

UNIVERSITY BULLETIN

2025-26

BROWN

This bulletin is intended to provide only general information concerning Brown University and is not in any manner contractually binding. The information contained herein is subject to revision and change at any time.

CORRESPONDENCE

The general mailing address for the University is Brown University, Providence, Rhode Island 02912. Correspondence sent to that address may be expected to reach the proper department, but, in order to avoid delay, information and inquiries concerning the items below should be addressed as noted. Addresses for other offices are available at www.brown.edu.

ITEM

Matters directly in charge of or concerning
the general interests of

the Corporation
the University
The College
the Graduate School
The Warren Alpert Medical School
Alumnae and Alumni

ADDRESS TO

President, Box 1860
President, Box 1860
Dean of the College, Box 1828
Dean of the Graduate School, Box 1867
Dean of Medicine and Biological Sciences, Box G
Director of Alumni Relations, Box 1859

Inquiries from applicants for admission

For undergraduate study

College Admission Office, Box 1876

For graduate study

Graduate School Admission Office, Box 1867

For study in The Warren Alpert Medical School
of Brown University

Medical School Office of Admissions and
Financial Aid, Box G-A212

Inquiries regarding the University Bulletin

Registrar, Box K

Brown University courses are conducted in ZIP code 02912 (undergraduate and graduate courses) and 02903 (Warren Alpert Medical School and the School of Professional Studies).

Note: The University does not print published copies of the University Bulletin. This electronic version is deemed the official copy of the University Bulletin of Brown University.

Brown University provides equal opportunity and prohibits discrimination, harassment and retaliation based upon a person's race, color, religion, sex, age, national or ethnic origin, disability, veteran status, sexual orientation, gender identity, gender expression or any other characteristic protected under applicable law and caste which is protected under this policy, in the administration of its policies, programs and activities. The University recognizes and rewards individuals on the basis of qualifications and performance. The University maintains an affirmative action program in employment for minorities, women, persons with disabilities and veterans, and requires its employees to take good faith efforts to comply with the program. The University encourages those with whom it conducts business to meet the commitments of this important program.

BROWN UNIVERSITY

THE COLLEGE*

An undergraduate college, with courses leading to the degrees of Bachelor of Arts (A.B.), Bachelor of Science (Sc.B.) and a single combined Bachelor of Arts/Bachelor of Science degree (A.B.-Sc.B.), as well as undergraduate certificates that can be earned in conjunction with the bachelor's degree

THE GRADUATE SCHOOL*

A graduate school, with courses leading to a Graduate Certificate (Gr .Crt.) the degrees of Master of Arts (A.M.), Master of Science (Sc.M.), Master of Arts in Teaching (MAT), Master of Engineering (MEng), Master of Fine Arts (MFA.), Master of Public Health (MPH), Master of Public Affairs (MPA), Executive Master of Business Administration (EMBA *Joint with IE Business School) and the Doctor of Philosophy (Ph.D.)

THE WARREN ALPERT MEDICAL SCHOOL OF BROWN UNIVERSITY

A school of medicine, with courses and clerkships leading to the degree of Doctor of Medicine (M.D.) as well as the Graduate Certificate (Gr.Crt.)

**In collaboration with the Rhode Island School of Design, Brown University offers a dual degree at the bachelor's level and a joint Master of Arts in Design Engineering.*

Foreword

Brown University is a nonprofit, leading Ivy League institution and the only major research university in the nation where undergraduates are the architects of their own course of study. Brown is distinguished by its unique undergraduate academic program — defined by its Open Curriculum — a world-class faculty, outstanding graduate and medical students, and a tradition of innovative and rigorous education that crosses and transcends fields of study.

The University's mission — to serve the community, the nation, and the world by educating and preparing students (in the words of the College charter) to “discharge the offices of life with usefulness and reputation” — is fulfilled through strong faculty-student collaboration.

The seventh oldest university in America, Brown was established in 1764 as Rhode Island College in the town of Warren, Rhode Island, and enrolled its first students in 1765. In 1770 the College moved to its present location, and in 1804 it was renamed Brown University to honor a \$5,000 donation from local merchant Nicholas Brown. Today the University's main campus covers nearly 150 acres in the historic College Hill neighborhood overlooking downtown Providence, a vibrant city of some 190,000 people and the capital of Rhode Island. Brown's campus in the Jewelry District is home to the Warren Alpert Medical School, Laboratories for Molecular Medicine, School of Professional Studies and South Street Landing, which houses more than a dozen administrative departments.

Brown draws students from all over the United States and many other countries, distinguished by their academic excellence, creativity, self-direction, and leadership. With its student-centered approach to education, the University attracts leading faculty known both for prize-winning scholarship and research and also dedication to teaching. By providing rich undergraduate and graduate experiences, together with strong programs in medicine, public health and professional studies, the University fosters internal and external discovery at every level of the academic enterprise.

Brown is internationally known for its dynamic Open Curriculum for undergraduates, implemented by faculty vote in 1969. Undergraduates must pass 30 courses and complete the requirements for a concentration, or major, in order to receive a bachelor's degree. The curriculum does not require distribution or core courses outside the concentration. Nearly 2000 distinct course each year support more than 80 concentrations, many of them interdisciplinary, and a wide variety of independent studies.

Three basic principles lie at the heart of the Open Curriculum: that students are active participants in learning; that acquiring analytical and critical skills is as important as mastering factual knowledge; and that learning requires opportunities for experimentation and synthesis that crosses boundaries that typically separate fields of study.

More than 3,500 graduate and medical students comprise approximately one third of the University's total student population. Through the Graduate School, Brown offers nearly 50 doctoral programs across the life and physical sciences, social sciences, arts and humanities. The Division of Master's and Professional Programs supports close to 40 residential, professional and online master's programs, including an executive MBA (through the Division's School of Professional Studies) in partnership with the IE Business School in Madrid Spain. The Division also delivers 16 short programs and certificates. Across this wide range of doctoral, master's and professional degree programs, students and faculty work together to shape rigorous, research-based experiences that respect and develop each student's interests and ideas in ways that ultimately advance the trajectory of their careers.

The Warren Alpert Medical School, which awarded its first M.D. degrees in 1975, promotes the health of individuals and communities through education, research, and excellence in clinical practice. Warren Alpert is the only medical school in the state of Rhode Island and enrolls almost 600 students, most of whom are accepted through Brown's unique Program in Liberal Medical Education (PLME), which combines undergraduate study with professional studies in medicine. The School of Public Health of Brown University is also the only such school in the state, training future public health leaders and advancing knowledge on pressing

health challenges facing society, while enhancing population health and well-being.

In 2014, upon the close of the celebration of Brown's 250th anniversary, the University launched an ambitious plan to recruit and retain more of the world's top students and scholars; build resources to make Brown a leader in key areas of research, innovation and scholarship; catalyze entrepreneurship; improve the physical campus; amplify the student-athlete experience; and ensure students from all backgrounds can thrive at Brown. Arising from this extensive program of improvements, Brown launched an action plan to create a more diverse and inclusive campus, removed all loans from undergraduate financial aid packaged by the University, and implemented initiatives supporting the success of students inside and outside the classroom. In addition, a sustainability plan integrates research to train the next generation of climate action leaders.

Brown University is accredited by the New England Association of Schools and Colleges. In addition, the Warren Alpert Medical School is accredited by the Liaison Committee on Medical Education, and the School of Public Health is accredited by the Council on Education for Public Health. The School of Engineering has received accreditation from the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology for its bachelor of science programs in biomedical, chemical, computer, electrical, environmental, materials, and mechanical engineering. Within each of these concentration programs there are several options, each of which is accredited.

Academic Freedom

Consonant with Brown's tradition concerning academic freedom, the faculty and Corporation, in 1966, adopted the following statement of principles:

Academic freedom is essential to the function of education and to the pursuit of scholarship in universities.

Therefore, Brown University, mindful of its historic commitment to scholarship and to the free exchange of ideas, affirms that faculty and students alike shall enjoy full freedom in their teaching, learning, and research.

Brown University also affirms that faculty and students shall have freedom of religious belief, of speech, of press, of association and assembly, of political activity inside and outside the University, the right to petition the authorities, public and university, to invite speakers of their choice to the campus, and that students and faculty as such should not be required to take any oath not required of other citizens. The time, place, and manner of exercising these rights on campus shall be subject to reasonable regulation only to prevent interference with the normal functions of the University.

Nondiscrimination and Anti-Harassment Policy

Brown University's mission is “to serve the community, the nation, and the world by discovering, communicating, and preserving knowledge and understanding in a spirit of free inquiry, and by educating and preparing students to discharge the offices of life with usefulness and reputation.” This mission compels the University to create and maintain an environment that is free of any form of discrimination or harassment that is based upon a person's race, color, religion, sex, age, national or ethnic origin — including actual or perceived shared ancestry or ethnic characteristics or citizenship or residency in a country with a dominant religion or distinct religious identity — disability, veteran status, sexual orientation, gender identity, gender expression, or any other characteristic protected under applicable law, and caste, which is protected under The Corporation of Brown University's Policy Statement on Equal Opportunity, Nondiscrimination and Affirmative Action (<https://www.brown.edu/about/administration/corporation/corporation-policy-statement-equal-opportunity-nondiscrimination-and-affirmative-action/>). The University prohibits discrimination, harassment, or retaliation against individuals who report discrimination or harassment.

For more information about the nondiscrimination and anti-harassment policy, please visit <https://policy.brown.edu/policy/discrimination->

and-harassment (<https://policy.brown.edu/policy/discrimination-and-harassment/>)

The Family Educational Rights and Privacy Act of 1974

The Family Educational Rights and Privacy Act of 1974 (P.L. 93–380) extends to a student the right of access to his or her education records maintained at the University. Education records are those records maintained by or for Brown University that directly relate to an individual who is or has been in attendance (enrolled) at Brown University and for whom Brown maintains educational records. Information and notification as to the type of record; the accessibility of and policies for maintaining, reviewing and expunging the record; and the procedure for inspecting, reviewing, obtaining copies of, or challenging the record are established and promulgated by the appropriate executive officers. Further information may be obtained on the Office of the Registrar's website (<http://www.brown.edu/about/administration/registrar/student-information-rightsferpa/>). For the University's complete definition of directory information and disclosure please visit <https://www.brown.edu/about/administration/registrar/student-information-rightsferpa> (<https://www.brown.edu/about/administration/registrar/student-information-rightsferpa/>).

IMAGE USE

Brown University often captures photographic images and video of campus life, events, ceremonies, and other activities to advance the mission of the institution. The University is not prohibited from capturing and using student images through photography or video for University purposes unless a student has requested that the University maintain the confidentiality of that student's directory information, per FERPA. Students enrolled at Brown University who do not request directory withholding authorize the non-commercial use and reproduction by the University, or parties authorized by the University, of any photographs taken while at Brown without compensation.

Faculty, staff, visitors to campus, and participants in University-sponsored events beyond campus also may have their images captured for news or promotional purposes.

All photographic prints and digital image and video files shall constitute Brown University property and be used to advance the University's educational objectives.

CODES OF CONDUCT AND POLICIES

All Brown community members are subject to the University Code of Conduct (<https://policy.brown.edu/policy/code-conduct/>) and any other conduct codes or University policies (<https://policy.brown.edu/>) outlining standards of behavior and required compliance with procedures and operations affecting Brown constituencies and their activities as members of a community established with values of respect for others and shared responsibility.

General Regulations

General Academic Requirements

Undergraduate degrees:

Information regarding general academic degree requirements are listed under 'The College' section of the University Bulletin as well as on the respective websites of the Office of the Registrar (<https://registrar.brown.edu/students/degree-guidelines/college/>) and the Dean of the College (<https://college.brown.edu/design-your-education/complete-your-degree/>).

Advanced degrees:

Information regarding Advanced degree requirements for specific academic programs are listed on the Graduate School (<https://www.brown.edu/academics/graduate/>) website. Information regarding general and overall guidelines for advanced degrees are also listed on the Office of the Registrar (<https://registrar.brown.edu/students/degree-guidelines/graduate-school/>) website.

Enrollment and course registration

Instructions about enrollment will be sent via Today@Brown prior to the opening of each semester to all students. To complete enrollment, all requirements of the pertinent administrative offices of the University must be met, including registration for courses, payment of accounts, and arrangements for housing as appropriate. Fees will be charged for failure to meet established deadlines. All students must complete enrollment in order to be eligible to remain at the University.

Students are urged to note carefully the instructions provided at registration in order to assure eligibility for enrollment, proper registration in courses, and to avoid unnecessary payment of Change of Course fees. All registration materials and/or processes are considered official university documents. Any falsification of signatures or other tampering with such forms/processes constitutes a violation of the Academic Code.

All registration-related deadlines for each semester are listed in the 'Academic Calendar' section of the Bulletin and also on the Office of the Registrar website as well as answers to common registration-related questions.

For the full text on the Academic Regulations and Instructions for Registration, see the Registrar's Office web site at:

<https://registrar.brown.edu/students/course-enrollment/registration-guidelines/> (<https://registrar.brown.edu/students/course-enrollment/registration-guidelines/>)

For tutorials on registration, see:

<https://ithelp.brown.edu/kb/courses-brown-for-students/> (<https://ithelp.brown.edu/kb/courses-brown-for-students/>)

To access the most up-to-date course information *including credit bearing summer session offerings* (*The course information in the PDF versions of the University Bulletin and Course Announcement Bulletin is only updated just prior to registration events), see:

'Courses@Brown' (<https://cab.brown.edu/>) (<https://cab.brown.edu/>)

Concurrent or Dual Enrollment

In accordance with Brown University guidelines, Concurrent or Dual enrollment in credit bearing courses and/or degree programs at another postsecondary institution while enrolled as a Brown University degree candidate is prohibited except in cases of established cross registration agreements and/or approved joint degree programs such as the Rhode Island School of Design (in both The College and Graduate School); Wheaton College (The College); Harvard Faculty of Arts and Sciences (Graduate School only); and IE Business School (Graduate School only).

Course Credit

The semester course is the unit of credit. This is defined as a course taken for the duration of one semester and, for purposes of evaluation, may be considered the approximate equivalent of four semester hours.

Brown follows the Federal standard that defines a credit hour as an amount of work represented in intended learning outcomes and verified by evidence of student achievement that is an institutional established equivalence that reasonably approximates not less than: (1) One hour of classroom or direct faculty instruction and a minimum of two hours of out of class student work each week for approximately fifteen weeks for each semester, or the equivalent amount of work over a different amount of time (i.e. Summer/Winter Sessions); or (2) At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution including laboratory work, internships, practica, studio work, and other academic work leading to the award of credit hours. Additionally, transfer credit must equate to the four semester hour standard except for three credit courses taken at the Rhode Island School of Design.

Course Numbering

Courses numbered 0001-0999 are strictly for Undergraduate credit (Graduate students may enroll in such courses with the permission of the instructor and the Graduate School.)

Courses numbered between 1000-1999 are for both Undergraduate and Graduate credit depending on the level of the student's degree program.

Courses numbered between 2000-2999 are for Graduate credit (Undergraduate students may enroll in such courses and may be applied towards their Undergraduate degree requirements by permission of the instructor.)

Courses numbered above 3000 are strictly for credit in the Alpert Medical School. Certain MD level courses may be taken for credit for Undergraduate students enrolled in the PLME program, but such courses do not count towards quantity, concentration, or Latin honors requirements for the Baccalaureate degree.

Maximum Course Load and Auditing

No student enrolled in The College or the Graduate School may enroll for more than five Brown credits in a semester. A degree candidate paying full tuition (4 or more enrollment units per semester) and is enrolled in less than five academic credits may be permitted to audit (*see below section on auditing*) additional course(s). At no time may a student be registered for more than 5 credits/courses including audits.

Enrollment Without Academic Credit

Auditing. An auditor is a student who is registered in a course without earning academic credit upon successful completion under the following conditions: (1) the student must be properly registered for it; (2) the student must pay the usual course fee except as indicated in the next paragraph; (3) the student is entitled to all instruction in the course, including conferences, the criticism of papers, tests, and examinations.

Any student registered on a full-time basis may be permitted to audit additional courses in any semester without charge. The total number of course registrations, including audits, may not exceed five credits. Non-degree or student paying less than four enrollment units of tuition may choose to audit if they so choose, but the student does so with the understanding that they will pay the equivalent rate as if registered for academic credit.

With the concurrence of the instructor, the fact that a course has been audited shall be entered on the permanent record of any student electing this privilege. The status of a course in which a student has registered may not be changed from audit to credit after the fourth week of classes or from credit to audit after midsemester.

Vagabonding. A "vagabond" is a student who, with the permission of the instructor involved, visits a given course occasionally or regularly without payment of fee. It is understood that such a student shall be entitled to participate in classes and activities, including discussions, conferences, and papers, *only* at the pleasure of the instructor.

Attendance, Grading, Examinations

Attendance

It is in the interest of every student to attend all sessions of the classes in which registered, and each student has an obligation to contribute to the academic performance of all by full participation in the work of each class; however, within such limits as are necessary for the general welfare, a student benefits also from exercising discretion and assuming responsibility for his or her educational progress.

Accordingly, unless the instructor imposes attendance requirements, students are not limited with respect to the number of absences from a course. When, in the instructor's opinion, a student is abusing the privilege of voluntary attendance, the appropriate dean's office should be notified so that appropriate action may be taken.

A student is always fully responsible for any course work missed because of absences and will be assigned failing grades in final examinations missed without excuse from the dean's office.

No student organization shall make any appointment for undergraduates which conflicts with college exercises unless permission has been obtained from the dean.

Grading System

At the end of each semester final grades are given in semester courses. In all courses, except those designated by the instructor as *Mandatory Satisfactory/No Credit*, a student may, in consultation with the advisor, elect to be graded on a basis of either *Satisfactory/No Credit* or *A, B, C/No Credit*. A student must for every course taken indicate by the end of the fourth week of the semester which basis for grading is elected.

Any student regularly enrolled in a course, no matter whether for *A, B, C/No Credit* or for *Satisfactory/No Credit*, may request from the instructor a more detailed written evaluation of his or her work. (See Course Performance Report below.) Such supplemental evaluations are intended primarily for the information of the student and do not replace departmental evaluations.

No Credit. This grade is given when courses are not satisfactorily completed. The notation *No Credit*, and the description of the course in which it is given, are not entered on the official academic transcript.

1. Courses may be designated to be graded on a *Mandatory Satisfactory/No Credit* basis for all students enrolled on the initiative of the instructor. The designation of a course by an instructor to be graded *S/NC* only must be announced no later than the first day of classes and entails the responsibility for providing Course Performance Report forms to all students who request them. An asterisk shall accompany the listing on the transcript of any course that has been designated by the instructor to be graded on the basis of *S/NC* only, with an appropriate explanation of the symbol provided.
2. In exceptional circumstances, a course may be left incomplete (except for a regularly scheduled final examination—see paragraph 3 below), with the instructor's consent. In such cases, a grade of *INC* will be assigned provided that the student has filed a request for extension of time to complete the work of the course and the instructor has consented to such a request. Unless an earlier date is specified by the instructor, grades of *INC* must be made up as follows: for Semester I, by midsemester of Semester II; for Semester II or the for-credit 7 week Summer Session, by the first day of Fall semester. Extensions beyond semester in which the course left incomplete was taken may be granted by the instructor who will indicate this in writing to the registrar. A course not completed by the designated time will be assigned a grade of *NC* unless the instructor indicates that sufficient work has been completed to justify course credit by submitting, as appropriate, a grade change from *INC* to *A, B, C*, or *S*. A grade of *NC* assigned in accordance with these procedures may be changed subsequently, but no later than one calendar year after the end of the semester in which the course was taken.
3. If a student is absent from a regularly scheduled final examination for a course, the instructor should submit either an *INC* or an *NC*. If the absence from the examination is excused by the dean, the student will be permitted to take a Special Examination and the original grade

will be made into an *ABS* temporarily. The Special Examination will be administered by the Office of the Registrar in accordance with the provisions in the Faculty Rules for such examinations, unless other arrangements are agreed to by the instructor and the student, and communicated to the registrar. If the absence from the final examination is not excused by the dean, the student will receive no credit for the course.

Year Courses: A year course is one in which both halves must be passed in order to get credit for the entire year. The grade at the end of the first semester is normally a temporary one. Neither semester may be elected independently without special permission. The final grade submitted at the end of the course covers the work of the entire year and is recorded as the final grade for both semesters. It is normally expected that the second half of a year course will be completed in the second semester of the same academic year in which the first half was taken. If the second half of the year course is not completed at the end of that academic year, the grade for the first semester will become a No Credit. If the student completes the second part of the year course during a later academic year, he or she may need to notify the Registrar's Office, in order to reactivate the first part of the course.

In registering for the second half of a year course, students must register for credit if the first half was taken for credit. Similarly, if registered for audit in the first half, the second half of the course registration must also be as an audit. Exceptions must be approved by both the academic department and the Committee on Academic Standing.

Repeating Courses: Unless a course is explicitly approved by either the College Curriculum Council or Graduate Council as being able to be repeated for credit, Once course credit has been earned with an initial passing grade *A, B, C*, or *Satisfactory (S)* or through Transfer Credit it cannot be officially registered for again for in an effort to improve one's initial grade.

Grade Requirements for Advanced Degrees: A minimum grade of either *Satisfactory* or *C* in a 1000 or 2000 level course carries credit toward all advanced degrees. Individual departments may, subject to the approval of the Graduate Council, set higher grade requirements.

Advanced degree candidates may be required to register in courses primarily for undergraduates (numbered 1–999); these courses do not carry advanced degree credit. On occasion, however, and with approval of the student's department and the dean, a student may register for such a course with extra work for advanced degree credit. This course then has the same standing as a 1000-level course and an EX is noted on the transcript. This provision for extra work does not apply to courses of the level of 1–999 taken for graduate credit by students in MD program.

Transcripts: Requests for transcripts must be made electronically. For further information please visit the Office of the Registrar's website (<https://registrar.brown.edu/students/academic-records/transcript-requests/>).

An official transcript consists of a copy of the permanent record listing courses passed and grades received. A statement is added to all transcripts explaining the grading system and indicating that the student may elect to include other material with the official transcript. The student should choose this material in consultation with his or her advisor. The University will mail this material in one envelope along with the official transcript.

Examinations

A final, written examination (at the end of each semester) shall be given in each course numbered under 2000 unless the instructor of a particular course decides to use some other mode of final evaluation. If the written examination is not to be used, the mode of final examination which is to be used shall be made known to the students in the course no later than midterm and, in addition, the department and the registrar shall be informed.

Final Examination Schedule: A pre-defined period at the close of each semester is provided for final examinations for those courses for which such an examination is scheduled. Two examination periods are scheduled for each day. The examination group is determined by, in most cases, the offering time associated with the course (indicated by the figure

in parentheses) and also as displayed on Banner Web. The schedule for 2025-2026 is as follows:

Semester I, 2025-2026

Date	9 am Group	2 pm Group
Dec. 12 F	15	12
Dec. 13 Sat	5	3
Dec. 14 Su	17	7
Dec. 15 M	6	8
Dec. 16 T	9	16
Dec. 17 W	13	4
Dec. 18 Th	14	11
Dec. 19 F	1	18
Dec. 20 Sat	2	10

Semester II, 2025-2026

Date	9 am Group	2 pm Group
May 6 W	3	16
May 7 Th	15	2
May 8 F	12	9
May 9 Sat	4	5
May 11 M	1	18
May 12 T	11	7
May 13 W	13	10
May 14 Th	17	6
May 15 F	8	14

Exam Excuses: The Office of the Dean of the College is solely responsible for determining whether a student's absence from a final examination is excused. To ensure equitable treatment of all students, students are excused from exams only for family or medical emergencies. Please note that students' travel plans are never an excuse for missing a final exam. Faculty wishing to grant a student an exam excuse may contact the appropriate academic deans authorized to grant exam excuses. In emergency situations, students who are unable to contact their professors must contact the Office of the Dean of the College, which will determine whether or not an exam excuse is warranted. Course instructors are notified of exam excuses granted by the Dean of the College Office.

Consistent with Brown's policy on nondiscrimination, students who are unable to take a final examination due to religious observance may arrange to take their final at an alternate time. Students who cannot take a final exam on the scheduled date due to a religious observance must inform the instructors of any conflicts within the first four weeks of the term. In such cases, instructors are expected to offer a final exam on an alternate date within the same semester, noting the policy in the Faculty Rules that final examinations may be given only during the final examinations period. For further information on exams and religious observance please visit <https://www.brown.edu/academics/college/support/faculty/religiousobservance> (<https://www.brown.edu/academics/college/support/faculty/religiousobservance/>).

Make-up exams for approved exam excuses for medical or family emergencies are administered by the Registrar in the second week of the subsequent fall or spring term. The Registrar's Office informs students by email of the date, time, and location of make-up exams.

Placement and Achievement Tests in Foreign Languages. Placement tests in the foreign languages are given during Orientation Program in the fall and during the first week of classes in each semester.

All students, before taking college courses in a foreign language in which they have presented entrance credit, must take either a placement test at Brown University or, preferably, a College Board Language Achievement Test in secondary school. Students with outstanding performance on these tests, or on the Advanced Placement Tests of the College Entrance Examination Board, may be admitted to advanced courses without the usual course prerequisites.

Student Code of Conduct

Academic Code Violations

All cases of academic dishonesty among undergraduates, graduate, or medical students, as defined in the Academic Code at Brown University, shall be referred to the dean of the College, Graduate School, or Medical School, or his or her designated representative. A student accused of such an offense shall be notified in writing as soon as possible of the specific charge or charges against him or her before his or her case is considered. The student shall be given the opportunity of a hearing before the designated representative of the dean of the College, Graduate School, or Medical School, and two members of the faculty, at which all relevant facts may be presented. A student shall have the right to appeal any decision to the dean of the College, Graduate School, or Medical School within five business days after receipt of the official letter outlining the case and the decision reached.

Code of Student Conduct

Brown strives to sustain a learning environment that supports individual exploration. Central to this effort are the four primary Principles of the Brown University Community: individual integrity, respect for others, respect for University resources, and respect for the values of teaching, learning and scholarship. Our community believes that adherence to these principles supports the overall academic mission of the University. Violations of these principles will be handled through the procedures governing the Academic Code and the Code of Student Conduct. These procedures are designed to address behaviors that impede the educational activity of the University or that infringe upon the rights of others.

Student Conduct cases are administered by the Office of Student Conduct & Community Standards.

Specific hearing procedures can be found online at www.brown.edu/randr (<http://www.brown.edu/randr/>).

Academic Calendar

Summer 2025

March 24, 2025	Mon.	Registration opens for Summer 2025 for Online and Professional Master's programs (except Cybersecurity and PRIME) students at 9:00 a.m. EDT.
March 31 - April 10, 2025	Mon. - Thurs.	Registration for Summer courses for continuing Brown undergraduates and select masters students with summer program courses (including PRIME) opens at 9:00 a.m. EDT on Monday March 31 and continues through Thursday April 10 at 5:00 p.m. EDT
April 15 - April 22, 2025	Tues. - Tues.	Registration period for fall courses for Brown undergraduates. Summer registration closed during this period.
April 23 - June 18, 2025	Wed. - Thurs.	Registration period for Summer courses for Brown undergraduates and select masters students with summer program courses (including PRIME) re-opens at 9:00 a.m. EDT and remains open until Wednesday June 18 at 5:00 p.m. EDT
May 19, 2025	Mon.	Classes begin for Summer 2025 for Online and Professional Master's programs (except Cybersecurity and PRIME) students
June 15, 2025	Sun.	Residence halls open.
June 16, 2025	Mon.	Summer Session classes begin.
June 18, 2025	Wed.	Last day to change courses (5:00 p.m. EDT deadline). (All students MUST be in their registered courses by Wednesday, June 18.)
June 19, 2025	Thurs.	Juneteenth Holiday. No University exercises.
June 23, 2025	Mon.	Last day to change grade options (5:00 p.m. EDT deadline)
July 4, 2025	Fri.	Independence Day holiday. No University exercises.
July 25, 2025	Fri.	Classes end.
July 26 - Jul 29, 2025	Sat. - Tues.	Reading period.
July 29, 2025	Tues.	Last day to drop a course (5:00 p.m. EDT deadline).
Jul 30 - Aug 1, 2025	Wed. - Fri.	Final examination period.
August 1, 2025	Fri.	Summer Session ends.
August 2, 2025	Sat.	Residence halls close.
August 24, 2025	Sun.	Classes end for Summer 2025 for Online and Professional Master's programs (except Cybersecurity and PRIME) students

Fall 2025

July 9, 2025	Wed.	Registration opens for Fall 2025 for Online and Professional Master's programs (except Cybersecurity and PRIME) students at 9:00 a.m. EDT.
Aug. 1, 2025	Fri.	Last day for payment of charges.
Aug. 26, 2025	Tues	Beginning of Graduate School All-Student Orientation.
Aug. 28, 2025	Thurs.	Beginning of College Orientation.

Aug. 29 - Sept 1, 2025	Fri. - Mon.	Registration of new undergraduate and all graduate students (residential programs, Cybersecurity, and PRIME) for the fall semester begins at 4:00 pm EDT Friday and ends at 11:59 p.m. EDT Monday Sept 1. (Maximum of 4 credit hours allowed for undergraduates).
Sept. 2, 2025	Tues.	Registration re-opens at 9:00 a.m. EDT on Sept 2 for all students for the fall semester. (Up to a maximum of 5 credit hours allowed).
Sept. 2, 2025	Tues.	Opening Convocation at 4:00 p.m. EDT
Sept. 3, 2025	Wed.	Classes of the first semester begin.
Sept. 3, 2025	Wed.	First day of RISD Fall Session.
Sept. 10, 2025	Wed.	Last day to register for a Fall RISD course without a fee or change a grade option for a Fall RISD course - (5:00 p.m. EDT deadline).
Sept. 16, 2025	Tues.	Last day to add a course without a fee. (5:00 p.m. EDT deadline) Banner Web will be taken down for approximately one hour. Once relaunched, all course adds require Instructor override and will be charged a late fee of \$15 per course.
Sept. 30, 2025	Tues.	Last day to add a course (includes late fee), change from audit to credit, or change a grade option declaration (5:00 p.m. EDT deadline).
Oct. 1, 2025	Wed.	Deadline for undergraduates on personal leave (including employment and military leave) or on Full-time Study Away status to request return to studies at Brown for Spring.
Oct. 7, 2025	Tues.	Last day to receive any partial tuition refund.
Oct. 13, 2025	Mon.	Indigenous Peoples' Day. No University exercises.
Oct. 17, 2025	Fri.	Last day to change from credit to audit in a course (5:00 p.m. EDT deadline).
Oct. 18, 2025	Sat.	Mid-semester
Oct. 21, 2025	Tues.	Date by which sophomores entering their 5th semester must file their concentration declaration forms via ASK to avoid having a No Concentration hold placed against their Banner registration (5:00 p.m. EDT deadline).
Oct. 27, 2025	Mon.	Advising period for spring pre-registration begins. Students in their first through third semesters will need to procure their advising PIN from their advisor in order to register.

Nov. 10, 2025	Mon.	Registration opens for Spring 2026 for undergraduate students semester level 07 and above and all continuing graduate students (residential programs, Cybersecurity, and PRIME) at noon EST. Registration remains open until Tuesday, November 18, 5:00 p.m. EST. (Maximum of 4 credit hours allowed for undergraduates).	Dec. 6, 2025	Sat.	Midyear Completion Celebration at 4:00 p.m. in Salomon De Ciccio Family Auditorium. Reception to follow in Sayles Hall.
Nov. 12, 2025	Wed.	Registration opens for Spring 2026 for undergraduate students semester levels 05-06 at noon EST. (Students are unable to register for 5th semester unless approved concentration is filed). Registration remains open until Tuesday, November 18, 5:00 p.m. EST. (Maximum of 4 credit hours allowed for undergraduates).	Dec. 7, 2025	Sun.	Beginning of Reading Period (optional and at the discretion of the instructor.)
Nov. 13, 2025	Thurs.	Registration opens for Spring 2026 for undergraduate students semester levels 03-04 at noon EST. Registration remains open until Tuesday, November 18, 5:00 p.m. EST. (Maximum of 4 credit hours allowed for undergraduates).	Dec. 11, 2025	Thurs.	Classes end for courses not observing the Reading Period. Last day to drop a course (5:00 p.m. EST deadline) or to request an incomplete from an instructor.
Nov. 13, 2025	Thurs.	Students on serious warning who wish to drop a course after this date must meet with an academic dean for advising and to obtain a drop code.	Dec. 11, 2025	Thurs.	UG CONCENTRATIONS: Last day for students to declare second concentrations in ASK for students in their penultimate semester (typically the 7th semester) who are declaring a second concentration (5:00 p.m. EST deadline).
Nov. 14, 2025	Fri.	Deadline for submission of proposals for College Curriculum Council-approved undergraduate group study projects (GISPs), independent study projects, and internships for credit) for Semester II.	Dec. 11, 2025	Thurs.	UG CERTIFICATES: Last day for students in their ante-penultimate (typically 6th) semester to declare an undergraduate certificate in ASK.
Nov. 14, 2025	Fri.	Registration opens for Spring 2026 for undergraduate students semester levels 01-02 at noon EST. Registration remains open until Tuesday, November 18, 5:00 p.m. EST. (Maximum of 4 credit hours allowed for undergraduates).	Dec. 12 - 20, 2025	Fri. - Sat.	Final Examination Period (inclusive of Sunday)
Nov. 15 - 18, 2025	Sat. - Tues.	Registration for Spring 2026 continues until Tuesday, November 18, 5:00 p.m. EST.	Winter 2026		
Nov. 26, 2025	Wed.	Registration opens for Spring 2026 for Online and Professional Master's programs (except Cybersecurity and PRIME) students at 9:00 a.m. EST.	Nov. 19 - Dec. 17, 2025	Wed. - Wed.	Registration for Wintersession courses (begins at 9:00 a.m. EST).
Nov. 26 - 30, 2025	Wed. - Sun.	Thanksgiving recess	Dec. 17, 2025	Wed.	Last day to register for a Wintersession course (5:00 p.m. EST deadline).
Dec. 01, 2025	Mon.	Classes resume.	Dec. 17, 2025	Wed.	Wintersession tuition due.
Dec. 1, 2025	Mon.	Deadline for undergraduates to request a personal leave (including employment and military leave) or to request Full-time Study Away status for Spring. Any Full-time Study Away approved by the Study Away Review Committee for which the Registrar does not receive enrollment verification will not be honored.	Dec. 22, 2025	Mon.	Wintersession courses begin.
Dec. 1, 2025	Mon.	Last day of Fall RISD classes.	Jan. 6, 2026	Tues.	Last day to change a grade option declaration.
			Jan. 13, 2026	Tues.	Last day to drop a course or request an incomplete from an instructor.
			Jan. 19, 2026	Mon.	Martin Luther King, Jr. holiday. No University exercises.
			Jan. 20, 2026	Tues.	Final examinations. Wintersession ends.
			Spring 2026		
			Jan. 1, 2026	Thurs.	Last day for payment of charges.
			Jan. 5, 2026	Mon.	First day of RISD Winter Session.
			Jan. 9, 2026	Fri.	Theses/Dissertations of candidates for Masters and Ph.D. degrees in February due.
			Jan. 16 - Jan 19, 2026	Fri. - Mon.	Registration of new undergraduate and new graduate students (residential programs, Cybersecurity, and PRIME) for the spring semester begins at 2:00 pm EST Friday and ends at 11:59 p.m. EST Monday Jan 19. (Maximum of 4 credit hours allowed for undergraduates).
			Jan. 19, 2026	Mon.	Martin Luther King, Jr. holiday. No University exercises.
			Jan. 20, 2026	Tues.	Registration re-opens at 9:00 a.m. EST on Jan 20 for all students for the spring semester. (Up to a maximum of 5 credit hours allowed).
			Jan. 21, 2026	Wed.	Classes of the second semester begin.

Feb. 3, 2026	Tues.	Last day to add a course without a fee. (5:00 p.m. EST deadline) Banner web will be taken down for approximately one hour. Once relaunched, all course adds require Instructor override and will be charged a late fee of \$15 per course.	April 15, 2026	Wed.	Registration opens for Fall 2026 for undergraduates semester levels 05-06 at noon EDT (approved concentration must be filed to register for 5th semester) and remains open until Tuesday April 21, 5:00 pm EDT (Max of 4 credits allowed for undergraduates).
Feb. 6, 2026	Fri.	Last day of Winter RISD classes.	April 16, 2026	Thurs.	Registration opens for Fall 2026 for continuing undergraduate students semester levels 04 and below at noon EDT. Registration remains open until Tuesday, April 21, 5:00 p.m. EDT. (Maximum of 4 credit hours allowed for undergraduates).
Feb. 12, 2026	Thurs.	First day of RISD Spring Session.	Apr. 17 - Apr. 21 2026	Fri. - Tues.	Registration for Fall 2026 continues until Tuesday, April 21 5:00 p.m. EDT.
Feb. 14 - 17, 2026	Sat. - Tues.	Long weekend. No University exercises.	April 24, 2026	Fri.	Reading Period begins and will end on May 5 (optional and at the discretion of the instructor).
Feb. 18, 2026	Wed.	Classes resume. Last day to add a course (includes late fee), change from audit to credit, or change a grade option declaration (5:00 p.m. EST deadline).	May 1, 2026	Fri.	Deadline for undergraduates to request a personal leave (including employment and military leave) or to request Full-time Study Away status for Fall. Any Full-time Study Away approved by the Study Away Review Committee for which the Registrar does not receive enrollment verification will not be honored.
Feb. 19, 2026	Thurs.	Last day to register for a Spring RISD course without a fee or change a grade option for a Spring RISD course (5:00 p.m. EST deadline).	May 1, 2026	Fri.	Theses of candidates for Masters and Ph.D. degrees in May due.
March 6, 2026	Fri.	Last day to change from credit to audit in a course (5:00 EST p.m. deadline).	May 5, 2026	Tues.	Classes end for courses not observing the Reading Period. Last day to drop a course (5:00 p.m. EDT deadline) or to request an incomplete from an instructor.
March 7, 2026	Sat.	Mid-semester.	May 5, 2026	Tues.	Reading Period ends.
March 16, 2026	Mon.	Date by which sophomores entering their 5th semester must file their concentration declaration forms via ASK to avoid having a No Concentration hold placed against their Banner registration. (5:00 p.m. EDT deadline).	May 5, 2026	Tues.	UG CONCENTRATIONS: Last day for students to declare second concentrations in ASK for students in their penultimate semester (typically the 7th semester) who are declaring a second concentration (5:00 p.m. EDT deadline).
Mar. 21 - 29, 2026	Sat. - Sun.	Spring Recess.	May 5, 2026	Tues.	UG CERTIFICATES: Last day for students in their ante-penultimate (typically 6th) semester to declare an undergraduate certificate in ASK.
March 30, 2026	Mon.	Advising period for fall pre-registration begins. Students in their first through third semesters will need to procure their advising PIN from their advisor in order to register.	May 6 - May 15, 2026	Wed. - Fri.	Final Examination Period. (No exams on Sunday May 10).
March 30, 2026	Mon.	Classes resume.	May 13, 2026	Wed.	Last day of Spring RISD classes.
April 1, 2026	Wed.	Deadline for undergraduates on personal leave (including employment and military leave) or on Full-time Study Away status to request return to studies at Brown for Fall.	May 24, 2026	Sun.	Commencement.
Apr. 7, 2026	Tues.	Students on serious warning who wish to drop a course after this date must meet with an academic dean for advising and to obtain a drop code.			
April 10, 2026	Fri.	Deadline for submission of proposals for College Curriculum Council-approved undergraduate group study projects (GISPs), independent study projects, and internships for credit) for Semester I.			
April 14, 2026	Tues.	Registration opens for Fall 2026 for undergraduates semester level 07 and above and continuing graduate students (residential programs, Cybersecurity, and PRIME) at noon EDT and remains open until Tue April 21, 5:00 p.m. EDT. (Max of 4 credits allowed for undergraduates)			

The College

Admission

We encourage you to join our contact list (<https://apply.college.brown.edu/register/?id=ba6e1b28-15de-43f1-8f7c-4444c7958180>) if you would like to receive information and updates about admission to the undergraduate college. You may learn more about life at Brown, the admission process, and financial aid by visiting the Office of College Admission website (<http://admission.brown.edu/>). The Office of College Admission is available to answer any questions during normal business hours and may be reached at admission@brown.edu or by phone at (401) 863-2378.

Curricular Recommendations

While there are no specific course requirements for admission to Brown, most successful applicants demonstrate preparation for university-level studies through a rigorous curriculum across academic disciplines throughout secondary school.

The Open Curriculum allows students to explore broadly across departments in addition to delving deeply into areas of focus. The Admissions Office understands that individual academic opportunities may vary by school and by year and that curricular expectations will also vary around the world. With that in mind, secondary school transcripts should show that students have taken advantage of available learning opportunities. Brown expects students to take at least four academically rigorous courses, preferably five, across a range of core subject areas each year throughout secondary school. English language and literature, math, the sciences, history, and a second language are considered the academic subjects best suited to help students prepare for the intellectual opportunities and interdisciplinary learning environment at Brown.

College Entrance Examination Board Tests

Based on an extensive review of data over the past three years, Brown University has returned to a policy requiring standardized test scores (either SAT or ACT scores) for first-year applicants. We will superscore either the SAT or ACT, or both. Please note that the SAT Essay and ACT Writing components remain completely optional, and the majority of applicants to Brown will not submit these exam sections. The ACT Science section will be optional beginning in spring 2025 in alignment with the changes to this exam.

Standardized test scores remain one factor among the many we consider in our whole-person admission process when assessing an applicant's academic preparation and potential to succeed on our campus. Not determinative, but informative, we have always considered these scores in the context from which each individual student is applying.

Brown continues to consider transfer students, veterans, and applicants to our Resumed Undergraduate Education (RUE) program under a test-optional admission policy. The SAT or ACT, when submitted, will continue to be considered in the context of all the other information we have about a candidate. As with our first-year admission process, we accept Score Choice and will always consider a student's highest scores if multiple results are submitted.

In all of our application processes, it is highly recommended that international applicants for whom English is not a first language, a primary language spoken at home, or the primary language of instruction for the duration of their secondary school career submit the results of an English proficiency test. English proficiency (<https://admission.brown.edu/international/english-proficiency/>) testing recommendations are available for international applicants and non-native speakers of English.

For more detail regarding our current standardized testing policy, please see our dedicated FAQ (<https://admission.brown.edu/ask/standardized-tests/>).

Advanced Placement Examinations

Brown participates in the Advanced Placement (AP) Program of the College Entrance Examination Board. The program aims "to give able students challenging educational experiences in school, and to increase

for these able students the opportunity to take advanced work in college." Students in secondary schools participating in this program may take the appropriate examinations given in May and have the scores sent to Brown. Students who earn qualifying scores may be granted placement notations that would allow them to meet course prerequisites and possibly satisfy concentration requirements. Brown's respective academic departments determine qualifying scores for course equivalencies. Students who report their eligible scores by the designated deadlines will be notified of their eligibility for such placement notations upon matriculation at Brown before their first semester and asked whether they wish to accept or decline transcript notation(s) of advanced placement credit (when indicated by department policy for a subject). Please consult our AP policies page (<https://college.brown.edu/design-your-education/academic-policies/advanced-placement-exams/>) for a full listing of all approved qualifying subjects and scores.

Advanced Placement notations may not be applied to the minimum 30 course credits needed to earn a Brown degree; placement notations carry a value of 0.0 course credit; in other words, they do not earn actual course credit or an enrollment unit in the way that Brown courses do. Placement notations also do not carry any enrollment units.

Transfer Admission from Other Colleges

To be eligible for transfer admission, you must have completed at least one full year of college study (or its equivalent) before your planned matriculation at Brown. Both part-time and full-time students at accredited two- and four-year colleges may seek transfer admission. University rules stipulate that anyone admitted as a transfer must be enrolled full-time at Brown for at least four semesters prior to earning an undergraduate degree. Students who have already completed a bachelor's degree at another college are ineligible to apply as transfers. In contrast, high school students currently enrolled in dual-degree programs or early college programs are ineligible to transfer and should apply as first-year applicants.

To transfer, courses taken outside of Brown should be in undergraduate academic subject areas offered at Brown. The Courses@Brown catalog (<https://cab.brown.edu/>) can be used for reference. Brown will not automatically award transfer credit for courses taken during summer programs. More information about transfer admission (<https://admission.brown.edu/transfer/>) is available through the Office of College Admission.

Visiting Undergraduate Students

Each year, Brown welcomes visiting students from partner institutions both in the United States and abroad. In addition, a limited number of students enrolled as full-time degree candidates at other colleges may apply to spend one or two semesters at Brown to pursue areas of study not otherwise available to them for credit at their own institutions.

The Visiting Undergraduate Student Program welcomes applicants who wish to enroll in undergraduate-level academic work during the fall or spring semesters or during the Summer Session. Most Visiting Undergraduate Students hold full-time status during their time on Brown's campus. This program is not intended for high school graduates who wish to spend a gap year or gap semester at Brown, nor is it intended for students who have already earned a bachelor's degree.

Resumed Undergraduate Education Program

The Resumed Undergraduate Education (RUE) Program is a small, highly competitive program ideal for students who interrupted or delayed their formal education due to family commitments, financial concerns, health issues, military service, employment opportunities, or simply a compelling need to explore other paths. Applicants must have earned a high school diploma or equivalent and have been out of high school for six or more years by the time of proposed enrollment at Brown. More information about RUE admission (<https://admission.brown.edu/rue/>) is available through the Office of College Admission website.

U.S. Military Veterans

Brown values the extraordinary talents, experiences and diversity that veterans bring to campus. Veterans and currently serving military personnel are highly encouraged to apply via Brown's Veterans

Application (<https://apply.college.brown.edu/apply/?sr=cb5ff848-fb9a-465e-be4a-25c6f54ec1f1>), regardless of their year of high school graduation or any college credits earned to date. In appreciation of your service, there is no application fee. More information about the application process is available here (<https://admission.brown.edu/veterans/>).

Brown is a proud college partner of Service to School's VetLink Program (<https://service2school.org/vetlink/>), which provides free application mentoring and networking to veterans. We are also a longstanding partner of the Marine Corps Leadership Scholar Program (<http://www.usmc-mccs.org/services/education/leadership-scholar/>) (LSP), which assists Marines intending to pursue their undergraduate degree at highly selective institutions. The university has also undertaken a number of initiatives (<https://www.brown.edu/news/2019-11-11/veterans/>) to double our enrollment of undergraduate student veterans.

Requirements for Baccalaureate Degrees

Baccalaureate Degree Programs

At Brown, two baccalaureate degrees are awarded — the Bachelor of Arts (A.B.) and the Bachelor of Science (Sc.B.). A student's chosen concentration program determines the degree awarded. All Brown undergraduates must complete the requirements for either an A.B. or an Sc.B. to earn the baccalaureate degree at Brown.

The Sc.B. degree recognizes a science concentration that demonstrates both breadth and depth in science beyond the minimum required for the A.B. degree in the same field. An Sc.B. program typically follows these guidelines:

1. The concentration program, except for Computer Science and Engineering, shall require at most 10 courses in any single department. The total number of concentration courses required shall be at most 20 (21 for Engineering).
2. At least one one-semester course of independent study, research, or design in the concentration discipline must be included.
3. Additional electives must be chosen to meet the quantity requirement for all baccalaureate degrees. In cases where the student may complete the Sc.B. degree based on one concentration and an additional concentration associated with an A.B. degree, only one degree (Bachelor of Science) is awarded upon graduation. *See below for requirements associated with combined degrees.

Degrees with Distinction

Baccalaureate degrees may be awarded with distinction (*magna cum laude*) to those students whose percentage of quality grades — grades of "A" or "S with Distinction" — in courses taken at Brown puts them in the top 20% of the entire undergraduate graduating class. The Registrar will allow students to indicate that they do not wish to be considered for a degree with distinction.

Quantity and Progress Requirements

To graduate with a Brown baccalaureate degree, a student must complete at least 30 course credits (equivalent to 120 semester hours), 15 of which must be taken at Brown. A maximum of 4 Brown Summer and/or Winter Session courses may be applied toward this requirement. Approved study at another institution may also count toward the 30-course credit degree requirement.

The standard semester course load at Brown is four course credits. Full-time students are permitted to enroll in a maximum of five courses/credits in a given semester; students may take three classes in a semester if doing so will not bring them below the level of good academic standing. A student may not enroll in fewer than three courses in any semester without written permission from a designated academic dean or with coordination with accommodations recommended by Student Accessibility Services. Resumed Undergraduate Education students may study full-time or less than full-time with authorization from an academic dean.

Residency Requirement

Every candidate for a baccalaureate degree must reside at Brown for at least four semesters as a full-time student. Credits from Brown approved Study Abroad and Study Away programs as well as Brown Summer and

Winter Sessions do not apply to the residency requirement. Every student must spend sufficient time in concentration studies to permit faculty evaluation of their concentration.

Certain students may be eligible for part-time status via a course load reduction with authorization from an academic dean. Eligible students include students admitted to the Resumed Undergraduate Education (RUE) program or students considered RUE-like, including Veterans, as well as students for whom a course load reduction is an approved academic accommodation through Student Accessibility Services. All students interested in a course load reduction must consult the RUE Program Advisor or an academic dean and present a viable degree completion plan.

Writing Requirement

Learning to write well is a developmental process that occurs over time. Brown students are, therefore, required to work on their writing at least twice: once in their first two years of study and a second time in semesters 5-7 (or the penultimate semester). Students must complete an approved writing-designated (WRIT) course at Brown in their first two years of study. Exceptions are made for transfer students, who may meet this part of the requirement with an approved course in the subjects of either Comparative Literature, English, or Literary Arts from their prior institution, and for students in the Brown/RISD Dual Degree program who are required to take only one writing-designated course at Brown.

In semesters 5-7 (or the penultimate semester), all students must demonstrate that they have worked on their writing a second time in a course they have taken at Brown (study away courses are ineligible). Learn more about the University Writing Requirement (<https://www.brown.edu/academics/college/degree/curriculum/writing-requirement/>).

Concentration Requirements

An academic concentration is the focal point for a student's undergraduate educational experience at Brown. It is an in-depth study centering on a discipline or exploring a problem, theme, or broad question through interdisciplinary fields. Concentrations aid intellectual development by encouraging conceptual and methodological study on a sophisticated level. A concentration may coincide in some ways with specific prerequisite training for professional goals, but professional training is not the central aspect of the concentration process. Instead, the concentration is designed to foster students' command of an area of knowledge and ability to use a concentration's concepts and methods coherently.

Brown offers standard concentrations that lead to either the Sc.B. or the A.B. degree. In keeping with the philosophy of the Open Curriculum, students may design an independent concentration if standard offerings do not match their interests. Independent concentration proposals are sponsored by at least one faculty member and must be reviewed and approved by a subcommittee of the College Curriculum Council.

A listing of departmental and interdepartmental concentration programs that are currently available may be found at: <https://www.brown.edu/undergraduate-programs> (<https://www.brown.edu/undergraduate-programs/>). The programs have been approved and are subject to periodic review by the College Curriculum Council. Guidelines for preparing an independent concentration proposal are on the College's website.

All students (except incoming junior transfers) must declare their concentration by the middle of their fourth semester before pre-registering for semester five (usually the spring semester of sophomore year). This declaration outlines the student's primary objectives in choosing the concentration while listing the specific courses to take. Once the declaration is approved, the departmental concentration advisor becomes the student's advisor for the remainder of their time at Brown.

Students may complete as many as three concentrations during a regular four-year program. While Brown does not offer minors, students may pursue and earn one certificate. Students who pursue a certificate may only complete one concentration. A student who completes more than one concentration program may have that fact indicated on their permanent record. To accomplish this, the student must have filed a declaration for each concentration and had it "advisor approved" by the last day of classes in the student's penultimate semester (for most students,

this is the seventh semester). Sponsorship and authorization of each concentration program shall follow the usual procedures.

Students will only be permitted to register for their fifth semester if a declaration of concentration has been filed. Exceptions are made for incoming junior transfers and for Brown|RISD Dual Degree program students. Students failing to complete registration on time because of the failure to file a concentration declaration will be subject to the same action taken by the University for all cases of late registration (see Financial Information (p. 997)).

Honors in the Concentration: Students whose work in the field of concentration has demonstrated superior quality and culminated in an honors thesis of distinction are awarded departmental honors at Commencement. The designation "Honors" is included on the student's transcript and diploma. No distinctions are made among quality levels of honors work. Students considering honors work should consult their departmental, interdepartmental, or independent concentration advisor.

Recommendations for honors are due in early May preceding Commencement. Brown does not grant honors retroactively. Therefore, students who consider taking a grade of Incomplete in a thesis project should understand that they will only receive honors if the thesis is completed in time to be evaluated by faculty readers and a recommendation is submitted before graduation.

Enrollment Unit Requirement

To complete their undergraduate degree, a student must earn at least 32 enrollment units, which are distinct from course credits. The 32 enrollment unit requirement is separate from and in addition to all other degree requirements. While each full-time student is required to take from three to five courses each semester, they accrue 4 enrollment units for each full-time semester at Brown. In addition, beginning with the 2025 Summer Session, degree-seeking Brown undergraduates will earn 1 enrollment unit for each Brown Summer or Winter course credit, but they will not increase a student's semester standing for other purposes. (Please note that students may use a maximum of 4 Brown Summer and Winter courses as part of their degrees.) The only students who may receive enrollment units for pre-matriculation coursework are Transfer or Resumed Undergraduate Education Students, and the only students who may receive enrollment units for post-matriculation coursework at other institutions are students on approved study abroad or study away programs. (See section below on Tuition Regulations for additional information.)

Requirements for Combined Degree Programs

Combined A.B./Sc.B. Degree

Students who wish to earn a combined A.B. and Sc.B. degree may do so in a five-year program in which work for both degrees proceeds concurrently. Students who elect this five-year plan will usually arrange their programs of study so that they may change to either degree candidacy alone before the fourth year.

Requirements for this degree program are as follows:

- Declaration of intent. A formal application approved by the appropriate dean must be filed with the Registrar no later than the student's fifth semester of study.
- Satisfactory completion of the Sc.B. requirements for a standard concentration program in the life sciences, physical sciences, or mathematics or an approved independent Sc.B. program spanning one or more of these areas.
- Satisfactory completion of the A.B. requirements for a standard or independent concentration in the humanities or social sciences.
- A minimum of 38 courses passed. Transfer credits are awarded according to the University's standard rules and regulations.
- At least three years in residence.
- Ten semesters, or 40 units, of enrollment credit. At least six of the ten semesters must be completed in residence at Brown. The ten-semester enrollment requirement is separate from and in addition to any other degree requirements.

Note: The Brown Corporation has enacted a provision allowing students in the five-year A.B.-Sc.B. program who complete all academic requirements in nine semesters to terminate their studies at that point, provided the Committee on Academic Standing (CAS) approves the breadth and quality of the student's program. In that case, the enrollment requirement will be reduced to nine semesters. This provision is subject to review by the Corporation's Academic Council.)

Five-Year Baccalaureate–Master's Degree Program

With the approval of the Graduate Council, academic departments may establish integrated programs leading to the successive awarding of the bachelor's and master's degrees. In such programs, a student may offer up to two courses taken during undergraduate study at Brown in partial fulfillment of the requirements for the master's degree. In all cases, the equivalent of at least six semester courses must be taken in residence at Brown University.

A student must apply for admission to a 5th-year program by the end of the third week of their penultimate semester of undergraduate study. Admission to the Graduate School for the fifth year will ordinarily be a matter of course; however, such admission must be applied for at the proper time and decided on in the regular way. Students interested in this program should consult with relevant staff in the Graduate School.

Brown-Rhode Island School of Design Dual Degree Program

In this five-year program, students earn a bachelor's degree from both Brown and RISD. BRDD students may earn a Bachelor of Fine Arts (B.F.A.) from RISD in any undergraduate major, with the exception of the 5-year BArch program. BRDD students typically earn a Bachelor of Arts (A.B.) degree from Brown, although permission to pursue a Bachelor of Science (Sc.B.) degree may be granted on a case-by-case basis because of their heavier curricular requirements.

To gain admission, students must apply to and be admitted by both schools as well as to the BRDD program. Because of the program's strict requirements, only students applying to enter as first-year students are eligible. Approximately 15 students matriculate in the program each year.

Program in Liberal Medical Education

Each year, Brown's Program in Liberal Medical Education (PLME) matriculates approximately fifty first-year students pursuing an undergraduate degree and medical professional studies in a single eight-year program. As undergraduates, PLME students may choose to work toward an A.B. or Sc.B. degree in the sciences or toward an A.B. in the humanities, social sciences, or behavioral sciences. The undergraduate experience is designed to prepare students for the last four years of the program, which constitute the medical school years and culminate in the MD degree.

To apply to the PLME program, students submit the standard Brown application. Candidates considered permissible by the College Admission Office are reviewed by the PLME Advisory Board. Applicants not admitted to PLME are still considered candidates to the College for the Bachelor of Arts or Bachelor of Science degree.

Academic Advising Programs

A strong network of advisors and mentors help students engage fully and successfully with Brown's open learning environment. Brown's advising programs are designed to facilitate these relationships and provide students with maximum opportunity to formulate and achieve their educational objectives. Students are expected to take the initiative in seeking out and working with advisors to make the best use of their time at Brown.

To ensure students have the guidance and support they need to make informed choices, the University assigns each new student two advising partners: an exploratory advisor and a Meiklejohn peer advisor. The exploratory advisor is a faculty member or administrator who provides a long-term institutional perspective on educational options while generally informing, sometimes encouraging, and occasionally challenging students.

The student Meiklejohn provides an experienced perspective on the ins and outs of course registration, course selection balance, prerequisites, and the like.

As first-year students transition to the sophomore year, they are encouraged to stay with their exploratory advisor to benefit from the continuity and depth of a two-year advising relationship.

Students declare a concentration in their fourth semester of study. Concentration advisors help with this process by explaining the dimensions of their academic disciplines, reading and providing feedback on students' concentration declaration essays, and advising students during their final two years at Brown. Faculty in individual departments and programs that administer concentrations often serve as informal advisors to their concentrators.

A broad network of academic, co-curricular, and personal counseling complements the work of assigned advisors. Throughout the year, deans in the College and in the Office of Student Support Services provide one-on-one consultation to all students who request it. Additional support is available from the Sheridan Center's Academic Tutoring Program, the Curricular Resource Center, the Sarah Doyle Center for Women and Gender, the Brown Center for Students of Color, the LGBTQ Center, the Undocumented, First-Generation College and Low-Income Student Center (U-FLI), the Center for Career Exploration, the professional staff in University Health Services, Counseling and Psychological Services, and the Office of the Chaplains and Religious Life. Peer advising includes Brown's Meiklejohn advising program; Matched Advisor Program for Sophomores (MAPS); Peer Career Advisors (PCA); Health Careers Peer Advisors (HCPA); and athlete peer advisors.

Academic Support Services

Several programs support undergraduates' academic success and help them take full advantage of the curriculum.

- The Curricular Resource Center (<https://crc.brown.edu/>) (CRC) provides advising, facilitation, and reference materials for students wishing to design their own courses (ISPs and GISPs), craft independent concentrations, and explore options for time away from Brown. It also provides peer mentoring support for sophomores and coordinates an academic coaching program staffed by juniors, seniors, and graduate students
- Student Accessibility Services (<https://studentaccessibility.brown.edu/>) (SAS) coordinates and facilitates services for students with physical, psychological, and learning disabilities.
- The Math Resource Center (<https://www.brown.edu/academics/math/math-resource-center/>) assists students in introductory mathematics courses.
- The Sheridan Center for Teaching and Learning (<https://www.brown.edu/sheridan/>) offers opportunities for undergraduate students to engage in their own learning and support the learning of their peers. One of the programs offered by the Sheridan Center is the Academic Tutoring Program (<https://www.brown.edu/sheridan/programs-services/academic-tutoring/>). The Tutoring Program provides small-group tutoring for select gateway STEM and language courses. The peer-led groups meet weekly to review key concepts and learning objectives and discuss problem-solving techniques.
- The Sheridan Center's Writing and English Language Support Hub provides individual and group communication support to any member of the Brown community. In the Writing Center, associates help students with all stages of the writing process, from finding a topic through drafting, revising, and final editing. Students can request a virtual or in-person appointment on the Writing Center's website (<http://brown.edu/go/wc/>). Multilingual students can also work directly with English Language Support on any aspect of English language development, including writing, speaking, reading, listening, and US academic and cultural norms.

Academic Standing

The Brown Faculty and Corporation set the minimum standards students must meet to earn the baccalaureate degree. Undergraduate students are typically expected to take four courses each semester for a total of

32 courses in eight semesters and will ordinarily complete eight courses every two consecutive semesters. (Successful course completion means a course completed with a grade of A, B, C, or S.)

More information about the number of courses a student should complete to maintain good academic standing, and more information about academic standing generally, can be found here (<https://college.brown.edu/design-your-education/academic-policies/academic-standing/>) on the College's website.

In addition, students making satisfactory academic progress will complete a minimum of seven courses in any two consecutive semesters. Before the summer of 2016, academic standing was determined based only on courses completed at Brown. Effective Summer 2016, academic standing is determined based on courses completed at Brown or via approved transfer credit noted on the transcript after a student has been enrolled as a degree candidate. Any pre-Brown matriculation credit, such as college credits for transfer students, do not determine academic standing.

Undergraduates who, in the judgment of the Committee on Academic Standing, have unsatisfactory scholastic records may be placed in one of three categories: Academic Warning, Serious Warning, or Academic Suspension. Academic Suspension or Dismissal (second suspension) includes a permanent transcript notation. The Committee's judgment will depend on the extent of a student's academic deficiency as defined by rules approved by the Faculty on February 5, 1991:

Academic Warning cautions a student that their record is below the standard for graduation.

Serious Warning notifies a student that, unless the record improves, he or she will be subject to academic suspension at the end of the semester.

Academic Suspension may be ordered when the Committee finds that a student's academic record falls more than two credits below the number expected for the student's semester level.

Students on Academic Warning and Serious Warning must obtain special academic advising from an assigned dean.

Guidelines for Study Elsewhere

Students who wish to transfer credit for study completed at an institutionally accredited, degree-granting, two- or four-year institution may do so with prior approval of the College on behalf of the Committee on Academic Standing (CAS). The rules governing transfer credit for study away from Brown are nuanced; consult with a Degree Completion Dean before enrolling. This section describes the policies and procedures most commonly called into play when matriculated students wish to have credits from elsewhere added to their Brown transcript.

Students may receive up to eight Brown course credits for work undertaken during one academic year. Nearly all Brown courses carry one Brown course credit (1.0cc). One Brown course credit is equivalent to four semester credit hours (or 6 quarter units). Therefore, the number of courses taken while on study away from Brown may not be equal to the number of course credits earned. Once a plan is approved by the College, all coursework must meet Brown's transfer credit policies (https://docs.google.com/document/d/1G1QLbMhHdGP04ZEP_zRgRixUTwR3JGL5HV-OxvAcZfw/edit?usp=sharing). Students should also keep all records from their work away, including course syllabi, exams, papers, notes, projects, and portfolios, should the student's concentration department require it for concentration credit.

Coursework that meets transfer requirements for academic content will either be assigned a Brown academic department (e.g. "SOC" would be transcribed for a Sociology course) or if we do not have an equivalent department "NOSP" will be articulated, indicating "no specific subject". A "T" will appear next to each articulation, indicating that the coursework was completed at another institution and transferred to Brown. Successfully completed coursework (coursework completed with a number or letter grade equal to or greater than the equivalent of a C) will be articulated in increments of .25 Brown credit increments with the greatest articulated value being 1 Brown credit. For courses that are worth greater than the equivalent of 1 Brown credit, the residual credit value will be articulated separately to the closest .25 credit increment.

Please note that the above transfer credit articulation only applies to courses offered by other institutions. Brown courses, such as the Pro Seminar in the Brown in Bologna program, which are transcribed directly by Brown will continue to be articulated with their course titles and earned grade (according to the student's choice of grade option (https://registrar.brown.edu/students/course-enrollment/grades/#:~:text=Grading%20System,C%2FNC%20upon%20initial%20registration)))).

Full-Time Study Away

Students planning to study away from Brown full-time must receive approval in advance from the College. This pathway is generally for U.S.-based students interested in studying at another U.S. school during the academic year, but also for international students (F1) interested in studying away in their "home country." Full-Time Study Away awards students one semester of standing. Learn more about the policies that govern Full-Time Study Away here and how to apply (<https://college.brown.edu/learn-beyond-classroom/us-study/study-away-brown/>). This is distinct from Study Abroad, which is outlined further below.

Study Away during the Summer

Two avenues of study are available to undergraduate students interested in summer coursework. They may take courses in Brown's 7-week Summer Session or apply for transfer credit from other summer programs — either domestic or international — that meet certain conditions. Most students will not be eligible to transfer course credit from a non-Brown summer program, as it generally requires a credit recovery need. Consult with a Degree Completion Dean before enrolling. Whether studying in the U.S. or abroad, students must study at institutionally-accredited, degree-granting institutions. Students must obtain preliminary approval for summer study away from Brown by the College. Course equivalency approvals from a Brown academic department does not confirm that a student is eligible to take courses outside of Brown and transfer credit.

Students may apply a combined maximum of 4 Brown course credits from Brown's Summer and Winter Session toward the baccalaureate degree. Non-Brown summer transfer credit contributes to this limit. Non-Brown Winter Session coursework is not transfer eligible. No more than the equivalent of 2 Brown course credits will be transcribed for any given summer of enrollment. Concurrent enrollment in Brown's Summer Session and outside coursework is not permissible. Summer transfer credit may not be used to advance a student's graduation date. Students interested in summer study elsewhere should consult with an academic dean in the College or with Study Abroad Advising, as appropriate.

Semester Study Abroad

Study Abroad | studyabroad.brown.edu (<https://studyabroad.brown.edu>)

Brown University offers undergraduate students the opportunity to study abroad through a wide variety of academic programs, some offered directly by the University and others sponsored by institutions that Brown approves for academic credit. Over 400 undergraduates at Brown study outside of the U.S. each year and are transformed by their experiences in the most positive and profound ways.

Study abroad advisors work closely with students to consider and select one of Brown's many study abroad program offerings. For decades, Brown has offered its own programs in France and Italy. As the administering lead institution of the Consortium for Advanced Studies Abroad, Brown also provides students with study opportunities in Australia, Chile, Cuba, Ireland and Spain (Barcelona and Granada). Additionally, the University partners with leading world universities in Japan and the United Kingdom, and you may consider more than 70 approved programs in other countries.

It's never too early to begin thinking about studying abroad. Brown encourages you to plan ahead to incorporate study abroad into your academic planning.

The Senior Associate Dean for Study Abroad oversees the approval of course credits earned in study abroad programs, and summarizes petitions for courses of study to the Committee on Academic Standing. Guidelines for approving such petitions are below. When exceptions to these guidelines are sought by students, petitions are made to the Senior

Associate Dean, who presents the petitions to CAS for consideration on the students' behalf.

Study abroad is intended to provide students with opportunities not available at Brown, and to complement the university's curricular offerings. In order to qualify for transfer credit back to Brown, the courses taken must be either a part of a degree-bearing program at a foreign institution of higher learning, under the aegis of the responsible office of that country, or offered by a study abroad program provider that is able to document completed coursework through a U.S. school of record who provides a transcript for the earned credits. Brown students are ordinarily subject to the same rules and regulations governing the degree-seeking students of the host university. Special arrangements may be approved for the evaluation of student work if the local institution does not normally evaluate student work at the end of the student's study abroad period. This exception, however, does not permit students to deviate from the host university's normal program of study or its calendar.

Students may study abroad through programs that are Brown sponsored, Brown approved, or CAS-petition approved. In all cases, pre-approval from the Study Abroad Office is required before a student may study abroad for academic credit. Under no circumstances are students allowed to study abroad without first obtaining pre-approval if they intend to use those courses toward their Brown degree requirements. It is also not possible to study abroad without pre-approval and then apply retroactively for transfer of study abroad credit, unless this coursework is completed during the summer. Credit earned independently on a summer study abroad program is eligible for transfer if the program meets the above-described accreditation standards, transfer credit policies are adhered to, and the student has a demonstrated credit recovery need.

Home Tuition Policy

All students are charged Brown University tuition while studying abroad for academic credit. The revised fee structure enables study abroad to be integrated into the Brown four-year academic experience while ensuring equity across the broad socioeconomic spectrum of Brown students.

Academic Standing Requirement

Study abroad is usually not appropriate for students in academic difficulty; therefore, students must be in good academic standing in order to obtain approval to study abroad. Students on Warning may petition the Study Abroad Office for an exception to this rule, and must have a degree completion plan developed with their CAS dean to be considered for an exception.

Language Requirement

Students who wish to attend programs in countries where Brown offers a language concentration (French, Spanish, German, Italian, and Portuguese) must demonstrate proficiency in the host country's language before studying abroad. Competence is certified by the appropriate language department at the level required for study abroad by the language departments and the Study Abroad Office. When studying abroad in these countries, students are required to take all courses in the local language. Some approved programs, such as Granada, allow students to begin study of the language at lower levels.

In host sites where the local language is not routinely available for study by the average Brown student, students may enroll in English language programs administered by or on behalf of the host university. Such students are generally required to study the local language as part of their study abroad programs.

Enrollment Requirement

Study abroad requires that a student enroll full time for courses in an accredited undergraduate study abroad program. Students must register for study abroad courses for a letter or number grade (i.e., not Pass/Fail), and must pass each course with the equivalent of a C or better. Students may receive up to ten transfer course credits for work undertaken during one academic year. The maximum number of courses accepted for concentration credit may not exceed four. Courses taken for general credit towards graduation are reviewed and approved by the Study Abroad Office in consultation with relevant departments. Transfer of courses taken for concentration credit requires written post-approval by the student's concentration advisor. As is the case with all courses transferred back to Brown, letter grades are not recorded on the Brown transcript.

Special Programs

Study abroad institutions created primarily for American and other foreign students will not ordinarily bear credit at Brown. Exceptions to this rule include programs that provided a structured curriculum in areas represented in Brown's curriculum but often not available at universities in other countries (e.g., theater and studio arts, development studies, environmental studies, and community health); programs in which students pursuing a relevant field of study or language at Brown cannot be expected to have mastered the local language well enough to function alongside local students; and programs in a specific area of study or field of research either unavailable at Brown or better pursued at a foreign site with special opportunities.

Excluded Programs

Credit is not granted for "itinerant programs" (those in which students spend a week or less in different locations or countries), shipboard education programs, or most programs created primarily for American and other foreign students (see Special Programs above for exceptions). To earn transfer credit for courses completed in a non-university-based program, students must spend the majority of their time living and studying in the country in which the program is based, or working with members of the host country.

Computing Transfer Credit

The maximum number of credits earned abroad in one semester that will transfer to Brown is five, even if the student completed more than the equivalent of a full Brown course load abroad. Because of differences in the way credits are calculated throughout institutions of higher education, the number of credits taken in a program abroad may not transfer one-to-one to Brown.

Academic Standing upon Returning to Brown

Students studying abroad are subject to the same academic standing regulations as when they are in residence at Brown. Students who return from study abroad with fewer than the equivalent of 4 Brown courses should be aware that their academic standing could be negatively affected, and that they must address the resulting credit shortfall, if any, in the subsequent semester.

Enrollment Unit Requirement

In order to earn a bachelor's degree, students must earn 32 enrollment units, signifying the completion of eight semesters of full-time study. A minimum of three Brown course credits per semester from study abroad will award a student 4 enrollment units. A minimum of 7 Brown course credits per year will grant a student 8 enrollment units. In the event that a student earns fewer than 3 transfer credits for a semester of study abroad or fewer than 7 transfer credits for a year abroad, the student's expected date of graduation may be altered.

Study Away | <https://college.brown.edu/learn-beyond-classroom/us-study/study-away-brown> (<https://college.brown.edu/learn-beyond-classroom/us-study/study-away-brown/>)

In addition to study abroad options, some students are interested in studying away at another college or university in the U.S. or in their home country of permanent residence. At Brown, you have the opportunity to apply for full-time study away status to earn a semester's equivalent of standing and course credits for degree requirements after a semester of study at Brown. Academic deans are available to help you plan ahead to ensure your plans meet requirements and support your degree completion, academic and personal objectives.

With the appropriate permissions, Brown students are allowed to earn credit from other colleges and universities as part of their Brown degree requirements. U.S. citizens and permanent residents of the United States may petition the College (by the Associate Dean of the College for Curricular Integration or designee) to study at a institutionally-accredited two- or four-year degree-granting college or university in the U.S.; students studying on F-1 visas may petition to study at a two- or four-year institution in their home countries. Students must obtain advance review and approval of their proposed coursework from the College in order to transfer course credit back to Brown, using the transfer credit approval process. Students who wish to use non-Brown courses to

satisfy concentration requirements must independently obtain permission from their concentration advisor. Many departments will allow only two concentration requirements to be fulfilled with transfer courses; students should confirm departmental rules in advance. Transfer credit cannot be granted until the student has completed their work with a grade of C or better, submitted an official transcript from the visited institution, and finalized approval in ASK.

One option for studying at other institutions is "Study Away," which connotes full-time study at an approved institution as a visiting (non-matriculated) student. With appropriate approvals, students will receive enrollment units for such approved study away. Students should discuss their plans well in advance with a Degree Completion Dean and with their concentration advisor to review and gain approval for both academic courses and enrollment unit calculations. In some cases, students eligible for financial aid may be able to arrange aid at the other institution through a consorial agreement worked out with the financial aid office. The Associate Dean of the College for Curricular Integration (or designee) will make regular reports to the CAS on approved study away plans.

The Summer Session

Brown's Summer Session offers courses on campus and at international sites during the summer. Summer classes meet for six weeks; exams and final work are completed during the seventh week of the program. Brown students take summer courses to enhance their degree work or maintain progress toward degree completion. Summer Session courses are open to all Brown students and to students from other institutions by application.

Governed by Faculty Rules, Brown's Summer Session maintains guidelines similar to those followed during the academic year. The courses are equivalent to academic year offerings, are approved by the College Curriculum Council, and count toward official determination of academic standing.

Brown undergraduates may enroll in up to 2 course credits in any given summer term. These credits count towards the 4 course credit limit from summer and winter coursework that students can apply towards their bachelor's degree. Brown Summer Session courses at the 1000 level may count toward graduate degrees.

Each Summer Session course credit carries a tuition charge equivalent to one quarter of the semester's full tuition charge, and as such, matriculated degree-seeking students accrue one enrollment unit for each summer course credit. While the enrollment unit(s) earned will count towards the minimum 32 required for the degree, these summer courses will not increase a student's semester standing for other purposes.

For more information, visit <https://summersession.brown.edu/>

Each year's Summer Session calendar is posted on the Brown Registrar's website, <https://registrar.brown.edu/>, as well as at the site above.

Brown Winter Session

In 2016-2017, Brown Launched a Winter Session for Brown undergraduate degree candidates. Following Brown Summer Session rules, students can count no more than 4 Summer/Winter Session course credits toward their bachelor's degree. Brown Winter Session courses carry full academic course credit. Hence, they may be offered in partial fulfillment of graduation requirements at Brown. Students may elect no more than one course in any given winter term. Winter Session course credits count towards the 4 course credit limit from summer and winter coursework that students can apply towards their bachelor's degree. Each Winter Session course credit carries a tuition charge equivalent to one quarter of the semester's full tuition charge, and as such, matriculated degree-seeking students accrue one enrollment unit per winter course credit. While the enrollment unit(s) earned will count towards the minimum 32 required for the degree, these winter courses will not increase a student's semester standing for other purposes.

With the exception of courses taken during Rhode Island School of Design's Winter Session under the cross-registration agreement, Winter Session courses taken elsewhere are not eligible for transfer credit.

Curricular Programs

Collaborative Research and Scholarly Experiences

Collaborative Research and Scholarly Experiences (COEX) engage groups of students in addressing a research question or knowledge gap of interest to scholarly communities. Typically, a COEX course would engage students in:

1. Research practices authentic to the discipline (e.g., by asking questions, using the tools of the discipline for gathering and analyzing data, developing and critiquing interpretations and arguments).
2. Discovery, or exploration of ill-structured questions where the outcome is not known to the students nor the instructor, and there is the potential for generating new knowledge or insights.
3. Creating work that has potential impact beyond the classroom (e.g., through reports for an outside organization, authorship or acknowledgement in a potential publication, blogs or podcasts distributed beyond the classroom).
4. Collaboration, such as group work, giving and receiving peer feedback, pooling data, and sharing interpretations.
5. Iteration, or processes of revision, learning from failure, and acknowledging and building on other students' work.

A complete list of each semester's COEX courses may be viewed in Courses@Brown by choosing "Collaborative Research and Scholarly Experiences" in the Curricular Programs field.

Community-Based Learning and Research

Community-Based Learning and Research (CBLR) courses connect academic inquiry with real-world learning experiences, enabling students to integrate and transfer their learning to contexts beyond the classroom.

CBLR-designated courses: (i) Involve collaboration with one or more community partners to investigate an important social challenge or problem; (ii) Incorporate in-depth community-based experiences (typically undertaken outside of the classroom) into the learning and/or research objectives of the course; (iii) Provide structured opportunities for reflecting on the relationship between classroom learning and real-world experience, with the goals of deepening the understanding of course content and exploring questions of identity, agency, and social responsibility; and (iv) Create products or outcomes that are shared with the community partner and/or broader public.

A complete list of each semester's CBLR courses may be viewed in Courses@Brown by choosing "Community-Based Learning and Research" in the Curricular Programs field.

First Year Seminars

First-year seminars ensure close contact between first-year students and faculty members while simultaneously offering a rigorous introduction to the concepts and methods of a particular subject area or department. Seminars have few if any prerequisites and are offered in all areas of the curriculum, from anthropology to physics to literary arts. Students receive regular feedback on the work they produce for the seminars, and seminar faculty often serve as informal mentors for their students long after the class has ended. A complete list of each semester's seminars may be viewed in Courses@Brown by choosing "First-Year Seminar" in the Curricular Programs field.

Race, Power, and Privilege Courses

Race, Power and Privilege (RPP) courses center issues of race and examine issues of structural inequality, racial formations and/or disparities and systems of power within a complex, pluralistic world. Course syllabi clearly outline these goals to students via learning objectives, assessment, and readings. All are welcome to explore this curriculum.

RPP courses investigate:

- the ways different forms of power and privilege construct racial and identity formations in the U.S. and/or globally; the cultural, political and intellectual responses to this racialization;

- how categories of race and ethnicity are produced intersectionally in relation to other hierarchical structures of difference including gender, sexual orientation, class, religion, ability, citizenship status and geography;
- the structures, institutions, practices and attitudes that enable, maintain or mitigate domestic and/or global racial disparities in health, income, education outcomes, media representations, etc.; and/or
- the ways in which disciplinary structures of knowledge have been embedded in such historical formations as racism and colonialism.

Sophomore Seminars

Sophomore seminars bring together ideas, perspectives, and approaches that are not normally seen side by side in a given course or program. Embracing a range of intellectual perspectives, many of the seminars focus specifically on issues of social justice, identity, and difference. Limited to twenty students each, the seminars help students develop the skills, knowledge, and values they need to progress toward more advanced learning in a discipline or field.

A complete list of each semester's SOPH seminars may be viewed in Courses@Brown by choosing "Sophomore Seminar" in the Curricular Programs field.

Writing-Designated Courses

Brown students are expected to work on writing in their general studies and in the concentration. Students may begin to fulfill this expectation by taking at least one course that carries the WRIT designation. WRIT courses are offered across the curriculum and help students develop the ability to write well in styles appropriate to different academic disciplines.

A complete list of each semester's WRIT courses may be viewed in Courses@Brown by choosing "Writing-Designated Courses" in the Curricular Programs field.

The Graduate School

The Graduate School oversees doctoral and MFA education at Brown University, preparing students for distinguished careers in research, teaching, and as experts in the public and private sectors. Doctoral students perform research at the highest level, advancing knowledge in their fields and gaining meaningful experience. The rigors of research, analysis, debate, performance, and publication prepare our graduates to help solve real-world problems at the local, national, and international level.

Brown University offers nearly 50 graduate programs through the Graduate School. Brown's collaborative culture facilitates interdisciplinary exploration and with nearly 3,000 graduate students and more than 800 full-time faculty members, Brown offers exceptionally close mentoring in its doctoral and MFA programs.

The Graduate Program finder (<https://graduateprograms.brown.edu/>) pages serve as the primary source of information for graduate programs. The section includes distinct pages for each program, detailing application and completion requirements as well as an overview of the general application (<http://www.brown.edu/academics/gradschool/application-information/>) process and links to the online applications.

The Graduate School website also provides information on general rules and regulations (<https://www.brown.edu/academics/gradschool/academics/rules-regulations/>), including links to the Graduate Studies Handbook, dissertation guidelines, and master's thesis guidelines. Additional regulations regarding overall requirements and tuition regulations can also be found on the Office of the Registrar's (<http://www.brown.edu/about/administration/registrar/degree-guidelines-0/graduate-school/>) website.

The Division of Biology and Medicine

The Division of Biology and Medicine is home to five academic departments, fourteen clinical departments, and is affiliated with seven diverse teaching hospitals (<http://brown.edu/academics/medical/about/hospitals/>) in and around Providence. At the Division's core is the Warren Alpert Medical School and the five academic departments in Biology (which includes study at the undergraduate and graduate levels).

For more information on Brown's many research centers, institutes, programs, and other initiatives in the health and life sciences found within the Division of Biology and Medicine, please visit <http://biomed.brown.edu/research/cip> (<http://biomed.brown.edu/research/cip/>).

For further summary information on the academic units within the Division, please follow the below links:

- The Warren Alpert Medical School of Brown University (p. 30)
- Biology (Undergraduate) (p. 46)
- Biology (Graduate) (p. 70)
- Neuroscience (p. 79)

The Warren Alpert Medical School of Brown University

Admissions

Students interested in the study of medicine at the Warren Alpert Medical School of Brown University may apply through a variety of admission routes designed to create a highly qualified and diverse medical student body.

The majority of the 120 matriculants in the first-year class apply through the American College Application Service (AMCAS). Approximately (40%) of the first-year class enroll from Brown's eight-year combined Bachelor's-medical degree Program in Liberal Medical Education. These students are joined by students entering through special programs at institutions with which the medical school has formed linkages (postbaccalaureate and early identification). These admission routes are described below.

AMCAS Admission

Qualified students or graduates of accredited colleges or universities in the United States or Canada may apply to Alpert Medical School (AMS) through the AMCAS route. Individuals must first complete and submit the electronic AMCAS application, found on the website of the American Association of Medical Colleges (<https://www.aamc.org>), and indicate that they wish to apply to the Warren Alpert Medical School of Brown University. Applicants must also complete a web-based secondary application (forwarded by AMS Office of Admissions) and submit an application fee to be considered an eligible candidate for admission.

The AMCAS applicant pool for the most recent entering class (MD 2016) was competitive, with over 3300 applicants vying for 57 seats (of 120). The applicant pool was impressive in geographic scope and size, including residents of 49 states, the District of Columbia, the Commonwealth of Puerto Rico, and a number of foreign countries (predominantly Canada, China, and South Korea).

Additional information and related admission requirements may be found at <http://www.brown.edu/academics/medical/admission> (<http://www.brown.edu/academics/medical/admission/>). The Office of Admissions may be contacted by email (MedSchool_Admissions@brown.edu) or telephone (401) 863-2149. Letters and other correspondence should be mailed to the Office of Admissions, Box G-M, Brown University, Providence, RI 02912-9706.

Program in Liberal Medical Education (PLME)

The Program in Liberal Medical Education is an eight-year continuum of liberal arts and medical education leading to both the bachelor's and M.D. degrees. The PLME is open to high school graduates who have applied to and are simultaneously admitted to Brown for their undergraduate studies. The PLME seeks highly qualified and strongly motivated high school students who are committed to a career in medicine at an early age and who also wish to pursue another area of academic interest to an advanced level of scholarship within the framework of a broad liberal education.

From a large (approximately 2,000) and highly qualified applicant pool, roughly 50 students matriculate annually. For additional information regarding the PLME, access the website at <http://www.brown.edu/academics/medical/plme/> or contact the College Admission Office, Brown University, Box 1876, Providence, RI 02912-9706; (401) 863-2378.

Postbaccalaureate Linkage Programs

The Postbaccalaureate (PB) Linkages are cooperative ventures between Alpert Medical School and the Premedical PB Programs at Bryn Mawr College, Columbia University, Johns Hopkins University, and Goucher College. Postbaccalaureate students enrolled in these programs may be offered admission to the medical school during the spring semester of their first year of study, thus allowing them to enter the medical school in the next class.

Selection occurs by a nomination process in which the premedical advisor selects candidates meeting established eligibility criteria (e.g., age, postbac grade point average). The number of PB students in each medical school class depends upon the number of places available as well as the caliber of the applicant pool. PB students nominated for admission must apply to AMCAS and complete an AMS secondary application. The MCAT is not required for admission. Timelines for this process are distributed to PB Program Directors on a yearly basis. Completed applications are reviewed by a subcommittee of the Admissions Committee, which selects nominees for interviews. The interviews follow the same protocol as that for AMCAS applicants and the same evaluation form is used.

The Early Identification Program (EIP)

The Early Identification Program (EIP) provides selected students at cooperating institutions with a place at Alpert Medical School upon continued academic progress and college graduation. This route provides opportunities for a medical career to two groups:

- Rhode Island residents enrolled at Providence College, Rhode Island College, and the University of Rhode Island; and
- Students enrolled at Tougaloo College, a historically black, liberal arts institution in Mississippi.

Eligible students are identified by their premedical advisor in the sophomore year of college, participate in selected PLME activities, and enroll in medical school after receiving the bachelor's degree. Generally, up to two students may be admitted annually from each school. For more information and application procedures, please contact the premedical advisor at the participating institutions. For more information access the website at <http://www.brown.edu/academics/medical/admission/other-routes-of-admission> (<http://www.brown.edu/academics/medical/admission/other-routes-of-admission/>).

Definition of Rhode Island Residency for Medical School Admission

An individual is considered a Rhode Island resident if he or she graduated from a Rhode Island high school and if the individual's parent(s) have lived in Rhode Island for the previous two calendar years, as documented by federal tax returns. For dependent students, the custodial parent(s) must claim the student as a dependent on his or her federal tax returns for the prior two years. Individuals who are independent (i.e., not living with parents and filing individual federal tax returns for the previous two years) must have at least one parent residing in Rhode Island for the previous two years, as documented by federal tax returns.

Selection Factors

Students admitted to Alpert Medical School must attain competence in the sciences basic to medicine at a sufficient level to provide adequate preparation for medical school. Applicants are expected to demonstrate competence by successfully completing the following premedical course requirements at a college or university in the United States or Canada: one semester of organic chemistry; and two semesters of physics, inorganic chemistry, and social and behavioral sciences. The Medical College Admission Test (MCAT) is required for AMCAS route applicants.

All applicants are selected on the basis of academic achievement, faculty evaluations, evidence of maturity, motivation, leadership, integrity, and compassion. For the PLME, Brown seeks highly qualified and strongly motivated students who wish to pursue an area of academic interest to an advanced level of scholarship within the framework of a liberal premedical education.

In order to be eligible for consideration, candidates must present a minimum cumulative grade point average of 3.00 (on a 4.00 scale) in courses taken as a matriculated student at an undergraduate college. Applicants who have attended graduate school must achieve a cumulative grade point average of 3.00 (on a 4.00 scale) in courses taken in graduate school. Applicants must have completed requirements for the baccalaureate degree before matriculating into the medical school. All applicants must be capable of meeting the competency requirements expected of all graduates. Technological compensation can be made for some disabilities in certain competency requirements. Candidates accepted for admission who will need special accommodations cannot be admitted unless those supportive services are available, as determined by the Dean of Medicine and Biological Sciences. The processes for assessing whether applicants will be able to meet the competency requirements for the M.D. degree are described in *Technical Standards for Medicine*, listed below.

In keeping with the mission of Brown University, the office of admissions recognizes the importance of diversity to the success of the medical school. Dimensions of diversity include, but are not limited to: race, ethnicity, religious affiliation, gender identity, sexual orientation, veteran status, age, socioeconomic status and geographic background. Multicultural perspectives enrich educational understanding, improve outreach to the community, enhance trust and communication, and facilitate development of culturally appropriate clinical and research programs.

Technical Standards for Medicine

Policy and Process for Assessing Ability to Meet Technical Standards for Medicine:

1. No inquiry will be made on the application forms concerning disability. The Medical School has specific required Technical Standards for matriculation, continuation, and graduation. These Technical Standards are listed in the Student Handbook on the Medical School website. Brown's policies regarding technical abilities and skills necessary to meet the competency requirements are included with the letter of admission, and students are asked at that time to contact the Associate Dean for Medical Education if they have any concerns about their ability to meet these standards.
2. Applicants who are identified as having a disability through volunteered information, supporting credentials, or interviews will have an assessment of their ability to meet competency requirements only after a determination is made of their admissibility to the medical program.
3. Those applicants with disabilities deemed admissible to the Medical School will be requested to have submitted on their behalf appropriate documentation in regard to the disability from a qualified health professional. The health professional will be asked to provide an opinion on the candidate's ability to meet the competency requirements for the M.D. degree. The applicant may also be requested to respond to that question.
4. The responses will be submitted to a committee appointed by the Dean of Medicine and Biological Sciences. This committee may ask for a review of the supporting documentation by appropriate members

of the faculty in regard to the applicant's meeting the competency requirements. The committee will ascertain what accommodations, if any, the medical program would need to make in order that the applicant might be able to meet the competency requirements, and assess the feasibility of any needed accommodations.

5. The committee will review the information received to determine if the applicant will be able to meet the competency requirements, with reasonable accommodations on the part of the medical program, if necessary.
6. The committee will recommend to the Dean of Medicine and Biological Sciences acceptance of applicants who can meet the competency requirements or will recommend nonacceptance if they cannot.

Process for Assessing Student's Ability to Continue in the Medical School Should Disability Occur After Matriculation at Brown University:

1. A student who develops a disability after matriculation at Brown University may be identified to the Medical Student Affairs Office through a variety of sources, e.g., reporting of accident or illness by peers, family, friends, or faculty and subsequent follow-up with health professionals managing the care.
2. If the degree to which the student has become disabled raises questions related to meeting the competency requirements after a review by the Associate Dean for Medical Education, a meeting of an ad hoc committee will be set up to discuss the situation. The student will be asked to meet with the committee members, unless the disability is so severe that the student needs to be represented by another individual. In some cases, it might be more appropriate to have a health professional, not directly involved in the care, serve as a consultant to the committee on the issues surrounding the disability.
3. The ad hoc committee will develop a recommendation as to the student's ability to successfully pursue a medical education based on his or her ability to meet the competency requirements of the medical program. These educational accommodations will be discussed with the appropriate course directors to be certain that there is agreement on how the student will be managed. If facilities accommodations are recommended, the committee will discuss these with the appropriate individuals to be certain that the needs for the disabled student can be provided. The committee's recommendations will be discussed with the student or his or her representative in the event that the student cannot attend.
4. When the recommendation is that the disabled student can meet the medical program's competency requirements, the committee will develop a report on any educational program accommodations that, if made, will still meet the competency requirements.
5. Should the decision of the committee be to recommend to the dean that the student be dropped from enrollment in the medical program, the normal due process appeals mechanism will be in effect, and the Student Affairs Office will work with the individual as appropriate on potential alternative career options. For students in the Program in Liberal Medical Education continuum, being dropped from the program due to inability to meet competency requirements for medical education does not necessitate the withdrawal of the student from the undergraduate college if that phase of the student's education has not been completed.

Advanced Scholarship

Medical students who wish to earn an advanced degree (M.A., Sc.M., M.P.H., Ph.D.), must meet the requirements of the Graduate School. Numerous academic departments at Brown offer graduate programs. All graduate studies are carried out under the supervision of a faculty member of a graduate program at Brown University and are subject to the specific requirements of that program in addition to the general guidelines given below. Students should discuss their interests and goals with a director of a graduate program in planning any study that might lead to an advanced graduate degree.

Educational Programs

Program in Liberal Medical Education

The Program in Liberal Medical Education (PLME) offers a unique opportunity to combine undergraduate education and professional studies in medicine into an eight-year program.

The PLME is not an accelerated medical program. Rather, it encourages students to take advantage of the breadth of a liberal arts education, to take charge of their education, and to become active learners. At Brown, creative students need not sacrifice the benefits of a rich liberal arts education in order to gain admission to medical school.

The PLME provides great flexibility in curriculum planning. During the early years, students take courses related to their chosen concentration and to obtain a broad liberal education. In addition, students take courses designed to meet the competencies required for admission to Alpert Medical School. This begins with courses in the natural, social and behavioral sciences, and mathematics, which provide a foundation for later medical science and clinical courses.

Students may choose to work towards an A.B. or Sc.B. degree in the sciences, or to fulfill the requirements for an A.B. in the humanities, social sciences or behavioral sciences. Several interdisciplinary concentrations such as Public Policy and International Relations are also available. The expected duration of the program is eight years. The last four years of the program culminate in the M.D. degree.

Brown's entire faculty is available to PLME students. This access to faculty throughout the University fosters collaborative teaching and research among scholars and students from widely divergent disciplines. Although the program is characterized by the unique breadth of educational opportunities available to students, it has great strength in the conventional biomedical sciences accompanied by in depth research opportunities as well.

The Medical Curriculum

The Alpert Medical School curriculum has been designed and implemented with the intention of creating an integrated, contemporary, compassionate, and flexible program of learning for our students. Our approach to medical education is predicated on the vision that tomorrow's physician must be a lifelong learner who is scientifically and clinically enlightened, patient and service-centered, and who understands the economic underpinnings of the US health care system. Our goal is to train physicians who will provide informed and compassionate care while at the same time serving as leaders and change agents for the health care system. To achieve the latter goal, we aim to train physicians who will be leaders at all levels.

These educational goals are pursued through a curriculum with the following structure. During Years 1 and 2, students enroll in four sequential semesters of Integrated Medical Sciences (IMS-I through -IV) and Doctoring-I through -IV. The elective Scholarly Concentrations Program is introduced to students during Year 1. Year 3 allows students to explore core disciplines and related specialties through the completion of required clerkships in medicine, surgery, pediatrics, obstetrics & gynecology, psychiatry, and family medicine. The transition from the third year to the fourth year takes place in May, after which time students have the opportunity to develop a program of elective rotations aimed at finalizing a career choice, and obtaining and preparing for a residency in their chosen field.

Alpert Medical School continues to employ a competency-based curriculum that was officially launched in 1996 for the graduating MD Class of 2000. The rationale behind the competency-based curriculum stems from the need to define the outcomes of the educational process: what are the desirable qualities of a medical school graduate, and what constitutes the essential knowledge base that will enable a graduate to make a successful transition to his or her chosen medical field?

All students are expected to gain competency in the Nine Abilities (see below) and knowledge base by graduation. Each course within the core curriculum of the Medical School identifies which abilities and parts of the knowledge base it addresses. Students may also meet the competency

requirements through individualized study, group independent study projects (GISPs), or alternative courses that might be arranged as part of collaborative learning opportunities.

Nine Abilities:

1. Effective communication
2. Basic clinical skills
3. Using basic science in the practice of medicine
4. Diagnosis, prevention, and treatment
5. Lifelong learning
6. Professionalism
7. Community health promotion and advocacy
8. Moral reasoning and clinical ethics
9. Clinical decision making

MD/PhD Program

Students interested in careers in academic medicine may want to consider dual MD/PhD training. Applications are only accepted from current PLME and Alpert Medical School students. Other interested individuals must apply to the MD program (<http://brown.edu/academics/medical/admission/>). Consideration for PhD training will take place during years 1, 2 or 3 of medical school.

Our approach to dual MD/PhD training offers curriculum flexibility. Students may begin their graduate work after Year 2 or Year 3 of medical school. Components of the requirements for the MD may be incorporated into the graduate years, and graduate work can provide partial fulfillment of the Year 4 requirements for the MD.

PLME students in their undergraduate years and medical students in years 1, 2 or 3 must meet with the Associate Dean for Medical Education to discuss entry into the MD/PhD program. Selection is based on past research accomplishments, a clear commitment to a research career, and academic achievement at Brown. Students without substantial research experience will be advised to garner such experience before making an application to the program. Applications will be considered not only by the Associate Dean but also by representatives of the graduate program(s) of interest to the student.

Learn more about the MD/PhD Program (<https://www.brown.edu/academics/medical/education/other-programs/md-phd/>) at : <https://www.brown.edu/academics/medical/education/other-programs/md-phd/>

MD/MPH Program

Students interested in the MD/MPH program must apply separately to Alpert Medical School and to Brown University's Graduate School. Regardless of the route of admission to the medical school— PLME, Standard, EIP, Postbaccalaureate, Advanced Standing—all students are eligible to apply for the MPH during the first three years at the Alpert Medical School.

There is no formal path for non-Brown medical students to enroll in the 5-year MD/MPH Program. However, medical students from other schools are welcome to apply to the MPH Program through the standard route and they may request that up to 4 courses from their medical school curriculum count toward the MPH degree.

Learn more about the MD/MPH Program (<https://www.brown.edu/academics/public-health/mph/dual-degrees/>) at: <https://www.brown.edu/academics/public-health/mph/dual-degrees/>

Primary Care - Population Medicine Combined MD-ScM Program

The Primary Care-Population Medicine (PC-PM) program is an innovative, dual-degree curriculum that focuses on preparing students for a career in medicine while providing comprehensive, longitudinal training in population medicine.

The program will prepare medical students for leadership roles in health care on the local, state, or national level in areas ranging from primary care clinical service to research, education, and health policy.

This four-year program, **the first of its kind in the United States**, results in the awarding of both a Doctor of Medicine and a Master of Science in Population Medicine.

Learn more about the Primary Care - Population Medicine Combined MD-ScM Program (<https://www.brown.edu/academics/medical/education/other-programs/primary-care-population-medicine/>) at: <https://www.brown.edu/academics/medical/education/other-programs/primary-care-population-medicine/>

SCM in Medical Physics

Medical Physics is one of the select non-MD specialties recognized by the American Board of Medical Specialties. Medical Physicists contribute to maintaining and improving the quality, safety and cost-effectiveness of healthcare services through patient-oriented activities requiring expert action, and optimized clinical use of medical devices, such as CT and MRI scanners, linear accelerators, and treatment planning systems, including patient risk and protection.

Activities are based on current best evidence or the Medical physicists' own scientific research when the available evidence is not sufficient. The career path eventually leads to residency training and certification by the American Board of Radiology.

Students will write a publishable thesis and engage in practical experience, both of which are essential to securing a residency. This is also the key metric of success for students and ultimately the program, in addition to students' academic success beyond residency and board certification. In addition, the program will be distinctive in that students will have a full semester to undertake their research and work closely with faculty.

Learn more about the SCM in Medical Physics Program at: <https://www.brown.edu/med-physics-graduate-program/>

Brown Gateways to Medicine, Health Care, and Research - Master of Science in Medical Sciences

The Gateways Program at the Warren Alpert Medical School of Brown University provides academically promising, motivated students new pathways to careers in the health sciences.

In this one-year, full-time program, you will complete 8.5 required courses culminating in a Master of Science (ScM) in Medical Sciences from Brown University. Courses include all four of the basic science courses and two of the three organ system courses undertaken by first-year medical students at Alpert Medical School. You'll also complete a unique seminar course series about pressing issues in today's health care system, such as social determinants of disease, population health, interdisciplinary teamwork, quality improvement, and health care communication. Integrated into this course series will be a longitudinal service learning experience at a community healthcare site and an associated community-based capstone project.

Courses

Biology

BIOL 3001. Clerkship in Medicine.

Twelve weeks.

BIOL 3005. Clerkship in Medicine - LIC.

No description available.

BIOL 3010. Systemic Pathology.

First-semester systemic pathology course building on the general principles of disease introduced in general pathology IMS-1. Objectives include learning the classification of systemic disease according to basic pathological mechanisms, describing and explaining the functional and structural changes produced by the most common diseases, and enhancing the ability to diagnose and treat patients. Runs in parallel with pathophysiology BIOL 3500; covers four organ system segments: cardiovascular, renal, and pulmonary and supporting structures.

BIOL 3015. Individualized Clerkship in Medicine.

No description available.

BIOL 3020. Nephrology.

No description available.

BIOL 3025. Longitudinal in Renal Disease.

No description available.

BIOL 3030. Clinical Nephrology.

No description available.

BIOL 3035. Clinical Nephrology.

No description available.

BIOL 3040. Clinical Dermatology.

No description available.

BIOL 3045. Advanced Dermatology.

No description available.

BIOL 3050. Gastroenterology.

No description available.

BIOL 3060. Gastroenterology.

No description available.

BIOL 3065. Infectious Disease.

No description available.

BIOL 3070. Infectious Disease.

No description available.

BIOL 3073. Infectious Disease - Newport.

No description available.

BIOL 3075. Infectious Disease.

No description available.

BIOL 3080. HIV/AIDS.

No description available.

BIOL 3090. Allergy and Clinical Immunology Seminar.

The pathophysiology, diagnosis, and treatment of allergic and immunological diseases. Particularly addresses the following diseases: asthma, rhinitis, sinusitis, urticaria, anaphylaxis, primary immunodeficiencies, food allergy, allergic reactions to medications, atopic eczema and insect-sting allergy. Molecular, cellular, and genetic components of allergy and other immunologic inflammation guide consideration of the diagnosis, clinical management, and prevention of allergic and other immunological diseases.

BIOL 3100. Cardiology.

No description available.

BIOL 3110. Clinical Adult Cardiology.

No description available.

BIOL 3120. Coronary Care Unit.

No description available.

BIOL 3130. Community General Cardiology.

No description available.

BIOL 3140. Cardiology.

No description available.

BIOL 3165. Med/Peds Infectious Diseases.

No description available.

BIOL 3170. Urgent Care.

No description available.

BIOL 3180. Hospice and Palliative Medicine.
No description available.

BIOL 3190. Palliative Care - RIH.
No description available.

BIOL 3195. Surgical Palliative Care.
No description available.

BIOL 3200. Tropical Medicine in East Africa.
No description available.

BIOL 3205. International Critical Care at Tuebingen.
No description available.

BIOL 3207. International Exchange in Japan.
No description available.

BIOL 3210. Hospice and Palliative Medicine.
No description available.

BIOL 3215. Internal Medicine Night Float.
No description available.

BIOL 3220. Endocrinology.
No description available.

BIOL 3230. Hematology Oncology - MH.
No description available.

BIOL 3240. Clinical Hematology/Oncology.
No description available.

BIOL 3260. Hematology Oncology.
No description available.

BIOL 3270. Hematology.
No description available.

BIOL 3280. Allergy.
No description available.

BIOL 3290. Pulmonary Diseases.
No description available.

BIOL 3300. Pulmonary Diseases.
No description available.

BIOL 3310. Pulmonary Diseases.
No description available.

BIOL 3315. Pulmonary - Inpatient - MH.
No description available.

BIOL 3320. Critical Care Consult Service.
No description available.

BIOL 3325. Critical Care Elective.
No description available.

BIOL 3326. Concussion and Brain Injury Rehabilitation.
No description available.

BIOL 3330. Subinternship in Medicine.
No description available.

BIOL 3331. Subinternship in Medicine - MH.
No description available.

BIOL 3332. Subinternship in Medicine - MHRI.
No description available.

BIOL 3333. Subinternship in Medicine - RIH.
No description available.

BIOL 3334. Subinternship in Medicine - VAMC.
No description available.

BIOL 3336. Subinternship in Hematology/Oncology.
No description available.

BIOL 3337. Subinternship in Medicine -Newport.
No description available.

BIOL 3340. Subinternship in Medical Intensive Care (MICU).
No description available.

BIOL 3350. Subinternship in Critical Care Medicine.
No description available.

BIOL 3370. Subinternship in Intensive Care Medicine (ICU).
No description available.

BIOL 3390. Psychiatry in Medical Practice.
No description available.

BIOL 3400. Medical Consultation - OB/Gyn.
No description available.

BIOL 3405. Medical Consult in OB/Gyn and Periop Med.
No description available.

BIOL 3410. Internal Medicine in the Dominican Republic.
No description available.

BIOL 3415. Clinical Medicine in Nicaragua.
No description available.

BIOL 3420. Physical Medicine + Rehabilitation.
No description available.

BIOL 3425. Men's Health: Lifestyle Medicine in Practice.
No description available.

BIOL 3460. College Health Longitudinal.
No description available.

BIOL 3470. Issues Concerning Deaf Patients in Healthcare.
Students will gain understanding of the basics of communication with and among the Deaf, including ASL, lip-reading, current technologies, and the use of interpreters.

BIOL 3480. Nuclear, Biological, Chemical Weapons of Mass Destruction Domestic Preparedness Training Seminar.
No description available.

BIOL 3490. Cardiology.
No description available.

BIOL 3500. Cardiovascular Medicine - Outpatient and Inpatient Practice.
No description available.

BIOL 3505. Medical and Interventional Pain Management.
No description available.

BIOL 3510. Clinical Reasoning and Human Errors in Medicine.
No description available.

BIOL 3515. Rheumatology Elective.
No description available.

BIOL 3516. Introduction to POCUS.
No description available.

BIOL 3517. Interprofessional Practice: A Nursing Perspective.
No description available.

BIOL 3518. Social Medicine.
No description available.

BIOL 3519. Intro to Lifestyle Medicine.
No description available.

BIOL 3551. Advanced Clinical Mentorship in Renal.
No description available.

BIOL 3552. Advanced Clinical Mentorship in Dermatology.
No description available.

BIOL 3553. Advanced Clinical Mentorship in Cardiology.
No description available.

BIOL 3554. Advanced Clinical Mentorship in Endocrinology.
No description available.

BIOL 3555. Advanced Clinical Mentorship in Med/Peds Primary Care.
No description available.

BIOL 3556. Advanced Clinical Mentorship in Infectious Disease.
No description available.

BIOL 3557. Advanced Clinical Mentorship in Comprehensive HIV Care.

No description available.

BIOL 3558. Advanced Clinical Mentorship in Adult Oncology.

No description available.

BIOL 3559. Advanced Clinical Mentorship in Hematology/Oncology.

No description available.

BIOL 3560. Advanced Clinical Mentorship in Pulmonary Disease.

No description available.

BIOL 3561. Advanced Clinical Mentorship in Rheumatology.

No description available.

BIOL 3562. Advanced Clinical Mentorship in Internal Medicine.

No description available.

BIOL 3563. Advanced Clinical Mentorship in Gastroenterology.

No description available.

BIOL 3564. Advanced Clinical Mentorship in Functional Neurosurgery.

No description available.

BIOL 3565. Advanced Clinical Mentorship in Neurology.

No description available.

BIOL 3566. Advanced Clinical Mentorship in Orthopedic Surgery.

No description available.

BIOL 3567. Advanced Clinical Mentorship in Anesthesiology.

No description available.

BIOL 3568. Advanced Clinical Mentorship in Ophthalmology.

No description available.

BIOL 3569. Advanced Clinical Mentorship in Surgery.

No description available.

BIOL 3570. Advanced Clinical Mentorship in Pediatric Surgery.

No description available.

BIOL 3571. Advanced Clinical Mentorship in Urology.

No description available.

BIOL 3572. Advanced Clinical Mentorship in Hand Surgery.

No description available.

BIOL 3573. Advanced Clinical Mentorship in ENT.

No description available.

BIOL 3574. Advanced Clinical Mentorship in Pancreatic Surgery.

No description available.

BIOL 3575. Advanced Clinical Mentorship in Pediatric Neurology.

No description available.

BIOL 3576. Advanced Clinical Mentorship in Pediatrics.

No description available.

BIOL 3577. Advanced Clinical Mentorship in OB/Gyn.

No description available.

BIOL 3578. Advanced Clinical Mentorship in Outpatient Psychiatry.

No description available.

BIOL 3579. Advanced Clinical Mentorship in Child Psychiatry.

No description available.

BIOL 3580. Advanced Clinical Mentorship in Clinical Rehabilitation Medicine.

No description available.

BIOL 3581. Advanced Clinical Mentorship in Emergency Medicine.

No description available.

BIOL 3582. Advanced Clinical Mentorship in Pediatric Emergency Medicine.

No description available.

BIOL 3583. Advanced Clinical Mentorship in Family Medicine.

No description available.

BIOL 3584. Advanced Clinical Mentorship Vascular and Interventional Radiology.

No description available.

BIOL 3585. Advanced Clinical Mentorship in Radiation Oncology.

No description available.

BIOL 3586. Advanced Clinical Mentorship Independent Study.

No description available.

BIOL 3587. Advanced Clinical Mentorship in Primary Care/Behavioral Medicine.

No description available.

BIOL 3588. Advanced Clinical Mentorship in Plastic Surgery.

No description available.

BIOL 3589. Advanced Clinical Mentorship in Refugee Health.

No description available.

BIOL 3590. Advanced Clinical Mentorship in Radiology.

No description available.

BIOL 3591. Advanced Clinical Mentorship in Pediatric Endocrinology.

No description available.

BIOL 3592. ACM in Pathology.

No description available.

BIOL 3640. Doctoring 1.

No description available.

BIOL 3641. Integrated Medical Sciences I.

No description available.

BIOL 3642. IMS 1 - Scientific Foundations of Medicine.

No description available.

BIOL 3643. IMS-1 Histology.

No description available.

BIOL 3644. IMS-1 Human Anatomy I.

No description available.

BIOL 3645. IMS-1 General Pathology.

No description available.

BIOL 3646. Histopathologic Foundations of Disease.

No description available.

BIOL 3650. Doctoring 2.

No description available.

BIOL 3651. Integrated Medical Sciences II - Comprehensive.

No description available.

No description available.

BIOL 3653. IMS-2 Microbiology/Infectious Diseases.

No description available.

BIOL 3654. IMS-2 Endocrine Sciences.

No description available.

BIOL 3655. Human Anatomy II.

No description available.

BIOL 3656. Health Systems Science.

No description available.

BIOL 3657. Health Systems and Policy II.

No description available.

BIOL 3660. Doctoring 3.

No description available.

BIOL 3661. Integrated Medical Sciences III - Comprehensive.

No description available.

BIOL 3662. IMS-3 Cardiovascular.

No description available.

BIOL 3663. IMS-3 Pulmonary.

No description available.

BIOL 3664. IMS-3 Renal.

No description available.

BIOL 3665. IMS-II Supporting Structures.

No description available.

BIOL 3666. Integrated Medical Sciences III - Systemic Pathology.

No description available.

BIOL 3667. Integrated Medical Sciences III - System-Based Pharmacology.

No description available.

BIOL 3670. Doctoring 4.

No description available.

BIOL 3671. Integrated Medical Sciences IV - Comprehensive.

No description available.

BIOL 3672. IMS-4 Hematology.

No description available.

BIOL 3673. IMS-4 Gastroenterology.

No description available.

BIOL 3674. IMS-3 Human Reproduction.

No description available.

BIOL 3675. Integrated Medical Sciences IV - Systemic Pathology.

No description available.

BIOL 3676. Integrated Medical Sciences IV - System-Based Pharmacology.

No description available.

BIOL 3691. System-Based Pharmacology.

No description available.

BIOL 3750. Neurology.

No description available.

BIOL 3760. Clinical Neurology.

No description available.

BIOL 3770. Clinical Neurology.

No description available.

BIOL 3775. Subinternship in Neurocritical Care.

No description available.

BIOL 3776. Elective in Neurocritical Care.

No description available.

BIOL 3780. Comprehensive Elective in Neurology.

No description available.

BIOL 3785. Subinternship in Neurology.

No description available.

BIOL 3790. Aging and Dementia.

No description available.

BIOL 3795. Neurophysiology.

No description available.

BIOL 3800. Neurosurgery.

No description available.

BIOL 3815. Subinternship in Neurosurgery.

No description available.

BIOL 3820. Neurointerventional Surgery.

No description available.

BIOL 3890. Culture, Patient, Advocacy and the Community.

This course focuses on the knowledge, skills, and attitudes required for effective patient advocacy with an emphasis on the role of culture in developing advocacy partnerships with patients, families, peers and community service providers. Specifically, it examines the relationships between race, ethnicity, social factors, economic factors and health status indicators. The course will provide opportunities to build self-awareness, to develop greater insight into the social and community contexts of health care and patient advocacy, and to refine physician-patient communication skills.

BIOL 3900. Core Clerkship in Surgery.

Six weeks.

BIOL 3905. Individual Clerkship in Surgery.

No description available.

BIOL 6360. Neuroradiology.
No description available.

BIOL 6380. Pediatric Radiology.
No description available.

BIOL 6390. Intro to Women's Diagnostic Imaging.
No description available.

BIOL 6400. Radiation Oncology.
No description available.

BIOL 6410. Radiation Oncology Exploratory Elective.
No description available.

BIOL 6500. Cancer Action and Reflection (CARE).
No description available.

BIOL 6501. Medical Chinese Elective.
Students will attain a working knowledge of Chinese relevant to medical practice in order to better communicate with and serve Chinese-speaking patients. Open to students who are proficient in the Mandarin dialect of Chinese.

BIOL 6502. Intermediate Medical Spanish.
The course is designed for students to gain beginning-level competence in Medical Spanish that will enable them to communicate more effectively with Spanish-speaking patients and their families. Specifically, the students will develop critical Spanish lexicon and language skills for conducting the medical interview. Prerequisite: Background in Spanish. Grading: S/NC

BIOL 6503. Introductions to Physical Medicine and Rehabilitation.
No description available.

BIOL 6504. Health Care in America.
No description available.

BIOL 6505. Introduction to Multidisciplinary Fetal Medicine.
An 8-session elective seminar for 2nd year medical school students. Emphasis is placed on the multidisciplinary approach to medical problems. The course concentrates on those conditions for which fetal and/or neonatal intervention may be indicated, from gene therapy to fetal surgical intervention.

BIOL 6506. Medical Malpractice.
No description available.

BIOL 6507. Introduction to Forensic Pathology.

No description available.

BIOL 6508. Physical Diagnosis Rounds.

The goal of the course is to provide medical students with the knowledge needed to effectively and competently work with a growingly diverse patient (and colleague) population. Contemporary medical school curricula are lacking in the instruction and discussion of patients of all genders and sexualities. This elective will address this need. The course will consist of eight 2-hour sessions, with guest speakers lecturing for the first hour and small group discussion happening for the second hour. Students are required to keep a journal of their experiences as their final assignment for the class. The class will be graded S/NC.

The topics range from LGBTQ Teenagers to Institutionalized Homophobia to Hormone Therapy, led by experts in each field.

BIOL 6509. Introduction to Surgical Subspecialties.

No description available.

BIOL 6510. Advanced Human Anatomy: A Deep Dive into the Hand, Ear, and Spine.

No description available.

BIOL 6511. Introduction to Integrative and Lifestyle Medicine.

No description available.

BIOL 6512. Introduction to Neurology.

No description available.

BIOL 6513. Introduction to Oncology.

No description available.

BIOL 6514. Introduction to Pediatrics.

This elective seminar for 1st and 2nd year medical school and PLME students will introduce them to the world of complementary and alternative forms of healing (CAM) and place it into a framework of an Integrative medicine.

BIOL 6515. Psychedelic Medicine.

No description available.

BIOL 6652. Wilderness Medicine Preclinical Elective.

The Wilderness Medicine elective is designed to instill the basic survival skills training necessary for environments outside the hospital, both urban and wild. It combines didactic lectures on such topics as toxicology and travel medicine with field skills sessions & workshops (e.g. suturing, splinting). These sessions also include mock medical scenarios, such as near drownings, for the students to handle. It includes off-campus consultation with experts to review their medical emergency procedures. A final project consisting of writing about a popular wilderness myth and its voracity is required.

Medical Education

MED 2010. Health Systems Science I.

This course will explore how multiple social determinants influence individual and population health; the laws and policies that shape the social environments in which patients live; and the role of physicians in advocating for systems and policy changes that will reduce health disparities and improve population health outcomes.

MED 2030. Research Methods in Population Medicine.

The thesis requirement for the Master of Science degree in Population Medicine is an integral component of the Primary Care-Population Medicine program at Brown University. This course will have students develop and demonstrate the necessary research skills to formulate a population medicine research question and then design, conduct and write a manuscript presenting a research study that will satisfy the thesis requirements. The course itself has three parts:

An introductory primary on biostatistics A research methodology seminar series A journal club in which the biostatistics and research methodology will be integrated in the analysis and critique of studies related to population medicine

MED 2040. Health Systems Science II.

This course will offer an overview of the critical issues in U.S. healthcare and public health policy. It will also provide future leaders in population medicine with a foundation for analyzing healthcare reform and public health efforts and for identifying the role of physicians in driving and shaping future policy reforms to improve the healthcare system and population health.

MED 2045. Quantitative Methods.

In this course, students will be introduced to fundamental concepts in clinical epidemiology and basic statistics, as they relate to population and clinical research. This course is intended to teach students both the basic knowledge required to develop and interpret clinical studies as well as the skills in order to conduct basic statistical analyses.

MED 2046. Leadership in Health Care.

This course emphasizes practical application of teamwork and leadership skills across multiple settings. Leadership in Health Care is a master's level course for second year medical students enrolled in the Primary Care-Population Medicine (PC-PM) program. Through interactive classroom sessions, field work in health care advocacy, and a team-based "leadership action project", students will develop foundational leadership skills. The first formal leadership course at Alpert Medical School, Leadership in Health Care will contribute to the PC-PM program's ultimate goal of preparing physician leaders who will improve the quality of health care and wellness of the population.

MED 2050. HSS III: Pop & Clinical Med I.

This is the first semester of Population and Clinical Medicine, a two-semester course focused on the integration of population medicine and clinical practice. In this course, students will focus on topics integral to clinical medicine, but expand beyond the patient into the population and beyond. Given the importance of population health interventions for impacting the health of vulnerable and underserved patients, the course will focus on issues affecting these populations.

MED 2060. HSS III: Pop & Clinical Med II.

This is the second semester of Population and Clinical Medicine, a two-semester course focused on the integration of population medicine and clinical practice. In this course, students will focus on topics integral to clinical medicine, but expand beyond the patient into the population and beyond. Given the importance of population health interventions for impacting the health of vulnerable and underserved patients, the course will focus on issues affecting these populations.

MED 2070. Health Systems Science IV.

This course is designed to further explore the themes of the Primary Care-Population Medicine Program and prepare students for the next steps in their professional careers. The course is designed to be a capstone and employs integrated, developmental, evolutionary educational spirals - providing the knowledge, attitudes and skills at the right time in the right format, and building on the first three years of the program. Course threads include Health Systems Science Advanced Content, Skill Building, Preparation for Next Career Stages, and Master's Thesis Workshopping.

MED 2110. Introduction to Medical Sciences and Patient Care.

This 2-week intensive course introduces students to the wide variety of topics explored in the Master's of Medical Sciences program, with a focus on patient care aspects. The course combines seminar classroom instruction with field work/immersion at community healthcare sites. Topics covered include: biopsychosocial model of healthcare; intersection between science, social science and humanities in healthcare; introduction to community health centers; professionalism in healthcare; basic healthcare communication skills; quality improvement skills; and strategies for mastery of basic science knowledge. Students will be assessed using multiple methods including: seminar participation, reflective essays/field notes, attendance at field-work sites, & assessment from community mentors.

MED 2120. Patient Care in Complex Systems I.

This is the second of a three course series for Master of Medical Sciences students. This course introduces students to the variety of complex factors affecting health, imparting both theoretical knowledge and practical skills. Teaching methods: interactive seminars and experiential learning at community healthcare sites with members of multidisciplinary teams. Topics covered: healthcare systems, social determinants of health, roles of interdisciplinary healthcare team members, quality improvement, and epidemiology. Students will begin developing a project at their clinical sites which will be implemented in spring semester. Student assessment includes: seminar participation, reflective essays, attendance at field-work sites, and assessment from community mentors. Pre Requisites: MED 2110

MED 2130. Patient Care in Complex Systems II.

This is the third of a 3 course sequence for Master of Medical Science students. Students will continue their study of both theoretical and practical aspects of healthcare through an interactive seminar series, continued service learning at their longitudinal community healthcare site, and completion of their community project. Seminar topics: care of vulnerable populations, environmental health, population health, new models of healthcare delivery, ethical issues in healthcare, whole-person health, cultural humility, complementary and alternative medicine, and patient advocacy. Students assessment includes: seminar participation, reflective essays, attendance at field work sites, assessment from community mentors, and quality of project and presentation. Pre Requisites: MED 2110 and MED 2120.

MED 2140. Human Histology.

Human Histology provides an in-depth examination of the basic architecture of the body. Fundamental to this understanding is the cell and how during early development cells in the aggregate undergo specialization as tissues, which are the building blocks of the body. This course focuses first on the biology of the four basic tissues (epithelium, connective tissue, muscle and nerve) and second, how they contribute to the functional anatomy of all organs and systems. We will emphasize characteristic developmental, structure-function and regulatory relationships within normal cells and tissues, which in turn are the foundation for the understanding of pathological alteration.

MED 2145. Medical Histopathology.

Medical Histopathology (MED 2145) is equivalent to a first-year, fall semester medical school course that examines the microarchitecture of the body (the organization of cells to form organs), and the causes (etiology), mechanisms (pathogenesis), and consequences (sequelae) of disease. Understanding the normal microanatomy of the body is essential for understanding disease processes, as well as the clinical presentations and treatments of disease. The course material builds sequentially upon prior knowledge and integrates other concurrent coursework in the ScM in Medical Sciences program (including the Human Anatomy I and Scientific Foundations of Medicine courses). Exams are integrated and cover material in all 4 concurrent courses, and the course schedule exactly mirrors the medical school's first-year basic medical sciences curriculum. Therefore, Medical Histopathology (MED 2145) will be open only to ScM Medical Sciences students.

MED 2150. General Pathology.

Pathology is the study of the causes, mechanisms, and consequences of disease. In General Pathology students study in detail the cell and tissue alterations that lead to the production of human diseases. To uncover such alterations, morphological observations are correlated with studies involving molecular biology, biochemistry, and genetics. In studying the pathogenesis of human disease we pay close attention to epidemiological parameters, population health, aging, and to environmental and occupational health problems. General Pathology been integrated, whenever possible, with other courses in the Fall Semester of the Gateways Program, in order to maximize learning opportunities.

MED 2160. Human Anatomy 1.

This course explores the anatomical organization of the human body, viewing anatomical structures as a product of development and functional demand. Human Anatomy provides an opportunity for students of diverse backgrounds, interests, and goals to emerge with an understanding of the human body as a cornerstone of medical science. The course uses a combination of lectures, on-line modules, and mandatory laboratory sessions examining human cadaver dissections, to impart broad conceptual and in-depth knowledge of this subject.

MED 2170. Scientific Foundations of Medicine.

Scientific Foundations of Medicine is an integrated cross-disciplinary course that introduces the fundamental basic science principles relevant to the study of health, disease mechanisms and clinical medicine. As such the course consists of six blocks of core topics that incorporate foundational principles of molecular biology, cellular and metabolic biochemistry, nutritional science, cell physiology, inheritance patterns, mechanisms of genetic disorders, and immunology. Grounding in these scientific principles gives students insight into the biological complexity and genetic diversity that underlies disease processes.

MED 2171. Scientific Foundations of Medicine-1: Cell Physiology & Immunology.

SFM-1 is an integrated cross-disciplinary course that introduces the fundamental basic science principles relevant to the study of disease mechanisms and clinical medicine. The goal is for students to develop the broad-based foundational knowledge in biomedical science that will enable them to explain and integrate the pathophysiology, pathology, and the diagnostic and clinical management of disease. The course consists of foundational principles of cell and molecular biology, cellular biochemistry and physiology, and immunology. These challenging core areas give students insight into the biological complexity that underlies disease processes. SFM-1 builds sequentially upon prior knowledge and is closely integrated with the other required courses in the ScM in Medical Sciences program (including Human Anatomy I & Medical Histopathology). Exams are integrated and the course schedule exactly mirrors AMS's complex schedule. Therefore, this course is only open to ScM Medical Science students.

MED 2175. Scientific Foundations of Medicine-2: Medical Biochemistry & Genetics.

SFM-2 is an integrated cross-disciplinary course that covers fundamental basic science principles relevant to the study of health, disease mechanisms and clinical medicine. The goal is for students to develop the broad-based foundational knowledge in biomedical science that will enable them to explain and integrate the pathophysiology, pathology, and the diagnostic and clinical management of disease. The course consists of three core topics: nutrition science, biochemistry and genetics. Grounding in the scientific principles of these core areas gives students insight into the biological complexity that underlies disease processes. SFM-2 builds sequentially upon prior knowledge and is closely integrated with the other first-semester courses (including Human Anatomy I and Medical Histopathology). Exams are integrated covering material in all concurrent courses, and the course schedule mirrors the medical school's curriculum. Therefore, this course is only open to ScM in Medical Science students.

MED 2180. Brain Sciences and Neurological Disease.

Brain Sciences is composed of several interrelated components - Head Anatomy, Neurobiology, Neuropathophysiology, Neuropathology and Neuropharmacology. The intent of the course is to encourage the integration of underlying neuroanatomy and basic science principles with an understanding of the presentation and management of neurological diseases. Course leaders from each of these disciplines have worked closely together in order to present the material in a cohesive and logical framework that promotes the sequential acquisition of new information based upon a substantive understanding of the previous material.

MED 2181. Brain Sciences with Head and Neck Anatomy.

This is a core course for the ScM in Medical Sciences degree, part of the Gateways program at Alpert Medical School. This course builds on 4 required prerequisite courses offered in the Fall Semester. In this course, students learn the integration of neuroanatomy, gross anatomy and basic science principles, and the application of these principles to clinical neurologic dysfunction. In the anatomy portion of this course, students learn about the functional and developmental anatomy of the head and neck. This study is aided by review of dissections of the head, neck and brain, and builds on anatomical structure and function learned in the fall semester. The neurobiology section is designed to acquaint students with the major structures and functions of the nervous system, building on cell physiology and introductory materials from the fall semester, and the application to clinical dysfunction.

MED 2190. Microbiology and Infectious Disease.

