind (PHP 1890).

Interested students must register for PHP 1890.

COST 1910. Individual Study Project – Semester 1.

COST Individual Study Project Semester 1, directed reading and research arranged with individual faculty. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COST 1920. Individual Study Project - Semester 2.

COST Individual Study Project Semester 2, directed reading and research arranged with individual faculty. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COST 1950. Senior Concentrators' Seminar.

A selection of topical readings that will enable concentrators in the Sciences and Humanities Tracks of the concentration to synthesize their knowledge of the field of Contemplative Studies and its current principal issues. Students will also share ideas and methods regarding the research and writing of their Capstone Projects, which typically they will be working on concurrently via their other course.

COST 1980. Thesis Preparation.

Required of seniors in the honors program, (second semester of two-semester sequence that includes COST 1950 in first semester). Open to others only by permission of the Director. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Religious Studies

RELS 0010. Happiness and the Pursuit of the Good Life.

What is happiness, and how does it relate to the “good life,” or a life well-lived? This is an age-old question, and in this course we will investigate religious and philosophical answers alongside insights drawn from modern positive psychology. A major goal of the course is to give you intellectual tools that will help you to construct a meaningful life. Areas of study will include value determination; gratitude; status and wealth; and mindfulness.

RELS 0011. Faith and Violence.

Explores the relationship between religious texts and rhetoric and violence. How do sacred texts promote or discourage violence, and how have later religious communities understood (and continue to understand) these texts? While the course will focus mainly on Judaism, Christianity, and Islam, occasional Asian examples will be used. No prerequisites.

RELS 0012. The Religious Lives of Everyday People.

For centuries, scholars have looked to religious institutions, theological doctrines, and sacred texts to explain religion's form and function in culture and society. And while this approach has enabled scholars to neatly prescribe what counts as religious, it's also caused them to ignore the ways people's daily faith practices make a mess of this work. Drawing on sub-fields in religious studies, anthropology, and sociology, this course explores how formal ideas of religion expand when confronted with the normality of everyday life. From cooking and talking to prayer and devotion, the “religious” and “non-religious” things people do tell us a lot about how religion animates and is animated by lived experience, and how porous the boundary is between the “sacred” and “profane”.

RELS 0014. Jesus.

Who was, and is, Jesus? Who decides? What can we know about the historical Jesus and who he became? In this course, we will begin with the earliest accounts of Jesus as recounted in the canonical gospels and outside it (e.g., the Gospel of Judas). Then we will turn to the many ways that later generations of Christians (both heretical and orthodox) and non-Christians depicted Jesus, especially in art, literature, theology, politics, and entertainment. We will read canonical and non-canonical Christian texts, Jewish accounts of Jesus, the Quran, modern Christian apologetic literature, and analyze films like the Life of Brian.

RELS 0015. Sacred Stories.

What do stories do? How do stories underlie who we are, where we are, or why our world is as it is? Ancient religious stories have been formative for western culture in all its expressions, lasting into our modern, secularized times. They underlie how we think about life, death, suffering, or joy. They sustain foundational categories of power, gender, sexuality, race and class. How do they work? This course will examine narrativity – the telling, sharing, and contesting of stories – as a means for constructing and maintaining religious identity, community, and world view. Jewish, Christian, and Muslim materials. Mini-lectures; in-class discussion.

RELS 0021. Inequality in the Ancient World.

This course examines various forms of inequality in the ancient world as well as the range of responses to it by those who resist it and reject it. The axes of inequality we shall investigate vary from culture to culture, but often include the privileging of male/masculine over female/feminine, native over foreign, whole-bodied over “defective” or “blemished,” old over young, ritually pure over polluted, holy over common or profane, rich over poor, free over enslaved, honored over shamed, or the couplings of men and women over same-sex couplings. The course is comparative, with a primary focus on texts and artifacts from ancient Israel and coastal West Asia, Babylon and Assyria, Greece and Rome. Texts we will study include various passages from the Hebrew Bible (Christian Old Testament), the Epic of Gilgamesh, Hammurabi’s Laws, the Middle Assyrian Laws, the Iliad, and

RELS 0022. Introduction to the New Testament.

The New Testament, the product of a Jewish social movement two thousand years ago, remains one of the most interesting and important collections of texts in history. This course explores the origins of these texts in their social context, and through close readings, the development of the various theologies contained within them. Comparisons will also be made to ancient Jewish, Greek, and Roman texts and the non-canonical Christian texts that were contemporary with the New Testament. In addition, the modern appropriation of the “Jesus paradigm” in film and pop culture will be discussed.

RELS 0025. Wealth: Religious Approaches.

This course will survey religious approaches to the acquisition and use of wealth: How do religious thinkers understand the notion of ownership and private property? Is the fact of ownership of significant possessions seen as a moral good or an impediment to the spiritual life? Are there better or worse ways to acquire wealth? To spend it? The course will focus primarily on Judaism and Christianity, although examples from Islam and perhaps eastern religions will be brought in as appropriate. Topics to be covered will include religious understandings of poverty, charity, finance, and the link between religion and capitalism.

RELS 0030. Sound, Song and Salvation in South Asia.

Sound, Song and Salvation in South Asia explores both the theoretical formulations and the performative expressions that constitute the inextricable nexus of sound, music and religious practice in South Asia. By investigating fundamental concepts such as *nāda*, *rāga*, *bhakti* and *rasa*, this course historicizes the ongoing discourse on the soteriological underpinnings of several genres of South Asian music from Vedic chanting to Hindustani and Carnatic music traditions.

RELS 0032. Music and Meditation.

Music and Meditation explores the contemplative nature of sonic experience from humanistic, artistic and scientific perspectives. By drawing from various traditions across both time and space, and by engaging with a variety of disciplinary methodologies from Contemplative Studies, Ethnomusicology, Religious Studies and Cognitive Science, we will seek to better understand how diverse religious communities have used music as a meditative tool, a mystical philosophy, a communal exercise, a ritual performance, and more. We will examine the philosophies of thinkers, scientists and musicians to investigate music making as both an instrument, and a goal, of contemplative practice.

RELS 0034. Dharma: A History of Classical Indian Civilization.

Dharma—a Sanskrit word encompassing duty, ethics, law, and religion—is a common thread running through the cultures of premodern India. This course offers a history of Indian civilization from its origins up through the end of the classical period. Drawing on a rich array of textual, material, and expressive cultures, we trace the arc of human history on the subcontinent, paying special attention to the intersections of religion and politics. The sources at hand reveal the dynamic interplay between tradition and innovation, and attest to human efforts to redefine what it means to live a life according to dharma.

RELS 0035. Saints and Mystics of India.

Saints and Mystics of India explores the rich variety of religious experience in India as expressed in the inspired poetic productions of several mystics through time. By critically listening to these powerful voices of the past, we will endeavor to understand how mystical poems from divergent Indian traditions exhibit multiple points of interaction, influence and convergence. Our investigation will draw on the spontaneous literary outpourings of several mystics including but not limited to: Nammalvar, Andal, Kabir, Mahadeviyakka, Nanak, Mira, Tukaram, Caitanya, Ramakrishna and Ramana Maharshi.

RELS 0036. Love and War in India.

Love and War in India explores two fundamental cultural tropes that have significantly shaped the religious, literary, social and political life of South Asia. Building on the ancient Tamil conceptions of *aham* (love/interiority) and *puram* (war/exteriority), and the Sanskrit ideas of *kama* (desire), *dharma* (duty) and *ahimsa* (non-violence) we will investigate a variety of texts on religious devotion, ethical behavior and political theory in order to contextualize the concepts of love and war within multiple arenas of Indian social and cultural life.

RELS 0037. Sensing the Sacred: Sensory Culture in South Asian Religions.

This course explores South Asian religions through the body, the senses, and aesthetics. Drawing on Hindu, Buddhist, and Jain traditions, and concentrating on embodied practices such as meditation, chanting, eating, sex, asceticism, ritual, possession, and performance, we will examine experiences of the sacred in India, past and present. How has sensory culture shaped lives, practices, and doctrines? What place do the senses have in South Asian traditions? Drawing on premodern law codes, erotic handbooks, and medical treatises; and integrating new media from ethnographic films to graphic novels, we will plunge into the rich sense-worlds of religions in South Asia.

RELS 0040. Great Contemplative Traditions of Asia.

Introduction to the critical study of contemplative practices and experiences emphasizing philosophical and scientific analyses of works from the major Asian contemplative traditions of South and East Asian Buddhism and Chinese Daoism in historical context. Theoretical studies of mysticism and studies from the psychological sciences will be included. Additional weekly meditation lab section.

RELS 0041. Contemplation, Mysticism and Action in Christianity.

While Eastern traditions like Buddhism are well-known for meditation, contemplative practices within Western traditions often remain underexplored. This course aims to fill that gap by focusing on Christian contemplation and mysticism. Contemplative practices have long played a vital role in spiritual development, guiding individuals toward a deeper connection with the Divine. From the early Desert Fathers and Mothers to influential figures like Ignatius of Loyola, Teresa of Avila, Saint John of the Cross, and modern voices such as Thomas Merton, these practices have offered powerful tools for inner transformation and social engagement. This course will examine the intersection of contemplation, mysticism, and action in the world from both historical and contemporary perspectives. It will also introduce the emerging field of neurospirituality, exploring how contemplative and mystical experiences can affect the brain and contribute to psychological, emotional, and spiritual well-being.

RELS 0045. Buddhism and Death.

Death is universal but seldom discussed in contemporary culture. In this class we will address how the varieties of Buddhist religion represent and understand dying, death, and the afterlife. Using images, films, and texts, we will ask, How should we die? How does death influence the living? Is there an afterlife? What should be done with dead bodies? The class will move between theories and practices, and past and current events. Coming to terms with these diverse materials may reveal to us some of our own assumptions about death, dying, and the afterlife.

RELS 0050. Love: The Concept and Practice.

A study of love (in classical and modern texts and in film) that provides a window into a host of religious, philosophical, and ethical issues. Topics include the potential conflict between divine and human love, between transcendent and earthly love, and the nature of friendship, romance, marriage, and love at the crossroads. Although the scope is love in the West, the Kamasutra and other texts furnish a comparative component. All students must register for one conference in addition to the primary section.

RELS 0052. Experiencing Powerlessness, Power, and Religion in the Ancient World.

We often speak of power and powerlessness but how are these things experienced? By what means can we say someone experiences power? What are the nuances of that experience? Is powerlessness merely a lack of something or does the experience of powerlessness have a more complex interaction with its subjects? In this class we will be investigating the effects of experiencing power and powerlessness in the context of religion in the ancient world. We will be analyzing the means by which people acted upon others and the ways in which those actions affected both themselves and their subjects.

RELS 0055. Modern Problems of Belief.

Some say it is impossible to be both a modern person and a religious person. What are the assumptions behind this claim? And what is it about the modern (or postmodern) era that, according to some, has made religion difficult to believe in? These questions will be discussed as we explore the ways religion has been understood in Western culture from the Enlightenment to the present. We will read such influential thinkers as Hume, Kant, Hegel, Kierkegaard, Marx, Nietzsche, Freud, Durkheim, Buber, and Woody Allen. Each figure has left a decisive mark on the way we think about religion.

RELS 0056. Spiritual But Not Religious: Making Spirituality in America.

When people call themselves "spiritual but not religious," what does that mean? This course answers that question by exploring many of the diverse ideas, practices, and desires that the idea of spirituality has included. To see how spirituality has saturated American society, students will examine phenomena such as yoga, hip hop, ghosts, self-help gurus, countercultures, and protest movements. By studying the making of spirituality in the past and present, this course will enable students to recognize how Americans have made sense of their own lives and institutional attachments through shifting concepts of race, pluralism, science, capitalism, secularism, and more.

RELS 0058. Christianity and Culture.

The aim of this introductory level lecture course is to interrogate the relationship between culture and religion. The foundation for our study will be exemplary works by major cultural critics and theologians since the early 19th century. Our focus will be on forms of cultural criticism put forward by interdisciplinary thinkers that attempted to gain a better grasp of both modern social crises and sources of communal joy. The course shall rehearse debates in cultural studies, theology, postmodernism, and politics.

RELS 0060. Judaic Studies Introductory Cross Listings.**RELS 0060A. Believers, Agnostics, and Atheists in Contemporary Fiction and Memoirs (JUDS 0050A).**

Interested students must register for JUDS 0050A.

RELS 0060B. Foreigners, Refugees, and the Ethics of Minority (JUDS 0061).

Interested students must register for JUDS 0061.

RELS 0060C. The Bible and Moral Debate (JUDS 0060).

Interested students must register for JUDS 0060.

RELS 0060D. Antisemitism: A History (JUDS 0063).

Interested students must register for JUDS 0063.

RELS 0060E. Angels and Demons Past and Present (JUDS 0064).

Interested students must register for JUDS 0064.

RELS 0060F. Ancient Israelite and Jewish Narrative and Artistic Image (JUDS 0065).

Interested students must register for JUDS 0065.

RELS 0060G. Hope, Despair, and Longing in Jewish Thought (JUDS 0050K).

Interested students must register for JUDS 0050K.

RELS 0065. On Being Human: Religious and Philosophical Conceptions of Self.

An examination of classic and contemporary views on the nature of human existence. Central themes include human freedom, the relation between reason and emotion, and the significance of personal history and memory. We also ask how conceptions of who we are shape views about how we should live. Sources include religious and philosophical texts as well as recent films.

RELS 0067. Divine Drugs: Psychedelics, Religion, and Spirituality.

From LSD to magic mushrooms, mescaline to ayahuasca, psychedelics are drugs that alter consciousness and perceptions of reality. This course investigates the central role that religion and spirituality have played in the long, tangled history of psychedelics, from colonial eradication of psychedelics as indigenous sacraments, to psychedelic modes of expanding consciousness in 1960s counterculture; from the moral panic around these substances as a tool of mind control, to their present scientific investigation as a panacea for mental health, addiction, and self-realization. Interweaving primary sources and scholarly accounts on psychedelics, our inquiry will use an interdisciplinary approach, blending religious studies, philology, anthropology, the history of science, and art history. To explore this varied terrain, we survey the history of divine drugs around the world, even as we ruminate on the wisdom and philosophy they have inspired over the ages.

RELS 0068. Religion and Torture.

The debates about the moral and legal status of torture have acquired a new urgency since 9/11. People are now questioning the consensus of law and human rights declarations that torture is never permissible. Indeed, some argue that in extreme cases, it may be obligatory to torture a captive for information that could save many lives. This class explores the recent debates about torture from secular and religious perspectives. It also deals with more general themes related to torture: What are the nature and effects of pain? Are human beings sacred, and does sacredness involve a prohibition against torture?

RELS 0072. Asian Classics.

An introduction to the most influential religious writings of South and East Asia. These "Great Books of the East" depict the values, ritual concerns, symbols, and philosophical speculations of the major religious communities of ancient and medieval India, Tibet, China, and Japan. Emphasis will be on key ideas with an eye to their broader significance. Readings may be drawn from the Upanishads, Bhagavad Gita, Analects, Dao De Jing, Journey to the West, and Life of Milarepa, among others. No prerequisites.

RELS 0080. Japan: Nature, Ritual and the Arts.

This course is an introduction to Japanese culture and aesthetics as represented in pre-modern literature, drama, tea practices, landscape and the fine arts. Recurring themes include Japanese attitudes toward the natural world; traditional conceptions of beauty; and the function of ritual in artistic cultivation. The course is designed for students who have no previous exposure to Japanese studies at the college level; no prerequisites.

RELS 0082. Japan's Floating World.

An introduction to visual, literary, and dramatic expressions of Japan's moral and aesthetic values in the early modern period (17th-19th centuries). We will seek to identify recurring intellectual and cultural patterns, as illustrated in woodblock prints, Kabuki, puppet theatre, and popular fiction, with an eye to connections with later popular culture. Course materials are primary readings in translation, secondary scholarship, and audiovisual works. No previous knowledge of Japan or Japanese language is expected.

RELS 0085A. Exodus: Freedom in the Modern Black and Jewish Religious Imaginations.

A symbol of the journey from exile and captivity, slavery and oppression to liberation and freedom, the story of the Biblical Exodus of the Israelites from Egypt has helped many communities articulate narratives of suffering and redemption. In this class, we will examine Black and Jewish confrontations with catastrophic conditions in modernity and try to understand the distinctive and yet paralleled ways the Exodus narrative has helped these communities undertake projects of racial, ethnic, and collective struggle for freedom and cultural self-transformation.

RELS 0085B. Blues People: Topics in African American Religion and Culture.

African American religious practices and cultural expressions have been a significant force in American culture and a sustaining force for African-Americans. Some have argued there is nothing distinctive about African-American cultures, others contend that African American religion is merely a response and a regurgitation of European forms of Christianity, while others have erected strict boundaries about what does and does not constitute black culture and religion. This introductory course will investigate what constitutes African American religion and culture, the social and political impact of African American religion and culture, and their relationship, among other things.

RELS 0085C. Religion, Spirituality, and Ecology in the West.

We live in an age of immense and intersecting environmental problems. Has Western philosophical and religious thought contributed to them? If so, how? What theoretical and practical tools – of these traditions or others – can be used to resolve these problems? This course will address these broad questions by exploring classical and contemporary representations of nature and the place of human beings within it. Special emphasis will be given to the relation between nature and culture; the relation between nature and technology; the relation between nature and gender; our ethical duties to the natural environment; and the normativity of nature.

RELS 0085D. Religion and Place: An Introduction.

The intersection of religion and place is a complex and fundamental aspect of the human experience. It is a theme that scholars and thinkers have explored for a long time, yet it still holds a powerful sway over our understanding of the world. In this course, we will delve into the intricacies of this intersection, drawing on a range of critical works and perspectives to gain a deeper understanding of its significance. By examining critical works from environmental humanities, social sciences, legal studies, and indigenous studies, we will gain a greater appreciation for the diversity and complexity of how religion and place intersect. We will explore the roles of religion and place in creating and maintaining social structures, shaping our relationships with the natural world, and providing a framework for understanding our place in the cosmos.

RELS 0085E. Sex Wars: Religion and Gender in the Public Sphere.

Religious traditions have always had a lot to say about sex, gender, and sexuality—be it eunuchs under Roman rule or reproductive autonomy in the US today. Many heated and long-standing public debates take place at this very intersection. While we tend to imagine religion as inherently sex negative, religious communities have diverse and diverging approaches to sex and sexuality. In this course, we turn to “Sex Wars” in the public imagination, including but not limited to: abortion, gay marriage, sodomy, contraception, trans life, child and sexual abuse, consent, and the AIDS crisis. Using resources from religious studies and gender studies, we will investigate the way such public debates appear and recur, deepening our understanding of the relationship between religion, gender, and public discourse, and developing tools to both research on and intervene in these ongoing debates.

RELS 0085F. The Christian Right.

An introductory cultural and historical study of conservative Christianity in the United States. The Christian Right has played a defining role in American and global politics since at least the 1940s. What is the history of this movement? Who are conservative Christians, and how are they distinct from other kinds of religious actors? What, exactly, do they believe—about feminist and LGBT rights, healthcare, education, civil rights, religious liberty, and capitalism? This course explores these questions and more, with an emphasis on intersectional feminist and critical ethnic studies analysis of the themes and histories at hand. Students will analyze primary sources from the movement, complete a field visit to a thematic site of their choosing, participate in biweekly film screenings, and do a final “unessay” project related to their specific areas of interest.

RELS 0086. Religion and Movement Politics.

This course considers the relationship between religion and social movements in democratic societies. Political theorists often invoke social movements and the Civil Rights Movement, in particular, as examples of salutary political uses of religion. But what does ‘religion’ mean in these debates? What is its relationship to race and gender? And under what conditions – and to whom – do religions and social movements pose problems for democratic politics? This course explores these questions using a range of theoretical sources as well as historical, ethnographic and personal accounts of twentieth- and twenty-first-century social movements.

RELS 0087. Religion in America.

From Native American traditions and Puritan migrations in the seventeenth century to Barack Obama's “crypto-Islam” and debates over gay rights in the twenty-first: American history is religious history. For centuries, religion has shaped how Americans have carried out their everyday lives, interacted with others, understood themselves, and perceived the wider world. Focusing primarily on religious life in the United States, this course invites students to explore the relationship between religion and society in North America by addressing key questions and critical tensions surrounding such issues as race, ethnicity, science, gender, capitalism, pluralism, sexuality, and secularism.

RELS 0088. Judaism, Christianity, and Islam.

A survey of the history and major beliefs and rituals of Judaism, Christianity, and Islam, with special attention to issues of contemporary concern. Will serve also to introduce basic methods for studying religion in an academic context.

RELS 0089. Jews and Muslims: Their Contacts through the Ages.

What are the contours and major themes of interactions between Jews and Muslims from the 7th century to the present? What can we learn from this history about ways in which minority and majority communities develop—socially, intellectually, and so on—in relationship to one another, in varying political and demographic circumstances? This course explores the topic of Jewish-Muslim relations from such angles as religion, literature, philosophy, politics, economics, and social life. Some of the contexts and themes we will examine are the following: attitudes toward Jews and Judaism in earliest Islam; the Judeo-Arabic “symbiosis” of the Middle Ages; social developments in the Jewish-Muslim relationship in the Near East and Europe in the early modern period; Jews and Muslims as ethnic and religious minorities in Western countries today; and Islamic life in the State of Israel.

RELS 0090A. Women and Gender in Ancient Religions.

What was religion like for women in the ancient Mediterranean world? What experiences, emotions, and constraints characterized women's religious lives? What was public and what was private? What were the family issues involved? How were religions gendered? Were there major differences between religions that included goddesses and priestesses, and those that did not? Were notions of gender fixed or fluid? Could they enable religious freedoms for women? We will explore these and other questions through a consideration of religions Greek, Roman, Jewish, and Christian between roughly 500 BCE and 500 CE, with a focus on the Roman Empire. Discussion

RELS 0090B. Indigenous Ecologies.

A collaborative exploration of (mainly North American) Indigenous traditions, practices, and beliefs in relation to ecology. We will learn about a variety of Indigenous environmental perspectives and practices as expressed by Indigenous authors, elders, film producers, and community members. Topics will include: Indigenous knowledge systems, environmental activism, sacred lands, the importance of place, kinship relations to the human and more-than-human, climate change adaptation, storytelling, tribal and food sovereignty, and how settler colonialism and dispossession have affected Indigenous populations in their relation to the environment. Additionally, we will learn about Brown University's relation to local Indigenous lands and populations, and how Indigenous research methods can inform the Brown community of scholars. Our community of learning will discuss broad topics that relate to life and learning at the University, and will offer guidance and support for students' first year experience at Brown.

RELS 0090E. Faith and Violence.

Explores the relationship between religious texts and rhetoric and violence. How do sacred texts promote or discourage violence, and how have later religious communities understood (and continue to understand) these texts? While the course will focus mainly on Judaism, Christianity, and Islam, occasional Asian examples will be used. No prerequisites. Reserved for First Year students. Enrollment limited to 19. Instructor permission required.

RELS 0090F. Friendship in the Ancient World.

How have ancient societies understood friendship, and how do ancient ideas about friendship differ from or resemble those of contemporary Westerners? This seminar, a comparative investigation of the ways in which friendship has been represented in the Hebrew Bible, Mesopotamian literature, and Greco-Roman texts, will addresses these and other questions through study of materials such as the Epic of Gilgamesh, the Iliad, the Book of Ruth, 1 and 2 Samuel (on Jonathan and David), the Wisdom of Ben Sira (Sirach), and Aristotle's Nicomachean Ethics. Enrollment limited to 19 first year students.

RELS 0090I. Radical Romantics: Politics, Ecology, and Religion.

We will endeavor to create an intimate community of learning as we jointly explore political, environmental, and religious aspects of Romanticism (especially British Romanticism). It has become commonplace to think of Romanticism as nostalgic notions of the pastoral or narcissistic reports of the individual's private gaze on the sublime. In contrast to this approach, we will focus on the radical political and environmental perspectives embedded within Romantic religious and poetic sensibilities. In the process, we will reflect on how this Romantic heritage can serve as a contemporary public resource for the cultivation of interrelated environmental and democratic beliefs and practices.

RELS 0090J. Death and Afterlife in the Biblical Tradition.

A close analysis of the development of ideas about death and the afterlife in the Hebrew Bible and in the literatures of Second Temple Judaism and early Christianity. Topics: life and death in Israel and ancient West Asia; the abode of the dead and its denizens; from Sheol to Heaven, Hell, and the final judgment; religious specialists, rituals, and the literature of death: necromancy; burial and mourning rites; cults of the dead ancestor. No prerequisites. Enrollment limited to 19 first year students.

RELS 0090K. Christmas in America.

This course explores how Christmas became a religious, consumer, and social extravaganza. Every year, many Americans devote several months to preparing for and recovering from Christmas. Most participate as Christians, but others participate despite other religious identities. Yet Christmas has not always loomed so large. Through encounters with such phenomena as sacred stories, consumer practices, and legal controversies, this course invites students to ask how and why Christmas became an important event. By the end of the course, students not only will recognize how religion and culture take shape together but also will appreciate how popular practices develop.

RELS 0090L. Pilgrimage and Quest.

An exploration of pilgrimage broadly conceived, encompassing devotional visits to revered sites, personal travel quests, and literary or imagined journeys. Emphasis on the ritual dimension of specific pilgrimages across cultures, as well as the transformative effects of the travel process itself. Some consideration of relations between pilgrimage and tourism. Materials include historical and anthropological records as well as biographical, fictionalized, and poetic accounts.

RELS 0090M. Religion Violence and Media.

This first-year seminar studies the phenomenon and representation of religious violence, with a focus on the critical study of contemporary media. and the nature and roots of militant Islamist violence in the contemporary world. We will learn about historical contexts, theoretical structures, and comparative case studies and explore self-styled religious movements, including the rhetoric of martyrdom, domestic (US) and international terrorism, and social media.

RELS 0090N. What is Islam? Rethinking Centers and Peripheries in Religious Tradition.

Islam is a major religion with over a billion adherents living in different parts of the world. One can easily speak of "Islam" as an all-encompassing religious tradition with a scripture and a fixed set of beliefs shared by many a follower, but Islamic/Islamic history and heritage is a tapestry of multiple patterns and colors. In this class we will survey Islamic history and traditions by reading and discussing both primary and secondary sources. We will question what we might mean when we say something, or someone is "Islamic". We will examine how Muslims elaborated on their religious corpus to build political, ethical, legal, and religious institutions. We will also discuss how gender, sexuality, race, and class functioned in the building of these institutions.

RELS 0095A. Islam from the Ground Up.

Current events and popular culture alike direct our attention to the centrality of discourse on the Islamic world. In this course, we examine the historical origins and development of Islamic religion and practice in light of the sources and communities that shaped them in a variety of contexts. The goals of this course are to learn the fundamentals of: how people have studied the Qur'an, the concept and development of "Shariah", sectarianism, approaches to gender and sexuality, and Muslim theology, philosophy, and mysticism in pre-modern and contemporary Muslim life.

RELS 0096. The Imaginary Lives of Muslims.

How have Muslims understood the natural and social world that forms the backdrop for human lives? We will use this question to chart a variety of Islamic perspectives pertaining to thought and action. Topics include: worldviews contained in the Quran and other early Islamic materials; formal cosmologies that reflect continuity with late antique ideas; mystical thought pertaining to Sufis and Shi'is; reflection on politics and ethics; impact of modern science; and contemporary perspectives concerning the environment, gender, race, and class. No prerequisites or presumption of prior knowledge regarding the subject.

RELS 0100. Buddhist Thought, Practice, and Society.

From its beginnings to the 21st century. Principal teachings and practices, institutional and social forms, and artistic and iconographical expressions.

RELS 0105. Judaism.

Surveys the major practices, traditions, and beliefs of the Jews, with an emphasis on modern Jewish communities. How does a Jewish community shape its practices and beliefs against its own specific historical circumstances to create a coherent and meaningful religious system? What is "Judaism," and how do scholars of religion explain and interpret it?

RELS 0110. Christians.

A historical survey of Christianity from its foundations to the present, tracing its development into three main branches: Orthodox, Catholic, and Protestant. Readings from a variety of Christian "classics" accompany the survey, pursuing the theme of how-in different times, places, and circumstances-Christians have understood their relations to the divine and to the world.

RELS 0120. The Classical Chinese Philosophy of Life.

An introduction to the origins and early development of the indigenous religious thought of China from the oracle bone divination of the Shang Dynasty to the ethical philosophy of Confucianism and the cosmology and mysticism of Daoism. The course will seek to identify and elucidate the basic elements of the distinctive Chinese world view and demonstrate how they have shaped the nature of religious practice and experience and how they have been shaped by them. Works of interpretive scholarship will be used to supplement the primary texts in translation that will form the course. Optional lab section.

RELS 0140. Food, Religion and Politics in South Asia.

Why study food? What can food tell us about religion, politics, and culture? Food in South Asia often shapes identity, social status, ritual purity, religious belonging, and political activism—the notion that you are what you eat has wide currency. Whatever form it takes, food embodies histories of migration, trade, empire, colonialism, and ethics. Through reading primary texts and ethnographic articles, watching films, and (of course) eating delicious food, we will explore the rich foodways of South Asia and their social, religious, and political ramifications.

RELS 0145. Karma, Rebirth and Liberation: Life and Death in South Asian Religions.

Karma, Sanskrit for the "action" that makes up a human life, has been a central concern for the religious traditions of South Asia throughout their history. Hinduism, Buddhism and Jainism share the belief that after death people are reborn, taking on lives according to their actions in lives previous. In these traditions, liberation from the cycle of rebirth becomes the ultimate goal of human existence. This course examines the ideas of karma, rebirth and liberation in Hinduism, Buddhism and Jainism from historical, cosmological, ritual, narrative, iconographic and theological points of view. We also look at these ideas in Western culture.

RELS 0150. Islam Unveiled.

In this course, the historical origins and development of Islam will be studied in light of the sources and communities that shaped it. Themes to be explored include the central doctrines of Islam as derived from the Qur'an and traditions (sunnah), the development of Islamic law (shari'ah) the Shi'i alternative, the growth of Muslim theology, philosophy, and mysticism (Sufism), and controversial issues among contemporary Muslims.

RELS 0195. Gender in Early Jewish and Christian Narratives.

Many of the favorite narratives of Jews and Christians in the ancient period (for this course, about 400 BCE to 300 CE) featured women characters or emphasized issues of gender: Esther, Judith, and Susanna; Mary Magdalene and other gospel women, or Thecla, the perhaps legendary companion of Paul. Both Jewish and Christian texts used gender to explore new ways of constructing heroic women and men that either re-inscribed or challenged traditional roles. This seminar takes up a close reading of narrative texts, compared also with wisdom texts (Proverbs, Ben Sira, Wisdom of Solomon, Avot).

RELS 0200A. Christianity and Economic Inequality.

In the face of the vast, increasing economic inequality, this sophomore seminar interrogates the role of religious institutions and individuals. Do our religious institutions sustain or challenge economic inequality, and how? We will attempt to answer this question with a focus on three types of texts: classical texts that shaped 20th Century U.S. Christian consciousness (e.g., Weber, Niebuhr, and Ayn Rand); contemporary works that analyze the effects of economic inequality on the social fabric (e.g., Stiglitz, Freeland, Wilkinson/Pickett); and texts that clarify the vital roles some contemporary religious movements are playing in supporting economic inequality (e.g., Bowler, Walton, Byrne).

RELS 0200B. Ethics and Politics of Intelligibility and Otherness.

This course will explore philosophical and religious ideas about intelligibility and otherness, with a close eye to how these ideas have significant value for identifying, understanding, and addressing how we relate to and engage with others – especially "others" not like "us" – in modern democratic societies. Toward these ends, the course will address several interconnected questions. Are we intelligible to each other, despite profound differences of belief, practice, identity, and experience? Or do these deeply ingrained differences engender a radical unintelligibility between persons and between persons and nature? How our views about the intelligibility and otherness of other persons and of nature impact the way we construe ethical and political dialogue, contestation, conflict, and change? How can philosophical and religious ideas, traditions, and practices aid in cultivating mutual intelligibility across difference? What is the relation between intelligibility, otherness, and power?

RELS 0210A. Religion, Politics, and Culture in America (HIST 0253). Interested students must register for HIST 0253.

RELS 0210B. Pilgrimage Art and Architecture in the Middle Ages (HIAA 0432).

Interested students must register for HIAA 0432.

RELS 0240. Judaism and Christianity in Conflict.

Explores the tense relationship between Judaism and Christianity from antiquity to the present, with an emphasis on theological issues and polemics. Readings include selections from the New Testament and early Christian writers on Jews and Judaism, Jewish writings on Jesus and Christianity, transcripts of medieval debates, philosophical broadsides, parodies, and contemporary theological documents (e.g., Vatican II).

RELS 0260. Religion Gone Wild: Spirituality and the Environment.

A study of the dynamic relation between religion and "nature" or the more-than-human world. Religion, in this course, includes forms of religion within and outside the bounds of conventional religious traditions. In this course, then, religion includes Buddhism, Christianity, and Aboriginal religion, but also ecofeminism, nature literature, and environmentalism. Topics in this study of religion, ethics, and environmental humanities include: religious depictions of humans in relation to "nature" and the more-than-human; the contribution of religions to environmental degradation and environmental health; religion and environmental justice; and North American and Australian indigenous eco-spiritual perspectives.

RELS 0265. Philosophy as Spiritual Practice.

From antiquity to the present, the philosopher has been concerned with cultivating artful ways of living through intentional "spiritual exercises." This seminar offers a historical survey of ancient and modern approaches to philosophy as a way of life and the spiritual exercises these approaches entail. Special attention will be given to ideas about the self and human flourishing, the nature of freedom and responsibility, the question of democratic community and tradition, the question of God and religion, and the ethical status of nature. We will carefully consider how these ideas intersect with various spiritual practices and exercises, including walking, storytelling, cultivating the senses, paying attention, cultivating virtue and character, stoic contemplative exercises, ritual practice, work, prayer, forgiveness, and love. Finally, we will try out some of these exercises to gain a deeper understanding of these different philosophical approaches to life.

RELS 0290D. Islamic Sexualities.

In this course we examine gender and sexuality in a range Muslim cultures past and present, as well the ways in which Islam is imagined (in and against Orientalist scholarship) in relationship to gender and sexuality. In addition to topics such as Islamic law, the representation of women in the Quran, and gender and family issues in the life of the Prophet Muhammad, we will also explore scholarship on how constructions of gender and sexuality shape the representation of Islam and Muslims in a variety of contexts. Students will learn to engage with and complicate key terms including "masculinity," "cultural difference," "women's and LGBT rights," and "modernity/civilization" that are widely, and often uncritically, deployed in the study of Islamic life and culture.

RELS 0290E. Engaged Buddhism.

"Engaged Buddhism" is a term used to describe social activism that applies Buddhist insight and ethics. This course will examine the historical background of engaged Buddhism, explore its central concepts, analyze it theoretically, and look at practical applications. Since many engaged Buddhist movements employ meditation, we will also study, first hand, the effects of meditation on prosocial attitudes in the "Meditation Labs" that are integral to the pedagogy of the course. Preference given to students who have taken RELS 0500 or UNIV 0540 or who have prior coursework in Buddhism. Additional weekly meditation lab section.

RELS 0290H. Defense Against the Dark Arts in the Ancient World.

Alongside their Jewish and Pagan neighbors, ancient Christians sought to control and defend themselves against unseen forces teeming around them. They bound powerful angels to their will and harnessed the spirits of the recently deceased to activate their spells. Though none found the Elixir of Life, they left behind spells, recipes, and talismans as evidence of their quest to master spirits both hostile and sympathetic. This course will interrogate Christian and non-Christian conceptions of magic, its relationship with "religion" and "philosophy," contextualize Christian magical practices alongside their neighbors, and conclude by examining the reception of "magic" into the modern West.

RELS 0320. Israelite Religion.

The origins and development of ancient Israel's religious beliefs, rituals and cultic institutions will be considered from an historical and contextual (i.e., wider West Asian) perspective. Topics include method in reconstructing religion; myth, epic and history; the identity of Yahweh, Israel's national god; covenant; Yahweh and other deities (monolatry and monotheism; angels; a consort of Yahweh?); temples, their iconography and ideologies; festivals and sacrifice; purity; death and afterlife; religious specialists (priests, prophets, mediums, professional mourners). No prerequisites.

RELS 0323. Great Jewish Books.

A survey of classic Jewish texts, from the Bible to modern literature. Each text will be discussed from the perspective of both its own historical and social context and its engagement with earlier ones. Attention will be paid on how these authors address perennial issues of human concern and how their answers are shaped by their experience as Jews.

RELS 0325. How the Bible Became Holy.

No book in human history has exercised as much influence as the Bible. Over the past 2,000 years, people have killed and died for the Bible, and it continues to exercise a powerful if contested role in modern politics. Yet how did it achieve this power? This course will trace the development of the Hebrew Bible (Old Testament) from its origins in ancient Israel to its development about five hundred years later as a foundational text of both Judaism and Christianity. The focus will be on how Jews and early Christians throughout antiquity understood and ascribed authority to the Bible.

RELS 0340. Kabbalah: An Introduction to Jewish Mysticism.

In the 12th and 13th centuries, new ways of approaching Judaism sprung up in France and Spain that would come to be known as "kabbalah." These new approaches expressed aspirations for mystical illumination and elaborated vast mythological narratives about divine and demonic beings. The kabbalists radically departed from the then-conventional understandings of Judaism, particularly those of philosophers like Maimonides. However, they also claimed to find their new worldviews in the tradition's most ancient texts. This course will introduce students to kabbalah's founding period, focusing on primary texts (in translation), especially the Zohar, the magnum opus of classical kabbalah.

RELS 0410. Ancient Christianity: Jesus to Muhammad.

The communal struggles, personal rivalries, and theological conflicts that shaped Christianity in its formative centuries: heresy and orthodoxy, hierarchy and charisma, gender and class, persecution and martyrdom, paganism and classical tradition, creeds and councils, asceticism and the body, church and state, eastern and western Christianity. Focused in the 2nd through 6th centuries A.D.

RELS 0415. Ancient Christian Culture.

How did the Jesus movement that originated in a backwater of the Roman Empire become the Empire's dominant religion? What was it like to be a Christian in a world full of religions, cults and philosophical traditions, and of diverse social and cultural identities? An introduction to the history of early Christianity, and to the ancient Christian culture through the exploration of selected topics by means of textual, material and epigraphic evidence. Multiple Christianities; literacy and orality; visual culture; the episcopal authority; wealth and poverty; asceticism and monasticism; hagiography and the cult of saints; sacred landscape and pilgrimage; women, gender; burial.

RELS 0420. Sacred Bodies.

How did ancient Christians understand embodied holiness? What did the bodies of saints demonstrate or reveal? Different notions of what makes a body "sacred" have abounded in Christian history, and continue to inflect our broad cultural thinking about gender, sexuality, race, ethnicity, and health. This course will explore those constructions and their malleability through the reading of ancient Christian hagiography (stories about saints). We will ask whether and how multiple notions of sacred bodies might be visible in Christian imagination. The course is organized around three broad categories of holy bodies: the heroic body, the desiring body, and the performing body. Seminar format. WRIT

RELS 0430. Sacred Stories.

Ancient Christian narrative imagination and the formation of Western culture. Emphasis will be on the ancient stories that accompanied the spread and "triumph" of Christianity, but attention will also be given to how these themes and images have prevailed in western history. Biblical legends, heroes and heroines, saints and sinners, the demonized Religious Other.

RELS 0450. Both Divine and Deficient: Women between Discourse and Practice in East Asian Religious Traditions.

In this course, we will examine the main religious traditions of East Asia — Confucianism, Buddhism, Daoism, Shintoism, and folk practices like Shamanism — through the lens of gender. These traditions offer diverse narratives, discourses, and prescriptions, which shaped and informed women's religious lives. In some cases, female practitioners are treated positively, while in others, we find more disparaging depictions. As we examine the treatment of female practitioners within these traditions, we will also observe how specific historical women navigated gender expectations, created their own spaces of practice, and offered their own interpretations. The geographical breadth of the course, which includes China, Japan, and Korea, will allow us to consider historical continuities and departures between these different regions. Finally, we will also deliberate on the ways these traditions can confront and address modern issues related to women and gender.

RELS 0500. The Theory and Practice of Buddhist Meditation.

Examines the theory and practice of Buddhist meditation in historical and modern contexts. Traces this practice from its origins in 6th-century B.C.E. India to its transmission through Sri Lanka, Myanmar, Thailand and on to modern insight meditation movements in the West. Students will examine selected textual sources and explore how Buddhist meditation is practiced today, both as an individual practice and as part of broader social institutions. Additional weekly meditation lab section.

RELS 0505. Big Screen Buddha.

"Big Screen Buddha" examines representations of Buddhism(s) in diverse Asian cinemas. Classic, contemporary, documentary, and experimental films include Thai ghost stories, a Tibetan comedy, and portrayals of Japanese priests as sound artists. We will survey major traditions of Buddhism, and closely examine local lived traditions. Students will confront problematic representations of race and ethnicity as well as misogyny. The existence of death, sex, and drugs will arise in discussion. Additional topics include sound and Buddhists experimenting with making the medium sacred. Background in the study of Buddhism or film not required, though preferred. Lecture with screening plus discussion each week.

RELS 0510. Confucian Ethics.

An examination of Confucian moral thinking as contained in the *Analects*, *Mengzi*, *Xunzi*, and *Records of Rituals*. Issues considered include the absence of a concept of transcendence, the relationship between moral and ritual norms, and moral activity as an aesthetic and spiritual discipline, against the background of Western patterns of moral thought. Prerequisite: Previous work in ethics or Chinese studies.

RELS 0520. Tai Chi, Qigong, and Traditions of Energy Cultivation in China.

In recent years Taijiquan (Tai Chi) and Qigong have become increasingly popular forms of exercise, alternative medicine and contemplative practice. This course aims to provide students with a foundation for understanding these practices through an exploration of their roots in Chinese medicine, philosophy and religion, as well as their more recent history in modern China and the rest of the world. In addition to studying historical and scholarly interpretations of these practices, students will also have the opportunity to learn basic Qigong and Taijiquan in weekly labs.

RELS 0525. The History and Practice of Yoga in India and Beyond.

From its roots in premodern India to its current popularity worldwide, yoga has a rich and complex history. As a practice of the mind, body, and spirit, yoga has taken many forms—meditation, chanting, breath control, postures—in order to achieve a range of goals: liberation from rebirth, supernatural powers, strength, pleasure, peace, wellness. As its reputation and commodification have increased, yoga has attracted deep interest, debate, and even controversy. In this course we will study yoga from its earliest texts to its status in the modern world, addressing its historical, religious, social, and political ramifications in many different contexts.

RELS 0526. This Whole World is OM: Mantras in Indian Religions.

A mantra is a syllable or formula used in ritual and meditation. Mantras are central to Indian religions—not only Hinduism, but also Jainism, Buddhism, Sufism, and Sikhism. Some mantras are made up of words and language—usually in Sanskrit—while others are sound fragments with no semantic meaning. The sacred syllable OM, now a global symbol of Eastern spirituality, exemplifies the power and authority of mantra. What are mantras? What do they accomplish? How do they shape identities, beliefs, and practices? Engaging with sacred utterance in various media, this course explores the world of mantras in India and beyond.

RELS 0530. Laozi and the Daodejing.

Introduction to classical Daoism, one of the two indigenous religions of China, through the history, philosophy, and contemplative practices found in its famous foundational work, the Daodejing. Through careful study of this text and its many early iterations, including the recently discovered manuscript versions from Ma-wang-tui and from Guodian and early commentaries, we will attempt to reconstruct the intellectual and experiential elements on which this tradition was based. Limit: 10.

RELS 0535. Self Transformation and Transcendence in Later Daoist Contemplative Traditions.

Who are we? How do we fit in the universe? Like many other systems of thought around the world, the Daoist tradition approached these questions both through the creation of texts, teachings, and theory, and through the development of at times extremely complex embodied contemplative practices. Starting from a perspective of a person not as a unitary, monolithic entity, but rather as a composite of energies and influences, these practices seek to harmonize, balance, and transform the person. This course will explore how the possibilities of personal transformation were expressed in Daoist contemplative literature from the first centuries CE up to the modern day. Contemplative practice labs will also offer students an opportunity to explore the ideas in the texts through direct experience. No prerequisites.

RELS 0545. Confucianism and Its Critics.

This course confronts the changing historical phenomenon we call “Confucianism” on its own terms, as represented by its advocates, as well as from the perspective of its interlocutors and critics. It is an opportunity to become familiar not only with the Confucian canon and its main commentarial traditions, which undergirded education in East Asia into the nineteenth century, but also with the ways in which these ideas were rejected, adjusted, and reconfigured in early Daoist discussions, Neo-Confucian debates with Buddhists, and modern disputes over their socioeconomic, political, and/or gender impact. Readings are drawn from primary Chinese, Korean, and Japanese texts in translation, and from modern interpretations of Confucianism and its legacy. The course format is primarily discussion and short lecture. No prerequisites. Counts for concentration credit in East Asian Studies and Religious Studies.

RELS 0550. Tibetan Buddhism and the West.

This course traces the history and development of the various lineages of Tibetan Buddhism from its origins in Indian Buddhism through to encounters between Tibet and the West in the modern period. The course investigates the religious, political, and geographical conditions in Tibet that influenced the development of some of the unique characteristics of the lineages of Tibetan Buddhism. The course explores key doctrines, practices, institutions, and religious leaders of the major lineages, and delves into key events in the modern period, beginning with the age of missionaries and explorers and ending with the Cultural Revolution and subsequent diaspora.

RELS 0555. Zen: An Introduction.

“Zen” has become a common trope in modern North American Culture but few people know what the term really means. This course will study Zen’s origins in Indian Perfection of Wisdom teachings, follow its meanderings through China from the legend of Bodhidharma through the Five Houses of Chan, and chart its arrival and developments in Japan and eventual transplanting to the West. We will focus on several important Zen teachers: Huineng and Linji in China, Dōgen, Bankei and Hakuin in Japan. We will also explore the essential technique of kōan meditation and the practice of “just sitting.”

RELS 0560. Contemplation and Social Action.

The spiritual path is often called an inward journey. Practices like contemplation, renunciation, meditation and seclusion are often experienced in isolation with the mind drawn towards the self. This may seem counterproductive to social action, almost selfish, but exemplary spiritual aspirants from across time and space have demonstrated how contemplation can be a powerful medium of social change. By exploring key historical movements (Indian Independence, Abolitionism, Civil Rights) and transformational figures who have embodied the ideals of engaged contemplation (Gautama Buddha, Mohandas K. Gandhi, Martin Luther King, Jr., Thich Nhat Hanh and the Dalai Lama), this course seeks to elucidate relevant ways in which contemplative philosophies and practices can challenge, critique, and ultimately transform the world in which we live by way of peaceful, inclusive and socially engaged means.

RELS 0570. Science, Religion, and the Search for Happiness in Traditional Asian Thought.

The search for true happiness is as relevant today as it was 2500 years ago in South and East Asia. Is it attained through sense pleasures or through spiritual satisfaction? Attained through self-indulgence or through self-denial? Can you be completely and truly satisfied in life if you flourish while others suffer? What are the roles of compassion for self and others and of mindfulness and meditation in the creation of a life of genuine happiness? This course will explore these issues through readings in the Buddhist, Confucian, and Daoist traditions and via recent scientific research on mindfulness, meditation and compassion.

RELS 0580. Experiencing the Sacred: Embodiment and Aesthetics in South Asian Religions.

This course explores South Asian religions through the body, aesthetics, and the senses, with a focus on Hindu, Buddhist, and Jain traditions. Concentrating on embodied practices like meditation, chanting, eating, sex, asceticism, ritual, possession, and performance, we will examine experiences of the sacred past and present. How have sensory and material cultures shaped lives, practices, and doctrines? What placed does the pursuit (or denial) of sensual pleasure have in South Asian religious cultures? This course will draw on texts as various as sermons of the Buddha and the Kamasutra, and integrating a range of media from ethnographic films to graphic novels.

RELS 0580A. Anticolonial Perspectives from South Asia (SAST0740). Interested students must register for SAST 0740.

RELS 0585. Indian Cinema and Social Change.

How does film imagine a changing nation? This course explores India's vibrant cinematic landscape in the 21st century, from Bollywood blockbusters to boundary-pushing independent films, that grapple with love, desire, gender, caste, religion, corruption, and activism. We'll ask how filmmakers turn the camera into an instrument of social critique and emotional transformation. How do sound, color, and image shape awareness, empathy, and revolt? Through close viewing, discussion, and creative analysis, students will engage the politics and poetics of India's visual storytelling in a time of rapid globalization and cultural flux. Tracing cinema's evolution from postcolonial roots to its digital, transnational reach today, the course invites you to see how contemporary films both mirror and challenge the realities of modern India—and how they ask audiences everywhere to feel, question, and reimagine the world anew.

RELS 0600A. Islam Today: Religion and Culture in the Modern Middle East and Beyond.

Lupe Fiasco, Al-Jazeera News, the so-called Arab Spring, surreal sectarianism and reality shows produced by Ryan Seacrest: Contemporary Islam is now having an impact on modern culture in unprecedented ways. Islam is often said to be the fastest growing religion in the world, and is second to Christianity in all the countries of Western Europe. In this class we will study the contemporary life, culture and thought of Muslims in the Middle East and beyond, including America and Europe.

RELS 0600B. Islam in America.

Lupe Fiasco, the Al-Jazeera News Network, and Mos Def: from films to fiction, poetry and music, contemporary Islam is having an impact on modern culture in unprecedented ways. Islam is often said to be the fastest growing religion in America, and in this class we will study the contemporary life, culture and thought of Muslims in the US. We will begin with exploring Muslims in the US from its beginnings, as a result of the Atlantic slave trade, through the civil rights movement and the Nation of Islam, Malcolm X and mainstream Sunnis, and conclude with the multicultural present.

RELS 0600C. Radical Islam (?).

One of the most controversial issues in contemporary political discourse is the question of radicalization and its relationship to Islamic religion and practice. In this course, we will explore the phenomenon of religious radicalization, and explore its relationship to a number of institutions and issues, including but not limited to: religious texts, terrorism, global politics, war, immigration, nationalism, and law.

RELS 0600D. Black & Brown Islam in America.

This class is a survey of Black and Brown Islam in America, in which we explore the contemporary life, culture and thought of Muslims in the US-context. We will begin with exploring Muslim life in the US from its beginnings in the Atlantic slave trade, to the civil rights movement and the Nation of Islam, to Malcolm X and the Nation of Islam, and conclude the course with the multicultural present, Donald Trump's presidency and continuing the War on Terror in all its political complexity. There are no pre-requisites or previous knowledge of Islam required to take this course.

RELS 0600E. Islamic Modernities: Religion, Culture, and Power.

In this class, we will explore the culture and practice of contemporary Islam in a variety of geographical contexts. From the United States to South Asia, from Europe to the Middle East, we will look at how Islam is practiced, discursively shaped, and represented across a variety of media. We will also introduce and learn about major phenomena including orientalism, colonialism modernity, and the post-modern—what do these terms mean, and why are they relevant to understanding the Islamic world? No previous study of Islam or religious studies is required for this course, and it is open to all undergraduates.

RELS 0600F. Contestations Within Political Islam.

9/11 catapulted figures such as Osama bin Laden as the face of Political Islam. But there is a longer, complex history behind the relationship between Islam, modern politics, and violence. Examining thinkers such as Sayyid Qutb, Hassan Al-Bana, Zaynab Al-Ghazali, Ayatollah Khomeini, Ali Shariati, Murtaza Mutahhari, and Abul Ala Maududi, this seminar will explore the diversity of intellectual and political positions within Political Islam. We will discuss how such figures employed conceptions of state, nationalism, secularism, democracy, law, gender, and minority rights to articulate multiple futures for national and global Muslim communities and influenced a variety of popular struggles as well as armed movements. As such, we will think through their intellectual, political, and hermeneutical departures from more traditionalist understandings as a critique of the modern condition and examine the strengths as well as limitations of their ideas and receptions.

RELS 0640. Dying To Be With God: Jihad, Past and Present.

This course will examine the concepts of martyrdom and jihad, past and present. We will begin with a comparison of Jewish, Christian, and secular "martyrdom, but focus extensively on the concept and evolution of jihad and jihad ideology in Islam, asking: How are war and martyrdom presented in the sacred texts of religious traditions? Historically, how have religious people idealized and problematized the martyr in different ways? In what ways have modern religious revivalism, geopolitical conflict and nationalism changed how people appropriate martyrdom and jihad today? Enrollment is contingent on attendance on the first day of class.

RELS 0700A. Great Jewish Books (JUDS 0681).

Interested students must register for JUDS 0681.

RELS 0700B. The Bible as Literature (JUDS 0830).

Interested students must register for JUDS 0830.

RELS 0700C. Race, Religion, and the Secular (JUDS 0603).

Interested students must register for JUDS 0603.

RELS 0700D. How the Bible became Holy (JUDS 0682).

Interested students must register for JUDS 0682.

RELS 0700E. The Language of Religious Faith (JUDS 0820).

Interested students must register for RELS 0700E.

RELS 0700F. War and Peace in the Hebrew Bible and Its Environment (JUDS 0670).

Interested students must register for JUDS 0670.

RELS 0700G. Gender in Early Jewish and Christian Texts (JUDS 0606).

Interested students must register for JUDS 0606.

RELS 0700H. The Parting of the Ways?: Questioning Jewish/Christian Difference (JUDS 0608).

Interested students must register for JUDS 0608.

RELS 0725. Psychedelics in Religion, Science, and Healing.

Psychedelics are in the midst of a renaissance of public attention. Though used for millennia in indigenous ceremonies and religious rites, it is only in the last century that they have played a role in Western science, medicine, and culture. Literally “manifesting the soul,” psychedelics have been both stigmatized and hyped, remaining illegal or controversial in many contemporary contexts even as they are marketed as the “next big thing” in mental health care. This course compares and contrasts the cultural and ontological contexts for psychedelic use from indigenous and religious ceremonies to contemporary scientific clinical trials and neuroscience. Along the way, pressing questions within the psychedelic field will be investigated from an interdisciplinary lens and with an appreciation for history and context.

RELS 0750. Law and Religion.

In our arguably “post-secular” age, conflicts over the relationship between religion and law have again moved to the forefront of international debate. In a multicultural and globalized world, such conflicts often provoke contestation over the very possibility of universal definitions of either “religion” or “law,” let alone their proper relationship. Our interdisciplinary inquiries on these questions will include concrete legal disputes in domestic and international courts; theoretical debates over the construction of “religion” in fields such as anthropology, religious studies, and philosophy; and historiographical controversies about the relationship between “secularization” and sovereignty, particularly in light of the legacy of colonialism.

RELS 0795. Religion and Morality in Modern Philosophy.

This course explores the relationship between religion and morality in the context of modern philosophy. This period, roughly the nineteenth century, spurred tremendous creativity in thinking about the relation between religion and morality – by defenders of religion as well as its critics – that continues to dominate philosophical reflection today. Through critical analysis of primary texts, students will explore key philosophical debates surrounding the foundation of moral values, the power and limits of human reason, the relation between reason and religion, the concept of the secular, the nature of transcendence, and the implications of God’s existence or non-existence on ethical systems and ideas about social progress. Considerable attention will also be given to the contemporary legacy of modern philosophical thinking on religion and morality. Readings include selections from Immanuel Kant, Hermann Cohen, G.W.F. Hegel, Søren Kierkegaard, Friedrich Nietzsche, William James, Emmanuel Levinas, Jacques Derrida, and Iris Murdoch. The course will be run as a seminar with heavy discussion and writing components.

RELS 0800. Death: Religion, Philosophy, Law.

Profound meditations on human life always confront its perhaps most baffling feature: death. We will study human mortality from a variety of perspectives, highlighting the powerful implications of death for the living. These include religious perspectives, with their paradox of the quest of mortal beings for the infinite, as well as of life after death; philosophical perspectives, with their insistence on confronting death for an authentic life; legal perspectives, with their enforcement of the intent of the deceased in the lives of survivors. That “our little life is rounded with a sleep” (Shakespeare) will be our central mystery.

RELS 0810. Conservatives vs. Liberals: Religion and Identity in America.

This course explores how Americans have cultivated, articulated, and contested religious and cultural identities during the twentieth- and twenty-first centuries. Identifying and interrogating apparent oppositions between religious conservatives and liberals, students will consider whether and why such oppositions have developed and persisted. Throughout the seminar, students will engage varied theoretical, historical, and thematic approaches to the study of religious identity, evaluating how attention to such issues as politics, ideology, gender, and class illumine the ways in which people come to understand themselves and others.

RELS 0815. Sacred Economy: Religion and Capitalism in the United States.

This course explores the ongoing relationship between religion and capitalism in the United States and the wider world. Although systems of economic organization and activity often seem to function as natural and secular spheres of social life, they meanwhile rely upon social priorities, intellectual presumptions, and cultural practices that continually have taken shape through the realm of religion. By exploring histories of capitalism from slavery to Silicon Valley, students will recognize how successive economic forms have drawn authority from religious ideas, initiatives, and individuals.

RELS 0817. Race, Religion, and the Secular.

The history of race is intertwined with religion. From the Spanish Inquisition to the trans-Atlantic slave trade, to the European construction of a secular “humanism” in the Enlightenment, the relationship between Christianity and Whiteness has entailed dehumanizing consequences for non-Christian, racialized Others. This class will explore the relationship between religion, nationalism, secularism, and racism by drawing on theological, historical, sociological, theoretical and literary texts. This class will outline a genealogy of both racialization and secularization to understand how “whiteness” is bound up with the history of Christianity and secular power in liberal democracies, as well as how racial logics rely upon and redeploy the language of religion in purportedly secular sites of social systemic discriminations. Topics will include racialization and religio-racial formation; Anti-Blackness, Anti-Semitism, and Islamophobia; nationalism and populism; citizenship, civic religion, and public morality.

RELS 0820. African American Religious Strategies: Martin and Malcolm.

MLK, Jr. and Malcolm X are two iconic figures in the pantheon of black religious leadership. Their profoundly influential ideas about justice, freedom, democracy and racism, along with their activist strategies and personal biographies have generated extraordinary interest over the past 50 years. Despite this, the rich and complex tradition out of which their ideas and world-views evolve; the 300 year old religious strategies and practices employed by African-Americans have been understudied, disconnected from our understanding of their significance. This course will examine these traditions and these two central figures’ roles within them in order to shed important light on both.

RELS 0821. Black Religion and Media in America.

The religious lives of Black people have been represented across media forms for centuries. This course surveys the history and practice of this phenomenon, and what it reveals about race, belief, and culture in the United States. Paying special attention to print, film, radio, television, and social media, this class examines how Black religious actors use media to articulate the boundaries of blackness and religiosity; how religion and media have been integral to Black people’s calls for equity and inclusion in American society; and how popular images of Black faith continue to inform cultural discourse on race, religion, gender, class, sexuality, and citizenship.

RELS 0825. Foundational Texts in African American Theology.

Central topics and foundational texts in the field of scholarship historically known as Black Theology. Major African American responses to those writings by Marxists, Womanists, process theologians, and religious humanists.

RELS 0830. Religion, Reason, and Ethics from Kant to Nietzsche.

The nineteenth century witnessed revolutionary transformations in thinking about the power and limits of human reason, the relation between reason and religion, revelation, the role of humanity in creating religion, morality and religion, the significance of history, and the plurality of religions. This course examines major thinkers from this period who continue to shape our own assumptions and reflection.

RELS 0835. Black and Brown Religion in America.

This course explores Black and Brown religious experience in American life, mainly from the perspectives of Christianity and Islam. We will explore topics such as secularism, White supremacy, Orientalism, imperialism, immigration, the history of segregation, and democratic political thought. The course goals are to: understand the histories of Islam and African American religion vis a vis race, religion, and theory in historical, cultural, and political context. We will also explore connections between solidarity movements and politics such as Black Lives Matter and the Palestinian/Israeli conflict.

RELS 0840. Religion and Politics.

This course examines the role of religion in public life, especially in pluralistic, democratic societies. We consider whether religion and politics can or should be separated; what role government should have in regulating religion; and whether a cohesive society needs a shared religion. Readings from early modern Western thinkers, contemporary theorists, and recent Supreme Court decisions.

RELS 0841. Far-Right Religious Terrorism.

Since 9/11, far-right violent extremists in the U.S. have committed almost twice as many terrorist attacks as Islamist terrorists, and are responsible for nearly half of all terrorism fatalities. While not all of these attacks are religiously motivated, in many instances they are explicitly Christian in their orientation. This course examines domestic and international far-right religious terrorism – as well as the U.S. government's response to this violence – by looking at attacks that are anti-abortion, white supremacist, anti-government, and anti-immigrant.

RELS 0842. Religion, Sex, Citizenship.

An exploration of the relationship between religion, sex, and citizenship with a focus on the United States. What has been the role of religion in the creation of sexual norms in United States history? How has this relationship changed over time, in relation to intersecting systems of class and race? What are "family values" and where did they come from? What is secularism, and does it promote sexual freedom? This course takes up questions like these, anchoring its inquiry in interdisciplinary feminist theories of gender and sexuality. Linking theoretical texts to a range of grounded contexts—from Court rulings on religious freedom, to fights over sex education in schools, to militarized sexual violence, to capitalism's regimes of gendered labor—students will develop critical vocabularies for analyzing intimacies between religion, sex, and politics in American empire.

RELS 0843. How do you Feel? The History of Emotions.

This course is an introduction to the history of emotion. How do we feel, and how do we know what we feel? How did concepts like shame, pride, wonder, happiness, or grief change over time? Are emotions primarily the result of neurological processes, or are they learned and performed within culturally determined social constructs? And finally, what are the politics of emotional expression from the point of view of racial, religious, and gender differences? We will explore these questions and more through readings on the theory and history of emotion, various media sources, and pre-modern as well as modern literature.

RELS 0845. Religious Freedom in America.

This course examines the ideal of religious freedom, which often is seen a cornerstone of American society. Interrogating that view, students explore the idea and practice of religious freedom in the past and present, paying close attention to its limitations, contradictions, and ironies. Although the course draws especially upon studies of religion, law, and politics in the United States, students also consider forms of religion and secularism from around the world. Reading-intensive and discussion-driven, this course has no prerequisites.

RELS 0850. Liberation Theology in the Americas.

Liberation theology seeks to bring the social teachings of Christianity to bear on political and economic injustice. This course treats liberation theologies as socially grounded, politically engaged currents in religious thought. We will investigate the historical contexts and central themes of liberation theology: the relationship between theory and practice, the political function of the church, the relation between political freedom and salvation, and the role of intellectuals.

RELS 0880D. Fascism: 1933 - Present (UNIV 0701).

Interested students must register for UNIV 0701.

RELS 0915B. The Bhagavad Gita (CLAS 0855).

Interested students must register for CLAS 0855.

RELS 0915C. Mythology of India (CLAS 0850).

Interested students must register for CLAS 0850.

RELS 0915D. Dreaming in the Ancient World (CLAS 0771).

Interested students must register for CLAS 0771.

RELS 0916A. Islam between Theatre and Performance (TAPS 0800K).

Interested students must register for TAPS 0800K.

RELS 0916B. Of Emotions Unbound: Feeling Middle Eastern Theatre and Performance (TAPS 0900J).

Interested students must register for TAPS 0800J.

RELS 1000. Methods in Religious Studies.

Intensive introduction to classical and contemporary theories of religion and the principal methods for the study of religion. Junior seminar for religious studies concentrators. Enrollment limited to 25.

RELS 1050A. Problems in Israelite Religion and Ancient Judaism (JUDS 1625).

Interested students must register for JUDS 1625.

RELS 1050B. The Political Theology of the "Jewish Question" (JUDS 1614).

Interested students must register for JUDS 1614.

RELS 1050C. Prophets and Priests in Exile: Biblical Literature of the 6th Century BCE (JUDS 1690).

Interested students must register for JUDS 1690.

RELS 1050D. Jewish Magic (JUDS 1801).

Interested students must register for JUDS 1801.

RELS 1050E. Jewish and Christian Identity in the Ancient Period (JUDS 1601).

Interested students must register for JUDS 1601.

RELS 1050F. Digging for the Bible: Science, Religion, and Politics (JUDS 1974).

Interested students must register for JUDS 1974.

RELS 1050G. On the Margins of the Bible: Jewish and Christian Non-Canonical Texts (JUDS 1603).

Interested students must register for JUDS 1603.

RELS 1050H. Problems in Israelite History (JUDS 1635).

Interested students must register for JUDS 1635.

RELS 1050I. The Talmud (JUDS 1630)..

Interested students must register JUDS 1630.

RELS 1105. Kabbalah: An Introduction to Jewish Mysticism.

In the 12th and 13th centuries, new ways of approaching Judaism sprung up in France and Spain that would come to be known as "kabbalah." These new approaches expressed aspirations for mystical illumination and elaborated vast mythological narratives about divine and demonic beings. The kabbalists radically departed from the then-conventional understandings of Judaism, particularly those of philosophers like Maimonides. However, they also claimed to find their new worldviews in the tradition's most ancient texts. This course will introduce students to kabbalah's founding period, focusing on primary texts (in translation), especially the Zohar, the magnum opus of classical kabbalah.

RELS 1130. Philo.

Examines Philo's life and writing, and their importance for the study of Judaism and Christianity in antiquity. How typical was Philo? How did he interpret the Bible? How does his thought "fit" into the religious landscape of the first century CE? Focuses on reading Philo's writings, but will also survey scholarly approaches to Philo. Knowledge of Greek helpful.

RELS 1144. Adam and Eve in Early Jewish and Christian Interpretation.

In antiquity, the biblical story of Adam and Eve generated an enormous volume of commentary. Early Jews and Christians saw in this story profound lessons about the nature of humanity, God, and the world. We will examine how, in antiquity, both religious groups interpreted this relatively short story. We will also pay close attention to the different ways that both Jews and Christians developed to interpret these texts. Genres such as allegory, inspired interpretation (*pesher*), *midrash*, and the letters of the New Testament will be covered.

RELS 1150. Religion in the Dead Sea Scrolls.

An examination of the Dead Sea scrolls and the archaeology of Qumran with a particular focus on the religious aspects of this community. How did the authors of these scrolls envision their relationship with the divine? How did they worship? How did they understand religious and moral perfection? This class will have an additional section for graduate students. Enrollment limited to 20.

RELS 1190. Religious Japan.

An introduction to the history of Japanese religion in the early and medieval periods, with some attention to related modern and contemporary manifestations. Emphasis on the development of both native practices ("Shinto") and Buddhism, and on the historical interaction between them. Readings include primary texts in translation and selected modern interpretations. A previous course in Asian religion or culture is recommended but not required.

RELS 1300. Ancient Christianity and the Sensing Body.

Bodily experience and sensory engagement became increasingly important for Christians during their first six centuries. This seminar examines how and why the body and its senses gained worth for ancient Christians as instruments for gaining knowledge of God. Prerequisites: RELS 0110, 0400 or 0410.

RELS 1315. Religious Authority in an Age of Empire.

How does one live in a hostile Empire? How do you carve out a niche? Where do you allow the Empire in and where do you draw a hard line? Such were the questions that both Jewish and Christian communities faced at various times in the Roman Empire. In this course, we will look at the variety of ways that both communities negotiated with and against Empire. We will read texts across religious lines, including gospels, gnostic texts, Rabbinic literature, apocalypses, and Church orders. To sharpen our thinking, we will also read literature associated with post-colonial critical thought.

RELS 1320. Social World of the Early Christians.

The followers of Jesus created a movement that spread quickly from rural Galilee to the largest cities of the Roman Empire, ultimately to become the largest religion in the world. Increasingly, scholars write a history of the early movement by learning more about its historical context, the Jewish, Greek, and Roman worlds. The fascinating texts of the followers of Jesus will be studied in comparison to equally fascinating non-Christian texts, with a focus on social categories: patterns of new religious movements, with reference to race, class, gender, ability, and other categories.

RELS 1325A. Educating Bodies in Ancient Christianity.

How did ancient Christians learn to be Christian? Did Christian education look different from the ways that "Pagans" learned to be Pagan, Jews Jewish, or "heretics" heretics? This course explores the many ways that Christians learned to be Christian, paying particular attention to the role of the family, city, liturgy, and, of course, "schools." We will adopt a comparative approach, looking at education among heretical "Gnostic" communities, on the one hand, and the rabbinic Jewish community, on the other. Some familiarity with the ancient Mediterranean world, through prior study of early Christianity, Judaism, Classics, or Ancient History, is recommended.

RELS 1325B. Early Christian Asceticism: Rhetorics of Practice.

A study of eastern Christian asceticism and its literary expressions during late antiquity, with attention to forms, motivation, theological understandings, and cultural impact. Particular focus on Egypt, Cappadocia, and Syria.

RELS 1325C. The Virgin Mary in Christian Tradition.

Who was the Virgin Mary? How did she become important, when and to whom? What was inherited? What was new? How were Mary's meanings demonstrated? A study in the developing theological and devotional traditions regarding Mary the Mother of Jesus, focused on the first thousand years of Christian history. Major theological positions; relationship to pre-existing religious practices and goddess traditions; the role of popular violence; Marian piety; Marian relics; Mary as cultural metaphor. Seminar format.

RELS 1325D. Desire and the Sacred.

Relationality, sexuality, and the quest for holiness in medieval and Byzantine Christianity. How did medieval and Byzantine Christians understand human relationships as instrumental in the human advancement towards God? How did they utilize erotic desire as an ontological aspect of embodiment? What sorts of relationships, lived in what kinds of social arrangements, enabled pursuit of human divine union? Seminar.

RELS 1325E. Ecotheology in Ancient Christianity.

How did early Christians understand the relationship of humanity to the natural world, the animal kingdom, and the created order? What were the obligations and responsibilities of Christians regarding care for the world? How did they manifest a relationship to God? A study of the ancient Christian conception of humanity's place in the cosmos, as lived out in the daily life of the Christians in the Roman Empire. The course will focus on the first seven Christian centuries, with attention to how legalization and ascendancy reshaped Christian ideas on these matters. Seminar.

RELS 1330A. The Life and Afterlives of the Apostle Paul.

While the writings of the Apostle Paul are commonly understood as early Christian scriptures, the Apostle Paul never converted to "Christianity." He was and remained Jewish. We must therefore reexamine his writings within his Jewish context, not apart from it. We also need to see how the earliest "Christians" talked about Paul within the context of an emerging "Christianity." In this course, we will first dive into both the authentic and spurious letters of Paul in the New Testament. We will then turn to the figure of Paul in later Christian texts, both canonical and non-canonical.

RELS 1340A. Roman Religion (CLAS 1410).

Interested students must register for CLAS 1410.

RELS 1370A. Augustine and Hegel.

A theoretical comparison of Augustine of Hippo and G.W.F. Hegel, highly influential thinkers at different turning points in Western history, on various facets of their understanding of religion. Potential themes for comparison include the relationship between Christian faith and philosophy, God and the world, and religion in history and society.

RELS 1370B. Philosophy of Mysticism.

Covers important attempts to understand the nature of religious experiences and mysticism. We will look at several philosophical issues surrounding religious experience, including: (a) whether mystical experiences are too private for outsiders to understand or evaluate them; (b) what the relationship between religious experiences, language, and culture is; (c) whether religious experiences justify religious beliefs; and (d) how gender and religious experiences are related. We will treat theorists from various perspectives, including philosophical, historical, theological, psychoanalytic, and neuroscientific. Previous work in philosophy courses (or philosophically-intensive courses) is highly recommended. Enrollment limited to 20.

RELS 1370C. David Hume and Religion.

This course will consider and challenge traditional scholarly views of philosopher David Hume as a critic of Christianity, by examining a wide range of his writings (letters, historical writings, moral enquiries, philosophical and religious writings). How might his corpus inform work in philosophy of religion? Previous coursework in philosophy or philosophy of religion strongly advised. Enrollment limited to 20.

RELS 1370D. Modern Mystics: Bataille, Weil, Murdoch.

Description: Georges Bataille, Simone Weil, and Iris Murdoch all drew from mystical traditions to fashion a religious sensibility that engaged constructively and critically with modernity. Bataille and Murdoch were atheists, Weil a highly unconventional theist. Their mysticism was about experiences of self-rupture and self-transformation rather than traditional religious ideas or practices. They were highly literary (Bataille and Murdoch both wrote fiction) and saw connections between art and ecstatic experience. We will explore their writings across various genres (philosophy, social theory, fiction, and notebooks).

RELS 1380A. Money, Media, and Religion.

This course explores the relationship between religious life, forms of capitalism, and media technologies in the history of the United States. From constructing buildings and printing texts to disseminating teachings and communicating with members: essential aspects of religious life require both money and media. Yet forms of money and media continually have changed, and those changes have taken shape in dialogue with religious beliefs, practices, and sensibilities. This seminar examines this dialogue by visiting such varied sites as Puritan marketplaces, Santa Claus displays, Bible factories, television talk shows, and Occupy protests.

RELS 1380B. ORGANIZE! Solidarity in Theory and Practice.

This interdisciplinary seminar explores the history, theory, and practice of grassroots organizing with an emphasis on the US tradition. Often the response to overwhelming systemic injustice—from climate change, to gender-based violence, to labor exploitation, to carceral terror—is to organize. But what is organizing? How is it different from activism or advocacy? What can today's organizers learn from grassroots social, religious, and political movements of the past? How do organizers navigate conflicts around strategy, leadership, and identity? This course explores these questions and others like them with an emphasis on intersectional feminist, anti-racist, and anti-colonial analysis of power. Students will gain familiarity with classic debates about organizing tactics and processes and analyze how they manifest within local political landscapes.

RELS 1380C. Law and Religion.

In our arguably "post-secular" age, conflicts over the relationship between religion and law have again moved to the forefront of international debate. In a multicultural and globalized world, such conflicts often provoke contestation over the very possibility of universal definitions of either "religion" or "law," let alone their proper relationship. Our interdisciplinary inquiries on these questions will include concrete legal disputes in domestic and international courts; theoretical debates over the construction of "religion" in fields such as anthropology, religious studies, and philosophy; and historiographical controversies about the relationship between "secularization" and sovereignty, particularly in light of the legacy of colonialism.

RELS 1380E. Critiques of Religion + Capitalism.

This interdisciplinary and comparative seminar analyzes the economic aspects of religion and the religious aspects of capitalism. It takes up these questions in relation to historical and contemporary archives, and it prioritizes feminist, critical race, and queer analysis. Readings and course themes press boundaries of how we might think about religion and reveal new directions for an analysis and critique of capitalism. We will ask questions like the following: How can we trace the growth of the idea that participation in global free markets can facilitate relations of justice? What moral frameworks and theories of human life underwrite the vision of capital markets as a theater for political-ethical action? Under what circumstances can capitalist philosophies and practices be understood in terms of religion?

RELS 1385. Religion and Postmodernism.

This advanced seminar treats the central ideas in the thought of Zizek, Sloterdijk, Bauman, and others. It will pay particular attention to the idea of God in the works of Derrida, Foucault, and Deleuze as it filters through these contemporary, popular efforts. Students will trace some of the normative aspects of a postmodern ethics and theology by looking at "Emergent" churches, "New Thought", and post-foundational Christian theology in practice.

RELS 1410. Directed Readings in Chinese Religious Thought: Zhuangzi.

Entails a careful reading of the entire text of the *Chuang Tzu* in translation. Secondary sources on the philosophy and textual criticism of the book—drawn from the writings of Graham, Liu Hsiao-kan, Ivanhoe, Mair, Roth, and others—are also read. Seminar format. Pre-requisites: At least one of the following courses: RELS0040; RELS0120; UNIV0540.

RELS 1415A. Classical Daoist Thought.

Considers philosophical issues in early Daoism. We will work with classical texts such as Guanzi's "Inward Training," the Laozi, the Zhuangzi, and the Huainanzi and examine issues in them that have been of interest to comparative philosophers, such as cosmology and cosmogony, the nature of religious experience, and the types of implicit and explicit moral thought. The course will feature primary works in translation and secondary works by authors such as Graziani, Ivanhoe and Kjellberg, Moeller, Ames, Yearley, Raphals, Cook, Roth, and Slingerlands. Prerequisites: RELS 0040 and 0120. Enrollment limited to 20.

RELS 1420. The Contemplative Foundations of Classical Daoism.

Introduction to classical Daoism, one of the two indigenous religions of China, through the history, philosophy, and contemplative practices found in its foundational works the Daodejing and the Zhuangzi. Through careful study of these texts, we will attempt to reconstruct the intellectual and experiential elements on which this tradition was based.

RELS 1425. Buddhist Poetry.

This course surveys Asian and Anglophone literary cultures that emerged in response to Buddhist teachings and practices. Through close reading, we will engage epic poetry celebrating the Buddha's life; verses in Buddhist scripture; the landscape poetry of Chinese hermits; the poetry of early nuns; Japanese poems of spiritual travel; American beatniks; and contemporary Taiwanese poetry. All readings are available in English. Students may complete a creative or imitative project, an original translation, or a research paper for the final project.

RELS 1430. Buddhist Classics.

An opportunity to read and understand the canonical texts of East Asian Buddhism. Through close reading, written analysis, and discussion, participants will become conversant with the major Mahayana Buddhist teachings in their original scriptural or literary articulations. Selected later interpretations may also be considered. All readings are in English translation. Previous study of Buddhism is recommended, but not required. Enrollment limited to 10 students.

RELS 1435. Buddhism in Motion.

This advanced seminar examines Buddhism as it moves across the edges of China. Telling histories of Buddhism in motion will challenge us to reimagine the encounters between the Indian Buddhist religion and native Chinese cultures. After reviewing foundational works in the field, including theories of cultural translation, we engage recent studies of Chinese Buddhism that focus on interstices, borders, and contact zones; examine sources for the study of Chinese Buddhism from cross-cultural perspectives, including objects, emigrants, medicine, and bathing practices; and practice critical thinking about how we talk about Chinese Buddhism when the object of study is in motion.

RELS 1440A. Japanese Buddhism.

An exploration of key ideas and debates in the study of Japanese Buddhism. Influential paradigms of medieval Japanese Buddhism, including "original enlightenment," "transfer of merit," and "harmonization of gods and buddhas," will be brought into conversation with aspects of Japanese religious life in premodern and modern contexts, such as healing; care of the dead; bodily self-denial; and ritual uses of language. Materials include primary texts in English translation, modern secondary interpretations, and related literary and visual expressions.

RELS 1440B. The Archaeology of Japanese Buddhism.

This course explores the history of Japanese Buddhism through archaeological sites, artifacts, and interpretations. It aims to introduce students to the major contours of Japanese Buddhist history by examining the relationships between religious transmission, belief, ritual, and material culture. We will first focus on the major issues surrounding material culture in the study of Buddhism, and religion more broadly. The remainder of the course will consist of an survey of the chronological transmission and development of Buddhism in Japan in the early and medieval periods through case studies of specific sites, objects, architectural features, sculpture, and human remains.

RELS 1441. Zen Meditation in China, Korea, and Japan.

Intensive study of the development of Zen Meditation in China, Korea and Japan featuring historical origins in Indian Mahayana Buddhism and Chinese Daoism. Historical and social contextualization will be balanced by first-person investigations. Examines both kōan and silent illumination methods. Weekly seminars on representative texts in translation; labs will experiment with meditation techniques directly drawn from the readings. Students register for both seminar and lab. Prerequisite: Any of the following: COST 0100, 0420, 0480; RELS 0040, RELS 0100, RELS 0145; RELS 0290E; RELS 0500, or UNIV 0540; or instructor's permission. Enrollment limited to 20. Additional weekly Lab section.

RELS 1442. The History, Philosophy, and Practice of Rinzai Zen Buddhism.

An advanced seminar that considers Rinzai Zen Buddhism from origins in India to developments in China to its transmission to Japan and eventual transplanting to the West. Course will examine the nature of cultural and historical influences on the practices and adaptations through the Asian and American contexts, including the secular pedagogy of Contemplative Studies. Pre-Requisite: Any of the following courses: COST 0040/RELS 0040; RELS 0045; RELS 0100; COST 0100; COST/RELS 0125; COST/RELS 0145; COST/RELS 0555; RELS 1425; RELS 1440. Meditation lab: Tuesday and Thursday at 11:00- 11:50 AM .

RELS 1445. Sinners and Seers in Japanese Literature.

Exploration of Japanese Buddhist sensibilities as expressed in poetry, popular tales, drama, and fiction. Recurring themes include wrongdoing and its karmic consequences; renunciation; tension between aesthetic and religious commitments; pilgrimage as creative process; the role of nature in the quest for enlightenment. Reading and discussion in a seminar-style format. A previous course in Buddhism or East Asian culture is helpful but not required. Counts for concentration credit in Religious Studies and East Asian Studies.

RELS 1500. From Moses to Muhammad: Prophets of the Ancient World.

The figure of "the Prophet" forms the backbone to many of history's major religions. From well-known prophets like Moses and Muhammad to more obscure figures like Mani, ancient prophets claimed to have unique access to God(s). Yet the concept of prophethood, and its twin, "prophecy," was as diverse as those who claimed its mantle. This seminar will explore ancient discourses of prophethood and prophecy from the Ancient Near East up to the early medieval era. Our reading selection will include the Hebrew Bible, apocalypses, Greek theories of divination, the Manichaean corpus, the Qur'an, and other "non-canonical" texts.

RELS 1510. Islamic Imaginaries from South Asia.

This course will examine the intellectual, political, and cultural imaginaries of South Asia's Muslims as they engaged with the institutions and technologies of modernity. It will explore the formations of religious community, conceptions of rule, anticolonial thought, national belonging, minoritization, and subalternity among Muslims across colonial and postcolonial periods. Through a close reading of primary sources, films, and literature, the course will critically examine the tensions between collective identity and individual aspirations, secularism and religion, ethics and politics to understand what it has meant to be a Muslim in the modern era. Finally, the course will pay particular attention to historical methods and think through alternative ways of researching and writing the histories of marginalized communities.

RELS 1520. Pilgrimage and Sacred Travel in the Lands of Islam.

This seminar focuses on pilgrimage and travel to loca sancta in the Islamic world. We will read travelogues and pilgrimage manuals in translation, and will address theoretical and anthropological studies on the phenomenon of pilgrimage and sacred travel in a variety of geographical and chronological contexts. We will study physical, artistic, and architectural aspect of pilgrimage shrines. Enrollment limited to 20 students.

RELS 1530A. Methods and Problems in Islamic Studies.

Examines the problem of historical thinking and writing in the first six centuries of Islam. It will specifically emphasize the rise and development of Islamic narratives as they are discussed in contemporary scholarship on how to "do" Islamic studies. As such, we will discuss, in depth, theoretical issues pertaining to source criticism, Orientalism, the Cultural Turn, anthropology, and narrative. Enrollment is limited to 20 students.

RELS 1530B. Heresy and Orthodoxy in Islamic Thought.

Orthodoxy is defined as "right belief" while Heresy is just the opposite, but those definitions have always been in tension with society and culture. This course will interrogate theory and history to ask "What are Islamic Orthodoxy and Heresy?" From Islamic Law to who is or is not a "heretic" we will uncover interpretations of religious law, practice, and culture to learn how scholars apply orthodoxy or heresy to disrupt and unsettle notions of what "Islam" was at different moments, and how their interpretations force us to think of new ways to envision the formation of communities.

RELS 1530D. Medieval Islamic Sectarianism.

Sunni and Shi'i conflict and sectarian division have been an enduring issue in the Islamic world. From Iraq to Syria, Iran to Egypt, inter-Muslim conflict and conflicting ideologies seem to be central issues. But how accurate and historical is this impression? In this course, we examine the origins and evolution of Islamic sectarianism, with an emphasis on the politics of religious authority in the Islamic world, old and new. This is an upper level seminar, and juniors and seniors will be given preference for enrollment. Shoppers must attend the first day of class if they wish to enroll.

RELS 1530H. Problems in Islamic Studies: Shaking up the Study of the Islamic World.

This course examines exciting new approaches to the study of Islam. In the form of a weekly salon, in each seminar we will examine recent and exciting paradigm-shifting works from a variety of perspectives (including but not limited to religious studies, anthropology, and history). We will consider these works within the broader context of how Islam has been studied in the past, and discuss why and how methods for the study of religion are changing. Themes include secularism, orientalism, gender, and politics.

All readings will be accessible electronically and posted on the course page via Canvas. Previous work in religious studies, Islamic Studies, or Middle East studies is an asset but is not required.

RELS 1530J. The Problem of Evil.

What kind of God would preside over a world in which injustice occurs? One of the earliest debates in Islamic history had to do with the question of theodicy: the problem of evil. This was connected to issues of free will and predestination. From the early Middle Ages onward people asked, what kind of all-powerful God holds humans accountable for things out of their power to control? If people are in fact in control of their own actions, what would that say about the nature and power of God? Does evil come from people or God, and if the latter, what does that say about the nature of Divinity? In this course we will discuss these issues and much more from the perspective of Islamic philosophy, ethics, history, politics, and theology from the Middle Ages to the present day.

RELS 1540. Monks, Mystics and Martyrs: Abrahamic Traditions Compared.

This course explores the process of "standing out" from mainstream society, from traditional kinship relationships, from local practices of community and economic production, undertaken by ascetics and mystics in the three Abrahamic traditions. We will explore monasticism and mysticism in Judaism, Christianity, and Islam, from the period of late antiquity to the high Middle Ages. Using primary sources in translation and scholarship on the phenomena of asceticism and mysticism, we will address the motivations for and manifestations of non-traditional practices of worship and community-building in the Mediterranean and Middle-Eastern world.

RELS 1600A. Race, Religion, and Ethnicity in the Study of Antiquity.

Critical theory presents new challenges and opportunities for the study of antiquity. What is critical theory and how might it be useful for understanding categories such as race, religion, and ethnicity in antiquity? How might critical theory help us to think about the ethical implications of contemporary study of the distant past? Graduate and advanced undergraduate students with interests in any premodern society are welcome. All class readings will be in English.

RELS 1600B. The Ethics of Community.

Community as an ideal promises a common life with others, sharing norms and values. On the other hand, it can easily engender stultifying conformity and homogeneity. Religion has and continues to play a key role in forming communities. This course will examine questions surrounding community, with a particular focus on how communities cope with loss, suffering, and trauma. We will also pose questions about the boundaries of communities, including ecological questions about community between humans and non-humans.

RELS 1600C. Angels and Monsters: Queer and Trans Religion.

Gender and sexual diversity is often described in religious terms: before "gay" became shorthand for homosexuality, German activist Karl Heinrich Ulrichs proposed "Uranian" in the 1860s, based off Greek mythology; in 2023, a Florida state representative called trans people "demons." Queers have used religious language to make sense of experiences and carve our space for gender and sexual non-normativity to flourish. At the same time, those who decry such forms of life also use religious language to make their case. In this seminar, we use religious studies and queer and trans studies to examine the relationship between queerness, transness, and religion, thinking across religious difference through fiction, film, poetry, and academic work alike. Students will undertake an independent project of their choice, building analytical and argumentative skills. What might thinking queerly about religion, or religiously about queerness, do for us?

RELS 1610. Sacred Sites: Law, Politics, Religion.

Sacred sites have long been flashpoints for inter-communal conflict the world over, as well as posing challenges to sovereign State authority. Such sites range from natural landscapes to architectural masterpieces. They often come to symbolize the perennial clash between the religious and the secular, the sacred and the political, tradition and modernity. We will discuss a diverse array of specific disputes and ask whether one may even speak of "sacred sites" cross-culturally. Can legal frameworks embrace different notions of the sacred? We will also examine the historical contexts that provoke such disputes, particularly the aftermath of colonialism.

RELS 1620. Disability in Antiquity.

An investigation into the ways in which physical deformities and mutilations are represented in texts from ancient Israel, Mesopotamia, Greece, and other Mediterranean cultures. Primary focus: texts of the Hebrew Bible.

RELS 1700A. The History, Philosophy, and Practice of Rinzai Zen: Zen Master Hakuin Ekaku.

Explores Japanese Rinzai Zen Buddhist tradition by focusing on its seminal figure, Hakuin Ekaku (1686-1769). Examines his biography, core practices, and key philosophy by looking at selections from his essential autobiographical and philosophical writings as well as his artwork. Focuses on the following aspects of Hakuin's importance in the history of Japanese Buddhism: Hakuin as reviver of Rinzai Zen, especially kōan practice; Hakuin as a meditation master; Hakuin as talented artist; Hakuin as social critic. Readings will be primary sources in translation.

RELS 1705A. Principles and Practices of Contemplative Studies.

Advanced study of the distinctive methods of the field of Contemplative Studies that includes third-person, second-person, and critical first-person perspectives. Will focus on the study of meditative practices in their cultural contexts and on essential scientific research on their nature and effects. Prerequisite: COST 0100 or Permission of Instructor. Meditation Lab to be scheduled

RELS 1705B. The Contemplative Science of Compassion.

This course will focus on the historical foundations and science of contemplative-based compassion trainings, with a particular focus on Buddhist psychology. We will critically examine clinical and social science literature while reviewing potential mental health (e.g., depression, posttraumatic stress disorder) and social benefits (e.g., "re-humanization," reducing intergroup bias) as well as drawbacks and limitations, adverse effects, controversies, and important unasked questions and perspectives. Alongside teachings from the Compassion Cultivation Training, developed by Dr. Thubten Jinpa, a historical lens will be integrated throughout. We will draw from literatures in contemplative science, history, psychological and neurosciences, public health, and religious studies.

RELS 1730. Epics of India: Ethics, Politics, and Expressive Traditions.

Existing for centuries, kept alive through vibrant forms of composition, transmission, performance, the epic tradition in India is a constantly emerging one. We will read translations of the Sanskrit Ramayana and the Mahabharata and retellings of these stories to explore why India's epics occupy such an energetic place in the ritual, literary, visual, and political imaginary of India. Why do these great epics continue to speak beyond borders of time and culture? In what ways does the epic culture of India challenge Western ideas about text and authorship? Why have the epics and given rise to wide and divergent interpretations, critiques, and recreations? How do different regions claim and create their regional identity through their own epic traditions? How do devotional traditions or national politics play in the interpretation—and revival—of epics?

RELS 1741A. International Law (INTL 1700A).

Interested students must register for INTL 1700A.

RELS 1742A. Great Authors and Works of Italian Renaissance (ITAL 1320).

Interested students must register for ITAL 1320.

RELS 1743A. Gospel Music from the Church to the Streets (MUSC 1927).

Interested students must register for MUSC 1927.

RELS 1744C. When Religion meets Modernity: Tibet Enters the World System (HIST 1978H).

Interested students must register for HIST 1978H.

RELS 1744D. Wonders, clerics, and natives: The Construction of Mesoamerican Christianities. A political reading.

Interested students should register for HIST 1978G.

RELS 1745D. Theo-Politics: Political Readings of the Hebrew Bible (HMAN 1974P).

Interested students must register for HMAN 1974P.

RELS 1745E. Religion from Below (HMAN 1975R).

Interested students must register for HMAN 1975R.

RELS 1760. Religion and Suspicion.

Religion has arguably been the classical locus of suspicious models of interpretation. Social and critical theorists from Marx to Foucault have argued that we only understand what religion really does if we interpret it with suspicion—if we refuse to take its claims at face value. Others have sought to redirect suspicion back against suspicion itself, and religious thinkers have sought to incorporate critiques of religion into their own theological projects. This seminar studies key figures in this complex interplay of religion and suspicion. Likely readings from Feuerbach, Marx, Nietzsche, Barth, Horkheimer, Adorno, Gadamer, Foucault, Said, Gutiérrez, Schüssler-Fiorenza, and Butler. Enrollment limited to 20.

RELS 1830A. Pragmatism, Religion, and Politics.

Pragmatism is a distinctive American school of thought that sees the goal of philosophy not as the apprehension of timeless truths but as a practical project of bettering individual lives and society. Pragmatists such as William James and John Dewey were devoted to deepening America's commitment to democracy. Both saw an important place for an unconventional sort of religion in democratic life. This course explores the pragmatist thought of James, Dewey, and others, looking especially at their views on religion and politics. We also will explore the influence of pragmatism on Barack Obama. Enrollment limited to 20 juniors and seniors.

RELS 1830D. Constructing the Human: Humanness and Animality in the Ancient World.

What does it mean to be human? How do we define "Humanness" and what assumptions do we make about our own distinctions between "Humans" and "Animals" when we define humanness? This course will look at the process of constructing the human category in the ancient world and compare that process to our own modern conceptions of humanness. In what ways are they similar and in what ways are they different? How can ancient examples of the human category inform our own ethical understandings of what it means to be human?

RELS 1880A. The Gift in Antiquity.

This course is an interdisciplinary and cross-cultural examination of gift-giving in antiquity, with a focus on the Mediterranean in late antiquity. We will examine a range of gift-giving activities, such as sacrifices (gifts to the gods), civic donations, and almsgiving. Several visiting lecturers will participate in the course, and it will culminate in an international conference to take place at Brown.

RELS 1990. Individual Study Project.

Directed reading and research arranged with individual faculty. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

RELS 1995. Senior Capstone Seminar.

This course is a culminating experience for the Religious Studies concentration. While introductory gateway courses introduced concentrators to the discipline and upper-level courses examined particular topics or methodologies, this capstone seminar provides concentrators with an opportunity to synthesize what they have learned, while also delving more deeply into the themes and topics that they find most central to their own interests. Thesis writers receive support including small group interaction and supportive criticism. Non-thesis writers create a capstone portfolio over the course of the semester. Through activities and guest presentations, all concentrators will connect their studies to their future goals.

RELS 1999. Thesis Preparation.

Required of seniors in the honors program. Open to others only by permission of the chair of the department. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

RELS 2000. Theory of Religion.

Critical examination of major approaches to the study of religion, especially those of the anthropology and the history of religions, with attention to issues in current debate.

RELS 2000A. Method and Theory in the Study of Religion: Historicizing the Discipline.

This seminar introduces the academic study of religion as a discipline by historicizing its emergence. The course engages both historical materials and recent critical engagements with these histories. Through critical reflection on the discipline, it attends explicitly to questions around race, gender, sexuality, and empire.

RELS 2000B. Method and Theory in the Study of Religion: Interpreting Religion.

This seminar examines diverse methodological and theoretical resources for studying religion. Readings may include influential recent theorists from across the humanities and social sciences, as well as contemporary scholars of religion who bring such theorizing to bear on religion.

RELS 2010A. Exegesis at Qumran.

Focuses on Hebrew exegetical texts such as the Temple Scroll, MMT, pHab, 4QJub, CD. Intended for doctoral students and others with sufficient knowledge of Hebrew.

RELS 2010B. 1 and 2 Kings.

Translation and exegesis of Kings. Intended for those with advanced Hebrew.

RELS 2011. Religion, Race, and Ethnicity in the Ancient Mediterranean.

An examination of the categories of race, religion, and ethnicity among Greeks, Romans, Jews, and Christians in antiquity. How did they use (or not) these different modes of identity?

RELS 2015. American Religious Histories.

This course explores the histories and historiographies of religion in North America, focusing especially the lands that became the United States. By engaging both classic and contemporary approaches to the historical study of religious life, this course not only familiarizes students with persistent scholarly debates and narratives but also helps students understand how and why historians have used particular methods to address varied challenges and objectives. Ultimately, the course will equip students to pursue their own research projects in ways that build creatively and rigorously on existing scholarship.

RELS 2050. Religious Identities in Sasanian Persia.

Sasanian Persia is rapidly emerging as a locus of study among scholars of Syriac Christianity, Rabbinic Judaism, and Ancient Iran. This course synthesizes recent advances in scholarship within these individual fields and experiments with alternative modes of contextualization. Primary sources include the Talmud, the Hekhalot corpus, Syriac martyrdom narratives, Manichaean literature, and Mandaean texts. We will also interrogate broader methodological questions, including comparative projects between "Roman" and "Persian" contexts, models of scholarly representation, and the limits of agonistic/assimilative frameworks. Reading knowledge of one of the following languages required: Hebrew, Aramaic, Syriac, Greek, Coptic, Arabic, or Middle Persian.

RELS 2100B. Exegesis at Qumran.

Focuses on Hebrew exegetical texts such as the Temple Scroll, MMT, pHab, 4QJub, CD. Intended for doctoral students and others with sufficient knowledge of Hebrew.

RELS 2100E. Literature of the Early Second Temple Period.

A close reading of selections from surviving literary texts of the late sixth century (e.g., Isaiah 56-66, Zechariah 1-8, Haggai) and the fifth century (Ezra-Nehemiah, Malachi). Prerequisite: An advanced knowledge of biblical Hebrew and permission of the instructor.

RELS 2100F. Seminar in Biblical Studies: Ugaritic.

Survey of Ugaritic grammar followed by readings in mythic and epic literature (e.g. the Baal Cycle, Kirta, Aqhat) and ritual texts. Prerequisite: Knowledge of the grammar of one Semitic language. Open to graduate students only.

RELS 2100G. Early Rabbinic Literature: The Mishnah.

Readings in the Mishnah and related rabbinic literature. While the focus will be on gaining textual skills, we will also survey academic approaches to the Mishnah: What is the Mishnah and its relationship to earlier and contemporaneous texts? How was it composed, transmitted, and received? Prerequisite: Reading knowledge of Hebrew.

RELS 2101. The Court Narrative in Ancient Israel.

A number of ancient Israelite and Jewish narratives are set in the court of the foreign king: the story of Joseph in Genesis 37-50, Esther, Daniel 1-6 (along with the additions from the Apocrypha: Susanna and Bel and the Dragon), and the Prayer of Nabonidus from Qumran. These entertaining narratives are often set off from the more strictly historical tradition, and seem to have been part of a resilient and international genre of popular stories. In this course we will read and analyze these narratives in their original Hebrew, Aramaic, and Greek.

RELS 2110A. Religion and Romanticism: Religion, Democracy, and the Environmental Imagination.

The seminar will explore the central radical religious, democratic, and environmental dispositions and ideologies that mutually informed each other in eighteenth- and nineteenth-century British Romantic literature and their subsequent and sustained legacies in America. We will read such authors as William and Dorothy Wordsworth, Coleridge, Mary Shelley, Emerson, and Thoreau.

RELS 2110B. Radical Romanticism: Progressive Democratic, Environmental, and Religious Traditions.

To what extent does Romanticism inform progressive democratic, environmental, and religious traditions and cultures in the U.S.? We will explore the sustained legacies of a particular strand of Romanticism, namely, radical Romanticism: an aesthetic tradition and way of life that seeks to cultivate perspectives, practices, and affect that bring dignity and justice to the human and the more-than-human worlds. Special attention will be given to the interrelated topics of democracy, the environment, and religion when reading such authors as Henry David Thoreau, Frederick Douglass, Walt Whitman, Zora Neale Hurston, W.E.B. Du Bois, Terry-Tempest Williams, Leslie Silko.

RELS 2110E. Just Home: Place, Belonging, and Justice.

What helps to establish beneficial (just and nurturing) homes, communities, and connections to place? What works against these? This seminar explores the relation between people, place, identity, and belonging, with a strong emphasis on racial, Indigenous, feminist, queer, and environmental justice. The seminar begins by interrogating the concept of home broadly. What constitutes notions of home and belonging? We then move to different frameworks through which we explore the concept of home: for example, nationhood, colonialism, and globalization; Earth as home and more-than-human dwelling; Indigenous dispossession and homemaking; feminist and queer ways of belonging; Black homes as sites of resistance, tenderness, and beauty; belonging and precarity among the unhoused and the incarcerated. The readings addressing these topics are diverse in disciplinary and genre.

RELS 2160. Aramaic Readings.

A survey of epigraphic and biblical Aramaic intended for doctoral students and others with sufficient background in Aramaic grammar.

RELS 2200B. Asceticism.

A study of eastern Christian asceticism during late antiquity, with attention to forms, motivation, theological understandings, and cultural impact. The focus in this offering will be eastern Syriac monastic traditions, 4th through 8th century.

RELS 2200E. Christianizing Antioch.

Antioch from the first century CE until the Muslim conquest in the seventh, as Christians first utilized the city and its resources for their own formative developments, and then came to assume ascendancy over its society, culture, and landscape as the Roman Empire took on its Christianized identity.

RELS 2200J. The Virgin Mary in Late Antiquity.

A study in the developing theological and devotional traditions regarding Mary the Mother of Jesus, focusing on the fourth through the sixth centuries A.D. Major theological positions; relationship to pre-existing civic cults and goddess traditions; the role of popular violence in the Mariological definitions of the Council of 431; imperial Marian piety; Marian relics; Mary as cultural metaphor.

RELS 2200M. Early Christian Hymnography.

Select examples of early Christian hymnography, 2nd-6th centuries. Particular attention to poetic forms, types of content, ritual contexts and functions, and performative elements. Weekly readings in Greek.

RELS 2200Q. Readings in Syriac.

Dramatic narratives in liturgical poetry. Readings from Cyrillonas and Jacob of Serug.

RELS 2250A. Is Gandhi Relevant?.

Mahatma Gandhi's influence on freedom movements and personal practice is unmatched, yet legend often obscures his evolving experiments and struggles. In this prison-based course, we will examine Gandhi's complexity and relevance. He was a sharp critic of modern civilization yet embraced progressive views—raising questions about whether his critique remains prophetic and can guide us toward a more equitable society founded on empathy and resource-sharing. We will especially study how he tried to embody self-practices that, despite their challenges, ultimately make hope and transformation possible even under dire conditions. We will read Gandhi's core writings to engage him not as a static icon but as a person who learned through trial and error, faced controversy, and experienced hardship and loneliness. Yet, he stayed inspired by the search for truth and a resolute commitment to nonviolence and human rights.

RELS 2300A. Seminar: Early Taoist Thought.

The foundational philosophical texts of the Taoist tradition will be read in Classical Chinese and analyzed from a number of possible perspectives including comparative religious thought, and historical and textual criticism. Texts for each year's version of the course will be drawn from the following list: *Chuang Tzu*, *Lao Tzu*, *Huang-Lao po-shu*, *Lü-shih ch'un-ch'iu*, *Han-fei Tzu*, *Kuan Tzu*, and *Huai-nan Tzu*. Pre-requisites: reading knowledge of Classical Chinese and prior study of Taoist thought. Advanced undergraduates may be admitted.

RELS 2300B. Huai-nan Tzu.

No description available.

RELS 2350A. Tokugawa Religion.

Key issues in the study of Japanese religious formations from the late sixteenth through mid-nineteenth centuries. Readings will be drawn from primary texts, both in English translation and in Japanese and/or Chinese, depending on enrolled participants; and from selected secondary accounts.

RELS 2350B. Readings in Japanese Religion and Thought.

Study of developments in Japanese religion, thought, and culture from the late Edo through the Meiji periods (ca. 1800-1912), and associated scholarly debates. We will read and discuss primary texts in English translation, modern secondary interpretations, and selected works in Sino-Japanese and/or Japanese, depending on the language capacities of enrolled students. Qualified undergraduates may enroll with permission of the instructor.

RELS 2380A. Chinese Buddhist Texts.

Each week we will engage in close reading through translation of Buddhist texts in the original Chinese. Selections will draw from sutras, commentaries, prefaces, colophons, biographies, and Chan literature. The course introduces research methods, major sources, dictionaries, and digital tools, and culminates in a seminar paper demonstrating original research using the tools and methods practiced in class. Prerequisite: Reading competence in classical Chinese.

RELS 2400A. Orthodoxy and Heresy in Islamic Thought.

This graduate seminar comprises advanced readings exploring the concepts of "orthodoxy" and "heresy" in a range of scholarly and theoretical contexts. We will explore the historiography of these two terms, their problematization and limits, and related concepts in primary and secondary literature. This course is best suited for graduate students with background training in Islamic Studies, and knowledge of Arabic and/or other relevant languages is preferred.

RELS 2400B. Historiography of Islam.

A critical appraisal of the field of Islamic history in light of issues in contemporary philosophy of history. We will discuss various ways in which 'Islam' has been imagined as an object of historical description and analysis. Topics include: historical thought generated by Muslims; relationship between historical projection and religious ideology; impact of contingent factors such as Mongol domination and modern colonialism; Orientalist views of the Islamic past; significance of narrative patterns, poetry, and modern historical fiction; and contemporary academic and popular trends. Intended for graduate students, with time devoted to materials in original languages (Arabic, Persian, and/or Urdu).

RELS 2400C. Sufism Seminar.

A survey of Sufism—as an Islamic religious phenomenon as well as a modern academic field—from the earliest sources to expressions in contemporary Muslim contexts. We will discuss Sufi mystical philosophies, liturgical practices, social organization, and historical development in Africa, Asia, and the Middle East. Readings consist of translations and academic treatments from various perspectives in the humanities and the social sciences. There will also be an optional weekly session dedicated to reading materials in original languages pertinent for course participants' research agendas.

RELS 2400L. Topics in Islamic Studies: Methods and Theories.

This graduate level course is survey of recent theoretical infusions into the academic study of Islam. We will examine paradigm shifting works, mainly from the last decade or so, and consider them within the broader context of contemporary historiography, methods, and theory. This course is designed for graduate students in order to aid them as they craft their own research agendas.

RELS 2450. Exchange Scholar Program.**RELS 2460. Professionalization Seminar.**

In addition to acquiring and practicing the arts of scholarship, teaching, and service, graduate students need to learn how to relate to colleagues, apply and interview for jobs, and submit proposals to conferences and publishers. The details of these processes are often mysterious, even to the initiated. The purpose of this seminar is to explore these various features of academia and graduate studies in a well informed manner. It is intended for fourth-year doctoral students in the Department of Religious Studies. Instructor permission required.

RELS 2510. Secularism and Secularity.

A graduate seminar on secularity, and related concepts, as they have been formulated to describe and interpret political and social life. What difference does "the secular" name? How do theories of the secular implicate our understandings of history, subjectivity, agency, and reason? Reading historical and recent scholarship on the secular, and paying particular attention to themes of coloniality and empire, we critically reflect on a concept that has been central to the formation of modern religion and politics.

RELS 2550D. Project Development Workshop (HMAN 2500).

Interested students must register for HMAN 2500.

RELS 2600D. Pragmatism and Religion.

Readings in the original American pragmatists and their recent admirers with special attention to the topic of religion.

RELS 2600E. Seminar in Religion and Critical Thought: Hegel. To Be Determined**RELS 2600F. Religious Ethics.**

This class will provide a survey of some of the most influential works in religious ethics in the past fifty or so years and also present a number of quite recent texts. Two areas of focus will be virtue ethics and questions around religion and politics.

RELS 2600G. Reason, Tradition and Modernity.

The modern West has been defined largely by pervasive challenges to inherited religious beliefs, ethical mores, and political institutions. Since the Enlightenment, these developments have provoked widespread reflection on the nature and significance of tradition, the limits of reason, as well as the relation between reason and tradition. We will trace this current from the developments of German romanticism through recent "new traditionalist" thought, such as that of Alasdair MacIntyre.

RELS 2600J. Religion, Power, and Practice.

The turns to power and practice are among the most important recent events in the academic study of religion, and in the humanities generally. Power speaks of the ways in which social arrangements produce social differences, resulting in domination, cooperation, and resistance across lines of class, race, gender, sexual orientation, and ethnicity. Practice speaks of what people *do*, a broader emphasis than prior emphases on what people *think*. This seminar will look at the social theorists who initiated these methodologies and some of the figures who have appropriated these theorists in the field of religious studies. Open to graduate students only.

RELS 2600K. Religion and Interpretation.

One of the most influential approaches to the study of religion views religion as primarily a matter of meanings or symbols. The task of the scholar of religion, then, is to interpret these meanings and symbols. This course examines this theoretical perspective on religion by looking at its proponents and its critics, as well as philosophical treatments of meaning and interpretation that have influenced religious studies. Readings include Hans-Georg Gadamer, Paul Ricoeur, Clifford Geertz, Mary Douglas, Donald Davidson, and Robert Brandom. Open to graduate students only.

RELS 2600L. Seminar: Afro-Theism.

This graduate seminar places a theological lens on Black life in North America. Its premise is that Afro-Theisms, not the institutional "Black Church" or Black prophetic religion, have been seminal to the self-conception of Black people and their way of constituting racial "others". Different theistic emphasis at different historical moments demonstrates both the importance and fluidity of Afro-Theisms and sheds unique light on quest for equity and self-actualization. Starting with the conventional Christian theologies into which New World Africans under slave conditions were indoctrinated, this course will explore the role and impact of Afro-Theisms.

RELS 2880. H. Arendt's Eichmann- POLS2354.

Interested students must register for POLS 2354.

RELS 2890. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for preliminary examinations.

RELS 2910. Independent Research.

The staff is willing to offer independent reading courses in selected areas. See the Instructor for more information. Please check Banner for the correct section number and CRN to use when registering.

RELS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Ruth J. Simmons Center for the Study of Slavery and Justice

The Ruth J. Simmons Center for the Study of Slavery and Justice (Simmons Center) at Brown University is a scholarly research center with a public humanities mission.

Recognizing that racial slavery was central to the historical formation of the Americas and the modern world, the Simmons Center creates a space for the interdisciplinary study of the historical forms of slavery while also examining how these legacies continue to shape our contemporary world.

Since its inception in 2012, the Center has organized hundreds of public programs to examine issues of social justice and racial equality, including the impact of anti-black racism on our nation's educational systems, and racial segregation and its persistent structural legacies. As well we have paid attention to issues around contemporary human trafficking. As part of its mission to examine the history and legacies of slavery in ways that engage a broad public, the Simmons Center has built a global network of scholars, museums, and universities. The Center has initiated joint projects with universities and museums around the world and fostered relationships with high school educators across the nation. Through its research, exhibitions, convenings, and curriculum, the Center has become

a leading institution for understanding how slavery's legacy directly impacts all of our lives, yet is "hidden in plain sight."

The Simmons Center's work is organized around research clusters that examine the legacies of racial slavery through scholarship and public engagement; seminar series; public humanities projects such as gallery exhibitions, arts programming, the development of new high school curriculum, walking tours; and the arts initiative that creates art platforms for artists and curators to develop a space for debate and discussion around the history of art, black aesthetics, and new forms of African and African diasporic art.

In the Fall 2024, the Simmons Center welcomed the first cohort of the the Master's in Integrative Studies (Public Humanities) program. The program provides students with an interdisciplinary exploration of issues surrounding race, decolonial practices and social justice with specific references to cultural work in museums and other cultural organizations. Students in this program gain the knowledge and tools to lead institutional change within their organizations.

To learn more about the Simmons Center, please visit <https://simmonscenter.brown.edu/>.

Center for the Study of the Early Modern World

The Center for the Study of the Early Modern World promotes interdisciplinary and multidisciplinary approaches to historical cultures around the world between the waning of feudalism and the arrival of global industrial capitalism, from the 1300s to the end of the 1800s. Characterized by new global aspirations as well as new modes of domination, resistance, and conflict, this period yielded significant technological transformations and cultural inventions whose study contributes to the historical understanding of the modern world.

Students take courses in a wide range of departments in the humanities and social sciences and from faculty affiliated with the Center for the Study of the Early Modern World.

The Center, which is part of the Cogut Institute for the Humanities, also hosts a lecture series, a graduate colloquium, and interdisciplinary opportunities for graduate students. Partnerships with the John Hay Library, the John Carter Brown Library, the Bell Gallery, as well as the RISD Museum and the Folger Institute in Washington, DC play a significant part in its activities.

For additional information, please visit the department's website at <https://earlymodernworld.brown.edu/>.

Early Modern World Concentration Requirements

The Center for the Study of the Early Modern World promotes interdisciplinary and multidisciplinary approaches to historical cultures around the world between the waning of feudalism and the arrival of global industrial capitalism, from the 1300s to the end of the 1800s. Characterized by new global aspirations as well as new modes of domination, resistance, and conflict, this period yielded significant technological transformations and cultural inventions whose study contributes to the historical understanding of the modern world.

Students take courses in a wide range of departments in the humanities and social sciences and from faculty affiliated with the Center. Students are invited to take advantage of this breadth of offerings in order to enhance their understanding of the period as well as to gain a sense of the uses, limitations, and interrelationships of particular disciplinary approaches.

Requirements

Concentrators are required to take a minimum of eight courses. These include the following:

- Three courses on early modern topics in one field in which the student has primary interest or training, e.g., literature, history of art and architecture, or history.

- Three courses related to the early modern period chosen from two other fields.
- A senior project. The senior project constitutes the capstone for all concentrators. Examples of possible senior projects include a senior thesis (roughly equivalent to a senior seminar paper), the staging of an early modern play, the performance of early modern music, or an exhibition. The final project will be developed in consultation with two faculty advisors who work closely with the student. Credit is granted through registration for Independent Study in the department for which the topic of research lies.
- Other relevant courses of the student's choosing.

In addition, the student must be able to demonstrate a reading knowledge of a relevant modern or ancient language other than English. This language requirement does not count as one of the eight courses.

Under the supervision of the director of the program, students may choose courses from the following:

HIAA 0062	Dutch and Flemish Art: Visual Culture of the Netherlands in the Seventeenth Century
ENGL 0100C	Altered States
ENGL 0150D	Shakespeare's Present Tense
HIST 0286A	History of Medicine I: Medical Traditions in the Old World Before 1700
ENGL 0310A	Shakespeare
ENGL 0310E	Shakespeare: The Screenplays
HIAA 0550	Painters, Builders, and Bankers in Early Modern Italy
HIAA 0560	Constructing the Eternal City: Popes and Pilgrims in Early Modern Rome
HIAA 0630	Cultural History of the Netherlands in a Golden Age and a Global Age
COLT 0710I	New Worlds: Reading Spaces and Places in Colonial Latin America
FREN 0720A	De l'Amour courtois au désir postmoderne
POBS 0910	On the Dawn of Modernity
ITAL 0981	When Leaders Lie: Machiavelli in International Context
FREN 1030A	L'univers de la Renaissance: XVe et XVIe siècles
FREN 1030B	The French Renaissance: The Birth of Modernity?
FREN 1040B	Pouvoirs de la scène: le théâtre du XVIIe siècle
FREN 1040C	Le Grand Siècle à l'écran
FREN 1040D	Molière et son monde
ENGL 1310A	Firing the Canon: Early Modern Women's Writing
ENGL 1310H	The Origins of American Literature
ENGL 1310J	Imagining the Individual in Renaissance England
ENGL 1310O	Restoration and Early Eighteenth-Century Literature
ENGL 1360K	Shakespeare and Company
ENGL 1360P	Shakespearean Tragedy
ENGL 1360S	Between Gods and Beasts: The Renaissance Ovid
ENGL 1360Z	Shakespeare and Embodiment
COLT 1410P	Shakespeare
HIAA 1560A	Italy and the Mediterranean
ITAL 1580	Word, Image and Power in Early Modern Italy
HIAA 1600I	Collections and Visual Knowledge in Early Modern Europe: 1400-1800

JUDS 1751	Jews Between Christians and Muslims in the Early Modern World
HIST 1825H	Science, Medicine and Technology in the 17th Century
ENGL 1950A	Form and Feeling in Renaissance Poetry
HIST 1964A	Age of Impostors: Fraud, Identification, and the Self in Early Modern Europe
HIST 1974M	Early Modern Globalization
EMOW 1980	Independent Study in EMOW
LATN 2000A	Senecan Tragedy
FREN 2130E	Corps et esprits libertins
FREN 2130F	Façons d'aimer: Discourses of Sexuality in Early Modern France
HISP 2160G	Don Quixote: Contexts and Constructions
ENGL 2360O	Irony and Satire
ENGL 2360P	Thinking with Romance in the Renaissance
ENGL 2360S	Alternative Miltons
HISP 2520I	Sor Juana Inés de la Cruz in Her Literary Context
ITAL 2550	Gender Matters

Liberal Learning

This concentration develops aesthetic awareness, close reading skills, collaborative skills, cultural understanding, facility with symbolic languages, historical awareness as well as speaking and writing skills.

Honors

Interested and eligible students petition to write a thesis and the faculty chooses the Honors group for that year from the applications, making every effort to accommodate all eligible proposals. Selection is based upon the quality of the application, the preparedness of the student to undertake the project, and the availability of appropriate advisors for the subject.

Students accepted in the Honors program sign up for EMOW 1980 in the Fall and again in the Spring, with the section number of their advisor (REMS 1980 will become EMOW 1980 as of Fall 2019). Students must meet regularly with their advisors and second readers throughout the year according to a schedule determined by each student and advisor. Finished drafts of the thesis (which will be about 35 pages in length, not counting bibliography and visual or other supporting materials) will be due to the advisor and second reader on April 1 of the Spring semester. Comments will be returned to the students for final polishing and corrections at that point. Students will receive Honors when both their primary advisor and their second reader have provided written statements in support of the finished project. The finished paper, which should be a polished and revised, edited, professional work of original research, will be made available to the entire Early Modern World faculty for comments. There will be a public presentation of the Honors work at the end of the Spring semester.

Students planning a December graduation will not be eligible for the Honors Thesis program, but they are welcome to work out other ways to pursue projects of independent interest in consultation with an academic advisor.

Students wishing to write an honors thesis must have an A average in the concentration, which means that they will not have received more than one "B" or "S" in any course used for the concentration. Classes taken S/NC may be considered as qualifying the student for Honors if they are marked "S with distinction," meaning that had the student taken the course for a grade, the grade would have been an "A." It is advisable for them to have taken at least one class with the person who will advise the thesis, and have already written a research paper before choosing to undertake this year-long writing project. Honors students are strongly encouraged not to take more than 4 classes either semester of their senior year—the Honors class being considered one of the four classes.

Honors Application Process

Applications are due to the Director of Center for the Study of the Early Modern World in mid-April of the student's junior year. Each application shall consist of:

1. A very brief (one or two paragraph) cover letter identifying the most appropriate advisor and second readers, and stating also the student's preparation for the project. Second readers may be professors who work in areas related to the topic, or in some very special cases (and with the advisor's approval) may be practitioners with whom the student already worked closely, for example.
2. A two-page double-spaced abstract stating and explaining the topic (subject and argument) of the research to be undertaken, written as clearly as possible.
3. A one-page working bibliography of the most relevant books and major articles to be consulted for the project.
4. A current resumé.
5. A printout of the most recent transcript.

Courses

EMOW 0023. South Asian Art/Arch-HIAA0023.

Interested students must register for HIAA 0023.

EMOW 0050M. Difficult Relations? Judaism and Christianity from the Middle Ages until the Present (JUDS 0050M).

Interested students must register for JUDS 0050M.

EMOW 0062. Dutch and Flemish Art: Visual Culture of the Netherlands in the Seventeenth Century (HIAA 0062).

Interested students must register for HIAA 0062.

EMOW 0063. Antisemitism: A History (JUDS 0063).

Interested students must register for JUDS 0063.

EMOW 0081. Architecture of the House Through Space and Time (HIAA 0081).

Interested students must register for HIAA 0081.

EMOW 0089. Jews and Muslims: Their Contacts through the Ages (RELS 0089).

Interested students must register for RELS 0089.

EMOW 0100C. Altered States (ENGL 0100C).

Interested students must register for ENGL 0100C.

EMOW 0150H. Foods and Drugs in History (HIST 0150H).

Interested students must register for HIST 0150H.

EMOW 0150Z. Hamlet/Post-Hamlet (ENGL 0150Z).

Interested students must register for ENGL0150Z.

EMOW 0210. Early Modern Philosophy (PHIL 0210)..

Interested students must register for PHIL 0210.

EMOW 0211. Art of Empire: The Early Modern Hispanic World (HIAA 0211).

Interested students must register for HIAA 0211.

EMOW 0233. Colonial Latin America (HIST 0233).

Interested students must register for HIST 0233.

EMOW 0260. Early Modern India, 1500-1800 (HIST 0260).

Interested students must register for HIST 0260.

EMOW 0286A. History of Medicine I: Medical Traditions in the Old World before 1700 (HIST 0286A).

Interested students must register for HIST 0286A.

EMOW 0304. Words on Things: Literature and Material Culture in Early Modern China.

Interested students must register for EAST 0304.

EMOW 0310. Japan's Floating World (EAST 0402).

Interested students must register for EAST 0402.

EMOW 0310A. Shakespeare (ENGL 0310A).

Interested students must register for ENGL 0310A.

EMOW 0510K. The 1001 Nights (COLT 0510K).

Interested students must register for COLT 0510K.

EMOW 0522G. An Empire and Republic: The Dutch Golden Age (HIST 0522G).

Interested students must register for HIST 0522G.

EMOW 0522O. What is Enlightenment? (HIST0522O).

Interested students must register for HIST 0522O.

EMOW 0550. Painters, Builders, and Bankers in Early Modern Italy (HIAA 0550).

Interested students must register for HIAA 0550.

EMOW 0580M. The Age of Revolutions, 1760-1824 (HIST 0580M).

Interested students must register for HIST 0580M.

EMOW 0610E. Crisis and Identity in Mexico, 1519-1968 (COLT 0610E).

Interested students must register for COLT 0610E.

EMOW 0630. Cultural History of the Netherlands in a Golden Age and a Global Age (HIAA 0630).

Interested students must register for HIAA 0630 and HIST 1264M.

EMOW 0632. Mural Painting in Mexico (HIAA 0632).

Interested students must register for HIAA 0632.

EMOW 0660. Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution (HIAA 0660).

Interested students must register for HIAA 0660.

EMOW 0703. Confucianism and Its Critics (EAST 0703 or RELS 0545).

Interested students must register for EAST 0703 or RELS 0545.

EMOW 0710I. New Worlds: Reading Spaces and Places in Colonial Latin America (COLT 0710I).

Interested students must register for COLT 0710I.

EMOW 0750N. Muslims, Christians, and Jews in Medieval Spain (HISP 0750N).

Interested students must register for HISP 0750N.

EMOW 0780. From Antiquity to the Humanities (via Humanism) and the History of Ideas (CLAS 0780).

Interested students must register for CLAS 0780.

EMOW 0810H. How Not to Be a Hero (COLT 0810H).

Interested students must register for COLT 0810H.

EMOW 0810L. The Pursuit of Happiness (COLT 0810L).

Interested students must register for COLT 0810L.

EMOW 0812W. The Epic Tradition: From Homer to Milton (COLT 0812W).

Interested students must register for COLT 0812W.

EMOW 0830. Shipwrecks and Castaways in History and Literature (POBS 0830).

Interested students must register for POBS 0830.

EMOW 0855. The Bhagavad Gītā (CLAS 0855).

Interested students must register for CLAS 0855.

EMOW 0910. On the Dawn of Modernity (POBS 0910).

Interested students must register for POBS 0910.

EMOW 0910A. Medieval and Renaissance Music (MUSC 0910).

Interested students must register for MUSC 0910.

EMOW 0910B. From Darkness to Light: Medieval and Renaissance Music (MUSC 0910).

Interested students must register for MUSC 0910.

EMOW 0920. Baroque and Classic Music (MUSC0920).

Interested students must register for MUSC 0920.

EMOW 1000B. Littérature et culture: Chevaliers, sorcières, philosophes, et poètes (FREN 1000B).

Interested students must register for FREN 1000B.

EMOW 1010. Dante in English Translation: Dante's World and the Invention of Modernity (ITAL 1010).

Interested students must register for ITAL 1010.

EMOW 1010A. Stories from the Chinese Empire: Scholars, Demons and Swindlers (CHIN 1010).

Interested students must register for CHIN 1010.

EMOW 1020. Decameron: MdvI-Mdrn (ITAL1020).

Interested students must register for ITAL 1020.

EMOW 1030B. Modernity, Italian Style (ITAL 1030B).

Interested students must register for ITAL 1030B.

EMOW 1040. Virgil: Aeneid (LATN 1040B).

Interested students must register for LATN 1040B.

EMOW 1040B. Théâtre du XVIIe siècle (FREN 1040B).

Interested students must register for FREN 1040B.

EMOW 1040C. Le Grand Siècle à l'écran (FREN 1040C).

Interested students must register for FREN 1040C.

EMOW 1040D. Molière et son monde (FREN 1040D).

Interested students must register for FREN 1040D.

EMOW 1112. China's Early Modern Empires (HIST 1112).

Interested students must register for HIST 1112.

EMOW 1120G. Reading Humanist Latin Texts (LATN 1120G).

Interested students must register for LATN 1120G.

EMOW 1120I. Latin Epic from Mexico (LATN 1120I).

Interested students must register for LATN 1120I.

EMOW 1121C. Cicero in New Spain (CLAS1121C).

Interested students must register for EMOW 1121C.

EMOW 1140. Classical Philosophy of India (CLAS 1140).

Interested students must register for CLAS 1140.

EMOW 1160. Classics of Indian Literature (CLAS 1160).

Interested students must register for CLAS 1160.

EMOW 1179. Reception of Latin in Americas (CLAS 1179).

Interested students must register for CLAS 1179.

EMOW 1216. The Paradox of Early Modern Europe (HIST 1216).

Interested students must register for HIST 1216.

EMOW 1220. 17th Century Continental Rationalism (PHIL 1220).

Interested students must register for PHIL 1220.

EMOW 1240A. Fashion and Fiction in the Early Modern Hispanic World (HISP 1240A).

Interested students must register for HISP 1240A.

EMOW 1262. Women, Gender, Feminism in Early Modern Italy (ITAL 1262).

Interested students must register for ITAL 1262.

EMOW 1262M. Truth on Trial: Justice in Italy, 1400-1800 (HIST 1262M).

Interested students must register for HIST 1262M.

EMOW 1266C. English History, 1529-1660 (HIST 1266C).

Interested students must register for HIST 1266C.

EMOW 1266D. British History, 1660-1800 (HIST 1266D).

Interested students must register for HIST 1266D.

EMOW 1272D. The French Revolution (HIST 1272D).

Interested students must register for HIST 1272D.

EMOW 1304. Crafting Early Modern China: Handicraft, Witchcraft and Statecraft (EAST 1304).

Interested students must register for EAST 1304.

EMOW 1310A. Early Mdrn Wmn Wrt (ENGL1310A).

Interested students must register for HMAN 1971U.

EMOW 1975R. Religion from Below (HMAN 1975R).
Interested students must register for HMAN 1975R.

EMOW 1980. Independent Study in EMOW.
Tutorial instruction on a topic in the Renaissance or early modern period, supervised by a member of the core faculty. This number may be used by concentrators for the required Independent Project undertaken in the junior or senior year. Section numbers vary by professor; instructor permission required.

EMOW 2015. Revolt and Revolution in the Black World (AFRI 2015).
Interested students must register for AFRI 2015.

EMOW 2030G. Mester de clerecia (HISP 2030G).
Interested students must register for HISP 2030G.

EMOW 2050. Microhistory (ITAL 2050).
Interested students must register for ITAL 2050.

EMOW 2080F. Latin in America (LATN 2080F).
Interested students must register for LATN 2080F.

EMOW 2100. The Ancient Near East: Early Modern Intellectual Histories (ASYR 2100).
Interested students must register for ASYR 2100.

EMOW 2110K. Vision and Visualization in Literature: The Rhetoric of Enargeia (CLAS 2110K).
Interested students must register for CLAS 2110K.

EMOW 2130R. Penser et écrire le non-humain au XVIIème siècle (FREN 2130R).
Interested students must register for FREN 2130R.

EMOW 2150E. Theories et fictions des Lumières (FREN 2150E).
Interested students must register for FREN 2150E.

EMOW 2160M. Early Modern Madrid: The Cultural Creation of a Court Capital (HISP 2160M).
Interested students must register for HISP 2160M.

EMOW 2160N. Antiquity and Innovation in the Hispanic Renaissance (HISP 2160N).
Interested students must register for HISP 2160N.

EMOW 2350H. The History of Wonder in Colonial Spanish American Lettres (HISP 2350H).
Interested students must register for HISP 2350H.

EMOW 2360Y. Lyric and Ecstasy (ENGL 2360Y).
Interested students must register for ENGL 2360Y.

EMOW 2361E. Sadoomasochism and Early Modern Literature (ENGL 2361E).
Interested students must register for ENGL 2361E.

EMOW 2400R. Tracing Translations: Artistic Migrations and Reinventions in the Early Modern World (HMAN 2400R).
Interested students must register for HMAN 2400R.

EMOW 2400T. Imagining Cities: Early Modern Urban Perspectives (HMAN 2400T).
Interested students must register for HMAN 2400T.

EMOW 2520I. Sor Juana Inés de la Cruz in Her Literary Context (HISP 2520I).
Interested students must register for HISP 2520I.

EMOW 2520T. Critical Disability Studies (Medieval and Early Modern) (HISP 2520T).
Interested students must register for HISP 2520T.

EMOW 2540D. The Theater that was Rome (HIAA 2540D).
Interested students must register for HIAA 2540D.

EMOW 2550. Gender Matters (ITAL 2550).
Interested students must register for ITAL 2550.

EMOW 2561V. The Pursuit of Happiness: Transatlantic Literary Culture in the Long Eighteenth Century (ENGL 2561V).
Interested students must register for ENGL 2561V.

EMOW 2600E. Jesuit Global Strategies in Art and Conversion (HIAA 2600E).
Interested students must register for HIAA 2600E.

EMOW 2600F. Histories and Cultures of the Medieval and Early Modern Lusophone World (POBS 2600F).
Interested students must register for POBS 2600F.

EMOW 2970E. Early Modern Continental Europe - Reading (HIST 2970E).
Interested students must register for HIST 2970E.

EMOW 2971T. Colonial Latin America (HIST 2971T).
Interested students must register for HIST 2971T.

Science, Technology, and Society

The program for Science and Technology Studies at Brown operates under the premise that students and scholars in the field of science and technology studies want to know how scientific knowledge is produced. STS believes that the idealized accounts of knowledge production entrenched in our scientific belief system are inadequate, given the complexity of the process they claim to describe.

STS scholars seek to understand how science operates by analyzing historical case studies, observing contemporary scientists at work, examining representations of scientific ideas in textbooks or journals, and studying the infrastructure of scientific institutions.

This interdisciplinary field brings together anthropologists, philosophers, historians, art historians, literary theorists, sociologists and practicing scientists and technologists. In addition to offering an undergraduate concentration program in Science and Society, Brown also offers interdisciplinary courses under the same rubric.

For more information on STS at Brown, please visit: <https://www.brown.edu/academics/science-and-technology-studies/>

Science, Technology, and Society Concentration Requirements

Science, Technology, and Society (STS, formerly Science and Society) is an interdisciplinary concentration that examines the processes of scientific discovery and the establishment of scientific policies and systems of belief from historical, philosophical, anthropological, and sociological perspectives. Concentrators analyze the practices, norms, and values that reflect and shape our deepest convictions about what is considered "science." Students select courses in the physical sciences, life sciences, or mathematics and choose a thematic track that may include the history and philosophy of science; gender and science; race, science and ethnicity; health and medicine; environment and society; or they may create their own independent focus. STS prepares students to follow, guide, and shape scientific knowledge as it travels from the laboratory into the public arena.

Requirements

Consisting of 12 courses, the program of study outlined below will be developed by each student in consultation with the concentration advisor. Where appropriate, independent reading, lab courses or GISPS may count for up to three of the twelve total courses. Students will take a minimum of 7 intermediate to advanced courses.

Required Courses (2)

The concentration has two required courses.

- STS 1000 : Introduction to Science and Society: Theories and Controversies, or equivalent introductory course: usually taken in the second or third year.
- STS 1900 : Senior Seminar in Science and Society, also open to non-majors with the proper background, usually taken senior year.

Thematic Track (3)

Students will organize their course of study around the choice of a thematic track. The theme may be thought of as the applied content portion of the concentration. Students will take a minimum of three courses, at least one of which must be at an advanced level, in one of the thematic areas listed below:

- History & Philosophy of Science
- Gender & Science
- Race, Science & Ethnicity
- Health & Medicine
- Representing Science in Literature & Culture
- Policy, Persuasion & the Rhetoric of Science
- Environment & Society
- Independent Focus

Science Track (4)

Students will take a minimum of four courses in one of the following scientific areas: physical sciences, life sciences, mathematics/computer science. The chosen area should provide appropriate background and support for the chosen concentration theme. The science courses will be sequenced such that a concentrator will move enough beyond the introductory level to gain some understanding of the world view of scientists within a chosen field. The particular sequence of courses which best meets the science requirement will be chosen in consultation with the concentration advisor. When necessary, the concentration advisor will seek guidance from faculty within the chosen scientific field.

Science and Technology Studies Theory (3)

Students will take three Science and Technology Studies-related courses in the social sciences and humanities. These courses, which will provide critical theoretical background for the study of Science and Society, should address questions of historiography, epistemology and methodology in the field of science and technology studies. A full list of such courses and sample concentrations may be found at <https://www.brown.edu/academics/science-and-technology-studies/>

Honors

To qualify for Honors a student must:

- Be in good standing
- Have completed at least two thirds of the concentration requirements by the application deadline
- Have earned a majority of "A" grades in the concentration. Classes taken S/NC will count as qualifying towards that majority if they are marked "S with distinction" or are accompanied by a Course Performance Report (https://ask.brown.edu/performance_reports/) indicating that had the student taken the course for a grade, the grade would have been an "A."

Courses

STS 0050. Science Fictions: The Misuse of Science in Public Life.

People on all sides of the political spectrum distort or spin science to advance their own economic, policy, religious or other goals. The phenomenon is obvious today but it is not new, and it is visible on both the right and the left. In this seminar we consider what science is and how it works, how people learn about it, why they are vulnerable to spin about it (and how to avoid being spun) and how spin plays out with subjects like climate change, medicine, diet, the teaching of evolution, sex education, pollution and other issues.

STS 0192N. Self-Help, Science, and the Pursuit of Happiness.

If you work hard enough, you can be anything you want to be." This course examines self-help culture and techniques of self-making, such as dieting and positive thinking. From the writings of Benjamin Franklin to television makeover shows, self-help discourse has proven central to U.S. culture and politics. Where does self-help culture come from, who does it serve, and what types of social relations does it authorize? How did scientists become the moral authorities on happiness and the good life? Taking a historical perspective and aided by scholarship in fat studies, disability studies, science studies, and Black feminism, we will answer these questions by analyzing a variety of cultural texts. We will explore together how self-help culture produces difference along the lines of class, gender, race, and disability. We will ponder when self-help is compatible with social justice.

STS 0400. The Phoenix and the Hummingbird: Natural History from Antiquity to Evolution.

Scientists love to solve mysteries. From philosophers of antiquity to contemporary citizen naturalists, study of nature has focused on the creatures that have most puzzled humankind. These have inspired natural histories: encompassing studies covering everything that could be known about an animal—from what it symbolized and how it behaved to its place in the natural order. By looking at issues of truth and its relationship to myth, direct experience, and nature's systematization, this seminar provides an introduction to the history of science through what naturalists have written about the more mystifying creatures in the natural world.

STS 0700B. Science and Social Controversy.

In this course we examine the institution of science and its relations to the social context in which it is embedded. Scientific objectivity, scientific consensus, scientific authority, and the social and moral accountability of scientists will be considered in the context of discussing such controversies as: the AIDS epidemic, climate change, science and religion, the Manhattan Project, the Tuskegee Syphilis Experiment, genetic and pharmacological enhancement, the role of drug companies in science and medicine, psychiatric diagnosis and medication, robotics, and the implications of neuroscience for free will and moral responsibility. Enrollment limited to 20 first year students and sophomores.

STS 0701. Dirty Computer: Race, Queerness, and Science Fiction.

What do representations of robots and cyborgs in popular film, sci-fi literature, and music tell us about gender, sexuality, race, and what it means to be "human?" Using queer of color critique, feminist theory, disability studies, and science and technology studies (STS), we will investigate the ways that science fiction's disruption of race, gender, and sexuality as stable categories offers radical models for our present and possible futures. Our case examples explore the politics of the body through narratives of artificial intelligence, sex work, urbanism and segregation, biotech research, prosthetics and athleticism, new reproductive technologies, and more. We will engage with poetry, film, visual art, and speculative fiction to explore how bodies are dreamed, crafted, and represented as these works re-imagine bodily and social estrangement in the present through the creation of counter-futures.

STS 0702. Invisible Labor in the Making of Science.

Invisible Labor in the Making of Science is about the people who are concealed, eclipsed, or anonymized in accounts of scientific research. Many scientific workers—including translators, activists, archivists, technicians, curators, and ethics review boards—are absent in publications and omitted from stories of discovery. Professional scientists are often celebrated, yet they are expected to uphold principles of 'objective' self-denial. This course will explore these silences and omissions to reveal how invisibilities have shaped twentieth and twenty-first century science. The course modules invites comparisons across geographic, temporal, and disciplinary boundaries. The modules also facilitate different forms of self-reflexive practice, and will open the possibilities of research avenues for students; how we should approach research and narrative method; and how contemporary interest in invisible labor relates to established discursive traditions in the historiography of science and STS.

STS 0703. Politics of AI.

Artificial Intelligence (AI) emerged over the past century through innovations in technology and through equally transformative innovations in law. The aim of this seminar is to explore AI law, policy, and advocacy in historical and political contexts at the level of organizations, countries, and global governance. The course is designed for students interested in 1) developing skills for thinking and working critically with science-technology; 2) gaining hands-on experience with basic big data tools; and 3) investigating and imagining creative, justice-based approaches to living well together in a data-driven world. Class delivery methods: This course is hybrid. Recorded lectures will introduce major American and international policy efforts and protests around AI tools and infrastructures. Discussions and case studies completed via Canvas will focus on whether—and how—AI might be used to support greater creativity and freedom.

STS 0770. Stories of Nature.

What is nature? Are humans part of it or outside it? How has this boundary diverged over time and space, and how has it been expressed? This seminar tackles these questions by exploring stories of nature from various epistemic traditions. Through ten case studies, we will investigate how the human-nonhuman boundary has been expressed through storytelling in creation myths, natural histories, fiction and journalistic writing, documentaries, and artistic creations. Methodologically, we will survey how scholars have reflected on this boundary from the history of science, animal studies and indigenous studies, while learning to write stories of nature of our own.

STS 1000. Introduction to Science, Technology and Society.

What is "science"? How do scientific ideas become knowledge? What is the nature of scientific objectivity, how can it be compromised? What is a scientific community, scientific consensus, and scientific authority? What roles does science play in our culture, and how is science related to other social institutions and practices? The interdisciplinary field of science studies is introduced through exploration of topics that include: gender and race, psychiatric classification, the drug industry, science and religion, and the use of nuclear weapons during World War II. Enrollment limited to 30 sophomores, juniors, seniors; others may enroll with permission of instructor.

STS 1100. Botanizing Worlds.

What can plants tell us about the human condition, and more broadly about the rapidly changing conditions on Earth? In recent years, scholars, writers, and artists have been calling for new ways to address "plant blindness"; finally, it appears that plants are having a moment. Plants are crucial to the survival of human life. From the food we eat, to the air we breathe, the clothes we wear, plant bodies are used to build homes, cure our ailments, and feed our addictions. Putting plants to use is tantamount to survival but this course aims for a less extractive relationship with plants. This course explores what we might gain by learning from plants—to know them, think with them, and attune our senses to their liveliness. Raising fundamental questions about human-plant relations to reconsider what it means to be human?

STS 1400. Disability, Coloniality, Decoloniality.

This course takes a multidisciplinary approach to disability justice, history, art, and activism. We will situate the social and medical models of the disabled, sick, and fat body within institutions of empire—such as the plantation, camp, and penitentiary) to examine how disability and other forms of bodily difference become scripted within liberal humanism. In doing so, we recast familiar debates in Postcolonial and Decolonial Studies on topics such as sovereignty, ecological extraction, and global capitalism through a Critical Disability Studies lens. Exploring historical and literary texts, films, poetry, embodied performances, and other aesthetic objects, we will identify how shifting formations of colonial and scientific knowledges reverberate onto our contemporary understandings and lived experiences of bodily difference as they are scaffolded through race-gender-labor relations.

STS 1500. The Science Beat: Writing from a Warming Planet.

In a time of widespread distrust of expertise and institutions, what role can science communicators play in cultivating a better-informed public? With a special focus on covering the climate crisis, this course will equip students to clearly and effectively communicate scientific concepts to a general audience through nonfiction writing. We'll start with the fundamentals of interviewing, news writing, and journalistic ethics, then move on to narrative techniques that will stretch students to develop their personal voices as storytellers. Students will be encouraged to bring their own experience to the page, since great science writing can provide what we look for in all literature—a sense of connection with others. This is a reading and writing intensive course; in addition to their own reporting, students will read—and reflect critically on—science storytelling in a variety of styles and formats.

STS 1700A. Disability and Sexuality: Politics of Desire and Desirability.

Disabled people have been variously understood as undesirable, as subjects who do not desire, or as people whose desire is dangerous and perverse. In this course, we will excavate the origins of these understandings and develop new ones through a "cripping" of sexuality. The "normalization" of disabled sexuality through disciplinary regimes, and the ways disabled people have challenged them, will be a central theme. The course will utilize texts from both queer theory and disability studies, understanding the ways disabled sexuality pushes against normative expectations of proper sexuality. From the eugenic logic controlling the reproduction of the "feeble-minded"; to discourses of consent and agency surrounding intellectual disabilities; to interdependency, care, and disabled intimacies; to queer crip theories of kink, we will take disability as a crucial lens into the constitution of modern understandings of "sexuality" itself.

STS 1700B. Race, War, and Medicine.

This course explores the historical and contemporary relationship between three prominent pillars of our daily lives: race, war, and medicine. How did each influence the development of the other, and through this process construct modern societies?

We will examine the role played by medical practitioners and military personnel in the creation of social and racial hierarchies that in turn abetted the appropriation of land and the extraction of labor. We will begin in the seventeenth century and predominantly track the history of modern Western imperialist powers, especially the US. Nonetheless, an important priority of the course is to de-center imperial and top-down narratives, and the scholarship we engage with reflects that goal.

STS 1700C. Science and Technology Policy in the Global South.

Junior-senior seminar exploring the relationships among science, technology, society, and public policymaking in the Global South. Exemplar countries are South Africa, Brazil, India, and China. Biotech, nanotech, public health, environment, and science training policies are among those closely examined. Three writing assignments, plus electronic conversations with counterparts in the Global South.

STS 1700D. Gathering Hope: Stories for Earthly Survival.

Human actions have had irreversible changes at a planetary level including in the composition of the atmosphere, land, and oceans, the climate, the rapid extinctions of life, and an increase in the prevalence of toxic chemicals. The history of colonialism, enslavement, and plantations are also intertwined in ruin of the environment. Feminist science studies provide a guide to the arts of noticing and staying with the troubles of our time but also for imagining otherwise. In this course we gather hope from ecofeminism in order to move towards a justice-oriented future. We do this by delving into the literature on ecofeminism alongside ecological speculative fiction. Recognizing that solutions to environmental problems require a feminist attunement, we can start to understand the implications that our ethical commitments have to the future of life on the planet.

STS 1700E. The Sounds of Science: Nonfiction Audio Storytelling.

In this course, we will use narrative nonfiction storytelling to try to get at the layers beneath popular science stories. Our medium will be audio, and the course will equip students with the tools and skills to develop their story ideas in ways that take advantage of the unique intimacy of sound. While audio is not a great medium for communicating numbers and statistics, it excels at the complexities of character and feeling. That's where we will focus our storytelling energies. In the spirit of inquiry, we will produce narratives that offer more questions than answers. Students will learn the fundamentals of field recording, interviewing, story structure, writing for the ear, audio editing, sound design, and scoring.

STS 1700F. Visualizing the Invisible: Art, Science and Observation.

DINOSAURS, wilting plants, Jupiter's moons and disembodied wombs—over the last few hundred years, thinkers have engaged with interdisciplinary methods across the arts and sciences in representing objects that have evaded the human eye. From anatomical theaters to observatories, natural history museums, labs, and rainforests, people have struggled with the politics and poetics of visualizing and communicating "invisible" objects—things that were too far away, too small, too ephemeral, too dead, or otherwise hidden from human sight. Asking how scientists and artists were trained to see, we will study the history of observation from the early modern period to the present. This class will include workshops at the Haffenreffer Museum of Anthropology, the Nature Lab, and RISD's glass studios. Students need not have any hands-on experience in the arts or sciences, but we will practice both in class.

STS 1700N. Race, Science, and Society: Genomics and Beyond.

Why are drugs being marketed as racial saviors? What does biotechnology have to do with race? This course introduces students to interdisciplinary approaches to the study of race in science and society as an integrated natural and social scientific endeavor. Using a team-based pedagogy, interdisciplinary groups of natural and social science concentrators will explore real-world problems like validating knowledge about racial difference, the relationship between politics and science, and the newest findings in such scientific fields as anthropology, epidemiology, and cognitive science. Enrollment limited to 20. S/NC

STS 1700P. Neuroethics.

In this course, we will examine ethical, social, and philosophical issues raised by developments in the neurosciences. Topics will include: neurodevelopment and the emergence of persons; the impact of child abuse on brain development; aging, brain disease, and mental decline; life extension research; strategies and technologies for enhancement of human traits; "mind-reading" technologies; agency, autonomy, and excuse from responsibility; error and bias in memory; mind control; neuroscientific and evolutionary models of religious belief and moral judgement. Enrollment limited to 20. Instructor permission required.

STS 1700R. Bodies at Work: Disability and Capitalism.

If disability has been defined as the inability to work, then an exploration of disability necessitates an exploration of capitalism. Workplaces literally injure and disable bodies, while changing arrangements of labor define and redefine what makes something a disability, requiring new tasks of bodies at work. This course traces the dynamic relationship between bodies and economies over the course of American history from the birth of industrial management science in the nineteenth century, to the "essential worker" of the COVID-19 pandemic. Nimble moving back and forth between disability studies and labor history, we will develop the conceptual tools to understand capitalism through the lens of disability, while also generating new ways to think about disability via critical histories of capitalism. We will also look at how disabled people have pushed back, envisioning new ways of valuing bodies beyond productivity.

STS 1700S. Crippling Technoscience: Disability, Knowledge, (Re)Invention.

Just as disabled people have re-appropriated the term "crip" for their own political empowerment, so too has technoscience been both a means of oppression and transformation in disabled people's lives. In this course, we will examine this tension. The social model of disability has long pointed out that inaccessible infrastructures and technologies literally "disable" bodies. Yet, disabled people are not just passive recipients; they also use technology for their own ends. In addition to our focus on technology, we will also look at knowledge and chronic illness: how science becomes both a tool for control and for activism. With the United States as our (general) focus, our exploration will intersect with themes such as race, sexuality, gender, and the nation-state.

STS 1700T. Race, Gender, and Technology in Everyday Life.

Using examples from everyday life, this course investigates how preferences for certain technologies are shaped by social arrangements that reflect power relations. By considering the origins, materiality, and practices of use for a diverse range of technologies, from the digital to the reproductive, this course will interrogate the socio-political and ethical fallout of consumer, infrastructural, personal, legal, and medical technologies. Reading about the history and anthropology of technology, watching films that engage the reception and making of science and technology, and imagining the future of technological solutions, this course analyzes how technologies are used to create and maintain boundaries around social categories of race, nation, sex, gender, and ability.

STS 1700V. The Changing Arctic Environment: Science, Society and Politics.

The Arctic has become a lens through which to understand the world. An unstable Arctic poses threats not only to the future of the Arctic but the world itself. This seminar will explore the Arctic as a region and the challenges it faces due to climate change, the rising conflicts over its vast mineral reserves, and the competing interests within the nations. The course is intended for students who are interested in Science, Technology and Society, Environmental Studies, Environmental Policy, and International Relations. There are no prerequisites for this class.

STS 1700W. Eating and the Politics of Wellness.

This course examines the construction of liberal humanism, gender, and transnational American empire by way of the stomach. Together we will analyze case studies of wellness foods and technologies to trace metaphors of eating, metabolics, and food-as-fuel through 20th century dietetics and industrial food production. Examining histories of diets and dieting, the foods created and circulated via U.S. militarism, and the impact of eugenics/Progressive era nutrition reform on our modern global food system, we will map the affective, material, and aesthetic afterlives of empire on the gut. Reading a collection of historical texts, visual media, and scientific journals, students are asked to think capaciously about the mundane act of eating and the benign concept of wellness.

STS 1701C. The First Scientific Americans: Exploring Nature in Latin America, 1500-1800.

Who were the "first scientists" in the Americas?, what exactly do we mean by "science" in this context?, and what has amounted to "America" in the past? Focusing on present-day Latin America, this seminar analyses the links between the exploration of the New World and scientific discovery in the early modern period. We will explore issues of primacy (why have both empires and scientists cared about "arriving first"); the nature of science (what kind of knowledge has been considered "scientific" in different periods); and locality in knowledge production (was there something special about the New World in fostering scientific thinking).

STS 1701Q. The Fate of the Coast.

This seminar focuses on what happens when science, politics and money intersect in a highly contested venue, in this case, the coast; the nation's most beloved and highly valued landscape. These issues form the heart of this seminar. Though the course will focus on the saltwater coasts of the contiguous 48 United States, it will also discuss the fate of low-lying island nations and other countries vulnerable to sea level rise; engineering efforts around the world to cope with the problem; and legal issues relating to climate refugees here and abroad, driven from their homes by rising seas.

STS 1705. The Medium(s) of Animation: Plasticity, Labor, Technology.

It is by no means a coincidence that early animators such as Émile Cohl, Winsor McCay and the Fleischer brothers brought to life scientific theories of evolution and neuropathology in their pioneering experiments. Beginning with the birth of animation as an industrial art form, this course will focus your attention on the technical mediums in which biological plasticity became an object of scientific knowledge, aesthetic experience, and political governance. While learning about a range of animation forms and techniques in their historical contexts, we will think deeply about the thrills and terrors of our own plasticity made suddenly perceptible through transformative encounters with new media technologies.