Microbiology and Infectious Disease is an integrated course that introduces the basic biological principles, pathogenesis and host response, disease presentation, epidemiology, control and treatment of parasites, viruses, fungi and bacteria that cause human disease. Emphasis is placed on the most clinically significant and best characterized pathogens in each group. The Microbiology component of the course explores the characteristics of disease-causing microorganisms, mechanisms of transmission, immunity, and how specific microbial pathogens cause disease. Microbial disease states in multiple organ systems are addressed in the Infectious Disease component of the course with a focus on common infectious diseases and their clinical presentation.

MED 2200. Anatomy and Physiology.

This course will cover major organ systems and disease sites. Organ functions will be presented in addition to standard anatomy and cross-sectional imaging based on different modalities (x-ray Mammography, CT, MRI, PET, US). Organs at risk and dose tolerance to normal structures will be discussed. Image Registration and Fusion will also be covered, as will motion management.

MED 2210. Radiological Physics and Dosimetry.

This course will cover the fundamental physics behind radiation production and interaction, including a review of pertinent mathematics, classical mechanics, and nuclear physics. Topics to be covered within basic radiation physics: radioactive decay, radiation producing devices, characteristics of the different types of radiation (photons, charged and uncharged particles), mechanisms of their interactions with materials, and essentials of the determination of absorbed doses, by measurement and calculation, from ionizing radiation sources used in medical physics (clinical) situations.

MED 2220. Radiation Protection & Instrumentation.

This course examines principles of radiation protection with application to the hospital setting in radiation oncology, diagnostic imaging, and nuclear medicine. Designs of facilities and quality management programs are examined. Radiation safety practices are reviewed for involved hospital staff, patients, and the general public. This includes various radiation sources: electronically-generated photons and electrons, sources of sealed radioactivity, and unsealed sources of radioactivity. Additionally, the practice of radiation measurements as performed by the medical physicist is taught. This aspect includes associated dosimetry protocols, instrumentation, and clinical contexts. A practicum permits hands-on opportunities to assimilate the theoretical basis and rationale for radiation measurements.

MED 2230. Computational Medical Physics.

The aim of the Computational Medical Physics course is to familiarize students with mathematical, statistical and computational techniques in Medical Physics and how they integrate at a systems level. Students will learn about the emerging field of Computational Medical Physics through the application of mathematical modeling, computer simulations and quantitative and data-intensive analyses to medical data towards enhancing the accuracy, safety and efficiency of patient care and providing an understanding of cancer research. Basic programming skills are expected.

MED 2250. Radiation Therapy Physics.

This course will provide a comprehensive survey of basic radiotherapy physics, fundamental radiation therapy, and contemporary radiation therapy. The basic principles of radiotherapy treatment modalities, radiation detection, dose calibration methods, and image-based treatment planning will be reviewed. Topics to be covered include external beam radiation therapy (photons, protons, and electrons), brachytherapy, and special procedures. Image guidance methods will be discussed as well as patient and machine quality assurance.

MED 2260. Physics of Medical Imaging.

The course provides the necessary physics background that underpins day-to-day medical imaging physics activities. It is aimed primarily at new entrants to the profession, but should be of benefit to postgraduate students, postdoctoral research workers, physicist-managers, representatives of allied commercial organizations and anyone wishing to deepen or re-establish their understanding of the physics of medical imaging. Overviews of specialized or research related topics, such as positron emission tomography and magnetic resonance spectroscopy are given.

MED 2270A. Research and Clinical Practicum for Medical Physics.

Customized for each project Note : 2.5 Credits

MED 2280. Nuclear Medicine Physics.

Nuclear Medical Physics - PET

MED 2290. Advanced Radiation Therapy.

Advanced Therapy is meant to serve as a guided self-study of advanced / applied topics in radiation therapy with emphasis on current clinical usage. Optional topics include, but are not limited to, dose calculation algorithms, optimization techniques, deformable registration techniques, modeling within treatment planning systems, and treatment planning.

MED 2300. MR Imaging Technology, Ultrasound, and Interventional.

This course will provide an introduction to magnetic resonance imaging scanner hardware, image acquisition methods used in the clinical setting for various contrast weightings, imaging of physiologic function, and image reconstruction methods. Causes and corrective measures for image artifacts will be discussed. Image-guided interventions for therapeutic purposes are becoming increasingly common as minimally-invasive treatments increase in popularity. The course will discuss some common methods used in interventional techniques with attention to the hardware and real-time image acquisition methods used for such therapies. An introduction to ultrasound imaging will be given which will include the physical principles of image formation, application of real-time techniques, Doppler methods for assessing blood flow, and ultrasound use in interventional procedures.

MED 2310. Radiation Biology.

This program provides a comprehensive overview of radiation biology with a particular emphasis on aspects of direct relevance to the practice of radiation oncology. It addresses the molecular and cellular responses to radiation-induced damage that influence cell death in both tumors and normal tissues. Quantification of radiation effects and the underlying biological basis for fractionation of radiotherapy and dose-response relationships in the clinic are covered in depth. The biological basis for current approaches to improve radiotherapy will be described including novel fractionation schemes, retreatment issues, targeting hypoxia, and biological modifiers.

MED 2980. Independent Study in Population Medicine.

For students enrolled in the Primary Care-Population Medicine program at Alpert Medical School, this course is structured to allow students to conduct research focused on population health with a mentor at Brown University.

Program in Liberal Medical Education**PLME 0200. Primetime Bioethics.**

Is it ethical to design a perfect baby? Who should get these organs? Is it ever okay to be dishonest with patients for their own good? These questions and more will be tackled in this discussion-based course that uses episodes of popular medical television shows to highlight topics in medical ethics. Students will watch 1-2 episodes of TV shows and read related articles and chapters on biomedical ethics and ethics theory. The goal is to give students the background with which to approach the ethical topics. This course may be most beneficial to students pursuing a career in medicine.

PLME 0250. Planetary Health: Preparing Clinicians for a Changing Planet.

This course provides an introduction to planetary health, an emerging field that involves interdisciplinary exploration of the relationships between human health and the environment. Planetary health examines how environmental changes – including climate change, deforestation, biodiversity loss, and pollution – impact public health across the globe. Students will explore the various components of planetary health with a focus on clinical medicine and health systems. Students will also investigate the disproportionate effects of a changing planet on the health of vulnerable populations, such as children and the elderly.

PLME 0300. Health and Healing through the Lens of Culture.

Through the lenses of culture, we examine health and healing in the US public health and health care systems and in select countries around the world. Course work includes reading and discussing essays in the book, *Healing by Heart: Clinical and Ethical Case Studies of Hmong Families and Western Providers*; journal articles, watching videos; interviewing physicians working in cross-cultural settings; and writing brief reflective essays on class material and discussions. Two papers (5 page and 10 page) will be required for the class. Students will learn how to use the library's resources, how to properly reference papers, and basic presentation skills. This course will preferentially enroll PLME students.

PLME 0400. Introduction to Medical Illustration.

This semester course explores the field of medical illustration and its many facets. Depiction of diseases, anatomy, medical practices and surgical procedures has been around since antiquity. Not only has medical illustration evolved over the centuries, it has played the role of historian, documenting the beliefs and knowledge of its time. Today, medical illustration is as present as ever despite the advent of other methods of medical documentation, including photography and videography.

PLME 0550. Italian and American Health Care: a Cultural, Historical and Practical View.

This program has been developed for Brown PLME students and first year Italian medical students to familiarize the future physicians with the much-debated theme of health care delivery and policies. Students will focus on medicine beyond science through the critical study of how socioeconomic and cultural factors impact this field. Students will compare the Italian and American systems, focusing on historical structures and current issues in health care regulation. Enrollment limited to 10.

PLME 0700. Communication in Health Care.

Communication is central to medical, nursing, public health and therapist practice and interpersonal relationships between patients and physicians/clinicians can be powerful curative agents. This course reviews theory and research on physician-patient communication. On-line videos, readings, discussions and exercises are enhanced by conducting and analyzing patient interviews. Appropriate for students interested in communication sciences, health psychology, health education, pre-med and other clinical training, and medical anthropology.

PLME 0800. Wilderness, Disasters, and Global Health.

"Wilderness, Disasters, and Global Health" is an interdisciplinary and integrative science course that explores the provision of medical care when challenges exist with regard to transportation, communication, equipment, facility infrastructure, medication supply lines, and the affordability and availability of skilled healthcare providers. This course, with a maximum enrollment of 15, is designed for any Brown senior who is interested in the outdoors, healthcare, or a science-based field. Instructor is an emergency physician, and anyone planning to pursue a medical career will learn skills to prepare for, and respond to, emergencies in a variety of limited resource environments.

PLME 1000. PLME2MD: A Bridge to Medical School.

PLME2MD is a bridge course designed for senior PLME students (and eligible juniors) to support the transition from undergraduate study to medical school. Through a mix of lecture and seminar formats, students will engage with foundational topics in clinical medicine, population health, and biomedical ethics. Students will practice clinical communication with standardized patients, analyze contemporary medical literature, reflect on professional identity, and develop skills necessary for early success in medical training. Enrollment is limited to PLME students only. Mandatory S/NC.

Biology (Undergraduate)

The Undergraduate Program in Biology offers courses at all levels of biological organization: molecular, cellular, organismal and population, and concentration programs with varying degrees of multidisciplinary or specialty foci.

There is a vast range of collaborative opportunities for independent study and research under the mentorship of the faculty. Faculty maintain research programs at the cutting edge of their fields including biochemistry, biophysics, cell biology, developmental biology, ecology, evolution, genetics, immunology, molecular biology, neurobiology, physiology, anatomy, artificial organs, microbiology, virology, experimental pathology, and pharmacology. The close administrative relationship with the Alpert Medical School offers additional opportunities for blending fundamental biology and clinical sciences in research projects at the Brown-affiliated hospitals.

The Office of Biology Undergraduate Education is a full service academic resource center, serving a key role for students of the life sciences here. The Office provides individualized advising for students at all levels; oversees student-faculty research collaborations, holds special events and maintains a variety of programs that support and enrich student life.

For further information, please visit: <http://www.brown.edu/academics/biology/undergraduate-education/>

Biology Concentration Requirements

The Biology concentration invites students to study, in depth and in breadth, the science of life and living matter. Whether pursuing the Bachelor of Arts (A.B.) or Science (Sc.B.) in biology, students can expect to learn broadly in the discipline through a selection of courses in three areas: cell and molecular biology, structure and function, and organismal biology. In addition, students pursuing the Sc.B. complete a thematic track through which they gain an in-depth understanding of a particular subfield such as, Immunopathology, Ecology and Evolutionary Biology, Physiology/Biotechnology, Cell and Molecular Biology, Physical Sciences. The concentration also emphasizes practical skills and experimental design. Concentrators are required to take at least 3 courses with a laboratory or fieldwork component. Within all of these requirements, students have a high degree of flexibility and choice. Broad research opportunities are also available across several departments within the basic sciences as well.

Standard program for the A.B. Biology

The concentration program for the A.B. in Biology consists of four prerequisite courses in math, chemistry, and a statistics course as well as ten courses in biological sciences, including at least one course in each of the following three areas: Area 1: Cell/Molecular Biology, Area 2: Structure/Function, and Area 3: Organismal Biology.

The Biology A.B. Concentration Worksheet (<https://bue.brown.edu/concentrations/biology-ab/>) may be a useful tool for course planning.

Prerequisites: ¹

CHEM 0330	Equilibrium, Rate, and Structure
CHEM 0350	Organic Chemistry I
MATH 0090	Single Variable Calculus, Part I (or placement. MATH 0050/MATH 0060 may be substituted for MATH 0090.)

One of the following:

MATH 0100	Single Variable Calculus, Part II (or placement)
MATH 0170	Single Variable Calculus, Part II (Accelerated) (or equivalent placement)
Or a statistics course, to be approved by the concentration advisor.	

Ten Core Courses: ^{2,3,4}

BIOL 0200	The Foundation of Living Systems (Required course; AP credit or similar IB or A-levels accepted, placement test available.)	1

Area 1 (Cell/Molecular Biology) **1**

BIOL 0280	Biochemistry
BIOL 0470	Genetics
BIOL 0500	Cell and Molecular Biology
BIOL 0510	Introductory Microbiology
BIOL 0530	Principles of Immunology
BIOL 1050	Biology of the Eukaryotic Cell
BIOL 1310	Developmental Biology
BIOL 1515	Conservation in the Genomics Age
BIOL 1810	21st Century Applications in Cell and Molecular Biology
BIOL 1865	Toxicology
NEUR 1020	Principles of Neurobiology

Area 2 (Structure/Function) **1**

BIOL 0410	Invertebrate Zoology
BIOL 0440	Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses
BIOL 0800	Principles of Physiology
BIOL 1120	Biomaterials
BIOL 1155	Hormones and Behavior
BIOL 1310	Developmental Biology
BIOL 1330	Biology of Reproduction
BIOL 1505	Environmental Physiology
BIOL 1800	Animal Locomotion
BIOL 1865	Toxicology
NEUR 0010	The Brain: An Introduction to Neuroscience

Area 3 (Organismal Biology) **1**

BIOL 0210	Diversity of Life
BIOL 0380	The Ecology and Evolution of Infectious Disease
BIOL 0410	Invertebrate Zoology
BIOL 0420	Principles of Ecology
BIOL 0430	The Evolution of Plant Diversity
BIOL 0450	Evolutionary Behavioral Ecology
BIOL 0480	Evolutionary Biology
BIOL 1480	Terrestrial Biogeochemistry and the Functioning of Ecosystems
BIOL 1515	Conservation in the Genomics Age
BIOL 1800	Animal Locomotion

ENVS 0490	Environmental Science in a Changing World	6
Six additional courses chosen from BIOL and/or NEUR offerings for concentrators. The Core may include up to two related sciences, with advisor approval. The Core must also include a Senior Capstone.		
SENIOR CAPSTONE: *Only applies to students who have declared in Fall 2019 or later.* To be fulfilled via ONE of the following:		
1. One of the following approved courses: BIOL 1100, 1140, 1150, 1250, 1330, 1515, 1525, 1535, 1555, 1575, 1600, 1820, 1970A.		
2. One semester of independent research/independent study (BIOL 1950 or BIOL 1960).		
Please visit the BUE webpage for more information.		

Total Credits **10**

- ¹ AP scores of 4 or 5 may substitute Math courses.
- ² Biology courses for concentration credit include those numbered between 0100 - 2999.
- ³ At least two biology and/or neuroscience courses must be at the advanced level (between 1000-2999). Senior Capstone can be used towards one advanced requirement or one lab requirement. At least three of the Biology and/or Neuroscience courses must include laboratory or fieldwork. BIOL 1950/BIOL 1960, (Directed Research) may be included, but is not required. If a lab project, a semester can count for one of the three lab course requirements.
- ⁴ No substitutions per above Area list. If a course is listed in more than one area, it may be used to fulfill one area only; the other area must be fulfilled by a different course.

Honors: Honors in biology requires a thesis and presentation based on a research project (conducted via BIOL 1950/BIOL 1960), and quality grades in the concentration. Guidelines and information on faculty research are available in the Office of Biology Undergraduate Education or found at <http://www.brown.edu/academics/biology/undergraduate-education/>.

Standard Program for the Sc.B. Biology

The concentration program for the Sc.B. in Biology consists of seven prerequisite courses in math, chemistry, and physics as well as fourteen courses in biological sciences, including courses in each of the following three areas: Area 1: Cell/Molecular Biology, Area 2: Structure/Function, and Area 3: Organismal Biology, and the three-course Track. The biological sciences requirement also requires research (BIOL 1950/BIOL 1960), which should reflect the advanced cluster.

Students pursuing a ScB in Biology have the option to substitute a course for CHEM 0360 (Organic Chemistry) in their background core. For students pursuing all tracks, BIOL 0280 (Introductory Biochemistry) may serve as the replacement course. Please note that approval from the concentration advisor is required for these background course substitutions. If the student has already declared, then a revised concentration plan must be submitted and approved via the ASK system. If BIOL 0280 is used as a substitute for CHEM 0360, it cannot be counted as a core course or as an Area 1 course. Students planning to apply to medical or graduate school should seek additional advising (such as from the Health Careers Office) in crafting their course plan.

The Biology Sc.B. Concentration Worksheet (<https://bue.brown.edu/concentrations/biology-scb/>) may be a useful tool for course planning.

Prerequisites: ¹

MATH 0090	Single Variable Calculus, Part I (or placement. MATH 0050/MATH 0060 may be substituted for MATH 0090)
One of the following:	
MATH 0100	Single Variable Calculus, Part II (or placement)
or MATH 0170	Single Variable Calculus, Part II (Accelerated)

or a statistics course to be approved by the concentration advisor

Each of the following:

CHEM 0330	Equilibrium, Rate, and Structure (or IB credit)
CHEM 0350	Organic Chemistry I
CHEM 0360	Organic Chemistry II
or BIOL 0280	Biochemistry
PHYS 0030	Basic Physics A (or equivalent. PHYS 0050 PHYS 0070, or ENGN 0040 may be substituted for PHYS 0030.)
PHYS 0040	Basic Physics B (or equivalent. PHYS 0060 or ENGN 0510 may be substituted for PHYS 0040.)

Core Courses: ^{2,3,4}

BIOL 0200	The Foundation of Living Systems (or placement)	1

Area 1 (Cell/Molecular Biology) **1**

BIOL 0280	Biochemistry
BIOL 0470	Genetics
BIOL 0500	Cell and Molecular Biology
BIOL 0510	Introductory Microbiology
BIOL 0530	Principles of Immunology
BIOL 1050	Biology of the Eukaryotic Cell
BIOL 1310	Developmental Biology
BIOL 1515	Conservation in the Genomics Age
BIOL 1810	21st Century Applications in Cell and Molecular Biology
BIOL 1865	Toxicology
NEUR 1020	Principles of Neurobiology

Area 2 (Structure/Function) **1**

BIOL 0410	Invertebrate Zoology
BIOL 0440	Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses
BIOL 0800	Principles of Physiology
BIOL 1120	Biomaterials
BIOL 1155	Hormones and Behavior
BIOL 1310	Developmental Biology
BIOL 1330	Biology of Reproduction
BIOL 1505	Environmental Physiology
BIOL 1800	Animal Locomotion
BIOL 1865	Toxicology
NEUR 0010	The Brain: An Introduction to Neuroscience

Area 3 (Organismal Biology) **1**

BIOL 0210	Diversity of Life
BIOL 0380	The Ecology and Evolution of Infectious Disease
BIOL 0410	Invertebrate Zoology
BIOL 0420	Principles of Ecology
BIOL 0430	The Evolution of Plant Diversity
BIOL 0450	Evolutionary Behavioral Ecology
BIOL 0480	Evolutionary Biology
BIOL 1480	Terrestrial Biogeochemistry and the Functioning of Ecosystems
BIOL 1515	Conservation in the Genomics Age
BIOL 1800	Animal Locomotion
ENVS 0490	Environmental Science in a Changing World

Six additional courses chosen from BIOL and/or NEUR offerings for concentrators. The Core may include up to two related sciences, with advisor approval. The Core must also include research.⁴

RESEARCH:

The two semester research requirement may be satisfied by any two of the opportunities listed below. Students may find the following resources useful in planning for research: the annual BUE-PLME Finding, Securing and Succeeding in Research workshop, the BUE Research webpage, and the Sheridan Center's Undergraduate Research & Experiential Opportunities webpage. Following conversation and agreement with the advisor, students articulate the research plan in the ASK declaration (in the designated text box) which is submitted for review and approval by the advisor.

Choose two:

BIOL 1950	Directed Research/Independent Study
BIOL 1960	Directed Research/Independent Study
NEUR 1970	Independent Study

Independent study course in a related discipline (i.e. STEM disciplines, ENVS, PHP, etc.) if the project is relevant to the student's learning goals and interests in the concentration.

A summer research experience equivalent in scope and scale to work the student would pursue in a Biology independent study course. Examples include UTRAs, LINK awards, approved research programs at other institutions, etc. These experiences do not count as a course in the 10 course core requirement, but they can be used to satisfy the one semester of the research requirement. Advisors will work with students to review these experiences - drawing on a range of potential materials including a written summary of the experience, formal work plans, materials produced (i.e. presentations/papers), and in some cases a letter from the supporting advisor.

Other equivalent opportunities not listed - with approval from the concentration advisor and Dean Achilli.

Students are encouraged to pursue research related to their track

TRACK:

The advanced thematic track consists of three additional biological sciences courses (not including BIOL 1950/1960 research) that form a Track. Tracks include: Immuno/Pathobiology; Ecology, Evolution and Organismal Biology; Physiology and Biotechnology; Neurobiology; Physical Sciences; Cell and Molecular Biology; Biomedical Informatics. At least two track courses, and preferably all three, must be above 1000-level. Track courses should form a cohesive grouping approved by the concentration advisor.

Total Credits

6

13

¹ AP scores of 4 or 5 may substitute Math courses.

² Biology courses for concentration credit include those numbered between 0100-2999.

³ At least two biology and/or neuroscience courses must be at the advanced level (between 1000-2999). At least three of the biology and/or neuroscience courses must include laboratory or fieldwork. BIOL 1950/ BIOL 1960 can count for one of the three lab course requirements and one advanced course.

⁴ No substitutions per above Area list. If a course is listed in more than one area, it may be used to fulfill one area only; the other area must be fulfilled by a different course.

Tracks

Biomedical Informatics - BIOL 1535 is required for this track along with 2 additional courses from the following (Additional advanced courses will be considered w/ advisor approval):

BIOL 1555	Methods in Informatics and Data Science for Health
BIOL 1575	Evaluation of Health Information Systems
BIOL 1595	Artificial Intelligence in Health Care

Cell and Molecular Biology

Three courses, for example:

BIOL 1050	Biology of the Eukaryotic Cell
BIOL 1222A	Current Topics in Functional Genomics
BIOL 1270	Advanced Biochemistry
BIOL 1300	Biomolecular Interactions: Health, Disease and Drug Design
BIOL 1310	Developmental Biology
BIOL 1330	Biology of Reproduction
BIOL 1540	Molecular Genetics
BIOL 1545	Human Genetics and Genomics
BIOL 1580	Metabolism Across Biological Scales: Integrative Physiology and Pathobiology
BIOL 1810	21st Century Applications in Cell and Molecular Biology
BIOL 1820	Environmental Health and Disease
BIOL 1865	Toxicology
BIOL 1970A	Stem Cell Biology

Ecology, Evolution and Organismal Biology

Three courses, for example:

BIOL 1430	Foundations of Population Genetics
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data
BIOL 1440	Marine Biology
BIOL 1465	Human Population Genomics
BIOL 1470	Conservation Biology
BIOL 1480	Terrestrial Biogeochemistry and the Functioning of Ecosystems
BIOL 1505	Environmental Physiology
BIOL 1515	Conservation in the Genomics Age
BIOL 1545	Human Genetics and Genomics
BIOL 1800	Animal Locomotion
ENVS 1775	Biogeography

Immunobiology

Three courses, for example:

BIOL 1250	Host-microbiome Interactions in Health and Disease
BIOL 1290	Cancer Biology
BIOL 1295	Fundamentals of Cancer Immunotherapy
BIOL 1520	Innate Immunity
BIOL 1525	Pathogenomics: Analysis, interpretation and applications of microbial genomes
BIOL 1550	Parasitism: Biology and Disease
BIOL 1560	Virology
BIOL 1600	Development of Vaccines to Infectious Diseases

Neurobiology

Three courses, for example:

BIOL 1100	Cell Physiology and Biophysics
BIOL 1110	Topics in Signal Transduction

BIOL 1260	Physiological Pharmacology
BIOL 1650	Structure of the Nervous System
BIOL 1610	Experimental Neurobiology
NEUR listings 1000-level or above	

Physiology and Biotechnology

Three courses, for example:

BIOL 1070	Biotechnology and Global Health
BIOL 1090	Polymer Science for Biomaterials
BIOL 1100	Cell Physiology and Biophysics
BIOL 1110	Topics in Signal Transduction
BIOL 1120	Biomaterials
BIOL 1140	Tissue Engineering
BIOL 1150	Stem Cell Engineering
BIOL 1160	Principles of Exercise Physiology
BIOL 1260	Physiological Pharmacology
BIOL 1300	Biomolecular Interactions: Health, Disease and Drug Design
BIOL 1505	Environmental Physiology
BIOL 1580	Metabolism Across Biological Scales: Integrative Physiology and Pathobiology
BIOL 1810	21st Century Applications in Cell and Molecular Biology
BIOL 1820	Environmental Health and Disease
BIOL 1865	Toxicology

Physical Sciences

Must be a coherent set of three courses drawn from the Physical Sciences; courses must be above the introductory level and approved by advisor

Honors: Honors in biology requires a thesis and presentation based on a research project (usually conducted via BIOL 1950/BIOL 1960), and quality grades in the concentration. Guidelines and information on faculty research are available in the Office of Biology Undergraduate Education or at <http://www.brown.edu/academics/biology/undergraduate-education/>.

Stipulations for Biology Programs:

1. For double concentrations, no more than two courses may overlap (i.e., be used to meet requirements of both concentrations) with a few specific exceptions (<https://college.brown.edu/sites/g/files/dprerj916/files/2022-04/2-Course-Overlap-Exceptions-list-and-rule-for-web.docx>).
2. No more than two semesters of directed research may be used as concentration credits. Each does count as an individual core course towards the program, but only carry one lab credit or one 1000-level credit towards the three required.
3. A limited number of transfer or study abroad courses may be used within the program, subject to approval of advisor, and Associate Dean of Biology, Toni-Marie Achilli.

Health & Human Biology Concentration Requirements

Health and Human Biology is an interdisciplinary concentration that provides a rigorous foundation in the biological sciences with substantive course work in humanities and social sciences within a subfield of Human Health and Disease. The program includes: background courses, biology core courses, a set of theme courses, and a Senior Capstone activity. Background courses provide the essential foundations in chemistry, mathematics, methods, and basic biology. These support the Biology core, which is comprised of a flexible menu of intermediate and advanced courses. A required portion of the Biology core is Genetics, a cornerstone of human biology and its interface with other fields. The Biology core underscores the related coursework within the Health and Disease Theme.

The Theme courses are social science and humanities courses that form a cohesive, thoughtful grouping. Theme groupings must be approved by

the advisor. A required senior capstone course or activity builds on the program's focus.

Program Requirements

REQUIRED BACKGROUND:

Four (4) courses including:

MATH 0090	Single Variable Calculus, Part I (or equivalent placement)	1
OR		
MATH 0050 & MATH 0060	Analytic Geometry and Calculus and Analytic Geometry and Calculus	
OR		
MATH 0100 or MATH 0170	Single Variable Calculus, Part II or Single Variable Calculus, Part II (Accelerated)	
CHEM 0330	Equilibrium, Rate, and Structure	1
BIOL 0200	The Foundation of Living Systems	1
Statistics or methods course chosen with advisor's help.		1

CORE PROGRAM:

In addition to the stated background in Chemistry, Math, Biology and Statistics, five (5) Biology plus four (4) coherently-grouped Theme courses, plus a Senior-Year Capstone course or project. (See description of Capstone at link below this table).

BIOLOGY:

Five (5) courses, including: 5

Genetics, which can be fulfilled in the following ways:

BIOL 0470	Genetics
-OR-	
BIOL 0480 & BIOL 0500	Evolutionary Biology and Cell and Molecular Biology
-OR-	
BIOL 0480 & BIOL 0510	Evolutionary Biology and Introductory Microbiology
-OR-	
BIOL 0480 & BIOL 0280	Evolutionary Biology and Biochemistry

Select one course in structure/function/development such as:

BIOL 0400	Biological Design: Structural Architecture of Organisms
BIOL 0800	Principles of Physiology
BIOL 1310	Developmental Biology
BIOL 1800	Animal Locomotion
NEUR 0010	The Brain: An Introduction to Neuroscience

One course in organismal/population biology such as:

BIOL 0380	The Ecology and Evolution of Infectious Disease
BIOL 0410	Invertebrate Zoology
BIOL 0420	Principles of Ecology
BIOL 0480	Evolutionary Biology
BIOL 1470	Conservation Biology
BIOL 1555	Methods in Informatics and Data Science for Health
ENVS 0490	Environmental Science in a Changing World

Or a course from the NEUR 1940 series

Two Biology or Neuroscience courses. At least one must be at the advanced level.

THEME: With the advisor's assistance, a theme is chosen and a cohesive set of courses are selected from outside of Biology and Neuroscience. 4

No more than TWO courses from a given department may be included in the theme portion

Students will then select from FOUR theme options: 1) Mind, Brain, Behavior, 2) Planetary Health, 3) Global Health, 4) Social Determinants of Health

SENIOR CAPSTONE ACTIVITY: Must be conducted during the senior year, fulfilled by one of the following, and related to the students learning goals in the concentration: 1

- 1) Advisor approved senior seminar or advanced course related to the theme
- 2) One semester of independent research/independent study (BIOL 1950 or BIOL 1960); in the case of a senior honors thesis, either BIOL 1950 or BIOL 1960 can be used as the capstone.
- 3) An appropriate internship with a scholarly context can be used if coupled with independent study mentored by a Brown faculty member the following semester.

Total Credits 14

CAPSTONE: See <https://www.brown.edu/academics/biology/undergraduate-education/undergraduate/health-and-human-biology> (<https://www.brown.edu/academics/biology/undergraduate-education/undergraduate-education/undergraduate/health-and-human-biology/>) for more information on the Capstone Activity.

HONORS: See more information about Honors at <https://www.brown.edu/academics/biology/undergraduate-education/honors-biological-sciences> (<https://www.brown.edu/academics/biology/undergraduate-education/honors-biological-sciences/>).

Applied Mathematics-Biology Concentration Requirements

Biology, the science of all life and living matter, is an incredibly diverse discipline offering students the opportunity to learn about topics ranging from the fundamental chemical reactions that fuel all living organisms to the population dynamics of entire ecosystems all the way to the question of how our brains give rise to the complexities of human cognition and experience. Applied mathematics is an increasingly important component of modern biological investigation. Modern technologies have enabled the creation of vast new biological data sets that often require sophisticated mathematical and statistical models for interpretation and analysis. Advances in computing have similarly enabled the simulation of biological phenomena at increasingly fine levels of detail. Entire subfields, such as bioinformatics and computational neuroscience, have developed around these new paradigms of biological investigation. The foundations of these new fields are inherently mathematical, with a focus on probability, statistical inference, and systems dynamics.

The Applied Mathematics – Biology concentration allows students to develop complementary expertise in biology and applied mathematics. Students will focus their advanced biological coursework in an area of particular interest to them. The applied math requirements emphasize those areas of mathematics that have found widespread use throughout all of the biological sciences. The program culminates in a senior capstone experience that enables students to participate in creative research collaborations with faculty.

Standard program for the Sc.B. degree

Prerequisites – the equivalent of two semesters of single-variable calculus

Single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, single-variable calculus consists of MATH 0090 followed by one of MATH 0100, MATH 0170, or MATH 0190.

Requirements – 16 courses ¹

Mathematical Requirements – 7 courses

MATH 0180	Multivariable Calculus ²	1
or MATH 0200	Multivariable Calculus (Physics/Engineering)	
or MATH 0350	Multivariable Calculus With Theory	
MATH 0520	Linear Algebra ²	1

or MATH 0540	Linear Algebra With Theory	
APMA 0355	Applied Ordinary Differential Equations with Theory ³	1
APMA 0365	Applied Partial Differential Equations I with Theory ⁴	1
APMA 1655	Introduction to Probability and Statistics with Theory ⁵	1
APMA 1070	Quantitative Models of Biological Systems	1
APMA 1080	Inference in Genomics and Molecular Biology	1
or NEUR 2110	Statistical Neuroscience	

Scientific Requirements – 7 courses

One approved course (or course grouping) covering Newtonian mechanics. ⁶	1
CHEM 0330 Equilibrium, Rate, and Structure	1
BIOL 0200 The Foundation of Living Systems ⁷	1
Two BIOL or NEUR courses. ⁸	2
Two 1000-level or higher BIOL or NEUR courses from the same Biology track. ^{8,9}	2

Additional Requirements – 2 courses

One approved course in the mathematical, biological, or computational sciences. ¹⁰	1
One approved capstone, senior seminar, or research-related course in the mathematical or biological sciences. ¹¹	1

Total Credits 16

- ¹ A required course may be replaced by a more advanced course with concentration advisor approval. No course may be used to satisfy multiple concentration requirements. Transfer credits and courses receiving placement credit notation can satisfy concentration credit as long as they appear on the Brown internal transcript. Pursuing honors will require 17 courses – these 16 along with two semesters of independent study courses for the honors research project, one of which can be used to satisfy the capstone concentration requirement. For students with multiple concentrations: calculus, linear algebra, one intro CSCI course, and at most two additional courses can be used for concentration credit in the other concentration(s).
- ² APMA 0260 can substitute for the multivariable calculus and/or the linear algebra requirements. If it is used as a substitute for both requirements, then students must take one additional approved 1000-level APMA or MATH course not used elsewhere for concentration credit that adheres to the restrictions in footnote 10 and these additional restrictions: APMA 1910, APMA 1920, MATH 1090, MATH 1910 and research/independent study courses cannot be used.
- ³ MATH 1110 may be used in place of APMA 0355. If MATH 1110 is used, then the concentration must include at least three 1000-level APMA courses that adhere to the restrictions in footnote 10. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0330 or APMA 0350 as a substitute for APMA 0355. Students matriculating in Fall 2025 or later who wish to use APMA 0330 or APMA 0350 must also complete the APMA 0355 online bridgework course and pass the in-person bridgework exam that is offered once per semester.
- ⁴ MATH 1120 may be used in place of APMA 0365. If MATH 1120 is used, then the concentration must include at least three 1000-level APMA courses that adhere to the restrictions in footnote 10. These can appear anywhere in the declaration. Students matriculating prior to Fall 2025 can use APMA 0340 or APMA 0360 as a substitute for APMA 0365. Students matriculating in Fall 2025 or later who wish to use APMA 0340 or APMA 0360 must also complete the APMA 0365 online bridgework course and pass the in-person bridgework exam that is offered once per semester.
- ⁵ Students matriculating prior to Fall 2025 can use APMA 1650 as a substitute for APMA 1655. Students matriculating in Fall 2025 or later who wish to use APMA 1650 must also complete the APMA 1655 online bridgework course and pass the in-person bridgework exam that is offered once per semester.

- ⁶ PHYS 0050 or PHYS 0070 are recommended. The following course(s) are automatically approved: PHYS 0030, PHYS 0050, PHYS 0070, ENGN 0040 + (one of PHYS 0040, PHYS 0060, a score of 3 or higher on any AP Physics, a score of 4 or higher on IB-HL Physics). When considering alternative course(s) a key criterion is whether both statics and dynamics are covered.
- ⁷ A BIOL placement test score of 30 or higher may be used in place of BIOL 0200. The placement test score can be found in ASK, in the advising detail view, under the test scores section. This will reduce by 1 credit the number of credits needed to complete the concentration.
- ⁸ Mixing BIOL and NEUR courses is fine. Students are encouraged to take at least one laboratory or fieldwork course.
- ⁹ The tracks (tracks, not areas) are listed at this link to the Biology Bulletin page (<https://bulletin.brown.edu/the-college/concentrations/biol/>) at the end of the Biology ScB requirements. The physical sciences track is not allowed. If the biomedical informatics track is used, then one of the courses must be BIOL 1565. Substitutions or the use of 2000-level courses requires approval of the Director of Undergraduate Studies in Biology.
- ¹⁰ 1000-level courses in APMA, BIOL, CSCI, MATH, NEUR are automatically approved, including APMA 1910, APMA 1920. Research/independent study courses cannot be used. At most one of APMA 1910, MATH 1090, MATH 1910, at most one of APMA 1000, APMA 1001, MATH 1000, MATH 1001, and at most one of APMA 1650, APMA 1655, CSCI 1450, MATH 1210, MATH 1610 can be used for concentration credit. Concentrators are strongly encouraged to use this requirement to develop their computer programming skills and to do so before the end of sophomore semester. Many upper-level APMA courses, including APMA 1080, require exposure to programming as a prerequisite. The following courses are automatically approved for this purpose: APMA 0160, APMA 0200, CSCI 0111, CSCI 0150, CSCI 0170, CSCI 0190, CSCI 0200, CPSY 0950, EEPS 0250.
- ¹¹ The following options can be used to satisfy this requirement
- (a) A pre-approved course that satisfies the APMA Sc.B. capstone requirement: currently APMA 1360, APMA 193*/194* (where * is any combination of numbers and letters; these are the APMA senior seminars).
 - (b) A pre-approved course that satisfies the Biology A.B. capstone requirement: currently BIOL 1100, BIOL 1140, BIOL 1150, BIOL 1250, BIOL 1330, BIOL 1515, BIOL 1525, BIOL 1555, BIOL 1565, BIOL 1575, BIOL 1600, BIOL 1820, BIOL 1970. Courses over the 2000 level may be used with approval of the Director of Undergraduate Studies in Biology.
 - (c) A directed research/independent study course from the APMA 1970/APMA 1971, BIOL 1950/BIOL 1960, or NEUR 1970 series that is used for undergraduate research. For students pursuing honors in APMA-Bio, one of the two required semesters of independent study courses can be used.
 - (d) A directed research/independent study course in a related discipline (i.e. STEM disciplines, ENVS, PHP, etc.) that is used for undergraduate research if the project is relevant to the student's learning goals in the concentration and with approval from the concentration advisor.
 - (e) An upper-level course related to the concentration (usually a 1000-level or higher APMA or BIOL course) in addition to a research experience equivalent in scope and scale to work the student would pursue in an Applied Math or Biology research-related independent study course. Examples include UTRAs, LINK awards, REUs, research programs at other institutions, the APMA Directed Reading Program, etc. This requires approval from the concentration advisor and appropriate documentation that should be uploaded to ASK.
 - (f) Other equivalent opportunities not listed, with approval from the concentration advisor. Documentation should be uploaded to ASK.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Concentrators that demonstrate excellence in grades and in undergraduate research can be awarded departmental honors. Honors students with primary advisors in Applied Math should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Applied Math concentrators (<https://bulletin.brown.edu/the-college/concentrations/apma/>) and as published on the APMA departmental website (<https://appliedmath.brown.edu/academics/undergraduate-program/honors/>). Honors students with primary advisors in Biomed should follow the guidelines, requirements, and deadlines for honors as described in the bulletin for Biology concentrators (<https://bulletin.brown.edu/the-college/concentrations/biol/>) and as published on the Biology departmental website (<https://bue.brown.edu/academics/honors/>). Students wishing to do honors research with a non-APMA or Biomed advisor should contact the Directors of Undergraduate Studies in APMA and Biology to discuss options.

Biochemistry & Molecular Biology Concentration Requirements

How does life work at the molecular level? This question is at the core of the concentration program Biochemistry and Molecular Biology. In earlier years of this discipline, the focus was on structure and function of proteins, nucleic acids, lipids, carbohydrates and small molecules such as vitamins. Today the logical approach and tools of biochemical science are being expanded to new areas in neuroscience, developmental biology, immunology, pharmacology and synthetic biology (the design of analogs of biological systems). Training in biochemistry begins with a foundation in mathematics, physics, chemistry and biology. Some courses offered in other departments, including engineering, geology and computer science, are also useful. A key component of this program is the year of hands-on research carried out in collaboration with a faculty member here at Brown. Faculty sponsors are drawn from both the Chemistry Department and the Division of Biology and Medicine, and include basic science and clinical faculty.

Standard program for the Sc.B. degree

Students must take twenty courses in biology, chemistry, mathematics, and physics, including the following core requirements, some of these may be fulfilled with AP credits.

Three courses in mathematics including two courses in MATH 0090/0100 or MATH 0170/0180 with a third class in statistics, math, or computer science	3
Options for statistics courses include: ¹	
APMA 0650 Introduction to Probability and Statistics	
APMA 1650 Introduction to Probability and Statistics with Calculus	
APMA 1655 Introduction to Probability and Statistics with Theory ³	
BIOL 0495 Statistical Analysis of Biological Data	
CPSY 0900 Statistical Methods	
PHP 1501 Essentials of Data Analysis	
PHP 1510 Principles of Biostatistics and Data Analysis	
Two courses in physics, typically: ¹	2
PHYS 0030 Basic Physics A	
or PHYS 0050 Foundations of Mechanics	
or ENGN 0040 Engineering Statics and Dynamics	
PHYS 0040 Basic Physics B	
or PHYS 0060 Foundations of Electromagnetism and Modern Physics	
Three courses in physical and organic chemistry:	3
CHEM 0330 Equilibrium, Rate, and Structure	
CHEM 0350 Organic Chemistry I	
CHEM 0360 Organic Chemistry II	

One course in biophysical chemistry:	1
CHEM 0400 Biophysical and Bioinorganic Chemistry	
Four courses in biochemistry:	4
BIOL 0280 Biochemistry	
BIOL 0285 Inquiry in Biochemistry: From Gene to Protein Function	
Plus two of three upper level biochemistry courses:	
BIOL 1270 Advanced Biochemistry	
or CHEM 1230 Chemical Biology	
or CHEM 1240 Biochemistry	
The two semester research requirement may be satisfied by any two of the following. Students should discuss alternative arrangements or special situations directly with their concentration advisor to obtain prior approval.	2
Students should aim to complete this requirement in their junior year at the latest to maximize their ability to find a lab able to host them. Finding a lab involves reaching out to professors directly to inquire about research possibilities in their lab prior to receiving an override code for registration for BIOL1950/1960 or Chem 0980/0980S/0981.	
BIOL 1950 Directed Research/Independent Study	
BIOL 1960 Directed Research/Independent Study	
CHEM 0980 Undergraduate Research	
CHEM 0980S Undergraduate Research - Writing Designated and Mandatory S/NC	
CHEM 0981 Undergraduate Research - Writing Designated	
A summer research experience with faculty in Biology or Chemistry at Brown equivalent or greater in scope and scale to work the student would pursue in a Biology or Chemistry independent study course to satisfy one semester of the research requirement.	
Suggested Elective Courses:	
Students are required to take five courses from the chart below or, with approval from a concentration advisor, from any science or mathematics course relevant to biochemistry, cell and molecular biology.	5
Applied Mathematics Electives:	
APMA 0330 Methods of Applied Mathematics I	
APMA 0410 Mathematical Methods in the Brain Sciences	
APMA 0650 Introduction to Probability and Statistics	
Biology Electives:	
BIOL 0030 Principles of Nutrition	
BIOL 0150D Techniques in Regenerative Medicine: Cells, Scaffolds and Staining	
BIOL 0170 Biotechnology in Medicine	
BIOL 0190R Phage Hunters	
BIOL 0200 The Foundation of Living Systems	
BIOL 0380 The Ecology and Evolution of Infectious Disease	
BIOL 0415 Microbes in the Environment	
BIOL 0440 Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses	
BIOL 0470 Genetics	
BIOL 0500 Cell and Molecular Biology	
BIOL 0510 Introductory Microbiology	
BIOL 0530 Principles of Immunology	
BIOL 0800 Principles of Physiology	
BIOL 1050 Biology of the Eukaryotic Cell	
BIOL 1090 Polymer Science for Biomaterials	
BIOL 1100 Cell Physiology and Biophysics	

BIOL 1110 Topics in Signal Transduction	
BIOL 1120 Biomaterials	
BIOL 1150 Stem Cell Engineering	
BIOL 1200 Protein Biophysics and Structure	
BIOL 1210 Synthetic Biological Systems	
BIOL 1222A Current Topics in Functional Genomics	
BIOL 1260 Physiological Pharmacology	
BIOL 1290 Cancer Biology	
BIOL 1300 Biomolecular Interactions: Health, Disease and Drug Design	
BIOL 1310 Developmental Biology	
BIOL 1330 Biology of Reproduction	
BIOL 1520 Innate Immunity	
BIOL 1540 Molecular Genetics	
BIOL 1560 Virology	
BIOL 1600 Development of Vaccines to Infectious Diseases	
BIOL 2110 Drug and Gene Delivery	
BIOL 2350 The Biology of Aging	
Chemistry Electives:	
CHEM 0500 Inorganic Chemistry	
CHEM 1140 Physical Chemistry: Quantum Chemistry	
CHEM 1150 Physical Chemistry: Thermodynamics and Statistical Mechanics	
CHEM 1220 Computational Tools in Biochemistry and Chemical Biology	
CHEM 1230 Chemical Biology	
CHEM 1240 Biochemistry	
CHEM 1450 Advanced Organic Chemistry	
CHEM 1560H Chemical Glycobiology	
CHEM 1560N Organometallic Chemistry	
CHEM 2410 Organic Mechanisms	
CHEM 2420 Organic Reactions	
Computer Science Electives:	
CSCI 0080 A First Byte of Computer Science	
CSCI 0111 Computing Foundations: Data	
CSCI 0150 Introduction to Object-Oriented Programming and Computer Science	
CSCI 0160 Introduction to Algorithms and Data Structures	
CSCI 0170 Computer Science: An Integrated Introduction	
CSCI 0180 Computer Science: An Integrated Introduction	
CSCI 0190 Accelerated Introduction to Computer Science	
CSCI 1810 Computational Molecular Biology	
Engineering Electives:	
ENGN 0410 Materials Science	
Neuroscience Electives: ²	
NEUR 0010 The Brain: An Introduction to Neuroscience	
NEUR 1020 Principles of Neurobiology	
NEUR 1030 Neural Systems	
NEUR 1040 Introduction to Neurogenetics	
NEUR 1670 Neuropharmacology and Synaptic Transmission	
NEUR 1740 The Diseased Brain: Mechanisms of Neurological and Psychiatric Disorders	
Physics Electives:	

PHYS 0160 Introduction to Relativity, Waves and Quantum Physics

Public Health Electives:

PHP 1501 Essentials of Data Analysis

Total Credits 20

- ¹ Note that the mathematics and physics requirements may be satisfied by Advanced Placement credit.
² or any NEUR course in Cell, Genetics, Molecular Biology, or Development.
³ Students may opt to enroll in APMA 1655 for more in depth coverage of APMA 1650.

Honors Requirements for Biochemistry

All ScB Biochemistry concentrators are candidates for Honors; no separate application is necessary.

The requirements for Honors in Biochemistry are:

* Students must have a majority of either As or S with distinction grades in concentration courses.

* Two semesters of Independent Study (CHEM 0980, CHEM 0980S, CHEM 0981, BIOL 1950, or BIOL 1960). Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (<http://www.brown.edu/academics/chemistry/undergraduate/>).

* A Thesis in a form approved by the research advisor, and recommended by the research advisor. Additional information about thesis guidelines will be provided by the Concentration Advisor in the first half of the fall semester.

* An oral presentation of the thesis in a fifteen-minute senior talk followed by a five-minute question and answer period.

Biomedical Engineering Concentration Requirements

Biomedical Engineering (<https://engineering.brown.edu/undergraduate/> (<https://engineering.brown.edu/undergraduate/concentrations/biomedical-engineering/>) (<https://engineering.brown.edu/undergraduate/concentrations/biomedical-engineering/>)) is a dynamic and growing field based upon the application of the tools of engineering to the subject matter of biology and medicine. The undergraduate program in biomedical engineering is an interdisciplinary concentration structured as a joint program between the Division of Biology and Medicine and the School of Engineering. Students can take courses from and do research with faculty from engineering, the various departments of biology, and the Brown-affiliated hospitals in Rhode Island. The Biomedical Engineering (BME) concentration shares much of the core with the other engineering programs, but the program's primary emphasis is on the fundamentals of biomedical engineering, while also allowing students to personalize their curriculum. Biomedical engineers design new drugs, genetically engineer organisms, and devise new medical devices and instruments. They also use their understanding of biology to advance synthetic and naturally-derived materials and products. BME students learn to apply the principles of engineering and science, along with problem solving skills and critical thinking to a broad spectrum of engineering problems. Further, BME is a sound foundation for lifelong education with its emphasis on the use of teamwork, effective communication skills, and an understanding of broad social, ethical, economic and environmental consequences. The biomedical engineering curriculum at Brown prepares students for careers in biomedical engineering and biotechnology, as well as careers in diverse areas such as medicine, law, business, and health care delivery.

The Sc.B. program in Biomedical Engineering is accredited by the Engineering Accreditation Commission of ABET <http://www.abet.org/>. It is jointly offered by the School of Engineering and the Division of Biology and Medicine as an interdisciplinary concentration designed for students interested in applying the methods and tools of engineering to the life

sciences and medicine. Alumni of the Biomedical Engineering (BME) program will achieve one or more of these program educational objectives (PEOs) within five (5) years of graduation: (1) Serve society through work or advanced study in a broad range of fields including, but not limited to, medicine, healthcare, industry, government, and academia; (2) Apply their deeply creative and versatile biomedical engineering education to solve a broad spectrum of engineering and societal challenges; and (3) Contribute as role models, mentors, or leaders in their fields. The student outcomes of this program are the ABET (1) - (7) Student Outcomes as defined by the ABET Criteria for Accrediting Engineering Programs, available online at <http://www.abet.org/accreditation-criteria-policies-documents/>. The Biomedical Engineering concentration shares much of the core with the other engineering programs and is structured to include more science courses and electives that introduce cutting edge areas in the field of BME.

The requirements regarding Mathematics, Advanced Placement, Transfer Credit, Substitutions for Required Courses, and Humanities and Social Science Courses are identical to those of the Sc.B. degree programs in Engineering. Please refer to the Engineering section of the University Bulletin (<https://bulletin.brown.edu/engineering/>) for explicit guidelines.

Standard program for the Sc.B. degree

1. Core Courses

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0510	Electricity and Magnetism	1
or ENGN 0520	Electrical Circuits and Signals	
ENGN 0720	Thermodynamics	1
ENGN 0810	Fluid Mechanics	1
CHEM 0330	Equilibrium, Rate, and Structure	1
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
CHEM 0350	Organic Chemistry I	1
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
APMA 0350	Applied Ordinary Differential Equations ¹	1
APMA 1650	Introduction to Probability and Statistics with Calculus	1
or BIOL 0495	Statistical Analysis of Biological Data	
or PHP 1510	Principles of Biostatistics and Data Analysis	
or APMA 1655	Introduction to Probability and Statistics with Theory	

2. Upper Level Biomedical Engineering Curriculum

ENGN 1110	Transport and Biotransport Processes	1
ENGN 1210	Biomechanics	1
ENGN 1230	Instrumentation Design	1
ENGN 1490	Biomaterials	1
BIOL 0800	Principles of Physiology	1

3. Additional Biomedical Engineering Electives: Complete at least 3 courses from the following groups; other upper-level courses are subject to Concentration Advisor approval.

Select one or two of the following:		
CSCI 1810	Computational Molecular Biology	
or CSCI 1820	Algorithmic Foundations of Computational Biology	
ENGN 0500	Digital Computing Systems	
ENGN 1220	Neuroengineering	
ENGN 1510	Nanoengineering and Nanomedicine	
ENGN 1520	Cardiovascular Engineering	

ENGN 1550	Recent Advances in Biomedical Engineering	
ENGN 1740	Computer Aided Visualization and Design	
ENGN 1930B	Biomedical Optics	
ENGN 1945	Immunoengineering	
ENGN 2625	Optical Microscopy: Fundamentals and Applications	
ENGN 2910S	Cancer Nanotechnology	
ENGN 2911R	Analytical Modeling for Biomechanical and Biomedical Systems	
ENGN 2912R	Implantable Devices	
BIOL 1140	Tissue Engineering	
BIOL 1150	Stem Cell Engineering	
BIOL 2110	Drug and Gene Delivery	
At least one or two more courses from:		
BIOL 0280	Biochemistry	
BIOL 0470	Genetics	
BIOL 0500	Cell and Molecular Biology	
BIOL 0510	Introductory Microbiology	
BIOL 0530	Principles of Immunology	
BIOL 1090	Polymer Science for Biomaterials	
BIOL 1100	Cell Physiology and Biophysics	
BIOL 1555	Methods in Informatics and Data Science for Health	
APMA 1070	Quantitative Models of Biological Systems	
CHEM 0360	Organic Chemistry II	
ENGN 2910G	Topics in Translational Research and Technologies	
NEUR 1020	Principles of Neurobiology	
NEUR 1440	Mechanisms and Meaning of Neural Dynamics	
PHYS 1610	Biological Physics	
BIOL 1810	21st Century Applications in Cell and Molecular Biology	
4. Capstone Design ²		
ENGN 1240	Biomedical Engineering Design and Innovation	1
ENGN 1250	Biomedical Engineering Design and Innovation II	1
5. General Education Requirement: At least four approved courses must be taken in the humanities and social sciences.		
Total Credits		21

¹ Students who completed APMA 0330 and/or APMA 0340 prior to academic year 2021-22 may count these as satisfying the APMA 0350 and/or APMA 0360 requirements.

² In some **rare cases**, Independent Study may be substituted, subject to Concentration Advisor approval.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Biophysics Concentration Requirements

Biophysics is a quantitative science at the intersection of the life and physical sciences. It requires a significant level of competence in physics, chemistry, biology and math as reflected in the concentration requirements. Students should work with their concentration advisor to develop a focused academic plan that complements the required research

component of the concentration and allows students to develop analytical and quantitative skills.

Student Goals:

Students in this concentration will:

- Explore the relationship between biological and physical principles by successfully completing foundational courses in biology, physics, math and chemistry
- Gain an in-depth knowledge of the interdisciplinary nature of life and physical sciences by selecting and successfully completing advanced courses in biology, physics, math, chemistry or related fields
- Develop skills to identify and analyze critical questions central to biophysics
- Apply quantitative methods to problems at the interface of life and physical sciences
- Complete a research project with a faculty advisor that focuses on a particular theme or problem in the field of biophysics where students apply knowledge gained throughout the curriculum.

Additional detailed information about the field of Biophysics may be found at: <https://www.brown.edu/academics/biology/undergraduate-education/undergraduate/biophysics> (<https://www.brown.edu/academics/biology/undergraduate-education/undergraduate/biophysics/>)

Standard program for the Sc.B. degree

Physics

One of the following series: 2

PHYS 0030 & PHYS 0040 Basic Physics A and Basic Physics B ¹

PHYS 0050 & PHYS 0060 Foundations of Mechanics and Foundations of Electromagnetism and Modern Physics

PHYS 0070 & PHYS 0160 Analytical Mechanics and Introduction to Relativity, Waves and Quantum Physics

PHYS 0470 Electricity and Magnetism 1

Chemistry

CHEM 0330 Equilibrium, Rate, and Structure 1

CHEM 0350 Organic Chemistry I 1

Select one other advanced Chemistry Course 1

Math

MATH 0090 Single Variable Calculus, Part I (or equivalent) 1

MATH 0100 Single Variable Calculus, Part II (or equivalent) 1

MATH 0180 Multivariable Calculus (or equivalent) 1

Biology

BIOL 0200 The Foundation of Living Systems (or equivalent) 1

Select four additional biology or neuroscience courses chosen with approval of the advisor. 4

Directed Research: Students must take two semesters of research which may be satisfied by any of the opportunities listed below: 2

Directed Research in Biology (BIOL 1950/BIOL 1960), Chemistry (CHEM 0970/CHEM 0980), or Physics (PHYS 1980)

A summer research experience in equivalent scope and scale to an independent study, but this would not count as course credit toward the concentration

Electives: Four electives in biology, physics, math/applied math, chemistry, neuroscience, engineering or computer science; at least 2 courses must be above the introductory level ² 4

Total Credits 20

¹ The PHYS 0050/0060 or 0070/0160 sequences are preferred to PHYS 0030/0040.

² Sample electives can be found on the Biology Undergraduate Education page (<https://www.brown.edu/academics/biology/undergraduate-education/undergraduate/biophysics/>).

Computational Biology Concentration Requirements

Computational biology involves the analysis and discovery of biological phenomena using computational tools, and the algorithmic design and analysis of such tools. The field is widely defined and includes foundations in computer science, applied mathematics, statistics, biochemistry, molecular biology, genetics, ecology, evolution, anatomy, neuroscience, and visualization.

Students may pursue a Bachelor of Arts or a Bachelor of Science. Students pursuing the ScB have the option of electing a concentration in Computational Biology with one of three focus areas: Computer Sciences, Biological Sciences, or Applied Mathematics & Statistics. Both programs require a senior capstone experience that pairs students and faculty in creative research collaborations.

Standard program for the A.B. degree

Please see the bottom of the page for more information regarding the University Writing Requirement, the Capstone Experience, and the Computational Biology Honors Program.

Standard program for the A.B. degree

Please review the footnotes for clarifying details and see the bottom of the page for more information regarding the Capstone Experience and the Computational Biology Honors Program.

Prerequisites (0-3 courses)

Students must complete or place out of these prerequisites.

MATH 0100 Single Variable Calculus, Part II
or MATH 0170 Single Variable Calculus, Part II (Accelerated)

APMA 0260 Linear Algebra and Multivariable Calculus for Applied Mathematicians¹
or MATH 0180 Multivariable Calculus
or MATH 0200 Multivariable Calculus (Physics/Engineering)
or MATH 0350 Multivariable Calculus With Theory

BIOL 0200 The Foundation of Living Systems

General Core Requirements: Biology 2

BIOL 0470 Genetics
BIOL 0280 Biochemistry
or BIOL 0500 Cell and Molecular Biology

General Core Requirements: Chemistry 1

CHEM 0330 Equilibrium, Rate, and Structure
or CHEM 0350 Organic Chemistry I

General Core Requirements: Computer Science 2

Choose one of the following groupings of introductory courses:

Group A

CSCI 0111 & CSCI 0200 Computing Foundations: Data and Program Design with Data Structures and Algorithms

Group B

CSCI 0150 & CSCI 0200 Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms

Group C

CSCI 0170 & CSCI 0200 Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms

Group D

CSCI 0190 & CSCI 0200 Accelerated Introduction to Computer Science and Program Design with Data Structures and Algorithms (or any full-credit computer science course above CSCI 0190)²

General Core Requirements: Probability & Statistics² 1

APMA 1650 Introduction to Probability and Statistics with Calculus
or APMA 1655 Introduction to Probability and Statistics with Theory
or CSCI 1450 Advanced Introduction to Probability for Computing and Data Science
or MATH 1210 Probability

Comp Bio Core Course Requirements 4

CSCI 1810 Computational Molecular Biology
APMA 1080 Inference in Genomics and Molecular Biology²

AND two of the following:

APMA 1070 Quantitative Models of Biological Systems
APMA 1660 Statistical Inference II
APMA 1690 Computational Probability and Statistics
BIOL 1222A Current Topics in Functional Genomics
BIOL 1430 Foundations of Population Genetics
BIOL 1435 Computational Methods for Studying Demographic History with Molecular Data
BIOL 1525 Pathogenomics: Analysis, interpretation and applications of microbial genomes
BIOL 1545 Human Genetics and Genomics
BIOL 1555 Methods in Informatics and Data Science for Health

BIOL 1575 Evaluation of Health Information Systems

CSCI 1420 Machine Learning

CSCI 1470 Deep Learning

CSCI 1820 Algorithmic Foundations of Computational Biology

PHP 1510 Principles of Biostatistics and Data Analysis

PHP 1560 Using R for Data Analysis

Additional 1000+ level course with concentration advisor approval

Capstone Experience 1

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision (i.e: BIOL 1950/1960, CSCI 1970, APMA 1970). The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor resulting in an advanced research project or a 2000-level Computational Biology course that covers an advanced topic within the Computational Biology field and includes an advanced research component.³

Total Credits 11

¹ These courses are prerequisites for APMA 1655. Students who matriculate in or after Fall 2025 will be required to take APMA 1655 as a prerequisite for APMA 1080 and will therefore need to complete or place out of one of these courses.

² APMA 1655 will be a prerequisite for APMA 1080 starting in Fall 2025. Current concentrators (as of Spring 2025) may still take APMA 1080 with APMA 1650 as their prerequisite but APMA 1655 is encouraged. Students matriculating in Fall 2025 or later will need to take APMA 1655 before taking APMA 1080.

³ Some 2000-level courses are not available to undergraduate students due to department restrictions but have 1000-level equivalents (such as BIOL 1545/2545) that can count for capstone credit with approval from the instructor and the student's faculty advisor. Please reach out to the CCMB Academic Programs Coordinator for more information.

Capstone Experience:

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

Honors:

In order to be considered a candidate for honors, students will be expected to maintain an outstanding record. Students must have a majority of either As or S with distinction grades in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters semesters, of reading and research with a CCMB faculty member or approved advisor. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters of reading and research with a CCMB faculty member or approved advisor.

Students seeking honors are advised to choose a Thesis Advisor prior to the end of their Junior year. Students must complete the Comp Bio Honors Registration form (<https://docs.google.com/forms/d/e/1FAIpQLSe5jZSIwNdZqCFOWTPVQN7PQUM1aMmrZOOdLxox9DVuCjkDZ...viewform/>) and submit their honors proposal to ccmb@brown.edu by the first Friday in October of their senior year. Students must submit a honors thesis in April of their senior year and present a public defense of their theses to the CCMB community. More information about the honors guidelines and deadlines can be found here: <https://ccmb.brown.edu/academics/undergraduate-program/honors-designation>. Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student's advisor.

Standard program for the Sc.B. degree

Please see the bottom of the page for more information regarding the University Writing Requirement, the Capstone Experience, and the Computational Biology Honors Program.

Standard program for the Sc.B. degree

Please review the footnotes for clarifying details and see the bottom of the page for more information regarding the Capstone Experience and the Computational Biology Honors Program.

Prerequisites (0-3 courses)

Students must complete or place out of these prerequisites.

MATH 0100	Single Variable Calculus, Part II (or equivalent)
or MATH 0170	Single Variable Calculus, Part II (Accelerated)
APMA 0260	Linear Algebra and Multivariable Calculus for Applied Mathematicians ¹
or MATH 0180	Multivariable Calculus
or MATH 0200	Multivariable Calculus (Physics/Engineering)
or MATH 0350	Multivariable Calculus With Theory
BIOL 0200	The Foundation of Living Systems (or equivalent)

General Core Course Requirements: Biology 2

BIOL 0470	Genetics (prerequisite BIOL 0200 or equivalent)

BIOL 0280	Biochemistry
or BIOL 0500	Cell and Molecular Biology
General Core Requirements: Chemistry 1	
CHEM 0330	Equilibrium, Rate, and Structure
or CHEM 0350	Organic Chemistry I
General Core Requirements: Computer Science 3	
CSCI 0220	Introduction to Discrete Structures and Probability

AND complete one of the following groupings of introductory courses:

Group A	
CSCI 0111 & CSCI 0200	Computing Foundations: Data and Program Design with Data Structures and Algorithms
Group B	
CSCI 0150 & CSCI 0200	Introduction to Object-Oriented Programming and Computer Science and Program Design with Data Structures and Algorithms
Group C	
CSCI 0170 & CSCI 0200	Computer Science: An Integrated Introduction and Program Design with Data Structures and Algorithms
Group D	
CSCI 0190 & CSCI 0200	Accelerated Introduction to Computer Science and Program Design with Data Structures and Algorithms (or any full-credit computer science course above CSCI 0190)

General Core Requirements: Probability & Statistics² 1

APMA 1650	Introduction to Probability and Statistics with Calculus
or APMA 1655	Introduction to Probability and Statistics with Theory
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science
or MATH 1210	Probability

General Core Requirements: Computational Biology 2

APMA 1080	Inference in Genomics and Molecular Biology ²
CSCI 1810	Computational Molecular Biology

Six Courses in One Track 6

Choose one of 3 tracks: Computer Science, Biological Sciences, or Applied Mathematics and Statistics. See track requirements below.

Capstone Experience 1

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision (i.e: BIOL 1950/1960, CSCI 1970, APMA 1970). The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor resulting in an advanced research project or a 2000-level Computational Biology course that covers an advanced topic within the Computational Biology field and includes an advanced research component.³

Total Credits 16

¹ These courses are prerequisites for APMA 1655. Students who matriculate in or after Fall 2025 will be required to take APMA 1655 as a prerequisite for APMA 1080 and will therefore need to complete or place out of one of these courses.

² APMA 1655 will be a prerequisite for APMA 1080 starting in Fall 2025. Current concentrators (as of Spring 2025) may still take APMA 1080 with APMA 1650 as their prerequisite but APMA 1655 is encouraged. Students matriculating in Fall 2025 or later will need to take APMA 1655 before taking APMA 1080.

³ Some 2000-level courses are not available to undergraduate students due to department restrictions but have 1000-level equivalents (such as BIOL 1545/2545) that can count for capstone credit with approval from the instructor and the student's faculty advisor. Please reach out to the CCMB Academic Programs Coordinator for more information.

Tracks

Please review the prerequisites required for the courses below in CAB. Students should also be aware of the requirements for enrolling in a given CSCI course, which can be found on the Computer Science website.

Computer Science Track:

Three of the following: 3

CSCI 1230	Introduction to Computer Graphics
CSCI 1270	Database Management Systems
CSCI 1411	Foundations of AI
CSCI 1420	Machine Learning
CSCI 1430	Computer Vision
CSCI 1470	Deep Learning
CSCI 1820	Algorithmic Foundations of Computational Biology
CSCI 2952G	Deep Learning in Genomics
or other 1000+ level Computer Science course approved by the concentration advisor.	

Three of the following: 3

APMA 1070	Quantitative Models of Biological Systems
APMA 1660	Statistical Inference II
APMA 1690	Computational Probability and Statistics
BIOL 1430	Foundations of Population Genetics
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data
BIOL 1555	Methods in Informatics and Data Science for Health
CPSY 1492	Computational Cognitive Neuroscience
CSCI 0320 & CSCI 0330	Introduction to Software Engineering and Introduction to Computer Systems ¹
CSCI 1550	Probabilistic Methods in Computer Science
CSCI 1570	Design and Analysis of Algorithms
PHP 1510	Principles of Biostatistics and Data Analysis
PHP 1560	Using R for Data Analysis
or another 1000+ level computational course approved by the concentration advisor.	

Total Credits 6

¹ Both CSCI 0320 and CSCI 0330 need to be taken to fulfill one of the six course requirements in this track.

Biological Sciences track

At least four 1000+ level courses comprising a coherent theme related to Computational Biology. Examples of themes include: Biochemistry, Ecology, Evolution, Genomics, Immunology, or Neurobiology. Other themes can be approved by your concentration advisor.

AND two courses from the following: 2

APMA 1660	Statistical Inference II
APMA 1690	Computational Probability and Statistics

BIOL 1222A	Current Topics in Functional Genomics
BIOL 1250	Host-microbiome Interactions in Health and Disease
BIOL 1430	Foundations of Population Genetics
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data
BIOL 1525	Pathogenomics: Analysis, interpretation and applications of microbial genomes
CSCI 1420	Machine Learning
CSCI 1470	Deep Learning
CSCI 1820	Algorithmic Foundations of Computational Biology
PHP 1560	Using R for Data Analysis
or other 1000+ level Computational Biology course approved by concentration advisor.	

Total Credits 6

Applied Mathematics & Statistics Track:

At least three courses from the following: 3

APMA 0350 & APMA 0360	Applied Ordinary Differential Equations and Applied Partial Differential Equations ¹
APMA 1070	Quantitative Models of Biological Systems
APMA 1660	Statistical Inference II
APMA 1690	Computational Probability and Statistics
APMA 1740	Recent Applications of Probability and Statistics
PHP 1510	Principles of Biostatistics and Data Analysis
PHP 1560	Using R for Data Analysis

At least three of the following: 3

BIOL 1222A	Current Topics in Functional Genomics
BIOL 1430	Foundations of Population Genetics
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data
BIOL 1555	Methods in Informatics and Data Science for Health
CSCI 1411	Foundations of AI
CSCI 1420	Machine Learning
CSCI 1470	Deep Learning
CSCI 1820	Algorithmic Foundations of Computational Biology
PHP 1855	Infectious Disease Modeling
or other 1000+ level Computational Biology course approved by concentration advisor.	

Total Credits 6

¹ Students must take both courses in this set (APMA 0350 & APMA 0360) to fulfill one of the six course requirements.

Capstone Experience:

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

Honors:

Honors:

In order to be considered a candidate for honors, students will be expected to maintain an outstanding record. Students must have a majority of

either As or S with distinction grades in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters semesters, of reading and research with a CCMB faculty member or approved advisor. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters of reading and research with a CCMB faculty member or approved advisor.

Students seeking honors are advised to choose a Thesis Advisor prior to the end of their Junior year. Students must complete the Comp Bio Honors Registration form and submit their honors proposal to ccmb@brown.edu by the first Friday in October of their senior year. Students must submit a honors thesis in April of their senior year and present a public defense of their theses to the CCMB community. More information about the honors guidelines and deadlines can be found here: <https://ccmb.brown.edu/academics/undergraduate-program/honors-designation>. Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student's advisor.

Courses

BIOL 0030. Principles of Nutrition.

Introduces the basic principles of human nutrition, and the application of these principles to the specific needs of humans, and the role of nutrition in chronic diseases. Provides an overview of the nutrients and their use by the human body. Also examines the role of nutrients in specific functions and disease states of the body. Not for biology concentration credit. Enrollment limited to 100.

BIOL 0040. Nutrition for Fitness and Physical Activity.

Reviews the role of nutrition in physical activity and health. It is designed to provide the student with the information and skills needed to translate nutrition and physical activity recommendations into guidelines for both the athlete for maximal performance and the non-athlete to improve both health and body weight. Students will learn the use of the energy yielding nutrition in physical activity and how food choices can influence both athletic performance and long-term health through the effect on risk factors for chronic diseases. **Prerequisite:** BIOL 0030. Enrollment limited to 20. Instructor permission required.

BIOL 0060. Introduction to Human Physiology.

An introduction to human physiology aimed primarily at undergraduates who have minimal to no Biology background or who are not concentrating in biology. Acquire a basic understanding of the physiological mechanisms that allow for the running of each major organ systems. Topics include basic cardiovascular, respiratory, urinary, digestive, endocrine, and neuromuscular function, as well as aspects of reproduction and exercise physiology. Not for biology concentration credit. Lab.

BIOL 0080. Biotechnology Management.

An examination of the pharmaceutical, biotechnology, and medical product industries: what they are, how they function, whence they originate, and various perspectives on why some succeed and others fail. Pathways from lab-bench to marketplace are described as are the pervasive influences of the FDA, patent office, and courts. Extensive reading; emphasis on oral presentation. Primarily intended for students planning a career in biomedical industry. Not for biology concentration credit. Enrollment limited to 20.

BIOL 0100. Living Biology at Brown and Beyond.

BIOL0100 is a first year seminar designed for aspiring biology program students. The course introduces students to the people and opportunities in Brown's Biology Program and fosters academic and soft skill development. Students will practice a range of laboratory methods used in molecular biology while examining the ways in which those methods are used in research and in the development of medical treatments. Students will hone their writing skills, learn to effectively read primary STEM literature, and consider how various disciplines in Biology come together to tackle critical global problems such as global environmental change and emerging infectious disease. BIOL 0100 is best suited for students with minimal experience in the biological sciences.

BIOL 0110. Fake Math: Analyzing the Misuse of Quantitative Concepts.

From the Scarecrow in the Wizard of Oz to the White House, quantitative errors are made and put forth. This course will present, discuss, and challenge students to analyze misused quantitative concepts. These errors will be taken from misapplied logic; inappropriate use of numbers; graphical inaccuracies and manipulations; cognitive illusions; self-fulfilling prophecies; the wrong-but-often-relied-upon Law of Small Numbers; conditional probability; correlation, confounding, and causality; hazards of data mining; circular reasoning; and basic misuses of statistics. Introductory concepts of classical logic, probability, and statistics will be presented and reviewed, and examples of their misuse will be discussed and evaluated.

BIOL 0140B. Communicating Science: Biological Illustration.

This Sophomore Seminar is an immersion practicum that conjoins art and science. Employing a series of techniques, students will learn the protocols of scientific rendering in an intensive hands-on approach. Field trips will include the RISD Nature Lab, the Brown Greenhouse, and John Hay collection of biomedical and botanical folios. Media will include graphite/ carbon dust; pen and ink (stipple, line); coquille board; scratch-board, colored pencil, watercolor and polymer clay. Course will be driven by project presentations focused on communicating science through illustration. Not for concentration credit in Biological Sciences programs. Instructor permission required; enrollment 10 students. 1/2 credit.

BIOL 0140K. Conservation Medicine.

How have fruit bats contributed to the emergence of Nipah virus in Malaysia? Is an infectious cancer going to drive the Tasmanian Devil to extinction? Will a warmer world be a sicker world? We will consider these and additional topics at the intersection of global change biology and infectious disease emergence in this course. The course should be of interest to pre-med, general biology and environmental studies concentrators seeking interdisciplinary learning classroom experience. This will satisfy "Area 3" organismal biology concentration requirement for Biology/Health-Human Biology. Expected background: BIOL 0200 or equivalent placement. Enrollment limited to 12 sophomores. Instructor permission required.

BIOL 0140T. Communicating Science Through Visual Media.

This class, offered jointly by professors at RISD and Brown, will explore the pedagogy and practice of using visual media to convey scientific concepts. The goal of this course will be to assess examples of existing material and create new animations/video that fill an educational need and make science engaging and accessible. Class time will be comprised of lectures, labs, screenings, discussions, critiques and exercises. After an introduction to teaching pedagogy and the basics of animation and visual design, small student teams will be paired with science faculty mentors to create videos and animations that explain scientific concepts.

BIOL 0150A. Techniques and Analyses using DNA-Based Biotechnology.

Students will study and practice a range of methods used in molecular biology while examining the ways in which those tools are used in research and in the development of medical treatments. This experience, combined with the reading and discussion of selected papers from the primary literature, fosters development of a skill set critically important for the modern day biology student. Expected background: high school Biology course. Enrollment limited to 10 first year students. Instructor permission required. Half-credit course. S/NC.

BIOL 0150B. Statistical Computing for Biology.

Modern biological research is a data rich endeavor, necessitating strong quantitative and computational skills to interpret the results of experimental and observational studies. In this course we will explore the application of statistics and modeling in biological research and environmental science. Topics covered will include basic probability, experimental design, sampling, hypothesis testing and mathematical models for prediction. No prior statistics knowledge is assumed. Enrollment limited to 10 first year and sophomore students. Instructor permission, based on a portfolio review. This is a half-credit course. S/NC

BIOL 0150C. Introduction to Ethnopharmacology.

Plant secondary metabolites are currently the subject of much research interest when investigating new target compounds for potential medicine from natural products. New leads for drugs and phytomedicines from plants and plant parts have been increasing at a rapid rate especially by the pharmaceutical industry. Many plants have been selected and collected for their specific secondary compounds and healing powers by ethnobotanists in the field. Students will gain hands on experience identifying medicinal plants, laboratory equipment, sampling procedures, field tests and extraction techniques of secondary metabolites by high throughput screening methods. Enrollment limited to 10 FYS. Instructor permission required.

BIOL 0150D. Techniques in Regenerative Medicine: Cells, Scaffolds and Staining.

Regenerative Medicine, also known as Tissue Engineering, is the process of creating living, functional tissues to repair or replace native tissue or organ functions that have been lost due to disease or congenital defects. As such, it is a prominent scientific discipline that can either "stand alone" or complement material-based research efforts in the areas of device design, drug delivery, diagnostics and pharmaceuticals. Students will develop proficiencies in basic cell culture techniques, early stage tissue regeneration strategies and histochemical characterization of mammalian cell constructs. Enrollment limited to 10 first year students. Instructor permission required. Half-credit course. S/NC.

BIOL 0160. Plants, Food, and People.

Examines the selection, breeding, cultivation and uses of food plants. Discusses the effects on agriculture of pathogens, climate change, and loss of biodiversity. Considers whether enough food can be produced for a world population of potentially 10 billion, while sustaining biodiversity and environmental quality. Enrollment limited to 50.

BIOL 0170. Biotechnology in Medicine.

Introduces undergraduates to the main technological advances currently dominating the practice of medicine. Provides an overview of the objectives, techniques, and problems related to the application of biomedical technology to the diagnosis and treatment of disease and the contemporary health care industry. Topics include: pharmaceutical development and formulation; organ replacement by prosthesis and transplantation; medical imaging; tissue engineering, therapeutic cloning, regenerative medicine; stem cells; societal, economic, and ethical issues. This course does carry Biology concentration credit.

BIOL 0180. The Biology of AIDS.

AIDS represents an example of the vulnerability of humans to new infectious agents. We will review some human infectious diseases including small pox yellow fever and influenza, and then explore AIDS/HIV. First characterized in 1981, AIDS became the leading cause of death in U.S. males aged 25-44 within a decade. We will examine what factors make HIV such a potent pathogen. The course is intended for students beginning in biology. Expected: BIOL 0200, or equivalent placement. This course *does* carry Biology concentration credit.

BIOL 0190. Phage Hunters.

Phage Hunters is a one-semester FYS class geared towards providing first-year students with hands on laboratory experience and a general background in molecular biology. Student applications are submitted in the summer and admitted students will receive overrides to register before the end of shopping period. You will isolate, cultivate, and purify a bacteriophage from the local environment. Lab work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and PCR to characterize the phage. There will be a series of lectures that introduce concepts in bacteriology, virology, genetics, and molecular biology. One bacteriophage will be selected among the purified isolates and its genome will be sequenced. If time allows, you will annotate the sequenced genome, which entails identifying all the protein-coding sequences found within the bacteriophage using computational approaches. Instructor permission required. Admittance based on applications

BIOL 0190E. Botanical Roots of Modern Medicine.

This course will explore a variety of medicinal plants found throughout the world, the diverse cultures that use them in their daily lives and the scientific underpinnings of their medicinal uses. In conjunction with readings, students will gain a hands-on approach in lab, observing, identifying and growing these plants. Enrollment limited to 19. Students MUST register for the lecture section and the lab.

BIOL 0190F. Darwinian Medicine.

Explores evolutionary explanations of why we get sick, and how this can shape, or misshape, our interpretations of medicine. Draws on evolutionary genetics, population biology, molecular biology and physiology. This course will build on evolutionary biology and then focus on disease processes such as infection, aging, cancer, allergy, diabetes, and obesity. Enrollment limited to 19 first year students.

BIOL 0190P. Pride and Prejudice in the Development of Scientific Theories.

We will examine how the pace and shape of scientific progress is affected by the social/cultural context and the "personality" of the individual. We will look into how the interplay between society and the individual affects how scientific theories arise, are presented, are debated and are accepted. The course will initially focus on Charles Darwin and his theory of Natural Selection using the biography of Adrian Desmond and James Moore, "Darwin: The Life of a Tormented Evolutionist." Enrollment limited to 19 first year students.

BIOL 0190Q. Climate Change and Species Extinction.

In this course students will go beyond the headlines and delve into the science to explore the impact of climate change on species extinction. Students will explore the integration of science and technology through traditional textbooks, primary literature, open source databases, simulations, and discussions. Students will investigate the impact of climate change on species distribution, ecology, and behavior through interactive, inquiry-based, collaborative classroom investigations. Students will learn to integrate information from a variety of sources and disciplines and share their ideas through classroom discussion, written assignments, and oral presentations. Enrollment limited to 19 first year students.

BIOL 0190R. Phage Hunters, Part I.

A research-based lab class for freshmen; both semesters are required in the sequence. Students will isolate and characterize a bacteriophage viruses found in the soil. Lab work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and PCR to characterize the phage. Several phage will be selected for genome sequencing, and will be annotated during the second semester. Instructor permission required. Admittance based on applications submitted online. Limited to 19 freshmen.

BIOL 0190S. Phage Hunters, Part II.

A research-based laboratory/class for freshmen; both semesters are required. Students will isolate and characterize a bacteriophage viruses found in the soil. Lab work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several phages will be selected for genome sequencing over Winter Recess, and annotated in the spring. One hour of lecture/discussion, and 3 hours lab per week. Expected: AP Biology or equivalent, HS chemistry, and permission of the instructor. Students are expected to take fall and spring courses in the sequence. Enrollment limited to 19 first-year students. Instructor permission.

BIOL 0190T. Bioinformatics: A Practical Introduction.

The amount of biological sequence data has grown at an exponential pace and spurred the development of computational tools that allow biologists to use this information. Students will become familiar with useful bioinformatics tools used by researchers. The course will introduce concepts of information transfer in biological molecules, storage in public databases, and how to use tools to access this information and organize it meaningfully. We will explore tools for studying whole genomes, including high-throughput sequencing data to assemble genomes and mapping subsets. Students will gain hands-on experience using these tools. Expected: AP credit or equivalent placement for BIOL 0200.

BIOL 0190U. The Lives of Plants.

This course examines the lives of plants through their development, structure, function, reproduction, and responses to environmental conditions. Enrollment limited to 19 first year students.

BIOL 0200. The Foundation of Living Systems.

A broad overview of biological systems, emphasizing patterns and processes that form the basis of life. Explores essentials of biochemistry, molecular, and cellular biology and their relationship to the larger issues of ecology, evolution, and development. Examines current research trends in biology and their influence on culture. Appropriate for all students interested in biology. Serves as a gateway course to much of the intermediate and advanced curriculum. Placement tests are offered (contact Jody_Hall@brown.edu); AP scores of 4 or 5 are equivalent to BIOL 0200, and place a student out of this course. Students will be assigned to a lab time during the second week of class.

BIOL 0210. Diversity of Life.

This course will explore biological diversity – the number of taxa, and the functions, and processes that support life – from the perspectives of ecology and evolutionary biology. It will draw on examples and case studies from the geological record, functional morphology, the evolution of organ systems in vertebrates, genomics, behavior and sexual selection in birds and invertebrates. Overarching themes will emphasize that taxonomic diversity is an emergent property of complex life on Earth, and the importance of diversity of biological functions and processes in generating and maintaining taxonomic diversity. The course is open to all students.

BIOL 0220. Discovering Novel Protein Folding Phenotypes of Wild Yeast.

Yeast species have been used by humans for over millennia in food and drink preparation. However, they are also a powerful model system to tease out the genetic and molecular details of protein folding. Research labs utilize yeast as a model system to study several cellular mechanisms, but this entire body of work comes from just two different yeast strains. And yet, wild yeast grow everywhere in our everyday environments outside of the research lab; nature has provided rich genetic diversity among these yeast species that go unstudied in a research setting. In this COEX course, you will investigate novel protein-folding phenotypes in these unidentified wild yeast strains.

BIOL 0280. Biochemistry.

Lectures and recitation sections explore the mechanisms involved in the principles of macromolecular structure and function, the organization and regulation of pathways for intermediary metabolism, and the transfer of information from genes to proteins. Expected background: Cell and Molecular Biology (BIOL 0500) or another intermediate level course providing background in molecular level thinking, e.g. BIOL 0470, BIOL 0530 or NEUR 1020.

BIOL 0285. Inquiry in Biochemistry: From Gene to Protein Function.

In this inquiry-based research course, students work in teams to formulate and test a hypothesis about how a change in genetic sequence affects enzyme function. Students will cultivate skills in scientific visualization, experimental design, data analysis, and laboratory techniques in molecular biology and biochemistry. In discussion, students will learn scientific writing through peer editing and iterative revisions to write a full scientific paper. This course is WRIT designated and will prepare students for writing an honors thesis. Expected: Students have previously taken or be concurrently enrolled in BIOL 0280. Enrollment in one lab section and one discussion section is required.

BIOL 0300. Endocrinology.

A basic examination of endocrinology with emphasis on hormone biosynthesis, mechanism of action, physiological roles, and endocrine pathology. Topics include: mechanism of action of steroid, amine, and peptide hormones; neuroendocrinology; reproductive endocrinology; and endocrinology of metabolism and calcium homeostasis. It is expected that students have taken BIOL 0200 (or equivalent) and CHEM 0350.

BIOL 0320. Vertebrate Embryology.

Introduction to the developmental anatomy of vertebrate embryos, including humans, in an evolutionary context, through lecture, discussion and microscope slide study. Gametogenesis through germ layers and their organ system derivatives. Expected: BIOL 0200, or equivalent placement, or AP Biology score of 4 or 5. Limited to 18 freshmen and 18 sophomores. Students MUST register for the lecture section and the lab.

BIOL 0350. The Fossil Record: Life through Time on Earth.

Course is designed for students with prior background in geology or evolutionary biology and who want to learn more about the fossil record, the origins of modern biodiversity and ecosystem structure, and interaction between organisms, and the geological and chemical cycles on the Earth. Lectures will cover major time periods during which animals and plants lived, as well as focusing on major transitions in the evolution of life on Earth. This course will fulfill requirements in both the geology/biology and evolutionary biology concentrations. Expected: BIOL 0210, GEOL 0240 or equivalent. Instructor permission, enrollment limited to 20 sophomores/juniors; register for course/lab.

BIOL 0380. The Ecology and Evolution of Infectious Disease.

Infectious diseases remain among the leading causes of death worldwide, and this burden is disproportionately borne by children living in low- and middle-income countries. Thus management of infectious disease remains a critical intellectual challenge in the 21st century. This course will develop and apply ecological and evolutionary theory to infectious microbes (and their hosts) via the detailed examination of a number of case studies. This will be accomplished by a combination of lectures, discussions, and readings drawn mainly from the primary literature. Assessment will be based on biweekly problem sets, two midterms and one final exam. Expected: BIOL 0200, BIOL 0210 or equivalent.

BIOL 0390. Vertebrate Evolution and Diversity.

An overview of vertebrate evolution that not only covers historical events, but also introduces various scientific concepts and modes of thought. Topics include past and present biodiversity, convergent evolution, biogeography, competition, continental drift, climatic change over time, the notion of evolution as progress, and a whole-animal approach to understanding evolutionary events. Enrollment limited to 50.

BIOL 0400. Biological Design: Structural Architecture of Organisms.

Many questions about the workings of living creatures can be answered by joining math, physics, and biology. We will identify basic physical science concepts that help biologists understand the structure and function of animals, plants, and microorganisms, and use these to study how the physical world constrains and facilitates the evolution of the extraordinary design and diversity of organisms. For first and second year students; others by permission. Recommended background: BIOL 0200, or equivalent. Enrollment limited to 40. Instructor permission required.

BIOL 0410. Invertebrate Zoology.

A survey of invertebrate animals emphasizing evolutionary patterns and ecological relationships. Functional morphology, physiology, reproduction, development, and behavior of invertebrates will be examined. Laboratory exercises and two separate day-long field trips provide firsthand experience with the animals. Expected: BIOL 0200 or equivalent. Enrollment limited to 44. Students MUST register for the lecture section and a lab.

BIOL 0415. Microbes in the Environment.

Examines the diversity of microbial life in the environment. Surveys key services that microbes perform on land and sea, including biodegradation of contaminants in the environment and ecosystem processes related to climate change. Examines biological interactions of symbioses, quorum sensing, and antibiotic production in a ecological context. Explores the genomic mechanisms explaining phylogeny and life history strategies in microbes. Demonstrate knowledge of the diversity of microbes in the environment and benefits in an ecological/evolutionary context. Lecture based, two fieldtrips to expand appreciation for microbial ecology. BIOL 0200 or equivalent placement; CHEM 0330. Enrollment limited to 20 sophomores, juniors and seniors.

BIOL 0420. Principles of Ecology.

The principles, concepts, and controversies involved in the study of the distribution and abundance of plant and animal populations and their integration into natural communities. Emphasizes interactions among organisms and the hierarchical nature of ecological processes affecting individuals, populations, and communities. Expected: BIOL 0200 (or equivalent) and MATH 0090. Lectures and weekly discussion.

BIOL 0430. The Evolution of Plant Diversity.

Examines the evolutionary history of plants from a phylogenetic perspective. Introduces the principles of phylogenetics and the use of phylogenies to understand organismal evolution. Highlights major trends in plant evolution over the past 400 million years. Lectures survey major plant lineages, with special focus on flowering plants. Weekly labs and assignments stress basic plant anatomy and morphology, identification, and learning to recognize and appreciate the abundance, diversity, and uses of plants in daily life. Expected: BIOL 0200 (or equivalent placement).

BIOL 0440. Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses.

This course focuses on what plants do and how they do it. Introduces the biology of plants, their growth and development, structural features, and their cellular and organismal responses to key stimuli. Examines physiological, reproductive and developmental strategies throughout the plant life cycle and in relation to environmental challenges. During laboratory section meetings, students pursue inquiry-based group research projects addressing novel questions about mechanisms that control plant growth and development. Laboratory section is required. Prerequisites: One Brown course with laboratory section in either Biology or Chemistry. Enrollment limited to 24 students.

BIOL 0450. Evolutionary Behavioral Ecology.

An exploration of the ecological and evolutionary principles that define animal behavior in the natural world. We will focus mostly on the field of behavioral ecology, including important phenomena like avoiding predators, obtaining food, finding mates, producing offspring, living in groups, and solving problems. In doing so, we will combine ideas and principles from the disciplines of ecology, systematics, physiology, and economics.

BIOL 0455. Coastal Ecology and Conservation.

Will enable to students to master fundamental ecological concepts and understand how this knowledge can be used to inform coastal conservation and management. Case studies from New England and elsewhere, field trips to rocky shores, salt marshes and coastal ecosystems enable students to develop scientific skills and experience the challenges of coastal conservation science. The course is aimed at freshmen and sophomores. Expected background: BIOL 0200 or equivalent placement. Enrollment limited to 10 students, and written permission required. Email (Mark_Bertness@brown.edu) to receive course application (due May 1). Admitted students register for the course in September.

BIOL 0460. Insect Biology.

Focuses on characteristics that make insects unique and why more insect species have been described than all other organisms combined; the opportunity to investigate diversity and adaptation; their abundance, small size, and short lifespans; their importance as agents of biocontrol pollination, agricultural pests, and disease vectors. Expected: BIOL 0200 or equivalent. Enrollment limited to 20. Students MUST register for lecture AND lab. Primarily for freshmen and sophomores.

BIOL 0470. Genetics.

We'll learn about genetic phenomena at the molecular, cellular, organismal, and population levels. Topics include: transmission of genes and chromosomes, mutation, structure and regulation of the expression of genes, genomics, genetic engineering, and evolutionary genetics. One laboratory session (mandatory) and several problem set solving sessions (optional) per week. Expected: BIOL 0200 (or equivalent placement). (Students should not plan to take BIOL 0470 after 1540.)

BIOL 0480. Evolutionary Biology.

A broad introduction to the patterns and processes of evolution at diverse levels of biological organization. Topics covered include natural selection, adaptation, speciation, systematics, macroevolution, mass extinction events, and human evolution. Students will be given the opportunity to do their 23andMe ancestry analyses as a means of integrating the topics that span genomics to human variation. Weekly discussion sections involve active learning simulations and discussions of papers from the primary literature. Occasional problem sets involve computer exercises with population genetics and phylogeny reconstruction. Expected: BIOL 0200 (or equivalent placement).

BIOL 0495. Statistical Analysis of Biological Data.

A first course in probability distributions and the use of statistical methods for biological data. Topics covered will include describing data, statistical inference (hypothesis tests and confidence intervals), analyzing associations, and methods for categorical data (contingency tables and odds ratios). Methods will be applied to data drawn from areas of biological inquiry. For statistics or related science credit in Biology programs. Expected background: BIOL 0200 or equivalent, math equivalent to MATH 0100. This course is for related science credit only in Biological Sciences concentration programs.

BIOL 0500. Cell and Molecular Biology.

This course examines the structure and function of the basic unit of an organism, the cell. An experimental approach is used to examine cellular functions, ranging from gene transcription, cell division and protein secretion, to cell motility, and signal transduction. Relevance to health and disease will be considered. Expected: BIOL 0200 (or equivalent advanced placement biology 4/5).

BIOL 0510. Introductory Microbiology.

Introduces role of microbes in our understanding of biology at the cellular and molecular level. Focuses on microbial significance for infectious disease, public health, genetics, biotechnology, and biogeochemical cycles. Laboratory involves basic microbiological techniques and selection and manipulation of microbes. Expected: BIOL 0200 (or equivalent placement). Students MUST register for the lecture section and the lab. Enrollment limited to 108.

BIOL 0530. Principles of Immunology.

Introduction to experimental and theoretical foundations of immunology. Focuses on concepts, landmark experiments and recent advances. Topics include innate and adaptive immunity; structure/function of antibody molecules and T cell receptors; regulation of immune responses through cellular interactions. Applications of concepts to medically significant issues (vaccines, transplantation, inflammation, autoimmunity, cancer, HIV/AIDS) are discussed. Interpretative analysis of experimental data is emphasized. Expected background: BIOL 0200 or equivalent placement credit.

BIOL 0600. Genetic Screening in Model Organisms.

Using gene silencing (RNAi) in the nematode *C. elegans*, students will identify genetic modifiers of proteins with roles in aging by reverse genetics. Analyzing the effect of knocking down genes on the level of aging-related proteins tagged with fluorophores (GFP, RFP, etc.). Students will use function-specific RNAi libraries (transcription factors, kinases, etc) established in our lab. Students will evaluate the effect of genetic modifiers on proteostasis and lifespan, also familiarize *C. elegans* work and appreciating the use of model organisms, the students will master microscopy, genetic crosses, gene silencing, and molecular and biochemical readout assays such as qPCR and immunoblotting. Expected: BIOL 0200 or equivalent.

BIOL 0610. Modeling Human Disease Using Stem Cells.

In this COEX and CBLR course, students will have the opportunity to develop their own hypothesis-driven research question with a focus on pluripotent stem cell biology and Alzheimer's Disease (AD). Understanding how to manipulate pluripotent stem cells is vital in studying normal developmental processes and what goes awry in a disease. Students in this course will propose and carry out their own research project utilizing human iPSCs to further understand pathological cellular states associated with AD using patient lines. The research project will be developed at the beginning of the semester with in-lab work carrying out the proposed set of experiments, analyzing the data and presenting the results in a scientific poster session. Students will also be able to translate the biology of the disease to clinical experiences, community outreach, and patient interactions in the surrounding community. For advanced undergraduates.

BIOL 0620. Fermentation to Publication: Experimental Food Microbiology.

To understand the art and science of fermentation, we need to explore the complex interplay of polymicrobial communities, where multiple microbial species interact, collaborate, and compete to produce the final product. This requires both experimental microbiology and computational analysis. In this CURE class, we carry out a novel, scientifically important experiment related to polymicrobial fermentation. We analyze the data using traditional microbiological techniques alongside sequencing and computational methods. Together, we write and submit a manuscript for publication based on our findings. In 2025, for example, the class focused on kimchi and published here: <https://www.mdpi.com/2304-8158/14/11/1948>. In addition to the research project, students give presentations on other fermented foods and, for the final project, propose a new experiment to be conducted in the following year's class. In effect, we go from fermentation all the way to publication in one exciting semester.

BIOL 0800. Principles of Physiology.

Introduction to the function of organ systems with an emphasis on human physiology, includes basic concepts in cell and organ system physiology as well as fundamentals of modern trends in physiological science, emphasizes the application of physical and chemical principles to organ function at both the cellular and systemic levels. Expected: BIOL 0200 or equivalent.

BIOL 0860. Diet and Chronic Disease.

This course addresses the relationship of food to the development and treatment of chronic diseases. Chronic diseases discussed are obesity, dyslipidemia/heart disease, diabetes mellitus, cancers and osteoporosis. Dietary recommendations for these diseases are critically assessed. Geared toward students interested in nutrition, medicine, and public health. Prerequisites: BIOL 0030, plus permission of the instructor. Enrollment limited to 20.

BIOL 0920A. Controversies in Medicine.

Why and how do controversies in medicine emerge at specific moments in time? Why do scientists come to different conclusions based on the same data? Does it matter how we interpret controversies? This sophomore-level seminar critically analyzes contemporary controversies in medicine and public health. Using a case study approach, we will examine the social and political assumptions that inform important controversies. Questions related to the relationship between science, media, activism, and health inequality will be woven into the case studies. Enrollment limited to 20 sophomores. (For theme, not biology, credit in Health and Human Health and Biology only.)

BIOL 0940A. Viral Epidemics.

This sophomore seminar will examine epidemics (outbreaks) of viral infections from a historical perspective. We will also cover current literature and up to the minute news accounts of infectious disease related outbreaks occurring around the globe. The major focus will be on virus related diseases but any microbial outbreak in the news will be explored. The seminar will cover basic aspects of microbial pathogenesis so students can gain an appreciation of microbial host interactions. Essential writing skills will also be developed. Enrollment limited to 20 sophomore students.

BIOL 0940B. Sophomore Seminars in Biology: Life in a Shell.

This Sophomore seminar is an examination of broad themes in whole animal physiology with an emphasis on environmental adaptations. The foundation of the course will be the instructor's recent book "Life in a Shell: A Physiologist's View of Turtle." A consideration of this iconic animal's novel biological traits will lead into comparisons with our own biology and that of other animals. Topics: respiration, circulation, metabolic rate, buoyancy control, overwintering, migration, reproduction, and bone structure and function. Relevant original research papers will be used. Mandatory S/NC; enrollment of 20 students; override required. Expected: BIOL 0200 or equivalent placement credit.

BIOL 0940C. Sophomore Seminar: Insect Biology.

Focuses on characteristics that make insects unique and why more insect species have been described than all other organisms combined; the opportunity to investigate diversity and adaptation; their abundance, small size, and short lifespans; their importance as agents of biocontrol pollination, agricultural pests, and disease vectors. Expected: BIOL 0200 or equivalent. Enrollment limited to 12 sophomores only. Students MUST register for lecture AND lab.

BIOL 0940D. Rhode Island Flora: Understanding and Documenting Local Plant Diversity.

This Sophomore Seminar focuses on species level identification of plants in Rhode Island and will cover the dominant plant species in each of the state's main habitats including coastal wetlands and uplands, freshwater wetlands, peatlands, upland forests, and disturbed areas. Students will learn to identify plants using online interactive keys as well as more technical dichotomous keys and will also cover basic ecological processes in each habitat including the interaction of soils, geology, and hydrology. Materials related to plant morphology, plant taxonomy, plant evolution, understanding phylogenetic trees, and botanical illustration. Instructor permission required.

BIOL 0940E. Precision Medicine or Privileged Medicine? Addressing Disparities in Biomedical Research.

This course examines the biomedical research behind precision medicine, disparities in the inclusiveness of this research, and implications of these disparities for the relevance of precision medicine innovations for people and places in Rhode Island. We will focus on these four questions: What new knowledge is making precision medicine possible? Who has been the focus of the biomedical research generating this knowledge, and why? How might inclusiveness of this research impact healthcare disparities in Rhode Island? What is needed to improve the design and outcomes of precision medicine research so that it provides benefits and mitigates harms for all?

BIOL 0940G. Antibiotic Drug Discovery: Identifying Novel Soil Microbes to Combat Antibiotic Resistance.

This is a Course-based Undergraduate Research Experience (CURE) class that will provide students with the chance to propose, design and conduct their own research projects. Antibiotic resistance is a major global health threat. Pharmaceutical companies are less likely to fund research and development of new antibiotics due to their relative low profitability. As bacteria become more resistant to antibiotics, it is critical that we have a robust pipeline ready to combat these pathogens. The main focus of the course will be for students to discover new antibiotics in soil bacteria that can be used to treat infectious disease. Please NOTE: This course carries Biology concentration credit for the laboratory component.

BIOL 0945. Toolbox for Scientific Research.

Why is scientific research important? What is the scientific method? What are hypotheses and theories? How do scientists identify research questions, design experiments, fund research, and communicate results? This sophomore seminar is designed for students who want to understand and engage in scientific research in biology. Through active learning seminars, group discussions, and meetings with scientists, students will gain a deeper understanding and an appreciation for the principles, practice, and culture of scientific research. The course will also help develop practical and transferable skills to succeed in research and give students an opportunity to connect with research groups at Brown.

BIOL 0946. Research Design + Quantitative Methods for the Health Sciences.

This is a course offered for students in one of Brown University's Biology concentrations that provides the skills necessary to identify a clinical research question from a case scenario, design a research design to answer a research question, identify the appropriate quantitative methods for the design, and interpret the results. These skills translate to almost any research experience, including honors theses and future endeavors. Students will also learn how to publish in oral and written formats across the health sciences disciplines.

BIOL 0960. Independent Study in Science Writing.

BIOL 0960 (fall/spring) is a half credit Independent Study in Science Writing course incorporating a nontechnical science journalism component into the Biology curriculum. Assignments may include investigative or analytical reviews, or feature articles on ethical or social impacts of new discoveries in the biological sciences. BIOL 0960 requires the submission of a formal project proposal completed collaboratively by the student and faculty mentor (see the Biology Undergraduate Education research page for details). BIOL 0960 is not for concentration credit in the biological sciences programs.

BIOL 0985. Greenhouse Crops & Interiorscapes.

This is an applied-knowledge course designed to prepare students to be introduced to the management of greenhouse operations and basic interiorscaping design & practices. This course covers principles of greenhouse structures, plant health and growth, growing media, greenhouse crop selection and propagation, and management techniques. Upon completion of this course, proficient students will be equipped with the technical knowledge and skills needed to prepare in furthering their education. This course will focus on introducing students to the greenhouse space and teach them how the facility aids in producing plants for research and for enjoyment. The course will also explain general propagation techniques and the world of interiorscaping, and how to grow the plants used for this purpose, as well as exploring basic interiorscape design. The course does not carry Biology concentration credit.

BIOL 1000. Quality Improvement Science and Application: From personal improvement to strengthening healthcare.

Have you ever set a goal, tried to accomplish it, failed, adjusted your routine, and tried again? If so, you have already engaged in quality improvement (QI)! QI is focused on how change is implemented in healthcare and in other settings (such as aerospace) with the goal of standardizing processes and reducing variation. QI is achieved through setting specific, measurable goals and making small, iterative changes; all while implementing and evaluating change. If you want to learn how to implement a change, sustain that change over time, and measure success, this course is for you. The project provides an opportunity to engage in QI in your life to implement and evaluate progress on a goal that is important to you (e.g., drinking more water, practicing better time management skills).

BIOL 1040. Bioimaging.

This course examines microscopy and image analysis in the life sciences. Theoretical and practical aspects of microscopy will be discussed. Students will obtain hands-on experience with electron microscopy, light microscopy, fluorescence microscopy, and confocal microscopy. Students will learn to display images in 3D. Advanced undergraduates. Instructor permission required.

BIOL 1050. Biology of the Eukaryotic Cell.

This course examines subcellular processes and structure/function roles of macromolecular complexes regulating major cellular activities in eukaryotic cells. Course content will cover cellular and molecular techniques in cell biology, functions of cellular compartments, and the organization and expression of genetic information in eukaryotes, comparing normal and pathological states. Lectures and readings will emphasize the experimental basis for knowledge in modern cell biology using original literature and current research in cell/molecular biology. You will learn to read and analyze published research as well as master current concepts and understanding of cellular structure and function. You will then apply this mastery to propose an original research project that would advance those understandings. For advanced undergraduates and beginning graduate students. Complementary to BIOL 1270 and 1540. Prerequisites: BIOL 0280 or 0470 or 0500, or instructor permission. Graduate students register for BIOL 2050.

BIOL 1070. Biotechnology and Global Health.

This course examines contemporary biotechnologies used to combat the predominant, worldwide problems in human health. Global health will be addressed from the scientific and engineering perspectives while integrating public health policy, health systems and economics, medical and research ethics, and technology regulation and management. This course is intended for graduate and advanced undergraduate students in biology, engineering, or related fields who have an interest in global health initiatives. Expected background: BIOL 0200 and BIOL 0800, or equivalents. Preference will be granted to graduate students in the Biotechnology and Biomedical Engineering programs. Only for related course credit in Biology. Enrollment limited to 20. Instructor permission required.

BIOL 1090. Polymer Science for Biomaterials.

Basic principles of polymer science and its application in medicine. Topics include basic polymerization chemistry, kinetics of polymerization and depolymerization with emphasis on bioerodible polymers, characterization of polymers by physical methods, bulk and surface properties, behavior of polymers in solutions, crystallization, gelation, and liquid crystals. Hands-on experience with polymer characterization. Expected: CHEM 0350. Enrollment limited to 25.

BIOL 1100. Cell Physiology and Biophysics.

Current topics in cell physiology, with an emphasis on membrane-mediated interactions between cells and their environment. Topics may include: ion channel structure, function and regulation; intracellular regulatory molecules; mechanisms of sensory transduction; membrane receptors and second messenger systems; vesicle secretion; and cytoskeletal regulation of cell function. Lectures, discussion, and student presentations of the current literature. Expected: BIOL 0800 or NEUR 0010. Instructor permission required. **Enrollment limited to 30, and admission is based on seniority -- graduate students, seniors, then juniors. (Not for first and second-year undergraduates.) Students must request an override code through C@B.**

BIOL 1110. Topics in Signal Transduction.

Signal transduction is one of the most rapidly developing fields in biomedical sciences. Defects in signaling pathways can be responsible for diseases such as cancer, diabetes, cardiovascular disorders and psychoses. This course offers students an overview of the molecular pathways that allow cells to receive and process signals from their external environment, with an emphasis on the emerging state-of-the-art techniques used in their study. Expected background: BIOL 0200, 0280, 0470, or 0500.

BIOL 1120. Biomaterials.

A biomaterial is defined as a material suitable for use in medical implants that come in direct contact with patients' tissues. These include polymers, metals, and ceramics, and materials obtained from biological sources or through recombinant biotechnology. Goal: to provide comprehensive coverage of biomaterial science and technology. Emphasizes the transition from replacement to repair strategies. For advanced undergraduates and graduate students. Prerequisite: BIOL 0800 or instructor permission.

BIOL 1140. Tissue Engineering.

Tissue engineering is an interdisciplinary field that incorporates progress in cellular and molecular biology, materials science, and engineering, to advance the goal of replacing or regenerating compromised tissue function. Using an integrative approach, we will examine tissue design and development, manipulation of the tissue microenvironment, and current strategies for functional reconstruction of injured tissues. Expected: CHEM 0330, plus BIOL 0500 or 0800. Enrollment limited to 20. Instructor permission required.

BIOL 1150. Stem Cell Engineering.

Stem cell engineering focuses on using adult, embryonic, and induced pluripotent stem cells to repair damaged or diseased tissues. This course will examine the role of stem cells in development, tissue homeostasis, and wound healing, as well as how they can be used for tissue engineering and cell-based regenerative therapies. We will also discuss the ethical, legal, and regulatory issues that accompany current and emerging stem cell engineering endeavors. The course will use an inverted lecture and classroom discussion format to effectively deliver relevant information. Emphasis is placed on oral and written communication skills applied to assignments, tests, and individual projects. As an additional part of this course, students will receive hands-on training in how to culture cells and assess samples for stemness characteristics in a group laboratory setting.

BIOL 1155. Hormones and Behavior.

This class will explore the hormonal basis of animal behavior. We will assess this relationship at the molecular, cellular, physiological, and evolutionary levels, focusing on a wide range of species beyond humans. Our goal is to understand the diverse mechanisms by which hormones act throughout the animal body to mediate what individuals do in their natural environment. We will explore how selective forces shape these mechanisms to not only arrive at common behavior traits, but also unique and unusual traits that allow species to thrive in harsh or extreme environments.

BIOL 1160. Principles of Exercise Physiology.

Application of the basic principles of physiology to the study of the response mechanisms of the human body during exercise. Topics include muscle and neural control, energy metabolism, cardiovascular and respiratory effects, endocrinology, principles of training, and special topics (e.g., diving, high altitude, and microgravity). Student presentations based on scientific articles are included.

BIOL 1180. Comparative Animal Physiology.

Comparative approach to the function and regulation of animal systems with an emphasis on vertebrates. Topics include circulation, gas exchange, neuromuscular function, excretion, acid-base and ion regulation, and temperature regulation. Considers the unity and diversity of physiological processes in animals differing both in phylogeny and environmental adaptation. Original papers are discussed. Expected: BIOL 0800 or equivalent.

BIOL 1190. Synaptic Transmission and Plasticity.

Synapses are the means by which the nervous system communicates. In this seminar-style course, we will explore the molecular and physiological underpinnings of synaptic transmission. We will then examine ways in which synapses can modulate their strength during development, learning, after addictive drugs, and other adaptive processes. Readings are ONLY from primary literature. Course recommended for juniors and seniors. Required: NEUR 1020. Enrollment limited to 20. Instructor's permission required, attendance at class on the first day is mandatory.

BIOL 1200. Protein Biophysics and Structure.

Structural Biology is the science to determine 3-dimensional structures of biomacromolecules (i.e. proteins, RNA, and DNA). These structures enable biologists to understand and explore their function. Since proteins, RNA, and DNA are the primary molecules of life, structural biology enables us to understand and influence these molecular machineries which form the basis of all biological processes. Throughout the class, the students will see examples of biologically important proteins and protein complexes that will allow them to correlate structure and biological function. Prerequisite: BIOL 0280.

BIOL 1210. Synthetic Biological Systems.

A multidisciplinary course that combines science and engineering providing a solid foundation in a cutting edge field of biological engineering. Synthetic biology is a mixture of biology, chemistry, engineering, genetic engineering and biophysics. It builds on recent work in systems biology which involves the modeling of biological systems, but goes further in that it involves the construction and standardization of biological parts, that fit together to form more complex systems. Expected: at least four courses beyond BIOL 0200, CHEM 0330, PHYS 0300, ENGN 0300, MATH 0900, or CSCI 0040.

BIOL 1220. Synthetic Biological Systems in Theory and Practice.

A multidisciplinary laboratory, lecture, and discussion based course that combines several areas of science and engineering providing a foundation in the cutting edge field of synthetic biological engineering. The field of synthetic biology is centered around trying to make biology easier to engineer. It builds on recent work in systems biology which involves the modeling of biological systems, but goes further in that it involves the construction and standardization of biological parts that fit together making complex systems. This course will combine classes, guest lectures and discussion lab visits to give students the best possible tools for understanding and applying research in synthetic biology. Expected: at least two courses in any of the key disciplines (biology, chemistry, physics, math, engineering, computer science) beyond the introductory level, and permission of the instructor.

BIOL 1222A. Current Topics in Functional Genomics.

A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of "system-wide" approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Students typically have taken an advanced undergraduate-level course in biology.

BIOL 1250. Host-microbiome Interactions in Health and Disease.

Will focus on current understanding of how various microbiomes communicate and interact with the host and the factors that influence these interactions. We will discuss how the new technologies such as metagenomics and metabolomics have enhanced our understanding of host-microbiome interactions in health and disease. Students will have the opportunity to participate in discussions on how to apply recent discoveries to disease processes, health restoration and maintenance. The course will help students develop skills in critical thinking and in reading and evaluating original scientific literature. Expected: students with a background in basic microbiology (BIOL 0530 or its equivalent). 20 enrollment.

BIOL 1255. Climate Change & Health: Infections and Inequalities.

This course examines the connections between people, animals, plants and their shared environment to highlight the influence of climate change on infectious disease and its disproportionate effect on impoverished communities. During the course, we will spotlight a several infectious diseases (HIV, Rabies, Ebola, Chagas), exploring their history, pathophysiology and geographic spread. We will discuss how climate change has influenced ecosystems, causing shifts in transmission and creating new challenges for treatment. We will use a biosocial approach to understanding how and why these changes disproportionately affect impoverished communities. You will learn using podcast episodes, news articles, research studies and documentaries. Several guest speakers will supplement course materials and guide activities. This course offers the opportunity to learn about climate change & health using a One Health and biosocial approach.

BIOL 1260. Physiological Pharmacology.

Covers the physiology of human disease (e.g., Heart failure and arrhythmia; cancer signaling pathways with a focus on breast cancer; neurological disorders such as schizophrenia and Parkinson's disease) and discusses the pharmacology of the drugs used to treat disease. A group of the most commonly prescribed drugs is discussed in terms of their fundamental modes of action and clinical importance. Expected: BIOL 0800.

BIOL 1270. Advanced Biochemistry.

An advanced course in biochemistry, biochemical methods, and reading of the primary literature, featuring systematic coverage of the biochemistry of the central dogma, including DNA (replication, repair, recombination), RNA (regulation and mechanism of transcription, processing, turnover), and proteins structure, synthesis, modification, degradation, mechanisms of action, function). Expected: BIOL 0280, CHEM 0350, 0360. Graduate students register for BIOL 2270.

BIOL 1290. Cancer Biology.

Provides a conceptual understanding of molecular events underlying development of human cancer. Focused on genetic changes leading to malignant transformation of cells. Covers cell cycle control, DNA damage, mutagenesis, cancer predisposition syndromes, oncogenic viruses, tumor immunology, metastasis, cancer chemotherapy and drug resistance. Lecture plus discussion of primary literature. Prerequisites: BIOL 0280 OR BIOL 0470 OR BIOL 0500.

BIOL 1295. Fundamentals of Cancer Immunotherapy.

Fundamentals of Cancer Immunotherapy focus on how are understanding of the relationship of cancer with the host immune system has allowed the development of a new generation of therapies. The course will be delivered by lecture/seminar and group discussions. The course covers contemporary knowledge of tumor-immune cell interactions, and the principles of immunotherapeutic approaches currently being applied in the clinic and in development. The course is designed so that students will view cancer immunotherapy through a range of different lenses; from intricate molecular details to cellular ecosystems and organismal effects. Lecture materials will provide detailed descriptions of the basic concepts involved and original research articles will be used to help develop critical thinking in the cancer immunotherapy field.

Recommended Prerequisites: At least two of the following or their equivalents: BIOL 0280, BIOL 0500, BIOL 0470, BIOL 0530, BIOL 1290

BIOL 1300. Biomolecular Interactions: Health, Disease and Drug Design.

Interactions between the molecules of life—proteins, RNA, DNA, membrane components—underlie all functions necessary for life. This course focuses on how nature controls these interactions, how these interactions can go awry in disease, and how we can learn the rules of these interactions to design drugs to treat disease. Students will review the physical basis of molecular interactions, learn classic and state-of-the-art high-resolution and high-throughput tools used to measure interaction, and survey the experimental and computational strategies to harness these interactions using a case study in rational drug design. Prerequisite: Introductory Biochemistry (BIOL 0280). Enrollment limited to 20; instructor permission.

BIOL 1310. Developmental Biology.

Covers the molecular and cellular events of development from fertilized egg to adult. Genetic basis of body form, cell fate specification and differentiation, processes controlling morphogenesis, growth, stem cells and regeneration will be examined. Differential gene regulation, intercellular signaling and their evolutionary conservation will be central to discussion of mechanisms governing developmental processes. Additional topics: developmental plasticity, impact of epigenetic and environmental factors, and basis of disease gleaned from developmental biology research. Live embryos will complement and reinforce concepts covered in class. Enrollment limited to 36. Expected: BIOL 0200 (or equivalent), and one course in genetics, cell biology or embryology.

BIOL 1330. Biology of Reproduction.

This course is an advanced, seminar-based course. Primary literature is emphasized to complement the format of extensive student seminar presentations. It is essential that students have a strong background in biology in order to gain the most from this course. The emphasis of the course is student seminar presentation and extensive discussion on the material. This is often the first opportunity for students to present/discuss science in a seminar format. Expected background: a course in Cell Biology (e.g. BIOL 0500 or 1050), and two additional Biology courses above the introductory (BIOL 0200) level. Enrollment limited to 20.

BIOL 1410. Evolutionary Genetics.

This course will focus on selected topics in molecular population genetics, molecular evolution, and comparative genomics. Classic and current primary literature at the interface of evolution and genetics will be discussed in a seminar format. The laboratory involves wet-lab exercises (allozymes, PCR-RFLP, sequencing), plus computer labs using DNA analysis packages. Students will prepare a final grant proposal on specific research interests. Expected: BIOL 0470 or 0480. Students MUST register for the lecture section and the lab. Enrollment limited to 20.

BIOL 1420. Experimental Design in Ecology.

An overview and discussion of the basic principles used to design lab and field experiments in ecology and environmental science. Topics include: replication and statistical power, appropriate use of factorial designs, nonparametric methods, post hoc tests, natural versus manipulative experiments, experimental artifacts and impact study design. Discussions based on primary literature and a new text. Expected: BIOL 0420.

BIOL 1425. Phylogenetic Biology.

This course is the study of the evolutionary relationships between organisms, and the use of evolutionary relationships to understand other aspects of organism biology. This course will provide a detailed picture of the statistical, mathematical, and computational tools for building phylogenies and using them to study evolution. Enrollment is by instructor permission. Students will present scientific papers in class and complete a final project consisting of their own phylogenetic analysis. Expected Background: Evolutionary Biology and quantitative methods (such as statistics, computation, or math). Open to juniors, seniors, and graduate students. Enrollment limited to 16.

BIOL 1430. Foundations of Population Genetics.

Population genetics considers the genetic basis of evolution: temporal changes in the genetic composition of populations in response to processes such as mutation, natural selection and random sampling effects. Starting from first principles, this course will develop a theoretical understanding of these dynamics. We will also explore the application of these tools to genomic-scale data in order to quantify the influence of various evolutionary processes at work in natural populations. Assessments will be based on class participation, one midterm exam and final project. Prerequisites: MATH 0100 and one of BIOL 0470 or 0480, or permission.

BIOL 1435. Computational Methods for Studying Demographic History with Molecular Data.

This course broadly covers the field of population genetics and genomics, and focuses on how inferences about demographic history can be made from genetic variation observed across populations today. The main question we will endeavor to answer in class is "How can we infer demographic history in a population using next-generation sequencing data?" Students will also learn how to apply computational tools/methods to infer demographic history using both simulated and real DNA sequencing data.

BIOL 1440. Coral Reef Ecology.

An examination of current topics in the biology of corals and the ecology and conservation of coral reefs in the Anthropocene. The seminar course sessions include an introductory lecture on the topic at hand coupled with discussion of assigned papers in the recent scientific literature. The course follows ecological principles to examine key species interactions, biodiversity patterns and consequences, trophic dynamics, pathways of resilience and regime shifts on coral reefs. This foundation builds the knowledge needed for advanced discussions of the effect of global climate change on coral reefs during the latter part of the course. Students select a contemporary topic to investigate and prepare a critical evaluation of research on that topic as a final term paper.

BIOL 1445. Medicine in Austere Settings.

This course examines the practice of medicine in austere settings and will include content related to tropical medicine/neglected tropical diseases, humanitarian relief, disaster management and wilderness medicine. Students will explore the history of these fields and the challenges that medical professionals face in these environments. It will focus on the multitude of ethical dilemmas when providing care in austere settings. Students should expect to think critically about challenging questions and learn various skills useful to the practice of medicine in austere settings, including basic epidemiology, public health coordination, disaster management and wilderness medicine techniques. Each week will feature a different scenario to tackle. Students will learn using podcast episodes, news articles, research studies, and documentaries. This course is well-suited for students who are interested in public health, international health policy or aim to pursue a career as a medical professional.

BIOL 1450. Community Ecology.

This course will explore foundational concepts in community ecology, and will draw on examples and case studies from marine and terrestrial ecosystems, including species-rich tropical rain forests and coral reefs, the marine intertidal and benthic environments, and species-poor forests and grasslands of the temperate zone. Overarching themes will emphasize theoretical frameworks to understand the evolutionary origins and maintenance of this biological diversity. This will be accomplished using traditional lectures, weekly student-led discussions, readings of the primary literature, and class activities. Expected background: BIOL 200 or equivalent placement; and BIOL 0420; OR instructor permission.

BIOL 1455. Planetary Health: Global Environmental Change and Emerging Infectious Disease.

Will a warmer world be a sicker world? What is it about the New England landscape that supports the proliferation of Lyme Disease? How are local wildlife trade and global species invasions contributors to emerging diseases like the 2003 outbreak of monkeypox virus in the USA? We will explore these and related questions in Planetary Health. Planetary health is a timely new field focused on understanding the human health implications of human-caused disruptions to Earth's natural systems. The facet of 'health' that we focus on in this course is infectious disease. Students will learn how, when, where and why infectious diseases emerge in association with anthropogenic environmental impacts, specifically climate change, land-use change, and increased human interaction with animals. This course satisfies the Health and Human Biology senior capstone requirement for students studying in the planetary health theme.

BIOL 1465. Human Population Genomics.

An introduction to human genomics and the evolutionary forces that shape observed genetic variation across humans today. Topics will include the relationship among humans and other primates, human population genetics and genomics, and examples of the concomitant evolution of both cultural traits and domesticated organisms. Assignments include a class presentation and reviewing papers on a selected topic. Expected background: BIOL 0470 or 0480, and BIOL 0495, PHP 2500, or equivalent. Enrollment limited to 25. Instructor permission required.

BIOL 1470. Conservation Biology.

Conservation Biology is the scientific study of the phenomena that affect the maintenance, loss, and restoration of biological diversity. Topics covered include: 1) the impacts of global warming, species invasions, and habitat destruction on biodiversity, 2) strategies developed to combat these threats, and 3) a consideration of key economic and ethical tradeoffs. Special attention will be paid to current debate and controversy within this rapidly emerging field of study.

BIOL 1480. Terrestrial Biogeochemistry and the Functioning of Ecosystems.

Three fundamental multidisciplinary questions will be addressed: How do ecosystems work? What limits the growth of life on Earth? How are humans altering the framework in which all life exists? Earth is basically a closed chemical system, and the reactions that support life are fueled by sunlight. But added to this chemistry and physics is the tremendous influence of life. Life created an oxygen atmosphere; the evolution of biological nitrogen fixation exponentially increased how many organisms could exist, and the soils that support human food production developed only by biologically-mediated processes. Throughout Earth's 4.5 billion-year history changes in Earth's basic biogeochemical processes have been fairly slow. Under our inattentive stewardship, we have almost instantaneously altered all of the major element cycles. We will focus heavily on what these changes mean for life on Earth. Instructor permission required.

BIOL 1485. Climate Change Health and Ecology.

Explore the linkages between climate change and health. Students will come to appreciate the topic through the foundations of the primary disciplines relevant to the field including global health, environmental change, disease ecology, and others. Climate-health linkages will be learned through weekly case studies addressed collectively through student-centered lectures, discussion of the primary literature, groups activities and guest lectures from campus faculty on topics ranging from climate migration to infectious disease range shifts. Expected background: BIOL 0475, or BIOL 1470, or PHP 1070, or PHP 1920, or equivalent experience with instructor's permission. Enrollment limited to 12 juniors and seniors.

BIOL 1495. 500 Million Years of Land Plants.

Explores the evolution of terrestrial plants and the ecosystems they structure. Introduces the fossil record of plants and basic patterns of plant diversification on land. Highlights major trends in the evolution of plant morphology, anatomy, and ecology. Lectures survey the diversity and community structure of different geological time periods. Weekly discussion sections, field trips, and assignments examine major evolutionary trends, particularly with regard to climatic changes over time. Expected: BIOL 0400, BIOL 0430, (or equivalent placement). Enrollment limited to 15 students; instructor permission; register for section and conference.

BIOL 1500. Plant Physiological Ecology.

An in-depth look at plant ecological strategy, focusing on the anatomical and physiological adaptations of plants to particular environments. Additional topics include plant-animal interactions, historical biogeography, and community assembly processes. A comparative, phylogenetic approach is emphasized. Lectures present a broad overview of topics, and discussions focus on current outstanding problems. Lab exercises provide hands-on experience in designing experiments, measuring plant performance, and scientific writing. Required laboratory hours to be arranged by the instructor. Expected: BIOL 0430 or BIOL 0440. Enrollment limited to 15.

BIOL 1505. Environmental Physiology.

This course seeks to explore the physiological mechanism by which animals are adapted to live in our planet's diverse habitats. We study this topic by considering the physical and chemical properties of the environment, and how these properties shape the organismal functioning and performance. No animal is off limits to our exploration, as we will look at both vertebrates and invertebrates alike. Overarching themes will emphasize the power of natural selection as an evolutionary force that writes the "rules" of life, particularly in terms of survival.

BIOL 1515. Conservation in the Genomics Age.

The course will introduce students to the rapidly developing field of molecular ecology, emphasizing its importance for conservation biology. Students will explore key principles in evolutionary ecology based on readings, lectures, and discussions. Participants will also gain practical experience with ecological, genomic, and computational methods in the lab. This course is intended for advanced undergraduate and graduate students. Suggested prerequisites include Principles of Ecology (0420); Evolutionary Biology (0480) or Genetics (0470); the Lab Techniques Workshop for Biology Students provided by MDL; or similar with permission. Students will obtain permission from the professor to enroll.

BIOL 1520. Innate Immunity.

Innate immunity is the initial response to microbes that prevents infection of the host. It acts within minutes to hours, allowing the development of the adaptive response in vertebrates. It is the sole mechanism of defense in invertebrates such as insects. The components and mechanisms dictating this response are explored. Prerequisite: BIOL 0530. Enrollment limited to 30. Graduate students must obtain instructor permission.

BIOL 1525. Pathogenomics: Analysis, interpretation and applications of microbial genomes.

Pathogen genomes offer a wealth of information—from the discovery of new gene functions to helping to pinpoint the source of a food borne disease outbreak—and have become an increasingly widespread tool in microbiology in recent years. This course will introduce the fundamentals of genome sequencing and analysis for the study of microbial pathogens, and discuss current applications of these techniques in diverse microbial taxa (viruses, bacteria, fungi and parasites). In addition to lectures, the course will include hands-on computational analysis of pathogen genomic data in which students will learn how to analyze genomic data and apply these skills to an independent project investigating a novel question using a publicly available genomic dataset. Students should have taken introductory courses in genetics or microbiology (either BIOL0470 or BIOL0510) and computing in a unix environment prior to enrolling in this class.

BIOL 1530. Emergency Medical Systems: An Anatomy of Critical Performance.

Students taking BIOL 1530 will explore Emergency Medicine and the many subjects that make up the practice of providing care to patients at the most critical and dire moments of their lives. We will read, discuss, and write about Trauma, Medical Malpractice, Death and Dying, Refugee and Disaster Medicine, Interpersonal Violence, and Crisis focused Medical Ethics, among others, all viewed through the lens of Emergency Medicine. You will shadow in the Emergency Department of a Trauma Center and debrief with your TA's in weekly meetings, where the class topics will be discussed in open forums. This class, formerly PHP1520, has created a transformative experience for more than 30 years and will continue to foster new perspectives and ideas for every student who participates.

BIOL 1535. Survey of Health Informatics.

This survey course provides an overview of the field of biomedical informatics covering relevant topics in computer science, healthcare, biology, and social science. This is not a programming course and there are no computer coding components in this course. Emphasis is given to understanding the organization of biomedical information, the effective management of information using computer technology, and the impact of such technology on biomedical research, education, and patient care. The final capstone project of this course requires the in-depth examination, critique, and presentation of a specific topic in biomedical informatics, within the context of student (clinical or computational) interests. Students taking the course for graduate credit must produce a manuscript suitable for peer-review that synthesizes existing research and presents insights or applications in biomedical informatics.