STS 1900. Senior Seminar in Science, Technology and Society.

This is an advanced seminar that uses a Problem Based Learning style pedagogy to explore real-world problems in STS. To solve assigned problems students will want to explore critical scholarship in areas such as laboratory studies, feminist science and technology studies, the rhetoric and discourse of science and technology, expertise and the public understanding of science. Course is intended for Science and Society senior concentrators, but is open to others with appropriate background. Enrollment limited to 20.

STS 1970. Independent Study in Science and Society.

Independent reading and research work in Science and Society is available to students who have completed introductory and intermediate level work in Science and Society. A decision to enroll must be made via consultation with the concentration advisor and the faculty advisor for the course. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Prerequisite: STS 1400. Open to junior and senior concentrators in Science and Society; instructor permission required.

STS 1971. Independent Study in Science and Society.

Independent reading and research work in Science and Society is available to students who have completed introductory and intermediate level work in Science and Society. A decision to enroll must be made via consultation with the concentration advisor and the faculty advisor for the course. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Prerequisite: STS 1400. Open to junior and senior concentrators in Science and Society; instructor permission required.

STS 2000A. Naturecultures: Speculative Futures in Environmental Justice.

The stories we tell about the world open the possibilities of certain futures, while foreclosing other imaginable ones. This course reveals how Western historical, theoretical, and scientific ways of knowing (epistemology) understood/understands both women and nature as inferior and thus needing to be controlled. Pushing back against the ideas of any inherent binary separations between men/women or nature/culture, we will examine ecofeminism as a theoretical location within both feminist and environmental philosophies and as a social movement. Learning from the intertwined history of environment and gender, that have led to both personal and global inequity and disaster, we will also engage solutions that imagine different futures. Recognising that solutions to environmental problems require a feminist attunement, we can start to understand the implications that our ethical commitments have to the future of life on the planet.

STS XLIST. Science, Technology, and Society XLIST.

Fall 2025

The following courses have a significant focus on the sociocultural and philosophical dimensions of science, technology and/or medicine. They may count toward the requirements of the Science, Technology, and Society concentration, depending on the student's thematic track and approval of the concentration advisor. Please check with the sponsoring department for times and locations.

Anthropology

ANTH 0800 Sound and Symbols: Introduction to Linguistic Anthropology

ANTH 1805

Slavic Studies

The Department of Slavic Studies at Brown specializes in the cultures, literatures, and languages of Russia, the Czech Republic and Poland. We are one of the oldest Slavic departments the US (established in 1947, with a graduate program added in 1960). The department has been distinguished by academic excellence and dedication to teaching since

its inception. Flexible and open to innovative approaches in the field, the department has remained in the vanguard of Slavic Studies. We are the center for campus study of the Slavic world at Brown and are strategically linked to a number of fields across the humanities and social sciences, including literature, performing arts, history, economics, and international relations. It is the particular strength of the department to enable students to view Slavic cultures *from within* through research and teaching based on solid knowledge of the relevant languages. The department helps students to discover the diversity of perspectives in those cultures and to examine and experience how they differ from the students' own.

For additional information, please visit the department's website: <https://www.brown.edu/academics/slavic-studies/>

Slavic Studies Concentration Requirements

Slavic Studies is concerned with the languages, literatures, and civilizations of the Slavic world. Built on sound knowledge of one or two Slavic languages (normally Russian or Czech) the program allows students to develop an in-depth appreciation and understanding of East European cultures and civilizations through a broad spectrum of interdisciplinary fields. Students take courses in literature, history, culture, theater, political science, economics, and international relations. Concentrators focusing on Russia learn one of the world's most commonly spoken languages and study some of the world's best-regarded authors and composers: Tolstoy and Dostoevsky, Gogol and Bulgakov, Tchaikovsky and Mussorgsky, and Rachmaninoff and Stravinsky. Focusing on Czech allows students to explore, for example, how Czechs distinguished themselves by peacefully transitioning from communism to capitalism (the "Velvet Revolution") and separating peacefully with the Slovak Republic (the "Velvet Divorce"). Most concentrators study abroad in a Slavic country, either during the academic year or the summer.

Requirements for the AB Degree

Six semesters of one Slavic language or the equivalent, or a combined total of eight semesters of two Slavic languages or the equivalent.

RUSS 0100 & RUSS 0200 or RUSS 0110	Introductory Russian and Introductory Russian Intensive Russian
RUSS 0300 & RUSS 0400	Intermediate Russian and Intermediate Russian
RUSS 0500 & RUSS 0600	Advanced Russian and Advanced Russian
In cases where a student's interests and course of study warrant it, and only upon consulting the concentration advisor, the student may apply more than one Slavic language to the concentration (Czech or Polish in addition to Russian), and would then need a combined total of eight semesters of two Slavic languages:	
CZCH 0100 & CZCH 0200	Introductory Czech and Introductory Czech
CZCH 0400 & RUSS 0300	Intermediate Czech and Intermediate Russian
PLSH 0100 & PLSH 0200	Introductory Polish and Introductory Polish
PLSH 0300 & PLSH 0400	Intermediate Polish and Intermediate Polish

The concentration in Slavic Studies requires students to complete a minimum of seven 1000-level courses devoted to the study of the East European civilizations: literature, history, culture, theater, political science, economics, international relations. Typically, at least four of these courses will be from within the Department of Slavic Studies. Students' choice of courses is subject to the approval of the concentration advisor.

Courses in the Department of Slavic Studies:

CZCH 1000	Dimensions of Czech Animation: Contexts, Interpretations, and Dialogs with the East
RUSS 1110	Special Topics in Russian Studies I: Advanced Reading and Conversation
RUSS 1120	Special Topics in Russian Studies II: Advanced Reading and Conversation
RUSS 1200	Russian Fantasy and Science Fiction
RUSS 1220	Nationalism and Nationalities
RUSS 1250	Russian Cinema
RUSS 1290	Russian Literature in Translation I: Pushkin to Dostoevsky
RUSS 1300	Russian Literature in Translation II: Tolstoy to Solzhenitsyn
RUSS 1330	Soviet Culture: Propaganda, Dissidence, Underground
RUSS 1340	The Russian Novel
RUSS 1440	Imagining Moscow: Utopia and Urban Spaces in 20th-Century Russian Culture
RUSS 1450	Love, Adultery, and Sexuality
RUSS 1500	Approaches to Russian Literature
RUSS 1550	Beyond the Kremlin: Russian Culture and Politics in the Twenty-First Century
RUSS 1600	Literature and History: Russian Historical Imagination in the European Context
RUSS 1660	Sexuality and Revolution in 20th-Century Russian Culture
RUSS 1800	Pushkin
RUSS 1810	Tolstoy
RUSS 1820	Dostoevsky
RUSS 1840	Nabokov
RUSS 1860	Chekhov
RUSS 1848	Central Europe: An Idea and its Literature
RUSS 1870	Gogol
RUSS 1967	Russian Postmodernism
SLAV 1250	Polish Culture Through Film
SLAV 1300	Language and Politics in East Europe and Russia
Sample courses in other departments:	
HIST 1268A	The Rise of the Russian Empire
HIST 1268B	Russia in the Era of Reforms, Revolutions, and World Wars
HIST 1268C	The Collapse of Socialism and the Rise of New Russia

Honors

Honors candidacy in Slavic studies assumes an excellent academic record, particularly in the concentration. Additional requirements are the same as those for a standard concentration, plus the writing of a senior thesis (SLAV 1990). For procedures and schedule for writing a senior thesis, please refer to the department guidelines.

Slavic Studies Graduate Program

The Department of Slavic Studies offers a graduate program leading a Master of Arts (A.M.) and Doctor of Philosophy (Ph.D.) in Slavic Studies.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/slavic-studies>
(<http://www.brown.edu/academics/gradschool/programs/slavic-studies/>)

Courses

Czech

CZCH 0100. Introductory Czech.

Introduces the performance of basic tasks in Standard Czech, highlights of Czech culture, and a worldview of a nation uniquely located on the threshold of western and eastern Europe. Emphasis on oral communication. Five meetings per week and use of audio/visual materials. Enrollment limited to 18.

CZCH 0200. Introductory Czech.

Introduces the performance of basic tasks in Standard Czech, highlights of Czech culture, and a worldview of a nation uniquely located on the threshold of western and eastern Europe. Emphasis on oral communication. CZCH 0200 includes readings of annotated literary texts on the Web. Five meetings per week and use of audio/visual materials. Enrollment limited to 18.

CZCH 0320A. Czech Animation: Cross-cultural Dialogs.

Czech animation has a long tradition and international reputation. Jiří Trnka beat Walt Disney at the post-war Cannes Film Festival. Karel Zeman is a pioneer in creating fantasy films with animation. Surrealist films by Jan Švankmajer continue to shock the audience. Younger animators such as Barta, Kliment, and Pospíšilová have been developing new modes of expression after the fall of socialism. This course explores a variety of Czech animated films from the 1960's to the 21st century and its cross-cultural dialog, especially with the Japanese anime. Readings in English and films with English subtitles.

CZCH 0400. Intermediate Czech.

Expression of abstract notions for discussion in complex structures; introduction to stylistic nuances. Listening comprehension exercises and discussion of Czech culture and history based on readings of literature and films. Prerequisite: CZCH 0200 or equivalent.

CZCH 0410A. Boys and Girls: Relationships under Socialist Bohemia.

Using Milos Forman's film "Loves of a Blonde" and supporting materials around it, we will discuss human relationships and how they can be interpreted culturally and politically. Equally important is the acquisition of language. Tasks for the course are adjusted to two different language levels (intermediate and advanced). Enrollment limited to 18.

CZCH 0410B. Coming of Age in Postwar Czechoslovakia.

Examines political and cultural changes in the post-WWII Czechoslovakia through the eyes of a child. Centerpiece of the course is a film on elementary school in post-war Prague as a symbolic representation of the society that is about to emerge. Other materials such as literary and journalistic texts are used. Places equal emphasis on the acquisition of language, including exposure to Colloquial Czech. Separate language tasks are given to students of two proficiency levels (2nd and 3rd year). Conducted in Czech. For students who completed CZCH 0200 or equivalent. Four meetings per week and use of audio/visual materials. Enrollment limited to 18.

CZCH 0410C. Czech View of Self and Others.

Examines the Czech view of themselves as well as others, one of the most debated topics in the current context of expanding European Union. The centerpiece is a film about a man-eating flower (animated by Jan Švankmajer) invented by a crazy scientist, which unfolds in Prague, involving a peace-loving Czech botanist and his daughter, the American detective Nick Carter (played by a Slovak actor), and the Czech police enforcement. The film is a treasure box of symbolic representations of Czechs and people Czechs view as others. Reading materials are drawn from literary and journalistic texts. Equal emphasis on the acquisition of language, including exposure to Colloquial Czech. Separate language tasks for students of two proficiency levels (2nd and 3rd year). Conducted in Czech. The course is for students who completed CZCH 0200 or the equivalent. Enrollment limited to 18.

CZCH 0410D. Czechs and the Big Brother: Czech Lands in the 1980s.

Events in Czechoslovakia in the late 1980's as represented in the Oscar-winning film *Kolja*. The Velvet Revolution and the Czech perspective on Russia. Readings from different genres. Equal emphasis on language acquisition, including Colloquial Czech. Separate language tasks for two proficiency levels (2nd-3rd year). Conducted in Czech. For students who have completed CZCH 0200 or the equivalent. Enrollment limited to 18.

CZCH 0500. Advanced Czech.

Consolidation of Standard Czech and active acquisition of stylistic registers. Discussion of emblems and icons in modern Czech culture. Focus on the process of myth-making specific to the nation, on the Czech cultural identity viewed from within and without. Prerequisite: CZCH 0400 or equivalent.

CZCH 0600. Advanced Czech.

Consolidation of Standard Czech and active acquisition of stylistic nuances. Discussion of emblems and icons in modern Czech culture. Focus on the process of myth-making specific to the nation and the debates on the Czech cultural identity viewed from within and without. Prerequisite: CZCH 0500 or instructor permission.

CZCH 0610B. Psychosis of Occupation in the Czech Lands.

Discussion of the Occupation period during WWII. The course is built around a Czech New Wave classic film about an eccentric director of a crematorium in Prague, who turns into a fanatic collaborator under the terror and demagoguery of the regime. We will also read excerpts from the original literary text on which the film was based, and work with the Czech National Corpus. Separate language tasks given to students of two proficiency levels (2nd, 3rd year). Conducted in Czech. The course is for students who completed CZCH0410 or the equivalent. Enrollment limited to 18.

CZCH 0610C. Czech Cultural Icons, Emblems, and National Identity.

The "most famous Czech" Jára Cimrman and his most active period, namely the late 19th to early 20th-century Bohemia. Highlights of Czech cultural icons and emblems, and discussions on what constitutes Czech national identity reflected in the Cimrman phenomenon. Readings on several Czech cultural icons. Two different sets of requirements for students of two language proficiency levels. The course is for students who have completed CZCH 0410 or the equivalent. Enrollment limited to 18.

CZCH 1000. Dimensions of Czech Animation: Contexts, Interpretations, and Dialogs with the East.

What are our expectations of animation films? This course will help you rethink and learn to "read" animation as an artistic and politically inspired form. Czech animation, with its long tradition and international reputation, is a vibrant branch of visual arts. Yet this artistic form has not only been extensively studied nor noticed until recently. We will study cultural-historical contexts that gave rise to the internationally acclaimed Czech animation by Trnka, Svankmajer and others. Fascination with Czech animation in Japan used as an example to illustrate the mechanism of cross-cultural reception of Czech animation. Readings of related Czech culture/metaphor/animation techniques. Selected Japanese animation films will also be discussed. Readings in English. Films are dubbed or subtitled in English. No prerequisites.

CZCH 1050. Contemporary Czech Society and Literature in Translation.

Surveys representative Czech prose texts mainly from the late 20th to 21st century, in English translation. No knowledge of Czech is required. Readings include Hasek, Capek, Kundera, Hrabal, and Havel. Films also part of course.

CZCH 1250. Introductory Czech.

CZCH 0100, 0200 and additional work in communicative practice, Web-based exercises, and reading.

CZCH 1260. Introductory Czech.

CZCH 0100, 0200 and additional work in communicative practice, Web-based exercises, and reading.

CZCH 1350. Intermediate Czech.

CZCH 0400 and additional work in communicative practice, Web-based exercises, and reading.

CZCH 1360. Intermediate Czech.

CZCH 0400 and additional work in communicative practice, Web-based exercises, and reading.

CZCH 2710. Advanced Czech.

CZCH 0500, 0600 and additional work in communicative practice, web-based exercises, and reading.

CZCH 2720. Advanced Czech.

CZCH 0500, 0600 and additional work in communicative practice, Web-based exercises, and reading.

Polish**PLSH 0100. Introductory Polish.**

Introduction to Polish language and culture. Oral and written communication in Polish; emphasis on the literary and everyday culture of Poland. Four meetings per week, plus use of audio, video, and web materials.

PLSH 0200. Introductory Polish.

This course is a continuation of PLSH 0100 or the equivalent, and it aims to establish essential "survival skills" that are needed in real-life situations. The primary focus is building vocabulary, reading, and engaging in guided conversation. In addition to learning the language, students are introduced to Polish literature and culture through film, music, and video presentations.

PLSH 0300. Intermediate Polish.

This course is for students who have completed first-year Polish. In this course you will further develop skills in speaking, reading, writing and understanding Polish. By the end of this course, you will be able to carry on basic conversations in Polish on many topics from your daily life. You will be able to write notes and simple letters to Polish friends or keep a journal in Polish. You will also have the skills to read basic texts. Enrollment limited to 18.

PLSH 0400. Intermediate Polish.

This course is designed for students who want to continue exploring Polish language and culture and have completed the Introductory Polish language sequence (PLSH 0150/0100, 0200 and 0300) or have otherwise acquired basic proficiency required for the second year sequence. The main goal of the course is to enhance students' Polish language skills (speaking, writing, reading and listening) through authentic participation in Polish culture: film, politics, and poetry. The course incorporates various Internet resources, selected contemporary Polish films as well as up-to-date news from Poland. Discussed topics and level of difficulty will be determined by students' individual interests and needs.

PLSH 0410. Intermediate Polish.

This course is for students who have completed first-year Polish. In this course you will further develop skills in speaking, reading, writing and understanding Polish. By the end of this course, you will be able to carry on basic conversations in Polish on many topics from your daily life. You will be able to write notes and simple letters to Polish friends or keep a journal in Polish. You will also have the skills to read basic texts. Prerequisite: PLSH 0150. Enrollment limited to 18.

PLSH 0500. Advanced Polish.

This course is designed for students who have completed the introductory and intermediate Polish language course sequence – PLSH 0100, 0200, 0300, and 0400, or have otherwise acquired basic proficiency required for the third year sequence.

In this course the students will further develop skills in speaking, reading, writing and understanding Polish. They will continue developing speaking, reading, and writing skills by reading and discussing increasingly more elaborate authentic texts and writing essays, and their listening skills will be cultivated by in-class interactions and listening to authentic Polish audio and video recordings.

PLSH 0600. Advanced Polish.

In this course students will further develop their skills in speaking, reading, writing and understanding Polish. They will continue developing reading and writing skills by reading increasingly more elaborate authentic texts, writing essays, and learning about Polish stylistics, syntax, and grammar at the advanced level. Their listening skills will be cultivated by in-class interactions and listening to authentic Polish audio and video recordings. Emphasis in this course will be on mastering oral expression and vocabulary building, as well as comprehension of fiction and non-fiction texts of a moderate level of difficulty. The course will be conducted almost exclusively in Polish.

PLSH 1050. Polish Cinema: Uneven Histories, Uneasy Aesthetics.

This course offers an in-depth survey of Polish cinema, spanning from the influential era of the Polish Film School (1955–65) through the Cinema of Moral Anxiety (1976–81) to contemporary, critically acclaimed cinematic expressions. We will begin with seminal works by directors such as Andrzej Wajda, Roman Polański, Andrzej Żuławski, and Krzysztof Kieślowski, exploring their unorthodox aesthetic innovations and thematic preoccupations, including Poland's infamous legacy as a site of excessive violence during the Second World War, as well as the existential condition of individuals under socialism. Subsequently, we will transition to the post-communist era, focusing on contemporary efforts to revisit Poland's past through haunting explorations of Polish-Jewish relationships, attentiveness towards minority groups, and the darkly comedic depictions of "the provincial" in films by Paweł Pawlikowski, Małgorzata Szumowska, and Wojciech Smarzowski, among others.

PLSH 1100. Faces of Polish Culture in Polish.

The main goal of the course is to enhance students' Polish language skills through authentic participation in Polish culture, which students will explore through: a) selected films from the acclaimed series Dekalog directed by Krzysztof Kieslowski; b) the scripts to the films; and c) film reviews and other non-fictional materials related to this film. The course will be conducted as a seminar and will consist of classroom discussion, interactive lectures, and student presentations. Successful completion of PLSH0600 or permission of the instructor is required. The course will be conducted in Polish.

PLSH 1150. Polish for Reading Knowledge.

This course is designed for advanced undergraduates (or graduate students), who wish to develop reading competence in Polish with the aid of a good dictionary. Using texts from various disciplines in the social sciences and humanities, as well as journalistic and technical writings, students will learn the fundamentals of grammar and syntax, and how to decipher the meaning of a text, proceeding from very basic to more and more complex readings. Students will acquire a basic reading vocabulary and understanding of Polish grammar through analytical discussion, grammar exercises, and extensive reading of selected texts in the field of individual students.

Russian**RUSS 0100. Introductory Russian.**

Introduction to Russian language and culture. Oral and written communication in Russian; emphasis on the literary and everyday culture of Russia and the former U.S.S.R., including the changes that have reshaped everyday life for citizens of Russia. Five meetings per week, plus use of audio, video, and web materials. Enrollment limited to 18.

RUSS 0110. Intensive Russian.

Intensively-paced introduction to Russian culture and language; completes one year of study in one semester (RUSS 0110 = RUSS 0100-0200). Comprehension and use of contemporary Russian; fundamentals of Russian grammar; vocabulary acquisition; focus on oral communication. Introduces aspects of everyday culture of Russia and the former U.S.S.R. Ten to fifteen hours weekly work outside the classroom. Enrollment limited to 18.

RUSS 0200. Introductory Russian.

Introduction to Russian language and culture. Oral and written communication in Russian; emphasis on the culture of Russia and the former U.S.S.R., including the changes that have reshaped everyday life for citizens of Russia. Five meetings per week, plus use of audio, video, and Web materials. Prerequisite: RUSS 0100 or RUSS 0250. Enrollment limited to 18.

RUSS 0250. Introductory Russian in St. Petersburg.

Intensive introductory language and culture taught in St. Petersburg, Russia, meeting 15 hours per week. Students develop communicative and cultural competence in Russian, emphasizing 1) culture of everyday life in Russia and 2) life in St. Petersburg. For students without previous study of Russian.

RUSS 0300. Intermediate Russian.

Continues development of language proficiency while broadening understanding of contemporary Russian culture via readings in literature and history. Expansion of vocabulary for dealing with conversational topics and review of Russian grammar. Features literary and nonliterary readings in Russian, as well as video and computer resources. Five class meetings per week. Prerequisite: RUSS 0110 or RUSS 0200 or RUSS 0250 or placement by exam. Enrollment limited to 18.

RUSS 0320A. Dostoevsky's "The Brothers Karamazov" - The Art of the Novel.

An in depth analysis of Dostoevsky's last novel as the culmination of his art and thought. Central religious and philosophical themes of the novel, such as the relations of faith to morality, modes of transgression, retribution, and epiphany, the question of theodicy, and the nature of authority. Discussion of Dostoevsky's poetics and of his contribution to the genre of the novel. Readings from literary criticism and from other pertinent literary texts, such as the Bible, Schiller, and Voltaire will also be discussed. In English. Enrollment limited to 19 first year students.

RUSS 0320B. Freshman Seminar: Gogol: A Journey into the Fantastic.

Gogol's altered states of reality uniquely shape the rise of modern Russian literature and anticipate the fictional worlds of Kafka and Borges. Gogol unfolds a grotesque gallery of characters with radish-shaped heads and ghosts with moustaches, who live in a world, in which dogs can talk and noses can walk. Dostoevsky was among the first to relish the labyrinths of Gogol's fantasy scapes; we will follow in Dostoevsky's footsteps. Enrollment limited to 19. Written permission required.

RUSS 0320C. Demons and Angels in Russian Literature.

The literary images of fallen angels, as well as various poetic demonologies in Russian literature extend from the medieval apocrypha, up to famous works of the twentieth-century literature, like, for example, Bulgakov's Master and Margarita or Dostoevsky's Demons. Although, the Russian literary angels are in many respects related to their Western counterparts, the apocalyptic character of Russian spiritual culture makes them in many respects unique. Examining these images, the course addresses the important questions concerning the human condition in general. Angels as one critic said, "represent something that was ours and that we have the potential to become again"; their essence is otherness. Consequently, their literary representations explore the possibilities of human existence as well as its central paradigms like, love, rebirth, mortality, or 'fallenness.' The course will analyze the images of angels and fallen angels (devils) in the works of the nineteenth and the twentieth-century Russian prose, visual art, and film - from romanticism to 'postmodernism' - in the context of the world literature and culture. Authors to be studied: Byron, Lermontov, Balzac, Dostoevskii, Sologub, Bulgakov, Nabokov, Erofeev. We will also discuss films by Tarkovskii and Wenders, Russian icons, and paintings by Vrubel. In English. Enrollment limited to 19 first year students.

RUSS 0320D. The Tolstoy Event: War and Peace.

A close reading of Tolstoy's major novel, with a focus on its interweaving of fictional and historical narrative and metahistorical discourse. Attention to issues of genre (e.g. the tension between "epic and novel"), literary tradition, the poetics of time and space, as well as his iconoclastic ideas about narrative, art, religion, and society. Tolstoy's formal innovation will be considered in a broader historical and cultural context. Selected readings in Bakhtin, Lukacs, Shklovsky, Eikhenbaum, Hayden White and others. Enrollment limited to 19 first year students.

RUSS 0320E. Crime and Punishment through Literature.

The seminar will explore how texts of different epochs and cultures, ranging from Ancient to Modern and from drama to poem, novel, and film treat the issues of transgression, punishment, justice, and forgiveness. We will examine each text both in terms of its artistic merit and its place within its cultural and historical milieu. Enrollment limited to 19 first-year students.

RUSS 0350. Intermediate Russian in St. Petersburg.

Intensive intermediate language and culture taught in St. Petersburg, Russia meeting 15 hours a week. Continues development of language competence while broadening understanding of Russian culture via readings. Includes expansion of vocabulary for dealing with conversational topics and review of Russian grammar. Features literary and nonliterary readings in Russian. Five class meetings per week. Prerequisite: RUSS 0110 or RUSS 0200 or placement by language coordinator.

RUSS 0400. Intermediate Russian.

Continues development of language proficiency while broadening understanding of Russian culture via readings in literature and history. Includes expansion of vocabulary for dealing with conversational topics and review of Russian grammar. Features literary and nonliterary readings in Russian, as well as video and computer resources. Five class meetings per week. Prerequisite: RUSS 0300 or placement by exam. Enrollment limited to 18.

RUSS 0500. Advanced Russian.

Examines selected topics in Russian culture and history as depicted in readings, the media, and Russian and Soviet films. Language work emphasizes increasing facility with spoken Russian and developing writing skills. Includes work on advanced grammar and syntax. Five class meetings per week. Prerequisites: RUSS 0350 or RUSS 0400 or placement. Enrollment limited to 18.

RUSS 0550. Advanced Russian in St. Petersburg.

Intensive advanced language and culture taught in St. Petersburg, Russia, meeting 15 hours per week. Development of communicative and cultural competence in Russian, emphasizing topics in culture and history as depicted in film and short texts. Emphasizes increasing facility with spoken and written Russian. Features work on advanced grammar and syntax. Prerequisite: RUSS 0400. Enrollment limited to 18.

RUSS 0600. Advanced Russian.

Examines selected topics in Russian culture and history as depicted in readings, the media, and Russian and Soviet films. Language work emphasizes increasing facility with spoken Russian and developing writing skills. Includes work on advanced grammar and syntax. Four class meetings per week. Prerequisites: RUSS 0500 or placement. Enrollment limited to 18.

RUSS 0770. Utopian Spaces in Fantasy Worlds in Literature and Film: East and West.

A survey of Russian, Czech, Polish, and Austrian 19th- and 20th-century works of fiction that depict altered states of reality. Readings (in English translation) range from folk tales and tales of the supernatural, 19th-century utopias and works by such major writers as Turgenev and Dostoevsky, to accomplished novels of the 20th-century. Showings of contemporary fantasy and science fiction movies from the U.S., Russia, England, France, and Czechoslovakia.

RUSS 0930. Cultures and Literatures of the Russian and Soviet Empires.

Examines in depth various topics that constituted the cultural and literary landscape of the Soviet Union, examining their antecedents in the Russian empire and their reemergence in the post-Soviet world. Topics include: the Caucasus, from Tolstoy to modern Chechnya; Orientalism; the Civil War and Pasternak; Akhmatova and the experience of the totalitarian state. Enrollment limited to 30.

RUSS 0990. The Black Experience in Russia and the Soviet Union.

A study of the African-American experience in Russia and the Soviet Union through the prism of autobiographies, biographies, diaries, travel journals, and memoirs from the 18th century to the present, of actors, American Communists, domestic servants, journalists, musicians, poets, political activists, publishers, stage designers, students and writers, including W.E.B. Du Bois, Harry Haywood, Langston Hughes, Paul Robeson and Richard Wright. Enrollment limited to 30.

RUSS 1000. Russian Modernism and the Arts.

Russian culture in a period of revolutionary upheaval: developments in literature, film, design, visual and applied arts. Avant-garde experimentation and the creation of tradition: primitivism, futurism, constructivism, and other movements in literature and the arts.

RUSS 1019. Revolution in Russian Women's Writing.

This course will use Russian women's writing, primarily fiction, to develop a new understanding of Russian literary and cultural history. By weaving together literature, historical texts, and feminist theory from Russia and beyond, we will reveal a narrative of Russian literary and cultural history that is generally relegated to footnotes, a narrative that contains different cataclysmic shifts and revolutions than those that occurred at the state level, and we will examine the inception and development of the tradition of Russian women's writing. No knowledge of Russian required.

RUSS 1020. Russia Rediscovered.

Explores Russian culture in the pre-Revolutionary era (ca. 1861-1905): encounters between elite and popular culture in a period of immense social upheaval, in particular the attempt to recover indigenously Russian art forms and rural traditions. Analyzes the expressions of this nativist trend in literature, ethnography, religion, and visual and applied arts, and attempts to sketch out the sociohistorical contexts of this "rediscovery" of native Russian culture.

RUSS 1050. Russian Culture: From Peter The Great to Putin.

Taught by Vladimir Golstein and Maria Taroutina. An interdisciplinary exploration of Russian cultural history through its literature, art, religion, political thought, and film. This course seeks to encourage thinking in more integrative and interdisciplinary ways about history, arts, and society. We examine a wide range of cultural expressions: visual arts, religion, civic rituals and practices, social customs and popular entertainment. Topics include: conceptions of Russian nationhood; visual arts in the service of Russian Empire, the myths of St. Petersburg and Moscow; the interaction among elites, intelligentsia, and the common people (narod); conflicting appeals of rationality, spirituality, and nihilism. All of these themes and forms will be treated as interrelated, as connected to social and political life, and as part of a larger European culture.

RUSS 1060. St. Petersburg: A Window on Russia.

An interdisciplinary exploration of Russian cultural history through its literature, art, architecture, religion, social and political thought, theater and ballet. Elements of Russian culture will be presented through the prism of the city of St. Petersburg, its history, its urban and cultural landscapes. Regular field trips to museums, theater, and city tours focused on specific themes.

RUSS 1090. Esoteric Russia.

A survey of the main currents of mystical, esoteric, occult, and magical theories and practices in Russia from the 11th century onward. Topics include pagan survivals, Orthodox mysticism and magic, heresies and schisms, Freemasonry and Rosicrucianism, Mesmerism and Spiritualism, H. P. Blavatsky, and G. I. Gurdjieff. No knowledge of Russian is necessary. Prerequisite: HIST 1400, 1410, or UNIV 0820, or instructor permission.

RUSS 1100. The Roots of Russian Culture.

Study of the patterns and roots of Russian culture over the last millennium and how Russia's languages have determined its worldviews and cultural structures (the Whorf-Sapir thesis). Principal topics: Russian spirituality, diglossia, other kinds of literacy; speech and silence as means of knowing and unknowing; the shape of time and the rhythm of space; sacred vs. secular history; etc. Lectures and discussions in English. Prerequisite: Intermediate Russian.

RUSS 1110. Special Topics in Russian Studies I: Advanced Reading and Conversation.

An advanced course recommended for students who are either planning to go or are returning from abroad. Focus on Russian culture as seen through the prism of Russian literature, film, and media. Extensive classroom discussion and frequent writing assignments. Prerequisite: RUSS 0600 or written permission. May be repeated once with permission from the instructor. Enrollment limited to 18.

RUSS 1120. Special Topics in Russian Studies II: Advanced Reading and Conversation.

A continuation of Russian 1110. Examines aspects of Russian culture as manifested in Russian literature. Readings range from fairy tales to contemporary works. Extensive classroom discussion and frequent writing assignments. Prerequisite: RUSS 1110, 1700, or written permission. May be repeated once with permission of the instructor. Enrollment limited to 18.

RUSS 1150. Russian/Soviet Performing Arts: Dance, Opera & Theater.

This course offers an introductory lens into 19th and 20th century Russian and Soviet culture. By examining the performing arts – dance, opera, music, and theater – of this time, we will trace the major artistic movements that governed Russia including Romanticism, Realism, Symbolism, and Socialist Realism. We will consider how history, politics and foreign influences affected the rise and shape of these movements in Russia and the former Soviet Republics.

RUSS 1200. Russian Fantasy and Science Fiction.

Survey of Russian literature, from fairy tales, utopias, and dream sequences to science fiction, which depict altered states of reality. Readings in English, supplemented with films in March and April. Seminar with emphasis on discussion. Russian concentrators and graduate students expected to cover most of the readings in Russian. Familiarity with Russian literary history is not required.

RUSS 1210. Art from the Underground: Currents of Soviet Nonconformist Art.

What is Soviet underground art and from where did it arise? Is it a continuation of the avant-garde, a Western knock-off, a kind of political protest or passivist dissent, or something else? This course introduces students not only to the world of Soviet Nonconformist visual art, but also to the historical and political context that shaped the period and the artistic movements therein. The course begins by laying a foundation concerning what preceded the underground movements, from the Russian and Soviet avant-garde to Stalinist Socialist realism, before examining the development of Soviet Nonconformist art from the mid 1950s to current day Russian art activism. By opening up the discourse to the Baltics, Georgia, Ukraine, and Central Asia, this course moves beyond the Russian-centric approach to Soviet Nonconformist art toward a more comprehensive understanding of what was occurring across the Soviet Union.

RUSS 1220. Nationalism and Nationalities.

This course explores the meaning and significance of nationalism and national identity in modern culture and society, starting with the emergence of nation-states, up to the recent rise of nationalist and identitarian movements throughout the globe. We will study the main theories of nationalism, as well as some of the art and literary movements that this ideology inspired. By developing an open discussion about different incarnations of nationalism as an ideology and a social practice, we will retrace a cultural history of this concept, and shed light on its crucial role and impact on contemporary political processes.

RUSS 1230. Putin's Russia – Fact or Fiction.

How has Vladimir Putin engaged with and impacted Russian culture? How did he come to power and how has he maintained his position? This course explores the impact of the collapse of the Soviet Union in Russian culture and identity formation from 1990 to the present day. We will examine how cultural memory manipulation has become a corner stone of Putin's Russia through film, the use of public space and commemorative practices. Core questions that will be addressed is the use of history to legitimate the present, Russia's relationship with its neighbors and what can be considered as the defining features of contemporary Russian identity and culture. Discussion and readings will be in English, with Russian originals available for interested students

RUSS 1250. Russian Cinema.

This seminar will provide a chronological overview of Russian cinema from its beginning to the present. The films will be considered against the background of some historical, political, and theoretical readings. The students will also be encouraged to juxtapose Russian and non-Russian films in order to evaluate the place of Russian cinema within a global film culture. Enrollment limited to 20.

RUSS 1290. Russian Literature in Translation I: Pushkin to Dostoevsky.

Survey of Russia's literary masterpieces of the early and mid-19th century, including Pushkin, Lermontov, Gogol, Turgenev, and Dostoevsky. From Pushkin's celebrated poem "The Bronze Horseman" and his novel in verse 'Eugene Onegin' to Gogol's grotesque and fantastic Petersburg tales and Dostoevsky's 'Crime and Punishment,' we will discuss questions of national identity and Empire, individual vs. the state, as well as other moral, political and philosophical issues that shaped Russian classical texts. Lectures and discussion. No knowledge of Russian is required.

RUSS 1300. Russian Literature in Translation II: Tolstoy to Solzhenitsyn.

Survey of major works of Russian literature of the late 19th and 20th centuries. Traces the development of Russian literature from realism to symbolism and decadence, from revolutionary experiments to socialist realism and dissent. Authors to be studied include Tolstoy, Chekhov, Sologub, Blok, Mayakovsky, Babel, Olesha, Zamiatin, Bulgakov, and Solzhenitsyn. Lectures and discussion. No knowledge of Russian required.

RUSS 1310. Russian Poetry and Poetics.

The technical study of verse; metrics and rhyme; linguistic analysis of poetic language; semiotic aspects of verse semantics, including genre and historical development. Primary focus on Russian verse, but some attention will also be given to other (Slavic and non-Slavic) traditions, as well as to general theoretical issues of poetic structure. Conducted in English.

RUSS 1320. Soviet Literature from 1917 to 1953.

Survey of Soviet literature and culture from the Bolshevik revolution to the death of Stalin, with particular emphasis upon intersections between politics, history and aesthetics. Texts by Akhmatova, Babel, Blok, Bulgakov, Gan, Mandelstam, Mayakovsky, Malevich, Platonov, Zamiatin and others, as well as films by Eisenstein, Vertov, and Alexandrov. Enrollment limited to 30.

RUSS 1330. Soviet Culture: Propaganda, Dissidence, Underground.

After the October Revolution of 1917, Soviet society became gradually split into official culture, dissidence, and the underground. Authors who did not conform to the limitations imposed by Soviet institutions often circulated their works illegally or published them abroad. Some of them were forced to emigrate. This course explores the complex intersections of propaganda, dissidence, and underground in Soviet literature, art, and film.

RUSS 1340. The Russian Novel.

When one considers the impact of Russian literature on world literature, one thinks first of all of the novel. And indeed, since the late nineteenth century its readers all over the world could not resist its artistic powers. The course explores selected Russian novels from the nineteenth- to the twenty-first century. Our in-depth (slow) reading and discussions will be guided by the questions concerning the stylistic peculiarities of the novel, and its development in changing historical and cultural contexts. The course includes: Gogol's *Dead Souls*, Goncharov's *Oblomov*, Dostoevsky's *Idiot*, Bely's *Petersburg*, Platonov's *The Fountain Pit*, among others.

RUSS 1350. Putin, Russia and the New Conflict with the West: Reading Modern Russian Culture.

The collapse of the USSR in 1991 was widely hailed in the West as a triumph of democracy over totalitarianism, and for some it even signaled the end of history as such. Today however it would seem history has returned with a vengeance, and there is now talk of a new Cold War, with Russia once again serving in its previous role as the enemy. This course will seek to understand this apparent reversal of vectors from within Russian culture, through analysis of literary works, films, television, and social media. No knowledge of Russian culture required. In English.

RUSS 1400. The Black Experience and Russian Culture.

The contact that began in the early eighteenth century between the Russian empire and the cultures of Africa and its diaspora reveals a mutual fascination that speaks powerfully about notions of racial identity in an increasingly global era. We will study the fateful misunderstandings as well as strong mutual influences between Russians, Africans and their descendants from the Abyssinian 'prince' Abram Gannibal's entry into the court of Peter the Great up to the tense dialogue over political values and conceptions of race, ethnicity and sexuality that underpins the volatile relations between Barack Obama's United States and Vladimir Putin's Russia.

RUSS 1420. Twentieth-Century Russia (HIST 1420).

Interested students must register for HIST 1420.

RUSS 1440. Imagining Moscow: Utopia and Urban Spaces in 20th-Century Russian Culture.

The course explores the role of Moscow in the Russian collective imagery throughout the 20th century. We will study how different utopian visions of the city in art, literature, film, and architecture affected the radical transformations of its urban landscape from the October Revolution to the present. We will start with the 1920s and 1930s, when the image of a new Moscow became closely associated with the creation of new socialist ways of life, and conclude with the neoliberal facelift of the city in the post-Soviet period, retracing a history of 20th-century Russian culture through its urban imagination.

RUSS 1450. Love, Adultery, and Sexuality.

Literary representations of love, marriage, adultery, and sexuality. Examines the formation of the notion of passionate romantic love, the myths of femininity, and various concepts of love and family. Emphasizes the way in which the notions of love and sexuality are linked to national identity. Readings include several Russian popular and revolutionary feminist writers as well as such classics as Rousseau, Racine, Pushkin, Flaubert, Tolstoy, Chekhov, and Kate Chopin.

RUSS 1460. Totalitarian Art and Its Opponents.

What does it mean for art to be political? Who or what decides what is art and what is non-art? To what extent do governments and the policies they make dictate and control artistic production? Can artists, writers and filmmakers also shape politics and ideology in their turn? Drawing on art history, literature, film studies and political theory, this course will investigate the complex inter-relationships between politics, ideology and aesthetics. More specifically, we will consider topics that examine issues of originality versus kitsch, avant-garde versus mass culture, abstraction versus figuration, state-sanctioned art and political propaganda versus art as a medium for political activism and resistance. Students will gain an appreciation of a wide range of different media, including architecture, painting, sculpture, printmaking, photography, film, music and literature.

RUSS 1470. New Russia and Ukraine: Culture and Politics in Post-Soviet Space.

Political and cultural aspects of transition from the authoritarian Soviet state to democracy. This transition will take considerable effort and time and will require change in people's mentality. Enrollment limited to 40.

RUSS 1500. Approaches to Russian Literature.

Reading in Russian of selected poetry and prose by important authors, among them Lomonosov, Karamzin, Derzhavin, Pushkin, Lermontov, Tyutchev, Gogol, Fet, Dostoevsky, Chekhov, Briusov, Akhmatova, Sologub, Remizov, Blok, Bely, Zamyatin, Pilnyak, and Mandelstam. Lectures in Russian on literary problems, literary terms, and important aspects of literary history. Prerequisites: RUSS 0600 plus RUSS 0290 or 0310 or written permission.

RUSS 1520. Between Heresy and Orthodoxy: A Survey of Russian Religious Thought.

This course focuses on Russian religious thought and its impact on culture, literature, and art. Beginning with a historical overview, it will examine the first engagements of 19th century thinkers including Fyodor Dostoevsky with Russian theology and with members of the clergy. The central unit will focus on the late 19th-early 20th century, particularly the works of Vladimir Soloviev, Pavel Florensky, and Leo Tolstoy. We will examine the impact of leading figures' writings and faith practices on the transformation of discourse around the Russian Orthodox Church as well as on key debates surrounding corporeality, sexual and platonic love, and salvation.

RUSS 1530. Russian Orientalism in the Visual, Literary and Performing Arts, 1760-1940.

This course investigates the ways in which Russia's artistic praxis was impacted by encounters—both real and imagined—with the cultures and representational traditions of the so-called East. Given the country's conflicted self-identification as neither fully European nor Asian, demarcations between the "self" and the "other" were more porous for Russian cultural practitioners than for their Western European counterparts, resulting in representations that were prone to hybridity, syncretism, and even self-Orientalization. Taking Edward Said's definition of Orientalism as a point of departure, the course will examine the writings of Pushkin, Lermontov, Dostoevsky, and Tolstoy; the paintings of Briullov, Aivazovskii, Vereshchagin, Polenov, Vrubel, Roerich, and Kuznetsov; and stage productions of *The Tale of Tsar Saltan*, *Prisoner of the Caucasus*, *Scheherazade*, and *Les Orientales*. Students will also engage with different theoretical positions and methodologies, including Marxist, feminist and subaltern critiques.

RUSS 1550. Beyond the Kremlin: Russian Culture and Politics in the Twenty-First Century.

This course explores the radical transformations of Russian cultural and political life after the end of the Soviet Union, with a specific focus on the Putin era. By combining the approaches of literary analysis and cultural anthropology, the course studies representations of social change, and attempts at producing social change, in Russian everyday life and language, as well as in contemporary art and literature. All readings and discussions in English, with Russian originals available for interested students.

RUSS 1600. Literature and History: Russian Historical Imagination in the European Context.

Relationships between fact and fiction between historiography and historical fiction, between ideology and various ways of reconstructing the past. Readings will include historical fiction of Shakespeare, Schiller, Walter Scott, Pushkin, Tolstoy *War and Peace*, and Pasternak, as well as theoretical texts from Aristotle to Nietzsche, White, and LaCapra. Enrollment limited to 30.

RUSS 1885. Literature and Art of the Russian Avant-Garde.

Examines the Russian avant-garde between 1912, the year of the first Russian futurist manifesto, and early 1930s when Social Realism became this only sanctioned style of art. This, arguably the most vibrant period in Russian art, permeated with unprecedented sense of creative and political urgency, coincided with the WWI and the Russian Revolution, which provide historical contexts for the analyzed works. Also stresses aesthetic and historic interconnections between the Russian and western avant-gardes. Includes the works of poetry, prose, literary manifestos, book design, painting, and film by such artists as Pasternak, Mayakovsky, Khlebnikov, Mandelshtam, Meyerhold, Malevich, Rodchenko, Eisenstein, among others.

RUSS 1890. The Arc of Russian Art.

Introduction to the history of art and architecture in Russia from the early Slavic period to the present day, tracing the main artistic developments throughout this period. Close examination of the works of artists such as Andrei Rublev, Dmitry Levitsky, Orest Kiprensky, Ilya Repin, Valentin Serov, Vasily Kandinsky, Marc Chagall, Kazimir Malevich, Robert Falk and many others. We will also study notable architectural masterpieces such as the Cathedral of Saint Sophia in Kiev, Saint Basil's Cathedral in Moscow, and the Winter Palace in Saint Petersburg. We will focus on recurrent themes such as the role of religious art in Russian culture; the artist in society; imperial, ecclesiastical and private patronage; the relationship between Russian art and the West; the connection between art and politics; and the role of art in modernizing and transforming society. No prerequisites.

RUSS 1895. Bakhtin, Formalism, and Soviet Avant-Garde Aesthetics.

This course examines the two approaches to literature, which in many respects changed the course of humanistic scholarship: Russian Formalism (1920s) focused on literary "devices" and "structures," and credited by many for inventing "literary theory" as an autonomous scholarly discipline, and the theories developed by Mikhail Bakhtin (1895–1975) and his circle of philosophers, poets, and literary critics, for whom the most important task of literary discourse was to create multiple, living personalities. The course discusses these theories in the context of Soviet and European modernist art and aesthetics of the 1920 and 30s. In English.

RUSS 1900. Russian Jewish Literature and Film.

The roots of Russian Jewish literature reach back into the Pale of Settlement of the pre-revolutionary era. The Russian Jewish historical experience provided a highly distinctive perspective onto Stalin's purges and the second World War, and the work of contemporary Russian Jewish authors and filmmakers reflects the complexity of the immigrant experience in Europe, North America, and the Middle East. We will also examine the diverse responses of writers to the present-day redrawing of the political map of Russia and Ukraine.

RUSS 1917. Communism and Soviet Literature.

The purpose of the course is to objectively study Marxist thought and its implementation by Soviet Literary practitioners. Clichés of the Cold War – presenting Soviet artistic experience as either a Big Truth or Big Lie – will be stripped in favor of a fresh evaluation. We will consider salient writings of the Marxist canon, then examine Soviet creative output as it strove to embody Marxist ideals within artistic idiom. While the empty slogans, downright lies, and delusions of Soviet Communism are by now obvious, its aspirations and genuine feelings need to be re-examined. Enrollment limited to 20.

RUSS 1960. Independent Study.

Independent research project on topics related to Russian culture. Enrollment permitted only after the written proposal (instructions in the department office) is submitted to the Concentration Advisor and Chair of the department (deadline: the last day of *Add a course without fee* period during the semester when the project is undertaken). Please check Banner for the correct section number and CRN to use when registering for this course. Each section limited to 10 students; instructor permission required.

RUSS 1967. Russian Postmodernism.

This course will focus on Russian postmodern literature from the 1960s to the present. We will explore the extent to which its themes and experimental stylistic techniques unmask the sense of fragmentation, disorientation and instability that characterize late 20th-century and contemporary Russia. The fictions studied (including film) offer parodies of philosophical and ideological discourses; reveal an obsession with bodily functions, sexuality, and violence; and playfully reinterpret the grand "metanarratives" of Russian culture. We will relate these trends in Russian fiction to broader discourses of the postmodern in the West. Authors include: Bitov, Erofeev, Limonov, Sorokin, Pelevin, Kabakov, Petrushevskaya, Tolstaya.

RUSS 1990. Media Cultures of the Russian 1990s.

Today's global media—marked by political "virtuality," disinformation, and conspiracy theories—found early expression in the media landscape of the Russian 1990s. Post-Soviet Russian society emerged alongside an explosion of new media, including a newly liberated press and television and the fledgling Internet. In this course, we will examine Russophone print, audiovisual, and early digital media, along with select performance and material culture artifacts dating to the "long 1990s"—from the mid-1980s to Putin's rise to power. In tracing these developments, we will see how even the boldest media experiments of the Russian 1990s continue to shape global culture and politics today. Weekly reading assignments for the class will be primarily taken from the digital humanities project, *The Post-Soviet Public Sphere: A Multimedia Sourcebook of the Russian 1990s*. All readings in English, with Russian originals also available for interested students.

RUSS 2010. Eighteenth-Century Literature.

The most important literary currents from the Baroque to early romanticism. Study of style and genre and the development of the literary language.

RUSS 2017. Roaring Twenties: Literature, Arts, and Politics in Post-Revolutionary Russia.

The goal of this seminar is to explore the cultural, artistic, and ideological diversity of the 1920s, with the focus on ideological and political confrontations resulting in the dogmatism of the later Stalinist period. We'll examine literary practitioners, along with the cultural and literary politics of the 1920s and 30s. As the Communist Party moved from War Communism to New Economic Policy, so did the cultural and artistic discourse, producing innovative texts of the early Soviet Period (Gladkov, Bulgakov, Fadeev, Mayakovsky). Equally fascinating was the critical polemics of the period that clashed Trotsky with Blok, or Buharin with Zamiatin.

RUSS 2040. Russian Symbolism.

The origins and character of the Russian Symbolist movement; survey of major poets; the Symbolist novel (Sologub, Bely).

RUSS 2320. Old Russian Literature.

East Slavic literature from the Kievan period to the end of the seventeenth century.

RUSS 2410. Movements and Genres in Russian Literary Culture.

Seminar. Critical reading of selected texts from the Baroque period through the first half of the 19th century. Analysis is based on a study of the infrastructure of each work and the external influences of the period. Conducted mainly in Russian, with a focus on Russian critical terminology and approaches.

RUSS 2610A. Chekov.

No description available.

RUSS 2610B. Gogol's *Dead Souls*.

A research seminar for advanced students, including those with no Russian. Qualified undergraduates may be admitted with the instructor's permission.

RUSS 2610C. Russian Romanticism.

This course will examine the works of Zhukovsky, Batiushkov, Pushkin, Lermontov, Tiutchev, Bestuzhev-Marlinsky, Odоеvsky, and Gogol in the context of Romanticist literary culture. Students will also read works by other European authors associated with Romanticism to elucidate the extent of the adherence of Russian writers to Romanticist aesthetics and philosophy. Advanced reading knowledge of Russian is required for this course.

RUSS 2610D. Pushkin.

For generations of Russian readers and writers, Pushkin has been a cult figure, a true "national poet." This course focuses on Pushkin as the progenitor of Russian national mythology and examines the seminal nature of his writing. Analysis of the dazzling array of genres which became his greatest achievement: lyric poetry, narrative poetry, novel in verse, prose, drama, history, and other nonfictional narratives. Pre Requisites: Advanced reading knowledge of Russian is required. The original Russian texts will be referenced during in-class discussion. Enrollment limited to 20.

RUSS 2610E. Dostoevsky.

An examination of Dostoevsky's major texts tracing his development as an artist, thinker, and religious visionary. The texts will be considered against the background of literary and cultural history of Dostoevsky's period. This course number is for graduate students. Undergraduates should enroll in RUSS1820.

RUSS 2620A. To Be Determined.**RUSS 2620D. Russian Freemasonry.**

No description available.

RUSS 2710A. Pasternak.

The poetry of Boris Pasternak, its structure and development over the entire span of his working life. Conducted in Russian. Open to undergraduates.

RUSS 2710B. Poetic Structure.

The technical study of verse; metrics and rhyme; linguistic analysis of poetic language; semiotic aspects of verse semantics, including genre and historical development. Primary focus on Russian verse, but some attention will also be given to other Slavic materials, as well as to general theoretical issues of poetic structure. Open to qualified undergraduates with instructor's permission.

RUSS 2710C. In Memoriam in Russian Literature.

A study of the philosophical vein in Russian poetry about the meaning of the poetic and cultural heritage of the past, as well as reactions of the rising voices in Russian poetry in succeeding generations to the individual deaths of their immediate predecessors.

RUSS 2720B. Seminar in Russian Literature: Pushkin.**RUSS 2720C. Death and Immortality in Russian Poetry.**

No description available.

RUSS 2720D. Derzhavin and His Epoch.

No description available.

RUSS 2810. Russian Poetry: Silver Age.

Exploration of the writings of such Russian poets as Blok, Tsvetaeva, Pasternak, Mandelstam – in the context of social and cultural changes that shook Russia in first decades of the twentieth century. The class will be conducted in English, but the poetry will be read in the original. Primary goal of the class is to teach students to analyze and discuss the complexities of poetic expression. The class is geared toward graduate students in Slavic but it is open to qualified upper level undergraduates, i.e. to those who can read poetry assignments in original. Instructor permission required.

RUSS 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

RUSS 2980. Advanced Reading and Research.

Only for graduate students. Independent research project on topics related to Russian culture. Enrollment permitted only after the written proposal (instructions in the department office) is submitted to the DGS and Chair of the department (deadline: the last day of *Add a course without fee* period during the semester when the project is undertaken). Please check Banner for the correct section number and CRN to use when registering for this course. Each section limited to 10 students; instructor permission required.

RUSS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Slavic**SLAV 0990L. Jews between Christians and Moslems in the Early Modern World (JUDS 0990L).**

Interested students must register for JUDS 0990L.

SLAV 1200. Slavic Fantasy and Science Fiction.

Slavic literatures, with emphasis on fairy tales, utopias, and dream sequences to science fiction, which depict altered states of reality. Readings in English, supplemented with films in March and April. Seminar with discussion. Slavic concentrators and graduate students expected to cover much of the readings in the original. Familiarity with Slavic literary histories is not required.

SLAV 1210. Ukraine: Continuities and Crises.

How has Ukraine developed into a distinctive nation? This course will address critical aspects of Ukrainian identity, history, culture and politics in relation to its neighbours and itself. As the War in Ukraine continues, we must understand the narration of the war and Ukraine at large both in the West and the former Soviet space. We will explore how memory wars that are occurring in East and Central Europe are shaped by the present realities of Ukraine.

Students will become acquainted with core texts on cultural study, memory study, literature and film relating to Ukraine. Students will gain critical insight into the core aspects of discourse surrounding Ukraine during its Imperial, Soviet and Post-Soviet experiences. We will look at the national revival of Ukraine, the heroization of the Cossack, and the Post-Soviet interpretation of the past in contemporary Ukraine.

SLAV 1250. Polish Culture Through Film.

This course uses Polish film and media to introduce cultural issues central to the Polish nationality and identity. It is a survey of Polish cinema from before World War II to the present, in which cultural and socio-historical contexts as part of Polish and European traditions are shown and examined through the lens of the camera. The main objective of the course is to provide students with deeper knowledge of and insight into the sociological and cultural issues of Polish society, as well as their complex and multifaceted nature.

SLAV 1260. Aesthetics at War: East European Film and Military Conflicts.

Can cinema adequately depict the experience of war? What are the limits of visual representation of excessive brutality? To what extent can we treat cinematic productions as historical commentaries on violence? We will turn towards several filmmakers from Poland, Czechia/Czechoslovakia, Serbia, Bosnia and Herzegovina, and Ukraine to discuss these questions, while bearing in mind that the region has been - and continues to be - the site of some of the most horrific wars in modern history.

SLAV 1300. Language and Politics in East Europe and Russia.

In this seminar course we explore how closely language and politics are intertwined. We explore topics including language policy (e.g., nation-building, linguistic purism and standardization, language maintenance and preservation), minority languages, relevance of inflectional grammar to discourse, metaphor, code-switching and diglossia, language contact, (im)politeness, and language origin-myths and their significance to the conceptualization of the politics of language. Case-studies on languages in East Europe, Russia are used as entry-points to classroom discussions. Knowledge of Slavic languages is not required. Open to advanced undergraduate and graduate students. First- and second-year students who demonstrate their knowledge of the basic notions in linguistics or their familiarity with Russia and East Europe may enroll with the instructor's written permission. Enrollment limited to 20.

SLAV 1310. Discourse Analysis: Approaches to Talk, Action, and Text.

This course examines approaches to language phenomena beyond the sentence level. We will study four aspects of discourse, spoken and written, that are relevant to linguistics: the interaction between grammar (e.g. deixis, inflection, tense-aspect) and discourse; functions of larger units of text (e.g. discourse markers, turn-taking, repair, (im)politeness, structure of discourse); functions of text types (e.g. discourse and ideology). Discussion of methodologies: qualitative analysis, use of language corpora, and triangulation approach. Case studies on Slavic languages. Open to concentrators in Slavic Studies and students interested in languages and/or linguistics.

SLAV 1350. Religion, Marriage and Gender in Russian Culture and Literature.

With Russia as our case study, in this course we will examine the cultural history of marriage as an ecclesiastical and popular religious institution and as a nucleus of debates regarding ecclesiastical authority, popular piety, secularization, modernization, and gender. Examining the dissemination of the ecclesiastical view, we will consider the role of secular literature in challenging official views and practices. We will also examine marriage as folk religious practice and its role in the social thought of the intelligentsia and study its influence on the concepts of gender, sexuality and the body through interaction with European theology and literature.

SLAV 1360. Deep Thoughts Versus Big Data: Dostoevsky's Underground Man in the 21st Century.

This intensive Wintersession seminar centers on Fyodor Dostoevsky's novella, *Notes from the Underground*, which examines the plight of the underground man, an overly-conscious individual who struggles in a society that rewards conformity. We begin with an overview of the philosophy of the underground man in the context of nineteenth-century Russia and Russian literature (reading other related primary and secondary texts). Then we will apply our discussion to an investigation of our lives today, as our interactions increasingly occur on screens and not in person. Readings in English; no prior knowledge is required. 1/2-1/18 daily with longer meetings on weekends.

SLAV 1500. The Literature and Cinema of Global Organized Crime.

In this course we will examine the demonized, self-consciously romanticized, or pointedly de-glamorized images of organized crime in literature and cinema across the contemporary global village. We will discuss the ways in which literary and cinematic texts portray the lives of organized crime workers within the international marketplace, focusing on the countries within Eastern Europe and Mexico, Italy, France, Japan and India. We will also study theories of confessional and postmodernist narratology, in an effort to de-code representations of the criminal self that finds itself trapped in a world driven by the neoliberal economic policies of outsourcing and transnational mergers.

SLAV 1552. Co-existence and Conflict: Polish-Jewish Relations from 1500 until Today (HIST 1552).

Interested students must register for HIST 1552.

SLAV 1760. Film, Theater and Culture of Poland.

This course explores Polish twentieth-century culture with a special stress on literature, theatre, film, visual arts, and architecture. After the examining of the romantic roots of Polish twentieth-century culture through the works of two famous Polish poets, Mickiewicz and Krasiński, the course will explore the works of representative Polish modernist and avant-garde artists such as Przybyszewski, Wyspiański, Witkacy, Schulz, or Gombrowicz. The third part of the course is devoted to the Polish contemporary theatre and film, including the workshops of the two legendary European theaters Cricoteka and Gardzienice, and films of the famous Polish Film School. In English. First year students require instructor permission.

SLAV 1770. Prague and St. Petersburg: A Tale of Two Cities.

An exploration of the mythopoetic universe of Prague and Petersburg through literature and film. Both - one, ancient, the other "modern" - served at one point of the historical continuum as capitols of multinational empires (Holy Roman and Russian), yet also as loci of national identity, both factors thus contributing to their respective enigmatic states. The course will attempt to identify these enigmas and discuss their possible futures in the global polity and culture. Enrollment limited to 20.

SLAV 1780. Economies and Politics of Transition.

The course identifies, describes, and explains major social, economic and political processes that have started in the late 1980s and early 1990s with the collapse of the communist systems in Poland and other East-Central European countries. The transition from the centrally planned to free market economies and the present challenges and problems associated with joining the European Union will be discussed in the context of the political and social changes and related to specific historical conditions. The course puts a special stress on Poland, which in turn will allow students to develop models of patterns of transition applicable to the entire region of East-Central Europe. In English. First year students require instructor permission.

SLAV 1800. Visual and Historical Imagination of Andrzej Wajda.

The course explores the cinema of one of the world's greatest directors Andrzej Wajda (1926-2016). From his first film, "A Generation" (1955), to his last one, "Afterimage" (2016), Wajda unceasingly shaped visual and historical imagination of Polish post-war generations. His art—growing out of the trauma of WWII, and the experience of social and political changes in the twentieth-century Poland and Eastern Europe—shows the work of collective memory, and portrays individual lives enmeshed in history. His films—always in a dialogue with other forms of visual arts and literature—are also commentaries on the role of art and the artist in contemporary society.

SLAV 1821L. International Relations of Russian, Eastern Europe, and Eurasia (POLS 1821L).

Interested students must register for POLS 1821L.

SLAV 1890. Twentieth-Century Russian Literary Theory: Bakhtin and the Formalists.

In this seminar, we examine three schools of literary theory that emerged in Russia after the Revolution: in the twenties, Formalism, which is often credited for inventing literary theory as a distinctive scholarly discipline; Mikhail Bakhtin (1895-1975) and his circle of philosopher critics; and the Tartu School of Cultural Semiotics (1960-90s). We will learn how to apply these theories to a diverse range of literary texts (some chosen by students themselves, from their own areas of interest), and will also take into consideration their international influence on the work of critics such as Homi Bhabha, Elaine Scarry and Slavoj Žižek.

SLAV 1950. Independent Study.

Independent research project on topics in Slavic Studies. Enrollment permitted only after the written proposal (instructions in the department office) is submitted to the Concentration Advisor and Chair of the department (deadline: the last day of *Add a course without fee* period during the semester when the project is undertaken). Please check Banner for the correct section number and CRN to use when registering for this course. Each section limited to 10 students; instructor permission required.

SLAV 1970A. Literature in the Changing Eastern Europe.

Undergraduate seminar on the role of the intellectual in cultures subjected to enormous social and political change. Considers particularly the relevance of the intellectual's private and public selves to the literary, cultural and political life of society. Readings in English.

SLAV 1970B. Spirituality in Russian Literature.

Spirituality -- understood as the intimate, spiritual life of individuals as opposed to corporate expressions of religiosity -- occupies a large place in Russian national life, and its exploration has become the central issue of many famous literary texts. The course will examine selected Russian texts -- from symbolism to postmodernism -- from the perspective of the spiritual sensibility that combines atheism, Russian Orthodoxy, Gnosticism, and sectarian or unconscious religiosity. Authors to be studied include: Nabokov, Sologub, Rozanov, Erofeev, Sorokin and Pelevin. In English.

SLAV 1970D. Vaclav Havel: Dissident, Playwright, and Politician.

For Havel, life under communism represented "an inflated caricature of modern life in general" and the collective experiences of those who lived under such a totalitarian regime" stand as a kind of warning to the West, revealing to it its own latent tendencies." We will explore this hypothesis by studying Havel's texts and the cultural context where they arose.

SLAV 1970E. Kafka/Schulz.

The course explores the prose of Bruno Schulz and Franz Kafka, grasping a profound similarity between those two writers on many levels: cultural, religious, sexual, existential, and artistic. In English. For more information visit the Slavic Department web page.

SLAV 1970F. Comparative Slavic Linguistics.

An overview of the phonological and morphological development of Slavic languages from Common Slavic using readings and problem sets. The course will also examine the basic structure of Old Church Slavonic. Typological comparisons between contemporary Slavic languages. Familiarity with at least one Slavic language is required. Instructor permission required.

SLAV 1970G. Polish for Reading and Research.

An intensive course designed for students who wish to receive concise and systematic language instruction to read Polish for their research projects and/or to prepare for advanced language study in the study abroad context. The course does not require any previous knowledge of Polish. Students will develop functional reading and comprehension strategy in Polish through extensive activities focusing on grammar and reading of selected texts.

SLAV 1970H. Gender and Identity in Modern and Contemporary East Central European Visual Arts.

While issues of gender and identity are commonplace in Western modern and contemporary art discourse, due to isolation from the west for a better part of the twentieth century, East Central European modern and contemporary art has not been privy to similar conversations. This course will explore modernity in the Czech Republic, Slovakia, Poland and Hungary through discussions on Expressionism, Primitivism, Cubism, and Surrealism. Discussion on the role of the avant-garde artist, his manifestoes and art during heightened nationalism; the role of women as subject of modernity, significant female artists within the avant-garde context, especially in DADA and surrealist circles. Enrollment limited to 20.

SLAV 1981. Independent Research in the Slavic Language(s).

Independent research on various topics in Slavic cultures. Reading, discussion, research must be done in the chosen Slavic language (Czech/Russian). Close work with faculty on project is expected. Prerequisites: minimum RUSS0600/CZCH 0610 (3rd year-level) or placement evaluation by Russian or Czech language coordinator. Enrollment permitted only after the written proposal (instructions in the department office) is submitted to the Concentration Advisor and Chair of the department (deadline: the last day of *Add a course without fee* period during the semester when the project is undertaken). Each section limited to 10 students; instructor permission required.

SLAV 1990. Senior Thesis.

Only for Slavic concentrators writing their senior theses. For requirements and schedule, contact the department. Each section limited to 10 senior Slavic Studies concentrators.

SLAV 2020. Publish or Perish: Seminar in Slavic Studies.

This seminar intends to introduce graduate students to various scholarly approaches to the study of Russian literature and culture and to the diversity of themes and topics that inform Slavic Studies' intellectual community. The seminar will provide an overview of the current research in Slavic Studies and discuss an array of historical, comparative, theoretical, and disciplinary perspectives on the field. The main objective will be to help students to develop their projects into publishable essays. The course will also require students writing reviews.

SLAV 2210. Old Church Slavonic.

Introduction to Church Slavonic philology. Structural analysis of Old Church Slavonic. Readings in Old Church Slavonic texts.

SLAV 2230. History of Russian.

Elementary history of Russian, with emphasis on the standard languages, from the Kievan period to the 19th-century. Readings in early Russian texts. Some acquaintance with Old Church Slavonic is desirable. Not for graduate students in Slavic linguistics, who should take seminars in East Slavic historical dialectology and the history of the Russian literary language.

SLAV 2320. Russian Syntax.

Survey of approaches to the relationship between semantics and syntax in Russian. Discussion of morphosyntactic variation in Russian, including gender-number agreement, tense-aspect, case, reflexivization, and pronominalization. Some topics relevant to the teaching of Russian and stylistics.

SLAV 2450. Exchange Scholar Program.**SLAV 2970. Preliminary Examination Preparation.**

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

SLAV 2980. Advanced Reading and Research.

Only for graduate students. Independent research project on topics in Slavic Studies. Enrollment permitted only after the written proposal (instructions in the department office) is submitted to the DGS and Chair of the department (deadline: the last day of *Add a course without fee* period during the semester when the project is undertaken). Please check Banner for the correct section number and CRN to use when registering for this course. Each section limited to 10 students; instructor permission required.

SLAV 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

SLAV XLIST. Courses of Interest to Concentrators in Slavic Languages.

Sociology

Sociology is the study of how groups and individuals interact in producing social systems. Sociologists study the norms, values, identities, power structures and institutions through which societies are organized. Sociologists have long been particularly concerned with the gap between the ideal of legal equality and the reality of social inequality.

The Sociology Department offers a comprehensive set of introductory and advanced courses through which students acquire a range of research and theoretical skills. The department's areas of strength include Globalization and Development, Demography, Race and Ethnicity, Gender, Inequality, Urban Sociology, Environmental Sociology, Organizations and Economic Sociology, Political Sociology, and Education.

At the undergraduate level, the department offers an A.B. in Sociology, as well as an optional track in Sociology Organizational Studies (S/OS), and a Sc.B in Social Analysis and Research (SAR). At the graduate level the department offers a PhD in Sociology as well as a Masters in Social Analysis and Research (MSAR).

Faculty and students in sociology have extensive and deep ties to a wide range of programs and centers at Brown. These include the Watson Institute for International and Public Affairs, the Population and Studies Training Center (PSTC), the Center for the Study of Race and Ethnicity in America (CSREA), Spatial Structures in the Social Sciences

(S4), the Engaged Scholars Program, and the Institute at Brown for Environment and Society (IBES). The Graduate Program in Development (Watson Institute) and PSTC provide a range of interdisciplinary training opportunities for sociology graduate students.

For additional information, please visit the department's website: <http://www.brown.edu/Departments/Sociology/>

Sociology Concentration Requirements

The concentration in Sociology (leading to a Bachelor of Arts) provides a foundation in sociological theory and methods and the opportunity to cultivate more specialized knowledge in the discipline's substantive interests. Students develop that focus through their coursework, taking courses in diverse areas such as social inequality, family and gender, organizations, environmental sociology, race and ethnicity and globalization. Students refine their interests during the senior seminar and through their completion of a senior thesis or capstone project.

Standard program for the A.B. degree

Ten courses are required to complete the concentration.

Required core:

SOC 0010	Social Forces: An Introduction to Sociology	1
SOC 1010	Classical Sociological Theory	1
SOC 1020	Methods of Social Research	1
SOC 1100	Introductory Statistics for Social Research	1
or APMA 0650	Introduction to Probability and Statistics	
or ECON 1620	Introduction to Econometrics	
or CPSY 0900	Statistical Methods	
SOC 1950	Senior Seminar	1

Five (5) additional courses: 5

- a) At least three of the optional courses have to be 1000 level and one of them must be a substantive seminar (1870-1873).
- b) Students can choose to take up to two lower level (0100 level) courses.

- c) Students can petition to take two courses outside of the discipline (this will be allowed only when the proposed course makes sense given the interests of the student, and there is no equivalent sociology course).

Total Credits 10

Honors

In order to be considered for honors, students must (1) be in good standing with the College, (2) have completed at least half of the concentration coursework, and have earned a majority of "A" grades in the concentration. Honors also require a senior thesis, with a recommendation of Honors by the advisor and reader, that demonstrates an understanding of empirical research.

Organizational Studies Track

Ten courses to complete the concentration

Required Core:

SOC 0010	Social Forces: An Introduction to Sociology	1
SOC 1010	Classical Sociological Theory	1
SOC 1020	Methods of Social Research	1
SOC 1100	Introductory Statistics for Social Research	1
or APMA 0650	Introduction to Probability and Statistics	
or ECON 1620	Introduction to Econometrics	
or CPSY 0900	Statistical Methods	
SOC 1950	Senior Seminar	1

Foundations of Organizational Studies (choose two of the following): 2

SOC 0300	Organizations and Society

SOC 1311 Micro-Organizational Theory: Social Behavior in Organizations

SOC 1315 Macro-Organizational Theory: Organizations in Social Context

Advanced Organizational Studies Course (choose one course). The following are approved EXAMPLES. Please consult Courses@Brown/Concentration Advisor for current offerings. 1

SOC 1070 Introduction to Economic Sociology

SOC 1117 Focus Groups for Market and Social Research

SOC 1118 Context Research for Innovation

SOC 1120 Market and Social Surveys

SOC 1260 Market Research in Public and Private Sectors

SOC 1311 Micro-Organizational Theory: Social Behavior in Organizations (If not used to meet the "Foundations" requirement, above)

SOC 1315 Macro-Organizational Theory: Organizations in Social Context (If not used to meet the "Foundations" requirement, above)

SOC 1871C Sociology of the Legal Profession

SOC 1872N Ethnography in Organizations

Two (2) additional courses. Each of these courses must be either (a) offered by the Department of Sociology, or (b) drawn from the following list of interdisciplinary "Organization-Relevant Electives:" 2

AMST 1610A American Advertising: History and Consequences

CPSY 1250 Human Factors

CPSY 1470 Mechanisms of Motivated Decision Making

CPSY 1730 Psychology in Business and Economics

ECON 0110 Principles of Economics

ECON 1760 Financial Institutions

ETHN 1890C Business, Culture, and Globalization: An Ethnographic Perspective

ENGN 1930S Land Use and Built Environment: An Entrepreneurial View

HIST 0150A History of Capitalism

PHIL 1610 Decision Theory: Foundations and Applications

POLS 1150 Prosperity: The Ethics and Economics of Wealth Creation

POLS 1240 Politics, Markets and States in Developing Countries

POLS 1820W Market Liberalism: Origins, Principles and Contemporary Applications

Total Credits 10

Additional Restrictions to the Organizational Studies Track:

Lower-level Coursework: Students may count no more than two 0100-level courses toward the Organizational Studies and Concentration Elective requirements (combined).

Upper-level Coursework: At least three of the five courses counted toward the Organizational Studies and Concentration Elective requirements (combined) must be at the 1000-level, and at least one must be a substantive seminar (1870-1873).

Interdisciplinary Coursework: Students may petition to count non-Sociology courses beyond the Organization-Relevant Elective list toward the Concentration Elective requirement. This will be allowed only when the proposed course makes sense given the interests of the student, and the Department of Sociology offers no equivalent course.

****See the Sociology website <http://www.brown.edu/academics/sociology/> for details regarding Honors and Independent Studies”

The Senior Seminar SOC 1950 (<https://bulletin.brown.edu/search/?P=SOC%201950>)

Sociology requires all concentrators to complete a thesis or capstone project in their senior year. The purpose of the thesis or capstone project is to allow students an opportunity to apply the knowledge they acquired through the concentration curriculum on a topic of their own interests.

(Students in the Organizational Studies track are expected to focus their senior thesis or capstone project on an Organizational Studies topic.) To fulfill this requirement students enroll in SOC 1950 – Senior Seminar. Participation in this seminar allows each cohort of concentrators to discuss their diverse interests and expose students to the wide range of applications of Sociological knowledge.

A **senior thesis** must ask an original research question, answer it with appropriate evidence, and place that work within relevant scholarly literature in sociology. The thesis is supervised by a faculty member who serves as the primary advisor and one additional faculty member who serves as a reader. By the end of the sixth semester, students must submit a prospectus for the senior thesis (not more than four pages) accompanied by the signature of one faculty member indicating that he or she is willing to serve as the primary advisor on the thesis to the Director of Undergraduate Studies in their concentration. Only a senior thesis qualifies the student for Honors.

A **capstone project** is an independent, student-initiated project or experience developed during the Senior Seminar (SOC 1950) that connects in a meaningful way to learning in the concentration. A capstone project differs from a thesis in its scholarly content and form, and it depends only on the evaluation of the senior seminar instructor. Whereas the senior thesis follows the form of a conventional research paper, the capstone project allows a wider array of research and creative outputs, including but not limited to video documentaries, photographic exhibitions, and applied or policy-related reports for an off-campus organization. Projects are complemented by a poster presentation, literature review, and report that situates the central subject matter of the project within the context of sociological scholarship.

Independent Study

Students can use no more than one (1) Independent Study course (SOC 1970 (<https://bulletin.brown.edu/search/?P=SOC%201970>)) to meet the concentration course requirements. This course counts towards a 1000-level substantive requirement and will not serve as a substitute for any of the core concentration requirements.

Honors

In order to be considered for honors, students must (1) be in good standing with the College, (2) have completed at least half of the concentration coursework, and have earned a majority of “A” grades in the concentration. Honors also require a senior thesis, with a recommendation of Honors by the advisor and reader, that demonstrates an understanding of empirical research.