BIOL 1540. Molecular Genetics.

Even in this era when whole genome DNA sequencing has become routine, there are still thousands of eukaryotic genes with unknown functions. Genetic screens for mutations that alter pathways of interest remain the premier approach to understanding gene function in the context of the organism. In Molecular Genetics students will learn the key concepts involved in designing and interpreting genetic screens using the powerful tools available in model animal, plant, and fungal organisms. Students will also learn how to understand and analyze results presented in the primary scientific literature. Furthermore, students will gain an appreciation of how the field of genetics has changed through discoveries and technological advances made over the past 50 years. Graduate students should register for BIOL 2540.

BIOL 1545. Human Genetics and Genomics.

This course will exemplify the power of genetically informed approaches to understanding human biology. It is intended for advanced undergraduate students and graduate students; prerequisites include BIOL0470 or equivalent. The course is based in lectures, reading material (textbook and primary literature), and in-class discussions. Course topics include: medical genetics and genomics; methods to study human genotypes and related phenotypes; industry-related topics; and ethical and societal implications of genome science. It will benefit students with career interests in basic science, medicine, biotechnology, or science policy. Enrollment is limited to 20 students; selection will be based on seniority, prerequisites, and registration order.

BIOL 1550. Parasitism: Biology and Disease.

Protozoan parasites influence the health of human populations in less developed countries, leading to severe human suffering and loss of economic development. Understanding the fundamental biology of these pathogens and how they are transmitted is essential for developing treatments and mitigation strategies to improve human health. Focuses on biochemical, genetic, cellular, and immunological aspects of parasite and host responses. Expected: BIOL 0470 or BIOL 0530.

This course was formerly "Biology of Emerging Microbial Diseases"

BIOL 1555. Methods in Informatics and Data Science for Health.

The goal of this course is for students to develop a solution that uses data science and informatics approaches to address a biomedical or health challenge. This course will teach informatics and data science skills needed for public health and biomedicine research. Emphasis will be given to algorithms used within the context of biomedical research and health care, including those used in biomolecular sequence analysis, electronic health records, clinical decision support, and public health surveillance. This course has been developed as a Course-based Undergraduate Research Experience (CURE), where students will gain experience with the scientific method, its application, and presentation.

BIOL 1560. Virology.

Emphasizes the understanding of molecular mechanisms of viral pathogenesis. Begins with a general introduction to the field of virology and then focuses on the molecular biology of specific viruses that are associated with human disease. Lectures based on current literature. Prerequisite: BIOL 0280, 0470, or 0530, or instructor permission.

BIOL 1565. Survey of Biomedical Informatics.

Survey course provides overview of field of biomedical informatics. Topics include computer science, healthcare, biology, social science. This course is designed to be complementary to BIOL 1555. Emphasis given to understanding the organization of biomedical information, effective management of information using computer technology, impact of such technology on biomedical research, education, patient care. Major aim explores the process of developing and applying computational and information science techniques for assessing current information practices, determining information needs of health care providers and patients, developing interventions or supporting clinical practice using informatics, and evaluating the impact of informatics solutions from a biomedical perspective.

BIOL 1575. Evaluation of Health Information Systems.

This course covers the field of evaluation of health information systems (HIS) in a range of roles and environments, in the US and worldwide. It includes topics in health information system (HIS) design and deployment, healthcare workflow, quantitative and qualitative evaluation methods and socio-technical environment for HIS. Emphasis is given to understanding the range of evaluation questions that can be asked, identifying the key stakeholders, understanding available evaluation techniques, and designing rigorous but achievable studies. Examples will include Open Source systems, medical Apps, and economic evaluation, the role of evaluation frameworks and theories, and notable HIS successes and failures. Recommended: past or concurrent enrollment BIOL 1565 or a public health course covering clinical research.

BIOL 1580. Metabolism Across Biological Scales: Integrative Physiology and Pathobiology.

Metabolism is a fundamental biological process encompassing all chemical reactions in the human body. The genetic diversity of trillions of microorganisms that live in and on the host further enhances the chemical diversity in mammals. Metabolic perturbation underlies almost all human diseases. Recent advances in analytical tools such as high-resolution mass spectrometry and imaging mass spectrometry, the use of stable isotope tracing and metabolic flux analysis, as well as the development of genetically encoded sensors and mathematical modeling have provided critical insights into mammalian biology in health and diseases. This course provides historical perspectives and explores recent advances in various metabolism-related topics. It is designed to be interactive and includes guest lectures from renowned scientists and learning modules to develop skills in creative writing, critical thinking, science communication, and artistic expression.

BIOL 1595. Artificial Intelligence in Health Care.

This course will teach the fundamental theory and methods of artificial intelligence (AI) alongside their application to the biomedical domain. It will give a representative overview of traditional methods as well as modern developments in the areas of (deep) machine learning, natural language processing and information retrieval. The course is designed to be accessible to non-computer science audiences and will not require extensive prior programming experience. The course will be accompanied by practical assignments applying the discussed techniques in a biomedical context. Understanding of formal theoretical knowledge will be assessed in a final exam. The course is designed for students concentrating in domains such as Computational Biology and Applied Mathematics-Biology; or Neuroscience concentrators who have completed a course in introductory statistics (e.g., BIOL 0495).

BIOL 1600. Development of Vaccines to Infectious Diseases.

Provides background steps involved in vaccine development, from conceptualization to production to deployment. Considers infectious diseases and associated vaccines in context of community health. Appropriate for students wanting to gain an understanding of vaccine science. Provides a foundation for advanced courses in immunology and infectious disease, biomedical research, or medical/graduate studies. Activities include a weekly section meeting for discussion of relevant primary literature, and a final project of the student's choice in the form of an in-class presentation, a research paper or an approved alternative format. Expected: BIOL 0200 or equivalent placement; BIOL 0530, and at least one additional biology course.

BIOL 1610. Experimental Neurobiology.

Please see NEUR1600 for registration instructions. Intensive laboratory experience in neuroscience appropriate for students with basic background in Neurobiology. Learn and employ the classical neurophysiological techniques of extracellular recording, intracellular recording and receptive field mapping using a variety of animal species. Experiments will include recording of sensory signals in the cockroach leg; frog sciatic nerve and sciatic nerve/muscle preparation; intracellular recording of neurons in Aplysia; receptive field mapping in frog skin; and visual field mapping in the frog tectum. Instruction on and practice of effective science writing is another component to this course. Labs are supplemented by informal lectures. Enrollment limited to 18.

BIOL 1630. Big Data Neuroscience Lab.

Recent technological developments have transformed neuroscience research, enabling us to generate comprehensive 'big data' sets that are often shared freely amongst the neuroscience community. This lab course will explore strategies to effectively use such open-sourced neuroscience data sets. Students will identify fundamental open questions in brain science and develop strategies to mine open-source sequencing, imaging and connectivity data to address their research questions. Please see NEUR1630 for registration instructions.

BIOL 1650. Structure of the Nervous System.

Combined lecture and laboratory course on the anatomy of the central nervous system. Lectures survey the circuitry of the major neural systems for sensation, movement, cognition, and emotion. Laboratory exercises (Mon. 10:30-12:30) include brain dissections, microscopy of neural tissue, and discussion of clinical cases. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030. Please see NEUR1650 for registration instructions.

BIOL 1800. Animal Locomotion.

How and why do animals run, jump, swim and fly? Physiology, anatomy, ecology, and evolutionary history all influence, and are influenced by, the way animals move around. We will integrate analyses from many levels of biological organization - from molecular motors, through bone-muscle systems, to biogeography - with methods and approaches from mechanics, fluid dynamics, and robotics. Expected: BIOL 0800 and PHYS 0030. Instructor permission required.

BIOL 1810. 21st Century Applications in Cell and Molecular Biology.

Twenty-first century applications in cell and molecular biology focuses on the structure and function of macromolecules and cells and how they are altered in disease and therapy. This course will explore physical principles underlying cell function, along with biophysical approaches for solving problems of cell and molecular biology. Cutting-edge molecular and cellular-based therapeutics will be discussed throughout this course; this includes viral gene delivery constructs, novel platforms for tissue engineering, CRISPR genome editing, and immune checkpoint therapy. This course is particularly suitable for undergraduate students interested in basic medical research, graduate school, or research-based careers in biotechnology or pharmaceutical industry.

BIOL 1820. Environmental Health and Disease.

Humans live, work, and play in complex chemical environments. BIOL1820 examines how environmental exposures impact health and contribute to disease. We will discuss contamination in the context of colonialism and capitalism as well as critically assess the ways society shapes science as a discipline. The course covers basic concepts in toxicology, physiology, and molecular biology and is divided into 6 units. The first unit, Science, Society, and Scientific Funding, will introduce you to the main themes of the course. The remainder of the course will be divided into the following units: radiation, lead, per- and polyfluoroalkyl substances (PFAS), endocrine disruptors, and emerging environmental concerns. For each unit, students will learn how contamination affects different communities and examine the biological systems impacted by contaminant exposure. BIOL1820 is designed for third and fourth year undergraduates, and is open to others with permission.

BIOL 1840. Epigenetics in Health and Disease.

In this course, students will explore an alternative perspective on genetic regulation beyond basic Mendelian genetics. If we share the same genetic content, why are our cells different, and why do they perform distinct functions? Why do some diseases profoundly affect gene regulation without a genetic mutation to explain them? The epigenome, a dynamic layer of information associated with genetic material (beyond DNA), plays a crucial role in creating genetic diversity. This course will examine epigenetic mechanisms, their regulation, and their impact on various biological layers, from cellular processes to diseases, brain circuits, psychological disorders, and social behavior. While the primary focus will be on human health and disease, students will also explore non-human case studies, investigating a range of organisms, including plants and animals, to demonstrate the diversity and complexity of epigenetic mechanisms.

BIOL 1850. Environmental and Genetic Toxicology.

Human disease is produced by complex interactions between inherited genetic predisposition and environmental exposures. These interactions will be explored at the molecular, cellular, and systemic levels. Prototype diseases will include hereditary disorders of hemoglobin, hypercholesterolemia, birth defects, and cancer. Expected: Cell Biology.

BIOL 1855. Tropical Medicine & Neglected Tropical Diseases.

This asynchronous/online course uses a biosocial approach to examine tropical medicine and neglected tropical diseases (NTDs). Students will learn about the troubled origins of tropical medicine and current efforts to decolonize global health. In addition, students will explore the effects of climate change on tropical medicine and neglected tropical diseases. The course will include a focus on global public health and the various interventions used to reduce the impact of neglected tropical diseases. Students will be challenged with a multitude of ethical dilemmas faced by global health practitioners and should expect to think critically about challenging questions. As part of the course, students will also learn about the epidemiology and pathophysiology of several tropical diseases, including malaria, dengue fever, Chagas disease, and more. Students will learn using assigned readings, podcast episodes, news articles, research studies, and documentaries.

BIOL 1865. Toxicology.

Toxicology is the science that describes the adverse biological effects of exogenous chemical and physical stressors, including environmental, industrial, and agricultural chemicals and pharmaceuticals. This course will introduce the principal biological processes that determine an organism's response to a toxicant, including absorption, distribution through a biological system, metabolism, elimination, and effects at the site(s) of action. We will discuss modern challenges in toxicology, such as assessing toxicity of mixtures and testing some of the thousands of untested chemicals in commerce. The material will be presented in lecture and student-led discussions, with readings from the toxicology literature.

BIOL 1870. Techniques and Clinical Applications in Pathobiology.

A methodology course featuring laboratory and lecture instruction in established and leading-edge technologies. Examples: flow cytometry (multi-parameter analysis, cell sorting); molecular biology (PCR, real time PCR, in situ hybridization, microarrays, DNA sequencing, bioinformatics); digital imaging (image acquisition, processing and analysis); confocal microscopy; histology and immunohistochemistry (confocal, immunohistochemistry).

BIOL 1880. Comparative Biology of the Vertebrates.

The biology, structure, and evolutionary history of the vertebrates considered phylogenetically, emphasizing evolution of the major body systems. Stresses an evolutionary approach to the correlation of structure and function with environment and mode of life. Labs include dissection of several different vertebrates and comparative osteological material. Emphasis of course is on critical thinking rather than memorization of material. Recommended: BIOL 0320 or 0800. First year students must obtain instructor permission to register. Enrollment limited to 32. Students MUST register for the lecture section and the lab.

BIOL 1885. Human Anatomy and Biomechanics.

Human Anatomy and Biomechanics examines the structure of the human body from the perspectives of biomechanics, evolution, and development, focusing on the musculoskeletal system, sensory systems, and the complex, multifunctional organ of the human skin. The course considers biological form and function at multiple levels of organization and in diverse contexts, and offers students opportunities to synthesize, question, and write about ideas presented in class. The course includes a weekly, 2-hr laboratory section in which students will use kinesthetic learning to develop deep knowledge of anatomico-medical terminology, study osteology and develop powers of observation working with human and non-human animal bones, dissect a preserved rabbit specimen to learn the soft-tissue anatomy of a mammal and visit the human anatomy dissection lab at the Alpert Medical School.

BIOL 1890. Human Histology.

This course will provide an in-depth treatment of the "stuff we are made of" and the wonderful logic of its organization. This course focuses first on the biology of the four basic tissues (epithelium, connective tissue, muscle and nerve) and second, how they contribute to the functional anatomy of all organs and systems. For Pfizer students only.

BIOL 1920C. Social Contexts of Disease.

What shapes our understandings of disease, and what makes a disease real? How might we explain the demise of formerly prevalent diseases and the arrival of others? How do politics, technologies, and institutions affect conceptions of disease and structure their treatment? Will examine the impact of social context on patients' experiences of disease, including clinical, scientific, and public health approaches. Will consider disease in relation to social relationships, power of the state to regulate disease, and cultural care of the body. Enrollment limited to 20 students; instructor permission required; serves as Capstone in Health and Human Biology. Not for concentration credit.

BIOL 1941A. Plants in a Changing Planet.

Plants are the foundation of Earth's ecosystems and essential to human survival and civilization. This seminar will examine the physiological, ecological, and evolutionary responses of plants to rapid environmental change, and the consequences for agriculture and the structure and function of natural systems. Expected background: at least one of the following courses - BIOL 0420, 0430, 0440, 0480, or ENVS 0490.

BIOL 1945. Outbreaks and Infections: Harnessing History and Preventing Future Epidemics.

This senior capstone course will investigate epidemic diseases that have plagued mankind in the past and explore the factors that contribute to the continued spread of diseases today. This course will emphasize the biology of both infectious and noninfectious diseases by exploring mechanisms of spread, pathogenesis, and prevention. Attention will also be given to environmental, economic, geographical, and social contributors to disease. Interactive class discussions, student presentations, analysis of primary literature, and multimedia homework will develop student skills culminating in an independent research project that dissects the life history of a disease and provides a forward-thinking strategy to combat it. The enrollment for this course is 15 students and limited to seniors who are HHB concentrators. Other students should request an override and priority will be given to senior Biology AB students.

BIOL 1950. Directed Research/Independent Study.

Directed research/independent study in biological sciences: basic science, social studies of biomedical science, and clinically-oriented projects, mentored by individual faculty members in the Division of Biology and Medicine. Sites include campus and hospital based facilities. Projects can serve as the basis for Honors theses, or to fulfill research requirements in a Bio-Med concentration program. Students planning to use 1950/1960 to fulfill a concentration requirement must receive approval from the concentration advisor. No more than two (2) semesters of BIOL 1950/1960 may be used toward a concentration program in the biological sciences. Faculty from outside the Division may supervise projects for bio-med program concentrators, but should do so using their Department's own Independent Study course number. Registration for BIOL 1950 requires the submission of a formal Project Proposal Form: https://brown.co1.qualtrics.com/jfe/form/SV_6KYM101CeOasFXE. For detailed information, please visit: <https://bue.brown.edu/research/independent-study>.

BIOL 1960. Directed Research/Independent Study.

Directed research/independent study in biological sciences: basic science, social studies of biomedical science, and clinically-oriented projects, mentored by individual faculty members in the Division of Biology and Medicine. Sites include campus and hospital based facilities. Projects can serve as the basis for Honors theses, or to fulfill research requirements in a Bio-Med concentration program. Students planning to use 1950/1960 to fulfill a concentration requirement must receive approval from the concentration advisor. No more than two (2) semesters of BIOL 1950/1960 may be used toward a concentration program in the biological sciences. Faculty from outside the Division may supervise projects for bio-med program concentrators, but should do so using their Department's own Independent Study course number. Registration for BIOL 1960 requires the submission of a formal Project Proposal Form: https://brown.co1.qualtrics.com/jfe/form/SV_6KYM101CeOasFXE. For detailed information, please visit: <https://bue.brown.edu/research/independent-study>.

BIOL 1970A. Stem Cell Biology.

Senior seminar course will provide an interactive forum by which up to twenty seniors (and qualified juniors with permission) will explore the biology of stem cells from their humble beginnings in the embryo to their potential use in regenerative medicine. The potency and regulation of embryonic and adult stem cell populations derived from diverse organisms will be contrasted with laboratory-derived human stem-like cells for biomedical applications. Critical reading of classical and modern literature in the field of stem cell biology will form the basis of student-led presentations, papers and ethical forums. Expected: biochemistry, genetics and/or cell biology. Instructor permission.

BIOL 1980. HIV/AIDS in Diverse Settings: Focus on Israel.

Participants in this winter session course will explore HIV/AIDS within the context of Israel's diverse society, unique demographics and universal healthcare. While in Israel, students will visit clinics, hospitals, and universities, engage with health care providers, experts in the field and populations with HIV. By the end of the course students will gain research skills and an understanding of this pandemic, its management and challenges in Israel, and how this important disease is modulated through risk factors, healthcare systems, medical innovations, and socio-economic factors. There is no need for prior experience in any associated discipline or any knowledge of Hebrew.

Course schedule: January 2-6, 2023 - daily seminars at Brown (including student and guest lectures); January 7-16 - tour in Israel; January 17 - rest day; January 18-24 - daily seminars at Brown.

BIOL XLIST. Courses of Interest to Biology Concentrators.**Fall 2025**

The following courses may be taken for concentration credit. Please see the sponsoring department for the time and location of each course.

Cognitive and Psychological Sciences

CPSY 1195: Life Under Water in the Anthropocene

Biology (Graduate)

Graduate Biological Sciences Education

The Division of Biology and Medicine offers multiple programs of advanced graduate study leading to the degrees of A.M., Sc.M., and Ph.D. These programs are thematically based: Biotechnology; Computational Biology; Ecology, Evolution, & Organismal Biology; Molecular Biology, Cell Biology, and Biochemistry; Neuroscience; Pathobiology; Therapeutic Sciences; and Biomedical Engineering.

The research network at Brown features advanced facilities situated on campus and at partner institutions which encourages discovery and innovation with state-of-the-art equipment and resources including: Genomics Core (<http://www.brown.edu/Research/CGP/core/equipment/>) and Proteomics Facility (http://biomed.brown.edu/epscor_proteomics/), Bioimaging facility (http://www.brown.edu/Facilities/Leduc_Bioimaging_Facility/), Transgenic and Gene Targeting Facility (http://www.brown.edu/Departments/Molecular_Biology/transgenic/), Center for Animal Resources and Education (<http://biomed.brown.edu/ancare/>), Plant Environmental Center (<https://www.brown.edu/academics/ecology-and-evolutionary-biology/about-us/facilities/plant-environmental-center/>), Water Flume (<http://www.brown.edu/Departments/EEB/research/morphology.htm>), RI BioBank (<http://biomed.brown.edu/rhode-island-biobank/>), Molecular Pathology Core (<https://www.brown.edu/research/projects/superfund/cores/core-d/>), Center for Computational Molecular Biology (<https://www.brown.edu/academics/computational-molecular-biology/home/>). More information about the Division's Research Facilities can be found here: <https://www.brown.edu/academics/biomed/research/core-facilities> (<https://biomedcorefacilities.brown.edu/>)

Students entering graduate programs generally have appropriate preparatory course work as well as significant research experience. Courses are chosen with the advice of program counselors, and may include, in addition to divisional offerings, courses offered by other university departments. As a part of the doctoral training most students will be required to participate in the teaching of one or more courses related to the program.

Biotechnology Graduate Program

The Biotechnology masters program offers Master of Arts (A.M.) and Master of Science (Sc.M) degrees and is designed for students interested in a range of topics related to the field of biotechnology and therapeutics including drug discovery, drug & gene delivery, cell therapy, and biotechnology business.

The educational objectives of the program are to promote an understanding of: 1.) the designs and materials used in novel cell and drug delivery systems; 2.) the molecular, cellular and animal sciences of drug discovery & drug development; and 3.) the development and testing of cell-based therapies for the treatment of diseases. We also offer courses on the business and management of biotechnology. Active areas of research include: cancer therapeutics, bioadhesive drug delivery systems, mesenchymal stem cells, alternatives to animal testing, nerve guidance channels, cartilage regeneration, cardiac arrhythmias, micro-vesicles, anti-microbials, insulin regulation, neuroactive & neuroprotective agents and cell delivery & encapsulation strategies.

Requirements for the ScM Degree

- A minimum of 8 tuition units are required.
 - At least five of the required eight courses must be structured, advanced level courses in biology or the sciences.
 - Must receive a grade of B or better, courses must be taken for a grade rather than credit/no credit.
 - No more than three of the required eight courses are to be used for thesis research (Graduate Independent Study).
- Program Director endorses the student's proposed curriculum.
- Must identify Brown faculty member willing to host student in lab.
- Students do research for the duration of the time in the Program.
- Student and faculty mentor select Thesis Committee.
- Submit final thesis, present work as a seminar and pass final oral examination by Thesis Committee.

Requirements for the AM Degree

- A minimum of 8 tuition units are required.
- Must receive a grade of B or better, courses must be taken for a grade rather than credit/no credit.
- Program Director endorses the student's proposed curriculum.
- Must complete an approved program of study consisting of at least eight structured, advanced-level courses in biology or the sciences.
- Students who elect to fulfill the requirements of a non-thesis degree receive the A.M. degree.

For further information on admission and program requirements, please visit: <https://www.brown.edu/academics/biotechnology-graduate-program/masters-degree-programs> (<https://www.brown.edu/academics/biotechnology-graduate-program/masters-degree-programs/>) and for additional information: <https://graduateprograms.brown.edu/graduate-program/biomed-biotechnology-am-scm> (<https://graduateprograms.brown.edu/graduate-program/biomed-biotechnology-am-scm/>)

Ecology, Evolution, and Organismal Biology Graduate Program

The graduate program in Ecology, Evolution and Organismal Biology (EEOB) is intended for highly qualified students who plan to pursue a career that includes research and/or teaching in areas of ecology, evolution, and organismal biology. We tailor our training programs to meet each student's needs and interests, providing a customized curriculum that supports their own intellectual growth and goals. All students are expected to attain proficiency in ecological and evolutionary theory, quantitative research methods, statistical analysis, writing, and oral presentation. Depending on the student's interests, they may also be expected to demonstrate proficiency in other areas such as functional morphology or genetics and genomics. This proficiency may be attained through coursework, seminars, independent reading, and laboratory and field programs.

The Ecology, Evolution, and Organismal Biology program offers a Doctor of Philosophy (Ph.D.) degree as well as a 5th year Master of Science (Sc.M.) degree for students who would like to continue the research they started as an undergraduate at Brown. The Master of Science degree is also available for participants in Brown's Open Graduate Education Program.

For further information on admission and program requirements, please visit: (<https://www.brown.edu/graduateprograms/biomed-ecology-evolution-and-organismal-biology-phd/>) (<http://www.brown.edu/academics/gradschool/programs/biomed-ecology-and-evolutionary-biology/>) (<http://www.brown.edu/academics/gradschool/programs/biomed-ecology-and-evolutionary-biology/>)

Health Informatics and Artificial Intelligence Graduate Program

The Master of Science (ScM) merges the fields of data science, technology and healthcare. The program equips you with the knowledge and skills to harness cutting-edge analytics to improve diagnosis accuracy, create personalized treatment plans and seamlessly coordinate patient care across healthcare teams and the entire healthcare ecosystem.

The goal of the program is to train students to be experts in the major competencies of: 1) Health and Healthcare, 2) Data Science, 3) Social and Behavioral Science, 4) Health Information Technology and Digital Health, 5) Professionalism, 6) Leadership and 7) Team Science. The program aims to provide foundational and applied training for learners with diverse backgrounds, interests, and career paths. These career paths include: health informaticians, data analysts, data scientists, healthcare IT specialists and consultants contributing to advancements in healthcare quality, efficiency and patient outcome.

For further information on admission and program requirements, please visit:

<https://bcbi.brown.edu/education/health-informatics-scm/> (<https://bcbi.brown.edu/education/health-informatics-scm/>)

For additional information:

<https://graduateprograms.brown.edu/graduate-program/health-informatics-scm/> (<https://graduateprograms.brown.edu/graduate-program/health-informatics-scm/>)

Course List

BIOL2535	Survey of Health Informatics	
BIOL 2575	Evaluation of Health Information Systems	1
BIOL2610	Trends in Health Informatics	
BIOL2520	Acculturation to Health and Health Care	
BIOL2555	Methods in Informatics and Data Science for Health	
BIOL 2025	Foundations in Statistics for Biology and Medicine	1
BIOL2660	Practicum in Health Informatics	
BIOL 2595	Artificial Intelligence in Health Care	1

Pathobiology Graduate Program

The Pathobiology Graduate Program is an interdisciplinary and interdepartmental program broadly devoted to understanding mechanisms of human disease. The program offers a Doctor of Philosophy (Ph.D.) degree as well as a 5th year Master of Science (Sc.M.) or Master of Arts (A.M.) degree. The four major research and teaching thematic areas are: I) Immunology & Infectious Disease, II) Environmental Pathology, III) Cancer Biology, and IV) Aging. Training may be obtained in diverse areas of immunology, infection biology, cancer biology, toxicology, pulmonology, hepatology, and aging.

For further information on admission and program requirements, please visit: (<http://www.brown.edu/academics/gradschool/programs/biomed-pathobiology/>) (<http://www.brown.edu/academics/gradschool/programs/biomed-pathobiology/>)

Molecular Biology, Cell Biology, and Biochemistry Graduate Program

The graduate program in Molecular Biology, Cell Biology, and Biochemistry (MCB) is intended for highly qualified students who plan to pursue a career that includes research in biology or medical sciences. The MCB Program offers a Doctor of Philosophy (Ph.D.) degree as well as 5th Year Master of Arts (A.M.) and Master of Science (Sc.M.) degrees. The program is interdisciplinary and interdepartmental.

For further information on research areas in MCBGP as well as admission and program requirements, please visit: (<http://www.brown.edu/academics/gradschool/programs/biomed-molecular-biology-cell-biology-and-biochemistry/>) (<http://www.brown.edu/academics/gradschool/programs/biomed-molecular-biology-cell-biology-and-biochemistry/>)

Molecular Pharmacology and Physiology Graduate Program

The graduate program in Molecular Pharmacology and Physiology offers advanced training appropriate for academic and research careers in the fields of biology and medical sciences that include:

1) neuropharmacology, neurophysiology and neural circuit function; 2) receptor and ion channel pharmacology, physiology and signal transduction; 3) structures and interactions of biological molecules and their roles in disease; 4) translational and clinical applications of pharmacology & physiology; 5) chemical biology, biophysics and their applications; and 6) cancer biology and therapeutics. Programs of study and research are developed individually in consultation with the student's advisor and advisory committee and are designed to ensure expertise in the student's principal field. The Molecular Pharmacology & Physiology Program offers a Doctor of Philosophy (Ph.D.) degree.

The Molecular Pharmacology & Physiology Program will no longer accept applications effective 2022. For those interested in the Ph.D. degree, we ask you to consider the Therapeutic Sciences Graduate Program.

For more information on the program in Therapeutic Sciences, please visit: (<https://www.brown.edu/graduateprograms/biomed-therapeutic-sciences-phd/>) (<https://www.brown.edu/graduateprograms/biomed-therapeutic-sciences-phd/>) (<https://www.brown.edu/graduateprograms/biomed-therapeutic-sciences-phd/>) and (<https://www.brown.edu/academics/tsgp/>)

Biomedical Engineering - Master of Science Graduate Program

The Biomedical Engineering (BME) graduate program provides cutting-edge, interdisciplinary, graduate-level education at the interface of engineering, biology, and medicine. The program features an interdisciplinary approach in multiple complementary research areas: diagnostics, biomaterials, mechanobiology, regenerative engineering, and neuroengineering. Research in these areas is advancing fundamental biological, medical, and engineering knowledge while innovating to improve the human condition. The program is distinguished by its

quantitative rigor and strong collaborative connections among academic science, clinical medicine, and industry. The BME graduate program is designed for students with backgrounds in engineering, physics, or applied mathematics that seek additional education and training in the field of biomedical engineering

For more information on admission and program requirements, please visit: <http://www.brown.edu/academics/gradschool/programs/biomedical-engineering> (<http://www.brown.edu/academics/gradschool/programs/biomedical-engineering/>) and <https://www.brown.edu/academics/biomedical-engineering/academics/graduate-program> (<https://www.brown.edu/academics/biomedical-engineering/academics/graduate-program/>)

Biomedical Engineering - Master of Engineering Graduate Program

Requirements for Master of Engineering (Effective Fall 2025)

- Must complete a minimum of 8 tuition units.
 - no independent research credits
 - all 8 should be structured (non-independent study) advanced-level (1000 or 2000 level) courses
 - at least 3 courses in biological topics
 - at least 3 courses in engineering topics
- Must receive a grade of B or better, courses must be taken for a grade rather than credit/no credit.
- Time to completion can be less than two academic years depending on the preference of the student.

Therapeutic Sciences Graduate Program

The Therapeutic Sciences Graduate Program (TSGP) houses two degree programs: a PhD in Therapeutic Sciences, described here; and a Master's degree in Biotechnology described at a separate website (Biotechnology Master's Program (<https://www.brown.edu/academics/biotechnology-graduate-program/home/>)). TSGP also includes MD/PhD students who must apply through the MD/PhD Program at Brown. Shared activities and courses promote a sense of community within all of TSGP.

The Therapeutic Sciences PhD program covers pharmacology, physiology, and biotechnology, as well as other fields that are part of the broader area of therapeutic sciences related to the discovery and development of novel therapeutics to treat and prevent disease. TSGP offers advanced training appropriate for academic and research careers in the fields of biology and medical sciences with a focus on determining disease mechanisms and drug actions, and developing novel therapies. The PhD program has been funded for many years in part by an NIH training grant (T32) through the NIGMS Program in Interdisciplinary Training in Pharmacological Sciences.

For more information about admissions and program requirements, please visit: <https://graduateprograms.brown.edu/graduate-program/biomed-therapeutic-sciences-phd> (<https://graduateprograms.brown.edu/graduate-program/biomed-therapeutic-sciences-phd/>) and <https://tsgp.brown.edu/>

Medical Physics Graduate Program

Medical Physics is one of the select non-MD specialties recognized by the American Board of Medical Specialties. Medical Physicists contribute to maintaining and improving the quality, safety and cost-effectiveness of healthcare services through patient-oriented activities requiring expert action, and optimized clinical use of medical devices, such as CT and MRI scanners, linear accelerators, and treatment planning systems, including patient risk and protection.

Activities are based on current best evidence or the Medical physicists' own scientific research when the available evidence is not sufficient. The career path eventually leads to residency training and certification by the American Board of Radiology.

Students will write a publishable thesis and engage in practical experience, both of which are essential to securing a residency. This is also the key metric of success for students and ultimately the program,

in addition to students' academic success beyond residency and board certification. In addition, the program will be distinctive in that students will have a full semester to undertake their research and work closely with faculty.

Learn more about the SCM in Medical Physics Program at: <https://www.brown.edu/med-physics-graduate-program/>

Coursework

- Students must complete the Responsibility Conduct or Research module
- Students must complete the RSNA Ethics in Graduate and Resident Education module
- Students must complete all courses in the curriculum (<https://www.brown.edu/med-physics-graduate-program/curriculum/courses/>)
- Students must earn grades of B or better in all courses
 - All courses must be taken for a grade
 - Credit will only be given for graduate-level courses taken at Brown

Research

- Students must become a student member of the AAPM (\$50 per year; the program will pay the fee for students who need financial assistance)
- Students must choose a thesis advisor before the start of second semester. In turn the thesis advisor must declare their commitment.
- Students must submit final thesis, present work as a seminar, and pass final oral examination by Thesis Committee

Required Courses

Year 1- Fall		
MED 2200	Anatomy and Physiology	.75
MED 2210	Radiological Physics and Dosimetry	1
MED 2220	Radiation Protection & Instrumentation	.75
MED 2310	Radiation Biology (Project or E)	.5
Year 2- Fall		
MED 2270A	Research and Clinical Practicum for Medical Physics	2.5
Summer		
Project or Elective Course		
Year 1- Spring		
BIOL 1555	Methods in Informatics and Data Science for Health	1
MED 2250	Radiation Therapy Physics	1
MED 2260	Physics of Medical Imaging	1
Year 2- Spring		
MED 2280	Nuclear Medicine Physics	.5
MED 2290	Advanced Radiation Therapy	.5
MED 2300	MR Imaging Technology, Ultrasound, and Interventional	0.5
MED 2230	Computational Medical Physics	.5

Medical Science Graduate Program

The Gateways Program at the Warren Alpert Medical School of Brown University provides academically promising, motivated students new pathways to careers in the health sciences.

In this one-year, full-time program, you will complete 8.5 required courses culminating in a Master of Science (ScM) in Medical Sciences from Brown University. Courses include all four of the basic science courses and two of the three organ system courses undertaken by first-year medical students at Alpert Medical School. You'll also complete a unique seminar course series about pressing issues in today's health care system, such as social determinants of disease, population health, interdisciplinary teamwork, quality improvement, and health care communication. Integrated into this course series will be a longitudinal service learning experience at a community healthcare site and an associated community-based capstone project.

Learn more about the ScM in Medical Sciences program (<https://www.brown.edu/academics/medical/education/other-programs/gateways/master-science-medical-sciences/>) at: <https://www.brown.edu/academics/medical/education/other-programs/gateways/master-science-medical-sciences/>

Required Courses

MED 2110	Introduction to Medical Sciences and Patient Care	.5
MED 2140	Human Histology	1
MED 2160	Human Anatomy 1	1
MED 2150	General Pathology	1
MED 2170	Scientific Foundations of Medicine	1
MED 2120	Patient Care in Complex Systems I	1
MED 2181	Brain Sciences with Head and Neck Anatomy	1
MED 2190	Microbiology and Infectious Disease	1
MED 2130	Patient Care in Complex Systems II	1

Courses

BIOL 2000A. Current Topics in MCDB - RNA Regulation: Beyond the Central Dogma.

The central dogma of molecular biology has long held that the primary role of RNA is to serve as an intermediary to convert the information stored in DNA into functioning proteins. However, it is now clear that RNA does not merely play a passive role in the information transfer process from DNA to protein. This course will focus on the many roles played by RNA molecules in both normal cellular processes and disease states. Papers from the primary literature will be chosen to explore this topic, primarily through student-led discussions. Course is limited to graduate students or advanced undergraduates with permission of the instructors.

BIOL 2000B. Topics in MCDB: How Protein Structure Informs Biological Function.

This course covers various aspects of structural and functional biology from primary to quaternary structure and deals with the 3D structure of proteins and nucleic acids and 3D structure determination. Course will be a mixture of lecture and class discussion/presentations. Students typically have taken an advanced undergraduate-level course in biology or biochemistry. Advanced undergraduates with permission. Enrollment limited to 20 students.

BIOL 2000C. Molecular Recognition and Signaling in Self and Non-self Interactions.

This course will cover cell signaling mechanisms that allow discrimination between self and non-self interactions in various biological contexts. Self/non-self signaling pathways from several model systems will be examined and their relevance to development and defense will be considered. Topics will include signaling in intra- and inter-species reproductive interactions, signaling in the establishment of symbioses, signaling upon predator attack, signaling in pathogen interactions, and co-evolution of pathogenic and resistance effectors. After one introductory lecture/discussion session led by the instructors, the remaining meetings will be student led and will focus on current primary literature. Open to advanced undergraduates with appropriate coursework.

BIOL 2000E. Topics in MCDB: The Genomics Revolution and its Impact on Genetics, Medicine and Society.

A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of "system-wide" approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Enrollment limited to 20 graduate students. Advanced undergraduates with appropriate course preparation and permission from instructor.

BIOL 2004. Next-Gen Therapeutics: Advanced Tools & Technologies in Drug Development.

The emergence of cell and gene therapies is closely linked to rapid developments in the biotechnology research environment. Following FDA approval of adeno-associated virus (AAV) for therapeutic gene delivery, efforts to apply it in CRISPR-based gene editing have quickly moved to clinical trials. The demand for expertise for these and related technologies has never been higher. This course uses case studies to explore how experimental theory and quantitative modeling drive the development of next-generation medicines. Participants will gain practical experience in the application of quantitative principles for massively scaling experimental models. Topics include discovery and engineering of viral vectors (AAV), high throughput experimental design of gene editing platforms (CRISPR), advanced molecular assays, and quantitative analysis of barcoded DNA libraries by next-generation sequencing.

BIOL 2010A. Introduction to Molecular Research in the Life Sciences.

In this practical skill-building course, entering PhD students in the Molecular Biology, Cell Biology, and Biochemistry Graduate Program (MCBGP) will participate in an immersive laboratory experience. Students will practice foundational molecular methods for analysis of nucleic acids and proteins. Students will also develop key professional skills including workflow and time management, record keeping, experimental rigor and reproducibility, working in a team, and communication of experimental results. In addition, students will learn about experimental technologies and model organisms used in the molecular life sciences through interactive modules led by MCBGP trainer laboratories. Enrollment is restricted to first-year MCBGP PhD students.

BIOL 2010B. Introduction to Data Science in Molecular Biology.

In this course, second year PhD students in the Molecular Biology, Cell Biology, and Biochemistry Graduate Program (MCBGP) will learn about the basic methodologies to analyze and interpret omics datasets. This course combines lectures with hands-on workshops on data science applied to molecular research for the analysis of nucleic acids and proteins. Student will acquire knowledge of the data generated by modern molecular biology, and of the computational methods used to analyze and interpret these datasets. The hands-on workshop will teach students how to utilize the state-of-the-art computational workflows to create reproducible pipelines for data analysis. Students will also learn the best practices in data management, organization and sharing, with a focus on the big data generated by modern sequencing techniques in the life sciences. Enrollment is restricted to second year MCBGP PhD students. This is a half credit course.

BIOL 2015. Conservation in the Genomics Age.

The course will introduce students to the rapidly developing field of molecular ecology, emphasizing its importance for conservation biology. Students will explore key principles in evolutionary ecology based on readings, lectures, and discussions. Participants will also gain practical experience with ecological, genomic, and computational methods in the lab. This course is intended for advanced undergraduate and graduate students. Suggested prerequisites include Principles of Ecology (0420); Evolutionary Biology (0480) or Genetics (0470); the Lab Techniques Workshop for Biology Students provided by MDL; or similar with permission. Students will obtain permission from the professor to enroll.

BIOL 2018. Management Strategies in Biotechnology.

This course, taken the second semester, goes in depth into the numerous strategies in biotechnology. Significant differences in the strategies of small companies versus large companies, and device companies versus drug companies will be discussed with ample use of biotechnology case studies. At the end of this course, the successful student will: Understand the process of managerial decision making in the pharma/biotech industry Understand the basic principles of Decision Science, the application of quantitative analysis (modeling) to inform managerial decision making Gain exposure to basic frameworks and tools used by management consultants to define strategic options Preference is given to students in the Biotech Master's Program and The Therapeutic Science PhD Program.

BIOL 2020. Biotechnology Science and Industry.

This course provides a comprehensive overview of the primary functional roles and steps involved in developing and commercializing a novel technology/scientific breakthrough within the biotechnology industry. This course is particularly suitable for students interested in pursuing a career within a biotechnology company, or for those interested in developing an in-depth knowledge of how the science of biotechnology becomes real world products. Recommended prerequisites include Foundations of Living Systems (BIOL0020), Principles of Physiology (BIOL0080). Preference is given to students in the Biotech Master's Program and The Therapeutic Science PhD Program.

BIOL 2024. Gene and RNA Therapeutic Development.

The field of gene and RNA-based therapeutic development has had a profound impact on our ability to treat many unmet medical needs. By targeting the genetic basis of a given disease, it has become possible to regulate, limit, or modify the expression of the associated transcript, and in some cases, completely replace the impacted gene. This course provides a comprehensive exploration into the field of gene-modifying therapeutics, focusing on gene therapy and oligonucleotide therapy. Students will delve into the mechanisms of action, innovative delivery methods, evolving development pipelines, and the strengths and limitations of each therapeutic modality. Students will gain a comprehensive understanding of genetic therapeutics, preparing them to contribute to the advancement of this field and the translation of innovative therapies from bench to bedside. Preference is given to students in the Biotech Master's and Therapeutic Science PhD programs.

BIOL 2025. Foundations in Statistics for Biology and Medicine.

This course provides essential statistical knowledge and skills for conducting graduate research in biology and medicine. Using statistical analysis software, students will engage in hands-on analysis of biological and medical data, covering a range of topics including data cleaning and shaping, descriptive statistics, probability distributions, parametric and non-parametric tests, correlation, mean differences, analysis of variance, regression (linear and logistic), and graphical presentation of data as well as an overview of more advanced methods. By the end of the course, students will demonstrate their learning into a final project that demonstrates the application of statistical methods to a real-world research problem.

BIOL 2030. Foundations for Advanced Study in the Life Sciences.

BIOL2030 is a graduate-level course focused on multidisciplinary approaches to biological questions. The mechanisms and regulation of basic cellular processes involving nucleic acids (synthesis, structure, maintenance and transmission) and proteins (synthesis, maturation, function) and integration of those processes into more complex circuits (signaling, cell cycle control, development) will be presented through examples from the primary scientific literature. There are no prerequisites for this course. Enrollment is limited to graduate students. BIOL2030 is required for Ph.D. students in the MCB Graduate Program. All other students must obtain instructor permission.

BIOL 2040. Bioimaging.

This course examines microscopy and image analysis in the life sciences. Theoretical and practical aspects of microscopy will be discussed. Students will obtain hands-on experience with electron microscopy, light microscopy, fluorescence microscopy, and confocal microscopy. Students will learn to display images in 3D. For graduate students and advanced undergraduates. Instructor permission required.

BIOL 2050. Biology of the Eukaryotic Cell.

This course examines subcellular processes and structure/function roles of macromolecular complexes regulating major cellular activities in eukaryotic cells. Course content will cover cellular and molecular techniques in cell biology, functions of cellular compartments, and the organization and expression of genetic information in eukaryotes, comparing normal and pathological states. Lectures and readings will emphasize the experimental basis for knowledge in modern cell biology using original literature and current research in cell/molecular biology. You will learn to read and analyze published research as well as master current concepts and understanding of cellular structure and function. You will then apply this mastery to propose an original research project that would advance those understandings. For advanced undergraduates and beginning graduate students. Complementary to BIOL 1270 and 1540. Prerequisites: BIOL 0280 or 0470 or 0500, or instructor permission. Undergraduate students register for BIOL 1050.

BIOL 2075. Evaluation of Health Information Systems.

This course covers the field of evaluation of health information systems (HIS) in a range of roles and environments, in the US and worldwide. It includes topics in health information system (HIS) design and deployment, healthcare workflow, quantitative and qualitative evaluation methods and socio-technical environment for HIS. Emphasis is given to understanding the range of evaluation questions that can be asked, identifying the key stakeholders, understanding available evaluation techniques, and designing rigorous but achievable studies. Examples will include Open Source systems, medical Apps, and economic evaluation, the role of evaluation frameworks and theories, and notable HIS successes and failures.

BIOL 2078. Regulatory Affairs in Pharma, Med Device and Digital Health.

In a global regulatory environment, learning the process of moving a medical device, drug or biologic from conception to market can be daunting. This course will provide the framework for regulatory affairs strategic knowledge with a focus on the process from development to commercialization, and post commercialization in a global environment. This course is particularly suitable for students interested in pursuing a career within a biotechnology company, or for those interested in developing a foundational understanding of how regulatory and health authorities regulate products in order to safely and effectively bring products to patients. Preference given to Biotechnology Masters Therapeutic Science PhD.

BIOL 2089. The Importance of Intellectual Property in Biotechnology.

This course delves into the various roles of intellectual property in biotechnology. In addition to providing a solid foundation in the fundamentals of intellectual property, the course will use case studies in biotechnology to explore in depth the interplay between specific scientific breakthroughs and intellectual property. An understanding of the science of biotechnology is critical for advanced understanding of the value and possibilities of biotechnology intellectual property. Preference is given to students in the Biotech Master's Program and The Therapeutic Science PhD Program.

BIOL 2091. Responsible Conduct of Research.

Responsible Conduct of Research is a course to develop, foster and maintain a culture of integrity in science and to empower researchers to hold themselves and others accountable to high ethical standards. Participants will be given the opportunity to review and discuss the most current and pressing matters related to research integrity with experts in the field. This course is restricted to first year PhD students within BioMed and overrides will be given to certain students outside of the BioMedical Division

BIOL 2110. Drug and Gene Delivery.

Topics in drug delivery systems including history of the field, advantages of controlled release technology, stabilization and release of proteins, fabrication methods, regulatory considerations, economic aspects, patents and intellectual property rights, and more. Prepares students for research in industry and academia, and offers information for consultants in the field. Expected: BIOL 1090, 1120; CHEM 0350, 0360.

BIOL 2117. Human Physiology.

For Brown-Pfizer Master of arts Program students. Provides an introduction to basic human physiological concepts along with more advanced coverage of selected systems. We'll start with topics of diffusion, cell physiology and the basis of cell membrane potential and then cover the nervous, endocrine, musculoskeletal, cardiovascular, respiratory, renal and gastrointestinal systems. We'll focus on normal human physiology and at times incorporate discussions of exercise physiology, pathophysiology, and specific physiologic scenarios to build toward the goal of understanding complex integration of function between cells, tissues and organ systems. Readings will consist of textbook chapters along with primary literature covering selected topics.

BIOL 2121. The Biochemistry of Signaling and Regulation from Prokaryotes to Eukaryotes.

Proteins are the engines of life. Determining how they function from a biophysical and biochemical perspective enables us to understand how they work and how we can direct and alter their activities. Proteins participate in cellular signaling pathways that are important regulators of cellular function and are often misregulated in disease. This course introduces various aspects of biochemistry involved in the analysis of cellular signaling pathways that regulate disease. Open to 12 graduate students and advanced undergraduates. Prerequisite: Students must have taken several advanced undergraduate-level courses in biology.

BIOL 2125. Bioinformatics for Evidence to Improve the Discovery, Development and Use of Medicines.

This course explores evidence used in decisions for discovery, development and use of medicines. Goals are i) learn issues and decision criteria for stakeholders in biomedical innovation, ii) understand challenges and emerging opportunities to improve the evidence used to make decisions over the life of a therapeutic, iii) apply this learning to develop a novel call for proposals for multi-stakeholder projects that integrate molecular and clinical knowledge for improving discovery, development and/or use of medicines for Parkinson's disease or pancreatic cancer. Preference is given to graduate students in MPPB, Biotechnology and BME. Other qualified students may enroll with instructor's permission.

BIOL 2130. Techniques in Molecular and Cell Science.

This course provides hands-on laboratory training in state-of-the-art techniques in molecular and cellular sciences, and reinforces this training with didactic lectures that stress key principles, the quantitative approach and the most exciting applications of these technologies in the context of current research. Areas covered include cell culture, tissue engineering, DNA cloning, gene therapy, quantitative assays, microscopy and image analysis.

Enrollment is limited to 12; written permission required. Permission will be granted after the first class. Students MUST register for the lecture section and a lab.

BIOL 2135. Pharmacokinetics and Drug Design.

Consists of the absorption, distribution, metabolism, and elimination of drugs. These factors, including dosage, determine the concentration of drugs at its sites of action, and intensity of effects. Will examine models describing the relationship between plasma drug concentrations and therapeutic drug effect. Will acquire biologic sampling techniques, analytic methods for measurement of drugs and metabolites, and procedures facilitating data used in designing drugs and dosage regimens. Prerequisite: BIOL 0800 or equivalent. Enrollment limited to 20. Preference is given to students in the Biotech Master's and Therapeutic Science PhD programs. Graduate students (PhD and ScM) from other programs enroll if permission of instructor is granted.

BIOL 2140. Principles in Experimental Surgery.

An introduction to the principles and practice of surgery, sterile technique, anesthesia, and laboratory animal care. Intended to provide highly supervised, hands-on experience in techniques for humane handling and surgical management of experimental animal subjects. Emphasizes surgical technique, anesthesia technique, and laboratory animal medicine. Prerequisite: BIOL 0800. Limited to five (5) Graduate students only. Instructor permission required. Students MUST register for the lecture section and the lab.

BIOL 2145. Molecular Targets of Drug Discovery.

This course emphasizes the role of cell physiology in the identification of drug targets and the development of novel drugs. Specific protein drug targets such as G-protein coupled receptors will be examined in detail from identifying a target to development of drugs for that target and the physiological consequences. Prerequisite: BIOL 0800. Enrollment limited to 20. Preference is given to graduate students in Biotechnology and BME, especially Masters students. Graduate students from other programs may enroll if permission of the instructor is granted. Students must request an override code through C@B.

BIOL 2150. Scientific Communication.

Focused on the effective dissemination of scientific information in biological and biomedical research disciplines. Students will develop the skills necessary to effectively communicate scientific ideas, experiments, and results relating to their PhD dissertation projects through activities common to the profession including writing a grant proposal and presenting research work orally. Each of the activities will be dissected into key components and developed through interactive discussions and peer review. Required for most second-year PhD students in the MCB and Computational Biology Graduate Program. Other qualified PhD students may enroll with instructor's permission.

BIOL 2160. Analytical Methods in Biotechnology.

This course will cover principles and practical applications of important analytical tools used in the field of Biotechnology. Topics covered include spectroscopy, chromatography, and physical and chemical methods of characterization of a variety of molecules used for therapeutic applications. The molecules will range in size from traditional drugs with molecular weights of less than 1000, peptides and proteins as well as siRNA and industrial polymers. This course is suitable for students intending on pursuing a career in biomedical research in academia or industry. Prerequisites: BIOL 0280, BIOL 1120, CHEM 0350/0360, or equivalent course. Enrollment limited to 20 Masters students in Biotechnology and BME.

BIOL 2167. In Vitro Models for Disease.

This course will use case studies to examine high burden diseases, their pathophysiology, treatment, and the models used to study the disease. Literature will be used to discuss the current models for the disease and the associated limitations of each of these models. The course will also cover the use of animals in research and how new in vitro models could be used to decrease their use. This course is intended for graduate students in biology, engineering, or related fields. Prerequisites: BIOL 0200 and 0800, or equivalent. Enrollment limited to 20 graduate students.

BIOL 2170. Molecular Pharmacology and Physiology.

Fundamental concepts in pharmacology and physiology from the cellular/molecular level to organ systems. Required of first-year graduate students in Therapeutic Sciences. Students must request an override code through C@B.

BIOL 2180. Experiential Learning Industry, ELI.

Experiential Learning in Industry is restricted to biomedical engineering (BME) Sc.M. and biotechnology (Biotech) Sc.M. students, who have secured a 6-month co-op. The course is an extended in-depth learning experience in an industry environment related to the discipline of BME and Biotech. Industry environments include; medical device, pharmaceutical or biotechnology and industries that provide BME and Biotech relevant services to the aforementioned companies including patent law, licensing, regulatory and consulting. Students will pursue Experiential Learning in Industry during one summer plus one semester or during two semesters for which they will receive credit towards their degree. This course is restricted to BME and Biotech Masters students only. Students must have successfully completed the first year of the BME Masters Program. Permission is granted to students with co-op job offers.

BIOL 2190. MPP Professional Development Seminar.

Professional development seminar required of all first year graduate students in the Molecular Pharmacology and Physiology Graduate Program, and open to graduate students in other programs. Topics include grants and funding, effective oral presentation skills, alternative careers in science, and others. All students will be required to present a research seminar during the scheduled class time.

Instructor permission required for graduate students outside the Molecular Pharmacology and Physiology Graduate Program. Not intended for undergraduate students.

BIOL 2200B. Post-Transcriptional Regulations of Gene Expression.

This course will explore concepts in RNA science, with special emphasis on how various RNA processing events influence the life and function of RNAs in cells, in turn modulating gene expression beyond transcription. The course will include discussion of coding and non-coding RNAs, RNA modifications, RNA transport, and the role of RNA in phase separation. Course material will be based on primary research literature. Prerequisites are a background in advanced molecular and cellular biology and knowledge of basic biochemistry. In case of exceeding number of enrolment requests, priority will be given to graduate students.

BIOL 2200D. Current Topics in Biochemistry: Biochemical Genomics.

A critical evaluation of current research in biochemistry and molecular biology focusing on the mechanism and regulation of transcription. Intensive reading, critical analysis, and discussion of the relevant literature in the context of student presentations in seminars. Advanced undergraduates with permission of the instructor. Enrollment limited 20 students. Instructor permission required.

BIOL 2210C. Current Topics in Molecular Biology: Cellular Quality Control Mechanisms.

Protein synthesis is a fundamental cellular process that is dependent upon the rapid and accurate synthesis of ten to twenty thousand ribosomes per generation to carry out the equally rapid and accurate synthesis of protein. Progress in understanding Ribosome structure and function, Ribosome evolution, Ribosome biogenesis and coordination of cell growth with cell division will be explored using the current literature with weekly student seminars and a final research proposal.

BIOL 2220. Topics in Signal Transduction.

Signal transduction is one of the most rapidly developing fields in biomedical sciences. Defects in signaling pathways can be responsible for diseases such as cancer, diabetes, cardiovascular disorders and psychoses. This course offers students an overview of the molecular pathways that allow cells to receive and process signals from their external environment, with an emphasis on the emerging state-of-the-art techniques used to study signal transduction events. The course will cover the basic molecular steps of receptor-mediated pathways used in signal transduction and a series of applications that will allow students to understand the complexity of this rapidly developing field of research. We will discuss new ideas, mechanisms of disease, and unsolved problems in signal transduction primarily through reading and critical analysis of recent primary literature. Expected background: BIOL 0200, 0280, 0470, or 0500 or other classes that cover similar content.

BIOL 2222B. Current Topics in Functional Genomics.

A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of "system-wide" approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Students typically have taken an advanced undergraduate-level course in biology.

BIOL 2230. Biomedical Engineering and Biotechnology Seminar.

Biomedical engineering and biotechnology are interdisciplinary fields that incorporate progress in biomedical sciences, the physical sciences, and engineering. To achieve success in these fields requires facility with interdisciplinary oral communication – this is the specific and practical focus of this course. Each week, doctoral students in the Biomedical Engineering Graduate Program will give research presentations and receive feedback from the audience to help improve their public speaking skills.

BIOL 2240. Biomedical Engineering and Biotechnology Seminar.

See Biomedical Engineering and Biotechnology Seminar (BIOL 2230) for course description.

BIOL 2245. Blood Substitutes: Principles and Therapeutics Development.

Blood serves many critical functions including respiratory gas transport, hemostasis and host defense. Plasma and cellular components of blood, their functional mechanisms, pathophysiologic consequences when deficient and current treatments will be reviewed. Finally, development of blood component substitutive therapeutics (blood substitutes) based on protein and cellular engineering technologies (biotherapeutics) will be discussed. Open to Graduates students and Juniors and Seniors who meet the pre-requisites BIOL 0800 and BIOL 0280 or with instructor's permission.

BIOL 2250. Survey of Modern Therapeutics.

Survey of Modern Therapeutics examines the process of drug discovery, development, and approval from target selection to commercialization. The course will provide students with a broad overview of central background concepts in drug development including cellular physiology, target-drug interactions, and pharmacokinetics/pharmacodynamics. The course will examine the preclinical stages of the traditional small molecule drug discovery process, from initial target identification and validation, through assay development, high throughput screening, hit identification, lead optimization and the selection of a candidate drug. The course will also go through the process of bringing a therapeutic into clinical trials, through FDA approval, and to the market. Students will study some of the modern approaches in therapeutics including small molecules, biologics, vaccines, anti-infectives, and cell therapies and their applications. There are no prerequisites, but a background in biology, chemistry, or a related field is strongly encouraged. Students must request an override code through C@B.

BIOL 2260. Physiological Pharmacology.

The objective of this course is to present drugs in the context of the diseases they are used to treat. A list of the Common medically prescribed drugs will be discussed in terms of their fundamental modes of action and clinical importance. Pertinent background biochemistry, physiology, and pathology is provided, e.g., the electrophysiology of the heart is discussed as a background to anti-arrhythmic drugs. Course is relevant for students interested in medicine journalism, law, government, precollege teaching, biomedical research, and pharmacy. Expected: background in physiology. For graduate students ONLY register for BIOL 2260; all others BIOL 1260.

BIOL 2270. Advanced Biochemistry.

(Undergraduate students should register for BIOL 1270.)

BIOL 2290B. Mechanisms of Protein Synthesis and Impact on Human Disease.

This course will examine mechanisms central to the regulation of protein synthesis in both prokaryotes and eukaryotes. Targeting protein synthesis through ribosomes is a proven drug target commonly used to treat many infectious diseases. The regulation of protein synthesis in eukaryotes is critical for myriad human conditions including aging and cancer, including the recently discovered role of microRNAs. This course will explore the common and unique mechanisms of regulation of protein synthesis between prokaryotes and eukaryotes and the importance of understanding these mechanisms for human health. For graduate students and advanced undergraduates with permission.

BIOL 2290E. Signal Transduction.

This seminar course will provide a broad introduction to basic mechanisms of cell signaling from the extracellular environment to the nucleus of a cell, and to the mechanisms that regulate signal transmission. Topics of discussion will include: processing and modification of signaling molecules; signal recognition/ligand binding; co-receptors and receptor trafficking; intracellular relays; transduction to the nucleus; regulation of signal intensity and duration; feedback controls. Signal transduction pathways from several model systems will be examined and their relevance to development and disease will be considered. Senior undergraduates with permission of the instructors. Enrollment limited to 20.

BIOL 2300. Biomolecular Interactions: Health, Disease, and Drug Design.

Interactions between the molecules of life—proteins, RNA, DNA, membrane components—underlie all functions necessary for life. This course focuses on how nature controls these interactions, how these interactions can go awry in disease, and how we can learn the rules of these interactions to design drugs to treat disease. Students will review the physical basis of molecular interactions, learn classic and state-of-the-art high-resolution and high-throughput tools used to measure interaction, and survey the experimental and computational strategies to harness these interactions using a case study in rational drug design. Prerequisite: Introductory Biochemistry. Enrollment limited to 20; instructor permission.

BIOL 2310. Developmental Biology.

Covers the molecular and cellular events of development from fertilized egg to adult. Genetic basis of body form, cell fate specification and differentiation, processes controlling morphogenesis, growth, stem cells and regeneration are examined. Differential gene regulation, intercellular signaling and evolutionary conservation are central to discussion of mechanisms governing developmental processes. Additional topics: developmental plasticity, impact of epigenetic and environmental factors, and basis of disease gleaned from developmental biology research. Live embryos complement and reinforce concepts covered in class. Expected: BIOL0200 (or equivalent), and one course in genetics, embryology, cell biology or molecular biology. Enrollment limited to 36. (Undergraduate students register for BIOL 1310.)

BIOL 2320E. Genetic Control of Cell Fate Decisions.

A cell's fate is acquired in a process whereby largely uncommitted progenitor cells are instructed down a commitment path that ultimately results in a specific cell type with distinct molecular and physiological properties. This process is critical for the establishment of all cell types and tissues and is poised to be a critical topic in cell-based therapeutic strategies. We will investigate the intrinsic and extrinsic mechanisms that manifest at the genetic level to impart cell fate decisions on progenitors. Advanced undergraduates with permission of the instructor.

BIOL 2340. Neurogenetics and Disease.

Genetic mutations provides a powerful approach to dissect complex biologic problems. We will focus on fascinating discoveries from "forward genetic" studies – moving from nervous system phenotype to genetic mutation discovery. There will be an emphasis of neurologic disease phenotypes and the use of novel genomic methods to elucidate the central molecular and cellular causes for these conditions. The course will emphasize the use of "reverse genetics" – engineered mutations in model systems – to dissect nervous system function and disease mechanisms. Disorders to be covered include autism, intellectual disability, schizophrenia, epilepsy. Enrollment limited to 20. Instructor permission required.

BIOL 2350. The Biology of Aging.

Aging is a fundamental biological process. It is the major risk factor for age-related diseases such as cancer, cardiovascular disease, stroke, osteoporosis, arthritis and Alzheimer's, just to name a few. As life expectancy has increased in the 20th century, these diseases have become the leading causes of death. Recent research has identified universal mechanisms that regulate organismal aging and impact all organ systems. Several gene networks that can regulate the rate of aging and multiple age-related diseases have already been discovered. These mechanisms are conserved throughout evolution and many key insights have been garnered from simple model organisms. Manipulation of these networks has been achieved by diet, genetic engineering, and most recently, with drugs. The goal of modern medicine is to increase healthy survival, as opposed to simply longevity. It is now generally acknowledged that increasing health span – the fraction of our life spans free of frailty and debilitating chronic disease – has become a realistic goal. This course will examine the new concept of "geroscience" – the molecular, cellular, and genetic foundations of the biology of aging, and how this knowledge can be applied to therapies for age-associated diseases. Course material will be based on the primary research literature. Prerequisites are a background in cell biology, molecular biology and genetics - such as BIOL0470, BIOL0280, BIOL0200, and BIOL0800.

BIOL 2370. Applied AI/ML in Biotechnology.

Applied AI/ML in Biotechnology explores how data-driven tools are reshaping decision-making across the drug development lifecycle. Rather than focusing on coding or theory alone, this course trains students to become translational thinkers, able to frame meaningful questions, interpret machine learning models, and apply insights to real-world challenges in R&D, clinical trials, commercialization, and manufacturing. This course follows the end-to-end biotech value chain through five modules, where each focus on a critical decision point: How can we responsibly apply machine learning to biological problems? Which targets should we pursue? Hit Discovery & Lead Optimization: Which candidates show the most promise? Which patients should we enroll, and how should we design early trials? How can we forecast demand and ensure scalable, efficient production? Students will build hands-on skills in R, work with real-world datasets, and complete practical labs aligned to each stage.

BIOL 2400. Integrative Behavioral Biology.

In this seminar course, students will discuss core topics in the field of animal behavior. Our conversations will focus not only on new and exciting papers in the field, but also on classic studies that have come to define how we conceptualize behavior as a discipline within the life sciences. Graduate students from other programs must request special permission from instructors to provide an override code to enroll in this course.

BIOL 2430. Topics in Ecology, Evolution and Organismal Biology.

Current literature in ecology, behavior, and evolutionary biology is discussed in seminar format. Topics and instructors change each semester. Representative topics have included: structuring of communities, biomechanics, coevolution, quantitative genetics, life history strategies, and units of selection. Expected: courses in advanced ecology and genetics.

BIOL 2440. Topics in Ecology, Evolution and Organismal Biology.

See Topics In Ecology And Evolutionary Biology (BIOL 2430) for course description.

BIOL 2450. Exchange Scholar Program.**BIOL 2455. Planetary Health: Global Environmental Change and Emerging Infectious Disease.**

Will a warmer world be a sicker world? What is it about the New England landscape that supports the proliferation of Lyme Disease? How are local wildlife trade and global species invasions contributors to emerging diseases like the 2003 outbreak of monkeypox virus in the USA? We will explore these and related questions in Planetary Health: global environmental change and emerging infectious disease. Planetary health is a timely new field focused on understanding the human health implications of human-caused disruptions to Earth's natural systems. The facet of 'health' that we focus on in this course is infectious disease. Students will learn how, when, where and why infectious diseases emerge in association with anthropogenic environmental impacts, specifically climate change, land-use change, and increased human interaction with animals.

BIOL 2460. Foundations in Ecology and Evolution: TA Training for the Life Sciences.

This course will help students hone their skills as effective teachers in the life sciences, particularly in disciplines related to ecology, evolution, and organismal biology.

BIOL 2520. Acculturation to Health and Health Care.

This course introduces the practice and culture of health and health care. Students will learn about medical language and terminology, basic anatomy and physiology, clinical decision-making and quality improvement, workflows, and health IT and digital health. The course will include lectures, interactive discussions, and first-hand accounts from clinicians and other health professionals demonstrating how data and technology are used in practice.

BIOL 2525. Pathogenomics: Analysis, Interpretation and Applications of Microbial Genomes.

Pathogen genomes offer a wealth of information—from the discovery of new gene functions to helping to pinpoint the source of a food borne disease outbreak—and have become an increasingly widespread tool in microbiology in recent years. This course will introduce the fundamentals of genome sequencing and analysis for the study of microbial pathogens, and discuss current applications of these techniques in diverse microbial taxa (viruses, bacteria, fungi and parasites). In addition to lectures, the course will include hands-on computational analysis of pathogen genomic data in which students will learn how to analyze genomic data and apply these skills to an independent project investigating a novel question using a publicly available genomic dataset.

BIOL 2528. Innovation and Commercialization in Medical Devices, Diagnostics, and Wearables.

This course provides a comprehensive overview of concepts and steps involved in developing and commercializing novel technology/scientific breakthroughs for medical devices, diagnostics and wearables. This course is particularly suitable for students interested in pursuing a career within a medical device segment, or creating innovation-based companies, as well as for those interested in developing an in-depth knowledge of evolution of medical devices from research concepts to products in the market.

BIOL 2530. Immunology.

In this course, we will explore the biology of the mammalian immune system to gain an understanding and appreciation of its importance and complexity. Together, we will learn the experimental and theoretical foundations of immunology. Topics include innate and adaptive immunity; anatomy of immune organs and tissues, structure/function of antibody molecules and T cell receptors; cytokine response, development and maturation of immune cells, and regulation of immune responses through cellular interactions. We will investigate the cells and chemicals that make up each branch of the immune system and learn how cells communicate with each other. Clinically significant issues such as vaccinations, transplantation, inflammation, autoimmunity, cancer, and immunodeficiency like HIV/AIDS infection will be discussed. This course will introduce students to primary literature where interpretative analysis of experimental data will be emphasized.

BIOL 2535. Survey of Health Informatics.

This survey course provides an overview of the field of biomedical informatics covering relevant topics in computer science, healthcare, biology, and social science. This is not a programming course and there are no computer coding components in this course. Emphasis is given to understanding the organization of biomedical information, the effective management of information using computer technology, and the impact of such technology on biomedical research, education, and patient care. The final capstone project of this course requires the in-depth examination, critique, and presentation of a specific topic in biomedical informatics, within the context of student (clinical or computational) interests. Students taking the course for graduate credit must produce a manuscript suitable for peer-review that synthesizes existing research and presents insights or applications in biomedical informatics.

BIOL 2540. Molecular Genetics.

Even in this era when whole genome DNA sequencing has become routine, there are still thousands of eukaryotic genes with unknown functions. Genetic screens for mutations that alter pathways of interest remain the premier approach to understanding gene function in the context of the organism. In Molecular Genetics students will learn the key concepts involved in designing and interpreting genetic screens using the powerful tools available in model animal, plant, and fungal organisms. Students will also learn how to understand and analyze results presented in the primary scientific literature. Furthermore, students will gain an appreciation of how the field of genetics has changed through discoveries and technological advances made over the past 50 years. Undergraduate students should register for BIOL 1540.

BIOL 2545. Human Genetics and Genomics.

This course will exemplify the power of genetically informed approaches to understanding human biology. It is intended for advanced undergraduate students and graduate students; prerequisites include BIOL0470 or equivalent. The course is based in lectures, reading material (textbook and primary literature), and in-class discussions. Course topics include: medical genetics and genomics; methods to study human genotypes and related phenotypes; industry-related topics; and ethical and societal implications of genome science. It will benefit students with career interests in basic science, medicine, biotechnology, or science policy. Enrollment is limited to 20 students; selection will be based on seniority, prerequisites, and registration order.

BIOL 2555. Methods in Informatics and Data Science for Health.

The goal of this course is for students to develop a solution that uses data science and informatics approaches to address a biomedical or health challenge. This course will teach informatics and data science skills needed for public health and biomedicine research. Emphasis will be given to algorithms used within the context of biomedical research and health care, including those used in biomolecular sequence analysis, electronic health records, clinical decision support, and public health surveillance. This course has been developed as a Course-based Undergraduate Research Experience (CURE), where students will gain experience with the scientific method, its application, and presentation.

BIOL 2560. Advanced Virology.

The emphasis of this course will be on understanding the molecular mechanisms of viral pathogenesis. It will begin with a general introduction to the field of virology, a basic review of the immune response to viruses, and then focus primarily on the molecular biology of specific viruses that are associated with clinical human disease. Lectures will be based on the current literature and provide historical context. Students will become familiar with primary literature and produce their own original research proposal by the end of the semester.

BIOL 2565. Advanced Virology for Biotechnology.

The emphasis of this course will be on understanding the molecular mechanisms of viral pathogenesis. It will begin with a general introduction to the field of virology, a basic review of the immune response to viruses, and then focus primarily on the molecular biology of specific viruses that are associated with clinical human disease. The format will be 100% online and consist of both lectures and in-class work in small groups. Lectures will be based on the current literature and provide historical context. Students will become familiar with primary literature and produce their own original final project by the end of the semester.

BIOL 2575. Evaluation of Health Information Systems.

This course covers the field of evaluation of health information systems (HIS) in a range of roles and environments, in the US and worldwide. It includes topics in health information system (HIS) design and deployment, healthcare workflow, quantitative and qualitative evaluation methods and socio-technical environment for HIS. Emphasis is given to understanding the range of evaluation questions that can be asked, identifying the key stakeholders, understanding available evaluation techniques, and designing rigorous but achievable studies. Examples will include Open Source systems, medical Apps, and economic evaluation, the role of evaluation frameworks and theories, and notable HIS successes and failures. This course is designed primarily for biological science, public health, public policy and international health concentrators. Concurrent enrollment in or completion of BIOL 1535/2535 "Survey of Health Informatics", or a public health course covering clinical research is beneficial. Instructor permission required.

BIOL 2595. Artificial Intelligence in Health Care.

This course examines the application of artificial intelligence (AI) in health care, focusing on contemporary methods and their historical context. Students will explore AI's impact on clinical decision-making, translational bioinformatics, and precision medicine. Students will critically assess AI technologies' strengths and limitations in medical practice through lectures, discussions, and hands-on projects.

BIOL 2610. Trends in Health Informatics.

This course equips students with the skills and strategies to stay current with the rapidly evolving field of health informatics. Through lectures, hands-on workshops, and critical assessment of recent literature in health informatics, students will learn to identify emerging trends, critically evaluate innovations, and develop a framework for tracking advancements in health informatics beyond the course. The course emphasizes practical approaches to continuous learning, fostering the ability to integrate new developments into professional practice. The course will culminate in students developing and drafting a trend evaluation report on a health informatics topic of their choice.

BIOL 2640A. Viral Immunology.

Viral Immunology is an advanced topics course in Microbiology and Immunology which will be focused on viral immunology. Weekly meetings will cover different issues concerning defense against viral infections and pathology related to viral infection, with focus on viral-host interactions. Topics will be selected to present either important basic concepts in the context of immune responses and/or major challenges in controlling viral infections. Recent advances in understanding virus-host interactions, host responses to viruses, cytokine regulation of immune responses or cytokine-mediated pathology during viral infections will be emphasized. The 2020 organizational meeting is set for Wednesday, Jan. 22 at 3:00PM (BMC 6th Floor Conference Room - Room 603). There is also a requirement for a previous immunology course.

BIOL 2640B. Microbial Pathogenesis.

Examines microbial pathogens and the underlying mechanisms by which infectious organisms cause diseases. Bacterial, fungal, protozoal and viral pathogens will be studied using tools of modern biology. Also examined are the host's immune responses to infection and disease. Areas covered include mechanisms of pathogen internalization and survival, immune responses, signal transduction and pathophysiology. Expected: BIOL 0510, 0530, or 1550.

BIOL 2640C. The Immune System.

Introduction to the experimental and theoretical foundations of immunology and the function of the mammalian immune system. Focuses on concepts, landmark experiments and recent advances. Topics include innate and adaptive immunity; structure/function of antibody molecules and T cell receptors; and regulation of immune responses through cellular interactions. Application of concepts to medically significant issues (vaccines, transplantation, hypersensitivity, autoimmunity, cancer, immunodeficiency) is discussed. Interpretative analysis of experimental data is emphasized. Activities include written assignments that analyze a hypothetical immune system and a final paper addressing an immunological topic of the student's choosing. For Pfizer students only.

BIOL 2660. Practicum in Health Informatics.

The goal of this hands-on experience is to gain practical expertise with informatics in healthcare environments. Students will be expected to demonstrate proficiency in applying fundamental health informatics concepts to address real-world challenges in healthcare operations and delivery. Throughout the experience, students will receive guidance in every phase of the project lifecycle, including development, design, and management.

BIOL 2850. Introduction to Research in Pathobiology.

Introduces incoming pathobiology graduate students with research opportunities in the laboratories of program faculty. Consists of seminars with individual faculty members in the graduate program in pathobiology. Required background reading of recent papers lead to a discussion of current research in the faculty member's laboratory. Additional discussions include safety and ethical issues in research. Open only to first-year graduate students in the program in pathobiology.

BIOL 2860. Molecular Mechanisms of Disease.

Dr. Bartnikas' goal for this class is to teach first-year graduate students what he wishes he would have been taught and what he wished he would have known as a first-year graduate student. This will be accomplished by studying specific human diseases and designing experiments to better understand their mechanistic and molecular basis. The class will consist of didactic lectures, discussions, small group work, and group presentations. Active participation and attendance by all students are required at all lectures. Students should have a solid background in the life sciences with an understanding of the fundamental principles of molecular biology, genetics, biochemistry, and cell biology. Readings will be assigned from primary literature and reviews. Upper-level undergraduates require permission to take the course and will be admitted if space allows.

BIOL 2865. Toxicology.

Toxicology is the science that describes the adverse biological effects of exogenous chemical and physical stressors, including environmental, industrial, and agricultural chemicals and pharmaceuticals. This course will introduce the principal biological processes that determine an organism's response to a toxicant, including absorption, distribution through a biological system, metabolism, elimination, and effects at the site(s) of action. We will discuss modern challenges in toxicology, such as assessing toxicity of mixtures and testing some of the thousands of untested chemicals in commerce. The material will be presented in lecture and student-led discussions, with readings from the toxicology literature.

BIOL 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

BIOL 2980. Graduate Independent Study.

Independent study projects at the graduate level. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

BIOL 2985. Graduate Seminar.

Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

BIOL 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

BIOL 2995. Thesis.

Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

Neuroscience

Neuroscience is the scientific study of the nervous system, including its development, functions, and pathologies. It is an interdisciplinary field that encompasses neurobiology (anatomy, physiology, biochemistry, molecular biology, genetics), elements of psychology and cognitive science, and mathematical and physical principles involved in modeling neural systems.

The Department of Neuroscience offers an undergraduate concentration leading to the Sc.B. degree and a graduate program leading to the Ph.D.

degree. These programs include courses offered by the department and by several allied departments. The Department of Neuroscience has modern facilities for conducting research in a broad range of areas from molecular mechanisms to behavior and undergraduate students are encouraged to pursue research projects.

For additional information, please visit: <http://neuroscience.brown.edu/>

Computational Neuroscience Concentration Requirements

This multidisciplinary concentration spans many fields, including computer science, neuroscience, cognitive science, applied math, and data science. Students studying Computational Neuroscience will learn to use computational models of the brain and nervous system to study complex biological processes and overcome the limitations of human experimentation. They will also learn to use the brain and nervous system as a model to improve the power and efficiency of artificial systems. Concentrators will think critically about the impact of their work on society and understand how biases can negatively influence computational models.

Standard program for the Sc.B. Degree

Background Courses (must take one of each):

Calculus		
MATH 0100	Single Variable Calculus, Part II	
Differential Equations		
APMA 0350	Applied Ordinary Differential Equations	
Linear Algebra		
MATH 0520	Linear Algebra	
or MATH 0540	Linear Algebra With Theory	
Statistics		
APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	
or CPSY 0900	Statistical Methods	
or BIOL 0495	Statistical Analysis of Biological Data	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	

Core Concentration Courses:

NEUR 0010	The Brain: An Introduction to Neuroscience	1
NEUR 1020	Principles of Neurobiology	1
or NEUR 1030	Neural Systems	
CSCI 0111	Computing Foundations: Data	1
or CSCI 0112	Computing Foundations: Program Organization	
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
CSCI 0200	Program Design with Data Structures and Algorithms	1
or CSCI 0190	Accelerated Introduction to Computer Science	
NEUR 0680	Introduction to Computational Neuroscience	1

Two Computational Neuroscience Electives From The Below List:

CPSY 1492	Computational Cognitive Neuroscience	
NEUR 1440	Mechanisms and Meaning of Neural Dynamics	
NEUR 1660	Neural Computation in Learning and Decision-Making	
CPSY 1291	Computational Methods for Mind, Brain and Behavior	

CSCI 1810	Computational Molecular Biology	
NEUR 1940B	Deep Learning in Neuroethology	
NEUR 1630	Big Data Neuroscience Ideas Lab	
CPSY 1950	Deep Learning in Brains, Minds and Machines	
CPSY 1850	Language Processing in Humans and Machines	
HIST 1956S	History of Artificial Intelligence	
NEUR 2110	Statistical Neuroscience	

One Course in Artificial Intelligence: 1

CSCI 1410	Artificial Intelligence	
CSCI 1420	Machine Learning	
CSCI 1430	Computer Vision	
CSCI 1460	Computational Linguistics	
CSCI 1470	Deep Learning	
DATA 2060	Machine Learning: from Theory to Algorithms	

Two Upper-Level Neuroscience Electives 2

Two courses that will enhance your understanding of the field of neuroscience. While electives need not be from the neuroscience department, the following list are common courses taught by Neuroscience and other departments that are often used as electives. We encourage students to explore the broader course catalog and consult with their concentration advisor to explore the full range of electives, rather than limiting themselves to this list. These electives must be of 1000-level or above.

CPSY 1400	The Neural Bases of Cognition	
ENGL 1900Z	Neuroaesthetics and Reading	
ENGN 1220	Neuroengineering	
NEUR 1540	Neurobiology of Learning and Memory	
NEUR 1650	Structure of the Nervous System	
NEUR 1740	The Diseased Brain: Mechanisms of Neurological and Psychiatric Disorders	

One Elective in Ethics: 1

CSCI 1805	Computers, Freedom and Privacy	
CSCI 1951Z	Fairness in Automated Decision Making	
DATA 0080	Data, Ethics and Society	
ENGN 1800	Social Impact of Emerging Technologies: The Role of Scientists and Engineers	
PHIL 0401	Ethics of Digital Technology	
PHIL 0403	Ethics and Politics of Data	
APMA 1910	Race and Gender in the Scientific Community	
STS 1700T	Race, Gender, and Technology in Everyday Life	

Two Additional Electives: 2

Two courses that will enhance your understanding of the field of computational neuroscience. These electives are not limited to a specific department, and are able to be any of the courses already listed for this concentration (though, you cannot cross-count an elective with a named requirement). The following list are courses that we recommend be used as electives, however, we encourage students to explore the broader course catalog and consult with their concentration advisor to explore the full range of electives, rather than limiting themselves to this list. Students can substitute TWO semesters of independent study (NEUR1970 or equivalent course from another department) for one elective course

APMA 0160	Introduction to Scientific Computing	
APMA 0200	Introduction to Modeling	
APMA 0360	Applied Partial Differential Equations I	
APMA 1070	Quantitative Models of Biological Systems	

APMA 1170	Introduction to Computational Linear Algebra	
APMA 1360	Applied Dynamical Systems	
APMA 1660	Statistical Inference II	
APMA 1690	Computational Probability and Statistics	
APMA 1710	Information Theory	
APMA 1740	Recent Applications of Probability and Statistics	
APMA 1860	Graphs and Networks	
APMA 1941D	Pattern Theory	
BIOL 1435	Computational Methods for Studying Demographic History with Molecular Data	
BIOL 1555	Methods in Informatics and Data Science for Health	
CPSY 0450	Brain Damage and the Mind	
CPSY 0800	Language and the Mind	
CSCI 0535	Linear Algebra for Machine Learning	
CSCI 1010	Theory of Computation	
CSCI 1570	Design and Analysis of Algorithms	
CSCI 1951A	Data Science	
ENGN 2912P	Topics in Optimization	
MATH 1210	Probability	
PHYS 1610	Biological Physics	
NEUR 1900	Capstone	1

Total Credits**14**

Neuroscience Concentration Requirements

Neuroscience is an interdisciplinary field that seeks to understand the functions and diseases of the nervous system. It draws on knowledge from neurobiology as well as elements of psychology and cognitive science, and mathematical and physical principles involved in modeling neural systems. Through the Neuroscience concentration, students develop foundational knowledge through courses in biology, chemistry, and mathematics as well as three core courses in neuroscience. They are also required to develop facility with research methodologies (through courses in statistics and laboratory methods) before moving into specific topics in the field (e.g., visual physiology, neurochemistry and behavior, and synaptic transmission and plasticity). Members of the Neuroscience faculty are affiliated with the Carney Institute for Brain Science, a multidisciplinary program that promotes collaborative research about the brain. Prospective concentrators should contact neuroundergrad@brown.edu in order to have a faculty advisor assigned to them.

The concentration combines a general science background with a number of specific courses devoted to the cellular, molecular, and integrative functions of the nervous system. The concentration allows considerable flexibility for students to tailor a program to their individual interests. Elective courses focus on a variety of areas including molecular mechanisms, cellular function, sensory and motor systems, neuropharmacology, learning and memory, animal behavior, cognitive function, bioengineering, theoretical neuroscience and computer modeling.

You may find this following form useful for mapping out your courses, be sure to use it before meeting with your concentration advisor for the first time: [link to course plan worksheet PDF (https://neuroscience.brown.edu/sites/default/files/NeuroCoursePlanWorksheet_Fillable.pdf)]

Standard program for the Sc.B. degree

The concentration in neuroscience leads to an Sc.B. degree. The following courses, or their equivalent, are required for the degree. Keep in mind that there are multiple ways to fulfil the various requirements and your concentration advisor can help you go through your options and optimize your course of study:

Background Courses:

MATH 0090	Single Variable Calculus, Part I ((only needed as a prerequisite for MATH 10))	1
MATH 0100	Single Variable Calculus, Part II ((or equivalent))	1
PHYS 0030	Basic Physics A (Mechanics *see NOTE)	1
PHYS 0040	Basic Physics B (Electromagnetism)	1
BIOL 0200	The Foundation of Living Systems ((or placement test))	1
CHEM 0330	Equilibrium, Rate, and Structure	1
CHEM 0350	Organic Chemistry I	1

Note: ENGN 0030 may be used instead of PHYS 0030, but ENGN 0040 is NOT equivalent to PHYS 0040.

Core Concentration Courses:

NEUR 0010	The Brain: An Introduction to Neuroscience	1
NEUR 1020	Principles of Neurobiology	1
NEUR 1030	Neural Systems	1

One critical reading course

NEUR 1440	Mechanisms and Meaning of Neural Dynamics	1
NEUR 1510	Neurotechnology: Molecular Tools and Methods for Neurobiology	
NEUR 1530	Communication In the Brain: What We Know and How We Know It	
NEUR 1560	Developmental Neurobiology	
NEUR 1660	Neural Computation in Learning and Decision-Making	
NEUR 1970	Independent Study (*Two Semesters)	
BIOL 1100	Cell Physiology and Biophysics	
BIOL 1180	Comparative Animal Physiology	
BIOL 1190	Synaptic Transmission and Plasticity	
CPSY 1400	The Neural Bases of Cognition	
CPSY 1760	The Moral Brain	
PHP 1890	The Craving Mind	

1930/40 Topics in Neuroscience

NOTE: Critical reading courses are small discussion based courses, with around 20 students, with a focus on primary literature around a neuroscience related topic. Other courses not listed here could also fulfil this requirement, please check with your concentration advisor.

One statistics course

PHP 1501	Essentials of Data Analysis	1
PHP 1510	Principles of Biostatistics and Data Analysis	
PHP 2510	Principles of Biostatistics and Data Analysis	
APMA 0650	Introduction to Probability and Statistics	
APMA 1650	Introduction to Probability and Statistics with Calculus	
CPSY 0900	Statistical Methods	
SOC 1100	Introductory Statistics for Social Research	
BIOL 0495	Statistical Analysis of Biological Data	
EDUC 1230	Applied Statistics for Ed Research and Policy Analysis	

One lab methods course

NEUR 0680	Introduction to Computational Neuroscience	1
NEUR 1440	Mechanisms and Meaning of Neural Dynamics	
NEUR 1600	Experimental Neurobiology	
NEUR 1630	Big Data Neuroscience Ideas Lab	

NEUR 1640	Behavioral Neurogenetics Laboratory
NEUR 1650	Structure of the Nervous System
NEUR 1660	Neural Computation in Learning and Decision-Making
NEUR 1670	Neuropharmacology and Synaptic Transmission
NEUR 1680	Computational Neuroscience
NEUR 1970	Independent Study
*Two Semesters of NEUR1970 can be used to fulfill one critical reading, lab, or elective requirement	
CPSY 1190	Techniques in Physiological Psychology
CPSY 1194	Sleep and Chronobiology Research
CPSY 1490	Functional Magnetic Resonance Imaging: Theory and Practice
CPSY 1491	Neural Modeling Laboratory
CPSY 1492	Computational Cognitive Neuroscience
BIOL 0800	Principles of Physiology
BIOL 1880	Comparative Biology of the Vertebrates

Four electives related to neuroscience¹ 4

Four courses that will enhance your understanding of the field of neuroscience. While electives need not be from the neuroscience department, the following list are common courses taught by Neuroscience and other departments that are often used as electives. We encourage students to explore the broader course catalog and consult with their concentration advisor to explore the full range of electives, rather than limiting themselves to this list:

NEUR 0680	Introduction to Computational Neuroscience
NEUR 1040	Introduction to Neurogenetics
NEUR 1065	Biology of Hearing
NEUR 1440	Mechanisms and Meaning of Neural Dynamics
NEUR 1510	Neurotechnology: Molecular Tools and Methods for Neurobiology
NEUR 1530	Communication In the Brain: What We Know and How We Know It
NEUR 1540	Neurobiology of Learning and Memory
NEUR 1560	Developmental Neurobiology
NEUR 1600	Experimental Neurobiology
NEUR 1630	Big Data Neuroscience Ideas Lab
NEUR 1650	Structure of the Nervous System
NEUR 1660	Neural Computation in Learning and Decision-Making
NEUR 1670	Neuropharmacology and Synaptic Transmission
NEUR 1740	The Diseased Brain: Mechanisms of Neurological and Psychiatric Disorders
NEUR 1970	Independent Study

*Two Semesters of NEUR1970 can be used to fulfill one critical reading, lab, or elective requirement

NEUR 2110	Statistical Neuroscience
All NEUR 1930/1940 Seminar Course	
CPSY 0120	Introduction to Sleep
CPSY 0400	Cognitive Neuroscience
CPSY 1150	Memory and the Brain
CPSY 1180B	Animal Languages
CPSY 1193	Laboratory in Genes and Behavior
CPSY 1291	Computational Methods for Mind, Brain and Behavior
CPSY 1400	The Neural Bases of Cognition
CPSY 1420	Cognitive Neuropsychology

CPSY 1478	Translational Models of Neuropsychiatric Disorder
CPSY 1480C	Cognitive Control Functions of the Prefrontal Cortex
CPSY 1480H	Disorders of Memory
CPSY 1490	Functional Magnetic Resonance Imaging: Theory and Practice
CPSY 1492	Computational Cognitive Neuroscience
CPSY 1495	Affective Neuroscience
CPSY 1560	Visually-Guided Action and Cognitive Processes
CPSY 1561	The Nature of Attention
CPSY 1570	Perceptual Learning
CPSY 1580E	Perception, Attention, and Consciousness
CPSY 1620	Developmental Cognitive Neuroscience
CPSY 1760	The Moral Brain
CPSY 1820	Language and the Brain
CPSY 1950	Deep Learning in Brains, Minds and Machines
BIOL 1100	Cell Physiology and Biophysics
BIOL 1110	Topics in Signal Transduction
BIOL 1155	Hormones and Behavior
BIOL 1260	Physiological Pharmacology
BIOL 1545	Human Genetics and Genomics
ENGN 1220	Neuroengineering
PHP 1890	The Craving Mind
COST 1020	Cognitive Neuroscience of Meditation

List 2: Selected common non-neuro courses (no more than 2) - student must be able to justify why it enhances their understanding of Neuro

BIOL 0470	Genetics
BIOL 0800	Principles of Physiology
BIOL 1050	Biology of the Eukaryotic Cell
BIOL 1540	Molecular Genetics
BIOL 1810	21st Century Applications in Cell and Molecular Biology
CPSY 0950	Introduction to programming
CPSY 1195	Life Under Water in the Anthropocene
CPSY 1500	Perception and Action
CSCI 0111	Computing Foundations: Data
ENGL 1900Z	Neuroaesthetics and Reading
PHIL 1770	Philosophy of Mind
PHP 1540	Alcohol Use and Misuse
STS 1700P	Neuroethics
TAPS 1281Z	Arts and Health: Practice

Completing the Concentration Research Requirement As with other ScB concentrations, neuroscience concentrators are required (beginning with the class of 2023) to do the equivalent of one semester of independent study, research or design. This is a chance for the student to explore and apply the concepts that they have learned in their concentration courses. The following are ways in which this research requirement can be met. After consulting with your concentration advisor, be sure to include how you will fulfill your research requirement in the appropriate box within ASK: 1. Enrolling in independent study courses (NEUR 1970, CLPS 1970/80 or BIO 1950/60) for work in a lab. Keep in mind to count this towards your concentration two semesters or one semester and a summer are required. 2. Enrolling in independent study (NEUR 1970) to work with a faculty member to explore an integrative topic related to neuroscience. See our section on independent study for more information. 3. Enrolling in a course-based research experience, also known as a CURE course. Current related CURE courses are NEUR 1630, CLPS 1195, CLPS 1591, but there might be new ones coming down the pipeline. 4. Participating in a structured summer research program (eg. an UTRA or an REU) that is equivalent in scope and scale as would be pursued during a semester of independent research. 5. Participating in a research-focused Fall or Spring UTRA. 6. Pursue a design or independent research project related to neuroscience that could be associated with a different course. 7. Anyone writing an honors thesis automatically fulfills the research requirement, in order to document your research requirement, please describe your plan in your Course Plan Worksheet and in ASK, be sure to discuss it with your concentration advisor to make sure it is appropriate. Honors: Honors in Neuroscience requires a thesis and presentation based on a research project, and quality grades in the concentration. Guidelines and information on faculty research as well as details about declaring Honors are available in the Undergraduate Neuroscience Page [<https://www.brown.edu/academics/neuroscience/undergraduate-concentration>].

Total Credits

17

¹ Independent study and honors research projects are encouraged.

Neuroscience Graduate Program

The program in Neuroscience offers graduate study leading to the Doctor of Philosophy (Ph.D) degree. The program is designed to educate and train scientists who will become leaders in the field and contribute to society through research, teaching and professional service. The core of the training involves close interaction with faculty to develop expertise in biological, behavioral, and theoretical aspects of neuroscience. Graduate research and training are carried out in the laboratories of the program's faculty. These faculty trainers lead outstanding well-funded research programs that use cutting edge technology to explore the nervous system.

For more information on admission and program requirements, please visit: <http://www.brown.edu/academics/gradschool/programs/biomed-neuroscience> (<http://www.brown.edu/academics/gradschool/programs/biomed-neuroscience/>)

Courses

NEUR 0010. The Brain: An Introduction to Neuroscience.

Introduction to the mammalian nervous system with emphasis on the structure and function of the human brain. Topics include the function of nerve cells, sensory systems, control of movement and speech, learning and memory, emotion, and diseases of the brain. No prerequisites, but knowledge of biology and chemistry at the high school level is assumed. Please register for any one of the evening recitation sections irrespective of the meeting time listed. Time conflicts will be resolved after classes start.

NEUR 0680. Introduction to Computational Neuroscience.

This course will introduce students to the broad field of computational neuroscience through a combination of lectures, readings, and hands-on assignments. Historical perspectives will be explored and compared with modern approaches, with the aim of providing a broad understanding of this multidisciplinary approach to understanding the brain and nervous system. A key theme will be a focus on the central role that models play in framing scientific questions about neural systems and circuits. There are no prerequisites, but students should be prepared to learn basic programming and computational skills.

NEUR 0700. Psychoactive Drugs and Society.

Will examine psychoactive drugs from two perspectives: (1) biological mechanisms of drug action and (2) the impact of psychoactive drug use on society and society attitudes towards psychoactive drug usage. Drugs to be discussed will include alcohol, opiates, cocaine, marijuana, LSD, nicotine and caffeine, as well as drugs used therapeutically to treat psychiatric disorders. This course will benefit students who are interested in exploring both the biological and social aspects of psychoactive drug use. Prerequisite: NEUR 0010 or equivalent.

NEUR 1020. Principles of Neurobiology.

A lecture course covering fundamental concepts of cellular and molecular neurobiology. Topics include structure of ion channels, synaptic transmission, synaptic development, molecular mechanisms of synaptic plasticity, learning and memory and neurological diseases. Prerequisite: NEUR 0010. Strongly recommended: BIOL 0200 or equivalent.

NEUR 1030. Neural Systems.

This lecture course examines key principles that underlie the function of neural systems ranging in complexity from peripheral receptors to central mechanisms of behavioral control. Prerequisite: NEUR 0010 or the equivalent. First year and Graduate students require instructor approval.

NEUR 1040. Introduction to Neurogenetics.

Recent advances in molecular genetics have allowed researchers to test specific hypotheses concerning the genetic control of behavior and neurological disease. This course will familiarize you with the relatively new and exciting field of neurogenetics. We will cover basic topics, new ideas, and unsolved problems in neurogenetics primarily through lectures, scientific seminars, assigned readings, class activities, and class discussion. Neurogenetics is essentially a frontier area in neuroscience, and the best way to approach this topic is by scientific literature, which you will become familiar with through your term project and writing assignments. Information derived from various animal model systems, including worms, flies, zebrafish, and mice, will be covered with a focus on techniques that use information from the fields of classical genetics, molecular genetics, genomics, and behavioral neurobiology. DO NOT REQUEST AN OVERRIDE. See registration instructions in Class Notes section.

NEUR 1065. Biology of Hearing.

Examines the sensory and perceptual system for hearing: the external, middle, and inner ears; the active processes of the cochlea; sound transduction and neural coding; neural information processing by the auditory system; and the nature of auditory perception and its biological substrate. Prerequisite: an introductory course in Neuroscience, Cognitive Science, Physics, Engineering or Psychology.

NEUR 1230. Teaching Neuroscience.

Teaching Neuroscience is a 0.5 credit course designed to help teaching assistants for neuroscience courses learn best practices in teaching, supporting student learning, and creating inclusive and equitable learning spaces. Topics will include: evidenced-based pedagogies, high-impact practices, and inclusive pedagogies; active learning; assessments and assessment feedback; communication skills; teaching in the age of AI; and the use of reflective practices for both instructors and students. The course is primarily discussion-based. Course assignments include, but are not limited to, reflective journaling, developing a teaching philosophy statement, and completing a final project. The course is only offered with an S/NC grading designation.

NEUR 1440. Mechanisms and Meaning of Neural Dynamics.

We humans can shift our attention, perceive new objects, make complex motions, and adjust each of these behaviors within fractions of a second. Neurons and systems of neurons vary in their activity patterns on millisecond to second time scales, commonly referred to as "neural dynamics." This course addresses mechanisms underlying this flexibility and its potential meaning for information processing in the brain. The course integrates biophysical, computational, single neuron and human studies. In addition to lectures and readings, students will learn how to build computational models to simulate neural dynamics at various scales from single neurons to networks, using Matlab and the Human Neocortical Neurosolver. Computational modeling will be taught hands-on in an interactive lab session each week. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section on how to gain enrollment into this course.

NEUR 1500. From Neurons to Consciousness.

NEUR 1500 is an introductory neuroscience course designed for students in the joint Brown-Pfizer Master of Arts Program. It begins with the study of nerve cells: their structure, the propagation of nerve impulses, and synapses. This is followed by lectures on brain anatomy to show how the brain is functionally organized. We then move to the sensory systems such as hearing, vision and touch and discuss how physical energy is converted by each system into neural signals, where these signals travel in the brain, and how they are processed. Next we study the control of voluntary movement. In the last portion of the course we discuss brain mechanisms involved in coordinated brain functions and behavior, including functions of the autonomic functions, motivated behaviors (e.g. eating, drinking), learning and memory, attention and consciousness, and mental illness.

NEUR 1510. Neurotechnology: Molecular Tools and Methods for Neurobiology.

New tools are transforming Neurobiology, both in the way experiments are being done and the questions they are addressing. New methods of observation and analysis are enhancing our understanding of the complex workings of the brain. This course is unique in helping students become critical thinkers about choosing the right toolset for different neuroscience questions at both the systems and molecular levels. We will also examine how new molecular tools are developed and evolve to address fundamental questions about how our brain. In many ways, neurotechnology, new methods, and molecular tools open the way for new discoveries in neuroscience. Course is geared towards neuroscience, biomedical engineering, biology and others. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section on how to gain enrollment into this course.

NEUR 1520. Exploring Neural Data.

While a large part of being a neuroscientist involves performing experiments to collect data, the reality of studying the brain is that you can often collect way more data than you know what to do with! In this course, we will discuss data analytic challenges in neuroscience. We will provide real data sets for hands-on student activities. By the end of the course, students will have the basic tools and techniques to begin to work with neuroscience data themselves. Topics will include spike train, EEG and behavioral analyses. The course will emphasize basic computer programming skills in Python.

NEUR 1530. Communication In the Brain: What We Know and How We Know It.

Neurons communicate through the thousands of synapses they form. In this seminar-style course, we will explore the cellular and molecular underpinnings of synaptic transmission. We will then examine how synapse number and function can be modulated to shape circuit function during development, learning & memory formation, and in response to perturbations. We will develop scientific thinking skills and an understanding of experimental approaches in modern neuroscience by focusing on how the field investigates synaptic transmission and plasticity. All readings are from primary literature. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section on how to gain enrollment into this course.

NEUR 1540. Neurobiology of Learning and Memory.

Exploration of learning and memory from the molecular to the behavioral level. Topics will include declarative and procedural memory formation and storage, associative and non-associative learning, cellular and molecular mechanisms for learning, and disorders affecting learning and memory. Examples will be drawn from numerous brain areas and a variety of model systems, including humans. Students will gain experience interpreting experiments from primary literature. Prerequisite: NEUR 1020.

NEUR 1560. Developmental Neurobiology.

The course will explore core concepts of developmental biology in the context of the developing nervous system. Topics will include: neuronal specification, cell migration, axon guidance, synapse formation, and neural plasticity. Students will gain experience with the primary literature and learn about cellular and molecular mechanisms of brain development and the tools and model organisms used to study them. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section on how to gain enrollment into this course.

NEUR 1570. The Non-Neuronal Brain.

This undergraduate course is designed to provide students with a comprehensive understanding of the role and function of glial cells, the non-neuronal cells that comprise half of our nervous system. Glia, once considered merely supportive cells, are now recognized as critical players in brain development, homeostasis, and neurological disorders. This course will explore the various types of glial cells, focusing on central nervous system glia, their structure and distribution, molecular characteristics, and their interactions with neurons and each other. Additionally, the course will cover recent advances in glial cell research and their implications for brain function and disease. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section for information about how to gain enrollment into this course.

NEUR 1600. Experimental Neurobiology.

Intensive laboratory experience in neuroscience appropriate for students with basic background in Neurobiology. Learn and employ the classical neurophysiological techniques of extracellular recording, intracellular recording and receptive field mapping using a variety of animal species. Experiments will include recording of sensory signals in the cockroach leg; frog sciatic nerve and sciatic nerve/muscle preparation and intracellular recording of neurons in Aplysia. Instruction on and practice of effective science writing is another component to this course. Labs are supplemented by informal lectures. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section for information about how to gain enrollment into this course.

NEUR 1630. Big Data Neuroscience Ideas Lab.

Recent technological developments have transformed neuroscience research, enabling us to generate comprehensive 'big data' sets that are often shared freely amongst the neuroscience community. This lab course will explore strategies to effectively use such open-sourced neuroscience data sets. Students will identify fundamental open questions in brain science and develop strategies to mine open-source sequencing, imaging and connectivity data to address their research questions. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section on how to gain enrollment into this course.

NEUR 1640. Behavioral Neurogenetics Laboratory.

Recent advances in molecular biology and molecular genetics have allowed researchers to test specific hypotheses concerning the genetic control of behavior and neurological disease. This course will familiarize you with the relatively new and exciting field of neurogenetics, and provide hands-on experience in developing and conducting behavioral neurogenetic experiments using the fruit fly, *Drosophila melanogaster*. This course will be a laboratory course focused on reading and understanding the primary literature, gaining expertise in the design and implementation of basic fly genetics, behavioral testing and analysis of tracking data, and the preparation of research reports associated with laboratory work. Throughout the course we will discuss the appropriateness, use, and limitations of animal models and human models for studying pathology, run real experiments with live animals, and collect, analyze, interpret, and write up results associated with those experiments.

NEUR 1650. Structure of the Nervous System.

Combined lecture and laboratory course on the anatomy of the central nervous system. Lectures survey the circuitry of the major neural systems for sensation, movement, cognition, and emotion. Laboratory exercises (Mon. 10:30-12:30) include brain dissections, microscopy of neural tissue, and discussion of clinical cases. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section for information on how to gain enrollment into this course.

NEUR 1660. Neural Computation in Learning and Decision-Making.

Your brain is constantly making decisions, receiving feedback about those decisions, and learning from that feedback. In this course we will examine the neuroscience underlying these processes from a computational perspective. The course will involve reading scientific papers from cognitive neuroscience, building and testing the computational models that have been developed to synthesize this literature, and, as a final project, extending an existing model of learning or decision making and characterizing its behavior. A primary goal for the course is to develop the tools and motivation to translate verbal theories of behavior into formal and testable computational models. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section on how to gain enrollment into this course.

NEUR 1670. Neuropharmacology and Synaptic Transmission.

Synaptic transmission will be studied from a biochemical and pharmacological point of view. We will explore the factors regulating neurotransmitter synthesis, storage, release, receptor interaction, and termination of action. Proposed mechanisms of psychoactive drugs and biochemical theories of psychiatric disorders will be examined. Prerequisites: NEUR 0010 and BIOL 0200 or the equivalent.

NEUR 1680. Computational Neuroscience.

A lecture and computing lab course focused on computational models of neurons and neural systems, and emphasizing Matlab-based computer simulation. The course is open to all undergraduate and graduate students in any of the Brain-Sciences-related departments. It includes two parallel tracks: an intro track for students with little background in math and computation, and an advanced track for students with substantial background in probability, differential equations, and computing. The intro track is the equivalent of NEUR 0680, last taught in 2018. Prerequisites: NEUR 0010, or NEUR 1020, or NEUR 1030. MA 0100 or equivalent. Maximum enrollment: 16.

NEUR 1740. The Diseased Brain: Mechanisms of Neurological and Psychiatric Disorders.

The goals of this course are to illustrate what basic science can teach us about neurological disorders and how these pathologies illuminate the functioning of the normal nervous system. Consideration will be given to monoallelic diseases (e.g. Fragile X Syndrome, Duchenne Muscular Dystrophy and Tuberous Sclerosis) as well as genetically complex disorders, such as Autism, Schizophrenia and Alzheimer's Disease. Emphasis will be on the cellular and molecular basis of these disorders and how insights at these levels might lead to the development of therapies. Prerequisites: NEUR 1020. BIOL 0470 suggested.

NEUR 1750. Brain Rhythms in Cognition, Mental Health and Epilepsy.

"Everything in the universe has a rhythm, everything dances." – Maya Angelou.

The brain, too, dances. Its rhythms are the result of millions of neurons coordinating each other's activity. This course will explore how these rhythms are generated, how they relate to our perception and cognition, and how they can be used to better understand and diagnose psychiatric and neurological disorders. Our readings in this seminar will range from historical reviews of brain rhythms to modern primary literature employing cutting-edge experimental neuroscience techniques. Prerequisite: NEUR 0010 or the equivalent.

NEUR 1930A. Cognitive Neuroscience: Motor Learning.

This critical reading course will investigate the behavioral and neural mechanisms of motor learning. Readings will focus on work done with neuroimaging, neural recording and neuropsychological approaches that have addressed how the brain organizes and controls different forms of motor learning including simple conditional, practice-related changes and sensory-motor associations. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030, or equivalent.

NEUR 1930B. From Neurophysiology to Perception.

This seminar will use readings from the research literature to explore the neural basis of perception. There will be an emphasis on vision, though other sensory modalities may be discussed. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030, or equivalent.

NEUR 1930C. Development of the Nervous System.

The course will explore core concepts of developmental biology in the context of the developing nervous system. Topics will include: neuronal specification, cell migration, axon guidance, synapse formation, and neural plasticity. Students will gain experience with the primary literature and learn about cellular and molecular mechanisms of brain development and the tools and model organisms used to study them. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1930D. Cells and Circuits of the Nervous System.

Selected topics on the biology of neurons and neuronal networks emphasizing original research literature about the membrane physiology, transmitter function, synaptic plasticity, and neural interactions of different vertebrate central nervous systems. Appropriate for graduates and undergraduates with strong neuroscience background. Offered alternate years. Previously offered as NEUR 2150.

NEUR 1930E. Great Controversies in Neurobiology.

This upper-level course examines some of the great controversies in the history of neurobiology. Reading material is drawn primarily from the primary scientific literature, so students are expected to already be familiar with reading scientific papers. Each theme will focus on a particular controversy, examining experimental evidence supporting both sides of the issue. Prerequisites: NEUR 0010 and NEUR 1020. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Instructor permission required.

NEUR 1930F. Brain Interfaces for Humans.

Seminar course will cover developing and existing neurotechnology to restore lost human neurological functions. It will cover stimulation technologies to restore hearing, vision and touch, recording technologies to return function for persons with paralysis. The course will also cover devices to modulate brain function (e.g. deep brain stimulators). We will discuss early brain technologies, the present state neural sensors and decoders and future technology developments (e.g. brain-machine hybrids, human augmentation), as well as ethical implications. A final paper will be required. Instructor permission required. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030; 1 year of physics, calculus. Enrollment restricted to 20 Neuroscience Concentrators and Graduate Students. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1930G. Disease, Mechanism, Therapy: Harnessing Basic Biology for Therapeutic Development.

The recent surge in understanding the cellular and molecular basis of neurological disease has opened the way for highly targeted drug discovery and development. In this course we will use several case studies to illuminate how mechanistic insights are being translated into novel therapeutic approaches. Please request an override through C@B. Please keep in mind that decisions on overrides may not be made until the first meeting of the course.

NEUR 1930H. Neurological Disorders: Neural Dynamics + Neurotechnology.

A seminar course on neural dynamics and therapeutic approaches based on open-/closed-loop Brain-Computer Interfaces (BCIs) and neuromodulation for neurological and neuropsychiatric disorders. Topics include: (1) Disorders of consciousness: loss-of-consciousness in generalized epileptic and psychogenic seizures; closed-loop seizure control; Coma, medically induced coma and general anesthesia; Neuromonitoring of consciousness; (2) BCIs for auditory/visual/somatosensory disorders; (3) Movement disorders: BCIs for restoring movement/communication; adaptive-DBS for Parkinson's disease and essential tremor. (4) Neuropsychiatric disorders: DBS for major depression and obsessive compulsive disorder. To sign up, add this course to your cart. Enrollment is based on a variety of factors such as: seniority, concentration requirement.

NEUR 1930I. Neural Correlates of Consciousness.

This course will consider the neuroscience of consciousness from a variety of perspectives, using examples from behavior, neurophysiology, neuroimaging and neurology. The course content will focus on primary literature, using review articles for background. Students will lead discussions. Strongly Recommended: NEUR 1030. Enrollment limited to 15. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section for information about how to gain enrollment into this course.

NEUR 1930J. C2S Neurotech: From Concept to Startup- Translating Neurotechnology.

To provide an understanding of the process of translating neurotechnology concepts into applications that can benefit people with nervous system disorders. Emphasizing principles useful to (1) recognize viable neuroscience concepts that can be applied to human nervous system disorders and (2) implement the essential engineering and clinical steps to translate concepts into real world, useful solutions. This is for students interested in translational neuroscience research in academia or in entrepreneurship and commercialization of neurotech innovations. Please request override via Courses@Brown.

NEUR 1930K. Smart: The Neocortex and Human Intelligence.

This course will explore features of the human cerebral neocortex that may account for our species uniquely types of intelligence ('smart'). The course will begin with a discussion of smart human behavior, followed by a review of functional and structural features including cortical cells, circuits, areas, and networks, as well as evolutionary differences. We will focus on finding candidate features that may distinguish human cortex from other species. Through student-led critical evaluation of key research papers, class discussions, and a final written paper, students will assess the evidence supporting these features and propose future experiments to address gaps in knowledge. The course includes an objective exam on core material, a student-led presentation on a chosen topic, and a final paper. **DO NOT REQUEST AN OVERRIDE.** See registration instructions in Class Notes section.

NEUR 1930L. Neurobiology of Love.

The goal of this course is to explore the underlying neurobiological principles of love and attachment. Topics include the relevant brain areas, the role of sensation and perception in love and attachment; how love and attachment influence action and behavior; plasticity and learning in these systems; and relevant neurodiversity related to love and attachment. You will gain a deeper understanding of concepts and principles that apply throughout the brain. You will gain experience with primary literature and learn about the relevant experimental techniques. There will be an emphasis on how the neurobiology of love is portrayed in the popular press. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section for information about how to gain enrollment into this course.

NEUR 1930N. Region of Interest: Amygdala.

An in-depth exploration of the amygdala. Topics will include: cell types and properties; synaptic properties; plasticity; connections to other brain areas; sub-divisions within the area; the region's role in sensation and perception; the region's role in action and behavior; the region's role in learning and memory; and diseases and disorders. Students will gain a deeper understanding of concepts and principles that apply throughout the brain. Students will gain experience with primary literature and learn about techniques for studying the area.

NEUR 1930Z. Cells and Circuits of the Nervous System.

Selected topics on the biology of neurons and neuronal networks emphasizing primary research literature about neuronal excitability, synaptic mechanisms and plasticity, and diverse sensory, motor, and cognitive functions of neural circuits in vertebrate brains. Offered alternate years. Limit 15. To sign up, add this course to your primary cart. Enrollment decision will be made based on seniority, concentration requirement, etc.

NEUR 1940B. Deep Learning in Neuroethology.

Critical readings class will examine neural mechanisms for natural behavior (neuroethology) through reading classic studies and following current research. The course will emphasize the application of deep learning methods to movement patterns, spatial orientation, and social communication. DeepLabCut is one of several new programs that empower students and researchers to take advantage of deep learning methods for behavioral neuroscience. The course will teach how to replace single-parameter data analysis with deep learning methods to identify underlying patterns. Prerequisites are Introductory Neuroscience (NEUR0010) and prior training in Matlab or computer programming languages. **DO NOT REQUEST AN OVERRIDE FOR THIS COURSE.** Please see the Class Notes section for information about how to gain enrollment into this course.

NEUR 1940C. Topics in Visual Physiology.

Selected topics in visual physiology are examined through a close and critical reading of original research articles. Emphasizes the anatomical and physiological bases of visual function. Appropriate for graduate students and undergraduates with a strong neuroscience background. Offered in alternate years. (Previously offered as NEUR 2120.)

NEUR 1940D. Higher Cortical Function.

This reading course examines a series of high-level neurocognitive deficits from the perspectives of popular science and basic neuroscience. Prerequisite: NEUR 1030. Instructor permission required. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1940E. Molecular Neurobiology: Genes, Circuits and Behavior.

In this seminar course, we will discuss primary research articles, both recent and classical, covering topics ranging from the generation of neuronal diversity to the control of behavior by specific neural circuits. Instructor permission required; enrollment limited to 15. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1940G. Drugs and the Brain.

This is a seminar course devoted to the reading and analyzing of original research articles dealing with the interaction between drugs and the brain. This will include drugs used to analyze normal brain function, as well as drugs of abuse and drugs used for therapeutic purposes. This course is intended for undergraduate and graduate students with a strong background in neuropharmacology. To express interest, please add this course to your primary cart. The decision will be made based on a variety of factors including, but not limited to seniority, concentration requirement. Limited to 15.

NEUR 1940I. Neural Correlates of Consciousness.

This course will consider the neuroscience of consciousness from a variety of perspectives, using examples from behavior, neurophysiology, neuroimaging and neurology. The course content will focus on primary literature, using review articles for background. Students will lead discussions. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Prerequisite: NEUR 0010, 1020, and 1030. Enrollment limited to 15. Instructor permission required.

NEUR 1970. Independent Study.

Laboratory-oriented research in neuroscience, supervised by staff members. A student, under the guidance of a neuroscience faculty member, proposes a topic for research, develops the procedures for its investigation, and writes a report of the results of his or her study. Independent study may replace only one required course in the neuroscience concentration. Prerequisites include NEUR 0010, 1020 and 1030. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Permission must be obtained from the Neuroscience Department.

NEUR 2010. Graduate Proseminar in Neuroscience.

A study of selected topics in experimental and theoretical neuroscience. Presented by neuroscience faculty, students, and outside speakers. A required course for all students in the neuroscience graduate program.

NEUR 2020. Graduate Proseminar in Neuroscience.

See Graduate Pro-Seminar In Neuroscience (NEUR 2010) for course description.

NEUR 2030. Advanced Molecular and Cellular Neurobiology I.

Focuses on molecular and cellular approaches used to study the CNS at the level of single molecules, individual cells and single synapses by concentrating on fundamental mechanisms of CNS information transfer, integration, and storage. Topics include biophysics of single channels, neural transmission and synaptic function. Enrollment limited to graduate students.

NEUR 2040. Advanced Molecular and Cellular Neurobiology II.

This course continues the investigation of molecular and cellular approaches used to study the CNS from the level of individual genes to the control of behavior. Topics include patterning of the nervous system, generation of neuronal diversity, axonal guidance, synapse formation, the control of behavior by specific neural circuits and neurodegenerative diseases. Enrollment is limited to graduate students.

NEUR 2050. Advanced Systems Neuroscience.

Focuses on systems approaches to study nervous system function. Lectures and discussions focus on neurophysiology, neuroimaging and lesion analysis in mammals, including humans. Cognitive neuroscience approaches will become integrated into the material. Topics include the major sensory, regulatory, and motor systems. Enrollment limited to graduate students.

NEUR 2060. Advanced Systems Neuroscience.

Focuses on cognitive approaches to study nervous system function. Lectures and discussions focus on neurophysiology, neuroimaging and lesion analysis in mammals, including humans. Computational approaches will become integrated into the material. Topics include the major cognitive systems, including perception, decisions, learning and memory, emotion and reward, language, and higher cortical function. Instructor permission required.

NEUR 2100. NeuroPracticum.

Intensive laboratory experience appropriate for graduate students with basic background in cellular and molecular neuroscience. This short course includes electrophysiology, and other fundamental techniques. Laboratory exercises run in January and are supplemented by informal lectures. Enrollment requires instructor permission and is limited to 24 graduate students. Prerequisite: NEUR2030. S/NC course

NEUR 2110. Statistical Neuroscience.

An introduction to the statistical modeling of multiscale neural dynamics in networks of neurons and large-scale brain networks with a focus on stochastic processes and random dynamical systems. Analysis of dynamical and statistical network properties: stationarity, directed transfer functions, stability and bifurcations, phase transitions. Related applications to prediction, control, low-dimensional representation, probabilistic neural population encoding and decoding are introduced as well. This is a course for senior undergraduate and graduate students with a background in systems/computational neuroscience and/or applied math/biomedical engineering. Lectures are accompanied by hands-on Python/Matlab-based applications to real and simulated neural data. Topics include: (1) Time and spectral domain models of network dynamics based on multivariate neural time series and point process observations with exogenous inputs; vector autoregressive processes, nonlinear Hawkes processes; stability, transfer functions; (2) Identification of directed interactions in networks of neurons and brain inter-areal communication (Granger causality, transfer entropy, ODE networks); (3) Collective dynamics and low-dimensional representations of network dynamics; (4) Prediction, neural population encoding and decoding for brain-computer interfaces: Bayesian probabilistic approaches based on linear/nonlinear state-space models, machine learning; (5) Data assimilation methods for modeling neural network dynamics. Example datasets include neuronal spike trains, local field potentials, ECoG/SEEG. PREREQUISITES: Introduction to statistics and probability, calculus and linear algebra; Python/Matlab programming language; familiarity with stochastic processes, difference/differential equations and related math background is helpful. Instructor permission required.

NEUR 2120. Topics in Visual Physiology.

Selected topics in visual physiology are examined through a close and critical reading of original research articles. Emphasizes the anatomical and physiological bases of visual function. Primarily for graduate students with a strong background in neuroscience and a working knowledge of the anatomy and physiology of the mammalian visual system. Offered in alternate years. Instructor permission required.

NEUR 2160. Neurochemistry and Behavior.

Examines behavior from a neurochemical perspective via readings and discussions based on original research articles. Intended primarily for graduate students with a strong background in neurochemistry and neuropharmacology and advanced undergraduates with an appropriate background. Offered alternate years. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 2450. Exchange Scholar Program.**NEUR 2920. Behavior: A Genetic and Molecular Perspective.**

Many of the cellular and molecular mechanisms that underlie behavior are conserved across species. This seminar course draws on work in invertebrate and vertebrate species to examine the genes and molecules that have been implicated in diverse behaviors. Topics to be discussed include circadian rhythms, pair bonding, migration, and aggression. Each week, students will read two to three papers from the primary literature and actively participate in class discussion. Prerequisites: NEUR 0010 and NEUR 1020 (undergraduate students) or NEUR 2030 (graduate students). Enrollment limited to 13. Instructor permission required.

NEUR 2930C. Historical Foundations of the Neurosciences.

Two year sequence starting Fall 2010; students register for one year at a time. The first year (2010-2011) will examine the history of basic neuroscientific concepts from the late Greeks (Galen) to the later 19th century, up to Cajal (neuron doctrine) and Sherrington (reflexes and integration). Since the seminar meets only monthly, it must be taken in the Fall and Spring semesters to receive a semester's credit. For credit, a substantial paper (approximately 15 pages) is required at the end of the Spring semester. Primarily for graduate students in neuroscience, cognitive science, and psychology. Others may be admitted after discussion with the instructor. Auditors are welcome if they share in the rotating duty of presenting seminars. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 2930E. Bench to Bedside: Unraveling Diseases of the Nervous System.

Enrollment restricted to graduate students.

NEUR 2930F. Disease, Mechanism, Therapy: Harnessing Basic Biology for Therapeutic Development.

The recent surge in understanding the cellular and molecular basis of neurological disease has opened the way for highly targeted drug discovery and development. In this course we will use several case studies to illuminate how mechanistic insights are being translated into novel therapeutic approaches. Instructor permission required. Enrollment limited to 15 Graduate students. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 2940A. Advanced Molecular Neurobiology.

No description available.

NEUR 2940G. Historical Foundations of the Neurosciences II.

Continuation of a two year sequence focusing on the conceptual foundations in the history of neuroscience, from the late nineteenth century to the present. Primarily for graduate students in neuroscience, cognitive science, and psychology, but senior undergraduates may be admitted with written permission from the instructor. Seminar meets monthly, and must be taken for the full year to receive one semester credit.

NEUR 2940H. Ethics and Skills Workshop.

The ethics and skills workshops will be lead by faculty trainers in the Neuroscience Graduate Program. We will cover the following or similar topics over a two year period: Plagiarism, scientific accuracy, data ownership, expectations of advisory committees and mentors, authorship disagreements, and conflicts among lab members. Enrollment restricted to graduate students.

NEUR 2940I. Neural Correlates of Consciousness.

Will consider the neuroscience of consciousness from a variety of perspectives, using examples from behavior, neurophysiology, neuroimaging and neurology. The course content will focus on primary literature, using review articles for background. Students will lead the discussions. Primarily for graduate students. Senior undergraduates neuroscience concentrators and others may be admitted after discussion with the instructor. Instructor permission required. S/NC

NEUR 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

NEUR 2980. Graduate Independent Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. S/NC

NEUR 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

NEUR XLIST. Courses of Interest to Neuroscience Concentrators.

The School of Engineering

The mission of Brown University's School of Engineering is to educate future leaders in the fundamentals of engineering in an environment of world-class research. We stress an interdisciplinary approach and a broad understanding of underlying global issues. Collaborations across the campus and beyond strengthen our development of technological advances that address challenges of vital importance to us all.

Along with our associations with the other scholarly disciplines – biology, medicine, physics, chemistry, computer science, the humanities and the social sciences – our collaborations bring unique solutions to challenging problems. The School focuses on unique and innovative clustering of faculty. In terms of research groups, engineers of all types team together with non-engineers to tackle some of the biggest problems facing engineering, science, and society today. Our talents and expertise lie in the interdisciplinary domain where the seemingly diverse disciplines converge.

The School of Engineering offers courses and programs leading to the Bachelor of Science (Sc.B.), the Bachelor of Arts (A.B.), the Master of Science (Sc.M.), the Master of Arts (A.M.), and the Doctor of Philosophy (Ph.D.).

In addition, the School of Engineering, in collaboration with the Division of Biology and Medicine, offers an interdisciplinary graduate program leading to the Master of Science and Doctor of Philosophy in Biomedical Engineering.

For more information on admission and program requirements for the Sc.M. or Ph.D. degrees in Engineering, please visit the following websites:

Five-Year Sc.B./Sc.M.: <https://engineering.brown.edu/graduate/programs-guide/five-year-scbscm-requirements> (<https://engineering.brown.edu/graduate/programs-guide/five-year-scbscm-requirements/>)

Sc.M. in Biomedical Engineering: <https://www.brown.edu/academics/ibeam/academics/graduate-program/master-science-scm-programs/scm-program-overviews>

Sc.M. in Chemical Engineering: <https://engineering.brown.edu/graduate/programs-guide/scm-requirements> (<https://engineering.brown.edu/graduate/programs-guide/scm-requirements/>)

Sc.M. in Environmental Engineering: <https://engineering.brown.edu/graduate/programs-guide/scm-requirements> (<https://engineering.brown.edu/graduate/programs-guide/scm-requirements/>)

Sc.M. in Electrical and Computer Engineering: <https://engineering.brown.edu/graduate/programs-guide/scm-requirements> (<https://engineering.brown.edu/graduate/programs-guide/scm-requirements/>)

Sc.M. in Materials Science and Engineering: <https://engineering.brown.edu/graduate/programs-guide/scm-requirements> (<https://engineering.brown.edu/graduate/programs-guide/scm-requirements/>)

Sc.M. in Applied Mechanics and Mechanical Engineering: <https://engineering.brown.edu/graduate/programs-guide/scm-requirements> (<https://engineering.brown.edu/graduate/programs-guide/scm-requirements/>)

Ph.D. in Engineering: <https://www.brown.edu/graduateprograms/engineering-phd> (<https://www.brown.edu/graduateprograms/engineering-phd/>)

For additional information, please visit the School's website at: <https://engineering.brown.edu/>

Engineering Concentration Requirements

Engineers make decisions, by collecting and analyzing data; using scientific principles to formulate analytical models of a process; and predicting the outcome of candidate solutions to a problem. They use their creativity to identify innovative solutions to challenging problems. These skills are valuable not only in technical careers, but also in fields such as public service, environmental policy, architecture, teaching, technology management, finance, entrepreneurship or patent law. A foundation in engineering will help prepare you for the future, regardless of your aspirations. The School of Engineering offers the Engineering A.B. degree to enable students to combine a rigorous and interdisciplinary foundation in engineering with the diverse opportunities provided by Brown's liberal arts curriculum. With only 11 required courses, it has the greatest flexibility of all of the School's undergraduate degree programs.

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies after assuring compliance with all relevant program and accreditation requirements.

Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0200, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200 (or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra), or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1260 (Complex Analysis), MATH 1610 (Probability), or MATH 1620 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA

concentration credits. Details regarding the mathematics requirement for each concentration are listed in the corresponding programs.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the “Study Elsewhere” section of the University Bulletin for procedures.) In addition to the general rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be “unassigned credit” given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor. In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad/>)). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their

Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

Standard Program for the A.B. Degree

Please note that the A.B. degree program is not accredited by ABET. Candidates for the Bachelor of Arts (A.B.) degree with a concentration in Engineering must complete at least eight approved Engineering courses. The eight courses must include at least two 1000-level Engineering courses. Of these two 1000-level courses, one must be a design course (ideally capstone or any design course in accredited Sc.B. programs) or be an independent study course that incorporates elements of student project design (must meet Brown course hour requirements), and the other course would be any 1000-level advanced (with pre-requisites) engineering in-classroom experience course. The set of Engineering courses must be chosen with careful attention to the prerequisites of the 1000-level courses.

Not all engineering courses may be used to satisfy the Engineering course requirement for the A.B. degree. For example, the following courses, in the table below, cannot be used to satisfy the Engineering course requirement for the A.B. Therefore, the program of study must be developed through consultation with the Concentration Advisor.

ENGN 0020	Transforming Society-Technology and Choices for the Future
ENGN 0090	Management of Industrial and Nonprofit Organizations
ENGN 0130	The Engineer's Burden: Why Changing the World is Difficult
ENGN 0260	Mechanical Technology
ENGN 0350	Art Fluid Engineering
ENGN 0610	Systems Thinking
ENGN 0620	Design Brief
ENGN 0900	Managerial Decision Making
ENGN 0930A	Appropriate Technology
ENGN 0930C	DesignStudio
ENGN 1010	The Entrepreneurial Process
ENGN 1800	Social Impact of Emerging Technologies: The Role of Scientists and Engineers
ENGN 1931Q	Entrepreneurial Management in Adversity
ENGN 1931W	Selling & Sales Leadership in the Entrepreneurial Environment
ENGN 1932M	Foundations of Internet Communication Systems
ENGN 2110	Business Engineering Fundamentals I
ENGN 2120	Business Engineering Fundamentals II
ENGN 2130	Innovation and Technology Management
ENGN 2140	Innovation and Technology Management II
ENGN 2150	Technology Entrepreneurship and Commercialization I
ENGN 2180	Globalization Immersion Experience and Entrepreneurship Laboratory
ENGN 2160	Technology Entrepreneurship and Commercialization II

The A.B. program also requires preparation in Mathematics equivalent to MATH 0200 and APMA 0350, as well as at least one college-level science course from the general areas of chemistry (except CHEM 0100), biology, physics, or geological sciences. A programming course is also recommended, but not required. The entire program is subject to approval by an Engineering Concentration Advisor and the Director of Undergraduate Programs in Engineering.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Biomedical Engineering Concentration Requirements

Biomedical Engineering (<https://engineering.brown.edu/undergraduate/> (<https://engineering.brown.edu/undergraduate/concentrations/biomedical-engineering/>) (<https://engineering.brown.edu/undergraduate/concentrations/biomedical-engineering/>) is a dynamic and growing field based upon the application of the tools of engineering to the subject matter of biology and medicine. The undergraduate program in biomedical engineering is an interdisciplinary concentration structured as a joint program between the Division of Biology and Medicine and the School of Engineering. Students can take courses from and do research with faculty from engineering, the various departments of biology, and the Brown-affiliated hospitals in Rhode Island. The Biomedical Engineering (BME) concentration shares much of the core with the other engineering programs, but the program's primary emphasis is on the fundamentals of biomedical engineering, while also allowing students to personalize their curriculum. Biomedical engineers design new drugs, genetically engineer organisms, and devise new medical devices and instruments. They also use their understanding of biology to advance synthetic and naturally-derived materials and products. BME students learn to apply the principles of engineering and science, along with problem solving skills and critical thinking to a broad spectrum of engineering problems. Further, BME is a sound foundation for lifelong education with its emphasis on the use of teamwork, effective communication skills, and an understanding of broad social, ethical, economic and environmental consequences. The biomedical engineering curriculum at Brown prepares students for careers in biomedical engineering and biotechnology, as well as careers in diverse areas such as medicine, law, business, and health care delivery.

The Sc.B. program in Biomedical Engineering is accredited by the Engineering Accreditation Commission of ABET <http://www.abet.org/>. It is jointly offered by the School of Engineering and the Division of Biology and Medicine as an interdisciplinary concentration designed for students interested in applying the methods and tools of engineering to the life sciences and medicine. Alumni of the Biomedical Engineering (BME) program will achieve one or more of these program educational objectives (PEOs) within five (5) years of graduation: (1) Serve society through work or advanced study in a broad range of fields including, but not limited to, medicine, healthcare, industry, government, and academia; (2) Apply their deeply creative and versatile biomedical engineering education to solve a broad spectrum of engineering and societal challenges; and (3) Contribute as role models, mentors, or leaders in their fields. The student outcomes of this program are the ABET (1) - (7) Student Outcomes as defined by the ABET Criteria for Accrediting Engineering Programs, available online at <http://www.abet.org/accreditation-criteria-policies-documents/>. The Biomedical Engineering concentration shares much of the core with the other engineering programs and is structured to include more science courses and electives that introduce cutting edge areas in the field of BME.

The requirements regarding Mathematics, Advanced Placement, Transfer Credit, Substitutions for Required Courses, and Humanities and Social Science Courses are identical to those of the Sc.B. degree programs in

Engineering. Please refer to the Engineering section of the University Bulletin (<https://bulletin.brown.edu/engineering/>) for explicit guidelines.

Standard program for the Sc.B. degree

1. Core Courses

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0510	Electricity and Magnetism	1
or ENGN 0520	Electrical Circuits and Signals	
ENGN 0720	Thermodynamics	1
ENGN 0810	Fluid Mechanics	1
CHEM 0330	Equilibrium, Rate, and Structure	1
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
CHEM 0350	Organic Chemistry I	1
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
APMA 0350	Applied Ordinary Differential Equations ¹	1
APMA 1650	Introduction to Probability and Statistics with Calculus	1
or BIOL 0495	Statistical Analysis of Biological Data	
or PHP 1510	Principles of Biostatistics and Data Analysis	
or APMA 1655	Introduction to Probability and Statistics with Theory	

2. Upper Level Biomedical Engineering Curriculum

ENGN 1110	Transport and Biotransport Processes	1
ENGN 1210	Biomechanics	1
ENGN 1230	Instrumentation Design	1
ENGN 1490	Biomaterials	1
BIOL 0800	Principles of Physiology	1

3. Additional Biomedical Engineering Electives: Complete at least 3 courses from the following groups; other upper-level courses are subject to Concentration Advisor approval.

Select one or two of the following:

CSCI 1810	Computational Molecular Biology
or CSCI 1820	Algorithmic Foundations of Computational Biology
ENGN 0500	Digital Computing Systems
ENGN 1220	Neuroengineering
ENGN 1510	Nanoengineering and Nanomedicine
ENGN 1520	Cardiovascular Engineering
ENGN 1550	Recent Advances in Biomedical Engineering
ENGN 1740	Computer Aided Visualization and Design
ENGN 1930B	Biomedical Optics
ENGN 1945	Immunoengineering
ENGN 2625	Optical Microscopy: Fundamentals and Applications
ENGN 2910S	Cancer Nanotechnology
ENGN 2911R	Analytical Modeling for Biomechanical and Biomedical Systems
ENGN 2912R	Implantable Devices
BIOL 1140	Tissue Engineering
BIOL 1150	Stem Cell Engineering
BIOL 2110	Drug and Gene Delivery

At least one or two more courses from:

BIOL 0280	Biochemistry
BIOL 0470	Genetics

BIOL 0500	Cell and Molecular Biology
BIOL 0510	Introductory Microbiology
BIOL 0530	Principles of Immunology
BIOL 1090	Polymer Science for Biomaterials
BIOL 1100	Cell Physiology and Biophysics
BIOL 1555	Methods in Informatics and Data Science for Health
APMA 1070	Quantitative Models of Biological Systems
CHEM 0360	Organic Chemistry II
ENGN 2910G	Topics in Translational Research and Technologies
NEUR 1020	Principles of Neurobiology
NEUR 1440	Mechanisms and Meaning of Neural Dynamics
PHYS 1610	Biological Physics
BIOL 1810	21st Century Applications in Cell and Molecular Biology

4. Capstone Design²

ENGN 1240	Biomedical Engineering Design and Innovation	1
ENGN 1250	Biomedical Engineering Design and Innovation II	1

5. General Education Requirement: At least four approved courses must be taken in the humanities and social sciences.

Total Credits **21**

¹ Students who completed APMA 0330 and/or APMA 0340 prior to academic year 2021-22 may count these as satisfying the APMA 0350 and/or APMA 0360 requirements.

² In some **rare cases**, Independent Study may be substituted, subject to Concentration Advisor approval.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Chemical Engineering Concentration Requirements

The Sc.B. program in Chemical Engineering prepares students for any field in the chemical sciences. The program emphasizes a molecular engineering approach to problem-solving. Students will learn how engineering at the atomic scale can be used to solve some of the most pressing technical challenges facing society. The program provides a rigorous foundation in engineering fundamentals and space for students to craft a program for their desired goals. Our students go on to work in industry, start-ups, consulting, graduate and professional schools, and many other fields.

The Chemical Engineering program is accredited by the Engineering Accreditation Commission of ABET: <http://www.abet.org> (<http://www.abet.org/>). The objectives of the Brown University Chemical Engineering Sc.B. Program are to produce graduates who will: (1) apply their knowledge of engineering, science, mathematics, and liberal arts to successful careers and leadership roles in industry, government, or academia; (2) apply independent, critical, and integrative thinking to a broad range of complex, multidisciplinary problems, and effectively communicate their solutions to broad audiences of diverse backgrounds; and (3) show a lifelong commitment to technical approaches that address the needs of society in an ethical, safe, sustainable, and environmentally responsible manner. The student outcomes of this program are the ABET (1)- (7) Student Outcomes as defined by the "ABET Criteria for

Accrediting Engineering Programs" available online at <http://www.abet.org/accreditation-criteria-policies-documents/>

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies after assuring compliance with all relevant program and accreditation requirements.

Standard Program for the Sc.B. degree

Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0200, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200 (or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra) or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1460 (Complex Analysis), MATH 1210 (Probability), or MATH 1220 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA concentration credits. Details regarding the mathematics requirement for each concentration are listed in the corresponding programs.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the "Study Elsewhere" section of the University Bulletin for procedures). In addition to the general rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be "unassigned credit" given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor. In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad>). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

1. Core Courses:

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0410	Materials Science	1
ENGN 0510	Electricity and Magnetism	1
ENGN 0520	Electrical Circuits and Signals	1
or ENGN 0500	Digital Computing Systems	

ENGN 0720	Thermodynamics	1
ENGN 0810	Fluid Mechanics	1
CHEM 0330	Equilibrium, Rate, and Structure	1
BIOL 0200	The Foundation of Living Systems	1
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
or MATH 0520	Linear Algebra	
APMA 0350	Applied Ordinary Differential Equations	1
APMA 0360	Applied Partial Differential Equations I	1
or APMA 1650	Introduction to Probability and Statistics with Calculus	
or APMA 1655	Introduction to Probability and Statistics with Theory	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
2. Upper-Level Chemical Engineering Curriculum		
ENGN 1100	Numerical Methods in Chemical Engineering	1
ENGN 1120	Reaction Kinetics and Reactor Design ¹	1
ENGN 1130	Chemical Engineering Thermodynamics ¹	1
ENGN 1710	Principles of Heat and Mass Transfer	1
CHEM 0350	Organic Chemistry I	1
Advanced Chemistry elective course ²		
CHEM 0360	Organic Chemistry II	1
or CHEM 0400	Biophysical and Bioinorganic Chemistry	
or CHEM 0500	Inorganic Chemistry	
or CHEM 1140	Physical Chemistry: Quantum Chemistry	
Advanced Engineering or Natural Sciences elective course ³		
3. Capstone Design Course		
ENGN 1140	Chemical Process Design	1
*In addition to program requirements above, students must take four courses in the humanities and social sciences.		
Total Credits		21

¹ ENGN 1120 and ENGN 1130 are only offered in alternate years.

² An advanced chemistry course approved by Concentration Advisor; the courses listed have been pre-approved for this requirement.

³ An advanced course in the natural sciences approved by the Concentration Advisor. For suggestions of acceptable courses that fulfill this requirement, please see the Concentration Advisor.

Special Sc.B. Concentrations (non-accredited)

In addition to the standard program described above, students may also petition the Engineering Concentration Committee to pursue a special engineering Sc.B. degree of their own design. Such special Sc.B. programs are not ABET-accredited. Students with a special concentration will receive an Sc.B. degree in engineering, but a specific area of specialization will not be noted on their transcript. A special Sc.B. concentration is intended to prepare graduates for advanced study in engineering or for professional practice, but in an area that is not covered by one of the existing Sc.B. programs. Accordingly, special concentration programs are expected to consist of a coherent set of courses with breadth, depth and rigor comparable to an accredited degree. A total of 21 engineering, mathematics, and basic science courses are required. The program must include at least 3 courses in mathematics, at least 2 courses in physical or life sciences; and at least 12 courses in engineering. At least five of the engineering courses must be upper level courses, and one must be a capstone design course or independent study, which

must be advised or co-advised by a member of the regular engineering faculty. Note that not all Engineering courses may be used to meet Sc.B. requirements: for example, the courses not allowed to count toward the A.B. will not qualify. Petitions should be prepared in consultation with an engineering faculty advisor, who will submit the petition to the Engineering Concentration Committee. Petitions must include: (i) a statement of the objectives of the degree program, and an explanation of how the courses in the program meet these objectives; (ii) course descriptions for any courses in the program that are not part of standard Sc.B. Engineering concentrations; (iii) a detailed description of any independent study courses used for concentration credit, signed by the faculty advisor for this course; and (iv) an up-to-date internal transcript.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Computer Engineering Concentration Requirements

Computer engineers design computer hardware (from chips to servers), communication and network systems, and the smart digital devices that continue to revolutionize how we live and work. They also write the software to run these systems, constantly innovating to improve performance to meet our growing technological needs. They are at the forefront of cybersecurity, machine intelligence, networking, embedded systems, and robotics. They are proficient in both electrical engineering and computer science and are employed in every industry or field that requires computer hardware.

The Computer Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org> (<http://www.abet.org/>). The Program Educational Objectives (PEOs) of the CE undergraduate program strives to prepare graduates who: (1) will succeed as leaders in the computer engineering and technology industry and in research and development positions within industry and academia; (2) will work effectively in a range of roles to solve problems with global, economic, environmental and societal impacts; and (3) will pursue lifelong learning through advanced degrees and professional development opportunities throughout their chosen career. The student outcomes of this program are the ABET (1) - (7) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" available online at <http://www.abet.org/accreditation-criteria-policies-documents/>

The Computer Engineering concentration shares much of the core with the other engineering programs, but is structured to include more courses in computer science and a somewhat different emphasis in mathematics.

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies after assuring compliance with all relevant program and accreditation requirements.

Standard Program for the Sc.B. degree Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0100, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200 (or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra), or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1460 (Complex Analysis), MATH 1210 (Probability), or MATH 1220 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA concentration credits. Details regarding the mathematics requirement for each concentration are listed in the corresponding programs.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the "Study Elsewhere" section of the University Bulletin for procedures.) In addition to the general rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with

ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be "unassigned credit" given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor. In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad/>)). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

1. Core Courses:

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0510	Electricity and Magnetism	1
ENGN 0520	Electrical Circuits and Signals	1
APMA 1650	Introduction to Probability and Statistics with Calculus	1
or APMA 1655	Introduction to Probability and Statistics with Theory	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	

CHEM 0330	Equilibrium, Rate, and Structure ¹	1
or ENGN 0410	Materials Science	
or NEUR 0010	The Brain: An Introduction to Neuroscience	
APMA 0350	Applied Ordinary Differential Equations	1
or APMA 1170	Introduction to Computational Linear Algebra	
or APMA 1710	Information Theory	
or CSCI 0220	Introduction to Discrete Structures and Probability	
or CSCI 1570	Design and Analysis of Algorithms	
or MATH 1260	Complex Analysis	

Select one of the following series (other CSCI courses subject to approval):

CSCI 0150	Introduction to Object-Oriented Programming and Computer Science
and	
CSCI 0200	Program Design with Data Structures and Algorithms

OR

CSCI 0170	Computer Science: An Integrated Introduction
and	
CSCI 0200	Program Design with Data Structures and Algorithms

OR

CSCI 0190	Accelerated Introduction to Computer Science (plus one additional CSCI course subject to Concentration Advisor approval)

OR

CSCI 0111	Computing Foundations: Data ²
and	
CSCI 0112	Computing Foundations: Program Organization
and	
CSCI 0200	Program Design with Data Structures and Algorithms

2. Upper-Level Computer Engineering Curriculum:

ENGN 1570	Linear System Analysis	1
ENGN 1630	Digital Electronics Systems Design	1
ENGN 1640	Design of Computing Systems	1
MATH 0520	Linear Algebra	1
or MATH 0540	Linear Algebra With Theory	
One advanced Computer Engineering foundations course:		1
ENGN 1580	Communication Systems	
ENGN 1600	Design and Implementation of Digital Integrated Circuits	
ENGN 1610	Image Understanding	
ENGN 1620	Analysis and Design of Electronic Circuits	
ENGN 2530	Digital Signal Processing	
One advanced Computer Science course with significant systems programming: ³		1
CSCI 0330	Introduction to Computer Systems	
or CSCI 0300	Fundamentals of Computer Systems	
ENGN 0500	Digital Computing Systems	
CSCI 0320	Introduction to Software Engineering	
CSCI 1230	Introduction to Computer Graphics	
CSCI 1380	Distributed Computer Systems	
CSCI 1670	Operating Systems	
CSCI 1680	Computer Networks	

Select three upper-level Computer Engineering electives. At least one must be an ENGN course, and at least one must be a CSCI course. Note that some upper-level courses are not offered every year. Other 1000- or 2000-level ENGN and CSCI courses outside of the list below may also be approved by the Concentration Advisor if they have appropriate connections to Computer Engineering.⁴

ENGN 1220	Neuroengineering
ENGN 1450	Properties and Processing of Electronic Materials
ENGN 1560	Applications in Microwave Communications
ENGN 1580	Communication Systems
ENGN 1590	Semiconductor Devices
ENGN 1600	Design and Implementation of Digital Integrated Circuits
ENGN 1610	Image Understanding
ENGN 1620	Analysis and Design of Electronic Circuits
ENGN 1650	Embedded Microprocessor Design ⁵
ENGN 1690	Photonics Devices and Sensors
ENGN 1930B	Biomedical Optics
ENGN 1931A	Photovoltaics Engineering
ENGN 1931F	Introduction to Power Engineering
ENGN 1931M	Industrial Machine Vision
ENGN 1931Y	Control Systems Engineering
ENGN 2500	Medical Image Analysis
ENGN 2501	Digital Geometry Processing
ENGN 2502	3D Photography
ENGN 2520	Pattern Recognition and Machine Learning
ENGN 2530	Digital Signal Processing
ENGN 2560	Computer Vision
ENGN 2620	Solid State Quantum and Optoelectronics
ENGN 2911X	Reconfigurable Computing
ENGN 2912B	Scientific Programming in C++
ENGN 2912K	Mixed-Signal Electronic Design
ENGN 2912U	Coordinated Mobile Robotics
ENGN 2920F	Sensors and Actuators for Real Systems
CSCI 0320	Introduction to Software Engineering
CSCI 1230	Introduction to Computer Graphics
CSCI 1270	Database Management Systems
CSCI 1300	Interaction Design
CSCI 1380	Distributed Computer Systems
CSCI 1411	Foundations of AI
CSCI 1430	Computer Vision
CSCI 1470	Deep Learning
CSCI 1570	Design and Analysis of Algorithms
CSCI 1600	Real-Time and Embedded Software
CSCI 1660	Introduction to Computer Systems Security
CSCI 1670	Operating Systems
CSCI 1680	Computer Networks
CSCI 1730	Design and Implementation of Programming Languages
CSCI 1951R	Introduction to Robotics

3. Capstone Design⁶

ENGN 1650	Embedded Microprocessor Design ⁵
or ENGN 1000	Projects in Engineering Design I
or ENGN 1001	Projects in Engineering Design II

3

4. General Education Requirement: At least four approved courses must be taken in humanities and social sciences

Total Credits

21

- 1 Or a Biology course beyond BIOL 0200, subject to Concentration Advisor approval
- 2 Subject to approval by the Concentration Advisor, the third upper-level elective may optionally be chosen from another department, such as CLPS, NEUR, PHYS or CHEM, if it has a significant quantitative physical science emphasis.
- 3 CSCI 1952Y cannot be used as a CS elective due to its overlap with ENGN 1640, which is a required course.
- 4 Students wishing to go directly from CSCI 0111 (<https://bulletin.brown.edu/search/?P=CSCI%200111>) to CSCI 0200 (<https://bulletin.brown.edu/search/?P=CSCI%200200>) (without CSCI 0112 (<https://bulletin.brown.edu/search/?P=CSCI%200112>)) will need to successfully complete additional exercises to receive an instructor override code for CSCI 0200 (<https://bulletin.brown.edu/search/?P=CSCI%200200>).
- 5 ENGN 1650 cannot be counted as an elective and capstone simultaneously. It can only be either elective or capstone.
- 6 Subject to approval by the Concentration Advisor, an independent study course (ENGN 1972/ENGN 1973) may be used to fulfill the Engineering Capstone Design requirement. To qualify for such approval, the independent study project must: (1) contain a significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work; (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study/>)

Special Sc.B. Concentrations (non-accredited):

In addition to the standard programs described above, students may also petition the Engineering Concentration Committee to pursue a special engineering Sc.B. degree of their own design. Such special Sc.B. programs are not ABET-accredited. Students with a special concentration will receive an Sc.B. degree in engineering, but a specific area of specialization will not be noted on their transcript. A special Sc.B. concentration is intended to prepare graduates for advanced study in engineering or for professional practice, but in an area that is not covered by one of the existing Sc.B. programs. Accordingly, special concentration programs are expected to consist of a coherent set of courses with breadth, depth and rigor comparable to an accredited degree. A total of 21 engineering, mathematics, and basic science courses are required. The program must include at least 3 courses in mathematics, at least 2 courses in physical or life sciences; and at least 12 courses in engineering. At least five of the engineering courses must be upper level courses, and one must be a capstone design course or independent study, which must be advised or co-advised by a member of the regular engineering faculty. Note that not all Engineering courses may be used to meet Sc.B. requirements: for example, the courses not allowed to count toward the A.B. will not qualify. Petitions should be prepared in consultation with an engineering faculty advisor, who will submit the petition to the Engineering Concentration Committee. Petitions must include: (i) a statement of the objectives of the degree program, and an explanation of how the courses in the program meet these objectives; (ii) course descriptions for any courses in the program that are not part of standard Sc.B. Engineering concentrations; (iii) a detailed description of any independent study courses used for concentration credit, signed by the faculty advisor for this course; and (iv) an up-to-date internal transcript.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

1

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Design Engineering Concentration Requirements

Design Engineering (<https://engineering.brown.edu/undergraduate/concentrations/design-engineering/>) (DE) teaches students to understand not just the how and what, but the why and why not behind the creation of technologically enabled products, services and systems. Methodologies, frameworks and analytical tools to evaluate strategic and systemic implications and consequences of these products, services and systems are considered. DE prepares students to (a) effectively apply engineering principles and quantitative analysis to make design decisions, (b) utilize complementary and conflicting principles from domains other than engineering in design decisions, (c) adeptly apply systemic principles to show interactions within and between systems, and (d) achieve fluency in human-centered and systems design processes and principles to analyze and synthesize responses to complex real-world problems.

Visit <https://engineering.brown.edu/undergraduate/concentrations/design-engineering>

The DE program has 19 required courses and a required narrative explaining why the student is choosing Design Engineering, their proposed pathway, and how their courses support that pathway. Course requirements include three courses in mathematics; one introductory engineering design course; one engineering gateway course; one natural science course; one computer science course; two engineering design courses (ENGN 0610 and ENGN 0620); three cognitive, psychological or social science courses (either from the list provided or with concentration advisor approval); and six upper-level courses curated by a student's chosen pathway focus, from which four must be engineering courses. The program culminates with a capstone, design or independent study experience. Brown's Design Engineering Bachelor of Science degree is non-ABET accredited.

Program Requirements

Introduction to Engineering

ENGN 0032	Introduction to Engineering: Design	1
or ENGN 0030	Introduction to Engineering	

Engineering Gateway (courses selected should include those required for the student's proposed pathway)

ENGN 0040	Engineering Statics and Dynamics	1
or ENGN 0410	Materials Science	
or ENGN 0490	Fundamentals of Environmental Engineering	
or ENGN 0500	Digital Computing Systems	
or ENGN 1490	Biomaterials	

Basic Physical/Life Science

BIOL 0200	The Foundation of Living Systems	1
CHEM 0330	Equilibrium, Rate, and Structure	
NEUR 0010	The Brain: An Introduction to Neuroscience	

Computer Science

CSCI 0111	Computing Foundations: Data	1
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	

CSCI 0170	Computer Science: An Integrated Introduction	
CSCI 0190	Accelerated Introduction to Computer Science	
APMA 0160	Introduction to Scientific Computing	
Mathematics: Calculus and Methods of Applied Mathematics and Statistics		
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
APMA 0350	Applied Ordinary Differential Equations	1
A third mathematics course from the following list:		
MATH 0100	Single Variable Calculus, Part II	
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	
APMA 0360	Applied Partial Differential Equations I	
APMA 1650	Introduction to Probability and Statistics with Calculus	
APMA 1655	Introduction to Probability and Statistics with Theory	
CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
MATH 0520	Linear Algebra	
MATH 0540	Linear Algebra With Theory	
Design Engineering Specific Requirements		
ENGN 0610	Systems Thinking	1
ENGN 0620	Design Brief	1
Social Science Research, Decision Making and Societal Context		
One course that covers Social Science Research Methods:		
ANTH 1940	Ethnographic Research Methods	1
SOC 1117	Focus Groups for Market and Social Research	
SOC 1118	Context Research for Innovation	
POLS 0500	Foundations of Political Analysis	
Or an equivalent course approved by the Concentration Advisor		
One course on Decision Making and Design:		
CPSY 0220	Making Decisions	1
CPSY 0010	Mind, Brain and Behavior: An Interdisciplinary Approach	
CPSY 0700	Social Psychology	
CPSY 1730	Psychology in Business and Economics	
EDUC 0800	Introduction to Human Development and Education	
PHIL 1610	Decision Theory: Foundations and Applications	
Or an equivalent course approved by the Concentration Advisor		
One course on Societal Context for Design:		
AMST 1611S	US Popular Culture	1
ANTH 0100	Introduction to Cultural Anthropology	
ANTH 1236	Urban Life: Anthropology in and of the City	
ARCH 0755	Engineering and Technology in the Ancient World	
ECON 0110	Principles of Economics	
ECON 1390	Inequality of Income, Wealth, and Health in the United States	
HIAA 0140	Structural and Architectural Analysis	
HIAA 1171	Cities, Landscapes, and Design in the Age of Pandemics	
PHIL 0401	Ethics of Digital Technology	

PHIL 0403	Ethics and Politics of Data	
PHIL 1430	Moral Theories	
TAPS 0220	Persuasive Communication	
URBN 1870D	Downtown Development	
Or an equivalent course approved by the Concentration Advisor		
Advanced Courses: Six engineering and/or engineering-related courses, at least four of which are ENGN courses, including two ENGN courses that are above the 1000-level (cannot be Entrepreneurship or Innovation Management and Entrepreneurship (PRIME) program courses). The fifth and the sixth courses can be non-introductory STEM courses. The pathway must be approved by the Concentration Advisor and constitute a coherent body of work. ¹		6
One Capstone, Design or Independent Study		1
ENGN 1000	Projects in Engineering Design I	
ENGN 1001	Projects in Engineering Design II	
ENGN 1140	Chemical Process Design	
ENGN 1150	Environmental Engineering Design	
ENGN 1230	Instrumentation Design	
ENGN 1620	Analysis and Design of Electronic Circuits	
ENGN 1640	Design of Computing Systems	
ENGN 1650	Embedded Microprocessor Design	
ENGN 1740	Computer Aided Visualization and Design	
ENGN 1760	Design of Space Systems	
ENGN 1930L	Biomedical Engineering Design and Innovation	
ENGN 1930M	Industrial Design	
ENGN 1931D	Design of Mechanical Assemblies	
ENGN 1931L	Biomedical Engineering Design and Innovation II	
ENGN 1972	Independent Study in Engineering Design	
ENGN 1973	Independent Study in Engineering Design	
Total Credits		19

¹ The following courses do not qualify for this purpose: ENGN 0020, ENGN 0090, ENGN 0130, ENGN 0350, ENGN 0900, ENGN 0930A, ENGN 1010, ENGN 1800, ENGN 1931H, ENGN 1931J, ENGN 1931Q, ENGN 1931W, ENGN 1932D, ENGN 2000, ENGN 2040, ENGN 2060, ENGN 2095, ENGN 2110, ENGN 2120, ENGN 2125, ENGN 2130, ENGN 2140, ENGN 2150, ENGN 2160, ENGN 2172, ENGN 2173, ENGN 2180

Electrical Engineering Concentration Requirements

The Sc.B. program in Electrical Engineering equips students with a solid foundation for careers in electrical engineering and related fields, to advance the knowledge base for future technologies, and to merge teaching, scholarship, and practice in the pursuit of solutions to human needs. Electrical engineers design and manufacture microelectronic hardware; sensors; biomedical instrumentation; communication systems; control systems; radar and navigation equipment, as well as power generation and distribution equipment and propulsion systems. The professional organization for electrical engineers, the Institute of Electrical and Electronics Engineers (IEEE), has over 400,000 members worldwide.

The curriculum consists of an interdisciplinary engineering core that includes courses in engineering, mathematics, and computer science, followed by advanced courses in electrical engineering, which include linear systems, analog and digital electronics, advanced science (typically modern physics or quantum mechanics) and three upper-level EE courses selected by the students. The program culminates with the capstone project course.

The Electrical Engineering program is accredited by the Engineering Accreditation Commission of ABET: <http://www.abet.org>. The Program Educational Objectives (PEOs) of the Electrical Engineering Sc.B. Program are to prepare the graduates: (1) to leverage their knowledge of mathematics, science, engineering, and liberal arts to succeed as leaders in engineering and technology industries and in R&D positions in industry and academia; (2) to build broad knowledge and experience in interdisciplinary research and project management, and to apply critical thinking skills in developing and evaluating technological solutions addressing societal needs. The student outcomes of this program are the ABET (1) - (7) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" available online at <http://www.abet.org/accreditation-criteria-policies-documents/>

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies after assuring compliance with all relevant program and accreditation requirements.

Special Sc.B. Concentrations (non-accredited):

In addition to the standard programs described above, students may also petition the Engineering Concentration Committee to pursue a special engineering Sc.B. degree of their own design. Such special Sc.B. programs are not ABET-accredited. Students with a special concentration will receive an Sc.B. degree in engineering, but a specific area of specialization will not be noted on their transcript. A special Sc.B. concentration is intended to prepare graduates for advanced study in engineering or for professional practice, but in an area that is not covered by one of the existing Sc.B. programs. Accordingly, special concentration programs are expected to consist of a coherent set of courses with breadth, depth and rigor comparable to an accredited degree. A total of 21 engineering, mathematics, and basic science courses are required. The program must include at least 3 courses in mathematics, at least 2 courses in physical or life sciences; and at least 12 courses in engineering. At least five of the engineering courses must be upper level courses, and one must be a capstone design course or independent study, which must be advised or co-advised by a member of the regular engineering faculty. Note that not all Engineering courses may be used to meet Sc.B. requirements: for example, the courses not allowed to count toward the A.B. will not qualify. Petitions should be prepared in consultation with an engineering faculty advisor, who will submit the petition to the Engineering Concentration Committee. Petitions must include: (i) a statement of the objectives of the degree program, and an explanation of how the courses in the program meet these objectives; (ii) course descriptions for any courses in the program that are not part of standard Sc.B. Engineering concentrations; (iii) a detailed description of any independent study courses used for concentration credit, signed by the faculty advisor for this course; and (iv) an up-to-date internal transcript.

Standard Program for the Sc.B. degree

Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0200, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200 (or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon

completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra), or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1460 (Complex Analysis), MATH 1210 (Probability), or MATH 1220 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA concentration credits.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the "Study Elsewhere" section of the University Bulletin for procedures). In addition to the general rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be "unassigned credit" given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad/>)). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher-level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

1. Core Courses:

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0410	Materials Science	1
ENGN 0510	Electricity and Magnetism	1
ENGN 0520	Electrical Circuits and Signals	1
ENGN 0720	Thermodynamics	1
ENGN 0310	Mechanics of Solids and Structures	1
or ENGN 0500	Digital Computing Systems	
or ENGN 0810	Fluid Mechanics	
or CSCI 0200	Program Design with Data Structures and Algorithms	
CHEM 0330	Equilibrium, Rate, and Structure	1
or MATH 0520	Linear Algebra	
or MATH 0540	Linear Algebra With Theory	
or APMA 0360	Applied Partial Differential Equations I	
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
APMA 0350	Applied Ordinary Differential Equations	1
APMA 1650	Introduction to Probability and Statistics with Calculus ¹	1
or APMA 1710	Information Theory	
or CSCI 1450	Advanced Introduction to Probability for Computing and Data Science	
CSCI 0150	Introduction to Object-Oriented Programming and Computer Science ²	1
or CSCI 0111	Computing Foundations: Data	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
or APMA 0160	Introduction to Scientific Computing	
or ENGN 1931Z	Interfaces, Information and Automation	

2. Upper-Level Electrical Engineering Curriculum

ENGN 1570	Linear System Analysis	1
ENGN 1620	Analysis and Design of Electronic Circuits	1
ENGN 1630	Digital Electronics Systems Design	1
PHYS 0790	Physics of Matter ³	1
or PHYS 1410	Quantum Mechanics A	

3. Electrical Engineering Specialization - Complete at least three courses from the following groups:

At least one advanced Electrical Engineering foundations course:

ENGN 1230	Instrumentation Design
ENGN 1580	Communication Systems
ENGN 1590	Semiconductor Devices
ENGN 1600	Design and Implementation of Digital Integrated Circuits
ENGN 1610	Image Understanding
ENGN 1640	Design of Computing Systems

Up to two other Electrical Engineering courses ⁴

ENGN 1220	Neuroengineering
ENGN 1560	Applications in Microwave Communications
ENGN 1650	Embedded Microprocessor Design ⁵
ENGN 1680	Design and Fabrication of Semiconductor Devices
ENGN 1690	Photonics Devices and Sensors
ENGN 1730	Lasers and Nonlinear Optics
ENGN 1790	Quantum Optics
ENGN 1930B	Biomedical Optics
ENGN 1931A	Photovoltaics Engineering
ENGN 1931F	Introduction to Power Engineering
ENGN 1931I	Design of Robotic Systems
ENGN 1931Y	Control Systems Engineering
ENGN 1931Z	Interfaces, Information and Automation

Up to one interdisciplinary engineering science course: ⁶

CPSY 1492	Computational Cognitive Neuroscience
ENGN 1370	Advanced Engineering Mechanics
ENGN 1450	Properties and Processing of Electronic Materials
NEUR 2110	Statistical Neuroscience
PHYS 1420	Quantum Mechanics B

4. Capstone Design: At least one course from the following:

ENGN 1650	Embedded Microprocessor Design ⁵	1
or ENGN 1000	Projects in Engineering Design I	
or ENGN 1001	Projects in Engineering Design II	

5. General Education Requirement: At least four approved courses must be taken in humanities and social sciences**Total Credits** **21**

¹ Another APMA/MATH course, such as MATH 0520 or APMA 0360, can be used in consultation with the Concentration Advisor, provided ENGN 1580 is taken in the upper-level Electrical Engineering program.

² ENGN 1931Z may replace CSCI 0150 or meet an upper-level elective requirement, but not both.

³ Other 1000-level PHYS courses may be taken subject to Concentration Advisor's approval.

⁴ Other Electrical Engineering foundations courses can also be taken, as well as a 2000-level Electrical Engineering graduate course, such as ENGN 2500, ENGN 2520, ENGN 2530, ENGN 2560, ENGN 2912K.

⁵ ENGN 1650 cannot be counted as an elective and capstone simultaneously. It can only be either elective or capstone.

⁶ Or CSCI course beyond CSCI 0200, subject to Concentration Advisor approval.

⁷ Subject to approval by the Concentration Advisor, an independent study course (ENGN 1972/ENGN 1973) may be used to fulfill the Engineering Capstone Design requirement. To qualify for such approval, the independent study project must: (1) contain a significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work, (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study/>)

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Environmental Engineering Concentration Requirements

The Sc.B. program in Environmental Engineering provides students with the tools to develop sustainable solutions to complicated environmental problems and design real-world solutions that consider risk, sustainability, life-cycle principles, and environmental impacts. Environmental engineers use the principles of engineering, mathematics, biology, and chemistry to develop and implement engineering solutions to protect human health and the environment from the adverse impacts of environmental pollution. Their work includes water and wastewater treatment, air pollution control, soil and groundwater remediation, site characterization and risk assessment, life cycle assessment, and climate change mitigation.

The Environmental Engineering program is accredited by the Engineering Accreditation Commission of ABET: <http://www.abet.org>. Within a few years of graduation, graduates of the Brown Environmental Engineering (EnvE) Program will: (1) Engage in continued learning through professional development, professional licensure, and service to the profession and society; (2) Achieve leadership positions or roles that advance environmental engineering practice; and (3) Pursue and successfully obtain an advanced graduate or professional degree in environmental engineering or a related discipline. The student outcomes of this program are intended to be those enumerated in items (1) - (7) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" available online at <http://www.abet.org/accreditation-criteria-policies-documents/>

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies after assuring compliance with all relevant program and accreditation requirements.

Standard Program for the Sc.B. degree Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0200, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200 (or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra), or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1460 (Complex Analysis), MATH 1210 (Probability), or MATH 1220 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA concentration credits. Details regarding the mathematics requirement for each concentration are listed in the corresponding programs.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the "Study Elsewhere" section of the University Bulletin for procedures). In addition to the general rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with

ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be "unassigned credit" given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor. In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad>)). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

1. Core Courses:

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0410	Materials Science	1
or ENGN 1490	Biomaterials	
ENGN 0490	Fundamentals of Environmental Engineering	1
CSCI 0111	Computing Foundations: Data	1
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
or ENGN 0500	Digital Computing Systems	
or ENGN 0510	Electricity and Magnetism	
or ENGN 0520	Electrical Circuits and Signals	
ENGN 0720	Thermodynamics	1
ENGN 0810	Fluid Mechanics	1
BIOL 0200	The Foundation of Living Systems	1

CHEM 0330	Equilibrium, Rate, and Structure	1
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
APMA 0350	Applied Ordinary Differential Equations ¹	1
or APMA 0360	Applied Partial Differential Equations I	
APMA 1650	Introduction to Probability and Statistics with Calculus	1
or APMA 1655	Introduction to Probability and Statistics with Theory	
2. Advanced Science Courses		
EEPS 1370	Environmental Geochemistry	1
or EEPS 0850	Weather and Climate	
or EEPS 1310	Global Water Cycle	
or EEPS 1320	Introduction to Geographic Information Systems for Environmental Applications	
or EEPS 1330	Global Environmental Remote Sensing	
or EEPS 1430	Principles of Planetary Climate	
or EEPS 1520	Ocean Circulation and Climate	
or EEPS 1710	Remote Sensing of Earth and Planetary Surfaces	
BIOL 0420	Principles of Ecology	1
or BIOL 0480	Evolutionary Biology	
or BIOL 0500	Cell and Molecular Biology	
or BIOL 0800	Principles of Physiology	
or BIOL 1470	Conservation Biology	
3. Upper-Level Environmental Engineering Curriculum ²		
ENGN 1340	Water Supply and Treatment Systems - Technology and Sustainability	1
Plus four advanced engineering courses from the list below		4
ENGN 1110	Transport and Biotransport Processes	
ENGN 1120	Reaction Kinetics and Reactor Design	
ENGN 1130	Chemical Engineering Thermodynamics	
ENGN 1342	Groundwater Flow and Transport	
ENGN 1700	Fluid Mechanics of Aerospace and Energy Systems	
ENGN 1710	Heat and Mass Transfer	
ENGN 1860	Advanced Fluid Mechanics	
ENGN 1931P	Energy and the Environment	
ENGN 1931R	The Chemistry of Environmental Pollution	
ENGN 1932P	Sustainable Energy: Science and Technology	
ENGN 2911P	Fate and Transport of Environmental Contaminants	
Or any other course approved by the Concentration Advisor		
4. Capstone Design ³		
ENGN 1150	Environmental Engineering Design	1

* In addition to program requirements above, students must take four courses in the humanities and social sciences.

Total Credits **21**

¹ Students who completed APMA 0330 and/or APMA 0340 prior to academic year 2021-22 may count these as satisfying the APMA 0350 and/or APMA 0360 requirements.

² Or any other advanced Engineering course approved by the Concentration Advisor.

³ Subject to approval by the Concentration Advisor, an independent study course (ENGN 1972/ENGN 1973) may be used to fulfill the Engineering Capstone Design requirement. To qualify for

such approval, the independent study project must: (1) contain a significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work; (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study/>)

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Materials Engineering Concentration Requirements

Materials engineers design, create, and manufacture materials which include semiconductors, polymers, ceramics, metal alloys, and composites. Their contributions have led to breakthroughs in many fields including computing, communications, automobiles, energy, aerospace, buildings/infrastructure, and biomedical devices. The Materials Engineering curriculum at Brown provides graduates with both the expertise necessary to practice their profession as well as the interdisciplinary foundation necessary to collaborate with the engineers who will use the materials that they develop. A substantial fraction of Materials Engineering students at Brown participate in research which allows them to make use of Brown's state-of-the-art facilities in microscopy, materials characterization, materials processing, and fabrication.

The Materials Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. The Program Educational Objectives PEOs of the Materials Engineering Sc.B. Program are to are to prepare the graduates: (1) To build on the knowledge gained in their undergraduate program in terms of strong engineering fundamentals, a specific strength in materials engineering, advanced written and verbal communication, and societal awareness and engagement, as well as new knowledge learned in their first years of employment or graduate school, to move toward positions of responsibility, leadership, and influence in the field; and (2) to be viewed as outstanding engineering leaders, whether in start-ups or multinational corporations or academia, in terms of technical competence and in their understanding of an engineer's responsibility to society and to ethical behavior. Through this reputation they will be having a significant organizational influence in their work. The student outcomes of this program are the (1) - (7) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" available online at <http://www.abet.org/accreditation-criteria-policies-documents/>

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies

after assuring compliance with all relevant program and accreditation requirements.

Standard Program for the Sc.B. degree Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0200, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200 (or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher-level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra), or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1460 (Complex Analysis), MATH 1210 (Probability), or MATH 1220 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA concentration credits. Details regarding the mathematics requirement for each concentration are listed in the corresponding programs.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the "Study Elsewhere" section of the University Bulletin for procedures.) In addition to the general

rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be "unassigned credit" given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor. In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad/>)). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

1. Core Courses:

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1

* In addition to program requirements above, students must take four courses in the humanities and social sciences.		
Total Credits		21

¹ Students who completed APMA 0330 and/or APMA 0340 prior to AY2021-22 may count these as satisfying the APMA 0350 and/or APMA 0360 requirements.

² These courses, or a course approved by the Concentration Advisor, are taken in either the junior or senior year. Note that ENGN 1450, ENGN 1470, ENGN 1475, and ENGN 1480 are typically offered in alternate years.

³ Subject to approval by the Concentration Advisor, an independent study course (ENGN 1972/ENGN 1973) may be used to fulfill the Engineering Capstone Design requirement. To qualify for such approval, the independent study project must: (1) contain a significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work; (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study/>

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Mechanical Engineering Concentration Requirements

The Sc.B. program in Mechanical Engineering (ME) has a long tradition of excellence at Brown. ME is one of the most versatile engineering disciplines as it explores a wide range of systems spanning fluids and solids. Students from this concentration learn the science of motion, designing and analyzing systems that shape our world: From high-precision nanomechanical machines to large-scale aerospace systems. At Brown, ME students carve unique paths leveraging computational, analytical, or experimental methodologies with other areas of interest in the spirit of the open curriculum. They become distinguished scholars, engineering innovators, and management leaders.

The curriculum in ME is intended to provide students with a broad interdisciplinary foundation complemented by specialized training in mechanical systems and fluid/thermal systems.

The Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. The Program Educational Objectives of the Mechanical Engineering program are to prepare the graduates: (1) to pursue careers as creative and innovative mechanical engineers in industry or academia; (2) to advance the frontiers of their field; and (3) to discharge their offices in a professional and responsible manner. The student outcomes of this program are the (1) - (7) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" available online at <http://www.abet.org/accreditation-criteria-policies-documents/>

Please note that all students concentrating in Engineering need to file a concentration declaration using the University's ASK advising system. This declaration must be first reviewed by the relevant Concentration Advisor and then approved by the Director of Undergraduate Studies after assuring compliance with all relevant program and accreditation requirements.

Standard Program for the Sc.B. degree Mathematics Requirements

As mathematics is a cornerstone of all engineering programs, significant attention is given to early preparation in mathematics in engineering concentrations. It is recognized that students entering Brown will have different levels of mathematics preparation, and the following is offered as general guidance, though the actual choices of courses should be made in consultation with an exploratory advisor. MATH 0190 (or MATH 0100), followed by MATH 0200 (or MATH 0180) is the preferred sequence of courses to be taken in the freshman year. MATH 0100 and MATH 0180 offer content like that in MATH 0190 and MATH 0200, respectively, but the latter courses are highly recommended for future engineering students because they offer more examples of relevance to the field. Students who would prefer, or require, a more introductory level calculus course may start the sequence with MATH 0090. They may then take MATH 0200

(or MATH 0180) in the subsequent semester and in that case, would receive engineering concentration credit equivalent to that which they would have received having taken MATH 0190 and MATH 0200. However, students who find that the step up from MATH 0090 to MATH 0200 is too challenging, have a choice to take MATH 0190 (or MATH 0100) upon completion of MATH 0090, but in this case, MATH 0090 would not carry engineering concentration credit and the student would then need to take MATH 0200 (or MATH 0180) in the sophomore year.

Students who have taken Advanced Placement (AP) calculus courses in high school and/or have shown proficiency through AP examinations may start the calculus sequence at a higher level than that suggested above. If a student has AP credit and accepts to use it, it then allows the student to place out of MATH 0190 (or MATH 0100). These students should enroll in the appropriate higher-level math course, e.g., MATH 0200 (or MATH 0180) or possibly MATH 0350 (a more theoretical course that covers similar material). Although it is impossible to place out of MATH 0200 or MATH 0350 with AP credit, we recognize that some students enter with an even higher level of preparation. Those students are advised to enroll in MATH 0520 (Linear Algebra), or MATH 0540 (Honors Linear Algebra), and take their second freshman mathematics course at a higher level, for example, MATH 1460 (Complex Analysis), MATH 1210 (Probability), or MATH 1220 (Mathematical Statistics). Alternatively, for some engineering concentrations, this second MATH credit requirement may be satisfied by taking a course from the Applied Mathematics Department, such as APMA 0350 (Applied Ordinary Differential Equations), APMA 0360 (Applied Partial Differential Equations), APMA 1650 (Statistical Inference) or APMA 1210 (Operations Research: Deterministic Models) if one of those courses listed is not taken for two APMA concentration credits. Details regarding the mathematics requirement for each concentration are listed in the corresponding programs.

Advanced Placement

Courses that have been taken at the secondary school level are typically only used for placement into the appropriate course level at Brown. The examples of how this can be done in mathematics are given above, and there are other instances (such as in selection of the appropriate introductory chemistry course) where AP credit is considered. It should be noted, however, that advanced placement credits cannot be used to substitute for any Engineering concentration requirements; they are instead used to ensure that students are placed into the correct level of courses.

Transfer Credits

Some students will also complete courses at other universities during the time they are Brown students (sometimes during summers while they are not in residence at Brown; sometimes during a junior semester abroad). Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the "Study Elsewhere" section of the University Bulletin for procedures). In addition to the general rules governing such transfers, there are specific rules governing courses that will be offered as satisfying Engineering concentration requirements.

If the course proposed for transfer credit is offered by another department at Brown (i.e., that it carries a course number that does not start with ENGN), then the equivalent of the course must be established by that other department. This is done by submitting a formal request through the ASK system (https://ask.brown.edu/transfer_credits/information/index). Once this approval has been received from the other department, the student's internal transcript will show the equivalence and the course in question can be shown in the Engineering concentration declaration as having been completed elsewhere. If the equivalence to a Brown course is not approved, then there may still be "unassigned credit" given for the course. In this case, the situation relative to how it does or does not count for concentration credit needs to be discussed with the Concentration Advisor. In rare cases, students may petition the Engineering Concentration Committee to use courses that do not have an equivalent offered at Brown in order to meet a concentration requirement. Substitutions of this nature can only be approved if the student's overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses

to meet relevant accreditation requirements. Students should consult their Concentration Advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

If the student wishes to transfer a course taken outside of Brown that would normally carry an Engineering course number, the sequence is a bit different. First, the student needs to fill out an Engineering Transfer Credit Approval Request (see <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/study-abroad/>)). This routes the request to the relevant Brown Engineering faculty member for approval. Once this has been obtained, then transfer approval is requested through the ASK system, as described above. This process ensures that the transcript will capture the equivalence of the externally completed course.

Substitutions for Required Courses

Students may petition the Engineering Concentration Committee to substitute a course in place of a defined concentration requirement. Such substitutions can only be approved if the student's modified program continues to meet the published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses needed to meet accreditation requirements. If the substitution involves taking an equal or higher-level course in substantially the same area, whether at Brown or elsewhere, it can be approved by the Concentration Advisor without requiring a formal petition to the Concentration Committee. (For courses taken elsewhere, the credit must be officially transferred as described above.) Students wishing to make substitutions of a broader nature should consult their Concentration Advisor for assistance in drafting their petition to the Engineering Concentration Committee. Such petitions may be approved by a majority vote of the Committee.

1. Core Courses:

ENGN 0030	Introduction to Engineering	1
or ENGN 0032	Introduction to Engineering: Design	
ENGN 0040	Engineering Statics and Dynamics	1
ENGN 0310	Mechanics of Solids and Structures	1
ENGN 0410	Materials Science ¹	1
ENGN 0510	Electricity and Magnetism	1
ENGN 0520	Electrical Circuits and Signals	1
ENGN 0720	Thermodynamics	1
ENGN 0810	Fluid Mechanics	1
CHEM 0330	Equilibrium, Rate, and Structure	1
MATH 0190	Single Variable Calculus, Part II (Physics/Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
MATH 0200	Multivariable Calculus (Physics/Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
APMA 0350	Applied Ordinary Differential Equations ²	1
APMA 0360	Applied Partial Differential Equations I ²	1
CSCI 0111	Computing Foundations: Data	1
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
or APMA 0160	Introduction to Scientific Computing	

2. Upper-Level Mechanical Engineering Curriculum: **Complete at least 6 courses from the following groups:** **6**

Mechanical Systems: At least one course from:

ENGN 1300	Structural Analysis
ENGN 1370	Advanced Engineering Mechanics
ENGN 1735	Vibration of Mechanical Systems

ENGN 1750	Advanced Mechanics of Solids
Fluids/Thermal Systems: At least one course from:	
ENGN 1860	Advanced Fluid Mechanics
ENGN 1700	Fluid Mechanics of Aerospace and Energy Systems
ENGN 1710	Principles of Heat and Mass Transfer
Capstone: At least one course from the following must be taken in the final two semesters: ³	
ENGN 1000	Projects in Engineering Design I
or ENGN 1001	Projects in Engineering Design II
ENGN 1931D	Design of Mechanical Assemblies
ENGN 1760	Design of Space Systems
Design Electives: Up to two courses from:	
ENGN 1230	Instrumentation Design
ENGN 1740	Computer Aided Visualization and Design
Bioengineering Electives: Up to two courses from:	
ENGN 1210	Biomechanics
ENGN 1220	Neuroengineering
ENGN 1490	Biomaterials
Robotic and Control Systems Electives: Up to two courses from:	
ENGN 1931Y	Control Systems Engineering
Engineering Analysis and Computation Electives: Up to two courses from:	
ENGN 1840	Numerical Methods in Engineering
ENGN 1950	Advanced Numerical Methods for Data, Simulation, and Optimization
Energy and Environmental Engineering Electives: Up to two courses from:	
ENGN 1932P	Sustainable Energy: Science and Technology
ENGN 1931P	Energy and the Environment
Interdisciplinary Electives: Up to one course from: ⁴	
ENGN 1620	Analysis and Design of Electronic Circuits
or ENGN 1340	Water Supply and Treatment Systems - Technology and Sustainability
or ENGN 1440	Mechanical Properties of Materials
or ENGN 1470	Composite Materials
or ENGN 1570	Linear System Analysis
or ENGN 1931F	Introduction to Power Engineering
or ENGN 1931Z	Interfaces, Information and Automation

3. Upper Level, Advanced Science Course: At least one course from:⁵

PHYS 0790	Physics of Matter
or BIOL 0800	Principles of Physiology
or CHEM 0350	Organic Chemistry I
or CHEM 1140	Physical Chemistry: Quantum Chemistry
or EEPS 1450	Structural Geology
or EEPS 1370	Environmental Geochemistry

4. General Education Requirement: At least four approved courses must be taken in humanities and social sciences

Total Credits **21**

- ¹ ENGN 1490 may be substituted if taken in Sophomore year.
² Students who completed APMA 0330 and/or APMA 0340 prior to academic year 2021-22 may count these as satisfying the APMA 0350 and/or APMA 0360 requirements. Other advanced courses in Mathematics or Applied Mathematics may be substituted with approval of the Concentration Advisor.
³ Subject to approval by the concentration advisor, an independent study course (ENGN 1972/ENGN 1973) may be used to fulfill the Engineering Capstone Design requirement. To qualify for such approval, the independent study project must: (1) contain a

significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work, (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at <https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study> (<https://engineering.brown.edu/undergraduate/concentrations/concentration-options/independent-study/>)

⁴ Other advanced alternative courses can be used with the approval of the Concentration Advisor.

⁵ Other non-introductory courses in physics, chemistry, neuroscience, geology, and biology are allowed.

Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Degrees with Honors in Engineering

Honors are granted by the University to students whose work in a field of concentration has demonstrated superior quality and culminated in an 'Honors Thesis of Distinction.' Honors recipients in the School of Engineering must meet the following criteria: (1) Demonstrate a strong academic record (60% A's or "S with Distinction" in their concentration through the seventh semester); (2) Propose and execute an independent research project under the guidance of a faculty member; (3) Complete a written thesis to the satisfaction of the Honors Program Committee; (4) Give a scientific/technical presentation at the Undergraduate Research Symposium in the spring semester; and (5) Fulfill all deadlines for applying for or completing honors to the satisfaction of his/her research advisor and the Honors Program Committee.

Engineering and Physics Concentration Requirements

The program is designed to ensure that students take a significant portion of the usual curriculum in Engineering and Physics, obtain substantial laboratory experience, and take several upper-level elective courses, focusing on applied science. Students may take either the standard Physics or Engineering programs during their first and second years and then switch to this combined program. The Sc.B. degree program in Engineering and Physics is not accredited by ABET and is mostly intended to prepare students for graduate study in applied science and engineering. Since the requirements include both quantum mechanics with the physics concentrators and analog electronics with EE concentrators, as well as more mathematics than either Physics or Engineering, it is one of the more demanding programs at Brown.

The following standard program assumes that a student begins mathematics courses at Brown with MATH 0100 or MATH 0190. Students who begin in MATH 0200 can substitute an additional science, engineering or higher-level mathematics course for the MATH 0190 requirement. To accommodate the diverse preparation of individual students, variations of the following sequences and their prerequisites are possible with permission of the appropriate concentration advisor and the instructors involved. We recommend that each student's degree program be submitted for prior approval (typically in semester four) and scrutinized for compliance (in semester seven) by one faculty member from the Department of Physics and one faculty member from the School of Engineering.

Select one of the following two course sequences:

ENGN 0040 & ENGN 0030 or ENGN 0032	Engineering Statics and Dynamics and Introduction to Engineering Introduction to Engineering: Design
PHYS 0050 & PHYS 0060	Foundations of Mechanics and Foundations of Electromagnetism and Modern Physics

2

PHYS 0070 & PHYS 0160	Analytical Mechanics and Introduction to Relativity, Waves and Quantum Physics	
MATH 0190	Single Variable Calculus, Part II (Physics/ Engineering)	1
or MATH 0100	Single Variable Calculus, Part II	
MATH 0200	Multivariable Calculus (Physics/ Engineering)	1
or MATH 0180	Multivariable Calculus	
or MATH 0350	Multivariable Calculus With Theory	
Select three additional higher-level math, applied math, or mathematical physics (PHYS 0720) courses.		3
CSCI 0111	Computing Foundations: Data	1
or APMA 0160	Introduction to Scientific Computing	
or CSCI 0150	Introduction to Object-Oriented Programming and Computer Science	
or CSCI 0170	Computer Science: An Integrated Introduction	
or CSCI 0190	Accelerated Introduction to Computer Science	
ENGN 0510	Electricity and Magnetism	1
or PHYS 0470	Electricity and Magnetism	
ENGN 1690	Photonics Devices and Sensors	1
or PHYS 1510	Advanced Electromagnetic Theory	
PHYS 0500	Advanced Classical Mechanics	1
or ENGN 1370	Advanced Engineering Mechanics	
PHYS 1410	Quantum Mechanics A	1
PHYS 1420	Quantum Mechanics B	1
PHYS 1530	Thermodynamics and Statistical Mechanics	1
or ENGN 0720	Thermodynamics	
ENGN 1620	Analysis and Design of Electronic Circuits	1
CHEM 0330	Equilibrium, Rate, and Structure	1
or ENGN 0310	Mechanics of Solids and Structures	
or ENGN 0810	Fluid Mechanics	
or PHYS 1600	Computational Physics	
ENGN 0410	Materials Science	1
or ENGN 1560	Applications in Microwave Communications	
or PHYS 0560	Experiments in Modern Physics	
PHYS 1560	Modern Physics Laboratory	1
or ENGN 1590	Semiconductor Devices	
or an approved 2000-level engineering or physics course.		
A thesis under the supervision of a physics or engineering faculty member:		1
PHYS 1990	Senior Conference Course	
or ENGN 1970	Independent Studies in Engineering	
or ENGN 1971	Independent Study in Engineering	
or ENGN 1972	Independent Study in Engineering Design	
or ENGN 1973	Independent Study in Engineering Design	

* Students are also encouraged to take courses dealing with
the philosophical, ethical, or political aspects of science and
technology.

Total Credits **19**

Professional Track

The requirements for all undergraduate professional tracks within
concentrations are standardized and additional information can be found
here:

<https://bulletin.brown.edu/undergradprotrack/>

Entrepreneurship Certificate Requirements

Offered by the Nelson Center for Entrepreneurship, in partnership with
Brown's School of Engineering, the Certificate in Entrepreneurship equips
students with an understanding of the fundamental building blocks of the
entrepreneurial process: i) understanding and validating an unmet need;
ii) developing a value proposition that addresses an unmet need; and iii)
designing a sustainability model that allows the value proposition to be
delivered repeatedly at scale. Two core courses introduce students to
foundational entrepreneurial concepts. Two elective courses will extend
students' foundational work into areas of particular interest. Finally,
students will complete an entrepreneurship practicum that enables them
to apply what they have learned in the classroom to a real-world project of
interest.

As with all undergraduate certificates (<https://www.brown.edu/academics/college/degree/undergraduatecertificates/>), students may only have one
declared concentration and must be enrolled in or have completed at least
two courses toward the certificate at the time they declare in ASK, which
must be no earlier than the beginning of the fifth semester and no later
than the last day of classes of the antepenultimate (typically the sixth)
semester, in order to facilitate planning for the entrepreneurship practicum.
Students must submit a proposal for their practicum project by the end of
the sixth semester.

Certificate Requirements

Core Courses: **2**

ENGN 0090	Management of Industrial and Nonprofit Organizations
ENGN 1010	The Entrepreneurial Process

Elective Courses (choose two): **2**

BIOL 2089	The Importance of Intellectual Property in Biotechnology
CPSY 0220	Making Decisions
ECON 1490	Designing Internet Marketplaces
ECON 1730	Venture Capital, Private Equity, and Entrepreneurship
ENGN 0020	Transforming Society-Technology and Choices for the Future
ENGN 0610	Systems Thinking
ENGN 0900	Managerial Decision Making
ENGN 0930L	Biomedical Engineering Design and Innovation
ENGN 1820	Future of Work
ENGN 1931L	Biomedical Engineering Design and Innovation II
ENGN 1931Q	Entrepreneurial Management in Adversity
ENGN 1931W	Selling & Sales Leadership in the Entrepreneurial Environment
ENGN 1932D	Qualitative Market Research for Entrepreneurs & Business Innovators
ENGN 1932R	Leadership in Organizations ((formerly SOC 1260))
ENVS 1207	Eco-Entrepreneurship (formerly UNIV 1207)
ENVS 1545	The Theory and Practice of Sustainable Investing
GNSS 1101	A Gender Perspective on Women and Enterprise
IAPA 1201D	Social Entrepreneurship
SOC 1118	Context Research for Innovation
SOC 1260	Market Research in Public and Private Sectors

URBN 1943	The Real Estate Development Process: An Entrepreneurial Lens	
Practicum:		1
ENGN 1931T	Entrepreneurship Practicum: Starting, Running, and Scaling Ventures	
Students must complete an Entrepreneurship Practicum (EP), an experiential semester course that enables them to apply what they have learned in the classroom to real-world projects. Students will apply the entrepreneurial process to a challenge or problem that is important to them, perhaps evolving from one of their other courses. The Practicum will act as a laboratory to identify and develop an impactful solution to that problem. ¹		
Total Credits		5

Biomedical Engineering - Master of Engineering Graduate Program

Requirements for Master of Engineering (Effective Fall 2025)

- Must complete a minimum of 8 tuition units.
 - no independent research credits
 - all 8 should be structured (non-independent study) advanced-level (1000 or 2000 level) courses
 - at least 3 courses in biological topics
 - at least 3 courses in engineering topics
- Must receive a grade of B or better, courses must be taken for a grade rather than credit/no credit.
- Time to completion can be less than two academic years depending on the preference of the student.

Biomedical Engineering - Master of Science Graduate Program

The Biomedical Engineering (BME) graduate program provides cutting-edge, interdisciplinary, graduate-level education at the interface of engineering, biology, and medicine. The program features an interdisciplinary approach in multiple complementary research areas: diagnostics, biomaterials, mechanobiology, regenerative engineering, and neuroengineering. Research in these areas is advancing fundamental biological, medical, and engineering knowledge while innovating to improve the human condition. The program is distinguished by its quantitative rigor and strong collaborative connections among academic science, clinical medicine, and industry. The BME graduate program is designed for students with backgrounds in engineering, physics, or applied mathematics that seek additional education and training in the field of biomedical engineering.

For more information on admission and program requirements, please visit: <http://www.brown.edu/academics/gradschool/programs/biomedical-engineering> (<http://www.brown.edu/academics/gradschool/programs/biomedical-engineering/>) and <https://www.brown.edu/academics/biomedical-engineering/academics/graduate-program> (<https://www.brown.edu/academics/biomedical-engineering/academics/graduate-program/>)

Chemical Engineering Graduate Program

Five-year Bachelor of Science / Master of Science

Brown undergraduates in engineering and other quantitative concentrations may apply to enter an integrated program leading to a master of science degree completed in two semesters following the completion of their bachelor of science (Sc.B.) degree. The program requirements are identical to those of the regular Sc.M. degree programs, with the exception that 5th Year students are able to share up to two relevant 1000- or 2000-level Engineering courses between their bachelor's

and master's programs. The maximum number of courses that can be transferred from the undergraduate program is two.

Master of Science (Thesis Option)

- Candidates must complete a coherent plan of study based in engineering or engineering science consisting of eight graduate or advanced level courses and an acceptable thesis, which is normally sponsored by a member of the engineering faculty.
- The program must include ENGN 2010 and ENGN 2020 (Mathematical Methods in Engineering and Physics) or their equivalent (must be 2000-level)
- ENGN 2010 and/or ENGN 2020 can be replaced by an alternate/applied mathematics course or 2000-level engineering/science course. This substitution can only be made with the approval of the appropriate Graduate Representative and the Director of Graduate Studies. The final program must contain at least one advanced (2000-level) mathematics/applied mathematics course.
- A three-course core in Chemical Engineering is taken which includes thermodynamics (ENGN 2730 or CHEM 2010), kinetics (ENGN 2750), and transport (typically ENGN 2760, ENGN 2911P, or ENGN 2810).
- The final three courses are electives or can be used for thesis preparation (ENGN 2980 Special Projects: Reading, Research, Design). Students should choose courses in consultation with the student's advisor to develop a coherent program. At least five of the eight courses must be at the 2000-level; up to three 1000-level courses may be taken where appropriate.
- The proposed program of study must be approved by the Director of Graduate Programs in the School of Engineering.

For students in a Master of Science in Chemical Engineering program (Thesis Option), the approved course sequence is 2-2-2-2, where the student takes two courses in each semester. However, the program strongly recommends a sequence of 3-2-2-1 where the student takes 3 courses the first semester, 2 the second, 2 the third, and 1 the fourth. **Deviations from these schedules can result in additional tuition.**

The program offers a non-thesis option in addition to the thesis option which does not require ENGN 2980.

PHYS 2020	Mathematical Methods of Engineers and Physicists	1
or ENGN 2010	Mathematical Methods in Engineering and Physics I	
ENGN 2020	Mathematical Methods in Engineering and Physics II	1
CHEM 2010	Advanced Thermodynamics	1
or ENGN 2730	Chemical and Environmental Thermodynamics	
ENGN 2750	Chemical Kinetics and Reactor Engineering	1
ENGN 2760	Heat and Mass Transfer	1
or ENGN 2911P	Fate and Transport of Environmental Contaminants	
or ENGN 2810	Fluid Mechanics I	
Three additional Engineering courses (At least five of the eight courses must be at the 2000-level; up to three 1000-level courses may be taken where appropriate.)		3
or ENGN 2980		
Total Credits		8

Data-Enabled Computational Engineering and Science Graduate Program

The Data-Enabled Computational Engineering and Science (DECES) program targets students with recently obtained Bachelor of Science (BS) degrees in Engineering, Applied Mathematics, Computer Science, Physical Sciences, and related disciplines, who are interested in pursuing careers that involve advanced modeling and simulation in engineering and physical sciences. This program will also be of interest to research staff as well as working professionals whose success on the job depends on their ability to perform high-fidelity engineering simulations with data assimilation. Data-Enabled Computational Engineering and Science is an

inherently interdisciplinary field requiring in-depth knowledge of advanced mathematics, numerical methods and their computer implementation, engineering sciences, and methods in the emerging field of Data Science. Given the composition of Brown's School of Engineering and Applied Math faculty, we are uniquely positioned to offer such a program using a combined Engineering and Applied Math graduate curriculum.

Program Requirements:

Two courses in Engineering, such as: 2

ENGN 1750	Advanced Mechanics of Solids
ENGN 2010	Mathematical Methods in Engineering and Physics I
ENGN 2020	Mathematical Methods in Engineering and Physics II
ENGN 2210	Continuum Mechanics
ENGN 2220	Mechanics of Solids
ENGN 2340	Computational Methods in Structural Mechanics
ENGN 2410	Thermodynamics of Materials
ENGN 2520	Pattern Recognition and Machine Learning
ENGN 2810	Fluid Mechanics I
ENGN 2820	Fluid Mechanics II
ENGN 2912B	Scientific Programming in C++
ENGN 2912V	Deep Learning for Scientists and Engineers
ENGN 2605	Image Understanding
ENGN 2790	Quantum Optics
ENGN 2980	Special Projects, Reading, Research and Design
ENGN 2930	Atomistic Modeling of Materials

Two courses in Applied Mathematics, such as: 2

APMA 1690	Computational Probability and Statistics
APMA 2070	Deep Learning for Scientists & Engineers
APMA 2190	Nonlinear Dynamical Systems I
APMA 2550	Numerical Solution of Partial Differential Equations I
APMA 2560	Numerical Solution of Partial Differential Equations II
APMA 2570B	Numerical Solution of Partial Differential Equations III
APMA 2580A	Computational Fluid Dynamics
APMA 2630	Theory of Probability I
APMA 2822B	Introduction to Parallel Computing on Heterogeneous (CPU+GPU) Systems

Two courses in data science/high performance computing 2

Two additional courses. To ensure depth these may be taken in Engineering, Applied Mathematics, Data Science, or other relevant disciplines. 2

Total Credits 8

For more information on admission and program requirements for the Data-Enabled Computational Engineering and Science program, please visit <https://computational.engineering.brown.edu/>

Please view sample course plans based on Sc.M. Thesis or Non-Thesis and Curriculum options at <https://computational.engineering.brown.edu/program-and-schedule> (<https://computational.engineering.brown.edu/program-and-schedule/>)

Design Engineering Graduate Program Master of Arts in Design Engineering (MADE)

The faculty and students of the MADE program have backgrounds in design and engineering. These combinations of vision with pragmatism,

qualitative combined with quantitative, and users with technology, multiply our ability to assess conditions, envision alternatives, and produce effective solutions. Our work responds to practical challenges with creativity, analytical reasoning, research skills, and collaboration.

Core courses

ENGN 2170	Engineering Design: Measure and Make	2
ENGN 2171	Iterating with Intention	2
ENGN 2173	Design Engineering Communication	1
ENGN 2172	Integrate and Implement	2

Four additional elective credits. Students may take two 1 credit electives or one 2 credit elective in Fall and Spring at Brown or at the Rhode Island School of Design. Electives must be approved by the MADE Advisor. Note: A 3-credit RISD course = 1 Brown credit

Total Credits 11

For students in the MADE program, the approved course sequence is 2 Summer, 4 Fall, 5 Spring (1 of which takes place during Winter Session). Any deviation from this schedule can result in additional tuition and/or penalties

Electrical and Computer Engineering Graduate Program

Five-year Bachelor of Science / Master of Science

Brown undergraduates in engineering and other quantitative concentrations may apply to enter an integrated program leading to a master of science degree completed in two semesters following the completion of their bachelor of science (Sc.B.) degree. The program requirements are identical to those of the regular Sc.M. degree programs, with the exception that 5th Year students are able to share up to two relevant 1000- or 2000-level Engineering courses between their bachelor's and master's programs. The maximum number of courses that can be transferred from the undergraduate program is two.

Master of Science (Thesis Option)

- The program must include ENGN 2010 and ENGN 2020 (Mathematical Methods in Engineering and Physics) or their equivalent (must be 2000-level)
- ENGN 2010 and/or ENGN 2020 can be replaced by an alternate/applied mathematics course or 2000-level engineering/science course. This substitution can only be made with the approval of the appropriate Graduate Representative and the Director of Graduate Studies. The final program must contain at least one advanced (2000-level) mathematics/applied mathematics course.
- Two additional 2000-level Engineering courses (other than ENGN 2980)
- Three additional Engineering or approved courses (not more than two 1000-level courses).
- One thesis preparation course (ENGN 2980 Special Projects: Reading, Research, Design).
- Students should choose courses in consultation with the student's advisor to develop a coherent program. The proposed program of study must be approved by the Director of Graduate Programs in the School of Engineering.

For students in a Master of Science in Electrical and Computer Engineering program (Thesis Option), the approved course sequence is 2-2-2-2, where the student takes two courses in each semester. However, the program strongly recommends a sequence of 3-2-2-1 where the student takes 3 courses the first semester, 2 the second, 2 the third, and 1 the fourth. **Deviations from these schedules can result in additional tuition.**

The program offers a non-thesis option in addition to the thesis option which does not require ENGN 2980.

ENGN 2010	Mathematical Methods in Engineering and Physics I	1
ENGN 2020	Mathematical Methods in Engineering and Physics II	1
Two additional 2000-level Engineering courses (other than ENGN 2980)		2
Three additional Engineering or approved courses (not more than two 1000-level courses)		3
ENGN 2980	Special Projects, Reading, Research and Design	1
Total Credits		8

Environmental Engineering Graduate Program

Five-year Bachelor of Science / Master of Science

Brown undergraduates in engineering and other quantitative concentrations may apply to enter an integrated program leading to a master of science degree completed in two semesters following the completion of their bachelor of science (Sc.B.) degree. The program requirements are identical to those of the regular Sc.M. degree programs, with the exception that 5th Year students are able to share up to two relevant 1000- or 2000-level Engineering courses between their bachelor's and master's programs. The maximum number of courses that can be transferred from the undergraduate program is two.

Master of Science (Thesis Option)

- Candidates must complete a coherent plan of study based in engineering or engineering science consisting of eight graduate or advanced level courses and an acceptable thesis, which is normally sponsored by a member of the engineering faculty.
- The program must include ENGN 2010 and ENGN 2020 (Mathematical Methods in Engineering and Physics) or their equivalent (must be 2000-level)
- ENGN 2010 and/or ENGN 2020 can be replaced by an alternate/applied mathematics course or 2000-level engineering/science course. This substitution can only be made with the approval of the appropriate Graduate Representative and the Director of Graduate Studies. The final program must contain at least one advanced (2000-level) mathematics/applied mathematics course.
- A three-course core in environmental engineering is taken which includes thermodynamics (ENGN 2730, CHEM 2010), groundwater (ENGN 2342), and transport (typically ENGN 2911P), or other appropriate courses chosen in consultation with the advisor.
- The final three courses are electives. Students must choose courses in consultation with the student's advisor to develop a coherent program.
- The proposed program of study must be approved by the Director of Graduate Programs in the School of Engineering.

For students in a Master of Science in Environmental Engineering program (Thesis Option), the approved course sequence is 2-2-2-2, where the student takes two courses in each semester. However, the program strongly recommends a sequence of 3-2-2-1 where the student takes 3 courses the first semester, 2 the second, 2 the third, and 1 the fourth.

Deviations from these schedules can result in additional tuition.

The program offers a non-thesis option in addition to the thesis option which does not require ENGN 2980.

PHYS 2020	Mathematical Methods of Engineers and Physicists	1
or ENGN 2010	Mathematical Methods in Engineering and Physics I	

ENGN 2020	Mathematical Methods in Engineering and Physics II	1
CHEM 2010	Advanced Thermodynamics	1
ENGN 2342	Groundwater Flow and Transport	1
ENGN 2911P	Fate and Transport of Environmental Contaminants	1
Three additional Engineering courses (at least one 2000-level and up to two ENGN 2980)		3
Total Credits		8

Materials Science and Engineering Graduate Program

Five-year Bachelor of Science / Master of Science

Brown undergraduates in engineering and other quantitative concentrations may apply to enter an integrated program leading to a master of science degree completed in two semesters following the completion of their bachelor of science (Sc.B.) degree. The program requirements are identical to those of the regular Sc.M. degree programs, with the exception that 5th Year students are able to share up to two relevant 1000- or 2000-level Engineering courses between their bachelor's and master's programs. The maximum number of courses that can be transferred from the undergraduate program is two.

Master of Science (Thesis Option)

- Candidates must complete a coherent plan of study based in engineering or engineering science consisting of eight graduate or advanced level courses and an acceptable thesis, which is normally sponsored by a member of the engineering faculty.
- The program must include ENGN 2010 and ENGN 2020 (Mathematical Methods in Engineering and Physics) or their equivalent (must be 2000-level)
- ENGN 2010 and/or ENGN 2020 can be replaced by an alternate/applied mathematics course or 2000-level engineering/science course. This substitution can only be made with the approval of the appropriate Graduate Representative and the Director of Graduate Studies. The final program must contain at least one advanced (2000-level) mathematics/applied mathematics course.
- Two advanced engineering courses recommended to be:
 - ENGN 2410 Thermodynamics of Materials or ENGN 1410 Physical Chemistry of Solids
 - ENGN 2420 Kinetic Processes and Mechanisms in Materials Science or ENGN 1420 Kinetics Processes in Materials Science and Engineering
- Two advanced engineering or science electives. Some recommended courses include:
 - ENGN 2430 Deformation Behavior of Materials or ENGN 1440 Mechanical Properties of Materials or ENGN 2490A Crystal Structures and Crystallography
 - ENGN 2210 Continuum Mechanics or ENGN 2240 Linear Elasticity
 - ENGN 2400 Electron Microscopy in Materials Science
 - ENGN 2930 Atomistic Modeling of Materials
 - ENGN 2460 Electronic and Magnetic Materials Design
 - ENGN 2920H Materials and Interfaces for Energy Storage Devices
- Two thesis preparation courses (ENGN 2980 Special Projects: Reading, Research, Design).
- Students should choose courses in consultation with the student's advisor to develop a coherent program. The proposed program of study must be approved by the Director of Graduate Programs in the School of Engineering.

For students in a Master of Science in Materials Science and Engineering program (Thesis Option), the approved course sequence is 2-2-2-2, where the student takes two courses in each semester. However, the program strongly recommends a sequence of 3-2-2-1 where the student takes

3 courses the first semester, 2 the second, 2 the third, and 1 the fourth.
Deviations from these schedules can result in additional tuition.

The program offers a non-thesis option in addition to the thesis option which does not require ENGN 2980.

PHYS 2020	Mathematical Methods of Engineers and Physicists	1
or ENGN 2010	Mathematical Methods in Engineering and Physics I	
ENGN 2020	Mathematical Methods in Engineering and Physics II	1
Two additional 2000-level Engineering courses (other than ENGN 2980)		2
Three additional Engineering or approved science courses (not more than two 1000-level courses)		3
ENGN 2980	Special Projects, Reading, Research and Design	1
Total Credits		8

Mechanical Engineering and Applied Mechanics Graduate Program

Total Credits		8

Program in Innovation Management and Entrepreneurship Graduate Program

Master of Science: Program in Innovation Management and Entrepreneurship (PRIME)

PRIME students experience the process of creating value from technology, learn how to develop embryonic ideas and execute how to bring these ideas to market. Core business skills in finance, strategy, marketing, decision making, globalization and management are provided to assure venture success. Students are given the opportunity to participate in a program established internship with a PRIME-partnering company during their studies. The PRIME program is offered either as a residential program or as an on-line program, with the same course requirements.

Residential Requirements

ENGN 2110	Business Engineering Fundamentals I	1
ENGN 2120	Business Engineering Fundamentals II	1
ENGN 2125	Engineering Management + Decision Making	1
ENGN 2150	Technology Entrepreneurship and Commercialization I	1
ENGN 2160	Technology Entrepreneurship and Commercialization II	1
ENGN 2180	Globalization Immersion Experience and Entrepreneurship Laboratory	1
Two 1000-level or above electives. Must be approved by the PRIME advisor.		2
Total Credits		8

Sustainable Energy Graduate Program

The U.S. is undergoing an historic transition of its energy system in order to decarbonize and help mitigate the worst effects of global climate change. Optimistically, the electrical system will become largely based on renewable and sustainable sources in the next ten years, and major energy consumption sectors of transportation, residential and commercial buildings, and industrial production will electrify and approach net-zero carbon emissions around 2050. These controversial changes constitute complex transitions in economic, political, and regulatory alignments along with technological innovation and continuing scientific advances. There is an urgent and growing need for technically and scientifically literate practitioners who can join cross-disciplinary teams working in both the public and private sectors to craft transition pathways and help deploy sustainable energy systems. The Sc.M. in Sustainable Energy challenges students to integrate knowledge across a wide range of science, engineering, policy, and business topics, develop a focused expertise in one aspect of sustainable energy systems, and prepare to enter or re-enter a career path directly impacting the progress of electrification and decarbonization.

Core Courses (To be approved after program approval)

The core of the Sc.M. in Sustainable Energy is envisioned as 3 new required and customized 2000-level courses. One of these is structured as 2 "ristretto" mini-courses, each being a one-half-credit module. Together, these 3 courses aim to condense a large body of cross-disciplinary material into a cohesive foundation for would-be practitioners. In general, we are building a future-focused framework; not just collecting what is known today and practiced today, but instead positing pathways that conceptualize and exhibit how the energy system could evolve in the next 2-3 decades, driven by climate mitigation goals and technology investments. All students shall take all 3 courses, in the same sequence, at least initially.

ENGN 2XX1: Sustainable Energy Science and Technology (graduate enrollment in ENGN 1932P; Andrew Peterson, SoE). Students will learn the fundamental thermodynamics of energy conversions, as well as the tools to analyze energy technologies. The course will cover the basic science of greenhouse-gas induced climate change, and analyze energy technologies in terms of the trade-offs involved in emissions, cost, scalability, land use, and resource ability.

ENGN 2XX2A: Policy and Economics of Energy Transitions (Dr. Kathryn Chelminski, Lawrence Berkeley National Laboratory). This ½-credit module provides an intensive overview of the policy and economic processes involved in the clean energy transition, with examples drawn from the U.S. as well as the world. Technological feasibility is necessary but not sufficient for the successful decarbonization of energy systems. Empirical social science documents the political factors that matter for climate policy outcomes, such as special interest groups, costs to develop and deploy renewable energy systems, preferences for clean energy, and measures and perceptions of distributive justice associated with transitions. Through weekly readings from current research, policy, regulatory and other sources, students encounter a diverse set of perspectives and issues arising in the planning and implementation of energy projects and their technical and societal impacts. Weekly writing assignments require synthesizing key learnings, reviewing relevant regulatory docket orders, and connecting to the major concepts presented in class. Students will complete a final research paper including interviews with industry experts, or an essay exam based on class themes.

ENGN 2XX2B: Energy and Climate Systems Modeling (Dr. Jun Ukita Shepard, U.S. Department of Energy, Office of Policy). This ½-credit module examines global energy systems from a variety of technological and economic perspectives: technological transitions, renewable energy

2 markets, climate science, and the complex relationship between energy consumption and climate change negotiations.

8 ENGN 2XX3: Electrification and Decarbonization (Rod Beresford, School of Engineering) Demand for electricity is surging and will continue to grow to as much as 2 or 3 times current capacity, as combustion energy sources are retired in favor of renewable sources in the transportation, buildings, and industrial sectors. Students will learn the fundamentals of the electrical grid in the U.S., including its history, ownership and regulatory structure, physics, and economics. The emphasis is on how the traditional and risk-averse focus on reliability and low cost can evolve in the decarbonization transition, expanding to target a smarter, more resilient, and more equitable set of societal goods.

Existing Engineering and Physical Science Courses

For their remaining 5 courses in the 1-year / 8-credit program, students shall select one focus area consisting of at least 3 related courses, with the remaining courses being free electives. In all cases, students consult with the Program Director in choosing from among existing Brown courses, including those comprising the following focus areas:

Energy Conversion Processes, Components, and Systems (at least 3 courses)

CHEM 1560N	Organometallic Chemistry	1
CHEM 1560S	The Chemistry of Polymeric Organic Materials	1
CHEM 1700	Nanoscale Materials: Synthesis and Applications	1
CHEM 2320	Solid State Chemistry	1
EEPS 2410	Kinetics of Geochemical Processes (Other 2000-level courses with approval)	1
ENGN 1130	Chemical Engineering Thermodynamics	1
ENGN 1931A	Photovoltaics Engineering	1
ENGN 1931P	Energy and the Environment	1
ENGN 2830	Compressible Fluid Flow	1
ENGN 2920H	Materials and Interfaces for Energy Storage Devices	1
PHYS 1530	Thermodynamics and Statistical Mechanics	1
PHYS 2140	Statistical Mechanics	1
PHYS 2410	Solid State Physics I	1
PHYS 2600	Computational Physics	1

Other 2000 level courses with approval

Energy and Environment: Economics and Policy of Systems in Transition (At least 3 courses)

ECON 1110	Intermediate Microeconomics	1
or ECON 1130	Intermediate Microeconomics (Mathematical)	
ECON 1210	Intermediate Macroeconomics	1
ECON 1350	Environmental Economics and Policy	1
ECON 1355	Environmental Issues in Development Economics	1
ECON 1480	Public Economics	1
ECON 1490	Designing Internet Marketplaces	1
EEPS 1400	Climate Modeling I	1
EEPS 2410	Kinetics of Geochemical Processes	1
ENGN 2920H	Materials and Interfaces for Energy Storage Devices	1
ENGN 1931P	Energy and the Environment	1
POLS 1435	Politics of Climate Change	1
PHP 1730	Climate Risks and Health Solutions	1
PHP 1855	Infectious Disease Modeling	1
PHYS 2410	Solid State Physics I	1
PHYS 2600	Computational Physics	1

SOC 1315	Macro-Organizational Theory: Organizations in Social Context	1
SOC 2385	Environmental Sociology	1
Other 2000-level course with approval		

Technology Leadership Graduate Program Requirements for the Master of Science in Technology Leadership for students admitted in Spring 2024

ENGN 2095	The Psychology of Decision Making	.5
ENGN 2800	Critical Challenge Project	1
ENGN 2040	Leadership Lab	.5
Total Credits		2

Courses

ENGN 0010. Introduction to Engineering: Design, Materials, and Structures.

The purpose of the course is to introduce students to the profession of engineering and the important role engineers play in society, as well as to provide a foundation for further study in engineering. The course begins with the consideration of engineering design and introduces a number of tools that are fundamental to engineering. These include vectors, computer aided design (CAD), and basic programming (Matlab). Particular attention is then focused on mechanics of materials and the analysis of static structures, but topics also include professional ethics and the social responsibility of engineers. Led by an undergraduate mentor/TA, students will complete three group design projects over the course of the semester related to the core course content. ENGN 0010 should be taken by students considering concentrating in engineering as well as students just curious about engineering and design.

ENGN 0020. Transforming Society-Technology and Choices for the Future.

This course will address the impact that technology has on society, the central role of technology on many political issues, and the need for all educated individuals to understand basic technology and reach an informed opinion on a particular topic of national or international interest. The course will begin with a brief history of technology.

ENGN 0030. Introduction to Engineering.

ENGN 0030 introduces students to the engineering profession and the important role engineers play in society, providing a foundation for further study in the field. The course will familiarize students with important engineering software tools, including MATLAB programming and CAD design (Solidworks). The course will also provide exposure to the BDW and the different engineering disciplines offered at Brown. Students will choose two five-week modules from subject areas including wearable sensors, decarbonization, batteries, wireless data links, mechanisms, and product design concepts.

ENGN 0031. Honors Introduction to Engineering.

ENGN 0031 introduces students to engineering and the important role engineers play in society, but with a greater emphasis on calculus-driven instruction and computational approaches using MATLAB and Mathematica. Technical topics include case studies across multiple engineering disciplines, static equilibrium, structural analysis, introductory robot kinematics, energy methods, CAD, professional ethics, and social responsibility. Students will also participate in group design projects which apply concepts from lectures. Students who complete ENGN 0031 may substitute an approved engineering or computer science course in place of CSCI 0111. Students are advised to concurrently enroll in MATH 0180/0190, or a higher MATH course.

ENGN 0032. Introduction to Engineering: Design.

This course is an introduction to the engineering profession with an emphasis on design. It is a project-based class which consists of three major design projects. Working in small groups, students leverage the design process and engineering discipline to present solutions to three design briefs. In weekly studio sessions, students will learn different tools (e.g., Matlab) associated with engineering and design. ENGN 0032 provides the foundation for further study in engineering. This class is designed for students who have a strong interest in design or are unsure of their interest in engineering. Students should have a math background (AB calculus).

ENGN 0040. Engineering Statics and Dynamics.

A broad introduction to Newtonian dynamics of particles and rigid bodies with applications to engineering design. Concepts include statics of structures; kinematics and dynamics of particles and rigid bodies; conservation laws; and use of MATLAB to solve equations of motion and optimize engineering designs. Examples of applications are taken from all engineering disciplines. Lectures, recitation, and team design projects, including use of Brown Design Workshop.

ENGN 0061. Undergraduate Teaching Assistant Apprenticeship: Full Credit.

Being an undergraduate TA is a learning and rewarding experience: Students get a deeper understanding of the course material and gain valuable management, mentoring, and social skills that they can take with them well into the future. Students taking this course must first be selected as an Undergraduate TA for an undergraduate Engineering course. Students can expect to work closely with the course instructor(s) on a variety of course-related topics, including preparation of material and development of assignments. A report on course development outcomes is expected as part of the course credit requirements.

ENGN 0062. Undergraduate Teaching Assistant Apprenticeship: Half Credit.

Being an undergraduate TA is a learning and rewarding experience: Students get a deeper understanding of the course material and gain valuable management, mentoring, and social skills that they can take with them well into the future. Students taking this course must first be selected as an Undergraduate TA for an undergraduate Engineering course. Students can expect to work closely with the course instructor(s) on a variety of course-related topics, including preparation of material and development of assignments. A report on course development outcomes is expected as part of the course credit requirements.

ENGN 0090. Management of Industrial and Nonprofit Organizations.

Exposes students to the concepts and techniques of management. Topics include marketing, strategy, finance, operations, organizational structure, and human relations. Guest lecturers describe aspects of actual organizations. Lectures and discussions.

ENGN 0110. Lean LaunchPad.

The Lean LaunchPad (LLP) is a Wintersession course on how to build a startup using lean startup tools and frameworks. It is a hands-on, intensive, experiential course designed for student teams who are serious about pursuing a startup. The course teaches development of relationships with customers, suppliers, communications providers and other enablers of the business with immediate feedback, requiring students to get out of the building and test their business hypotheses through multiple in person meetings. The Business Model Canvas is the scorecard for contact effectiveness and for development of the ecosystem of contacts which will make the business viable.

ENGN 0120. Crossing the Chasm by Engineering Design and Strategy.

Whether devising a new approach to spacecraft engineering, composing new music, or launching an innovative new consumer product, the acceptance by our intended audience to innovation is critical to success. While we believe that innovation is generally desirable, the reality is that the great majority of innovations either fail to be accepted or face strong criticism. The course is in part a theoretical framework starting with the concepts outlined in Geoff Moore's *Crossing the Chasm* and extended to a broad range of innovation and complete methodology for anticipating points of resistance and for creating strategy to overcome them. Another part is a series of case studies of innovations and their trajectories to eventual acceptance or to failure. Finally, the course is a laboratory experimenting with students' own ideas for innovation.

ENGN 0120A. Crossing the Consumer Chasm by Design.

Technologies have shaped human life since tools were sticks and flints to today's hydrocarbon powered, silicon managed era. Some spread throughout society; bread, cell phones, airlines, but most never do; personal jet packs, Apple Newton, freeze dried ice cream.

Space Tourism, the Segway, electric cars: Can we predict which ones will cross the chasm to broad application? Can we help them to by combining design, engineering, marketing, communications, education, art, and business strategies?

Student teams identify potential new products, conceptualize, package, and define their business mode. By plotting their course across the chasm, we confront the cross-disciplinary barriers to realizing benefits from technology.

Enrollment limited to 18 first year students.

ENGN 0120B. Crossing the Space Chasm Through Engineering Design.

Five decades of human activity in space have provided the world with instant global communications and positioning, human and robotic exploration of the moon, planets and sun, and a perspective of earth which informs and influences our relationship with our environment. Unlike other technical revolutions space has not transitioned to a commercial, consumer market commodity. Rather its users and applications remain primarily large and institutional. To experience the challenges of engineering design for adoption of innovation, we will work in groups to identify uses of space, and a plan for their implementations, that could help space become "every day". Through the process of design, we will confront the technical, economic, societal and political barriers to acceptance of innovation and to making new technologies beneficial to a wider range of users. Enrollment limited to 18 first year students.

ENGN 0120C. Power: From Early Engines to the Nuclear-Powered Artificial Heart.

Mechanical and electrical power have been source of major changes in civilization in last 250 years. This course starts from introduction to animal muscle power and harnessing nature to steam and later sources of power and applications, examining not only the technologies but also the people who developed them and the social and political impacts, ranging up to the nuclear-powered artificial heart. Enrollment limited to 19 first year students.

ENGN 0120D. Strategies for Creative Process: Design Topics.

There is no one simple methodology for creative thinking. Creative thinking is a critical response to the world around us - to our curiosities and interests, to the questions our observations generate, to the ways we frame problems, and to the strategies we develop for translating what we imagine into objects and experiences. Working as artist/designers, making things within a studio environment, we will examine various approaches for the development and refinement of our creative processes as we establish a technical and conceptual foundation for the design and fabrication of objects and experiences. Enrollment limited to 15 first year students.

ENGN 0130. The Engineer's Burden: Why Changing the World is Difficult.

We will examine the assertion that most of the changes that have improved people's lives are essentially technological and then we will look at the difficulties in creating sustainable and beneficial change. Topics of interest include unintended consequences, failure to consider local culture, and engineering ethics. Many, but not all, of the examples will have a third world context. The engineering focus will be on infrastructure--housing, water and sanitation, transportation, and also mobile devices as used in health care and banking.

ENGN 0150. Principles of Chemical and Atomistic Engineering.

This course introduces students to core concepts of chemical and molecular engineering. Students will learn to formulate, derive, and solve material and energy balances for chemical systems. Examples will be drawn from diverse application areas that are relevant to chemical engineering in the twenty-first century. These examples will emphasize how to break down complex problems into simpler components, how to derive the governing equations from first principles, and how to obtain the solution using numerical methods. Students will learn fundamentals of molecular modeling methods, and how atomistic techniques can be applied to engineering problems. The course is appropriate for students concentrating in any field of engineering, or related fields such as chemistry, physics, or biology.

ENGN 0230. Surveying.

Theory and practice of plane surveying; use of the tape, level, transit, stadia, and plane table; triangulation and topography. Lectures, field work, and drafting. Recommended for students interested in civil engineering. Hours arranged. Time required, about 10 hours. Audit only.

ENGN 0240. Biomedical Engineering Design and Innovation.

This course is an incubator for innovative ideas in biomedical design. Students across all disciplines are invited to collaborate with biomedical engineers to enhance the development of design solutions that address clinical and public health concerns. Students will form teams with their peers and a clinical advisor, identify and define a design project to meet a clinical need, and engage in the design process throughout the semester. Engineering concentrators should register for ENGN 1240.

ENGN 0250. Biomedical Engineering Design and Innovation II.

This course is an incubator for innovative ideas in biomedical design. Students across all disciplines are invited to collaborate with biomedical engineers to enhance the development of design solutions that address clinical and public health concerns. Student teams formed in the previous semester will continue develop a design project based on an unmet clinical need with a clinical advisor, gaining hands-on process experience and generating innovative solutions. Engineering concentrators should register for ENGN 1250.

ENGN 0310. Mechanics of Solids and Structures.

Mechanical behavior of materials and analysis of stress and deformation in engineering structures and continuous media. Topics include concepts of stress and strain; the elastic, plastic, and time-dependent response of materials; principles of structural analysis and application to simple bar structures, beam theory, instability and buckling, torsion of shafts; general three-dimensional states of stress; Mohr's circle; stress concentrations. Lectures, recitations, and laboratory. Prerequisite: ENGN 0040.

ENGN 0350. Art Fluid Engineering.

Art can be defined in many different ways, such as: Art is the action to produce objects with no practical use, whose only purpose is to be beautiful or stimulate the intellect in some way. Engineering, on the other hand, is a discipline that uses science to produce devices or processes that are intrinsically useful. We will combine two contrasting views to create objects with aesthetic value and can be useful. We will use fluid flows to create art. Discussions in which a 'fluid' idea is presented, and contrasting scientific/engineering and artistic analysis will be conducted. Students will identify a flow problem to create art: dynamic sculptures, paintings, videos, installations. Art pieces will be presented at the end of the semester and exhibited publicly. Engineering Students: Enroll in ENGN 1350 for advanced engineering credit with a prerequisite and scaled expectations.

ENGN 0410. Materials Science.

Relationship between the structure of matter and its engineering properties. Topics: primary and secondary bonding; crystal structure; atomic transport in solids; defects in crystals; mechanical behavior of materials; phase diagrams and their utilization; heat treatment of metals and alloys; electrical and optical properties of materials; strengthening mechanisms in solids and relationships between microstructure and properties. Lectures, recitations, laboratory.

ENGN 0490. Fundamentals of Environmental Engineering.

This course presents a broad introduction to environmental engineering, and will help students to explore environmental engineering as an academic major and as career option. The course covers topics in environmental engineering: chemistry fundamentals, mass balance, air pollution, water pollution, sustainable solid waste management and global atmospheric change. The course is essential for the environmental engineering students who are planning to take more advanced courses in environmental engineering. This course is also for the students in other engineering disciplines and sciences, who are interested in environmental constraints on technology development and practice, which have become increasingly important in many fields.

ENGN 0500. Digital Computing Systems.

Computers are so ubiquitous in modern technology that it is important to build a solid understanding of how computing machines are designed. We will work where software and hardware intersect, and introduce digital logic design, finite state machines, stored-program CPUs, digital data types, assembly language programming, compiler concepts and the C language. We will design digital logic and program modern RISC microprocessors similar to those in cell phones. We encourage all freshmen and sophomores interested in computing, and we welcome students from all Brown concentrations. It is assumed that students have some prior exposure to basic computer programming concepts.

ENGN 0510. Electricity and Magnetism.

Fundamental laws of electricity and magnetism and their role in engineering applications. Concepts of charge, current, potential, electric field, magnetic field. Resistance, capacitance, and inductance. Electric and magnetic properties of materials. Electromagnetic wave propagation. Lectures, recitation, and laboratory. Prerequisites: ENGN 0030, 0031, 0032 or PHYS 0070; ENGN 0040 or PHYS 0160 (previously 0080); MATH 0180 or 0200; and APMA 0330 or 0350 (may be taken concurrently).

ENGN 0520. Electrical Circuits and Signals.

An introduction to electrical circuits and signals. Emphasizes the analysis and design of systems described by ordinary linear differential equations. The frequency domain is introduced early and stressed throughout. Other topics include circuit theorems, power transfer, transient analysis, Fourier series, Laplace transform, a brief intro to diodes and transistors, and a little control theory. There is a lecture on engineering ethics. Laboratories apply concepts to real problems in audio and controls. Lectures, recitation, and laboratory. Prerequisite: MATH 0180 or MATH 0200, courses may be taken concurrent to ENGN 0520.

ENGN 0610. Systems Thinking.

Systems Thinking links theory and practice to better understand and improve the world around us. It examines the nature of systems in nature, society, and engineering, and applies interdisciplinary lenses to explore important global challenges like those tied to climate change, energy, health, and supply chains. This holistic approach provides both a strategic and practical means to visualize, analyze, and design solutions to improve performance. Students will engage in activities to discover how complex patterns of behavior can arise from simple structures and simple rules and draw on these insights to develop a deeper understanding of how people, process, and purpose align to get things done. In sum, this course helps students see systems in a whole new light, develop mental toolkits for analyzing tough issues, model their structure and behavior, and understand how and why change happens.

ENGN 0620. Design Brief.

This course introduces students to the theory and practice of engineering design. Topics include conceptual frameworks that ground the design process, the application of engineering concepts to inform design decisions, visual and written representation and communication, and the practice of design engineering.

ENGN 0720. Thermodynamics.

An introduction to macroscopic thermodynamics and some of its engineering applications. Presents basic concepts related to equilibrium and the zeroth, first and second laws for both closed and open systems. Examples include analysis of engines, turbines, and other engineering cycles, phase equilibrium and separation processes, chemical reactions, surface phenomena, magnetic and dielectric materials. Lectures, recitations, and laboratory. Prerequisites: ENGN 0030 or ENGN 0040 or equivalent; ENGN 0410 or CHEM 0330. An understanding of intermediate calculus is recommended, such as MATH 0180 or MATH 0200.

ENGN 0810. Fluid Mechanics.

Properties of fluids, dimensional analysis. Fluid statics, forces on submerged surfaces, kinematics. Conservation equations. Frictionless incompressible flows, Euler's equations, Bernoulli's equation: thrust, lift, and drag. Vorticity and circulation. Navier-Stokes equation, applications. Laminar and turbulent boundary layers, flow separation. Steady one-dimensional compressible flow. Sound, velocity, flow with area change, normal shocks. Lectures, laboratory. Prerequisites: MATH 0180 or 0200, ENGN 0040 or PHYS 0050 or PHYS 0070, APMA 0330 or APMA 0350 (can be concurrent).

ENGN 0860. Boat Building Design & Culture.

This course introduces the study of the design, engineering, work, material culture and history through the construction of a traditional workboat, a Maine Peapod. As the class builds the boat, we'll gain hands-on understanding of issues of engineering, design, skill, and workmanship. We will do historical research and visit museums to gain insight into the history of small craft and their builders/users from the nineteenth century to the present. Throughout the course, we will consider philosophical issues of tradition, creativity, and knowledge in engineering and making. Three longer writing assignments and an ongoing journal will connect hands-on work and research.

ENGN 0900. Managerial Decision Making.

Ways of making effective decisions in managerial situations, especially situations with a significant technological component; decision analysis; time value of money; competitive situations; forecasting; planning and scheduling; manufacturing strategy; corporate culture. Lectures and discussions. Prerequisite: ENGN 0090 or MATH 0100.

ENGN 0930A. Appropriate Technology.

Our goal for this course is that you leave it with the ability to think and act rationally and concretely on issues of technology and the human condition. We will provide background on useful technologies (e.g. wind, solar, hydro), techniques to fabricate them, and an opportunity to explore the obstacles to their implementation.

ENGN 0930C. DesignStudio.

DESIGNSTUDIO is a course open to students interested in learning through making. Working in a studio environment, we will iteratively design, build, and test projects, as we imaginatively frame design problems, and develop novel strategies for addressing those problems. We will explore design thinking, creative collaboration, exploratory play, ideation, iteration, woodworking, prototyping, CNC milling and laser cutting – in addition to other strategies that enhance our creative processes – as we establish a technical and conceptual foundation for the design and fabrication of objects and experiences. Enrollment limited to 16. Instructor permission required.

ENGN 0930L. Biomedical Engineering Design and Innovation.

This course is an incubator for innovative ideas in biomedical design. Students across all disciplines are invited to collaborate with biomedical engineers to enhance the development of design solutions that address clinical and public health concerns. Students will form teams with their peers and a clinical advisor, identify and define a design project to meet a clinical need, and engage in the design process throughout the semester. Engineering concentrators should register for ENGN1930L.

ENGN 0931. Internet of Everything.

The Internet can be visualized as Internet of information, Internet of people, Internet of places and most importantly the Internet of "things." Internet of Everything includes these four paradigms. In this class, we will learn about how these four ideas can come together to make a difference in the world. We will study the underlying infrastructure that supports Internet, the TCP/IP model, addressing and routing. Experiments and projects in the class would include a tree on the Internet communicating with the sprinkler system only when it is thirsty. Privacy and ethical issues will also be addressed.

ENGN 0931L. Biomedical Engineering Design and Innovation II.

This course is an incubator for innovative ideas in biomedical design. Students across all disciplines are invited to collaborate with biomedical engineers to enhance the development of design solutions that address clinical and public health concerns. Student teams formed in the previous semester will continue develop a design project based on an unmet clinical need with a clinical advisor, gaining hands-on process experience and generating innovative solutions. Engineering concentrators should register for ENGN 1931L.

ENGN 1000. Projects in Engineering Design I.

Fall semester projects in design for concentrators in electrical, materials, and mechanical engineering. Students work in teams on projects that are defined through discussions with the instructor. An assembled product or detailed design description is the goal of the semester's effort. Students may elect to combine ENGN 1000 with ENGN 1001 to work on a year-long project with permission of the instructor. Students electing to pursue this option must take ENGN 1000 and ENGN 1001 in the same academic year, and must submit a project proposal no later than October 1. Permission of instructor is required. Applicants should fill out this form and attend the first class: <https://forms.gle/Fkr8DYyaB2Gse9NZ6>

ENGN 1001. Projects in Engineering Design II.

Spring semester projects in design for concentrators in electrical, materials, and mechanical engineering. Students work in teams on projects defined through discussions with instructor. An assembled product or detailed design description is the goal of semester's effort. Students may elect to combine ENGN 1000 with ENGN 1001 to work on a year-long project with permission of the instructor. Students electing to pursue this option must take ENGN 1000 and ENGN 1001 in the same academic year and must have submitted a project proposal by October 1 of the previous Fall semester. Permission of instructor is required. Applicants should fill out this form and attend the first class: <https://forms.gle/Fkr8DYyaB2Gse9NZ6>

ENGN 1010. The Entrepreneurial Process.

Entrepreneurship is innovation in practice: transforming ideas into opportunities, and, through a deliberate process, opportunities into commercial realities. These entrepreneurial activities can take place in two contexts: the creation of new organizations; and within existing organizations. This course will present an entrepreneurial framework for these entrepreneurial processes, supported by case studies that illustrate essential elements. Successful entrepreneurs and expert practitioners will be introduced who will highlight practical approaches to entrepreneurial success. Enrollment limited to 35.

ENGN 1100. Numerical Methods in Chemical Engineering.

This course focuses on the numerical solution of common problems encountered in engineering with a focus on problems of interest in the chemical sciences. A theoretical background into these methods is essential to their accurate and efficient application. Therefore, this course will provide both theoretical underpinnings as well as practical use of such methods, relying on physical problems from chemical engineering wherever possible. Topics covered include linear algebra, model formulation and nondimensionalization, optimization and nonlinear systems, graph theory, numerical integration, atomistic and molecular simulation, Bayesian inference, and data analysis.

ENGN 1105. Numerical Methods in Chemical Engineering.

This course focuses on the numerical solution of common problems encountered in engineering, with a focus on problems of interest in the chemical sciences. A theoretical background into these methods is essential to their accurate and efficient application. Therefore, this course will provide both theoretical underpinnings as well as practical use of such methods, relying on physical problems from chemical engineering wherever possible. Topics covered include linear algebra, model formulation and nondimensionalization, optimization and nonlinear systems, graph theory, numerical integration, atomistic and molecular simulation, Bayesian inference, and data analysis. Sophomore level and above.

ENGN 1110. Transport and Biotransport Processes.

Aim: To develop a fundamental understanding of mass transport in chemical and biological systems. The course includes: mechanism of transport, biochemical interactions and separations; mass transport in reacting systems; absorption; membrane and transvascular transport; electrophoretic separations; pharmacokinetics and drug transport; equilibrium stage processes; distillation and extraction. Other features: design concepts; modern experimental and computing techniques; laboratory exercises. Prerequisites: APMA 0350.

ENGN 1120. Reaction Kinetics and Reactor Design.

Mechanisms, driving forces, and rate expressions of homogeneous and heterogeneous chemical and biochemical systems. Kinetics described from the potential energy surface to reaction networks. Basic concepts in reactor design and idealized reactor models. Chemostats and enzymatic reactors. Optimization. Temperature and energy effects in reactors. Catalysts and coupled transport effects. Prerequisite: ENGN 0720 or equivalent. Offered in alternate years.

ENGN 1130. Chemical and Statistical Thermodynamics.

Application and derivation of the laws of thermodynamics, built from the atomic scale up. Basic statistical mechanics treatment of chemical thermodynamics, and an in-depth treatment of the calculus of thermodynamics. Driving forces for atomic and macroscopic processes. Phase and chemical equilibria and partitioning of species in multiphase and reactive systems. Applications and examples drawn from chemical processing and environmental problems. Prerequisite: ENGN 0720 or equivalent. Offered in alternate years.

ENGN 1140. Chemical Process Design.

Chemical process synthesis, flow charting, and evaluation of design alternatives. Process equipment sizing as determined by rate phenomena, economics, and thermodynamic limitations. Introduction to optimization theory. Applications of these principles to case studies. Prerequisites or Corequisites: ENGN 1110, 1120, 1130.

ENGN 1150. Environmental Engineering Design.

Capstone engineering design course for Environmental Engineering. The course will involve introducing students to environmental contamination scenarios, developing responses to that scenario, e.g., developing methods to assess the extent of the problem, to designing actual remediation or mitigation strategies to address the problem. Coursework relies on laboratory measurements, computer modeling or both. Emphasis on conducting realistic assessments of the threat to human and ecological receptors, including learning about any relevant regulations, an evaluation of strategies to minimize negative impacts, and consideration of both the costs and timescales needed for implementing alternatives. Prerequisites: ENGN 0490, ENGN 0720, ENGN 0810.

ENGN 1210. Biomechanics.

Important foundations of continuum biomechanics, properties of biomaterials, three-dimensional concepts of strains and stress, linear isotropic elasticity, anisotropic response, yield, fracture, fatigue, nonlinear elastic and viscoelastic response of biological materials/structures and biomedical implants/devices will be taught. Students will learn physical basis, theory and applications of each of these topics for biomedical engineering applications. Muscle biomechanics, biomechanics of walking and running, and response of soft tissue and bone will be discussed.

ENGN 1220. Neuroengineering.

Course Goals: To develop an advanced understanding of how signals are generated and propagated in neurons and neuronal circuits, and how this knowledge can be harnessed to design devices to assist people with neurologic disease or injury. Fundamental topics in neuronal and neural signal generation, recording methods, and stimulation methods. Clinical/Translational topics include multiple clinically available and emerging neurotechnologies. Prerequisites: NEUR 0010 and ENGN 0510; or instructor permission, which may be provided after discussion with course faculty.

ENGN 1230. Instrumentation Design.

Sensors for pressure, temperature, blood flow, muscle and neural activity. Amplifiers, filters, and A/D-D/A converters. The use of computers in monitoring and controlling physiological processes. Feedback controllers for temperature, flow rate, and experimental stimuli. Intended as a design course primarily for biomedical engineers. Lab times to be arranged.

ENGN 1240. Biomedical Engineering Design and Innovation.

This course is the culmination "capstone" of the biomedical engineering educational experience. The primary objective of this course is to recall and enhance design principles introduced through the engineering core curriculum and to apply this systematic set of engineering design skills to biomedical engineering projects. Students will form teams with their peers and a clinical advisor, identify and define a design project to meet a clinical need, and engage in the design process through the course of the semester. For seniors only. Non-engineering concentrators should register for ENGN 0240.

ENGN 1250. Biomedical Engineering Design and Innovation II.

This course is part two of the culmination "Capstone" of the biomedical engineering educational experience. The primary objective of this course is to recall and enhance design principles introduced through the engineering core curriculum and to apply this systematic set of engineering design skills to biomedical engineering projects. Student teams formed in the previous semester will continue develop a design project based on an unmet clinical need with a clinical advisor, gaining hands-on process experience and generating innovative solutions. For seniors only. Non-engineering concentrators should register for ENGN 0250.

ENGN 1300. Structural Analysis.

Classical and modern methods of analysis for statically indeterminate structures. Development of computer programs for the analysis of civil, mechanical, and aerospace structures from the matrix formulation of the classical structural theory, through the direct stiffness formulation, to production-type structural analysis programs. Introduction to Finite Element Methods (FEM) and Isogeometric Analysis (IGA). Prerequisite: ENGN 0310.

ENGN 1310. Planning and Design of Systems.

No description available.

ENGN 1340. Water Supply and Treatment Systems - Technology and Sustainability.

This course provides a comprehensive overview of engineering approaches how to protect water quality. Class begins with brief introduction to hydrological cycle. More in detail groundwater flows (Darcy eq.-n) and flows into wells are examined. Principles of hydraulics are presented. Open channel and river flows, flood routing and preventing are presented. Freshwater and wastewater treatment technologies, together with advanced water treatment processes, are evaluated. Course ends with the visit to a local wastewater treatment plant. Prerequisites: CHEM 0330 and ENGN 0040. Recommended ENGN 0810.

ENGN 1342. Groundwater Flow and Transport.

Students in this course will develop a fundamental understanding of groundwater flow and transport processes. They will derive and apply mathematical models used in aquifer evaluation, aquifer testing, regional flow assessment, and solute transport predictions. Students will be introduced to state-of-the-art groundwater flow and transport simulators. A major portion of the course will be devoted to a team project in which students will use available geologic, hydrologic, and geochemical data from a selected site to develop, implement, and apply an aquifer model to address a real-world subsurface contamination problem.

ENGN 1350. Art Fluid Engineering.

Art can be defined in many different ways, but I like this one: Art is the action to produce objects with no practical use, whose only purpose is to be beautiful or stimulate the intellect in some way. Engineering is a discipline that uses science to produce devices or processes that are intrinsically useful. We will combine these two contrasting views to create objects that have aesthetic value and can be useful. This course aims to use fluid flows to create art. Students will participate in discussions in which a "fluid" idea will be presented. A contrasting scientific/engineering and artistic analysis will be conducted in each of these lectures. The students will then identify a flow problem to create a piece of art: dynamic sculptures, paintings, videos, or installations. The art pieces will be presented at the end of semester.

ENGN 1360. Soil Mechanics and Principles of Foundation Engineering.

Classification and identification of geological materials; mechanical and physical properties and methods of testing. Elements of the analysis of stress and strain in rock and soil masses; theories of failure, theory of seepage. Problems of building foundations; consolidation and settlement; stability of earth slopes and embankments. Includes geotechnical laboratory. Prerequisite: ENGN 0310.

ENGN 1370. Advanced Engineering Mechanics.

A unified study of the dynamics of particles, rigid bodies, and deformable continua. Generalized coordinates and Lagrange's equations; variational principles; stability of equilibrium; vibrations of discrete systems and of elastic continua, and wave propagation.

ENGN 1380. Design of Civil Engineering Structures.

This course provides an introduction to the design of steel and reinforced concrete structures using ultimate strength methods. Lectures will cover key concepts of design theory, building codes, and standards using examples from real structures. Students will apply concepts through computer labs, homework problems, and a design project. Lectures plus lab. Prerequisite: ENGN 1300.

ENGN 1400. Analytical Methods in Biomaterials.

Analytical methods and instrumentation currently used to characterize biomaterials. Specific methods/instrumentation covered include: molecular scale analysis (NMR, FTIR, UV-Vis spectroscopy); surface analysis (AFM, SEM, XPS, contact angle goniometry, ellipsometry, quartz crystal microbalance, electrochemistry, grazing angle IR); bulk analysis (DSC, mechanical testing) and biological analysis (bioassays, fluorescence and confocal microscopy). Prerequisites: CHEM 0330, CHEM 0350, ENGN 0040 and BIOL 0200. Enrollment limited to 40.

ENGN 1410. Physical Chemistry of Solids.

Application of physical chemistry and solid state chemistry to the structure and properties of engineering solids as used in solid state devices, ceramics, and metallurgy. Equilibrium and free energy of heterogeneous systems, thermodynamics of solutions, chemical kinetics, diffusion, catalysis and corrosion, solid state transformations. Case studies taken from industrial practice. Prerequisites: ENGN 0410, 0720.

ENGN 1420. Kinetics Processes in Materials Science and Engineering.

This course introduces the basic principles and formulations that describe kinetic processes in materials science and engineering. These are divided into the following principle types of mechanisms: solid state diffusion, reactions at surfaces and interfaces, and phase transformations. The final section of the course applies these principles to several relevant materials processing systems. Prerequisites: ENGN 0410, 0720, 1410 or equivalent.

ENGN 1440. Mechanical Properties of Materials.

Begins with basic concepts of mechanical properties common to all materials, with some emphasis on dislocation theory. Particular attention is given to the relationship between mechanical properties and microstructures. The different types of mechanical tests that are used in each of these fields are analyzed. Lectures plus laboratories. Prerequisite: ENGN 0410.

ENGN 1450. Properties and Processing of Electronic Materials.

Focus on fundamental properties, processing, and characterization of electronic materials for microelectronic, large area, and thin film device applications. Processing Si into modern integrated circuits, e.g., VLSI, USLI, will be described in terms of materials science of unit processes (oxidation, lithography, diffusion, ion implantation, thin film deposition) used in device fabrication. Review relationship between properties of different materials classes (metals, semiconductors, insulators) and band structure. Concepts used to explain the operation of a p-n junction and simple MOS structures. Laboratory will focus on depositing materials via vapor phase synthesis methods and measuring fundamental electronic properties of materials using transport measurements.

ENGN 1470. Composite Materials.

A study of the structure and properties of nonmetallic materials such as glasses, ceramics, and polymers. The crystal structure of ceramics, and the noncrystalline networks and chains of glasses and polymers, and the generation of microstructures and composites are considered. The physical and mechanical properties of glasses, ceramics, polymers, and composites, and their dependence on structure, are developed. Prerequisite: ENGN 0410

ENGN 1475. Soft Materials.

This course is an introduction to soft materials, focusing on natural and synthetic polymers and composites. Students will learn fundamentals of polymer chemistry (synthetic approaches) and polymer physics (thermodynamics, diffusion, viscosity); methods for characterizing/analyzing the structure of polymers in solution and solid state, including laboratory exercises; and approaches to designing polymers with properties for different applications (actuation, 3D printing, robotics, drug delivery). Course focuses on design of soft materials for specific applications and includes reading and discussion of primary literature. The course will be taught at a level suitable for undergraduates in engineering and graduate students in engineering and related fields.

ENGN 1480. Metallic Materials.

The central theme is to familiarize students with typical microstructures in metals and alloys, their origin, and factors that control stability. The role of processing (primary and secondary) in influencing microstructures will be demonstrated. The ability to change microstructure through composition and processing to obtain a "desired" microstructure that provides specific properties will be highlighted with examples in different alloy systems including Al, steels, and Ni-based. Factors that control stability and shape of second phase particles will be discussed for L/S and S/S processing. The consequences of microstructural changes on physical and mechanical properties will be illustrated. Prerequisite: ENGN 0410. Recommended: ENGN 1410.

ENGN 1490. Biomaterials.

Biomaterials science, the study of the application of materials to problems in biology and medicine, is characterized by medical needs, basic research, and advanced technological development. Topics covered in this course include materials used in bone and joint replacement, the cardiovascular system, artificial organs, skin and nerve regeneration, implantable electrodes and electronic devices, drug delivery, and ophthalmology.

ENGN 1510. Nanoengineering and Nanomedicine.

Students in this course will develop a fundamental understanding of nanoengineering and its applications in medicine. We will discuss nanomaterials synthesis, fabrication, and characterization. Medical applications of these materials will include drug delivery, imaging and diagnostics, and tissue engineering approaches. Nanotoxicology will also be discussed. Research methods in nanoengineering and nanomedicine will be emphasized (i.e., critical analysis of scientific literature, effective oral and written communication). Students will also have the opportunity to gain an introduction to several nanoengineering research tools available on campus. This course is for engineering and science graduate students and advanced upper-level engineering undergraduates.

ENGN 1520. Cardiovascular Engineering.

In this course, students will learn quantitative physiological function of the heart and vascular system, including cardiac biomechanics and vascular flow dynamics, through lectures and discussion of current scientific literature. A systems approach will integrate molecular biophysics, cell biology, tissue architecture, and organ-level function into a quantitative understanding of health and disease. Discussion topics will include cardiovascular devices, pre-clinical regenerative therapies, stem cell ethics, and clinical trials.

ENGN 1550. Recent Advances in Biomedical Engineering.

This course will cover the latest developments in biomedical engineering over a broad range of areas including drug delivery, regenerative medicine, immune engineering, and diagnostics. Applications discussed within these fields may include infectious disease technologies, women's health, global health technologies, biomanufacturing, etc. Students will learn about recent developments in these fields in academia, government, and industry. This course is intended for engineering and science graduate students and undergraduates interested in gaining an appreciation for current applications of biomedical engineering. An emphasis will be placed on critical analysis of current technologies and scientific communication with diverse audiences. This course is meant for engineering and science graduate and undergraduate students that have completed CHEM 0330 (or equivalent) and MATH 0100 (or equivalent).

ENGN 1560. Applications in Microwave Communications.

We focus on the study/design of communications systems that operate within microwave frequencies (1-300 GHz). We review transmission/reception of TEM waves in various mediums, transmission lines, PCB's and waveguides. We look at RF components including oscillators, amplifiers, filters, tuners, frequency converters and antenna systems. We also measure system performance in terms of dynamic range, noise figure and power delivery. Once these foundations are set, we look at the End-2-End system design for Radio/TV, Radar, WIFI, 5G-Mobile, Satellites, and fiber optic networks. We also look at high-speed circuits used throughout the packet switched Internet. We look at practical design approaches for high-availability design with guest industry experts. We augment class lectures with biweekly P-sets and hands-on lab experiments, both with instrumentation and SW simulation. The class has 2 mid-terms, a class field trip, and final design project from class concepts.

ENGN 1565. Physical and Physics Foundation of Computing.

Computing is a physical act of counting and comparing quantities, represented in symbols but executed by charges and waves. This course introduces the physical and physics foundation of computing and the underlying principles. It draws inspirations from the mounting demands and pressing problems in the computing industry, impacting all sectors worldwide. And, it builds on the R&D of current and future computing in industry and academia. This course is designed to be a frontier exploration course at the introductory level, for aspiring researchers, technologists, and explorers. It is open to and accessible at junior, senior undergraduate or graduate levels in engineering, physics, chemistry, materials, and computer sciences. The theoretical concepts presented are developed from the ground up, starting with basic knowledge of E&M, statistics, quantum mechanics, and linear algebra.

ENGN 1570. Linear System Analysis.

Analysis of discrete and continuous electrical signals and systems in both time and frequency domains. Modulation, sampling, spectral analysis, analog and digital filtering. Fourier, Laplace and z-transforms, the state-space approach, stability of linear systems. Prerequisite: ENGN 0520.

ENGN 1580. Communication Systems.

We will learn basic communication and information theory, but with examples drawn from a variety of areas not normally considered communication. Basic knowledge of Laplace/Fourier transforms and frequency domain is essential (ENGN 0520 or equivalent required). Linear Systems (ENGN 1570), Probability (APMA 1650 or MATH 1610), Linear Algebra (MATH 0520 or 0540) and E&M (ENGN 0510) are helpful but not required. Analog modulation, digitization, signal space, digital modulation and noise, information theory, selected topics in modern communication/information network theory and applications to biology and physics as time and interest permit. Depending on preparation, we may also pursue final projects.

ENGN 1590. Semiconductor Devices.

An introduction to semiconductor device physics and basic electronic properties of semiconductors, including junctions, heterojunctions and fundamental device building blocks. Current and proposed semiconductor devices: field effect transistors, bipolar transistors, quantum-effect devices, and optoelectronic devices. A brief fabrication lab will introduce junction fabrication in the cleanroom. Advanced topics, such as heterojunction bipolar transistors and silicon-on-insulator FETs, included in the graduate version.

ENGN 1595. Lasers and Nonlinear Optics.

This is a second course on optics and photonics and is intended for juniors interested in more advanced topics in modern optics who have already completed ENGN1690. Topics to be covered include the fundamentals of laser operation, gain and gain saturation, resonators, single-mode and multi-mode lasers, and a selection of important laser examples. We will then discuss light-matter interactions in the nonlinear regime, relying on a classical or semi-classical treatment. Topics will include frequency conversion via mixing or parametric processes, and degenerate third-order self-induced effects. Time permitting, we will discuss some of the most recent breakthroughs in optically-driven nonlinear processes such as laser-induced fusion as well as the planned exascale laser systems currently under development.

ENGN 1600. Design and Implementation of Digital Integrated Circuits.

This course will cover digital design and implementation concepts required for successful tape-out of integrated circuits. The first part covers the fundamentals of Very Large-Scale Integration (VLSI) design, including transistor analysis, standard cell layout, and cell characterization techniques. The second part covers use of design automation tools to complete a full design to tape-out. In the second part, hardware design using Verilog will be first discussed, and then will follow with the use of techniques and tools: logic synthesis, circuit timing and power, and placement and routing. The class will feature a number of labs and a large design project.

ENGN 1610. Image Understanding.

Image processing is a technology experiencing explosive growth; it is central to medical image analysis and transmission, industrial inspection, image enhancement, indexing into pictorial and video databases, e.g., WWW, and to robotic vision, face recognition, and image compression. This senior-level undergraduate course covers theoretical underpinnings of this field and includes a series of practical MATLAB image processing projects. ENGN 1570 is recommended, but not required.

ENGN 1620. Analysis and Design of Electronic Circuits.

Analysis and design of a variety of fundamental analog integrated microelectronic circuits at the transistor level and their practical applications to sensing and interfacing in a range of fields; life sciences, wireless communications, and computing. Elementary device physics and circuit characteristics of semiconductor diodes and MOS field effect transistors (FETs) as fundamental building blocks will be discussed. Concepts of noise and fundamental limits of sensing will also be discussed. Required Text: Fundamentals of Microelectronics, Wiley, Behzad Razavi, any edition (1st - 3rd). Prerequisites: ENGN 0520 or ENGN 1230 or with instructor permission.

ENGN 1630. Digital Electronics Systems Design.

Fundamentals of digital logic design including: Boolean algebra, gates, truth tables, logic families, flip-flops, finite state machines, memory, and timing. More advanced topics include A-D conversion, binary arithmetic, CPU organization, programmable logic (CPLDs and FPGAs), and VHDL. Extensive laboratory requirement. Not open to first year students; permission required for sophomores.

ENGN 1640. Design of Computing Systems.

This course introduces the main concepts and techniques for designing computing systems. Topics covered include assembly language, instruction set design, pipelining, superscalar and VLIW processor design, memory subsystem design, and I/O interfacing. Laboratory topics include programmable logic devices, hardware definition languages, and implementation of a bootable version of the pipelined MIPS processor. Laboratory emphasizes design optimizations with respect to speed and design area. Prerequisite: ENGN 1630 or passing of a quiz on basic digital logic concepts, or instructor permission.

ENGN 1650. Embedded Microprocessor Design.

This is a combined lecture and design project course offering experience in the open-ended design of an electronic product or system employing an embedded microprocessor by small-group design teams. Activity includes product specification, circuit design, programming, printed circuit layout, construction, packaging, and economic assessment. Teams are expected to produce functional products. Lecture topics will be adjusted to reflect the chosen design problems. Emphasis is placed on the criteria for choosing processors and on the interfaces and programming requirements of the system. Primarily for senior concentrators. Experience with C programming is helpful but not required. Prerequisite ENGN 1630 or permission of the instructor.

ENGN 1670. Soft Matter.

This course provides an introduction to soft matter: Polymers, elastomers, liquid crystals, and colloids. Students in Physics, Engineering, Chemistry, and Applied Mathematics may find this course useful. Familiarity with classical statistical mechanics (PHYS 1530) is required. We will use scaling arguments and simple physical pictures as much as possible.

ENGN 1680. Design and Fabrication of Semiconductor Devices.

Contemporary practice in the design and fabrication of semiconductor devices. The realization of basic electronic device functions on the semiconductor platform is a central theme in a coordinated lecture and laboratory course. Topics include microcircuit photolithography; layout and design scaling rules for integrated circuits; and techniques in semiconductor and thin film processing as they apply to ULSI circuit manufacturing. Prerequisite: ENGN 1590 or permission.

ENGN 1690. Photonics Devices and Sensors.

Science and engineering principles of photonics and optoelectronic devices that provide foundation to a broad range of technologies from lasers to detectors, from cameras to computer displays, from solar cells to molecular sensing, from internet to quantum cryptography, and to new lighting sources for illuminations in the city and in biomedical treatments. Topical content: Light as waves in media, on surfaces, and through micro and nanostructures; interference and waveguiding; light generation by spontaneous emission, stimulated emissions, photodetection, infrared and night visions, LED, lasers, optical amplifiers and modulators, etc. Prerequisite: ENGN 0510 or equivalent.

ENGN 1700. High Reynolds Number Flows.

You will explore the fluid mechanics of aerospace and energy systems. Aerospace fluid dynamics are the dynamics of flows involving air. Such flows have a variable density over space and time. They can expand to take the shape of volume or be compressed into a confined space. These flows surround (air), inflate (air in lungs), compress (impact), hold/push (drag/thrust), and levitate (flight). Investigate flows to design and take advantage of their behavior for engineering solutions (e.g., extracting energy). Learn to identify a fluid and develop the framework (differential equations) describing compressible flow motion/dynamics. Study fundamental thin airfoil, wing, and boundary layer theory. Consider extracting energy from air flows using wind turbines. Solve the Euler equations using analysis and numerical methods. The course concludes by surveying advanced topics involving supersonics, hypersonics, and space propulsion. Prerequisites: ENGN 0720 and ENGN 0810.