Social Analysis and Research Concentration Requirements

The Sc.B. concentration in Social Analysis and Research provides both a conceptual and a working knowledge of the techniques for data collection and analysis used for social research in academic and non-academic environments. The centerpiece of the concentration is a rigorous and comprehensive collection of courses: (1) that develop an understanding of the principles underlying the processes of data collection and analysis; and (2) that train students in the application of advanced statistical techniques for data description and analysis. The concepts and skills learned in these courses are reinforced through engagement in applied research with Sociology faculty and/or internships with local organizations in the for profit and not-for-profit sectors.

Concentrators also take courses that provide grounding in the theoretical approaches to social phenomena that are foundational to social research.

Graduates develop an understanding of the concepts and processes that underlie the issues studied by sociologists and the analytic techniques that allow sociologists to understand social relations and individual behavior.

Standard program for the Sc.B. degree

Required core:

MATH 0090	Single Variable Calculus, Part I	1
SOC 1100	Introductory Statistics for Social Research	1
or APMA 0650	Introduction to Probability and Statistics	
or ECON 1620	Introduction to Econometrics	
SOC 1020	Methods of Social Research	1
SOC 2010	Multivariate Statistical Methods I	1
SOC 1010	Classical Sociological Theory	1
SOC 1950	Senior Seminar	1
Three (3) substantive or theory courses (non-methodological courses) in Sociology, two (2) of which must be at the 1000-level or above.		3
Three (3) of the following advanced analysis courses:		3
SOC 1117	Focus Groups for Market and Social Research	
SOC 1118	Context Research for Innovation	
SOC 1120	Market and Social Surveys	
SOC 1260	Market Research in Public and Private Sectors	
SOC 1340	Principles and Methods of Geographic Information Systems	
SOC 1872N	Ethnography in Organizations	
SOC 2020	Multivariate Statistical Methods II	
SOC 2070	Text as Data for Social Science Research	
SOC 2210	Qualitative Methods	
SOC 2230	Techniques of Demographic Analysis	
SOC 2240	Event History Analysis	
SOC 2250	Ethnography: Theory and Practice	
SOC 2260T	Cultural Theory and Methods	
SOC 2610	Spatial Thinking in Social Science	
SOC 2612	Geographic Information Systems and Spatial Analysis for the Social Sciences	
SOC 2960G	Spatial Data Analysis Techniques in the Social Sciences	
SOC 2960Y	Causal Analysis	
SOC 2961A	Advanced Spatial Data Analysis Techniques in the Social Sciences	
Research experience (1 course)		0-1
A one-semester research internship (not for credit or for credit as SOC 1970 - Independent Study), or a summer research internship (not for credit).		

Total Credits

12-13

A one semester or a summer research internship is required. The research internship is designed to provide students with hands-on experience in social research. Students will typically complete the research internship in their junior year or during the summer between their junior and senior years. Students need to submit an *Internship Proposal Form* to the Undergraduate Concentration Advisor for approval prior to starting the internship. Upon completion of the internship, students are required to submit to the Undergraduate Concentration Advisor a brief summary report of their experience, which must be signed by the supervisor of the student's internship.

Academic research internships involve work on a faculty member's research project. Activities may range from data collection, data entry, data file management, descriptive analyses, and more advanced model estimation. Students are encouraged to approach faculty about opportunities for working on their research projects. Academic and off-

campus research internships will typically entail 5-10 hours of work per week and may or may not involve compensation.

Students may receive academic credit for academic research internships and off-campus internships completed during the academic year if they combine the internship experience with an academic component under the direction of a faculty advisor. Students taking an internship for credit should register for an *Individual Research Project* (SOC 1970).

***See the Sociology website <http://www.brown.edu/academics/sociology/> for details regarding Honors and Independent Studies

Course substitutions: Students may petition the Director of Undergraduate Studies to use one advanced analysis course taken in another department to count toward the three required advanced analysis courses.

Organizational Studies Track requirements

Required core:

MATH 0090	Single Variable Calculus, Part I	1
SOC 1010	Classical Sociological Theory	1
SOC 1020	Methods of Social Research	1
SOC 1100	Introductory Statistics for Social Research	1
or APMA 0650	Introduction to Probability and Statistics	
or ECON 1620	Introduction to Econometrics	
SOC 1950	Senior Seminar	1
SOC 2010	Multivariate Statistical Methods I	1
Any combination of two (2) courses from below:		2
SOC 0300	Organizations and Society	
SOC 1311	Micro-Organizational Theory: Social Behavior in Organizations	
SOC 1315	Macro-Organizational Theory: Organizations in Social Context	
One (1) Advanced Organizational Studies Elective:		1
SOC 1070	Introduction to Economic Sociology	
SOC 1117	Focus Groups for Market and Social Research	
SOC 1118	Context Research for Innovation	
SOC 1120	Market and Social Surveys	
SOC 1260	Market Research in Public and Private Sectors	
SOC 1311	Micro-Organizational Theory: Social Behavior in Organizations	
SOC 1315	Macro-Organizational Theory: Organizations in Social Context	
SOC 1871C	Sociology of the Legal Profession	
Three (3) of the following Advanced Analysis Courses:		3
SOC 1117	Focus Groups for Market and Social Research	
SOC 1118	Context Research for Innovation	
SOC 1120	Market and Social Surveys	
SOC 1260	Market Research in Public and Private Sectors	
SOC 1340	Principles and Methods of Geographic Information Systems	
SOC 1872N	Ethnography in Organizations	
SOC 2020	Multivariate Statistical Methods II

SOC 2960G	Spatial Data Analysis Techniques in the Social Sciences
SOC 2960Y	Causal Analysis
SOC 2961A	Advanced Spatial Data Analysis Techniques in the Social Sciences
Research experience (1 course)	
A one-semester research internship (not for credit or for credit as SOC 1970 - Independent Study), or a summer research internship (not for credit).	
Total Credits	
12-13	

Research Internship

A one semester or a summer research internship is required. The research internship is designed to provide students with hands-on experience in social research. Students will typically complete the research internship in their junior year or during the summer between their junior and senior years. Students need to submit an *Internship Proposal Form* to the Undergraduate Concentration Advisor for approval prior to starting the internship. Upon completion of the internship, students are required to submit to the Undergraduate Concentration Advisor a brief summary report of their experience, which must be signed by the supervisor of the student's internship.

Academic research internships involve work on a faculty member's research project. Activities may range from data collection, data entry, data file management, descriptive analyses, and more advanced model estimation. Students are encouraged to approach faculty about opportunities for working on their research projects. Academic and off-campus research internships will typically entail 5-10 hours of work per week and may or may not involve compensation.

Students may receive academic credit for academic research internships and off-campus internships completed during the academic year if they combine the internship experience with an academic component under the direction of a faculty advisor. Students taking an internship for credit should register for an *Individual Research Project* (SOC 1970).

***See the Sociology website <http://www.brown.edu/academics/sociology/> for details regarding Honors and Independent Studies

Course substitutions: Students may petition the Director of Undergraduate Studies to count a course not on the list above toward the advanced analysis requirement or the advanced organizational studies requirement.

Engaged Scholarship Certificate Requirements

The Engaged Scholarship Certificate allows students to investigate public, civic, and/or social justice issues that they are passionate about through the integration of academic study with community-based learning, research, and action. Students pursuing the Engaged Scholarship Certificate conduct intensive interdisciplinary inquiry into a topic or issue area of their choice (e.g., criminal justice reform, educational equity, environmental justice), coupled with direct engagement with communities, organizations, and practitioners outside of the academy. The certificate has four requirements - a foundational seminar, a three-course interdisciplinary elective sequence, a community-based practicum, and a capstone - that together advance students' learning and skills to contribute to the world beyond Brown.

As with all undergraduate certificates (<https://www.brown.edu/academics/college/degree/undergraduatecertificates/>), students may only have one declared concentration. and must be enrolled in or have completed at least two courses toward the certificate at the time they declare in ASK, which must be no earlier than the beginning of the fifth semester and no later than the last day of classes of the antepenultimate (typically the sixth) semester, in order to facilitate planning for the experiential learning opportunity (practicum). Students must submit a proposal for their practicum by the end of the sixth semester.

Students in any concentration may pursue the Engaged Scholarship Certificate. No concentrations are excluded.

Certificate Requirements:

Each student will take a required foundational seminar and propose a set of three experiences—a three-course interdisciplinary elective sequence, a community-based practicum, and a capstone—related to their issue area focus.

Core Course:

SOC 0310	Theory and Practice of Engaged Scholarship	1

Elective Courses: 3

One course carrying the Community Based Learning and Research (CBLR) curricular designation or an approved alternative. For example:

AFRI 0300	Performing Ethnography and the Politics of Culture
AFRI 1075	Providence Housing Ecosystem, Development, Displacement and Gentrification
AFRI 1230	Black Protest Music
AFRI 1275	Memory, Movements, and Mississippi
AFRI 1430	Lincoln in the Archive: Material Culture, Representation, and Race
ANTH 0805	Language and Migration
ANTH 1300	Anthropology of Addictions and Recovery
ANTH 1301	Anthropology of Homelessness
ANTH 1515	Anthropology of Mental Health
ARCH 0317	Heritage in the Metropolis: Remembering and Preserving the Urban Past
ARCH 0760	Palaces: Built to Impress
ARCH 1170	Community Archaeology in Providence and Beyond
ARCH 1494	Southeast Asia's Entangled Pasts: Excavated, Curated, and Contested
ARCH 1500	Classical Art from Ruins to RISD: Ancient Objects/Modern Issues
ARCH 1538	Heritage Under Fire: From Conflict to Understanding, Memory, and Reconciliation
ARCH 1900	The Archaeology of College Hill
ARTS 1002	Arts Writing Workshop
ARTS 1800	ArtsCrew & The Future of Arts Work
BIOL 0940E	Precision Medicine or Privileged Medicine? Addressing Disparities in Biomedical Research
CSCI 1951I	CS for Social Change
EDUC 0515	Teaching LGBTQIA History
EDUC 0520	Adolescent Literature
EDUC 0530	Fieldwork and Seminar in Secondary Education
EDUC 0540	Language and Education Policy in Multilingual Contexts
EDUC 1190	Family Engagement in Education
EDUC 1250	Policy Implementation in Education
EDUC 1320	Turning Hope into Results: The Policy Ecosystem of the Providence Public Schools District
EDUC 1655	Human Development and Education in East Asia
EEPS 1745	Planetary System Design: A Team Project Course

EEPS 1960G	Geo-, Environmental + Planetary Sciences' curriculum design + teaching pract. for local high school
ENGL 1050P	Reframing Race in Art Writing
ENGL 1140E	Writing for Activists
ENGL 1160K	Literary Reportage
ENGL 1180V	Contemporary Asian American Writers
ENGL 1190F	My So-Called Life: The Art of the Literary Memoir
ENGL 1191A	The Poet & The Press Release: Rhetoric of Social Change
ENVS 0110	Humans, Nature, and the Environment: Addressing Environmental Change in the 21st Century
ENVS 1247	Clearing the Air: Environmental Studies of Pollution
ENVS 1421	Podcasting For the Common Good: Storytelling with Science
ENVS 1555	Local Food Systems and Urban Agriculture
ENVS 1557	Birding Communities
ETHN 0090A	The Border/La Frontera
ETHN 1000	Introduction to Ethnic Studies
FREN 1410T	L'experience des refuges: déplacements, migrations
GNSS 1510A	Reproductive In/Justice
HISP 0710E	Introduction to Professional Translation and Interpretation
HISP 0750B	The Latin American Diaspora in the US
LACA 1503O	Networked Movements. Mobilizations for change in Latin America in the 21st century.
LACA 1630	Engaged Humanities: Storytelling in the Americas
LITR 1152C	Writers-in-the-Community Training & Residencies
MGRK 1210	A Migration Crisis? Displacement, Materiality, and Experience
PHP 1300	Parenting Behaviors and Child Health
PHP 1810	Community-Engaged Research in Public Health
PHP 1820	Designing Education for Better Prisoner and Community Health
PHP 1821	Incarceration, Disparities, and Health
POBS 1601M	Migrants, Political Activism and the Racialization of Labor
POBS 1740	Artful Teaching: Intersecting the Arts with Foreign and Second Language Acquisition
POLS 1820I	Indigenous Politics in Hawai'i: Resurgence and Decolonization
SAST 0730	Economic and Human Development in South Asia
SOC 0320	Critical Communities, Critical Engagements
SOC 1118	Context Research for Innovation
SOC 1120	Market and Social Surveys
SOC 1871J	Ethics, Justice, and Transformations in Engaged Scholarship
SOC 1873H	A Hip Hop Companion to Race and Ethnicity
TAPS 1281W	Arts and Health: Theory
TAPS 1281Y	Art and Activism
TAPS 1281Z	Arts and Health: Practice

TAPS 1370	New Works/World Traditions	
URBN 1870Z	Housing Justice	
URBN 1871A	Heritage in the Metropolis: Remembering and Preserving the Urban Past	
URBN 1932	The Just City: Installment I, Comparative Perspectives on Juvenile Justice Reform	
VISA 0100	Studio Foundation	
Issue Area Course: A course that addresses the student's stated public, civic, or social justice issue of interest (e.g., criminal justice reform, educational equity, environmental justice). That issue or topic will be a coherent thread throughout their ESC course sequence and community-engaged experiences.		
Critical Perspectives Course: A course related to the student's specific community engagement focus that examines the broader ethical, political, and social context of that issue area. Students are strongly encouraged to consider RPP-designated or other courses that address issues of structural inequality, the root causes of social problems, and the production of knowledge and difference in the context of discourses on race, power, and privilege.		
Practicum: The ESC practicum is a significant practice-based experience (internship, fellowship, volunteer role, etc.) with a community organization or project, during which students also complete a series of reflective assignments. In most cases, the practicum will be completed as a non-credit-bearing experience. However, it may be fulfilled through a credit-bearing course, such as the Brown in Washington, DC Practicum.		0-1
ESC Capstone: The ESC capstone will provide students with a culminating learning experience through which they reflect back on their certificate work and demonstrate achievement and competency with respect to key learning outcomes articulated in their certificate plan. ESC students will have two options for fulfilling the capstone requirement:		0-1
Engaged Research/Course Option (credit): Students who elect this option will pursue an engaged capstone involving research or other project-based work with a community partner organization. Students may select an upper-level course - including potentially a concentration capstone or honors thesis course - or propose an independent study (DISP or GISP) aligned with their research interests and, with the agreement of the instructor, pursue a project with a collaborating non-academic partner.		
ePortfolio/Reflection Essay Option (non-credit): Students who elect this option will create an electronic portfolio (ePortfolio) of representative ESC work. The ePortfolio will consist of papers, projects, and/or other artifacts developed in courses and the ESC practicum. It will be accompanied by a reflective essay that responds to a series of prompts about the student's community engaged learning experiences. ESC participants' faculty advisors, ESC Review Committee members, and/or Swearer Center staff with relevant expertise will advise and evaluate this type of capstone.		
Total Credits		4-6

Migration Studies Certificate Requirements

The Certificate in Migration Studies promotes a multidisciplinary understanding of migration and competency in a range of research methodologies. It accomplishes these goals by linking students to diverse learning resources spread across departments and centers at Brown University, and by building community among students and faculty with shared interests in migration, immigration, and the immigrant experience. The program places particular emphasis on research methods, research experience, and rigorous approaches to the study of migration. The required introductory course covers the central features, concepts and foci of international migrations studies, and the two elective

courses selected from the lists of preapproved courses expose students to diverse substantive concerns and disciplinary approaches. A required methods course from a list of preapproved courses exposes students to methods beyond their concentration requirements.

As with all undergraduate certificates (<https://www.brown.edu/academics/college/degree/undergraduatecertificates/>), students may only have one declared concentration and must be enrolled in or have completed at least two courses toward the certificate at the time they declare in ASK, which must be no later than the last day of classes of the antepenultimate (typically the sixth) semester.

There are no excluded concentrations.

Certificate Requirements:

Course work in Migration Studies:

SOC 0315	International Migration	1
One of the following:		1
AMST 1611A	Making America: Twentieth-Century U.S. Immigrant/Ethnic Literature	
ETHN 1750A	Immigrant Social Movements: Bridging Theory and Practice	
SOC 1128	Migrants, Refugees and the Mediterranean	
SOC 1281	Migration in the Americas	
SOC 1155	Borderlands	
One course from the following:		1
ANTH 1225	Gendering Migration and Diasporas	
FREN 1410T	L'experience des refugies: déplacements, migrations	
HIST 0150D	Refugees: A Twentieth-Century History	
HIST 0577B	The US-Mexico Border and Borderlands: A Bilingual English-Spanish Seminar	
HIST 2971P	Diaspora, Displacement, Transnationalism	
LACA 1503W	Migration and Gender in Latin America: Crossing Borders and Bridging Disciplines	
LACA 1503Y	Latin America in Motion: Migration and Crisis in the Post-globalization Era	
LACA 1503X	Regulating Bodies: Migration, Race, and Colonial Legacies in Central America	
POLS 1824S	The Politics of Migration	
SOC 0030	Race, Immigration, and the Making of Inequality	
SOC 1128	Migrants, Refugees and the Mediterranean	
SOC 1281	Migration in the Americas	
SOC 1450	Unstable Times: Migration, Identity and Societal Integration	
SOC 2320	Migration	
One methods course (that is not a requirement for your concentration):		1
ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis	
ANTH 1940	Ethnographic Research Methods	
APMA 1650	Introduction to Probability and Statistics with Calculus	
APMA 1660	Statistical Inference II	
ECON 1000	Using Big Data to Solve Economic and Social Problems	
ECON 1620	Introduction to Econometrics	
ECON 1629	Applied Research Methods for Economists	
ECON 1660	Big Data	
ECON 1680	Machine Learning, Text Analysis, and Economics	

EDUC 1230	Applied Statistics for Ed Research and Policy Analysis
EDUC 1240	Qualitative Methods
POLS 1600	Political Research Methods
PHP 1501	Essentials of Data Analysis
PHP 1510	Principles of Biostatistics and Data Analysis
PHP 1560	Using R for Data Analysis
PHP 1511	Applied Regression Analysis
SOC 1020	Methods of Social Research
SOC 1100	Introductory Statistics for Social Research
SOC 1117	Focus Groups for Market and Social Research
SOC 1260	Market Research in Public and Private Sectors
SOC 1340	Principles and Methods of Geographic Information Systems
SOC 1118	Context Research for Innovation
SOC 1120	Market and Social Surveys
SOC 1872N	Ethnography in Organizations

Capstone Thesis, Project or Experiential Learning in Migration Studies: Students have available a number of opportunities for hands-on experience in migration research, either through a senior project or thesis that is completed for a concentration requirement, participation in a faculty research project, or an internship or volunteer work with an immigrant service organization.

(i) Students who undertake a senior project or thesis for their concentration are required to have a migration related topic as the central focus of the project or thesis. Proposals for projects/theses will need program approval for migration content.

(ii) Students in the certificate program have opportunities to participate in faculty research projects with a focus on migration. These opportunities are available on a limited basis and are contingent on project needs and faculty approval.

(iii) Students may opt to complete an internship or volunteer with a community organization that primarily serves immigrant communities.

Course credit for a thesis or project should be arranged through the student's concentration. Course credit for participation in faculty research, an internship or community service is optional and can be arranged as a faculty directed independent study.

Total Credits

5

Social Data Analytics Graduate Program

The master's (Sc.M.) program in Social Data Analytics trains students in advanced techniques for data collection and analysis.

For more information on admission and program requirements, please visit the following website: <https://graduateprograms.brown.edu/graduate-program/social-data-analytics-scm> (<https://graduateprograms.brown.edu/graduate-program/social-data-analytics-scm/>)

The master's program in Social Data Analytics is a terminal degree program designed to be completed in two semesters. The program requires eight courses, including an optional intensive research internship that is attached to a faculty-directed research practicum.

Brown undergraduates who enter the program as fifth-year master's students are allowed to use up to two undergraduate courses to count towards the eight credit requirements if the courses are among the required or elective courses for the program.

All entering students are required to have

1. One-semester introductory statistics course (SOC 1100 Introductory Statistics for Social Research or an equivalent),

2. More advanced course in statistics or a course in college calculus (MATH 0050 and 0060, or MATH 0090 or an equivalent), and
3. One-semester course in research methods (SOC 1020 Methods of Social Research or an equivalent).

Two Required Courses

SOC 2010	Multivariate Statistical Methods I
SOC 2020	Multivariate Statistical Methods II

Five Elective Advanced Analysis Courses Across Three Topical Areas

Research Internship and Directed Research Practicum

Students may elect to enroll in a faculty-directed research practicum (SOC 2982) in the first or second semester in conjunction with a research internship. The internship provides students with hands-on experience in social research. Internship experiences may occur outside of the department (either off-campus with a local organization in the for-profit or not-for-profit sector or an on-campus organization) or on a faculty member's research project. Activities may range from data collection, data entry, data file management, descriptive analyses, and more advanced model estimation. Students sometimes opt to design their own project under the supervision of a faculty member.

Optional Tracks

The master's in Social Data Analytics offers tracks that allow students to specialize in one of three methodological areas. The tracks are: Qualitative Analysis, Spatial Analysis, and Demographic Analysis. The track name will appear in parentheses at the end of the official transcript below the program name, for example: Social Data Analytics (Spatial Analysis). The completion of a track signals strength and expertise in a particular set of methods to potential employers. Students who wish to pursue a track must either take at least four of their elective courses from an approved list of courses for that track; or take three approved courses from that track plus one pre-approved course from another track. Students may only select one track. Students applying to a track must do so by the end of the first week of classes in their second semester. Students are not required to select a track and may opt for a more general mixed-method training.

In any given academic year, not all of the courses listed under each track are offered, and new courses not listed on the table may be offered. Students who are interested in pursuing a track need to choose their courses carefully in consultation with a program advisor. In exceptional cases, a course taken outside of the Population Studies and Training Center or the Department of Sociology can be used to meet a track requirement with the permission of the program advisor.

Sociology Graduate Program

Ph.D. Program in Sociology

The department of Sociology offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. The department also offers a Master or Arts (A.M.) but this option is only open to Ph.D. candidates.

For more information on admission and program requirements, please visit the following website: <https://www.brown.edu/graduateprograms/sociology-phd> (<https://www.brown.edu/graduateprograms/sociology-phd/>)

Courses

SOC 0001S. The Social and Political Life of Food.

This course introduces students to sociological theory and methods through studying the production, distribution, and consumption of food. We will examine the forces that shape the global and national food systems, and will treat Rhode Island as a laboratory for answering pressing questions about how food systems work: How is food produced and who does the production? How is food distributed, and who wins and loses in the distribution? Finally, what social, political, cultural and economic forces help explain our eating choices? This seminar course will feature creative assignments, guest speakers, and a fieldtrip to a local farm.

SOC 0010. Social Forces: An Introduction to Sociology.

Social forces constrain and empower us, bond us together and push us apart. Sociology explores the workings of societies large and small: nations, organizations, communities, families, and other groups. How do societies shape action and identity, and why are social pressures so hard to defy? How do societies distribute wealth and power, and why do inequalities so often coalesce around race, ethnicity, class, and gender? How do established practices persist, and when do movements arise to challenge them? Examining such themes across a range of issues and topics, this course provides a springboard for future study throughout the social sciences.

SOC 0010A. Social Problems.

Revolution and Social Movements. Urbanization and Globalization. War and Genocide. These are all examples of social change, and sociology, the discipline for which this course serves as introduction, seeks to understand, and explain, them all and other transformations too. We focus in particular on how technology and power relations help us explain variations in social change, and how culture shapes our recognition and evaluation of those transformations. Although analyzing the USA today is our common ground, our method is both comparative (other societies) and historical (focusing especially on the 20th and 21st centuries).

SOC 0020. Perspectives on Social Interaction: An Introduction to Social Psychology.

An introduction to the discipline of sociology examining the individual in society. Explores the social development of the person, the development of interpersonal relationships, and the problems of integrating the individual and social system. For each area, the personal and structural factors that bear upon the issue are investigated. The objective is to deepen understanding of the behavior of people in a social context.

SOC 0030. Race, Immigration, and the Making of Inequality.

In what ways has the interpretation of race and immigration shaped the current system of stratification in American society? This course focuses on answering this question from a historical and contemporary perspective. Using a sociological approach, we analyze the meaning of ethno-racial formation and categorization and survey the different processes that contribute to ethno-racial inequality. Engaging empirical research, we pay special attention to how individuals and groups interpret and experience the institutional arrangements that perpetuate exclusion and disadvantage by race and immigration status. The course aims to provide the analytical tools required to understand race relations in everyday life.

SOC 0111. Social Change, Dictatorship, and Democracy.

Why are some countries more democratic than others? What effects have industrialization and colonization had on developing world democracies? This course probes those questions from a sociological perspective. We'll explore the relationship between political regimes and socioeconomic factors, like class and race and look at Europe, the US, East Asia, and Latin America, using historical texts, sociological theory, novels, and films. This course will be of interest to concentrators in the social sciences, and students interested in Latin America and Asia. A foundational social science course is recommended. AP U.S. History or AP Comparative Politics is required for high school students.

SOC 0130. American Heritage: Democracy, Inequality, and Public Policy.

America professes equality but exhibits many forms of inequality in schools, race relations, and income. An examination of contrasting elements of American society and a review of the role social science plays in public debate. To illuminate the debates, key topics, such as welfare, immigration, affirmative action, and environmental equity are considered.

SOC 0150. Economic Development and Social Change.

Emphasis on understanding the interrelations among economic, political, and cultural aspects of change in developing countries. The experience of currently developing nations is contrasted to that of nations which industrialized in the 19th century. Compares the different development strategies which have been adopted by currently developing nations and their consequences for social change.

SOC 0170. The Family.

The state of the contemporary family generates debate within and beyond sociology. That debate is considered by examining different definitions of family, changing gender roles within the family, and the family in cross-cultural context. Special issues include new family forms, such as gay and lesbian families and biological and step-parenthood, as well as changing patterns of work and housework.

SOC 0200. Population and Society.

Introduces some of the major social issues relating to population size, growth, and change in industrialized and developing nations. Mortality, fertility, and migration levels and trends are analyzed. Also considers contemporary issues, such as HIV/AIDS epidemic, population aging, U.S. immigration, and national and international population policy debates.

SOC 0210. The City: An Introduction to Urban America.

What is special about urban life? How and why do cities differ? How has the way we think about the city changed over time? Can we solve urban problems? An interdisciplinary approach to cities in the U.S. and abroad: their history, physical design, spatial form, economy, government, subcultures, and social life.

SOC 0230. Sex, Gender, and Society.

This course will explore contemporary frameworks and methodological approaches underpinning the sociological study of sex, gender, and sexuality. In addition to delving into key debates about sex, gender, and sexuality, this course will critically examine the social construction of sex, gender, and sexuality within different institutions and social contexts. Throughout the course, close attention will be paid to understanding how sex, gender, and sexuality are mutually constituted alongside other systems of inequality, such as race, ethnicity, class, and nationality, as well as how moments of tension, resistance, and change emerge.

SOC 0240. The Nature of Community: Place, Space, and Identity.

What is a community? How can it best be organized and strengthened? How can communities contribute to social justice? This course examines boundaries and identities, rights, responsibilities, cooperation and conflict, and the roles of volunteerism, sports, stories, language, meals and even sleep in community life. Concern about the nature and well-being of "community" has been at the heart of sociology since the discipline was born, so examining these issues provides an in-depth introduction to the sociological way of thinking. The course is particularly aimed at those working within community settings, such as residential units, student activities, and service programs.

SOC 0250. An Environmental Sociology for a Rapidly Warming World.

Environmental problems are rooted in societies' complex and changing relationship with the natural world. Understanding those environmental problems, let alone solving them, requires careful investigation of nature-society interactions. Through lectures, readings, discussion, and written work, students will examine the social and historical foundations of contemporary environmental problems and societal efforts to address or resolve those problems. Building on these foundations, we will explore the social dimensions of three (interrelated) "environmental grand challenges": curbing climate change, preparing for and responding to environmental disasters, and building sustainable cities. Through all of these challenges, questions of environmental inequality and environmental racism loom large.

SOC 0270. The Sociological Imagination.

Sociology is a study of the course and effect of social action. Sociologists study human societies by researching social groups, patterns, interactions, and institutions. This course introduces students to the discipline of sociology with the hope of showing students that, as Peter Berger stats, "things are not what they seem." In other words, in this class students will learn to rethink several assumptions about society that are commonly taken for granted. The course strives to make the strange familiar, and the familiar strange.

SOC 0300. Organizations and Society.

We live in a society of organizations. We are born inside organizations, we are educated inside organizations, we work inside organizations, and when we die, we will be buried by organizations. Organizations are therefore central to processes that shape individual lives and societal trends, from widening income inequality, to the spread of innovations, to struggles over public policy. This course introduces the field of Organizational Studies, examining organizations as complex, multifaceted social settings. By investigating how organizations and society shape each other, students will build skills for informed, socially-responsible engagement in an increasingly organizational society.

SOC 0300A. Contrasting Societies.

Offers a cross-cultural examination of major social institutions and characteristics. Addresses questions such as how do families and intergenerational relations differ in various societies? How does the social safety net differ? What is the character of racial and ethnic relations? Integral is a comparison of the United States and other societies. Enrollment limited to 19 first year students.

SOC 0300B. Environment and Society.

This course examines the intersection between the environment and social structures and institutions. It is centered around environmental sociology, environmental justice, and environmental health. We cover climate change, risk perception and risk communication, environmental consciousness and environmental movements, government regulation, lay-professional differences in scientific knowledge, and various forms of toxic contamination and environmental disasters. Readings are very broad, including work of sociologists, physicians, biologists, journalists, epidemiologists, activists, toxicologists, lawyers, and anthropologists. This course has a required service learning component. Enrollment limited to 19 first year students.

SOC 0300C. The Nature of Community.

What is community? How can it best be organized and developed? How can communities contribute to social justice? This course investigates such questions by examining the nature of community life, rights and responsibilities of individuals in relation to communities, approaches to community service, and the roles of leadership, ritual, and narrative in community building. Enrollment limited to 19 first year students.

SOC 0300D. Who Am I?.

A study of self in contemporary society. We examine the structural and situational forces that shape the self and their impact on personal development, orientations to the world, and interpersonal behavior; we investigate the development of the self as a way of being in the world that makes everyday doings and, ultimately society, possible. Enrollment limited to 19 first year students. Instructor permission required.

SOC 0300E. HIV/AIDS: Politics, Culture and Society.

The current HIV/AIDS crisis is not merely medical. It also involves fundamental political, social and economic issues. Through extensive readings, class discussions and the writing of research papers, we will explore issues such as, what are the sociological barriers to changing sexual behavior? Why do some government, but not others, fail to commit resources to fight the disease? How was improved access to expensive drugs achieved? Instructor permission required. Enrollment limited to 19 first year students.

SOC 0300F. Unequal From Birth: Child Health From a Social Perspective.

Why are the children of immigrants so healthy? How do experiences in families, schools, neighborhoods and the health care system produce unequal health? What are the consequences of health for the economic and social welfare of individuals and populations? We will read, discuss and evaluate social science evidence to understand how social and economic inequalities produce and result from health inequalities among youth. Attention will be given to both industrialized and developing societies, and to potential ways that social policies can equalize children's health. This course is designed for first-year students and should appeal to a variety of interests, including social justice, medicine, research and law. Enrollment limited to 19 first year students.

SOC 0300G. Populations in Danger.

Examines populations confronted with dangerous social, economic, political, or health crises. These include small Amazon farmers in situations of environmental degradation, Catholics and Protestants in Northern Ireland in economic and social conflict and under peace agreement, Israelis under threat of random attack with neighbors who demand Israel's extinction, Palestinians under Israeli occupation with a largely powerless and corrupt Palestinian Authority, South Africans under HIV/AIDS pandemic, and undocumented Dominican immigrants in Providence. The seminar will include readings on these populations in danger, lectures by internationally known experts, student presentations and class discussion, and three short essays. Enrollment limited to 19 first year students. Instructor permission required.

SOC 0300H. Organizations and Disasters: Living With the Reality of Really Big Mistakes.

This new first year seminar will introduce students to the amazing world of organizational failures and disasters. Recent disasters will be examined within frames provided by several leading organizational theories about how and why modern organizations are so frequently plagued by mistakes that wreak havoc on many constituencies: from customers, patients and employers to innocent bystanders. Among the disasters we will explore as examples will be the Deepwater Horizon Oil Spill, the Challenger Disaster, the 9/11 attacks, and misestimation of nuclear weapon devastation. We will consider Normal Accident Theory, High Reliability Theory, and the Normalization of Deviance. Enrollment limited to 19 first-year students.

SOC 0300I. From Macro to Micro: Experiencing Education (In)equality in and beyond Schools.

In American society a paradox exists: education is both a conduit of mobility and inequality. Schooling offers the potential for greater opportunities; yet the disparate nature of school-communities often compound disadvantages for others. In this course, we explore the complex "ecology" of educational inequality, from macro- to micro-dimensions, exploring economics, housing, intergroup dynamics, race and racism, gender and sexism, poverty and class, and other phenomena. It will provide students with a basis for understanding the relationship between education and society, and we will explore the intersectional ways that group distinctions, material and political realities impact people's lives.

SOC 0300J. Becoming Adults: Adolescent Transitions to Adulthood.

Adolescence and early adulthood is a critical period in our lives. During this time we experience a number of major life events that mark the transition into adult roles and relationships, and that are of major consequence for the rest of our lives. We leave school, start working, form romantic relationships, begin sexual activity, leave home, become financially independent, get married, and start having children. This seminar explores how adolescent transitions are studied, how they compare across different national contexts, and how individual, family, and community factors affect the type and timing of different transitions. Enrollment limited to 19 first year students.

SOC 0300K. Inequalities and Health.

We start from the assumption that the social organization of society shapes definitions and experiences of health and illness, the distribution of diseases, and the responses to them. We explore the relevance of social structure and social interaction to health and well-being, emphasizing socioeconomic status, race, ethnicity, gender, and social contexts such as relationships, families, schools, and neighborhoods. This is not a "sociology of medicine" course. It will not emphasize the profession of medicine, health care policy, or health care organizations. Enrollment limited to 19 first year students. Instructor permission required.

SOC 0300L. Environment and Society in Africa.

This seminar will actively examine contemporary environmental issues in Africa. The African setting is a key site for the world's environmental challenges and policies, with a large number of highly visible and valued flora, fauna, and ecosystems. At the same time, Africa nations are severely pressed with competing social issues: poverty, economic development, health, refugees. How can these be reconciled? What roles do the many actors play? This course is multidisciplinary in orientation and broad in scope geographically. Seminar discussion admits a variety of perspectives. Readings span a wide variety of approaches. Enrollment limited to 19 first year students. S/NC.

SOC 0300M. Deviance, Crime and Social Capital.

This course explores the reasons why society creates mandatory rules of behavior, the reasons why members of society sometimes break those rules, and the reasons why society responds to rule-breaking in the ways that it does. The course focuses, in particular, on the leading sociological and criminological explanations of deviance, crime, and social control. Rather than taking categories like “deviant” and “criminal” for granted, however, the course considers the ways in which society’s decisions about rule-making and enforcement may be every bit as consequential as individuals’ decisions about deviance and conformity.

SOC 0300N. Social Inequality: Change and Continuity in the U.S..

Although we like to believe the U.S. is the land of opportunity, it has lower equality of opportunity than most developed countries. What does inequality of opportunity in the U.S. look like and how has it changed or remained stable over the last several decades? We will examine theories, characteristics, and trends of socioeconomic inequality in the U.S., focusing on how this inequality shapes children’s life chances. In the process, this course will help us think about what an ideal level of equality of opportunity might look like and social changes that could help us achieve it.

SOC 0300P. Being Normal: The Politics of Fitting In and Standing Out.

What does it mean to be “normal,” and gets to decide what it means? This course explores how societies define normality and the consequences for those who don’t fit the mold. We will examine the concept of the mythical norm — an unspoken ideal that privileges certain identities while marginalizing others — and how social inequalities like gender, race, sexuality, and age shape experiences of fitting in and standing out. We will also consider how normality is constructed within institutions like families, schools, medicine, fashion, and social media. Get ready to question what you take for granted—being “normal” might not be as normal as it seems.

SOC 0300R. The Sociology of Race.

The course examines the main theories in the Sociology of race, racism and discrimination. It focuses on how race patterns the experiences of ethno-racial groups and simultaneously defines the contours of systemic racism and inequality. It teaches students how to lead and participate in critical discussions, collaborate on the analysis of data, write research-based policy proposals with a client orientation, and engage with current issues surrounding the sociology of race, discrimination and racism. While the focus is primarily sociological, the course takes a multivalent approach to examine how racial inequality persists in a presumably “post-racial” society.

SOC 0300T. Contrasting Societies: Democracy, Dictatorship, and Trump.

How do we explain the rise of Trump and what does it represent? Is it a moment of popular legitimation or a challenge to democracy’s development? To what extent is this turn something peculiar to the US? Does this resemble other transformations in the world? How do the last decades’ technological transformations shape conditions both for domination, and resistance, in these times? This sociology seminar depends on your reading course materials and developing their articulations with your own interests. Beyond each week’s preparation, you will be asked to write three 1500 word essays across the term that reflect that engagement.

SOC 0300W. Whiteness in the World.

Whiteness is a socially and historically constructed concept that is used to grant or deny privileges, opportunities and rights. This course gives students an opportunity for a comparative exploration of how whiteness is defined, structured and applied in different global contexts. Using materials from film, music, literature and scholarly texts, we will examine both the fluidity and rigidity of whiteness over time and across continents. By the end of the semester, students will have a thorough understanding of how societies have used and continue to use the status of whiteness to grant or withhold rights and resources.

SOC 0310. Theory and Practice of Engaged Scholarship.

Efforts are underway across college and university campuses—in the United States and globally—to increase opportunities for community-engaged teaching, learning, and research. What is engaged scholarship and how does it challenge (and/or complement) more traditional concepts of scholarship and disciplinary knowledge? What are the historical, practical, methodological, ethical, and other considerations associated with engaged scholarship? Through investigating these and other questions, students will emerge from this course with a critical understanding of engaged scholarship at Brown University and in the broader landscape of U.S. higher education. Students will be equipped to design a course of study that integrates community practice with academic knowledge throughout the remainder of their time at Brown and beyond. SOC 0310 fulfills a requirement for the Engaged Scholarship Certificate.

SOC 0315. International Migration.

This course introduces the research and policies related to international migration, a phenomenon involving the dynamic movement of people across borders. The class provides the theoretical and empirical tools required to understand immigration’s main theories and empirical debates. The course examines why people migrate and how and why immigrants settle where they do. Additionally, the class examines the structural forces influencing the experiences of immigrant groups in American society and the consequences of international migration for both immigrants and native-born citizens in the United States. Through readings, research, and discussions, students acquire skills needed to objectively analyze how immigration patterns people’s lives and simultaneously shapes the boundaries of inclusion and exclusion in society.

SOC 0320. Critical Communities, Critical Engagements.

This course offers an examination of community engagement and a deep dive into three social justice issues in Providence, RI through readings, case studies, participatory activities, and guest speakers (faculty and community practitioners whose work exemplifies key issues explored in the course). The Winter Break Providence program component will provide context and knowledge for the course. Upon returning from Winter Break Providence, students will attend a series of seminar meetings in continuation of the course, and prepare for a final presentation of learning at the end of the spring semester.

SOC 0400. Deviance, Crime and Social Control.

This course explores the reasons why society creates mandatory rules of behavior, the reasons why members of society sometimes break those rules, and the reasons why society responds to rule-breaking in the ways that it does. We focus on leading sociological, criminological explanations of deviance, crime and social control. Enrollment limited to 100.

SOC 1001. Foundations of Development (IAPA 1001)..

Interested students must register for IAPA 1001.

SOC 1010. Classical Sociological Theory.

How is modern society organized? What holds society together and what drives social change? Why is there such a large gap between the “modern” ideal of formal equality and the reality of factual inequality? Why do differences of class, race and gender persist? What is power and who has it? These questions have motivated generations of sociologists, but many of the arguments continue to be informed by the foundational classical theorists: Karl Marx, Max Weber, Emile Durkheim and W.E.B Du Bois. Looking at the transformations around them — the rise of capitalism, the modern nation-state, rational bureaucracy, the spread of colonialism, the decline of religion, struggles for emancipation and much more — they developed arguments that allow us to better understand ourselves, our actions, and the contemporary political, economic and social transformations around us. We explore the defining contributions of these theorists and link them to current debates and theories on systemic racism, gender/sex struggles, global inequalities, social movements and democracy.

SOC 1020. Methods of Social Research.

This course aims to impart a critical perspective of, and an empirical familiarity with, the range of methods available to sociological researchers to answer interesting, important, and complex social research questions. It introduces students to the frameworks and methods of conducting sociological research -- from both a qualitative and quantitative perspective. We will examine broadly defined methodological approaches to doing sociology such as survey research, ethnography and interviews, and historical/comparative studies. These methodological approaches correspond to distinct conceptualizations of social life and the science dedicated to studying it. Over the course of the semester, students will focus on developing a fully feasible research proposal.

SOC 1040. World Population Problems.

This is an introductory course to the study of human population. The objective is to investigate population-related issues, including population history, growth, fertility, mortality, aging, family structure, race/ethnicity, migration, and environment in the United States and around the world. The course focuses on changes in the population processes and how such changes shape the compositions and structures of the U.S. and world populations. We learn demographic methods, seek to understand demographic behaviors, and pay special attention to the population divide between more and less developed countries.

SOC 1050. Methods of Research in Organizations.

An introduction to the various methods used by social scientists to study organizations and to the skills needed by managers and administrators to soundly evaluate problems and assess performance within organizations. Explores both qualitative and quantitative methods. Students gain experience in developing research questions and linking those questions to appropriate research designs. Enrollment limited to 60.

SOC 1060. Leadership in Organizations.

What is leadership? What makes a great leader? Can leadership be learned? Improved? This course explores various theoretical approaches to leadership using a combination of lectures and case-study analysis. Additionally, it aims at developing your personal leadership skills by using self-exploration and reflection, self-assessment instruments, role-play, and feedback from peers.

SOC 1070. Introduction to Economic Sociology.

Money makes the world go round. Money talks. Show me the money. This course addresses the ways money pervades social life. We examine money through multiple disciplines, from politics, history and finance, to gender, religion, and art. Relevant to concentrators in any of those fields, while also offering a critical perspective particular to sociology.

SOC 1080. Groups in Organizations.

Teamwork has become increasingly popular in organizations. Whether structured into the organizational makeup, or temporarily established around specific projects, teams are a critical competency of organizations. They are considered an effective performance unit, and expected to efficiently cope with the fast changes and demands of today's corporate environment. However, deriving the full benefits from teamwork requires correct management of its processes and dynamics. This course dwells on selected issues in team development, internal processes, and members' behavior, as well as management skills needed to effectively lead teams; therefore it can benefit anyone who works in a group, whether as a student or in the business world. Enrollment limited to 35.

SOC 1100. Introductory Statistics for Social Research.

Introduction to descriptive and inferential statistics: measures of central tendencies and variability, sampling, tests of significance, correlation, and regression. Also includes the use of computers in data analysis. Knowledge of elementary algebra is assumed. Enrollment is limited to 144 students.

SOC 1114. Law and Society.

A broad exploration of contemporary social-science scholarship on law and legal institutions, covering competing theoretical perspectives and drawing examples from diverse empirical settings. Lectures and discussions survey different ways in which social scientists study legal life, seeking contrasts and commonalities across the various perspectives. Coverage includes: Social-psychological models of rule-following and rule-breaking; social-structural linkages between law and the economy, stratification, and politics; and the dynamic relationship between law and social change--including the role of lawyers, judges and juries in giving law "independent causal significance." Strongly recommended: previous coursework in the social sciences.

SOC 1115. The Enlightened Entrepreneur: Changemakers, Inspired Protagonists and Unreasonable People.

This course explores the practices of enlightened entrepreneurs, with the intention of moving beyond the limiting social/commercial dichotomy to develop a more useful paradigm for understanding entrepreneurs whose ventures lead to positive developments in society and in the environment. You will be exploring the success stories and cautionary tales of entrepreneurs to develop an understanding of how ventures can have an impact on their fields of engagement as well as their fields of influence. Afterwards you will develop an assessment tool for understanding the spectrum of entrepreneurs whose ventures lead to positive developments in society and in the environment.

SOC 1116. Criminal Courts and the Law in an Era of Mass Incarceration.

This course provides a comprehensive introduction to America's criminal court system and all its institutional stakeholders. We will examine America's criminal court system from myriad of different perspectives: courts as organizations, courts as social arrangements of professionals, courts as providers of social services and courts as consumer institutions -- providing the experience of justice to victims, witnesses, defendants and jurors. We will focus on state courts as well as the federal system.

SOC 1117. Focus Groups for Market and Social Research.

This course introduces students to a range of qualitative research methods commonly used in market and social science research. It is designed to provide students with a skill set that will allow them to conduct and design market and social research that gets below the surface of the traditional survey. Focus groups, ethnographic observation and user-centered research are widely used in product design, communications, marketing and entrepreneurship research. Students will learn and practice all of the methods introduced in the course by conducting a semester-long research project, will gain insight into which methods are most appropriate for particular research needs.

SOC 1118. Context Research for Innovation.

This course brings design thinking into conversation with qualitative research methods, examining the elements of a comprehensive perspective of context. It introduces students to design research methods, ethnographic research methods, and how they work together. Students will learn how to use these methods to identify and engage in "deep hanging out" with the problem, gap or inefficiency in question. They will then move on to patient contextualized opportunity identification for meaningful innovation. By the end of the course, students will have developed a process for effective, through innovation context analysis. Relevant for designers of products, services, organizations, and experience.

SOC 1119. Understanding the Arab Spring: Sociology of the Middle East.

What explains the continuous mass uprisings in different parts of the Middle East since the beginning of 2011? Have they been successful in transforming power structures? Or already been co-opt by the legacies of the older regimes? This class probes the "Arab Spring" comparatively and sociologically from a historical perspective. It is sociological, it assumes a strong relationship between different forms of exclusions (on the basis of religion, ethnicity, gender and class) and the uprisings. It is historical because it explores these exclusions through a close analysis of the historical particularities of nation-state formation in the region.

SOC 1120. Market and Social Surveys.

This course covers the theory and practice of survey research. Topics include questionnaire design and formatting; sample design and selection; interviewing techniques; data base design and data entry; and elementary data analysis and report production. Students will design, construct, administer, and analyze a survey for a Brown community partner.

SOC 1121. Creative Companies: Entrepreneurship, Markets, and the Culture Industry.

Firms in creative industries influence many physical and psychological aspects of our lives, from what we eat and wear to how we entertain ourselves, but markets for cultural goods are complex and difficult to navigate. Entrepreneurs must, therefore, understand the economic sociology of cultural market and ecosystem in order to capture economic value, a process that recursively relates to cultural norms. Students will analyze business cases of firms in a wide range of creative industries such as art, fashion, film, food, music, publishing, and theater to explore and understand the economic, organizational, and sociological underpinnings of culture, value(s), and markets.

SOC 1128. Migrants, Refugees and the Mediterranean.

The Mediterranean Sea is one of the deadliest bodies of water on the planet to cross. It is also one of the most frequently crossed for migrants and refugees. This course examines the history, the origins, the destinations, and the definitions of human population flows across the Mediterranean. We will explore push and pull factors as well as sending and host country classifications of people as they cross from one side to the other. We will focus in particular on the tensions between sending and host countries from individual, societal and institutional levels.

SOC 1130. Race, Migration and the American Color Line.

This course focuses on the sociology of race relations and migration, utilizing a historical and contemporary perspective to explore patterns of inequality in the US. We start by examining the meaning of ethno-racial formation and categorization. The course then looks at how individuals and groups navigate the institutional arrangements that generate and perpetuate inequality. Finally, the course examines how immigration and demographic shifts influence the American color line. Throughout the course, we discuss the experiences of different ethnic and racial minorities and engage the central debates related to the study of migration, race and ethnic relations.

SOC 1155. Borderlands.

This course explores the creation and maintenance of international borders and the communities that develop in response to them. We will examine a particular collection of borders and borderlands that includes a range of structural, managerial, and geographical variation. Through a combination of scholarly texts, ethnographic accounts, films, and research on GOs and NGOs, we will study legal and illegal crossings, border communities, and border patrol organizations that seek to protect the integrity of national boundaries. (Note: While the case study texts focus on the Mediterranean/Middle East, students will be required to investigate and share research on other areas of the world.) By the end of this course, you will have a comprehensive understanding of how international borders are created, how they are maintained, and how people and organizations navigate them. While the majority of this course will be conducted on campus, it includes one-week, embedded travel to Istanbul during spring break (March 23 - March 31, 2024).

SOC 1220. Future of Work.

The Future of Work refers to technological advances in brain science, AI, blockchain, machine and deep learning that have the potential to substantially change our work experiences, organizations and society. These changes can bring many positive benefits and also raise ethical concerns when technology is used to predict human behavior, replace employees, create a contingent/low-wage workforce, or drive autonomous vehicles. This class will examine how the world of work is changing, how these changes relate to organizations and entrepreneurship, and what skills are necessary to shape the Future of Work in ways that are sustainable, ethical and inclusive.

SOC 1230. What Do Schools Do? Education and Inequality.

Education is an important institution in modern societies. Schools influence all of our lives from an early age. Schools are the largest employer in many communities and are widely considered the major force for social equality. What does this mean for society? What do schools do? Why do some students learn more than others? How do schools reduce or reproduce social inequality? How do schools influence society and how does society shape schools? We will consider these and other related questions in this course.

SOC 1240. Human Sexuality in a Social Context.

How do we come to know ourselves as sexual beings? How do individuals develop attractions, make sexual choices, define and enact their own sexuality? What is social about sexuality, and how do institutions and organizations influence understandings of human sexuality over time? This course investigates these questions by examining the processes through which the human body is sexed, from without, by the society into which it is born, and from within, through self-definition, desire, and practice. Social science theories of sexuality will be considered, and cross-cultural and historical accounts of sexual practices will be reviewed. Not open to first year students.

SOC 1250. Perceptions of Mental Illness.

This interdisciplinary course centers on the need to understand mental illness in a broad social context. It covers personal experience of mental illness, history of psychiatric concepts and treatment, politics of diagnosis, mental health policy and deinstitutionalization, public attitudes toward mental illness, social factors and epidemiology of mental illness, and links between mental illness and creativity. There is much attention to artistic perceptions of mental illness through fiction, memoirs, drama, music, and art.

SOC 1260. Market Research in Public and Private Sectors.

Introduction to data and research methods for private and public sector organizations. Data used in market research include trends in the population of consumers, economic trends, trends within sectors and industries, analyses of product sales and services, and specific studies of products, promotional efforts, and consumer reactions. Emphasizes the use of demographic, GIS, and other available data.

SOC 1270. Race, Class, and Ethnicity in the Modern World.

Applies sociological analysis to understand present and historical cases of ethnic and race relations and conflicts. Topics addressed are the social construction of race and ethnicity; historical processes of racialization; ethnic conflict and the nation state; and the linkages between race, class, and social mobility. Focuses on racial and ethnic relations in the U.S., but also has a strong international comparative component.

SOC 1281. Migration in the Americas.

Examines historical trends and determinants of migration from Latin America to the United States. Each stage of the migration process is examined: the decision to migrate, getting across international borders, settlement and integration in destinations, and return to places of origin. The course integrates theories and empirical studies of international migration with hands-on analysis of survey data from the Mexican and Latin American Migration Projects, the two largest survey databases for studying migration in the Americas. Students will learn how to formulate and operationalize research hypotheses, read, process, and analyze survey data files, and present and interpret research results.

SOC 1310. Social Change in Latin America.

Analyzes the development of modern Latin American societies, focusing on three interrelated processes: the formation of states, the formation of nations, and the formation of socioeconomic systems. The approach is macrosociological, looking at broad processes of structural and institutional change, and historical-comparative, analyzing and comparing how the three processes above developed historically in different Latin American countries.

SOC 1311. Micro-Organizational Theory: Social Behavior in Organizations.

Micro-Organizational Theory focuses on the human dynamics of organizations as natural systems. It examines how individual attitudes, actions, and interactions make a difference for organizational processes and outcomes. This focus is contrasted with more macro-level approaches, which take the organization (instead of the individual) as the primary unit of analysis. For example, studies of organizations from an economic perspective are typically concerned with the performance of the organization relative to its competitors. Studies of organizations from a macro-sociological focus are typically concerned with an organization's routines and structures, contextualized by the broader environment. SOC 1311 takes a more micro and meso perspective that asks questions such as, "why do individuals in organization behave the way they do, how does this affect the organizations of which they are a part and how, in turn, are individuals affected by their organizations?"

SOC 1315. Macro-Organizational Theory: Organizations in Social Context.

Macro-Organizational Theory focuses on the organization and its social/economic environment. This class will explore various definitions of the organization's environment, and the many types of macro-level organizational structures in which sets of organizations interact, function, compete, and cooperate. Important questions to be asked include the following:

-What is an organizational environment and how do organizations "deal" with what is outside of their boundaries?

-How are the boundaries of organizations defined/recognized/function?

-How do environments influence organizational strategy and performance?

-What are the major theories for assessing macro-level organizational phenomena?

-What are the many ways in which organizations relate to other organizations?

SOC 1320. Progressive and Regressive Welfare States.

An introduction to the philosophical justifications, history, and contemporary reality of welfare states and social programs around the world. The course focuses especially on the United States in contemporary perspective, examining the turning points in American political development and identifying consequences of policy for social stratification, racism and race relations, intergenerational transmission of wealth, and the capacity of local governments.

SOC 1330. Remaking the City.

Cities are being reshaped by immigration, economic restructuring, and other forces. This course reviews these changes from several perspectives, including the patterns and causes of change, the role of politics and public policy, and how different groups of people (by class, race, and national origin) manage under the new conditions. Readings will emphasize historical and cross-national comparisons.

SOC 1340. Principles and Methods of Geographic Information Systems.

An introduction to the fundamental principles and methods of geographic information systems (GIS). Topics include (a) handling different types of geographic datasets, (b) geo-analytical and modeling tools in GIS, (c) conceptual and theoretical aspects of GIS application development, and (d) errors and uncertainty analysis of GIS applications. Laboratory assignments and the project work provide hands on experiences in GIS. Enrollment limited to 42 juniors and seniors.

SOC 1340A. Principles and Methods of Geographic Information Systems (PSTC 1340).

Interested students must register for PSTC 1340

SOC 1352. Employment and Labor in the New Economy.

This class will introduce students to classical and contemporary theories pertaining to work, employment, and labor markets. Readings and class discussions will specifically focus on individuals' careers and employment processes within organizations. The course will examine: (1) the sociology of labor markets, (2) employment and careers in the new economy and (3) job search, networks, and hiring decisions. Students will develop knowledge of these key theories, which will be applied in high-profile organizational settings.

SOC 1400. Political Sociology.

Analyzes "American Exceptionalism" through constitutional and cultural controversies. Considers relations between the state and such institutions as the market, the family, associations and churches. Examines the effects of class, race, ethnicity, and gender on American politics.

SOC 1410. Aging and the Quality of Life.

Provides a broad-based knowledge of the aging process and its impact on the quality of life of elders. Explores physical, psychological, social, cultural factors. Assesses different approaches to meeting needs of elders and providing high quality care and examines consequences of an aging population for social institutions. Prerequisites: SOC 0010 or 0020 and PHP 0070 or 0310, or permission of the instructor.

SOC 1420. Violence and Society.

The course focuses on the personal and structural sources and consequences of violence in the U.S. We investigate three levels of violence: interpersonal; institutional, wherein social institutions do violence to individuals or groups; and structural, examining the structures of society that tolerate or promote violence, both within the society and toward other societies. Next, we examine the culture of violence that permeates our society, including the mass media and violence. WE focus on specific forms of violence in our society, including gang violence, bullying, violence within schools, sex trafficking, war, religious violence, and terrorism.

SOC 1430. Social Structure and Personal Development.

The relationship between one's place in the social structure and one's own personal growth. Investigates the social aspects of individual growth and change throughout the life course. Also examines social factors involved in the failure to find a meaningful place for oneself in society.

SOC 1440. Intimate Violence.

Explores sociological perspectives of violence in intimate relationships. Begins with theories of violence, including social learning theory, the frustration-aggression hypothesis, and violence as catharsis. Examines the contributions of gender, race status, media violence, and pornography to the issue. Investigates specific forms of intimate violence: sexual aggression (including "acquaintance rape"), partner abuse, elderly abuse, and child abuse. Not open to first year students.

SOC 1450. Unstable Times: Migration, Identity and Societal Integration.

This course focuses on the changing experience of immigrants in American society. It builds on the premise that periods of social transformation are central to understanding the process of integration of people moving across borders and settling in particular locales. The course engages theories of immigrant incorporation to examine processes of identity formation and societal integration. The course also considers how immigrant integration is a major force reshaping social and political ideologies as well as how new patterns of exclusion emerge as immigrants confront the denial of resources, opportunities and access to citizenship.

SOC 1480. What's Wrong with Empowerment: Critical perspectives on Development.

Women's "empowerment" is a means and ends to international development. From microfinance self-help groups that foster women's businesses, to corporate social responsibility projects that promote girls' education, to campaigns against domestic violence, developmental initiatives target women. These projects are motivated by the commonsense understanding that focusing on women will not only make women better off, but also their families, neighborhoods, and the entire nation. This course analyzes the evolution and effects of women as a global solution to poverty. How did women become the targets of development? Are women empowered by development schemes we find today in their names?

SOC 1490. Power, Knowledge and Justice in Global Social Change.

How bad is climate change, and how much worse it will get? How are global inequalities' changing? What are their consequences? How is white supremacy implicated here? What is our responsibility in analyzing/engaging these questions? You have at least an implicit response to these questions and others addressing global transformations. This course will help refine your understandings by inviting you to consider the actors, structures, norms and powers shaping how change works and why we judge its expressions as we do. Across multiple areas of global change, we compare conceptions of power and justice in their various articulations.

SOC 1540. Human Needs and Social Services.

The development of human services and a broad range of social welfare purposes are studied, including health and nutrition programs, job development, youth empowerment, and family, workforce, and educational policies. The role of nonprofit and nongovernmental organizations receives particular attention, and alternative models of human services are discussed. This semester will focus particularly on the impact of community-based programs, featuring case studies from projects funded through the course, "Investing in Social Change," in Fall 2010. The emphasis will be on different means and measures for evaluating impact and demonstrating sustainability and accountability. Instructor permission required.

SOC 1550. Sociology of Medicine.

The aim of this course is to give conceptual framework and some analytic tools to examine the context of health, illness and well-being at the micro, meso and macro levels. The focus of our attention will be on health inequalities: how they are produced, their relationships with socioeconomic status, and how to minimize their effects. Special attention will be given to the phenomenon of medicalization, to the ways in which a diagnosis is socially constructed, issues of social justice and equity, and the implications of biotechnological innovation and the rise of health and wellness-oriented culture.

SOC 1600. Comparative Development.

An exploration of the economic, political, and social changes that constitute development. Both the historical experience of Europe and the contemporary Third World are considered. Major processes examined include state and nation-building, agricultural modernization, colonialism, industrialization, revolution and socialism, authoritarianism and democracy, and socioeconomic distribution. Emphasis on the countries of Africa, Asia, and Latin America.

SOC 1620. Globalization and Social Conflict.

Examines the effect globalization is having on the economies and societies of the developed and developing world. Focuses in particular on how new forms of global production and networking are transforming the traditional role of the nation-state, creating new dynamics of wealth distribution, and generating new sources of social conflict and political contestation, including transnational social movements.

SOC 1630. Transnational Social Movements and the Environment.

Globalization presents distinct environmental challenges and alters the terrain upon which social movements mobilize and engage for change. How can we understand the relationships between globalization, the environment and society? In what ways is inequality being shaped in this context? How do social movements and advocacy networks engage transnationally to find leverage? Through readings, writing, film, multimedia projects, and engagement with case studies and social theory, this course explores how social movements and advocacy networks mobilize transnationally to achieve environmental justice and sustainability.

SOC 1640. Social Exclusion.

Why are some groups rejected and others accepted? This course examines the mechanisms of belonging and ostracism, social integration and exclusion, theories of diversity and hierarchy, and policies to reduce exclusion and inequality.

SOC 1650. Unequal Societies.

This course compares nation-states in terms of various forms of inequality and assesses theories explaining international inequalities. It examines why poverty, income inequality, and poor health are greater in the United States than in comparably affluent countries, why intergenerational mobility varies, and why some societies treat women more equally or are more accepting of immigrants and cultural minorities than others. It asks whether the high standard of living in the Global North comes at the expense of the Global South. What holds unequal societies together and pulls them apart? Can inequalities be reduced?

SOC 1702J. The (Racial) Politics of National Culture (IAPA 1702J).

Interested students must register for IAPA 1702J.

SOC 1830. Mattering and Dysfunctional Behavior in Adolescence.

No description available.

SOC 1840. Mattering and Dysfunctional Behavior in Adolescence.

No description available.

SOC 1870A. Investing in Social Change.

Philanthropy -- "giving away money" -- sounds attractive and simple. But the very acts of contributing and receiving resources affect dynamics and relationships among all involved. We explore philanthropic strategies, social change, the sociological dimensions of philanthropy in historic and current practice. Students engage in teams to investigate a particular community concern, design an investment strategy, recommend the investment of grant dollars. Instructor permission required. Course enrollment is by application only. Applications can be found at swearercenter.brown.edu shortly before the start of class. Students who pre-register must still be selected through the application process and attend the first class meeting. Enrollment limited to 18.

SOC 1870B. Seminar in Contemporary Political Sociology.

Explores how political power in society is structured from above and challenged from below. Using contemporary theory and comparative-historical analysis, this seminar critically addresses the power of the modern state, the politics of social class, the character of social movements, and the causes of social revolution. No formal prerequisites. Previous coursework in the social sciences is recommended. Enrollment limited to 20. Not open to first year students.

SOC 1870C. African Development and Demography.

Focuses on the relationship between socioeconomic developments in Africa and their demographic transitions. Particular emphasis will be placed on cultural issues in the analysis of population changes (mortality, morbidity, migration, family, and fertility) in the contexts of economic growth and dependency. Theories of development will be evaluated in the context of African demography; African population patterns will be assessed in their developmental diversity.

SOC 1870D. Aging and Social Policy.

This seminar examines the policy challenges of Americas aging population, centering on two major themes. The first has to do with the impact of the elderly on society and societal institutions. The second theme concerns alternate models for health and social service provision. We will explore the process of policy formation, focusing on the social and political construction of the problems of aging. Enrollment limited to 20.

SOC 1870E. Alternatives to Violence.

We examine nonviolence as a method for resolving serious social conflict. We consider psychological and sociological approaches to understanding why people choose violence, as a precursor to studying theories of nonviolence. We investigate practitioners of nonviolence throughout history and analyze nonviolence as a response to such issues as the death penalty, war, and terrorism.

SOC 1870G. Capitalism, Democracy, and Social Welfare.

This seminar for advanced undergraduate and graduate students explores long-term developments in modern societies. Empirical comparative historical analysis and theoretical assessments of causation, inevitability, and alternative possibilities will be complemented by normative reflections.

SOC 1870H. Comparative Chinese Family Studies.

Explores central issues in the social research of the Chinese family in both historical and contemporary contexts, with primary emphasis given to the latter and the family systems in China and in Taiwan. Two questions frame the course: "What is going on in Chinese families?" and "Why?"

SOC 1870I. Contested Environmental Illness-Research Seminar.

Examines "contested illnesses," focusing on environmental factors in Gulf War illnesses, asthma, breast cancer and other diseases. Students conduct interviews and do field work and document analysis to study lay, scientific, and governmental perspectives. Examines how these disputes can lead to progress in disease detection and etiology, and in the development of less toxic products.

SOC 1870K. Demographics and Development.

Assesses the social and economic determinants and consequences of changes in fertility, mortality, and migration and their impact on the size, distribution, and composition of population in developing societies. Implications of the evolving population structure for planning and policy. Enrollment limited to 20.

SOC 1870L. The Economic Foundations of Everyday Life.

Critically examines the relationship between markets and individual, inter-personal, and community level social phenomena. Aims to help students develop knowledge and skills to understand markets as social institutions, evaluate them through different theoretical lenses, analyze their impacts on social life. Students also learn the skills of critical analysis and argumentation needed to form thoughtful opinion, take a critical position, make a decision about important economic and social issues. Thus, students gain expertise as informed actors and advocates in the social and economic system. Prerequisite: SOC 1010, equivalent, or permission of the instructor. Enrollment to 20.

SOC 1870M. Entrepreneurship and Good Work: Engineering Dreams.

In this course, students examine the concepts of creation, organization, promotion, management and risk of ownership, to wit: entrepreneurship. This is done in the context of "good work". Using a combination of relevant case studies, readings, guest lectures and discussion, each participant builds a theory and framework to explore what defines innovative and meaningful engagement during one's working years.

SOC 1870N. Environmental Sociology.

Since its formal inception in the late-1970s, environmental sociology has developed as a highly interdisciplinary field that simultaneously confronts core sociological questions and challenges. This seminar provides students with a selective overview of major approaches, debates, and interdisciplinary cross-currents shaping the field of environmental sociology. The general goal of the course is to deepen collective understanding of the dynamic interrelationships shaping human societies and the natural environment. To do so, we will consider how sociologists and others have conceptualized society-environment relations and critically assess the various approaches developed to examine those relations, their causes, and outcomes.

SOC 1870O. Ethnic Entrepreneurship.

This course focuses on the dynamics of urban labor markets in Latin America. In spite of rapid industrialization, large numbers of people in Latin American cities depend on the informal economy for their livelihood. The course begins with a review of the different theoretical approaches to the urban labor markets and the informal economy in Latin America. It then focuses on the relationship between industrialization and urbanization in the region, the economic and social linkages of the informal economy, and the household strategies of labor market insertion. Enrollment limited to 20.

SOC 1870P. Explaining China's Rise: Development and Accumulation in Contemporary China.

Few questions pose more significance to scholars and policymakers than the "rise of China". As scholars grapple with explaining China's rise, they also provide tantalizing previews of the future of Chinese growth, by extension, the future of global economy. This course explores the character, conditions, consequences of the rapid Chinese economic growth that many have termed "capitalism with Chinese characteristics". 3 paradigms for explaining growth: a state-centered approach, a market-oriented approach, Marxist, accumulation-centered approach. 3 parts, each examining a separate paradigm of development, providing case studies this paradigm explains growth in specific industries and sectors of the Chinese economy.

SOC 1870R. Groups in Organizations.

Groups are the core social unit of organizations. This class examines the unique processes that make groups more than just the sum of their individual members, as well as the impact of groups on organizations, and the ways in which groups are constrained and influenced by organizational context. Enrollment limited to 20.

SOC 1870S. Sociology of Gender.

Gender is among the most prominent organizing principles in our society. From the day they are born—and even earlier as the result of reproductive technologies—on through to the day they die, individuals are gendered. Instead of understanding gender as a set of behaviors derived from innate, fixed biological differences between men and women, this course analyzes gender as a social arrangement shaped by social actors, organizations, and institutions. Drawing from social science research, the course analyzes everyday interactions of intimacy, language, and identity issues, as well as macro structures like the economy, religion, and education, to understand how they affect notions of gender. The course sustains an analysis of sexuality because ideas of femininity and masculinity are constructed around notions of "appropriate" sexual conduct and relations. Although this course focuses on everyday life in this country, the class will explore the production and institutionalization of gender relations in historical moments and spaces beyond the U.S. Enrollment limited to 20 juniors and seniors.

SOC 1870T. Health Professions and Organizations.

An in-depth study of the social history of the professions and institutions of medicine. Primary emphasis will be on the U.S., but some comparative reading will be done as well. Theories of social change will be applied to the medical profession, and organizational processes of change will be used to explain current developments in managed care organizations and in the use of strategic alliances in health care delivery.

SOC 1870U. Household and Families.

Examination of sociological, economic, anthropological, and historical research on the impact of change on family structure and the effect of family processes on demographic behavior. Trends considered include the rise of one-person households and one parent families.

SOC 1870V. Households, Work, and Gender.

Household membership typically entails coordinated behavior. We discuss the organization of work and its gendered dimensions. We explore the determinants and consequences of existing divisions of labor drawing on readings from multiple disciplines. The approach is sociological and comparative. Considerable time devoted to less developed settings. Seminar format. Individual research encouraged. Enrollment limited to 20.

SOC 1871A. Sociological Perspectives on Mexico - United States Migration.

This course examines the economic and social determinants of migration, and the consequences of migration for migrant families and communities. Each stage of the migration process is examined: the decision to migrate, getting across the border, adaptation and settlement in the U.S., return migration, and the impact of migration on origin communities.

SOC 1871B. Sociological Perspectives on Poverty.

Examines the personal experiences of socioeconomic status, with focus on the lower tiers of the hierarchy. We distinguish three levels of poverty: the working poor, marginal workers, and the underclass. Analysis will make use of issues of gender and family, race and ethnicity, and urban and rural settings. We investigate sociological perspectives on the problem of homelessness. Enrollment limited to 20.

SOC 1871C. Sociology of the Legal Profession.

This seminar explores the structure and functioning of the legal profession, with a particular focus on the role of lawyers in contemporary America. The approach is broadly sociological, emphasizing that lawyering, like all professional work, reflects the social dynamics of both the profession itself and the larger society in which the profession is embedded. Topics and materials focus on general social processes, not on the mechanics of getting into law school, choosing a practice area, or succeeding as a practitioner. Through readings and field observations, coupled with weekly discussions and e-mail dialogues, the seminar invites students to refine and extend their thinking on a series of important and controversial topics, including legal education, client relations, professional ethics, inter-professional competition and intra-professional stratification. Prerequisites: familiarity with other areas of sociology or law is helpful, but not essential; previous coursework in the social sciences is strongly recommended.

SOC 1871D. Sophomore Seminar in Sociology of Development.

This seminar provides an introduction to the study of development. It looks at the diversity of understandings of the concept of development as well as its practical importance in the world. Students will read texts that present pressing questions and issues concerning development practices, policies, and theories. Efforts to connect broad theoretical debates to understanding contemporary problems will be encouraged. Enrollment limited to 20 sophomores.

SOC 1871E. Theory and Methods in Historical Sociology.

An examination of work at the intersection of sociology and history. Explores the different theoretical traditions that guide the sociological analysis of history, the diverse approaches to conceptualization and comparison used in the investigation of large - scale structures, and the various methodological techniques that are available for generating valid explanations of historical patterns of change. Prerequisites: some background in sociology or history.

SOC 1871F. The Sociology of Labor Markets.

An introduction to the fundamental principles and methods of geographic information systems (GIS). Topics include (a) handling different types of geographic datasets, (b) geo-analytical and modeling tools in GIS, (c) conceptual and theoretical aspects of GIS application development, and (d) errors and uncertainty analysis of GIS applications. Laboratory assignments and the project work provide hands on experiences in GIS. Enrollment limited to 15 juniors and seniors. Instructor permission required.

SOC 1871G. Social Goals, Motivation and Behavior in Organizations.

Social goals such as status, reciprocity, and group solidarity take into consideration not only our individual needs, but also the social context. In this course we will learn about these three social goals, various types of organizational motivation, and the role the social goals may play in influencing people's behavior when they work in groups.

SOC 1871H. Social Perspectives on HIV/AIDS.

This seminar will build upon your understanding of the perspectives and research methods used in sociology through studying the vulnerabilities for HIV infection and the social consequences of the epidemic in east and southern Africa. The course relies heavily on student participation, which will include leading class discussions, making formal presentations, and contributing to class discussions. The readings have been chosen to frame our discussion and to fuel debate; therefore, all readings should be completed before the class for which they are assigned. It is helpful if you have had previous coursework in sociology; however, the course is open to all students interested in the topic.

SOC 1871I. Advanced Geographic Information Systems.

Advanced GIS will explore students in the social sciences to the tools of spatial analysis. Students will explore both the theoretical foundation for different types of spatial analysis as well the practical implementation of spatial analysis as presented in various software packages.

SOC 1871J. Ethics, Justice, and Transformations in Engaged Scholarship.

We seek to refine our understandings of the variations in engaged scholarship's ethics, conceptions of justice, and practices of transformation. In this seminar we shall work with a variety of experienced scholars and practitioners to identify best practices, recognize recurring and distinctive challenges, and to identify the conditions of consequential transformations that emerge from such engaged scholarship.

SOC 1871K. Nanotechnology and Organizations.

In recent years, nanotechnology has attracted enormous interests from a variety of organizations. This course examines how different organizations - public, private and non-profit - promote and shape the development of nanotechnology. To help students understand the emergence of this new high-tech science, this course also introduces theories and empirical studies in the literature of organizational studies.

SOC 1871L. Migration, Displacement and Emerging Community Experiences: Contemporary Turkey.

This course explores Anatolia as a dynamic territory of transit, through a critical lens. We will study communities that have been formed through internal and international migration, displacement, and Otherness that forces people to organize along identity lines, resulting in emerging diverse communities within Turkey. We will look briefly at Anatolia's past and focus primarily on contemporary Turkey. We will compare the reality of the population with the rhetoric and performance of ruling powers pertaining to indigenous status and belonging. Students will leave this course with a comprehensive understanding of population and identity formation in contemporary Turkey as they relate to migration and displacement.

SOC 1871M. Theories of the Third Sector and Civil Society.

Third Sector- consisting of non-government, nonprofit, social movements organizations-- is an increasingly important segment of societies worldwide. This seminar will train students to critically apply organizational theory to evaluate the contributions, opportunities and challenges of this sector. We will probe critical third sector issues, including: impact, accountability, and sustainability of sector activities; common issues in the sector such as legitimacy and co-optation; the dynamics of government collaboration; and what constitutes social justice in the distribution of the sector's resources. Prerequisite: at least one course in Sociology. Enrollment preference given to Sociology and BEO concentrators.

SOC 1871N. Military Health: The Quest for Healthy Violence.

As an institution, the military trains individuals to conduct violence while remaining, at least ideally, healthy. From the standpoint of the organization, the successful soldier is someone who is good at violence at the same time that he or she is mentally and physically fit. Enrollment limited to 20.

SOC 1871O. Law, Innovation and Entrepreneurship.

This seminar explores the relationship between law and organizational change, with particular attention to the emergence of new technologies, new enterprises, and new fields. Topics focus on underlying sociological processes, not on technical or practical details of particular legal or industrial settings. The seminar is aimed at advanced students who are familiar with organizational sociology; familiarity with law is helpful, but not essential. Through shared and individual readings, weekly discussions, and e-mail dialogs, this course helps students to refine and extend their thinking on important and controversial topics at the intersection of contemporary organizational and socio-legal studies.

SOC 1871P. Field Methods in Development Research.

An introduction to the various techniques of field methods in development research, with a focus on qualitative and field methods.

SOC 1871Q. Sociology of Culture.

This upper level seminar reviews classic and contemporary approaches to the sociology of culture, with special attention to the cultural sociology, relational sociology, and questions of political culture.