ENGN 1705. Sustainable Energy: Science and Technology.

The energy transition from fossil fuels to renewable sources may be the defining technological issue of the coming decades. This class covers the fundamental science and technology of energy technologies, focusing on emerging energy resources. Students will learn the fundamental thermodynamics of energy conversions as well as the tools to analyze energy technologies. The course will cover the basic science of the greenhouse-gas induced climate change, and will analyze energy technologies in terms of the trade-offs involved in emissions, cost, scalability, land use, and resource ability.

ENGN 1710. Principles of Heat and Mass Transfer.

This course explores the transfer of energy as heat. It starts with basic heat transfer problems involving thermal conduction, convection, and radiation. The steady heat transfer through composite walls and heat dissipated from extended surfaces (such as fins) are examined. Transient heat transfer and heat transfer between solids and fluids will be investigated, considering natural and forced convection heat transfer. Various heat exchanger types will be evaluated, however concentric double-pipe heat exchangers analyzed in detail. Radiant heat transfer, surface emissive power, real surface radiation; view factors for black and gray surfaces will be studied. The course includes two hands-on laboratory experiments which supplement the material covered in the class meetings. The course also includes recitation sessions devoted to using COMSOL. The course ends with a design team competition focused on the most "efficient and elegant" coffee cup. Prerequisite: ENGN 0720

ENGN 1720. Design of Thermal Engines.

Students will work in groups on semester long engine design projects. Projects are to incorporate: formulation of design problem statements and specifications, consideration of alternative solutions, detailed design descriptions, development and use of design methodology, development of student creativity and use of acquired engineering skills, while including realistic constraints such as economic factors, safety, reliability, ethics, social impact, etc. Lectures, laboratory, and computer-aided design projects with oral and written reports. Lectures to cover: thermodynamics, heat transfer, fluid dynamics, kinematics/dynamics, lubrication, combustion, fuels, and pollution of thermal engines. Prerequisites: ENGN 0720 and 0810.

ENGN 1730. Lasers and Nonlinear Optics.

This is a second course on optics and photonics and is intended for juniors interested in more advanced topics in modern optics who have already completed ENGN1690. Topics to be covered include the fundamentals of laser operation, gain and gain saturation, resonators, single-mode and multi-mode lasers, and a selection of important laser examples. We will then discuss light-matter interactions in the nonlinear regime, relying on a classical or semi-classical treatment. Topics will include frequency conversion via mixing or parametric processes, and degenerate third-order self-induced effects. Time permitting, we will discuss some of the most recent breakthroughs in optically-driven nonlinear processes such as laser-induced fusion as well as the planned exascale laser systems currently under development.

ENGN 1735. Vibration of Mechanical Systems.

This course will focus on the vibration characteristics of mechanical systems. Topics will include: analysis of free and forced single degree-of-freedom linear oscillators, vibration control and isolation, multiple degree-of-freedom and continuous systems, and introduction to nonlinear oscillations. Relevant analytical and numerical methods useful for modeling and analysis of vibrating systems will be discussed throughout. Students will be expected to do some numerical calculations on a computer.

ENGN 1740. Computer Aided Visualization and Design.

Provides instruction in the application of computers to the design methods in engineering. Hands-on experience in use of CAD/CAE software packages for geometric modeling, visualization, and drafting. Emphasis on applications to solids and structural problems. Independent design projects are carried out. Course counts as an ABET upper-level design course for mechanical and civil engineering concentrators. Prerequisite: ENGN 0310.

ENGN 1750. Advanced Mechanics of Solids.

Continuum mechanics of solids and its application to the mechanical response of machine and structural elements. Tensor descriptions of deformation and internal forces in solids; field equations. Elastic and elastic-plastic material models; failure criteria. Analytical techniques and energy methods for elastic solids; implementing the finite element method for elastic solids. Beam and plate theory. Stress waves and vibrations in solids. Use of commercial finite element software. Prerequisite: ENGN 0310, APMA 0330 or 0350.

ENGN 1760. Design of Space Systems.

Working in design groups, students conceive a space mission and design all of the elements necessary for its execution including launch and orbit / trajectory, space and ground systems, including analysis of structure, thermal, radio link, power and mass budgets, attitude control and dynamics. Each group builds a hardware project to demonstrate a core element of their mission design.

ENGN 1790. Quantum Optics.

An introduction to the fundamental theory, mathematical formalism, and applications of quantum optics, the study of light and its interactions with matter at microscopic scales. Topics will include: an introduction to quantum mechanics using the bra-ket (or Dirac) notation, quantization of the electromagnetic fields, generation and detection of single photons, non-classical quantum states (single-mode states, Fock or number states, coherent and squeezed states), phasor diagrams, number-phase uncertainty, quantum theory of photoionization/photodetection, quantum description of mirrors, beam splitters, Mach-Zehnder interferometers, spontaneous emission and parametric downconversion, as well as interaction-free measurements. The course is intended for graduate and senior undergraduate students who would like to understand more advanced concepts in emerging fields, such as quantum computing. The material is self-contained, therefore students who do not have a deep background in quantum mechanics or optics will also be able to take the course

ENGN 1800. Social Impact of Emerging Technologies: The Role of Scientists and Engineers.

The role of engineering sciences in an ever-changing technology-driven world. Students will develop basic working knowledge of selected contemporary technologies that help identify and forecast future prospects while discerning future disruptions. Emphasis on the importance of ethical and social responsibilities that technologists must shoulder in answering societal challenges and contributing to policy making and corporate leadership. How do we create beneficial technologies yet anticipate their potential social costs, such as workforce automation or overdependence on the internet? Will we give up brains as our last private space? Who will control the data / technology ecosystem that influences our decisions?

ENGN 1820. Future of Work.

Technological advances have the potential to substantially change our work experiences, organizations and society. Collectively, these trends represent the Future of Work and can bring many positive benefits, such as new work options in the gig economy or new opportunities for start-ups. At the same time, such advances can raise ethical concerns and questions when technology is used to predict human behavior, replace employees, create a contingent and low-wage workforce, or drive autonomous vehicles, among many other examples. Using a combination of case studies, projects, academic articles, and current media materials, this class will examine three issues related to these new trends: How the world of work is changing, why these changes are important in relation to organizations and entrepreneurship, and what skills are necessary to shape the future of work in ways that are sustainable, ethical, and inclusive.

ENGN 1840. Numerical Methods in Scientific Computing.

Numerical analysis techniques related to solving systems of linear algebraic equations, matrix eigenvalue problems, nonlinear equations, polynomial approximation and interpolation, numerical integration and differentiation, ordinary and partial differential equations. Programming in Matlab. Pre-req: ENGN0040, CSCI 0040 or equivalent programming ability. APMA 0330, APMA 0340 or equivalent.

ENGN 1855. Design Principles and Process.

This course, through substantial projects, deepens student's understanding of the design principles and processes and develops their skill at synthesizing artifacts that are appropriate responses to situations in specific contexts. It asks students to acquire new knowledge of a physical and social context and to integrate this new knowledge with their world model to create artifacts that produces a positive change in the context.

ENGN 1860. Advanced Fluid Mechanics.

Aims to give students a deeper and more thorough grounding in principles and applications of fluid mechanics. Topics include review of dimensional analysis and conservation principles; viscous flows with application to microfluidics; lubrication analysis for bearing design; laminar boundary layers; wave motion; and interfacial phenomena (e.g., drops and bubbles). Lectures, assignments, computational projects, and laboratory. Prerequisites: ENGN 0810.

ENGN 1900. Construction of the Entrepreneurial Enterprise Framework: From Decision Making to Opportunity Creation.

Students examine and engage with the decision making process in the modern enterprise, including investment, negotiation, and opportunity creation. This is done in an entrepreneurial context. Teams research and present orally and in writing on major class themes. Case studies, Socratic discussion models, readings, guest lectures, rhetoric and writing fellows support for videotaped oral and written business plans are utilized. Enrollment limited to 35.

ENGN 1920. Sustainable Energy: Science and Technology.

The energy transition from fossil fuels to renewable sources may be the defining technological issue of the coming decades. This class covers the fundamental science and technology of energy technologies, focusing on emerging energy resources. Students will learn the fundamental thermodynamics of energy conversions as well as the tools to analyze energy technologies. The course will cover the basic science of the greenhouse-gas induced climate change, and will analyze energy technologies in terms of the trade-offs involved in emissions, cost, scalability, land use, and resource ability.

ENGN 1930A. 3D Photography.

By 3D photography we refer to a number of processes that use cameras and lights to capture the shape and appearance of 3D objects. In this course we will first study and build basic 3D techniques and systems, and then cover several closely related methods based on signal processing techniques, constrained energy minimization, and the solution of diffusion differential equations to smooth, denoise, edit, compress, transmit, simplify, and optimize very large polygonal models. Applications include computer animation, game development, electronic commerce, heritage preservation, reverse engineering, and virtual reality.

ENGN 1930B. Biomedical Optics.

Biomedical Optics is a rapidly growing field with applications in medicine, biology, and neuroscience. This course aims to empower students with theoretical and practical skills needed to design state-of-the-art biomedical optical systems, spanning from imaging systems to medical devices. Topics include ray transfer matrix analysis, use of symbolic and numerical computations, light as an electromagnetic wave, depth of field, diffraction, and imaging techniques such as widefield and scanning microscopy. By integrating a solid theoretical foundation with hands-on experience, this course offers an in-depth understanding of the topics, preparing students for optical device design challenges. Prerequisites: Undergraduate level ENGN 0510 Minimum Grade of S

ENGN 1930D. Large Scale Engineering Design Project.

Provides a major design experience for civil, mechanical, and, with approval, environmental engineering students. This experience involves an open-ended design problem that requires teamwork and the integration of understanding developed in upper-level courses in the engineering concentrations. Intended for students in their senior year.

ENGN 1930F. Entrepreneurship and Good Work: Engineering Dreams.

In this course, students examine the concepts of creation, organization, promotion, management and risk of ownership, to wit: entrepreneurship. This is done in the context of 'good work'. Using a combination of relevant case studies, readings, guest lectures and discussion, each participant builds a theory and framework to explore what defines innovative and meaningful engagement during one's working years. Enrollment limited to 24. Written permission required.

ENGN 1930G. Entrepreneurship I.

Teams of students from Engineering, COE and other technical and non-technical disciplines form simulated high tech startup companies working on mentor-defined opportunities, from conception to commercialization. Intellectual property, marketing, definition of a product requirements document, human factors (including team building), safety and environmental concerns, and legal concerns are emphasized. Students in the COE Technology Management Track should complete ENGN 1010 prior to this course. Enrollment in the course is limited and students must fill out a formal application (though COE tech track seniors are automatically approved). The course meets TR from 2:30-3:50, and other outside meeting hours will be arranged.

ENGN 1930H. Entrepreneurship II.

Please see ENGN 1930G for course description. Enrollment limited to 24.

ENGN 1930I. Ethics and Professionalism.

Issues of ethics and professionalism for the engineer and for members of other professions. The principal objectives are to examine the responsibility a person accepts when practicing his or her profession and to provide opportunities for students to explore the ethical aspects of their profession, become comfortable and confident discussing and using value systems, and practice effective expression of ideas in oral and written form.

ENGN 1930K. High-Performance Sensors and Multimedia.

Design, construction, and programming of embedded systems with system-on-chip processors, and audio/visual sensors for real-time applications. Design and implementation of distributed audio/visual applications. Hands-on project oriented hardware/software course.

ENGN 1930L. Biomedical Engineering Design and Innovation.

This course is the culmination "capstone" of the biomedical engineering educational experience. The primary objective of this course is to recall and enhance design principles introduced through the engineering core curriculum and to apply this systematic set of engineering design skills to biomedical engineering projects. Students will form teams with their peers and a clinical advisor, identify and define a design project to meet a clinical need, and engage in the design process through the course of the semester. For seniors only. Non-engineering concentrators should register for ENGN 0930L.

ENGN 1930M. Industrial Design.

Brown engineering and RISD industrial design faculty lead product development teams through a design cycle. Engineers explore industrial design, designers gain some insight into engineering, and both groups can apply their skills to challenging problems. Frequent presentations, field trips, critiques, and labs. Preference given to seniors. Prerequisites: completion of engineering core. Enrollment limited to 15 students.

ENGN 1930N. Introduction to Magnetic Resonance Imaging and Neuroimaging.

Magnetic resonance imaging (MRI) is a powerful tool for investigating the biological structure and functional dynamics across an incredibly broad spatial and temporal scale. This course will provide an understanding of the basic physical principles of magnetic resonance; including signal generation, detection and contrast mechanisms; as well as image acquisition techniques and reconstruction methods. This course is aimed at undergraduate and graduate students from a variety of disciplines, including: Engineering, Computer Science, Applied Mathematics, Physics, Cognitive Science and Neuroscience as well as medical students and residents. Students should have a basic understanding of matrix mathematics and familiarity with the concepts of magnetism and waves.

ENGN 1930O. MicroElectroMechanical Systems (MEMS).

Integrated analysis and design of MicroElectroMechanical Systems (MEMS), which are highly integrated micron-scale devices used in many applications: sensors, energy (engines), optics, bioengineering, chemical processing, etc. Provides an introduction to the science and art of design, fabrication, performance, and use of MEMS in all disciplines of engineering.

ENGN 1930P. Solid Biomechanics.

Applications of mechanics to biological systems over a range of scales, including microscopic scales of cells and cellular components, intermediate scales of tissues and muscles, and macroscopic scales of organs, joints, locomotion, and whole organisms. Dimensional analysis and scaling; elasticity, viscoelasticity, poroelasticity applied to tissue mechanics; models for muscle contraction; mechanics of the cytoskeleton, biopolymers, cell membranes, and cell adhesion. Prerequisites: ENGN 0040 or equivalents, APMA 0330.

ENGN 1930R. Molecular and Cell Biology for Engineers.

Applications of mechanics to biological systems over a range of scales, including microscopic scales of cells and cellular components, intermediate scales of tissues and muscles, and macroscopic scales of organs, joints, locomotion, and whole organisms. Dimensional analysis and scaling; elasticity, viscoelasticity, poroelasticity applied to tissue mechanics; models for muscle contraction; mechanics of the cytoskeleton, biopolymers, cell membranes, and cell adhesion. Prerequisites: ENGN 0040 or equivalents, APMA 0330.

ENGN 1930S. Land Use and Built Environment: An Entrepreneurial View.

Through the use of readings, group discussions, students presentations and guest lectures, students examine and challenge the analytical and structural frameworks which underlie and support public and private land and use the urban and suburban built environments. Students build an understanding and theory of how social, political, governmental and economic forces interact with society's present and future physical space needs.

ENGN 1930T. Aircraft Design.

The process of aircraft conceptual design as practiced in industry: requirements definition to initial sizing, configuration layout, analysis, sizing, optimization, and trade-off studies. Concepts and calculation methods for aerodynamics, stability and control, propulsion, structures, weights, performance, and cost; coverage of conventional and unconventional design methods drawing from knowledge gained in engineering science courses, synthesized towards novel imaginative aircraft designs guided by participants' interests. Prerequisite: the level of senior in engineering studies.

ENGN 1930U. Renewable Energy Technologies.

Renewable Energy Technology examines energy conversion, transport, and storage with the goal of devising courses of action that transform the current state of energy use into one that relies more fully on renewable resources and efficient processes. The course will give priority to photovoltaics, wind, and hydro conversion technologies and to the electrical grid for energy transport. From year-to-year other topics will be explored based on the wishes of the participants. Research, discussion, projects, and presentations will be the primary learning methods. The engineering core and thermodynamics are suggested preparation for this course.

ENGN 1930W. The Art and Science of Light.

This studio course explores artificial light from both artistic and scientific perspectives. Laboratory demonstrations on optics and new light emitting materials will be counterbalanced by presentations on the historical and contemporary integration of these materials within the fields of architecture, industrial design, and sculpture. Students will be asked to reimagine the light bulb by developing artistic design alternatives to conventional lighting. Extensive outside work is expected. Written permission required.

ENGN 1930X. Entrepreneurship and New Ventures: A Socratic Approach to Innovation Analysis and Application.

Taught via Socratic method, this course will use case studies that explore essential elements of the entrepreneurial process: Defining Entrepreneurship; Recognizing Opportunities and Developing Business Models; Assembling The Team; Raising Financial Resources; Managing Uncertainty; Managing the Growing Venture; and Realizing Value. Guests will include successful entrepreneurs and expert practitioners who will highlight practical approaches to entrepreneurial success.

Please note that beginning with the *very first class*, students MUST read the session's case study and supplemental readings, to be ready for participation in discussions. For the first day's assignment, please contact Professor Warshay directly at Daniel_Warshay@brown.edu. Enrollment limited to 35.

ENGN 1930Y. Social Enterprises.

This course will combine reading, discussion, field work, and guest talks by practitioners and theorists to delve into the workings of a variety of social enterprise models. Prerequisites: Social Entrepreneurship (ENGN1930Q) or comparable experience and an existing relationship with a social enterprise.

ENGN 1930Z. Robot Design.

Overview of robots used in material handling, transportation and automated manufacturing. Sensors: force transducers, tachometers, orientation and joint angle detectors; video. Kinematics of a multidimensional robot arm. Inverse kinematics: optimal arm path generation. Automatic control: negative feedback, stability, proportional and integral compensation. Motor sizing, drive trains, navigation and locomotion. Labs: design and construction of a robot, with arm; use of embedded C programming for robot control. Enrollment limited to 24.

ENGN 1931A. Photovoltaics Engineering.

This seminar course will provide an overview of the operation, design, characterization, and manufacturing of photovoltaic solar cells and panels. The course will span a range from the fundamental physics of solar cell operation to highly applied, industrially relevant engineering topics. Recommended prerequisites: Good knowledge of basic physics and electromagnetism concepts; proficiency in ENGN 0510 or PHYS 0470; This course is designed for undergraduate and graduate students in Physics, Chemistry and Engineering interested in the field of alternative energy with a focus in photovoltaics. Enrollment limited to 20.

ENGN 1931C. Digital Nudges: Influencing Behavior in the Digital Age.

This seminar will explore the intersection of behavioral economics, psychology, and technology. It will delve into the concept of digital nudging, a strategy that uses small, non-intrusive cues to influence an individual's behavior in digital environments. This seminar provides participants with a deep understanding of digital nudges, their theoretical foundations, practical applications, and ethical considerations when building user experiences. By the end of the seminar, attendees will be well-equipped to analyze, design, and implement digital nudges while considering the ethical and psychological dimensions.

ENGN 1931D. Design of Mechanical Assemblies.

An introduction to the design and development of mechanical assemblies suitable for production over a range of volumes, from prototypes to high volume manufacture. The course is intended to present an overview of basic machine components and manufacturing processes from the perspective of a design engineer in a contemporary industrial setting. The objective of which being to provide students the background necessary to create mechanical assemblies from blank-page concepts through to production ready designs. Coursework will include both theoretical and experimental exercises as well as two group projects working on a mechanical assembly produced via high volume manufacture. Prerequisite: ENGN 0310, 1740. Enrollment limited to 20.

ENGN 1931E. Writing Science.

This seminar focuses on communicating scientific and technical information to a lay audience in ways that engage and inform. The focus is on writing about new findings, scientific disputes and policy debates, along with producing profiles, feature articles, op-eds and blog posts. Students who complete this seminar will learn how to turn a collection of facts into a story, ways of explaining complex topics in simple terms, and how to differentiate between crucial technical details and clutter. Proficiency in English is assumed. Permission from the instructor is required. Preference will be given to seniors and graduate students. Enrollment limited to 15.

ENGN 1931F. Introduction to Power Engineering.

An introduction to the generation, distribution and use of electrical energy in three-phase balanced systems. Topics include: properties of magnetic fields and materials; magnetic reluctance circuits; phasors and the properties of balanced three-phase voltage and current lines; generators; transformers and transmission lines; induction motors; brushless DC motors; power semiconductor switches; and the properties of solar photovoltaic sources and microinverters. Laboratory project. Prerequisites: ENGN 0510 and 0520.

ENGN 1931H. Capital Formation & Financing Growth.

In this course, we will focus on capital formation, valuation, and understanding the implications of investment and financing decisions that firms make. By the end of this course, you will be able to: Describe the role and purpose of the corporation; Calculate a firm's/project's cost of capital; Evaluate corporate projects and make decisions on whether or not to pursue them; Determine a corporation's optimal capital structure; Analyze how, why, and when corporations return capital to shareholders; Assess the role, applicability, and issuance process of various debt and equity securities; Undertake a comprehensive valuation of a firm or project.

ENGN 1931I. Design of Robotic Systems.

Designing kinetic systems (i.e., systems requiring movement or motion) relies on both mechanical and electrical understanding. These systems include everything from mobile robots for rescue operation to electrically powered moving sculptures. Through a series of projects, students combine knowledge of electronic circuit design, sensors, actuators, motors, microcontrollers, control theory, and programming to build interactive art and robotic systems. Projects culminate in the design of a creative robotic system that incorporates several principles learned in class. Programming experience is helpful but not required. Prerequisites: ENGN 0040 and (ENGN 0520 or ENGN 1230 or ENGN 1630 or hardware experience). Otherwise, seek instructor approval.

ENGN 1931K. Cell-Material Interactions in Tissue Engineering.

Students study how materials are used in cell-based biological applications focusing on engineered tissues and translational applications. Hybrid materials can be designed to elicit specific cellular interactions, including cell adhesion, mechanosensing, biochemical signaling, and electrical conduction. Primary scientific literature provides examples of design principles as applied to natural and synthetic materials in cell-based assays, engineered tissues, and in vivo implantation. Students participate in class discussions of scientific literature, lead discussion through oral presentation and group engagement, and write literature summaries including a final project (either a primary research manuscript or literature review). Pre Requisites: Recommended: Physiology/Cell & Molecular Biology, Biomaterials/Materials Science.

ENGN 1931L. Biomedical Engineering Design and Innovation II.

This course is part two of the culmination "Capstone" of the biomedical engineering educational experience. The primary objective of this course is to recall and enhance design principles introduced through the engineering core curriculum and to apply this systematic set of engineering design skills to biomedical engineering projects. Student teams formed in the previous semester will continue develop a design project based on an unmet clinical need with a clinical advisor, gaining hands-on process experience and generating innovative solutions. For seniors only. Non-engineering concentrators should register for ENGN 0931L.

ENGN 1931M. Industrial Machine Vision.

This course will offer advanced undergraduate and master's students a practical introduction to industrial applications of machine vision and will provide theoretical, hands-on experience with automation and visual inspection technologies. Computer Vision, the automated analysis of images and video sequences, began as a research subject within computer science and engineering and has become an accepted technology with industrial applications. Current industry applications of machine vision: Electronics, metal, automotive, wood, plastics, paper, textiles, films, food manufacturing, biomedicine. Common functions: Recognition of features or components, guidance of assembly, robotic arms or vehicles, welding, dispensing; and inspection, measurement, detection of defects.

ENGN 1931N. Building Entrepreneurial Ecosystems for Economic Inclusion.

Entrepreneurial ecosystems represent recent developments for fostering economic development as leaders globally aspire to build successful ecosystems in their cities and regions. These ecosystems are entrepreneurs in relationships of exchange and mutual reciprocity within the institutional and cultural environment of entrepreneur support organizations (ESO), infrastructures, and resources. This course will examine the emergence of entrepreneurial ecosystems in different cities and the roles, functions, and goals of ESOs. Students will visit local ESOs to learn about ecosystems and inclusive economic development.

ENGN 1931P. Energy and the Environment.

This course explores all the energy forms, but will focus on energy sources from which the majority of "useful" energy originates at the present time. Basic heat transfer problems related to energy efficiency are presented. Rankine and Brayton power cycles are introduced. Cycle modifications supporting energy efficiency are explored. Carbon footprint calculations are illustrated. Traditional and cutting-edge technologies for carbon capture and storage presented. Emissions such as SO_x, NO_x, and PM and their capture technologies investigated. The Earth climate model examined. The course features three 1-page long scientific summary writings and the tour to the Manchester Street Power Station.

ENGN 1931Q. Entrepreneurial Management in Adversity.

Companies get into trouble all the time -- making wrong products for the market, failing to meet sales quotas. This course examines actions a company must take in adverse conditions. There is never enough time to hire consultants, do research, hire new employees. Top Management must make decisions, often with insufficient data and alternative 'sub-optimal' options. Primary objectives are to understand analysis and rapid action when faced with adversity; identify the cause of adversity, building solutions to prevent recurrence or give management the skills to solve problems; and develop recommendations and action plans to 'sell' to the Board of Directors.

ENGN 1931R. The Chemistry of Environmental Pollution.

This course examines fundamental chemical aspects of pollutants and methods used to address pollution. We will consider pollution in air, water and soil media, and how pollution arises. Basic aspects of pollutant chemical partitioning will be explored. Examples of site investigation and the chemical tools used for that purpose will be discussed, along with risk assessment. Different ways of cleaning up contaminated sites will be examined, along with considering how mitigation and natural processes might represent options for addressing the particular pollution situation. Prerequisites are (MATH 0100, 0170, 0180, 0200, 0350 or 0190) and (CHEM 0100 or 0330).

ENGN 1931S. Medical Physics.

Medical Physics is an applied branch of physics concerned with the application of concepts and methods to the diagnosis and treatment of human disease. It allies with medical electronics, bioengineering, and health physics. Students will become familiar with major texts and literature of medical physics and be exposed to imaging and treatment techniques and quality control procedures. Students will acquire physical and scientific background to pose questions and solve medical physics problems. Topics include: Imaging, imaging metrics, ionizing radiation, radiation safety, radioactivity, computed tomography, nuclear medicine, ultrasound, magnetic resonance imaging, and Radiation Therapy (delivery systems, treatment planning, brachytherapy, image guidance).

ENGN 1931T. Entrepreneurship Practicum: Starting, Running, and Scaling Ventures.

Starting and running a venture is one of the most rewarding and frustrating endeavors a manager faces. While good ideas abound, the hallmark of the entrepreneur is the ability to translate ideas into action. This course is experiential, project-based, and designed to help entrepreneurs turn ideas into real ventures. Students should have already identified a problem whose solution may serve as the basis for a venture. Some may have embarked upon venture-building already. This course will help them work in a structured way, with supportive mentorship and content, to make significant progress on the venture and increase chances for success.

ENGN 1931V. C2S Neurotech: From Concept to Startup- Translating Neurotechnology (NEUR 1930J).

Interested students must register for NEUR 1930J.

ENGN 1931W. Selling & Sales Leadership in the Entrepreneurial Environment.

Is there any skill more important to entrepreneurs than sales? Startups only have two problems: sales and all else. The entrepreneur starts with a product or service and must convince an embryonic team to join a firm before there is a product, financing or customers; and convince investors the idea is sound, doable, and profitable; and convince customers to rely on a company with no track record. Sales skills are essential. Entrepreneurs sell an intangible and must make it feel immensely tangible. Until company/product become tangible, sales responsibility never stops. Entrepreneurs are key sales figures and face of the company.

ENGN 1931X. Instrumentation for Research: A Biomaterials/Materials Project Laboratory.

This course is designed to prepare students for research in biomaterials/materials science by focusing on a project that yields a testable product/device. Advanced equipment/instrumentation will be used to fabricate and evaluate materials required for each project and to test the performance of the product/device that uses these materials. Example projects that illustrate the course plan include building a microfluidic-based medical sensor or fabricating a polymer-based battery. These examples require materials synthesis (polymerization or hydrothermal), materials characterization (SEM, X-ray diffraction), device fabrication (microfabrication, assembly under inert/sterile atmosphere), and product testing (biological assays, electrochemical methods). Student interests will determine other projects. Completion of Laboratory Safety and Hazardous Waste Training offered by EHS.

ENGN 1931Y. Control Systems Engineering.

Control Systems is an Engineering discipline that applies control theory to analyze and design systems with desired response behavior. The objective of this course is to introduce the student to the topic of feedback control design with applications on many diverse systems. The course will cover the fundamentals of classical control theory such as modeling, simulation, stability, controller design and digital implementation. It will also address basic aspects of state-space and modern control theory. The course is open to all Engineering majors and will make use of existing simulation packages such as Matlab/Simulink.

ENGN 1931Z. Interfaces, Information and Automation.

Laboratory-intensive course to help students develop and implement simple computer programs in Python to control, query, and integrate discrete (traditionally isolated) systems, ranging from automobiles to websites. Assignments will provide hands-on practice using programmatic interfaces to control both physical and virtual systems. Topics include physical interfaces and communication protocols (e.g., GPIB, RS-232, USB) as well as accessing online resources (e.g., SOAP and RESTful web services) and building hybrid systems for data acquisition and analysis. Formal programming experience is not required, but familiarity with either MatLab or Python (at the level of CSCI 0040 or higher) would be very helpful.

ENGN 1932B. Engineering Practice.

This course will cover issues faced by engineers which can contribute to the success or failure of engineering projects. Practical solutions will be discussed along with successful and unsuccessful efforts to address these issues. Topics include: good and bad designs, ethical issues, failure analysis, role of research, factory and plant practices, supply chain management and technology diffusion. Additionally, discussion will involve human factors.

Course will be taught in a seminar mode, meeting once per week.

Enrollment capped at 15 students and limited to those in their Junior or Senior year.

ENGN 1932C. C2S Neurotech: From Concept to Startup- Translating Neurotechnology (NEUR 1930J).

Interested students must register for NEUR 1930J.

ENGN 1932D. Qualitative Market Research for Entrepreneurs & Business Innovators.

A critical element of entrepreneurship, and indeed all new business development, is to be able to undertake insightful market research, including developing an 'understanding' of the customers of potential new products and services. This requires qualitative research methods, and in this course participants learn to utilize the most recent and effective methods. A feature of the course is that the curriculum also explores the academic origins of the methods, developed from the fields of sociology, anthropology, management, and industrial design. Participants undertake a meaningful market research project in teams or as individuals.

ENGN 1932M. Foundations of Internet Communication Systems.

This course focuses on the foundational communications technologies that are the cornerstones of the modern Internet. We start with basic concepts in the field of Communications: analog vs. digital, digital sampling, SNR and detection in transmission of information, etc. We then discuss voice/video/data media, packetized media, point-to-point, multicast and broadcast networks, radio, digital telephony, streaming media, wireless networking, satellite communications and the ever-evolving configuration of the Internet. We look at core enabling technologies (e.g., routing and switching), the development of key SW constructs used in the Internet, and the popular "SaaS" model that enables most of commerce and collaboration across today's Internet. The course includes presentations by industry experts and field trips to technology leading companies. Our goal is to excite students to enter this amazing world of Communications Engineering.

ENGN 1932P. Sustainable Energy: Science and Technology.

The energy transition from fossil fuels to renewable sources may be the defining technological issue of the coming decades. This class covers the fundamental science and technology of energy technologies, focusing on emerging energy resources. Students will learn the fundamental thermodynamics of energy conversions as well as the tools to analyze energy technologies. The course will cover the basic science of the greenhouse-gas induced climate change, and will analyze energy technologies in terms of the trade-offs involved in emissions, cost, scalability, land use, and resource ability.

ENGN 1932R. Leadership in Organizations.

Leadership is an important part of organizational life and can be broadly understood as those behaviors and approaches that have the ability to influence ideas, actions, and outcomes in organizations and in society. In this course, we will examine different theories and approaches to leadership and then apply them in the context of inclusion and innovation. In today's world, leading innovations in an inclusive way is important for the well-being of organizations/firms specifically and society broadly. Many different notions and practices of leadership co-exist, sometimes harmoniously and sometimes at odds with each other. Both technical and non-technical individuals must learn how to lead successfully in different contexts ranging from start-ups to well-established organizations across industries and sectors.

ENGN 1945. Immunoengineering.

The immune system is one of the most complex and powerful systems in the human body as it plays integral roles in maintaining homeostasis, wound healing, disease progression, chronic inflammation, autoimmunity, and cancer. Dysregulation of immune cells can cause disease progression; conversely, therapeutics capable of regulating immune cells can promote tissue regeneration or cancer cell killing. Immune engineering holds great potential for the development of therapeutics aimed at a broad range of diseases from autoimmunity to cancer and beyond. In this course, we will: (1) review key components of the immune system, (2) read and discuss primary research articles describing well-established and new immunotherapeutics, (3) discuss key concepts and laboratory techniques used in the design of immunotherapeutics, including strategies used to target drug delivery and design lipid nanoparticles, and (4) apply these concepts to design novel immune therapies.

ENGN 1950. Advanced Numerical Methods for Data, Simulation, and Optimization.

Engineers persistently aim to create new structures, machines, and devices to leverage physical principles to man's advantage. Stemming from recent concerns over the environmental impact of technology and increased market competition, there is heightened focus on increasing efficiency. Therefore, future engineers must come up with designs that are not only functional but also optimal. This course will present the mathematical theory of engineering optimization; review optimization theory and techniques from calculus; calculus of variations; necessary and sufficient conditions for optimality; bio-inspired engineering, optimal designs found in nature. Projects involving design and fabrication of optimal engineering systems will be encouraged.

ENGN 1970. Independent Studies in Engineering.

Independent Study in Engineering. Instructor permission required after submitting online proposal (<https://forms.gle/PGBcZrcB2Y6N3Ca17>). Section numbers vary depending on concentration. Please check Banner for the correct section number and CRN to use when registering for this course.

ENGN 1971. Independent Study in Engineering.

Independent Study in Engineering. Instructor permission required after submitting online proposal (<https://forms.gle/PGBcZrcB2Y6N3Ca17>). Section numbers vary depending on concentration. Please check Banner for the correct section number and CRN to use when registering for this course.

ENGN 1972. Independent Study in Engineering Design.

Independent Study in Engineering, with approved design content. Instructor and concentration advisor approval is required after submitting online proposal (<https://forms.gle/PGBcZrcB2Y6N3Ca17>). Section numbers vary depending on concentration. Please check Banner for the correct section number and CRN to use when registering for this course.

ENGN 1973. Independent Study in Engineering Design.

Independent Study in Engineering, with approved design content. Instructor and concentration advisor approval is required after submitting online proposal (<https://forms.gle/PGBcZrcB2Y6N3Ca17>). Section numbers vary depending on concentration. Please check Banner for the correct section number and CRN to use when registering for this course.

ENGN 2001. Strategic Planning.

The approach this course shall take is in understanding the various tools used to plan when the future is less than certain. The course is centered around the scenario planning method, incorporating other tools such as nominal group technique, the Delphi Method, and Set-Based Design. The key learning outcome is to gain an understanding of how strategic planning, regardless of tool, is ultimately about building consensus across the organization, to communicate strategically in order to act strategically.

ENGN 2002. Climate Solutions: Science and Society.

This course is designed to introduce you to the most recent science of climate change and its impacts in the coming decades, and will focus on solutions (technical, social, political, and economic) that are being or could be implemented to avert the worst consequences of this human caused problem. The course discusses the scientific foundation for a goal of net zero greenhouse gas emissions, and then explores how this might be achieved, and how different theories of change, equity and justice might lead to different conceptions of what an optimal solution might look like. The final deliverable asks your team to assess a climate solution in your industry and the barriers to, and opportunities for, more rapid implementation of that solution.

ENGN 2010. Mathematical Methods in Engineering and Physics I.

An introduction to methods of mathematical analysis in physical science and engineering. This course focuses on analytical techniques in mathematics. It includes series solution for differential equations, Fourier series and Fourier transform for solving partial differential equations, analytical maximum and minimum problems, calculus of variations and complex functions, and complex calculus.

ENGN 2020. Mathematical Methods in Engineering and Physics II.

This course focuses on numerical solutions of common problems encountered in engineering and physical sciences, and provides both theoretical underpinnings and practical use of such methods, relying on physical problems from engineering and physical sciences wherever possible. This course covers: 1) Matrix operations, including linear algebra, eigenvalue problems, vector calculus, etc. 2) Solving physical equations numerically: converting physical governing equations into numerically solvable problems to user-defined accuracy, focusing primarily on numerical integration methodologies. 3) Advanced numerical methods: introductions to Bayesian statistics (via Markov chain / Monte Carlo), machine learning (simple regression / classification algorithms), principle component analysis, and design of experiments.

ENGN 2031. Communication and Influence.

Communication skills impact success. Everyone can improve their communication skills. In this course, you will learn about the theories of communication, have multiple practice opportunities and receive individualized coaching. We will address both in-person and virtual communication. We will focus on persuasive communication, including verbal and nonverbal communication, the relationship between a presenter's goal and the goals/perspectives of their audience, and the classical rhetorical elements of logos, ethos and pathos. You will also learn how to create compelling business presentations. This course also includes persuasive written communication. The written component will focus on short-form communication such as Slack and emails. PowerPoint presentation best practices will also be addressed.

ENGN 2040. Leadership Lab.

Leadership is a critical piece of the student experience for the Master of Technology Leadership (MTL). Designed as an integrated application, it spans the length of the program and is woven into the fabric of the other courses. In both residential and online settings, students will engage in discussions, reflections, lectures, simulations and experiential activities focused on their professional development as leaders. Students will be consistently challenged to apply the leadership theory and practice they are exploring in the program to their MTL team and personal work environment. They will also have opportunities to establish professional development goals and receive support from peers and faculty relative to those aspirations. By the end of the course, students should have improved their leadership skills and be confident in their ability to assume greater levels of responsibility.

ENGN 2080. Emerging Technologies and Innovation Ecosystems.

Technological trends and marketplace derive marketing strategy for technology development and management. Technology leaders use innovative models with effective product management to serve market needs. The course provides examples and case studies from biotechnology, environmental and energy technologies, information and communications technologies, and nanotechnology to learn about and gain practical experience applying new innovation models; engaging the constellation of innovation stakeholders; fostering a culture of continuous innovation; leveraging innovation, science, and technology policies; protecting intellectual property; overseeing effective product management; responding to technology trends and trajectories; and understanding regulations and external factors that affect technology development.

ENGN 2090. Tech Entrepreneurship.

This 10-module elective course focuses on tech entrepreneurship and aims to provide students with the decision-making, leadership and critical-thinking skills required to launch and lead successful technology ventures. It will also prepare students to consider ethical, socio-cultural and political complexities in the context as they decide to adopt new, emergent and/or established technologies. Students considering their own ventures or becoming part of a start-up will benefit from this course as well as those who may be leading innovation efforts in their firms. Those considering investing in start-ups can also benefit from learning about the business models for technology-based start-ups.

ENGN 2095. The Psychology of Decision Making.

Leadership is a choice. That choice and the many others that you make determine your value to your organization, and determine the quality of your life. But decision making is hard because the world is full of uncertainty, conflict, complexity, and ignorance. This course will focus on how people make decisions, revealing some systematic errors and useful decision-making strategies. We will review topics in judgment and decision making, a field related to behavioral economics, that covers academic and applied topics and draws from disciplines including cognitive science, psychology, statistics, economics, and philosophy. The focus will be on using insights from the field to find ways to improve individual, professional, and societal decision making.

ENGN 2097. The Psychology of Decision Making: Advanced Topics.

This course is a follow-on to The Psychology of Decision Making (ENGN 2095). It focuses on elaborating and developing the nuances and limitations associated with the topics covered in that course. We will review topics in judgment and decision making that covers academic and applied topics and draws from disciplines including cognitive science, psychology, statistics, economics, and philosophy. The focus will be on using insights from the field to find ways to improve individual, professional, and societal decision making.

ENGN 2098. Leading Innovation Strategy.

Today's leaders not only have to have the leadership skills to navigate complex and volatile business environments, they will also need to implement effective innovative strategies to move businesses forward. In the context of rapid technological advancements and digital transformations, developing an effective innovation strategy can propel organizations to stay competitive and find growth opportunities in a global context. Such innovation derives from strong entrepreneurial leadership and an understanding of the capabilities and strategic objectives of one's organization. It also requires an understanding of the innovation ecosystem within particular industries and foresight to strategically take advantage of opportunities. This class will focus on developing the necessary skills and strategies for individuals to succeed as innovation leaders.

ENGN 2110. Business Engineering Fundamentals I.

The course examines core concepts in distinct areas through three modules: (1) intellectual property and business law, (2) technical marketing and (3) finance. All aspects of intellectual property will be treated, models on how to analyze markets will be discussed, culminating in a finance module which utilizes accounting fundamentals and models to perform financial analysis.

ENGN 2120. Business Engineering Fundamentals II.

The course examines core concepts in distinct areas through three modules: (1) organizations, leadership, and human capital, (2) implementing radical technology change, and (3) engineering ethics. Organization, leadership and human capital focuses on the attributes of effective leadership and the tactical operation of start-up companies, implementing radical technological change centers on disruptive technologies and their adaptation in the marketplace, and ethics treats the issues that arise in small start-up organizations with an emphasis on the interface of ethics and environmental, health and safety issues.

ENGN 2125. Engineering Management + Decision Making.

The primary objective of the course is to train students on tools, skills, and behaviors required for effective management of complex engineering, research, and business development projects. Although the course will be framed in the context of early-stage technology companies, the skills and principles will be applicable to businesses of any size and maturity. The course is organized around three actionable themes: project management, team management, and decision making.

ENGN 2130. Innovation and Technology Management.

Examines core concepts through four modules: (1) Industry Dynamics of Technological Innovation, (2) Formulating Technological Innovation Strategy, (3) Implementing Technological Innovation Strategy, and (4) Early Commercialization and Deployment. Industry Dynamics of Innovation will explore some drivers of technology innovation. Implementing Technological Innovation Strategy explores execution issues concerning the flow of technology and innovation from concept to physical product or service. Early Commercialization and Deployment will focus on more salient strategic and operational issues related to commercial readiness and roll-out of a technology-based product or service. Emphasis will be on technology oriented entrepreneurial enterprises, but exploration also includes larger more established organizations.

ENGN 2140. Innovation and Technology Management II.

Explores concepts relevant to the management of operations in industrial enterprises with an emphasis on technology-oriented firms. Topics fall into three basic modules: (1) Capacity Planning, (2) Industrial Engineering, and (3) Materials & Resource Engineering. Capacity Planning will focus on capacity considerations in manufacturing and service organizations. Industrial Engineering will examine optimizing plant and process layouts. Materials & Resource Engineering will cover various aspects of planning and scheduling material, labor, and work center capacity. Inventory management techniques will also be introduced and examined as will concepts such as materials requirements planning and aggregate planning.

ENGN 2150. Technology Entrepreneurship and Commercialization I.

ENGN 2150 and the spring ENGN 2160 form a sequence that develops the skills for technology-based entrepreneurship. It teaches creation of viable high-growth-potential new ventures from emerging science and technology. It is from emerging S&T that a high percentage of new jobs are created, both by existing large companies and through the formation of new companies. You will examine S&T for new opportunities, create novel product or service concepts from these sources and determine whether these concepts truly represent new business opportunities. Pedagogy is a combination of lectures and "experiential learning", with work undertaken as a two-semester project. Enrollment limited to students in the ScM Prime program.

ENGN 2160. Technology Entrepreneurship and Commercialization II.

ENGN 2160 develops the knowledge of, and embeds the skills for, technology-based entrepreneurship. While ENGN 2150 has helped you to examine science and technology sources, and create a portfolio of opportunities from these, this course continues by developing selected opportunities into a compelling business case for the creation of a high growth potential new venture. Once again, learning is by a combination of lectures and "experiential learning", with work undertaken as a guided two-semester project. Enrollment limited to 30 graduate students in the ScM PRIME program.

ENGN 2170. Engineering Design: Measure and Make.

Measure and Make is a series of experiences that ask students to come to an understanding of a context/place/situation that enables them to "devise courses of action aimed at changing the current situation to a preferred one." We will develop appropriate methods for measuring and making meaning, plan courses of action, and execute some of those plans to test the effect.

ENGN 2171. Iterating with Intention.

The studio experience forms the core of MADE. It gives students the opportunity to practice deliberate design engineering with guidance, mentoring, and critique from experienced academics and practitioners. Three short fall projects are arranged so that, as students progress, the responsibility for content, organization, and outcomes shifts from the faculty to participants.

ENGN 2172. Integrate and Implement.

In this final studio, students embark on a semester-long project to collaboratively develop their proposal into a proven, credible product implementation plan. These group-based, research-driven design engineering projects serve to illuminate skills and professional ambitions. They become the basis for building portfolios and integrate prior components of the program into a coherent whole. To start, the previously completed project proposal is developed for execution. It is refined to include further details such as project planning, professional audience and advisor identification, and budgeting. The remaining self-directed process will go on to include client interactions, user and market research, collaborative practice, realization strategies, prototyping and testing, and methods to "tell the story" of how the artifacts developed fit in the world.

ENGN 2173. Design Engineering Communication.

Communication is a vital component of effective collaboration. In this 4-week course, students learn how the extended human-centered design process can apply and be implemented by graphical and language-based communication for different audiences. Beginning with exercises framing the challenge of identifying and engaging different audiences, students will consider the broad variety of design engineering audiences and their information consumption and dissemination behaviors. Identify, adapt and create appropriate communication strategies for a variety of objectives and contexts, such as individual inquiry, eliciting feedback or engaging support. Students teach each other, bringing tools and approaches from their disciplinary homes to this shared endeavor. This studio transitions discussions of effective communication to drafting the Capstone Studio proposal. Initial drafts are used as the basis for learning; they are developed and transformed from detailed statements of interest to a group proposal for all participants.

ENGN 2180. Globalization Immersion Experience and Entrepreneurship Laboratory.

In this course, students will gain a better understanding of the political, social and cultural dynamics that influence entrepreneurial enterprises in different world regions. Meetings will be arranged with high technology companies and their venture arms, academic incubators, investment professionals, legal professionals, government officials, entrepreneurs, and other university faculty and students. The semester becomes a global entrepreneurship and innovation "laboratory" where students experience and take part in guest lectures from experts working in other countries. Classroom discussions, student presentations, papers and readings will be used to focus and further understand the globalization dynamic and its relationship to entrepreneurship. Enrollment limited to graduate students in the PRIME program.

ENGN 2190. Financial Management.

This course focuses on core concepts related to financial management.

ENGN 2191. Strategic Management.

This course focuses on core concepts related to strategic management.

ENGN 2192. Ethical Dilemmas in Technology Leadership.

The course shall explore relevant ethical frameworks of history, looking at the particular interplay between ethics and technology. As we move through the elements of an ethical dilemma's lifecycle, we will learn how to spot a dilemma in the making, the ways in which these dilemmas may have been prevented, and how leaders can arm themselves to make ethical choices in their own careers.

ENGN 2200. Economic Perspectives on Strategic Decision Making.

This course will develop students' strategic thinking skills by providing a theoretical framework for modeling rational decision-making, with extensions to interactive decision-making (game theory); decision-making under uncertainty; and behavioral approaches to decision-making. The course will also study applications of the theory to profit maximization by individual firms under different market structures such as perfect competition and oligopoly.

ENGN 2205. International Immersion.

This course is designed to develop innovative global leaders who can more effectively manage international markets, customers, suppliers, government regulations, and other partners. It aims to help students develop those capacities using Europe as a great example by providing an opportunity to evaluate all aspects of the European innovation ecosystem and apply critical, comparative, analytic skills and develop cultural awareness through academic lectures, visits to companies and cultural field trips. Students will examine all aspects of the innovation ecosystem that is recognized in Europe as a leading technology contributor in the world.

ENGN 2210. Continuum Mechanics.

An introduction to the mathematical foundations of continuum mechanics. Vectors and tensors; properties and basic operations. Mass conservation and kinematics of deformation; displacement/velocity fields and strain measures. Momentum conservation laws; stress measures. Energy conservation and kinetic irreversibility laws; thermodynamics. Material frame indifference and constitutive equations; elastic, viscous, and viscoelastic responses. Linearization. Simple problems in finite and linear elasticity, and in Navier-Stokes flows. Introductory plastic flow rules.

ENGN 2220. Mechanics of Solids.

A unified introduction to the engineering mechanics of elastic, plastic, and time-dependent solid materials and structures. Stress and equilibrium. Kinematics of deformation, strain, and compatibility. Tensor representation and principal values. Principle of virtual work. Formulation of stress-strain relations in elasticity, plasticity, and viscoelasticity. Uniqueness. Extremum and minimum principles, including energy methods.

ENGN 2240. Linear Elasticity.

General theorems in linear elasticity. Basic singular solutions. Boussinesq-Papkovich and Galerkin representations. Curvilinear coordinates. Cavity, inclusion, crack and contact problems. States of plane strain, plane stress, and axial symmetry. Complex variable techniques. Torsion. Thermoelasticity.

ENGN 2260. Stress Waves in Solids.

Elastic wave propagation theory with an introduction to waves in viscoelastic and plastic media. Waves in unbounded media, half spaces, layered media, plates, rods, and beams. Solutions to transient problems. Relation of theory to experiment. Stress waves and fracture.

ENGN 2270. Advanced Elasticity.

Large elastic deformation. Controllable deformations of incompressible materials. Initial stress problems. Elastic stability. Additional topics may include membrane theory, fiber-reinforced materials, second-order elasticity.

ENGN 2280. Topics in Continuum Mechanics.

Devoted to one or more advanced topics in continuum mechanics not covered in detail by the regular courses. Examples are: nonlinear viscoelastic constitutive equations, strain gradient and micropolar theories of elasticity, coupled mechanical and thermal or electromagnetic phenomena, and continuum thermodynamics.

ENGN 2290. Plasticity.

Theory of the inelastic behavior of materials with negligible time effects. Experimental background for metals and fundamental postulates for plastic stress-strain relations. Variational principles for incremental elastic-plastic problems, uniqueness. Upper and lower bound theorems of limit analysis and shakedown. Slip line theory. Representative problems in structural analysis, metal forming, indentation, strain and stress concentrations at notches, and ductile failure.

ENGN 2320. Experimental Mechanics.

The design and evaluation of experiments in solid mechanics. Considers methods for experimental stress analysis and for the mechanical testing of materials. Topics covered include photoelasticity, creep and relaxation tests, high-speed testing, stress wave propagation, fatigue, and fracture. Techniques, instrumentation, and recording systems for the static and dynamic measurement of mechanical parameters such as forces, displacements, velocities, accelerations, and strains.

ENGN 2340. Computational Methods in Structural Mechanics.

Fundamentals of the finite element method of structural analysis. Nodal points, element design, and consistent formulation for assumed functions. Principle of virtual work, formulation of element stiffness and master stiffness matrices. Relation to variational and minimum principles. Linear elastic analysis for static problems; direct and iterative procedures. Nonlinear static analysis with piecewise linearization; elastic-plastic behavior, large geometry changes. Time dependent behavior.

ENGN 2342. Groundwater Flow and Transport.

Students in this course will develop a fundamental understanding of groundwater flow and transport processes. They will derive and apply mathematical models used in aquifer evaluation, aquifer testing, regional flow assessment, and solute transport predictions. Students will be introduced to state-of-the-art groundwater flow and transport simulators. A major portion of the course will be devoted to a team project in which students will use available geologic, hydrologic, and geochemical data from a selected site to develop, implement, and apply an aquifer model to address a real-world subsurface contamination problem.

ENGN 2350. Data-Driven Design and Analysis of Structures and Materials.

This course provides introductory knowledge on data-driven design and analysis of structures and materials. This course will try to balance theory and practice, such that the students become capable of understanding and using the methods in new scenarios. The first half of the course focuses on introducing machine learning from a probabilistic perspective, providing the foundations to understand current machine learning methods. The second part of the course focuses on applying machine learning to different engineering problems in solid mechanics.

ENGN 2370A. Thin Films.

No description available.

ENGN 2370B. Topics in Solid and Structural Mechanics.

Devoted to one or more advanced topics in solid and structural mechanics not covered in detail by the regular courses, such as: numerical methods in solid mechanics, theory of optimal design, shell structures and instability, or other topics of interest to the staff or visitors.

ENGN 2380. Fracture Mechanics.

The mechanics of brittle and ductile fracture in structural materials. Elastic stress fields near cracks, theories of brittle fracture, elastic fracture mechanics. Techniques of stress analysis. Elastic-plastic analysis of crack extension. Plastic instability. Fatigue, creep, and dynamic fracture. Dislocation mechanisms, cleavage, ductile fracture by void growth. Transitional behavior, rate sensitivity, running cracks. Fracture toughness and fatigue testing and structural design considerations.

ENGN 2400. Electron Microscopy in Materials Science.

Theory of electron optics and principles of transmission electron microscopy, including dynamical theory of electron diffraction and image contrast. Applications to materials analysis including defect, boundary, and phase analysis. Analytical electron microscopy including convergent beam diffraction, energy dispersive x-ray analysis, and energy loss spectroscopy. Intensive laboratory exercises.

ENGN 2410. Thermodynamics of Materials.

Conditions for equilibrium and stability. First and higher order phase transformations. Critical phenomena. Order-disorder transitions. Principles of phase diagram calculation and construction for binary and ternary phase diagrams. Solution models. Chemical reactions for gases and pure phases. Thermodynamics of surfaces and interfaces. Statistical thermodynamics with representative applications.

ENGN 2420. Kinetic Processes and Mechanisms in Materials Science.

Continuum and atomistic descriptions of diffusion in solids. Reactions involving surfaces and interfaces, including evaporation, adsorption, grain growth, and coarsening. Phase transformation kinetics, including nucleation, growth, solidification, spinodal decomposition, and martensitic transformations. Analysis of systems with multiple kinetic mechanisms (typical examples include oxidation, crystal growth, and sintering). Prerequisite: background in basic thermodynamics. Recommended: ENGN 1410 or 2410 or equivalent.

ENGN 2430. Deformation Behavior of Materials.

This course examines the fundamentals of elastic and plastic deformation of crystals. Topics include: Linear elasticity as it applies to isotropic and anisotropic materials; Hooke's law is reduced for various levels of symmetry from triclinic to cubic symmetry; Various yield criteria and their relevance; Plasticity mechanisms through an introduction to dislocation theory. A description of dislocation core structure and Peierls stress, quantifying stress fields, energies, line tension and force on a dislocation and between dislocations. Dislocation motion, their dissociation, interaction, intersections and consequences. In the context of the above topics, we rationalize the mechanical behavior of single and polycrystals.

ENGN 2440. Strength of Solids.

Mechanical behavior of solids as interpreted through atomistic mechanisms. Theory and characteristics of dislocations in continuous and crystalline media. Intrinsic and extrinsic stacking faults, extended dislocations, point defects, nodes and networks, disclinations, crystal boundaries. Applications of dislocation theory to single and polycrystal plasticity, work-hardening, stress-corrosion, creep, fatigue, hardening mechanisms, etc.

ENGN 2450. Exchange Scholar Program.**ENGN 2460. Electronic and Magnetic Materials Design.**

This course combines materials chemistry and condensed matter physics to understand the design of nanoscale electronic and magnetic devices. This course integrates fundamental atomistic understanding, heterostructure design, and macroscopic properties. We will learn and apply knowledge of chemistry, crystallography, defects, deposition, and device physics to delve into thin film materials used in fuel cells, solid state sensors, quantum information science, logic and memory, and data storage. We will not only study examples used today, but also explore cutting-edge research on the frontier of these areas. Our goal is to better understand the functional materials and heterostructures used in solid states devices. The course is intended to support graduate students conducting research in nanoscale devices.

ENGN 2490A. Crystal Structures and Crystallography.

The study and experimental analysis of solid structures from crystallography and crystal chemistry viewpoints. Electronic structure of the atom as related to core level chemical analysis techniques in material science, atomic arrangements in solids, form crystallography, crystal symmetry and symmetry of finite objects, and experimental techniques in x-ray diffraction.

ENGN 2490B. To Be Determined.**ENGN 2500. Medical Image Analysis.**

Explosive growth in medical image analysis has enabled noninvasive methods to diagnose and treat diseases. The course will first discuss the fundamentals of formation of medical images such as CT, MRI, ultrasound, and nuclear imaging; then consider clinical constraints and discuss methods in image guided therapy/surgery, techniques to detect, delineate, measure, and visualize medical organs and structures.

ENGN 2501. Digital Geometry Processing.

Three-dimensional geometric models are fundamental for applications in computer vision, computer graphics, medical imaging, computer aided design, visualization, multimedia, and many other related fields. This course includes the study of basic data structures and algorithms for representing, creating, manipulating, animating, editing, and analyzing digital geometry models, such as point clouds and polygon meshes, as well as state-of-the-art material from the current scientific literature. This is a project oriented course with several programming assignments and a final project. Students are expected to have successfully completed an introductory computer graphics/vision course or have an equivalent background. Instructor permission required. Open to seniors and graduate students.

ENGN 2502. 3D Photography.

In 3D Photography, cameras and lights are used to capture the shape and appearance of 3D objects represented as graphical models for applications such as computer animation, game development, electronic commerce, heritage preservation, reverse engineering, and virtual reality. This course covers 3D capture techniques and systems, surface representations and data structures, as well as methods to smooth, denoise, edit, compress, transmit, simplify, and optimize very large polygonal models. Instructor permission required.

ENGN 2520. Pattern Recognition and Machine Learning.

This course will cover fundamental concepts in pattern recognition and machine learning. We will focus on mathematical formulations and computational methods that are broadly applicable. Topics include supervised learning, parametric and non-parametric models, decision theory, bayesian inference, dimensionality reduction, clustering, feature selection, generalization bounds, support vector machines and neural networks. We will consider motivating applications in computer vision, signal processing, medical diagnostics, and information retrieval.

ENGN 2530. Digital Signal Processing.

This course teaches the principles and the practical methods for processing real-world signals on a computer. The vital need to understand the effects from sampling and quantization is emphasized. Modern methods for designing digital filters and their use are introduced. Discrete-time and DFT properties, fast DFT algorithms (FFT), and spectral analysis are important further topics. Both stochastic and deterministic signals are differentiated and methods for processing them are introduced. Current methods for A/D conversion are explained. Mathematical homework, MATLAB reinforcement exercises, and an open-ended DSP task are all used to build competence.

ENGN 2540. Audio and Speech Processing.

Signal-processing and machine-learning techniques for speech, music and other audio signals is the topic. The basics for speech production and hearing are introduced. PDEs and simplified vocal-tract models are derived for speech and acoustic propagation models are described. LPC, DFT/cepstral audio analysis methods are discussed as well as the modern method for speech synthesis. Basic dynamic programming and hidden Markov modeling are introduced. Microphone-array methods are presented. Coding methods for speech and music are included. Real-time issues are considered. A project and presentation are important in grading. Offered every other year.

ENGN 2560. Computer Vision.

Fundamentals of Computer Vision with an emphasis on multiview geometry and drone imaging. Camera models, Camera calibration, epipolar geometry, essential and fundamental matrices, relative pose estimation, RANSAC, two-view and multiview triangulation, 3D reconstruction, bundle adjustment, Levenberg-Marquardt, absolute pose estimation (PnP/EPnP), drone flight operation and image acquisition, feature-based Visual Odometry (VO), Optical Flow, Direct VO, Simultaneous Localization and Mapping (SLAM), Stereo and Multiview Stereo, pose averaging, trifocal pose estimation, Image-Based Localization (IBL), edge/curve-based odometry, RGBD cameras (Microsoft Kinect, Intel RealSense), surface reconstruction and modeling.

ENGN 2570. Applied Stochastic Processes.

The study of stochastic processes and a number of applications central to electrical engineering. Analysis of continuous and discrete time Gaussian and second order stochastic processes. Stochastic calculus. Innovations and spectral representations. Markov random fields. Applications to Kalman filtering, the detection of signals in the presence of noise, and two-dimensional image processing. MATLAB projects. Prerequisite: an undergraduate level course in probability or statistics.

ENGN 2590. Semiconductor Devices.

An introduction to semiconductor device physics and basic electronic properties of semiconductors, including junctions, heterojunctions and fundamental device building blocks. Current and proposed semiconductor devices: field effect transistors, bipolar transistors, quantum-effect devices, and optoelectronic devices. A brief fabrication lab will introduce junction fabrication in the cleanroom. Advanced topics, such as heterojunction bipolar transistors and silicon-on-insulator FETs, included in the graduate version.

ENGN 2595. Laser and Nonlinear Optics.

This course is for upper-level students interested in more advanced topics in modern optics who have already completed ENGN1690 (or equivalent). Topics to be covered include some topics in linear optics (Fourier optics, coherence) and lasers (fundamentals of laser operation, gain and gain saturation, resonators, transient laser phenomena). We will then discuss light-matter interactions in the nonlinear regime, relying on a classical or semi-classical treatment. Topics will include frequency conversion via mixing or parametric processes, and degenerate third-order self-induced effects. Time permitting, we will discuss some of the most recent breakthroughs in optically-driven nonlinear processes such as the generation of attosecond pulses (Physics Nobel Prize 2023).

ENGN 2600. Electronic Processes in Semiconductors.

Electronic processes primarily in semiconductors with tetrahedral bonding (Si, Ge, GaAs compounds). Topics include phonon spectra, band structure, impurity states, electron and hole distributions, optical properties, electron plasma, scattering processes, excess and hot carriers, semiconductor-metal transitions, one-and two-dimensional electron gas, and amorphous semiconductors. Prerequisite: ENGN 1590 and Intro Quantum Mechanics or equivalent.

ENGN 2605. Image Understanding.

Image Understanding is an Artificial Intelligence core technology that is experiencing explosive growth; it is central to medical image analysis, industrial inspection, image enhancement, indexing into pictorial and video databases, robotic vision, drone navigation and mapping, face recognition, image compression, etc. This graduate-level course covers theoretical underpinnings of this field and includes a series of practical MATLAB image processing projects. Knowledge of Fourier Transform is required; ENGN 1570 is recommended.

ENGN 2620. Solid State Quantum and Optoelectronics.

Incorporates the study of interaction of radiation with matter emphasizing lasers, nonlinear optics, and semiconductor quantum electronics. Q-switching and mode-locking, electro- and acousto-optic interactions, harmonic generation and parametric processes, self-focusing and phase modulation, stimulated Raman and Brillouin scattering, ultrashort pulse generation, nonlinear processes of conduction electrons in semiconductors, bulk and surface polaritons. Prerequisite: ENGN 2600 or equivalent.

ENGN 2625. Optical Microscopy: Fundamentals and Applications.

This course is intended to provide an introduction to optical microscopy for engineering and science students. Topics ranging from basic brightfield and fluorescence microscopy to Nobel-prize winning advanced optical microscopy methods will be discussed. The course will also provide students with the opportunity to acquire hands-on training in experimental optics techniques and basic microscopy.

ENGN 2630. Electro-Optical Properties of Materials and Biomolecules.

Fundamental ideas and principles relevant to the understanding of the electrical and optical properties of materials and bio-molecules are emphasized. The mathematics is deliberately kept to a minimum. Topics include metals, semiconductors dielectric materials, magnetic materials, superconductors, carbon nanotubes, DNA, photosynthesis and redox proteins. Prerequisites: ENGN 0510 and PHYS 0470.

ENGN 2640. Classical Theoretical Physics II (PHYS 2040).

Interested students must register for PHYS 2040.

ENGN 2660. Physics and Technology of Semiconductor Heterostructures.

Covers, largely from an experimental point of view, topics of current interest in semiconductor heterostructure physics and technology; magnetotransport in two-dimensional electron gas; integer and fractional quantum Hall effects; resonant tunneling and superlattice transport; optical and transport properties of quantum wires and dots; heterostructure-based devices; other topics of student interest. Prerequisites: PHYS 1410 or equivalent quantum mechanics and ENGN 1590 or introductory device course helpful, but not required.

ENGN 2670. Soft Matter.

This course provides an introduction to soft matter: Polymers, elastomers, liquid crystals, and colloids. Students in Physics, Engineering, Chemistry, and Applied Mathematics may find this course useful. Familiarity with classical statistical mechanics (PHYS 1530) is required. We will use scaling arguments and simple physical pictures as much as possible.

ENGN 2702. Descriptive Analytics for Technology Leaders.

Acquiring, enriching, and analyzing data for business analytics is an essential use case for technology in business enterprises. This course helps prepare students for management roles that oversee the transformation of business data into actionable information, including how to communicate insights through visualizations. Such roles are ubiquitous in modern enterprises that use data analytics, business intelligence, and data science teams. The course opens with a series of interlocking frameworks that businesses use to take a problem—any problem—and break it down into components that can be analyzed with the use of diverse data sources and analytical approaches. Students then practice using two widely available tools, Excel and Tableau Desktop, to tackle these analyses and solve problems with real-world data sets. This work teaches students to integrate and transform data, analyze the data, and create appropriate visualizations/summaries/results/insights.

ENGN 2703. Entrepreneurial Thinking.

In the context of global competition and rapid technological advancements, developing entrepreneurial leadership skills can propel individuals and organizations to develop innovations and find growth opportunities. Such leadership derives from a strong entrepreneurial mindset that includes finding unmet needs, being resilient under conditions of uncertainty and having a propensity to seek creative, learning opportunities. These leadership skills are necessary given that many businesses now require digital transformation to thrive in the age of technological disruptions.

ENGN 2704. Predictive Analytics.

This course, which builds on the analytical skills developed in Descriptive Analytics, is a deep dive into the predictive analytics techniques that underpin strategic decision-making in contemporary business environments. Students will engage in event forecasting, participating in an in-class forecasting contest designed to put theory into practice. A key component of the course is exploration of Bayes' Theorem, providing a probabilistic foundation for making informed predictions. The course covers time-series forecasting of business metrics and customer-level predictive modeling techniques, enabling students to anticipate customer behaviors and take action at scale. This work segues into calculating customer lifetime value, a vital metric for evaluating long-term business relationships and profitability, along with customer experience analytics. It incorporates the latest advances in generative AI, examining its application to data analytics and its potential to revolutionize the way businesses analyze, visualize, and forecast trends.

ENGN 2705. Sustainable Energy: Science and Technology.

The energy transition from fossil fuels to renewable sources may be the defining technological issue of the coming decades. This class covers the fundamental science and technology of energy technologies, focusing on emerging energy resources. Students will learn the fundamental thermodynamics of energy conversions as well as the tools to analyze energy technologies. The course will cover the basic science of the greenhouse-gas induced climate change, and will analyze energy technologies in terms of the trade-offs involved in emissions, cost, scalability, land use, and resource ability.

ENGN 2706. Electrification and Decarbonization.

Decarbonization depends on electrification coupled with conversion to renewable sources of electricity generation. Students will learn the fundamentals of the electrical grid in the U.S. including its history, ownership and regulatory structure, physics, and economics. The emphasis is on how the traditional and risk-averse focus on reliability and low cost can evolve in the decarbonization transition, expanding to target a smarter, more resilient, and more equitable set of societal goods. Hands-on skills will be gained through several open-source modeling tools applied to grid modernization projects and case studies. Major topics include optimization in energy systems; the physics of the electric grid; centralized power transmission and distribution systems; distributed energy resources, including storage and microgrids; reliability, resilience, energy burden, and equity; and evolving power system business models and electricity market issues.

ENGN 2707. Policy and Economics of Energy Transitions.

An intensive overview of the policy and economic processes involved in the clean energy transition with examples drawn from the U.S. as well as the world. Technological feasibility is necessary but not sufficient for the successful decarbonization of energy systems. Empirical social science documents the political factors that matter for climate policy outcomes, such as special interest groups, costs to develop and deploy renewable energy systems, preferences for clean energy, and measures and perceptions of distributive justice associated with transitions. Students will encounter a diverse set of perspectives and issues arising in the planning and implementation of energy projects and their technical and societal impacts.

ENGN 2708. Energy Modeling for Policymaking.

Overview of energy systems and climate modeling for policymaking and application of fundamental concepts to emerging policy areas. The course will begin with lecture deep dives into key modeling concepts and models and then moves into hands-on evaluations of policies to accelerate the deployment of low-carbon energy technologies.

ENGN 2709. Electrification and Decarbonization.

Decarbonization depends on electrification coupled with conversion to renewable sources of electricity generation. Students will learn the fundamentals of the electrical grid in the U.S. including its history, ownership and regulatory structure, physics, and economics. Emphasis is on how the traditional and risk-averse focus on reliability and low cost can evolve in the decarbonization transition, expanding to target a smarter, more resilient, and more equitable set of societal goods. Hands-on skills will be gained through several open-source modeling tools applied to grid modernization projects and case studies. Major topics include optimization in energy systems; the physics of the electric grid; centralized power transmission and distribution systems; distributed energy resources, including storage and microgrids; reliability, resilience, energy burden, and equity; and evolving power system business models and electricity market issues. Open to Seniors who have taken ENGN 0510 and ENGN 0520.

ENGN 2730. Chemical and Environmental Thermodynamics.

This is a fundamentals course targeted at first or second-year graduate students in chemical engineering, environmental engineering or related fields. The course reviews and expands on the principles of chemical thermodynamics: equilibrium criteria, fundamental relations, derivation of property relations, phase equilibrium, mixture behavior, intermolecular interactions, and reaction networks. The course will also cover the thermodynamic aspects of electrochemical systems, surface phenomena, complex molecules, and self-assembly, and will incorporate an introductory entryway module on statistical mechanics. The fundamental principles will be illustrated through application to current research topics in chemical technologies and environmental systems. Designed for students with some prior thermodynamics coursework. Undergraduates with thermodynamic background may enroll with instructor permission.

ENGN 2735. Vibration of Mechanical Systems.

This course will focus on the vibration characteristics of mechanical systems. Topics will include: analysis of free and forced single degree-of-freedom linear oscillators, vibration control and isolation, multiple degree-of-freedom and continuous systems, and introduction to nonlinear oscillations. Relevant analytical and numerical methods useful for modeling and analysis of vibrating systems will be discussed throughout. Students will be expected to do some numerical calculations on a computer.

ENGN 2740. Advanced Thermodynamics II.

Introduction to the statistical mechanics of equilibrium phenomena for classical and quantum-mechanical systems. Ensemble theory; fluctuations; statistical interpretation of the laws of thermodynamics; applications to ideal gases, chemical equilibrium, simple crystals, magnetic and dielectric materials, radiation, and condensation phenomena.

ENGN 2750. Chemical Kinetics and Reactor Engineering.

This course focuses on the fundamentals of chemical kinetics with engineering applications. Topics include: quantum chemistry, statistical thermodynamics, and transition state theory; tight versus loose transition states; the kinetics of gases, liquids, and surfaces; adsorption, desorption, surface diffusion; enzyme kinetics and biological processes; formation, solution, and interpretation of elementary mechanisms; global versus local sensitivity analysis; uncertainty quantification; and the coupling between fluid dynamics and chemical reactions.

ENGN 2760. Heat and Mass Transfer.

Convection. Laminar flow: boundary layer equations and similarity solutions; solution techniques for arbitrary wall temperature distribution; development of flow in tubes. Turbulent flow: semiempirical methods of solution for turbulent shear layers. Natural convection. Separated flow. Condensation and evaporation. Fundamentals of heat and mass transfer for chemically reacting flows. Radiation. Basic concepts and properties of solids and gases.

ENGN 2770. Atomistic Reaction Engineering.

Topics include electronic structure calculations, molecular dynamics, potential energy surfaces, thermodynamic connections, scaling and free-energy relations, surface reactivity, rate theory, electrocatalytic concepts, and applications of machine-learning to atomistic calculations. Students will have flexibility to pursue research directions of interest through project- and literature-based work. All software employed in the course is open-source, so students can continue to use these tools without license after the course completes. This course is intended for graduate students or advanced undergraduates. A background in thermodynamics is required. Experience in quantum and statistical mechanics as well as computing is useful, but not necessary.

ENGN 2790. Quantum Optics.

An introduction to the fundamental theory, mathematical formalism, and applications of quantum optics, the study of light and its interactions with matter at microscopic scales. Topics will include: an introduction to quantum mechanics using the bra-ket (or Dirac) notation, quantization of the electromagnetic fields, generation and detection of single photons, non-classical quantum states (single-mode states, Fock or number states, coherent and squeezed states), phasor diagrams, number-phase uncertainty, quantum theory of photoionization/photodetection, quantum description of mirrors, beam splitters, Mach-Zehnder interferometers, spontaneous emission and parametric downconversion, as well as interaction-free measurements. The course is intended for graduate and senior undergraduate students who would like to understand more advanced concepts in emerging fields, such as quantum computing. The material is self-contained, therefore students who do not have a deep background in quantum mechanics or optics will also be able to take the course proficiently.

ENGN 2800. Critical Challenge Project.

The Critical Challenge Project (CCP) is an integrative experience in the Master's in Technology Leadership curriculum. Through the project, students address a critical organizational challenge, drawing from their own professional experiences, their MTL coursework, and career aspirations. In collaboration with their CCP mentors and peers, students analyze their chosen critical challenges from multiple perspectives, with insights developed throughout the program, and create comprehensive plans for addressing the challenges.

ENGN 2801. Visual Storytelling.

Data visualization is an essential tool for both discovering and communicating key data findings. However, it's easy to underestimate the visual polish that goes into creating effective presentation-level graphics. This course will act as a technical primer for building data visualizations in Microsoft Excel and Adobe Illustrator, but the core focus will be the graphic design decisions – color, hierarchy, font selection, labeling – that can elevate a graphic into something truly coherent, unique and memorable.

ENGN 2810. Fluid Mechanics I.

Formulation of the basic conservation laws for a viscous, heat conducting, compressible fluid. Molecular basis for thermodynamic and transport properties. Kinematics of vorticity and its transport and diffusion. Introduction to potential flow theory. Viscous flow theory; the application of dimensional analysis and scaling to obtain low and high Reynolds number limits.

ENGN 2820. Fluid Mechanics II.

Introduction to concepts basic to current fluid mechanics research: hydrodynamic stability, the concept of average fluid mechanics, introduction to turbulence and to multiphase flow, wave motion, and topics in inviscid and compressible flow.

ENGN 2830. Compressible Fluid Flow.

We explore the fluid mechanics of aerospace and energy systems in this course. Aerospace fluid dynamics are dynamics of flows involving air. Such flows have variable density over space and time. They can expand to take the shape of their volume or be compressed into an enclosing, confined space. These flows surround (air), inflate (air in lungs), compress (impact), hold/push (drag/thrust), and levitate (flight) us. We investigate flows to design and take advantage of their behavior for engineering solutions (e.g., extracting energy). You will learn to identify a fluid and develop the mathematical framework (differential equations) that describe compressible flow motion/dynamics. We study fundamental thin airfoil, wing, and boundary layer theory. We will consider extracting energy from air flows using wind turbines. We conclude by surveying advanced topics involving supersonics, hypersonics, and space propulsion.

ENGN 2880A. Chemical Reaction Engineering.

Elements of chemical rate processes; steady-state and transient behavior of continuous-flow chemical reactors; uniqueness, multiplicity, and stability in chemical reactor systems and individual catalyst particles; heterogeneous chemical reactor analysis focusing packed beds (continuum and discrete models) and fluidized beds (deterministic and stochastic models).

ENGN 2910A. Advanced Computer Architecture.

This class focuses on advanced computer architecture concepts, including super-scalar processor design, out-of-order execution, branch prediction, multi-core processors, memory hierarchy consistency, GPU architectures, and architecture of large-scale systems such as data centers and supercomputers. Class work expected to include HWs, Labs, and projects. Prerequisite: ENGN 1640 or permission of instructor.

ENGN 2910B. Advanced Process in Materials: Thin Film Processing and Characterization.

No description available.

ENGN 2910C. Advanced Processing of Materials.

This course will present a detailed consideration of processing of specific types of materials. In this particular offering, electronic materials will be the focus of the discussion. Detailed state of the art methods of processing will be described and the relationship between processing and the resulting properties will be discussed.

ENGN 2910D. Engineering and Design I.

No description available.

ENGN 2910E. Complex Fluids.

Complex fluids comprise a large class of "soft" microstructured materials which are encountered extensively in engineering applications and biological systems. This course will explore the interrelation between the microscale physics, microstructure and macroscopic properties of complex fluids. Topics include surfactants and self-assembly, intermolecular forces and stability of colloidal suspensions, polymer solutions, ordered phases and liquid crystals, electrokinetic phenomena, rheology.

ENGN 2910F. Nano and Micro Mechanics of Solid Interfaces.

This course covers the topics: Mechanics of intermolecular forces and surface forces; Adhesion and friction of hydrophobic and hydrophilic surface complexes; Mechanics aspect of chemical etching and chemical reactions on solid surfaces; Interface energetics and kinetics with anisotropic elasticity and diffusion equations; Micromechanics of grain boundaries and interface fracture Nano and micro mechanics of single asperity and rough-surface contact friction.

ENGN 2910G. Topics in Translational Research and Technologies.

To improve human health, engineering and scientific discoveries must be explored in the context of application and translated into human/societal value. Translational research is creating a fundamental change in the way basic science and engineering research has operated for decades, breaking down the literal and figurative walls that separate basic scientists/engineers and clinical researchers. Such discoveries typically begin at "the bench" with basic research--and in the case of medicine--then progress to the clinical level, or the patient's "bedside." This seminar course will utilize case studies to demonstrate to students how the translational research unfolds. Lectures will be delivered by clinicians, medical researchers, engineers, and entrepreneurs, with case studies focused on topics ranging from value creation, IRB, HIPAA, FDA approval, etc.

ENGN 2910H. Flat Panel Display.

No description available.

ENGN 2910I. Mechanics of Entropic Forces in Biological Adhesion.

Course will cover fundamental concepts of entropic force and its significance in mechanical systems involving "soft matter". A prominent example is cell adhesion which plays a central role in cell migration, spreading, differentiation and growth. For such problems, the importance of mechanics and mechanical forces has been widely recognized and are currently under intensive research. This course is also aimed to stimulate live discussions on potential research topics and opportunities at the interface between solid mechanics and biological mechanics, with emphasis on cell-substrate, cell-cell and cell-particle interaction. Fundamental concepts to be discussed include Brownian motion, fluctuation, diffusion, dissipation, ligand-receptor bonds, single molecule mechanics, stochastic dynamics of binding/rebinding, elasticity, stress fibers, cytoskeleton, focal adhesion and endocytosis.

ENGN 2910J. Mechanics and Surface Science of Nanostructures.

Thermodynamics ideas applied to surfaces - surface energies and crystal shapes, concepts of surface stress and stiffness. Surface processes in epitaxial growth. Morphological stability and evolution of surface based nanostructures. Atomistic approaches to surface energetics and kinetics. Elastic interactions of defects on surfaces. Strain driven self-assembly. Surface processes in thin film electronic devices.

ENGN 2910K. Cell Mechanics.

Course is designed for students with a strong background that want to learn more about mathematical and mechanical descriptions of the cell and its functions. It will include an overview of cell biology emphasizing locomotion, mitosis (cell division), intracellular transport, cellular mechanotransduction, and biological material properties. The course will draw examples from recent theoretical and experimental research investigations, and teach quantitative tools commonly used by engineers in the field.

ENGN 2910L. Chemical and Transport Processes in the Environment.

This course will cover fundamental properties and processes that are important for the fate and transport of chemicals in the environment. Topics will include acid/base speciation, complexation, sorption, phase-partitioning, and solution chemistry. Emphasis will be placed on natural and engineered environmental systems, including a range of environmentally relevant media (e.g. water, air, soil/sediments, plants, organisms). Conceptual understanding of chemical structure and its role in environmental transport will be highlighted, while quantitative approaches will be used to solve problems.

This course is relevant for graduate students interested in environmental pollution chemistry. Undergraduates need permission of the instructor to register.

ENGN 2910M. Biosensors and Applied Microfluidics.

This course will acquaint students with two modules: 1) new approaches to detection and quantification of biological molecules for diverse purposes ranging from medical diagnostics to food safety to defense, 2) processes at the microscale which can be translated into applications. The topics will include sensing platforms, devices, instrumentation, biomolecular engineering of probe molecules, quantitative evaluation, separations, sample stacking, DNA/protein sizing and diagnostic devices for use in developing countries. Lectures, assignments, a group design project and a laboratory will acquaint students with the state-of-the-art in biosensors and applied microfluidics. The course is relevant to physicists, chemists, biologists and engineers.

ENGN 2910N. Molecular and Cellular Biomechanics.

Mechanics and statistical mechanics applied to biological systems. Topics will include semiflexible polymers (DNA, microtubules, actin, flagella), membranes, and molecular motors. We will cover fundamentals including Brownian motion, random walks, diffusion, the fluctuation-dissipation theorem, and electrostatics of ions in solutions.

ENGN 2910O. Atomistic Simulation in Mechanics and Physics.

Random numbers in molecular simulations, Monte Carlo methods applied to equilibrium systems, Kinetic Monte Carlo methods, Molecular dynamics with simple potentials - equilibrium properties in various ensembles (ENV,NVT,NPT,NoT) and non-equilibrium properties. Simulations with three-body potentials and EAM potentials. Molecular statics. Introduction to quantum mechanical methods, Application to the above methods to defect interactions in solids, structure of surfaces, crystal growth and structure of nanostructures.

ENGN 2910P. Nano-system Design.

The goal of this course is to provide a broad understanding of the many fields that are involved in electronic nanotechnology. The material will focus on considering how new basic devices intended to replace silicon-based transistors, such as single-molecule organic switches and nanotube electron conduits, will impact VLSI, computer architecture, and how we may design systems to take advantage of the opportunities they offer. Class will include a mix of lectures and discussion on assigned reading of recent publications. Students will be responsible for leading and participating in these discussions. A course project will also be required. Prerequisites: ENGN 1640 and 1600 are helpful, but not required.

ENGN 2910Q. Chemically Reacting Flow.

This course focuses on problems in chemical engineering that involve both transport and chemical reaction. The emphasis will be on numerical methods for practical problems. The students will learn to use the open-source code Cantera. Examples will draw from combustion chemistry, porous media, and electrochemistry.

ENGN 2910S. Cancer Nanotechnology.

This course will integrate engineering and biomedical approaches to diagnosing and treating cancer, particularly using nanotechnology and BioMEMS. Topics will include the extracellular matrix and 3D cell culture, cancer cell invasion in microfluidic devices, heterotypic interactions, cancer stem cells and the epithelial-mesenchymal transition, angiogenesis and drug targeting, circulating tumor cells and biomarker detection, as well as molecular imaging and theranostics. Recommended coursework includes ENGN 1110 (Transport and Biotransport), ENGN 1210 (Biomechanics) and ENGN 1490 (Biomaterials) or equivalents

ENGN 2910T. Physics of Materials.

No description available.

ENGN 2910U. Quantum, Statistical and Continuum Mechanics.

No description available.

ENGN 2910V. Simulation Methods in Physics and Mechanics.

No description available.

ENGN 2910W. Synthesis of VLSI Systems.

Promotes understanding of the algorithms used in designing many of today's CAD tools used for VLSI. Topics include synthesis of two-level and multi-level logic, logic testability and automatic test pattern generation, technology mapping, and sequential synthesis. Also introduces efficient manipulation algorithms for logic functions (based on Binary Decision Diagrams). Prerequisite: ENGN 1630. ENGN 1600 is helpful.

ENGN 2910X. Video Processing.

This special topic course will address the rapidly evolving technologies involved in representing and processing video data, including compression, tracking and 3-D modeling. The course will involve projects to implement live and file-based video processing algorithms as well as periodic quizzes. Projects will be carried out primarily in C++.

ENGN 2910Z. Small Wonders: The Science, Technology, and Human Health Impacts of Nanomaterials.

Survey course focusing on nanomaterials as enabling components in emerging nanotechnologies. Covers scaling laws for physicochemical properties, synthesis routes, manipulation and characterization tools, and example applications in sensors, composites, advanced energy devices, and nanomedicine. Impacts of nanomaterials on environment and health, including the interactions between nanoscale structures and biological molecules, cells, and whole organisms. Undergraduate enrollment by permission.

ENGN 2911A. Nanoelectronics.

Review and analysis of novel and exotic electronic devices, and proposals for extending scaling into the nanometer regime. Contemporary research and development in areas such as nonclassical CMOS; single-electron and nanocrystal memories; 1D nanotube and nanowire transistors, qubits, quantum dots, spin transistors, molecular electronics; and the realization of such elements in arrays and biologically inspired networks.

ENGN 2911B. Electrical and Optical Properties of Materials and Biomolecules.

Fundamental ideas and basic principles relevant to the understanding of the electrical and optical properties of solid-state materials and biomolecules are emphasized. Topics, including metals, semiconductors, dielectric materials, magnetic materials, superconductors, carbon nanotubes, DNA, and redox proteins, are selected in order to explain the operation of devices having current or future applications in engineering.

ENGN 2911C. Digital Integrated Circuit Testing and Hardware Security.

Testing of digital integrated circuits has historically focused on the detection and diagnosis of manufacturing defects. However, in the past few years, testing for security has become an important hot topic. This class will cover testing fundamentals along with new approaches for the detection of hardware Trojans (malicious circuitry inserted into a design by an adversary). Related topics in hardware security and authentication, including physically unclonable functions, will also be discussed. Prerequisite: ENGN 1630 or equivalent or permission of instructor.

ENGN 2911D. Engineering and Design II.

No description available.

ENGN 2911E. New Frontiers of Solid Mechanics in Nano- and Bio-Research.

Course will cover fundamental concepts and methods in continuum, atomistic and statistical modeling of nanoscale and hierarchical materials in engineering and biology. Various systems and phenomena, including thin films, nanocrystalline materials, fracture, hierarchical tissue structures of bone and gecko, cell adhesion and endocytosis, carbon nanotubes and biomolecular assembly, are selected to stimulate discussions at the forefront of solid mechanics research.

ENGN 2911F. Topics in Emerging and Breakthrough Technologies.

No description available.

ENGN 2911G. Physical Design of Digital Integrated Circuits.

This class investigates the physical principles and algorithmic methodologies that are used in physically designing and implementing state-of-the-art digital circuits and high-performance processors. We'll also survey the main available design implementation tools in the market and examine new directions for innovative solutions.

ENGN 2911H. Computer Architecture.

No description available.

ENGN 2911J. Computational Electromagnetics.

This course will introduce numerical techniques for solving practical and theoretical problems in optical science. Using MatLab and Mathematica, students will develop a toolkit for physical optics and build an intuition for wave propagation (e.g. transfer matrices), Fourier optics (beam propagation methods, normal mode analysis), light emission/absorption (surface- and cavity-enhanced lifetimes) as well as general finite difference schemes (frequency and time domain). Prerequisites: ENGN 0510 or PHYS 0470; APMA 0330 or APMA 0350; MATH 0520 or MATH 0540; or equivalent courses.

ENGN 2911K. Biological Impacts of Nanomaterials.

This course will emphasize advancements nanomaterials have made in several fields. In doing so, this course will cover fundamentals of nanomaterial synthesis and biological responses of nanomaterials if ingested, inhaled, or implanted. Biological concepts (immune response, cellular toxicity, etc.) will be combined with engineering concepts (manufacturing and property control) to understand the relationship between manufacturing and biological impacts of nanomaterials.

ENGN 2911L. Environmental Technologies and Human Health.

No description available.

ENGN 2911M. Instabilities and Turbulent Flows.

Introduction to hydrodynamic stability and the dynamics turbulent flows. Fundamentals of linear and nonlinear stability theory with a focus on shear flows, but also addressing examples of thin film and interfacial instabilities. Mechanics of turbulent flows including statistical descriptions, correlation functions, free-shear, and wall-bounded turbulence. Turbulence modeling and numerical methods.

ENGN 2911P. Fate and Transport of Environmental Contaminants.

Physical, chemical and biological processes governing the fate and transport of contaminants in the environment. Topics to be covered include solute transport, sorption processes, mass transfer, non-aqueous phase liquid (NAPL) entrapment and dissolution, abiotic and biotic transformations. A portion of the course will involve the use of analytical and numerical models to assess the impact of coupled processes on contaminant fate and transport.

ENGN 2911R. Analytical Modeling for Biomechanical and Biomedical Systems.

Students will develop a fundamental understanding of selected important statistical, physical and mathematical modeling methods for engineering and biomedical engineering applications. Topics covered will include analysis of variance, factorial design of experiments, modeling of infectious disease dynamics, soft material mechanics for cells and tissues and cancer tumor growth modeling. Students will learn introductory statistical methods, factorial design and analysis of experiments, introductory numerical methods, methods to model either time-dependent viscoelastic or nonlinear 3D large strain response of soft biological materials, and methods to develop mathematical models based on biological and physical knowledge. Students will learn applications of these methods for real-life problems and gain practice in critical analysis of scientific literature and effective oral and written technical communication. Prerequisite: APMA 0350 or a similar math background or instructor permission.

ENGN 2911T. Ultrafast Optical Phenomena.

This course covers the generation, propagation, and measurement of short laser pulses, of duration less than one picosecond. Concepts include mode locking, the effects of dispersion, optical pulse amplification, and time-domain non-linear optical phenomena. Intended as an introduction to ultrafast phenomena for graduate students or advanced undergraduates; a basic understanding of electromagnetic waves and of quantum mechanics is assumed.

ENGN 2911U. Hardware Architecture for Deep Learning.

Introduction to the design and implementation of hardware architectures for efficient processing of deep learning algorithms and tensor algebra in AI systems. Topics include basics of deep learning, optimization principles for programmable platforms such as GPUs, design principles of custom accelerator architectures, co-optimization of algorithms and hardware, including sparsity, and architectural implications of precision reduction. Includes labs involving modeling and analysis of hardware architectures, architecting deep learning inference systems, and an open-ended final design project. Class adapted (with permission) from MIT class 6.5930 by Professors Joel Emer and Vivian Sze, including lectures and labs. For Seniors and Graduate level students.

ENGN 2911V. Advanced Topics in Computational Mechanics: Isogeometric Analysis, Meshfree Methods, and FSI.

This course aims at exposing the graduate students in mechanics and beyond to the ideas and methods that go beyond classical Finite Element Methods (FEMs) for solid mechanics. The course will cover the following topics: 1. Isogeometric Analysis (IGA); 2. Meshfree methods, such as the Reproducing Kernel Particle Method (RKPM) or Peridynamics (PD); 3. Stabilized and variational multiscale (VMS) methods for fluid mechanics and Fluid-Structure Interaction (FSI). We will use Jupyter as the platform for testing the ideas presented in the lectures. Students will also be asked to read recent research papers in the field and make informal presentations.

ENGN 2911X. Reconfigurable Computing.

In this course, we will study computing platforms featured with CPUs + FPGAs (field-programmable gate arrays) for reconfigurable customized computing. We will first cover architecture and programming models for FPGAs as an accelerator platform using high-level synthesis (HLS). Various customization techniques on FPGAs, including customized control flow and data flow, accelerator memory management, performance & energy modeling and optimization, and communication & computation optimization, will be discussed. We will then cover various application domains that use FPGAs as accelerators, including deep learning, computer vision, natural language processing, security-related applications, etc. This course welcomes enrollment from both undergraduate (seniors) and graduate students (all).

ENGN 2911Y. Verification, Test, Synthesis.

This course will provide an overview of algorithms and techniques in electronic design automation relating to the synthesis, verification, and test of digital integrated circuits. Some topics covered will include synthesis of two-level and multi-level circuits, logic minimization, representations of combinational and sequential circuits for design automation, ordered binary decision diagrams, equivalence checking, verification coverage, assertions, and automatic test pattern generation. Classic techniques and recent state-of-the-art research advances will both be discussed.

ENGN 2911Z. Principles of Nano-Optics.

The goal of this course is to help students build an intuition for light-matter interactions at the nanoscale, especially when optically active elements are located near complex surfaces. The course will begin with a review of the theoretical foundations of macroscopic electrodynamics, but will continue on to discuss specific experimental techniques for investigating microscopic behavior. Topics will include near-field optical microscopy, quantum dots and single molecule spectroscopy, surface plasmon polaritons, local density of states, and photonic crystals.

ENGN 2912A. Toxicity of Nanoparticles.

This course will emphasize advancements nanoparticles have made in several medical fields such as preventing, diagnosing, and treating various diseases. This course will integrate fundamental knowledge of toxicity into such applications. In particular, the course will cover current results in terms of nanoparticle applications and potential toxicity. Toxicity in such organs as the lungs, blood, kidneys, liver etc. will be emphasized. Biological concepts will be combined with engineering concepts to understand the relationship between manufacturing and nanoparticle toxicity.

ENGN 2912B. Scientific Programming in C++.

Introduction to the C++ language with examples from topics in numerical analysis, differential equations and finite elements. As a prerequisite, some programming knowledge, e.g., MATLAB projects. The course will cover the main C++ elements: data types; pointers; references; conditional expressions; streams; templates; Standard Template Library (STL); design and debugging techniques.

ENGN 2912C. Future Directions in Computing: From Bio and Quantum to Nano and 3D.

Silicon-based electronics is the foundation of computing devices. The computer industry is reaching an important milestone, where physical limits arising from using optical lithography manufacturing techniques can stop the evolution of computational power as predicted by Moore's law. In this class, we explore some of the alternatives that can be used for future computing devices. Topics covered include: quantum computing, bio-based computing, spin-based computing, nanotube-based computing, computing with light and 3D chips.

ENGN 2912D. Networks and Network-on-Chip Design.

Network-on-Chip communication fabrics are a very recent approach to multi-core system-on-chip design. This class will cover state-of-the-art research in the design and test of network-on-chip communication hardware and will compare these on-chip communication networks to more traditional networks. Additional aspects of system-of-chip design and test will also be explored. Prerequisites: ENGN 1630 and ENGN 1640 or equivalent experience in digital design.

ENGN 2912E. Low Power VLSI System Design.

Integrated circuits drive today's technology, from smartphones to AI and supercomputers. This course explores key design challenges such as power, timing, interconnects, and noise, along with innovative solutions such as adaptive and energy-recovery techniques. Through lectures, labs, and a team-based project, students will gain advanced hands-on experience across the digital design flow, from Verilog and simulation to layout and verification. By the end of the semester, students will have the foundation to tackle advanced chip design, whether in digital systems, custom circuits or system-on-chip integration, while building skills highly valued in both research and industry. Note: There is an option to tapeout in GF 180nm as part of this class.

ENGN 2912H. Interfacial Phenomena.

This course is an introduction to mechanics of material interfaces. Particular cases considered are liquid surfaces (surface tension, contact line slip, electro-wetting, etc), lipid membranes, and thin elastic plates and shells. The course will cover detailed analyses of statics and dynamics of these interface. Classical and modern research papers related to these topics will form the motivation for the discussion. A unified treatment of these apparently disparate interfaces is presented to conclude the course. Prerequisites: ENGN 2010, 2020, 2210, or 2810.

ENGN 2912I. Selected Topics in Physics of Locomotion (PHYS 2610E).

Interested students must register for PHYS 2610E.

ENGN 2912J. Asymptotic and Perturbation Methods.

In this introductory course to perturbation methods, topics covered are inspired by problems in solid mechanics (e.g. ridges and kinks in thin plates), fluid mechanics (e.g. viscous boundary layers), electrical circuits (van der Pol oscillator), and include regular and singular perturbations, methods of strained coordinates, multiple scales, averaging, WKB, Laplace's method and the method of steepest descent for approximating integrals, and solutions of partial differential equations. Prerequisite: ENGN 2010 and 2020.

ENGN 2912K. Mixed-Signal Electronic Design.

ADCs, DACs, switched-capacitor circuits, noise and distortion. Circuit simulation and system design projects. Examples will be used from various biological sensing and instrumentation applications and recent scientific literature. Prerequisite: ENGN 1620 and 1630, or instructor permission. Enrollment limited to 20.

ENGN 2912L. Topics in Bioelectronics.

Seminar course covering subjects related to interactions between electronic and biological systems. Material includes energy harvesting, low-power electronic circuit design, biosensors and signal integrity, neuromorphic hardware, low-power wireless communications, and electrochemical methods. Emphasis on critical reading, technical analysis, presentation, and discussion. Design project.

ENGN 2912M. Introduction to Quantum Computing and Physical Basics of Computing.

Inspired by Richard Feynman's lectures in computation, this course explores how physical principles/limits have been shaping paradigms of computing, with a particular focus on quantum computing. Topics include but are not limited to: Physical limits of computing, coding and information theoretical foundations, reversible computing, with a particular focus on quantum computing. Open to Junior level and above.

ENGN 2912P. Topics in Optimization.

This course will cover various topics in discrete and continuous optimization. Topics include graph algorithms, dynamic programming, linear programming, convex optimization and coarse-to-fine methods. Prerequisites: basic theory of algorithms (at the level of an undergraduate algorithms course) and linear algebra.

ENGN 2912Q. Coherence of Light in Nanooptics and Plasmonics.

This class is a special topics graduate course focusing on advanced concepts in optics, including spatial and temporal coherence of optical fields, higher-order coherence phenomena in space-time domain, coherence effects at the nano- and micro-scale, optical and plasmonic interferometry using partially coherent sources. The subject is aimed at graduate and undergraduate students interested in optical communications, propagation of laser beams in biological or turbulent media, optical microscopy and imaging, as well as medical diagnostics. The concepts of "flipped teaching" and "learning by teaching" will be explored. Knowledge of advanced electricity and magnetism concepts is required.

ENGN 2912R. Implantable Devices.

This course will expose students to topics across the electrical and biological sciences through lecture, design, and laboratory exercises. Students will learn basic governing concepts of implantable device design, including those of tissue interfaces, power delivery, data transmission, hermetic packaging and biocompatibility, and in vivo evaluation through appropriate animal models including design of surgical approach. Teams will be formed early in the course and maintained throughout the semester. Successful teams will invent, design, build, and implant their unique device. Teams will have access and exposure to the Technology Ventures Office through guest lectures and individual meetings.

ENGN 2912T. Experimental Fluid Mechanics.

Theory and practice of experimental techniques for fluid mechanics. Principles of measurement, noise and error analysis, transduction and recording of signals. Measurement of temperature and pressure. Fundamentals of optics and image processing for measurements, Particle Image Velocimetry and Particle Tracking Velocimetry. Microfluidic and wind tunnel experimental techniques. Will include lab projects.

ENGN 2912U. Coordinated Mobile Robotics.

Mobile robotics has made a large impact in our lives, from how we satisfy our consumerism to how we fight wars. Thousands of warehouse robots autonomously zip around each other in a highly structured and specialized environment that makes coordination look easy, while military robots are often teleoperated by more than one person, making coordination difficult. Moving beyond highly controlled scenarios presents many challenges. Most importantly, mobile robots will interact in complex environments with other robots and people. How can we ensure robots safely do what we want them to do? What are the ethical ramifications of multirobot systems? In this course, we study the past, present, and future of coordinated mobile robotics, including a discussion of ethics. The majority of this course is a seminar-style survey of issues and approaches for control and coordination in multi-robot systems.

ENGN 2912V. Deep Learning for Scientists and Engineers.

This course introduces concepts and implementation of deep learning techniques for computational science and engineering problems to first or second year graduate students. This course entails various methods, including theory and implementation of deep learning techniques to solve a broad range of problems using scientific machine learning. Lectures and tutorials on Python, Tensorflow and PyTorch are also included. Students will understand the underlying theory and mathematics of deep learning; analyze and synthesize data in order to model physical, chemical, biological, and engineering systems; and apply physics-informed neural networks and neural operators to model and simulate multiphysics systems. Undergraduate students who want to enroll in this course should request an override through Courses@Brown.

ENGN 2912W. Two Phase Flows.

Introduction of two-phase flows. Flow maps. Conservation Equations. Two-phase homogenous flows. Drift flux models. Interfacial dynamics. Motion of single particles, drops or bubbles. Bubble growth and collapse. Cavitation. Dusty gases. Granular flows. Sprays. The student who successfully completes this course will be able to understand the principles to two phase fluid mechanics; be able to start reading specialized literature of the subject; recognize the areas of active research; and develop research projects in this general area. Prerequisites: Advanced undergraduate fluid mechanics (e.g., ENGN 1860); graduate fluid mechanics course (e.g., ENGN 2810).

ENGN 2920A. Complex Fluids: Non Newtonian Fluid Mechanics.

Introduces the treatment of non Newtonian liquids in flow. A review of classical rheological models will be discussed in detail. The course will focus on effects of non Newtonian behavior on the flow of these materials. The intended audience is graduate students in Engineering, Physics, Chemistry, and Applied Mathematics. Prerequisite: We will use material from ENGN 2010/2020, such as differential equations, Fourier and Laplace transforms, elementary differential geometry, basic probability, vector calculus. A graduate course on fluid mechanics is required (ENGN2810).

ENGN 2920B. Mechanics of Energy Storage Materials.

This course introduces the students to the mechanics aspects of battery materials and some of the current research problems. It will consist of a series of lectures by experts from academia and industry, which will cover the state of the art in lithium ion batteries, the role of mechanics in advancing the field, experimental studies, continuum modeling, ab initio modeling and practical design issues. There will be approximately one lecture each week (150 min); each lecture will focus on a specific aspect of battery materials, giving an in-depth treatment of scientific problems, the current state of understanding and future challenges.

ENGN 2920D. Environmental Technologies and Human Health.

This course explores interdisciplinary approaches to environmental safety and health drawing from Brown University faculty and other affiliated experts. Topics include history of environmental regulation and waste management; origin and chemistry of pollutants; fundamentals of toxicology, biological impacts of exposure and risk assessment; pollutant dispersion, transport and bioaccumulation; and remediation technologies. The overarching theme is the interactive role of life sciences, physical sciences, and social sciences in the development of solutions to manage or avoid the adverse human health impacts of legacy, current, and emerging technologies. Enrollment limited to 30.

ENGN 2920E. Theory of Heterogeneous Materials.

Heterogeneous materials appear in nature (polycrystals, wood, bone, blood), physical systems ((un)stable colloidal suspensions) or in engineering applications (fiber-reinforced materials, reinforced rubber in tires). They usually exhibit remarkable physical properties superior to the properties of individual components. Despite being comprised at the microscopic length scale of multiple domains with different physical properties, these materials behave as homogeneous materials and can be assigned macroscopic (effective) physical material-like properties for practical purposes. The course will cover classical and recent analytical, numerical methods for computation of various physical properties (viscous/thermal/dielectric, viscoelastic, thermoelastic, piezoelectric, electrostrictive) of heterogeneous materials that exhibit (non)linear and/or coupled behaviors.

ENGN 2920F. Sensors and Actuators for Real Systems.

This course was introduced in Spring 2020 as a course specifically aimed toward ScM students, interested advanced undergraduates, and curious PhD students. The idea is to introduce some of the input and output components used in embedded systems, drones, robots, etc. This includes circuit analysis of analog sensors, estimation theory, including Kalman Filtering and radar processing, to overcome noise inherent in all such systems, the discussion of some modern digital sensors, controlling the latest actuators, including ways to control brushless DC motors. There is a lab component in the course.

ENGN 2920G. Creating Economic and Social Value from Your Science or Engineering Research.

As a graduate student or undergraduate researcher, the primary output of your research is new knowledge and research publications. But is there a more direct way of creating value, through licensing and commercialization to a company, through creating products or services, or through the creation of a new venture? And how can we assess the potential social impact? We will together examine some currently emerging science to establish the methods. Thereafter you will examine the science and technology within your own research group in order to discover value, value that you may possibly be able to exploit. Students must be actively participating in research. Undergraduate students must also be undertaking research (instructor permission is required). Graduate students are requested to contact the instructor when registering.

ENGN 2920H. Materials and Interfaces for Energy Storage Devices.

This is an introductory course that combines materials science and electrochemistry, emphasizing thermodynamics, charge transfer kinetics, interface structures, and ionic mass transport mechanisms in both liquid and solid materials. This course integrates the atomistic point of view with the macroscopic concepts in electrochemistry and energy storage devices. Examples of various battery and fuel cell technologies will be presented. An emphasis is placed on mechanistic understanding, quantitative analysis, and mathematical models of electrochemical systems. The course is intended to support graduate students conducting research involving electrochemical technologies.

ENGN 2930. Atomistic Modeling of Materials.

This class describes the fundamentals of statistical mechanics with a focus on both traditional analytic methods and modern atomistic simulations methods. The class is divided in two parts. (i) Techniques used to calculate interactions at the atomic level are first covered, from simple interatomic potentials to quantum mechanical first-principles methods. (ii) Simulations techniques to sample atomic degrees of freedom for obtaining macroscopic quantities are then discussed, such as Monte Carlo and Molecular Dynamics. The tools presented in class are illustrated with ongoing examples that illustrate how these methods work in concert. Enrollment limited to 40 graduate students.

ENGN 2960. Experiential Learning in Industry (ELI).

This course will immerse students for up to 6 months in a corporate environment to learn first-hand about industry careers in engineering and technology. Corporate environments may include design, development, simulation, testing, technical documentation, consulting, investment, patent law, licensing, compliance, and/or regulations. Students will work as employees for a host company and carry out company-defined activities.

ENGN 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ENGN 2980. Special Projects, Reading, Research and Design.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ENGN 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

ENGN 2991. Characterizing Nanomaterial Structure.

Characterizing nanomaterial structure is challenging as it requires multiple methods drawn from disciplines ranging from materials engineering to colloidal chemistry. This class will present analysis tools and will focus on their specific application to nanostructures, specifically those prepared via solution-phase chemistry. Material will be structured into four modules on (a) dimensions and morphology (b) internal structure (c) surface chemistry and (d) molecular analysis. Case studies will illustrate best practices for analyzing and reporting characterization data. This course provides students an opportunity to compare different methodologies as well as select not just sufficient, but appropriate, tools for a nanomaterial analysis problem.

The School of International and Public Affairs

The School of International and Public Affairs is a community of scholars whose work aims to help us understand and address the world's most pressing issues, including globalization, economic uncertainty, security threats, environmental degradation, and poverty. Focusing on three main areas – development, security, and governance – the School leverages Brown's signature interdisciplinary approach to foster innovative, policy-relevant scholarly activities.

The School's core faculty of anthropologists, economists, historians, political scientists, sociologists, and other specialists work across academic disciplines with Brown faculty colleagues, as well as with an ever-changing cohort of visiting scholars and practitioners from around the world. The School collaborates with key organizations, such as the United Nations, national governments, and non-governmental organizations to seek practicable solutions to today's global problems.

The School administers the undergraduate concentration in International and Public Affairs, and houses several others: Latin American Studies, Middle East Studies, and South Asian Studies. It also administers the Master of Public Affairs (MPA) degree program, which prepares students for careers spanning public service, government, NGOs, foundations, and the private sector. The School is also home to a thriving postdoctoral fellows program.

The Brown International Advanced Research Institutes (BIARI), an early-career professional development initiative that builds transnational knowledge networks among young leaders from the Global South, is located at the School, where a two-week residency occurs each year. The Choices Program, which develops secondary level curriculum resources and offers professional development to classroom teachers, is also affiliated with the School.

The School is home to several centers focused on area studies: the Africa Initiative, Brazil Initiative, Center for Contemporary South Asia, Caribbean and Latin American Studies, China Initiative, Humanitarian Innovation Initiative, Middle East Studies and the Taubman Center for American Politics and Policy. The co-location of these centers, combined with the School's thematically driven research, enables the School to take an interdisciplinary, comparative approach to research and education. In keeping with the School's mission, such collaboration leads to a deep understanding of the greatest challenges of our time.

The School houses and supports three major academic journals: *Studies in Comparative International Development*, *Journal of Health Politics, Policy and Law* (JHPPL) and the *Brown Journal of World Affairs* (BJWA). Founded in 1993, BJWA is a highly regarded scholarly publication in the field of international studies, edited and managed entirely by Brown undergraduates.

Finally, a full agenda of seminar series, conferences, lectures, and workshops each year brings leading scholars and public figures to the School to put current events into context, explore emerging global issues, develop policy, and publish research. A new podcast, *Trending Globally: Politics and Policy*, further connects faculty research and visiting scholars with broader news and world events.

More information about the School is available at <http://watson.brown.edu/>. (<http://watson.brown.edu/>)

International and Public Affairs Concentration Requirements

The concentration in International and Public Affairs equips students with the knowledge and skills necessary to be engaged global citizens. This concentration offers three tracks: Development, Policy & Governance, and Security. All students take a common core of five classes, beginning with a

choice of thematic gateway lecture courses (ideally taken during freshman or sophomore year), and then building through a required junior seminar and a required senior seminar (eligible students may choose to write an honor's thesis to satisfy the senior seminar requirement). All students choose one of three tracks of substantive specialization: Development, in which students explore issues of human development in local and global contexts, and across both the developing world and advanced industrial settings; Security, which allows students to explore issues of security in both local and global contexts; and Policy and Governance, in which students explore the design, implementation, and evaluation of public policies to resolve societal challenges, as well as the governing structures that yield those policies. The concentration is committed to engaging students in the classroom, enabling research opportunities with faculty and in the field, and supporting experiential learning opportunities. Advisors' office hours and an online appointment scheduler are available here.

Concentration Requirements

The concentration comprises 11 courses (12 for an honors degree). Students take a Gateway course, which introduces them to multidisciplinary perspectives on social challenges that cut across global regions. The Foundational course introduces students to central themes and texts in the three IAPA tracks: Development, Policy and Governance, and Security. Gateway and Track Foundational courses are not interchangeable or substitutable with courses offered in other concentrations. They should both be taken in the first or second year.

Once a student has chosen a track, they take five electives, selected from a pre-approved list for each track on our website. Approval of track elective courses not on the pre-approved list is permitted only in extenuating circumstances. Note that that list of electives is subject to change. We encourage students to cluster two or three of these electives around a region, theme, or social problem to create coherence in their plan of study and prepare for future work.

Students also take courses in qualitative and quantitative methods (a high-level course in language instruction can substitute for one of the two methods courses).

All International and Public Affairs concentrators take a junior seminar (1700 level) during the fall or spring semester of the junior year. The seminars, which are not track specific, focus on issues in international and public affairs that can be studied in comparative perspective, that can be subjected to multidisciplinary analysis, and that often cut across concerns about development, policy and governance, and security. The seminars are designed to help students hone skills of critical thinking, argumentation, and the design and operation of social science research and scholarship. Junior seminar students write papers on topics that can later be pursued as capstone or thesis projects. Junior seminars are not interchangeable or substitutable with courses in other concentrations. Junior seminars are typically WRIT-designated.

All International and Public Affairs concentrators complete a capstone course during their senior year. Designated IAPA Senior Seminars (1800 level) require students to write a research paper or extended policy brief that draws on analytic expertise, thematic expertise, regional expertise, and foreign language skills, if applicable. The capstone research project is typically about 20-25 pages in length. Senior capstone seminars are not interchangeable or substitutable with courses offered in other concentrations. Senior seminars are typically WRIT-designated. Eligible seniors may choose to write a two-semester honors thesis to satisfy the senior capstone requirement.

Track Specialization and Electives

IAPA students must take the track foundational course associated with their track specialization (Development, Security, or Policy & Governance).

Track foundational courses are not interchangeable or substitutable with courses offered in other concentrations. Students select 5 elective courses from the list of pre-approved electives consistent with their track specialization. Approval of track elective courses not on the pre-approved list is permitted only in extenuating circumstances. Note - the list of electives is subject to change.

Concentration Requirements Summary

Gateway Course	1
IAPA 0300	Costs of War
IAPA 0400	Fiscal Plumbing 101: The American Tax State in Comparative and Historical Perspective
IAPA 0900	How We Compete: The Race for Industrial Supremacy Over Time and Place
ECON 1000	Using Big Data to Solve Economic and Social Problems
POLS 1020	Politics of the Illicit Global Economy
SOC 1490	Power, Knowledge and Justice in Global Social Change
Track Foundational	1
IAPA 1001	Foundations of Development
IAPA 1002	Foundations of Policy and Governance
IAPA 1003	Foundations of Security
Track Electives (See tables below)	5
Qualitative Research Methods ¹	1
IAPA 1500A	Ethnographic Research Methods
SOC 1020	Methods of Social Research
Quantitative Research Methods ²	1
ECON 1620	Introduction to Econometrics
IAPA 1502	What Works: Evaluating the Impact of Social Programs
POLS 1600	Political Research Methods
SOC 1100	Introductory Statistics for Social Research
Junior Seminar ³	
IAPA 1700P	Displaced: How Global Systems Shape Refugee Families
IAPA 1700R	Inequality, Policy, and Economics
IAPA 1700S	Survey of Time: Temporality, Social Theory, and Difference
IAPA 1701M	Justice, Gender, and Markets
IAPA 1701N	Diplomacy, an Art That Isn't Lost
IAPA 1701V	Democratization
IAPA 1701W	The Cold War in Latin America
IAPA 1701X	American Education Policy in Historical and Comparative Perspective
IAPA 1701Y	Climate Change, Power, & Money
IAPA 1701Z	Animals and War
IAPA 1702D	Beyond Refugeehood: Politics of mobility, border regimes, and humanitarianism
IAPA 1702H	The Politics of Industrial Transformation
IAPA 1702I	Governance from Socialist to Post-socialist China
Senior Capstone ⁴	
IAPA 1800D	Introduction to Corporate Law and Public Policy
IAPA 1801D	Politics & Journalism: A Practical Guide to How We Got Here and Where We're Going
IAPA 1801F	Prison Abolition as Policy
IAPA 1802M	Rwanda Past and Present
IAPA 1803	Humanitarian Response in Modern Conflict
IAPA 1804	Diplomacy, Crisis, and War in the Modern Era
IAPA 1804A	Iran and the Islamic Revolution
IAPA 1804D	Legal Methods for Public Policy
IAPA 1804M	Overcoming Threats to Human Security
IAPA 1810	Democratization and Autocratization

IAPA 1811	Contemporary Digital Policy and Politics
IAPA 1821P	Political Psychology of International Relations
IAPA 1816A	Senior Honors Seminar
IAPA 1817A	Senior Honors Thesis
Total Credits	11

¹ A comparable course from an outside department (including ANTH 1236, ANTH 1940, BIOL 1575, EDUC 1240, SOC 1117, SOC 1260, SOC 1340) may also be used.

² A comparable course from an outside department including (APMA 1650, CPSY 0900, CSCI 0300, CSCI 0111, ECON 1620, EDUC 1230) may also be used.

³ Other 1700-level approved IAPA courses may also fulfill the Junior Seminar requirement

⁴ Other 1800-level approved IAPA courses may also fulfill the Senior Seminar requirement. Students pursuing honors are required to take the IAPA Honors Seminar (IAPA 1816A or IAPA 1850) in the fall and a directed reading independent study with their primary thesis reader in the spring.

Examples of track electives include the following: (Note that a full list is available on the IAPA website (<https://home.watson.brown.edu/iapa/requirements/track-electives/>)).

DEVELOPMENT TRACK

Five courses from the following (approval of track elective courses not on the pre-approved list is permitted only in extenuating circumstances):

ANTH 1150	Middle East in Anthropological Perspective
ANTH 1301	Anthropology of Homelessness
ECON 1500	Current Global Macroeconomic Challenges
ECON 1560	Economic Growth
ENVS 1554	Farm Planet: Hunger, Development, and the Future of Food and Agriculture
HIST 1267	The Global British Empire, 1600-The Present
IAPA 1401	Economic Development in Latin America
IAPA 1402	Beyond Sun, Sea and Sand: Exploring the Contemporary Caribbean
JUDS 1711	History of the State of Israel: 1948 to the Present
PHP 1460	Public Health Law and Policy
POLS 1290	The Rise of China
POLS 1440	Security, Governance and Development in Africa
SOC 1270	Race, Class, and Ethnicity in the Modern World
URBN 1871G	Urban Asia: Beyond Tradition, Modernity, and Crisis

Total Credits **5**

Development Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

SECURITY TRACK ELECTIVES

Five courses from the following (approval of track elective courses not on the pre-approved list is permitted only in extenuating circumstances):

CSCI 1800	Cybersecurity and International Relations
ECON 1340	Economics of Global Warming

HIST 1080	Humanitarianism and Conflict in Africa
IAPA 1201B	Victory, Defeat, and Everything In-Between: History, Strategy, and Politics
IAPA 1203	History of American Intervention
POLS 1225	Nuclear Weapons
POLS 1500	The International Law and Politics of Human Rights
POLS 1822I	Geopolitics of Oil and Energy
SOC 1128	Migrants, Refugees and the Mediterranean
UNIV 1001	The Israeli-Palestinian Conflict: Contested Narratives

Total Credits 5

Security Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

POLICY & GOVERNANCE TRACK ELECTIVES

Five courses from the following (approval of track elective courses not on the pre-approved list is permitted only in extenuating circumstances):

AFRI 1170	African American Women's History
ANTH 1300	Anthropology of Addictions and Recovery
CSCI 1580	Information Retrieval and Web Search
ECON 1385	Intergenerational Poverty in America
ECON 1570	The Economics of Latin Americans
IAPA 1201B	Victory, Defeat, and Everything In-Between: History, Strategy, and Politics
ENVS 1400	Sustainable Design in the Built Environment
HIST 1121	The Modern Chinese Nation: An Idea and Its Limits
HIST 1531	Movement Politics in Modern America
PHP 1450	COVID-19, Public Health, and Health Policy
PHP 1681	Reproductive Health, Rights and Justice
POLS 1090	Polarized Politics
POLS 1280	The Rise of India: History, Politics, Economics and Society
SOC 1116	Criminal Courts and the Law in an Era of Mass Incarceration
URBN 1250	The Political Foundations of the City

Total Credits 5

Policy & Governance Professional Track

The requirements for all undergraduate professional tracks within concentrations are standardized and additional information can be found here:

<https://bulletin.brown.edu/undergradprotrack/>

Honors

Students who demonstrate exceptional academic performance and scholarly achievement in the International and Public Affairs concentration have the opportunity to be recommended for graduation with honors. Students submit applications to the Honors Program (<https://home.watson.brown.edu/iapa/honors/>) in the spring semester of their junior year. Students who are graduating in December can apply for the honors program in the spring semester (their 5th) to complete their thesis in the 7th semester with the spring cohort.

To apply, students must meet IAPA honors course and GPA prerequisites and turn in a well-developed social science research question, method, and bibliography along with a plan for completing the thesis by April of

senior year. They must also have secured signatures of a primary thesis advisor and a second reader. Only those students with an approved thesis application will be permitted to enter the senior thesis seminar in the fall and /or receive thesis grant funding for the summer.

Master of Public Affairs Graduate Program

The Brown MPA - Change the World

The Ivy League's only one-year residential master's program in public affairs, Brown's MPA (<https://home.watson.brown.edu/mpa/>) prepares students to be public policy leaders, analysts, and advocates in government, the nonprofit, and private sectors in the U.S. and abroad. Through our rigorous one-year program that runs from early June to May, students will sharpen the analytical, communication, leadership, and other skills needed to address pressing societal challenges as future global leaders.

Distinct Program Features:

- The exclusive one-year, on-campus master of public affairs degree from an Ivy League institution
- Rigorous, multidisciplinary curriculum with flexibility to pursue a track through elective coursework on data analysis, economics, leadership, inequity, security, or a customized topic
- Policy in Action project with a real-world collaborating organization in the public, private, or nonprofit sector
- Faculty comprised of world-renowned researchers and experienced practitioners
- Merit-based Tuition Scholarships (<https://home.watson.brown.edu/mpa/admissions/scholarships/>) are available
- Dedicated career planning and professional coaching support

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/public-affairs-and-public-policy/>

Required Courses

Summer Sequence I

MPA 2455	Statistics for Public Policy	0.5
MPA 2460	Economics for Public Policy	0.5

Summer Sequence 2

MPA 2040	Statistics for Program Evaluation	0.5
MPA 2450	Economics of Government Intervention	0.5

Global Policy Experience (2 Weeks)

Fall Semester

MPA 2445	Policy Analysis and Problem Solving	1
Skills-based MPA Elective		1

MPA 2015	Public Policy Advocacy and Strategic Communication
MPA 2020	Public Budgeting and Management
MPA 2229	Principles and Practices of Stakeholder Engagement
MPA 2603	Leading for Impact

Track Elective 1	1
Track Elective 2	1

Spring Semester

MPA 2800	Policy in Action Consultancy	1
MPA 2160	Management and Implementation in Public and Non-Profit Organizations	1
MPA 2475	Policy Problems of the 21st Century	1
Track Elective 3		1

Total Credits 10

Data and Policy Analysis Track

The following information should be read in conjunction with the Curriculum Requirements for the Master of Public Affairs program.

Track Description: Data and Policy Analysis

How do we know when a public policy, government program, or a public organization is working? What data, information, or evidence can we leverage? What analytical methods, tools, languages, or software can we deploy to investigate correlations or identify causal relationships? When does it make sense to use one analytical tool or another? The Data and Policy Analysis specialization prepares MPA students to answer such important questions for government, nonprofit, or for-profit organizations.

The courses below introduce students to a variety of programming languages, packages, and environments for analyzing data, such as R, Python, Stata, and SQL. Students also gain hands-on, practical experience with data cleaning, analysis, visualization, and reporting. Finally, students develop knowledge of multiple statistical and econometric tools, and the theoretical foundations of different model specifications.

Data and Policy Analysis Track Requirements

MPA students will be required to complete complete at least three credits from among the MPA courses listed below, with a grade of "B" or higher in each completed course, to qualify to have this Track notation added to their transcript.

Eligible MPA courses for the Data and Policy Analysis Track include:

MPA 2455	Statistics for Public Policy	.5
MPA 2460	Economics for Public Policy	.5
MPA 2040	Statistics for Program Evaluation	.5
MPA 2450	Economics of Government Intervention	.5
MPA 2065	Introduction to Data Science and Programming	1
MPA 2710	GIS and Public Policy	1

Note: available classes may change on a year-to-year basis, and the academic advising staff of the MPA program will inform students of their options accordingly.

Inequity and Public Policy Track

The following information should be read in conjunction with the Curriculum Requirements for the Master of Public Affairs program.

Track Description: Inequity and Public Policy

Age. Caste. Disability. Education. Gender. Income. Race. Religion. Sexual Orientation. Let's face it: inequity is a fact of life around the world today, along these and many other dimensions. How do we measure inequality? How do we explain it? How can we eradicate it?

The courses in the Inequity and Public Policy specialization help MPA students identify inequity in its many forms and venues; determine how, when, and why inequity materializes; understand how public policy can contribute to inequities; and strategize ways to address inequality using the instruments of public policy where appropriate.

Inequity and Public Policy Track Requirements

MPA students will be required to complete complete at least three credits from among the MPA courses listed below, with a grade of "B" or higher in each completed course, to qualify to have this Track notation added to their transcript.

Eligible MPA courses for the Inequity and Public Policy Track include:

MPA 2226	Race and Public Policy	1
MPA 2735	Women and Nations	1
MPA 2475	Policy Problems of the 21st Century (one of two sections below)	1

MPA 2475 Section: Social Policy

MPA 2475 Section: State Law, Policy, and Advocacy

Note: available classes may change on a year-to-year basis, and the academic advising staff of the MPA program will inform students of their options accordingly.

Global Security Track

The following information should be read in conjunction with the Curriculum Requirements for the Master of Public Affairs program.

Track Description: Global Security

Peace and security are noble goals, but they are often elusive. What factors tend to promote peace and security? What factors tend to undermine them? What happens when the opposite of peace and security prevail?

Courses in this specialization examine the foundations of and challenges to security in domestic and international contexts. They also examine how insecurity affects different political and social outcomes, including inequality, migration, and public health, and ways to foster peace and improve conditions that insecurity creates. Students who pursue this specialization will have the opportunity to learn from some of the world's foremost academics and practitioners about topics like the use of digital technologies to achieve peace, how women leaders navigate conflict, the complicated history of humanitarian assistance, and leading practices for managing public health crises.

Global Security Track Requirements

MPA students will be required to complete complete at least three credits from among the MPA courses listed below, with a grade of "B" or higher in each completed course, to qualify to have this Track notation added to their transcript.

Eligible MPA courses for the Global Security Track include:

MPA 2475	Policy Problems of the 21st Century (Digital Peacebuilding section)	1
MPA 2735	Women and Nations	1
PHP 2700	Lessons (Un)Learned in Public Health and Humanitarian Response: A Historical Perspective (cross- or double-listing with MPA)	1
PHP 1580	Pandemic Game Changers: Preparing the Next Generation of Decision-Makers for Emerging Bio Threats (cross- or double-listing with MPA)	1

Note: available classes may change on a year-to-year basis, and the academic advising staff of the MPA program will inform students of their options accordingly.

Public Leadership and Management Track

The following information should be read in conjunction with the Curriculum Requirements for the Master of Public Affairs program.

Track Description: Public Leadership and Management

The Public Leadership and Management specialization prepares MPA students to manage and lead complex organizations in government, nonprofit, and for-profit sectors. Students are introduced to a variety of applied skills, including strategic communication, budget management, project management, inclusive leadership, and negotiation.

Public Leadership and Management Track Requirements

MPA students will be required to complete complete at least three credits from among the MPA courses listed below, with a grade of "B" or higher

in each completed course, to qualify to have this Track notation added to their transcript.

Eligible MPA courses for the Public Leadership and Management Track include:

MPA 2160	Management and Implementation in Public and Non-Profit Organizations	1
MPA 2020	Public Budgeting and Management	1
MPA 2229	Principles and Practices of Stakeholder Engagement	1
MPA 2603	Leading for Impact	1
MPA 2015	Public Policy Advocacy and Strategic Communication	1

Note: available classes may change on a year-to-year basis, and the academic advising staff of the MPA program will inform students of their options accordingly.

Dual Degree Program: Master of Public Health (MPH) and Master of Public Affairs (MPA)

The School of Public Health and the School of International and Public Affairs also offer a dual-degree Master of Public Health (MPH) and Master of Public Affairs (MPA) program. Emphasizing a learning by doing approach, this rigorous, program will offer highly qualified applicants the opportunity to gain training in public health and public policy to prepare them to address the critical health policy issues in the United States and throughout the world. The dual-degree degree program includes 19 courses as well as a Masters level thesis. Students will benefit from the rich academic resources at the School of International and Public Affairs and the School of Public Health, as well as their extensive applied learning programs in Rhode Island, as well as throughout the United States and the world.

Interested students should apply separately to the MPH and MPA program. Applicants will indicate interest in the joint degree program on the application form.

For more information on admission to the MPH program and it's requirements, please visit the following website:

<https://www.brown.edu/academics/gradschool/programs/public-health>
(<https://www.brown.edu/academics/gradschool/programs/public-health/>)

Courses

International and Public Affairs

IAPA 0020. Introduction to Public Policy: How to Change the World.

Introduction to Public Policy: How to change the world, provides a roadmap to empower you to make a difference in the world. The goal of this course is to deepen your understanding of how American public policy, as in the solutions to problems that our communities confront, is developed. This course is designed with an emphasis on political actors, institutions and context. From interest groups to mayors and the role of the media in foreign affairs we will continually ask: how and why do some issues gain traction with the American public (and decision makers) and others ignored? We examine how public policy is crafted, negotiated and enacted. It is a complicated story – one worth understanding. The goal of this course is to provide future leaders with conceptual tools for analyzing the environment in which policy is made.

IAPA 0100. Global Health, Humanitarianism, and Inequality.

The term "global health" refers to an aspiration and a set of problems. An aspiration to global health has potential to unite biosecurity, humanitarian, and philanthropic efforts to rid the world of infectious disease, improve sanitation, and address malnutrition. As a set of problems, global health is less unifying than unruly. Deciding when a local epidemic becomes a global emergency or calculating the economic value of healthy childbirth are not straightforward processes. This course takes a multidisciplinary, critical approach to global health. Focus will be on "bottom-up" perspectives—how projects and policies play out in the lives individuals and communities.

IAPA 0300. Costs of War.

This interdisciplinary seminar explores a ground-level view of war and its human, economic, environmental, and social consequences. We primarily take up the example of the post-9/11 wars, focusing less on the causes of war, on battles, elite war strategies, or relations between states than on what war is like for those caught within it, what larger social and economic contexts make it more or less likely, what are its impacts for many differently situated peoples, and how myths about violence, and even the category of war itself, often obscures fuller understanding.

IAPA 0310. Reimagining Human Security.

The concept of human security— in both theory and practice— has significantly evolved over the past two decades, with the idea that people, and the protection of human life and dignity, should be the central focus of governmental and intergovernmental security policy and practice. Yet, despite many advances in the field, the world is more dangerous than ever, and vulnerable civilians are increasingly threatened by a multitude of challenges including war, climate change, pandemics, natural disasters, the erosion of humanitarian and human rights law, and rapid advances in world-changing technologies. How do global issues such as climate change, pandemics, artificial intelligence, and migration impact human security? In what ways do social, economic, environmental, and political factors intersect in the context of human security? What ethical considerations should be considered when reimagining approaches to human security?

IAPA 0400. Fiscal Plumbing 101: The American Tax State in Comparative and Historical Perspective.

This IAPA Gateway course explores the origins and development of the American Tax State in comparative and historical perspective. It's designed as an interdisciplinary introduction to the welter of problems associated with the raising and spending of public revenue —the life blood of contemporary nation-states. It should be of use to students interested in the political and institutional development of the welfare state, and in the origins, fault lines and prospects of American federalism. We explore the origins and development of the American Tax State in comparative and historical perspective. It is designed as an interdisciplinary introduction to the welter of problems associated with the raising and spending of public revenue —the life blood of contemporary nation-states.

IAPA 0700. The Political Economy of Hard Policy Problems.

This class tackles some of the "hard problems" that governments and global firms routinely face. That is, while governments are cajoled and called upon to produce economic growth, do something about economic inequality and social mobility, and improve the life chances of citizens through purposive action, actually delivering these things is incredibly hard. Likewise firms are supposed to police their supply chains, decarbonize their operations, raise their wages, and pay more taxes, all at once. These areas constitute 'hard problems' for two main reasons. Economically, we don't really have much of a clue about how to do many of these things. Politically, there are powerful interests and entrenched ideas out there that want to keep things just as they are.

IAPA 0900. How We Compete: The Race for Industrial Supremacy Over Time and Place.

This course examines factors that have driven industrial competitiveness from the dawn of industrialization to the present. What does being "competitive" really mean? How have nations traditionally achieved and sustained industrial competitiveness over time? What have been the social costs and consequences of achieving such competitiveness? And, most fundamentally, who really is competing against whom? Nations? Industries? Different segments of society? This course examines how these questions have evolved over time and across different societies, with the intention of illuminating and clarifying the choices we face today in dealing with rapid technological change, shifting global geopolitical circumstances, and growing environmental challenges.

IAPA 1000A. Money and Power in the International Political Economy (POLS1420).

Interested students must register for POLS1420.

IAPA 1001. Foundations of Development.

This course presents an interdisciplinary approach to the study of development. The course examines what constitutes development from a variety of different disciplinary perspectives, and the course examines how and in what context the term "development" itself has evolved over time. The goal of this course is to provide students an intellectual and conceptual grounding for study a variety of issues surrounding development, whether in the global North or South.

IAPA 1002. Foundations of Policy and Governance.

An overview of policymaking and policy analysis in the contemporary United States. The course begins with an examination of traditional justifications for government action. We will then examine the discipline of policy analysis that has arisen to design and evaluate public policies. We will also consider critiques of the rational method and ask questions about how policy expertise fits into the political system. The course ends with classic works on organizations and implementation. Not open to graduate students.

IAPA 1003. Foundations of Security.

This course introduces students to contemporary international security topics with a special focus on problems associated with war and violent conflict in the 21st century. It mixes the theoretical, historical, analytical, and practical. Students learn theory on the causes of war, how wars are fought, civil-military relations, the costs and consequences of warfare, and more. They also learn about the organization of the U.S. and other national security establishments. Using these tools, we will apply social science methods and critical thinking to security "hot spots" and wars around the world. There will be an emphasis on analyzing the unfolding war in Ukraine, as well as the prospects for U.S.-China rivalry and/or military conflict in the future, including within a Taiwan scenario. Aside from readings, lectures and discussions, students will benefit from a variety of films, simulations, walking excursions, and debates.

IAPA 1010. Borders and Bodies.

Whose maps, whose stories? This seminar begins by asking: what is a border? And where is it? How do particularly gendered, sexualized, raced, and classed bodies experience borders and mobility across them? Why are borders important sites of political, socio-cultural, economic, and religious contestation? How do borders and border-crossers matter to nation-states and global flows of capital and commodities? How do people living in border zones relate to the geopolitical reality of the border and the sociocultural and historical connections that often run across them? How do ideas about belonging and identity structure competing visions of justice, community, and citizenship?

IAPA 1020. Pathologies of the Rich (Countries): Liberal Capitalism and its Discontents.

Advanced capitalist economies face challenges from a number of different sources. Economic inequality is increasing, austerity and welfare reforms have undermined social protections. Globalization and decades of permissive merger policies have resulted in private companies of unprecedented size and in possession of extraordinary market power and political influence. Climate change has called into question economic foundations and social compromises of post-war capitalism, while threatening to unleash destabilizing catastrophes. Populist parties are on the rise across Europe and North America, posing a direct challenge to the liberal order and creating new uncertainty about the future of liberal democracy and global capitalism.

IAPA 1020A. Politics of the Illicit Global Economy (POLS 1020).

Interested students must register for POLS 1020.

IAPA 1021. Experiments on Race, Class, and Gender Diversity, Power, and Identity Course Series.

Open expressions of bias are becoming less socially acceptable. Inequalities along lines of race, class, and gender, however, persist. This raises a challenge for social scientists: to study unequal treatment without prompting research subjects to modify their behavior. Social scientists are increasingly turning to experiments in order to unobtrusively identify causal effects on attitudes and behaviors. The goal of this course is to introduce students to the theory and practice of experimentation through exemplary studies on bias. As part of a semester-long project, student will be involved in the design and implementation of an experiment conceived by the instructors.

IAPA 1040. Nationalism and the Nation-State.

From Brexiteers in the United Kingdom and independence activists in Catalonia to members of the Hindu right-wing in India, nationalism seems to be everywhere today. We live in a world of nation-states whose boundaries are legitimized by the shared identities of their populations. But what is nationalism, and how does it relate to the nations whose borders structure both the affairs of states and the details of our everyday lives?

IAPA 1201B. Victory, Defeat, and Everything In-Between: History, Strategy, and Politics.

This is a course about strategy, politics, and history, their complicated relations, and the ways in which strategy talk has become a staple of politics. One goal is to give students a working knowledge of the fundamentals of strategic theory at multiple levels of analysis, ranging across the various instruments of military power. Another, more important goal of our seminar is to make students aware of strategic thought as tools with which to think as opposed to simply existing as historical artifacts. We are not intellectual antiquarians. Each week we will challenge students to make clear connections between theorists, history, and contemporary politics. If students leave the course with only one idea, it should be that that there is no such thing as a military strategy separable from achieving political objectives.

IAPA 1201D. Social Entrepreneurship.

Social Entrepreneurship, engages students in the process of exploring significant global problems and developing innovative solutions that drive transformative social change. The course helps students understand the strategies that social entrepreneurs employ to tackle complex and entrenched social problems with transformative approaches that work and impact systems. Students will learn about real organizations and interact with entrepreneurs leading this work. Case studies, complemented by articles and guest speakers, will show different approaches to social entrepreneurship and illustrate the strengths and weaknesses of various models and strategies.

IAPA 1201E. Nonprofit Organizations.

Contemporary nonprofits and their role in community building and shaping public policy are central to this course. Topics include how strong coalitions impact housing, welfare and children's policy, organizing empowered communities, the influential and engaged donor and building the value of nonprofits. Case studies will be featured and new nonprofit models will be conceptualized to strategically address critical human need. Enrollment limited to 20 juniors, seniors, and graduate students concentrating in Public Policy. This course satisfies the American Institutions requirement.

IAPA 1203. History of American Intervention.**IAPA 1204. The Political Economy of Strategy: From the Financial Revolution to the Revolution in Military Affa.**

This is a course about how major powers make, maintain and potentially undermine themselves using several recent examples -- Great Britain, the United States, Germany, the Soviet Union, and Japan. We make no claims that this course will reveal clues about the end of the American Empire, or the Pax Americana, but we do argue that only through an honest accounting of the history of the political economy of strategy can students understand both the costs and benefits of hegemony.

IAPA 1205. International Law.

This introduction to public international law covers the nature of legal reasoning in international relations, the interplay of international law and international politics, and the international legal process. Examines selected substantive fields such as state responsibility, the use of force, international human rights, and the U.S. and international law.

IAPA 1206. War.

This course introduces students to modern and contemporary war—its nature, its technology, its philosophers, its variations, and its evolution—across five domains: on land, at sea, in the air, and across cyber space. The course is divided into three parts: unpacking the nomenclature of violence; “old war”; and “new war. Students who complete the course will gain sufficient military literacy to critically engage in important questions and ongoing debates about the use of armed force to pursue national political interests.

IAPA 1207. The Politics of Developing Countries.

Students will explore the assumptions, models, and discoveries in mainstream research on developing countries. The “developing world” comprises the majority of the world’s populations and nation-states. The course incorporates themes from development studies, regime type, democratic breakdown and backsliding, clientelism, political economy, and political violence. As such, it features readings from political science, economics, and sociology. While there is no specific regional focus of this class, the Middle East and North Africa, Sub-Saharan Africa and Southeast Asia are heavily featured. We seek to answer multiple questions, such as: what are the causal initiators and obstacles to development? How does this vary across regional, national, and sub-national experiences? What are the distinct features and challenges of developing countries’ political and economic systems? How do global and domestic forces operate independently and interactively. What is the connection between development and democracy?

IAPA 1208. Political Economy of China.

Over the past forty years, China has grown rapidly to become one of the world’s largest economies. This course first examines how China transitioned from a planned economy to a “socialist market economy,” then turns to how the “socialist market economy” has functioned in practice. By examining the key factors of production—land, labor, capital, and information—this course shows how the Chinese state retains the ability to set prices and allocate inputs across different sectors of the economy, facilitating the implementation of industrial policy. At the same time, the course highlights the large size of informal markets in land, labor, capital, and information, which spur market-driven economic behavior outside of the industrial policy framework.

IAPA 1401. Economic Development in Latin America.

This course covers some of the unique events and characteristics that have shaped the economic development landscape of Latin America since colonial times until the present. Topics include: the historical legacy, why Latin America fell behind, import substitution industrialization, the debt crisis, poverty and income inequality, inflation, trade and financial liberalization and competitiveness. The class exposes students to a number of concepts and tools that can be broadly applied to the understanding of development in other geographic areas.

IAPA 1401A. Public Opinion Surveys Research.

This course will provide a robust introduction to the methodology of opinion surveys, from designing a questionnaire to analyzing and presenting results. We will explore how hypotheses are formulated and variables operationalized into observable data, and what the data say about the hypotheses. We will study basic quantitative techniques to manipulate datasets and draw insights and conclusions from them. We will also discuss political science works based on public opinion data. These articles will allow students to become aware of relevant issues for democratic societies as well as to be able to reconstruct the theories, identify main hypotheses and evaluate the evidence presented by different authors.

IAPA 1402. Beyond Sun, Sea and Sand: Exploring the Contemporary Caribbean.

For many people, their image of the Caribbean is the tourist brochure and television advertisement representation of sun, sea and sand. This course challenges that through a broad introduction to the real society, economy and politics of the Caribbean region. Using literature, film and traditional texts, it captures the cultural and linguistic complexity of the region through the exploration of a range of central themes such as ethnicity, color, class, politics, as well as more specific, targeted areas including economic inequality, migration, and tourism.

IAPA 1404. Economic Development of China and India.

For nearly four decades, China and India have been two of the most successful developing economies. Their development strategies are interesting and distinctive in themselves but also in contrast to each other. They have had unique historical legacies, have had their particular colonization experiences, made very different choices immediately after independence (in the case of India) and after the civil war and revolution (in the case of China), and abandoned statism in their own ways in the late 1970s/early 1980s, and are now at different points in their development trajectories with China on the verge of being a superpower if not already one.

IAPA 1435. Politics of Climate Change (POLS 1435).

Interested students must register for POLS 1435.

IAPA 1500. Methods in Development Research.

An introduction to the various techniques of research in Development Studies, with a focus on qualitative and field methods.

IAPA 1500A. Ethnographic Research Methods.

This course introduces students to ethnographic research methods as a capacious set of tools for understanding the diverse ways people make sense of social issues that affect their lives and shape their experiences. It also addresses the ethical, legal, and political dilemmas that ethnographers encounter while engaging in field research. The course consists of weekly lectures, fieldwork practice, and ethnographic lab sessions. Students learn how ethnographers design their research projects, undertake participant observation in their chosen field sites (including online), write fieldnotes, prepare for and conduct interviews, collect and analyze artifacts, use visual and audio tools to experiment with multimodality, and work with archives, both historic and contemporary. Throughout the course, students will practice and apply these methods to pursue independent research projects on a topic of their choice. (IAPA Qualitative Research Methods course)

IAPA 1500B. Investigating Modes of Social Change.

This course examines the range of approaches to making social change through democratic institutions and processes in the U.S. These approaches—direct service, community organizing, policy/politics, philanthropy, social entrepreneurship and research/scholarship—have different value systems, methodologies, strengths and limitations. There’s no one “right” approach, and the modes often intersect in ways that can be mutually reinforcing or counterproductive. The course will be valuable to students interested in being involved in social change during their time at Brown and in their future careers.

IAPA 1500C. Qualitative Methods.

This synchronous remote course introduces students to field research methods and analysis of qualitative data that focuses on the application of qualitative methodologies in evaluation and policy research. Together we will read about, consider, and explore qualitative research methodologies and how they have been conceived and used in research. We will consider the processes, ethics, and philosophical tenets that ground qualitative research methodologies.

IAPA 1500D. Research Design and Methods.

This course provides an introduction to research design in the social sciences. The goals of the course are two-fold: to instruct students to critically analyze scholarly articles in terms of research design and to guide students in designing an original research project. The methods presented in the course include qualitative methods (e.g., interviews, focus groups, participant observation, and process tracing) and quantitative methods (e.g., surveys, observational studies, and experiments). The course is designed as preparation for a senior thesis or original research project. All assignments in the course revolve around the development of an original research project. The research itself will not be conducted as part of the course. There are no prerequisites for the course and a background in statistics is not required.

IAPA 1502. What Works: Evaluating the Impact of Social Programs.

Public and non-profit sector resources are limited, and decisions about how to allocate scarce resources must be informed by an understanding of the impact of social programs and policies. However, measuring impact can be a challenge. This course provides a broad – yet rigorous – overview of the methods and tools available for evaluation of the impact of public and non-profit sector programs. Students become familiar with the concepts and methods of program evaluation. They gain knowledge and skills relevant to the planning and implementation of process and impact evaluations. We cover the pros and cons of various methods, including experimental and quasi-experimental designs, qualitative methods and mixed methods. Students will also learn how to critically review evaluation methods and findings. We will use real-life examples and case studies from a range of substantive areas to support and promote course learning.

IAPA 1555. The Political Economy of Strategy: From the Financial Revolution to the Revolution in Military Affa.

This is a course about how major powers make, maintain and potentially undermine themselves using several recent examples -- Great Britain, the United States, Germany, the Soviet Union, and Japan. We make no claims that this course will reveal clues about the end of the American Empire, or the Pax Americana, but we do argue that only through an honest accounting of the history of the political economy of strategy can students understand both the costs and benefits of hegemony.

IAPA 1700. Economics for Public Policy.

This course examines the role of the public sector in the economy. We begin by exploring when and how the government intervenes in the economy. We also consider the impact of government intervention. We then use this theoretical foundation to examine current issues in expenditure, education, health, retirement, business competition, environment, cybersecurity, crime, financial, and tax policy. The student will acquire analytical skills to better evaluate existing and alternative public policy alternatives. Qualitative and quantitative methods will be used throughout the course. Class sessions require a significant degree of student participation.

IAPA 1700A. Program Evaluation.

Students in this course will become familiar with the concepts, methods, and applications of evaluation. We will build intuition around the experimental and quasi-experimental method commonly used in practice so that students learn how to interpret evaluation results, read evaluation research critically, and understand the pros/cons of each method. We will draw on illustrations and case studies from a variety of substantive policy areas.

IAPA 1700C. Political Communication.

This course will focus on the importance of written and oral communication in public decision-making, particularly in the congressional context. The course will examine the impact on political interactions, and the influencing of public policy decisions and outcomes. The course will emphasize some of the practical tools for producing relevant, useful material in the professional policy and the political communications arenas. The course requires several writing assignments focusing on different public policy analyses and political communications tools as well as active class participation including oral presentation.

IAPA 1700F. Engaged Research Engaged Publics.

Policy problems are complex. Policy analysis and design is both a science and a craft. Increasingly, policymakers have begun to acknowledge that effective policy research requires not only multiple methods of inquiry, but also interdisciplinary teams of social science researchers, citizens, designers, scientists, artists, consultants, and engineers, among other experts. Generating innovative policy solutions, from this approach, is not a straightforward, linear process, but instead a creative, collaborative, and engaged activity that requires not only iterative and dynamic research methods, but also storytelling, design, and other creative methods.

IAPA 1700G. Energy, Climate and Society.

Energy shapes society, from the daily lives of local communities to patterns of global inequality. In this course, we explore the social dimensions of energy production and consumption. We start by examining fossil fuels and their wide-ranging effects on communities and the environment, then shift to the ongoing energy transitions and the social forces that help or hinder the large-scale adoption of renewables. Throughout the course, we will ask who benefits and who bears the costs of energy production and transition, and focus on understanding the equity implications of these changes and the prospects for a sustainable society. Students will develop policy analysis skills by identifying current energy challenges, assessing their social impacts, and proposing evidence-based solutions.

IAPA 1700H. Guns and America: Research Methods and Perspectives.

This course introduces students to recent questions in the study of firearms from across social science, medical, and humanist disciplines. In the last thirty years, when we talked about guns in domestic U.S. politics, we have often fought over the 2nd Amendment. But the right to bear arms is only one component of gun politics. Firstly, it introduces us to literature on the international arms trade and the history of the U.S. in the world over the last 300 years. We discuss cutting-edge research across different fields to show cross-disciplinary methods to researching issues and debates about the political economy of small arms. This course is necessarily selective and so addresses our subject through a less familiar framing: rather than just rights and regulations of users, we will also spend time discussing manufacturers, traders and middlemen, users, and impacted communities.

IAPA 1700L. U.S. Grand Strategy.

This junior seminar examines prominent decisions in U.S. foreign policy through various analytical and historical lenses. We begin by defining the term "grand strategy," discussing how it has been used (and misused) by both academics and decision makers, and evaluating the degree of rationality in the process of constructing grand strategy. We establish the frames of analysis through which scholars and policymakers understand key decisions of war and peace. Then we apply these theories to major U.S. military operations since the dawn of the 20th century, exploring the extent to which these frameworks can help us understand successes and failures in American grand strategy. We investigate the degree to which scholarship can help us learn from these experiences as well the practical strengths and limitations of grand strategy as both a means and an end of states' foreign policies.

IAPA 1700M. Comparative Politics of Urban Development.

Urbanization has been a driving force behind social change and economic growth. It has also been a deeply political process, in which urban space is distributed and its development subject to state regulation. This course examines the politics of urban development through international comparisons, primarily between the United States and China, but with reference to India and Brazil as well. Addressing in turn land takings, the governance of urban development, and informality in urban development, this course is an opportunity to identify commonalities and differences in urbanization processes across the world. (IAPA Jr seminar)

IAPA 1700N. Transitional Justice.

This course is an introduction to the study of transitional justice (TJ), or how institutions – local, domestic, and international – address the legacies of human rights abuses. In this course, students are invited to explore several key questions motivating the study of transitional justice. Why do societies pursue accountability for past repression in general? How do transitioning societies go about these pursuits? What effects might TJ policies have on prospects for democracy, rule of law, and future human rights abuses? Throughout the course, special attention will be paid to how local and global politics interact to influence both the development and the effects of different transitional justice policies. Students will also be exposed to the variety of research methods used to study TJ, including both qualitative and quantitative approaches at the sub- and cross-national levels of analysis. (IAPA Jr Seminar)

IAPA 1700P. Displaced: How Global Systems Shape Refugee Families.

This course approaches the global refugee crisis from a sociological vantage point. Who is considered a refugee? How is this category constructed? We examine how the state and other global systems categorize and constrain refugee families across borders. The family is a key institution—in society as well as in migration. We investigate how displacement shapes key dynamics of family life, such as family roles and identities, social relationships and networks, and economic strategies and status. We will follow the experiences of refugee families and the institutions that shape their trajectories—from their lives in limbo displacement (often in the Global South) to the possibility of more durable solutions, including repatriation to their home country, local integration, or resettlement in the Global North. (IAPA Jr Seminar)

IAPA 1700R. Inequality, Policy, and Economics.

Tax the rich? Increase public housing? Invent a new vaccine? This course examines inequality in United States by using the tools of economic research to ask: who benefits from different policy choices? And at what cost? Week-by-week, we will dive into different domains such as education, housing, health, innovation, wealth, and taxation. To prepare for each class, students will be asked to read a published economics research paper in depth. We will use this paper as jumping off point to explore the broader domain and hone our understanding of research design and quantitative methods. This seminar is designed to help students build skills and generate ideas for a future senior thesis or capstone project. The semester will culminate in students writing a proposal for an independent research project. (IAPA Jr Seminar)

IAPA 1700S. Survey of Time: Temporality, Social Theory, and Difference.

Time. The lifeblood for everything we do in this life and potentially the next. It is the distance between you and I. It is the only thing we all have and can never regain. In our very finite lives, we are constantly working against the clock in an attempt to find meaning, love, and purpose. Our daily lives are calculated by the clock, calendars, and other measures of time blocks. Our mental processes (memory, consciousness, etc.) are steeped in temporal terms as we consolidate our present on the basis of our pasts and potential futures. Time is everything – the only thing. The goal of this course is to expose you to the funky concept of time and how it orders and informs our daily lives. (IAPA Jr Seminar)

IAPA 1700T. Politics of Public Health: The United States in Comparative Perspective.

This course examines the politics involved in public health interventions in the United States. We take a comparative approach, meaning we will compare the current situations/problems/solutions in the United States with those in other countries as well as in history. The purpose of this class is to understand the big picture of the existing public health system and to delve into the politics that shape the system. To achieve this purpose, we explore big questions that concern scholars, policymakers, and the public. (IAPA Jr Seminar)

IAPA 1700U. Civil Resistance.

What is civil resistance? Civil resistance movements utilize nonviolent collective action to challenge specified entities. In this, students are introduced to the major theories and explanations of nonviolence, whether it works, and how states respond. This course examines the political, economic and social causes, incentives, dynamics, and outcomes of nonviolent civil resistance movements. These have important implications for policymakers, civil groups, activists, and international cooperation. Students will engage their professional skills in seeking, analyzing and incorporating typically marginalized voices in the dominant discourses on global politics. Students will be expected to take an intellectual stand, defend their positions with evidence, and peer review. Students will explore these topics and themes from the perspective of policymakers, activists, and scholars.

IAPA 1700V. Media and Nation Building in Africa.

This course introduces students to the diverse and complex role of media in the social, economic, cultural, and political developments that shaped various approaches to nation building in Africa in the late and post-colonial periods. We will explore the various ways media and communication technologies have been employed by individuals, groups, and institutions to define and respond to the politics and political economy of development in Africa from the 1940s to present. Topics include a general survey of Africa's diverse media landscape; media and the politics of decolonization; telecommunication and broadcasting technologies in Africa; journalism in the era of one-party regimes in Africa; the press under military rule; journalism and civil war reporting; structural adjustment and privatization in Africa; anti-corruption and public interest journalism; media and disease outbreaks; and mass communication and new media technology.

IAPA 1700W. Neoliberalism and the Global Right.

What is neoliberalism? How does it translate to ideas, policies, and institutions? Why has it become the main driver of economic policy in the world? And why is it frequently associated with rising inequality, financial crises, and right-wing advocacy? In this course, we will unpack when free-market ideas can drive political action, how neoliberal policies are implemented, and why these policies are consequential for our daily lives. We will also explore how neoliberalism boosts many contemporary right-wing political projects, and reflect upon why these leaders receive varying degrees of popular support.

IAPA 1700X. World Peace and its Discontents.

Is the world becoming more peaceful or more bellicose? What are the causes of war and how can individuals, organizations, states, and multi-stakeholder coalitions promote peace? How are concepts like war, peace, and security defined and measured, and why do such definitions matter? Which international forums, courts, or intergovernmental organizations are the most effective at resolving disputes between their members? These are some of the fundamental questions and debates that will be covered in this junior seminar, with a major emphasis on the critical role that international law and institutions can have in building peace between states and at the highest levels of global governance.

IAPA 1700Y. Women and Rebellion.

Historically, women have played an active and imperative role in rebel movements challenging state power across the world. However, women's participation in rebellion is seldom examined and their experiences during conflict is often perceived to be limited to being "peace activists" or "victims." This course challenges these pervasive stereotypes to examine women's motivations to join rebel groups, the roles they fulfill and contributions they make within these groups, their everyday experiences when participating in rebellion and long-term consequences of such participation. To do so the course draws on readings from an interdisciplinary and methodologically diverse body of research on conflicts unfolding across a variety of geographic and cultural contexts. The course is designed to equip students with theoretical and empirical knowledge required to appreciate the complex and varied nature of women's experiences during rebellion and critically engage with broader themes

IAPA 1700Z. Global Governance.

This course provides an overview of the evolving architecture, processes, and outcomes in global governance. It examines the ways in which global governance does (or does not) work in practice as well as possible ways of improving the capacity of the international community to deal with global challenges. We will explore these issues through case studies of today's most pressing issues, such as climate change, wars of aggression, accountability for mass atrocity, global public health crises, cybersecurity, business and human rights, and refugee flows.

IAPA 1701. Drug War Politics.

This seminar examines the politics, practice, and consequences of government efforts to regulate mind-altering substances since the early 20th century. Although much of the focus is on the contemporary United States and Latin America, the coverage is broadly historical, comparative, and global. The main drugs focused on are cocaine, opium, and cannabis, but will include alcohol, tobacco, and synthetics. The course also evaluates policy alternatives and the obstacles to policy reform. The course draws on readings from fields such as political science, anthropology, criminology, and history. The seminar is reading intensive, and is designed to cultivate critical writing and presentation skills.

IAPA 1701A. Technology and Development.

A "smart" global order is currently being created, where information and communication technologies dominate public arenas and private lives. Much of the debates on new technologies have focused on the global North, yet the impact on the global South is equally significant. In this course, we will explore the history, present and possible futures of the use of technologies for transforming economic, social and political lives. The technologies discussed will range from the steam power leading to the first industrial revolution to today's mobile phone technologies, workforce automation, as well as facial-recognition and other surveillance technologies.

IAPA 1701B. Cyber Security: Strategy & Policy.

This course examines the challenges of cyber security from a strategy and policy perspective. Our main focus: challenges to achieving cyber security; and of building cyber security capacity in national security (including cyber war and critical infrastructure security), economic development, and international security contexts. We incorporate global, as well as corporate, government, and non-governmental organizational perspectives. We start by working toward what "cyber," "security," "strategy," and "power" mean; and develop an understanding of the policy issues faced by public and private sector stakeholders. Students should be familiar with international relations theory, but no technical background is needed.

IAPA 1701C. Power and Knowledge: The "Muslim World" in the Social Sciences.

The global Muslim community totals nearly 2 billion people, or nearly one in every four people on the planet. With a few notable exceptions, most Muslim majority countries face significant obstacles to economic and political development. Scholars have long argued that it is impossible to understand these challenges without a greater understanding of religious doctrine and Islamic institutions. Are these scholars correct? Or does this emphasis on religious doctrine obscure more than it illuminates? This course draws on a wide range of social sciences literature on the Muslim World to better understand how religion shapes economic and political development.

IAPA 1701D. Turning Rights into Realities.

Democratic systems cannot operate without citizens' rights, which are neither automatic nor uniform. What does it take – in terms of resources, organizations, politics, expertise, and more – to turn formal rights into lived realities? How might barriers to rights manifest at different phases of the policy process? How might this differ across populations? How might this differ over time and over different geographic spaces? This course will take up these puzzles by examining three stages of the policy process – mobilization, policy enactment, and implementation – for several categories of rights in the United States: voting, disability, employment, speech, and social rights. This course is a Junior seminar for the IAPA concentration, open to Political Science juniors and seniors. This is a WRIT designated course, designed to support students' writing.

IAPA 1701E. Gender and Capitalism.

This course considers the intertwined relationship between capitalism—its development and the various forms it takes—and gender. The course travels across more than two centuries investigating how gender relations and women's roles in them are embedded in processes of industrialization, battles for workers' rights, state-market relations, colonialism, and how societies care for their young and old. Investigating both historical and contemporary topics will give students new insight into how gender structures society today, including how and why various inequalities exist. Throughout the course students will learn how to think critically about gender in order to gain new understandings of gender relations, gender inequality, and the economy.

IAPA 1701F. Wealth and Poverty in the New Metropolis.

Metropolitan areas contain extremes of wealth and poverty, which take expression in spatial inequalities. In American metros, spatial inequalities mark lines of racial and ethnic divisions. This course will examine how economic shifts combine with national and local governance choices to exacerbate metropolitan inequalities. We will examine how recent economic shifts in technology combine with our long history of racial segregation to create protected spaces of wealth as well as disinvested communities of poverty. We pay special attention to the way housing policies, climate change mitigation strategies, and infrastructure investments have reinforced inequalities in the recent past. The course concludes by considering new strategies for building wealth in disinvested communities and analyzing new patterns of mobilization that seek to provide local communities with the tools to build wealth and opportunity.

IAPA 1701G. Cultures of Surveillance: Technology, Terror and Identity.

Developments in digital technology have generated urgent political discussions about the role of surveillance in our society. In this seminar, students learn to think and write critically about the historical, socio-cultural and political dynamics that shape surveillance technology today. Who is a spy and what historical context produced such a figure? How has the history of technology shaped surveillance and spying? What role do identity and identification technologies play in surveillance in the context of the "War on Terror," and how do these technologies impact groups unevenly across the globe? How can we historicize what we call surveillance to understand its political and social implications beyond what might appear in the document caches of the NSA or on a Black Mirror episode? Students apply course concepts to technologies of daily use to reflect on debates surrounding privacy, security and policing.

IAPA 1701H. Is World Peace Possible?.

World politics is often described as a "state of war." In this course we ask why, and if there is anything that can be done about it. Using theory from the social sciences and evidence from recent history, we seek to understand the causes of war in order to assess the possibilities for peace. Students will engage classic texts, cutting-edge research and current events to identify why wars start, what makes them more or less likely, and what strategies states and non-state actors use to prevent them.

IAPA 1701I. Seeking Refuge: A Global Perspective on Refugee Displacement.

In this course, we read texts written by refugees and scholars from multiple disciplines including legal studies, sociology, anthropology, political science, international relations, and refugee studies. This class is organized by the movement trajectory of a "composite refugee." Beginning with flight from the home country, we will learn about refugee hosting in the countries of the Global South, resettlement in the countries of the Global North, asylum-seeking, and return and incorporation. While very few individual refugees may pass through all these stages and places, we will use these categories to analyze different types of refugee policies and experiences. We will learn how refugees are embedded in a world system of control and humanitarian protection in which policymaking in one context is strongly shaped by actors elsewhere. We will explore questions about the limits of humanitarianism, human rights, and citizenship protections.

IAPA 1701J. Family Politics: Gender and the American Welfare State.

How are families regulated in the United States and how has that changed over time? American welfare state practices have shaped families' lives, from private charities in the colonial era, to professional welfare services founded in the Progressive Era, culminating in recent reproductive and child welfare policies. This course tracks how political, economic, and cultural shifts have influenced the development of deeply gendered and racialized policies regulating American families. Building on political and social theory, we will consider how those policies affect families of varying economic, social, and racial backgrounds.

IAPA 1701K. Geography of Uneven Development.

In this class, students will engage with development policies pertaining to poverty, corruption, infrastructure and the environment across the world. While surveying several explanations provided for the introduction and failure of these policies in the past century, this course will equip students with the tools to critically analyze the geopolitical implications related to the history of capitalism, colonialism, imperialism, neo-liberalism and globalization.

IAPA 1701L. The Politics of Risk: Danger, Governance, and Social Inequality.

How do professional and state organizations use ideas of "risk" to manage and govern populations? This course traces the history of risk construction and surveillance in four areas: the penal system, the medical system, the welfare state, and family policy. We will study how professional and state actors understand and evaluate risk, construct "dangerous" subjects that require surveillance and intervention, and develop organizational practices to respond to these ideas about risk. As we study this, we will consider how this process of risk construction and surveillance unevenly affects different economic and racial groups and impacts some of the most vulnerable and disadvantaged members of society: prisoners, the ill, the poor, and children.

IAPA 1701M. Justice, Gender, and Markets.

How do poor women connect to markets? How have philosophical ideas about gender influenced ideas about gender and justice and consequently, gender, justice and markets? Answering these questions helps us explore how justice, gender, and markets interact and the conditions that keep millions of women trapped in poverty. They help us understand the history of entrepreneurship by women and the role entrepreneurship plays in empowering women. Such an understanding, is of course, a critical step to help us develop policies and programs that support women seeking to escape entrenched poverty.

IAPA 1701N. Diplomacy, an Art That Isn't Lost.

This seminar is offered in Washington DC to Brown in Washington students and remotely to students on campus. It examines the practice and profession of diplomacy and its relationship to the policy process. While the practice of diplomacy and the policy-making process has a U.S. focus, the lessons learned apply to other nation states as well. We briefly review the history of inter-state relations, including the international legal basis for diplomatic relations. Diplomacy has evolved over the years and has been greatly influenced by modern technology; however, it continues to incorporate such common functions as policy formulation, representation, reporting, negotiation, intercultural contacts and interaction with the media, parliamentary bodies and other external actors. The course will provide a knowledge base for understanding the policy process and will expose students to policy analysis, memo writing for decisionmaking, negotiations and verbal communications.

IAPA 1701O. Diplomacy and Development: Related but Different Missions.

This course will explore two international relations missions—diplomacy and development cooperation-- that complement one another but differ in substance and nature. Diplomacy, comprised of statecraft, policy formulation, representation, reporting and negotiation, will be treated in opening segments. The diplomatic mission is about influencing other sovereign states to bridge national differences in an effort to promote interests and avoid conflict. The course will explore these aspects using simulations, including a mock negotiation, a congressional hearing, and other pedagogical approaches.

IAPA 1701P. Global Megaprojects.

Megaprojects are costly, complicated, risky, and laborious. They include power plants, pipelines, ports, and petrochemical complexes; take years—or even decades—to finish; and owe their successes and failures to social and organizational—and not merely technical—considerations. This class addresses the origins, design, management, and consequences of megaprojects in contemporary and historical perspective. Our goal is to learn not only about specific projects—like the Panama Canal, Tennessee Valley Authority, Trans-Amazon Highway, and Belt and Road Initiative being undertaken by China—but about theories and methods that will help us understand the origins and fates of large-scale organizations more generally.

IAPA 1701Q. Coercion: Deterrence and Compellence.

This advanced undergraduate seminar dives deep into the theory and practice of coercion—the use of threats to change incentives. From a library threatening late fees for tardy patrons to a parent sending an insolent child to their room, banal aspects of daily life brim with the logic of coercion. The threat of punishment casts an even longer shadow in international affairs. Threats of invasion, bombing, or economic sanctions are common throughout history. This course will introduce students to classic and contemporary scholarship on military and economic coercion. Topics will include deterrence and compellence, signaling, bargaining, reputation, crisis stability, air power, and trade and financial sanctions.

IAPA 1701R. Democracy and Capitalism in the Post-colonial World.

The literature on democracy has largely been dominated by work on Western democracies. The goal of this class is to closely examine democracies in the post-colonial world and in doing so to re-examine dominant theories of democracy. Drawing on theoretical, critical and empirical writings, we examine the origins, trajectories and current challenges of democracies in Africa, South Asia and Latin America. We examine the core institutions of democracy, but also the array of social forces and civil society actors that have shaped post-colonial democracies. The course draws on both the sociology and political science literatures. All students will be expected to develop and write a research paper on a topic of their choice.

IAPA 1701S. Past and Future of War: Opposing Identities, Memories, and Symbols.

The course explores how people live and identify themselves in the context of war. It provides an entry point for understanding how opposing worldviews, local mindsets, and self-identifications are formed and expressed through the analysis of language, media, collective memory, religious practices, social rituals, and symbols. We will examine how conflicts arise from people's identification as members of a community (national, linguistic, religious) in opposition to other communities. We will learn about the mechanisms that form opposing worldviews by studying conflicts in Europe, Russia, the Middle East, Asia, and the U.S. Understanding these mechanisms will help us comprehend any conflict and, therefore, reveal the conditions needed to facilitate peaceful conflict resolution.

IAPA 1701T. Technological Transformations: A Global Perspective.

This course examines the evolving relationship between technology, the environment, and society from ancient times to the present. By tracing the development and impact of various technological systems, we will explore how these systems have shaped – and been shaped by – cultural, economic, and political forces throughout history. Our journey begins with an exploration of what we mean by "technology" and why certain technologies emerge, endure, or disappear over time. We will maintain a broad, global perspective while focusing primarily on the modern era, examining key themes such as the Industrial Revolution, economic growth, food systems, infrastructure, military technologies, artificial intelligence, and digital media. This multidisciplinary course invites you to ask big questions about the world and to think critically about the transformations that define our current technological landscape.

IAPA 1701V. Democratization.

This course examines why autocratic states democratize and why democracy breaks down in already democratic states. The course analyzes domestic factors (e.g., values, norms, religion, culture, economic development and inequality, natural resources, protests, insurgencies, and coups d'état), as well as international ones (e.g., trade, foreign aid, international organizations, and international war). The course also examines the reasons for and the effectiveness of different ways that governments resist democratization, including accommodation, censorship, and repression.

IAPA 1701W. The Cold War in Latin America.

This seminar aims to enrich understanding of the present by studying the recent past. Many countries in Latin America still bear scars from past interventions, so we will assess the long-term impact they had. Poverty, repression, gang violence, mass migration and other problems that Americans see south of our border were caused by various factors, but they cannot be understood without considering the continuing impact of Cold War interventions. We will consider the ways Latin American countries have sought to recover from the trauma of these interventions, including the emergence of museums and other institutions that aim to preserve historical memory.

IAPA 1701X. American Education Policy in Historical and Comparative Perspective.

This seminar examines the historical roots of—and contemporary debates over—select but fundamental issues in the finance, regulation, and governance of public education. Our focus is on the American expression of these issues and debates. But we will look to the experience of other multilevel democracies to highlight conceptual and institutional differences that are of theoretical interest and perhaps of practical use. In particular, the seminar will explore how the goals of education as a public good get defined; the history of school finance and governance in America; the ways in which 'school choice' has intersected in practice and in theory with segregation, integration, and debates over mechanisms to improve school quality; on the problems of test-based accountability regimes; and on the role teacher training systems in educational improvement.

IAPA 1701Y. Climate Change, Power, & Money.

Fossil fuel energy made economic development possible, but now we're cooking the planet. Some want to keep burning carbon; some want to halt capitalism itself; most are somewhere in between. This course is about the political economy of decarbonization. It begins by evaluating the state of affairs, how we became dependent on carbon, the current stakes, and the key actors and stakeholders. It then goes straight to debate the core problem of our future: What are the trade-offs that come with different decarbonization paths? The course then examines some of the most prominent solutions and challenges for rapid decarbonization. Throughout the course, we will pay special attention to - you guessed it - power and money. At the end of the day, those two forces make the world go round and will make or break decarbonization.

IAPA 1701Z. Animals and War.

Over the course of history, academics have studied the myriad ways that war ruptures human life, infrastructure, and societies. Despite concerted efforts to understand the economic, health, and social "costs of war" (Lutz et al., 2010) on human life, very little is known about how war interrupts the lives of animals and other non-human species. In this seminar, we broaden our lens on war, looking at how it disrupts the lives and lived environments of humans and non-human beings alike. The perspectives in this seminar challenge us to consider what it means to live and die in the mist of wide-spread ecological disruption across species.

IAPA 1702. Sex and War.

The course explores biological and social determinants of participation in aggression, violence, and war; along with how and why sex differences become gendered. Some topics include gender biases in international relations theories, women in combat, LGBTQs in the military, discourse, attitudes towards war, rape, and female and male roles in the conduct of war. The course also assesses the ongoing evolution of the roles of women as leaders, actors, and agenda-setters in, and objects of, foreign policy. Some familiarity with international relations theory is helpful, but there are no prerequisites.

IAPA 1702A. Diplomacy and Development: Related but Different Missions.

This course will explore two international relations missions—diplomacy and development cooperation—that complement one another but differ in substance and nature. Diplomacy, comprised of statecraft, policy formulation, representation, reporting and negotiation, will be treated in opening segments. The diplomatic mission is about influencing other sovereign states to bridge national differences in an effort to promote interests and avoid conflict. The course will explore these aspects using simulations, including a mock negotiation, a congressional hearing, and other pedagogical approaches.

IAPA 1702B. Prison Abolition as Policy.

This is an advanced seminar for International and Public Affairs (IAPA) concentrators. As experienced social scientists with policy interests, we will use theoretical and methodological tools to evaluate some of the most pressing social problems to evaluate the role of equity and efficiency in solving real world issues. While using a multi-disciplinary approach I will lean heavily on sociological approach to equity for us to think deeply about development, governance, and security. While we will grapple with issues of efficiency, the primary questions we will engage with will focus on racial equity. Junior Seminar.

IAPA 1702C. Inequality and Social Mobility in America.

Income and wealth inequality in America are at their highest levels in a century. Historically, one reason Americans have been thought to tolerate inequality is that we tend to believe that our society is a mobile one, where people can easily move from one social class to another. But in recent years, inequality and stagnant social mobility have been associated with increasing social and political distrust and unrest. In this junior seminar, we will examine the economic and political, and ideological factors that have contributed to this historical moment, learn about how Americans experience living in an unequal society, and consider the future of equality and social mobility in the United States. How should our society be shaped, and what are our obligations as members of that society?

IAPA 1702D. Beyond Refugeehood: Politics of mobility, border regimes, and humanitarianism.

While the history of human migration is arguably as long as the history of humanity, Refugeehood—as a global problem that needs to be tackled in a systematic manner—is a rather recent phenomenon. This course examines the categorization of refugees, the reasons behind and shortcomings that result from a top-down definition of displacement. Through an on-the-ground and ethnographic engagement with displaced communities worldwide, we interrogate analytical distinctions between legal and illegal categories of asylum seekers and migrants, internally displaced and refugees. Rather than treating refugeehood as an immanent crisis, we examine how the language of crisis shapes migration in the era of global capitalism. This course has relevance for students interested in international legal frameworks, human rights and humanitarianism, national laws and citizenship status, climate migration, and border studies.

IAPA 1702E. Smart, Fluid, & Out of Control: The Political Economy of Production.

New technologies like smart production, AI, and 5G, are fundamentally changing how we consume and how produce is being produced. This class explores technological innovation to better understand the changing dynamics of the global political economy and relations between the market and the state. It focuses on the concept of smart production as an outgrowth of flexible production, which is changing relationships between the human body and machine, collective and individual data extraction, and their social adaptations. Through an analysis of these transformations, the class will examine how our ideas of scale, especially the concept of "local", and the meaning of value are being reimagined, and what effect this has on interactions between state, society and market.

IAPA 1702F. Political (dis)engagement, (de)mobilization, and dissent in Eastern Europe.

The course will explore the forms and dynamics of popular political participation, engagement, and disengagement, as they have been emerging and evolving in the region of Eastern Europe, which has been defined by popular mobilizations and revolutions as well as authoritarianism, imperialism, and large-scale war. We will analyze the variations, divergences, and commonalities between the social and political contexts of different states with a special focus on Russia, Ukraine, and Belarus, whose relations are characterized by intertwined histories, power asymmetries, close connections, and extreme confrontations. By situating the developments in this region within broader global and historical contexts, participants will reflect on the possibilities and dynamics of political and societal change and its trajectories. The course is specifically preoccupied with popular politics and the ways agency is historically forged and structurally conditioned.

IAPA 1702G. Governing Marginalized Groups: How State Institutions Shape Social Inequality in the U.S..

How does the state govern marginalized groups? And how do the processes of state governance—from population-level policies to everyday institutional interactions—intersect to shape the lives of group members? This course will draw primarily on sociological literature and methods to explore theories and case studies of governance at the margins, highlighting the role of state institutions from courts and prisons to hospitals and schools. The course material will focus on the governance of low-income Black and Brown families in the United States, though much of what we study will apply to other marginalized groups and contexts as well. As we learn together, we will consider the implications of various modes of governance for the reproduction of social marginality—as well as the possibilities of governance for promoting care and justice.

IAPA 1702H. The Politics of Industrial Transformation.

This course examines the political sources and ramifications of industrial change, which is closely related to the distribution of wealth between and within nations and the response to global challenges. The course will explore why some nations have been more successful in industrial and technological development and how globalization has affected uneven development. Key topics include the relationship between state and market; institutional sources of comparative advantage; the role of national security; globalization; the debate on industrial policy; and the potential of mobilizing industries to address climate change. The experiences of developed countries, particularly those of the U.S., will be discussed in conjunction with those of developing countries.

IAPA 1702I. Governance from Socialist to Post-socialist China.

This course leads students to investigate the issue of governance under the People's Republic of China (PRC). Who govern? Who is governed? What are the typical techniques and institutions of governance, as well as the rationales, ideologies, and interests behind them? Do state-initiated marketization and globalization create discontinuities in socialist governance? Should one understand Beijing's reinforcement of state sovereignty in the contemporary era as a simple revival of an authoritarian regime, or as more innovative practices? In what ways are governing practices under the Chinese socialist system similar to, or different from, those under liberal democracies? In this seminar course, students will explore these questions through scholarly discussions on governance in the realms of bureaucracy, economic market, technology and media, population, public health, and family. Course materials are drawn from anthropology, political science, sociology, and history.

IAPA 1702J. The (Racial) Politics of National Culture.

In this junior seminar, we will focus our attention on understanding how culture is constructed and mobilized in defining national belonging following racial logics. We will approach the topic on several levels: a macro-level understanding of national identity formation processes and policies, the meso-level of institutional processes playing a part in deploying concepts of national culture, and micro-level experiences and understanding of these politics among everyday citizens. We will explore the nexus between national culture, identity, citizenship, and whiteness in Western nations with a focus on France, the U.S., and possibly others. Students will write and present final papers on a country of their choosing.

IAPA 1702K. The Political Economy of a Global Green Transition.

How can we green the global political economy? The seminar provides an understanding of the political economy of a global green transition by discussing the inadequacy of our current efforts and the pathways for future transformation. To capture the interdisciplinarity of environmental issues, the seminar is rooted in political economy, drawing from across political science, economics, sociology, and history. The seminar looks at green transition as a global phenomenon and covers issue areas across finance, industrial policy, trade, and security, with a geographic emphasis on the US, the EU, China, and other global South countries. At the end of the seminar, students will have the skillset to grasp the highly complex nature of a global green transformation.

IAPA 1702L. How Can Activists Change the World? The Dynamics of Power and Resistance.

Who protests, why, and how? Does collective action matter for social and political change? When does non-violent mobilization escalate into full-blown civil war? Why do some social movements succeed while others decline? The analysis of how people make conflicting collective claims on each other, the state, or on third parties can help us understand why and how different forms of political contention such as social movements, revolutions, and ethnic wars have developed in different times and places with varying degrees of success.

IAPA 1720. Slavery, Democracy, and Racial Violence in the Americas (AFRI 1270).

Interested students must register for AFRI 1270.

IAPA 1800A. Development's Visual Imaginaries: Still and Moving Images That Shaped the Field.

Using primarily paintings and films, this seminar explores the visual imaginaries created and circulated between 17th and early 20th centuries especially in the Americas but also in Europe, which came to underpin prominent mid- to late-19th century and early 20th-century development theories and resultant legislation and public policies in the United States, and which were deployed both internally and abroad. The course will argue that development policies domestically and abroad often drew from the same set of ideas and imaginaries about categories of humans, land, nature, work, gender, race, capacity for self-definition and political self-representation, and who should wield power. IAPA Sr Seminar

IAPA 1800B. Urban Ethnography and Public Policy.

Ethnography is a social science method in which the researcher participates in and closely observes the lives of others — getting, as Erving Goffman once put it, “close to them while they are responding to what life does to them.” Since the early twentieth century, urban ethnographers have used this approach to understand how city life “works,” revealing how people produce, interpret, and respond to the social forces that shape everyday urban experience. This course uses ethnographic inquiry to examine how urban policy intersects with individual lives. How are large-scale programs and institutions created, implemented, and experienced through daily encounters between residents, service providers, and public institutions?

IAPA 1800D. Introduction to Corporate Law and Public Policy.

This course will give students an introduction to business organizations — the law that governs corporations and partnerships, how they raise money in the financial markets, and to explore the public policy issues that inform the regulation of business and finance. We will look at business organizations, law that governs how companies raise money, operation of the stock markets, insider trading, and the regulation of institutional investors including mutual funds, hedge funds and private equity funds. We will finish by taking up corporations as persons, their social obligations and the recent Supreme Court cases on corporations and the First Amendment. Overrides granted based on random drawing for 11 seniors and 8 juniors; to be eligible you must turn in the first week's assignment and attend the first class. Put course in your cart to access the assignment via canvas.

IAPA 1801. Science and Technology Policy in the Global South.

Using both theoretical ideas and empirical examples, this seminar will explore the relationships among science, technology, society, and public policymaking in the Global South, in places where local science and global science often collaborate and sometimes clash. The class will investigate, from a variety of perspectives, how the governance of science and technology in various parts of the Global South is influenced by their past experiences, forms of public science organization, systems of knowledge and belief, civic epistemologies and regulatory frameworks, and strategic agendas for development, as well as the knowledge claims and concerns of social movements, and tensions in power and social relations.

IAPA 1801A. History of American Intervention.

This course reviews modern history through the study of invasions, coups, and other interventions carried out by the United States. From the Marine assault on Tripoli in 1805 to the bombing of Tripoli in 2011, there have been scores of these episodes. They have shaped American history and the history of the wider world. Enrollment limited to 20 seniors.

IAPA 1801C. Brazilian Democracy in the XXI Century: Challenges and Possibilities.

This course examines Brazilian social, political, economic, and environmental conditions and development since the end of the military regime in 1988.

IAPA 1801D. Politics & Journalism: A Practical Guide to How We Got Here and Where We're Going.

Politics in America has never been so manic, so divided, so pervasive, so vital. But we're not just in overlapping crises of government and democracy and economics and race. We're also in a crisis of truth. It's impossible to think about what is happening in politics without thinking about how it's covered. This course will explore that connection—in a practice-oriented, writing intensive approach which will aim to transform your understanding both of what's really happening in politics and how those developments are presented to the public. Fulfills IAPA senior capstone/seminar requirement.

IAPA 1801F. Prison Abolition as Policy.

We collaborate with the Urban Institute's Justice Policy Center and Office Racial and Equity Research for a collaborative research experience where we will be briefed on a major policy issue that they are working on and create several blogs, Tik-Toks, or a research report. Across each medium, you will provide policy recommendations on an issue of importance to their mission and work. We tackle a central problem in criminal legal system reform: prison abolition. Our work will be presented to the Urban Institute a nonprofit research organization that provides data and evidence to help advance upward mobility and equity. A trusted source for changemakers who seek to strengthen decision-making, create inclusive economic growth, and improve the well-being of families and communities. For more than 50 years, Urban has delivered facts that inspire solutions. Senior seminar.

IAPA 1801G. Technology and Development.

With the most recent inventions, a "smart" global order is being created, where information and communication technologies (ICT) dominate public arenas and private lives. Most of the debates on new technologies still focus on the Global North, yet the impact on the Global South may be at least as significant. In this seminar, we will explore the history, present, and possible futures of the use of technologies for transforming economic, social and political lives. The technologies discussed will range from the steam power central to the 19th century industrial revolution to today's mobile phone technologies, workforce automation, and facial-recognition technologies.

IAPA 1801H. Documentary Filmmaking.

This is a hands-on documentary directing class. Each student will conceive of, produce, direct, shoot, and edit two short documentary films on subjects that are meaningful to them. We will study a wide range of documentaries in order to understand how best to tell our stories. The course will be part seminar, part workshop, and will have a collaborative and supportive spirit, with rigorous requirements.

IAPA 1801K. From Growth to the Green Transition.

This seminar seeks to explore the idea of growth as a policy imperative. Growth as an idea has a peculiar intellectual history that arose in the 19th century, peaked in the 20th century, and has now come under stress in the 21st century. Today, the very idea of growth has become essentially contested with ideas of 'green growth,' 'de-growth' and zero growth' gaining ground in an era of heightened inequality, low growth and climate crisis. This seminar seeks to uncover the history of growth as process of wealth accumulation, as a means of political legitimization, and as a dangerous addiction.

IAPA 1801L. Mergers and Acquisitions.

This seminar explores mergers and acquisitions as a tool for corporate change. Students examine the roles of management teams, boards of directors, and advisors (both legal and financial) in affecting industry realignment. They also consider the role of regulators in developing M&A policy. Throughout this course, we utilize the seismic shifts in the global telecommunications industry as a backdrop for examining these issues. The evolutionary technological cycles in this industry and the wealth of governmental intervention provide an ideal backdrop for examining M&A activity across other industries.

IAPA 1801W. National Security, Innovation, and the Congress.

The seminar course will explore the role that Congress and policy making can play in creating an environment to support or impede innovation in our national security science and technology enterprise. The course will discuss the opportunities and challenges of implementing innovative technologies and practices into the complex defense establishment and understand how policymakers can work to create a legal framework, regulations, culture, and financial resources that can support or inhibit innovation. The course will explore the legislative process, focused on how Congress provides legal authorities and funding, and performs oversight activities over the Pentagon. The course will also examine the complementary roles of the legislative branch, executive branch, and the private sector in shaping the policy and innovation environment.

IAPA 1801X. Surveillance: State, Capitalism, and Society.

When we talk about surveillance, are we thinking of Orwell's Big Brother, the scenarios portrayed in Black Mirror, or Edward Snowden's disclosures? Although technological advances have intensified interest in this subject, surveillance is not a recent development; it has been a fundamental element of modernity. In this course, we will start with the theoretical bases for understanding surveillance. The subsequent weeks are divided into three modules, each focusing on a different participant in surveillance: the state, corporations and the emergence of "surveillance capitalism," and citizens who may embrace, participate in, or resist surveillance. Adopting a global viewpoint, we will explore surveillance practices across various political regimes, throughout different historical periods, and technological advancements. There are no pre-requisites for this seminar.

IAPA 1801Y. The Politics of Regulation: Technology, Finance, and Climate Change.

Technological innovations are a central force for economic development, but today we are facing some of their most severe and unintended consequences. Some observers argue that only market competition can enable the blossoming of human ingenuity, while others argue that state planning is essential for controlling the dangers inherent in new technologies. Rather than extol or deny the benefits that can come from technology, this course examines how governments in different historical circumstances have attempted to shape and regulate three of the most challenging risks facing advanced societies.

IAPA 1802A. Bilateral and Multilateral Policy and Diplomacy.

This course examines the practice and profession of diplomacy and its relationship to the policy process. Focus is on bilateral and multilateral diplomacy; practice focuses on U.S. context, lessons learned apply to other nation states. We review history of inter-state relations, including the international legal basis for diplomatic relations. The practice has evolved over the years and been greatly influenced by modern technology; however, it continues to incorporate such common functions as policy formulation, representation, reporting, negotiation, intercultural contacts and interaction with the media, parliamentary bodies and other external actors. Limited to Jrs, Srs. Priority given to IR Seniors.

IAPA 1802B. Development's Visual Imaginaries: Still and Moving Images That Shaped the Field.

This seminar in the Development Studies track of International and Public Affairs (IAPA) explores visual imaginaries, primarily those created and circulated between the 18th and early 20th centuries, in the colonial and later independent Americas but also in Europe, which underpinned some of the most prominent notions of how America was made and helped lay the foundations of development theories which emerged at mid-20th-century. U.S. public policies based on these theories were deployed both domestically and abroad. The seminar will argue that these two sets of policies—at home and abroad—often draw from similar ideas about hierarchies and categories of human beings; land-use, relations among humans, other living beings, and inanimate earth features; work and livelihoods; gender, race, capacity for self-definition and political self-representation, who should wield power, and so on.

IAPA 1802C. Infrastructure!

Infrastructure! It's the hardware and software that undergirds transportation, energy, water, and health systems. This course asks what we can learn about infrastructure when we approach it not as a neutral set of technologies but as a context-dependent social and political force. Taking a critical approach to (among others) natural resources, global health, and development, the course will trace how infrastructures have both served and obstructed colonial and contemporary projects for social change. The course will also take up the question of the future of infrastructure, including "green," modular, and "off the grid" technologies.

IAPA 1802D. The Environmental Movement in Comparative Perspective.

From Earth Day to Extinction Rebellion, the environmental movement has become a key player in contemporary politics. What determines the movement's mobilization, strategy, and impact? How and why does the environmental movement differ across time, location, and issue area? In this seminar, we will explore and apply relevant social movement theory to analyze the trajectory of the environmental movement and write effectively for policy audiences. We will pay particular attention to conflicts and controversies regarding the movement's political positions, tactics, and relationship with marginalized communities.

IAPA 1802M. Rwanda Past and Present.

In the mid-1990s, few countries on earth were as devastated as Rwanda. As many as one million people or more had been killed in a 100-day genocide, and the fleeing regime had left the country in ruins. Today, however, Rwanda is not only at peace but full of ambition. Some believe it is poised to rise from poverty and become an example for developing countries everywhere. Others worry that trouble is brewing, and that another apocalypse could lie ahead.

IAPA 1802S. Human Security and Humanitarian Response: Increasing Effectiveness and Accountability.

Disasters, epidemics, and conflicts all pose significant threats to human security, including the very ability for people to meet their basic needs for protection, food, water, shelter, and healthcare. This course will take a pragmatic approach to understanding how the legal, ethical, and technical principles of humanitarian assistance get translated into actual impact on the ground during large-scale emergencies worldwide. In particular, we will explore the justifications and limitations for humanitarian response as a tool for addressing modern challenges ranging from climate change to civil conflict, alongside new efforts to improve both the effectiveness of humanitarian response and its accountability to affected populations. This course will cover a diverse range of topics including the history, structure, and financing of humanitarian response; the public health evidence base for common human security interventions; and the intersections between human rights and humanitarianism.

IAPA 1802V. Diplomacy, Economics + Influence.

This course examines a dozen diplomatic situations and identifies the players, their interests, and their tools -- and how those produced outcomes. Particular attention is paid to economic factors -- pressures, incentives, and influences -- that contribute to the outcome. By examining these elements students will understand the economic tools of diplomacy and power, and how to wield them. The course concludes with a close look at China's growing role in the world economy and considers how that will change China's role in world affairs. Enrollment limited to 19 Juniors & Seniors. Priority given to IR seniors.

IAPA 1803. Humanitarian Response in Modern Conflict.

Armed conflict significantly affects civilian populations, often on a massive scale, and often in ways that generates large-scale humanitarian crises that can last decades or longer. Professional military organizations today are tasked both with prosecuting war and dealing with the humanitarian consequences. How do armed forces deal with this dual challenge? How do humanitarian organizations? What about governments and the private sector? How do policy makers think about these challenges? What accounts for successes and failures? How do military and civilian organizations interact in these settings, and what can be done to improve their engagements to better save lives and alleviate the suffering of affected populations? How can civilian protection, aid worker security, and humanitarian access efforts be improved upon so that humanitarian crises related to conflict can be more effectively addressed?

IAPA 1803A. Rwanda Past and Present.

In the mid-1990s, few countries on earth were as devastated as Rwanda. As many as one million people or more had been killed in a 100-day genocide, and the fleeing regime had left the country in ruins. Today, however, Rwanda is not only at peace but full of ambition. Some believe it is poised to rise from poverty and become an example for developing countries everywhere. Others worry that trouble is brewing, and that another apocalypse could lie ahead.

IAPA 1803C. The History and Politics of Development in the Middle East.

This course examines from a critical perspective the impact and legacies of development projects in the Middle East. After considering the historical emergence of development as a concept and some general critiques, we will explore its more specific deployment in the context of the Middle East. Readings will address its discursive frameworks as well as the economic, political, environmental, and social dynamics it has shaped through its definition of instrumental categories, objects, and spaces. We will also consider how these dynamics have contributed to the recent uprisings in the region. Priority given to DS seniors.

IAPA 1804. Diplomacy, Crisis, and War in the Modern Era.

This undergraduate seminar examines war and peace after 1945 through the lens of international relations (IR) theory. It aims to both teach students theoretical perspectives on international relations and to critically evaluate the changing ways in which states have interacted with one another since the end of World War II. What caused the Cold War? Did nuclear weapons change the way that states negotiated with one another? How much did individuals make a difference during interstate crises? Why did states sometimes fail to reach peaceful settlements with one another? What were the experiences of states other than the United States and Soviet Union during the Cold War? How have social and economic institutions changed international politics in the twenty-first century?

IAPA 1804A. Iran and the Islamic Revolution.

Shattering events of 1978-80 in Iran unfolded against the backdrop of the previous decades of Iranian history, knowing that history is essential to understanding the revolution. The revolution cannot be appreciated without studying the enormous effects it's had over the last 35 years. This course places the anti-Shah movement and the rise of religious power in the context of Iran's century of modern history. We conclude by focusing on today's Iran, the upheaval following the 2009 election, reformist president election in 2013, and prospects for reconciliation with the US. Enrollment limited to 20 juniors & seniors. Priority given to IR seniors.

IAPA 1804C. Migration and Development in Theory and Practice.

The primary theme of this course rests on a query standing at the center of a growing debate: in what ways are migrants linked to development? This course examines several theoretical debates and policies and programs focused on the migration-development nexus. Students examine scholarly interpretations of how migration is linked to development. They also employ a transnational lens to further explore what development means and how it is carried out in an increasingly mobile and connected world. The class examines how grassroots organizations have engaged in community development, and the roles states and non-governmental agencies are playing in on-the-ground interventions.

IAPA 1804D. Legal Methods for Public Policy.

This course uses both traditional lecture and interactive, mock-trial to give public policy students with the tools to understand, interpret and apply the law as expressed in judicial opinions, particularly the opinions of the Supreme Court of the United States. The end-product for the course will be a capstone public policy paper on a subject of the student's choice involving timely or complex legal issues. For the first three weeks, we'll have an introduction to civil procedure, examining how cases are brought, the requirements for valid claims, including what affects parties' right to bring a lawsuit, emergency relief, disposition with and without trial, appeals and the principles that the Supreme Court uses in deciding cases. If the seminar is oversubscribed, admission will be by lottery, comprised of students who turn in the first assignment and attend the first class session.

IAPA 1804E. Health Policy Challenges.

This course examines the topic of health reform through a variety of lenses – politics, policy, community organizing, and bureaucratic implementation. Specific issues include recent reform efforts at the national and state levels, including the Affordable Care Act and several Rhode Island state legislative campaigns over the past twenty years. During each of these legislative victories (or defeats), the interplay between politics and policy, community organizing and implementation have defined how successful the laws have been in improving people's access to quality, affordable healthcare.

IAPA 1804F. The Politics of Crime and Violence in Latin America.

Latin America ranks first in the world in both violent and common crime, and more than one in three people in the region believe insecurity is the most important problem facing their country. In this course we explore the causes and consequences of crime and violence in regional perspective, with a focus on better understanding the current political moment. Some of the motivating questions of this course are: What are the legacies of dictatorship and civil war on violence today? How do organized criminal groups govern, and what consequences do these modes of governance have for public life? How do state responses to crime affect different populations and overall public safety? Under what conditions do citizens resist crime and impunity, or conversely, further contribute to cycles of violence?

IAPA 1804H. Early History of the CIA.

This seminar traces the establishment, rise, and spreading ambition of the Central Intelligence Agency in its first fifteen years, from 1947 to 1962. During this period the CIA was on the front line of the Cold War, which was then in its most intense phase. It carried out dozens of covert operations, setting off chains of events that that would shape the history of the United States and many other countries. We will examine the events that led to the creation of the CIA, study its Cold War battles, and trace its growth into a powerful global force.

IAPA 1804I. National Security Decision Making.

This undergraduate seminar examines theories of individual and group decision-making in the context of national security policy. It connects analytical perspectives from political science, social psychology, and organizational theory with a wide variety of historical cases featuring the United States, Soviet Union, China, India, Pakistan, Iraq, and Vietnam. What constitutes an "effective" decision-making process? What types of individuals, groups and institutions foster more effective processes? When are individuals or groups prone towards risky decisions? Do decision-making processes matter in "high-stakes" issues, such as war and peace? The last third of the course will examine these questions in the context of the 2018 US-China Trade War.

IAPA 1804J. Policing in Global Perspective.

Debates about policing seem to be everywhere: in the news, in politics, in activist circles, in TV shows and movies. Around the world, from the Arab Spring movements to the Movement for Black Lives, condemnations of police brutality, racial bias, and police impunity have become pervasive. The solutions proposed range from implicit bias training and the generalization of body-worn cameras, to defunding and abolishing the police. This course engages with these debates by examining policing in global and comparative perspective.

IAPA 1804K. Political Violence.

In this course, students will learn how social scientific tools can be used to understand political violence, including inter-state conflict, civil war, genocide, and terrorism. While the course will focus on why and when these forms of violence occur, students will also develop and understanding for when and why violence does not occur. The course will also cover a number of emerging topics in the field of political violence, including rebel governance, technology and conflict, and the legacies of violence. The course will familiarize students with the basic research tools employed by scholars of political violence, including case studies, survey research, and the quantitative analysis of cross-national datasets, and apply concepts and tools in diverse regional contexts in the Americas, Europe, Africa, Asia, and the Middle East.

IAPA 1804L. Colonization and Decolonization in Comparative Perspective.

This course provides an advanced introduction to the social sciences literature on colonialism through an interdisciplinary lens. This course has three goals. The first is to familiarize students with key authors, texts, and concepts that emerged from the study of colonialism from authors in history, historical sociology, development economics, and comparative politics. The second objective is to familiarize students with the theoretical and conceptual mechanisms linking the colonial period and the present. Finally, this course provides an introduction to an interdisciplinary approach to studying a complex topic like colonialism and give students a practical introduction to how academics generally explore complex and controversial issues.

IAPA 1804M. Overcoming Threats to Human Security.

This course provides students with a comprehensive introduction to exploring challenges and opportunities related to global challenges from both a human and national security perspective – with a special focus on putting people and communities, as opposed to national interests, at the center of attention. Students will gain a deep understanding of key issues including humanitarian crises caused by natural disasters, and the impacts of climate change, food and water security, urbanization, mass migration, and infectious disease/pandemics on vulnerable people around the world.

IAPA 1804O. Life and Violence.

Violence in human societies has been at the center of social science scholarship for decades. Yet, how violence is conceptualized, written, and represented in the social science record varies from discipline to discipline. In this course, we dig deep into the study of violence in its many forms (e.g., political, ethnic, bodily, and religious), focusing specifically on how it affects the everyday lives of people. Reading and watching content produced by academics and nonacademics in a broad range of social contexts such as India, Sri Lanka, Haiti, Rwanda, Kenya, Northern Ireland, and the United States, we will critically assess how the past and present violence inform our ways of thinking and writing about places and people that might be unfamiliar to us.

IAPA 1804P. Discrimination and Public Policy.

This course examines structural discrimination and interpersonal discrimination as possible drivers of race, gender, and social class inequalities primarily within the U.S. but also in other parts of the world. Key questions involve: What is (and what is not) discrimination? How do social scientists measure discrimination? What do differing methods allow us (and not allow us) to say about the existence and mechanisms of discrimination? What are the consequences of discrimination? What are possible policy approaches to addressing discrimination?

IAPA 1804Q. French Colonialism in Global Perspective, 19th-20th Centuries.

In this seminar we examine how French colonial power deployed itself in different parts of the world both through self-legitimizing discourses and the imposition of political and economic systems of domination. We read classic and more recent scholarship on colonial wars and violence, the ideology of the French "civilizing mission", legal and economic discrimination and how colonialism transformed local ecologies. Colonial power was constantly debated, resisted, and subverted across metropole and colonies. We pay close attention to these voices and trace the emergence of political anti-colonialism in the aftermath of the First World War. We will examine how French colonialism was fought and eventually (partially) dismantled towards the middle of the 20th century. The course will end with an examination of current debates about the legacies of French colonialism in France and in formerly colonized countries.

IAPA 1804S. Critical Study of Development.

This seminar provides an introduction to the critical study of development. The goal is less to provide an exhaustive overview of the field than it is to help you develop critical thinking skills through group discussion and analytical writing. More specifically, the goal is to develop your understanding of the diversity of understandings of the concept of development, as well as its practical importance in the world. Students will read texts that present pressing questions and issues concerning development practices, policies, and theories. Though classroom discussion and writing, the course encourages you to connect broad theoretical debates to contemporary problems.

IAPA 1804T. Rethinking Development's Archive.

This seminar will explore the idea and practice of development, thought otherwise, taking the format of a humanities/social sciences laboratory whose objective is to research and draft an annotated, brief critical bibliography of intellectual resources on development as set of concepts and field of study. It will be a bibliography which can, borrowing from one of the key objects of library sciences, also serve as a Finders' Aid. It is especially recommended for IAPA students who want to think about a conceptual framework for honors theses and capstone essays.

IAPA 1805. Inequality, Sustainability, and Mobility in a Car-Clogged World AKA: Two Billion Cars.

With the possible exception of the computer or antibiotics, the car is arguably the most significant invention of the last two centuries. It has fundamentally reshaped the environment, social landscapes, lives, and economies, and its impact will only increase as the global vehicle population doubles, as predicted, to two billion by the year 2030. This class will explore the immense social, political, health, and environmental consequences, as well as cultural and political economic explanations for the car population explosion. Alternative forms and futures for transit will be considered throughout the course.

IAPA 1805A. Politics of International Finance.

The purpose of this course is to present the fundamental variables that shape modern international finance. We will introduce and examine the technical forces that determine international transactions and capital flows, as well as the problems caused by unsustainable imbalances and the subsequent domestic and international political responses. Given the important role that finance plays in international relations, the material will allow the student to establish a conceptual framework to understand the political dynamics and constraints of the global economy. Enrollment limited to 20 juniors & seniors. Priority given to IR seniors.

IAPA 1805C. Caribbean and Pacific Small States: On the Margins of Development.

Small states enter the imagination as sites of exoticism. Pristine beaches, flanked by swaying coconut trees are marketed as ideal for honeymooners and others seeking a refuge from stress-filled lives. This course centers small states, in particular, small island states, as a group of countries, with unique and interesting features, meriting academic scrutiny. We explore a wide range of issues introducing students to these diverse and complex states, including historical origins, globalization and effects on development, theoretical approaches to studying small states, issues in governance, migration, climate change, food security, sports and culture, gender and sexuality, among others.

IAPA 1806. State and Nation Building in Communist and Post Communist Europe.

This seminar investigates the politics of state-building and nation-building in communist and post-communist Eastern Europe since World War I. The course is designed as a Senior Seminar for the IAPA concentration, and its major requirement is the writing of a 25-to-30-page research paper on a subject of the student's choosing (Capstone Project). Ideally, students will come to the course with some idea of a problem or question that they want to spend the better part of the semester researching. The seminar, however, is open anybody with a demonstrated interest in the region and who is ready to read and seriously discuss texts drawn from a wide range of vocations –from literature and politics, to history, philosophy, economics, sociology, political science, and public policy.

IAPA 1806A. Diplomacy, Economics & Influence.

This course examines a dozen diplomatic situations and identifies the players, their interests, and their tools -- and how those produced outcomes. Particular attention is paid to economic factors -- pressures, incentives, and influences -- that contribute to the outcome. By examining these elements students will understand the economic tools of diplomacy and power, and how to wield them. The course concludes with a close look at China's growing role in the world economy and considers how that will change China's role in world affairs. Enrollment limited to 20 Juniors & Seniors. Priority given to IR seniors.

IAPA 1806C. Information Technology and Governance.

The use of information and technology in governance is a vexed subject. Civil society clamors for release of information about the state (openness) while the State wants more information about its citizens (surveillance). Technology plays a role in amplifying these respective intentions resulting in an unprecedented gathering and release of information, thereby bringing the issue of information, technology and its role in governance to sharp focus. This course provides an intensive introduction to the field of information technology and global development. Enrollment limited to 20. Preference given to DS juniors and Seniors.

IAPA 1807. Politics of Reproductive Justice.

Catherine MacKinnon once said "feminism has no theory of the state." She could also have said "scholars of the state have no theory of feminism." Thankfully times have changed. In this class, we will aim to understand why we need to think about states when we study gender, and why we need to think about gender when we study states. What does the pattern of gender inequality in social life (how bodies are classified and made unequal, what kinds of bodies command political power, what kinds of work people do and how well they are compensated for their labors, the punishments they receive when they violate the law, etc.) have to do with the way states govern? How and why are states gendered entities? How does state power reflect assumptions about masculinity and femininity and exacerbate or attenuate gendered differences?

IAPA 1807A. International Journalism: Foreign Reporting in Practice.

This seminar gives students direct experience with the job of being a foreign correspondent. Classes focus on two themes: the practice of international journalism and the history and contemporary reality of Costa Rica. Our semester culminates with a reporting trip to Costa Rica during spring break. The seminar is valuable to students interested in the possibility of a career in international journalism and those who are not pursuing a career in journalism but want to learn journalistic skills. Limited to Jrs and Srs. Priority given to IR seniors.

IAPA 1807C. Individual Research Project.

Section numbers vary by instructor.
Required: A completed proposal form and syllabus and faculty sponsor's and concentration advisor's approval prior to registering.

IAPA 1808A. Risk, Regulation and the Comparative Politics of Finance.

The course introduces students to the comparative history of finance as well as to alternative theories of regulation. It thereby develops students' ability to compare the role played by financial institutions in different historical periods and national contexts. This comparative perspective puts the recent financial crisis into a broader perspective, allowing students to see the structural as well as more proximate causes of recent financial instability in the industrialized democracies. Enrollment limited to 20 juniors and seniors. Priority given to IR, DS, and Public Policy seniors.

IAPA 1808C. Thesis Writing in Development Studies.

An integrative seminar designed for concentrators working on senior theses. Others with comparable backgrounds may enroll with written permission. Begins with a review of theoretical and methodological literature on development studies. Written and oral presentations of thesis research will be the central focus of the latter part of the course. Reserved for Development Studies seniors.

IAPA 1809A. The International Politics of Organized Crime.

Organized crime and extra-legal actors have established themselves as political actors in every region of the world. Violence has exploded in countries as criminal organizations compete with each other, the state, as well as a variety of other non-state armed groups for control of illicit markets, local dominance, and political influence. This course offers a broad understanding of these organizations, their origins, and the various illegal and violent activities in which they are engaged. This course is comparative and interdisciplinary in nature, drawing from research in criminology, sociology, anthropology, economics, and political science. Limited to Jrs, Srs. Priority to IR seniors.

IAPA 1810. Democratization and Autocratization.

Since the 1970s studies of democratization have shifted from a "global resurgence of democracy" to an "authoritarian resurgence." This course covers the conceptual tools for understanding these developments. We pay particular attention to the assumptions, biases, knowledge structures, and inferences produced by language and imagery—e.g., oilfields and greenhouses, pendulums and waves, pacts and backsliding—in our understanding of new and emerging threats to democracies across the globe. Includes single case, cross-national comparisons, and big data set studies. IAPA Capstone/Sr Seminar

IAPA 1810A. Perspectives in Human Capital: Investing in Women as a Strategy for Global Growth.

In this course, we ask and answer the questions: What are women's issues around the world? What policies and programs are designed to engage the issues and improve outcomes? What role does and can the private sector play in harnessing the untapped potential of 50% of the globe's population? Is there evidence to support the need for investment—of resources, focus, and political capital—and to quantify the results of its impact? Enrollment limited to juniors and seniors. Priority given to IR seniors.

IAPA 1811. Contemporary Digital Policy and Politics.

This course will examine the politics and processes for making policies related to the internet and digital policy issues. We will examine current issues at the national level, including the White House and federal agencies, Congress, international institutions and industry on issues such as privacy and information security, and on debates like whether and how to regulate Big Tech. Topics covered include the creation of national policies at the White House, the regulatory process, legislation, standards, global implications and the politics of technological change.

Format and participation: The course is a seminar with in-person and online sections meeting synchronously. Attendance at the weekly session (either in person or via Zoom) is required.

IAPA 1811A. Humanitarianism in Uniform.

The goal of this senior seminar is to explore the relationship between militarism and humanitarianism. When the US Army and Marine Corps released the Counterinsurgency Field Manual in 2006, military officials referred to NGOs as 'force multipliers' and soldiers as 'armed social workers.' In this course, we will develop a framework to understand military humanitarianism. We will also examine how military humanitarianism exceeds the contemporary geography of terrorism, investigating cases in Europe, Asia, Africa, Latin America and the Caribbean. Enrollment limited to 20. Preference given to IR juniors, seniors.

IAPA 1812A. Bilateral and Multilateral Policy and Diplomacy.

This course examines the practice and profession of diplomacy and its relationship to the policy process. Focus will be on bilateral and multilateral diplomacy; while the practice will focus on a U.S. context, the lessons learned apply to other nation states. We review history of inter-state relations, including international legal basis for diplomatic relations. The practice has evolved over the years; however, it continues to incorporate such common functions as policy formulation, representation, reporting, negotiation, intercultural contacts and interaction with the media, parliamentary bodies and other external actors. Limited to 20 juniors, seniors. Priority given to IR seniors.

IAPA 1813A. Revolutions that Changed the World.

The Bolshevik and Chinese Communist Party revolutions significantly changed the world. Studying the two revolutions helps us understand Russia's and China's contemporary roles. Alongside the framework of sociology of revolution, this course compares the two historical processes over their ideology, leadership, repression, international opening, mobilization, strategy, and outcome. Students will not only learn detailed historical knowledge of the two movements, but also master general perspective to understand how revolution occurs, succeeds, and changes society. Limited to Jrs and Srs. Priority to IR Srs.

IAPA 1814A. Roots of Crisis in Central America.

The five countries of Central America comprise a comparatively little-studied region. From time to time they burst into the world's consciousness, usually because of political upheaval, foreign intervention, or refugee flows. The forces that set off these crises are rarely explored. This seminar surveys and analyzes Central America from social, cultural, political, and historical perspectives.

IAPA 1815A. Computers, Freedom and Privacy: Current Topics in Law and Policy.

This course puts into context arcane debates about surveillance, privacy and cyber conflict, explaining and critiquing arguments put forward by and intelligence officials, civil liberties and privacy advocates, and companies. Double-listed with CSCI 1951F. Enrollment limited to 10 IR seniors and juniors.

IAPA 1816A. Senior Honors Seminar.

Open only to Senior students accepted into the honors program in international relations. Instructor permission required.

IAPA 1817A. Senior Honors Thesis.

Open only to Senior students accepted into the honors program. Instructor permission required. This course is the second of the two required courses for students writing a thesis in International and Public Affairs, Development Studies, International Relations, or Public Policy. It is taught as an independent study.

IAPA 1818A. Individual Research Project.

Limited to students doing independent study work for Development Studies, International and Public Affairs, International Relations, or Public Policy. Banner overrides will be given by the Undergraduate Concentrations Manager.

IAPA 1820. Brown in Washington, D.C. Practicum.

This course is a required 2-credit course for students participating in the Brown in Washington, D.C. program. The course is centered around a challenging 20-25 hour/week internship in a public-sector or not-for-profit organization in Washington, D.C., which provides an immersive experiential learning opportunity at an organization or agency involved in the public policy process. Seminar sessions, workshops, field trips, and reading and writing assignments enable students to reflect on their internship experiences, contextualize their work and organization within the broader DC policy environment, and develop academic and professional skills.

IAPA 1821. The New National Security: Transnational and Cross-Border Issues.

The objective of the class is to encourage a new understanding of the complexities of national security. The traditional paradigm of players, approaches, influences, and desired outcomes, no longer accommodates the corpus of transnational and cross-border issues that crosscut every policy decision in today's world. Gender, climate, health, technology, food security, and other "non-traditional" security issues must shape the way we look at security, stability and just governance both as a sovereign nation and as a global actor. This course is part of the Brown in DC program.

IAPA 1821M. War in Film and Literature.

This course introduces students to a study of warfare, and some of the central issues raised in war, through the use of movies and novels. Central themes include civil-military relations, leadership, the role of women in war, managing the homefront as well as issues related to battlefield tactics and strategy. Students will be encouraged to address these topics in applications related to World War I, World War II, and Vietnam in particular. This course will take place in a seminar format which stresses discussion of the relevant materials. Enrollment limited to 19 juniors and seniors.

IAPA 1821P. Political Psychology of International Relations.

This course covers basic methods and theories in the use of political psychology to study topics in international relations. The second part of the course applies these models to particular topics, including leadership, group dynamics, and the role of emotion in decision making.

IAPA 1822. Social Policy and Social Justice: Contestation and Compromise.

This seminar is for students in the Brown in Washington, DC program. This seminar is designed to allow interdisciplinary examination of domestic politics and policy, and of the relationship of scholarship to public engagement and governance, by focusing on enduring questions of social justice and their expression in contemporary social policy. Issues to explore include poverty, inequality, freedom, rights, race, gender, community, class, citizenship, paternalism, and the roles of government (federal, state and local), markets, capital, labor, philanthropy, and voluntary organizations. Enrollment is limited to Undergraduate level students participating in the Brown in Washington Program.

IAPA 1850. Senior Honors Seminar.

An advanced two-semester research seminar for senior honors candidates in the public policy and American institutions concentration. Participants jointly consider strategies appropriate to researching and writing a senior paper before proceeding to individual research on topics they choose. Each participant is required to present a summary of his or her work to the colloquium.

IAPA 1851. Senior Honors Thesis.

See Senior Honors Seminar (IAPA 1850) for course description.

IAPA 1852. Individual Research Project.

Supervised reading or research. Specific program arranged in terms of the student's individual needs and interests. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

IAPA 2000A. Theory and Research in Development I.

Explores a range of substantive debates in development by drawing on empirical and theoretical work from the disciplines of economics, political science, sociology and anthropology. The course aims to provide students with a broad understanding of current debates and research on development, evaluate both the differences and complementarities in disciplinary perspectives and develop a toolkit of interdisciplinary analytic skills that can be applied to concrete research questions.

IAPA 2010. Theory and Research in Development II.

Explores a range of substantive debates in development by drawing on empirical and theoretical work from the disciplines of economics, political science, sociology and anthropology. The course aims to provide students with a broad understanding of current debates and research on development, evaluate both the differences and complementarities in disciplinary perspectives and develop a toolkit of interdisciplinary analytic skills that can be applied to concrete research questions.

Public Affairs**MPA 2015. Strategic Communication for the World We Live In Now.**

This course provides students with insights and training on how to effectively communicate about policy, up to date for America in 2025, with our polarized politics and fragmented media. We'll work on how effective messages are created and framed, why we respond to messages the way we do, and how to employ advocacy and communications strategies to advance political and public policy goals. In addition, the course aims to give students practical experience in integrating communications into advocacy—not just honing methods, but weighing which to use, and how. No effort as the time or capacity to include everything, of course, so throughout the course we will discuss the tradeoffs inherently involved, and how to maximize effectiveness despite them.

MPA 2020. Public Budgeting and Management.

This course is designed to teach the political, theoretical and administrative aspects of contemporary public budgeting and management in the United States. You will examine the central role of budgeting in policy formulation and implementation and come to an understanding of the budget as a statement of competing for political priorities. In addition, the various roles of key institutions in the budgeting process will be studied.

MPA 2035. Statistics II for Public Policy Analysis.

The course introduces students to the use of multiple regression analysis and causal inference for analyzing data in the social sciences. We will study a variety of designs for empirical public policy analysis, from random assignment to quasi-experimental evaluation methods, and students will have the opportunity to analyze actual datasets. We will also study the strengths and weaknesses of various causal inference strategies.

Please note that students must be present at the first class meeting in order to be have the option to enroll in this course. They must have downloaded Stata 14 (available free of charge through software.brown.edu) and picked up and registered their iClicker on Canvas (see syllabus for details). Because the class meets once per week and the first assignment will be distributed during the first class, we will be launching directly into substantive material for the course. Week one/ meeting one is not only an introduction. It is therefore essential that all students attend beginning from the first class meeting.

MPA 2040. Statistics for Program Evaluation.

Broad overview of public policy analysis and program evaluation with emphasis on methodological issues involved in the analysis and assessment of government programs. Illustrations are drawn from a variety of substantive policy areas.

MPA 2055. The Politics of Policymaking in Comparative Perspective.

This course provides concepts and tools for thinking critically about the political context in which policy is made and implemented. The course examines the underlying ideas, interests, and historical legacies that make politics and policymaking distinctive in different countries and governmental systems. It aims to supply a simple but flexible conceptual toolbox that enables students to define policy challenges as they take shape, propose programs and implement policies that can work in various settings.

MPA 2065. Introduction to Data Science and Programming.

We live in the era of data-driven decision making in all aspects of our lives. The features on your iPhone, the images in an ad campaign, even the background colors on many websites are all carefully tested and chosen against their measurable impact on customer satisfaction, purchasing, clicks, or some other goal. In this course, we will be learning to use and apply those same principles to public policy and government programs. Our goal is to equip MPA students with the tools required to set up experiments, gather data, and begin to evaluate and design public policy and government programs.

MPA 2066. Introduction to Statistical Machine Learning.

This course is a highly applied introduction to statistical machine learning. In particular, the key aim of this course is to give students the knowledge and tools to incorporate statistical machine learning methods to answer policy-related research questions. This course will also explore the philosophical differences that exist between traditional methods of statistical inference and the more recent statistical machine learning methods. Finally, throughout this course, we will emphasize the importance of reproducibility in science.

MPA 2140. Politics, Public Policy, and Economic Development in Asia.

It is widely accepted that development is not simply an economic phenomenon. Political processes are intimately tied up with economic development. We will compare and contrast the various Asian countries and models of development around themes identified above. The heaviest emphasis will be on China, India and South Korea. Economic policy will be the center of our discussion.

MPA 2160. Management and Implementation in Public and Non-Profit Organizations.

How and when can organizational leaders and staff become engines of policy and social change? How do the policies that elected officials, courts, and bureaucrats promulgate get put into practice? What affects whether those policies get put into practice? What affects whether those policies produce expected changes? This course is designed to help students identify and manage core challenges facing policy development, implementation, and sustainment in public organizations.

MPA 2221. Human Rights and AI: Impacts, Risks, and Opportunities.

Technology is not magic—it's power, coded and deployed. Artificial intelligence is becoming one of the most powerful forces shaping our future, determining who has access to opportunity, whose voices are heard, and how resources and rights are distributed. The Human Rights and AI seminar explores the complex, rapidly evolving landscape of AI and its profound impacts on human rights at the intersection of technology, public policy, and international law. Will AI hollow out our civil and human rights through invisible, automated systems that surveil, sort, and silence? Can AI serve liberation and justice if shaped, designed, and deployed from a rights-respecting framework? We will critically analyze both the harms and opportunities that AI poses to fundamental rights, and if civil and human rights laws and frameworks are relevant to responsible AI governance.

MPA 2222. Introduction to Health Policy.

The United States health care system is responsible for delivering high-quality care to millions of people. It is also a major and growing part of the national economy, employing many workers while commanding an ever-growing share of government budgets and employee paychecks. For decades, Americans have debated the best ways to reform the system to get better care for more people for the same or lower spending levels. This course will focus on developing a strong understanding of the system's dynamics as well as its players, both government and private so that students will be able to develop policy recommendations for how these players can best work toward their goals.

MPA 2224. Race, Policy and Politics of Asian Americans.

Examination of the historical and contemporary political experiences of Asian Americans and how policy systems shaped their pursuit of immigration, equality, citizenship, political identity, racial justice, cross-racial/ethnic coalition-building, and incorporation into the U.S. political system. The course will also explore the effectiveness of the "pan-ethnic" identity in contemporary US politics.

MPA 2225. Climate Diplomacy and International Negotiations.

Building on the Paris agreement, adopted in 2015, this course aims at enhancing the participants' understanding of the global climate change framework in international relations. It will give students the tools to navigate climate COPs and beyond, building on the theoretical basis in science, history, and international relations, putting in practice the art of negotiations in the context of climate governance, and attempting to honestly address possible ways forward.

MPA 2226. Race and Public Policy.

Race and Public Policy is an advanced course about racial bias in U.S. public policy, and the effects of that bias on both practitioners and subjects of public agency activities. You will learn about the process of policy formation and review several important critiques of conventional policy analysis. Substantively, we focus on three key areas: education policy, environmental justice, and police-community relations. During the semester you will engage in small- and large-group discussions, complete two research assignments, and prepare a final "Race and Policy Project" on a subject of your choosing. Regular attendance, active class participation, and extensive reading are expected.

MPA 2227. Dismantling Global Racism: Getting inspired by resilient local communities from around the world.

This course examines the nature and impacts of racism with a global approach. Building on the experiences of resilient post-conflict local communities around the world and on the theories and practices of Transitional Justice, we will explore tools and frameworks to innovate and efficiently dismantle racism in organizations, communities, and societies. Adopting a comparative approach, we will study materials and examples of successful antiracist initiatives coming from Africa, the Middle East, Europe, Asia, and the Americas, and mobilize diverse academic fields: political sciences, history, genocide studies, psychology, sociology, literature, and cinema. We will articulate our understanding of racial domination and develop approaches to dismantle it with the other forms of oppression.

MPA 2228. Communication on the Political and Global Stage.

Students may or may not go into government, politics, or other forms of public service, but wherever they go and whatever they do, including as global citizens, they will consume news and may shape the contours of public debate by their own participation or decision not to participate. Certainly, all will be affected by it. This course seeks to answer the question from the unique perspective of public communicators: how do we communicate issues and messages on the public stage, to insiders and outsiders, whether domestically or in the world? The objective of the class is not just to encourage a new understanding of the complexities of public communication, but to learn how to bring those skills to whatever vocation and career path you may choose.

MPA 2229. Principles and Practices of Stakeholder Engagement.

This class will introduce you to various types of policy stakeholders, from executives to the mass public. You will identify those actors, the combination of authorities, powers, interests, and constraints each one possesses. This framework for viewing stakeholders will enable you to strategize about how to engage different actors when and where they intervene in the policy process. As a policymaker, analyst, or advocate, you will have to contend with stakeholders that possess formal authorities to shape the policy process. These stakeholders will determine whether the problems that concern you reach the agenda; whether your preferred solution is adopted; how that policy solution is implemented; whether it diffuses from one political venue to another; and whether the policy endures, or reshapes politics, succumbs to termination or reform. We will catalog those authorities and powers and observe how they apply in real policy situations.

MPA 2230. Issues for Future Diplomats.

To prepare students to advocate in this world, we have designed a course with twelve exercises, each involving an issue, a new challenge, and an activity to hone their skills. In each session, the exercise will require practical skills (like speaking, concise writing, and information gathering) and outreach efforts to influence, negotiate and advocate. Students will carry out these exercises individually and in small groups. The goal of the course is to introduce students to some of the issues and practices that will prevail as they seek to influence governments and societies for whatever cause or the entity they represent. By looking at how to shape and influence the new economy, new global problems, new finance, and new dangers students will gain an understanding for engagement in future world affairs.

MPA 2231. Activating Change for Climate & Sustainability.

Taking the class as a metaphor of the outside world, we will explore and propose our own respective path(s) for climate policy while focusing on the class's individual and collective willingness to act. While the topic of the class is climate policy, the primary material of our work will be yourself, as a participant of this collective effort.

MPA 2445. Policy Analysis and Problem Solving.

This course introduces students to concepts and tools relevant to making public decisions informed by social values. It equips students to define problems and to systematically develop and compare policy options available to public actors. In short, the course teaches students to "think like a policy analyst" and reason in the public interest. In addition, the course is attentive to the political and institutional context in which policy decisions are made.

MPA 2450. Economics of Government Intervention.

This course considers the cases for and implications of government intervention in the economy. When is government intervention desirable? Why is it desirable? What are its consequences?

MPA 2451. Exchange Scholar Program.**MPA 2455. Statistics for Public Policy.**

Covers social and economic statistics and their role in public policy research. Among the topics explored are descriptive and inferential statistics, measurement, sampling, and multivariate analysis.

MPA 2460. Economics for Public Policy.

Examines issues in government spending and tax policy. Conceptual topics include the normative assignment of responsibility with federal systems and the equitable distribution of income. Specific policy applications are covered.

MPA 2465. Financial Management For Public, Health, and Not-for-Profit Organizations.

This course focuses on financial aspects of not-for-profit organizations. The objectives of this course include helping students (1) learn the basics of not-for-profit accounting and the construction of their financial reports, (2) become more intelligent users of the financial statements of nonprofit organizations such as private colleges, hospitals, charities, and cultural institutions and (3) better understand the factors that affect the financial condition and financial performance of such entities.

MPA 2475. Policy Problems of the 21st Century.

This course provides a forward-looking analysis of public policy and inequality. By the end of this course you will be able to: Analyze how advocates and policymakers use data to frame policy problems Evaluate how stakeholders at the state and local levels have sought to address inequality Through class participation and exercises, you will also practice several applied skills that good policymakers use and develop throughout their careers: Using descriptive data to frame a context and a policy problem Breaking down a complex social and political problem into its components Defining policy tasks in terms that recognize the relevant constituencies ("stakeholders") and assess political feasibility. Gain experience in public-facing writing, including issue briefs and op-eds.

MPA 2475A. Policy Problems of the 21st Century: Social Policy.

This course provides a forward-looking analysis of public policy and inequality with a focus on the United States. It examines eight intertwined issue areas that any effort to reduce inequality must confront: 1.) job quality and "bad jobs"; 2.) place winners and place losers; 3.) work, family, and policy; 4.) the supply of affordable housing and housing insecurity; 5.) climate threats and inequality 6). criminal justice: the school to prison pipeline; 7) the digital divide, algorithms, and inequality; 8) immigration. In each, we pay special attention to how racial and ethnic, and gender inequalities interact with these policy domains to reinforce inequality. The focus of the class is on the United States but in each of these domains we will draw comparisons from different parts of the world to understand how the United States is similar or different.

MPA 2475C. Policy Problems of the 21st Century: Digital Peacebuilding.

Digital Peacebuilding examines the policy challenges encountered in fostering peace within and among states in the Twenty-First Century. The course considers the utility of various peacebuilding interventions (e.g., foreign intervention, foreign aid, diplomacy, ceasefires and peace treaties, peacekeeping, courts, and elections), and the integration of digital technologies (e.g., artificial intelligence, virtual reality, cryptocurrencies, drones, satellites, crowdsourcing, and social media platforms) in these interventions.

MPA 2476. Global Environmental Policymaking.

Global environmental policymaking has a mixed record. In this course, we examine three stages of the policy process --- identifying problems, negotiating solutions, and implementing agreements --- to explore the conditions that lead to effective governance. We will ask: under what circumstances do countries negotiate treaties to resolve environmental problems, and when are these agreements effective? Our cases include plastics, whaling, ozone depletion, and especially global climate change. We will also focus on learning to write for policy audiences.

MPA 2480. Selected Topics in Health Economics.

This course equips students with econometric tools to evaluate health programs and policies. Focusing on causal inference methods—such as randomized experiments, differences-in-differences, instrumental variables, regression discontinuity, and synthetic controls—students learn to assess and design rigorous studies that inform public health decisions. Emphasis is placed on applying economic theory in real-world contexts and interpreting evidence for impact evaluation. Students will carry out a hands-on research project using statistical software to test a theory-driven hypothesis. By the end of the course, students will be prepared to contribute to evidence-based public health practice and policy evaluation. This course assumes prior exposure to basic regression and microeconomic concepts. It is open to advanced undergraduate and graduate students

MPA 2545. An Introduction to Public Finance in Multilevel Democracies.

This course will introduce students to the fundamental political, institutional, and technical issues associated with sub-national governance and public finance reform multilevel democracies. The course requires no prior experience with either intergovernmental finance or fiscal issues. Its central purpose is to explore how politics and policy shape the way responsibility for regulating, financing, and managing public services get defined and divvied up between levels of government in both federal and unitary states.

MPA 2555. Environmental Policy, From the Ground Up.

The seminar will examine selected environmental issues at local, national and international (especially Global South) levels which are at the center of widespread public concern. We will give critical consideration to some of the key ideas, concepts, discourses and approaches underlying public solutions to those concerns. The seminar will draw on literature and concepts from the fields of public policy and administration, science and technology studies, feminist theory, Africana Studies, and indigenous knowledge systems, as well as on practitioners' knowledge.

MPA 2580. Pandemic Game Changers.

Pandemic Game Changers will examine the public health and public policy issues vital to mitigating pandemic risks. It will afford students opportunities to analyze scenarios, identify and hone policy solutions, and learn how to convince decision-makers to take the steps needed to address the public health crises that pandemics cause. Students will be required to participate in interactive Q&A with field experts, perform a group analysis of an outbreak scenario, make a written and oral analysis of policy solutions for a biosecurity or biosafety risk, and provide a policy memo and persuasive oral briefing outlining views and potential next steps on one specific pandemic-related public policy issue.

MPA 2601. Envisioning and Building Prosperous, Inclusive Communities.

Great communities do not happen by accident. Great communities take vision, thoughtful planning, participation and an inclusive civic engagement plan. The top communities in our country engage diverse leaders, acknowledge the complex and inextricable tie between community and economic development, are accountable – measuring their progress, and are fiercely competitive. This course will focus on the planning, creation, and implementation of successful community development plans from across the country. Specific topics that will be covered include: Collective Impact, the utilization of data, the role of sustainability, health, education, art, transportation, and parks, evaluation methodology, communication, and working with local governments.

MPA 2602. Poverty, Redistribution, and the Future of Work.

A changing economy is providing fewer paths to a middleclass existence. Worldwide, absolute poverty has declined, yet most people around the globe still subsist on living standards most Americans would consider to be near-poverty levels. What can be done? Is it true that the poor we shall have with us always? Are governmental actions, economic evolution, or technological changes the cause – or the cure? We will be particularly interested in the future: Will jobs still exist, what will they look like, and what will that mean for the structure and distribution of wealth and income?

MPA 2603. Leading for Impact.

Students in Leading for Impact will explore multiple leadership paradoxes such as: in every context, people are both more connected than ever—mostly digitally—and at the same time more socially and politically polarized, and lonely, than ever. Engaging with the concepts of diversity, equity, inclusion, and belonging in an authentic and vulnerable way is critical for leaders. Creating impact requires a thorough understanding of the problem at hand. A common mistake policy-makers, politicians, executives, or social business founders make is to address the problem they want to tackle as if it were “technical” i.e. only requiring expertise and appropriate tools. However, wicked problems have “adaptive” aspects: their root causes and their impact have to do with people's beliefs, values, habits, or behaviors. Leaders need to use Emotional Intelligence to leverage their own strengths as well as the conditions that enable success,

MPA 2604. The Corporation and Public Policy.

This course examines corporations as instruments of government policy and as significant policy setters in their own right. Rather than taking a fixed viewpoint about the proper location of executive authority, the course will examine the changing boundaries of private and public decision-making. Through selected readings paired with case studies, the course investigates a range of critical policy problems: the underlying purpose of corporate organization; climate change and environmental sustainability; consumer safety in the gig economy; labor standards in transnational supply chains; corporate responsibility and health in developing regions.

MPA 2605. Translating Evidence into Economic Policy.

The objective of this course is, precisely, to offer those insights to students interested in a career in policymaking by providing case studies of the most important and challenging policy questions of our lifetimes. By the end of the course, students will have deepened their understanding of the most important policy challenges from an array of different policy questions and studying the evidence around them, with a special focus on quantitative methods useful to analyze those questions.

MPA 2606. Public Policy and Politics in Partisan Times.

This course explores the causes and consequences of partisan polarization, focusing on the impact of polarization on the development and implementation of American national policy. The course examines both historical and contemporary examples of successful and unsuccessful policy-making in such a climate, as well as the role of effective leadership and political entrepreneurship in the promotion of policy that can build wide support and overcome the barriers to adoption.

MPA 2675. Science and Technology Policy in the Global South.

Using both theoretical ideas and empirical examples, this seminar will explore the relationships among science, technology, society, and public policymaking in the Global South, in places where local science and global science often collaborate and sometimes clash. The class will investigate, from a variety of perspectives, how the governance of science and technology in various parts of the Global South is influenced by their past experiences, forms of public science organization, systems of knowledge, civic epistemologies and regulatory frameworks and strategic agendas for development, as well as the knowledge claims and concerns of social movements, and tensions in power and social relations.

MPA 2700. Lessons (Un)Learned in Public Health and Humanitarian Response: A Historical Perspe.

This course is premised on the belief that public health experts rarely understand the full nature of previous humanitarian health crises and argues that a better understanding of historical events will improve our response to future challenges. Through thoughtful reflection and interactive discussion, we will explore the oft-repeated themes that continue to challenge public health and humanitarian response to this day and examine the progress we've made as a field. Most importantly, we will question why lessons identified so often fail to become lessons learned.

MPA 2710. GIS and Public Policy.

This seminar presents an introduction to the theory and practice of social science Geographic Information Systems (GIS) as applied to public policy analysis. We will cover a variety of topics, such as the geographical basis of policy issues, spatial mapping, and use of ArcGIS software to study a wide range of policy issues. The course will involve discussions, hands-on computer laboratory exercises, take-home problem sets and a Practical Exam.

The goals of the class are: 1) learning how to use GIS software and techniques, 2) database development and editing 3) spatial modeling techniques, and 4) using GIS to study policy issues.

MPA 2715. Education Governance in Comparative Perspective.

This course will examine some of the governance issues associated with these trends by pairing critical readings with case studies. We will begin by surveying the historical relationship between how education gets defined as a public good, and systems of finance and governance. We will then examine the very particular trajectory of school governance and finance in America.

Course Goals: Robust understanding of how the competing, and hard-to-measure objectives (e.g. civic virtue, economic competitiveness, equal opportunity, personal growth) that people invest in schooling shape how education is defined as public good, and how it is governed and finance.

MPA 2725. Smart Policy.

The purpose of this course is two-fold. Students will read, analyze and understand the current research literature in the behavioral economics of policy reform. Second, they will continue themes and projects started in the RIPL Smart Policy Consultancies, and use data collected as well as the RIPL database to design a Smart Policy Innovation and a test of that innovation. Smart Policy Innovations will be considered for the RIPL Smart Policy Fellowship for 2016-2017.

MPA 2730. The Political Economy of Hard Policy Problems.

This class tackles the “hard problems” of public policy. While governments are cajoled and enjoined to produce economic growth, do something about economic inequality and social mobility, and improve the life chances of millions through purposive action, actually delivering in these areas of policy is incredibly hard. These areas constitute “hard problems” for policy for two main reasons. Economically, we don’t have much of a clue about how to do many of these things. Politically, there are powerful interests and entrenched ideas that like these areas of policy just as they are and work hard to keep them “hard problems.”

MPA 2735. Women and Nations.

See the linkage between the security and situation of women and the security and situation of the nations in which they live. Understand the roles women play in world society as producers, reproducers, agents of cultural continuity and change, and to render women “visible” in international and national affairs. Explore in greater depth women’s choices about education, family, and work in the developing world, and how these affect and are affected by national and international forces and influences.

MPA 2765. System Dynamics: Policy Analysis for a Complex World.

The course studies why so many public policy problems are challenging and often lead to disappointing results or outright failure. Students learn to conceptualize a social problem as a set of structures and policies that create dynamics and govern performance. The course introduces the tools of system dynamics for modeling and analyzing public policy. Using role playing games, simulation models, and management flight simulators, we develop insights essential to managing in a world characterized by dynamic complexity. Case studies include applications of system dynamics in healthcare, environmental policy, project management, and implementation of improvement programs.

MPA 2772. Disaster, Displacement and Response: A Practitioner, People-Focused Lens on Urban Policy & Practice.

Applying a practitioner’s view and working from scenarios will allow students to examine practical elements of delivery as well as the complexities of coordination in an emergent arena. This class will create both empathy and urgency - fueled by stories the class can explore together. The aim is to examine commonalities in the experiences of displaced people with respect to how cities respond across the world and to create a people-centered lens for examining effective responses.

Assignments will focus on creating convincing presentations – making a case for what works and what cities may learn from one another.

MPA 2775. U.S. Foreign Policy: The Institutional Basis.

This course will examine the institutions that influence American foreign and development policy. Institutions provide the organizational framework, rules and social structures that in turn impact on the policy positions of those who are part of them. The agencies and bureaus that make up the national security cluster have both professional expertise and bureaucratic qualities. We will delve deeply into these entities to understand better their jurisdictional authorities and professional perspectives. We will use case studies and role playing exercises to enhance understanding of these orientations and their impact on the policy process.

MPA 2796. The Historical Determinants of Public Health.

An ignorance of public health history is partly to blame for our imperfect response to COVID-19 in the United States. Throughout the pandemic, the reductive framing of public health’s greatest challenges—from addressing vaccine hesitancy, the rampant spread of pseudoscience and misinformation, or pervasive stigma and discrimination in communities of color—allowed our field to overlook the deep and undeniable historical roots of contemporary public health practice. This course will highlight the central role that historical determinants of public health continue to play in shaping health policy and response. Using the COVID-19 pandemic as a prism, students will critically examine the successes and setbacks of earlier eras in public health history, providing them with the historical framing necessary to better understand and advocate for impactful public health interventions in the present and future.

MPA 2800. Policy in Action Project.

The Policy in Action experience is designed to provide a rigorous and practical immersion in dealing with a real policy issue in a domestic or global community-based or institutional setting. The course focuses on experiential learning and creative problem-solving. Teams of students address real-world, complex, contemporary problems, explore policy and practice-based solutions, identify strategies for addressing feasibility concerns, and recommend future approaches to external partner organizations. Students conduct research to understand contemporary problems and issues and develop policy and practice-related solutions to address these issues and/or enhance an organization’s capacity.

MPA 2981. Independent Graduate Study.

This is an independent study course for the MPA program.

The School of Public Health

Through teaching and research, the Brown University School of Public Health trains future public health leaders, advances knowledge on pressing health challenges, and enhances population health and well-being for all. Our students *learn* public health by *doing* public health.

The School's mission is to improve the health of all populations, especially those most vulnerable, by producing world-class public health scholarship, forging strong community partnerships, and educating the next generation of diverse public health leaders. The School aims to achieve its mission by:

1. Rigorously preparing the next generation of diverse public health leaders, from undergraduates through postdoctoral fellows, to address the health needs of all people, including those of historically underserved or vulnerable populations
2. Generating world-class public health scholarship that addresses the health needs of all people, including historically underserved or vulnerable populations
3. Cultivating strong partnerships with communities and governmental entities in order to address the health needs of all people, including historically underserved or vulnerable populations
4. Ensuring that the School's infrastructure supports operational effectiveness, through enhanced philanthropy, improved financial practice, and expanded physical space

The School's values of Excellence, Equity, Diversity and Inclusion, Collaboration, Innovation, and Community Focus are critical to preserving and enhancing the health and well-being of humanity. Learn more about the School's Mission, Vision, & Values (<https://www.brown.edu/academics/public-health/about/mission-values/#:~:text=School%20Mission,of%20diverse%20public%20health%20leaders>).

Accredited by the Council on Education for Public Health (CEPH) in 2016, the School offers programs in the following degrees: Master of Public Health (MPH); PhD in Behavioral and Social Health Sciences; AM, ScM and PhD in Biostatistics; ScM and the Certificate in Clinical and Translational Research; PhD in Epidemiology; and PhD in Health Services Research. The School of Public Health offers two undergraduate concentrations: AB in Public Health and ScB in Statistics.

The School's small size and low student-to-faculty ratio translates to personal attention. From assistance in selecting coursework to advice on submitting grant proposals, faculty advisors in the School of Public Health work closely with students as they move through their studies.

For additional information regarding the School of Public Health and its programs of study and areas of research visit: brown.edu/academics/public-health/about (<http://brown.edu/academics/public-health/about/>)

Public Health Concentration Requirements

Public Health is an interdisciplinary concentration through which students examine a variety of health issues, including population health and disease, health policy, cross-cultural and international aspects of health, the organizational and social structures through which health services are delivered and received, and the public health system. Courses in the concentration allow students to explore the ways in which the social, political, behavioral and biological sciences contribute to the understanding of patterns of population distributions of health and disease. The concentration also provides students with courses in basic research methods and statistics necessary for problem solving and critical thinking in the emerging emphasis on evidence-based health care and public health.

Requirements for the Public Health Concentration

1. Core Courses (non-substitutable; 5 required for all students)

PHP 0310	Health Care in the United States	1

PHP 0320	Introduction to Public Health	1
PHP 0850	Fundamentals of Epidemiology	1
or PHP 2120	Introduction to Methods in Epidemiologic Research	
or PHP 2150	Foundations in Epidemiologic Research Methods	
PHP 1501	Essentials of Data Analysis	1
or PHP 1510	Principles of Biostatistics and Data Analysis	
or PHP 2507	Biostatistics and Applied Data Analysis I	
or PHP 2510	Principles of Biostatistics and Data Analysis	
PHP 1910	Public Health Senior Seminar (required of all non-honors seniors; FALL)	1
or PHP 1915	Public Health Honors Senior Seminar	
2. Environmental Health and Policy (select one of the following):		1
PHP 0720	Public Health and the Environment	
PHP 1101	World of Food: Personal to Global Perspectives on Nutrition, Agriculture and Policy	
PHP 1700	Current Topics in Environmental Health	
PHP 1720	Environmental Exposure Assessments in Practice (Rural Public Health)	
PHP 1725	Rural Public Health	
PHP 1730	Climate Risks and Health Solutions	
3. Health, Health Care Systems, and Policy (select one of the following):		1
PHP 0330	Health Law and Policy	
PHP 0650	From Manufacturer to Patient: Why is the Cost of Prescription Drugs So Darn High?	
PHP 1100	Comparative Health Care Systems	
PHP 1450	COVID-19, Public Health, and Health Policy	
PHP 1460	Public Health Law and Policy (I)	
PHP 1480	Introduction To Public Health Economics	
PHP 1580	Pandemic Game Changers: Preparing the Next Generation of Decision-Makers for Emerging Bio Threats	
PHP 1681	Reproductive Health, Rights and Justice	
4. Social and Behavioral Science for Prevention (select one of the following):		1
PHP 0400	Intro. to Health Disparities & Making Connection btw Structure, Social Determinants&Health Equity	
PHP 0700	Global Public Health Interventions	
PHP 1101	World of Food: Personal to Global Perspectives on Nutrition, Agriculture and Policy	
PHP 1300	Parenting Behaviors and Child Health	
PHP 1540	Alcohol Use and Misuse	
PHP 1551	Substance Use Prevention, Treatment, & Policy	
PHP 1610	Tobacco, Disease and the Industry: cigs, e-cigs and more	
PHP 1650	Race, Racism and Health	
PHP 1670	Public Mental Health: A Framework for Studying and Preventing Mental Disorders	
PHP 1680U	Intersectionality and Health Inequities	
PHP 1690	Technology and Health Behavior Change	
PHP 1920	Social Determinants of Health	
PHP 1998	Public Health Nutrition	
5. Global Health Elective (select one of the following):		1
PHP 0700	Global Public Health Interventions	
PHP 0720	Public Health and the Environment	
PHP 1070	Global Burden of Disease	

PHP 1580	Pandemic Game Changers: Preparing the Next Generation of Decision-Makers for Emerging Bio Threats	
6. Health Disparities Elective (select one of the following):		1
PHP 0400	Intro. to Health Disparities & Making Connection btw Structure, Social Determinants&Health Equity	
PHP 1460	Public Health Law and Policy	
PHP 1580	Pandemic Game Changers: Preparing the Next Generation of Decision-Makers for Emerging Bio Threats	
PHP 1650	Race, Racism and Health	
PHP 1680I	Pathology to Power: Disability, Health and Community	
PHP 1680U	Intersectionality and Health Inequities	
PHP 1681	Reproductive Health, Rights and Justice	
PHP 1796	The Historical Determinants of Public Health	
PHP 1810	Community-Engaged Research in Public Health	
PHP 1821	Incarceration, Disparities, and Health	
PHP 1822	Effective Health Communication With Medically Underserved Populations in an Applied Learning Setting	
PHP 1920	Social Determinants of Health	
PHP 1998	Public Health Nutrition	
7. Biology (select one of the following):		1
BIOL 0200	The Foundation of Living Systems	
BIOL 0380	The Ecology and Evolution of Infectious Disease	
BIOL 0420	Principles of Ecology	
BIOL 0470	Genetics	
BIOL 0500	Cell and Molecular Biology	
BIOL 0510	Introductory Microbiology	
BIOL 0530	Principles of Immunology	
BIOL 0800	Principles of Physiology	
PHP 2130	Human Biology for Public Health	
8. Public Health Elective (select any one PHP course OR one of the following Humanities/Fine Arts/Humanistic Social Sciences for Public Health courses)		1
AFRI 0550	African American Health Activism from Emancipation to AIDS	
AFRI 1060W	Policy, Culture and Discourse that Shape Health and Access to Healthcare	
AFRI 1060Z	Race, Sexuality, and Mental Disability History (HMAN 1973A)	
AFRI 1920	Health Inequality in Historical Perspective	
AMST 1600C	The Anti-Trafficking Savior Complex: Saints, Sinners, and Modern-Day Slavery	
AMST 1601	Health and Healing in American History (STS 1110, GNSS 1960B)	
COLT 0610Y	Women's Writing in the Arab World	
COLT 1810P	Literature and Medicine	
COST 0032	Music and Meditation	
COST 0100	Introduction to Contemplative Studies	
ENGL 1030C	Writing Science	
ENGL 1050R	Writing about Health and Healthcare	
ENGL 1140D	Writing Diversity: A Workshop	
ETHN 1750B	Treaty Rights and Food Fights: Eating Local in Indian Country	
GNSS 0090C	Reproductive Health: Science, Politics, and the Media	

GNSS 0120	Introduction to Gender and Sexuality Studies
GNSS 1300	Gender-Based Violence Prevention
HISP 0490A	Spanish for Health Care Workers
HISP 0750Q	Health, Illness and Medicine in Spanish and Spanish American Literature and Film
HIST 0150H	Foods and Drugs in History
HIST 0270B	From the Columbian Exchange to Climate Change: Modern Global Environmental History
HIST 0286A	History of Medicine I: Medical Traditions in the Old World Before 1700
HIST 0286B	History of Medicine II: The Development of Scientific Medicine in Europe and the World
HIST 0537B	Tropical Delights: Imagining Brazil in History and Culture
HIST 1080	Humanitarianism and Conflict in Africa
HIST 1830M	From Medieval Bedlam to Prozac Nation: Intimate Histories of Psychiatry and Self
HIST 1960Q	Medicine and Public Health in Africa
HIST 1977I	Gender, Race, and Medicine in the Americas
HMAN 1975G	Planning the Family: Gender, Reproduction, and the Politics of Choice.
LACA 1503V	Health of Hispaniola
LITR 1151T	Poetry for Healing Territories
PHIL 0060	Modern Science and Human Values
PHIL 0520	Global Justice
SAST 0700B	Introduction to Modern South Asia: Public Health From Theory to Practice
TAPS 1281W	Arts and Health: Theory
TAPS 1281Z	Arts and Health: Practice

Total Credits **12**

Study Abroad/Study Away: The best semester to travel abroad/away is Spring of junior year. Courses taken away/abroad will likely NOT count for any of the concentration requirements, with the exception of the Elective requirement, and it must be a course related to a Public Health topic. Meet with concentration advisor and be prepared to provide syllabi for course being considered for transfer. Permission from concentration advisor is required.

Honors:

Honors Track, Classes of 2023 & Beyond

For Classes of 2023 & beyond, Honors track students enroll in PHP 1915, Public Health Honors Senior Seminar during Fall semester of their senior year as well as PHP 1980, Honors Thesis Prep during both semesters of their senior year to conduct research and write the honors thesis. Thus, for Classes of 2023 & beyond, fourteen courses are required for completion of the concentration requirements for an honors track student.

Please visit <https://www.brown.edu/academics/public-health/undergraduate/curriculum> (<https://www.brown.edu/academics/public-health/undergraduate/curriculum/>) for details or email the Director of Undergraduate Studies, Patricia Risica (patricia_risica@brown.edu) for more information.

Statistics Concentration Requirements

The Bachelor of Science degree in Statistics is designed to provide foundations that include basic statistical concepts and methodologies, and to expose students to the role of statistical thinking and analysis in interdisciplinary research and in the public sphere. To ensure deep rigorous understanding of the foundations and main methods of analysis in statistics, the program is composed of three parts: a) foundations in mathematics and computing, combined with an introduction to statistical thinking and practice; b) four core courses on the fundamentals of

statistical theory and data analysis; and c) more advanced material covering important areas of statistical methodology. A capstone project involving substantial data analysis or focused on methodology/theory is required. Students also have opportunities to acquire practical experience in study design, data management, and statistical analysis by working as undergraduate research assistants in projects in one of the participating academic departments or Research Centers at Brown.

Statistics equips individuals with the ability to analyze and interpret complex data, a skill essential in a wide range of industries including healthcare, finance, technology, and social sciences. With a solid foundation in statistical methods, students can solve real-world problems using quantitative evidence, making the concentration an excellent choice for those who want to apply mathematical reasoning to diverse and impactful fields.

The concentration is based on the premise that statistics is a scientific discipline that is essentially concerned with the art and science of data analysis and is best taught in conjunction with specific, substantive applications. To this end, the concentration is designed to provide a foundation of basic concepts and methodology, requiring students to take core courses in the discipline itself, and to expose students to a cross-section of statistical applications. Through either a capstone project or senior honors thesis, each student will carry out a major project of statistical data analysis.

The program requires **twelve** one-semester courses.

Pre-Requisites

Single-variable calculus is not an enforced requirement for our concentration, but it is a required prerequisite for many of our courses. At Brown, single-variable calculus consists of MATH 0090 followed by one of MATH 0100, MATH 0170, or MATH 0190.

PHP 1501 Essentials of Data Analysis (AP Statistics with a score of 5 or another approved introductory statistics course may substitute for PHP 1501.)

Mathematical Foundations

APMA 0260 Linear Algebra and Multivariable Calculus for Applied Mathematicians Students may opt to take both Multivariable Calculus (MATH 0180, MATH 0200, or MATH 0350) and Linear Algebra (MATH 0520 or MATH 0540) to meet this requirement and count one of these courses towards their general elective requirements.

Statistical Inference and Modeling

APMA 1655 Introduction to Probability and Statistics with Theory
or MATH 1210 Probability
APMA 1660 Statistical Inference II
or MATH 1620 Mathematical Statistics
PHP 1560 Using R for Data Analysis
or PHP 2560 Statistical Programming with R
PHP 1511 Applied Regression Analysis

Numerical Methods (Choose 1)

APMA 0160 Introduction to Scientific Computing
APMA 1690 Computational Probability and Statistics
ENGN 1950 Advanced Numerical Methods for Data, Simulation, and Optimization

Track Electives (3)

Students can choose from the following tracks and must complete three courses within a track. Other courses may be used with the approval of the Director of the Statistics Concentration.

Health Data Science Track

PHP 0850 Fundamentals of Epidemiology
PHP 1480 Introduction To Public Health Economics
PHP 1855 Infectious Disease Modeling

PHP 1854 The Epidemiology and Control of Infectious Diseases

PHP 2514 Applied Generalized Linear Models

PHP 2516 Applied Longitudinal Data Analysis ((Half-credit))

PHP 2517 Applied Multilevel Data Analysis ((Half-credit))

PHP 2650 Statistical Learning and Big Data

PHP 2602 Analysis of Lifetime Data

Econometrics Track

PHP 1480 Introduction To Public Health Economics

ECON 1630 Mathematical Econometrics I

ECON 1640 Mathematical Econometrics II

ECON 1360 Research Seminar in Health Economics

ECON 1629 Applied Research Methods for Economists

ECON 1670 Advanced Topics in Econometrics

APMA 1200 Operations Research: Probabilistic Models

APMA 1720 Monte Carlo Simulation with Applications to Finance

Statistical Theory Track

APMA 1740 Recent Applications of Probability and Statistics

APMA 1670 Statistical Analysis of Time Series

APMA 1680 Nonparametric Statistics

APMA 1690 Computational Probability and Statistics

MATH 1630 Real Analysis I

PHP 2515 Fundamentals of Probability and Statistical Inference

or PHP 2520 Statistical Inference I

PHP 2610 Causal Inference and Missing Data

PHP 2530 Bayesian Statistical Methods

Interdisciplinary Track

Students may design their own track with the approval of the Director of the Undergraduate Concentration.

General Electives (Choose 2)

Students must choose two general elective courses. Pre-approved courses are listed below, but courses may also be chosen from those courses listed in the track electives. Other courses may be used with the approval of the Director of the Statistics Concentration.

APMA 1080 Inference in Genomics and Molecular Biology

APMA 1160 An Introduction to Numerical Optimization

APMA 1210 Operations Research: Deterministic Models

APMA 1710 Information Theory

APMA 1860 Graphs and Networks

BIOL 1435 Computational Methods for Studying Demographic History with Molecular Data

CSCI 1420 Machine Learning

CSCI 1430 Computer Vision

CSCI 1470 Deep Learning

CSCI 1491 Fairness in Automated Decision Making

CSCI 1520 Algorithmic Aspects of Machine Learning

CSCI 1810 Computational Molecular Biology

CSCI 1820 Algorithmic Foundations of Computational Biology

CSCI 1951A Data Science

ENGN 2520 Pattern Recognition and Machine Learning

SOC 1120 Market and Social Surveys

SOC 1340	Principles and Methods of Geographic Information Systems	
SOC 2230	Techniques of Demographic Analysis	
SOC 2960G	Spatial Data Analysis Techniques in the Social Sciences	
Capstone Project		1
PHP 1970 or PHP 1980	Independent Study Honors Thesis Preparation	
Total Credits		12

PHP 0100: As part of the capstone course or thesis, students should complete an online course, PHP 0100, at their own pace. This course is a requirement and is meant to give a broad overview of public health and it allows students to see different areas in public health where statistics is being used. The course does not require any additional credit and is completed as part of the independent study, PHP 1970/PHP 1980. Students who are in a double concentration in public health are exempt from this course.

Double Concentrations: Students may count up to three courses towards another concentration. This cannot include your capstone project or honors thesis. You must declare an additional concentration no later than your seventh semester.

Senior Thesis/Capstone: Statistics concentrators have the option to complete either a capstone project or an honors thesis. Students who complete a thesis and enroll in PHP 1980 for two semesters may count one semester towards their general statistics elective requirements.

Honors:

Students who wish to achieve honors must complete a senior honors thesis and obtain grades of A or S-with-distinction in at least 70% of the Brown University courses used for concentration credit.

Students pursuing a senior honors thesis undertake an independent research project over two semesters, under the guidance of a faculty advisor. Either the faculty advisor or an additional reader must be a faculty member in the Department of Biostatistics. Students are required to produce a manuscript on their project, which is submitted to the University. Thesis projects may involve a major data analysis, the design of a simulation study to assess the performance of a statistical method, or contributions to the development of new statistical methods.

Study Abroad/Study Away: Up to two courses taken elsewhere (study abroad or other transfer) may be applied to required courses. Meet with a concentration adviser to discuss; provide a syllabus for each course to be considered for transfer to your concentration plan.

The program is administered by the Department of Biostatistics, located at 121 South Main Street, 7th floor.

For additional information please contact: Roee Gutman, Box G-S-121-7; Telephone: 401-863-2682; Fax: 401-863-9182; e-mail: Roee Gutman (rgutman@stat.brown.edu)

Master of Public Health Graduate Program

The Brown MPH has a singular purpose: to train leaders in public health who are armed with the skills to conduct research, bring about policy change, and positively affect the health of populations. The program includes an internship, a thesis or a capstone, and the option of customizing your MPH with one of several concentrations.

The MPH Program has a 12 course credit requirement (11 standard courses and 2 half courses). In addition to the core courses listed below (4 standard and 2 half courses), MPH students must complete 4 concentration courses and 3 general MPH electives.

For further information on program curriculum, please visit: <https://mph.sph.brown.edu/curriculum>.