SOC 1871R. Knowledge Networks and Global Transformation.

How do refined knowledge and the social relations that organize and distribute it influence changes in the institutions, inequalities and cultural systems and practices that define particular world regions and global formations? And how do global transformations influence the trajectories of knowledge production themselves? We will examine particular knowledge-identified agents, including universities, research institutes, think tanks, and professional associations, to consider why they approach global transformations in the way that they do. And we will consider how particular kinds of global transformations, from the end of the cold war and the transformation of information/communication technology to the last financial crisis, affect knowledge production itself. By exploring intersections between global complexity and reflexivity in this fashion, we hope to increase our own capacities for seeing the world not only as it is, but how knowledge might be used in making better alternatives for the future. Enrollment limited to 20 juniors and seniors.

SOC 1871S. Legacies of Inequality: The U.S. and Beyond.

Does education equalize or widen gaps between people and nations? Has mass imprisonment reduced crime or exacerbated U.S. racial inequality? Does biology determine destiny, or is society more fluid? This course introduces theory and research on social inequality, emphasizing temporal dimensions of social differentiation. Attention will be paid to the characteristics we are given (race, sex), those we achieve (education, income), and institutions and policies we encounter throughout the life cycle (schools, the justice system). By understanding the complexities of social inequality and the challenges of devising solutions, students will leave as informed citizens, better equipped to enter any profession. Enrollment limited to 20. First year students require instructor permission.

SOC 1871T. Who Governs Markets?

This Course will introduce students to problems of market regulation. It begins with discussion of key turning points and debates around markets and states that shaped contemporary capitalism. We will then explore a wide array of governance institutions and mechanisms, raging from international organizations, private certification agencies to bottom-up social movements and protection rackets. Students will have an opportunity to apply theoretical knowledge to exploring one particular industry or company through design of a case study. They cases will help develop our understanding of how policies, labor and social movements or forces of competition influenced particular industries. Enrollment limited to 20.

SOC 1871U. Sample Surveys in Social Research.

This course covers the theory and practice of survey research. Topics include questionnaire design and formatting; sample design and selection; interviewing techniques; data base design and data entry; and elementary data analysis and report production. Students individually design and conduct a survey on a topic of their choice, and collectively conduct and analyze a sample survey of the Brown student population. Please note that this course is a seminar version of SOC 1120. Enrollment limited to 20.

SOC 1871V. Update on American Society: Social Trends in the Last Decade.

American society is always changing, and national data sources (especially the American Community Survey and Current Population Survey) provide updated information on social trends every year. This course will review the most significant recent social trends based on these sources, including such topics as income and wealth inequality, racial and ethnic change, immigration, marriage and family patterns, home ownership, and residential segregation. Enrollment limited to 30 juniors, seniors, and graduate students.

SOC 1871W. Geographical Analysis of Society.

Provides an introduction to a geographical approach to understanding the spatial organization of individuals, societies, and economies. The two main emphases are on theories/concepts and applied analytical tools. We will learn about key theories in geography, sociology, and economics that have attempted to organize and classify the spatial structures and interactions across space of social and economic actors and will work with related analytical techniques. Enrollment limited to 20 juniors, seniors, and graduate students.

SOC 1871X. Comparative Urban Political Economy.

For the first time, most people across the globe live in cities. Inequalities within both nations and cities are increasingly similar across national boundaries. This course ask how the politics of formal and informal institutions in cities produce and change inequalities of shelter, work, race, and other social identities, across urban space. We analyze cases from across the globe, along with a range of social science methods and theoretical perspectives.

SOC 1871Y. Time and Social Inequality.

This course explores the subject of time from a sociological perspective. The international adoption of a standardized time alludes to a universality in the experience of time. Yet, time is neither experienced nor distributed equally. In this course, we will explore temporal inequalities in contemporary U.S. society by considering how time is patterned, managed, and experienced across social boundaries.

SOC 1871Z. Martial Arts, Culture, and Society.

In this upper level undergraduate course for which there are no prerequisites, we consider how sociology, and other social sciences, help us understand martial arts and other bodymindful practices (including yoga!) and how they might inform the social sciences. We consider how these practices, their organizations, and their cultures shape, and are shaped by, different structures of power and privilege. We concentrate on martial arts because they straddle such an important axial dimension of society around violence. Enrollment limited to 20.

SOC 1872A. Stratification and Labor Markets.

This class examines theories pertaining to labor market inequality and wealth stratification. What organizational practices shape employment outcomes, and how can they be addressed? What factors are contributing to widening wealth stratification in the USA and abroad. How are establishments, technology, and executive compensation shaping labor market inequality today? These questions, and others, will be addressed by examining processes affecting: (1) organizations, (2) individuals and society, and (3) nations. Theoretical concepts will be explored through practical examples. In addition to discussing key factors shaping inequality and stratification outcomes, solutions to address these issues will be examined through organizational policy initiatives.

SOC 1872B. Sociology of Money.

What is money, wealth, their relationship? How have U.S. Markets for money changed this relationship? How have money markets changed? This is an introduction to current markets for money: how credit/debit is exchanged, how money is produced, what it represents in relation to global production, trade, and wealth distribution. Each week presents a question, than answers this question in two ways: 1st explaining how financial instruments work within U.S. market (economic explanation), 2nd examining how financial instruments change market outcomes (sociological critique). By the end students will understand how money markets work and how they effect the distribution of wealth.

SOC 1872C. Race and Ethnic Relations, Identity, and Inequality.

This course provides an overview of perspectives used in sociological studies of race and ethnicity. It focuses on race and ethnic relation, boundaries, and inequalities through empirical research on interracial or interethnic contact opportunities and racial, ethnic change and variation in interracial or interethnic relationship, romance, and marriage. The goal of the course is to deepen the understanding that racial/ethnic boundaries are rigid, yet may be crossed, blurred, or shifted over time and across generations.

SOC 1872E. Global Sociology: Capitalism, Colonialism and the Making of the Modern World.

This course seeks to question our sense of place in the world. Sociology often takes the nation as a bounded unit of analysis. Yet, the history of the modern world is one of empires, colonialism and transnational connections. These global racial and colonial histories are frequently ignored or silenced. This course focuses on Providence and Rhode Island to look at the embeddedness of local lives in global social processes. If we acknowledge that the world has always been global, how does that change our understanding of contemporary issues? How should we rethink sociology to break with its colonial origins?

SOC 1872G. First-Generation College Students: A Sociological Perspective: A Sophomore Seminar.

Colleges have expanded their focus on diversity to include the social class origins of prospective students. One consequence is the emergence of the notion of first-generation college students: those who are the first in their families to attend college. We examine the challenges facing first-gens as they pursue higher education, focusing on two sources of difficulty: gaining admission and acclimating oneself to college, both academically and socially. Our goals are two-fold: (1) To understand the social barriers, compromises, and internal conflicts that first-generation college students face, and, (2) consider how institutional and structural forces impact and shape these students.

SOC 1872H. Sociology of FIRE: Finance, Insurance, + Real Estate.

This seminar explores the sociology of finance, insurance, and real estate (the "FIRE" sector). Topics covered include: the causes and consequences of the growth of finance, the morality of life insurance, gender discrimination, race and the role of the state in the mortgage market, the interplay between innovation and regulation, and the 2008 financial crisis. We will ask whether the benefits of modern finance are worth its costs, and whether finance merely reflects existing social and economic inequalities, or if there are mechanisms by which finance creates or reinforces those inequalities.

SOC 1872I. Revolutions and Social Change.

Revolutions are some of history's most dramatic events, causing rapid social transformations to arise from direct human action. But what exactly is a revolution? What causes revolutions? How do revolutions unfold? What do revolutions accomplish? How can revolutions change the world? In this course, you will answer these questions by examining and comparing a wide range of revolutions across history and the world, from France and Russia to Cuba and Iran. You will explore their social and political dynamics, focusing on their causes, courses, and outcomes, and by the course's end will understand the role of revolutions in history.

SOC 1872J. Engaged Research/Engaged Publics: The Science + Craft of Applied Policy Research.

Policy problems are complex. Policy analysis and design is both a science and a craft. Increasingly, policymakers have begun to acknowledge that effective policy research requires not only multiple methods of inquiry, but also interdisciplinary teams of social science researchers, citizens, designers, scientists, artists, consultants, and engineers, among other experts. Generating innovative policy solutions, from this approach, is not a straightforward, linear scientific process, but instead a creative, collaborative, and engaged activity that requires not only iterative and dynamic research methods, but also storytelling, design, and other creative processes. Pre Requisites: Substantive courses in public policy, urban studies, sociology, political science, and anthropology are also recommended, but not required.

SOC 1872K. Schools and Social Inequality.

Education has long been conceived of as the engine of social mobility, yet many factors dog modern efforts to close persistent opportunity and achievement gaps between low-income and minority youth and their affluent and white peers. This community-engaged course has a dual focus on content and research methods. Working with partner schools in Providence, students will investigate the macro, meso, and micro-level processes that enable the replication or remediation of social inequality, while simultaneously developing data collection techniques and analytic capacities. Complimentary class reading, reflection, and assignments will give context to and refine students' learning in the field.

SOC 1872L. 20th Century World – A Sociology of States and Empires.

This course introduces students to the sociology of empires and states. With help from key theories and concepts it charts a course through the transformation of pre-WWI empires into nation-states and the international order of today. Using primary sources, chosen by the students, we focus on historical continuities and discontinuities that constitute(d) both empires and states and mark the making of the 20th century. Sources may vary from treaties and declarations to literary, film and art works – like Gore Vidal's *Narratives of Empire* or Chaplin's *Dictator* – that analyze, portray or reproduce state- and empire-making (or unmaking) efforts.

SOC 1872N. Ethnography in Organizations.

This course explores how ethnographers study organizations. You will explore ethnographic case studies of different types of organizations, from private companies to governmental agencies. You will also have the opportunity to practice methods by conducting a semester-long ethnographic study of an organization on campus. This course will give students a strong grounding in the theories and methods that define ethnographic studies of organizations.

SOC 1872O. Critical Race Theory.

We will examine US race, racism, and racial inequality through the lens of critical race theory. We start with an examination of the development of critical race theory in the legal academy and explore the foundational principles of the theoretical framework. We will utilize a critical race frame to analyze the law as a tool of the US racial state, a mechanism through which the state has created and maintained race privilege and corresponding racial oppression. We will also compare the critical race paradigm that developed in the legal academy to some of the most critical race perspectives in sociology.

SOC 1872P. Healthcare Professions, Organizations, and Markets.

When we are sick and seek treatment, we encounter a complex system of healthcare. This course explores variations in who provides care, how the care is delivered, and how it's paid for, and whether it has consequential impacts on patient outcomes. It also considers the important role of state regulations and patient driven social movements in shaping care. To untangle this system and understand the actors and structures that shape our healthcare experiences, both locally here in the United States as well as abroad, this course engages in a sociological analysis of healthcare professions, organizations, and markets.

SOC 1872S. Sociology of Health Inequality in Global Perspective.

Arguably no resource is more important for social life than health. Health, however, is unequally distributed both within and across populations. This course critically investigates the determinants of health inequality, examining evidence from across the globe. It draws together key readings from the stratification literature, the sociology of development, and public health to consider how health is structured in High and Low and Middle Income countries.

SOC 1872V. Race and Wrongful Conviction in the United States.

This class examines the racial origins of wrongful conviction in the U.S. criminal justice system. We examine how wrongful conviction is created through both formal laws as well as social norms of practice that obscure how racial bias infiltrates seemingly race-neutral areas of due process. While legal scholars and lawyers examine wrongful conviction as a type of "misfire" in an otherwise functioning criminal justice system, this course considers how wrongful conviction is type of social system within the mainstay of the criminal justice system, at large. In the tradition of W.E.B. Du Bois, we examine how racism is the engine of this social system that is best referred to as "mass wrongful conviction." Pre-requisite: SOC 1020 or an equivalent social science methods course.

SOC 1873B. Calculating the Incalculable: W.E.B. Du Bois and Racialized Modernity.

For W.E.B. Du Bois sociology is the study of human agency, how to "calculate the incalculable," and how racialized structures of power affect agency. Students of sociology are typically taught three different approaches to the analysis of modernity: Weberian rationalization, Marxist commodification of labor, and Durkheimian division of labor. For Du Bois, the defining feature of modernity was the process through which people and groups were assigned social status based on physical characteristics—in other words, racialization. In this class, we explore Du Bois's critique of racialized modernity and apply it to the study of contemporary social problems.

SOC 1873C. Cities of the Global South.

This course covers key phenomena and concepts of social life in cities through a transnational comparison of cases that span beyond the typical focus on the US. Instead, we focus on cities as global phenomena – the world population now being mostly urban for the first time ever – with issues of urban structure, connections, and subjectivities only fully comprehensible through perspectives that surpass a domestic lens. To do this, we will focus on cities in the “global South.” Our goal is to understand many of the key issues that mediate the urban experience, including inequalities, infrastructure, security, violence, and citizenship.

SOC 1873D. Inequality of Infant Health.

Infant health has become increasingly unequal since 2010. Medical improvements and greater access to health insurance predict greater equality, but underweight and preterm births have become increasingly likely for unmarried and Black mothers with low levels of education. Why? What contributes to infant health and how could policies improve outcomes for marginalized mothers? This course examines contexts and resources that shape infant health and how infant health shapes life chances for children. Infant health is a central connection between generations and a valuable focus to learn how to increase equality of opportunity in the U.S.

SOC 1873F. Feminist Perspectives in Criminal Justice.

This course examines black feminist perspectives broadly, and how they pertain to the study of mass incarceration, institutions, and organizations. I ask questions like: 1) how do concepts of gender and race intersect in the criminal justice system, and 2) how are ideas of deviance filtered through the lens of race, gender, and class? This course also examines the policy implications of these issues, paying particular attention to how multiple statuses of individuals (gender, race/ethnicity, social class, sexuality, and so forth) affect social and institutional responses.

SOC 1873G. The Geography of Urban Inequality.

This course considers spatial aspects of inequality in metropolitan neighborhoods in the United States. We will examine the social and economic forces driving patterns of urban inequality, drawing from sociological readings on topics such as housing, education, segregation, gentrification, neighborhood effects, and concentrated poverty. Students will investigate the consequences of these inequalities for individuals and their communities, and analyze the effectiveness of policies in addressing or exacerbating stratification. This course will be discussion-based and interactive, requiring weekly preparation and active exchange during class.

SOC 1873H. A Hip Hop Companion to Race and Ethnicity.

This course investigates racial and ethnic discrimination and inequality through sociological texts and Hip-Hop. Despite their different expressions, both forms of social interpretation have long addressed the issue(s) of racial and ethnic discrimination and inequality thus providing excellent complementary sources to answer key queries related to race and ethnicity. How are race and ethnicity (re)constructed and subjectively experienced? What mechanisms underpin and reinforce racial and ethnic stratification? How do race and ethnicity intersect with other dimensions to produce differential outcomes? These are questions we will address in this seminar, resorting to sociological texts, Hip-Hop artistry, and our own collective thinking.

SOC 1873I. Immigration and Inequality in the United States.

Why do some immigrants excel in the United States, while others suffer? Why are some immigrants recruited from other countries for jobs, while others already living in the U.S. are fired, criminalized, or deported? The United States has long been touted as a “melting pot”; yet its policies have often restricted immigrants. In this course, we will read, discuss, and evaluate social science evidence to understand the relationship between U.S. immigration policies and inequality. The course will introduce students to the history of immigration policy; patterns of immigrant integration; and the forces that drive inequalities in these outcomes.

SOC 1873R. Research Ethics.

Is covert research inherently unethical? Is it okay to inflict harm upon research participants for the sake of scientific learning? Is it unethical to misrepresent or lie to research participants? What happens to research participants after the research is over? What happens to the research findings? And who is regulating these things? In this course, we will explore case studies that underscore the importance of ethical research. We will examine the evolution and efficacy of internal research boards. We will study the development of posthumanism and relational ethics to understand evolving thought on the treatment of humans and non-human animals in research. Finally, students will develop their own research ethics framework based on their understanding of material presented in the course.

SOC 1873T. Contemporary Social Theory.

This course introduces key theorists and concepts in contemporary social theory to advanced social science students who have taken courses in classical theory. It focuses on the lineages of sociological concepts like hegemony, Orientalism, symbolic power etc. which are widely used in the sociological lexicon and seeks to demonstrate how these concepts are applied in empirical research. The course also aims to discuss the major axes of domination in modern society as developed by each theory. This will lead to a discussion of the underlying aims of social theory, and the circumstances under which sociology can be critical and emancipatory.

SOC 1874B. Work, Inequality, and Social Change.

This course aims to introduce key questions in the sociology of work. Why are some jobs so much worse than other? How are workers hired for different jobs and how do schools prepare them? How have workers tried to change society, and what explains their successes and failures? The goal of this course is to understand how workplace processes relates to key forms of inequality and the promises and pitfalls of collective action. To do so we review key theoretical concepts and empirical studies across a broad range of workplaces.

SOC 1874C. Medical Sociology.

How do institutions, policies, and structures shape the health of individuals and populations? How has healthcare changed over time? To what extent are the concepts of “health”, “illness”, and “disability” innate or socially constructed? This course will tackle these questions, and more, through the study of medical sociology. The course is designed for undergraduates with at least some familiarity with sociological concepts. Throughout the course, students will learn to apply theoretical and empirical insights from the readings to real-world situations. Most readings will focus on the United States, but we will occasionally read and discuss research on other countries.

SOC 1874D. From Factory to Code.

Recent transformations in capitalism owing to the pervasive production and commercial use of data, including personal data of users of internet-related services, have seen proclamations such as “data is the new oil” and “you are the product”, and the rise of new analytical concepts such as “digital”/“data”/“surveillance”/“platform”/“information” capitalism. But what do we mean when we say data, where does it come from, what does it have to do with capitalism, and why does any of it matter? This course aims to answer these questions, by examining the technology and data-driven transformations in political economy and society.

SOC 1874E. Science, Knowledge & Technology: A Globalizing Approach.

Everything is involved with science, knowledge, and technology: from education to punishment, from communication to healthcare, from voting to investment, from policymaking to activism, and from developmental initiatives to nation building. This course 1) introduces how sociology studies broadly defined science, knowledge, and technology; 2) bridges the sociological literature on science, knowledge, and technology with related social scientific domains such as organization theory, economic and political sociology, and inequality and intersectionality; 3) attempts to break the “selection bias” in the literature by covering a wider range of societies (especially the institutionally “significant others” like China and Russia) and their interactions.

SOC 1874F. Sociology of Elites.

Who are elites in society and how did they “earn” such a status? This course examines the ecology of elites—those who hold disproportionate control over economic, social, and cultural capital in society. From educational to familial realms, we will explore theoretical concepts associated with social class and its reproduction, generation to generation. With a focus on the class-advantaged, we will consider the influence this group has on our social world, examining how those with significant resources affect the structures and cultures of schools, workplaces, social media, and more. We will also interrogate the role of identity within such spaces.

SOC 1900. Religion, Christianity, and Spirituality.

Religion, in general, and Christianity, in particular, have had an indelible influence in the lives of Americans, especially African Americans. Why? What common themes, beliefs, and rituals exist for these two cultural systems? How do they tend to be appropriated and understood? Moreover, how does spirituality manifest as a viable response? Research by seminal sociologist and community activist W.E.B. Du Bois and other scholars of race and racism will inform answers to these and other questions. The course will examine whether and how religion, Christianity, and spirituality influence the lives and quality of life of diverse groups. Special attention will be given to their usage by African Americans.

SOC 1950. Senior Seminar.

Advanced seminar for sociology and social analysis and research (SAR) concentrators. Participants examine methods for analyzing, writing, and presenting capstone and thesis material and apply peer review techniques in assessing each other's work. Culminates in presentation of capstone or thesis to the department. Required for all sociology and social analysis and research (SAR) concentrators.

SOC 1970. Individual Research Project.

Supervised reading or research. Specific program arranged in terms of the student's individual needs and interests. Required of intensive concentrators; open to others only by written consent of the Chair of the department. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

SOC 1980. Senior Honors Thesis.

Under the direction of a faculty advisor, students construct and carry out a research project. The written report of the research is submitted to the advisor for honors consideration. A second reader selected by the thesis advisor certifies that the thesis is of honors quality. Please check Banner for the correct section number and CRN to use when registering for this course.

SOC 1990. Senior Honors Thesis.

Under the direction of a faculty advisor, students construct and carry out a research project. The written report of the research is submitted to the advisor for honors consideration. A second reader selected by the thesis advisor certifies that the thesis is of honors quality. Please check Banner for the correct section number and CRN to use when registering for this course.

SOC 2000. Theory and Research in Development.

Explores a range of substantive debates in development by drawing on empirical and theoretical work from the disciplines of anthropology, economics, political science, and sociology. The course has four objectives: 1) to provide students with a broad understanding of current debates and research on development; 2) to explore a range of substantive issues including growth, inequality and democratization, 3) to develop interdisciplinary analytic skills that can be applied to concrete research questions; and 4) to foster cross-disciplinary conversation and debate.

SOC 2000A. To Be Determined.

No description available.

SOC 2010. Multivariate Statistical Methods I.

Introduction to probability, descriptive statistics and statistical inference. Coverage of the linear model, its assumptions and potential biases. Emphasis on hypothesis testing, model selection and interpretation through application with real data.

SOC 2020. Multivariate Statistical Methods II.

This course is a graduate-level introduction to multivariate regression models for categorical and limited dependent variables. Subject matter includes modeling nominal and ordinal outcomes; truncated distributions; and selection processes. The course also reviews strategies for sample design; handling missing data and weighting in multivariate models. The course employs contemporary statistical software. Special emphasis is placed on model selection and interpretation. Prerequisite: SOC 2010

SOC 2030. Social Stratification, Inequality and Mobility.

This course provides an introduction to contemporary literature on social stratification, social mobility, inequality in the United States, abroad, based on research articles and books. We focus on theories, data, methods, facts about categorical dimensions of inequality (race, ethnicity, gender, sexual orientation); core dimensions of stratification systems (income, earnings and wealth distributions; poverty; education; the intergenerational transmission of socioeconomic status; social mobility); social institutions that govern social stratification (families, schools, labor markets, and the justice system); key inequalities that stem from stratification systems (e.g., health). This is a reading course, not a research seminar.

SOC 2040. Classical Sociological Theory.

This is a graduate-level course requires students to engage in detailed analysis and critical review of sociological thought of the 19th and early 20th centuries. The class will introduce students to the critical thinking, methodological innovation, and historical imagination of sociological theory by reading the original texts of the forefathers of sociology, including Karl Marx, Max Weber, Emile Durkheim and others.

SOC 2050. Contemporary Sociology.

This class offers a review of some of the most interesting contemporary social theorists and the most intense debates in current sociological thought. It thematically reviews the works of Jurgen Habermas on the public sphere, Michel Foucault on disciplinary and governmental modes of power, Bruno Latour on modernity and modern science, Pierre Bourdieu on field and habitus and among others. No prerequisites.

SOC 2060. Complex Organizations and Health Policy.

Application of organizational theory to health care organizations, with special emphasis on the development of multi-organizational provider structures, health policy formulation and reform and the influence of regulations and technology on healthcare organization relationships. Written permission required for undergraduates.

SOC 2070. Text as Data for Social Science Research.

This graduate-level course covers methods for analyzing textual data in social science research. Students will learn techniques for data collection and natural language processing, and gain hands-on experience with large textual datasets. The course will also cover recent research that develops and applies machine learning tools and causal inference to answer questions of interest in social science.

SOC 2071. Introduction to Social Network Analysis.

Social network analysis studies the patterned social relationships linking social entities, such as people, organizations, and countries. It seeks to understand how interdependence and social context shape the behavior of these entities. This course will present methods for analyzing network data and show how to implement them using the R programming language. We will also see how network concepts relate to social science theory about small groups, organizations, social capital, etc. The first part of the course emphasizes descriptive network analysis, covering basic statistics for describing networks, approaches to visualizing network data, measures of the centrality of individual units within a network, and methods for detecting network subgroups. The latter part considers inferential analyses that accommodate network data's complex structure of interdependencies. Models studied here include exponential random graph models (ERGMs), network autocorrelation models, and stochastic actor-oriented models (SAOMs).

SOC 2080. Principles of Population.

An advanced introduction to theoretical and substantive issues in the social scientific study of population. Major areas within sociology are integrated with the study of population, including the comparative–historical analysis of development, family processes, social stratification, ethnicity, ecological studies, and social policy. Primarily for first year Graduate students.

SOC 2090. Culture and Social Structure.

An analysis of the interrelations of religious ideas, value patterns, and various forms of knowledge on the one hand, and of the societal structures and changes in organizations and roles on the other hand. Offered in alternate years.

SOC 2110. The Sociology of Gender and Sexualities.

This course offers an in-depth understanding of the sociological study of gender and sexualities. In addition to examining contemporary theoretical frameworks and methodological approaches, we will interrogate the social construction of gender and sexualities within a variety of institutions and social contexts, such as families, schools, work, health and medicine, technology, and popular culture. Throughout the course, close attention will be paid to understanding how gender and sexualities intersect with other systems of inequality, such as race, class, age, nationality, and disability. Although empirical research will primarily draw from the United States, some transnational perspectives will also be considered. Students will leave this course with a strong understanding of gender and sexualities within macro, meso, and micro levels of society, as well as how moments of tension, resistance, and change occur.

SOC 2112. Practicum in Social Research.

Covers the steps involved in social survey research, from site selection and questionnaire design all the way through data dissemination. It assumes a basic level of familiarity with social science research methods, particularly the logic of causal inference. We will discuss the linkage between research questions, site selection, and questionnaire design. We will also discuss in detail many of the practical considerations involved in fielding a survey, including balancing available funds and personnel with ideal sampling strategies and balancing the focus on a particular research topic with the responsibility to collect enough general information to make the data useful to a variety of users.

SOC 2120. Gender, Work, and Inequality.

We spend a great deal of our waking hours working, either paid or unpaid. In what ways is gender embedded in work, and how does work reflect and reinforce gender inequality? This seminar will provide an overview of contemporary theory and research on gender and work. Throughout the course, we will consider gender in relation to race and ethnicity, and we will pay close attention to how gender and race at work translates into class and inequality. Our primary focus will be on the United States in the 20th and 21st centuries, with some comparisons with other nations. Readings will include a mix of qualitative and quantitative methods. Topics covered include: gender segregation and pay gaps, labor market discrimination, service work and emotional labor, unpaid household work, immigration and globalization, labor organizing, social policy, and the future of work.

SOC 2130. Health, Illness and Medicine in Social Context.

The influence of social and economic factors on the development of concepts of health and illness, on the cause and distribution of disease, and on responses to disease. Lay-professional disputes over disease identification and intervention. Implications of medicalization (the expanding social jurisdiction of medicine). The importance of the health care system in American society. Selected issues in recent health policy.

SOC 2150. Socioeconomic Analysis of Development.

Compares economic and sociological perspectives on the problems of development. Topics include problems of conceptualization and measurement, entrepreneurship, capital accumulation, labor force utilization, income distribution, the role of the state, and the impact of international economic relations on developing countries. Prerequisite: a basic undergraduate micro-macro economics course or permission.

SOC 2200. Social Capital and Social Networks.

Explores the consequences of social capital and social networks for economic development. Examines different types and combinations of social relations, network structures of these relations, institutional environments that impact them, and dynamic forms these social relations take. Multilevel development cases include urban ethnic entrepreneurship, rural Third World communities, business networks (financiers, firms), intranational regions, and state-society relations.

SOC 2210. Qualitative Methods.

Emphasis on ethnographic field work through participant observation and interviews. Some attention to content analysis and visual sociology. Technical training in developing observational and interview guidelines, data collection, coding, transcript analysis, and computer applications. Strong emphasis on quality writing. Analysis of ethnographic research in book and article format. Attention to recent developments in ethnography, especially reflexivity and autoethnography.

SOC 2220. Advanced Quantitative Methods of Sociology Analysis.

Analysis of limited variables (variables at a categorical or ordinal level of measurement). Topics include measures of association, contingency table analysis, binomial and multinomial logistic regression, ordered logistic regression, goodness-of-fit tests, and parameter interpretation. Prerequisite: SOC 2010.

SOC 2230. Techniques of Demographic Analysis.

Procedures and techniques for the collection, evaluation, and analysis of demographic data; measures of population composition, fertility, morality, and migration; construction of life tables, population and projections, population dynamics; responsible use of demographic methodology.

SOC 2240. Event History Analysis.

An introduction to hazard models and their application to event history data in sociology. Topics include survival distributions, standard parametric models, discrete time approaches, partial likelihood models, and the introduction of covariates. Attention is given to practical application and the estimation of these models with software packages, where possible.

SOC 2250. Ethnography: Theory and Practice.

This course is designed to introduce graduate students in sociology and related fields to the study and practice of ethnographic methods. We will discuss various qualitative methodological approaches, but we will concentrate on observational and interview-based research. In addition to considering some of the epistemological issues these methods raise at the theoretical level, students will also have the opportunity to learn by doing. The overall goal of this course is to cultivate and enhance students' skills in ethnographic data analysis and interpretation, and to employ these skills in the writing of a scholarly paper or book chapter.

SOC 2260B. Sociology of Discrimination.

In recent decades, open expressions of prejudice and discrimination have become less socially acceptable. Inequalities along lines of race, class, and gender, however, persist. We will examine the social scientific literature on discrimination in its interpersonal and structural forms. We will also discuss what is not discrimination given that this term is often used (incorrectly) synonymously with disparities to refer to inequalities that originate through other processes. We will investigate causes, definitions, measurement, effects, and possible policy responses to discrimination. This course will draw on both qualitative and quantitative approaches to the study of discrimination.

SOC 2260C. Perspectives on Family Planning.

Reviews sociological and demographic perspectives on family planning. How and why did family planning programs develop? What do they entail? Who do they serve? What are the implications of family planning programs for individuals and family life? Individual case studies are considered. International family planning efforts are emphasized.

SOC 2260D. Race, Ethnicity, and Nation: Boundaries, Identities, Inequalities.

This seminar aims to provide students a solid base in the analysis of racial and ethnic boundaries, identities, and inequalities. The seminar addresses a number of central topics in the field and acquaints the students with some key works. The course is divided in three parts. The first part focuses on how race constituted the modern world and on contemporary forms of racialization. The second part focuses on the construction of nations and challenges to their ethnic and racial boundaries. The third part of the course looks at contemporary boundaries of race and ethnicity in the United States. Open to upper level undergraduates with permission of instructor.

SOC 2260E. Structural Equation Models in the Social Sciences.

Structural equation models as used in the social sciences and methodological issues pertaining to such models. Topics include the logic of causal modeling; theories and models; recursive and non-recursive structural equation systems (path analysis); reduced form equations; the problem of identification; unobserved variables and the analysis of covariance structures (using LISREL).

SOC 2260F. Advanced Demographic Techniques.

No description available.

SOC 2260G. The Souls of Sociology: W.E.B Du Bois and Critical Sociologies of Race.

This course investigates Du Bois' empirical and theoretical sociological work and its implications for contemporary sociology. W.E.B Du Bois is recognized as a pioneer of sociology of race, but his work is seldom explored. The first part of this course we discuss in-depth Du Bois work to construct the bases for a Du Boisian sociology. The second part we will read contemporary theories of race through the lens of Du Bois' work. The final section we will read contemporary empirical works in the field of race and ethnicity, reflect how we would conduct them differently from a Du Boisian perspective.

SOC 2260R. Race and Ethnicity: Boundries, Inequalities, Identities.

The goal of this seminar is to provide students with a solid base on the sociological theoretical and empirical base for the study of race and ethnicity. The course is divided in three parts: The first focuses on the place of race, ethnicity, and nation in the making of the modern world. The second part focuses on key topics and works in the American sociology of race, ethnicity and immigration. The third part focuses on the comparative study of nation making and ethnic and racial politics.

SOC 2260T. Cultural Theory and Methods.

This course introduces graduate students to the sociology of culture (understanding social influence on cultural formations) and cultural sociology (understanding cultural influences on social processes). As we consider different theoretical areas of the field, we will discuss the best methodological approaches in cultural theory. We consider how one formulates a research questions and puts evidence together in order to investigate specific instances of the culture-society interaction. We discuss the distinctions between culture, institutions and organizations.

SOC 2270. The Structures of Social Inequality.

Examines the structural bases for social inequality in the U.S.: gender, race, and socioeconomic status. Investigates the processes by which we generate and preserve these social structures, as well as their effects on the individual. Finally, considers the changing nature of social inequality in a postmodern society and comparative issues across societies. Enrollment limited to 20. Instructor permission required.

SOC 2280. Interdisciplinary Perspectives on Population.

This course provides an introduction to interdisciplinary perspectives on population, drawing on insights from anthropology, economics and sociology in regards to population questions, theories, and methodologies. The focus is on three topical areas in population studies - understanding fertility change, HIV/AIDS, and population structure and process.

SOC 2300. Welfare States.

This seminar examines the political sociology of welfare states and social policies in the United States and abroad. It reviews major theories accounting for the origins and subsequent development of welfare states, explains the "exceptional" nature of American social policy, and discusses recent welfare reforms via institutional histories and in depth case studies.

SOC 2310. Health Institutions and Professions.

Structure and operation of health professions and health care institutions, both historically and at present. Emphasis on structural determinants of health-such as race, class, and gender differences in disease, mortality, environmental exposures, and health utilization-and the importance of nonmedical interventions in improving health status and reducing inequalities.

SOC 2320. Migration.

Examination of migration in its several manifestations: internal, international, and patterns of settlement and segregation. Consideration is given to both determinants of population movement and the socioeconomic adjustment of migrants in their destination. Includes comparative study across migrant groups and geographic settings.

SOC 2330. States, Power, Politics.

Foucault and Weber agree that state power has undergone some critical modifications over the past four hundred or so years. Be it the rise of bureaucratic rationality or discipline, we supposedly live in a world where state officials have given up pomp and public displays of violence in favor of more rationalized, less physically obtrusive tactics. In this course, we will attempt to figure out if Weber and Foucault were on to something, and what, if anything, they might have missed.

How do contemporary states exercise power? Through what practical and discursive strategies? When does state power change form and why? How do political processes and infrastructural conditions influence governance? With what effects?

SOC 2350. Social Movements in Health.

Study of social movements dealing with health and illness, with emphasis on contemporary movements such as women's health, environmental justice, environmental health, breast cancer activism, asthma activism. Examination of historical formation, recruitment, links to other movements, lay-professional interactions, research ethics, effects on science and medicine, and impacts on society.

SOC 2360. Fertility.

An introduction to the study of the social determinants of human fertility. Contemporary and historical populations are considered. Theories and frameworks used to guide fertility research are reviewed. Special topics include: fertility decision-making, gender and fertility, work and fertility, adolescent fertility, and population policies and family planning programs.

SOC 2385. Environmental Sociology.

As contestation over environmental concerns proliferates, it draws increasing attention from sociologists. But sociological research on environmental issues raises major challenges. Social-environmental relationships raise theoretical and methodological questions: How do we know an "environmental" issue when we see one? How can we effectively examine the relationships between environmental processes and social processes and structures?

SOC 2390. Social Movements and Political Change.

This graduate seminar offers students an advanced introduction to social movement theory and the political sociology of social change. Unlike a "pure" social movements course, we will not restrict ourselves to informal politics and movements, although we will grapple with these topics, and will consider a much wider breadth of change-making process, including lobbying, clientelism, litigation, regulatory capture, organizational change, and the role of culture and ideology in political change. Environmentally-themed case studies will be common, but we will grapple with a wide range of substantive issues, from gender to labor and more, with examples drawn from around the world.

SOC 2420. Master's Thesis and Proposal Writing Seminar.

Sociology 2420 is a graduate seminar on the craft of social-science writing. Writing is not easy for most of us, and it can sometimes be frustrating. Through out-of-class writing and recurrent in-class review the course explores strategies for making your writing more effective, more productive, and hopefully more enjoyable. The seminar's goal is to help graduate students to advance and complete their writing tasks, whatever they are working on. It is open to students working on a variety of goals such as writing their MA, their dissertation proposal, a research proposal, or a journal article.

SOC 2430. Fields and Methods of Social Research.

Introduction to strategies sociologists use to formulate theories and conduct methodologically sound research. Hypothesis formulation and research design; special emphasis on identifying causal mechanisms, techniques of operationalization, and choice of relevant comparisons.

SOC 2450. Exchange Scholar Program.**SOC 2460. Sociology Paper Writing Seminar.**

This is a special seminar for graduate students in Sociology on the art of writing research papers for publication. The goals of the course are to: 1) learn the process of writing by drafting or redrafting a complete research paper, one section at a time 2) participate in the process of critical peer review 3) become knowledgeable about the process of submission/publication in peer-reviewed journals in Sociology and related social science fields 4) become more familiar with the often hidden processes of journal review, publication ethics, and interpreting/responding to editorial decisions

SOC 2500. Teaching Practicum in Sociology.

This course is designed for sociology graduate students whose funding has prohibited a teaching assistantship but who need to complete the departmental teaching requirement. The instructor for this course will default as the department chair but it is the graduate student's responsibility to identify an instructor to work alongside. This partnership must be approved by the director of graduate study.

SOC 2510. Teaching Practicum in Sociology.

This course is designed for sociology graduate students whose funding has prohibited a teaching assistantship but who need to complete the departmental teaching requirement. The instructor for this course will default as the department chair but it is the graduate student's responsibility to identify an instructor to work alongside. This partnership must be approved by the director of graduate study.

SOC 2530. Teaching in the Social Sciences.

This course is oriented to graduate students who intend to teach after graduate school in a variety of career settings, but with a primary focus on pedagogical theory and practice in a postsecondary setting. The course is designed to complement Sheridan Center certificates by offering domain-specific readings and assignments, with emphasis on teaching in the social sciences (and sociology specifically). Although the course will be framed by readings on teaching and learning, there will be a focus on creating key artifacts needed for an academic job search and evidence-based, reflective practice in instructional roles: teaching statement, syllabus, and teaching demonstration.

SOC 2580. Health and Inequality: Race, Class, and Gender.

Primarily emphasizes race, class, and gender inequalities, but also attends to inequalities of place, social control and official misconduct, and the responsibility of health care providers and researchers in dealing with inequality. Emphasizes social causation of morbidity and mortality rather than inequalities in access to health services and inequalities in clinical interaction, but touches on these other areas as well.

SOC 2600. Comparative Historical Analysis.

The seminar focuses on the application of theory and method in historical sociology. It will combine the reading of exemplary works, both classical and current, in comparative-historical sociology, with an exploration of historical methods that involves methodological readings but focuses on students' use of archives in their own individual research. For graduate students only.

SOC 2610. Spatial Thinking in Social Science.

This course reviews ways in which social scientists have incorporated concepts about space, place, and distance into their theories and research. Examples are drawn from many substantive areas, including the spatial organization of communities, spatial inequalities, and mobility. Separate laboratory meetings introduce methods of spatial analysis encountered in the course readings, including an introduction to GIS and related mapping tools.

SOC 2612. Geographic Information Systems and Spatial Analysis for the Social Sciences.

This course is intended for graduate students seeking to learn the basics of Geographic Information Systems (GIS) and how to incorporate spatial questions into social science research. The course is primarily a methods course and through required independent project work, students will learn how GIS and spatial analysis are typically employed across the social sciences. By the end students will be proficient in independent use of ArcGIS, most frequently used GIS software package, and will be able to apply the more common tools of spatial analysis. They will also know basics of cartography.

SOC 2960A. Comparative Statification.

No description available.

SOC 2960B. Democracy and Civil Society.

No description available.

SOC 2960C. Urban Sociology.

This course will review alternative theoretical perspectives on urban and regional development with an emphasis on variants of ecological and political economy approaches. Substantive topics will include metropolitan restructuring in the U.S. and abroad, growth politics and growth control, neighborhood social networks and collective action, and incorporation of immigrants and minority groups in the metropolis.

SOC 2960D. Organizations and Disasters.

An overview of theory and research on organizations involved in various forms of disaster prevention, and organizations for whom mistakes can lead to major disasters (such as the Nuclear Regulatory Agency, the Office of Homeland Security, NASA, etc.). Students in this class will be involved in literature synthesis, hypothesis formulation, and the development of research designs to test those hypotheses.

SOC 2960E. Poverty as Social Inequality.

The objective of this seminar is to examine historical and contemporary poverty in the U.S. Topics covered include the measurement and analysis of poverty, individual and structural causes of poverty, the geographic distribution of poverty, poverty abroad, the consequences of poverty, and the policies that intend to address poverty. Course is organized around sociological perspectives, although multi-disciplinary scholarship is reviewed.

SOC 2960F. Global and Transnational Sociology.

The new phase of capitalism, commonly called "globalization," has radically transformed the postwar order. In this seminar, we will review several debates regarding current political-economic transformations, including: What caused the shift to neo-liberalism? What external economic pressures do states experience? Can domestic factors mediate such pressures? How do developing countries react to the new international environment? And what role does the United States and international organizations play in the new order?

SOC 2960G. Spatial Data Analysis Techniques in the Social Sciences.

Survey course of statistical methods that can be used to analyze spatial and/or clustered data at the individual and aggregate levels. Topics include multilevel analysis; fixed effects approaches; spatial choice; spatial autocorrelation, heterogeneity and dependence. Application with real data. Not a course about Geographic Information Systems (GIS) or mapping techniques.

SOC 2960H. Demography of the Life Course.

This seminar provides an overview of the development and current uses of the life course perspective in studies of demographic behaviors, process and change. Cohorts and age-graded patterns of behavior are considered as are the effects of social institutions, opportunity structures, and behavioral preferences all of which determine alternative life course pathways. Family origins and prior life experiences, along with ethnic/racial, gender, and cultural identities are examined as critical factors giving rise to inter-individual differences in demographic behaviors over the life course. The role of biography and agency in decisions about demographic behaviors and actual experiences are considered, as is their relationship to life course pathways, trajectories, and success. Graduate students and advanced Undergraduates with permission.

SOC 2960I. Internal Migration.

Critical analysis and discussion of current research on trends in, and causes and consequences of internal migration. Specific content of the course varies according to recent developments in the field.

SOC 2960J. Comparing Institutional Forms: Public, Private and Non-Profit Organizational Forms.

No description available.

SOC 2960K. Comparative Political Sociology.

This course explores both classic and contemporary debates in political sociology. The central thematic is the relationship between democracy and power and includes theories of the state, markets, social class and civil society. The debates are explored through historical and comparative lenses, covering both old and new democracies. Some background in political or sociological theory is recommended.

SOC 2960L. Special Topics in Population.

No description available.

SOC 2960M. Sociology of Organizations Graduate Seminar.

The sociology of organizations offers a burgeoning and vibrant literature, with relevance not only for self-identified organizational sociologists, but also for scholars in fields as diverse as politics, development, industrial relations, finance, education, health care, and the arts. This seminar offers an intensive exploration of the "state of play" in contemporary macro-organizational theory. Shared and individual readings, coupled with weekly discussions and email dialogues, allow students to refine and extend their thinking on a series of important and controversial topics in the recent literature. Although this course has no formal prerequisites, the syllabus is aimed primarily at graduate students who enjoy some prior familiarity with organizational theory, whether in sociology or a kindred discipline. Enrollment limited to 15.

SOC 2960N. Governance in Development.

No description available.

SOC 2960O. Sociology Of Race and Education.

How is racial inequality in education reproduced and challenged? How can research, policy, practice, and the agency of students, parents, and communities help create more racially just educational contexts? In this course, students will engage with sociological tools to understand how race and white supremacy (and other intersecting forms of domination) impact education and how their negative impact can be mitigated. After completing this course, students will better understand how race shapes educational organizations and the opportunities and outcomes they generate. They will also become better equipped to assess the potential efficacy of various approaches to challenging reproductive processes.

SOC 2960P. Social Network Analysis.

Provides a synoptic survey of the various methodologies and theoretical frameworks that collectively go by the name "Social Network Analysis" in the social sciences. Students will study the origin and history of social network analysis during the latter part of the 20th Century and work to develop core competencies in the construction, use and interpretation of basic network measures. Special attention will be given to the intersection of social network theory with broader social theory. Although there are no formal prerequisites, students should be advised that social network analysis relies heavily on matrix algebra and basic statistical theory. Open to graduate students in Sociology.

SOC 2960Q. Sociology of Culture and Knowledge.

We focus in this course on a few of the important theoretical and empirical developments in cultural sociology since the 1960s. In particular, we address ways in which culture is conceived and researched and how the sociology of knowledge and understanding underlies this address. We also consider the forms in which such a cultural sociology can inform a wide range of sociological questions, from the formation of the self to the articulation of historical epochs.

SOC 2960R. Urbanization in a Global System.

The world is undergoing an unprecedented wave of urban growth, and already more than half of the world's population is living in towns and cities. This course takes a global view of urban issues. In earlier developing regions such as North America and Europe, the focus is on a large scale restructuring of cities related to cycles of growth and decline, challenges to the social safety net, and replacement of local populations by immigrants with different racial, and ethnic or religious backgrounds.

SOC 2960S. Statistical Methods for Hierarchical and Panel Data.

A survey course providing an applied introduction to statistical methods for analyzing clustered and panel data. Topics include multilevel analysis, fixed effects models, and growth models. Our focus will be applied, with an introduction to underlying theory and emphasis on application and interpretation. Overall goals include highlighting the framework and assumptions for each approach; studying applications; understanding disciplinary and theoretical preferences for particular approaches; providing experience with software; and studying issues that arise in empirical research.

SOC 2960T. Economic Sociology.

This course provides an overview of the subfield of economic sociology. Economic sociologists examine economic life at all levels of analysis, including individuals, organizations, markets, fields, institutions, and states. Economic sociologists approach the study of economic life using diverse theoretical approaches, from cultural analysis to structural networks. In the first half the term, we will survey the major approaches to economic sociology. In the second half, we will cover specific debates and read exemplars of recent work.

SOC 2960V. Sociology of Law.

This seminar explores central themes in contemporary social-scientific scholarship on law, law-oriented behavior, and legal institutions. The perspective is fundamentally sociological, with attention to such core sociological concerns as: social norms; law, power and culture; and law and social change. In addition, the course examines selected themes from the interdisciplinary "Law and Society" movement, for example: the psychology of justice; the anthropology of disputing; the economics of rulemaking; and the institutional politics of courts and legislatures. Other topics may include: law and inequality; law and social movements; law and globalization; the legal profession; legal consciousness; and the "Rule of Law."

SOC 2960Y. Causal Analysis.

"Does premarital cohabitation protect marriage?" "Does reducing class size improve elementary school education?" "Is there racial discrimination in the market for home loans?" We often use associations to claim causal effects. This course provides a broad introduction to causal analysis. We will address causal inference from observational and quasi-experimental research designs. Topics include instrumental variables estimation, difference-in-difference models, regression discontinuity, matching, propensity scores, heterogeneous treatment effects, and fixed effects models. The prerequisite of this course is SOC 2020 or equivalent.

SOC 2960Z. Social Theory Now.

Most courses in social theory cover either "classical theory" (stopping around WWII) or "contemporary theory" (stopping in the early 1990s). This course offers a broad overview of recent trends and new directions in social theory. It focuses on works published since 2000 by sociologists and by theorists that have been influential in sociology. The course covers conversations in "metatheory" around mechanisms and fields, science studies approaches to the body and nature, diverging interpretations of the place of culture, debates around identity, and critical perspectives including feminist theory and postcolonial theory.

SOC 2961A. Advanced Spatial Data Analysis Techniques in the Social Sciences.

This course provides a survey of advanced spatial data analytical techniques with particular focus on methods relevant to applications in the social sciences. Topics include spatial process models, Bayesian analysis of spatial data, spatial models for discrete dependent variables (spatial counts, spatial probit and tobit, spatial multinomial models), spatial panel data (time series of cross-sections with spatial effects). The course introduces use of specialized software packages included in R and the PySAL library for spatial analysis in Python. SOC 2960G or equivalent is a prerequisite. The course requires a solid background in multivariate statistics, basic spatial statistics and spatial regression analysis.

SOC 2961B. Applications in Geographic Information Systems.

This course is for graduate students seeking to develop their GIS skills further and to gain practice applying GIS methods in a research-oriented setting. The course is organized around a set of social science topics—as opposed to sequential coverage of various methods—and the focus is on getting from research question to analytical results to interpretation of findings. The course emphasizes practice matching concept to tool, as well as identifying appropriate tools and combining them successfully. Independent research skills using GIS are developed via the reading of published literature, the guided replication of results, and the interpretation of findings.

SOC 2961C. Family Demography.

This seminar provides a broad survey of the demographic literature on patterns and trends in family and household structures and processes. Students will be exposed to current theoretical, methodological, and substantive issues in family demography. We will cover important life course events including cohabitation, marriage, divorce and remarriage; marriage markets and assortative mating patterns; childbearing; child and elderly care; and gender, family, and work.

SOC 2961D. Sociology of Power.

The goal of the course is to both engage with the many different and often conflicting theoretical paradigms in sociology that have shaped the debate on power as well as to explore in depth the various empirical manifestations of power. The goal of the course is two-fold: first to familiarize ourselves with the rich set of theoretical tools that sociology provides for exposing, engaging and reconstituting power and second to fully grapple with the challenges of producing social science research that can build on and advance the normative and empirical debate on power. Undergrads by permission of instructor.

SOC 2961E. Sociology of Education.

This course provides an overview of Sociology of Education, covering substantive, theoretical, and methodological issues in the field. Beginning with classical theories of education, the course will then provide an overview of the relationship between education and society, with a focus on its role in reducing and reproducing inequality. We will discuss causes and consequences of educational inequality, paying particular attention to education and the labor market. In the process, we will engage with ascriptive forms of stratification, including race and ethnicity. The focus of the course is education in the U.S., but we will occasionally incorporate international comparisons.

SOC 2961G. The Sociology of Health and Illness.

The sociology of health and illness is a broad field covering a range of substantive and empirical issues, including (but not limited to): the social production of health, illness, morbidity, and mortality; population inequalities in health and disease; medicalization; the experience of illness; and the organization and delivery of health care. This course is designed to engage students in central topics and key debates in the field, with particular emphasis on the social, structural, and political forces shaping health and illness. We will also pay critical attention to the empirical methods used to investigate topics in this area

SOC 2961H. Organizing Development.

This course would address the roles of formal and informal organizations in the development process. Examples might include international financial institutions; development banks; multinational enterprises; public bureaucracies; private firms and trade associations; political parties; social movements; religious institutions; non-profit organizations; and community associations. Students would both: learn about specific organizations in a number of different regional and historical contexts; and develop the skills they'd need to understand organizations more generally using the latest social scientific theories and methods. They'd be evaluated based upon class participation, short writing assignments, group projects, and one longer writing assignment.

SOC 2961J. R for Data Analysis.

This course provides an introduction to the software program R for data management and statistical analysis. It covers commonly used commands to create and transform data sets for data analysis, and commands and procedures for descriptive and multivariate statistical analysis. Students will learn how to read and save data files, create and transform variables, merge, append and transpose data, and functions for string and numeric variables, as well as commands and procedures for descriptive analysis and statistical testing, and multivariate regression models. Prior experience with a statistical software package is not necessary, but a course in introductory statistics is required.

SOC 2961M. Computational Methods for Social Scientists.

This course will teach students the fundamentals of computational methods for social science research, with an emphasis on techniques for analyzing large-scale textual data. The first part of the course will provide students with basic technical skills necessary to conduct computational research, including introducing them to Python programming and web-scraping. The second part of the course will focus on automated text analysis, highlighting key methods appropriate for inductive or deductive inquiry, such as topic modeling and dictionary-based methods. The course assumes no previous knowledge of programming and is most appropriate for graduate students in the social sciences or humanities.

SOC 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

SOC 2980. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

SOC 2981. Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

SOC 2982. Directed Research Practicum - MSAR Students Only.

The Directed Research Practicum (SOC 2982) is a one semester course taken in conjunction with an on- or off-campus research internship. The course consists of a directed reading of methodological texts and research articles selected by the student and the faculty director that are of direct relevance to the methodological issues and challenges encountered in the internship. The student and faculty director will meet on a weekly basis to review the readings, assignments, and discuss how the methods on paper "come to life" during the internship experience. Faculty directors need not be involved with the actual internship work (i.e. the internship is off-campus or with an on-campus office), unless the student is working on the faculty member's research project.

SOC 2990. Dissertation Preparation.

For Sociology PhD graduate students who have met the residency requirement and are continuing research on a full time basis.

SOC XLIST. Courses of Interest to Students Concentrating in Sociology.

South Asian Studies

South Asian Studies is an interdisciplinary concentration in which students work across the humanities and social sciences, geographical locations, and time periods. The concentration emphasizes both the diversity of South Asia as a region, as well as the long-term historical connections

among people and places in Pakistan, Nepal, Bhutan, India, Bangladesh, and Sri Lanka. The concentration takes a comparative approach, bringing attention to history, politics, and culture within the region, as well as in the equally vital global South Asian diaspora.

For additional information, please visit the department's website: <https://watson.brown.edu/southasia/students> (<https://watson.brown.edu/southasia/students/>)

South Asian Studies Concentration Requirements

South Asian Studies is an interdisciplinary concentration in which students work across the humanities and social sciences, geographical locations, and time periods. The concentration emphasizes both the diversity of South Asia as a region, as well as the long-term historical connections among people and places in Pakistan, Nepal, Bhutan, India, Bangladesh, and Sri Lanka. The concentration takes a comparative approach, bringing attention to history, politics, and culture within the region, as well as in the equally vital global South Asian diaspora.

Course Requirements

All South Asian Studies concentrators must take and pass 10 courses as approved by their concentration advisor. Students who wish to earn honors must take 12 courses total (see Senior-Year Project below).

SAST 0700	Introduction to Modern South Asia	1
or HIST 1620	Resisting Empire: Gandhi and the Making of Modern South Asia	

Two courses in the Humanities with a majority focus in South Asia, such as: 2

CLAS 0995	India's Classical Performing Arts
CLAS 1140	Classical Philosophy of India
COST 0030	Sound, Song and Salvation in South Asia
COST 0034	Dharma: A History of Classical Indian Civilization
COST 0035	Saints and Mystics of India
COST 0036	Love and War in India
COST 0037	Sensing the Sacred: Sensory Culture in South Asian Religions
COST 0140	Food, Religion and Politics in South Asia
COST 0145	Karma, Rebirth and Liberation: Life and Death in South Asian Religions
COST 0525	The History and Practice of Yoga in India and Beyond
COST 0526	This Whole World is OM: Mantras in Indian Religions
HIAA 0013	Introduction to Indian Art
HIAA 0023	South Asian Art and Architecture
LITR 1231K	Innovations in Indian Literature
RELS 0096	The Imaginary Lives of Muslims
RELS 1510	Islamic Imaginaries from South Asia
RELS 0036	Love and War in India
RELS 0037	Sensing the Sacred: Sensory Culture in South Asian Religions
RELS 0526	This Whole World is OM: Mantras in Indian Religions

Two courses in the Social Sciences with a majority focus on South Asia, such as: 2

HIST 1979D	Ruined History: Visual and Material Culture in South Asia
POLS 1280	The Rise of India: History, Politics, Economics and Society
POLS 1821O	Politics of Economic Development in Asia
POLS 2320	Ethnic Conflict
POLS 2330	Politics in India

SAST 0750	Understanding the Indian Economy
SAST 0725	Political Ecology in South Asia
SAST 0526	This Whole World is OM: Mantras in Indian Religions
SAST 0525	The History and Practice of Yoga in India and Beyond
SAST 0140	Food, Religion and Politics in South Asia
SAST 0037	Sensing the Sacred: Sensory Culture in South Asian Religions
SAST 0034	Dharma: A History of Classical Indian Civilization

At least five additional elective courses. Students can take additional courses in the humanities or social sciences with a focus on South Asia, such as: 5

At least three of the five electives must be drawn from the department pre-approved course listings (or be approved by the DUS/Concentration advisor). The courses on this pre-approved list have significant (at least 25%) South Asia content.

No more than two of the remaining electives can be courses with less empirical South Asia content, but these courses must have theoretical relevance to the study of South Asia (with the approval from the DUS).

ANTH 0100	Introduction to Cultural Anthropology
ANTH 2320	Anthropology and Development: Critical Ethnographic Perspectives
COST 0032	Music and Meditation
COST 0100	Introduction to Contemplative Studies
ECON 0510	Development and the International Economy
ECON 1530	Health, Hunger and the Household in Developing Countries
ECON 2510	Economic Development I
HIAA 0081	Architecture of the House Through Space and Time
HIST 0150D	Refugees: A Twentieth-Century History
HIST 1440	The Ottomans: Faith, Law, Empire
HNDI 0200	Beginning Hindi or Urdu
HNDI 0400	Intermediate Hindi-Urdu
HNDI 1080	Advanced Hindi-Urdu
MCM 1505O	Does Utopia Still Exist? Media, politics and the hope of something else
POLS 0200	Introduction to Comparative Politics
POLS 1380	Ethnic Politics and Conflict
RELS 0100	Buddhist Thought, Practice, and Society
SAST 1970	Independent Study
SANS 0200	Elementary Sanskrit II
SANS 0400	Classical Sanskrit Story Literature
SANS 1030	The Bhāgavata Purāṇa: Text and Reception
SANS 1100	Vedic Sanskrit

Total Credits 10

Language Requirements

Proficiency in a South Asian language is required for the concentration. Demonstrating proficiency can entail passing a written and oral examination, 4 semesters of formal language study at Brown or another institution, or a high school transcript indicating that the language of instruction for all courses was a South Asian language. Native Hindi/Urdu speakers are encouraged to fulfill the language requirement by taking another South Asian language for four semester, such as Sanskrit at Brown or a relevant language at another institution. Up to two language courses can count toward fulfilling the student's elective requirements.

An **Honors Thesis** is a two-semester independent study supervised by a thesis advisor (SAST 1970). These two courses constitute the additional courses needed for honors in the concentration.

An honors thesis can be textual, or it can take other forms (multi-media, visual, artistic, or musical, for example). The form and substance of a non-textual honors thesis must conform to the rigorous regulations set out by the relevant department(s) and the Dean of the College.

Additional Honors Requirements

To be eligible for Honors, students will have earned an "A" in the majority of graded courses for the concentration.

Students may graduate with Honors in South Asian Studies by completing an undergraduate Honors thesis under the supervision of at least one reader drawn from the South Asian Studies faculty* and one additional reader from the Brown (or RISD, in the case of Brown-RISD students) faculty community.

In order to pursue Honors, students must submit the following materials to the South Asian studies Director of Undergraduate Studies (DUS) by the end of their 6th semester:

1. A prospectus (3-5 pages, describing the major research questions and methods to be used, complete with bibliography) that has been read and vetted by the student's intended primary reader.
2. An email from the faculty member who will serve as primary reader to the South Asian Studies DUS noting their willingness to advise the thesis.

In addition, students must:

1. Enroll in a two-semester sequence of independent study [SAST 1970 or under a relevant departmental course code].
2. Designate a second reader by the end of the first month of their 7th semester. Second readers should also confirm their willingness to serve as a reader by sending an email to the South Asian Studies DUS.
3. Be in regular contact with thesis advisor about the progress of the project.
4. Present their research to the Saxena Center community during their final semester.

For **mid-year graduating students**, the topic and primary reader must be identified and confirmed by mid-November of the junior year, and a second reader must be arranged and confirmed by January 30 of the senior year.

* This includes all people listed under the Faculty, Postdoctoral Associate, and Visiting Scholars (limited to those in residence at Brown) tabs on the Saxena Center website

Senior-Year Project

Students must complete either a senior capstone project OR an honors thesis.

Capstone projects or honors theses are opportunities for students to creatively synthesize the thinking on South Asia that they have developed during the concentration. The project should exhibit an empirically and theoretically driven research question or argument about some aspect of South Asian Studies. The senior-year project should involve some research in at least one South Asian language.

All students are encouraged to start thinking about their capstones in their junior year.

Capstones can take two primary forms:

1. A research paper of approximately 30 pages on a topic related to South Asia for an existing concentration-eligible course, undertaken with the permission of the instructor.
2. An independent study-based project. The produce and/or process that constitutes this can be artistic, primary or secondary research-based, internship-related, or something else. The project must be supervised by at least one South Asian Studies faculty member* for at least one semester under SAST 1970. This course can count towards the five elective requirement.

At the end of the junior year, each student should meet with the Director of Undergraduate Study (DUS) to review their plan for completing their capstone. If pursuing a capstone project, students will be required to

submit, by the end of the shopping period of the fall of their senior year, a short proposal (300 words) that describes how they are going to complete this requirement.

Courses

SAST 0034. Dharma: A History of Classical Indian Civilization.

Dharma—a Sanskrit word encompassing duty, ethics, law, and religion—is a common thread running through the cultures of premodern India. This course offers a history of Indian civilization from its origins up through the end of the classical period. Drawing on a rich array of textual, material, and expressive cultures, we trace the arc of human history on the subcontinent, paying special attention to the intersections of religion and politics. The sources at hand reveal the dynamic interplay between tradition and innovation, and attest to human efforts to redefine what it means to live a life according to dharma.

SAST 0037. Sensing the Sacred: Sensory Culture in South Asian Religions.

This course explores South Asian religions through the body, the senses, and aesthetics. Drawing on Hindu, Buddhist, and Jain traditions, and concentrating on embodied practices such as meditation, chanting, eating, sex, asceticism, ritual, possession, and performance, we will examine experiences of the sacred in India, past and present. How has sensory culture shaped lives, practices, and doctrines? What place do the senses have in South Asian traditions? Drawing on premodern law codes, erotic handbooks, and medical treatises; and integrating new media from ethnographic films to graphic novels, we will plunge into the rich sense-worlds of religions in South Asia.

SAST 0067. Divine Drugs: Psychedelics, Religion, and Spirituality.

From LSD to magic mushrooms, mescaline to ayahuasca, psychedelics are drugs that alter consciousness and perceptions of reality. This course investigates the central role that religion and spirituality have played in the long, tangled history of psychedelics, from colonial eradication of psychedelics as indigenous sacraments, to psychedelic modes of expanding consciousness in 1960s counterculture; from the moral panic around these substances as a tool of mind control, to their present scientific investigation as a panacea for mental health, addiction, and self-realization. Interweaving primary sources and scholarly accounts on psychedelics, our inquiry will use an interdisciplinary approach, blending religious studies, philology, anthropology, the history of science, and art history. To explore this varied terrain, we survey the history of divine drugs around the world, even as we ruminate on the wisdom and philosophy they have inspired over the ages.

SAST 0110. Beginning Hindi or Urdu (HNDI 0100).

Interested students must register for HNDI 0100.

SAST 0112. Intermediate Hindi-Urdu (HNDI 0300).

Interested students must register for HNDI 0300.

SAST 0115. Elementary Sanskrit I (SANS 0100).

Interested students must register for SANS 0100.

SAST 0120. Sanskrit Epic Narrative (SANS 0300).

Interested students must register for SANS 0300.

SAST 0140. Food, Religion and Politics in South Asia.

Why study food? What can food tell us about religion, politics, and culture? Food in South Asia often shapes identity, social status, ritual purity, religious belonging, and political activism—the notion that you are what you eat has wide currency. Whatever form it takes, food embodies histories of migration, trade, empire, colonialism, and ethics. Through reading primary texts and ethnographic articles, watching films, and (of course) eating delicious food, we will explore the rich foodways of South Asia and their social, religious, and political ramifications.

SAST 0145. Karma, Rebirth and Liberation: Life and Death in South Asian Religions.

Karma, Sanskrit for the "action" that makes up a human life, has been a central concern for the religious traditions of South Asia throughout their history. Hinduism, Buddhism and Jainism share the belief that after death people are reborn, taking on lives according to their actions in lives previous. In these traditions, liberation from the cycle of rebirth becomes the ultimate goal of human existence. This course examines the ideas of karma, rebirth and liberation in Hinduism, Buddhism and Jainism from historical, cosmological, ritual, narrative, iconographic and theological points of view. We also look at these ideas in Western culture.

SAST 0200. Early Modern India, 1500-1800 (HIST 0260).
Interested students must register for HIST 0260.

SAST 0260. Early Modern India, 1500-1800 (HIST 0260).
Interest students must register for HIST 0260.

SAST 0525. The History and Practice of Yoga in India and Beyond.
From its roots in premodern India to its current popularity worldwide, yoga has a rich a complex history. As a practice of the mind, body, and spirit, yoga has taken many forms—meditation, chanting, breath control, postures—in order to achieve a range of goals: liberation from rebirth, supernatural powers, strength, pleasure, peace, wellness. As its reputation and commodification have increased, yoga has attracted deep interest, debate, and even controversy. In this course we will study yoga from its earliest texts to its status in the modern world, addressing its historical, religious, social, and political ramifications in many different contexts.

SAST 0526. This Whole World is OM: Mantras in Indian Religions.
A mantra is a syllable or formula used in ritual and meditation. Mantras are central to Indian religions—not only Hinduism, but also Jainism, Buddhism, Sufism, and Sikhism. Some mantras are made up of words and language—usually in Sanskrit—while others are sound fragments with no semantic meaning. The sacred syllable OM, now a global symbol of Eastern spirituality, exemplifies the power and authority of mantra. What are mantras? What do they accomplish? How do they shape identities, beliefs, and practices? Engaging with sacred utterance in various media, this course explores the world of mantras in India and beyond.

SAST 0601. Home and Away: South Asian Literature in the Global Diaspora (COLT 0711U).
Interested students must register for COLT 0711U.

SAST 0700. Introduction to Modern South Asia.
This course will explore the making of modern South Asia through a dynamic conception of its peoples as historical actors who contributed to and engaged with the varied facets of the empire, resistance, and modernity. We will ask: How did resisting colonial rule include, exclude, or form creative attempts to adapt, appropriate, question, and reject elements of European modernity? What were the various complementary and competing visions of anti-colonial nationalism? How were these represented and turned into history writing? In other words, what is the relationship between power, culture, and knowledge? Finally, what are the contemporary political stakes in different narratives of the past? This course thus grapples with history as well as post-colonial theory, and provides students with comparative tools to engage with imperial forms, nationalism, and struggles that remade much of the global south by the mid-twentieth century.

SAST 0700A. Introduction to Modern South Asia: The Politics of States, Society, and Development in South Asia.

India, Pakistan, and Bangladesh are collectively home to over 1.5 billion people, with rapidly growing economies. Yet, all three states continue to grapple with high levels of poverty, ethnic, religious, gender, and caste-based discrimination, and threats to deepening democracy. Despite a shared history of colonial rule and similar bureaucratic structures, these states have developed important differences in political regimes, systems of governance, and state-citizen linkages. This seminar is an introduction to States, Society, and Development in South Asia, drawing on academic literature primarily from political science, as well as sociology, and history. Over the semester, we will comparatively address themes such as the origins and consolidation of political regimes, the role of the state in economic growth and poverty alleviation, and the evolution of political parties, civil society, and social movements in organizing and making demands for rights.

SAST 0700B. Introduction to Modern South Asia: Public Health From Theory to Practice.

This course introduces students to public health in South Asia (including India, Pakistan, Bangladesh, Nepal, Bhutan, and Sri Lanka) through a health equity approach. We will examine the history, theories, and interventions that shape health care systems in South Asia in three ways. First, students will learn about fundamental historical shifts in public health from the British Raj before 1947, Nation-building between 1947 and 1971, and the present time in health care and policy in South Asia. Second, students will be introduced to structural and social determinants of health (e.g., race and ethnicity, caste, gender, socioeconomic position, sexual orientation) using an interdisciplinary approach rooted in global health theories. Finally, through case studies, we will examine health policies and initiatives across the South Asian region and critically delve into ethical dimensions, behavioral health, and sustainability.

SAST 0700C. Current Debates in Modern South Asia.

Abbreviated Course Description: This course provides a survey of the debates currently occupying scholarship on South Asia. Topics will include – the impacts of colonial modernity; the divergences as well as traffic between class, caste, and religion; the politics of representation in a democracy; forms of relatedness across intimate and geological scales; the distance or proximity between law and violence; the psychic and social consequences of economic liberalization. Throughout the course, we will examine debates over the pertinence of concepts considered to be from elsewhere to understanding South Asian life. Readings are drawn from the disciplines of anthropology, history, sociology, literary studies, political science, and media studies.

SAST 0725. Political Ecology in South Asia.

This course focuses on the complex issues of intra-(human)-species and interspecies inequality, the history of uneven development as well as ecological vulnerability of diverse South Asian societies, and the resulting environmental movements that intersect concerns for environment with that of social justice. First we explore the underlying theoretical premise of how environments can be understood as both 'natural' and 'social', and variations over time and space. Is there one Nature or multiple natures? Is Nature even natural? Is there something distinct about the ecology, political ecology, or the history of environmental movements in South Asia? Are the environmental justice movements emerging from the global south able to capture the intricate relationship that many indigenous people in South Asia have with their environment? And how do such movements respond to ecological challenges that are a result of activities of global magnitude?

SAST 0730. Economic and Human Development in South Asia.

This course takes stock of Economic and Human Development achieved in modern South Asia and discusses pertinent public policy issues across countries in an interdisciplinary framework. Following cross-country comparisons of various development indices, we will question the contribution of neo-liberal reforms in agricultural and industrial sectors in improving people's lives. We will draw upon the rich histories of struggles for economic rights and dignity, led by women, as well as caste and minority groups. We will also explore inequalities in income, wealth, access to health and education, as well as attempts to remedy these by way of social policy. Finally, we discuss the rapidly changing natural and political environments, as we shift our focus to communal tensions and climate change in this region.

SAST 0735. South Asia in the World and the World in South Asia.

This course gives a broad overview of South Asia's inextricable role in the making of the world and vice versa from the 13th century to the present. To counter the dangerous nationalisms the region has experienced recently, this course underlines the worldliness and the planetarity of South Asia. Course materials also examine gender, sexuality, caste, race, religion, indigeneity, class, region, et cetera, not just because justice demands that we critically examine inequalities and injustices perpetuated against those who are "different" but because the enormous diversity of lives and experiences in South Asia is a matter of fact. This interdisciplinary course draw on multimedia material, journalistic works and archival pieces to think critically about how the region known today as South Asia has come to be shaped socially, politically, affectively, and materially and how it has contributed to shaping the world.

SAST 0740. Anticolonial Perspectives from South Asia.

This seminar examines anticolonial perspectives that not only influenced twentieth century movements for decolonization and independence in South Asia, but also profoundly shaped struggles for equality and justice globally. We will explore major South Asian political and intellectual figures such as Gandhi, Ambedkar, Savarkar, revolutionaries, poets, and writers such as Bhagat Singh, Amrita Pritam, Namdeo Dhasal, Muhammad Iqbal, and Saadat Hassan Manto. The course will also engage with thinkers such as Martin Luther King, DuBois, Frantz Fanon, and Ghassan Kanafani, among others, to think in conversation with the repertoire of global anticolonial thought. The seminar is chance to closely read canonical as well as lesser-known primary sources to think through the entanglements between individual and collective liberation, religion and secularism, and ethics and politics, across intersections of caste, gender, race, and religion.

SAST 0745. The Making of Modern South Asia.

This undergraduate seminar course offers a historical introduction to South Asia – India, Pakistan, Bangladesh, Sri Lanka, Afghanistan, and Myanmar. It focuses on the historical evolution of the cultures, polities, and societies in this region from the eighteenth century, through colonial and post-colonial period, to the twenty first century. Using seminal historical events as entry points, this course will not only provide a comprehensive historical survey of this region but also explore several major themes and debates in South Asian historiography such as colonialism, orientalism, and modernity. It will also offer a critical analysis of the several post-independence issues that dominate this region. By utilizing a diverse archive of sources such academic texts, primary documents, movies, literature, and maps this course aims to provide students with a comprehensive overview of and the critical tools to engage with scholarship on

SAST 0750. Understanding the Indian Economy.

With a view to help understanding the Indian economy, the course will discuss a number of topics. The aim will be to become conversant with a number of contemporary issues such as demonetisation, Goods and Services Tax (GST), the GDP numbers controversy, fiscal federalism and the outlook for the Indian economy post-COVID. But understanding the economy today will also require becoming familiar with the past and how ideas, events, and developments of the past shaped the India of today in terms of the basic Indian development model, structural transformation, India's economic and financial crises, the state of state capacity, and gender and other outcomes.

SAST 0755. Introduction to Modern South Asia.

This course offers an introduction to social and cultural formations in Modern South Asia, and prepares students to think critically about the forms of life that have characterized the region. First, it sets up a historical context for the region, focusing on how critical events such as the partition and Indian independence from British rule invited a line of scholarly preoccupations with colonialism, post-colonialism and nationhood. At the same time, it dwells on how historiography itself might become a political object in the light of social upheaval. Second, it examines the particularities of these upheavals: religious and ethnic majoritarianism, gendered violence, class and caste-based hierarchies, as well as the political orders –sovereignty, democracy, secularity, that they resist and abide by in everyday life. Third, the course compares ritual, ethical and linguistic practices, born from a characteristically South Asian confluence.

SAST 1050. Contemporary Bollywood: The Cultural Logic of Popular Indian Cinema.

Bollywood, like Hollywood, is not just a cinematic genre but a discursive field that dominates popular imagination in South Asia, permeating its culture, society, and politics. Although rooted in Euro-American sensibilities, Bollywood films have emerged as a distinct form of cinematic representation in the late twentieth century. These films, characterized by flamboyant music, extravagant dance routines, high melodrama, lavish production values, and a focus on stars and spectacle, are deeply embedded in contemporary South Asian ethos. Each week will focus on one film and several key texts to uncover the ideological, social, and cultural logic of Bollywood. The course will link the films' formal structure and content to broader issues such as postcolonial national identity, pre-modern epic traditions, contemporary popular culture, history, globalization, and diaspora implications.

SAST 1100. Intermediate Hindi-Urdu (HNDI 1080).

Interested students must register for HNDI 1080.

SAST 1120. The Sanskrit Grammatical Tradition (SANS 1400).

Interested students must register for SANS 1400.

SAST 1200. Resisting Empire: Gandhi and the Making of Modern South Asia (HIST 1620).

Interested students must register for HIST 1620.

SAST 1700. Epics of India: Ethics, Politics, and Expressive Traditions (RELS 1730).

Interested students must register for RELS 1730.

SAST 1970. Independent Study.

Section numbers vary by instructor. Please check CAB for the correct section number and CRN to use when registering for this course.

SAST XLIST. Courses of Interest to Concentrators.

Swearer Center for Public Service

The Swearer Center for Public Service is a community of scholars, students, practitioners and community members that work together to build on community strengths and address community challenges. The Swearer Center's work aims to catalyze student learning and commitment to lifelong civic engagement and responsibility to advance social justice. The Center is an important agent of Brown's intent and obligation to ensure that the University makes meaningful, positive and sustainable contributions to the public good.