MPH Program Core Course Requirements

MPH Core Course Requirements

Students must complete one of the following Data Analysis course sequences:

Sequence 1:

PHP 2507	Biostatistics and Applied Data Analysis I
PHP 2508	BioStatistics and Data Analysis II
Sequence 2:	
PHP 2510	Principles of Biostatistics and Data Analysis
PHP 2511	Applied Regression Analysis
Sequence 3:	
PHP 2506	Biostatistics for Public Health Research
PHP 2060	Qualitative Methods in Health Research
PHP 2061	Qualitative Data Analysis in Public Health Research (MPH students following the PHP2506/2060 sequence must also take PHP2061 as either an elective or concentration course)

Students must complete one of the following Epidemiology courses:

PHP 2120	Introduction to Methods in Epidemiologic Research
PHP 2140	Principles of Applied Epidemiology
PHP 2150	Foundations in Epidemiologic Research Methods

Students must complete the following course:

PHP 2355	Designing and Evaluating Public Health Interventions

Students must complete the following two half credit courses:

PHP 2071	Applied Public Health: Systems and Practice
PHP 2072	Applied Public Health: Policy, leadership and communication

A five-year integrated Undergraduate/MPH (UG/MPH) program is also offered. This rigorous program in professional public health education is open to Brown undergraduates in any concentration. Students accepted into the program will complete the degree requirements for both their undergraduate degree and an MPH degree in a five-year period. Students must take 12 total course credits toward the MPH (5.5 during their first four years and 6.5 courses in the fifth year). For more information, please visit: <https://mph.sph.brown.edu/dual-degrees/ugmph>.

Dual Degree Program: Master of Public Health (MPH) and Master of Public Affairs (MPA)

The School of Public Health and the Watson Institute for International and Public Affairs offer a dual-degree Master of Public Health (MPH) and Master of Public Affairs (MPA) program. Emphasizing a learning by doing approach, this rigorous program will offer highly qualified applicants the opportunity to gain training in public health and public policy to prepare them to address the critical health policy issues in the United States and throughout the world. The dual degree program starts in summer and includes 17 course credits (14 full courses and 6 half courses) as well as an internship and a master's thesis. Students will benefit from the rich academic resources at the Watson Institute and the School of Public Health, as well as their extensive applied learning programs in Rhode Island, as well as throughout the United States and the world.

Program and admissions information can be found here: <https://mph.sph.brown.edu/dual-degrees/umphmpa>

Master of Public Health (Generalist) Graduate Program

The goal of the Master of Public Health (generalist) is to equip the next generation of public health leaders with the data analysis capabilities, public health knowledge and leadership skills to tackle the global health challenges of our time. To empower more people who can help meet those challenges, we've reimagined our generalist master's in public health degree as a 100% online master's in public health program.

The online MPH degree program is designed for working professionals throughout the United States and internationally.

The Master of Public Health (generalist) program can be completed across 6 consecutive semesters and has a 12 course credit requirement.

GPHP 2000	Using Biostatistics to Make Public Health Decisions
GPHP 2010	Using Epidemiology to Make Public Health Decisions
GPHP 2020	Using Survey and Qualitative Methods to Make Public Health Decisions
GPHP 2300	Social Determinants of Health/Equity in Public Health
GPHP 2310	Interventions at the Local, National and Global Scale
GPHP 2320	Evaluation of Public Health Programs
GPHP 2400	Health Care Systems & Policy
GPHP 2410	Comparative Health Care Systems
GPHP 2800	Public Health Leadership and Practice
GPHP 2810	Local-Global Public Health Leadership
GPHP 2850	Public Health Communications
GPHP 2900	Integrated Learning Experience (ILE)

Accelerated Master of Public Health Graduate Program

The Accelerated MPH for Clinicians is a fast-paced, in-person program designed to deliver an academically rigorous and comprehensive public health education to professionals with prior medical or clinical healthcare education. The program is comprised of 10.5-units (i.e., the equivalent of 42 semester credits) that students can complete in one year (July – May), beginning with an online session in the summer. The curriculum will enable clinical professionals to achieve a deep and broad understanding of public health at a pace that complements their existing experience. Drawing on expertise from faculty within biostatistics, epidemiology, health services, policy and practice, and behavioral sciences, the Accelerated MPH program is designed to transform clinicians into experts in public health.

The following nine courses form the curriculum through which students will develop the program competencies:

Summer Course (online)

PHP 2073	Leadership and Communication (2 units)

Fall Courses

PHP 2074	Needs Analysis and Program Planning (1.5 units including 80 hours of practicum)
PHP 2081	Health Policy and Equity
PHP 2120	Introduction to Methods in Epidemiologic Research
PHP 2506	Biostatistics for Public Health Research

Spring Courses

PHP 2030	Clinical Trials Methodology
PHP 2076	Integrated Learning Experience for Accelerated MPH Program
PHP 2727	Putting Research Into Practice with Implementation Science

Students must select one of the following two methods courses: PHP2040 or PHP2060

PHP 2040	Survey Research Methods
PHP 2060	Qualitative Methods in Health Research

For more information, please visit: <https://mph.sph.brown.edu/accelerated-mph>

Biostatistics Graduate Program

The graduate programs in Biostatistics offers comprehensive course work leading to a Master of Science (Sc.M.); a Master of Arts (A.M.) degree for

students in the 5th-year Master's program and Brown's Open Graduate Education Program; and the Doctor of Philosophy (Ph.D.) degrees. The Ph.D. program is intended to enable graduates to pursue independent programs of research.

Full details for the Biostatistics Doctoral Program can be found at <https://www.brown.edu/academics/public-health/biostats/academics/doctral-program> (<https://www.brown.edu/academics/public-health/biostats/academics/doctral-program/>).

The Sc.M. program provides training for application of advanced methodology in professional and academic settings. The Department of Biostatistics offers a 5th-Year Master's (<https://www.brown.edu/academics/public-health/biostats/academics/masters-program/5th-year/>) (A.M. degree) which is available to Brown Undergraduates.

Required courses for the Biostatistics Master's degree program are listed below. Additional details can be found on the Department's webpage: <https://www.brown.edu/academics/public-health/biostatistics> (<https://www.brown.edu/academics/public-health/biostatistics/>).

For more information on admission and program requirements, please visit <https://www.brown.edu/academics/public-health/admissions> (<https://www.brown.edu/academics/public-health/admissions/>).

The graduate programs in Biostatistics are designed to provide training in theory, methodology, and practice of statistics in biology, public health, and medical science. The programs provide comprehensive training in theory and methods of biostatistics, but is highly interdisciplinary and requires students to acquire expertise in a field of application.

Requirements for the ScM

Required Courses -ScM (7 biostatistics plus PHP 1001)

PHP 2515	Fundamentals of Probability and Statistical Inference (OR)	1
PHP 2520	Statistical Inference I	1
PHP 2514	Applied Generalized Linear Models	1
PHP 2516	Applied Longitudinal Data Analysis (1/2 course)	.5
PHP 2517	Applied Multilevel Data Analysis (1/2 course)	.5
PHP 2550	Practical Data Analysis	1
PHP 2560	Statistical Programming with R	1
PHP 2610	Causal Inference and Missing Data	1
PHP 2650	Statistical Learning and Big Data	1
PHP 1001 Scope of Public Health (online course)		

Electives (3 Courses)

Statistical Electives		
PHP 2030	Clinical Trials Methodology	1
PHP 2530	Bayesian Statistical Methods	1
PHP 2580	Statistical Inference II	1
PHP 2601	Linear Models	1
PHP 2602	Analysis of Lifetime Data	1
PHP 2605	Generalized Linear Models	1
PHP 2620	Statistical Methods in Bioinformatics, I	1
PHP 2980	Graduate Independent Study and Thesis Research	1-5
PHP 2590	Design of Experiments	1
PHP 2670	Simulation Models for Public Health Decision Making	1

Epidemiology Electives

PHP 2120	Introduction to Methods in Epidemiologic Research	1
PHP 2150	Foundations in Epidemiologic Research Methods	1
PHP 2200	Intermediate Methods in Epidemiologic Research	1

Programming and Data Science Electives

PHP 2561	Methods in Informatics and Data Science for Health	1
CSCI 1420	Machine Learning	1
CSCI 1470	Deep Learning	1
CSCI 1570	Design and Analysis of Algorithms	1
CSCI 1810	Computational Molecular Biology	1
CSCI 1820	Algorithmic Foundations of Computational Biology	1

Requirements for the AM

Required Courses -AM (4 biostatistics plus PHP 1001)

PHP 2515	Fundamentals of Probability and Statistical Inference (OR)	1
PHP 2514	Applied Generalized Linear Models	1
PHP 2550	Practical Data Analysis	1
PHP 2560	Statistical Programming with R	1
PHP 1001	Scope of Public Health (online course)	

Electives (4 Courses)

Biostatistics (Health Data Science) Graduate Program

The online Master of Science in Biostatistics (Sc.M.), Health Data Science track, provides students with a strong foundation in biostatistical, health data science methods and rigorous training in applied skills to meet the growing demands of this industry and become future leaders in the life science and public health domains. This program is offered 100% online and designed to serve a broad and diverse audience of learners to

meet the pressing need for well-trained biostatistics professionals, both domestically and internationally.

The online Sc.M. in Biostatistics, Health Data Science track can be completed across 5 consecutive semesters and has a 9 course credit requirement.

BHDS 2000	Probability and Statistical Inference	1
BHDS 2010	Statistical Programming for Health Data Science	1
BHDS 2110	Methods I: Linear and Generalized Linear Models	1
BHDS 2120	Methods II: Extensions to Regression	1
BHDS 2020	Design of Observational and Experimental Studies	1
BHDS 2030	Causal Inference	1
BHDS 2130	Methods III: Statistical Machine Learning	1
BHDS 2040	Advanced Topics in Health Data Science	1
BHDS 2050	Problem-driven Biostatistics and Capstone Project	1

Total Credits **9**

Behavioral and Social Health Sciences Graduate Program

The Doctor of Philosophy (Ph.D.) program in Behavioral and Social Health Sciences is an interdisciplinary graduate program that trains graduate students who are interested in (a) analyzing the complex behavioral and social determinants of public health, (b) developing interventions to change behaviors and improve social contexts related to public health, and (c) employing behavioral and social science theory and methods to understand contemporary health problems and to develop interventions that improve the health of individuals and populations. The program puts substantive focus on diet, physical activity and obesity; alcohol/drug use and misuse; smoking/tobacco use and misuse; HIV and sexual health risk behaviors; chronic disease prevention and management; global health; LGBTQI+ health; mindfulness in health; and health disparities and culture.

For more information on admission and program requirements, please visit:

<http://www.brown.edu/academics/gradschool/programs/behavioral-and-social-health-sciences> (<http://www.brown.edu/academics/gradschool/programs/behavioral-and-social-health-sciences/>)

Clinical and Translational Research Graduate Program

The Master of Science in Clinical and Translational Research (CTR) is designed primarily for physicians, doctorally-trained basic scientists, and students in doctoral programs or medical school. The goal of the Master's in Clinical and Translational Research Program is to train clinicians and basic scientists to extend basic scientific research into the clinical arena, ultimately leading to improvements in individual and population health. By translating basic research into improved clinical outcomes, researchers and clinicians are able to provide new treatments to patients more efficiently and quickly.

Full details on the Master of Science in Clinical and Translational Research, including the most up to date list of course requirements, can be found at <https://www.brown.edu/academics/public-health/ctr/masters>

Note:

Starting in fall 2022, Brown will admit no new students to the ScM CTR program. The program will remain open until all enrolled students have graduated or completed their maximum time to graduate (i.e., five years from initial enrollment if enrolled full time). As with all degree programs at the Brown School of Public Health, the CTR ScM program is accredited by CEPH. The program will retain its accredited status.

Master's in CTR Requirements

Master's in CTR Requirements

Intro to Research Methods (Students must complete one of the following two courses)

PHP 2120	Introduction to Methods in Epidemiologic Research

PHP 2150	Foundations in Epidemiologic Research Methods

Biostatistics and Applied Data Analysis (Students must complete one of the following 2 courses sequences)

Sequence 1:

PHP 2507	Biostatistics and Applied Data Analysis I

PHP 2508	BioStatistics and Data Analysis II

Or

Sequence 2:

PHP 2510	Principles of Biostatistics and Data Analysis

PHP 2511	Applied Regression Analysis

Advanced Research Methods (Students must complete two of the following courses)

PHP 1560	Using R for Data Analysis

PHP 2030	Clinical Trials Methodology

PHP 2040	Survey Research Methods

PHP 2060	Qualitative Methods in Health Research

PHP 2180	Interpretation and Application of Epidemiology

PHP 2200	Intermediate Methods in Epidemiologic Research

PHP 2410E	Medicare: A Data Based Policy Examination

PHP 2415	Introduction to Evidence-based Medicine

PHP 2465A	Introduction to Health Decision Analysis

PHP 2561	Methods in Informatics and Data Science for Health

Scientific Writing (Students must complete the following course)

PHP 2090	Research Grant Writing for Public Health

Topics in CTR (Students must enroll in this half credit course two times to fulfill the one credit requirement)

PHP 2470	Topics in Clinical, Translational and Health Services Research

Students must complete two CTR electives found at <https://www.brown.edu/academics/public-health/education-training/masters/clinical-and-translational-research/scm-ctr-electives>

The Certificate in Clinical and Translational Research is designed for trainees who need a more structured and intensive experience than can be obtained from taking one or two courses as a special/non-degree student, but who do not need or are not in a position to pursue the full Master's Degree. Students in the Certificate Program in Clinical and Translational Research must complete four courses. Full details on the Certificate in CTR can be found at <https://www.brown.edu/academics/public-health/ctr/certificate>.

Certificate in CTR Course Requirements

Certificate in CTR Course Requirements

Research Methods (Students must complete one of the following courses)

PHP 2120	Introduction to Methods in Epidemiologic Research

PHP 2150	Foundations in Epidemiologic Research Methods

PHP 2300	Research Methods in Behavioral Science

Biostatistics and Applied Data Analysis (Students must complete both of the following courses)

PHP 2507	Biostatistics and Applied Data Analysis I

PHP 2508	BioStatistics and Data Analysis II

Students must complete one elective from the list found at <https://www.brown.edu/academics/public-health/ctr/certificate>

Epidemiology Graduate Program

The graduate program in Epidemiology offers comprehensive course work leading to the Doctor of Philosophy (Ph.D.) degree. Using sophisticated study designs, statistical analyses, field investigations, and laboratory techniques, epidemiology students investigate the multiple causes of a disease, disease distribution (geographic, ecological, and social), methods of transmission, and measures for control and prevention.

For more information on admission and program requirements, please visit: <https://www.brown.edu/academics/public-health/epi/home> (<https://www.brown.edu/academics/public-health/epi/home/>)

Health Care Leadership Graduate Program Requirements for the Master of Science in Healthcare Leadership

The ScM in Healthcare Leadership is administered by the School for Professional Studies in Coordination with the School of Public Health in terms of instruction and academic requirements.

HCL 2010	Healthcare Policy: Yesterday, Today, and Tomorrow	1
HCL 2000	Strategy and Implementation for High-Performance Health Care	1
HCL 2020	Leadership and Workforce Development	1
HCL 2150	Health Technology, Data, and Analysis	0.5
HCL 2070	Healthcare Finance & Cost Accounting	1
HCL 2060	Quality Improvement and the Learning Organization	.5
HCL 2080	The Critical Challenge: Capstone Project	1
HCL 2090	Leadership and Professional Development	.5
HCL 2100	Health Law	0.5
HCL 2200	Digital Health Innovations and AI in Healthcare	.5
HCL 2120	Health Economics: Jargon, Theory, and Analytical Methods	0.5
HCL 2140	Marketing for Health Care Transformation	.5
Total Credits		8.5

Health Services Research Graduate Program

The graduate program in Health Services Research offers comprehensive course work leading to the Doctor of Philosophy (Ph.D.) degree. The program seeks to develop scientists experienced in the use of state-of-the-art experimental and non-experimental research methods to investigate how people obtain access to health care, the components and impacts of health care costs, and what happens to patients as a result of care. Health services research aims to identify the most effective ways to organize, manage, finance, and deliver high quality care to benefit population health.

For more information on admission and program requirements, please visit: <https://www.brown.edu/graduateprograms/health-services-research-phd> (<https://www.brown.edu/graduateprograms/health-services-research-phd/>)

Courses

Biostatistics/Health Data Sci

BHDS 2000. Probability and Statistical Inference.

This course explores statistical concepts such as random variables, distributions, point and interval estimation, hypothesis testing, MLE, large-sample properties, bootstrap methods, and Bayesian methods. Emphasizing probability theory and mathematical statistics, the focus is on their application in biostatistics. Starting with foundational probability theory, the course progresses to statistical inference using data to understand unknown probability models in biomedical contexts. Key topics include fundamental probability ideas, foundational models, sample moments, sampling distributions, and practical applications in modeling.

BHDS 2010. Statistical Programming for Health Data Science.

Statistical computing is an essential part of analysis as it enables us to pose and answer meaningful questions. Statisticians need not only to be able to run existing computer software but also to understand how that software functions and how to interact with data in a computational setting. As programmers, we will practice constructing a solution through logic and translating that logic into code with a focus on using these skills in statistical applications. This course will ask you to think in a computational manner by giving you a peek under the hood of R, focusing on key building blocks, and developing good coding practices. You will also learn to read and evaluate others' code through group exercises and using existing libraries in R.

BHDS 2020. Design of Observational and Experimental Studies.

Introduces the basic concepts and types of experimental designs with a focus on their statistical properties. Concepts covered include randomization, replication, blocking, matching, nesting, control of variation, interaction, random and fixed factors, choice of controls, estimation of precision, and sample sizes. Types of designs to be covered include classical designs such as factorial, fractional factorial, split plot, randomized blocks, incomplete blocks, crossover, repeated measures, Latin squares, and central composite as well as more recent designs such as platform, adaptive, N-of-1, stepped wedge and dose finding. Concepts will be developed through examples, emphasizing proper analysis of each design.

BHDS 2030. Causal Inference.

This course provides conceptual and methodological foundations for causal inference. The course begins by discussing the difference between randomized trials and observational studies and providing frameworks to define and estimate causal effects in such settings. Common challenges in causal inference with observational studies, such as confounding and noncompliance will be discussed. It then covers causal inference methods for evaluating policy effects under different types of designs. Finally, the course covers some advanced topics, including directed acyclic graphs (DAGs) and causal mediation analysis.

BHDS 2040. Advanced Topics in Health Data Science.

The course covers advanced methodologies for conducting research with health data. It begins by introducing the basics of health data science and progresses to the management of large-scale databases such as health informatics and Electronic Health Records (EHR) data. Following this foundation, students will learn techniques for studying large health data, including machine learning methods, generative modeling, and the development of robust and interpretable models. Prediction modeling, including its application in pandemic surveillance, will also be covered. Toward the end, we will discuss the important topics of ethical considerations, regulatory compliance, and data security when conducting research using health data.

BHDS 2050. Problem-driven Biostatistics and Capstone Project.

For their capstone experience, students will work on a project in the area of their interest. The topics include (not limited to): performing a comprehensive literature review on a topic related to health data science, conducting a simulation study, developing software packages, performing a meta-analysis, developing prediction models, etc. Students will work with faculty supervisors to complete their capstone projects. They will submit a proposal at midterm and submit a complete paper and/or give a presentation of their work at the end of the semester.

BHDS 2110. Methods I: Linear and Generalized Linear Models.

This course offers a comprehensive foundation in statistical theory and the practical application of generalized linear models (GLM) for clinical and human health research. It will cover diverse applications of GLMs tailored to common outcomes found in health data, such as continuous, binary, count, and survival data. The curriculum spans from exploratory data analysis to model building, diagnostics, and predictive analytics, with an emphasis on applications of GLM theory for solving real-world data challenges. Case studies and examples will be drawn from various fields, including medical/pharmaceutical applications, public health, and social sciences. This course is specifically crafted for students enrolled in the online Master's program who seek to gain both hands-on proficiency and a solid conceptual grasp of regression analysis principles.

BHDS 2120. Methods II: Extensions to Regression.

This course is designed to equip students with the skills to navigate and analyze datasets of complex structures commonly encountered in biomedical research. The first half of the course will provide a foundation for statistical thinking in clinical and population health research involving longitudinal data. Topics will range from exploratory analysis, study design considerations, covariance structures, and modeling approaches for longitudinal data, including marginal and mixed effects generalized linear models for both continuous and categorical outcomes. Data and examples will come from medical/pharmaceutical applications, public health and social sciences. The second half of the course will provide a survey of advanced statistical methods for modeling and analyzing data of complex structures. Multilevel data structures are found in longitudinal studies, clustered designs, and many other settings where data are structured at multiple levels of aggregation.

BHDS 2130. Methods III: Statistical Machine Learning.

This course introduces modern statistical learning tools with a specific focus on those developed for big data. It covers three interconnected components: statistical machine learning methods, the underlying algorithms, and computational tools. The primary emphasis is on key techniques for comprehensive data analysis, including managing large datasets, exploring patterns, framing statistical problems, constructing efficient computational algorithms, and generating reports. Topics encompass data management, feature engineering, clustering, convex optimization algorithms, tree/ensemble methods, and predictive modeling. Upon completion, participants should be able to (a) manage and explore large data sources using techniques such as sampling, parallel processing, or other tools, (b) apply, evaluate, and interpret results from statistical learning tools, including clustering, decision trees, and neural networks, (c) understand the underlying assumptions and mathematical foundations of these methods, discerning how associated parameters influence outcomes, (d) compare the computational complexity of different statistical

Generalist Public Health

GPHP 2000. Using Biostatistics to Make Public Health Decisions.

The objective of the three-course data sequence is for students to develop the knowledge, skills, and perspectives necessary to use data to make public health decisions.

These three data courses complement each other, but do not have to be taken in a specific order. In this course, students learn core principles and methods of biostatistics and data analysis as they apply to public health case studies/current real-world examples. This course focuses on statistical principles as well as the applied skills necessary to answer public health questions using data, including the following: data analysis, data interpretation and the presentation of results. This course is intended to teach students both the basic knowledge required to develop and interpret quantitative studies as well as the skills to conduct basic statistical analyses.

GPHP 2010. Using Epidemiology to Make Public Health Decisions.

The goal of this course is for students to develop the foundational knowledge and skills of epidemiology that are needed to make public health decisions. In this course, students will learn the core principles and methods of epidemiological investigations and apply this knowledge to examples of real-world public health issues. Through group-based practice problems, discussions of epidemiological literature, and problem sets, students will use their knowledge of epidemiological methods and study designs to analyze public health data, critique published epidemiological studies, and make informed public health decisions.

GPHP 2010A. Using Epidemiology to Make Public Health Decisions.

The objective of the three-course data sequence is for students to develop the knowledge, skills, and perspectives necessary to use data to make public health decisions. These three data courses complement each other, but do not have to be taken in a specific order. In this course, students learn core principles and methods of epidemiologic investigations as they apply to public health case studies/current real-world examples. This course focuses on epidemiological methods and principles of study design and data analysis through analyses and critiques of published epidemiological studies as well as hands-on practice through weekly exercises and assignments.

GPHP 2020. Using Survey and Qualitative Methods to Make Public Health Decisions.

The objective of the three-course sequence is for students to develop knowledge, skills and perspectives necessary to use data to make public health decisions. These three data courses complement each other, but do not have to be taken in a specific order. Students learn and apply the theory of sampling and survey methods and their application to case studies from the first two methods courses. Topics include: survey design and planning; principles of sampling and survey terminology; questionnaire construction; protection of human subjects; data collection (including interviewing and data coding procedures); and application, presentation, and evaluation of results. The students will also be introduced to qualitative approaches to data collection and analysis. Methods covered include: participant observation, key-informant interviews, focus groups, innovative data collection strategies, and non-obtrusive measures. Students will learn and develop skills in: qualitative data collection and management, interviewing, transcript analysis using computerized software, triangulation between qualitative and quantitative data, and report preparation for qualitative studies.

GPHP 2300. Social Determinants of Health/Equity in Public Health.

There is mounting support for a social determinants of health approach across the world, from global, sociopolitical commitment to within-country action. In this course, students will examine the inequitable conditions in which people are born, live, work and age and how these conditions are propelled by inequities in power, money, and resources. Students will analyze structural, political, economic factors as well as how resource distribution decisions made outside the health sector contribute to health inequities. In the course, students will also explore innovative ways to reduce health disparities and work toward achieving health equity.

GPHP 2310. Interventions at the Local, National and Global Scale.

In this course students will learn about the role of theory, evidence, community engagement, ethics, cultural values, and cultural practices in health promotion intervention design. The course will focus on identifying population needs, assets, and capacities to inform intervention design. The course will also discuss intervention strategies across multiple levels of the socio-ecological framework and intervention implementation at the local, national, and global levels.

GPHP 2320. Evaluation of Public Health Programs.

This course will focus on how public health programs and interventions are evaluated. Students will learn about frequently used methods and planning tools as well as basic principles of budget and resource management to apply them to the development of an evaluation plan. Part of the evaluation is also assessing the impact of structural, socioeconomic, political, and organizational processes on the development, adaptation, implementation, and evaluation of public health programs and interventions.

GPHP 2400. Health Care Systems & Policy.

This course is designed to give students the skills and experiences they need to master understanding of health care systems, policy in public health, and systems thinking. Throughout the class, students will assess how the health care and public health infrastructures operate across multiple levels of government and the role of stakeholders, politics, and media in influencing public health-related policies. Building on skills related to leadership and communications, students will learn about policy design and implementation to improve the health status of populations.

GPHP 2400A. Healthcare Systems & Policy.

This course is designed to give students the skills and experiences they need to master understanding of health care systems, policy in public health, and systems thinking. Throughout the class, students will assess how the health care and public health infrastructures operate across multiple levels of government and the role of stakeholders, politics, and media in influencing public health-related policies. Building on skills related to leadership and communications, students will learn about policy design and implementation to improve the health status of populations.

GPHP 2410. Comparative Health Care Systems.

This course utilizes a comparative analysis framework for students to gain an understanding of health care systems in various high-income, middle-income, and low-income countries and analyze public health challenges as well as opportunities/strengths at these varying levels of economic development. Students will compare the organization, structure and function of health care, public health, and regulatory systems across national and international settings.

GPHP 2800. Public Health Leadership and Practice.

Leadership & Practice is part of a two-semester sequence of courses designed for students to develop and refine leadership skills to transition to leadership and management roles. These two courses complement each other, but do not have to be taken in a specific order. A large focus of these two courses is on the role of the students as leaders in their own organizations or in those in which they hope to work in the future. The first part of this course will introduce key ethical frameworks and concepts relevant to leadership in public health. Students will learn to apply ethical principles of public health to core concepts of leadership, governance, and management as well as how to develop vision, strategy and change management. Students will develop strategic plans that identify stakeholders and incorporate metrics to align operational strategies, goals and overarching mission.

GPHP 2810. Local-Global Public Health Leadership.

Leadership in Public Health is a two-semester sequence of courses designed for students to develop and refine leadership skills to transition to leadership and management roles. These two courses complement each other, but do not have to be taken in a specific order. A large focus of these two courses is on the role of the students as leaders in their own organizations or in those in which they hope to work in the future. In this course, students will learn to apply negotiation and mediation skills to address organizational or community challenges, integrate perspectives from other sectors and/or professions to promote and advance population health, and develop a strategic plan to guide an organization through changes caused by public health issues. Other leadership tools and techniques include mediating organizational change with available resources and integrating innovative and creative strategies.

GPHP 2850. Public Health Communications.

Effective communication skills are needed by leaders in public health settings. Public Health Communications is designed for students to develop communication skills to prepare them for the breadth of issues related to public health challenges. Students will learn and apply various communication strategies for different audiences and sectors and how to communicate audience-appropriate public health content, both in writing and through oral presentation. Students will learn to develop a communications plan for multiple audiences that addresses misinformation and conflicting data. In addition, students will learn the importance of cultural competence in communicating public health content to decision makers and will develop a public health campaign that demonstrates the utilization of a cultural competency framework.

GPHP 2900. Integrated Learning Experience (ILE).

As a culminating academic experience, students will complete a final project addressing a public health challenge. In this project, known as the integrated learning experience (ILE), students will apply the knowledge and skills learned through the MPH program and synthesize MPH competencies. Students will have the option to complete either a literature review or secondary data analysis project. The results of this project will be communicated through a paper, which will be structured as a scientific article that could be submitted to a public health journal, as well as a poster presentation. Students' final products will enable them to contribute to the body of scholarly knowledge on their topic area.

Healthcare Leadership**HCL 2000. Strategy and Implementation for High-Performance Health Care.**

In this course, you will learn about the challenges that make success in strategic planning and implementation so elusive. Then, you will learn how to mitigate those challenges by developing a High-Performance Mindset and ensuring alignment of the elements of the High-Performance Framework. The framework includes strategic planning and implementation, process improvement, and resource and organizational alignment. Ultimately, you will apply the framework to create value for your own organization and your Critical Challenge Project.

HCL 2010. Healthcare Policy: Yesterday, Today, and Tomorrow.

In this course, students appraise past and current political, legal, technological, and economic U.S. healthcare policy developments. Students critically examine the implementation of alternative methods of health services delivery and financing within multiple global healthcare systems. Participants question assumptions, think creatively, and consider integrated patient care solutions to prepare for change and new paradigms within the global healthcare sector.

HCL 2020. Leadership and Workforce Development.

In the rapidly changing healthcare landscape of today, leaders require critical leadership skills to guide their organizations. In this course, you will explore several essential leadership capabilities, specifically negotiation, conflict management, collaboration, team building, ethical challenges, work-force development and Diversity/Equity/Inclusion (DEI). You will have the opportunity to assess your personal leadership styles and build a robust plan for your personal, on-going leadership development.

HCL 2030. Data-Driven Decision Making: The Structure, Conduct, Review, and Evaluation of Research.

This course will provide an overview of the methods and applications of therapy economics, biostatistics and epidemiology in healthcare sector decision-making. Specific topics include: the application of therapy economics and economic evaluation to treatments, pharmacoeconomics and technology assessment; the assessment and interpretation of published epidemiological studies; institutional oversight of epidemiological research programs; the four key steps of statistical analysis (identification of scientific programs or problems of interest, collection of the required data, analysis and summary of data, and generation of a conclusion).

HCL 2040. Navigating the Regulatory Maze.

This course explores the culture of decision making as well as the structure and role of key US and international regulatory bodies. Students explore how health care is regulated with an eye towards understanding how existing regulations improve quality, enhance access, and control cost. The topics of risk management, public health, and product/drug regulation are emphasized.

HCL 2050. Info-Powr Patient Care: Electr. Health Records, Healthcare Info Techn. + Medical Information Systems.

This course will provide an overview of the major aspects of information technology (IT) as they relate to both the causes of and the solutions to current problems in healthcare. Issues of standardization, integration, communication and patient engagement will be stressed, and the types of strategic planning for and governance of information systems will be explored. During the course students will be presented with real problems in the field of HIT and explore possible solutions.

HCL 2060. Quality Improvement and the Learning Organization.

In this course, students will explore quality improvement systems, principles, drivers, and other tools that maximize patient outcomes and help create a healthcare learning organization. Students will discover how quality improvement creates value, and how to ultimately evolve/grow cultures, including a "just" culture and a culture of learning within their organization. Students will also design and implement at least two rapid cycle tests of change within their organizations. The course will explore both technical challenges and adaptive challenges (the latter ultimately concerning how to creatively empower all employees to view daily improvement as a key part of job responsibilities).

HCL 2070. Healthcare Finance & Cost Accounting.

This course builds on fundamentals of financial accounting concepts and financial statement analysis tools to expand students' competencies and skill sets for managing healthcare costs. Using a case study approach, students focus on applying management accounting tools and techniques for strategic decision-making in the C-Suite including assessing healthcare services and products using the Quintuple Aim model; preparing real-time electronic dashboards using what-if scenario analysis; analyzing quarterly and annual year-over-year physician financial performance; and forecasting financial conditions for proposing premiums per member per month for value-based contracting.

HCL 2080. The Critical Challenge: Capstone Project.

In this project, supervised by Executive Master of Healthcare Leadership (HCL) faculty, students identify a critical challenge within healthcare and then work collaboratively to integrate knowledge from various perspectives and healthcare sectors and to apply relevant skills to develop possible solutions to their challenge. Students draw upon knowledge and skills from coursework with particular emphasis on collaborating across healthcare sectors, considering ethical implications, communicating effectively and developing creative and viable solutions.

Upon completion of this project, students will be able to successfully integrate knowledge of healthcare policy, strategic planning, regulation, management, marketing, healthcare research, quality improvement, finance and information technology to address a critical challenge within healthcare. Project outcomes should prove applicable to professional practice. This course spans two semesters.

HCL 2090. Leadership and Professional Development.

Leadership is a critical piece of the student experience for the Master of Healthcare Leadership (MHL). Designed as an integrated application, it spans the length of the program and is woven into the fabric of the other courses. In both residential and online settings, students will engage in discussions, reflections, lectures, simulations and experiential activities focused on their professional development as leaders. Students will be consistently challenged to apply the leadership theory and practice they are exploring in the program to their MHL team and personal work environment. They will also have opportunities to establish professional development goals and receive support from peers and faculty relative to those aspirations. By the end of the course, students should have improved their leadership skills and be confident in their ability to assume greater levels of responsibility.

HCL 2100. Health Law.

This course explores the major legal frameworks that govern US healthcare at the state and federal levels with a focus on legal relationships among patients, providers, payers, and institutions. Students will examine how the law regulates these relationships through informed consent; malpractice litigation; fraud and abuse restrictions pertaining to in-kind payments for healthcare services, devices, and pharmaceuticals; and antitrust laws to curb anti-competitive practices in healthcare consolidation. In addition to exploring the role of law in regulating the healthcare system, students will consider broader biomedical ethical issues and legal principles in the delivery of healthcare, such as abortion, experimental treatments, human subject research, end-of-life decision-making, including refusal of treatment, physician-assisted suicide, and organ donation. This course will connect these topics to practical executive skills related to negotiation, evaluation of risk, & effective engagement of legal counsel at the leadership level.

HCL 2110. Epidemiology and Biostatistics for Healthcare.

This course will introduce the principles and methods of epidemiologic investigations and biostatistics as they apply to the healthcare context. We will illustrate the methods by which studies of the distribution and transmission of diseases in populations (including disease outbreaks and epidemics) can contribute to an understanding of etiologic factors and can help inform treatments. We will introduce various study designs, including randomized trials, cohort studies, and case-control studies. We will also introduce the building blocks of evidence-based medicine, i.e., systematic reviews and meta-analyses. Quantitative and analytic methods covered during the course include measures of morbidity and mortality, statistical concepts, and measures of diagnostic test accuracy and treatment effectiveness.

HCL 2120. Health Economics: Jargon, Theory, and Analytical Methods.

This course is intended to provide a basic foundation in the methods and application of health economics; the concepts, topics, cases, and exercises are intended for healthcare leaders delivering care, paying for and producing healthcare goods and services, as well as those regulating, managing, and overseeing the delivery of healthcare. This course provides a high-level overview, understanding, and working knowledge of economic principles and methods applied in the healthcare sector. Applications to real healthcare delivery and financing issues are emphasized throughout the course, with students gaining experience analyzing health policy decisions that arise from basic economic choices that must be made concerning the efficient and equitable production, allocation, and consumption of healthcare resources. Upon completion of this course, students will demonstrate a technical understanding of the theory, principles, and methods of health economics.

HCL 2130. Data Analytics.

This course will introduce the principles and methods of data analytics as they apply to the healthcare context. We will illustrate the methods by which big data can contribute to an understanding of the underlying problems and challenges confronting our healthcare system. We will also introduce a number of case studies illustrating how analytics can solve strategic and operational issues. Students will work in their teams to understand and solve the case studies.

HCL 2140. Marketing for Health Care Transformation.

In today's rapidly changing healthcare market, leaders require critical marketing skills to help them guide the transformation of their organizations. In this course, you will develop several essential marketing skills, specifically in customer listening, segmentation & positioning, branding, social media, pricing, and product innovation. This course is specifically designed to discuss marketing in the healthcare context with a mix of examples from payers, providers, and the life science spaces. You will have the opportunity to apply the newly acquired knowledge. Upon completion of this course, you will be able to leverage strategic marketing constructs and frameworks in daily healthcare leadership situations that will be critical for changing behaviors of different stakeholders within the healthcare environment. You will also be able to use these tools and frameworks to help you proactively identify and address gaps in Diversity, Equity & Inclusion (DEI).

HCL 2150. Health Technology, Data, and Analysis.

Challenges and opportunities abound as healthcare has raced into the digital age. Emerging technology and vast pools of data create both significant challenges and industry changing opportunities. This course will provide you with background and context for exploiting these changes. The first part of the course tracks the evolution of information technology and electronic medical records. It explores the decisions you must make, and the tradeoffs associated with planning and using this new technology. It prepares you to deal with the future of Cyber Security, Artificial Intelligence, Block Chain products and Quantum Computing. The next is will introduce the principles and methods of data analytics, and pitfalls to avoid, as they apply to the healthcare context and social determinants of health. The final part dedicated to the principles and methods of epidemiologic investigations and biostatistics in the healthcare context.

HCL 2200. Digital Health Innovations and AI in Healthcare.

This course will provide an overview of the design, evaluation, and deployment of digital health innovations in the healthcare setting. This course will also cover key aspects of artificial intelligence (AI) that is increasingly poised to impact the practice and delivery of healthcare. Through examination of primary literature, students will gain insight to the promises and challenges of digital health and AI in clinical and public health contexts.

Public Health**PHP 0060. Complexities and Challenges of Global Health.**

Global health refers to the health and wellbeing of all of the world's populations, regardless of geography, country, or citizenship. Many of today's most pressing issues, from climate change to political conflict and population displacement, have profound implications for health. This course will introduce students to fundamental topics in global health, and it will encourage them to approach global health issues through a lens of equity and responsibility toward people and populations beyond United States' borders. Students will develop a framework for understanding contemporary health challenges and learn how responses to these complex problems require collaboration across health and non-health sectors of society. This course will challenge students' assumptions about world health while strengthening their skills in data literacy and critical analysis.

PHP 0080. Epidemiology of Hope: Historical Perspectives on Public Health in the Ocean State.

What can we learn about the world's most pressing public health challenges by looking to the past? This first-year seminar aims to introduce learners to the history of communities across Rhode Island, using the stories of everyday people to explore how key historical developments have led to changes in the health of populations over time. Blending methods from a range of disciplines, we will work together to develop our capacities for critical analysis and interpretation, putting scientific knowledge about the drivers of health and well-being in their historical context. In doing so, this seminar aims to prepare to engage meaningfully in public health activities in local communities across the Ocean State.

PHP 0300A. Pandemics and Global Epidemics.

This online summer-session course will provide an intensive introductory-level learning experience on several important pandemics and global epidemics throughout history. The course will begin by covering the basic biology of infectious diseases; the different ways infectious diseases can spread throughout populations; what makes an infectious agent successful; and how changes in population structure and rapid advancements in population movement impact infectious diseases. We will then review important pandemics and global epidemics throughout time, including the 1350 bubonic plague, 1918 Spanish flu pandemic, HIV/AIDS global epidemic, and the coronavirus outbreaks. We will examine the basic characteristics of each of these diseases, how they are believed to have spread to humans, how they spread globally, what prevention and control measures were implemented, and what was learned. The course will conclude with a discussion of the concept of "pandemic preparedness."

PHP 0300B. The Interplay Of Ethics, Politics, and Science in Public Health.

Vaccine requirements, taxation of soda and cigarettes, communication campaigns on healthy lifestyles – these public health interventions have saved lives. These different measures illustrate the range of approaches in public health, from laws that force individuals to take action to persuasive strategies to convince people to do so. These approaches also raise questions: When is it justifiable to employ coercion to achieve public health gains? Can persuasion be manipulative? What groups may be empowered, or marginalized, by these measures? In this course, we will explore how scientific evidence, socio-political forces, and ethics intersect to frame public health issues, policies, and research. This course will help students develop analytical skills that can be employed to examine controversial topics and evaluate public health programs critically. These skills can be applied to varied contexts and settings, being foundational in students' professional and academic careers.

PHP 0310. Health Care in the United States.

Introduction to the health care delivery system. An overview of the U.S. health care financing, delivery and regulatory system. Considers the interaction between paying for and providing and assuring the quality of health services; changes in one component of the system inevitably affect the others. Addresses the balance between employer funded health insurance, publicly funded health insurance and the consequences of not being insured. Six discussion sections will be arranged. Open to undergraduates only. This is a core class for the concentration in public health.

PHP 0320. Introduction to Public Health.

An introductory overview of the U.S. Public Health System with an emphasis on the core functions of public health, challenges and strategies for working with communities, and specific health issues that impact the health of the population. Presents a comprehensive overview of the environmental and behavior factors associated with health promotion and disease prevention.

PHP 0330. Health Law and Policy.

PHP 0330 provides an overview of how law shapes the U.S. health care system, including key health policy aims of access, quality, affordability, and equity. "Health Law" includes the laws and public policies that apply to the health care system or affect health care delivery. Health law profoundly shapes the U.S. health care system and the health and welfare of the population. The law has an important role in advancing (or retrenching) health equity through enforcement of individual rights and structuring the distribution of resources within the society. This course will cover core health law topics, including the regulation of health insurance and financing, quality, competition, provider-patient relationships, reproductive health care, and antidiscrimination in health care. The course will surveying the historical development and existing health law and policy and apply policy evaluation frameworks to engage in policy analysis.

PHP 0400. Intro. to Health Disparities & Making Connection btw Structure, Social Determinants&Health Equity.

Course provides an introduction to the examination of health disparities in the U.S. Through assigned readings, lectures, guest speakers, and class discussions—this course will provide a broad overview of health disparities in the United States and examine them through intersecting structural and social determinants (e.g., race and ethnicity; gender; immigration status; socioeconomic position; age; sexual orientation; policy). This course also examines how stigma, residential segregation, implicit bias and the debates around genetics also contribute to health disparities. Lastly, we will also critically delve into the ethical dimensions, the role of social networks as well as behavioral health and public policy interventions. Community leaders will be invited to discuss their respective organizations, discuss ongoing community-university partnerships, advocacy, and networking.

PHP 0650. From Manufacturer to Patient: Why is the Cost of Prescription Drugs So Darn High?

In 2015, estimates of drug spend in the United States was about \$457 billion and could be as high as \$610 billion by 2021. The reasons for the continued escalating costs of prescription drugs are unclear. In this course we will examine the complex chain of discounts, rebates and markups that impact the price of a prescription drug from the manufacturer's list price to the time it is dispensed to the patient. We will examine the role of major stakeholders in the drug supply chain including the manufacturer, wholesalers and distributors, pharmacy benefit managers and health plans. PHP 0310, Healthcare in the United States, is a prerequisite. Students who feel they have adequate background and understanding of health insurance, Medicare and Medicaid and model of care delivery and financing but have not taken PHP 0310 should contact instructor for override. Students must have basic knowledge of terms associated with managed care and healthcare issues routinely written about or featured in the news.

PHP 0700. Global Public Health Interventions.

This is an introductory course designed to provide an overview of social and behavioral global health interventions. This course will introduce the history of global public health interventions and the philosophy of global public health including its core values, concepts, and functions. It will present an overview of design, implementation, and evaluation considerations for behavioral and social interventions in global settings with a particular focus on settings of resource scarcity. Furthermore, this course will focus on understanding the socio-economic, behavioral, biological, and other factors that impact human health and contribute to health disparities globally. To encourage participative learning, the class will collectively decide on 4-5 health topics to dive deeper into and apply knowledge learned at the beginning of the course to global health topics of interest.

PHP 0710. Introduction to Modern South Asia: Public Health From Theory to Practice (SAST 0700B).

Interested students must register for SAST 0700B.

PHP 0720. Public Health and the Environment.

This course approaches global public health through the lens of environmental determinants. We will examine our world's changing environment and its relationship to health with particular focus on environmental health challenges in low- and middle-income countries (LMICs). Students will explore important environmental issues that impact population health and apply public health perspectives to understanding determinants of disease and contextualizing and addressing global health challenges.

PHP 0850. Fundamentals of Epidemiology.

What is epidemiology? It is the study of the occurrence and distribution of health-related states and processes in specified populations and the application of this knowledge to control health problems. This course will provide learners with a strong foundation in the concepts and methods needed to describe the burden of a disease in communities, identify what causes these poor health outcomes, and evaluate the impacts of interventions meant to improve health.

PHP 1040. Focus Groups & Interviews for Health Research - Qualitative Methods: The Basics.

This asynchronous, online course provides an ideal introduction to the design and conduct of qualitative research studies. We will focus on a simplified yet rigorous approach to the collection of interview, focus group, or textual data and methods to produce reliable research findings. We will address key elements necessary for publication in a scientific journal. You will learn how to construct a conceptual model, select and implement an approach to data collection, minimize bias, plan for subject recruitment, develop a data management plan, and apply thematic analysis using basic functions of NVivo qualitative analysis software. Although the focus of this course is on health topics, the qualitative methods employed apply to a wide variety of domains including social sciences, education, program evaluation, business/market research, and political science.

PHP 1070. Global Burden of Disease.

This is an advanced introduction to global public health, defining and critically examining key topics and concepts through an interdisciplinary lens. From historical efforts in mid-20th century international health assistance, to the early 21st century explosion of global health funding, to current efforts to decolonize global health and engage in more equitable global partnerships, this course examines major social and scientific developments. Readings, lectures, in-class discussions and small groups explore changes in the underlying causes of morbidity and mortality during global social, economic and health transitions, the biological and social ecology of global disease patterns, and efforts to improve health in under-resourced settings. Guest lecturers offer different perspectives on the global burden of disease. An in-depth research paper worth 40% of the final grade is the scholarly centerpiece of course; this is a rigorous semester-long project. There are two exams.

PHP 1100. Comparative Health Care Systems.

Focuses on principles of national health system organization and cross-national comparative analysis. Emphasizes application of comparative models to the analysis of health and health-related systems across nations. Addresses research questions related to population health and systems' performance.

PHP 1101. World of Food: Personal to Global Perspectives on Nutrition, Agriculture and Policy.

This course explores food and nutrition in the US and around the world through the lens of public health, economics, and agriculture. The hybrid setting requires students to engage in and learn about the local Providence community and their own community at home from perspectives likely not previously noticed. Students will read from many sources; will review documentary films; and will write for several audiences.

At the completion of this course, students will:

- Describe how nutrients are consumed through foods
- Explore food consumption in the US and abroad
- Describe US agricultural production techniques
- Propose policy changes to the current food system

PHP 1160. The Global Burden of Mental Illness: A Public Health Approach.

Provides an introduction to the classification, epidemiology, etiology, treatment and potential prevention of psychiatric disorders from a population perspective. Reviews the magnitude and social burden associated with mental disorders worldwide and opportunities to enhance prevention and treatment.

Covers concepts and methods used to study mental illness at the population level, including definitions of "normality" and "pathology", current classification systems and measurement approaches to assess psychopathology and severity and cross-cultural issues.

Covers the prevalence, risk factors, and etiology of major disorders of children, adolescents and adults, including autism spectrum disorders, attention deficit disorders, mood and anxiety disorders, schizophrenia and substance use disorders. PHP 0850 OR prior coursework in psychology, epidemiology, sociology or related fields.

PHP 1300. Parenting Behaviors and Child Health.

Parents play an integral role in developing, supporting, and managing children's health-related behaviors. We will examine how parenting influences child behaviors and health outcomes across development, from infancy through adolescence. We will explore parenting styles, knowledge, attitudes, and practices, including specific behaviors in various domains such as food parenting and sleep parenting. Using socio-ecological models and a community-engaged approach, we will investigate how sociodemographic characteristics, culture, family structure, the physical environment, and other contextual factors impact parenting and subsequently child health behaviors and outcomes. We will discuss of the unique experiences and stressors of diverse and/or non-traditional families including single parent households, families in poverty, LGBT families, and immigrant and/or racial/ethnic minorities. Finally, we will examine parenting as a modifiable intervention target to improve child health. Through it all, students will understand how parenting behaviors shape child health.

PHP 1400. HIV/AIDS in Africa: A Multidisciplinary Approach to Support HIV/AIDS Care and Treatment Programs.

The course is intended to challenge students from different disciplines to develop strategies to address the challenges of establishing and sustaining HIV/AIDS care and treatment programs in Africa. The course will begin with a general introduction to HIV/AIDS to provide a foundation wherein students will obtain a basic scientific and sociological understanding of the disease. Discussion topics on: the impact of AIDS, introducing antiretroviral therapy in Africa, monitoring and evaluating ARV therapy scale up and developing a country wide plan for a national laboratory system to support HIV/AIDS care and treatment will be facilitated through the use of case studies. Enrollment limited to 25 juniors and seniors. Graduate students with permission of instructor.

PHP 1450. COVID-19, Public Health, and Health Policy.

The impact of COVID-19 on US society has been profound. Caused by the newly emergent SAR-COV2 virus, the pandemic required public health practitioners and healthcare systems to pivot to keep the public safe under challenging circumstances. In the US, local municipalities, state governments, and the federal government developed varying, and at times conflicting, policies to guide the public health response. Using a case-study approach, this course will explore how public health and health policy intersected and clashed in responding to this 100-year pandemic. We will examine how different states and federal agencies responded to COVID-19 and learn from leaders directly involved in the pandemic response. Due to the limited class size, enrollment preference will be given to Juniors, Seniors, MPH and graduate students.

PHP 1460. Public Health Law and Policy.

Laws and policies shape public health in profound ways. The U.S. Constitution frames and limits government authority to protect and promote public health. It also provides protections for individual rights that often are in tension with public health's focus on the common good. Federal, state and local laws and policies structure the distribution of society's resources and—as interpreted, implemented and enforced—can have serious implications for health equity. The COVID-19 pandemic has exposed deeply polarized views among Americans about the role of government in public health and has laid bare vast structural health inequities. This course will explore the Constitutional foundations of public health law; how public health powers are distributed across different levels and branches of government; legal and policy strategies for addressing infectious and chronic diseases and injuries; and the role of laws and policies in structuring—and remedying—health inequities.

PHP 1480. Introduction To Public Health Economics.

This course builds an understanding of the healthcare delivery and financing systems from a health economics perspective. It will draw examples that illustrate the production of and demand for health, healthcare, and health insurance. The goals of the course are twofold. First, it will provide the basic intuition of the fundamental economic models such as health production, demand for healthcare and demand for insurance. Second, it will introduce key empirical findings in the public health economics literature. Emphasis will be placed on key theoretical insights as well as practical and public health policy implications.

PHP 1501. Essentials of Data Analysis.

This course covers the basic concepts of statistics and the statistical methods commonly used in the social sciences and public health with an emphasis on applications to real data. The first half of the course introduces descriptive statistics and the inferential statistical methods of confidence intervals and significance tests. The second half introduces bivariate and multivariate methods, emphasizing contingency table analysis, regression, and analysis of variance. This is designed to be a first course in Statistics. The course is intended for Public Health or Statistics concentrators. Others can register with instructor's permission. There are no prerequisites.

PHP 1510. Principles of Biostatistics and Data Analysis.

This course is the first in a two-part sequence (the sequel being PHP 1511: Applied Regression Analysis), designed to provide students with a broad-based exposure to modern methods and applications of probability and biostatistical inference. It is geared toward students concentrating in statistics and other students who desire a course that combines the mathematical underpinnings of statistical methods with timely applications in the biological, life and health sciences and related fields. Applications to real data from a variety of studies are used throughout the course to illustrate the materials, but the emphasis is on the principles of inference and the underlying theory. This course will also give students experience manipulating and analyzing data using the R statistical software package with RStudio interface. Students will work with statistical software during the homework assignments, but this is not a course in R.

PHP 1511. Applied Regression Analysis.

This course provides a survey of regression techniques for outcomes common in public health data including continuous, binary, count and survival data. Emphasis is on developing a conceptual understanding of the application of these techniques to solving problems, rather than to the numerical details. Extensive use of the computer will be made for analysis of datasets.

PHP 1540. Alcohol Use and Misuse.

Reviews the epidemiology of alcohol use, abuse, and dependence and examines its neurobiological and behavioral underpinnings. Covers etiology including physiological, genetic, psychological and social cultural influences, and prevention, brief intervention and treatment considerations. Course background in psychology, sociology, or public health is recommended. Recommended prerequisites: PHP 0320 and CLPS 0010. Enrollment limited to 20 juniors, seniors, and graduate students.

PHP 1550. Substance Use and Vulnerability to Addiction.

This course will examine how we classify substance use, substance misuse, and substance use disorders and how substance use impacts population health, including exacerbating health disparities. We will critically examine and compare prominent models of why people become addicted to substances. Multilevel factors influencing vulnerability will be analyzed, including individual factors such as biological susceptibility, personality, and co-occurring psychiatric disorders; interpersonal factors such as peer use and familial support; community factors such as access to alternative reinforcers and positive group identity; and sociopolitical factors such as systemic bias, racism, and stigmatizing policies and practices. Using the socioecological model as a guiding framework, students will reflect on their own risk and protective factors as they consider the complex influences that predispose some people and population groups to substance misuse more than others.

PHP 1551. Substance Use Prevention, Treatment, & Policy.

This course will focus on the public health response to substance misuse and addiction. We will critically examine substance use-related policies, including evaluating their positive impacts as well as their potentially damaging consequences, particularly for racial and ethnic minority communities. We will discuss the key tenets of mutual help programs, behavioral treatments, and pharmacotherapies for addictions and discuss their efficacy, cost effectiveness, population reach, and capacities for addressing health inequities. Finally, we will discuss how a range of substance use prevention and harm reduction programs are developed and evaluate evidence for their effectiveness in the context of existing health inequities. Suggested prerequisites are one epidemiology course: PHP 0850, 2120, or 2150. Enrollment restricted to juniors, seniors and graduate students. Others with instructor permission. PHP1550 is recommended but not required.

PHP 1560. Using R for Data Analysis.

This hands-on course teaches foundational skills in data analysis and programming using R. Students will learn to summarize and visualize data, implement statistical analyses, and produce reproducible reports with Quarto. Key topics include understanding the base data structures in R, simulating from probability distributions, conducting an exploratory data analysis, implementing hypothesis testing, and larger programming structures such as loops and functions. The course also focuses on writing clean, understandable, and modular code by employing good coding practices. Students will gain experience in designing code to build an end-to-end data analysis pipeline. This course is taught as a flipped course.

PHP 1580. Pandemic Game Changers: Preparing the Next Generation of Decision-Makers for Emerging Bio Threats.

Pandemic Game Changers will examine the public health and public policy issues vital to mitigating pandemic risks. It will afford students opportunities to analyze scenarios, identify and hone policy solutions, and learn how to convince decision-makers to take the steps needed to address the public health crises that pandemics cause. Students will be required to participate in interactive Q&A with field experts, perform a group analysis of an outbreak scenario, make a written and oral analysis of policy solutions for a biosecurity or biosafety risk, and provide a policy memo and persuasive oral briefing outlining views and potential next steps on one specific pandemic-related public policy issue.

PHP 1600. Obesity in the 21st Century: Causes, Consequences and Countermeasures.

The scope of obesity knowledge is too large to cover during one single course, therefore we will focus primarily on obesity-related health outcomes, assessment of obesity, obesity epidemiology, social and behavioral correlates of obesity, obesity and stigma, policy and interventions across population groups. The readings for this course are multi-disciplinary in nature and integrate epidemiological, biological, sociological, political and philosophical perspectives. This course is specific to the United States and thusly all readings will reflect this contextual focus. Enrollment limited to 30.

PHP 1610. Tobacco, Disease and the Industry: cigs, e-cigs and more.

This class will help students gain knowledge about tobacco use and cigarette smoking, nicotine addiction, novel new products, and the tobacco industry. We will cover the link between smoking, disease, and death; smoking prevalence and nicotine dependence; novel products such as e-cigarettes and Modified Risk Tobacco Products; the role of the tobacco industry; behavioral and pharmacological smoking cessation treatments; community, organizational, and media campaigns; tobacco policy; and, global tobacco control. The course is designed as a seminar course emphasizing class discussion and debate, as well as in-depth discussion of the assigned readings. Suggested prerequisites PHP 0850, PHP 2120, or PHP 2150

PHP 1650. Race, Racism and Health.

The primary aim of this course is to expose students to state-of-the-science conceptual and methodological approaches to critically analyze and identify strategies to address racial and ethnic health disparities. A multidisciplinary approach using readings from disciplines such as sociology, medicine, and biology will be used to provide a foundation for examining scientific literature and conducting intervention research on racial and ethnic health disparities.

PHP 1670. Public Mental Health: A Framework for Studying and Preventing Mental Disorders.

This course provides a framework for studying and preventing mental disorders. Key concepts in public health and epidemiology will be applied to mental and behavioral health disorders including depressive, anxiety, and substance use disorders. Major topics of this course include: 1) classification systems for mental disorders, 2) public health surveillance of mental disorders, 3) the burden, epidemiology, and determinants of mental disorders, and 4) strategies for mental disorder treatment and prevention, with a focus on health policy.

PHP 1680I. Pathology to Power: Disability, Health and Community.

This course offers a comprehensive view of health and community concerns experienced by people with disabilities. Guest speakers, and hands on field research involving interactions with people with disabilities will facilitate the students gaining a multi-layered understanding of the issues faced by people with disabilities and their families.

PHP 1680U. Intersectionality and Health Inequities.

This interdisciplinary seminar course examines health inequities in the US using an intersectional lens. Intersectionality addresses how multiple power relations and systems of oppression impact the lived experiences of multiply marginalized groups in historical and social context. During this course, we will discuss the historical and theoretical underpinnings of intersectionality and its conceptual and methodological applications to public health. We will also examine how multiple forms of discrimination – including racism, sexism, classism, heterosexism, cisgenderism, xenophobia, and ableism – shape health inequities among diverse multiply marginalized groups in differential and compounding ways. This course will also address how multiply marginalized communities have resisted oppression and discrimination and promoted their own health and well-being through community organizing efforts and social movements. Finally, we will identify the implications of using an intersectional approach to addressing health inequities for research, policy, and practice.

PHP 1681. Reproductive Health, Rights and Justice.

This course will explore how reproductive health, healthcare and freedom are regulated in the United States. The course will apply an reproductive justice framework that investigates laws, policies and practices affecting reproductive rights and bodily autonomy, but that also applies an intersectional lens to consider how race, gender, sexuality, class, ability, and immigration status affect reproduction and parenting for marginalized communities. We will also explore how religion and ideas of morality shape laws, policies and practices implicating reproductive health, bodily autonomy and notions of reproductive justice. Topics will include: eugenics, sterilization, contraception, abortion, criminal fetal endangerment laws, substance use during pregnancy, reproductive rights of incarcerated populations, access to reproductive healthcare, assisted reproduction, surrogacy, maternal health disparities, the child welfare system, and policies related to parenting and family health. Readings will include public health, law and policy analysis and landmark legal opinions.

PHP 1685. Digital Innovations & Artificial Intelligence in Healthcare.

The way that Americans (and people from around the world) are receiving health care is changing rapidly. Instead of going to the doctor's office, people are receiving care via apps and video visits. Instead of seeing a therapist, people are going to AI chatbots. Instead of waiting for a patient to present with a complication, doctors are proactively monitoring patients' chronic illness via Bluetooth-enabled devices. What is the landscape of these changes? What is working and what is not working? In other words, which new models are improving quality, access, and health care affordability? How do you assess that? How are health systems incorporating these changes? How should "we" (i.e., society) regulate and pay for these new models of care? These are the questions we try and address in this class. This course provides an overview of digital health applications

PHP 1689. Technology and Mental Health: Evidence, Ethics, and Innovation.

This course aims to provide you with knowledge and skills in evaluating and designing technology-driven support for mental health. It also seeks to enable you to develop critical perspective on the role of technology plays in mental health. The course has three major themes, which will be covered sequentially: (a) evidence on technology-mediated mental health interventions, (b) the impact of technology on psychosocial health, and (c) questions of equity, accessibility, and ethics that arise as a result of the intersection of technology and mental health.

PHP 1690. Technology and Health Behavior Change.

Lifestyle behaviors like poor diet, low physical activity, drug/alcohol use, and poor medication use contribute to some of the top causes of morbidity and mortality globally, including heart disease, diabetes and many cancers. Changing these behaviors is difficult and requires substantial, long-term effort and commitment on the part of both patients and providers. This course is a survey of computing systems and technologies that are designed to help users make healthier choices. We will explore how and why these systems work, the theories behind them, and how to find/evaluate the evidence supporting them, using both popular industry products and more experimental programs as examples. Students interested in gaining hands-on experience with these technologies and learning more about the processes behind their features should take this course.

PHP 1695. Effective Communication in Networked Information Ecosystem.

This course, which was designed for MPH students and advanced undergraduates, will provide a comprehensive understanding of the ways in which the contemporary information environment has impacted the production, consumption and dissemination of information. This course considers the good, bad and ugly when it comes to the contemporary information environment, providing a thorough theoretical grounding as well as practical training for effective communication, whether it's talking to your conspiratorial uncle around the dinner table, disseminating a new piece of research, or launching a population level health behavior change campaign. The course will draw from a range of case studies from the past few years, as well as bringing in real-time examples as the course progresses.

PHP 1700. Current Topics in Environmental Health.

This course is designed to introduce students to the field of environmental health, and demonstrate how environmental health is integrated into various aspects of our lives, both directly and indirectly. Topics to be covered include: toxic metals, vector-borne disease, food safety, water quality, radiation, pesticides, air quality, hazardous waste, risk assessment, and the role of the community in environmental health. Several topics will be presented by guest speakers so that students can learn from the expertise of professionals in the field. Enrollment limited to 65.

PHP 1710. Climate Change and Human Health.

Global climate change is occurring and these changes have the potential to profoundly influence human health. This course provides students with a broad overview of the diverse impacts of projected climate change on human health, including effects of changing temperatures, extreme weather events, infectious and non-infectious waterborne threats, vector-borne disease, air pollution, the physical and built environment and policies to promote mitigation and adaptation. Students will explore multiple sides of controversial issues through lively and informed class discussions, writing exercises, and participation in a series of end-of-term debates. Enrollment is limited to 20 students.

PHP 1720. Environmental Exposure Assessments in Practice.

Exposure assessments are the key to linking environmental contaminants to human health. This course will provide you with a detailed overview of environmental exposure assessment and its role in providing tools and metrics for defining exposures in epidemiological studies. This includes the design of community and personal monitoring studies, the techniques and equipment used for sampling and analysis, and the interpretation of data. Simultaneously, students will develop and carry out an environmental exposure assessment in the local community and will also learn about and put into practice topics such as community engagement, community surveying, environmental justice, and public health communication strategies.

PHP 1725. Rural Public Health.

This course will be anchored by a class research project, where together, we will work through a public health topic in real-time. The overarching goal of this class is to provide students with a solid basis for understanding public health issues in rural settings, and how to carryout, thoughtful, and impactful public health studies and environmental exposure assessments in rural communities. For the Spring 2024 semester, students enrolled at Brown University and Tougaloo College will develop a public health research project based in Gloster, Mississippi, a rural community of only 897 residents, grappling with pollution coming from one of the largest wood pellet manufacturing companies in the world. We will leverage a current and ongoing air pollution monitoring network and public health study to examine the relationship between air quality and community health.

PHP 1730. Climate Risks and Health Solutions.

Climate risks are no longer theoretical. This course provides students with a broad overview of the health consequences of climate change resulting from changing temperatures, extreme weather, air pollution, and water quality. The course will introduce students to practical solutions that both reduce greenhouse gas emissions and improve human health. These solutions include energy efficiency and decarbonization in buildings, electrifying transportation, changing food production, and engagement with healthcare organizations. Students will be exposed to a range of practitioners working to implement solutions in a variety of sectors and will gain practical skills needed to support the development of regulations, policy, and programs. Assignments will give students experience developing written materials and practicing oral skills to engage in climate policy work. Note that enrollment is limited to 20 students.

PHP 1796. The Historical Determinants of Public Health.

An ignorance of public health history is partly to blame for our imperfect response to COVID-19 in the United States. Throughout the pandemic, the reductive framing of public health's greatest challenges—from addressing vaccine hesitancy, the rampant spread of pseudoscience and misinformation, or pervasive stigma and discrimination in communities of color—allowed our field to overlook the deep and undeniable historical roots of contemporary public health practice. This course will highlight the central role historical determinants of public health continue to play in shaping health policy and response. Using the COVID-19 pandemic as a prism, students will critically examine the successes and setbacks of earlier eras in public health history, providing them with the historical framing necessary to better understand and advocate for impactful public health interventions in the present and future.

PHP 1802S. Human Security and Humanitarian Response: Increasing Effectiveness and Accountability.

Disasters, natural and anthropogenic, pose significant threats to human security. Effective humanitarian action is important for both short and long-term responses to complex emergencies. The array of factors contributing to the economic and human losses experienced in both natural disasters and complex humanitarian emergencies are vast and complicated, and the strategies employed to mitigate and heal the damage caused by these disturbances must be equal to the task. This course covers diverse topics including the role of NGOs, UN agencies, local governments, peacekeepers and military in humanitarian response; economic impact of humanitarian aid; the evidence base for humanitarian interventions.

PHP 1810. Community-Engaged Research in Public Health.

This course will provide students with the foundational knowledge, perspective, and skills to conduct community-engaged research. While this course will introduce a spectrum of community-engaged research approaches, we will focus primarily on the community-based participatory research (CBPR) approach. We will begin with an introduction to community-engaged research's concepts and principles and a brief history on the theories that shaped CBPR, including how power/privilege influence the way each individual approaches research. We will then move through case studies of CBPR projects and how specific methods can be applied within CBPR. We will end with examples on how CBPR can be used to help shape health policy and advocacy. Students will engage in interactive learning through facilitated discussions, case studies, and reflective activities, will learn real-life applications of CBPR from invited guest speakers and work in groups to complete a community-engaged project.

PHP 1820. Designing Education for Better Prisoner and Community Health.

This course will provide the needed background and context for understanding the multiple issues and challenges facing prisoners and the national justice and health systems that impact their lives. In addition to contextual background, students in this course will attain the knowledge and skills needed to develop a final practical, real world health communication/ intervention project that addresses one or more health literacy challenges facing people who are incarcerated and other low income, medically disenfranchised individuals. Students interested in taking the course must contact the professor directly for an application to obtain an override.

PHP 1821. Incarceration, Disparities, and Health.

This survey course is designed for students who want to interrogate the central role that public health policies and practices play in creating and sustaining the nation's epidemic of incarceration. The course will focus on individuals who have experienced incarceration and the under-resourced, low-income, and medically disenfranchised communities from which these individuals come and to which most will return. Students will learn about the lived experiences of those directly impacted by the criminal legal system through invited speakers who have been incarcerated. Experts who work at the intersection of the criminal legal and health systems will also be invited to the class. Undergraduates who have taken PHP 0310 and PHP 0320 and MPH candidates will have priority for enrollment. Unfilled spaces in the class will be available to undergraduates who have not taken PHP 0310 and PHP 0320.

PHP 1822. Effective Health Communication With Medically Underserved Populations in an Applied Learning Setting.

This course is designed to provide a foundational understanding of the creation, use, and impact of health communication tools for low-income, medically underserved audiences. The course is group and project-focused. Student project teams will conduct focus groups and key informant interviews with 1) individuals who have been directly impacted by the epidemic of incarceration and 2) experts in the community, to conceptualize, develop, and prototype health communication projects. Projects may address health literacy needs faced by individuals and their communities and/or advocacy needs designed to address systemic or structural health barriers. The course will explore how health communication can be used to effectively address stigma, connect audiences to resources and education, to engage public audiences with emerging concerns, and drive data and advocacy. Learning objectives: - Complete a health communication project or campaign with a small team of other students and

PHP 1830. Harm Reduction as Public Health.

This course explores harm reduction as a public health framework and social movement rooted in dignity, justice, and care for people who use drugs (PWUD). Co-designed with local harm reduction professionals, it centers lived experience while providing students with historical, political, and practical foundations. Core topics include harm reduction philosophy and principles; drug criminalization, stigma, and racialized policy; and current drug trends. Students will examine U.S. and global harm reduction policies and programs, service models, emerging technologies, and the contributions of the harm reduction workforce. Weekly spotlights address communities disproportionately affected by drug-related harms, including people of color, gender-diverse individuals, and people experiencing housing instability. Through case studies, guest speakers, and community-based learning, students will develop an evidence-informed, community-driven harm reduction intervention tailored to a specific population and setting.

PHP 1854. The Epidemiology and Control of Infectious Diseases.

Course objectives are to introduce students to methods and concepts in the study and control of infectious diseases. By the end of this course, students will have a solid foundation in the distribution, transmission, and pathogenesis of major infectious diseases that affect human populations. We will investigate methods to design and evaluate public health strategies to prevent or eliminate infectious diseases, including: outbreak investigation, disease surveillance, infection control, screening, and vaccination. The course is open to undergraduate students who have completed PHP 0320 or PHP 0850, and to graduate students who have completed or are concurrently enrolled in either PHP 2120 or PHP 2150.

PHP 1855. Infectious Disease Modeling.

This course will introduce infectious disease modeling and its applications. Students will learn to build computational models of infectious disease, fit models to data, leverage models to develop predictions, and target public health interventions. We will explore how models were used during the COVID19 pandemic, and are being used to project the health effects of climate change. We will introduce core mathematical underpinnings including dynamical systems and statistical approaches for model fitting. Students should be familiar with calculus and have prior coding experience in R, Python or Matlab. There are no required prerequisites but students in the Applied Epidemiology MPH sub-concentration should email the instructor before enrolling.

PHP 1856. A One Health Approach to Emerging Public Health Issues.

One Health describes an approach to disease monitoring, research, and prevention that stresses the natural linkages between human populations, animal and plant populations, and the environment broadly. Students will learn how the One Health framework relates to classic epidemiological concepts and can be applied to conduct more effective zoonotic and vector-borne disease surveillance. This course emphasizes systems-thinking, multi-disciplinary approaches to research, and collaborative partnerships. Active learning strategies such as case studies will be used to demonstrate real-world application for emerging public health issues such as climate change and pandemic preparedness.

PHP 1880. Meditation, Mindfulness and Health.

This course provides an overview on the relation of meditation and mindfulness (the ability to attend in a nonjudgmental way to one's own physical and mental processes during ordinary, everyday tasks) with various health outcomes and disease risk factors such as depression, anxiety, diet, substance use, and cardiovascular disease. Mechanisms by which mindfulness may influence health will be addressed. The course will assess studies in the field for methodological rigor, and students will be taught strengths and weaknesses of current research. Students will be taught various mindfulness practices including direct experience with mindfulness meditation.

PHP 1885. Measuring Mindfulness.

Recently, the cover of Time magazine declared a "mindful revolution" due to its popularity and growing body of research suggesting that mindfulness may help to treat a number of health-related problems from general stress to anxiety to addiction. However, little is known about the underlying mechanisms of how it works. This course will investigate the many ways that mindfulness is measured (e.g. self-report, behavior, EEG, fMRI etc.), and use these as a doorway for our own experiential exploration of what mindfulness is for ourselves.

PHP 1890. The Craving Mind.

We are creatures of habit. Driven by biological processes set up to help us survive, our minds are constantly craving experiences and substances—from smartphones to romance to alcohol—and this craving leads to habit formation. This course will explore the behavioral and mental processes that foster craving and consequent habit formation, the impact these have on individual and societal health, and how we can "hack" our own neurobiological reward circuitry using practices such as mindfulness, to foster greater health and wellbeing. Priority given to Public Health concentrators; all others with instructor permission.

PHP 1895. Mindfulness Epidemiology.

This course focuses on developing skillful application of epidemiologic methods to understand the health effects of mindfulness. Focus will be on study design (clinical trials, observational studies, and systematic reviews/meta-analyses), causal inference, confounding, bias, mediation, effect modifiers, generalizability, and methodological strengths/limitations of the field. Students will create a methodologically rigorous protocol for a mindfulness study.

PHP 1900. Epidemiology of Disorders and Diseases of Childhood and Young Adulthood.

Students will learn about diseases and disorders of childhood and young adulthood, including allergies, autism, eating disorders, obesity, endometriosis, and migraines. Students will learn how these disorders are defined, how many youth are impacted, and the age-appropriate epidemiologic methods to study disorders and diseases during childhood, adolescence, and young adulthood, respectively. For the final project, students will pick a disease or disorder of interest that occurs during childhood, adolescence, or young adulthood, synthesize the results from multiple epidemiological studies, and concisely present this information in both a written report and an oral presentation.

PHP 1910. Public Health Senior Seminar.

This dynamic course is designed to provide an overarching capstone experience to seniors graduating with a bachelor's degree in Public Health. This class is intended to help students gain in-depth knowledge of public health by utilizing and strengthening both oral and written communication skills. These skills will facilitate communicating with diverse audiences through a variety of media and working in teams. Critical skills such as literature searches, use of bibliographic software, critiquing the literature, working in teams, and writing research papers will be practiced. Current public health topics that are timely will be discussed and public health successes, failures, and areas that need more work and effort will be explored. The course is designed as a seminar emphasizing class discussion, interaction, and debate regarding differing perspectives, as well as in-depth discussion of the assigned readings.

PHP 1915. Public Health Honors Senior Seminar.

This dynamic course will provide an overarching public health experience for students in the public health honors track. Students will strengthen oratory, writing, and teamwork skills. The course will add structural support for students beginning their thesis experience. This will include literature review and appraisal, scientific writing, data presentation, and communication of findings to scientific and lay audiences. The instructor is formally trained in Internal Medicine, public health, health policy and clinical epidemiology which will be brought to the classroom. This seminar course will emphasize class discussion, interaction and debate regarding differing perspectives on each topic area, as well as in-depth discussion of the assigned readings.

PHP 1920. Social Determinants of Health.

The course provides an overview of social determinants of health. Examples of topics include health effects of educational attainment, social integration, neighborhood socioeconomic characteristics, racial discrimination, gender, income inequality, childhood socioeconomic circumstances, parental neglect, and job strain. Mixed teaching methods are used, including small group discussions, problem-based learning and guest lectures. Open to graduate students and advanced undergraduates.

PHP 1950. Adolescent and Young Adult Health.

The course will cover the mental and physical health of adolescents and young adults and factors that influence their health, including self-identity, sexual orientation and gender identity, race, weight status, and socioeconomic status.

PHP 1960. Epidemiology of Chronic Disease.

This course provides an in-depth exploration of chronic disease epidemiology, equipping students with the skills to assess disease burden and evaluate key chronic disease studies. Students will learn to access and interpret state and national data sources, identify key risk factors for chronic diseases, and synthesize findings from scientific literature. Emphasis is placed on critical appraisal of epidemiologic studies and the application of data to inform public health practice. By the end of the course, students will be prepared to characterize chronic disease patterns in populations and effectively utilize surveillance data to support prevention and intervention efforts.

PHP 1964. Cancer Epidemiology and Prevention.

This course is aimed at enhancing the knowledge and skills central to the application of epidemiologic methods to cancer screening, prevention, and control. We will exam cancer incidence and trends in the U.S. and globally, interpret their implication for cancer etiology, and critically analyze current evidence regarding the role of various major risk factors on human cancer risks. The class will focus on the impact of major environmental, occupational, and lifestyle risk factors on cancers of high public health significance.

PHP 1970. Independent Study.

A special project may be arranged in consultation with an individual faculty sponsor. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHP 1980. Honors Thesis Preparation.

Two semesters of PHP 1980, Honors Thesis Preparation, will be devoted to the development and implementation of an Honors project, and of the writing of the Honors Thesis for the Public Health Concentration.

PHP 1998. Public Health Nutrition.

Public health nutrition is an interdisciplinary field focused on promoting health and reducing disease risk by improving the nutritional status of populations. The goal of this seminar is to introduce the basic principles of public health nutrition with a focus on the United States. Students will gain an understanding of the science behind government-issued dietary recommendations and learn about methods of dietary assessment, determinants of food intake and nutritional status, and individual-level and environmental-level interventions to improve diet. The course will emphasize the ways in which environmental factors and public policy can influence the nutritional status of diverse population groups. Through discussions and debates, students will explore and critically discuss current public health nutrition controversies, such as taxation of less healthful foods, nutrition restrictions on food stamp purchases, federal agricultural policy, and school food policy among other contested topics.

PHP 2000. Foundations of Public Health.

All incoming students must enroll in PHP 2000: Foundations of Public Health. This online, asynchronous, self-paced, non-credit, and no-cost course provides a broad overview of the field of public health as required by the School of Public Health's accrediting body, the Council on Education for Public and Health (CEPH). Students are encouraged to enroll in the course as soon as registration opens and, if possible, to finish it before their credit-bearing courses begin. Devoting this approximately one-week period to the course will enable them to acquire foundational knowledge that will support them in their coursework and lower the burden of their workload during the semester. Students are expected to complete PHP 2000 by the end of their first semester.

PHP 2015. Foundations of Spatial Analysis in Public Health.

The distribution of power and privilege in society directly shapes where we live and what opportunities we have available to us for achieving optimal health and well-being. Describing how sociopolitical forces shape our neighborhoods and communities can help us understand how and why health and disease vary over space and time. In this course, we will use a combination of didactic lecture sessions and interactive tutorial sessions to develop our knowledge and skills as spatial thinkers and understand how geographic information system applications like ArcGIS can be used to collect, analyze, and visualize spatial data to inform, evaluate, and improve public health programs. In small groups, we will work together to conduct spatial analyses using data from programs delivered by the Rhode Island Department of Health to learn and apply best practices for conducting spatial analyses and communicating their results.

PHP 2018. Epidemiology of Cardio-Metabolic Health.

This course surveys the entire landscape of the nutritional, biochemical, and genetic aspects of cardiometabolic health addressing issues of obesity, diabetes, metabolic syndrome, and their micro- and macro-vascular complications. Students will learn about both the descriptive and analytical epidemiology of these seemingly distinct but clearly clustered disorders including the so-called metabolic syndrome comprehensively and in-depth. International comparison of prevalent data in different social contexts will also be reviewed, so that strategies for prevention by either changing our cultures or natures can be appreciated and debated with a better understanding of the related issues confronted by public health and medical professionals.

PHP 2019. Measurement Issues in Health Care.

Provides a theoretical and practical basis for measurement in health care. Introduces measurement theory, scale development, and criteria to be considered when choosing measures in clinical practice and research. Practical exercises include questionnaire development and a written research protocol for the development and validation of a new measure. Prerequisites: PHP 2120, 2130.

PHP 2023. Maternal and Child Health in the United States.

This is a graduate level course focused on maternal and child health in the United States.

While some reference will be made to the experience in other countries, the focus of the course will be on the United States. A broad range of health conditions will be covered, with an emphasis on leading causes of mortality and morbidity. In addition, we will examine the range of programs designed to prevent or address important health threats.

PHP 2024. Engaged Scholarship in Maternal and Child Health.

This overall goal of this course is to help students develop the knowledge, skills and perspectives necessary to make contributions in the field of maternal and child health, with a particular focus on community-based or community serving interventions, research and evaluation. This includes the short-term goal of helping students prepare for internship, thesis or capstone work and the long-term goal of providing training for students' future career in the field of maternal and child health. In the course students will:

- expand their knowledge of current research in maternal and child health and explore the community context of the research.

- develop or refine a skill set that has applications in community-based interventions, research or evaluation.

- complete a community-based or community serving project as part of the Hassenfeld Child Health Innovation Institute 's Community of Learners.

PHP 2030. Clinical Trials Methodology.

We will examine the modern clinical trial as a methodology for evaluating interventions related to treatment, rehabilitation, prevention and diagnosis. Topics include the history and rationale for clinical trials, ethical issues, study design, protocol development, sample size considerations, quality assurance, statistical analysis, systematic reviews and meta-analysis, and reporting of results. Extensively illustrated with examples from various fields of health care research. Recommended prerequisites: introductory epidemiology and statistics. Pre-requisites: (PHP 2120 or PHP 2150) and either PHP 2508, 2510, or 2520. Open to graduate students only.

PHP 2040. Survey Research Methods.

Emphasizes the theory of sampling and survey methods and their application to public health research. Topics include: survey design and planning; principles of sampling and survey terminology; questionnaire construction; protection of human subjects; data collection (including interviewing and data coding procedures); and application, presentation, and evaluation of results. Suggested prerequisites: PHP 2120 or PHP 2140, and PHP 2508 or 2510. Open to graduate students only.

PHP 2060. Qualitative Methods in Health Research.

Introduces qualitative approaches to data collection and analysis in health research. Methods covered include: participant observation, key-informant interviews, focus groups, innovative data collection strategies, and non-obtrusive measures. Students will use applied projects to develop skills in: qualitative data collection and management, interviewing, transcript analysis using computerized software, triangulation between qualitative and quantitative data, and report preparation for qualitative studies. Enrollment limited to 20 graduate students.

PHP 2061. Qualitative Data Analysis in Public Health Research.

This intermediate/advanced graduate seminar focuses on various interdisciplinary approaches to the analysis of textual data, including thematic analysis, grounded theory, phenomenology, and narrative and discourse analysis. Students will explore the philosophical underpinnings of these qualitative data analysis approaches and consider their application in the context of critical theories and methodologies, including intersectionality. Students will also learn practical skills involved in qualitative data analysis, including codebook development, coding, developing themes, categories, and conceptual models, writing memos, and disseminating findings to diverse audiences. The course centers issues of power, ethics, positionality, and reflexivity in the context of qualitative research with minoritized populations and discusses community- and arts-based participatory research approaches. The course also addresses methods for combining qualitative and quantitative research findings in the context of a mixed-methods research approach. Students will have the option to analyze their own or others' qualitative data.

PHP 2071. Applied Public Health: Systems and Practice.

Applied Public Health is a two-semester sequence of courses designed to give students the skills and experiences they need to master understanding public health and health care systems, policy in public health, leadership, communication, interprofessional practice, and systems thinking. This will be achieved through a combination of lectures, in class exercises, homework assignments, and practical experience in a public health setting. The first course in the sequence (PHP 2071) is taken in the Spring of your first year.

PHP 2072. Applied Public Health: Policy, leadership and communication.

Applied Public Health is a two-semester sequence of courses designed to give students the skills and experiences they need to master understanding public health and health care systems, policy in public health, leadership, communication, interprofessional practice, and systems thinking. This will be achieved through a combination of lectures, in class exercises, homework assignments, and practical experience in a public health setting. The second course (PHP 2072) is taken in the Fall of your second year.

PHP 2073. Leadership and Communication.

The objective of this two-unit (i.e., 360-hour) course, which students will take online in the summer prior to arriving on campus, is to enable students to become public health leaders who can communicate effectively with a wide variety of audiences. Students will learn leadership principles, such as, how to create a vision, advocate for policies and programs, build coalitions, and use negotiation and mediation strategies. Students will build on their oral and written communication skills, by writing an op-ed delivering a presentation to their peers and interacting with public health leaders and elected officials. Students will also learn from leading experts in the fields of leadership and communication related to public health.

PHP 2074. Needs Analysis and Program Planning.

In this 1.5-unit (i.e. 270-hour) service-learning course, students will conduct a needs analysis in an actual clinical health care site, where they will spend a minimum of 80 practicum hours. The practicum portion of the course counts as their Applied Practice Experience (APE). Students will receive information on the APE requirements in the summer before the fall semester. Students will consider levels of intervention including the individual; families or small groups; organizations such as schools, worksites, health care settings; communities; the media; policy and environmental changes. Students will identify personal and environmental factors that affect public health and develop skills in needs assessment, formative research, cultural sensitivity, behavior change theories, intervention mapping, process and impact/outcome evaluation and dissemination. Students will critique intervention studies and gain experience in developing a behavior change intervention.

PHP 2076. Integrated Learning Experience for Accelerated MPH Program.

The ILE allows students the opportunity to synthesize their public health competencies at the end of the accelerated MPH program. The course will be conducted in a didactic and workshop style format so the attendees will have an experience of how to approach and identify public health topics of interest and how to advance public health messaging, policy, and research. The course will help students become familiar with how to guide and implement findings of clinical medical research to public health policies, conduct research and special attention to ethics of human subjects research and focus on the regulatory procedures for conducting ethical research in clinical settings.

PHP 2077A. Capstone: Policy Brief.

The Integrated Learning Experience (ILE) is designed to enable MPH students to synthesize learning across their core courses, concentration courses, and practicum experiences. Historically, the Brown School of Public Health has required a thesis for the ILE, however, students may now complete a thesis or a capstone course as their ILE. The thesis is the better option for those who want to conduct academic research with a mentor in an independent study-type format, the capstone course is for those who prefer an applied project in a classroom setting. Policy Brief: Students who choose to enroll in the policy brief section will learn to examine policy options to address emerging issues, analyze the possibilities, and communicate recommendations as a policy brief. Students will design their brief to provide decision makers with analysis-based recommendations on a specific issue or problem.

PHP 2077B. Capstone: Program Proposal.

The Integrated Learning Experience (ILE) is designed to enable MPH students to synthesize learning across their core courses, concentration courses, and practicum experiences. Historically, the Brown School of Public Health has required a thesis for the ILE, however, students may now complete a thesis or a capstone course as their ILE. The thesis is the better option for those who want to conduct academic research with a mentor in an independent study-type format, the capstone course is for those who prefer an applied project in a classroom setting. Program Proposal: Students who opt to take this section of the capstone course will craft a grant proposal for a health-promotion or disease-prevention program. The proposal may request funding for the design, implementation, or evaluation of the intervention.

PHP 2077C. Capstone: Data Brief.

The Integrated Learning Experience (ILE) is designed to enable MPH students to synthesize learning across their core courses, concentration courses, and practicum experiences. Historically, the Brown School of Public Health has required a thesis for the ILE, however, students may now complete a thesis or a capstone course as their ILE. The thesis is the better option for those who want to conduct academic research with a mentor in an independent study-type format, the capstone course is for those who prefer an applied project in a classroom setting. Data Brief: Students who choose to enroll in the data brief section will apply epidemiologic and basic biostatistical skills from prior coursework to summarize evidence to answer real-world public health problems. Students will work to answer independent research questions using available data, with consideration of population context. Results will be summarized graphically

PHP 2080. Public Health Law and Policy.

The global COVID-19 pandemic has brought to the forefront the important role that law – at the federal, state and local levels – plays in public health. Law not only organizes and structures the authority of government actors to intervene to protect the public's health, it also molds the social environment in which people live, shaping access to resources needed to stay healthy. This course will explore the tensions between public health laws and policies and individual rights and freedoms. What authority should the government have to compel individuals, groups and businesses to conform to health and safety standards to promote the common good? What happens when public health intervention infringes on individual rights and liberties? How do laws and policies, and the ways in which those laws and policies are implemented and enforced, affect health equity and justice?

PHP 2081. Health Policy and Equity.

The objective of this course is to provide students with a broad overview of the role of policy in population health, relevant equity-focused frameworks, the organization of the US healthcare system, comparative healthcare systems, and the policymaking process. This course will teach and assess students' competency to: Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings Apply ethical principles to public health practice Discuss the means by which structural bias, social inequities and racism undermine health and create challenges to achieving health equity at organizational, community, and societal levels Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence Evaluate policies for their impact on public health and health equity.

PHP 2090. Research Grant Writing for Public Health.

This course focuses on providing knowledge and experience in creating high quality public health research grant applications. Course objectives include developing significant and innovative scientific hypotheses, learning principles of effective written communication, and developing a research grant application suitable to submit for funding. Designed for Public Health School PhD students, post-doctoral fellows, and Masters students with advanced degrees (e.g. MD, PhD). Prerequisite: PHP 2120 or PHP 2150 or instructor permission.

PHP 2090A. Research Grant Writing for Public Health-Part A.

PHP 2090A is the first in a two-course sequence that enables students to gain hands-on experience in creating high-quality, competitive public health research grant applications. The sequence will focus on writing training- and early-career applications tailored to the National Institutes of Health (e.g., F- and K-series grants). In PHP 2090A, students will draft their specific aims with guidance from their mentor(s), obtain foundational knowledge about the NIH grant submission process, learn about the peer review process, understand the content of NIH grant sections, and develop the foundations of their full grant proposals. They will do this through directed readings, pre-recorded lectures, assignments, instructor-led seminars, and consultation with their primary academic mentors. In PHP 2090B, students will develop a full proposal and receive peer and faculty feedback on it.

PHP 2090B. Research Grant Writing for Public Health-Part B.

PHP 2090B is the second in a two-course sequence that enables students to gain hands-on experience in creating high-quality, competitive public health research grant applications. The sequence will focus on writing training- and early-career applications tailored to the National Institutes of Health. In PHP 2090B, students will develop a full NIH proposal (e.g., F- or K-series or R03/R21), provide feedback to and receive feedback from their peers on proposal documents, and obtain in-depth knowledge of how to design and conduct robust, rigorous, and impactful research studies. They will do this through directed readings, in-person lectures, assignments, and consultation with their primary academic mentors. Topics covered in the course will include basic statistical power calculations, presentation strategies, research misconduct and ethics, picking and managing mentors, and effective budgeting.

PHP 2120. Introduction to Methods in Epidemiologic Research.

Epidemiology quantifies the distribution and determinants of health in populations, with the goal of reducing the burden of negative health outcomes. This intensive introductory course is intended to provide graduate students with a strong foundation in key epidemiological concepts and methods so they can be critical consumers and users of epidemiological research. Students will learn the core principles of study design, calculating measures, and appraising and communicating research through lectures and readings of published epidemiological studies as well as applied practice through exercises and assignments. This is a graduate-level course aimed at Masters' and PhD students. The course is not open to first year students or sophomores but may be available for advanced undergraduates with the instructor's permission.

PHP 2130. Human Biology for Public Health.

This course provides basic principles of human biology and its applications to public health. Examples of biology topics include the cardiovascular system, endocrine system, immune system, nervous system, genetics, cancer, cardiovascular disease, HIV/AIDS, and depression. Examples of applied topics include strengths and weaknesses of using biomarkers, accuracy and precision of biological measures, quality assurance and quality control methods for using biomarkers for public health research. Mixed teaching methods are used, including small group discussions, problem-based learning and guest lectures. Prerequisite: PHP 2120 (may be taken concurrently) or instructor permission. Enrollment limited to 20 graduate students.

PHP 2140. Principles of Applied Epidemiology.

Epidemiology quantifies the distribution and determinants of health in populations, with the goal of reducing the burden of negative health outcomes. This intensive introductory course is the first in a methods sequence (followed by PHP 2210 and PHP 2180) and is intended to provide graduate students with a solid foundation in epidemiological concepts in relation to public health. They will use this foundation to build a methodological skill set to enable being critical consumers, users, and producers of research. Students will learn the core principles of research design, bias and confounding, and applied public health and be able to apply their knowledge to critically evaluate and synthesize findings from epidemiological studies and begin producing and communicating their own research products. Collaborative learning is a key component of the course design.

PHP 2150. Foundations in Modern Epidemiologic Methods.

The overall objective of this course is to provide students with a strong foundation in epidemiologic research methods. This is the first of a three- or four-course sequence in epidemiological methods aimed at students who expect to eventually conduct their own epidemiological research. The course is designed for students enrolled in a PhD program in the School of Public Health, or who are completing the MPH epidemiology concentration. There will be a strong quantitative focus in this course, and the typical student will also have some introductory knowledge of epidemiology. PHP 2507 or 2510 should be taken concurrently. Undergraduate students, fifth year MPH students, or graduate students not in a public health program may request instructor permission (override) through CAB from the instructor.

PHP 2160. The Global Burden of Mental Illness: A Public Health Approach.

Provides an introduction to the classification, epidemiology, etiology, treatment and potential prevention of psychiatric disorders from a population perspective. Reviews the magnitude and social burden associated with mental disorders worldwide and opportunities to enhance prevention and treatment.

Covers concepts and methods used to study mental illness at the population level, including definitions of "normality" and "pathology", current classification systems and measurement approaches to assess psychopathology and severity and cross-cultural issues.

Covers the prevalence, risk factors, and etiology of major disorders of children, adolescents and adults, including autism spectrum disorders, attention deficit disorders, mood and anxiety disorders, schizophrenia and substance use disorders.

PHP 2180. Interpretation and Application of Epidemiology.

Epidemiologists are professionals who strive to study and control factors that influence the occurrence and distribution of disease and other health-related conditions and processes in defined groups, populations, and societies. In observing, analyzing, and predicting the experiences of whole groups of people, epidemiologists aim to produce knowledge about causal mechanisms with the goal of informing policies, practices, and programs aimed at improving population health. This course will provide you with opportunities to apply the methods covered in previous courses to public health challenges of the past, present, and future while exploring the varied roles of epidemiologists in society.

PHP 2190. Epidemiologic Synthesis and Application.

This doctoral-level capstone course integrates and extends knowledge from the epidemiologic methods core sequence. Since epidemiology is often described as the scientific arm of public health, this course situates epidemiologic methods within a broader scientific context, encouraging students to reflect critically on the discipline's assumptions, methods, and purpose. Students will synthesize foundational and advanced epidemiologic concepts while exploring what it means to practice epidemiology in an increasingly computational and AI-driven world. Assignments are designed to reinforce learning through realistic qualifying exam questions, hands-on coding, statistical modeling, and evaluations of studies. Students also apply concepts to their own research interests, culminating in an informal presentation.

PHP 2200. Intermediate Methods in Epidemiologic Research.

This second course in epidemiologic methods reinforces the concepts and methods taught in PHP 2150, with in-depth instruction in issues of study design, assessing threats to study validity including confounding and selection bias, and analyzing data with standard regression models. The course emphasizes hands-on learning and includes a combination of didactic lectures, discussions of methodologic papers, and a required laboratory component where students will learn to apply the concepts learned in class to real-world problems. Prerequisites: PHP 2150 and either PHP 2510 or PHP 2507, and PHP 2511 or PHP 2508 (which either can be taken concurrently) or permission of the instructor.

PHP 2210. Surveillance Methods for Applied Epidemiology.

This course will further develop students' skill set by applying methods directly to public health data, building off the epidemiological foundation established in PHP 2140. While focused on applied methods and surveillance practices, epidemiological principles will be emphasized such as assessing systematic and random error in sampling, study design, and data collection. Students will apply these core principles to critically evaluate and synthesize findings from epidemiological studies and begin producing and communicating their own research. Collaborative learning is a key component of the course design. Key course topics include the role of surveillance in public health; the development of case definitions and the collection of data; the assessment of common accuracy limitations in surveillance or secondary data; approaches for cleaning complex data; descriptive statistics generation; sampling and stratification methods; program and policy evaluation; and effective communication in public health practice. If a student has taken only PHP 0850 or an undergraduate biostatistics course, they may be able to take this course with the instructor's permission. The corequisite for this course is an intermediate biostatistics course (PHP 2508, PHP 2511, or equivalent).

PHP 2220B. Nutritional Epidemiology.

This course provides a comprehensive and systematic review of contemporary issues in human nutrition that require the application of epidemiologic principles and quantitative methods. Substantive topics range from the assessment of molecular etiologies for health and disease outcomes to evidence-based development of clinical guidelines and public health policies for foods and dietary supplements. This course is designed for graduate trainees in public health or the division of biology and medicine, visiting fellows, and advanced undergraduates who want to understand or conduct research in human nutrition and dietary assessment related to health and diseases.

PHP 2220E. Topics in Environmental and Occupational Epidemiology.

This course introduces students to the epidemiological study of historical and contemporary environmental/occupational agents, focusing on study design, biases, and methodological tools used to evaluate and extend the evidence linking exposures to human disease. The course will discuss applications, strengths, and limitations of different study designs and their use in studying specific environmental agents. Didactic lectures and student-led discussions will be used to provide students with a basic understanding of and the tools to apply/extend their knowledge of specific environmental agents (endocrine disruptors) and special topics (children's neurodevelopment). Prerequisite: PHP 2120, PHP 2150, or equivalent. Undergrads with PHP 0850 and instructor's permission.

PHP 2220F. Reproductive, Perinatal and Early Childhood Epidemiology.

This course provides an overview of topics related to reproduction, pregnancy, maternal and child outcomes of pregnancy, and long-term consequences related to reproductive health. Methodological issues unique to reproductive and perinatal epidemiology are discussed, as well as general epidemiologic methods as applied to topics in reproductive and perinatal health. Class sessions will include lectures and discussions of published research studies, with active student participation expected. After several introductory lectures, students will select topics and be responsible for organizing a presentation and discussion under the instructor's supervision.

PHP 2220H. The Epidemiology, Treatment and Prevention of HIV.

The purpose of this seminar is to use HIV as an example to introduce students to a variety of methodological issues in the epidemiologic study of infectious diseases. While we will study the treatment and prevention of HIV in detail, emphasizing the current state of knowledge and critiquing the most recent literature, this course aims to use HIV as an example to better understand the variety of methodological issues in global and domestic infectious disease epidemiology today. Enrollment limited to 25 students. Prerequisites: PHP 0850 or PHP 1854 (undergraduates); PHP 2120 or 2150 and PHP 2508 or 2511 (graduate students).

PHP 2232. Modern Foundations of Causal Inference in Epidemiologic Research.

This course explores the development of causal inference in epidemiology through a close reading of influential methodological papers published between 1976 and 2010. Picking up where Sander Greenland's 1987 anthology of key epidemiologic methods left off, we trace major innovations that have shaped modern thinking about causality. Our focus is not only on understanding the methods themselves, but also on cultivating the skills needed to engage with complex ideas: reading deeply, presenting clearly, and leading thoughtful discussion. Students will practice distilling challenging material, contextualizing each paper historically and conceptually, and communicating technical content with clarity. Although grounded in epidemiology, the course reflects the interdisciplinary nature of causal inference today, incorporating contributions from biostatistics, econometrics, computer science, and related fields. This is a reading- and discussion-intensive course designed to develop both conceptual fluency and professional communication skills in causal inference.

PHP 2235. Pandemics in Global Perspective: From HIV/AIDS to COVID-19.

The objective of this course is to examine key epidemiological methods used for studying and preventing global pandemics. Focusing on two pandemics that played out on different time scales, HIV/AIDS and COVID-19, students will use these two examples of pandemics to better understand the natural history, distribution, pathogenesis, transmission and prevention of infectious diseases globally. We will pay particular attention to issues of disease measurement and the complexities of gathering and interpreting data during an ongoing crisis. We will explore the transmission events that fueled the pandemics under consideration; the social, political and disease dynamics that exacerbated the spread of these infections; efforts to stem their flow, from non-pharmaceutical interventions like social distancing (and the HIV equivalent of limiting the number of sex or needle-sharing partners) to biomedical interventions including therapeutics and vaccines.

PHP 2250. Advanced Quantitative Methods in Epidemiologic Research.

This course provides students with conceptual and quantitative tools based on counterfactual theory and causal diagrams (e.g., DAGs) to make causal inference using data obtained from observational studies. Causal diagrams will be used to provide alternative definitions of, provide clarifications regarding, or inform minimizing common biases. Non-, semi-, and fully parametric methods for minimizing bias will be discussed. These methods include standard regression, instrumental variables, propensity scores, inverse probability weighting, and marginal structural models. Settings when such methods may not be appropriate will be emphasized. Prerequisite: PHP 2200 and 2511; or PHP 2200 and 2508; or instructor permission.

PHP 2260. Applied Epidemiologic Data Analysis.

This course will lead students through the process of writing a journal-style manuscript based on performing applied epidemiologic data analysis using statistical software (i.e., SAS). This course is best suited for students who already have a research idea in mind and data in hand prior to the start of the course or are able to develop a research question based on de-identified publicly available population-based datasets that will be recommended in the course. Course enrollment is restricted to graduate students.

PHP 2300. Research Methods in Behavioral Science.

This course provides a broad overview of the research methods typically used in behavioral and social health sciences research. Students will learn to evaluate qualitative and quantitative public health research critically, to design their own research protocol, and to conduct a systematic review of the literature on a health outcome of their choosing. Prior coursework in research methodology and quantitative methods is recommended but not required. Open to public health graduate students and advanced undergraduates concentrating in public health. Enrollment limited to 15.

PHP 2310. Physical Activity and Public Health.

This course examines physical activity and health with an emphasis on the development of behavioral interventions to increase physical activity. Students gain knowledge of the impact of physical activity on health outcomes as well as differences in physical activity among subpopulations. They are introduced to behavioral theories, intervention design approaches, measurement issues, and methods that are relevant to physical activity. Through seminar discussions, a group project, and presentations, students engage with the material and gain skills in the development and evaluation of behavioral interventions. Students with an interest in behavioral interventions and physical activity will benefit from taking the course. Recommended prerequisites: PHP 2300 or PHP 2340 or PHP 2355. Enrollment limited to 15. Open to graduate students and seniors concentrating in Public Health.

PHP 2325. Place Matters: Exploring Community-Level Contexts on Health Behaviors, Outcomes and Disparities.

As with many health-related outcomes, the prevalence of ill health is unequally distributed across populations, with certain community features playing significant roles in shaping health. In this course, we will explore the features of place and the associations with health behaviors and health outcomes. The readings for this course are multi-disciplinary in nature and integrate epidemiological, biological, sociological, political and philosophical perspectives. This course is specific to the United States. The course activities will culminate with neighborhood audits, presentations, and policy briefs. Due to the course structure and activities, it is limited to 12 graduate students.

PHP 2330. Behavioral and Social Approaches to HIV Prevention.

This course examines concepts, approaches, and empirical findings from behavioral and social research to prevent HIV transmission. Students will become familiar with behavioral theories, social epidemiological principles, intervention design, and debates within the field of HIV prevention. A particular focus of this course is on the linkages between science and HIV prevention practice/policy. Students will conduct weekly readings, engage actively in seminar discussions, and participate in small-group presentations and research activities. Prior coursework in public health research methodology is recommended. Prerequisites: Graduate student or senior public health concentrator. Enrollment limited to 15 advanced undergraduate, graduate and medical students.

PHP 2340. Behavioral and Social Science Theory for Health Promotion.

This course will help students become familiar with behavioral and social science theories commonly used for planning disease prevention/health promotion interventions. In addition to review of specific theories, topics to be discussed include: how theories are developed and tested; challenges and potential pitfalls in using theory for intervention planning; and creation of causal diagrams based on concepts from theories. Graduate students only. Enrollment limited to 25.

PHP 2345. Affect, Emotion, and Health Behavior.

The purpose of this class is to learn about and discuss theory and research on affective determinants of health-related behaviors across multiple behavioral domains. The common thread through the entire course is that health-related behavior is the dependent variable and affect or emotion is the putative determinant. That is, this is a course about how affect and emotion influences health-related behavior. Although we will, in some instances, discuss the effects of health-related behavior on affect and emotion, emotion and mood are NOT considered to be the outcome of interest.

PHP 2355. Designing and Evaluating Public Health Interventions.

Previously listed as PHP 1740. Examines health behavior decision-making and elements for design of health promotion interventions. Covers theories of health behavior (focusing on primary and secondary prevention), principles of intervention design, and reading of research literature. Emphasizes psychological, social, and proximate environmental influences on individuals' health-related behaviors. Restricted to undergraduates in the AB/MPH program, and graduate students. Prerequisite: PHP 0320 or equivalent. Enrollment limited to 35.

PHP 2360. Developing + Testing Theory-Driven, Evidence Based Psychosocial and Behavioral Health Interventions.

This is a graduate-level course designed to provide students with the knowledge and research skills necessary to develop and ultimately test a theory-driven, evidence-based psychosocial or health behavior change intervention. Drawing on research, theory, and practice, students learn how to conduct formative research to inform the content, structure, and format of an intervention, set goals/objectives, develop intervention materials/messages, and evaluate outcomes – all while taking into account factors such as gender, sexuality, race/ethnicity, poverty, culture, social-support/social-capital, etc. Research methods that are relevant for examining efficacy, including study-design, power/sample size calculations, fidelity monitoring, randomization, control conditions, measures selection/assessment, data collection, etc. are covered. Prerequisite: PHP2340 or instructor permission

PHP 2361. Proseminar in Health Behavior Intervention Research.

This course is required for doctoral students in Behavioral and Social Health Sciences. Students will consider advanced topics related to designing, implementing, and evaluating behavioral and social interventions to promote health. The course is designed as a proseminar, emphasizing discussion of primary readings and presentations by experienced intervention researchers.

PHP 2365. Public Health Topics in LGBTQ+ Communities.

This seminar is designed for graduate students interested in health disparities and determinants of health in LGBTQ+ populations (also referred to as sexual and gender minority populations). Students will become familiar with key epidemiological reports, behavioral and social science theories/frameworks, intervention studies, and scientific debates related to the determinants of and disparities affecting the health of LGBT and sexual and gender minority populations. The course will focus primarily on US populations, but will also include global LGBTQ+ and sexual and gender minority populations. Readings and discussion will be considered in light of social, policy, and cultural contexts that frame the lives of LGBTQ+ populations.

PHP 2370. Etiology of Substance Use Disorders.

This course will help students become familiar with behavioral, genetic, neurobiological, and cultural factors related to the onset and course of substance use disorders. In addition to review of specific theories, empirical evidence supporting models will be covered as will the integration of evidence across models. Priority will be given to postdoctoral fellows. BSHS students should take the class for a grade (ABC/NC), special students/postdocs should choose S/NC grade option

PHP 2371. Psychosocial and Pharmacologic Treatment of Substance Use Disorders.

Intended to provide an overview of the history of the treatment of substance use disorders; assessment methods designed to determine progress in substance use treatment; and the current most common types of psychosocial and pharmacologic treatments for substance use. Enrollment limited to 20 graduate and medical students. Instructor permission required. BSHS students should take the class for a grade (ABC/NC), special students/postdocs should choose S/NC grade option.

PHP 2375. Communicating Science to Lay Audiences.

There is a growing need to translate scientific evidence to lay audiences as a way to foster trust in science and facilitate uptake of behavior changes and evidence-based best practices in health policies. However, many researchers do not have the training to disseminate their research to lay audiences. In this course, you will engage in hands-on training to develop lay summaries, animated video scripts, policy briefs, infographics, op-eds and presentations. Each class will be devoted to a few readings and discussion followed by in-class practice of the assigned deliverable. You will focus on one specific article for most activities, lay summary, video script and presentation, and the article related topic area for the policy brief, infographic and op-ed. We will focus on three topic areas - HIV, substance use and obesity. This course is limited to 12 students.

PHP 2380. Health Communication.

This class will explore Health Communication, with a focus on behavioral and social science interventions delivered through health communication programs. The course is structured so that basic building blocks (i.e., definitions of health communication, public health context for health communications interventions, theories of health communication and health behavior change) are presented sequentially early in the semester. Students will synthesize knowledge and demonstrate their understanding of the role of health communication through a final research project. Seniors with concentration in Public Health may enroll with instructor's permission. Enrollment limited to 20 graduate and medical students.

PHP 2400. The U.S. Health Care System: Case Studies in Financing, Delivery, Regulation and Public Health.

Reviews the development of the health care delivery, financing and regulatory control systems in the U.S. and reviews the literature on the relationship between health system structure and the services used and health outcomes that populations experience. A case-study approach is used to understand the inter-relationship between financing, delivery and regulatory components of the health system and their implication for public health by drawing on epidemiological, economic, political and sociological principals. Prerequisites: Graduate standing or PHP 0310 and instructor permission.

PHP 2410B. Interpreting Population Data for Health Services Policy.

Health services research frequently uses existing datasets based upon surveys of, and utilization records collected on, defined populations. Computer technology also makes it possible to link databases. Quality of datasets is crucial for using analyses to make proper recommendations for health policy. Course gives students the opportunity to consider the advantages and disadvantages of using existing health services datasets for investigating health policy issues.

PHP 2410E. Medicare: A Data Based Policy Examination.

This course will explore the role of Medicare as America's health insurer for the elderly and disabled through the use of real Medicare insurance claims data, examining how Medicare policy changes in financing and regulation have affected the delivery and receipt of medical services. At the end of the course students will: 1) know the history of important Medicare policy changes; 2) be able to construct aggregated patient case mix acuity adjusted measures of provider quality using insurance claims data; 3) be able to conduct policy analyses using Medicare claims data that are sensitive to standardized coding schemes. Enrollment limited to 15 graduate students. Prerequisite: PHP 2120, 2508, or 2510. Instructor permission required.

PHP 2411. Introduction to Health Policy Analysis.

In this course, students will learn about historical and contemporary state and federal health policies and the methods used to evaluate their efficacy, with a major focus on the Medicare program. Students will learn how to use statistical analysis software to manage and analyze real Medicare claims data, which are the main data source for landmark health services research studies.

PHP 2415. Introduction to Evidence-based Medicine.

Unbiased assessments of the scientific literature by means of research synthesis methods are critical for formulating public health policy, counseling patients or prioritizing future research. We focus on the methods and uses of systematic reviews and meta-analyses and their applications in medicine and health policy. After course completion, and with some direction, students will be able to undertake a basic systematic review or meta-analysis. Enrollment limited to 15. Prerequisites: PHP 2120, 2150, or 2460; and PHP 2507/08 or 2510/11 (2508 and 2511 may be taken concurrently); and clinical background or training in basic concepts in medicine (must discuss with instructor).

PHP 2428. Health Justice.

Health justice conceptualizes the ways in which health inequities are rooted in laws, policies, and practices that structure the opportunity to be healthy. This course will explore the deeply embedded, historical and legal underpinnings of racial, ethnic, gender-based and ableist health inequities in the U.S. We will consider how specific laws and policies—as written, implemented, and enforced—drive persistent health inequities. Further, we will analyze law and policy reforms focused on remedying health inequities. Topics will include: the role of civil rights, human rights, and reproductive rights in health justice; policy-driven structural inequities—such as, economic inequality, place-based disparities, and mass incarceration; how past and current discrimination and stigma influence the health of marginalized groups; and intersectoral frameworks for public health, medicine, and law to promote health justice.

PHP 2440. Introduction to Pharmacoepidemiology.

The course will focus on substantive topics in pharmacoepidemiology, including relevant principles of pharmacology, inference from spontaneous case reports, study design considerations, premarketing pharmacoepidemiology, common data sources for pharmacoepidemiologic studies, drug utilization review, adherence, and the development, implementation, and assessment of therapeutic risk management policies. The course will also focus on issues in pharmacovigilance, including the legal and historical basis of pharmacovigilance, evaluation of individual adverse drug events, signal detection, active safety surveillance, and medication errors. A clinical background is not required. Prerequisites are PHP 2507, PHP 2508, PHP 2510, or PHP 2511, AND PHP 2120 or PHP 2150, or permission.

PHP 2445. Minding the Gap: The U.S. Healthcare Safety Net.

The right to access affordable, quality health care in the US is not guaranteed. During our nation's history, a patchwork quilt of programs, referred to collectively as the safety net, has been crafted to address health care needs for a wide range of people who fall through the cracks. This course examines its structure, function, and effects. We introduce key features of the safety net: access, cost, quality, and outcomes. We pay particular attention to the nation's largest program, Medicaid. We highlight the unique challenges facing vulnerable groups: legal and illegal immigrants, homeless populations, veterans, and people with disabilities.

PHP 2446. Health Care Financing and Delivery.

The purpose of the course is to foster your development into a health services and policy researcher. To accomplish this, the course involves a general survey of substantive issues in payment and financing in healthcare. By the end of the course you should have knowledge of the main institutions, policy issues, and research areas and questions related to payment and financing in US healthcare. You should also have an initial understanding of where the most promising and pressing areas of research lie within this field. Thus, this course is about the past, present, and future of the field.

PHP 2450. Measuring and Improving the Quality of Health Care.

The quality of health care in the United States is in urgent need of improvement. This course will focus on the science of measuring and improving the quality of health care. Topics will include quality assessment, patient safety, medical errors, public reporting, financial incentives, organizational change, and health care disparities. Students will engage in a team-based quality improvement project. Open to graduate and medical students only.

PHP 2451. Exchange Scholar Program.**PHP 2455A. Health Services Research Methods I.**

Health services researchers use theories, models, and data to understand the health care system, assess the effectiveness of interventions (at multiple levels of the healthcare system), and inform health policy decisions. This course reviews the application of statistical and epidemiological principles to the design and analysis of health services research studies. The goal is to familiarize students with common study designs and methods in health services research, so that they can critically review the published literature and use these approaches in their own research.

PHP 2455B. Health Services Research Methods II.

Health services researchers use theories, models, and data to understand the health care system, assess the effectiveness of interventions (at multiple levels of the healthcare system), and inform health policy decisions. This course reviews the application of statistical and epidemiological principles to the design and analysis of health services research studies with a focus on causal inference methods. Methods and topics we will cover include panel data designs, difference-in-difference, synthetic controls, GEE, random and fixed effects, survival analysis, missing data, IV, propensity scores, research ethics, and statistical methods to study equity. This doctoral level course is the continuation of PHP2455A, and students are recommended to take both in sequence, however students with sufficient epidemiologic or econometric training may enroll with instructor permission.

PHP 2465A. Introduction to Health Decision Analysis.

Many decisions in health are value-laden, involve competing objectives, or must be made under uncertainty. Health decision analysis is a structured approach to thinking through such decisional problems. This course introduces decision analysis and cost-effectiveness analysis for public health and clinical problems. It covers basic theory for decisionmaking; principles and techniques for mathematical modeling; and implementation, by analyzing archetypical decisional problems in health. Pre Requisites: Some facility with mathematical notation and basic concepts in probability (advanced undergraduate students can enroll after instructor approval). Recommended course: DATA 1010, MATH 1610, or APMA 1690.

PHP 2470. Topics in Clinical, Translational and Health Services Research.

Through a combination of mini-courses and seminars, students will explore concepts, gain knowledge and develop skills in a variety of public health areas. To receive a half credit for this course, students will be required to successfully complete 70 units. Units must be pre-determined by the course instructor and the unit instructor. Units are generally based on the number of in-person contact hours and the number of outside of class/homework hours required for a mini-course or seminar. Students must receive special permission from the instructor or be accepted to the Clinical and Translational Research Summer Institute to enroll.

PHP 2480. Selected Topics in Health Economics.

This course equips students with econometric tools to evaluate health programs and policies. Focusing on causal inference methods—such as randomized experiments, differences-in-differences, instrumental variables, regression discontinuity, and synthetic controls—students learn to assess and design rigorous studies that inform public health decisions. Emphasis is placed on applying economic theory in real-world contexts and interpreting evidence for impact evaluation. Students will carry out a hands-on research project using statistical software to test a theory-driven hypothesis. By the end of the course, students will be prepared to contribute to evidence-based public health practice and policy evaluation. This course assumes prior exposure to basic regression and microeconomic concepts.

PHP 2490. Methods in Pharmacoepidemiology.

This course will cover applications of epidemiological, biostatistical, and other methods to the study of outcomes of medical interventions (drugs, vaccines, biologics, devices, and procedures) in large numbers of people. The course will focus on more advanced study designs (e.g., sequential target trial emulation) and analytic methods (e.g., high-dimensional propensity score estimation). Methods for evaluating the robustness of study results (i.e., sensitivity and stability analyses) will also be discussed. Formal frameworks of causal inference will be used throughout the course and will be applied to substantive topics in pharmacoepidemiology, vaccine epidemiology, and medical device epidemiology. Prerequisites: PHP 2120, PHP 2140, or PHP 2150; and PHP 2507 or 2510; and PHP 2200; and PHP 2508 or PHP 2511; or instructor permission.

PHP 2506. Biostatistics for Public Health Research.

This course will provide a foundation in statistical thinking for public health research. It is primarily intended for MPH students on the qualitative research track and MPH students in the accelerated program for clinicians. Others can register with instructor's permission. Students will learn the use and evaluate the appropriateness of statistical methods for analyzing medical and public health data, and learn how to interpret and present statistical findings. They will also gain hands-on experience using statistical software for data analysis.

PHP 2507. Biostatistics and Applied Data Analysis I.

The objective of the year-long, two-course sequence is for students to develop knowledge, skills and perspectives necessary to analyze data to answer public health questions. The year-long sequence focuses on statistical principles as well as the applied skills necessary to answer public health questions using data, including: data acquisition, data analysis, data interpretation and the presentation of results. Using lectures, labs and small group discussions, we focus on evaluating data sources, refining research questions, univariate and bivariate analyses, and presentation of initial results. Prerequisite: understanding of basic math concepts and terms. Enrollment limited to 50 students. Instructor permission required.

PHP 2508. BioStatistics and Data Analysis II.

Biostatistics and Applied Data Analysis II is the second course in a year-long, two-course sequence designed to develop the skills and knowledge to use data to address public health questions. The sequence is completed in one academic year, not split across two years. The courses focus on statistical principles as well as the applied skills necessary to answer public health questions using data, including: acquisition, analysis, interpretation and presentation of results. This spring semester course focuses on regression, interpretation of results, and communication of results. Prerequisite: PHP 2507. Enrollment limited to 50. Instructor permission required.

PHP 2510. Principles of Biostatistics and Data Analysis.

Intensive first course in biostatistical methodology, focusing on problems arising in public health, life sciences, and biomedical disciplines. Summarizing and representing data; basic probability; fundamentals of inference; hypothesis testing; likelihood methods. Inference for means and proportions; linear regression and analysis of variance; basics of experimental design; nonparametrics; logistic regression. Priority given to students in School of Public Health graduate programs. All others with instructor permission. Limited to PhD students and MPH Epidemiology Concentrators MPH students not in the Epi concentration should take 2506 or 2507

PHP 2511. Applied Regression Analysis.

Applied multivariate statistics, presenting a unified treatment of modern regression models for discrete and continuous data. Topics include multiple linear and nonlinear regression for continuous response data, analysis of variance and covariance, logistic regression, Poisson regression, and Cox regression. Prerequisite: APMA 1650 or PHP 2510. Open to advanced undergraduates with permission from the instructor.

PHP 2514. Applied Generalized Linear Models.

This course provides a survey of generalized linear models (GLMs) for outcomes including continuous, binary, count, survival and correlated data. This course will work through the basic theories of GLMs. Emphasis will be on understanding the implications of this theory and the applications to solving real data problems. Extensive use of computer programming will be required to analyze the data in this class. This course is designed for graduate and advanced undergraduate students who will be analyzing data and want to develop a practical hands on toolkit as well as understanding of the theoretical underpinnings of regression. Non-Biostatistics graduate students who have taken APMA1650, PHP2515, or PHP2520 (or an equivalent course) can request instructor permission to enroll.

PHP 2515. Fundamentals of Probability and Statistical Inference.

This course will provide an introduction to probability theory, mathematical statistics and their application to biostatistics. The emphasis of the course will be on basic mathematical and probabilistic concepts that form the basis for statistical inference. The course will cover fundamental ideas of probability, some simple statistical models (normal, binomial, exponential and Poisson), sample and population moments, point and interval estimation, and hypothesis testing. Examples of their use in modeling will also be discussed.

PHP 2516. Applied Longitudinal Data Analysis.

This course provides a survey of longitudinal data analysis. Topics will range from exploratory analysis, study design considerations, GLM for longitudinal data, covariance structures, generalized linear models for longitudinal data, marginal models and mixed effects. Data and examples will come from medical/pharmaceutical applications, public health and social sciences.

This course is designed for graduate and advanced undergraduate students who will be analyzing data and want to develop a practical hands on toolkit as well as understanding of the theoretical underpinnings of regression. Students in this class will need an understanding of how to work with Stata. Prereq is: PHP 2511 or PHP 2514; PHP 2508 with Permission from Instructor.

PHP 2517. Applied Multilevel Data Analysis.

This course provides a survey of multilevel data analysis. Topics will range from structure of multilevel data, basic multilevel linear models, multilevel GLM, Model testing and evaluation and missing data imputation. Data and examples will be drawn from medical, public health and social sciences. Students will be using real data throughout this course.

This course is designed for graduate and advanced undergraduate students who will be analyzing data and want to develop a practical hands on toolkit for multilevel analysis. Students in this class will need an understanding of how to work with R. Prereq is: PHP 2511 OR PHP 2514; PHP 2508 with Permission from Instructor.

PHP 2520. Statistical Inference I.

First of two courses that provide a comprehensive introduction to the theory of modern statistical inference. PHP 2520 presents a survey of fundamental ideas and methods, including sufficiency, likelihood based inference, hypothesis testing, asymptotic theory, and Bayesian inference. Measure theory not required. Open to advanced undergraduates with permission from the instructor.

PHP 2530. Bayesian Statistical Methods.

Surveys the state of the art in Bayesian methods and their applications. Discussion of the fundamentals followed by more advanced topics including hierarchical models, Markov Chain Monte Carlo, and other methods for sampling from the posterior distribution, robustness, and sensitivity analysis, and approaches to model selection and diagnostics. Features nontrivial applications of Bayesian methods from diverse scientific fields, with emphasis on biomedical research. Prerequisites: APMA 1650, PHP 2510, PHP 2511, or equivalent. Open to advanced undergraduates with permission from the instructor.

PHP 2550. Practical Data Analysis.

Covers practical skills required for successful analysis of scientific data including statistical programming, data management, exploratory data analysis, simulation and model building and checking. Tools will be developed through a series of case studies based on different types of data requiring a variety of statistical methods. Modern regression techniques such as cross-validation, bootstrapping, splines and bias-variance tradeoff will be emphasized. Students should be familiar with statistical inference as well as regression analysis. The course will use the R programming language.

PHP 2560. Statistical Programming with R.

Statistical computing is an essential part of analysis. Statisticians need not only be able to run existing computer software but understand how that software functions. Students will learn fundamental concepts – Data Management, Data types, Data cleaning and manipulation, databases, graphics, functions, loops, simulation and Markov Chain Monte Carlo through working with various statistical analysis. Students will learn to write code in an organized fashion with comments. This course will be taught using both R and Julia languages in a flipped format. Non-Biostatistics graduate students who have taken PHP 2510 (or an equivalent course) can request instructor permission to enroll.

PHP 2561. Methods in Informatics and Data Science for Health.

The goal of this course is for students to develop a solution that uses data science and informatics approaches to address a biomedical or health challenge. This course will teach informatics and data science skills needed for public health and biomedicine research. Emphasis will be given to algorithms used within the context of biomedical research and health care, including those used in biomolecular sequence analysis, electronic health records, clinical decision support, and public health surveillance. This course has been developed as a Course-based Undergraduate Research Experience (CURE), where students will gain experience with the scientific method, its application, and presentation.

PHP 2580. Statistical Inference II.

This sequence of two courses provides a comprehensive introduction to the theory of modern inference. PHP 2580 covers such topics as non-parametric statistics, quasi-likelihood, resampling techniques, statistical learning, and methods for high-dimensional Bioinformatics data. Prerequisite: PHP 2520. Open to advanced undergraduates with permission from the instructor.

PHP 2590. Design of Experiments.

Introduces the basic concepts and types of experimental designs with a focus on their statistical properties. Concepts covered include randomization, replication, blocking, matching, nesting, control of variation, interaction, random and fixed factors, choice of controls, estimation of precision, and sample sizes. Types of designs to be covered include classical designs such as factorial, fractional factorial, split plot, randomized blocks, incomplete blocks, crossover, repeated measures, Latin squares, and central composite as well as more recent designs such as platform, adaptive, N-of-1, stepped wedge and dose finding.

PHP 2601. Linear Models.

This course will focus on the theory and applications of linear models for continuous responses. Linear models deal with continuously distributed outcomes and assume that the outcomes are linear combinations of observed predictor variables and unknown parameters, to which independently distributed errors are added. Topics include matrix algebra, multivariate normal theory, estimation and inference for linear models, and model diagnostics. Prerequisites: APMA 1650 or 1660, or taking PHP 2520 concurrently.

Note: The course will cover fundamental and advanced topics in linear models, and concepts related to the generalized linear models will not be covered during the course.

PHP 2602. Analysis of Lifetime Data.

Comprehensive overview of methods for inference from censored event time data, with emphasis on nonparametric and semiparametric approaches. Topics include nonparametric hazard estimation, semiparametric proportional hazards models, frailty models, multiple event processes, with application to biomedical and public health data. Computational approaches using statistical software are emphasized. Prerequisites: PHP 2510 and 2511, or equivalent. Open to advanced undergraduates with permission from the instructor.

PHP 2605. Generalized Linear Models.

This course will focus on the theory and application of generalized linear models (GLM), a unified statistical framework for regression analyses. Specifically, we will focus on using GLMs to model the categorical outcomes. The GLM for categorical outcomes include logistic regression, proportional odds model, and Poisson regression. Maximum likelihood estimation and inference will be introduced in the GLM context. The students are expected to have knowledge of probability and inference (at the level of APMA1650, APMA1660, or PHP2520), knowledge of matrix algebra (at the level of MATH0520), knowledge of regression analysis (at the level of PHP2511) and knowledge of R.

PHP 2610. Causal Inference and Missing Data.

Systematic overview of modern statistical methods for handling incomplete data and for drawing causal inferences from "broken experiments" and observational studies. Topics include modeling approaches, propensity score adjustment, instrumental variables, inverse weighting methods and sensitivity analysis. Case studies used throughout to illustrate ideas and concepts. Prerequisite: MATH 1210 or PHP 2511 or PHP 2580.

PHP 2620. Statistical Methods in Bioinformatics, I.

Introduction to statistical concepts and methods used in selected areas of bioinformatics. Organized in three modules, covering statistical methodology for: (a) analysis of microarray data, with emphasis on application in gene expression experiments, (b) proteomics studies, (c) analysis of biological sequences. Brief review and succinct discussion of biological subject matter will be provided for each area. Available software will be introduced. Intro level statistics (PHP 2507/2508 or PHP 2510/2511) recommended. Other students should contact instructor. Intro to software R and Bioconductor tools provided in lab. Open to advanced undergraduates with permission from the instructor.

PHP 2650. Statistical Learning and Big Data.

This course will introduce modern statistical learning tools with a focus on tools developed for big data. It covers three interconnected components: statistical machine learning methods, the underlying algorithms, and computational tools. This course will focus on the principal techniques to analyze data from start to finish: managing large data, exploring patterns, framing statistical problems, building efficient computational algorithms, and writing reports. Topics will include data management, feature engineering, clustering, convex optimization algorithms, tree/ensemble methods, and predictive modeling. Non-biostatistics students who have taken 2510 and 2511 may request permission to enroll.

PHP 2670. Simulation Models for Public Health Decision Making.