We build capacity and community among faculty, graduate students and staff interested in engaged teaching and research through communities of practice, consultations, funding, partnership development and programming collaborations with other units on campus. This helps us center community knowledge as a critical driver of understanding and working toward social justice.

The Swearer Center is located at 2 Stimson Avenue and has a satellite location, the Fidler Family Campus & Community Center, at 339 Eddy Street in Providence's Jewelry District.

With 11 signature programs (<https://swearer.brown.edu/students/fellowships-programs/>), some of the Swearer Center's programs include:

- **Community Storytelling Fellowship** provides students with the opportunity to learn about ethical and responsible community

- storytelling, research ongoing community engagement work happening in Providence and Rhode Island, produce a form of storytelling and interact meaningfully with Swearer Center constituencies and community partners.
- **The Engaged Scholarship Certificate (ESC)**, sponsored by the Sociology Department with the Swearer Center, allows students to investigate public, civic and/or social justice issues they are passionate about by integrating academic study with community-based learning, research and action. Students pursuing the ESC engage in intensive interdisciplinary inquiry into the issue they define as the focus of their certificate experience, coupled with direct engagement with communities, organizations and practitioners outside the university.
 - **The Laidlaw Scholars Leadership and Research Program** is an innovative scholarship that aims to develop a new generation of skilled researchers who embrace data-based decision-making and believe it is a moral imperative to lead with integrity. It invests in talented and motivated undergraduate students, giving them the knowledge, skills and experience to become active global citizens and future leaders.
 - **The Social Innovation Fellowship** provides undergraduate students with meaningful community engagement and social innovation experiences. Focusing on local partnerships and social impacts through the lens of innovation, this two-year developmental program offers students the opportunity to explore modes of social innovation and the tools required to start successful ventures or make transformational changes within existing organizations. Additionally, students' work enhances the ability of nonprofit community organizations to use student talent effectively helping build organizational capacity while exploring ideas within the local social innovation ecosystem.

A. Alfred Taubman Center for American Politics and Policy

The A. Alfred Taubman Center for American Politics and Policy brings together scholars, practitioners, and students from different perspectives to address important problems facing American politics and policy. Since 1984, the Taubman Center has influenced local, national, and global policymakers working at the intersection of research and public engagement. The Taubman Center is one of several research centers within the Watson Institute for International and Public Affairs. Through their research and public engagement, Taubman Center Affiliates (<http://watson.brown.edu/taubman/people/affiliates/>) provide the intellectual foundation for the Center's work.

The Taubman Center's programming includes:

- Taubman Center public opinion polls (<http://watson.brown.edu/taubman/polls/>);
- R (<http://watson.brown.edu/taubman/research/>) research (<http://watson.brown.edu/taubman/research/>) through workshops, conferences, and scholarship;
- Engagement with public leaders through a rich speakers series (<http://watson.brown.edu/taubman/events/>);
- Internship and research funding for students (<http://watson.brown.edu/taubman/for-students/>).

Visit the Taubman Center website (<http://watson.brown.edu/taubman/>) to learn more.

Theatre Arts and Performance Studies

The Department of Theatre Arts and Performance Studies is the intellectual and artistic center at Brown for faculty and students interested in the aesthetic, historical, literary, practical and theoretical explorations of performance in global perspective – theatre, dance, speech, performance art, and performative “roles” in everyday life. The Department’s distinguished faculty consists of leading scholars and artists who are at the forefront in researching and teaching new and innovative methodologies produced by the intersection of the study of craft and the study of history and theory.

Every season, the Department mounts theatre and dance productions, along with a multitude of academic events and programs in theatre and performance studies, including Brown University-based and guest artists and scholars. Students are active in every aspect of production—learning the rigors of craft through participation in production as well as through class work in acting and directing, dance, playwriting, movement, history, theory, design, technical theatre, intermedial performance, and performance ethnography.

For additional information, please visit the department's website: <http://www.brown.edu/academics/theatre-arts-performance-studies/>

Theatre Arts and Performance Studies Concentration Requirements

The Department of Theatre Arts and Performance Studies (TAPS) is the intellectual and artistic center for the aesthetic, historical, literary, practical, and theoretical explorations of performance in global perspective – theatre, dance, speech, time-based art, and even performative “roles” in everyday life. The TAPS concentration offers three tracks with many points of overlap among them: Performance Studies, Theatre Arts, and Dance. Concentrators gain exposure to a broad spectrum of performance modes and methods -- acting, directing, dance, and writing, and chose an avenue of focus among them. Everyone graduates having studied craft, gained familiarity with history, and investigated the role of performance arts in culture.

Theatre Arts Track

This concentration combines the study of dramatic literature, theatre history, performance theory, and studio work in the various theatre arts. All concentrators in Theatre Arts will gain practical experience through the study of acting and directing as well as in the technical production of plays, preparing students in the practical study of a cross-section of the vital aspects of theatre craft, including one class in either dance or speech. An essential aim of the concentration track is the engagement of students in performance procedures (acting, dancing, directing, choreography, design, playwriting, dramaturgy, etc.) in order to experience the inter-relationships among social contexts, dramatic texts and theatrical enactments. Along with practical study in craft, concentrators will graduate having studied theatre history and performance theory in global perspective. The study of theatre history provides a Theatre Arts concentrator with the necessary background to understand a variety of dramatic and theatrical forms. The study of performance theory enhances a student's ability to ask fundamental questions about the role of theatre in social, political, cultural and cross-cultural arenas.

Students wishing to enroll as concentrators in Theatre Arts and Performance Studies and take the Theatre Arts track should see the undergraduate Theatre Arts track advisor, in order to discuss options that will best serve their interests.

Basic Theatre Arts Track Requirements -- 10 Credits		
TAPS 0700	Introduction to Theatre, Dance and Performance (Required Courses)	1
TAPS 0230	Acting	1

or TAPS 0220	Persuasive Communication	
TAPS 0250	Introduction to Technical Theatre and Production	1
TAPS 1230	Global Theatre and Performance: Paleolithic to the Threshold of Modernity	1
TAPS 1240	Performance Historiography and Theatre History	1
TAPS 1250	Late Modern and Contemporary Theatre and Performance	1
Theatre Studies electives: 4 elective courses, one of which must be theory, history, or literature chosen in consultation with the advisor according to the area of interest (i.e., acting, direction, playwriting, design/technical theatre). Additionally, following consultation with the advisor, one of the electives may be taken outside the TAPS department.		4
Total Credits		10

Performance Studies Track

The Performance Studies track in the Theatre Arts and Performance Studies concentration offers a base for students interested in a variety of performance forms, performance media, or in intermedial art. A concentrator in this track will study the multiple modes in which live performance articulates culture, negotiates difference, constructs identity, and transmits collective historical traditions and memories. Because Performance Studies is not primarily invested in one performance mode over another (such as theatre or dance), a concentrator will gain exposure to a broad spectrum of performance modes. Studying ritual, play, game, festival, spectacle and a broad spectrum of "performance behaviors" under the umbrella of Performance Studies, a concentrator will graduate having investigated the role of performance in culture, including performative acts in everyday life, political enactment, ritual behavior, aesthetic or representational practices, and social role or the performance of subjectivity. The history of aesthetic performance practices (such as the histories of theatre and/or dance) will be an important part of this track, serving to ground inquiry into the broader spectrum of performance study. Students will craft their electives on this track from a wide selection of courses both within the Department of Theatre Arts and Performance Studies and across the university. The study of performance behavior across mediums such as dance, theatre, ritual, and orature allows for geographic and historical flexibility as not all cultures parse theatre from dance, nor, historically, genres of religious or political ritual from genres of entertainment, play, or game. At least one of the ten required classes must show geographic or cultural breadth, and be approved as such by the undergraduate concentration advisor. Participation in practical classes in modes of performance is also required.

Students wishing to enroll as concentrators in Theatre Arts and Performance Studies and take the Performance Studies track should see the undergraduate Performance Studies track advisor, in order to discuss options that will best serve their interests.

Basic Performance Studies Track Requirements -- 10 credits

TAPS 0700	Introduction to Theatre, Dance and Performance	1
Three of the following courses:		3
TAPS 1230	Global Theatre and Performance: Paleolithic to the Threshold of Modernity	
TAPS 1240	Performance Historiography and Theatre History	
TAPS 1250	Late Modern and Contemporary Theatre and Performance	
TAPS 1280Y	Issues in Performance Studies	
Two primarily academic courses from within the Department with Performance Studies content to be selected with your advisor, such as (but not limited to):		2
TAPS 0800I	(Re)Imagining the Body: What can a Body do?	
TAPS 1280E	Neurodiversity and Performance	

TAPS 1281G	Queer Dance	
TAPS 1281O	Acting Outside the Box: Race, Class, Gender and Sexuality in Performance	
TAPS 1281Q	Introduction to Critical Dance Studies	
TAPS 1425	Queer Performance	
TAPS 1500P	Asian American Theater Making	
TAPS 1600	Dramaturgy	
TAPS 1670	Latinx Theatre + Performance	
Two full-credit courses based in performance craft in either Dance, Acting, Directing, Playwriting, Speech, Design, Literary Arts, Visual Arts, Music, or Africana Studies approved by the concentration advisor.		2
Two additional courses in the academic study of performance and performance culture(s) from either within TAPS or throughout the University in consultation with the advisor.		2
Total Credits		10

Dance Track

The Dance track of the Theatre Arts and Performance Studies concentration engages students in the study of dance, movement, and other forms of kinesthetic performance. Emphasizing dance technique, choreography/composition, and theories and histories of global forms of dance practice, concentrators in this track will study how multiple global dance forms articulate culture, negotiate difference, construct identity, and transmit collective historical traditions. Concentrators will receive instruction in composition and technique, and engage with dance, theatre, and performance production within the department to understand dance within a network of performance practices.

Basic Dance Track Requirements -- 10 credits

TAPS 0700	Introduction to Theatre, Dance and Performance	1
Critical Topics and Global Perspectives - three courses. Students should work with their advisor to ensure their courses offer theoretical and geographic breadth. Courses could include, for example:		3
TAPS 1230	Global Theatre and Performance: Paleolithic to the Threshold of Modernity	
TAPS 1240	Performance Historiography and Theatre History	
TAPS 1250	Late Modern and Contemporary Theatre and Performance	
TAPS 1281G	Queer Dance	
TAPS 1281Q	Introduction to Critical Dance Studies	
TAPS 1330	Dance History: The 20th Century	
TAPS 1425	Queer Performance	
TAPS 1670	Latinx Theatre + Performance	
Techniques of the Body - two courses selected in consultation with an advisor, such as the following:		2
TAPS 0310	Beginning Modern Dance	
TAPS 0330	Mande Dance, Music and Culture	
TAPS 0930C	The Actor's Instrument: Stage Movement for Actors and Directors	
TAPS 1000	Intermediate Dance	
TAPS 1340	Dance Styles	
TAPS 1341	Introduction to Ballet	
TAPS 1342	Ballet II	
TAPS 1343	Ballet III (Intermediate/Advanced Ballet)	
TAPS 1344	Advanced Ballet with Repertory	
TAPS 1348	Contemporary Dance Studio Project 1	
TAPS 1390	Contemporary Mande Performance	
Directing/Compositional Strategies - two courses selected in consultation with an advisor from courses such as the following:		2
TAPS 0320	Dance Composition	

TAPS 0360	Viewpoints Technique: The Moving Body in Relation to Time, Space, and Ensemble	
TAPS 1281E	Directing Theory and Practice	
TAPS 1320	Choreography	
Design or Production - one course selected in consultation with an advisor from the following:		1
TAPS 0250	Introduction to Technical Theatre and Production	
TAPS 0260	Stage Lighting	
TAPS 1100	Stage Management	
TAPS 1251C	Scenic Properties and the Props Artisan	
TAPS 1280F	Introduction to Set Design	
TAPS 1281A	Director/Designer Collaborative Studio	
TAPS 1281M	Introduction to Costume Construction	
TAPS 1300	Advanced Set Design	
One additional TAPS elective		1
Total Credits		10

For all concentrators, regardless of track:

In cases where dual concentrations are declared, the Department allows two courses to be counted toward both concentrations.

Capstone Project

Every concentrator will complete a capstone and 5-page reflection paper by the final semester of their senior year. The purpose of the capstone is to synthesize the core tenets of theory and practice from our concentration learning objectives in the form of a student-initiated creative project, experience, or a non-honors research paper. Students pursuing Honors fulfill the capstone requirement by successfully completing a senior thesis (see Honors section).

Please note that while the experience being reflected on for the Capstone may occur as early as the junior year, the reflective paper must be written and submitted in the senior year.

The 5-page reflection paper must be written and submitted in the final semester of the senior year, and completes the capstone requirement. The following options can qualify as the experiential component of a capstone project, and can be executed during junior or senior year.

- Participation in a Senior Slot Production.
- Major participation in a TAPS Department / Sock & Buskin Production. (i.e. acting, assistant directing, designer, dramaturg, stage manager)
- Extension of an existing curricular, co-curricular, or extra-curricular project.
- Revision or expansion of an existing final paper from any prior TAPS theory or history class.
- Major participation in a non-departmental campus production, performance or academic event. (i.e. student theatre, student dance (<https://taps.brown.edu/student-opportunities/student-groups/>) group (<https://taps.brown.edu/student-opportunities/student-groups/>), self-produced performance or event at the Granoff)

Students must create a Capstone project plan in consultation with the TAPS DUS. Finalized project proposals must be submitted via email for approval by the DUS no later than October 1st for students graduating in spring, and September 15th for students graduating in fall.

Capstone proposals must be approved the TAPS DUS.

Capstone Reflection Paper Due Dates

- For students graduating in spring, the capstone reflection paper is due March 1st of the senior year.
- For students graduating in fall, the capstone reflection paper is due November 1st of the senior year.

Capstone Reflection Paper

Please email the DUS a 5-page reflection paper addressing the following writing points:

- A brief description of the project completed, including details about who, what, when and where the project took place. If you revised a paper, detail which class the paper was originally written for; and how you revised the paper, etc.
- An examination of how you used knowledge, skills and research methods acquired in the concentration to conceptualize, do and complete the project, with a frank assessment of the project's success or ways in which it could have been improved.

The DUS will assess and approve the paper if all of the criteria above are met. The reflection will be assessed for clarity, honesty and depth of self-reflection and encapsulation of your experience of the TAPS curriculum.

Please note: Students should refer to the Brown Arts Institute student funding (<https://arts.brown.edu/institute/grants/rolling-grants/>) opportunities and consult with the staff regarding space availability and support.

Senior Honors Thesis

Honors are awarded for theses in all concentration tracks, and satisfies the capstone requirement. Candidates for the senior honors program should have an outstanding academic record, must apply to the Department for approval, and enroll in TAPS 1990 in Semesters VII and VIII. All theses are substantive pieces of writing. Some theses are strictly academic. Other honors theses may include a creative component (such as the directing of a play, a solo performance piece, the study and performance of a major role, or the design of a production) but the thesis itself will include a critical, written work based in research relative to that artwork. For creative work submitted for honors, the essay should accompany the play/ performance, reporting on the research and the process of creation although the play/ performance itself can count as the substantive written work. Please note that departmental support is not available for productions at this time.

Students should refer to the Brown Arts Institute student funding (<https://arts.brown.edu/institute/grants/rolling-grants/>) opportunities and consult with the staff regarding space availability and support.

Students should contact the honors advisor by the end of Semester V to discuss proposals, thesis guidelines, and scheduling TAPS 1990 the honors thesis course in Semesters VII and VIII.

- For students graduating in spring submit proposals to the Department in Semester VI by April 1st.
- For students graduating in fall submit proposals to the Department in Semester VI by October 1st.

Proposals should be submitted electronically to taps@brown.edu. (taps@brown.edu)

Theatre Arts and Performance Studies Graduate Program

The Department of Theatre Arts and Performance Studies offers the following graduate programs:

- **Doctor of Philosophy (Ph.D.) in Theatre Arts and Performance Studies.**

For more information on admission and program requirements, please visit the following website: <http://www.brown.edu/academics/gradschool/programs/theatre-arts-and-performance-studies> (<http://www.brown.edu/academics/gradschool/programs/theatre-arts-and-performance-studies/>)

- **Master of Fine Arts (M.F.A) in Playwriting.**

For more information on admission and program requirements, please visit the following website: <http://www.brown.edu/academics/gradschool/programs/theatre-arts-and-performance-studies-0> (<http://www.brown.edu/academics/gradschool/programs/theatre-arts-and-performance-studies-0/>)

Required MFA Playwriting Courses:

The MFA Playwriting Program will consist of a minimum of 14 courses that include:

- Six (6) semesters of Graduate Playwriting Workshop (TAPS 2310)
- One (1) course in dramaturgy (TAPS 1600)
- Two (2) semesters of Thesis Preparation in the third year of the program (TAPS 2975)
- Five (5) elective courses from throughout the university, including Brown/Trinity courses where appropriate, of which one (1) should be a theory or history course in TAPS or cross-listed in TAPS at the 1000 or 2000 level.

First Year

FALL		
TAPS 2310	Graduate Playwriting	1
TAPS 1600	Dramaturgy	1
Elective		1
SPRING		
TAPS 2310	Graduate Playwriting	1
Elective		1
Elective		1

Second Year

FALL		
TAPS 2310	Graduate Playwriting	1
Elective		1
SPRING		
TAPS 2310	Graduate Playwriting	1
Elective		1

Third Year

FALL		
TAPS 2310	Graduate Playwriting	1
TAPS 2975	Thesis Workshop	1
SPRING		
TAPS 2310	Graduate Playwriting	1
TAPS 2975	Thesis Workshop	1

Total Credits 14

- **Master of Fine Arts (M.F.A.) in Acting or Directing through the Brown University/Trinity Rep MFA Program.**

For more information on admission and program requirements, please visit the following website: <http://www.brown.edu/academics/gradschool/programs/theatre-browntrinity-rep-acting-directing> (<http://www.brown.edu/academics/gradschool/programs/theatre-browntrinity-rep-acting-directing/>)

Required Courses for MFA Actors:

First Year

FALL		
TAPS 2505	Fundamentals of Acting: Modern and Contemporary Realism	1
TAPS 2515	Acting Technique: Fundamentals of Physical Awareness	1
TAPS 2535	Directing 1: Fundamentals in Analysis and Action for Brown/Trinity MFA Actors and Directors	1
TAPS 2545	Dramaturgy	1
SPRING		
TAPS 2555	Advanced Acting: Modern and Contemporary Realism	1
TAPS 2565	Acting Technique II: Strength, Expansion and Articulation	1
TAPS 2575	Theatre History in a Changing Present	1
TAPS 2585	Directing II: Collaborative Communication	1

Second Year

FALL

TAPS 2605	Fundamentals of Acting: Shakespeare and Classical Verse	1
TAPS 2615	Acting Technique III: Poetic Expression	1
TAPS 2625	Playwriting Dramaturgy Practicum	1
TAPS 2635	Directing III: The Director's Vision	1

SPRING

TAPS 2655	Advanced Acting: Shakespeare and Classical Verse	1
TAPS 2665	Acting Technique IV: Creativity and Virtuosity	1
TAPS 2675	Advanced Playwriting	1
TAPS 2685	Directing IV: Special Topics	1

Third Year

FALL

TAPS 2705	Third Year Practicum: The Actor as Creator	1
TAPS 2715	Professional Development and Performance	1

SPRING

TAPS 2755	Third Year Practicum: The Actor as Total Theatre Artist	1
TAPS 2765	Professional Development and Performance - Spring	1

Total Credits 20

Required Courses for MFA Directors:

First Year

FALL

TAPS 2505	Fundamentals of Acting: Modern and Contemporary Realism	1
TAPS 2535	Directing 1: Fundamentals in Analysis and Action for Brown/Trinity MFA Actors and Directors	1
TAPS 2545	Dramaturgy	1
Elective		1

SPRING

TAPS 2555	Advanced Acting: Modern and Contemporary Realism	1
TAPS 2585	Directing II: Collaborative Communication	1
TAPS 2575	Theatre History in a Changing Present	1
Elective		1

Second Year

FALL

TAPS 2605	Fundamentals of Acting: Shakespeare and Classical Verse	1
TAPS 2635	Directing III: The Director's Vision	1
TAPS 2645	Fall Directing Practicum	1
Elective		1

SPRING

TAPS 2655	Advanced Acting: Shakespeare and Classical Verse	1
TAPS 2685	Directing IV: Special Topics	1
TAPS 2695	Spring Directing Practicum	1
Elective		1

Third Year

FALL

TAPS 2735	Directing V: Advanced Directing - Directing Seminar	1

TAPS 2975	Thesis Workshop	1

SPRING

TAPS 2775	Directing Seminar	1
TAPS 2975	Thesis Workshop	1
Total Credits		20

Courses

Theatre Arts and Performance Studies

TAPS 0001A. Trust Yourself: The Practice of Artistic Impulse.

Using theatre/ live performance as a point of entry, students will learn how to preserve their work and findings through digital mediums: film, radio, photo, etc. By the end of this course students will not only have a portfolio of their growth which can be used for future artistic opportunities, but they will have the confidence in their unique perspective and the know- how to expand on that in a useful way.

This class will follow a produce-first format. From various prompts, found materials, and sources of inspiration and intrigue, students will extrapolate and expand on impulses. It is my hope that by the end of this course that students will not only have confidence in their work, but have had the opportunity to apply newly applied skills to these impulses.

TAPS 0030. Introduction to Acting and Directing.

Explores basic acting/directing concepts from a variety of perspectives including the use of the actor's imagination/impulsivity in the creation of truthful, dramatic performance; the body, as a way of knowing and communicating knowledge; and the voice, as a means of discovering and revealing emotion/thought. There is a mandatory tech requirement and some evening hours are required. Please go to the TAPS website for specifics on admission and the technical requirement (<https://taps.brown.edu/undergraduate/undergraduate-courses%23/additional-info>). Enrollment limited to 18 students. Instructor permission required. No permission will be given during pre-registration.

TAPS 0080. Asian American Theatre and Performance in Transnational Contexts.

From the founding of the East West Players in San Francisco in 1965 to Toronto's now thriving Fu-Gen Theatre, formed in 2002, embodied performance has long played a central role in the formation of an Asian diasporic identity, movement, and politics in the Americas. This intro-level course explores the history and development of Asian American theatre and performance. Through a variety of critical, historical, and aesthetic texts (theatre, literature, contemporary art) we will consider encounters and exchanges in Asian American and Asian Canadian theatre and performance histories as one way to critically engage the "transnational" within Asian American Studies.

TAPS 0080A. Feminist Aesthetics and Performance Philosophy.

A theoretical and practical investigation of art and performance from feminist and performance philosophical perspectives, focusing on the topics of perception, experience, thinking, embodiment, and the practice of everyday life. The course will introduce students to theories and methods from feminist aesthetics and the emerging field of performance philosophy. We will study feminist critiques of aesthetic categories (Battersby, Cixous, Grosz, Korsmeyer, Piper, Scheman, Ziarek) and feminist practices of art and performance. We will combine our theoretical work with practical explorations in the studio. No prior experience with art or performance-making required.

TAPS 0085. Uncomfortable Media (MCM 0901H).

Interested students must register for MCM 0901H.

TAPS 0100. Playwriting I.

A workshop for students who have little or no previous experience in writing plays. Students will be introduced to a variety of technical and imaginative considerations through exercises, readings and discussions. Course is not open to those who have taken Advanced Playwriting (TAPS 1500, formerly LITR 1010C and TSDA 1500). Enrollment is limited to 12 undergraduates per section. A limited number of spaces are reserved for incoming and transfer students. Instructor permission required. S/NC.

TAPS 0101. Playwriting I.

An intensive workshop for students who have little or no previous experience in writing plays. Students will be introduced to a variety of technical and imaginative considerations through exercises, readings and discussions. Course is not open to those who have taken Advanced Playwriting (TAPS 1500, formerly LITR 1010C and TSDA 1500). Enrollment is limited to 14 undergraduates per section. A limited number of spaces are reserved for incoming and transfer students. Instructor permission required. S/NC.

TAPS 0110E. Screenwriting I (LITR 0110E).

Interested students must register for LITR 0110E.

TAPS 0150. Screenwriting I (LITR 0110E).

Interested students must register for LITR 0110E.

TAPS 0200. Playwriting II.

This course is an artistic laboratory and seminar that builds upon the fundamentals of Playwriting I. In this course we will bolster our writing practice with a toolbox of strategies to generate new writing, develop a revision process using peer feedback and exercises, read and discuss various plays and their mechanics, cultivate and act upon our creative curiosities to discover the forms that our ideas and stories want to be held in. S/NC

TAPS 0210. Dancing the African Diaspora.

This seminar/studio course introduces students to theories, debates, and critical frameworks in African Diaspora Dance Studies. It asks: What role does dance play throughout the African diaspora? What makes a dance "black"? How do conceptualizations of gender and sexuality inform our reading of dancing bodies? Using African diaspora, critical dance, performance, and black feminist frameworks, we will examine the history, politics, and aesthetics of "black dance".

TAPS 0220. Persuasive Communication.

Introduces public speaking and helps students develop confidence in public speaking through the presentation of persuasive speeches. The course combines public speaking and persuasive theory. Students develop and present speeches of increasing complexity, including speeches of introduction, speeches to teach, speeches to get an action, and speeches to change attitudes. Various delivery styles (impromptu, extemporaneous and manuscript) are highlighted. We address gender, culture, neurodiversity, and ethics of communication. Primarily for seniors. Limited to 15. Instructor's permission required. No permission will be given during pre-registration; interested students should sign up well in advance on the TAPS 0220 waitlist (application form is at https://docs.google.com/forms/d/e/1FAIpQLSdWavq-L_fukiBylGrPFdVpzCzLXCfjFiD9K7l7MMjaFbwI6Q/viewform?usp=sf_link) and attend the first day of class. Fall semester is in-person only. Spring semester is offered online only. The waitlist process does not apply to students registering for the Summer term. Attendance is mandatory.

TAPS 0230. Acting.

Focus on elements of dramatic analysis and interpretation as applied to the art of acting, and, by extension, directing. Monologues, scene study, and improvisation are basis for comment on individual problems. Reading of dramatic texts and theory. Substantial scene rehearsal commitment necessary. Attendance mandatory. Not open to first-year students. Instructor permission required. No permission will be given during pre-registration. S/NC

TAPS 0240. Africana Feminisms.

Beginning with the institution of slavery and carrying on to the present day, we will examine the field of Black Feminist Thought—or, the political, social, and economic forces that shape black American women's lives. We will ask: How do black women's lives, labor, and cultural productions lay bare the limits of maleness and whiteness as dominant frames? Why and how do black women matter to us all? Together, we'll ride the three waves of black feminism to explore the ways black women's cultural production has been consequential to notions of citizenship, liberation, and culture.

TAPS 0250. Introduction to Technical Theatre and Production.

This course is an introduction to the concepts and practices of stagecraft. You will be introduced to different elements of stagecraft such as scenery, lighting, and properties. Lecture and lab classes will also cover the proper and safe use of tools, the choosing of building materials, methods of construction, and the installation of electrics, scenery, and properties for the department of Theatre Arts and Performance Studies productions.

TAPS 0260. Stage Lighting.

This course is an introduction to stage lighting. Enrollment limited to 6.

TAPS 0310. Beginning Modern Dance.

Introduction to the art of movement. Focuses on building a common vocabulary based on ballet, vernacular forms, improvisation, Laban movement analysis, American modern dance, and the body therapies. Individual work is explored. One and one-half hours of class, four days a week. Enrollment limited to 20. S/NC.

TAPS 0310E. Shakespeare: The Screenplays (ENGL 0310E).

Interested students must register for ENGL 0310E.

TAPS 0320. Dance Composition.

Focuses on building the individual's creative voice. A movement vocabulary is developed from Western techniques (ballet, American modern dance, Laban/Bartenieff movement analysis, vernacular forms, space-harmony/movement physics, and the body therapies) along with group improvisations and collaboration with artists in other disciplines. Enrollment limited to 20. S/NC.

TAPS 0330. Mande Dance, Music and Culture.

Mande, Dance, Music and Culture explores three distinct life-cycle and celebratory dances from the Bambara, Malinke, Wasalu, and Khassonke peoples of Mali, West Africa. Each dance is taught in relationship to relevant oral histories, folklore and contemporary expressions. Emphasis is placed upon building a mindful community of committed thinkers and doers. Attendance at the first class is required. There is an application process for enrollment. S/NC

TAPS 0350. Black Performance Theory.

This interdisciplinary, reading/writing-intensive course examines the notion of blackness through theorizations of performance. It pursues the following questions: What is black authenticity? What are the rubrics with which 'authentic' blackness is measured? How is black performance political? Discussions and written work will interrogate the slipperiness of, desire for, and policing of blackness in order to trouble conceptions of race as a biological essence.

TAPS 0360. Viewpoints Technique: The Moving Body in Relation to Time, Space, and Ensemble.

The Viewpoints Technique systematically breaks down the elements of TIME and SPACE, providing a precise language for makers to communicate about dynamic staging and offering performing artists the tools to direct themselves more successfully from within composition. An indispensable practice for ensemble awareness, the Viewpoints Technique invites us to think more expansively about composition across performing arts disciplines. All performers can benefit from this rigorous investigation of time and space and the pursuit of cohesive ensemble.

TAPS 0510. Introduction to Shakespeare (ENGL 0310A).

Interested students must register for ENGL 0310A.

TAPS 0550. Weird and Wild Writing for the Dramatic Stage.

This is a class for writers interested in reading work that defies the boundaries of naturalism and slips into the strange, the surreal, the inventive – and the downright bonkers. In this undergraduate playwriting course you will engage fully with the craft of dramatic writing with an emphasis on bold structural choices and the questions that will feed your work as writers.

TAPS 0700. Introduction to Theatre, Dance and Performance.

An introduction to the breadth of topics covered in the TAPS Department, this class is a gateway to the concentration open to all students interested in live arts. We will explore how, where, and why theatre, dance and performance are made and investigate their relationship to broader culture and society. Students will learn basics: how to read a play, how to appreciate dance, and how to approach the variety of venues, histories, and methods involved in production. Overlaps with other media will be explored. Visits from TAPS faculty will dovetail with the season of offerings on the TAPS main stage.

TAPS 0800D. Asian/American Performance and Aesthetics.

This course examines performances in and of the Asias, paying special attention to gendered and racialized constructions of Asias and Asians in the popular imagination. Working at the intersections of Asian/American Studies and Performance Studies, this course considers the ways in which Asianness emerges from performance along the multiple axes of race, gender, sexuality and class. In analyzing a broad spectrum of aesthetic practices, including theatre, film, music and performance art, we will explore what Asianness means within the gendered and racialized circuitry of global exchanges of commodities, labors, bodies, affects, and discourses.

TAPS 0800E. Performance and Law: Staging Sovereignty in the Courtroom and the Theater.

In this course we explore the relationship between law and performance, and investigate the political stakes of doing so across various historical moments. From scripted proclamations of sovereignty during scenes of conquest to witness testimony in the infamous witch trials, legal processes often seem to rely on spectacle, drama, choreography, scripting—i.e., features associated with theatrical performances. Through case studies we learn to interpret legal events as performances and vice versa (staged performances as legal events). Can a work of theater or dance legislate? Adjudicate? Restore justice? Reading intensive and interdisciplinary course. Students across arts and social science backgrounds welcome.

TAPS 0800F. Performance and the Crisis of Scientific Reality.

Trust is a constant public problem. We are bombarded by competing versions of reality. A century ago, a 'crisis of reality' emerged after the breakdown of positivist science. Enduring truths gave way to contingent particulars in modern life. This course investigates how the experiments of artists and scientists contributed to the philosophical re-shaping of 'reality' as something not only historically made, but also performed. By mingling key texts from the philosophy of science with complementary texts and media from aesthetics and performance, this course focuses on the way that reality has been re-staged across overlapping domains of art and science.

TAPS 0800G. The Body Issue: An Introduction.

Notions about bodies determine what or who is normal, deviant, transgressive, healthy or ill, and who belongs to the human. From philosophical questions about the nature of the body, to issues of gender, race, sexuality, trauma, disability, artificial intelligence, and death, we will see how bodies carry, produce, and perform meanings. With different artworks, we will examine how bodies are being represented, discuss what is being expected from bodies, and speculate on the possibility for bodies to no longer be an issue. This is a reading intensive and interdisciplinary course. Students across arts, humanities, and social science backgrounds welcome.

TAPS 0800H. Performance and Technology: The Art and Science of the Artificial.

This seminar will explore the recent rise of "artificial intelligence" from the interdisciplinary perspectives afforded by performance studies. Performance studies is ideally situated to study algorithms, not as mathematical abstractions, but as material practices predating human tools and modern machines. Specifically, we will look to the emergence of the concept of artificial intelligence as it emerged from wide-ranging algorithmic practices from the mid- 20th century to the present. We will consider the subsequent rise of automation in fields as diverse as financial analysis, climate modeling, social media, crime prediction, and even artistic practice.

TAPS 0800I. (Re)Imagining the Body: What can a Body do?.

How does the body perform itself? And what at all is a body? These are the underlying questions to the fundamental question profoundly binding philosophy and performance: 'What can a body do?'. From philosophical questions about the nature of the body, to issues of gender, race, sexuality, trauma, disability, artificial intelligence, and death, we will see how bodies carry, produce, and perform meanings. With different visual and performance artworks, we will examine how bodies are being represented, discuss what is being expected from bodies, and speculate on the possibility for bodies to be thought of differently. This is a reading intensive and interdisciplinary course. Students from all backgrounds are welcome.

TAPS 0800J. Of Emotions Unbound: Feeling Middle Eastern Theatre and Performance.

How is the emotional, bodily experience of watching a theatrical production, a film, or reading a text alone different from the experience of doing so with friends in a dim room? Do feelings/moods sparked by art forms differ across bodies, regions, cultures, and media? Are sensory emotion concepts such as melancholia, euphoria, sorrow, sadness universal? Or are they historically, cross-culturally felt, framed, and situated? Do emotions, or affects, evaporate after a while? Or are they contagious, jumping across regions and bodies, perpetually re-membered from our past shaping our future? This introductory course will look at a wide range of aesthetic-cultural forms within broader political, social, historical contexts in the Middle East and its diaspora to delve into these philosophical queries that help us understand the highly complex region in terms of emotions transgressing its physical-geographic, Eurocentric, Orientalist conceptualizations.

TAPS 0800K. Islam between Theatre and Performance.

This course explores the nuanced relationship among concepts of theatre, performance and Islam in diverse texts and contexts. Our readings cut across disciplinary divides, weaving together theatre history, Islamic intellectual-cultural history, theory of performance, and theory of religion to support a dynamic, critical approach to our field of inquiry. We will discuss how attention to theatricality and performance may enrich our understanding of representations of Islam by Muslims, representations of Islam by non-Muslims, and the relationships between these representations. Taking as a point of departure the extreme opposition between "Islam" and "theatre" that contemporary discourse typically supposes when overlapping these topics, we will evaluate this convention and consider the reasons for its long and continuing prevalence.

TAPS 0800L. Devised Theatre.

Devised theatre is a practice of collaborative creation in which artists redefine the traditional roles of actor, director, playwright, and designer. Often, a devised theatre maker will do all of the above. A devised performance itself can take on a dizzying array of forms, anything from a solo musical to a site-specific dance installation to a guerrilla clown intervention to a Shakespeare play. This course focuses on developing an artist's toolkit for devising, pulling from a variety of traditions from clowning to creative writing. Students will work closely with each other to make performances of increasing magnitude throughout the semester, culminating in a full-class devised performance piece.

TAPS 0800M. Beyond The Rainbow: Black Otherwises in the Work of Ntozake Shange.

This course is designed to introduce students to the wide range of work by poet, playwright, and performer Ntozake Shange (1948-2018). We will discuss the historical periods, global events, social movements, communities, and art movements that shaped her work and her thinking. We will respond critically, creatively and at times collectively to Shange's work.

TAPS 0800N. Semiotics of the Broadway Musical.

In this class, we will explore the history, present, and future of one of the quintessentially American artforms—the Broadway musical—by investigating its unique combination of music, drama, dance, spectacle, and commerce. Our focus will be on understanding the different ways that the musical produces social meanings. To do so, the course will introduce concepts from semiotics—a method for studying the production and communication of meaning through various systems of "signification." Surveying the history of the artform in four broad phases, we will explore how musical theater has represented quintessentially human conflicts around identity and belonging. Assignments will include weekly response posts, a midterm paper, in-class presentations, a final project, and opportunities to perform.

TAPS 0800P. Uneasy Embodiments: Racial and Gendered Objecthood.

This seminar, open to all students, focuses on the distinctions between subject and object, human and non-human, agent and victim, and examines how categories of social difference, including race, gender, sexuality, disability, and class, inform these distinctions. We will analyze performance that demonstrates uneasy problems about personhood, with an emphasis on Asian/American and black aesthetic works, through the frameworks of performance studies and queer and feminist theory. Students can expect to study and create performance, read critical texts, and write a research essay.

TAPS 0800Q. On the Flesh: Queer and Trans Embodiments.

This course explores contemporary performances and visual art by queer and trans artists that center the body as a prism for identity-formation, affect, and objecthood. These artists activate their bodies to push back against prevailing cis and heteronormative aesthetic and cultural norms through frameworks and practices, like masochism, beauty, abjection, and eroticism. Drawing from Queer and Trans Studies, we perform formal analysis of their texts, contextualizing them within various institutions and structures of power. We will reflect on the experience of our own encounter with their works. This course surveys the works of contemporary Hemispheric trans and queer artists of color to ultimately ask: what connective threads (if any) can we identify in the work of these artists? What can their work tell us about trans and queer experiences of settler colonialism, diaspora, and racialization?

TAPS 0810. Performing Italy - Body, Voice and Politics: A Journey within Italian Theatre.

How does performance comment on, interact with, and influence society? And to what extent is this question culturally specific? Performing Italy focuses on Nobel-prize-winner Dario Fo, Franca Rame, Commedia dell'Arte, and Teatro di Narrazione. Engaging with theatrical materials, we will conduct comparative work driven by the students' own experiences and explore how Italian theater intervened in historical and political discourses within Italian society between the 1960s and the 2000s. Topics will include: the years of lead (1970s terrorism); the influence of the Catholic church on Italian society; the Italian State and organized crime; gender and sexuality in modern Italian society.

TAPS 0811. Campus Activism: Disability Justice and Unwaged Labor Movements.

In this class, we will look at the history of different unwaged labor movements and disability justice critiques of capitalism in order to think about why some kinds of labor become legible as 'work' under capitalism while others don't, and the implications of this. Understanding the educational system as preparation for the work force, we will examine the disciplinary strategies of schooling, and its programs for either cultivating or repressing certain qualities in body and mind. This is an interdisciplinary class that will engage education/pedagogy, labor, and disability studies in order to examine our society's institutions of governance (schools, families, workplaces) as well as movements of organized resistance to these institutions, such as Wages for Housework, Wages for Students, Socialist Patients' Collective (SPK), and contemporary campus activist movements. Students with an interest in learning practical organizing skills should enroll.

TAPS 0901N. Body/Gesture/Cinema (MCM 0901N).

Interested students must register for MCM 0901N.

TAPS 0901Q. Governing Sex: Citizenship, Violence, Media (MCM 0901Q).

Interested students must register for MCM 0901Q.

TAPS 0901S. Mediating Reproduction: Feminism, Art, Activism (MCM 0901S).

Interested students must register for MCM 0901S.

TAPS 0903X. The Dancer and The Muse (MCM 0903J).

Interested students must register for MCM 0903J.

TAPS 0930A. The Actor's Instrument: Voice and Speech.

A complete and well-seasoned actor has the ability to perform with specificity and ease, both vocally and physically. Specificity comes from an integration of speech and movement technique. Ease is only possible when a mastery of technical skills reaches the point where the actor can integrate them without loss of spontaneity. The goal of this class is to give the student the fundamental techniques of voice and speech in relation to the body. Prerequisite: TAPS 0230. Enrollment limited to 16. Instructor permission required. S/NC.

Prerequisite does not apply to students registering for the Summer term through the Office of Continuing Education.

TAPS 0930B. The Actor's Instrument: Improvisation.

This course is designed to help students explore the development of relationships in theatrical space without the benefit (or confinement) of a script. By cultivating and developing basic performance skills including spontaneity, self-awareness, creative use of the body and mind, access to the imagination, and collaborativity, this course has applications for actors and other performers interested in all types of performance as well as those interested in improvised performance specifically.

One of the intentions of this course is to generate truthful, creative, and collaborative play, which can lead naturally to material that is funny or humorous as an organic outcome of the moment. However, "comedy" or "improv comedy," which has a different set of intentions altogether, will be strongly discouraged in this course. "Getting laughs," as a goal in and of itself, manufactures unproductive pressure to "be clever" or to "succeed" in ways that are inconsistent with truly creative engagement.

TAPS 0930C. The Actor's Instrument: Stage Movement for Actors and Directors.

Students engage in a process of exploration that centers on the physical relationship of the actor to the physical reality of live performance on stage. The class is structured as a survey introduction to a variety of methods and targets beginning movers with a range of interests and performance applications. Students investigate a broad spectrum of contemporary, classic and non-western movement theories/approaches to better enhance the ability to be 3-dimensionally present in time and space and to develop skills in the art of non-textually based storytelling and performance.

TAPS 0930E. The Actor's Instrument: Clown.

Derived from the teachings of Jacques Lecoq and Philippe Gaulier, this course is physically-based, improvisational, loud and messy. Emphasis is on organic and intuitive response, timing and rhythms inherent in comedy, non-verbal expression, the relationship of the Actor to the Audience, and Play! Enrollment limited to 20. S/NC

TAPS 0930F. Explorations in Clown and Physical Play.

Participating in this course, you will learn how to value and share your own unique ridiculousness by transforming mistakes into opportunities and limitations into creative expression. Based in physical exploration and improvisation, this work will implore you to recognize your relationship to fear, expand your sense of humor, connect to an audience, and play with abandon. Inspired by various kinds of clowns throughout history, you will begin to create your own vocabulary of play that will organically accumulate into solo and group performance pieces.

TAPS 0950. Site-Specific Performance.

This class will offer an intensive exploration of the rich histories, theories, and practices of site-specific performance—that is, performances that take place beyond the traditional theatrical stage. Intended to cross-hatch between history, theory, and artistic practice, the class will study a range of examples of performance forms that have emerged in response to specific non-theatrical spaces. Students will also undertake a series of site-specific performance exercises and projects throughout the term, culminating in a public presentation in the form of a mini "festival" of original works of site-specific performance created by students in the class.

TAPS 0971. Digital Art (MCM0750).

Interested students must register for MCM 0750.

TAPS 0980. Black Lavender: Black Gay/Lesbian Plays/Dramatic Constructions in the American Theatre (AFRI 0990).

Interested students must register for AFRI 0990.

TAPS 1000. Intermediate Dance.

This is an intermediate-level modern dance class that extends and expands movement coursework for students who have taken TAPS 0310 or equivalent dance study. It is intended to challenge students' memory, capacity for rhythmic complexity, and improvisational competence, as well as foster a professional work ethic that can withstand abundant physical, emotional and organizational challenges.

TAPS 1006A. Playing the Villain on Camera (ARTS 1006).

Interested students must register for ARTS 1006.

TAPS 1007A. Performance Practice Workshop (ARTS 1007).

Interested students must register for ARTS 1007.

TAPS 1010. Performing Brazil: Language, Theater, Culture (POBS 1080).

Interested students must register for POBS 1080.

TAPS 1011A. Acting for the Camera (ARTS 1011).

Interested students must register for ARTS 1011.

TAPS 1012A. Body as Medium: Queer Lineages of Duration, Resonance, and Excess (ARTS 1012).

Interested students must register for ARTS 1012.

TAPS 1050E. The REAL: A Research to Performance Project (AFRI 1050E).

Interested students must register for AFRI 1050E.

TAPS 1080. Performing Brazil: Language, Theater, Culture (POBS 1080).

Interested students must register for POBS 1080.

TAPS 1100. Stage Management.

To introduce students to the principles and techniques of modern stage management from script selection to closing. Through the study of various models of stage management (both professional and academic), students will develop an appreciation of the role of the stage manager as the facilitator, mediator and organizer of the production process. Students will apply theory learned in the classroom by stage-managing or assistant stage-managing a TAPS production and/or observing other TAPS and Trinity Rep stage managers during the production process. Enrollment limited to 12.

TAPS 1110. Voices Beneath the Veil (AFRI 1110).

Interested students must register for AFRI 1110.

TAPS 1150A. Russian/Soviet Performing Arts: Dance, Opera & Theater (RUSS 1150).

Interested students must register for RUSS 1150.

TAPS 1160. Style and Performance.

For qualified sophomores, juniors, and seniors who offer TAPS 0230 as a prerequisite. Period scene study and monologues are basis for comment on individual progress in acting/directing. Extensive reading of dramatic texts and historic research materials. Work in voice, movement, and poetic text. Substantial commitment necessary for preparation of class scenes. Attendance mandatory. Prerequisite: TAPS 0230. Limited to 20. Instructor's permission required. No permissions will be given during pre-registration.

TAPS 1160A. Physical Play: Embodied Action & The Art of Making Something New.

This course explores the actor's capacity for play and the idea that games provide theatrical moments of truth and joy. Through a continuum of games, improvisations, and devising activities, students will develop a vulnerable and egoless state of existence that empowers them to take risks, access their imagination, and play more fully with their voice, body, and mind. Exercises explore physicality, vocality, status, focus, scale, presence, flow, and impulse while immersing participants into a state of "le jeu," or the pleasure of playing.

TAPS 1170. Acting Methods for Period Texts.

This course explores and hones the actor's craft of performing dramatic texts from various periods across theatre history.

TAPS 1175H. Dance and Architecture (HIAA 1175).

Interested students must register for HIAA 1175.

TAPS 1210. Solo Performance.

An exploration of the challenges and rewards of performing solo. Students research, write, and perform a one-person show. Other projects may include performance art, stand-up comedy, and monologuing. Substantial time commitment. Attendance mandatory. For advanced students with appropriate background and experience. Submit proposal and resume in the fall. For guidelines and information contact taps@brown.edu. Permission required in advance. Enrollment limited to 20.

TAPS 1230. Global Theatre and Performance: Paleolithic to the Threshold of Modernity.

This course explores performance practices that predate the European Renaissance across disparate parts of the globe. Considered will be Paleolithic rock art and other evidence of ritual practices in Europe, Africa, and the Americas; ritual dramas of Egypt, Greece, and the Roman Empire; Sub-Saharan African traditions and theatre/dance forms in ancient India, medieval Japan and the indigenous Americas. In short, we will explore a wealth of differing ancestral theatrical modes and methods that continue to leave their mark in contemporary diasporic expressions.

TAPS 1240. Performance Historiography and Theatre History.

This course will provide an introduction to performance history and historiography by concentrating on analysis of dramatic texts, theatrical events, festival performances and "performative" state and religious ceremonies from 1500-1850. We will explore incidents in Asia, the Americas and Europe as related to state consolidation, colonization, incipient nationalism(s), urbanization, cultural negotiation, and the representational practices the enacted. Enrollment limited to 35.

TAPS 1250. Late Modern and Contemporary Theatre and Performance.

This class provides introduction to an array of theatre and performance forms of 20th- and 21st-century Europe and North America. We explore historical realism and naturalism to symbolism, the birth of avant-garde, constructivism, dada and surrealism, and myriad other modernist isms. After Stein, Artaud, and Brecht, we jump to Americas and indigenous theatre, the Harlem Renaissance, site specific art, and innovative companies and practitioners from Maria Irene Fornes to the Wooster Group, Augusto Boal and more. We study playwrights, directors, actors, dancers, designers, and performance artists. The focus is on "experimental" forms, recalling that even naturalism, in its day, was "revolutionary."

TAPS 1251A. Making the 21st Century Musical.

Songs are a powerful dramatic storytelling tool - we see them used all the time in media, alongside scripted dialogue and visual elements. In this class we will explore contemporary musicals, in all forms, and we will create songs that tell stories. Together we will investigate how dramatic songs are made, what they can be about, and who are our audiences. We will pay special attention to perspectives that have been left out of past musical storytelling, and we will discover ways that our songs can advocate for justice in the 21st century and beyond. Instructor permission required. Interested students should fill out the following questionnaire (LINK: <https://forms.gle/eDM3Mss95oGFqxEU9>) and must attend the first class.

TAPS 1251C. Scenic Properties and the Props Artisan.

Scenic Properties requires a working knowledge of all theatrical stagecrafts, an inventory of useful materials, and creative solutions. This class is designed to allow students to develop a creative process and pursue the skills that fortify theatre crafts. Students will hone skills in the scene shop to explore the techniques, materials, and problem solving that support craftspeople and theatre making. The course is designed to support students in creative thought processes and build confidence with practice and research. It is intended to help students grow a better understanding of scenic properties for theatre and in the support of live performance at Brown University and in the future. The course has no formal pre-requisites.

TAPS 1251D. Unmasking the Technologies of White Supremacy.

This advanced undergraduate seminar looks to examine the re-emergent topics of white supremacy and fascism within the so-called post-truth political media landscape. We will proceed by returning to critiques of white male patriarchy at the heart of white supremacy. The course will follow three streams of critical theory and their attendant historical moments. The first section will draw from black feminism and critiques of fundamental American forms of freedom built upon the immobility of "the other" in the service of white racial capital. The second section of the course will contend with the recent rise of Proud Boys, Identity Europa, and the rise of the far-right in Eastern Europe through the lens of performance studies to understand the procedures of identification and aesthetics that lead to white supremacy.

TAPS 1251E. Embodiment, Materiality and Cultural Production.

This course investigates embodiment as one of many materials engaged in contemporary art and performance practices. We will explore concepts of body/mind, the haptic, interiority, intersubjectivity, experience, spatiality, temporality, relationality, liveness, and futurity and how it occurs within a wide variety of cultural productions. Course readings are drawn from dance studies, critical race studies, gender and sexuality studies, performance studies, and museum and curatorial studies. Our theoretical inquiries will culminate in the practical experience of crafting and producing an exhibition and/or live event. No prior performance or art-making experience is required, however, students with active art practices are encouraged to utilize this opportunity to create and present their own works.

TAPS 1251P. Theatre Practicum.

This course offers the practical study of theatre through participation as a member of the production team of a Sock and Buskin theatre or dance production. Regular rehearsals, coaching and mentorship by department faculty and staff, participation in technical rehearsals and performances are required. Enrollment is available after auditioning/assignment of roles. Each student will be assigned an advisor/mentor for this process. S/NC only.

TAPS 1260. Food as/in Performance.

A theater maker has a rare relationship with an audience. It is a relationship that holds the opportunity to engage the five senses (six, if you count the heart). With this thought, let us consider the theatricality of food. How are theater makers creating conversation and experience using language, memory, touch, taste, and smell to shape dramatic action or tell story? Students will prepare "theatrical food experiences" that provide opportunities to write and perform texts.

TAPS 1270. Masking, Trancing, Performing, and Spectating in Non-Western and Circumpacific Performance.

An inquiry into specific traditions of performance - ritual, traditional theatre, contemporary theatre, and performed behavior in more or less day-to-day life - that exist or have existed in various (mostly) Asian settings and have been studied and documented by scholars, film-makers, and theatre artists. The emphasis will be on traditions that use masks as means of transforming the identity of the performer and of the world presented in performance. No prior experience in theatrical performance or in the study of Asia or anthropology is assumed.

TAPS 1280B. The Creative Ensemble: Poetry in/to Performance.

Creative Ensemble: Poetry in/to Performance is an Interdisciplinary Arts course designed to develop skills in acting, improvisation, directing, design, visual storytelling, and writing. Professor Kym Moore (TAPS) and Enongo Lumumba-Kasongo (Music) are exploring the multiple dimension of Poetry: visual, aural, and sonic. Drawing on Enongo Lumumba-Kasongo's expertise as a rap lyricist and performer, students will also examine the ways in which the incorporation of hip hop poetics can shape a performance. Through research, experimentation, performance, participants will engage in a creative process that will culminate in an Ensemble-based final performance for the public. Application and Override Required.

TAPS 1280C. Stage Lighting II.

This class is a continuation of Stage Lighting. The major portion of this class is to give the student opportunity to create an actual design on stage for the Theatre Arts & Performance Studies (TAPS). Each individual student's main project will be to create a light design and be part of the production team of a Sock and Buskin produced show. The class will be an open forum for students to share ideas about their perspective designs. The class is also set up for the continuation of expanding their Vectorworks Spotlight and Lightwright skills, as well as light console programming.

TAPS 1280D. Perception/The Performativity of Neurology.

Time-based art and "theater" more specifically is a perfect manipulator of experience. Many creators of time-based art look for the "universal." In this course we will explore the science behind what we all have in common beyond shared-experience: brains. What happens in the minds of all truly happens. How can we use art to make our brains experience the same things? And what experiences can we curate for our brains based on science? Show don't tell. How can art take place in the room in front of us? How do we experience a performance rather than just "watch" it.

TAPS 1280E. Neurodiversity and Performance.

This course will use the framework of performance studies to investigate the emerging concepts of neurodiversity and neurodivergence—terms originally developed by autistic activists and self-advocates seeking to depathologize autism and other forms of neurological, mental, and cognitive difference. Course materials will incorporate perspectives from theatre, performance, and other aesthetic modes in addition to theoretical and scholarly work from disability studies, the history of science, and cultural studies. We will also ask how social movements such as neurodiversity and mad pride have used performative strategies to contest and reformulate how we understand disability and neurological difference.

TAPS 1280F. Introduction to Set Design.

In this class, students will be introduced to the aesthetics, creative process, and industry standard technical skills and tools necessary for designing theatrical scenery. Students will explore set design in a studio format that will focus on the development of both hand and digital design techniques, such as drafting, rendering, and scale model-making. This course is intended to lay the foundation for further study while empowering students to actively engage as set designers in productions on campus and beyond. Students interested in applying for a Registration Override Code should complete the Google Form course application below.

TAPS 1280G. Introduction to Theatrical Design.

This class is an introduction to the process of creating designs for live performance, with a focus on Set, Costume, Lighting, and Sound. Students will learn about the history of production design, how to analyze a script for design, the aesthetic and practical considerations of a designer, and the skills, techniques, and philosophies used to create meaningful designs for theatre. Students will gain proficiency in each area of design, as well as learn communication and collaboration skills required in a team setting. No prior experience with theatre or design is required.

TAPS 1280K. Mindfulness and Movement: Interoceptive Expressive Arts.

This course cultivates and mobilizes interoceptive awareness as a means of self-expression. By slowing things down, calming the mind and focusing attention on the breath and bodily sensations we practice an open-hearted release from self-judgment. Our daily training in Somatic Studies includes Body-Scanning, Authentic Movement, Yoga, Ideokinesis, Laban Movement Analysis, Continuum, Narrative Medicine, Feldenkrais, Automatic Writing and the Visual Arts. S/NC

TAPS 1280L. Modern American Drama.

Modern American Drama is a broad overview of the field, from O'Neill through Kushner and Parks. Particular attention will be paid to the theatrical, social and performance context of the plays under study, although the plays themselves will be the only assigned texts.

TAPS 1280M. A Producer Prepares: Curation, Ethics, and the Entrepreneurial Practice of Arts Programming.

This course introduces students to the complex relationships between cultural entrepreneurs, buyers, sellers, producers, managers, audiences, and artists. Through readings, guest speakers and case studies, with particular emphasis on emerging media technologies, business practice and live art administration, "A Producer Prepares" will arm students with the critical, historical, managerial and curatorial tools necessary to produce work in the contemporary cultural economy. This class seeks to situate arts curation and production within histories of cultural practice, management and technology, and ultimately aims to endow student producers with the critical acumen necessary to thrive in an arts sector in flux. Mandatory S/NC

TAPS 1280N. New Theories for a Baroque Stage.

This course re-conceptualizes and re-models seventeenth-century "baroque" theatricality through the lenses of Russian formalist theory, phenomenology, (post-)surrealist literature and objects, Oulipian literature of constraints, Deleuzian theory, ontological-hysteric theatre, film, etc.

TAPS 1280Q. Hybrid Art (VISA 1800L).

Interested students must register for VISA 1800L.

TAPS 1280S. Libretto Workshop for Musical Theatre.

This class is not only for the aspiring librettist but for any student desiring insight into the craft of book writing for musical theater. The course will cover the basics of storytelling (plot, character development conflict, etc.) but specifically in terms of the musical. It will also detail the fundamentals of lyric writing, musical narrative and basic composition. We will examine three libretti (SWEENEY TODD: the classic horror, LITTLE SHOP OF HORRORS, the modern sci-fi and RENT, the contemporary adaptation). There will be lectures, group discussions, talks with guest professionals, and analysis of student assignments. Enrollment limited to 15 sophomores, juniors, and seniors.

TAPS 1280U. Voice Over for the Actor.

Has voice acting always appealed to you but you weren't sure where to start? Luckily, COVID-19 has not impacted the voice over industry and the opportunities in traditional media and digital content are ever-growing. Students will learn acting techniques and how to analyze and voice different types of copy ranging from commercials to video games, animation, audio books and more. The class also covers setting up a cost effective home studio, hardware and software, demo reels, how to find voice work and other aspects of the business. Students need a laptop/desktop computer, a mic, a quiet place to work and a stable internet connection.

Enrollment is limited to 12 to individualize learning and feedback. The focus of the course is skill building and practice in a supportive ensemble environment therefore attendance is required every class.

TAPS 1280V. Theatre and Conquest in the Americas, from Cortes to NAFTA.

Explores the intimate relationship between theatre and conquest in the Americas as contained in missionary accounts, plays, performances and visual art from Cortés arrival to the present. Students will analyze plays and performances that stage the Spanish Conquest, consider the theatrical procedures of the conquest and examine theatrical representation as a methodology of conquest in the Americas.

TAPS 1280W. Native American Indigenous Theatre Performance.

Investigates Native American Indigenous Theatre performance through the study of new contemporary plays. Diverse performance styles informed by Indigenous ways of being and knowing, language, land and identity distinguish Native American Indigenous Theatre performance from Euro-American styles. Inquiry beyond western theatrical understandings is required to center Indigenous narratives and to grasp the rich spectrum offered in the storytelling. Methods of community knowledge production will include guest artists, orality, place / object-making and embodiment to contextualize Indigenous values and their application to decolonize performance spaces, methods of working and theatre-making. All are welcome!

TAPS 1280X. Compossible Worldbuilding.

This course involves project-making through the use of materials and influences that are in plain sight but perhaps not within the reach of what previous investigative methodologies allowed. Our small worlds will be mined for their alterity, their surreality, their complexity, their possibility and apparent impossibility. Students will be reading philosophy, fiction, movies, criticism, and above all, interior and exterior rooms and spaces that will feed into their worldbuilding.

TAPS 1280Y. Issues in Performance Studies.

Explores myriad ways of thinking, doing and talking about performance in the broad spectrum -- from social media to theatre, dance, film, and everyday life including identifications and disidentifications of gender, race, sex, and class. We may study museum installations, surgery, tourism, carnival, history reenactments, performance-based art, sports, and even dinner parties among other actions and sites. The objective is not to pin down a genre or category of performance but to understand performance variously as an analytic and practice, a form of lived history and way of being, including but not limited to traditional theater and dance practices.

TAPS 1280Z. A Producer Prepares: Advanced Topics in Curation, Ethics, and Arts Programming.

This course continues students' orientation to the complex relationships between cultural entrepreneurs, buyers, sellers, producers, managers, audiences and artists. Through readings, guest speakers and case studies, with particular emphasis on emerging media technologies, business practice and live art administration, "Advanced Topics..." will arm students with the critical, historical, managerial and curatorial tools necessary to produce work in the contemporary cultural economy, with particular emphasis on memes, think tanks, and the relationship between the state and art. This class seeks to situate arts curation and production within histories of cultural practice, management and technology, and ultimately aims to endow student producers with the tactical, critical and strategic acumen necessary to thrive in an arts sector in flux.

TAPS 1281A. Director/Designer Collaborative Studio.

Students will explore the relationship between director and designer within the production process. The main objective is to improve collaboration and production output by learning the language, tools, and skills involved in each area of discipline so as to enhance creative output. Enrollment limited to 17 students.

TAPS 1281C. Memory Plays: Theatricality and Time.

This course will read philosophy and critical theory about memory and time beside dramatic works and performance art that take up the topic of history, repetition, and temporality in live art. Readings will be selected from Sophocles, Aristotle, Shakespeare, Noh, Freud, Benjamin, Bergson, Brecht, Muller, Stein, Duras, Homi Bhabha, Paula Vogel, Suzan-Lori Parks, W. G. Sebald, Gilles Deleuze, Thomas King, Philip Deloria, Coco Fusco, Diana Taylor, Charles Ludlam, Teching Hsieh, Wooster Group, Spiderwoman Theatre, *Ubu and the Truth Commission*, Errol Morris, Robin Soans, and Erik Ehn to ask about time, memory, history, act, *Mneme*, *anamnesis*, recognition, and "reconciliation."

TAPS 1281D. Place-Based Dance and Performance.

How can movement practices excavate buried histories and ignored rhythms to invite new understandings of place? In this hybrid studio-seminar course, we will develop critical and creative tools for making public performances that engage local sites through the body. Students will encounter site-specific techniques drawn from dance, performance art, and sculpture, as well as interdisciplinary decolonizing methods for doing place-based research. The class culminates in collaborative performance projects based on extensive research with a local site. This course is open to all who are interested in developing embodied methods of engaging with place and the public.

TAPS 1281E. Directing Theory and Practice.

Directing Theory and Practice is a hybrid academic and studio class designed to introduce students to the history, theory, and practice of the director's craft. Readings on the theoretical/practical methods of direction are examined closely in class discussions and directing projects. All students must serve as actors and directors throughout.

TAPS 1281F. Choreography ONE: Dancemaking Pre-Classic to Post-Modern.

This course introduces students to 20th century American choreographic methods. Drawing from key texts, improvisational games and dance scores, "Choreography ONE" examines influential choreographic pedagogues alongside major figures of Western dance history and key critical methods. Students will practice systems to make, discuss and critique dances while situating those modes in historical, cultural and performance context. All class members will receive optional lab time in the studio to respond to assignments and have the opportunity to partner with student lighting designers. This course will culminate in the performance of student work in the TAPS Fall Dance Concert.

TAPS 1281G. Queer Dance.

In this course we will study the intersections of dance studies and queer studies, in an inquiry into the emerging field of Queer Dance. What does dance do for queer studies? How does queer studies further dance studies? What constitutes dance as queer? Students will study, observe, examine, discuss, and at times participate in queer dance from a range of historical and global perspectives. Course readings are drawn from dance studies, critical race studies, gender and sexuality studies, and performance studies. Readings are complemented by screenings, movement exercises, and live performance. No prior dance or performance experience is necessary.

TAPS 1281H. Collaborations in Performance: Theory and Practice Moving Together.

This is a hybrid theory and practice course, where students will study and experiment with contemporary collaborative practices. We will investigate collaborations between people, disciplines, theories, practices, spaces, places, mediums, cultures, and institutions. Our readings and theoretical inquiries draw primarily from texts about dance-focused U.S. contemporary performance. Readings will serve as case studies for a series of collaborative projects and experiments. This course will culminate in a final paper and final performance study. Makers and collaborators of all disciplines are welcome. A curious, generous, and open approach to working with others is required. No prior dance or performance experience is necessary.

TAPS 1281M. Introduction to Costume Construction.

An introduction to the study and practice of core costume construction skills. Topics include basic machine, hand sewing and patterning techniques. Instructor overrides will not be provided until the start of class.

TAPS 1281O. Acting Outside the Box: Race, Class, Gender and Sexuality in Performance.

Examines the relationship between social and cultural identities and their representations in dramatic literature and performance. Students will be expected to read critical essays and plays, conduct research, and prepare to act in scenes that challenge the actor to confront the specifics of character and situation beyond the Eurocentric ideal. The goal is to strengthen the actor's ability to construct truly meaningful characters by removing any reliance of "type" and/or immediate "identification" with the characters they will portray. Open to Any Brown/RISD graduate/undergraduate student that has taken TAPS 0230/Acting or the equivalent. Students should be aware that this is a hybrid Research and Performance class which may be counted as either a Performance Studies/Theatre Arts course for credit. Instructor Permission is Required. Interested students should attend the first class meeting in order to apply.

TAPS 1281Q. Introduction to Critical Dance Studies.

Critical dance studies centers dancing bodies as integral to various social, cultural, and political identity-making practices. In this course students will study, observe, examine, discuss, and at times participate in popular, classical, and social dance forms from a range of historical and global perspectives. Our driving inquiries include: How does dance travel and transform through time and space? How does dance produce identities? How does dance complicate notions of authorship and originality? Course readings are drawn from dance studies, critical race studies, gender and sexuality studies, and performance studies. Readings are complemented by screenings, movement exercises, and live performance.

TAPS 1281S. The Precarious University (HMAN 1970E).

Interested students must register for HMAN 1970E.

TAPS 1281T. Native Americans in the Media: Representation and Self-Representation on Film (ETHN 1890G).

Interested students must register for ETHN 1890G.

TAPS 1281W. Arts and Health: Theory.

This course focuses on current research on and practices in arts and healing, with an emphasis on dance and music for persons with Parkinson's Disease (PD) and Autism (ASD). Includes guest lecturers, readings, field trips, and site placements. Admission to class will be through application in order to balance the course between self-identified artists and scientists and those primarily interested in PD and those primarily interested in ASD. Enrollment limited to 30.

TAPS 1281X. Costume Design.

To provide instruction in the basic techniques of theatrical costume design. This will include: figure drawing; how the elements and principles of design relate to and are utilized in costume design; collaboration; script analysis; research methods; costume design process; character analysis; the function and purpose of costumes in theatre and an introduction to costume history. Emphasis of this course will be on the process of how to design, how to think like a designer, and how to communicate as a designer. This course is intended to lay the foundation for further study while empowering students to actively engage as costume designers in productions on campus.

TAPS 1281Y. Art and Activism.

Using the fundamentals of storytelling acquired in prior theatre courses as the foundation, this course will examine and put into practice the ways we as artists can engage in political and social activism and express our points of view with and through established/published works.

TAPS 1281Z. Arts and Health: Practice.

This course focuses on the application of current research in neuroscience, education, narrative medicine, and best practices in the arts for persons with neurological disorders. Through site placements, students provide arts experiences (primarily dance and music) for persons with Parkinson's Disease (PD) and Autism Spectrum Disorders (ASD). The course also includes guest lecturers, readings, curriculum development, analyzing and developing research methodology, ethnographic research, and planning of and participation in a convening of artists, scientists and educators in an intergenerational exploration. Completion of TAPS 1281W highly recommended, but course may be taken with no prior experience in science, dance or music.

TAPS 1285. Film Acting I.

This intermediate acting class is designed to introduce and develop the tools necessary for acting on camera; to examine the application of the screenplay as a blueprint for the finished film; and to begin the process and demands of working under limited and quickly changing conditions. Utilizing an extensive library of screenplays, the class will study film scene analysis and preparation, pro-active choice, and heightened connection. The course will culminate in the filming and discussion of one scene and one monologue. This course is a prerequisite for TAPS 1286 Film Acting II.

TAPS 1286. Film Acting II.

This advanced acting course is designed as a practicum that will implement the analysis and acting tools learned in TAPS 1285 - Film Acting I. Utilizing an extensive library of current screenplays, students will develop and hone their ability to analyze scenes from film and television. Students will spend the majority of class time filming, viewing, and evaluating the on-camera acting work.

TAPS 1290. Advanced Costume Design.

Costume design and rendering approaches to various genres of performing arts, including opera, musicals, and dance. Designed for the serious student of theatrical design. Advanced work on rendering emphasizing character, practicality, line, form, and color. Lab required.

TAPS 1300. Advanced Set Design.

The examination of the working relationship between designer and director. An emphasis on the design abilities needed to communicate varied visual approaches. Developing the creative, theatrical vocabulary needed to turn a director's vision into a fully articulated set design. A substantial amount of plays will be read and researched. Drafting and model rendering techniques will be applied. Prerequisite: TAPS 1280F. Instructor approval required prior to registration. Enrollment limited to 10.

TAPS 1310. Advanced Modern Dance.

This course is designed for students with several years of dance experience in any genre. The purpose of this class is to endow students with technical mastery of current contemporary movement vocabularies, with emphasis on Release Technique and Bartenieff Fundamentals. Enrollment limited to 40. S/NC.

TAPS 1311. Dancers' Choice: Improvisational Frameworks for Intermediate and Advanced Movers.

Learning Goals: - The intention of this class is to practice complex improvisational dance frameworks within a cohort of experienced movers. Students must have previously completed at least one movement technique classes before enrolling. - To hone improvisation techniques (with emphasis and guest master teachers instructing) on Contact Improvisation and Forsythe Improvisation Technologies, in anticipation of potential performance for live audiences. - To challenge and expand students' memory, capacity for rhythmic complexity, competence and comfort holding multiple, simultaneous, and occasionally contradictory game parameters. - To foster a professional work ethic that can withstand abundant physical, emotional and organizational challenges.

TAPS 1312. Contemporary Dance Forms - Intermediate/Advanced Studio.

Three times per week, we will come together for rigorous dance practice based in release techniques, contemporary floor work foundations, and somatic and improvisational modalities. Designed to build strength, efficiency, and inspire a large, expressive way of moving through a three-dimensional sense of the body, our work will include movement research from the practice of Contact Improvisation, choreographic/compositional explorations, and through challenging contemporary phrase work. The course has no formal pre-requisites. Students enrolling should have a degree of comfortability replicating phrase material as well as basic rolling, meeting the floor, and inversions. If in doubt, please shop the class ask questions.

TAPS 1315. Digital Design for the Theatre.

A comprehensive introduction to the use of two-dimensional computer aided tools to realize scenic design elements and diversify the designers' visual vocabulary. A thorough understanding of digital work-flow from concept development, input, to computer aided design and output will be achieved. The course will cover: Introduction to Drafting with Auto-cad and plotting, Introduction to the use of the Adobe Creative Suite including Photoshop, Illustrator and InDesign as they relate to set design and implementing designs in full-scale. We will also review Typography and basic Graphic Design elements and how they relate to scenic elements, scaling and technical applications.

TAPS 1320. Choreography.

Designed for students with previous experience in dance practices, this course explores the process of making dances and the development of individual choreographic voice. Through improvisatory research in sensing, translation, non-hierarchy, structure, tone, and task, students will explore where movement is sourced and how to pattern with the resulting materials in time and space. The course will focus primarily on creation in solo and duet frameworks, but studio time will also be spent composing together in ensemble. Building skill in observation, critical analysis, self-evaluation, and reflection on creative process will be central to this work, and course participants will be supported in creating choreographic work for inclusion in the Fall Festival of Dance. Enrollment limited to 15 students. S/NC.

TAPS 1325. Experiments in Dance, Movement, and Performance.

This course introduces students to the histories and methodologies; meanings and functions of experimental choreography in specific artistic, social, and political contexts. We examine the ways in which choreographers and dancers have experimented with the traditions and forms of dance, by mapping a series of interdisciplinary gestures in relation to creative and critical fields. The course builds on a series of composition exercises and creative assignments to culminate with the making and showing of a dance performance. No experience of dance is required, but an interest in thinking and experimenting with the roles of dance across art, society, and academia.

TAPS 1330. Dance History: The 20th Century.

An exploration of the major figures and trends in modern dance. While the main focus of the course is on American Dance, attention is given to earlier European and other dance traditions that have contributed to the American dance heritage. May be of particular interest to Americanists, art historians, dancers, and theatre majors. No prerequisites are required.

TAPS 1330A. Way Too Much And Not Nearly Enough: Making Performance in The Post-Post-Dramatic.

The course will be an experimental studio, mixing theory and practice, to formulate a position beyond what's known in Europe as "post-dramatic theater." We will oscillate between discussion, assignments and practical studio work, learning from others and making our own work. The foundation will be addressing artists, writers and pop phenomena internationally with an emphasis on Europe and Israel. Building on these, the practical aspect will comprise of physical group work and home assignments. In learning to compose entanglements between image, sound, word, and space, we will sharpen our tools for reimagining the contemporary performative condition. In the final stage of the course, students will create their own performative études. Instructor permission required.

TAPS 1334. Contemporary Partnering.

This course investigates the dynamic potential of moving in relationship to other dancing bodies. In an environment that fosters physical play and consent-focused experimentation, we will grow our ability to dance responsively through deep listening and expansive physical sensitivity. Through the practice of Contact Improvisation and by learning pre-composed choreographies, we will explore the technical foundations of weight sharing, balance and counterbalance, tonal modulation, rolling point of contact, leverage and fulcrum, and shared momentum. Focusing on our choice-making within the dance, we will attend to how we receive and respond to new stimuli and ultimately affect space and our partners. Together we will build a room that supports effective communication and a robust research space for all participants. This course can be repeated for credit. Previous experience in contemporary dance recommended. S/NC.

TAPS 1335. Movement Theory: Choreography, Modernity, Subjectivity.

This seminar examines theatrical choreography as a defining art of western modernity. Drawing from the publication of *Chorégraphie* in 1700—from the Greek *khoreia* (dancing) and *graphein* (writing)—as a system of dance notation, the course will follow the transformation of the relation between the score and the event; writing and moving; philosophy and dance from the Baroque period to contemporary experimentations. This course seeks to enable students to apply a diverse set of languages and concepts to the study of dance; to equip them with the critical tools through which to experience, analyze, and write on dance as a culturally meaningful practice.

TAPS 1337. Introduction to FlexN Dance & Movement.

This course is an open level course that focuses on the history, foundations such as Dancehall and dance movement vocabularies of the international street dance style Flexn. Students will also be introduced to techniques from other dance styles that help broaden the experience. Engaging with this vernacular dance practice, students will build improvisational skills, develop rhythmic abilities, and begin learning some techniques to storytell through dance and movement. Students will learn ways to artistically respond to their world & past/current events, individually and collaboratively. These skills and conversations help students understand the relationship between the self and the communal.

TAPS 1338. Advanced FlexN.

After students have learned the history, foundation, and fundamentals of FlexN in the previous course, they will now work on execution of this style and continue to build on storytelling through dance now that they have touched the surface of an entirely new dance vocabulary. Elevating, developing, and exploring with this new dance vocabulary and culture to use dance as an outlet to tell a story in order to be heard, to bring awareness to different topics both personal and world events, to express stored emotions, and/or to simply have a release from their usual everyday routine and use their body in ways they never have before.

TAPS 1339. Embodied Anatomy.

This course introduces students to human anatomy through various modes of creative exploration. By utilizing somatic practices such as yoga, pilates and dance- students will gain a better understanding of "how and why" movement occurs. Class time will be split between discussion and experiential activities which will include movement based exercises and drawing. We will take an in-depth look at the human form- touching on injury prevention and how we can bridge the body/mind connection.

TAPS 1340. Dance Styles.

Students will be introduced to non-traditional and contemporary social dance practices. The class, which is ideal for students of all experience levels -- beginning, intermediate, and advanced -- features guest instructors who will bring their expertise and training to bear in the studio. Focus will be on dances from the Global South as well as from people of color in the US. Key tenets include; improvisation, polyrhythm, and geography. Students will learn to move their bodies in new directions.

TAPS 1340A. Native American Theatre: from Traditional Storytelling to the Modern Theater Movement.

This course examines Native American Theatre from origins of traditional storytelling to politics of race involved in Native theatre today. First, we will examine traditional storytelling from creation stories in literature and theatre. Second, we will study interactions with Europeans with the Doctrine of Discovery, Native American boarding schools systems, outlawing of traditional culture and how Native culture survived in these systems. These topics will be explored through Native literature and Native plays. Next, the course considers how the public, and the media, support the distortions of Native images. Finally, the course concludes by examining the modern era of Native Theatre and the Declaration of the Rights on Indigenous Peoples. Instructor permission required.

TAPS 1341. Introduction to Ballet.

An introduction to the classical ballet vocabulary and basic movement patterns. We will focus on maintaining correct body alignment while increasing fitness and coordination, and develop a deeper appreciation for ballet in the context of the liberal arts. No prior ballet or dance experience is necessary for this course, but dancers who would like to brush up on basics are also welcome.

TAPS 1342. Ballet II.

This course is designed for students who have some dance background, or who have successfully completed Introduction to Ballet (TAPS 1341). Apart from working on core strength, alignment, and flexibility, we will focus on faster paced movement sequences, and prepare for turns and jumps appropriate for an advanced beginner level.

TAPS 1343. Ballet III (Intermediate/Advanced Ballet).

This course is designed for students who have successfully completed Ballet II (TAPS 1342) and kept up with their dance conditioning, or for students with previous ballet experience at an advanced beginner/intermediate level. The main focus of this class is on center exercises, especially on pirouettes and petit, medium and grand allegro appropriate for an intermediate level.

TAPS 1344. Advanced Ballet with Repertory.

This advanced level half-credit ballet course will provide students with the opportunity to continue to refine their ballet technique while also exploring new and/or iconic repertory. We will focus on advanced barre and center work for the first part of the class with continued emphasis on placement and accuracy while increasing speed and level of difficulty. For the second half of the class, we will work on wide-ranging ballet repertory which will culminate in a dance performance. Instructor override required. This half-credit course can be repeated for credit. Mandatory S/NC.

TAPS 1345. Dance and the Visual Arts after 1960: Performing the Everyday, Choreographing the Museum.

This course examines the mutual influences between the fields of dance and the visual arts since 1960. It surveys a series of artworks spanning early minimal art, happenings, and Judson Dance Theatre to contemporary global experiments in choreographing museal spaces. How can we map the "close correspondence" between choreographic and visual art practices across the performance of pedestrian bodies, dancing sculptures, and relational encounters? Students are invited to experiment collectively with dance archiving methodologies, to write about a performance event in the museum context, as well as to research the critical intersections between dance and art history; performance and curatorial studies.

TAPS 1347. The Viewpoints Technique: The Moving Body in Relation to Time, Space, and Ensemble.

The Viewpoints Technique systematically breaks down the elements of TIME and SPACE, providing a precise language for makers to communicate about dynamic staging and offering performing artists the tools to direct themselves more successfully from within composition. An indispensable practice for ensemble awareness, the Viewpoints Technique invites us to think more expansively about composition across performing arts disciplines. All performers can benefit from this rigorous investigation of time and space and the pursuit of cohesive ensemble. Open to undergraduate and graduate practitioners.

TAPS 1348. Contemporary Dance Studio Project 1.

In this advanced technique and repertory course, we will engage in a rigorous studio practice based in post-modern dance modalities. Somatics, release techniques, contemporary floorwork foundations, contemporary partnering, and improvisatory frameworks are scaffolded to support the ongoing technical growth of the student practitioner and of a robust undergraduate company in performance. Designed to build strength, efficiency, and inspire a large, expressive way of moving through a three-dimensional sense of the body, our work will include movement research from the practice of Contact Improvisation, choreographic/compositional explorations, and through challenging contemporary phrase work. CDSP 1 supports ongoing technical growth and is repeatable for credit. Enrollment is by permission of instructor. S/NC.

TAPS 1349. Contemporary Dance Studio Project 2.

In this advanced technique and repertory course, we will engage in a rigorous studio practice based in post-modern dance modalities. As the companion course to TAPS 1348 CDSP 1, during this semester we will focus on guest choreographies. Somatics, release techniques, contemporary floorwork foundations, contemporary partnering, and improvisatory frameworks are scaffolded to support the ongoing technical growth of the student practitioner and of a robust student company in performance. Designed to build strength, efficiency, and inspire a large, expressive way of moving through a three-dimensional sense of the body, our work will include movement research from the practice of Contact Improvisation, choreographic/compositional explorations, and through challenging contemporary phrase work. CDSP 2 continues to support ongoing technical growth and is repeatable for credit. Enrollment is by permission of instructor. S/NC.

TAPS 1350. Dance Performance and Repertory.

Half course credit each semester. A study of dance repertory through commissioned new works, reconstruction, coaching, rehearsal, and performance. Guest artists and consultants from the American Dance Legacy Institute. Enrollment is by audition. Limited to skilled dancers. Instructor permission required. S/NC.

TAPS 1355. Indian Classical Performance: Natyasastra Theory and Practice.

Natya Prayoga is a theory-practice course of movement and contemplation based on Indian Classical Performing Arts and the principles of yoga. This course will explore the study of Natyasastra as a text for application, as well as, the intersection between theory and practice, with special reference to the contemplative aspects of performance. Students will review and analyze the text with explicit and implicit inferences. Thus, drawing parallels between the basic principles of performance in the Indian traditions and yoga. Analysis of the basic tenets of Natyasastra exploring the physical training routines, for stylized representation of movement and mimesis.

TAPS 1360. Dance Performance and Repertory.

A study of dance repertory offered through commissioned new works, reconstruction, coaching, rehearsal, and performance. The course will explore the phenomenology of dance, audience-performer connection, theatre production and dance criticism, among other topics. Enrollment is by audition. Limited to skilled dancers. S/NC.

TAPS 1370. New Works/World Traditions.

As an Engaged Scholarship course, New Works develops new dance theater pieces that are rooted in research in Mindfulness, Somatic Studies, Mande Dance, Contact Improvisation, Butoh and Contemporary Vernacular dance forms. Guest artists from Japan, China, West Africa, the USA, and local community partners co-create new theatrical pieces for the concert stage. May be repeated for credit. S/NC.

TAPS 1380. Mise en Scene.

A reconstruction of the idea of a stage and a frame on the evidence of theory, novels, plays, and especially films-the seen and the unseen-using the organizing strategies of mystery. Art's "impossible" brokering of the real and the representational in a dialectic of space is considered from a multiplicity of perspectives in diverse works. Enrollment limited to 20. Instructor permission required.

TAPS 1390. Contemporary Mande Performance.

This course examines the celebratory, life-cycle, club, and street party performance forms from the Bambara, Malinke, Bobo, Khassonke and Wasalu peoples of Mali, West, Africa. These embodied performance traditions are studied alongside their specific musical and social traditions and oral histories. Meditation, films, readings, guest artists and collaborative research projects will be introduced to help facilitate a deeper investigation of contemporary Mande society and its artistic production. Students MUST register for one of the Movement Labs, and all primary meeting times. Students must attend the first class and fill out an application.

TAPS 1400. Advanced Performance.

An investigation into abstract and nonlinear modes of performance, working from fragmentary and recombined narrative, dramatic, and found sources. Seeks to evolve a conceptual approach to performance of the individual actor-director-writer through supervised and independent exercises and projects. Prerequisite: TAPS 0230. For juniors and especially seniors. Enrollment limited to 20.

TAPS 1410M. Shakespeare and Philosophy (COLT 1410M).

Interested students must register for COLT 1410M.

TAPS 1415. 13 Positions.

A lab exploring the physical, aesthetic and performative relationship of the body to a student's cultural cosmology. We will also look at certain (so-called) traditional aspects to successful forms (a performance, a dance, a film-video, a piece of writing, a painting, sculpture...) and then attempt to break it down and reframe this tradition with a discipline (rigor) that evokes accidents and the inexplicable. A lab that examines how the creative process is thought about, considered and looked upon, watched, inside and out. A fresh outlook, (shared) labor and or proposition on how to construct/deconstruct the right/wrong/right art work.

TAPS 1425. Queer Performance.

This seminar will examine the many meanings of queer performance. We will consider queerness as it is performed in a range of aesthetic genres— theater, music, dance, performance art, digital media—as well as in everyday vernacular contexts. We will explore how the interdisciplinary academic field of queer studies has turned to performance and performativity as key modes through which gender and sexuality are expressed. The class will place a particular emphasis on queer of color, trans*, and crip/queer approaches and cultural practices, addressing how queerness intersects with other axes of social difference, including race, class, and ability.

TAPS 1430. Russian Theatre and Drama.

An overview of Russian theatre and drama from the 18th century to the late 20th century. Emphasis on plays as texts and historical documents, and on theatrical conditions, productions, and innovations. All readings are in English. Russian area studies concentrators are encouraged to enroll. Instructor permission required.

TAPS 1450M. The Archival of Gestures (MES 1450).

Interested students must register for MES 1450.

TAPS 1480. Sweating Infrastructure: Cultures of Support in Dance and Live Performance.

As the income gap in the US has grown, the possibility of a career in the performing arts has become increasingly less viable for a significant percentage of the population. Issues of arts funding, labor, and professionalization have been debated across academic disciplines and by arts organizers who experience these instabilities firsthand. Researching infrastructure through a dance studies lens, this course reframes the role of embodied action, interaction and assembly in sustaining enabling environments for the arts. By reviewing literature and interviewing arts professionals, this project evidences how people “sweat” the problem of sustaining art work differently on sociocultural grounds.

TAPS 1485. The Activist Body.

The current explosion of activist activity on and beyond college campuses has been called a “movement moment” (McCarthy, 2017), signaling an urgent need to address what it means to be a politically responsive body in the world today. This course examines activism as a topic and performance practice rooted in the body's capacity to disrupt the political status quo. Building from the growing literature on protest and social movement in dance and performance studies, students will theorize activism and agentic embodiment, analyze cultural events that claim activist intentions, and body forth activist strategies and manifestos in weekly movement sessions.

TAPS 1500A. Advanced Playwriting: Invitation to the Devout Life..

A practice-based class designed to promote prompt, connected and original writing for the live environment. We move through the regular practice of assorted exercises to the development of a completed script by the end of the term. Inquiry is guided by selected readings in esthetic theory, philosophy and theology (Anne Carson, St. Vincent de Paul, Simone Weil, others). Previous playwriting experience preferred. Instructor permission required.

TAPS 1500H. Advanced Playwriting.

This course brings together students of diverse writing backgrounds to build conversation and experimentation around multiple narrative techniques. Classes include craft exercises as well as readings from a range of texts—all to look deeper at how story-worlds are built. Writers create original theatrical works, and through workshop-style classes discover their own particular voice and what makes it unique and necessary. Open to graduate and undergraduate students. Contact instructor to learn more.

TAPS 1500I. Screenwriting.

Screenwriting is a course designed to familiarize the neophyte screenwriter with the basic principles of writing for the silver-screen. By closely examining produced films, in-depth readings of both good and bad scripts, and through the writing of our own, we will gain an understanding of how screenplays are written, and written well. The course will provide a foundation in the basics of the three-act structure, dramatic action, character arc, the revision process, and an introduction to the business of screenwriting. By the end of the semester we will have produced and polished a 10 page/minute manuscript. Enrollment limited to 17.

TAPS 1500J. Script Adaptation.

This class aims to develop skills and techniques for the creation of new dramatic works based upon previously published or performed material. The unit explores the process of creating a script from previously published source material. To achieve this goal, we will explore the problems inherent in creating dramatic material from source material of various forms. The module will enhance core skills in scriptwriting, dramaturgy and script analysis. Weekly classes will include lecture and discussion, readings, film screenings and writing exercises. Enrollment limited to 17.

TAPS 1500L. Acting Together on the World Stage: Writing and Political Performance.

Practical research in art for social change, with an emphasis on writing and composition, resulting in a series of solo and group devised performances (or well articulated proposals). Each week, in-session writing and devising exercises, coupled with a discussion of critical readings and case histories, build to projects that may be constructed solo or in small groups. Final projects may take the form of carefully constructed, achievable plans for long-range implementation. Students will be required to attend special workshops, field trips, and performances as scheduled through this semester; this schedule will be available at the first class. Enrollment limited to 12.

TAPS 1500M. Advanced Playwrighting: Guhahamuka.

Guhahamuka is a Kinyarwanda word meaning “breathlessness,” sometimes applied to the wordlessness that befalls the survivors of trauma. We will progress through a series of graduated exercises design to work-out the fundamentals of writing for the live encounter, with an emphasis on the uses of testimony, and language that pushes into spaces where language doesn't fit, doesn't belong, fails, converts itself to different energies. How a writer's technique images spiritual practice, and avails of the useful impossibilities of incarnation and transcendence. Taking on a practical language from contemplative traditions as means of ordering the writer's craft.

TAPS 1500N. Advanced Undergraduate Playwriting: Experiments in Time.

For centuries, from Pedro Calderón to Ntozake Shange and Caryl Churchill, playwrights have manipulated time to tell stories and create dynamic play-worlds. This class will challenge playwrights to build non-linear time into their plays and use specific approaches to "time-telling" to supercharge content. Students will read plays, essays and engage in time-based theater experiments to explore perspectives that challenge our human-ego-driven experience of time. How is time embodied? How are we programmed to experience time as a Western capitalist value system? How can we use non-linear time in our plays as a radical political act? Students will complete 3 short projects during the course, including two one-act plays and one piece of site-specific or performance art.

TAPS 1500P. Asian American Theater Making.

This course frames Asian American theater-making as a dynamic assertion of presence, autonomy and complexity against and beyond a backdrop of cultural, legal and historical exclusion, erasure and assimilation in the United States. In investigating theatrical practices and contexts made about, by and/or for Asian Americans, we explore the in/stability of identity as embodied sites of ambivalence, tension and solidarity. How do Asian American theater artists integrate, reject and transcend the myriad expectations of identity and representation? As scholars and artists, we will read plays, witness and create performances, discuss critical and historical essays and artifacts, and interact with active practitioners across a wide spectrum of Asian American theater-making. Open to advanced undergraduates/graduate students.

TAPS 1500R. Auditioning for the Camera.

This course focuses on learning to audition for scenes and scripts from film and television from the vast array of the entertainment industry. Work will cater to each student's individual needs, choosing material that both strengthens and stretches them. We will work on preparing scenes for an audition: in person, on zoom, self-tapes and cold auditions. We will discuss over-preparing and under-preparing and how to dress and present yourself. This work should complement and enhance previous acting studies and help you with an understanding about the nuanced shifts actors need to make when auditioning for the camera, and the difference between auditioning and playing the role. Your professor is a working actor who will provide examples of what she is teaching in real time. The semester will culminate with 3 audition pieces from both media filmed for your use. S/NC

TAPS 1500S. Performance and Media After Reality.

This class considers crises of "reality" in theatre, photography, television, and digital media. Reality media—like realist drama and reality television—and reality-breaking technologies, from electric stage lighting to the social internet, stage worlds in which some subjects are more real than others. We will ask: how do works articulate reality? How do assertions of reality support political life? Can alternate realities challenge carceral and colonial realisms? What does it mean to be seen as, or to be, unreal?

This is a discussion-based class with ongoing creative and critical response work. Enrollment will be determined at the first session.

TAPS 1500T. Liberatory Strategies for Whole Artist Collaboration.

This first year MFA course serves as foundational curriculum for fostering and sustaining anti-racist and generative learning spaces shared by MFA Actors, Directors and Playwrights and other key student collaborators. This course seeks to introduce and confirm a set of working shared language, analysis and practices anchored in consent-affirming and anti-racist commitments necessary for the theater work of embodied story-telling and collective world-building. How do artists create across, with and at times against differences in identities, lived experiences, imaginative aesthetics and contexts? How can artists discern between generative and harm-based conflict, enacting care, rest and accountability within collaborative projects and the larger theater ecosystem? Open to MFA graduate students and advanced undergraduates by permission.

TAPS 1510. Inventing Directing.

"Inventing Directing" is a course that deals with how a director gets thought into stage space via: different emphases communicated to actors; attention to the life of objects; exploration of the languages of stage space; accessing personal experience to deepen point of view; drawing upon film, the practical application of theory, and literature; vertical thinking; and spatializing time. The course will involve practical exercises and work on both scenes from plays and on material drawn from other sources.

TAPS 1511. Directing Workshop.

This course is designed to introduce students interested in Directing for the Stage to some of the fundamental aspects of the craft including: Staging, Dramaturgy and Textual Analysis for Production, Working with Actors, and Designers. Students will be expected to collaborate with each other throughout the process by serving as actors or technicians for in class projects. The final project will require directors to find actors to perform in their final scenes.

TAPS 1512. Directing Theory.

This course is designed to expose students interested in directing to multiple approaches to the craft. While there are some fundamental skills associated with the craft, how various director's achieve their creative objectives is as varied and particular. Students will read historical accounts, view performances, and write essays about the material covered in class. Each student will complete a directing project that employs one of the specific approaches explored. We will explore methodological approaches to directing as articulated by Bertholdt Brecht, Vsevolod Meyerhold, Anne Bogart, Moises Kaufman, Robert Wilson, Simon McBurney, Katie Mitchell, Laurie Carlos, and Julie Taymor.

TAPS 1513. Solo Performance.

In the words of the late great Robbie McCauley: "I'm a solo performer but I do not perform alone." There is a long history of solo performance that includes iconic figures like Whoopi Goldberg, Spaulding Grey, Lily Tomlin, Peggy Shaw, and Holly Hughes to name a few. What does it mean to "make art out of the fabric of one's life?" This course is designed to introduce students to the pioneers of the form as well as to engage them in the process of creating a solo performance. Students will develop solo pieces to be performed at the end of the term to an invited audience. This course is open to artists from all genres that are interested and curious about the form.

TAPS 1520. Seminar in Theatre Arts.

Seminar designed for senior theatre arts concentrators, required during Semester VII. Topics focus on career planning and theatre arts subjects not dealt with in other courses. Enrollment limited to seniors.

TAPS 1540. Bold Bodies: Race in Feminist & Queer Performance (GNSS 1540).

Interested students must register for GNSS 1540.

TAPS 1600. Dramaturgy.

This course is an introduction to dramaturgy and script analysis for advanced undergraduates. It will introduce a variety of plays and critical approaches to dramatic texts and performances with emphasis on culturally divergent dramaturgies, adaptation and textual analysis for performance.

TAPS 1610. Political Theatre of the Americas.

This course explores political theatre and performance in Latin America, the US and Canada. The primary concern will be the use of performance in indigenous rights, queer rights, and gender equity campaigns as well as general critiques of socioeconomic inequity. The course examines the strategies used by actors in theatrical performances, performance art, and political protests that use the tools of performance. Exploration is of the rich relationship between politics and performance. There are no prerequisites, but one course in either Latin American Studies or Theatre and Performance Studies is recommended.

TAPS 1630. Performativity and the Body: Staging Gender, Staging Race.

This course examines how we develop and interrogate different meanings around our bodies through performance practices in everyday life and on stage. Specifically, we analyze how race and gender are regulated, reinforced, reworked, and subverted through embodied modes of performance. We explore how raced and gendered bodies are constructed, reconstructed, and deconstructed through everyday performances of self from fashion to food to surgery. We will also examine works by playwrights, visual artists, and theatre artists who deploy performance practices to make, unmake, and remake historical, social, and political understandings of our bodies as raced and gendered.

TAPS 1640. Theatre and Conquest in Greater Mexico: From Cortes to NAFTA.

Explores the intimate relationship between theatre and conquest in the Americas as contained in missionary accounts, plays, performances and visual art from Cortés arrival to the present. Students will analyze plays and performances that stage the Spanish Conquest, consider the theatrical procedures of the conquest and examine theatrical representation as a methodology of conquest in the Americas.

TAPS 1650. 21st Century American Drama.

Course is designed to familiarize students with contemporary American playwriting from 2000-2005. We will explore how these plays reflect our current moment with attention to conceptions of gender, sexuality, national identity, trauma and memory. Playwrights may include Jorge Cortinas, Sarah Ruhl, Tony Kushner, Juilana Francis, Sabina Berman, and Carl Hancock Rux.

TAPS 1670. Latinx Theatre + Performance.

This course will be an introduction to Latino/a theatre concentrating on the following themes: borders, diaspora and exile, political and personal identities, sexuality, gender and violence, and latino re-imagination of U.S. and Latin history. We will read Chicano/a, Cuban American and Nuyorican drama and performance art. No prerequisites.

TAPS 1680. Performance, Politics, and Engagement.

A survey course in engaged and political performance; this seminar investigates social practice, political theatre, and dance as points of entry into contemporary questions in ecology, ethics, gender, racialization, sexuality, perception, labor, and value. Course materials include artists' and scholars' writings as well as scores, scripts, theoretical writings, photographs, films, reenactments, and performance procedures. Assignments include research projects on art and social movements, performance tasks, and scholarly writing projects. An existing performance or arts practice is not required. The course may be especially relevant to TAPS students, the Engaged Scholars Program, and Visual Art. There are no prerequisites.

TAPS 1690. Performance, Art, and Everyday Life.

Provides an introduction to performance-based art. Some knowledge of the historical avant-garde is required. The class will explore site-specific work, time-based work, life art, body art, instruction art and a variety of intermedial artwork. Theories of "theatricality" and "performativity" will be explored as will expressive properties of repetition, excess, mimesis, banality, mobility, framing, failure and shock. Enrollment limited to 16.

TAPS 1700A. Voices Beneath the Veil (AFRI 1110).

Interested students must register for AFRI 1110.

TAPS 1700B. African American Folk Traditions and Cultural Expression (AFRI 1120).

Interested students must register for AFRI 1120.

TAPS 1700C. Advanced RPM Playwriting (AFRI 1050A).

Interested students must register for AFRI 1050A.

TAPS 1700D. Intermediate RPM Playwriting (AFRI 1050D).

Interested students must register for AFRI 1050D.

TAPS 1700E. Introduction to Post-Colonial African and African Diasporic Theatre (AFRI 1050H).

Interested students must register for AFRI 1050H.

TAPS 1700G. Roots of African American Fiction: Oral Narrative through Richard Wright (AFRI 1050M).

Interested students must register for AFRI 1050M.

TAPS 1700H. Art and Civic Engagement: Creativity/Reality (AFRI 1050P).

Interested students must register for AFRI 1050P.

TAPS 1700I. RPM Playwriting (AFRI 1050E).

Interested students must register for AFRI 1050E.

TAPS 1700J. Musical Performance and Theatricality (MUSC 1680).

Interested students must register for MUSC 1680.

TAPS 1700K. Site-Specific Writing in Brown's Historical Spaces (AMST 1570).

Interested students must register for AMST 1570.

TAPS 1700L. African American Musical Theatre (MUSC 1905D).

Interested students must register for MUSC 1905D.

TAPS 1700V. Voices Beneath the Veil (AFRI 1110).

Interested students must register for AFRI 1110.

TAPS 1710A. Open Source Culture (MCM 1700N).

Interested students must register for MCM 1700N.

TAPS 1710B. Radical Media (MCM 1700P).

Interested students must register for MCM 1700P.

TAPS 1720. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).

Interested students must register for ENGL 1900R.

TAPS 1740. Artful Teaching: Intersecting the Arts with Foreign and Second Language Acquisition (POBS 1740).

Interested students must register for POBS 1740.

TAPS 1751. Choreodaemonics.

The phrase "choreodaemonics" is a contraction of "choreography" (the art of bodily movement through space and time creating meaning) and "daemon" (a background computational process). Within this rubric, this seminar seeks to explore the creative opportunities and political risks of creative production through emerging technologies of AI, robotics and virtual presence. Most urgently, "Choreodaemonics" examines the ideological, technological and aesthetic collisions wherever humans collide with emerging computational systems. Students will consider the histories and processes of creative production and technological development, and ultimately investigate the performative consequences of embodiment by computational agents through robots, avatars, games, software, customer service platforms and social media.

TAPS 1900K. Reading Sex (ENGL 1900K).

Interested students must register for ENGL 1900K.

TAPS 1900R. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).

Interested students must register for ENGL 1900R.

TAPS 1970. Independent Reading and Research.

Intensive reading and research on selected topics arranged in terms of special needs and interests of the student. A written proposal must be submitted to the instructor and the chair of the theatre arts department before the project can be approved. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

TAPS 1970P. Theatre Practicum.

This half-credit course offers the practical study of theatre through participation as a member of the production team of a Sock and Buskin theatre or dance production. Regular rehearsals, coaching and mentorship by department faculty and staff, participation in technical rehearsals and performances are required. Enrollment is available after auditioning/assignment of roles. Each student will be assigned an advisor/mentor for this process. This half-credit course offering is appropriate for students engaging in production projects that are smaller in scale or shorter in duration than befitting of the one-credit Theatre Practicum course offering, TAPS 1251P. S/NC only.

TAPS 1971. Digital Media and Virtual Performance (MUSC 1971).

Interested students must register for MUSC 1971.

TAPS 1971M. Digital Media and Virtual Performance (MUSC 1971).

Interested students must register for MUSC 1971.

TAPS 1990. Senior Honors Thesis Preparation.

To be taken by all students accepted into the theatre arts honors program. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

TAPS 2001A. Intertextuality, Interconnectivity: A Performative Sonnet Approach (ARTS 2001).

Interested students must register for ARTS 2001.

TAPS 2010M. Digital Performance (MUSC 2210).

Interested students must register for MUSC 2210.

TAPS 2050. Dramaturgy.

This course will be an introduction to dramaturgy for MFA Actors, Directors and Playwrights and advanced undergraduates. The course will introduce a wide variety of play and critical approaches to dramatic texts and performances with emphasis on culturally divergent dramaturgies, embodied dramaturgy, adaptation and textual analysis for performance.

TAPS 2100. Seminar in Performance Studies and Theatrical Theory.

Key texts in Performance Studies and Theatre Theory selected from works by ancient, modern, and contemporary philosophers, dramatists, performers, and theorists. Covers basic methodological trends crucial to thinking about mimesis and alterity, acting and actants, identity formation and disidentification, decolonial theory and feminist theory in relationship to the study of performance, performativity, drama and theatricality. Enrollment limited to 20.

TAPS 2120. Revolution as a Work of Art.

A study of Russian revolutionary culture and new personhood, ca. 1905-1930, with readings from Russian fiction, philosophy, art criticism, dramatic and political theory, and cultural and theatre history. Topics include the revolution of the spirit, the culture of the future, iconography and spectacle, charismatic authority, and revolutionary terror. For graduate students and qualified juniors and seniors. All readings are in English. Those who can may read some materials in Russian. Enrollment limited to 20.

TAPS 2200A. Abstraction and Resistance.

A study of the uses of abstraction in modernist and postmodern theatre and drama, film, painting, and narrative fiction and of the engagement of resistance as a performative strategy for conceptualizing such nominally unframed and alogical texts. The works of selected theatre directors and playwrights, philosophers and theorists, novelists, filmmakers, and artists are examined and discussed.

TAPS 2200B. Neoliberalism and Performance.

This course will explore the relationship between performance (dance, theatre, performance art, public art) and Neoliberal economic and governmental policies and practices. We will place special emphasis on how the arts participate in modes of labor flexibility, globalization, entrepreneurship, governmentality and surveillance as well as how these forms critique these phenomenon. Critical readings will include political theory, play and performance texts and videos and economic theory.

TAPS 2200E. Historiography.

This graduate seminar is dedicated to a thorough examination of theater and performance historiography. The course will consider methodologies of writing about the past, concentrating on analyzing the writing of history and examining how historical information is obtained, imagined and disseminated in our field, where embodied practice is crucial to thinking. This course will necessarily consider how historiography is understood with the discipline of history as well as performance and theatre studies.

TAPS 2200G. Performance, Photography, and the Live Border.

What are the limits of approaching live performance as essentially ephemeral? What is at stake in the lines drawn between media histories and theatre histories that account for the "still"? Questions such as these will be posed across media as we explore histories of photography and tableaux vivant, as well as critical theories in performance studies, visual studies, art history, media studies, and theatre studies. We will look at images documenting violence, images re-presenting documented violence, and violence to documentary images in the course of a broader conversation about the "life" or "liveness" of the still. Enrollment limited to 20.

TAPS 2200I. Wittgenstein, Writing and Performance.

Performance is the ideal forum in which to discuss Wittgenstein's philosophy, especially as the latter involves rigorous close reading of the physical and metaphysical identities of words, thought and action in the construction of discernible and livable roles and courses of action and understanding within the given circumstances of the mysterious world into which we are born. Wittgenstein's aphoristic writing, which creates a poetic structure, along with the necessary incompleteness of Wittgenstein's thought expression and the wide range of philosophical interpretations of his work by numerous artists and theorists underscore the liveliness of Wittgenstein's writing as creative texts in themselves. Enrollment limited to 17 juniors, seniors, and graduate students. Instructor permission required.

TAPS 2200K. Digital Performance (MUSC 2210).

Interested students must register for MUSC 2210.

TAPS 2200N. Liveness: Performance and Neoanimism in Late Capitalism.

Has the "affect economy's" 24/7 live shifted medial maps distinguishing live from object arts? As animacy and inanimacy warp, do orientations to duration, participation, and relation shift? Can liveness extend to the Paleolithic in today's "new materialist" imaginary? If "Cinema is Dead," does it join theatre as a zombie form? Modernist "animism," "totemism," and "primitivism" provide a backdrop to recent returns to animism in Chen, Bennet, Latour and others. Does theatre's separation from ritual and possession demand rethinking via "relationscapes" and the critical turn to affect theory? Art/performance, theatre, cinema will be under discussion, from Euripides Bacchae to Gucci Bacchae.

TAPS 2200T. Who Else: mimesis, performance, psyche.

In this course, we'll read in, around, and against psychoanalytic theory to think about how theories of the subject, and especially of desire and pleasure, have intersected with ideas about aesthetics and performance. Throughout, we'll pay special attention to constructions of alterity—difference from the self—and how love, art and performance work in relation to different kinds of difference.

TAPS 2200Z. Embodiment, Materiality, and Cultural Production.

This course investigates embodiment as one of many materials engaged in contemporary art and performance practices. We will explore concepts of body/mind, the haptic, interiority, intersubjectivity, experience, spatiality, temporality, relationality, liveness, and futurity and how it occurs within a wide variety of cultural productions. Course readings are drawn from dance studies, critical race studies, gender and sexuality studies, performance studies, and museum and curatorial studies. Our theoretical inquiries will culminate in the practical experience of crafting and producing an exhibition and/or live public event. No prior performance or art-making experience is required, however, students with active art practices are encouraged to utilize this opportunity to create and present their own works.

TAPS 2270B. Performance in a Virtual World (MUSC 2270B).

Interested students must register for MUSC 2270B.

TAPS 2300. Pedagogy Seminar.

This half-credit course is designed to support MFA Playwriting students preparing to begin teaching the following year, as well as TAPS PhD students as they prepare to teach, begin to teach, or continue teaching. The intent is to offer a space for students to reflect on teaching, bring concerns, and offer each other feedback on pedagogical issues; to introduce resources (from Brown and not) that can help with teaching, both methodologically and practically; and to workshop concrete teaching tasks, such as building and executing lesson plans, grading, and designing syllabi. Students in the course will also observe classes taught by three other instructors during the semester.

TAPS 2300A. Graduate Seminar in Performance Studies: The Vulnerability Artist.

This graduate seminar in performance studies, open to students from all disciplines, will investigate practices of enduring, surviving, reimagining, parodying, and just plain grappling with the inescapable "vulnerability" of the body and the self. Rooted in the interdisciplinary ethos of performance studies, the seminar will use the aperture of the "Vulnerability Artist" (adopting a term used by the performance theorist José Muñoz to describe the work of performance artist Nao Bustamante) to survey foundational and recent scholarship on embodiment, disability, health and illness, mad studies and neurodiversity, psychoanalysis, and aesthetics, among other areas of inquiry. We will explore a range of theoretical frameworks and methodological approaches to vulnerability and consider how they relate to longstanding debates within performance studies. Students will write a culminating seminar paper that expands upon course topics in relation to their own research interests.

TAPS 2300B. Professionalization Seminar.

This seminar focuses on giving students an introduction to multiple aspects of professionalization activities. It will focus on building central skills around conference presenting, journal publishing and the basics of the academic job market. This is a 0.5 course credit seminar. S/NC

TAPS 2310. Graduate Playwriting.

This course is a combination of workshop and seminar, which MFA Playwriting students take every semester in residence. Students write and revise a new play over the course of the term, sharing work periodically. Weekly reading assignments (plays, theoretical texts, other literary works, works in other media) are designed to expand and unsettle your grasp of this art form. Requirements include detailed written and oral feedback, lively participation, presentations, and written exercises. May be taken multiple times for credit. Other graduate students and undergraduates may contact the instructor to request admission to the course, based on a writing sample and relevant experience. S/NC.

TAPS 2400A. Concepts of Space and Time in Media Discourses (HMAN 2970C).

Interested students must register for HMAN 2970C.

TAPS 2450. Exchange Scholar Program.**TAPS 2505. Fundamentals of Acting: Modern and Contemporary Realism.**

This course will cover three modalities. Acting/Scene Study: Realism will provide a fundamental understanding of Stanislavski-based acting within the realistic style, developing: a working understanding of a five-week rehearsal process; a system of text analysis based upon events and cause-and-effect; beginning the work of integrating vocal and physical technique into each individual student's acting method. Voice and Speech I will provide the basis of the actor's three years of vocal training, gaining an understanding of the actor's personal vocal blocks as they relate to how the breath resides in the body. Contact Improvisation will investigate improvisation movement through physical contact.

TAPS 2515. Acting Technique: Fundamentals of Physical Awareness.

All Voice and Speech work has two underlying goals: for the actor to be heard; for the actor to be understood. A daily warmup, rigorous drilling, the learning of IPA, and its application in Standard American dialect will build muscle to strengthen your instrument for clarity of speech and train your ear to the nuances of speech sounds, invaluable for dialect and character work. The Alexander Technique uses gentle guidance to enable movement to take place unencumbered by habitual effort. Voice, Speech and Alexander work together to enable the actor to produce clear, tension-free sound.

TAPS 2535. Directing 1: Fundamentals in Analysis and Action for Brown/Trinity MFA Actors and Directors.

This course is designed to activate the mind of the director. It is a detailed investigation of the creative process and the beginning of the foundation for communication with actors, designers and audiences in the making of live performance with text. MFA students will participate in Directing Lab, rehearsing as assigned.

TAPS 2545. Dramaturgy.

This course will be an introduction to dramaturgy advanced undergraduates and MFA students. The course will introduce a wide variety of play and critical approaches to dramatic texts and performances with emphasis on culturally divergent dramaturgies, embodied dramaturgy, adaptation and textual analysis for performance. This course meets for 2 of the 3 hours with TAPS 1600 Dramaturgy for MFA students; Graduate Students will take Deb Salem Smith's Playwriting course for the final hour of their course credit.

TAPS 2555. Advanced Acting: Modern and Contemporary Realism.

Purpose: To provide a deepened understanding of the principles of Stanislavski-based acting within the realistic style; to reinforce and practice a working understanding of a five-week rehearsal process; to develop a system of text analysis based upon events and cause-and-effect; to understand and deepen the process of individual personalization; to continue the work of integrating vocal and physical technique into each individual student's acting method.

TAPS 2565. Acting Technique II: Strength, Expansion and Articulation.

This course is open only to students of the Brown University/Trinity Rep MFA Consortium program. Continued studio exploration of various dance and movement techniques and vocal articulation and practice, designed to promote effective, healthy usage of the actor's instrument, as well as an introduction to dialect work and stage combat. This course includes separate classes in Speech, Alexander Technique and Movement Technique. Mandatory S/NC.

TAPS 2575. Theatre History in a Changing Present.

This course will be an introduction to the offerings in theatre history, theory and practice offered at Brown University and environs in relation to a changing American Theatre. Each week will feature an original guest speaker from TAPS or other affiliate departments/institutions to expand your understanding. First Look Production is included in this course. This production process is a companion production experience to course work done in the fall semester. Students will experience the full process of revising and staging original works, with opportunities to work as actor and/or director, playwright, producer—actively applying conceptual knowledge gained from first semester courses.

TAPS 2585. Directing II: Collaborative Communication.

Building on Directing I: Fundamentals in Analysis and Action this course focuses on communication between actors and directors. Methodologies are tested and explored through practice in studio scene work. Rehearsal preparation, diagnostic processes are developed and practiced, and a detailed exploration of the directors preparation is the final project.

TAPS 2605. Fundamentals of Acting: Shakespeare and Classical Verse.

An introduction to the conventions of classical English verse performance, including elements of meter, heightened language, metaphor and rhetoric, with the goal of expanding the actor's understanding of the principles of realistic acting to the rigorous demands of Shakespearean and other classical texts. This course includes separate classes in Scene Study, Voice and Movement, all designed to support and promote heightened poetic expressivity in performance. S/NC

TAPS 2615. Acting Technique III: Poetic Expression.

Vocal and physical work designed to support the exploration of classical verse acting, with an emphasis on expanding a range of performance beyond realism. Rhythm, fluidity, presence, power, clarity of thought and the expression of emotional depth through language and movement is the focus of studio practice. Also included is introduction to singing technique. This course includes separate classes in Movement Technique, Alexander Technique and Singing.

TAPS 2625. Playwriting Dramaturgy Practicum.

This course is advanced playwriting and script analysis for second year students. We will look deeper at the tools and craft of playwriting. We will begin by exploring adaptation—what are the bones and tissues of a given story? How can that body be transformed into a theatrical story? What is required? What changes? What is the relationship between form and content? We will transition from adaptation to writing original full-length works.

TAPS 2635. Directing III: The Director's Vision.

This course is for Brown/Trinity MFA Actors and Directors and focuses on the vision of the director. Deep investigation in complicated language, verse, period. Continued development in collaboration with actors as well as personal mission, and vision. Seminar discussion of current work in process and production, exploration of contemporary dramatic forms and practitioners, issues in the art and craft of directing, diagnostic and exchange around the breaking of boundaries and best practices. Seminar runs concurrently with Directors Lab, Director projects, including thesis, and verse.

TAPS 2645. Fall Directing Practicum.

This credit is designed to build the director's skills in preparation, script analysis, and rehearsal processes in the making of a Shakespeare production which tours into the Providence School System, a kind of "mobile unit" production. This project has very clear parameters and minimal design to center the work on the embodiment of the text by the actors. It is intended to center the actor in the making of work, requires a deep understanding of the text through analysis, and an edit to get it to a length that will support the tour.

TAPS 2655. Advanced Acting: Shakespeare and Classical Verse.

In-depth study of the methods and practice of classical acting, with the goal of developing professional-level skill and mastery of the form. Actors work toward total integration of the physical and vocal instrument into a unified whole to achieve complete expressivity of thought, emotion, character and imagination through poetic language and vigorous, purposeful and creative physicality. This course includes separate classes in Scene Study, Voice and Movement Composition.

TAPS 2665. Acting Technique IV: Creativity and Virtuosity.

A culmination of the technical practice of the previous three semesters, with the goal of achieving a professional level of technical expertise. Through mastery of the vocal and physical instrument, the actor is prepared to fulfill creative, imaginative and athletic choices in physical and vocal performance. This course includes separate classes in Alexander Technique, Singing and Movement/Devising.

TAPS 2675. Advanced Playwriting.

We will do craft exercises and close readings of texts to look deeper at how works are built. We will explore, discover, and map the mechanics of a diverse range of texts. You will have the opportunity to experiment with those same mechanics to create your own pieces. Through energetic workshop-style classes, you will experience the full process of drafting, hearing aloud, and then revising original works. In charting and defining others' voices, you will discover your own particular voice and what makes it valuable and necessary.

TAPS 2685. Directing IV: Special Topics.

This course is focused on the development of advanced and augmented research and the deepening of communication with designers and production team. Directors will explore a variety of methodologies and approaches to theater-making.

TAPS 2695. Spring Directing Practicum.

Spring Directing Practicum is the spring repertory production in the end of the fourth semester directed by each MFA Directing Student. This production is fully designed with a professional design team and presented to the public at the Pell Chafee Performance Center in cooperation with Trinity Rep.

TAPS 2705. Third Year Practicum: The Actor as Creator.

Based upon a foundation of mastery in realistic and classical acting styles, actors engage in an exploration of historical, modern and contemporary dramatic literature and theatre practice with a goal of developing a personal aesthetic voice that pushes the boundaries of convention and tradition in their mature theatre practice. This course includes separate classes in Scene Study, Voice, Movement and Alexander Technique, as well as participation in Director's Lab. S/NC

TAPS 2715. Professional Development and Performance.

This course builds upon the first two years of acting technique training. Students will use the foundational technique acquired as they add the critical component of preparation to enter the professional theater, television, film, and audiobook industries. Actors will select material for themselves and their colleagues in preparation for spring Showcase rehearsals. Students will cut/arrange selected material to an appropriate length, propose several partner pairings for each scene, and work on further adaptations and pairings as necessary. Workshops with industry professionals in casting, entertainment unions, agencies, self-taping, audiobook work, on-camera technique and auditioning will be scheduled throughout the semester. Mandatory S/NC

TAPS 2735. Directing V: Advanced Directing - Directing Seminar.

Seminar discussion of current work in process and production, exploration of contemporary dramatic forms and practitioners, issues in the art and craft of directing, diagnostic and exchange around the breaking of boundaries and best practices. Seminar runs concurrently with Directors Lab, Director projects, including thesis, and verse. Directors Lab provides work for critical analysis that is the bedrock of the conversation in Fall Seminar, through diagnostic tools.

TAPS 2755. Third Year Practicum: The Actor as Total Theatre Artist.

Actor's produce, direct, write and perform an original solo piece as a culmination of their ongoing study of acting, directing and playwriting, with the goal of developing confident expression of their singular voice, point of view and artistic aesthetic as they enter the professional world. Writing, devising, presentation and critique of ongoing work all take place throughout the semester, culminating in a final public performance that serves as an acting thesis and manifesto of the actor's identity as an individual artist. This course includes private work with members of the Acting, Directing, Voice, Movement, and Playwriting faculty.

TAPS 2765. Professional Development and Performance - Spring.

This course is a continuation of work begun in the fall semester. Students in this course will rehearse scenes selected in the fall semester, choose and rehearse songs or musical material, and stage both for their professional Showcase. They will perform their Showcase for our community in Providence, and travel to New York and Los Angeles to perform for industry professionals. In addition, several single and multi-day workshops with industry professionals may also be scheduled throughout the course of the semester. These workshops will be scheduled based on the availability of industry guests.

TAPS 2775. Directing Seminar.

Seminar discussion of current work in process and production, exploration of contemporary dramatic forms and practitioners, issues in the art and craft of directing, diagnostic and exchange around the breaking of boundaries and best practices. Seminar runs concurrently with Directors Lab, Director projects, including thesis, and verse. Directors Lab provides work for critical analysis. This course is required for all Brown/Trinity Rep MFA Directors. The course is S/NC.

TAPS 2890A. Theatricality: Labor, Time, Affect.

No description available.

TAPS 2970. Comprehensive Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

TAPS 2975. Thesis Workshop.

For graduate playwrights, in their second and third years, rehearsing and revising their thesis projects. May be taken multiple times for credit. Must be taken both semesters in the third year.

TAPS 2980. Graduate Level Independent Reading and Research.

A program of intensive reading and research on selected topics arranged in terms of special needs and interests of the student. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

TAPS 2981. Master's Thesis Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

TAPS 2982. Graduate Level Independent Reading & Research - 0.5 credit.

A 0.5 credit program of intensive reading and assignment preparation on selected topics arranged in terms of the special needs and interests of the student. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

TAPS 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Urban Studies

The Urban Studies Program equips students to analyze the city and urban life in the United States and around the planet through a variety of disciplinary lenses drawn from the humanities and social sciences, applying both qualitative and quantitative methods for scholarly research and community engagement. Cities are sites of problems and promise, inequality and solidarity, conflict and community. Processes of urbanization shape the challenges and possibilities of the 21st century. Urban Studies students explore the history of cities, urban and suburban growth and transformation, the organization and design of built, social, and natural environments, urban politics and policy, and the role of cities and urbanization in art, culture, and public life. The undergraduate program emphasizes global and local perspectives to understand how diverse communities have shaped cities through time, investigates the spatial dimensions of social relations and cultural meaning, and challenges students to work towards inclusive, equitable, and sustainable places.

Through experiences both inside and outside the classroom, Urban Studies concentrators learn to analyze urban life and the built environment through a variety of disciplinary lenses, to think creatively and critically about both the problems and potential of cities, and to use evidence-based approaches to address real-world issues. Above all, our students are dedicated to understanding, envisioning and creating cities that are inclusive and sustainable. An Urban Studies degree prepares students for a wide range of careers (<https://urbanstudies.brown.edu/career-opportunities/>), with our graduates (<https://urbanstudies.brown.edu/career-opportunities/alumni-spotlights/>) going on to work in government, the non-profit sector, business, law, education, planning and design, public health and medicine, academia, media and technology, and the arts.

For additional information, please visit the department's website: <http://www.brown.edu/academics/urban-studies/>

Urban Studies Concentration Requirements

The Urban Studies Program equips students to analyze the city and urban life in the United States and around the planet through a variety of disciplinary lenses drawn from the humanities and social sciences, applying both qualitative and quantitative methods for scholarly research

and community engagement. Cities are sites of problems and promise, inequality and solidarity, conflict and community. Processes of urbanization shape the challenges and possibilities of the 21st century. Urban Studies students explore the history of cities, urban and suburban growth and transformation, the organization and design of built, social, and natural environments, urban politics and policy, and the role of cities and urbanization in art, culture, and public life. The undergraduate program emphasizes global and local perspectives to understand how diverse communities have shaped cities through time, investigates the spatial dimensions of social relations and cultural meaning, and challenges students to work towards inclusive, equitable, and sustainable places.

Through experiences both inside and outside the classroom, Urban Studies concentrators learn to analyze urban life and the built environment through a variety of disciplinary lenses, to think creatively and critically about both the problems and potential of cities, and to use evidence-based approaches to address real-world issues. Above all, our students are dedicated to understanding, envisioning and creating cities that are inclusive and sustainable. An Urban Studies degree prepares students for a wide range of careers (<https://urbanstudies.brown.edu/career-opportunities/>), with our graduates (<https://urbanstudies.brown.edu/career-opportunities/alumni-spotlights/>) going on to work in government, the non-profit sector, business, law, education, planning and design, public health and medicine, academia, media and technology, and the arts.

For a concentration, the program requires ten courses selected from four course groups:

Introduction (choose one):		1
URBN 0210	The City: An Introduction to Urban Studies	
URBN 0230	Urban Life in Providence: An Introduction	
Research Methods (choose one):		1
ANTH 1940	Ethnographic Research Methods	
APMA 0650	Introduction to Probability and Statistics	
APMA 1650	Introduction to Probability and Statistics with Calculus	
APMA 1655	Introduction to Probability and Statistics with Theory	
APMA 1660	Statistical Inference II	
CPSY 0900	Statistical Methods	
ECON 1620	Introduction to Econometrics	
EDUC 1230	Applied Statistics for Ed Research and Policy Analysis	
PHP 1501	Essentials of Data Analysis	
POLS 1600	Political Research Methods	
SOC 1020	Methods of Social Research	
SOC 1100	Introductory Statistics for Social Research	
URBN 1100	Investigating the City: Hands-on Research Methods for Urban Analysis	
Core Courses (3 courses required, in at least 3 disciplines, such as American studies, anthropology, economics, education, English, history, history of art and architecture, political science, and sociology, as well as urban planning when staffing allows)		3
ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis	
ANTH 1236	Urban Life: Anthropology in and of the City	
ANTH 1255	Anthropology of Disasters	
ECON 1410	Urban Economics	
EEPS 1320	Introduction to Geographic Information Systems for Environmental Applications	
ENGL 0100N	City Novels	
ENGL 0700R	Modernist Cities	
ENGL 1711D	Reading New York	
ENVS 1107	Cartography and Geovisualization	

ENVS 1247	Clearing the Air: Environmental Studies of Pollution
ENVS 1400	Sustainable Design in the Built Environment
ENVS 1580	Environmental Stewardship and Resilience in Urban Systems
HIAA 0074	Nineteenth-Century Architecture
HIAA 0081	Architecture of the House Through Space and Time
HIAA 0100	Introduction to Architectural Design Studio
HIAA 0710	The Other History of Modern Architecture
HIAA 0770	Architecture and Urbanism of Africa
HIAA 0850	Modern Architecture
HIAA 0860	Contemporary Architecture
HIAA 0861	City and Cinema
HIAA 1171	Cities, Landscapes, and Design in the Age of Pandemics
HIST 1533	Cities and Inequality Since 1920: The United States
POLS 0220	City Politics
POLS 1310	African American Politics
SOC 1340	Principles and Methods of Geographic Information Systems
URBN 0074	Nineteenth-Century Architecture
URBN 0214	The U.S. Metropolis: Cities and Suburbs in American History
URBN 0215	Urban Life in the Global South
URBN 1000	Fieldwork in the Urban Community
URBN 1140	Urban Theory and Practice
URBN 1200	The United States Metropolis, 1945-2000
URBN 1250	The Political Foundations of the City
URBN 1260	Housing in America
URBN 1270	Urban Politics and Urban Public Policy
URBN 1290	Race, Racism, and the Urban Environment
Seminar courses (choose three) ²	
EDUC 1250	Policy Implementation in Education
EDUC 1620	Urban Schools in Historical Perspective
ETHN 1751F	Race in U.S. Cities and Suburbs
ENVS 1875	The Nature of Cities
ENVS 1926	Wasted: Rethinking Chemical Environments
HIAA 1850H	Berlin: Architecture, Politics and Memory
HIAA 1910A	Providence Architecture
IAPA 1701F	Wealth and Poverty in the New Metropolis
POLS 1821V	Democracy and Inequality in American Cities
POLS 1822S	The Politics of Urban Transformation
SOC 0310	Theory and Practice of Engaged Scholarship
SOC 1871W	Geographical Analysis of Society
SOC 1871X	Comparative Urban Political Economy
SOC 1873G	The Geography of Urban Inequality
URBN 0820A	Urban Ecologies: Forms, Flows and Futures
URBN 1870A	American Culture and the City
URBN 1870D	Downtown Development
URBN 1870G	Ancient Cities: From the Origins Through Late Antiquity
URBN 1870J	The Politics of Community Organizing

URBN 1870K	Jerusalem Divided: Politics and Cultural Heritage
URBN 1870M	Urban Regimes in the American Republic
URBN 1870N	The Cultural and Social Life of the Built Environment
URBN 1870Q	Cities in Mind: Modern Urban Thought and Theory
URBN 1870T	Transportation: An Urban Planning Perspective
URBN 1870X	The Political Economy of Cities: American and Comparative Perspectives
URBN 1870Z	Housing Justice
URBN 1871A	Heritage in the Metropolis: Remembering and Preserving the Urban Past
URBN 1871B	Berlin: Global Metropolis (1945-2020)
URBN 1871E	Urban Development and Governance in the Global South
URBN 1871F	Urban Ecologies: Forms, Flows and Futures
URBN 1871G	Urban Asia: Beyond Tradition, Modernity, and Crisis
URBN 1872	The Right to the City: Focus on Indonesia
URBN 1932	The Just City: Installment I, Comparative Perspectives on Juvenile Justice Reform
URBN 1943	The Real Estate Development Process: An Entrepreneurial Lens
Complementary Curriculum (Total of 2 courses required):	
1. Any course from the Introductory or Core Curriculum options above not used to fulfill another requirement	
2. OR Any of the following:	
AFRI 0600	Race, Gender, and Urban Politics
AFRI 1075	Providence Housing Ecosystem, Development, Displacement and Gentrification
AMST 1611A	Making America: Twentieth-Century U.S. Immigrant/Ethnic Literature
ARCH 1900	The Archaeology of College Hill
ECON 1370	Race and Inequality in the United States
EDUC 1240	Qualitative Methods
EDUC 1330	Social Psychology of Race, Class, and Gender
ENGL 1050S	Writing the City
ENGL 1710I	Harlem Renaissance: The Politics of Culture
ENVS 0705	Equity and the Environment: Movements, Scholarship, Solutions
ENVS 1555	Local Food Systems and Urban Agriculture
HIAA 1307	Politics and Spectacle in the Arts of Ancient Rome
HIST 1961D	Heaven Above, Suzhou and Hangzhou Below: Urban Culture in Early Modern China
POLS 1821V	Democracy and Inequality in American Cities
POLS 1824D	Power and Prosperity in Urban America
POLS 1826A	Space, Time and Society
RUSS 1440	Imagining Moscow: Utopia and Urban Spaces in 20th-Century Russian Culture
SOC 1270	Race, Class, and Ethnicity in the Modern World

3. RISD courses approved by the Urban Studies Program each semester as applicable to the Urban Studies concentration.³

4. Any course taken at another university in the US or abroad and approved by the Urban Studies Program each semester (2 maximum)

Total Credits

11

¹ There are also other statistics courses offered by other departments (e.g., Applied Mathematics, Cognitive Sciences, and Psychology). On occasion, an alternative research skills course may be approved for a specific concentration.

² The courses provide opportunities to undertake research or fieldwork projects and all qualify as "capstone" experiences.

³ No more than **two** may be used to satisfy the requirements of this concentration. The RISD course is identified in the student's record at Brown by a RISD course code.

Off-Campus Courses: Some courses taken outside Brown (e.g., in study abroad programs) may be used for credit towards the concentration *if the material covered directly corresponds to that taught in Brown courses, or is relevant to the complementary curriculum*. Such courses will be approved each semester by the concentration advisor.

Honors

Candidates for Honors shall apply for this distinction in writing to the Director of the Program by the middle of the second semester of their junior year. They shall include a cover letter with a brief statement of the intended research proposal as well as the name of the member of the Urban Studies faculty who would serve as their advisor and with whom they must work closely. Twelve courses are required for Honors concentrator, two in addition to the ten courses required for a standard program. During the Fall and Spring of the senior year, honors candidates must complete two additional courses beyond the ten courses required by the regular concentration: **URBN 1981 Senior Honors Thesis I in Urban Studies(S/NC)** and **URBN 1972 Senior Honors Thesis II in Urban Studies (grade)**. The candidate's final thesis must be of outstanding quality in order to qualify for honors.

Courses

URBN 0074. Nineteenth-Century Architecture.

Surveys stylistic developments, new building types, and the changing conditions of architectural production through the 19th century. Special emphasis placed on the social context in which buildings were designed and used. Weekly one-hour conference required.

URBN 0210. The City: An Introduction to Urban Studies.

With over half the world's population now living in cities, understanding the past and present of urbanization is critical to the planet's collective future. This course introduces students to cities and urban life around the globe. Drawing upon multiple disciplines, it explores questions like: How do histories of urban planning shape present patterns of inequality? How does rampant urban growth impact ecology and health? How do new identities and solidarities arise in cities, and what effects does citizen activism have on urban politics? What urgent challenges face cities today, and how might these be creatively overcome by communities, planners, and governments?

URBN 0215. Urban Life in the Global South.

Cities in the so-called "Global South" – from Jakarta to Johannesburg, Lima to Lahore, Dakar to Delhi – are vibrant, complex, and key to the future of our rapidly urbanizing world. While undoubtedly places of challenge and conflict, these cities are also hotbeds of creativity and activism, where alternative ways of building, governing, and sustaining urban communities take shape. This course first traces the historical forces of colonialism, nationalism, and globalization that have shaped cities across Asia, Africa, and Latin America, before delving into a range of social, political, and environmental issues that local city-dwellers and their leaders grapple with today.

URBN 0217. Metropolis: The Architecture and Urban Design of Global Cities.

This class serves as an introduction to global questions of urban architecture and planning, their history, present challenges and future opportunities. It is organized around comparative case studies of 20 global metropolitan centers (among them New York City, Los Angeles, London, Paris, Naples, Berlin, Madrid, Dubai, Delhi, Dakha, Tokyo, Manila, Hong Kong, Chongqing, Shanghai, Lagos, Johannesburg, Mexico City, Buenos Aires and Rio de Janeiro). A

URBN 0230. Urban Life in Providence: An Introduction.

An introduction to Urban Studies and to the city of Providence, this first year seminar explores from an interdisciplinary perspective how cities are broadly conceptualized and studied. Students then focus on urban dwelling, using Providence as a first-hand case study. We comprehensively examine urban life and change, attending to urban history, the diverse configurations of people and place, social and environmental issues, and urban sustainability. In a lively and varied approach to local learning, course activities include lectures, discussion, reading and writing assignments, films and other media, guest speakers, and excursions to local sites. Enrollment limited to 19 first year students.

URBN 0820A. Urban Ecologies: Forms, Flows and Futures.

This seminar explores the potential agency of environmental planning and design to bring about positive change on urban-ecological problems. Students will create a framework to critically investigate the geographies of urban socio-logical processes that are directly relevant to achieving more equitable, sustainable and resilient futures. The course will focus on local geographies and extended regional dynamics through the development of cities, parks, and the role of landscape as both social and environmental infrastructure.

URBN 1000. Fieldwork in the Urban Community.

Each student undertakes a fieldwork project in close collaboration with a government agency, a nonprofit association, or a planning firm, thereby simultaneously engaging with community and learning qualitative research methods skills. In weekly seminar meetings, the class examines a series of urban issues and discusses fieldwork methodology. Students also schedule regular appointments with the instructor.

URBN 1100. Investigating the City: Hands-on Research Methods for Urban Analysis.

This course encourages students to take the study of cities into their own hands. At the start of term, students will pick their own field site within the city of Providence and will examine that field site through the lens of both qualitative and quantitative research methods. The class will consist of both hybrid lecture-discussion meetings, where we will examine case studies of urban research to give students a foundational understanding of a variety of methodological approaches, and hands-on workshops, where students will gain a more practical understanding of how to collect and interpret original data and successfully communicate findings. The course will culminate in a final mixed-methods research project synthesizing the data students have collected throughout the semester at (or related to) their chosen field site.

URBN 1140. Urban Theory and Practice.

This course will give students the critical tools to explore the socio-spatial dynamics of urbanization, critique normative approaches, and galvanize possible alternative urban futures. Taking a multi-scalar approach on how cities are connected to wider regional dynamics and how urban planning and design can mobilize to address pressing issues of health, climate and social justice.

URBN 1200. The United States Metropolis, 1945-2000.

This lecture and discussion course will provide students with an introduction to the history, politics, and culture of United States cities and suburbs from the end of World War II to the close of the twentieth century. Readings are drawn from recent work in the political, social, and cultural history of U.S. cities as well as primary sources rooted in the period under study.

URBN 1250. The Political Foundations of the City.

This course examines the history of urban and social welfare policy in the United States and abroad. It reviews major theories accounting for the origins and subsequent development of welfare states, explains the "exceptional" nature of American public policy, and employs a combination of historical texts and case studies to analyze the connections between politics and the urban environment.

URBN 1260. Housing in America.

An examination of why housing matters to individuals, communities, and the nation. This course examines the unique qualities of housing and associated American cultural ideals and norms. The changing role of the government in housing is considered, along with other factors shaping the provision of housing, and the success and failure of housing programs. While housing is a necessity, for many in America housing choices are constrained as costs are unaffordable, discriminatory practices remain, and physical features do not align with needs. This course deliberates how well America meets the challenge of providing decent shelter for all residents.

URBN 1270. Urban Politics and Urban Public Policy.

A central theme of the course is that urban politics in the United States arises from the interplay of governmental power and private resources. The course describes the emergence of urban America; the modern city and the theories that have evolved to explain urban politics; and the nature of the urban condition with particular emphasis on the challenges faced by residents and government in the post-industrial city.

URBN 1290. Race, Racism, and the Urban Environment.

It is impossible to understand our past or present urban environments without a critical analysis of race and racism. Likewise, it is impossible to understand the contested meanings of race without accounting for the role of urban practices and environments in shaping racial identities, disparities, and struggles. This course explores the reciprocal relationship between urban studies and critical race studies through three thematic units: city planning, housing justice, and cultural production and the policing of public space.

Throughout, we will examine the ways that cities are remade by social movements, artists, and everyday residents through practices of spatial repurposing and cultural resistance.

URBN 1870A. American Culture and the City.

This course explores American culture and the way it shapes our cities. Topics include the American dream, race, immigration, urban dilemmas, white supremacy, and the seduction of suburbia. We read a book (readings include Alexis de Tocqueville, Richard Wright, Toni Morrison, Tom Wolfe, W.E.B. Du Bois, and others). Films include *Wall Street* and *Gangs of New York*. Prerequisite: POLS 0220. Priority given to Urban Studies concentrators.

URBN 1870D. Downtown Development.

This seminar examines the development and revitalization of the urban core in the United States with a focus on urban planning. Providence is used as a laboratory to explore development from the perspective of the planner, the developer, and city residents. Important concepts are illustrated through field trips, public meetings, and guest speakers.

URBN 1870G. Ancient Cities: From the Origins Through Late Antiquity.

This seminar explores major cities of the ancient Near East (Mesopotamia, Asia Minor, and the Levant), Egypt, Greece, and Italy from the origins through late antiquity. The primary focus will be on the physical appearance and overall plans of the cities, their natural and man-made components, their domestic and private as well as their religious and secular spaces. Objects and artifacts of daily life, including pottery, sculpture, wall paintings, mosaics, and various small finds will be evaluated to establish a more nuanced understanding of the different architectural and urban contexts.

URBN 1870J. The Politics of Community Organizing.

Introduces key issues concerning community organizing. Focuses on the life, skills, and tactics of Saul Alinsky and the national organization he founded, the Industrial Areas Foundation (IAF). Analyzes the work of the IAF in a number of urban settings. Seeks to develop theories and models for studying community mobilization in urban America. Priority given to Political Science and Urban Studies concentrators.

URBN 1870K. Jerusalem Divided: Politics and Cultural Heritage.

"The heritage of Jerusalem is indivisible, and each of its communities has a right to the explicit recognition of their history and relationship with the city. To deny, conceal or erase any of the Jewish, Christian, or Muslim traditions, undermines the integrity of the site, and runs counter to the reasons that justified its inscription on the UNESCO World Heritage list." These are the words of Irina Bokova, former Director-General of UNESCO, spoken in 2016. While the indivisible heritage referred to in this context reflects the reality of Jerusalem's Old City's intertwined historical, cultural, and religious legacies, it does not address the geopolitical conflict, in which ideological and territorial claims produce diverging heritage narratives. In this seminar, we will examine how competing heritage narratives have been shaped by Israeli, Palestinian, and international views and interests. We will explore the history of archaeological exploration, discovery, and interpretation in Jerusalem in the contexts of social, political, and religious debates from the mid-nineteenth century to the present, with an emphasis on its urban landscape.

URBN 1870M. Urban Regimes in the American Republic.

A probing of topical issues in both their theoretical antecedents and their contemporary manifestations. Examines the intellectual debates and the scholarly treatments surrounding issues of power in the city, urban redevelopment policy, urban poverty, urban educational policy, and race in the city. Enrollment limited to 20.

URBN 1870N. The Cultural and Social Life of the Built Environment.

This seminar investigates the relationship between people and place. It considers the ways that people create and experience the human-made landscape, how they understand place through various aesthetic forms, and political conflict over space and place. We look mostly at the history and contemporary development of cities and suburbs in the United States. Students will prepare a final project on a specific aspect of the built environment; they will be encouraged to focus their research on Providence or another local community. Enrollment limited to 20. Priority given to Urban Studies concentrators and seniors; instructor permission required otherwise.

URBN 1870Q. Cities in Mind: Modern Urban Thought and Theory.

This seminar investigates the place of the city in the history of modern thought and cultural theory, drawing on selected currents in urban thought and theory from Europe and the United States over the last two centuries. Topics include questions of public and private space, citizenship, selfhood, difference and inequality, media and technology, planning, modernism and postmodernism. Enrollment limited to 20 juniors and seniors, preference for those concentrating in Urban Studies.

URBN 1870T. Transportation: An Urban Planning Perspective.

This seminar explores how urban planners in the U.S. plan for and around various transportation networks. We will examine how these networks are designed and funded, which modes get priority over others, and ultimately how transportation shapes the built environment. Realworld examples of plans and projects from Providence and Rhode Island are used throughout the course. Important concepts are illustrated through field trips and guest speakers.

URBN 1870X. The Political Economy of Cities: American and Comparative Perspectives.

Why do cities grow, prosper, or decay? How are cities managed and organized? How can we make our cities better? This course is an introduction to the political economy of the cities, and the challenges and opportunities that we face today to build safe, inclusive, and sustainable cities. We will examine how economic and political factors shape cities, urban life, and urbanization processes using theories and methods from different social science disciplines (political science, economics, sociology, geography, etc.). Particular attention will be given to comparing urban processes across time and place, including cities from the U.S. and from all around the world, and critically evaluating the efforts of different actors to shape and reshape the city.

URBN 1870Z. Housing Justice.

Housing is fundamental to overall well-being, yet in RI many cannot find affordable, decent housing aligned with their needs. This community-based research course engages with local housing justice organizations working for change. Course participants, organizational staff, and community members will gather and analyze data to inform interventions and/or modify policies. After some foundational studies, the semester will be spent immersed in a team research project. Topics may include evictions, studentification and gentrification, rental inspections, property ownership, and healthy housing. The course will advance skills in research, communication, and collaboration, and expand understanding of the housing system.

URBN 1871A. Heritage in the Metropolis: Remembering and Preserving the Urban Past.

Urban heritage – from archaeological sites and historic architecture to longstanding cultural practices – is increasingly threatened by the exponential growth of cities around the globe. Most critically, the complex histories and lived experiences of the diverse communities who have inhabited and shaped cities are often in danger of being erased and forgotten today. This course examines how we might remember and preserve this urban past – and the tangible sites and artifacts that attest to it – in light of the social and political dynamics of cities in the present.

URBN 1871B. Berlin: Global Metropolis (1945-2020).

This seminar explores the physical and human landscapes of post-war Berlin: its steadily expanding urban fabric and how it engages with the rapidly changing population make-up. The focus will be on the tension between past and present histories, new German identities, the recent massive migrations, anti-Semitism and Islamophobia, and how these social and geopolitical phenomena interact with the city's urban spaces and monuments. As case studies, we will explore the relationship among Germans and three other significant communities: Turks, Israelis, and Palestinians.

URBN 1871E. Urban Development and Governance in the Global South.

More than half of the world's population now lives in urban areas, and this proportion will continue to increase mostly due to urban growth and urbanization in the Global South. This course will focus on some of the most salient governance issues that enable and constrain development in Global South cities: poverty and inequality, housing and informal settlements, political protests and social movements, crime and violence, the informal economy, climate change and pollution, etc. Special attention will be given to comparing and critically evaluating how urban governance in developing countries today resembles or departs from contemporary and historical urban processes in the United States and Western Europe.

URBN 1871F. Urban Ecologies: Forms, Flows and Futures.

This seminar explores the potential agency of environmental planning and design to bring about positive change on urban-ecological problems. Students will create a framework to critically investigate the geographies of urban socio-logical processes that are directly relevant to achieving more equitable, sustainable and resilient futures. The course will focus on local geographies and extended regional dynamics through the development of cities, parks, and the role of landscape as both social and environmental infrastructure.

URBN 1871G. Urban Asia: Beyond Tradition, Modernity, and Crisis.

In popular portrayals, the diverse cities of Asia are often caricatured as icons of eternal tradition, dazzling modernity, or intractable crisis. This seminar goes beyond these simplistic narratives to explore change and continuity in some of the world's oldest and largest urban centers, delving into both the rich history of Asian urbanisms and the complexities of city life in the region today. Films, poetry, short stories, and artwork are paired with scholarly research to examine how urban Asia has been experienced, imagined, and represented over the centuries.

URBN 1872. The Right to the City: Focus on Indonesia.

Cities today face profound challenges, from deepening inequalities to deteriorating environments. While the scale of these issues can demand top-down interventions, some of the most creative and effective efforts to address such challenges come from activists, researchers, and residents working locally to make their urban communities more just and sustainable. This course explores the diverse ways in which communities claim their "right to the city" in urban Indonesia, focusing on citizen-led efforts to foster environmental resilience, housing justice, accessible transportation, and inclusive public spaces. This is a GELT course and will be taught at Brown and in Indonesia.

URBN 1932. The Just City: Installment I, Comparative Perspectives on Juvenile Justice Reform.

The first installment in a series on "the just city," this course focuses on juvenile justice reform. Beginning with a broad view of the just city, the course then examines: 1) urban childhoods and constructions of race, inequality, and delinquency and 2) juvenile justice reform from a comparative perspective that includes local, U.S., and international contexts. An engaged scholars course, students participate in reflexive practices to draw connections between course content, their own experiences, and specific community-based contexts. At the end of the semester, students write and share reports in a public forum conceptualized and organized by the class.

URBN 1943. The Real Estate Development Process: An Entrepreneurial Lens.

Real estate development is the ongoing configuration of the built environment for society's needs. The improved spaces in which we live, work, and play all started as ideas initiated and brought to fruition. Every real estate project, whether it's making use of unused land or redeveloping existing properties, is in essence a separate business undertaking employing the three factors of production - land, labor, and capital - to create a new or changed product. These factors are coordinated by entrepreneurial management and delivered by teams.

URBN 1970. Independent Reading and Research.

A specific program of intensive reading and research arranged in terms of the special needs and interests of the student. Open primarily to concentrators, but others may be admitted by written permission. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

URBN 1971. Senior Honors Thesis I in Urban Studies.

A program of intensive reading, research, and writing under the direction of a faculty member. Permission should be obtained from the Thesis Advisor in Urban Studies. Mandatory attendance at periodic meetings during the semester is required. Open to Senior Urban Studies concentrators pursuing Honors in Urban Studies. Instructor permission required.

URBN 1972. Senior Honors Thesis II in Urban Studies.

A program of intensive reading, research, and writing under the direction of a faculty member. Permission should be obtained from the Thesis Advisor in Urban Studies. Mandatory attendance at periodic meetings during the semester is required. Open to Senior Urban Studies concentrators pursuing Honors in Urban Studies. Instructor permission required.

URBN 1981. Honors Thesis Workshop.

This seminar introduces students to independent research and writing skills necessary for successful and timely completion of the honors thesis. Course work includes presentation of one's own thesis drafts and peer review of classmates' work. All students who submit an approved honors thesis proposal shall enroll in URBN 1981 for the spring semester of their thesis research and writing. Concentrators may also enroll in the course during semesters 6 or 7 in preparation for the honors thesis, but must present a written proposal in place of chapters. Enrollment limited to 20 juniors and seniors in Urban Studies. S/NC

URBN XLIST. Courses of Interest to Concentrators in Urban Studies.**Fall 2025**

The following courses offered by other departments will fulfill Core Discipline, Seminar, and Complementary Course requirements of the Urban Studies concentration. (Please refer to the Urban Studies website to determine which requirements are fulfilled by these courses.)

Please check with the sponsoring department for times and locations.

Applied Mathematics

APMA 0650 Introduction to Probability and Statistics
 APMA 1650 Introduction to Probability and Statistics with Calculus
 APMA 1655 Introduction to Probability and Statistics with Theory

Anthropology

ANTH 1236 Urban Life: Anthropology In and Of the City

Archaeology and the Ancient World

ARCH 1900 The Archaeology of College Hill

Cognitive and Psychological Sciences

CPSY 0900 Statistical Methods

Computer Science

CSCI 1360 Human Factors in Cybersecurity
 CSCI 2200 Cybersecurity Law and Policy
 CSCI 2999A Cybersecurity Management Within Business, Government, and Non-Profit Organizations

Economics

ECON 1620 Introduction to Econometrics

Education

EDUC 1430 Social Psychology of Race, Class, and Gender

Environmental Studies

ENVS 1580 Environmental Stewardship and Resilience in Urban Systems

History of Art and Architecture

HIAA 0100 Introduction to Architectural Design Studio
 HIAA 1171 Cities, Landscapes, and Design in the Age of Pandemics
 HIAA 1621 Abolition Architecture

History

HIST 1961D Heaven Above, Suzhou and Hangzhou Below: Urban Culture in Early Modern China

Public Health

English

Visual Art

A Visual Art education at Brown is a rich experience of conceptual challenge, skill-building, and self-discovery. Our students acquire the intellectual and practical tools to make art, as well as to interpret and critique the world of images. We offer a range of courses: digital media, drawing, painting, photography, printmaking, sculpture, and video. Our students also have opportunities to take classes at the neighboring Rhode Island School of Design.

For additional information, please visit the department's website: <https://www.brown.edu/art> (<https://www.brown.edu/art/>)

Visual Art Concentration Requirements

The Visual Art concentration engages in artistic practice across a wide range of media: painting, sculpture, printmaking, drawing, photography, digital imaging, book arts, and film. Courses in art history combine with these to frame the direction of the concentrator's work and to develop their critical thinking skills. Students are encouraged to cultivate an informed and thoughtful individual perspective. Students in the Department of Visual Art enjoy cutting-edge facilities and a knowledgeable faculty. These two resources inspire creativity and pleasure in our concentrators while they explore the discipline. Students acquire the intellectual and practical tools to make art as well as to interpret and critique the world of images. Students also have the opportunity to take courses at the neighboring Rhode Island School of Design (RISD). All Visual Art (VISA) courses are graded S/NC.

Concen tration Program Requirements

Concentration Requirements:	
Three Foundation courses are required. One from each of three categories.	
Category I: Analog 2D (choose one from the following:)	1
VISA 0100 Studio Foundation	
VISA 0160 Foundation Painting	
Category II: Digital & 4D (choose one from the following)	1
VISA 0120 Foundation Media	
VISA 0140 Photography Foundation	
VISA 0150 Digital 2D Foundation	
Category III: Spatial & 3D (choose one from the following):	1
VISA 0130 Sculpture Foundation	
VISA 0170 Spatial Dynamics Foundations	
Five additional upper level studio courses are required. A minimum of three of these upper level studio courses must be taken within the Brown Visual Art Department. Only one ISP or GISP can be counted towards the concentration. When combined with the three Foundation courses, a total of six studio courses are required to be taken within the department.	5
3 HIAA courses are required. (3 credits total)	3
One course on 20th and/or 21st century art, one on non-Western practice, and one HIAA seminar. HIAA courses in Architectural Practice cannot be counted towards the Art History requirement.	
Senior Thesis Exhibition: which does not carry academic credit, is required for graduation (usually presented during the seventh or eighth semester).	
Total Credits	11

Honors

The project is a two-semester enterprise and counts as two courses taken for graduation credit VISA 1800C (Sem I) and VISA 1990 (Sem II) but will not count as two of the eleven courses needed for the visual art concentration. Students that are planning to complete their degree requirements in December must apply for honors by December 5 of the previous year.

Courses

- VISA 0100. Studio Foundation.**
Covers the basics of drawing and 2D design while cultivating the capacity for visual thinking.
- VISA 0120. Foundation Media.**
Foundation media focuses on the production and theory of time-based digital media and introduces the computer as a medium and a tool for art. Students will experiment with the production of video, sound, and interactive media. Students will examine and produce work that is multidisciplinary in nature, combining aspects of critical discourse, art, and technology.
- VISA 0130. Sculpture Foundation.**
This is an extensive study in form and structure. It is designed to develop spatial understanding and the fundamentals of 3-dimensional design and construction. Students will explore the structural, compositional and conceptual implications of common materials, such as wood, metal, plaster and found objects. Projects are designed as a means for investigating a variety of sculptural processes. Students will learn safe usage of power and hand tools, casting techniques, wood and metal work. In addition, special emphasis will be placed on creativity, critical thinking and the ability to successfully articulate ideas visually.
- VISA 0140. Photography Foundation.**
This class is a wide ranging technical and conceptual introduction to photography. Through weekly projects, students will be exposed to 19th-21st century photo processes. Topics covered include cameras, lenses, software, darkroom overview, scanning, natural and artificial lighting, alternative processes as well as concepts such as selective focus, color temperature, composition. Short readings and in-class slide presentations on a diverse range of photographers will introduce students to the history of photography. This course will prepare students for upper level Photography classes at Brown and RISD.
- VISA 0150. Digital 2D Foundation.**
This foundation studio course introduces the basic practices and concepts of two-dimensional digital media production including image acquisition, editing and manipulation, vector illustration, and preparation for online and offline viewing. Through studio exercises, readings, and assignments we will experiment with the production of electronic images. We will be looking at and producing work that is conscious and critical in nature, and which combines aspects of contemporary art, media, and technology. Collaboration and group work will be encouraged to share learning techniques and skill resources.
- VISA 0160. Foundation Painting.**
Painting in acrylics for a variety of interests and aptitudes - basic instruction in media and painting procedure, emphasis on development of the image as a visual statement. Will cover basic color principles, painting techniques and concepts. Assignments cover a wide range of approaches including painting from observation, individual research, and imagination. Images, related books, and articles are discussed. Individual criticism is given; participation in group discussions is required.
- VISA 0170. Spatial Dynamics Foundations.**
This beginner-level course introduces students to Spatial Dynamics, which is not a medium, but rather an approach to engaging with sculpture in the expanded field. Students will build visual, technical, and critical thinking skills through an exploration of materials in space, with particular interest to the relationship between objects, environments, and people. The course begins with a studio-based inquiry into constructing objects through traditional and non-traditional additive, subtractive, and transformative methods. The inquiry will continue beyond studio production and into alternative and public spaces, with an introduction to installation art, social practice, performance art, and dematerialized practices. The focus of the course is on interdisciplinary experimentation of complex ideas through problem solving, laying the groundwork for advanced courses in the arts.

VISA 1110. Drawing.

This course focuses on drawing from models, observation, and imagination in a variety of media with an emphasis on creative work and classroom participation. A continuing series of outside assignments is emphasized. Visits to galleries, museums and pertinent exhibitions may be undertaken. The later part of this course will introduce ideas of conceptual and political art into the drawing process.

VISA 1140. Monumental Drawing.

Monumental Drawing is an immersive studio art course exploring expansive, experimental approaches to drawing. Large-scale, ambitious projects will engage risk-taking and developing meaning through intensive studio work. Contemporary drawing has become a powerful medium in its own right. From process and experiential beginnings to site-specific and conceptual directions, artists have pushed the medium with ideas and projects that challenge any restrictive definition of the medium. Through innovations in concept, materials, form and location, there are limitless ways of approaching the making of and defining what a drawing can be. Studio projects assigned will explore and expand upon these ideas.

VISA 1160. Drawing with Watercolor.

This course will be a rigorous examination of the possibilities of drawing with watercolor, with an emphasis on unorthodox use of the watercolor medium. Because the basis of watercolor is sound drawing, there will be considerable instruction and practice in drawing fundamentals such as perspective, value, composition, scale, rendering, etc. Required prerequisite: VISA 0100 or by permission.

VISA 1210A. The Big Print.

The Big Print is a course that emphasizes the experimental aspects of printing, and how printmaking methods can be used in unique ways to create large, powerful images. This course utilizes relief printmaking—one of the oldest simplest and most “democratic” printmaking methods—to explore the scale and impact of print. Extensive technical exploration in linocut and woodcut techniques will be complemented by research into and discussion of the history of print workshops, public print installations, and the role of printmaking in grassroots political movements. Students will complete a series of four print projects getting successively larger in size and culminating with a collaborative woodcut composed from four sheets of plywood and printed with a road roller. Prerequisite: VISA 0100.

VISA 1210B. Etching.

Covers all aspects of black and white etching, using zinc plates. Combines an emphasis on traditional skills and craft with a critical and theoretical approach to images. Extensive outside work required. Prerequisite: VISA 0100.

VISA 1210C. Investigating Collage.

This course will be an artistic and intellectual investigation of 2 dimensional collage, which is the juxtaposition or arrangement of multiple images or parts of images to create fresh meanings and narratives. We will be working mostly with scissors, paper, printing, painting, and glue, supplemented with slides and reading. Use of the computer to complete some assignments will be optional. Prerequisite: VISA 0100 or VISA 0110.

VISA 1210D. Lithography I & II.

Lithography is the most versatile printmaking process. Working on limestone and aluminum plates, students will learn to produce, process and print their work. Class participation is vital, as students will be aiding each other in this complicated process. This course requires considerable time outside of class. Lithography can be repeated, with experienced students learning multi-plate color processes.

VISA 1210E. Printmaking.

This course covers a range of traditional and digital printmaking processes. The course will explore how traditional and digital techniques can be used together and how they may interact with and influence one another. Work will be in both black and white and color. Prerequisite: VISA 0100 or VISA 0110.

VISA 1210F. Relief Printing.

No description available. Prerequisite: VISA 0100 or VISA 0110.

VISA 1210G. Silkscreen.

This course will provide students with a thorough knowledge of both water-based screen printing techniques and digital imaging. The intersection of digital printing processes and screen printing within the context of contemporary works on paper will be explored through a series of experimental mixed-media projects. Work will be in both black and white and color.

VISA 1210I. Woodcut.

Woodcut, the simplest printmaking method, has been used as a communication device for more than a thousand years. Students will work in both black and white and color to address contemporary issues. The history and aesthetics of the political poster will provide the foundational knowledge for the class. Prerequisite: VISA 0100 or VISA 0110. Enrollment limited to 17. Students who are not admitted during pre-registration or who were unable to pre-register should attend the first class.

VISA 1210J. Making Monotypes: The Painterly Print.

The aim of the course is to understand the variability, sequencing potential and the inherent luminosity of the monotype medium and to use these attributes to discover and advance one's own visual ideas. Monotype refers to the making of a single unique print through press and non-press means. Several rapid projects with themes will precede a longer series culminating in a final epic portfolio of independent content. Individual, peer, and small and large group critiques will occur weekly for feedback.

VISA 1210K. Digital Printmaking.

This studio art course investigates possibilities for using the computer along w/traditional painting and printmaking processes to produce image-based intermedial work. We will explore how computers and computer networks have changed the creation, content, form, distribution, and exhibition of artwork through a series of assignments, readings, discussions, and slide lectures, and how computers and digital media can intersect with a traditional studio practice. Students will produce a portfolio of mixed-media work. Photoshop, Illustrator, the internet, and digital printers, along with traditional painting, drawing, and printing mediums will be used as tools for art-making.

VISA 1210L. Political Constructions.

Arranged as a collective, the class will make art using various media, such as digital printing, silkscreen, woodcut, collagraph, Xerox, on-line blogs and wikis to create and distribute activist political images related to one or more topics (class choice).

The class will research the history and theory of political art and its contribution and power in political movements of the recent past.

VISA 1210M. Collaboration & Community in Print.

Students will be introduced to printmaking through four main techniques: relief, drypoint, collagraph, and paper stencils. Just as each collaborator brings a new voice to a project, each medium affords a different mark-making style to a print. Working within these mediums, students will explore the potential for rich layered imagery, and robust variable editions. Course material will be presented through demos, lectures, in-class workshops, and critiques, and weekly feedback will be provided through individual, peer, small and large group critiques.

VISA 1240. Art of the Book.

Will examine the book, structurally and conceptually, as artist's medium. Students will learn the materials, tools and techniques of making books, as they explore the expressive and narrative possibilities of the book form. Topics and projects may include digital imaging, combining text and image, traditional binding or digital publishing.

VISA 1250. Art of the Book.

We will examine the artist's book from the printer/publisher perspective. Students will learn the basics of book design, traditional typography & letterpress printing. Students will consider the book and its related printed matter in service of its content. The course will be run as a fine press publishing house. Students will produce individual and group projects, including bookplates, broadsides, and books. Studio work will be augmented with field trips, artist visits, and guided exploration of the special collections at the John Hay Library.

VISA 1300. Words in Painting.

Words in painting introduce sound into what is usually a silent experience; they force the viewer to both look and read. Writing is a form of drawing. Words can be poetry, advertising, or labeling. Words can be admired abstractly for their form. For much of history, words and pictures have been used to tell important stories, deliver political content, or sell consumer goods. This course will examine the use of words in contemporary painting through readings, slides, and discussion. A series of painting assignments will address the artistic problems of using words.

VISA 1310. Painting I.

This painting course explores ideas and concepts in contemporary painting and emphasizes individual projects based on prompts. Students will experiment with materials, color and scale strengthening ideas through individual investigations into content and context. Critiques, readings, writing assignments and final projects will be supplemented by research into artists and movements that have developed within the last several decades.

VISA 1320. Painting II.

This course is an in-depth investigation of contemporary painting practices and concepts, with a strong emphasis placed on critique. Experimentation and exploration of individual themes is emphasized. Affords an opportunity for in-depth investigations of painting techniques and ideas and the development of a series of works reflecting an individual creative vision.

VISA 1320A. Painting The Mediated Image.

In this themed painting course we will explore how painting might serve as a lens through which to view and respond to the digital world. An emphasis will be placed on exploration of individual interests; students will choose a subject to research (i.e. digital aesthetics, computer graphics, photography, video, gaming, automation, social media, digital culture, privacy, identity, online shopping, etc) and will work on painting projects related to their chosen topics. The course introduces photo-silkscreen, digital painting and printing, and image transfer techniques into experimental painting-based studio practices. Course is restricted to Visual Art concentrators or by permission of the instructor.

VISA 1330. Drawing with Watercolor.

This course will be a rigorous examination of the possibilities of drawing with watercolor. We will do a lot of work outside and there will be an emphasis on unorthodox use of the watercolor medium. Because the basis of watercolor is sound drawing, there will be considerable instruction and practice in drawing fundamentals such as perspective, value, composition, scale, rendering, etc. Recommended prerequisite: VISA 0100, 0110, or comparable foundation level course is expected, or by permission.

VISA 1340. Accessorizing Painting: The Exalted Surface.

This studio course will examine the crossover between decorative arts and painting. Drawing upon sources such as fashion, textiles, adornments, jewelry, furniture, hair and architecture we will study how design aesthetics demonstrate class, position, lineage or a particular period in the history of painting and embellishment. Students will be encouraged to experiment with a wide variety of media and work on projects based on their selected researched subject areas. Enrollment limited to 14.

VISA 1350. Painting The Mediated Image.

In this themed painting course we will explore how painting might serve as a lens through which to view and respond to the digital world. An emphasis will be placed on exploration of individual interests; students will choose a subject to research (i.e. digital aesthetics, computer graphics, photography, video, gaming, automation, social media, digital culture, privacy, identity, online shopping, etc) and will work on painting projects related to their chosen topics. The course introduces photo-silkscreen, digital painting and printing, and image transfer techniques into experimental painting-based studio practices. Course is restricted to Visual Art concentrators or by permission of the instructor.

VISA 1400. The Artist's Body: Performance Art as Acts of Activism, Communion, Rebellion, Humor and Meditation.

In this course, we will divide our time equally between studying the works/ styles of contemporary performance artists and practicing performance art techniques and various modes of physically engaging in this art form. (Note: Performance art is not to be confused with the term performing arts. This class is not a theater or poetry presentation course, but can be applied to the ways in which both are presented.) This course will focus on the genre of performance art which lies between most other art disciplines and includes raw feelings (not acted emotions), political views and above all else, the embodiment of physical actions as art.

VISA 1410. Sculpture: Material Investigations.

This studio course addresses basic sculptural methods, i.e., additive + subtractive modeling, casting, and assemblage, and common sculptural materials, i.e., wood, metal, plaster, and found objects. Demos + workshops on a number of sculptural tools and materials form the foundation for this studio. Students develop sculptural solutions to a given set of problems. Contemporary issues raised in critiques and readings. Extensive outside work is expected.

VISA 1420. Sculpture II: Conceptual Propositions.

This studio course explores a number of contemporary sculptural theories and practices. Contemporary issues raised in critiques and readings. Completion of VISA 1410 is suggested, but not required. Demos and workshops on a number of tools and materials will be given as needed. Students may take this course more than once, as the problems can be customized for those with more experience. Extensive outside work expected.

VISA 1510. Black and White Photography.

This course offers introduction to traditional black and white 35mm darkroom techniques, including processing film, silver gelatin printing and related techniques. While the class is primarily a studio course, it will be supplemented by weekly slide presentations and discussions of assigned readings. Slide presentations will focus on individual photographers in the history of the medium. Topics of discussion will include photographic genres, the photo essay, editing and sequencing a body of work, personal visions, social and political context, documentary versus art photography.

VISA 1520. Digital Photography.

Over 1.8 billion photographs are uploaded to the Internet each day. Since everyone's a 'photographer', what type are you? While we constantly produce images for ourselves and others in private and public, this course will ask students to critically rethink this tool. Image-making, from "capture" to "color-correction" and beyond will be consciously addressed, as we approach photography from the perspective of contemporary art practice and produce a final portfolio of prints. Class will be discussion, slideshow, studio and critique. Prior experience in photography preferred not required.

VISA 1530. Digital Photo Bookbinding.

Digital Photo bookbinding is an advanced photography class for students with experience with digital or black and white photography. The class will focus on building on editing and sequencing a body of work as well layout, formatting and considerations of text and captioning. Students will come away from class with four bound books. The first three will be early tries at the various techniques and the final one will be a more ambitious project.

VISA 1600. Social Practice: Art in Everyday Life.

This interdisciplinary course explores theoretical and practical ways that art can engage community. We will explore methods for social interventions, collaboration, and the notion of art as activism. Part studio and part seminar, this course examines our role in society as cultural producers. Students will engage in a series of readings and assignments that will help them prepare for a self-directed, socially engaged project of their choosing. They may work in any artistic medium and in communities of their choice. Students will work outside of class on their projects and present documentation of its development for class critique.

VISA 1620. Performance Art: The Artist's Embodied Practice.

In this course, we will divide our time equally between studying the works/styles of contemporary performance artists and practicing performance art techniques and various modes of physically engaging in this art form. (Note: Performance art is not to be confused with the term performing arts. This class is not a theater or poetry presentation course, but can be applied to the ways in which both are presented.) This course will focus on the genre of performance art which lies between most other art disciplines and includes raw feelings (not acted emotions), political views and above all else, the embodiment of physical actions as art.

VISA 1710. Site and Sound.

This studio course provides an overview of contemporary sound art, facilitates the development of site-based sonic artwork, and encourages a critical approach to sound and audio practice. Work will be developed for and from specific sites with special emphasis placed on modes of listening and the physical characteristics of sound itself. Examples of site-specific sound work in a variety of formats including performance, installation, sculpture, literature, and radio are presented and analyzed.

VISA 1720. Physical Computing.

This studio course is an intensive introduction to electronic devices for use in artmaking and includes hands-on experience working with sensors, motors, switches, gears, lights, simple circuits, microprocessors and hardware-store devices to create kinetic and interactive works of art. Demonstrations, lectures and critical discussion of work will be given to develop concepts and technical skills. Demonstrations, lectures and critical discussion of work will be given to develop concepts and technical skills.

VISA 1730. Exploration in Video Art.

This studio course provides an overview of contemporary video art and video installation practices, facilitates the development of video work in expanded space, and encourages a critical approach to interactive moving image practice. Students will develop a set of video installation pieces for particular spaces and situations beyond the standard single-screen video format. Basic video production and post-production techniques will be covered and complimented by readings and screenings.

VISA 1740. Time Deformations.

This studio course explores modes of electronic media by focusing on time as a primary material. Students will develop projects for specific sites and situations in response to assigned topics individually and in groups. Selected works in video, sound, performance, and online media that make innovative use of temporal strategies will be examined. Production work will be complimented by technical lectures, readings and discussions, and screenings.

VISA 1750. Sonic Practice Studio.

This studio course provides an exploration of current practices in sonic arts and facilitates the development of sound-based creative work. Through production and critiques we will examine a number of overlapping areas of sonic practice and audio culture including phonography, sound installation, field recording and environmental audio, sonic narratives in language and other forms, mobile audio and soundwalks, and the materiality of noise. Students will develop sound-based pieces by working individually and in groups. The pieces will be developed for specific sites and situations and will function as creative research into the subjects areas of the course.

VISA 1800C. Honors Seminar.

Required for students who have been accepted as candidates for honors. The seminar meets weekly to discuss readings and for group critiques. Includes group trips to New York and Boston, to visit galleries, museums, and artists' studios. Instructor permission required. Must be accepted into Honors Program.

VISA 1800G. Junior Seminar in Visual Art.

Contemporary artists are makers, researchers, writers, curators. This is a hybrid seminar/ studio course on the global practice of contemporary art and how we can apply those lessons to our own artmaking. We will focus on questions such as "How do artists run their studios", "What is the place of history and identity?" and "How does art function as a commodity?" Class projects will include short writings and making objects. We will visit artists studios and have artists come to talk to us. Department trips to New York will be a part of the curriculum.

VISA 1800P. Art/Work: Professional Practice for Visual Artists.

Unlike other creative professionals, visual artists don't have agents or managers—you handle the business yourself, with the support of your community. This class covers business basics including tracking inventory and preparing invoices; taking legal precautions such as registering a copyright and drafting consignment forms; using promotional tools; diversifying income; and making career decisions such as choosing the right venues to show your work. We will discuss grants, residencies, budgets, do-it-yourself strategies, financial health, and professional relationships. Discussion and assignments will emphasize community, the sharing of resources, and the practical, hands-on skills necessary to thrive as a visual artist.

VISA 1900. Other Lives of Time.

Other Lives of Time takes a decidedly poetic approach to moving image and cinema. Part studio, screening, discussion and critique, we will watch, discuss and dissect works by artists and filmmakers from across the globe that use personal form and distinct techniques to communicate idiosyncratically. Readings will explore contemporary notions of time and cinema while screenings prioritize nonfiction and fiction works that have mainstream audience potential. Assignments will expand student's filmic language as they work over the semester toward the completion of a short film that employs a singular structure.

VISA 1910. Individual Study Project in the Practice of Art.

Work on an approved project leading to the presentation of a portfolio, under supervision of an individual member of the staff. Project proposals must be filed with the department no later than the first week of the semester. Section numbers vary by instructor.

VISA 1990. Honors.

Section numbers vary by instructor.

VISA 2450. Exchange Scholar Program.**VISA XLIST. Courses of Interest to Visual Arts Concentrators.**

University Courses

University Courses

In an intellectually creative atmosphere, ideas for new academic approaches and new kinds of courses may and should arise. Among these courses are offerings that address themselves to major themes and problems requiring a different perspective than generally governs departmental offerings. They provide students with the opportunity to integrate their understanding of major areas of learning and explore relationships among diverse forms of human experience; or to relate one or more disciplines to a broader context; or to focus on large and fundamental problems that need to be approached through several disciplines or by ways not found in existing disciplines. University courses originate with individual instructors and are retained in the curriculum only so long as these instructors wish to teach them.

Courses

UNIV 0090. Meditation and the Brain: Applications in Basic and Clinical Science.

This course draws upon the multi-disciplinary expertise of four instructors to provide a detailed exploration of recent neuroscientific research on meditation combined with guided first-person experiential learning in various meditation practices. The course focuses on the cognitive, affective, and neurophysiological effects of meditation practices and their clinical applications in health, psychiatry and medicine.

We will identify persistent methodological challenges as well as the potential solutions for cutting-edge research that can emerge from an informed interdisciplinary perspective.

UNIV 0101. Being Proactive and Reflective in Your Education.

This half-credit course is designed for incoming students who are excited to reflect on and challenge their learning experiences while building necessary skills for effective classroom and life-long learning. Students will engage with one another through discussions and reflective activities in class, group activities such as a scavenger hunt, reflective journaling, and written assignments. The course will culminate with students collaborating on a scaffolded project that will examine how to rehumanize (Gutierrez, 2018) the classroom by focusing on how students and Brown instructors engage with material in relation to their identities and learning environments. Students will develop effective group working skills; identify and practice effective study strategies; identify approaches to and engage with challenging problems through an exploration of their learning experiences; and develop the skills to be leaders in building a reflective Brown community.

UNIV 0102. Bridge Scholars: Intercultural Competence for Leadership.

In this discussion course, students will reflect on their own skills, experiences, and identities in a supportive classroom community. Exploring the fundamentals of 'intercultural competence,' students will become 'cultural detectives' in learning about themselves, one another, and Brown as they embark upon their college careers. Together, we will explore how we can become leaders in our own lives and in our communities as we pursue academic excellence and school/life balance. Class activities will include individual reflection, small group discussion, scaffolded written assignments, and opportunities for creative expression. Note: the first four weeks of this course will be online and the last two weeks will happen in person on Brown's campus in Providence. During the online portion of the course, we will have synchronous class meetings on Zoom and regular opportunities for students to ask questions.

UNIV 0123. Practical Introduction to Peer Advising.

A defining part of Brown's Open Curriculum is the central role that students play in supporting the learning of their peers. In this class, you – in community with your classmates as potential future peer advisors – will learn best practices in inclusive advising pedagogy while exploring specific academic, co-curricular, professional, and social challenges, opportunities, and resources at Brown. Coursework includes self-reflection, peer-to-peer sharing, hands-on exercises, and theoretical readings that culminate in a group project exploring an advising area of interest and importance to you. Those who successfully complete the course will receive preference for funded peer advising positions within the College, including the Meiklejohn Peer Advising program. (Mandatory S/NC, Half-Credit Course restricted to semester levels 01 to 06.)

UNIV 0400. Beyond Narnia: The Literature of C.S. Lewis.

C.S. Lewis was one of the most widely read authors of the 20th Century, yet much of his philosophical, theological and political theories are unfamiliar. His fiction and philosophical writings will be explored to better understand his perspective on modern humanity, the relationship of man to family, the community and the state. C.S. Lewis had a very clear philosophy on the importance of the individual and how he relates to the larger social structures. Morality and the role of individuals as they interface with others around them and their responsibility for working with society both at community level and at the macro-state level will be explored.

UNIV 0456. Exploring Career Options.

It's normal not to know what you want to do for the rest of your life, or even for the next few months. You're definitely not the only one who doesn't have it figured out yet. This course is designed to help you begin the process of identifying and reflecting on your skills, interests, values, and strengths to help you consider and explore internships, jobs, and career fields that might interest you. The course will also introduce you to internship and job search skills – resume, cover letter and LinkedIn profile writing, networking, interviewing, and negotiating – as well as frameworks to help you approach career-related decision making. (Mandatory S/NC, Half-Credit Course restricted to undergraduate students in semester levels 03 or 04.)

UNIV 0550. The Politics of European Integration and Disintegration.

What began as a post-war organization of six states to regulate coal and steel industries has evolved over seven decades into a Union of 26 states to regulate an extensive range of political, economic, and social issues at the transnational level. Viewed from this perspective, the project of European integration has been a remarkable success story. The EU has been engulfed in a seemingly endless series of crises that have seriously threatened the functioning of its institutions and the future of the integration project. We will study the politics of European integration and disintegration through some of these crises - the Euro crisis, the rule of law crisis, Brexit, the Covid-19 pandemic, and most recently the Russian invasion of Ukraine – and their impact on the EU's legal and political system.

UNIV 0700. Story and Sound: Introduction to Audio Journalism and Storytelling.

Storytelling and interviewing have long been tools in the social sciences. Their importance has grown as smart phones have put the ability to record sound and video into everyone's hand. Nowhere is the egalitarian nature of storytelling more apparent now than in podcasting, a format that's come to occupy a growing role among researchers and scholars. This course asks students to develop critical abilities to analyze and interpret works of audio journalism and podcasting, and create their own. Students learn the fundamentals of nonfiction storytelling and the specifics of audio and podcast production. They'll learn about how audio fits into an ever-changing media landscape, and learn to think critically about what stories are told and why. Students learn the fundamentals of audio journalism, including finding and identifying stories, conducting interviews, writing for radio, editing, and sound design.

UNIV 0901. Learning Transfer: Integrating Sport, School, and Life.

The ultimate goal of education is to teach students course content and skills in the hopes that the learning and skills will transfer to other situations, helping students become better problem solvers and citizens in the real world. This course examines and scaffolds learning transfer in the context of sports into the classroom. In particular, we discuss learning through the pursuit of sports and athletic competition, and draw the analogs into effective learning practices for the classroom context. We will have particular emphasis on high performing teams, drawing analogs between athletic teams and study groups/group work in the classroom. This course also explicitly recognizes that students are often novices in learning and intentionally scaffolds the transfer process so students can detect, elect and connect learning across the two realms.

UNIV 1001. The Israeli-Palestinian Conflict: Contested Narratives.

The Israeli-Palestinian conflict has been a central event in the history of the modern Middle East. We will compare the radically different narratives that Palestinians and Israelis tell themselves and others about their struggle over Palestine/Israel. Sources will include historical documents, memoirs, and accounts of the conflict by Israeli and Palestinian historians. We will read works of fiction and view films that present the story of the conflict from both perspectives. Attention will also be paid to efforts by Israelis and Palestinians to transcend their conflicting narratives and attain mutual understanding. All sources in English translation.

UNIV 1003. Jerusalem: Jews, Christians, Muslims.

In this course, we will examine how competing heritage narratives of the city of Jerusalem have been shaped by Jewish, Christian, and Muslim histories and beliefs, as well as by Israeli, Palestinian, and international views and interests. We will explore the impact of media portrayal, educational platforms, and archaeological explorations in the contexts of social, religious, and political debates from the mid-nineteenth century to the present. At the focus will be the question of the city's indivisible heritage and boundaries that divide the city and its communities.

UNIV 1005. Narratives of Racism: Lynchings, Miscarriages of Justice, and Internment Camps in America.

In this course, we will study narrative accounts of 20th-century American incidents in which racism led to the persecution of members of minority groups by means of lynchings, miscarriages of justice, or the placement of people in internment camps: the unjustly conducted trial and lynching of the Jewish factory manager Leo Frank accused of murdering a young girl in Georgia; the kidnapping and murder of African American adolescent Emmett Till in Mississippi; and the internment of Japanese descendants during World War II out of fear that they would aid America's enemy.

UNIV 1110. The Theory and Teaching of Problem Solving.

What is a problem and how do you solve one? What relationship exists between problem-solving and teaching? This course is designed for STEM focused students (but it is open to all) who are teaching/will teach and are interested in improving their problem-solving and teaching. You will gain the skills that will aid you in your own learning, promote learning in others, improve communication and problem-solving capabilities, and prepare you to engage more deeply in diverse learning spaces. In the final weeks of the course you will apply concepts to a Scholarship of Teaching and Learning project that focuses on improving/examining problem-solving and/or teaching in your field. S/NC

UNIV 1111. Systemic Racism and Modes of Resilience.

Over the past several years there has been much public discussion about systemic racism, and its role in perpetuating racial inequality. What is systemic racism? What role does it play in society and how have African Americans responded to it? This course will use the lens of "systemic racism" to explore the interconnections between policies and practices that create a network of devastating forms of racial discrimination and disadvantage; conditions that have shifted over time and have made it difficult for black communities, and individuals within them, to flourish. And yet, systemic racism does not have the final word. We will also consider how African-American communities have developed various modes of resilience in cultural, spiritual/religious, artistic, and other facets of life.

UNIV 1210. Practical Experience in the Clinical Environment.

This course will meet once a week on campus at the beginning of the semester to ensure you are prepared for your clinical shadowing experience. Our class time will focus on professionalism, the realities of practicing modern medicine, and your reflections on your shadowing experiences with the goal of a better understanding of your personal fit for a career in medicine. You will also shadow a physician or other healthcare professional at least four times throughout the semester at their home clinical site. Interested students can apply by filling out the application in the Class Notes below. The application is required for this course to ensure that students meet the requirements for shadowing and do not have significant prior shadowing experience.

UNIV 1211. Brown Experiential Learning Practicum.

This course is an optional 1-credit seminar for students participating in an off-campus semester internship. The course is centered around a 10-hour/week internship, which provides an immersive experiential learning opportunity. Seminar sessions, workshops, and reading and writing assignments enable students to reflect on their internship experiences, contextualize their work and organization within the broader environments, and develop academic and professional skills. (Mandatory S/NC; Instructor approval required.)

UNIV 1221. Brown Experiential Learning Practicum.

This course is a required 2-credit seminar for students participating in an off-campus semester internship. The course is centered around a 20-hour/week internship, which provides an immersive experiential learning opportunity. Seminar sessions, workshops, reading and writing assignments enable students to reflect on their internship experiences, contextualize their work and organization within the broader environments, and develop academic and professional skills. (Mandatory S/NC; Instructor approval required.)

UNIV 1801. Brown in Washington, D.C. Practicum.

This course is a required 2-credit course for students participating in the Brown in Washington, D.C. program. The course is centered around a challenging 30-hour/week internship in a public-sector or not-for-profit organization in Washington, D.C., which provides an immersive experiential learning opportunity at an organization or agency involved in the public policy process. Seminar sessions, workshops, field trips, and reading and writing assignments enable students to reflect on their internship experiences, contextualize their work and organization within the broader DC policy environment, and develop academic and professional skills.

UNIV 1981. Diasporic Healthcare and the Creolization of Health and Medicine: Cabo Verde and the United States.

This course aims to critically investigate the health status of Cabo Verde and its diasporic immigrants. This course is an introduction to the global burden of disease and the social determinants of health, which prove to be vitally relevant to our current understanding of healthcare and equity. Further, contextualizing contemporary health issues such as health inequity and inaccessibility with historical inquiry is important to further improve current systems of health care and management. The goal of this course is to define diasporic healthcare, navigate the complexities of Cabo Verdean creolization, and understand the interactions history, heritage, and health have with one another. The class will take a mandatory GELT-funded trip to Praia, Cabo Verde. More information on this trip can be found in the syllabus.

Independent Study Plans

Independent Study Projects

Most academic departments offer students opportunities to work independently with one of its faculty members. Students may approach a professor and request a departmental independent study which, if successfully arranged, takes place under the sponsoring department's course code (i.e. ECON 1970 or SOC 1970.) When such an option is unavailable, the student may propose an Independent Study Project (ISP) through the College Curriculum Council. Each course proposal must have the approval of a faculty sponsor who shall be responsible for the scrutiny of the proposal, the evaluation of the work done, and the assignment of a grade. The faculty sponsor is not expected to give regular tutorial instruction.

Proposals for non-departmental Independent Study Projects (ISP) must be submitted per guidelines established by the College Curriculum Council on a form provided by the Office of the Dean of the College. The College Curriculum Council will review the proposals to ensure the academic quality of the proposed course and avoid undue duplication. Independent study proposals have deadlines associated with them for each semester. For more information, please visit the Curricular Resource Center (<http://brown.edu/academics/college/advising/curricular-resource-center/independent-studies/independent-studies/>) website.

Group Independent Study Project

Group Independent Studies (GISP) are cooperative inquiries in which participating students bear major responsibility for the work's planning and conduct. They provide an opportunity for academic pursuits which might not be available in regular courses. They carry course credit.

Each Group Independent Study is sponsored by an instructor who holds a teaching appointment at Brown University and whose central functions are to assess the proposed study, provide advice during the work, and be responsible for evaluating each student's work. Group Independent Studies permit instructors to interact with more students than independent studies can realistically permit. A Teaching Assistant or Teaching Associate may sponsor a Group Independent Study if the department chair recommends that he or she be allowed to do so.

Proposals for Group Independent Studies should be made on a form provided by the Office of the Dean of the College. They will be reviewed by the College Curriculum Council to ensure the academic quality of the proposed study and to avoid undue duplication. Group Independent study proposals have deadlines associated with them for each semester. For more information, please visit the Curricular Resource Center website (<https://crc.brown.edu/curricular-options/independent-studies/>).

Each group should be sponsored by an instructor holding a teaching appointment at Brown University who is prepared to assess the proposed study, provide advice during the project, and be responsible for the evaluation of each student's work. Usually, this person will be a faculty member. Under exceptional circumstances, a graduate student with appropriate expertise and teaching experience would be eligible to be a sponsor. In this case, the proposal must be accompanied by a curriculum vitae for the graduate student and a statement of qualification and recommendation from the chair of the graduate student's department. The chair will assume ultimate responsibility for the academic quality of the GISP. The College will not offer remuneration for sponsors of GISPs.

At the end of each Group Independent Study, the faculty sponsor must submit a joint student-faculty evaluation report of the project's accomplishments to the College Curriculum Council.

Global Independent Study Project

Brown students studying abroad can craft a Global Independent Study Project (GLSP) with a Brown faculty member. Students accepted to this program work with faculty with teaching or research experience in their proposed overseas study destination. Together, the student and the faculty member develop a project proposal that is an integral part of the student's study abroad curriculum and that, where possible, is connected to the

student's concentration. Project proposals are submitted to the College Curriculum Council for review. Upon completing the global independent study project, students receive one Brown credit. The remainder of the student's course load abroad is taken through the study abroad sponsor institution.

Group Independent study proposals have deadlines associated with them for each semester. For more information, please visit the Undergraduate Study Abroad website (<https://studyabroad.brown.edu/about-study-abroad-brown/>).

Financial Information

The College — Tuition Regulations

Undergraduate students at Brown are required to accumulate eight semesters, or 32 enrollment units (in order to earn a baccalaureate degree). The eight-semester enrollment requirement is separate from and in addition to any other degree requirements.

1. Tuition rates are set by the Corporation of the University for each semester. Normally, the tuition rates for the two semesters of a given academic year will be the same.
2. Tuition payments for the baccalaureate degree are based on the norm of thirty-two courses, four courses in each of eight semesters. The minimum enrollment requirement is eight semesters, or the equivalent. The minimum tuition requirement for the program leading to the combined degrees of A.B.–Sc.B. is ten semesters of tuition credit. (Note: The Brown Corporation has enacted a provision allowing students in the five-year A.B.–Sc.B. program who complete all academic requirements in nine semesters to terminate their studies at that point, provided the Committee on Academic Standing (CAS) approves the breadth and quality of the student's program. In that case, the tuition requirement is reduced to nine semesters.)
3. Payment of full-time tuition for a semester entitles the student to enroll in three, four, or five courses for that semester. For full-time degree candidates, tuition charges are set for the semester, not per course. (Exception for students who are given permission to study beyond 8 semesters outside the 5 year Ab-ScB and the Brown-RISD program in which case they are charged per course. See #7.)
4. Enrollment Units for Transfer Credits

- a. Students who are granted credit for transfer credit for courses completed at another college or university prior to enrollment at Brown may apply for up to four semesters of enrollment units according to the following schedule:

Brown Semester Course Credits	Advanced Standing and Enrollment Units
3-6	1 semester (4 Enrollment Units)
7-10	2 semesters (8 Enrollment Units)
11-14	3 semesters (12 Enrollment Units)
15 or more	4 semesters (16 Enrollment Units)

- b. Students who are granted Brown course credits for work completed at and transferred from another college or university after enrollment at Brown may apply for and may be granted advanced standing and enrollment units according to the same schedule as in 4(a) above. All transfer credits earned after enrollment at Brown are cumulative. Advanced standing and enrollment credit for this cumulative total of transfer credits will be awarded *only* in semester-equivalent blocks. In exceptional cases the Committee on Academic Standing may allow a student to transfer the equivalent of less than 3 Brown semester course credits for work completed during the regular academic year (This would not carry any enrollment units). The following provisions apply with regards to transfer credits:

- i. Such courses completed while the student is not currently enrolled at Brown will become part of the cumulative total of any subsequent transfer credit earned by the student and the Table in (a) above will apply if a full time semester of transfer credit is earned in a fall or spring semester.
- ii. Once advanced standing has been granted, a student wishing to extend his or her total period of enrollment beyond eight full-time semesters, or the equivalent, must make a special petition to the Committee on Academic Standing. If approval is granted, tuition for each course (for the extended period) will be charged at corresponding fractional rate of the full-time semester rate based on registered credits.

- iii. Transfer credit for summer school courses is allowed in accordance with provisions established by the Faculty Rules and the Committee on Academic Standing. When such credit is awarded, no enrollment unit is associated with the transfer credit granted. The academic credit awarded may not be combined in any cumulative total of transfer credits for the purpose of determining advanced standing or enrollment credit.

5. Effective 2025-2026 academic year, students who enroll in Brown summer and/or winter courses will earn one enrollment unit per credit (as well as half credits if applicable), yet their semester standing will not be advanced. Students may not earn more than 4 total summer/winter course credits and enrollment units.
6. An eighth-semester student who owes less than a full-semester tuition credit at the beginning of the eighth semester will be charged the fraction of the full-time tuition charge for that semester which will complete the eight-semester obligation and may take an equivalent number of courses. Additional courses will be charged at the corresponding fractional rate of the semester's full tuition charge.
7. Regular degree candidate students who must or choose to take courses in semesters beyond the eighth semester in order to complete requirements for the baccalaureate degree will be charged tuition at the corresponding fractional rate of the semester's full tuition charge for each course enrollment.
8. Degree candidate students who are given permission by the dean to register for a reduced workload (one to three courses, inclusive of half credit courses) will be charged the corresponding fraction of the semester's full-tuition charge for each course credit enrollment.
9. Students in the eight-year program leading to a baccalaureate degree and the M.D. degree (Program in Liberal Medical Education) shall make four annual tuition payments at the rate fixed for the College (for years one through four) and four annual tuition payments at the rate fixed for the Medical School (for years five through eight).
10. Students in the Concurrent Bachelor's -Master's program are required to fulfill the minimum eight semester, 32 enrollment unit requirement, but can extend study up to nine semesters, 36 enrollment units. **(Note: This program is under review and no longer open to new applications.)**
11. The minimum enrollment requirement for the integrated five-year baccalaureate-master's degree program is eight semesters, 32 enrollment units while an undergraduate, and a minimum of six enrollment units while in the fifth year in the graduate school at the prevailing tuition rate for the specific graduate program.
12. The above regulations cover students who are candidates for a baccalaureate degree. For special students who are not candidates for a degree, a tuition charge of the corresponding fraction of the semester tuition rate will be made for each course/credit registered. *(Exception - RISD cross-registration students during the fall and spring semesters and some other programs such as Wheaton College and the RI language consortium for foreign language courses).*

Enrollment Unit Regulations Relating to Brown Summer and Winter Session Courses

Effective 2025-2026 academic year, Brown Summer and Winter Session courses each one quarter of full tuition charge and earn an enrollment unit (if a half credit course is registered for, the charge and enrollment units would be reflected).

The enrollment requirements dictate that courses taken prior to matriculation may not be combined with courses taken after matriculation in order to achieve advanced standing and enrollment units; hence, Summer Session courses cannot be so combined. In a similar manner, summer courses taken elsewhere and transferred after matriculation do not earn enrollment units.

The maximum number of summer and winter courses from all sources for which a student may receive credit is four, with no more than two in the same summer.

Estimated Date of Completion (EDOC)

One goal of the enrollment requirement is to enable the University to manage enrollment in the College more effectively. It is essential that

this be done to the maximum extent possible. Accordingly, all currently enrolled students are assigned an expected date of completion (EDOC). This information is sent annually to all students with instructions to confirm the assignments or to work out any necessary adjustment with the Registrar. Any extension of enrollment beyond the student's official EDOC will have to be applied for by December 1 for the spring semester and June 1 for the fall semester.

The College — Student Charges

The University reserves the right to change the rates that apply to all students whenever it is deemed advisable. Published notice of any change will normally be provided in advance.

Charges for 2025-2026 are as follows below. Additional detail can be found on the Student Financial Services Tuition and Fees (<https://sfs.brown.edu/tuition-and-fees/>) website.

Tuition: The annual tuition charge for the year is \$71,700 or eight tuition units. The tuition charge for part-time and special students is \$8,962.50 or one tuition unit, per course.

Room: The dormitory charge for the academic year in the undergraduate residence halls is \$10,410 for regular accommodations and for dormitory apartments/suites.

Housing Cancellation Fee: The Housing Cancellation Fee is charged to seniors who select on campus housing for the upcoming fall term and later choose to cancel their on campus housing after the published cancellation deadline. The Housing Cancellation Fee is not applicable to seniors who will study abroad/away on Brown-approved programs or who will be on leave in the fall.

Meals / Board: An annual charge of \$8,104 applies to the twenty meal contract. Other meal plan pricing is determined by Dining Services and will be reflected on the Student Financial Services Tuition and Fees (<https://www.brown.edu/about/administration/bursar/tuition-and-fees-0https://sfs.brown.edu/tuition-and-fees/>) website. Consistent with Brown's commitment to the residential college, all resident undergraduates (except RUE students) are required to participate in a meal plan throughout their first full year of enrollment. Refer to <https://dining.brown.edu/meal-plans/> for details regarding meal plan terms and conditions, including fees for meal plan cancellations or changes. Because services offered are often modified to reflect changes in student life, a current brochure is available from the food services office.

Academic Records Fee: An Academic Records Fee of \$100 will be charged to all first-time attendees in degree programs with a program start date on or after July 1, 2018. This includes students in undergraduate, graduate, medical, executive master degree, and stand alone certificate programs. Non-degree students who are charged tuition will be charged a \$10 fee per semester of enrollment. The Academic Records Fee will cover transcripts for life (students will have to pay the FedEx fee) and electronic diplomas (for students who completed degrees on or after May 2015). The Academic Records Fee does not cover replacement diplomas.

Student Resources Fee: The Student Resources Fee of \$1,086 is assessed to all undergraduate students. The fee is used to fund offices, centers and programs that provide direct support and services to students.

Health Services Fee: A \$1,236 annual fee is charged to all degree candidates, both full and part time. This fee is designed to cover costs of providing care at Health Services from late August through Commencement. This fee does not include Health Insurance coverage.

Student Health Insurance: Mandatory participation is required in the university group health and accident insurance program for students unless a waiver of participation is granted upon submission of proof of comparable coverage. Health insurance coverage rates for the 2025-2026 academic year are TBD. Once rates are determined, they will be added to the Student Financial Services Tuition and Fee (<https://sfs.brown.edu/tuition-and-fees/>) website. Students are encouraged to review the information regarding deadlines and eligibility to waive SHIP (<https://healthservices.brown.edu/fees-insurance/student-health-insurance-plan-ship/>) and contact studenthealthinsuranceplan@brown.edu with questions.

Student Activity Fee: A \$428 Activity Fee is charged to all undergraduates, the full balance of which is allocated by the student-run Undergraduate

Finance Board to support the activities of categorized student organizations and the three branches of the Student Government Association.

Recreation Fee: A \$100 recreation fee is charged to all Brown students to provide access to the University's recreational athletics facilities.

Late Course Add Fee: There is an additional charge of \$15 per course for all registrations after the second week of classes.

Transcripts: Information about ordering transcripts and the associated fees can be found at: <http://brown.edu/about/administration/registrar/academic-records/academic-transcript-requests/transcript-ordering-options> (<http://brown.edu/about/administration/registrar/academic-records/academic-transcript-requests/transcript-ordering-options/>)

The College — Payment of Charges

The University utilizes an electronic billing system (E-Bill). Payment of tuition and fees are due by August 1 for Semester I obligations and by January 1 for Semester II obligations. Charges applied to the student account during the semester will be due upon receipt.

Students who fail to make payment in full by the prescribed deadlines are assessed a late payment charge of 1.5% per month (an annual rate of 18%) on any unpaid balance. Outstanding balances greater than \$500 will prevent a student from receiving a diploma from the University. Outstanding balances greater than \$1,000 will prevent a student from pre-registering for any subsequent semester, charging Bookstore purchases to the student account, or receiving a diploma. Outstanding balances greater than \$5,000 will prevent a student from continuing to be enrolled at the University. Outstanding balances greater than \$5,000 will prevent a student from continuing to be enrolled at the University. Once dismissed from the University, a student will not be allowed to return for future semesters until their financial obligation has been fully satisfied. Students who fail to meet their financial obligation in accordance with established University regulations will have the status of their account reported to the University Student Account Committee for appropriate action, which may include cancellation of eligibility for enrollment and/or dismissal. The University reserves the right to refuse to furnish grades, certificates, diplomas, letters of honorable dismissal or recommendations, for students who fail to pay their student account balances. When required, the University utilizes the service of a commercial collection agency to assist in the collection of unpaid student accounts.

For students using Ch. 33 or Ch. 31 Veterans benefits, our tuition policy complies with 38 USC 3679(e) which means those students will not be charged or otherwise penalized due to a delay in VA tuition and fee payments. Students who wish to use VA education benefits should submit their Certificate of Eligibility to the School Certifying Official in order to be certified with the VA.

The Student Financial Responsibility Agreement (SFRA) is a commonly used tool among universities for ensuring that students are aware of important financial information. The SFRA is between the student and Brown University and outlines the financial obligations and responsibilities students agree to when enrolling at Brown University. The SFRA outlines important billing, payment, and collection information. All students must complete the SFRA in Banner Self Service (https://selfservice.brown.edu/ss/twbkwbis.P_GenMenu/?name=homepage) each year prior to registering for classes. If the SFRA is not completed, a hold will prevent course registration. Once the SFRA is completed, the registration hold is removed automatically and immediately.

Please refer to our Make Payments (<https://sfs.brown.edu/financing-payment/make-payments/>) page for details regarding accepted payment methods. In addition, students and families may choose to make semester payments via Brown University's Installment Payment Plan (<https://sfs.brown.edu/financing-payment/installment-payment-plan/>) (IPP). This plan enables students and their families to pay interest-free, monthly installments. A non-refundable enrollment fee must be paid at the time of enrollment.

The College — Refund of Annual Charges

1. Tuition

- A student who leaves the University during or at the end of the first semester shall not be charged tuition for the second semester.
- A student who leaves the University (except under conditions noted in (c) below) or changes his/her enrollment status during a semester shall be eligible for tuition payment refund during the first five weeks according to the following schedule:

i.

Week of Withdrawal	Percentage Amount of Refund
1 and 2	80 percent
3	60 percent
4	40 percent
5	20 percent

- If a partial refund is made, no portion of the tuition paid and not refunded will be credited to the total tuition required for the degree. When *no* refund is made, the four tuition units paid will be credited toward the total tuition requirement for the degree, and the number of semesters to which a student is entitled for full-time enrollment will be reduced by one.

- A student who is suspended, dismissed, or withdraws when under investigation for misconduct shall not have tuition refunded for the semester in which the action is taken.

2. Room

While residence hall rooms are rented on an academic year basis, students who leave the University or change their status to married students during or at the end of the first semester are not charged room rental for the second semester. Students who leave the residence halls during the semester are charged room rental for the balance of that semester unless the residential life office can provide a satisfactory replacement for the vacant space. A satisfactory replacement is deemed to be a student who is not currently living on campus or a student who is living in a "roomsharing" room if the total occupancy of the residence halls is in excess of normal capacity. Prorated room refunds when applicable will be made from a schedule prepared by the Director of Residential Life and will be on file in the Office of Residential Life. A student suspended or dismissed from the University or withdrawing when under investigation for misconduct is not entitled to any refund of room rental charges for the balance of the current semester. Students seeking any further information regarding room charges and/or refunds should contact the Office of Residential Life.

3. Board

Brown Dining Services offers flexible meal plans and varied menu and service offerings. Consistent with Brown's commitment to the residential college, all resident undergraduates (except RUE students) are required to participate in a meal plan throughout their first full year of enrollment. One change is permitted per semester. Meal plan contracts are in effect for the full academic year. Therefore, contracts may be changed but not canceled during the spring semester. Refer to <https://dining.brown.edu/meal-plans/> for details regarding meal plan terms and conditions, including fees for meal plan cancellations or changes.

1. Health Services Fee

A student who leaves the University at any time after the start of the semester is not eligible for a health services fee refund. A student who leaves the University during or at the end of the first semester shall not be charged a health services fee for the second semester.

2. Health Insurance Fee

Enrollment in the student health insurance plan is for a twelve-month period (August 15th to August 14th). Students who start their enrollment at Brown in the second semester are enrolled from January 15th to August 14th.

Prorated refunds are available only to students who separate from the University. Students who wish to request a prorated refund must notify studenthealthinsuranceplan@brown.edu in writing within 30 days of their separation date. Details are available from Health Services.

Student account records are maintained by Student Financial Services. Questions concerning the exact amount of debit or credit balance on a student account should be directed to Student Financial Services at sfs@brown.edu.

Additional information regarding student charges and payment options, please visit <https://sfs.brown.edu/>.

The College — Financial Aid

The Office of Financial Aid is committed to partnering with students and families to explore options to finance the cost of an education at Brown. We assist undergraduate and graduate students in understanding all aspects of the financial aid application processes for federal, state and institutional need-based grants and loans. Our office also provides information about student employment opportunities both on and off-campus.

At Brown, financial aid is one of our highest priorities. Brown is committed to meeting a family's full demonstrated financial need with a combination of federal and institutional need-based grants, student employment, and loans. Our financial aid program includes initiatives that in some cases offer awards with no expected parent contribution, and/or no loans.

Visit the Office of Financial Aid at <http://www.brown.edu/about/administration/financial-aid/> for more information.

The College — Financing Alternatives

Student Financial Services is the centralized department for all loan programs. This office administers student loans for undergraduate, graduate and medical students. The University participates in the Federal Direct Loan program for Subsidized and Unsubsidized Direct Loans and Plus Loans. In addition, the University offers various institutional loan programs.

For more information contact sfs@brown.edu or visit <https://sfs.brown.edu/financing-payment-options/>.

The Graduate School — Tuition Regulations, Student Charges, etc.

For information regarding Graduate School tuition and fees, visit <https://www.brown.edu/about/administration/bursar/student-account-billing/graduate-fees> (<https://www.brown.edu/about/administration/bursar/student-account-billing/graduate-fees/>).

For information regarding Graduate School tuition regulations, financing, and support, please visit <http://www.brown.edu/academics/gradschool/financing-support> (<http://www.brown.edu/gradschool/financing-support/>).

Warren Alpert Medical School — Tuition and Financial Aid, Student Charges, etc. PLME

The tuition for the first four years of the Program in Liberal Medical Education is the same as that of the College listed above. Tuition for the last four years of the PLME is somewhat higher than the College tuition, but consistent with other private medical schools. Tuition is determined each year by vote of the Brown Corporation.

For the current information regarding tuition regulations, student charges, payment of charges and financial aid, refunds, and financial support for the Warren Alpert Medical School, please visit the website at: <http://brown.edu/academics/medical/financial-aid> (<http://brown.edu/academics/medical/financial-aid/>).

University Libraries

University Library

Your Brown University Library is central to Brown's teaching and research mission. It offers a wealth of information for students, from books, academic journals, datasets and images to original manuscripts and photographs, research databases, streaming multimedia and other unique resources. Learn how to take full advantage of the spaces, services and resources available to the Brown community by visiting the library website (<http://library.brown.edu>).

Resources and Collections

Through your library, students and faculty have access to library research experts, data services, and physical and digital resources covering over 80 core academic areas and myriad interdisciplinary subjects. The Library's physical collections are housed in five campus buildings as well as the nearby Library Collections Annex. In addition, the John Carter Brown Library (<https://jcblibrary.org/>) — an independent research institution dedicated to study of the Americas prior to 1825 — is located on campus and open to Brown students.

Library Catalog, Databases and Research Tools

BruKnow (https://bruknow.library.brown.edu/discovery/search/?vid=01BU_INST:BROWN&lang=en) is Brown's catalog search engine — your gateway to Brown's collections of over 7 million volumes, including over 3 million ebooks, more than 250,000 journals and over 500 research databases. Special collections include some 400,000 monographs, 1.5 million archival files and records, 500,000 pieces of sheet music, and 60,000 each of broadsides, photographs and prints. In addition, Brown students and faculty may borrow from the collections of Ivy Plus libraries (<https://ivpluslibraries.org/>) (approximately 90 million items), as well as obtain materials from libraries around the globe through interlibrary loan (<https://library.brown.edu/info/borrowing/#:~:text=Borrowing%20Materials%20from%20Other%20Libraries>). BruKnow provides the call number and building location for physical materials as well as direct links to online content. If connecting from off-campus, be sure to learn about off-campus access (<http://library.brown.edu/offcampus/>).

Newspapers and other resources like some streaming media, interactive content and tools and even some ebooks and journals must be accessed directly on the publisher's platform. You can see and find direct links to all library subscribed resources and some open access resources via the A-Z Databases List (<https://libguides.brown.edu/az.php>) on the library website.

Special Collections

The John Hay Library is home to Brown University's remarkable collections of rare books, manuscripts and archival material ranging from Babylonian clay tablets and Egyptian papyri to current-day books, manuscripts and ephemera. The Hay's collecting policy (<https://library.brown.edu/hay/collectionpolicy/>) is organized around seven broad areas of distinctive strength and three integrative themes in the sciences — including American literature and popular culture, LGBTQ writers, speculative fiction, political and diplomatic history and propaganda, health and medicine, the history of mathematics, and military and society. The recently established Voices of Mass Incarceration in the United States (<https://library.brown.edu/hay/collectionpolicy/voices-of-mass-incarceration/#start>) collecting focus gathers and provides access to original material in all formats that document the lived experiences of incarcerated individuals in the U.S. as well as those affected by the American prison system. See our selective list of special collections (<http://library.brown.edu/collatoz/>).

The John Hay Library is also a leader in primary source pedagogy, and large numbers of Brown students and faculty engage with the Hay as a site of interdisciplinary exploration and active teaching, learning and research using special collections. Many graduate students conduct their dissertation research using special collections. Programs, exhibitions and

collection development at the Hay is continually transformed by and with Brown's vibrant intellectual community.

Borrowing Materials Beyond Brown

Brown students are able to borrow and place requests for print books and journal articles (in pdf form) from our Ivy Plus partners, as well as receive on-site access and borrowing privileges at their libraries. In addition, books and journal articles from several thousand research libraries worldwide are available through interlibrary loan. Learn more about borrowing from other institutions (<https://library.brown.edu/info/borrowing/#other:~:text=Borrowing%20Materials%20from%20Other%20Libraries>).

Course Reserves

The Course Reserves (<http://library.brown.edu/reserves/>) portal is used to place text, audio and video materials on reserve for classes. Anything placed on reserve will also be accessible to students in Canvas. Please see the staff in any of the libraries for assistance, contact the Library via chat (<https://brown.libanswers.com/>) or email rock-reserves@brown.edu for more information.

Reserving Spaces

The Library offers a variety of spaces for research, teaching and study for groups and individuals. Students can reserve group study rooms (<https://libcal.brown.edu/>) at the Rockefeller and Sciences libraries.

Graduate TAs may also access a limited number of small study/collaboration rooms to conduct online sections. Registration is required through 25Live (<https://it.brown.edu/services/type/25live-space-scheduling/>).

Carrels and Lockers

To accommodate the use of materials in long-term projects, graduate and medical students can apply to reserve study carrels at the Rockefeller, Sciences and Orwig libraries by inquiring at the Rockefeller Library service desk.

Lockers located in the stacks at the Rockefeller Library are available to all carrel-holding graduate and medical students. Combination lockers are also available in the Wernig Graduate Student Reading Room at the Rock. All lockers are issued at the circulation desk. Lockers can be renewed and kept for as long as the student is matriculated at Brown.

Library Academic and Research Services

The Library offers comprehensive support services designed to assist you throughout your time at Brown. Services include support for citation management tools like EndNote and Zotero, expert guidance on copyright and fair use, and extensive digital scholarship support for data analysis, visualization and mapping. Whether you need help with literature reviews, accessing special collections or managing research data, library experts provide personalized consultations and training to the academic community at Brown.

Library Experts and Research Consultations

Library experts (<https://library.brown.edu/about/specialists.php?sort=selector>), including librarians assigned to work directly with each academic department, are available to help you take full advantage of the Library's incredible collections and resources. In addition to offering personalized research consultations, librarians curate research guides (<https://libguides.brown.edu/>), build collections to support individual research needs and offer workshops and other educational opportunities to upskill and engage with research tools and methods across the disciplines.

You can schedule a consultation with the library expert in your field of study when you begin your program at Brown. Consultations can be scheduled directly with library experts (<https://library.brown.edu/about/specialists.php?sort=selector>), and questions can be asked via chat (<https://brown.libanswers.com/>) or by email through rock@brown.edu (general) or hay@brown.edu (special collections). Through our Ask-a-Librarian (<https://brown.libanswers.com/>) service, you can connect with

library experts and staff who provide guidance on library services and resources for your specific field of study.

Research Guides and FAQ

Research Guides (<https://libguides.brown.edu/>) are available for all academic departments on a wide variety of specialized topics and courses. Online tutorials offer curated information to help you explore the Library's resources, learn how to use a new tool or method, discover a new data workflow and connect to public and open access digital content.

Library Instruction and Workshops

Librarians are dedicated partners in your academic success, offering course-integrated instruction and specialized workshops in areas like advanced searching, information and data literacy, archival and primary source research, GIS, data management, digital scholarship and citation management. View the full calendar of workshops (<https://events.brown.edu/library/all/categories/Lectures%2C%20Seminars%20and%20Workshops/>) offered by the Library.

Research Lifecycle Support

In addition to traditional library resources, the Library supports the full research lifecycle with services for grant applications, data management planning and scholarly publishing. Through our repository services, digital publications platform and research impact metrics, we help you preserve and showcase your scholarly work while maximizing its impact in your field. You can access these services through individual consultations, workshops or our online guides and tutorials.

Health and Biomedical Library Services

Health and Biomedical Library Services (<https://libguides.brown.edu/health/contacts/>) provides direct and focused support for Brown's programs in medicine, public health and biomedical sciences. Services include help with literature reviews, publishing, reference management, locating and managing grant-related publications, public access compliance, writing data management and sharing plans, using the Brown Digital Repository (BDR) and more. To find out more information or to schedule a consultation, please contact our team at HealthSciLibrarians@brown.edu. For upcoming events and workshops, see the Library's calendar (<https://events.brown.edu/all/groups/Library/>).

Library Data Services

The Library Data Services team provides comprehensive support for finding, processing and analyzing data, with particular expertise in geospatial, census, socio-economic, financial and environmental datasets. Library experts offer guidance through research consultations, instruction, tutorials and workshops on data-oriented projects, assistance with data processing and scripting, and consultations on GIS and geospatial analysis, text and data mining and data sciences methods.

Tutorials

Guides (<https://libguides.brown.edu/tutorials/>) and videos (<https://www.youtube.com/channel/UCM0hGchHIOrcKmRo39tR22A/>) with information about how to use the Library are available online, including how to conduct various aspects of research.

Opportunities in the Library

The Library offers numerous opportunities (<https://library.brown.edu/info/scholars-in-the-library/>) for students, faculty and visiting scholars to expand their scholarly and professional skills through direct engagement with collections and programs, currently including the Interdisciplinary Opportunities in the Humanities and Social Sciences (<https://www.brown.edu/academics/gradschool/financing-support/phd-funding/dissertation-completion-proposal/interdisciplinary-opportunities-human/>) fellowship program. Proctorships are often available through library departments, including Brown University Digital Publications (<https://library.brown.edu/create/digitalpublications/opportunities/>) and GeoData@SciLi (<https://libguides.brown.edu/geodata/>). Employment opportunities for students are frequently available in a range of areas

including specialized language cataloging, archival work and digital projects.

Digital Scholarship

The Center for Digital Scholarship (<https://library.brown.edu/create/cds/>) (CDS), the University's digital scholarship hub, provides inspiration, expertise, services and teaching in digital scholarship methodologies, project development and publication to Brown faculty, staff and students. Graduate students also have opportunities to collaborate with CDS staff on faculty-driven digital projects (<https://library.brown.edu/create/cds/projects/>) and publications (<https://library.brown.edu/create/digitalpublications/>) via proctorships or employment.

Doctoral Certificate in Digital Humanities

CDS and the Cogut Institute for the Humanities (<https://humanities.brown.edu/courses/digital-certificate/>) are pleased to partner together to offer the Doctoral Certificate in Digital Humanities (<https://library.brown.edu/create/cds/digital-humanities-doctoral-certificate/>), which provides doctoral students with a foundation in digital methods and skills for their research, as well as an understanding of the broader theoretical questions that digital approaches to scholarship offer. The certificate is aimed at Ph.D. students in the humanities and humanistic social sciences, though doctoral students from all disciplines are welcome to apply.

Instruction and Consultations

CDS is here to help students, faculty and scholars across campus understand and use digital methodologies in research and scholarship. CDS staff teach workshops, help design class digital projects, support and teach digital humanities courses and offer consulting services.

Workshops

CDS offers workshops (<https://brownlibrary.lwcal.com/#!view/all/categories/Workshop>) on data, tools and methods. Each summer, we offer a two-week digital humanities workshop series.

Consultations

Have a digital scholarship project you'd like help with? Wondering how digital tools might complement other aspects of your research project? CDS staff are available to meet with you to discuss your ideas to help you get started in the field of digital scholarship. Schedule a consultation (<https://library.brown.edu/create/cds/consultations/>) by emailing cds_info@brown.edu.

Brown University Digital Publications

Brown University Digital Publications (<https://library.brown.edu/create/digitalpublications/>) — a collaboration between the University Library and the Dean of the Faculty, generously launched with support from the Mellon Foundation with additional support from the National Endowment for the Humanities and the Institute of Library and Museum Services — creates exciting new conditions for the production and sharing of knowledge. Widely recognized as accessible, intentional and inclusive, Brown's novel, university-based approach to digital content development is helping to set the standards for the future of scholarship in the digital age.

Library Spaces

Teaching and Event Spaces

Patrick Ma Digital Scholarship Lab

Library workshops and events are offered online and in the Rockefeller Library's Patrick Ma Digital Scholarship Lab (<https://library.brown.edu/create/cds/patrick-ma-digital-scholarship-lab-dsl/>) (DSL), which was renovated in January 2025 as a Zoom room and is well equipped for hybrid meetings. The DSL, located on Level 1, enables scholars across disciplines to engage with research data using advanced visualization hardware and software, to examine and compare high-resolution digital content and to experience audiovisual media in a suitably equipped campus space.

Sidney E. Frank Digital Studio

The Sidney E. Frank Digital Studio (<https://library.brown.edu/create/cds/studio/>) on Level 1 at the Rockefeller Library provides a unique and exciting intellectual hub for digitally enhanced scholarship at Brown. Infrastructure and staff in the Digital Studio facilitate both short-term and extended engagements with academic questions that benefit from the infusion of technology and new methodologies in research and learning. Open to all faculty and students, the studio contains a soundproof audio/video recording suite and a 3D scanner.

Vincent J. Wernig Graduate Student Reading Room

The Vincent J. Wernig Graduate Student Reading Room (<https://sites.brown.edu/gsc/resources/spaces/wernig-reading-room/>) is located on Level 2 of the Rockefeller Library, up the stairs to the right of the main entrance. It includes a large seminar room and kitchen. All graduate students can access the space by swiping their ID cards at the door.

University Library Locations

John D. Rockefeller Jr. Library

The John D. Rockefeller Jr. Library (<https://library.brown.edu/about/rock/>), known as “the Rock,” is the primary teaching and research library for the humanities and social sciences. Book checkout, interlibrary loan (<https://library.brown.edu/info/borrowing/#other>), course reserves (<https://library.brown.edu/reserves/>) and help services are available on the entrance level (Level 1). On Level 2, graduate students have exclusive ID-swipe access to the Vincent J. Wernig Graduate Student Reading Room (<https://sites.brown.edu/gsc/resources/spaces/wernig-reading-room/>). The Racial Justice Research Center (<https://library.brown.edu/create/rjrc/>) is also located on Level 2.

The Rock provides a variety of study spaces to suit different work styles, including open, comfortable seating as well as group study rooms, many of which can be reserved (<https://libcal.brown.edu/reserve/groupstudy/>). The “absolute quiet” study room is on Level A. Individual study carrels (<https://library.brown.edu/info/libweb/graduate-students/#~:text=for%20Graduate%20Students-,Get%20a%20carrel,-%3A%20Brown%20students%20writing>) are located throughout the building. East Asian collections (<https://library.brown.edu/collections/eastasian/>), located on Level 3, include the Gardner Collection and the traditionally styled Gardner Room, which mostly consists of historical Chinese material from the Qing Dynasty (1644–1912). A small café in the lobby of the Rock provides a convenient place for a study break or to meet informally with friends and colleagues.

Sciences Library

The tallest building on campus at 14 stories, the Sciences Library (<https://library.brown.edu/about/scili/>), known as “the SciLi,” holds print materials in medicine, psychology, neural science, biology, chemistry, earth, environmental and planetary sciences, physics, engineering, computer science and pure and applied mathematics. The Friedman Study Center, located on Level A, includes computer clusters and library services.

GeoData@SciLi

The 11th floor is home to the GeoData@SciLi (<https://libguides.brown.edu/geodata/>) space, a consultation and workspace devoted to geospatial data and research that's part of the Center for Library Exploration and Research (CLEAR). GeoData@SciLi offers research consultations on finding, accessing, processing and using geospatial, demographic and socio-economic data; workshops; access to datasets purchased by the Library; computer terminals for accessing social sciences data resources; and expert support for finding and studying the Library's collection of over 100,000 maps.

John Hay Library

The John Hay Library (<http://library.brown.edu/about/hay/>), known as “the Hay,” houses Brown's Special Collections and Archives. The classic and grand Willis Reading Room is open to all for quiet study. The Gildor Family Special Collections Reading Room is open to all Brown community members as well as the public via appointment. The newly renovated

conservation lab is used to care for library materials, and can be used for collaborative class instruction. The Hay's special collections materials can be requested online with an account in the request system, Aeon (<https://brown.aeon.atlas-sys.com/>). The Hay is also available as a primary source laboratory for instructors and students. It hosts over 150 class sessions from nearly all Brown departments each year, and staff are available to teach sessions (<https://libguides.brown.edu/primarysources/>) and to help graduate students and faculty learn about researching and teaching with primary sources.

Virginia Baldwin Orwig Music Library

The Virginia Baldwin Orwig Music Library (<http://library.brown.edu/about/orwig/>), located in the Orwig Music Building and known as “Orwig,” houses the main teaching and research collections in music and related areas such as dance and musical theater. Its collections include LPs, books, scores, periodicals, compact discs and DVDs. Media materials (CDs, DVDs, LPs) circulate to all members of the Brown community, and Orwig has playback equipment for a number of legacy formats including CD, DVD, LP, VHS and Blu-Ray. Graduate students can borrow media materials for one week.

Champlin Memorial Medical Library

Located within The Warren Alpert Medical School at 222 Richmond Street, the Champlin Memorial Library, known as “Champlin,” is open 24/7 to medical students. Though it contains no on-site physical collections, online access to the Library's extensive collection of electronic journals, textbooks and databases is fully available with a Brown ID via Core Health Sciences Resources (<https://libguides.brown.edu/c.php?g=293866>). Medical faculty and staff may use Champlin while in the medical school building during business hours; after-hours access is restricted to medical students.

The Annmary Brown Memorial (currently closed for renovation)

The unique Annmary Brown Memorial (<http://library.brown.edu/about/amb/>), completed in 1907, is a museum, mausoleum and memorial. Designed by architect Norman Isham, its bronze doors feature symbolic representations of Art and Learning, signaling to visitors the many treasures to explore and the array of cultural arts programming throughout the year. On exhibit are paintings from the collection of Annmary Brown and her husband, General Rush Hawkins, and special collections items from the John Hay Library.

Library Collections Annex

The Library Collections Annex (<http://library.brown.edu/about/annex/>), a high-density storage facility with a capacity of 1.8 million volumes, is located approximately four miles from campus. Materials shelved at the annex can be requested using BruKnow (https://bruknow.library.brown.edu/discovery/search/?vid=01BU_INST:BROWN&lang=en&mode=advanced), the Library's online catalog, for retrieval and use on campus. Journal articles from titles shelved at the annex can be scanned and delivered to your desktop.

John Carter Brown Library

The John Carter Brown Library (<https://jcblibrary.org/>), an independently administered and funded center for advanced research in history and the humanities, is also located on the Brown campus, right on the College Green. It is home to one of the world's outstanding collections of printed books and other materials related to the early Americas. The JCB's collection represents more than 65,000 rare books, maps and manuscripts created in more than 200 languages spanning more than three centuries. A Welcome and Access plan initiated in 2021 included the renovation of the historic building's west entrance and a new programming plan. The JCB launched Americana, a new digital platform offering open access to the collection, in the spring of 2023.

The JCB hosts talks, workshops, reading groups, and other activities, and graduate students from any field are welcome to attend. The JCB also offers a suite of fellowships for research support including the J.M. Stuart Fellowship (<https://jcblibrary.org/fellowships/opportunities/#~:text=Brown%20University%20Opportunities>) (tenable for nine months), which is open

only to Brown graduate students in the humanities or social sciences whose dissertation topic relates to the early history and culture of the Americas.

Accessibility

The Library works closely with Student Accessibility Services (<https://studentaccessibility.brown.edu/>) (SAS) to ensure equitable access (<https://library.brown.edu/info/libweb/dss/>) to library resources and services. The main entrances to the Rockefeller, Sciences, and Orwig libraries are wheelchair accessible. The John Hay Library's accessible entrance is located on the north side of the building. The service desks in the libraries can arrange to have materials retrieved from the stacks and can provide other tailored services. The Sciences Library has a computer workstation with magnification and reading software that can be accessed through SAS.

Accessible Study Rooms at the Rock and SciLi

There are three accessible study rooms available at the Rockefeller Library (rooms 327, 328, 329) for students who need a quiet space with reduced distractions. Each room can be used by one person at a time and can be reserved (<https://libcal.brown.edu/reserve/sas/>) for two hours per day, with access available during open building hours. SAS students may reserve a room up to two times per week.

Reservations (<https://libcal.brown.edu/reserve/sas/>) for SAS Library Study Rooms are made through the Library and are available for registered SAS students. For concerns or questions about the reservation system, please call the SAS office at (401) 863-9588 during weekday business hours, Monday through Friday, 8:30 a.m. to 5 p.m.

SAS students may also access room A-17 in the Sciences Library on a first-come, first-served basis. We ask that students utilize that room for one two-hour period per day, twice per week maximum.

Feedback

We encourage your feedback about any aspect of library services, resources and facilities. Feedback can be made through this anonymous form (https://docs.google.com/forms/d/e/1FAIpQLSfBEa-sleeaVAs1G1Rsrk_vKKyTYIIZrfc9zRZ1CeDrLVq8IA/viewform/), which has an option for inputting your contact information, or you can email WelcomeToYourLibrary@brown.edu.

This is your library. You belong here.

Summary of Enrollment & Degrees

The total IPEDS enrollment of Brown University degree candidates for Fall 2024 (October 15, 2024) was 11,136FTE. The breakdown by school was as follows:

The College

7,206 FTE

The Graduate School

3,331 FTE

Warren Alpert Medical School

559 FTE

Summary of Degrees

As of May 2024, there were enrolled the names of 154,975 graduates. Of this number 112,483 had received the bachelor's degree; 35,797 had received advanced degrees; 4,458 had received the degree of doctor of medicine; 2,237 had received honorary degrees.

For historical information regarding student enrollment figures and/or degrees for Brown University, please visit the website of the Office of Institutional Research: http://www.brown.edu/Administration/Institutional_Research/.

Written Contractual Agreements

Brown University has entered into written arrangements with the following entities:

Rhode Island School of Design

Degree: Dual Bachelor of Arts or Bachelor of Science (Brown) and Bachelor of Fine Arts (RISD)

Partner: RISD, Providence, RI

Method of Delivery: In-Person Coursework in Providence

Program Percentage Provided by RISD: 50%

Estimated Additional Costs: N/A.

Note: Program is Title IV Eligible

Additional Information: <https://www.brown.edu/academics/brown-risd-dual-degree/home> (<https://www.brown.edu/academics/brown-risd-dual-degree/home/>)

Degree: Master of Arts in Design Engineering

Partner: RISD, Providence, RI

Method of Delivery: In-Person Coursework in Providence

Program Percentage Provided by RISD: 40%

Estimated Additional Costs: N/A.

Note: Program is Title IV Eligible

Additional Information: <https://design.engineering.brown.edu/program> (<https://design.engineering.brown.edu/program/>)

IE Business School

Degree: Executive Master of Business Administration

Partner: IE Business School, Madrid, Spain

Method of Delivery: Hybrid, 5 residential sessions at Brown, IE Madrid and Cape Town South Africa + online

Program Percentage Provided by IE: 50%

Estimated Additional Costs: N/A.

Note: Program is Title IV Eligible

Additional Information: <https://emba.brown.edu/>

The Brown Alumni Association

Brown provided a transformative and unforgettable experience for its students, including their most important intellectual journeys and lasting bonds with other members of this unique community. The **Brown Alumni Association** (BAA), of which all former matriculated students are automatically members, fosters lifelong connections with Brown and within the alumni community.

Key services to alumni (<https://brunonia.brown.edu/alumni/services/>), including career help (<https://brunonia.brown.edu/alumni/careers/info/resources/>)

Alumni expand their career networks through BrownConnect and the BAA LinkedIn group; look up Brown friends and contacts through the online Alumni Directory; and enjoy savings on and benefits through valuable products and services.

A worldwide alumni community (<https://brunonia.brown.edu/alumni/community/>)

Brown's alumni community takes many shapes, including Brown clubs, classes, reunions, student-alumni groups, affinity groups like the Inman Page Black Alumni Council, and more. Hundreds of alumni events (<https://brunonia.brown.edu/search/event/?eventCity=%2525&eventEnd=%2525&eventStart=%2525&eventTitle=%2525>) around the globe provide opportunities to discover new alumni connections, interact with Brown faculty, network, and explore local highlights. Online communities help alumni to connect with each other and to keep current with the University.

Volunteering for Brown (<https://brunonia.brown.edu/alumni/volunteer/>)

Alumni volunteers support the continued vitality of the University. They interview applicants, serve as career resources for students and fellow alumni, organize Brown's alumni communities, help to raise funds for the University, and much more.