The primary objective of this course is to provide a survey of commonly used simulation models in Public Health Research including cohort/population-based, microsimulation, agent-based, and compartmental models. Emphasis will be on the applications of these models to inform decision making, such as in cost-effectiveness analysis (CEA) and comparative effectiveness research (CER). Basic concepts of the design and analysis of simulation studies will be covered. The course will also provide an overview of statistical methods for developing these models, including parameter calibration, validation, predictive accuracy, uncertainty propagation, and reporting practices. Students will have the opportunity to learn more about the development and application of simulation models in Public Health by attending presentations from accomplished scientists in the area, who will give guest-lectures during the semester. Prerequisites: The course is primarily intended for Graduate Students conducting research or interested in a relevant research area. Students should have prior knowledge of probability and statistical inference (e.g., PHP2510, PHP2515) and regression analysis (e.g., PHP 2511, PHP2514). Familiarity with R, Python, or other similar programming languages is also advisable. Students who wish to take the course may also contact the instructor to determine whether they have the required knowledge and ask for an override code.

PHP 2690A. Statistical Methods for Design and Analysis of Randomized Trials.

Modern account of methods for the design and analysis of trials in health research, with emphasis on randomized studies. Intended for students familiar with introductory statistics at the level of PHP2510 or PHP2515 and regression analysis at the level of PHP2511 or PHP 2514/2560. After an examination of the typology of trials, the discussion will turn to the building blocks of trial design, including goals and endpoints, methods for intervention assignment, and use of blinding. The rest of the course will be devoted to statistical methods for designing, implementing, and analyzing the results of trials. Although the emphasis will be on frequentist methods, the course will also discuss how trials can be approached within the Bayesian statistical paradigm. Causal inference thinking will be introduced early in the course. Examples from published trials will be used to illustrate concepts and methods.

PHP 2690I. Optimization Algorithms in Data Science.

This course provides a comprehensive exploration of advanced algorithmic techniques, with a strong emphasis on optimization algorithms and their applications in statistical and data-driven contexts. Students will gain a deep understanding of fundamental algorithm principles and optimization strategies, enabling them to tackle complex problems in data science, machine learning, and operations research. Students will also be introduced to object-oriented programming in python.

PHP 2690J. Meta-Analysis: Synthesizing Evidence From Different Data Sources.

This course will introduce the principles underlying meta-analysis, the statistical combination of results and data from multiple studies and data sources, and its application to provide unbiased assessments of evidence in a variety of scientific disciplines including public health, medicine, genetics and social science.

PHP 2691. Statistical and AI-Powered Methods for High-Dimensional Genomics Data Analysis.

This course will introduce both statistical methods and modern AI techniques for analyzing high-dimensional genomics data. Students will engage with a range of statistical methodologies, including Bayesian inference, hierarchical models, and non-negative matrix factorization, alongside advanced AI tools such as deep learning, machine learning, and ensemble methods. The curriculum covers applications such as differential expression analysis, gene set enrichment analysis, and integration of multi-omics data sets. Practical sessions include data preprocessing, model selection, interpretation of genomic data, and visualization of results. Prerequisites include coursework in statistics, proficiency in R or Python, and a basic understanding of genomics.

PHP 2700. Lessons (Un)Learned in Public Health and Humanitarian Response: A Historical Perspective.

Public health challenges complicate the response to humanitarian crises around the world, including disease outbreaks, war, and forcible displacement. Although the common narrative in our field is that the complex social, political and ideological challenges we're facing is unprecedented, an examination of the history of public health in acute crises reveals that many struggles confronting us today are neither entirely novel nor unique. This course posits that public health experts rarely understand the full nature of previous crises, and argues that a better understanding of historical events will improve our response to future crises. Through thoughtful reflection and interactive discussion, we will explore the oft-repeated themes that continue to challenge public health and humanitarian response to this day, and examine the progress we've made as a field. Most importantly, we will question why lessons identified so often fail to become lessons learned.

PHP 2710. Interdisciplinary Perspectives on Disability and Death in the Global South.

This course is a seminar for students interested in global health and it also counts as a global health selective course for undergraduate. Topics include the evolution of global health, how a simple solution saved millions of children, why pregnancy remains a leading cause of death for women in low-income countries, the role of equity in achieving better health outcomes, and how leveraging technology can promote improved health outcomes. A series of guest lecturers with diverse backgrounds and global health experience will join us on a journey to foster critical and integrative thinking and writing about the leading causes of illness, disability, and death in low- and middle-income countries (LMICs), as well as potential solutions to prevent and alleviate the burden of diseases.

PHP 2720. Implementing Public Health Programs and Interventions in the Global South.

This course will focus on theory and methods related to the development, adaptation, implementation, and evaluation of public health interventions in the Global South. This course will focus on the influence of social, structural, political, and organizational processes on all aspects of development and evaluation of public health interventions in the Global South. We will cover the field of implementation science and critically analyze approaches for the evaluation of ongoing global public health programs. We will focus on the issue of how evidence-based interventions translate to practice and policy and the evaluation of the implementation of interventions in the "real-world."

PHP 2727. Putting Research Into Practice with Implementation Science.

The objective of this course is for students to learn the principles of implementation science to ensure the successful translation of evidence-based research into practice. Building on the foundation of PHP 2074: "Needs Analysis and Program Planning," this course will teach students how to assess the results of interventions and address systematically identified impediments to sustainability and scalability. Students will also learn to use systems thinking tools and frameworks to determine the factors that promote or impede the adoption and sustainability of health-related interventions. This is a required AMPH course. This course is open to PhD students and residential two-year MPH program students. For two-year MPH students, PHP 2355 and PHP 2072 are the pre-requisite courses. Doctoral students will only be admitted with permission of the instructor.

PHP 2730. Including the Excluded: Global Health Ethics.

This course explores the ethics of global public health engagement. Global health implementation is fraught with ethical conundrums. These ethical conundrums include the process of generating rigorous evidence, championing health as a human right, engaging global partners in meaningful collaborations, and implementing complex programs in low-resource settings. These ethical challenges are driven by North-South inequities and by differences in socioeconomic backgrounds, culture, language, and other intersectional identities. This course introduces scholars to global health ethics as a framework for tackling health disparities, grappling in a scholarly and practical way with the complex fabric of global health research, policy, and practice.

PHP 2740. Learning Global Health by Doing Global Health: Global Health Thesis Seminar.

This course prepares students for constructive engagement in cross-cultural research. The course aims to familiarize students with global funding priorities and research approaches, and to ask questions about meaningful cross-cultural engagement. Part I (Weeks 1-5) covers global health research priorities and writing a small grant proposal. Part II (Weeks 6-12) focuses on acquiring skills and knowledge to plan and implement a global health project, including strategies for community and stakeholder engagement, the challenges and opportunities of cross-cultural research, and tools for project implementation. This course is a research fieldwork preparation seminar intended to prepare students for global field-based research.

PHP 2760. Critical Perspectives in Global Health.

An overview of social theory and analytical approaches relevant to the study of global health topics and their social context. Students learn writing skills and analytical tools and methods for in-depth analyses of global health topics, including social science critiques of global health policy and practice. The goal is for students to learn the skills to conduct critical social analysis of global health issues using qualitative or quantitative data, or mixed methods approaches, on topics ranging from patterns of disease prevalence, to health systems functioning, to community-level project implementation and evaluation. Suitable for students writing theses or papers for publication.

PHP 2950. Doctoral Seminar in Public Health.

The purpose of this seminar is to facilitate discussions of current scientific literature in epidemiology, biostatistics, health services, behavioral and health sciences, and public health in general. The main goal is to expose students to current methodological issues and controversies, in an effort to integrate knowledge across disciplines. This seminar is only open to doctoral students in Epidemiology, Behavioral and Social Health Sciences, Biostatistics and Health Services Research.

PHP 2980. Graduate Independent Study and Thesis Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHP 2981. Graduate Independent Study and Thesis Research (half-credit).

Half-credit independent study research course consisting of 90 credit hours of supervised independent work. Intended for master's students. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHP 2985. MPH Independent Study for Thesis Preparation and Research.

This optional half credit course may be taken up to two times during preparation for the MPH degree. It provides MPH students with self-directed thesis research and preparation time under the guidance of a thesis advisor. Prior to taking this course the student and advisor must reach agreement as to what constitutes satisfactory completion of the course (e.g., completion of a satisfactory literature review, attainment of specific thesis benchmarks, or completion of the thesis). Please check Banner for the correct section number and CRN to use when registering for this course.

PHP 2988. SPH Doctoral Teaching Experience (TE).

The Teaching Experience (TE) independent study is designed to enable graduate students to expand practical teaching skills as course coordinators/instructors under the mentorship of an experienced instructor. While the TE is a primarily a learning opportunity for doctoral students, secondarily, the activities associated with the TE should add value to the class by enhancing the experience of students enrolled in the course and assisting the faculty instructor with administration and delivery of the course. TEs are generally arranged according to student interests and goals and then approved by the student's Graduate Program Director. Once approved, a student will register for the independent study section with the instructor teaching the TE-associated course. Students should consult their Graduate Program Handbook for more information.

PHP 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

PHP XLIST. Courses of Interest to Concentrators in Community Health.

The Division of Master's and Professional Programs

The Division of Master's and Professional Programs, in coordination with academic departments, delivers nearly 40 master's degree programs across residential, professional and online formats. These programs embody Brown's commitment to research, collaborative learning, and interdisciplinary, student-centered education. Within the Division, the School of Professional Studies oversees the University's professional master's programs and portfolio of short programs.

The Division's Center for Master's Student Excellence serves as a central hub for our 2,000+ master's students, providing community building, professional development opportunities and streamlined access to essential resources.

The School of Professional Studies

The School of Professional Studies, part of the Division of Master's and Professional Programs, offers three professional master's programs, including an executive MBA in partnership with the IE Business School in Madrid Spain, as well as three early-career fully online master's programs. The School also develops and manages a portfolio of short programs, certificates and mindfulness offerings.

Professional Master's Programs (<https://professional.brown.edu/degree/>)

- Master of Science in Healthcare Leadership (<https://professional.brown.edu/healthcare/>)
In partnership with the School of Public Health, the accredited one-year hybrid master's program is designed for working professionals focused on building leadership skills within the complex healthcare industry.
- Master of Science in Technology Leadership (<https://professional.brown.edu/technology/>)
In partnership with the School of Engineering, the one-year hybrid master's program equips leaders across industries with the strategic leadership skills to manage technological change in today's global economy.
- Executive Master of Business Administration (<https://emba.brown.edu/>)
In partnership with IE Business School, the Executive MBA is an accelerated, 15-month hybrid program designed to build the business framework and leadership capacity to better serve people, organizations and society.

Online Master's Programs

- Master's in Management (<https://professional.brown.edu/academics/online-masters/management/>)
The 16-month, online master's in management equips early-career professionals with foundational business skills and an ethical and human-centered management perspective.
- Master of Science in Organizational Leadership (<https://professional.brown.edu/academics/online-masters/organizational-leadership/>)
The 16-month, online master of science in organizational leadership equips working professionals to confidently lead organizations by managing critical relationships, navigating complex environments and guiding diverse teams to achieve mission essential goals.
- Master of Science in Business Analytics (<https://professional.brown.edu/academics/online-masters/business-analytics/>) (Effective 26-2027 Academic Year)
The 16-month, online master of science in business analytics equips working professionals to focus on developing data analytics and

leadership skills that can be applied to a business, government, non-profit, or educational setting.

Business Administration Graduate Program

In partnership with IE Business School, the Executive MBA is an accelerated, 15-month hybrid program designed to build the business framework and leadership capacity to better serve people, organizations and society.

Master in Management Graduate Program

The online Master's in Management (MiM) program will extend Brown University's commitment to preparing professionals to become innovative and ethical business leaders. By offering a comprehensive and flexible curriculum tailored to current industry demands, the Master's in Management program will equip graduates with the necessary skills to thrive in dynamic and competitive environments. The online Master's in Management (MiM) will focus on developing skills and knowledge in management principles and practices. It is designed for individuals who have recently completed their undergraduate studies (0-5 years of experience post-bachelor's) and want to kickstart their careers in management or related fields, but lack foundational skills. The MiM will cover a wide range of subjects including finance, marketing, operations, human resources, strategy, and organizational behavior in order to provide students with a comprehensive understanding of business management concepts and prepare them for leadership roles in various industries.

Organizational Leadership Graduate Program

The online Master of Science in Organizational Leadership (ScM OL) program will extend Brown University's commitment to preparing professionals to become innovative and ethical business leaders. By offering a comprehensive and flexible curriculum tailored to current industry demands, the Master of Science in Organizational Leadership program will equip graduates with the necessary skills to thrive in dynamic and competitive environments. The online Master of Science in Organizational Leadership will provide students with leadership skills that can be applied to a business, government, non-profit, or educational setting, and will fulfill Brown University's commitment to preparing professionals who can lead and innovate in various sectors. The ScM OL will cover a wide range of subjects including organizational planning, dynamics of leadership, finance, team building, conflict resolution and negotiation, communication and other management skills.

Courses

EMBA 2000. Entrepreneurial Opportunities in Developing Regions.

This course utilizes team-based experiential learning methods for the further development of skills in business opportunity creation. It builds upon the courses on entrepreneurial management and ethnographic research methods to investigate a business opportunity that participant teams create within, or stemming from, a developing region. The course leverages field work in a specific complex developing regional economy that serves as a proxy for such developing regions more broadly. Upon completion of the course, participants should be able to develop business opportunities in complex, developing regions and have a greater appreciation of the potential and challenges these regions represent.

EMBA 2100. Ethnographic Research Methods.

This course develops basic skills in learning to use ethnographic research methods, the hallmark of anthropology and a crucial methodology for analyzing why people behave the way they do. Concentration is on the two key elements of ethnographic methodology: participant observation and interview techniques. Students apply these techniques in assigned course project work.

EMBA 2110. Society & Culture in the Age of Global Contradictions.

In the past five decades, the flows of commodities, ideas, people, norms and resources across international borders have accelerated exponentially. Driving these dynamics are not only market forces, but also social networks, cultural diffusions, environmental events and institutional transformations. The implications of globalization and its antagonists become particularly acute when we consider challenges that transcend borders, such as COVID-19 and climate change, interacting simultaneously with the effects of increasing challenges of nationalism, isolationism and extremism. What are we to make of these contradictions? This course draws on analytical tools from the social sciences to make sense of the rapidly changing nature of global society that can help you unpack and analyze the complex interactions that drive globalization and the resulting societal transformations.

EMBA 2210. Shared History of Slavery & Capitalism.

Over five meetings, we'll study specific aspects of the history of the Atlantic slave trade and the plantation regimes of the Americas. At the same time, we will explore key principles of historical reasoning and argumentation: the reliance upon evidence to support interpretation; the appreciation of contingency and the specificity of time and place; skepticism towards claims of the universality of experience and the inevitability of outcomes. Finally, in seeking to unravel the paradoxical relationship of free markets to unfree people, we will bring historical perspective to questions about commodities and liberties that remain urgent in the current global economy.

EMBA 2220. The Political Economy of Development.

The goal of this unit is to introduce executives in the MBA Program to the politics economic & social development, with a focus on both long-run historical determinants of development and the more recent effects of globalization and neoliberal reforms on economic growth and inequality. To put these issues in context, the unit addresses debates about development in Latin America and Sub-Saharan Africa.

EMBA 2230. The Imprint of Time, Space, and Place on our Bodies: Understanding Health Disparities.

Health is a fundamental human right regardless of where one is born or the social conditions one is born into. Disparities remain for the most vulnerable populations & communities, even with developed low-cost, evidence-based strategies. This course interrogates health disparity conundrums; explore social determinants of health through experiential learning; highlight pathologies of power driven by historical, political, and economic forces through discussion and debate, and using case-based learning; examine opportunities for achieving health equity, guided by social justice approach and utilizing a capabilities paradigm; define ethical challenges in tackling health disparities due to power differentials across countries, communities, populations.

EMBA 2300. History, Culture, and Politics in South Africa (change from Globalization and the Arts).

We will begin with colonialism and address the way twentieth century South African history inflected colonialism in unique ways, from the Boer War to the Apartheid State. Then on the monumental project of changing a nation state from racist authoritarianism to democratic citizenship across a diverse and highly unequal population in terms of access to resources (an inequality burdening South Africa to this day). If one asks what the humanities might contribute to understanding and explanation in this regard, it is the demand to read such history in an interdisciplinary, synergizing way, ranging across law, politics, art, architecture and culture.

EMBA 2310. Climate Solutions at the Intersection of Business and Society.

This course is designed to introduce you to the most recent science of climate change and its impacts in the coming decades, allowing us to see mitigation of climate change and adaptation to its impacts not only as moral imperatives but also as an opportunity for commercial actors in the coming years and decades. The course discusses the scientific foundation for a goal of net zero greenhouse gas emissions, and then explores how that is operationalized in businesses, in investing, and by governments. The final deliverable asks you to explore emissions reductions or adaptation strategies in your own company.

EMBA 2400. Global Markets.

This course investigates the institutions and regulations governing our global economy. Recent events have shown that traditional national regulations (or lack thereof) are no longer adequate yet international accords over aid, trade, labor standards and a host of other issues are fiercely and frequently contested by competing interests. The results of these debates, and the resulting economic systems and policies will determine winners and losers in the new global economy. Understanding the interaction between this political-economic-regulatory environment and individual firms and industries is key to determining both the possibilities for and constraints on global business in today's fast changing economy.

EMBA 2420. Game Theory, Risk and Strategy.

This course provides a strategic understanding of how economic principles shape business decision-making in an increasingly complex and competitive world. It focuses on equipping executives with the tools to think critically about decision processes, manage risk, and optimize strategies. Participants will learn how models can simplify complex problems and guide strategic choices, how to navigate competitive environments using game theory, and how to make more informed decisions in the face of uncertainty. The course also addresses key challenges like managing incentives, addressing information gaps between parties, and understanding how behavioral biases impact both consumer choices and organizational strategies. By discussing fundamental concepts of Microeconomics, the course aims to enhance participants' ability to make smarter, more economically sound decisions that drive business success.

EMBA 2450. The Global Economy: Past, Present, and Future.

We consider not only the growth of income per capita, but also other measures of well-being. Delving into the roots of growth entails understanding investment in skills and the institutional environment in which firms and workers operate. We will focus on the question of whether the "Western" model is the best choice of institutional and economic structure. We then turn to explicitly examine the process of technological progress and a discussion of income inequality. We will then discuss how globalization affects growth and inequality. We then examine how the role of the state may or may not change in coming decades in response to ongoing economic disruption. Finally, we examine two issues that will have enormous implications for economic, social, and political developments: first, the phenomenon of persistent sub-replacement fertility, and second, climate change.

EMBA 2520. Public Speak Your Mind and Your Heart.

What you say, how you say it, and how you make it relevant to the audience, can turn an idea into a power horse. And many ideas are dumped daily because their originators do not present them in a dynamic and convincing way. Presentation skills rank among the most practical for financial managers: nothing will give you a more immediate competitive edge than the ability to communicate orally in a fluent and confident manner.

EMBA 2530. Key Reflection Project.

The Key Reflection Project (KRP) is a culminating academic project where students integrate and apply the knowledge acquired during the program to examine an idea or solve a challenging problem that is within their area of influence or personal interest. The project must mirror the spirit and learning objectives of the program, which are based on the awareness of social complexities and critical analysis of business issues. The pedagogical objective is for students to practice the application of the multidisciplinary learnings of the IE Brown program to real and complex problems that they face in their own workplaces.

EMBA 2540. Global Trends Seminar Series.

This seminar aims to foster awareness and discussion on trending issues that have an impact on managerial work. The Series will concentrate on two highly imbricated fields: Global Leadership Awareness and Technology Trends. Students will be exposed to insights and discussion from speakers that will share their ideas about the state of the art of geopolitics, emerging AI developments and social implications of the integration of technology in the world of work. The seminars will take place either during the residential periods in Madrid and Providence or via webinars during the online periods.

EMBA 2550. Thinking About Thinking About Management.

The complexity involved in corporations nowadays is daunting, as issues related to globalization are adding to the classic issues of corporate and competitive strategy. This course has two main objectives. First, it provides an organizational theory perspective and thereby complements the previous courses of strategy and management. Second, it seeks to develop your critical thinking through specific reading of the material assigned and continuous connections with practical examples.

EMBA 2600. Financial Accounting.

This course will emphasize the understanding of how financial statements are created and how accounting decisions affect these statements. The course will teach the theory emphasizing the use of accounting as a tool for decision-making and problem solving. The objective of the course is not to memorize accounting rules and perform "bookkeeping" activities. However students will have to practice some bookkeeping in order to understand deeper issues that go beyond it. Students will also learn the problems associated with accounting subjectivity and flexibility while evaluating the appropriateness of accounting policies and estimates.

EMBA 2610. Financial Management.

This course focuses on the fundamentals of corporate finance. The objective of corporate financial theory is to maximize the value of the business. In this context financial decisions can be broken down in two basic decisions (1) how much to invest and what assets to invest in, and (2) how to raise the necessary cash. This course provides a framework to answer the first question: how the firm should make the investment, or capital budgeting decision, in order to increase shareholder value.

EMBA 2620. Cost Control.

Students, as future managers, will utilize the output of cost systems (the primary internal information systems in a firm). Students will gain an understanding of cost accounting systems, including a familiarization with: the goals of cost accounting systems; the fundamental features and design of cost accounting systems; and the various uses of the data provided by cost accounting decisions. A sound understanding of these issues is necessary to interpret cost accounting system outputs; to transform them from data to information and knowledge. Without this understanding, cost accounting data is often mis-interpreted and/or mis-applied leading to erroneous decision making.

EMBA 2700. Managerial Economics.

This course will attempt to provide students with a framework to understand the main economic variables that affect business activity and country risk. It will begin with a brief look at the microeconomy and the basic concepts underlying supply and demand and market structure. It will then focus on the macroeconomy, the main economic indicators such as GDP, inflation and unemployment and the business cycle, and evaluate how changes in these indicators affect business prospects. It will outline the operation of fiscal and monetary policy and how and why policy decisions are made, to give students the tools to anticipate key policy decisions. Finally, it will look at international trade, exchange rates and the processes of economic integration to determine their costs and benefits and their impact on the business environment. Students will learn to apply these tools to actual country data.

EMBA 2810. Managing Communities of Work.

The objectives of this course are to enable participants to: discuss the psychological, social and strategic contexts in which HR processes and principles operate; describe and appraise the social and strategic benefits of "general management" expending time and resources on "employee issues"; analyze and critique people-based processes relying on their psychological, social and strategically oriented business merits; assess the relevance of HR policies the impact on business outcomes as a function of factors such as the market, the industry or the culture of the organization; and, reflect upon emerging people topics in today's organizations, which impact the managerial profession.

EMBA 2820. Marketing Management.

This course is designed to provide students with a deep understanding of the fundamental principles of marketing and marketing strategy making. The focus will be on getting to know the basic techniques of defining and segmenting a target market for goods or services, building a brand with a meaningful positioning, and then integrating product, price, promotion and distribution to offer a superior marketing mix leading to a long-term competitive advantage. Finally, students will be given an insight into consumer behavior and brand management, as well as understanding the role played by different marketing tools such as marketing research.

EMBA 2830. Operations & Supply Chain Management.

This course provides an introduction to the basic aspects of the operation of the firm by presenting an integrated vision of those concepts and techniques and an understanding of the new role of operations and supply chain management in the overall strategy of the firm. The course structure initially addresses issues related to operations strategy, followed by a focus on systems and supply chain management. The course closes with a consideration of operations in practice.

EMBA 2840. Competitive & Corporate Strategy.

This introductory course to the area of strategic management aims to provide students with a thorough understanding of the internal and external factors that shape a firm's ability to create value. Students will be familiarized with tools to analyze industries, firm resources and competitive interactions, both on the individual business and the corporate level. Perhaps most importantly, the courses strive to instill a strategic mindset that will enable students to go beyond a simple application of tools to derive a deep understanding of firm competitive behavior in order to enhance their own firm's performance in any given situation.

EMBA 2850. Digital Technology & Business Strategy.

In this course, students will learn what it means to be an information-based organization, and how digital technologies-enabled processes to create and capture value for organizations. They will learn where digital is going, where it fits into organizations, and how to govern it. Through case studies, research reports, hands-on exercises, and interactive discussions, participants will learn to:

- Align digital technologies with organizations' business goals, and communicate those goals
- Set business and technology priorities based on those goals
- Apply concepts, tools and techniques to design appropriate digital business models
- Analyze innovation initiatives in the digital space
- Evaluate digital transformation strategies of a business

EMBA 2860. Strategy at the Intersection of Business & Society.

This course builds on the principles of strategic management to build an understanding of the impact of society on firm strategy and to learn to shape, accordingly, superior business strategies. The course addresses: stakeholder strategy (creating shared value); issue management (how social movements impact firm strategy); links between social performance and financial performance; communicating corporate strategy in line with social expectations in a social media era; and staying competitive in a global and digital era.

EMBA 2900. Entrepreneurial Management for Executives.

This course provides a forum for the in-depth examination of mindsets, methods, and managerial activities that follow the entrepreneurial process from opportunity recognition to growing new ventures, whether as startups or within existing businesses. In particular the course will examine the role of finding a fit between one's passions, skills and markets in the pursuit of opportunities and facilitate an understanding of the stages in the entrepreneurial process: opportunity recognition, customer discovery and market validation, solution validation and crafting of the business model.

EMBA 2910. Empower Your Negotiation.

This course is a high impact 5-sessions program to effectively improve your negotiation skills and knowledge by combining rigorous theoretical instruction and real practical exercises. Away from the magic recipes of a normative approach, the program has been designed to enhance participants to exercise the "art of negotiation" as an effective tool that they will be able to use throughout their professional careers and personal lives, within the current framework of our diverse and multicultural societies. This program will use relevant practical cases and by discussing these cases with the instructors during a process of five differentiated steps, one per session of the course.

EMBA 2930. Leading People, Teams and Organizations.

This course focuses on advancing students' understanding of how to lead and manage with the aim of increasing personal and organizational effectiveness. It is designed to address several fundamental aspects of managing and leading people. These include understanding and influencing group behavior and performance, working with and managing people on a one-on-one basis, and leading, motivating and aligning people behind a common vision or direction. This course places a particular emphasis on increasing students' self-awareness as leaders and their ability to address the challenges of leading change in organizations.

EMBA 2960. Data for Good.

Students learn about the modern practice of data analytics, beginning with the principles undergirding data science as it is used in for-profit enterprises. We explore hypothesis-driven problem-solving, the wide range of data sources including "alternative data," and techniques for aggregating and analyzing data. This body of data and knowledge constitutes the supply side of the problem. We next look at the demand side: the range of social concerns that can be addressed using data analytics, such as public health, poverty, and housing.

EMBA 2970. Inclusive Organizational Leadership and Development.

Through an interdisciplinary lens, we will examine the following: How do we experience and understand diversity and difference? How has the field of DEI changed over time and specifically since 2020? How do principles of equity and inclusion shape systems that affect individuals, families, communities, and society? How can leaders effectively use data to inform DEI decisions and drive greater business results? IE Brown students will explore the contours of difference and the dynamics of diversity, privilege, and oppression in international contexts. Building on standard models of multicultural competence that emphasize knowledge, awareness, and skills, they will be introduced to cultural humility, culturally specific approaches to practice, and frameworks for driving systemic programs through equity and empowerment. The goal is to promote DEI enablement and values-based approaches for advancing DEI within organizations.

EMBA 2980. Technology & Innovation: A Global Perspective.

This course aims to help participants to develop a deep understanding of innovation and technology as a global phenomenon. The course will emphasize the global nature of innovation and technology exploring how different approaches to innovation emerge as response to different competitive, social, technological and economic environments. This understanding of innovation as a global phenomenon will be used as a tool to gain a better appreciation of some of the current technology battles, their evolution and more likely outcome.

EMBA 2990. Ethical Leadership.

The purpose of this course is to explore ethical issues that leaders confront in a rational, practical, and responsible way to enable you to address them effectively when you confront them in your lives. This course works to close the gap between the personal moral choices of an individual and the business challenges presented by organizational life. This course will raise your awareness surrounding selected ethical systems, explore ethical challenges leaders face, create an awareness of the implications of decisions, and provide you with a system to guide your own and others' ethical choices.

Departments, Centers, Programs and Institutes

Africana Studies

Located in the historic Churchill House on the campus of Brown University, the Department of Africana Studies is the intellectual center for faculty and students interested in the artistic, historical, literary, and theoretical expressions of the various cultures of Africa and the African Diaspora. Central to the intellectual work of the department is the close collaboration of artists and scholars in examining relationships between academic and artistic knowledge about the world and human experience. Our commitment to rigorous scholarship and robust student and community development is grounded in a truly global understanding of the reach and implications of the Africana World.

For additional information, please visit the department's website: http://brown.edu/Departments/Africana_Studies/

Africana Studies Concentration Requirements

The concentration in Africana Studies critically examines the artistic, historical, literary, and theoretical expressions of the peoples and cultures of Africa and the African Diaspora. Central to the work of students and faculty in the concentration is the close collaboration of artists, scholars, and writers in examining relationships between academic and artistic knowledge about the world and human experience. Concentrators work closely with faculty members in developing new knowledge about the world and human existence through the critical and comprehensive study of the peoples and cultures of Africa and the African Diaspora. Concentrators are encouraged to study abroad in Africa, the Caribbean, and/or Latin America and to acquire language competency in a language other than English spoken in Africa and the diaspora.

Africana Studies presents a different conceptual paradigm that connects the global black experience. Africana Studies engages issues about historical and contemporary responses to local and global crises. It engages with how people of color create their own knowledge culturally and politically. It is oftentimes a critique of how forms of knowledge are produced. Concentrators acquire a host of interdisciplinary skills that allow them to ask questions about the world around them, and forms of knowledge production while developing critical analytical skills. Our concentrators deploy these skills in other classes, enriching their own general intellectual development.

In order to develop requisite competency in the discipline of Africana Studies, concentrators must complete nine (9) semester-long courses offered by or cross-listed with the Department. Seven (7) courses must have an AFRI prefix or be offered by Africana Studies core faculty. Two (2) courses can be cross-listed. In some cases, Concentrators may petition the Department to accept other appropriate courses. Of these 9 courses, the following Africana Studies courses are **required**:

- AFRI 0090 (<https://bulletin.brown.edu/search/?P=AFRI%200090>) An Introduction to Africana Studies
- AFRI 1330 (<https://bulletin.brown.edu/search/?P=AFRI%201330>) Africana Studies Junior Seminar
- AFRI 1360 (<https://bulletin.brown.edu/search/?P=AFRI%201360>) Africana Studies: Knowledge, Texts and Methodology—Senior Capstone Seminar (Spring ONLY)

Students studying abroad during the second semester of their junior year will be required to take the seminar during their senior year. If there is a documented conflict with another concentration's senior seminar, students should consult with the DUS.

The Department strongly encourages foreign study in Africa, the Caribbean, and Latin America.

The Department also encourages the acquisition of language competencies, in addition to English, which are spoken in Africa and the diaspora. Since no continental African language is permanently offered at Brown (to date), concentrators who study abroad and acquire certified competency in any African language are welcome to petition the department for competency credit.

For more information about the concentration, please contact the Director of Undergraduate Studies.

Honors in Africana Studies

Africana Studies' concentrators with outstanding academic records (demonstration of excellent research and writing skills from course selections to grades) may be admitted to the department's Honors Program.

Students interested in pursuing honors should identify a faculty sponsor in Africana Studies (chosen from Core Faculty or affiliated faculty after Chair agreement) in their 6th semester and begin working on their thesis project during the summer before their senior year. By the end of the sixth semester, while working in consultation with a faculty advisor, the student must submit a rough draft of the project proposal. **Please visit the department website for proposal guidelines (<https://www.brown.edu/academics/africana-studies/sites/brown.edu/academics/africana-studies/files/uploads/Final-ProposalGuidelines.pdf>)**. This preliminary plan should include a timeline for completion of the thesis and is not to exceed one (1) typewritten page. This plan should also include a bibliography that students have developed with their thesis advisor to guide their summer reading.

By the end of the summer, the Honor's candidate should be familiar with the secondary works in the field. (Secondary readings should be extensive and be incorporated into the final proposal, due **Monday, September 26, 2022**.) The student should also identify a second reader at this point.

The final work plan/proposal, not to exceed three (3) typewritten pages, should incorporate the summer research findings and updates to the completion deadline. The final proposal must be approved and signed by a committee, comprised of the faculty advisor who is to direct the Honor's thesis, the second reader, and the concentration advisor. By the end of week three of the first senior semester, the thesis advisor should inform the Director of Undergraduate Studies by email that the proposal has been approved.

The Honor's candidate should complete at least one chapter of distinguished quality while enrolled in an independent study with their faculty advisor during the first semester of the senior year. Students must enroll in at least one, preferably two, semesters of independent study to work on their thesis.

For students completing graduation requirements by the end of **Semester I (Fall)**, a first complete draft of the thesis should be completed by **the last Friday in October**. Final drafts must be submitted by **the last Friday in November**. For students completing graduation requirements by **Semester II (Spring)**, a first complete draft of the thesis should be submitted by **the last Friday in February**. The final draft of the thesis should be submitted by **the last Friday in March**. Students must submit bound copies of the final thesis to the department and to each of their readers, along with an electronic copy of the completed thesis to the Academic Department Manager. All students are expected to formally present their thesis projects in the Department of Africana Studies in **early April** at a time to be determined. After this presentation, a department committee will make recommendations for honors to the Director of Undergraduate Studies and students will receive notification of the recommendation.

Africana Studies Graduate Program

The Department of Africana Studies at Brown University is the intellectual center for faculty and students interested in the critical study of the artistic, cultural, historical, literary and theoretical expressions of the peoples and cultures of Africa and the African Diaspora. The department has one of the leading faculties in the discipline. Members of the faculty have received many prestigious honors and awards such as the Gish Award, the Andrew Carnegie Fellowship, the Guggenheim Fellowship and the MacArthur Fellowship, in addition to successfully competing for fellowships and

grants from the Ford Foundation, the Fulbright Program, the Woodrow Wilson Foundation, the National Endowment for the Arts and the National Science Foundation.

Our fifth-year M.A. provides training for students interested in doctoral studies or pursuing careers as teachers or in professions related to Africana Studies, with a thorough grounding in critical thinking, research and scholarship at one of the most prestigious centers of research and scholarship in the United States. Our program is organized to provide students with the opportunity and flexibility to design a program of study that addresses intellectual interests and career ambitions.

The department of Africana Studies offers a graduate program leading to the Ph.D. in Africana Studies. For more information on admission and program requirements, please visit the website: <http://www.brown.edu/academics/gradschool/programs/africana-studies-0> (<http://www.brown.edu/academics/gradschool/programs/africana-studies-0/>)

Students admitted to the 5th year M.A. must complete six courses (beyond the two courses taken as undergraduate students and applied to their master's degree). The eight courses (including the two taken as undergraduates) must include three of the core topical classes (AFRI 2101 [Methods] is required + 2 of the other core classes offered) in the Africana Studies graduate program. At least four of the remaining courses must be with core or affiliate Africana faculty. Students will take the core courses already in place for the doctoral program. That will integrate them into the overall graduate community in the Department.

Program Requirements

3 Core Courses

AFRI 2101	Methods in Africana Studies (*Students must register for 2 additional core courses below)	1
AFRI 2002	Theories of Africana Thought: Literary and Expressive Cultures	1
AFRI 2001	Theories of Africana Thought: Intellectual History and Critical Theory	1

4 of the remaining courses must be with core or affiliate Africana faculty

AFRI 2010	Black Transnational Feminism	4
HIST 2970C	Rethinking the Civil Rights Movement	
PHUM 2020	Methods in Public Humanities	
AFRI 2015	Revolt and Revolution in the Black World	
AFRI 2020	Afro-pessimism and Its Kin	
AFRI 2300	Black Critique: Black Critical Theory - History, Literature, Politics, the Human Sciences of Being	
ENGL 2901P	Black Feminism: Roots, Routes, Futures	

Courses

AFRI 0001. From Octavia Butler to N.K Jemisin, Black Feminist and Queer Theories in Science-Fiction and Fantasy.

Through the analytical lenses offered by Black feminist and queer theories, this course engages works of Black speculative fiction as modes of theorizing questions of race, gender, sexuality, class, environmental justice, interpersonal politics and more. Through course readings, seminar discussions, and creative writing projects, students will critically analyze works of speculative fiction written by Black authors and broaden their knowledge of Black speculative literature, with a particular focus on science fiction and fantasy.

AFRI 0005. Resistance in Black Popular Culture.

This course examines the terrain of black popular culture and its enduring yet shifting relationship to forms of social and political resistance employed by African-Americans in the US. This course offers a deep dive into two complex, related questions central to the field of Black Cultural Studies: 1) what is "black popular culture" and what can we learn by studying it in a social context? 2) How do black popular cultural forms both reproduce the status quo as well as enable black people to resist the status quo? In this course, we will engage with major texts and key theoretical concepts from Black Cultural Studies to help us analyze black popular cultural works via in-class listening and viewing of popular media to consider both the normative and resistive dimensions of black popular culture in a social context.

AFRI 0005A. Resistance in Black Popular Culture.

This course examines the terrain of black popular culture and its enduring yet shifting relationship to forms of social and political resistance employed by African-Americans in the US. This course offers a deep dive into two complex, related questions central to the field of Black Cultural Studies: 1) what is "black popular culture" and what can we learn by studying it in a social context? 2) How do black popular cultural forms both reproduce the status quo as well as enable black people to resist the status quo? In this course, we will engage with major texts and key theoretical concepts from Black Cultural Studies to help us analyze black popular cultural works via in-class listening and viewing of popular media to consider both the normative and resistive dimensions of black popular culture in a social context.

AFRI 0090. An Introduction to Africana Studies.

This course introduces students to the vibrant and contested field of Africana Studies by critically exploring and analyzing the links and disjunctures in the cultural, political, and intellectual practices and experiences of people of African descent throughout the African diaspora. Beginning with a critical overview of the history, theoretical orientations, and multiple methodological strategies of the discipline, the course is divided into three thematic units that examine intellectuals, politics, and movements; identity construction and formation; and literary, cultural, and aesthetic theories and practices in the African diaspora.

AFRI 0101. White Supremacy.

This class focuses on the long history and present circumstance of white supremacy, on its unchanging character and regular reinvention. Drawing together decades of scholarly work, the class envisions white supremacy as a structure, an ideology, a culture, and a psychology - and as the keystone of historical experiences we now often see as distinct: genocide, apartheid, nativism, segregation, settler colonialism, racialized policing, and personal prejudice. At the close of the semester, students should have a solid historical understanding of white supremacy and a strong sense of how these disparate experiences are linked.

AFRI 0110B. The Last Professors.

Addresses the profound effects of contemporary economic, political, and social changes on the role and function of the university in the 21st century. A primary concern of the seminar is to critically analyze how and in what ways the transformations in the broader society challenges, constrain, and, at times, frustrate critical intellectual activity. The seminar will draw on a broad and diverse set of readings ranging from classic statements by Cardinal Newman and W.E.B. DuBois to contemporary critical analyses by Henry Giroux and Adolph Reed, Jr. Enrollment limited to 19 first year students.

AFRI 0110C. Autobiography of the Civil Rights Movement.

Most of the rich written history of the civil rights movement originates from first-hand accounts documented in oral histories and autobiographies. This interdisciplinary course plots the milestones of the civil rights movement through the lens of several autobiographies. The aim is to critique autobiography as a historical document as well as use it to tell the stories of the civil rights movement. We will compare and contrast different texts, analyze content and map a history of the era. Students will work with a writing fellow to develop one critical paper and one autobiographical paper. Enrollment limited to 19 first year students.

AFRI 0120. Philosophy of Race and Gender.

Prejudice of many kinds, such as racism and sexism is so embedded in our modern social institutions, and so traditional and pervasive that we often fail to notice it. Furthermore, race and gender have been used repeatedly to explain differences. This course is a rigorous examination of the philosophical meanings of race and gender, from a variety of historical, anthropological and feminists perspectives.

AFRI 0130. This is America: Reimagining the American Saga.

History offers us a framework to appraise the forces and conditions that have formed people's shared experiences. Because of this, the histories we tell are often explanatory. They delineate how we arrived at this moment and tell us which people and what events were most consequential. But what happens when the people who look like you are not part of the story? Or if their inclusion amounts to cameos in support of a larger narrative that ultimately minimizes or ignores their contributions? This course reimagines American history by placing in the foreground the people and events often marginalized or forgotten in traditional appraisals of the past. Through a review of historical sources, literature, oral histories, and evidence found in popular culture, this class offers a more inclusive retelling of the American saga.

AFRI 0140. First Lady of the Struggle: Mary McLeod Bethune and Global Black Freedom.

This course will focus on the life and legacy of Mary McLeod Bethune through an examination of her activism in the areas of education, politics, women's rights issues, civil rights issues, and world affairs. Throughout the course of her 79 years, she rose from humble beginnings in South Carolina, the daughter of formerly enslaved parents, to work with presidents and world leaders. She was born during the period of Reconstruction, and passed away the same year as the ruling of Brown vs. Board of Education was made, which will allow for a study of her participation in laying the foundation for the Modern Civil Rights Movement. Students will also gain experiential learning by visiting historic sites which preserve the legacy of Bethune, including the Mary McLeod Bethune Council House-National Historic Site and the Carter G. Woodson Home-National Historic Site.

AFRI 0160. Twentieth-Century Africa.

Twentieth Century Africa delves into the complex and problematic narratives surrounding Sub-Saharan Africa, examining how the continent has been historically misrepresented, misunderstood, and "mistaken" in various contexts. We critically analyze the notion of "Mistaking Africa" focusing on deconstructing stereotypes, challenging misconceptions, and promoting a more nuanced understanding of Sub-Saharan Africa's diverse cultures, histories, and contemporary realities. Students will read literature, analyze popular culture, and examine primary sources to study European imperialism and racism; colonial systems of forced labor and wage labor; African resistance and collaboration; the Christianizing and westernizing effects of colonial education; the transformation of gender, class, and ethnic identities, and African nations' struggle for political autonomy.

AFRI 0170. Afro-American History and Society Before 1800.

Focuses on the history of Africans and persons of African decent in the part of North America that now constitutes the U.S. Centers on the 18th century, but gives some attention to the 17th and 19th centuries as well. Most of the readings are devoted to the English colonies, but some concern themselves with Dutch, French, and Spanish settlements.

AFRI 0190. Caribbean History and Society Before 1800.

Examines some of the themes important in the multiracial societies of the Caribbean from the 17th through the early years of the 19th century. Explores Creole societies, plantation economies, ethnicity, maroon societies, class and racial divisions, acculturation, syncretic religions, and patterns of slave resistance. Danish, Dutch, English, French, and Spanish settlements are studied.

AFRI 0200. Modern Caribbean History and Society.

This course will critically examine five themes in modern Caribbean history and society: What is the Caribbean? Nationalism, religion, economic development, and popular culture. These themes will be discussed with reference to the different geographical, racial, cultural and political spaces, which comprise the Caribbean.

AFRI 0205. Race and Labor: Black Workers and the Transnational Labor Movement.

This is a discussion-based, seminar-style class on the relationship between race and labor globally from the age of emancipation through the Civil Rights Movement. While this course will focus on the labor struggles of Black American workers and activists, we will also examine movements from throughout the African Diaspora in order to incorporate a Diasporic, comparative lens. Beginning with an interrogation of race and labor history within fields of historical study, the course will move along chronological and thematic axes to investigate the changes in wage labor structure, the nature of plantation economies, agricultural and industrial production, domestic and service work. It centers the experiences of Black workers through a critical Black feminist lens that centers the role of Black women's knowledge production in the construction of modern labor movements.

AFRI 0210. Afro Latin Americans and Blackness in the Americas.

This course focuses on the position of Blacks in the national histories and societies of Latin America from slavery to the present-day. Emphasis is on a multidisciplinary engagement with issues and the exposure of students to the critical discussion of national images and realities about blackness and Africa-descended institutions and practices. The role of racial issues in national and transnational encounters and the consequences of migration of people and ideas within the hemisphere are explored.

AFRI 0220. From Emancipation to Obama: Journeys in African American History.

This course explores African American History through the lens of black freedom struggles. The struggles take all forms, between black and white from local to national levels, within and between black communities, and between men and women. This course assumes some familiarity with basic U.S. History and will utilize a variety of primary sources from autobiographical material to visual art and music as well as the usual monographs and articles. Aside from reading, students will be required to work with a writing fellow on 2 papers. There are also 2 exams.

AFRI 0280. Race, Slavery, Modernity and Knowledge.

This course will review some of the central texts that constitute the different meanings of modernity and discuss how these texts became part of our framework for thinking about modernity, the human self and its different representations. The course will also engage texts that make attempts to complicate the meanings of modernity through a set of engagements with the issues of slavery, colonialism and race. Some key words in the course are: modernity, knowledge production, double-consciousness, social construction of race, racial slavery, coloniality.

AFRI 0300. Performing Ethnography and the Politics of Culture.

This course introduces students to the practice of fieldwork observation (ethnography) as a research method to investigate how culture is enacted and communities are formed and sustained. Regular opportunities to observe and participate in Black cultural events and institutions in and around Providence. Opportunities to sample local cuisines and to visit community gardens, religious institutions, and other cultural sites will develop students' capacity to conduct research. These experiences, combined with the course readings and other assignments, will teach students how to analyze and disseminate their findings in writing and through a final creative project.

AFRI 0370. African American Novels of the 1970s.

Literary historians generally agree that in the 1970s, in the U.S., there was a significant increase in the publication of diverse forms of African American literature. The 1970s is also often described by scholars as a decade in which there was a renaissance of African American women's writing as well as the publication of several experimental African American literary works. In this seminar, we will study this lively period in African American literary history primarily through novels, some of them recently republished or adapted into other forms. What idea of African American literature do we get when we read novels from this era? What questions were asked in 1970s African American novels that we continue to ask now? Novels we will likely read include detective fiction, diaristic fiction, satirical fiction, a love story, and historical fiction.

AFRI 0400. Badmen and Blues Women Explorations in African American Culture.

This course is designed to demonstrate to students the importance of Black interiority and the interpersonal in the struggle for Black liberation in America. It will offer students an opportunity to familiarize themselves with a variety of texts from across the Black radical tradition. What makes this course unique, however, is the parts of these texts that will be emphasized. Where others might prioritize politics and public spectacle, this course will direct students towards the personal – love lives, childhoods, personal awakenings, etc. – to show how these parts of the Black lived experience informs the development of politics and consciousness.

AFRI 0410. After the Uprisings: Abolition and Black Studies.

This small, discussion-based seminar will examine the concept of “abolition” and its relationship to Black Studies. In the aftermath of the uprisings of 2020, abolition has become part of popular discourse in ways hardly imagined by some of its theorists and practitioners. The framework is most often aimed at carceral structures such as police, prisons, and surveillance, yet some interpretations of abolition take aim at the state, borders, and even the world. This seminar will explore the varied discourses of abolition and invite students to wrestle with the theoretical and practical difficulties the framework is confronted with, such as questions of law, politics, gender, and temporality. A key site of inquiry will be the methods of struggle proposed to get from the present to the anticipated abolitionist future. What “pathways to abolition” are prioritized, while others fall off the table?

AFRI 0411. Reading Revolt: Blackness, Politics, and Morality.

This discussion-based seminar considers the critical question of Black revolt and its relationship to politics and morality. From the slave revolts of the 1800s century to the Black revolutionary movements of the 1960s, we will cover recurrent themes related to Black revolt through an interdisciplinary array of historical and literary sources, as well as scholarly texts. Discussions will focus on the various contributions of Black thinkers and actors who have faced the issue of revolt, and how they confront around ideas surrounding sovereignty, violence, and politics. Critically we will consider the question: What is at stake in Black revolt? Throughout the course we think comparatively across multiple contexts (enslavement, colonization, systematic oppression) to consider how the relationship between Blackness and revolt emerges, shifts, and what it means for our foundational concepts of Western order such as politics, morality, and rationality.

AFRI 0420. Cannabis Legalization: Race, Education, and Policing.

This course investigates issues related to policing, race, education and the legalization of cannabis. It examines Silicon Valley's innovations, foreign and domestic venture capital funding, and the “Big Cannabis” industry. We also explore race-related disparities in policies related to the selling and policing of cannabis, and the economic impact cannabis legalization has had on funding for public education and public schools. We will also explore various community and policy strategies to address race-based arrest and incarceration rates pre-legalization, race and gender-based differences in licensing programs for cannabis entrepreneurs, and the health impacts of cannabis processing plant placements which tend to be heavily clustered in poor, urban communities of color. We will invite local elected officials, nonprofit groups working on the topics, dispensary founders from the local area, and hopefully, cannabis funders and entrepreneurs to provide us with first-hand perspectives.

AFRI 0500. Globalization, Media and Culture.

This course is designed to examine the changing global landscape and its impact on society, culture and will draw on analytical tools from the social sciences to make sense of the rapidly changing nature of global society. In the past three decades the flows of commodities, ideas, people, norms, resources across international borders has accelerated exponentially. Driving these dynamics are not only market forces, but also the media, social networks, cultural diffusions, institutional transformations. This course focuses on the social structures, institutional and organizational forms, political processes and cultural practices that mediate the encounter of the global and the national.

AFRI 0510. Love Stories in African Literature and Film.

In African cinema and modern African literature, the genre of the love story is often used by artists as a medium for addressing various socio-political issues. In this seminar, we will discuss African love stories as complex narratives about romantic relationships, as political fiction, and as spaces where African artists reflect on romantic love, romantic desire, and the idea of romance. In what ways do African love stories published in the twentieth century still speak to us today? How do twenty-first century African artists use love stories to confront contemporary societal concerns?

AFRI 0520. The Making of Ghana: The Life & Times of a Black Nation.

This course investigates the relationship between history, memory, and Blackness in the making of the West African nation, Ghana. This is a study abroad course, that will include a trip to Ghana. Topics will include the trans-Atlantic slave trade, the “Scramble for Africa” and the early colonial era, the achievements of Ghanaian Independence in the 1950s and 60s and the constructions of national and racial identities in contemporary Ghana. We will also examine how such moments have been and continue to be performed in the public sphere. While in Ghana, we will hear lectures by leading Ghanaian scholars and artists, tour relevant historical sites, and attend performances in a variety of cultural locales.

AFRI 0550. African American Health Activism from Emancipation to AIDS.

This historical survey course examines African American activism and social movements from Emancipation to the contemporary period through the lens of African American access to health resources. By paying close attention to how social and cultural aspects of medicine impact access and quality of care by race, gender, and sexuality, the course examines how segregation, poverty, incarceration, and policing shaped activism and healthcare. The course develops a sense of how African American activists crafted responses to different historical crises including Reconstruction, Jim Crow, Civil Rights, and the War on Drugs by the demands they made for specific resources.

AFRI 0551. Bodies, Race, and Resistance: Africana Perspectives on Health Inequality.

This course examines the historical foundations and contemporary realities of health inequality in the United States through an Africana Studies lens. Students will study how racism, structural inequities, and systems of power shape health outcomes across race, class, gender, and citizenship. We will investigate themes including slavery's medical legacies, segregation and Jim Crow health systems, immigration and exclusion, incarceration and the carceral state, and the persistence of race-based medicine. At the same time, we will highlight Black communities' strategies of resistance, resilience, and advocacy for health justice. The course combines historical and contemporary case studies to equip students with a critical understanding of the past and its implications for today's health challenges.

AFRI 0560. Psychology of the Black Experience.

This course is designed to facilitate understanding of African American psychological experiences. We begin by critically reviewing historical approaches to the psychological study of Black people. We then shift to an examination of the themes, and research currently being generated by those involved in the quest for scholarly self-definition and for redefinition of the psychological fabric of the Black experience.

AFRI 0570. 20th Century Black Feminist Thought and Practice in the U.S.

This course will explore the ways that black women in the U.S. have experienced racial and gendered discrimination as well as what sorts of strategies (e.g., political, intellectual, narrative, and creative) black women have devised in response. We will be especially concerned with elements of African-American feminist thought and its articulation in writings, music, literature and practice/activism in the 20th century U.S. Enrollment limited to 80.

AFRI 0580. Black Theology.

"In this era of Black Power... theology cannot afford to be silent." This lecture course will plumb the depths of James H. Cone's statement by critically interrogating the cultural, political, and theoretical dimensions of the development and evolution of Black Theology. The course will consider the nature and task of theology with particular reference to its contested role in American public life, the complex relation between theology, race, and radical politics, and the connections and disjunctures between Black Theology and the fields of history, literature, and philosophy.

AFRI 0600. Race, Gender, and Urban Politics.

This course will introduce students to the methods and practice of studying black urban life with a primary focus on US cities. We will critically examine the urban cultural studies debates concerned with race, gender, class and sexuality. The approach of the course will be interdisciplinary, drawing upon works from anthropology, literature, history, music, and film. Topics include tourism, immigration, poverty, popular culture, gentrification, violence, and criminalization.

AFRI 0610. Black Student Protest from Jim Crow to the Present.

This is a history-driven class about black student protest. It puts this history in direct dialogue with other kinds of student protests over the long twentieth century. The point of the class is to ground conversations about contemporary protest culture in an historical context that extends well beyond Brown, that moves into the deep history of higher education and education more generally, and that reveals the intersection of protest with other global, national, and local plotlines. It is, as well, meant to think about how all of these histories have been represented popularly and politically in the very recent past.

AFRI 0620. African-American Life in the City.

This course examines the social and cultural history of black urban communities by examining the foundation of black communities in Chicago, New York and Los Angeles. We will examine how migration and the intersections of race, class, culture and gender shape life in urban places, reveal the structural forces that define black urban communities, and explore urban African-American expressive forms. Enrollment limited to 45.

AFRI 0630. Drama and War in Africa: New Voices.

This course is an historical, political and topical examination of the subject of War on the African continent as seen through the lens of artistic response. Class discussions will be based on the different Stage, Screen and Radio Dramas that will serve as course materials. We will analyze reflections by African artists and scholars on the violent conflicts that have characterized the region's recent history, as well as closely related international perspectives, such as those evident in *Hotel Rwanda* and *The Last King of Scotland*. We will also explore how political actors have used performative techniques, and will specifically examine the ways that other members of society (especially women and children) deal with such crises. Canonical African dramatists like Fugard, Ngugi, Soyinka and Ousmane will be referred to, but emphasis will be laid upon the New Voices emerging from a range of African nations, including Rwanda, Uganda, Congo, Senegal, Sudan and South Africa, that have engaged with the subject of war.

AFRI 0640. Contemporary Issues in African Politics and Culture: Thinking Africa Differently.

Using an interdisciplinary methodology this course will examine three current issues in African societies: War, Violence and Sovereignty; the Politics of Gender in the African postcolony and the meanings of History, Trauma and Public Memory in some African societies. We will undertake this examination by "thinking about Africa differently," that is by thinking about these three issues outside of the dominant set of images, tropes and ideas that have conventionally constructed a particular version of Africa.

AFRI 0660. Activist Scholarship: Research and Writing for Social Change.

How can research advance the global social justice struggle? This course will emphasize the idea that education has never been a politically neutral undertaking. Students' research can have social impact in the university and beyond. We will engage a variety of disciplinary fields to theorize key concepts such as intersectionality of oppression and resistance, power, hegemony, social justice, and activist research. Students will be required to carry out an original research project that tackles a pressing societal problem we face today.

AFRI 0670. Global Black Radicalism.

The decade from the mid-Sixties until the mid-Seventies witnessed the rise of Black Radicalism as a global phenomenon. The emergence of Black Power in the US, Brazil and the Caribbean, the consolidation of liberation struggles in Portuguese Africa and the rise of a Black Consciousness trend in Apartheid South Africa all represent key moments. What led young activists to embrace "Black Power"? What led to the emergence of Marxist movements in Portuguese Africa? What events in the Caribbean gave ascendancy to radical tendencies? And what forces contributed to the decline of these movements? This course seeks to answer these questions.

AFRI 0690. Gospel Titans, Divas, and Dynasties.

The course will explore some of contemporary black gospel music's most celebrated artists, as a lens into gospel music history and the challenges of commercializing religious folk music. This course will explore gospel music performance and commerce as defined by artists such as The Clark Sisters, who were recently celebrated in the biopic *The Clark Sisters: First Ladies of Gospel*, which first aired on the Lifetime network Sunday, April 12, 2020. The course will also explore other gospel music-making families, such as The Winans, The Staples Singers, Mary Mary, and The Crouchers.

AFRI 0700. Freedom Films.

"Freedom Films" is a First Year Seminar which will focus on historical documentary films related to the Southern Civil Rights Movement of the 1960s. We will analyze how these films reflect, change, and inform our views of the traditional Civil Rights Movement and how some offer contrasting narratives of that movement. We will also examine how and in what ways the films accurately and adequately reflect the historical realities of the Southern Civil Rights Movement based on readings and research. Enrollment limited to 19 first year students.

AFRI 0710A. Racial and Gender Politics in Contemporary Brazil.

Brazil is commonly understood as an example of a "racially democratic" nation, but as scholars have recently shown, racism permeates all aspects of Brazilian society. This course traces the development of the theorization of race, racial identity and race relations in contemporary Brazil. The approach of the course will be interdisciplinary, drawing upon works from anthropology, literature, history, music, and film. Topics will include colonialism and enslavement, nationalism, social activism and popular culture. We will also consider how Brazilian social relations differ from or conform to other racialized patterns in other nation-states in the Americas. Particular attention will be placed on the interrelationship between race, gender, class, and nation.

AFRI 0710B. Ethics of Black Power.

In his now classic text *Blood in My Eye*, George Jackson writes "All revolution should be love inspired". This course will plumb the depths of Jackson's remark by critically interrogating the ethical dimensions of the Black Power concept and the cultural, ideological, and political interventions influenced by the conceptual revolution. We will assess the ethical parameters of the various ideological tendencies that influenced the conceptual formulation and political articulation of Black Power including Black Nationalism, Feminism, Liberalism, Marxism-Leninism-Maoism and Pan-Africanism.

AFRI 0720. More Than Words: Contemporary Afro-Brazilian Fiction and Culture.

This lecture/seminar course delves into Brazil's Black legacy through contemporary creative productions. We will focus on how the dimensions of race, class, ethnicity, gender, and sexuality are portrayed in Brazilian literature and cultural expression forms. Through the lens of Brazilian Black feminism, we will examine how race relations have influenced Brazil's national identity. The curriculum integrates theoretical and critical readings from Black Brazilian female intellectuals, intersecting with various mediums such as fiction, graphic novels, films, music, and visual arts. These mediums serve as powerful tools to confront Brazil's history of slavery, challenge the notion of racial democracy, and foster positive transformations in Afro-Brazilian representation.

AFRI 0750. Race and Political Theory.

This course examines how the investigation of race in political theory impacts the subfield's conception of democracy, freedom, justice, equality, citizenship, political representation, the public sphere, and the political in general. To this end, the course will survey classic and contemporary works that interrogate race with the aim of better understanding the normative and descriptive political knowledge within the field, while shaping our own.

AFRI 0760A. Rastafari Studies.

This course will introduce students to the theoretical frameworks, methods, and practice based application of engaging with the Rastafari movement. We'll critically examine literature produced about Rastafari & the community-based activism of the movement in the context of African & African Diasporic movements from the 1930s to the present. Approach of the class is interdisciplinary and thematic, drawing upon works from Africana studies, literature, history, music, and film. Students will be able to engage with Rastafari guest speakers and read the most recent literature in Rastafari studies. Special emphasis will be placed on gendered anti-Black racism and Rastafari woman's community activism.

AFRI 0760B. Raggae, Rastafari and Revolution.

Bob Marley in the song *Revolution* declares, "Revolution Reveals." Beginning from this frame this course will examine the history of Rastafari since it was formed in the late 1930s as an Afro-Caribbean religious practice. It will examine how the emergence of raggae music in Jamaica in the late 1960s mixed and then became one central ingredient of what has been called "conscious music" in the period of the flowering of anti-colonial and black radicalism in the 20th century. The course will explore how raggae music became a form of subaltern language rethinking questions of nation and history in the Caribbean and Africa.

AFRI 0800. Theorizing Racism.

Why does racism persist in the twenty-first century? How has racism changed over time? Are the vast majority of Americans racist? Or does racism largely exist without racists? Is racism a problem we can overcome? Or is it a permanent feature of American democracy? This lecture course will examine these questions through a critical reconstruction of the most prominent theories of racism in the social sciences and humanities, identifying the concept's central problem space, while simultaneously opening up the question, what, if anything, can be done to intervene on this stubbornly persistent problem. Along the way, we will also interrogate related concepts like racial injustice, racial prejudice, race relations, racial inequality, white supremacy, antiblack racism, and herrenvolk democracy.

AFRI 0807. Racism, Segregation, Poverty and Public Education in the United States.

Using film, podcasts, legal history, memoir, sociology and social history, this course focuses on the past and present state of education in the United States as it both produces and ameliorates social inequality. The course explores how both primary schools, as well as colleges and universities both reflect and reproduce inequalities of opportunity along race and class lines.

AFRI 0808. Banned Black Books: Race, Power & Public Education.

This course examines the politics of book bans in public education, historically and contemporarily. It engages fundamental questions about who can read, what they can read, when they can read and why, at various points in US history, they can't read select Black books in U.S. K-12 schools, colleges, universities, and public libraries. Critically, we consider the politics of censorship, the educational nature of social control, and ongoing debates about freedom as an unfinished political project. The course centers literary, policy, historical and theoretical analyses of book bans, and considers competing efforts to defend freedom and protect children. At its core, this course examines reading (books and society) as a political exercise central to the power, practice and preservation of democracy.

AFRI 0830. How Structural Racism Works.

This lecture course is an exploration of structural racism: the normalized and legitimized range of policies, practices, and attitudes that routinely produce cumulative and chronic adverse outcomes for people of color. With a special focus on African-Americans in the post Civil Rights Era, we will explore how structural racism "works" intersectionally and in compounded ways in housing, criminal justice, education, employment, and media. We will also consider cultural, political and social challenges to structural racism as well as the role and impact of colorblind ideology and behavioralism as dominant countervailing explanations for racial disparities.

AFRI 0840. Monuments, History, and Memory in the United States.

In the wake of the killing of George Floyd, monuments tied to the violent histories of slavery, colonialism, and white supremacy have received renewed interest and debate. Protestors and individuals have defaced, toppled, and petitioned for the removal of Confederate monuments and statues to the white male power elite. This symbolic retributive violence and sometimes ritual care signals a challenge to the long-lived monument. This reading course explores public monuments and the ways in which artists and communities have negotiated history and the politics of memory and remembrance in the United States. We will evaluate the meaning and purpose of monuments that define American public spaces, investigating the problematic narratives and historic controversies surrounding such objects. The removal of monuments asks us to question whose histories have been forgotten, ignored, or suppressed, and what monumental justice might look like.

AFRI 0850. Queerness in Caribbean Literature.

This course examines 20th & 21st century Caribbean Literature with an emphasis on how histories of gender and sexuality contest and confirm understandings of diaspora, personhood, and colonialism.

AFRI 0880. Hip Hop Music and Cultures.

This course will explore both the history of the emergence of Hip Hop and the heated debates that surround it: aesthetics, censorship, sexism, violence, musical theft, originality, authenticity, the politics of cross-racial exchanges, urban black nihilism, and corporate influences on culture. These debates will be framed by our consideration of urban black life, African-American cultural formations, gender, representation, technology, commodification, pleasure and politics. Enrollment limited to 200.

AFRI 0890. Narratives of Power.

Close readings and critical discussion of some of the most influential discussions of power in the past two centuries. Seeks to develop an appreciation of the complexity and elusiveness of discourses of power.

AFRI 0900. More than the game: An Episodic Study of Sports and Agency in U.S. History.

Did you know that William Edward White—a first baseman on Brown's 1883 national championship team—was and likely the first person of African descent to play major league baseball? White hit the field as a member of the Providence Grays 68 years before Jackie Robinson suited up for Brooklyn. This course examines the history of athletes activism and considers how sports reflected and sometimes helped to shape cultural, social, political, and economic realities in the U.S. By examining certain pivotal episodes, this class appraises how individual—and sometimes collective—acts of athleticism helped traditionally marginalized peoples to critique and challenge exclusionary systems and mores.

AFRI 0950. History, Literature and the Caribbean Novel.

This course examines the ways in which literature is influenced by major historical events with special reference to the literatures of the Caribbean. Students will undertake a critical examination of the fictional representation of Europe's encounter with Africa and Asia in the Americas.

AFRI 0980. Fela Kuti: African Freedom from Afrobeat to Afrobeats.

Miles Davis famously described Fela Kuti (1938-1997) as "the future of music." Beyoncé's attempt "to do something that sounds like Fela" saw her compose an unpublished 20-track album. Arguably Africa's most prolific and controversial artist of the twentieth century, Fela continues to be invoked as musical genius and as icon of popular struggle. This course invites students to explore the complexities of Fela's art and activism. We mobilize his life/work as a springboard for examining emergent debates about African identity—from postcolonial masculinity to the creative logics of African cities, from contemporary African youth culture to the gendered politics of cultural memory.

AFRI 0990. Black Lavender: Black Gay/Lesbian Plays/Dramatic Constructions in the American Theatre.

Study of plays with African-American LGBTQ+ content, primarily manuscripts, with a focus on thesis paper development. Creative writing option. Participation in the Black Lavender Experience required. Cross-listed with TAPS. Gender and Sexuality.

AFRI 1010C. Race, Gender, Ethics and Environmental Justice.

African Americans, Gender, Ethics and Environmental Justice examines the role of African Americans in the larger environmental history conversation. It utilizes a gendered lens to investigate how African American interpreted their natural surroundings and contributed to the development of 20th century American environmental consciousness. This course is reading and writing intensive.

AFRI 1020A. Black Cultural Studies.

No description available.

AFRI 1020B. Freedom in Africana Political Thought.

This course will be a comparative analysis of freedom as a central value in political thought. It will do this by comparing the knowledge and practices of freedom to slaves in the Haitian Revolution, the ideas of freedom in the Civil Rights Movement, and then finally, the conceptions of freedom in South Africa. Enrollment limited to 30.

AFRI 1020C. The Afro-Luso-Brazilian Triangle.

Examines three historical components of the South Atlantic in terms of history, culture, and contemporary political and economic consequences. European colonialism in Africa and Brazil constitutes the baseline for this exploration, but the long and tardy nature of Portuguese colonialism in Africa in comparison with other European colonial powers, especially in its post-World War II manifestations, is our starting point. Enrollment limited to 40.

AFRI 1020D. Race, Rights and Rebellion.

Provides an in-depth examination of different kinds of social movements. Emphasis will be placed on the theoretical and methodological distinctions among the various kinds of social protests and social movement actors. From anti-slavery revolts to struggles for independence to anti-apartheid movements, key concepts will include power, resistance, subaltern, hegemony, identity politics and consciousness.

AFRI 1020E. Race and Visual Culture.

This is a sophomore seminar on race and visual media, including everything from high art on canvas to lowbrow film, from the comic book superhero Black Panther to the Black Panther Party, from the avant-garde to the burlesque, from the web to graffiti to homemade t-shirts. People who sign up for the class should be prepared to read a lot and talk a lot, to regularly get to the RISD museum, to watch a lot of stuff on OCRA, and to maybe take a field trip or two to Boston's MFA and some similar sort of place. Curiosity is required.

AFRI 1030. Contesting the Carceral State.

This course introduces students to the study of crime and justice through Black, feminist, queer and prison abolitionist frameworks, with a particular focus on narratives by people of African descent in the U.S. since 1965.

AFRI 1040. Decolonized Bodies, Spirit Bodies: Tracing the Indigenous Knowledge of Africans.

This course is a comprehensive study of the indigenous bodies of knowledge of rituals as they permeate the wholeness of the existence of African people referencing Yoruba nation of West Africa. It will integrate visual art methods with Rites and Reason Theatre's Research-to-Performance Method, where students will explore and trace the hidden legacies of the indigenous people of Africa in visual arts, music, dance, fashion, poetry, story-telling as a way of understanding the impacts of slavery, colonialism and decolonization of indigenous knowledge. Students will have the opportunity to study selected enduring indigenous festivals, organize and stage performance as knowledge production.

AFRI 1050A. Advanced RPM Playwriting.

Third level of RPM Playwriting; for students that have successfully completed RPM Playwriting and Intermediate RPM Playwriting (workshop). Instructor permission.

AFRI 1050B. Africana Feminism.

No description available.

AFRI 1050D. Intermediate RPM Playwriting.

Second level of RPM Playwriting; for students that want to continue developing their RPM plays or want to begin a new project (workshop).

AFRI 1050E. The REAL: A Research to Performance Project.

The course introduces students to the Black Arts Movement (BAM), an era from approx. 1965-1975 of politically charged, socially relevant art making designed to uncover, liberate, connect, and transform Black people. BAM artists used ritual, poetry, music, song, dance, and theatre to identify, disrupt, and examine human thought and action that produced and sustained racism, poverty, colonialism, and sexism. In our class, students will study BAM manifestos, poetry, and plays designed to transform audiences. These course readings will be augmented by regular, on-your-feet, interactive workshops in BAM performance techniques such as improvisational theatre, agit-prop, and the choreopoem. Along the way, we will also dive into the origins of Brown's own Rites & Reason Theatre (est. 1971), and the importance of community-engaged participant research in the African American theatre tradition.

AFRI 1050G. Narrating the Radical Self.

How black women in the United States and elsewhere have written about their lives in autobiographies will be the focus of this course. We will discuss black women's use of autobiographical writing to document their own individual experiences in political movements as well as to provide key insights into how black people throughout the black diaspora have organized in recent history. Enrollment limited to 20.

AFRI 1050H. Introduction to Post-Colonial African and African Diasporic Theatre.

This class will explore plays/theatrical works and ideologies of a selected group of playwrights from Africa, the Caribbean, and the United States. Exploring Culture, Creativity and Theatre practices, the course will focus on the ways in which these artists have syncretically responded to varied forms of colonization and creolization. This class will also pay attention to the Post Colonial Social and historical context that continues to impact and influence these modes of artistic production.

AFRI 1050K. Special Topics in RPM Playwriting: Playwriting Strategies From Contemporary Black Theatre.

A study of Aristotle's Poetics in relation to Dubois' four principles of black theatre and Audre Lorde's essay "The Master's Tools." What makes black theatre "black"? We will analyze plays from the 20th Century African-American canon as sites of aesthetic resistance to "normative" American Theatre; and write our own one-act plays based upon our discoveries. Prerequisite: Course is restricted to students who have taken any Africana Studies RPM Playwriting course, Theatre Arts Introduction to Playwriting, Literary Arts Intermediate or Advanced playwriting courses, or has playwriting experience.

AFRI 1050L. RPM Playwriting: Advanced and Staging.**AFRI 1050M. Roots of African American Fiction: Oral Narrative through Richard Wright.**

This course will employ a variety of narrative forms -- oral folktales, WPA narratives, slave narratives, short stories by European and American writers -- will also investigate the multiple traditions of African American fiction.

AFRI 1050P. Art and Civic Engagement: Creativity/Reality.

The primary objective of this course is to learn about and reflect upon public art and communities. This course will use selected public art and artists' ideologies as a framework for exploring culture, creativity, politics and practices and focus on the ways in which these public art works and artists' responses to varied forms of internal and external operators and stimuli successfully and unsuccessfully give voice to aspects of the environment, history, culture, social justice, health, politics and the imagination. This course will also pay attention to arts organizations, government agencies, history, power relations, human resources as well as leadership and the political that continues to influence public modes of artistic production.

AFRI 1050Q. New Narratives in African American History: The Art and Craft of Poetic and Creative Non-Fiction.

This seminar examines various examples of creative and poetic non-fiction, pertaining to race and the African American experience. While touching upon historic examples and precedent, emphasis will be on contemporary works, including the genres of poetry, drama, the narrative, the memoir, the travelogue and the personal essay. The course will explore what these works offer to the knowledge, popularization and perception of black history and to the shaping of cultural dialogue on blackness and race. Enrollment limited to 25.

AFRI 1050R. The History of Afro Futurism and Black Science Fiction.

Any class called The History Of Afro Futurism and Black Science Fiction automatically begs the question -- "Well, what isn't futuristic about being Black in America?" The entire history of Black America can be seen as a fundamentally futurological and science fictional enterprise -- a perpetual biding on hope and struggling for change endeavor that frequently employs far flung visions of tomorrow and other more oblique speculative stratagems in pursuit of outcomes barely foreseeable in the near-present. Enrollment limited to 25.

AFRI 1050S. Comparative Slavery and Slave Revolts: Slave Rebellion in the Americas, 1725-1865.

This course explores the history of slave revolts in North and South America and the Caribbean. It examines how acts of resistance transformed the lives of enslaved Africans and their relationships with white Americans, Europeans, and free and enslaved people of African descent. We will consider in what ways geography shaped the aims of a slave rebellion, how is a successful slave revolt determined, and what are the implications of slave unrest and its aftermath in local slave societies and in the Americas? This class will focus on insurrections in Jamaica, Saint Domingue (Haiti), the United States, Cuba, and Brazil.

AFRI 1050T. Slave Resistance and Moral Order in Environmental History.

This course is designed to examine the avenues by which enslaved persons redefined and re-appropriated the natural landscapes that kept them in bondage into direct forms of cultural and political resistance during the antebellum period. We will investigate rice production in South Carolina, the Dismal Swamp, maroon societies, Negro Spirituals, and the Black Judeo-Christian ethic to understand how the natural environment and the institution of slavery shaped slave resistance in the United States. This course is reading and writing intensive.

AFRI 1050V. Rhythm and Resistance.

This course will investigate the crucial cultural and political contributions of the African Diaspora in the formation of the contemporary Americas through an analysis of the rhythms they have produced in different national settings. We will use these rhythms as a guide to understand the peoples, places and conditions under which they were created and sustained. Through classroom discussion and historical and music-analysis students will understand the relationship of these rhythms to larger issues like nationalism, migration, colonialism, globalization, the politics of sexuality, gender and race and to understand the different meanings and practices of resistance.

AFRI 1050W. Transnational Hispaniola: Haiti and the Dominican Republic.

This course will examine the historical, political, and cultural development of the island of Hispaniola, currently divided in the countries of Haiti and the Dominican Republic. In this course we will call into question popular narratives that portray Haiti and the Dominican Republic as locked in an ahistorical, continuous conflict and explore the island's long history of Haitian-Dominican collaborations and networks. Over time, the two countries have developed different understandings of race, ethnicity, and national identity. This course will therefore engage in a comparative survey of the interwoven dynamics of race and national construction in the making of both nations.

AFRI 1050X. Slavery, Materiality, and Memorialization.

The institution of slavery ended in the Americas in the 19th century, but its official conclusion says little about the ways in which its legacies are materially present and memorialized today. This course is designed to place the material aspects of slavery in conversation with less tangible dimensions of how slavery is or isn't remembered and publicly acknowledged. Students will be introduced to the social and economic dimensions of transatlantic slavery, conduct archival research, and visit sites in the Providence area in order to inspire critical dialogue about how the material realities of slavery affect our past, present, and future.

AFRI 1060A. Africa Since 1950.

This seminar offers a survey of post-colonial African history, while probing the challenges of writing post-colonial history. Readings and discussions will focus on histories that bridge the colonial and post-colonial periods. How robust are these periods? What can historians draw from post-colonial theory? How can historical narratives account for both the colonial legacy and post-colonial dynamism. Enrollment limited to 20; instructor permission required. Students with a background in African history or contemporary African social science will be given priority. Interested students should email the professor at Nancy_Jacobs@brown.edu.

AFRI 1060C. Contemporary African Philosophy.

An examination of some of the most influential work on problems of identity and being, theology and theodicy, time and history, method and evaluation, race and racism, postcoloniality and liberation in contemporary African philosophy. Readings include the work of Anthony Appiah, Frantz Fanon, Kwame Gyekye, Pauline Hountondji, D. A. Masolo, John Mbiti, Kwame Nkrumah, Léopold Senghor, Tsenay Serequeberhan, among others.

AFRI 1060D. The Harlem Renaissance: Art, Literature, and Classic Women Blues.

In this undergraduate course, we will focus on the Harlem Renaissance, also known as the New Negro Movement, the important African American artistic and socio-cultural moment that dates roughly from 1919-1934. Organized as an interdisciplinary course, we will examine the historical context of the period; the literature including novels by Jean Toomer and Nella Larsen; the art including the painting of Aaron Douglas, the sculpture of Richmond Barthé, and the photography of James Van Der Zee; and classic female blues with a focus on the music and lyrics of Gertrude "Ma" Rainey and Bessie Smith. We will also read a range of writers from the period including Marita O. Bonner, W. E. B. Du Bois, Marcus Garvey, Langston Hughes, Zora Neale Hurston, Alain Locke, Elise Johnson McDougald, and George S. Schuyler.

AFRI 1060E. West African Writers and Political Kingdom.

Do West African writers have a role to play in the changing political landscape of their countries? An examination of the ways and means through which a select group of West African writers have dealt with issues that relate to the role of the state in the management of individual and group relations, the politics of gender, civil and military relations, and the construction of new forms of civil society. Enrollment limited to 20.

AFRI 1060F. Philosophy and Race.

This advanced seminar in Africana philosophy will examine critical texts and thinkers that articulate the problems, methods, and techniques for interrogating the interrelationships between the discourse of philosophy and modern conceptions of race. The seminar will move to consider contemporary engagements in this area by drawing on readings and thinkers from analytical, continental, feminist, marxist, and pragmatist philosophical traditions.

AFRI 1060G. Black Radical Tradition.

This advanced seminar in Africana philosophy will explore the contours of insurgent forms of Africana social and political philosophy. With a temporal focus on the twentieth century, we will concern ourselves with explicating the dominant themes, theoretical orientations, and methodological understandings that in/form constructions and articulations of the varieties of Africana feminism/womanism, black nationalism, Marxism-Leninism-Maoism, Pan-Africanism, and radical democracy. Enrollment limited to 20.

AFRI 1060H. Racial Frontier in South African History.

This seminar will focus on racial categories in South Africa. We will explore dynamic categories of race from the 17th through 20th centuries. Topics include the relationship of race and class; racial violence; the transmission of culture and knowledge across racial boundaries; intimate relations over racial boundaries; segregation; and race and nation. We will give attention to critiquing the ways that historians have represented race and the ways that conceptions of the category have evolved within the discipline, but the emphasis will be on recent scholarship. Students will be expected to participate actively in the seminar, to write one book review, and one research paper. Enrollment limited to 20.

AFRI 1060I. Africana Philosophy of Religion.

Who, or rather, what is God to the oppressed? This advanced seminar in Africana philosophy will examine the various theories, methods, and arguments that engage perennial questions that arise when contemplating God. The seminar will focus on questions of philosophical method and theological exposition while also being critically attuned to modes of social and cultural analysis and critique, particularly those perspectives inspired by forms of critical theory, feminist theory, and Marxist theory. Limited enrollment.

AFRI 1060K. African Literature After Achebe: Emerging African Writers.

In this course we will analyze how contemporary, emerging and marginally-read African writers contest the traditional and widely-held interpretations, understanding and assumptions of African literature. We will read and think about African literature in the contemporary post-colonial and post apartheid moment in Africa. Authors discussed include Dambudzo Marechera, Zoe Wicomb and Binyavanga Wainaina, among others.

AFRI 1060L. Varieties of American Philosophical Experience.

In contrast to Pragmatist and European-oriented views of American philosophy, this course will emphasize the colonial dimensions and features of American philosophy that emerged out of the colonial soil of early America. Out of this soil sprang extended debates between Native Americans, Euro-Americans and African Americans over the legitimacy of the hegemony that Euro-Americans were establishing over increasing portions of North America. This course views American philosophy as having within it two opposing traditions that have been engaged in ongoing angry dialogues: the dominant or Prosperian tradition of Euro-Americans and the subjugated or Caliban tradition of Native Americans and African Americans.

AFRI 1060M. African Environmental History.

This seminar will be devoted to the study of the environment and power in the history of sub-Saharan Africa. The goals for this class are that you learn more about the history of Africa, about the ways that relations with the environment shaped its human history, about the construction of environmental knowledge and its repercussions, and about historical research.

This course also has an applied dimension. Eight African environmental professionals visiting Brown through the Watson Scholars of the Environment (WISE) program will also participate in the class. In their final course project, students will conduct research of use to the WISE fellows on historical cases related to their training at Brown. (For more information see http://www.watsoninstitute.org/ge/watson_scholars/).

This course qualifies as a capstone seminar in the history department. Enrollment limited to 20 students. Instructors permission required. Interested students should email the instructor at Nancy_Jacobs@brown.edu with a description of their interests and background.

AFRI 1060Q. The New Science of Race: Racial Biomedicine in the 21st Century.

This course draws on film, news media, scientific discourse, and social theory to engage biomedicine's most controversial investigations of race and the social scientific questions they have provoked. The course asks: How is contemporary science imagining, constructing, and producing knowledge about race? What are the social, political, and cultural implications of this knowledge? Students will be introduced to important science studies methods that we will apply to historical and contemporary research agendas. No prior knowledge of science or racial theory is required. Enrollment preference will be given to juniors and seniors. Limited to 20.

AFRI 1060R. Comparative Africana Literatures and Criticism.

Caribbean, African American and African literature has been called engaged literature with explicit commitments to memory, history and ways to think about the political. This course will explore a set of writers, their novels, critical essays and their practices of criticism. It will examine anti-colonial, post-colonial writers as well as African American writers who in the words of Toni Morrison, "rip that veil drawn over proceedings to terrible to relate." We will in this course read the works of George Lamming, Patrick Chamoiseau, Toni Morrison, Richard Wright, Edwidge Danticat, Yvonne Vera, Zoe Wicomb and Njabulo Ndebele.

AFRI 1060T. South Africa since 1990.

South Africa transformed after 1990, but the past remains powerful. This seminar explores the endurance and erosion of the apartheid legacy, as expressed in historical and fictional narratives. We begin with transition to majority rule and continue with the administrations of Mandela, Mbeki, and Zuma, connecting the formative histories of these leaders with the changing dynamic of politics. We end with narratives about the ways that ordinary people experienced new times. The syllabus includes scholarly works in history and politics, biography, fiction and film. Two short writing assignments and a major research paper. Enrollment limited to 20 juniors and seniors.

AFRI 1060U. An Introduction to Africa.

Africa invokes myriad images in the global imagination. It figures in debates on the evolution of humans; in the formation of capitalism, and even as a counterpoint to discourses on human progress. This course interrogates how "Africa" gets mobilized in popular discourse in the US and beyond. How might we reconcile the idea of Africa with contemporary conditions of the African continent? We will not only examine Africa through a broad range of disciplinary perspectives; but also become familiar with social, cultural, political and economic diversity of the African continent. We will engage the disciplines of history, economics, politics, cultural studies and gender studies among others.

AFRI 1060V. Black Transnationalism.

This seminar explores the complex dynamics of Black transnationalism during the twentieth century, focusing on the global visions; transnational activities; and transracial political alliances of people of African descent worldwide. The course highlights several key areas of inquiry including the role of race, ethnicity, religion, gender, nationality, class and sexuality in shaping Black transnational movements and discourses. It also explores the connections between Black transnationalism and other philosophies including Pan-Africanism, Black nationalism, and cosmopolitanism. Course readings will represent a combination of primary and secondary sources that reflect the geographical breadth of the African Diaspora including Africa, the Americas, and Europe.

AFRI 1060W. Policy, Culture and Discourse that Shape Health and Access to Healthcare.

The global discourse on health and access to healthcare are shaped by narratives that often conflate health with being about the healthcare system rather than about where we live, the policies, the politics, and narratives/discourse that shape them. Global health also tends to promote a perspective that it is about those people over there and has nothing to do with us here. This course will create a platform that ties the global to the local. We will discuss how political and cultural discourse on race, class, and gender create the conditions that allow social inequalities to thrive.

AFRI 1060X. African Development.

Course takes an interdisciplinary approach to introduce contemporary development issues in Africa. Drawing on literature from political sciences, economics, sociology and history, it explores the challenges of development in the continent since independence, as well as investigates the influences of governance, institutions, conflicts and external forces in Africa's development trajectories. This is an applied course that would utilize both theoretical and policy analytical approaches to examine the political and socioeconomic dynamism in contemporary Africa. This course is guided by questions, such as: Why have most African countries remained underdeveloped, poor and susceptible to conflicts (many of which seem intractable)?

AFRI 1060Y. Sex, Violence and the Policing of Black Struggle.

This seminar considers some of the historical dimensions and diverse manifestations of the relationship between sex and violence across the eras of black social movement in order to inquire into the nature of a society structured in antiblackness. We consider violence, gender, sex, and freedom across an interdisciplinary terrain, dealing with problems of representation, punishment, policing, and self-determination. The real significance of iconic black lives lost to policing in recent days and years lies within this realm of sexual violence, beyond an examination of law and policing.

AFRI 1060Z. Race, Sexuality, and Mental Disability History.

This seminar investigates the fraught entanglement of mental disability with race and homosexuality beginning with late 19th Century ideas of scientific racism and the invention of the homosexual body in African American communities. By tracking changes in Psychiatry and Psychology through the 1960s and 1970s, the course examines the impact of the Civil Rights and Gay Rights movements on sustaining contemporary mental health diagnosis of "gender dysphoria" associated with Trans people. The course will further examine several approaches to queer, trans, and gay history from the fields of color critique, black feminism, and disability studies. Enrollment limit is 20.

AFRI 1065. Performing Africa.

Course engages storytelling, photography, movement as creative strategies with which to probe the idea of Africa. We'll explore historical and contemporary discourses that have shaped understandings of Africa in the West; examine the social and imaginative worlds constructed by African artists; study performative pieces that explore the multifaceted realities of what it means to be African today. Course asks students to imagine themselves as creators and curators, rather than merely consumers or critics, of African images. We'll engage the possibilities and limits of several performance strategies in appreciating a diverse continent with such a contested global image. Performance experience not required.

AFRI 1070. RPM: Traditional and Contemporary Elements of Intertribal Indigenous Theater in America.

Utilizes Rites and Reason Theater's research-to-performance method of developing new play scripts to examine the development and relationship of the colonial Euro-American art form, theatre, to its existence within the Indigenous intertribal (Native American Indian) communities in America.

AFRI 1075. Providence Housing Ecosystem, Development, Displacement and Gentrification.

This course will exam what are the influences and power dynamics that shape where we live. We will focus on Providence. From the perspective of marginalized communities often with limited power, we will consider how to change these dynamics. We will consider how government planning policies and housing speculators, impact housing stability, create value and shape the environment in which we live. We will consider the relationship-based channels which encourage social cohesion across neighborhoods and/or social disruption and upheaval caused by market-rate housing and development policies, as well as the discourse on housing and development that influence housing speculation forces.

AFRI 1080. The Life and Work of W. E. B. Du Bois.

From the publication of *The Souls of Black Folk* in 1903 until his death in Ghana sixty years later, W. E. B. Du Bois remained one of America's most penetrating analysts of what he called "the color line." Students read and discuss a selection of Du Bois's writings from his career as journalist, essayist, sociologist, historian, poet, political leader, and pioneering Pan-Africanist. Prerequisite: one course in AC, AF or US History.

AFRI 1085. The Black Vote: A Critical Interrogation of a Concept.

"The black vote" as a concept, simultaneously captures a truth and obscures reality. It reflects the truth that no other racial group comes close to the uniformity of Black Americans' voting behavior within American electoral politics. Yet, it also obscures the diversity of political opinions and ideological dispositions that animate a dynamic black American public. If voting is an essential means to give citizens voice and their share in self-rule within a democracy, this course explores what it means for the stability of American democracy that the black vote does not reflect the political diversity of the black community.

AFRI 1090. Black Freedom Struggle Since 1945.

Lecture course that examines the extended history of the mass civil rights movement in the U.S. Starting at World War II, we consider the roles of the courts, the federal and state governments, organizations, local communities, individuals and various activist strategies in the ongoing struggle for African American equality, focusing on African American agency, particularly in the South, but also in Boston, Mass. Sources include photographs, documentaries, movies, letters, speeches, autobiographies, and secondary readings. Requirements: Weekly readings, documentary viewings, 4 short papers, 2 exams.

AFRI 1090A. The Civil Rights Movement.

This lecture course unpacks the history of the Black mass civil rights movement in the United States as part of the Black Freedom Struggle using a range of sources and methods. Moving thematically and focusing primarily on the South, the course considers the roles of the courts, the government, organizations, local communities, and activist individuals in the ongoing struggle for social, political and economic equality. Sources include photographs, documentaries, movies, letters, speeches, autobiography, and secondary readings. By the end of the course, students will have a grasp on how to critically analyze primary sources but also develop tools for more general critical analysis and writing. Moreover, students will understand why history matters.

AFRI 1095. Black Women's Science Fiction and Fantasy Novels: The Future Then & Now.

Black women's science fiction and fantasy (SFF) are read as "freedom dreams." In this 13-week course we will discuss how these genres confront historical black trauma and glean present meaning about Black being and futurity. We straddle two of the most prominent literary eruptions: 1979-1989 when neo-slave narratives became popularized and 2015-2021 when Black SFF literature proliferates anew, particularly in children's categories. Beginning with Octavia Butler's acclaimed *Kindred* and concluding with Tracy Deonn's instant bestseller *Legendborn*, we will examine how Black SFF stages cross-temporal conversations attempting to repair the ontological ruptures of historical trauma and recuperate Black being.

AFRI 1097. AI, Health Data, and Race.

AI and health data are reshaping the future of medicine, public health, and human well-being. However, the ways AI engages with race and health data raise critical questions: Who is included in health data? How do AI-driven models transform medical knowledge? What innovative possibilities exist for AI in healthcare beyond narratives of bias and harm? Drawing on an Africana Studies perspective, this course offers an expansive exploration of these questions, balancing critical perspectives with an exploration of AI's potential to advance health, improve diagnostics, and create new knowledge systems. The course also investigates how race, AI, and health data intersect across medical innovation, digital culture, and policy landscapes. Through hands-on AI experiments, case studies, and discussions, students will develop a deeper understanding of how the convergence of race and data-driven technologies can both reflect and transform human health.

AFRI 1098. Black Digital Humanities: Black Technocultures.

What difference does Blackness make to the study of technology? This course relies on this question to foreground two important elements within the Black Digital Humanities (Black DH). First, Black scholarly approaches to the impact of technology on and in Black life and vice versa. Second, Black scholarly explorations of Black digital life and expertise. We will take a broad approach to Black DH, thinking generally about the transformative interplay between Blackness and digital technology, the extent to which digital projects can "recover" Black histories within the archive, and methodological approaches to the study of tech and digital life within Black Studies. Drawing on Black epistemologies, students will analyze digital technologies to propose new and different questions about how Blackness both (re)shapes technology and the "human" in the humanities.

AFRI 1099. Alternative Technofutures: Black Speculative Visioning for a Better Tomorrow.

In the last decade, we have witnessed the acceleration of technological experimentation and production. As such, this class explores the role that Black speculation plays in helping us envision and create technocultures beyond empire. Together, we will explore imperialism and colonialism as they manifest in our digital age, paying particular attention to how digital technologies like predictive algorithms, machine learning, surveillance, and data extraction extend and innovate on these systems of power. After initial grounding in the study of technology, speculative art and literature, and speculative design, we will pivot to "labs" where you will be able to read and analyze Black speculative works, develop a Black speculative method based on these works, and apply that method to your design of a technological tool that addresses a social problem.

AFRI 1100A. Comparative Identity Politics in Africa.

This course is a comparative analysis of identity politics in Kenya, Nigeria and South Africa. Africa is a heterogeneous region with ethnic and religious diversity. The course will introduce students to social identity theory and processes of identity politics and discuss how identity processes unfold in difference areas of political discourse.

AFRI 1100B. The Caribbean: Cultures, Politics, Histories and Literature.

The Caribbean archipelago has brought forth a new awareness of the region not as a fixed entity of islands as previously viewed; rather, it is a diverse group of islands that are not only geographically linked but share a common history of slavery and colonialism. This course aims to present students with an opportunity to delve into substantive multidisciplinary (social science and literary) texts that seek to analyze, expose and deconstruct forces that continue to shape the Caribbean.

AFRI 1100C. Slavery and Empire in the United States.

Between the American Revolution and the Civil War, the United States grew into the largest slaveholding society in the modern world. This course focuses upon this history to examine the centrality of slavery and empire in the making of the United States. Crucial to the formation of racial capitalism, U.S. slavery's growth was driven forward by unprecedented economic transformation and territorial conquest. This slavery-based expansion was defined by settler warfare that remade the United States into a vast, continental empire. Yet, in the face of unprecedented violence, enslaved people themselves brought about the end of slavery. Through an examination of this history and its legacies, the course will also introduce a range of sources documenting histories of resistance and subversion.

AFRI 1100X. Black Speculative Fiction: World-Making and Alternative Universes, Science Fiction and Fantasy.

This class surveys the genre, including the work of George Schuyler, Nalo Hopkinson, Samuel R. Delaney, N.K. Jemison, Octavia Butler, Coslon Whitehead, and Tananarive Due, along with everything related, from comic books to album covers to filmic re-writings of canonical science fiction and fantasy works. The goal is to understand the history of the genre, its relationship to histories of anti-blackness and ideologies of black liberation, and its contributions to speculative fiction more broadly.

AFRI 1110. Voices Beneath the Veil.

VBV is an interdisciplinary exploration of African-American history and cultures through the analyses of Black authored plays from 1858 to the present. The course focuses on the development of a thesis paper, which includes an incremental re-writing process.

AFRI 1111. Systemic Racism and Modes of Resilience.

Over the past several years there has been much public discussion about systemic racism, and its role in perpetuating racial inequality. What is systemic racism? What role does it play in society and how have African Americans responded to it? This course will use the lens of "systemic racism" to explore the interconnections between policies and practices that create a network of devastating forms of racial discrimination and disadvantage; conditions that have shifted over time and have made it difficult for black communities, and individuals within them, to flourish. And yet, systemic racism does not have the final word. We will also consider how African-American communities have developed various modes of resilience in cultural, spiritual/religious, artistic, and other facets of life.

AFRI 1112. What's Popping: The Contemporary Black Theatre Workshop.

Open to all Brown students, this course introduces students to contemporary (post-1980) Black theatre history, theory, and artistic practice. Students will read, analyze and interpret a range of influential plays such as *What to Send Up When It Goes Down*, *Hurt Village*, *Twilight*, *Topdog/Underdog*, *Choir Boy*, *Boothcandy*, *Diary of a Mad Black Woman*, and *Fences*. Course work includes opportunities to perform scenes and monologues, see live theatre in and around Providence, and devise original performance works through in-class writing, movement, and improv theatre exercises. The semester culminates in an Artists Salon featuring students' work. No previous acting, improv, movement, directing, playwriting or Black theatre experience required. No prereqs. All are welcome.

AFRI 1120. The Folk: African American Folk Traditions and Cultural Expressions.

A research, development, and performance workshop designed to explore, examine, and articulate various folk traditions and cultural expressions of African Americans. The course examines the unique history and heritage of African Americans through the creative manifestations of their cultures, e.g., storytelling, dance, music, poetry, and style. The emphasis of the course is on creative writing and in-class performances informed by research and analysis.

AFRI 1130. Black Feminist Thought and Womanist Theology.

Examines the historical contributions and contradictions of African American protofeminists and contemporary African American feminists and womanists. Emphasizes political critiques and theological writings. Examines historical contributions to black feminist thought; contemporary intersectional analyses of race, class, gender, sexuality, and ideology; and political advocacy and religiosity in contemporary womanist theology.

AFRI 1135. Reading with Black Caribbean Women Writers.

This course asks what it means for us to read Black Caribbean women's writing, not only in relation to their words, but also to the lived experiences, stories, worlds and possibilities they engender. We will survey a group of twentieth century Black Caribbean women writers who move through the Caribbean, North America, Europe, Africa, and Latin America. We will cover themes from enslavement, colonialism, independence movements, feminisms, racial formation, sexuality, and migration in order to evaluate the aesthetic, cultural, and imaginative realms that Black Caribbean women create. Materials will include novels, poetry, interviews, short stories, and literary criticism. Texts not originally written in English are provided in a translation.

AFRI 1140. Women, the State and Violence.

Examines the role of black women in 20th-century political movements, including with the turn-of-the-century antilynching campaigns, the southern civil rights movement, the black liberation movement, and contemporary educational activism for human rights. Central concerns include history of American radicalism and analyses of antiracist experiences, and the politics stemming from African American women's leadership. Prerequisites: AF 150 and/or AF 125.

AFRI 1145. The Black Hero.

This course is an exploration of the notion of a "Black hero." African American history and culture is replete with individuals who all share the label of "hero." However, what exactly makes a hero? And more importantly what kind of political and cultural work is being serviced by invocations of the term? How is it that Barack Obama, Michael Jordan, and the Black Panther – a politician, an athlete, and a fictional character – can all share this same title? Through discussions and readings, students will examine a range of examples of "Black heroes" and offer critical reflections on their relationships to specific kinds of politics as well as vectors of class, gender, and sexuality.

AFRI 1150. Afro-Caribbean Philosophy.

An introduction to the field of Afro-Caribbean philosophy. The first half focuses on the history of the field, identifying its African background and surveying some of its major schools, such as the Afro-Christians, the poeticists, the historicists, and existentialists. The second half consists of a more intensive comparative focus on the ontologies and epistemologies of two of these schools.

AFRI 1160. Public Health in Africa: History, Politics, and Practice.

Examines the ways in which medical knowledge has been produced in sub-Saharan Africa. Treats all medical discourses and practices-including biomedicine and "indigenous" and pluralist medicines-as culturally-based systems of knowledge production. Explores the political economy of health and disease and the role of medicine and medical practices (hygiene, epidemiology, demography) in producing and maintaining power in both the colonial and postcolonial periods.

AFRI 1170. African American Women's History.

This course examines the cultural, economic, political and social history of Black women in the United States from slavery to the present. Through a variety of secondary and primary sources, film and other multimedia, the course explores the myriad ways that African American women have experienced and resisted the "double burden" of racism and sexism in United States history. The course will consider the legacy of slavery and how African American women have defined their own identities as individuals, wives, mothers, community leaders, activists and theorists. Paying careful attention to their diverse experiences, the course will examine Black women's participation and leadership in a variety of institutions, organizations and social movements. Major course themes include labor, politics, internationalism, religion and family.

AFRI 1180. Visual Cultures of the Afro-Americas.

This course will examine how the visual modalities of power operate to ascribe, authenticate, and contest meaning within the Afro-Americas, understood here to include Afro-Caribbean, Afro-Latin American and African-American cultures. We will query the complex histories and technologies that constitute the social life of vision in the Afro-Americas, while cognizant of the fact that the field of visibility cannot be understood from single point of view. We will consider images made of and images made by peoples of African descent throughout the Americas as we attend to the reception, interpretation and reproduction of images, as well fields of invisibility. Enrollment limited to 20 juniors and seniors.

AFRI 1181. Black Women Visual Artists Global Contemporary Art in the United States.

This class examines Black women visual artists of the African Diaspora who are based in the United States and are part of the global contemporary art scene. We will study how race, gender, sexuality, and ethnicity have forged and continued to shape Black female identity and creative production. The course is organized around three themes: (re)presenting the Black female body; globalization and migration; and performing/visualizing self and community.

AFRI 1190. Haiti: A New World, A Free World.

Course examines the dual Haitian Revolution as a pivotal moment in the making of the modern world. It reviews the various historical interpretations of Haitian events, examines how these events contribute to or troubles our ideas about modern politics and notions of freedom as well as our conceptions of revolution. Course engages in these issues by working through three archives: Vodou Religion; The Art of the Revolution and the conventional historiography about the revolution, and will be tied to a joint Brown/RISD exhibition on Haitian Art. Enrollment limited to 15 juniors/seniors concentrating in Africana Studies, Visual Art, History; 15 RISD students.

AFRI 1190A. Framing Haiti: History, Culture, Politics + Literature.

In broadest terms, the objective of this multidisciplinary course will be to introduce students to the varied "nature" of the Haitian society and its fluid and dynamic culture, and then attempt to make historical and socio-anthropological sense of the country in relation to the region as a whole (particularly to the United States and Dominican Republic). Throughout the course we will discuss the dynamics of power in the realm of governance, with particular emphasis placed on the notion of struggle for sovereignty and the culture of resistance (through the arts) that forms the fundamental character of the national culture.

AFRI 1200. Gospel Music from the Church to the Streets.

Black gospel music has informed popular music artists including Beyoncé, Elvis, and Chance the Rapper. This course surveys African American gospel music as it is implemented for worship, evangelism, and popular consumption. Beyond analysis of key musical and lyrical characteristics of gospel, this class gives attention to the religious and sociocultural contexts that inform gospel composition and performance. Gospel music is integrally connected to the worship traditions of black American Pentecostals, Baptists, and Methodists. Consequently, this course is also a musical introduction to African American Christianity. Classes include interactive demonstrations in addition to discussion of audio/video recordings and required texts.

AFRI 1200X. The Art and Imagination of Josephine Baker.

This class is a seminar-style exploration of the art and imagination of Josephine Baker, the 20th century's most famous Black celebrity. Baker was an iconoclastic political thinker, a race-bending globetrotter, and a figure of outsized historical consequence. Her biography sheds light on many of the major dynamics of Black history, including the long histories of civil rights and human rights, and of radicalism and internationalism. Students will study Baker's body of artistic work, her role in many of the major social movements of the century, and her legacy right up to the present. The aim is to leave the class with a deep and thorough knowledge of her life, her ideas, and her politics.

AFRI 1210. Afro-Brazilians and the Brazilian Polity.

Explores the history and present-day conditions of Afro-Brazilians, looking specifically at the uses of Africana in contemporary Brazil, political and cultural movements among Afro-Brazilians, domestic politics and its external dimensions, and Brazilian race relations within a global comparative framework. Texts from a variety of disciplines. A reading knowledge of Portuguese is not required but students so advantaged should inform the instructor.

AFRI 1212. Rethinking 'Black Music'?

In an interview with Red Bull Music Academy, the oft-cited progenitor of "neo-soul," D'Angelo, rebuffed the industry's attribution of the sub-genre to his music. The singer suggested that he simply makes "black music." This course asks students to reflect on two guiding questions: 1) What is black music? 2) What does black music do? We will use an undisciplined approach to black sonic cultures that includes material from black studies, cultural studies, and history. Each class will consist of deep listening to an album and robust discussions. Assigned readings will equip students to note the historical and contemporary conditions that shape the formation and reception of black music by critics and general audiences. Rather than trying to uncover the meanings intended by artists, students will consider what their art does relative to the social climate in which they emerge.

AFRI 1215. The Visual Culture of 1930s: Race, Gender, and the Laboring Body.

The 1930s mark a moment of extraordinary change in the United States. The Great Depression precipitated a rethinking and reordering of the federal government's response to economic, political, and social institutions. As part of this rethinking, the federal government sponsored an unprecedented number of art projects, creating jobs for thousands of painters, sculptors, photographers, printmakers, architects, filmmakers, writers, and actors. However, the New Deal art projects of President Franklin D. Roosevelt were not the only response to the changing times. The 1930s also saw the rise of leftist political artists and the strikingly conservative art forms of the so-called "Regionalist" painters. In this seminar, we will consider the federal art projects of President Franklin D. Roosevelt, social realism (broadly conceived), and the world's fairs of the period—sometimes called the "Century-of-Progress" expositions.

AFRI 1230. Black Protest Music.

This course surveys African American protest music through research and performance. At every point in American history, African Americans have crafted music to speak out against racial injustices. This course highlights the music of three specific moments in African American history: 1) spirituals of the enslaved; 2) music of the classical phase of the Civil Rights movement; and 3) burgeoning protest music of the Black Lives Matter (BLM) movement. Students study the sociocultural contexts informing the performances of the Fisk Jubilee Singers, Mahalia Jackson, Nina Simone, Kendrick Lamar, and Beyoncé, among others. Students gain critical analytical skills for engaging music as cultural production, commodity, and vehicle of activism. Ultimately, this course equips students to situate BLM music within the longer history of African American musical activism, and it provides space for students to perform and compose black protest music.

AFRI 1234. The Black Radical Imagination.

This course offers an examination of early historical attempts to address arguably the two most basic questions of the Black freedom struggle in America: what exactly constitutes freedom? And how is this freedom to be attained? Using three broad themes – escape, salvation, and revolution – it surveys, highlights, interrogates the development of Black political creativity from mid-19th to mid-20th century. Through close reading of primary and secondary source documents, students will be introduced to a range of significant political moments, movements, and theories that chart the evolution of the American Black radical tradition during this period. Topics include the New Negro Movement and the notion of a Talented Tenth, Pan-Africanism and the 1920's Back to Africa Movement, the Black Women's Club Movement of the early 20th century, the NAACP "We Charge Genocide" campaign, etc.

AFRI 1237. How We Remember: Collective Memories of Slavery and Colonialism in Contemporary Nonfiction Cinema.

This course is organized in two parts; in the first, we examine five ethnographic and documentary films seeking to comprehend the significance of visual reconstructions of different colonial periods and legacies. We critically analyze bias and injustice in visual historical reconstructions instead of letting them go unaddressed. In the second part of the course, we focus on education and focus on the use of films in class. We study and compare digital learning companions that are complementary to some of the assigned films. As a final project, we use the digital platform Skalar to create a website collecting materials from course assignments. During the semester, we have three guest lectures by directors and education specialists who have used films and digital tools to teach the core topics of this course.

AFRI 1250. Women in the Civil Rights Movement.

This seminar focuses on women in the civil rights movements, spanning the years of 1955-1968. This course examines issues of gender, race, sexuality, social protest, nonviolent civil disobedience and self-defense during the height of activism against apartheid in the United States and for civil rights.

AFRI 1260. The Organizing Tradition of the Southern Civil Rights Movement.

This seminar aims to fill in some of the gaps of the official canon by emphasizing that the modern (1954-1966) southern civil rights movement was not as it is mainly portrayed, a movement of mass protest in public spaces led by charismatic leaders; but rather, a movement of grassroots community organizing - quiet day-to-day work. Enrollment limited to 40.

AFRI 1270. Slavery, Democracy, and Racial Violence in the Americas.

This seminar will provide students with an introductory course about the origins of racial violence in the Americas. After a short theoretical introduction, the course will analyze the enslavement of Indigenous peoples and Africans and their descendants as a fundamental instrument of European colonialism and the expansion of capitalism. The following section will describe the role of slavery in the making of constitutional regimes and criminal justice systems across the continent during the Age of Revolutions. Finally, the last classes will focus on the legacies of slavery after emancipation by analyzing phenomena such as lynching, capital punishment, police brutality, and incarceration. The seminar will also illuminate the formation of different racial and legal regimes in the Americas by offering a transnational perspective that integrates the United States, Jamaica, Haiti, Cuba, and Brazil as components of a longue durée Atlantic history.

AFRI 1275. Memory, Movements, and Mississippi.

This course explores the history of Mississippi through the lens of race, culture, and politics focusing on the mass of movements for civil rights to the present. Students will understand the complexities and contradictions of race, politics, and memory in the United States and have opportunities to articulate these intricacies in assignments – building communication skills for future work. Students will also advance critical reading skills and analytical writing, discussion, and oral presentation skills applicable beyond an academic setting. It accompanies the experiential component and the January trip to the state through the Bonner Program. Instructor override required.

AFRI 1280. Writing About Race in the Post Civil Rights Era.

This seminar is an explanation of the transformation of racial policies, relations and rhetorics since the end of the civil rights era in the United States. We will examine the complex ways race has remained central to US society and yet has dramatically shifted- examining terms such as: color-blind society; integration; political race, racialized (and gendered) community formation. Enrollment limited to 20.

AFRI 1310. Say Her Name: Black Women and the Carceral Experience Since 1865.

The death of George Floyd has increased national attention to police brutality and mass incarceration. However, the death of Breonna Taylor has not garnered as much attention, nor have the experiences of imprisoned Black women. This course examines the experiences of captive Black women from the mid-nineteenth century to the present and will probe the prison-industrial complex as well as asylums and other mental health spaces as carceral spaces. Themes will interrogate the criminalization of Black women, definitions of insanity, and activism surrounding Black women's incarceration.

AFRI 1330. Africana Studies Junior Seminar.

This junior seminar course is designed to support students' growth as academic writers and will prepare them to better complete their culminating senior thesis projects. While specifically geared towards Africana Studies concentrators, the class is open to any undergraduate student who has successfully completed AFRI 0090: An Introduction to Africana Studies and at least four semesters of coursework overall towards the Bachelor's degree. Course materials will delve deeply into the history, spaces, peoples and cultures of the African Diaspora, exploring a selection of critical writings, performance pieces, fiction and non-fiction works by leading scholars and artists.

AFRI 1360. Africana Studies: Knowledge, Texts and Methodology.

This course will explore the issues of Africana Studies as a discipline by engaging in a series of critical readings of the central texts, which laid the protocols of the discipline. The course will also raise issues of knowledge production and methodologies. This course is a senior capstone seminar. Open to all senior Africana Studies concentrators; others by instructor permission only. Enrollment limited to 25.

AFRI 1410. Africans and the West: Studies in the History of Ideas.

This course will examine the political thought of a selection of Africana thinkers from the period of slavery to the 20th century. It will examine the political thought of thinkers like, Franz Fanon, Ida B. Wells, Cugoano, CLR James, W.E.B. DuBois and Rastafari. The course will be an exploration of black radical intellectual tradition and its different meanings.

AFRI 1420. Caribbean Imaginations: Writing and Cultural Production.

In the global imagination, the Caribbean is either thought of as a place for vacation or a place of extreme violence. This course calls for a deeper engagement with the region and its diaspora by surveying the writing and cultural production of the Caribbean to unpack the varying meanings of a Caribbean imagination in the historical and present moment. We will cover themes ranging from enslavement, indentureship, colonialism, racial formation, gender and sexuality, class, and migration to understand the various transformations in Caribbean literary and expressive cultures. Students will evaluate the aesthetic and political contributions that these imaginative works put forward in a broader understanding of the Caribbean. Materials include novels, short stories, poetry, film, music videos, and visual art. Readings will be inclusive of the Anglophone, Hispanophone, Francophone, and Dutch Caribbean.

AFRI 1430. Lincoln in the Archive: Material Culture, Representation, and Race.

AFRI 1430 explores the Charles Woodbury McLellan Collection of Lincolniana in the John Hay Library. We will consider this extensive archive dedicated to Abraham Lincoln including the material objects, the many images of Lincoln, the visualization of the Emancipation Proclamation, and how race is represented in the collection. Students will engage the collection to create and publish a digital exhibition through the platform, CultureConnect

AFRI 1440. Theorizing the Black Diaspora.

This seminar will focus on the theorization of the black diaspora as a way to explore the various articulations of colonialism, gendered racism and resistance against that racism throughout African-descendant communities. Course readings will highlight the scholarship of black women who have contributed to the internationalization of radical black vis-a-vis theories of diaspora, transnationalism, transformative politics, identity formation, and community.

AFRI 1441. Caribbean and Latin American Migration: Race, Gender, Community.

This course explores key issues in migration, especially as they relate to Latin America and the Caribbean. Viewing migration through multidisciplinary lenses, it explores the historic and contemporary forces behind the movement of people across the region; global and regional Migration regimes and their limitations; the implications of gender, race, ethnicity and class on migrant experience; the social effects of migration, especially on families; migrant survival strategies; and migrants contributions to their adopted countries, among others. The course draws from literature, film alongside academic texts representing a wide range of disciplinary perspectives to illustrate the varied approaches to think about migration and the people at the center of this phenomenon.

AFRI 1460. Tell the Story: The Afro-Diasporic Experience Through Documentary Film.

Documentary films have grown into an influential art form that has influenced politics, culture, social movements and how we see the world. They are relied on to sort out fact from fiction in an increasingly complex world where the lines continue to blur. Through film screenings, lectures, readings, critical analysis and group discussions, the course examines the changing nature of the documentary as it relates to how films documenting the Black Experience are conceived, told and distributed in different mediums. We will also look at how these films have been influenced as much by technology and ethical, social, cultural and political movements, as it has by the individual choices of the filmmakers.

AFRI 1470. Southern African History.

This course examines major themes of the history of southern Africa from the earliest times until 1994, with a heavy emphasis on historiographical debates. Our discussions of the South African past will always be informed by a consideration of the approach of the scholars who have interpreted and presented it as history. Our major questions concern the origins of historical change and the creation of racial groups. We will probe the significance of race in South African history but also the limitations of its explanatory power. Readings are arranged at three levels. First, we will be reading primary sources, to gain experience in working with the evidence that informs historical work. Second, we will be working through a concise textbook that summarizes the major themes of South African history. Third, we will be reading specialized scholarly books and articles, chosen to illustrate recent discussions about the interpretation of South Africa's past. The course will meet twice a week for lecture and discussion groups will meet once a week.

AFRI 1480. The Black Digital Humanities.

What is the relationship between race, digital technology, and power? This question is the basis for studying and building with the "The Black Digital Humanities," a space and tool to consider the intersections between Blackness, humanity, and digital technology, an umbrella term that includes all electronic devices, systems, and resources that produce, process, or store information. In this course, students will spend the semester exploring the ways digital technology offers opportunities to revisit, reconsider, and reimagine knowledge about the Black experience in the United States and beyond. Drawing on Black epistemologies, students will utilize, adapt, and attempt to break digital technologies to both analyze and build things that help us pose new and different questions about the human. Course readings will include texts in digital studies, new media, and the digital humanities.

AFRI 1500. Incarceration, Education, and Political Literacy.

This seminar (w/out audits) in politics and social justice is open to juniors/seniors. Captivity has become a critical political-social phenomenon in U.S. democracy, given that the United States has over two million people in prison/jails/INS detention centers. This two-part, one-year long course examines and maps (using cyber technology) captivity and criminality in the United States, focusing on race, gender, politics and literacy. Students are strongly urged to take both semesters; the second semester course as practicum, with training in cyber-technology and community-based learning/literacy, is open only to those who complete the fall course (Pt I) and the grade option for the second part of the course will be S/NC. Pre-Semester writing assignment required; see syllabus on WebCt for details.

AFRI 1500A. Black Life in the Post-Industrial City.

This course explores key themes in African American life in post-industrial U.S. cities. Relying on scholarly and historical sources and films, we will examine the complicated interplay of race, class, ethnicity, and gender dynamics in the transformation of black urban life in the late twentieth-century, the structures that have defined black urban life, and various expressive cultures and modes of resistance that have emerged out of the urban context. While not required, it is beneficial for students to have a working knowledge of twentieth century American history, and African American history in particular.

AFRI 1500B. Black Women Thinkers: Alternative Genealogies of Black Radical Thought.

This seminar examines contributions of Black women as major thinkers within the Black radical tradition, and provides a critical genealogy of Black feminist activists, writers and scholars contributing to social movements in the 20th century. Throughout the course, we will ask the following questions: What methods do Black women use to form critical thought? How is Black women's knowledge disappeared and devalued within academic and activist contexts? Finally, how can we recover and center those histories within our work? Assignments include short writing assignments, a final paper, and a collaborative digital humanities project. Introduction to Africana Studies preferred.

AFRI 1510. Making and Remaking Blackness in the Western World.

This course is an interdisciplinary survey of cultural, social, and political expressions of Blackness among people of African descent in the Western World, primarily the United States, and the social forces that create various understandings of this identity. Black experiences of and reflections on what it means to be Black are articulated in writing, visual and performing arts, music, and social media. Students will read, listen, and view a wide of set of materials that reflect people of African descent and their negotiation, rejection, and reimagination of different forms of Blackness in affirmative and complex ways from the 18th century to the present. Primary and secondary texts will comprise the course readings and range from cultural studies, philosophy, critical race theory, sociology, political science, literature, and history, among other areas.

AFRI 1540. Black Popular Cultures.

This course is an historical and topical examination of the development of black popular cultures. We will explore the debates about popular culture and specifically examine the ways that race (as well as gender, sexuality and class) shape these debates. In addition we will explore specific black popular cultural practices (music, dance, film, radio, theater, etc.) as well as the larger contexts for their production and reception. Instructor permission required.

AFRI 1580. Contemporary African Women's Literature.

The aim of the course is to introduce students to novels like Head's *A Question of Power*, El Saadawi's *God Dies by the Nile*, Adochie's *Half of a Yellow Sun* and other major prose works by contemporary African women writers. It will present the African woman as a writer, her environment and her commitments. The emphasis is on the writing of continental African women, but will include works of other women writers. For a brief but necessary historical background to the course, it will be introduced with selections from Margaret Busby's *Daughters of Africa*. Enrollment limited to 25.

AFRI 1600. Caribbean Popular Culture: Reggae, Dancehall, and Calypso.

Whether interrogating the aesthetics and moralizing philosophies that compose reggae music, examining the manifestations of skin bleaching depicted in dancehall culture, or mapping the global routes calypso music occupies with an agenda to theorize Caribbean cultures—the course centers popular music as sites of politics, pleasure, clashes, and identity-making.

AFRI 1620. Black New Orleans: A Research Seminar.

Examines the development of a unique African/ American cultural and political identity in New Orleans. The seminar focuses on the development of the Faubourg Tremé, the oldest free black community in the United States, and covers the period from 1718 until 1899. Topics include: slavery and resistance; relations between enslaved and free blacks; social and political agitation; and the resulting early development of the nation's Civil Rights movement and legislation. There is discussion also of the formation and continued tradition of artists' and artisans' guilds; Creole language (e.g., Creole slave songs, proverbs); NOLA relationship to the Caribbean and Latin America. Enrollment limited to 20.

AFRI 1630. Modernist Africana Poetry of the Americas.

Focus on origins of Modernism among Africana authors of the Americas, with emphasis on the poetry, poetics and poetry movements of Brazil and Latin America, the Caribbean and US from 1888 through the first half of the 20th century. Begins with an overview of innovations wrought by Rubén Dario of Nicaragua, arguably the first modernist poet, and continues with the Harlem Renaissance of the 1910's and 20's; the Brazilian writers at the center of the Week of Modern Art of 1922; Caribbean writers of the Negrismo and Négritude movements; concludes with the work of such US and Anglophone Caribbean poets as Gwendolyn Brooks, Robert Hayden and Martin Carter. Enrollment limited to 20.

AFRI 1640. Development, Dependency, and Decline in Africa, 1950-2025.

This course on the history of Africa begins as European empire unraveled after the Second World War and ends with a look toward the future. Development was high on the international and national agenda in the mid-twentieth century, but the most conspicuous outcome of the following decades was dependency and decline. Yet the story is more mixed than has been represented in American headlines; it was not one of pre-determined and constant failure. More than ever, at the beginning of this new millennium, conditions across the continent have diverged. What are current signs for future development or continuing crisis?

AFRI 1651. The Other African Americans? Comparative Perspectives on Black Ethnic Diversity.

This course explores the immigration, integration and identification of Black Africans and Black Caribbeans in the United States from sociological, historical, and cross-cultural perspectives. The seminar critically examines questions such as: what are the meanings Black immigrants attach to being Black in the U.S.? When, how and why do Black Africans and Black Caribbeans stand in solidarity with African Americans, and vice versa? How and why does 'culture' matter for group success? How do ethnicity, social class, gender, citizenship and sexuality complicate and challenge notions of a unified Black group? At its core, the seminar examines intra-racial and inter-ethnic similarities and differences, conflicts and collaborations that animate the lived experiences of native and new Blacks in the U.S.

AFRI 1710A. Political Visions and Community Formations.

This course aims to consider the depths of connection between forms of racialized, gender, class and sexual oppression vis a vis the creation and maintenance of community and intimate social bonds among the oppressed. We will read sociologists, historians and others who have worked at this intersection and musicians and writers such as: Morrison, Bambara, Baldwin, Hill-Collins, Hansberry, soul and neosoul artists. Instructor permission required. Enrollment limited to 20.

AFRI 1750. Eastern African History.

A lecture course examining the history of Eastern Africa from earliest times until 1963. The area includes the Great Lakes region, the Horn of Africa, Madagascar, and the East African Coast. The major topics are: precolonial interactions, the development of states and stateless societies, contact with other Indian Ocean people, the slave trade, colonial rule, and independence movements.

AFRI 1760. How Europe Underdeveloped Africa.

This course draws on Guyanese historian and political activist, Walter Rodney's landmark text, *How Europe Underdeveloped Africa*, to examine the historical and structural forces that have shaped Africa's economic, political, and cultural landscapes. Through the lenses of colonialism, imperialism, and race, students will analyze how European and U.S. exploitation, along with global power dynamics, have influenced African development. Key themes include the transatlantic slave trade, gradual imperial expansion, extractive colonial policies, and post-independence neocolonialism. In addition to Rodney's work, students will read African literature to critically explore the relationship between racism and imperialism and its lasting effects on Africa's position in the global order.

AFRI 1761. Modern Africa.

This course is an interdisciplinary study of the external and internal structural forces that have shaped Africa's economic, political, and cultural landscapes since 1800. Key themes in the course include the transatlantic slave trade, gradual imperial expansion, colonial policies, and post-independence neocolonialism. Students will read African history and literature as well as watch films to critically explore African development over time and space.

AFRI 1800. Race, Empire and Modernity.

Taking Cicero's notion of empire as "ways of life", this course will survey the history of empires as forms of rule. It will explore how race has been deployed in the various types of empire. The course will pay particular attention to empires in modernity since 1492. The course will think about the various technologies of rule and their discourses of power.

AFRI 1820. Contemporary African Political Philosophy.

This course examines some contemporary responses to the human condition in Africa. Topics will include Democracy, human rights, instability, social justice, identity, community and solidarity. These topics will be approached through the works of Canonical figures such as Leopold Senghor, K. Nkrumah, Frantz Fanon, Steve Biko and the recent analytical (T. Kiroso), Hermeneutical (T. Serequeberhan), Existential (L. Gordon) Historicism and poeticism (P. Henry) and Postcolonial Mislocation (M. Diawara).

AFRI 1850. The Civil Rights Movement: History and Legacy.

Explores the origins, conduct and complex legacy of the Civil Rights Movement. Topics include: historical roots of the movement; the campaign against legal segregation; the birth of S.N.C.C.; Black Power; the impact of the Cold War, Vietnam and the coming of African independence; and the movement's impact on other political struggles, including movements among women, Latinos, and Native Americans.

AFRI 1920. Health Inequality in Historical Perspective.

Seminar takes a historical perspective to explore causes of health inequality. Draws on studies from the 19th century-present. Examines socio-political and economic context of health/disease, focusing on how race, class, and gender shape the experience of health, disease causality, and public health responses with emphasis on the COVID-19 pandemic. Includes health consequences of immigration and pandemics, incarceration, race-based medicine. Enrollment restricted to 20, second and third-year students.

AFRI 1930. Race, Difference and Biomedical Research: Historical Considerations.

This advanced seminar places the current debate over race, health, and genetics in historical context. An overarching goal is to understand how the social world informs the scientific questions we ask, design of research studies, and interpretation of findings. How have the theories and practices of biomedical science and technology produced knowledge of "race" and racial difference historically? How does race relate to gender and class? What are the implications of this debate for understanding health inequality? Previous coursework in Africana Studies preferred. Enrollment limited to 20; instructor permission.

AFRI 1950. Philosophy, Literature and the Caribbean Novel.

This is a thematic course on the philosophical and literary themes which emerge from the Caribbean novel and writing in general.

AFRI 1955. History and Memory in Africana Literature.

Focuses on the close reading of nine works by writers of African descent - encompassing a variety of eras, forms and genres, stretching from the slave narrative to more contemporary settings. The thrust is to examine how each writer wrestles with issues of history and memory, with particular attention to the sometimes explicit, sometimes implicit interest in ideas and modes of expression that are rooted in African culture. Enrollment limited to 20 sophomores, juniors, and seniors; preference given to Africana Studies and English concentrators.

AFRI 1968. 1968: A Year in Review.

In 1968 students' walked-out at Brown, leading to the 1969 creation of the Rites and Reason Theatre and later the formation of Afro-American Studies, now the Department of African Studies/Rites and Reason Theatre. 1968 was also a global year of contention, confrontation and change, with consequences that continue to resonate into the present. This class harnesses the multiple narratives and studies of our faculty across the campus and alumni who took part in the 1968 walk-out. Classes blend lecture and discussion. Speakers assign appropriate reading to coincide with their topics. Requirements include mandatory participation to planned anniversary events.

AFRI 1970. Independent Reading and Research.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

AFRI 2001. Theories of Africana Thought: Intellectual History and Critical Theory.

This course will be a close reading of the various ideas, theories and practices of the thinkers, writers, artists and activists whose work and practices have constituted an Africana intellectual tradition. In conducting this review we will examine questions around the formation and the history of thought and intellectual traditions in general. We will also think about the various fields of knowledge which have shaped Africana thought. The course therefore will spend some time working through the different meanings of intellectual work and critical thought and theory. Enrollment limited to 12 graduate students.

AFRI 2001A. Race and Migration in the diaspora-Latin America and the Caribbean.

This seminar focuses on a critical and often neglected dimension of the Black experience in Latin American and the Caribbean. It introduces students to a particular aspect of the field of Africana studies, that takes account of the particular historical experiences and critical theoretical perspectives that shape the social construction and functioning of race in the region. It introduces students to some of the key thinkers around race in Latin America, the Caribbean and the US, to better understand how ideas of race cross boundaries and intersect to generate specific racial hierarchies. It pays particular attention to how ideas around race respond to broader global forces. It uses migration within Latin America and the Caribbean as a concrete instance for exploring historic and contemporary manifestation of anti-Black racism, and as sites for community building and resistance.

AFRI 2002. Theories of Africana Thought: Literary and Expressive Cultures.

A preoccupation of Africana Studies involves the central, highly contested role of the notion of what constitutes black culture in the modern world. To what degree can we claim aesthetic and other distinctions between black cultures in the Diaspora and other western cultural practices and expressive forms? What role did enslavement, forced migration and segregation play in shaping Africana culture in the modern west? These cultural debates play a central role in literary, musical, philosophical, aesthetic, historical and sociological analyses of the culture of people of African descent frame this graduate course.

AFRI 2005. Monuments, Counter-Monuments, and the Representation of the Slave Past.

This course is concerned with the memorialization and representation of the slave past through monumental form in the Atlantic world. Beginning with a range of theoretical considerations of the concepts of monument and counter-monument, we engage the writings of Ana-Lucia Araujo, Stephen M. Best, Huey Copeland, Cheryl Finlay, Saidiya Hartmann, Katherine McKittrick, Sowande' M. Mustakeem, Christina Sharpe, Marita Sturken, Lisa Woolfork, James Young, and others. Using these various approaches and theories, we examine monuments located in a range of countries including Benin, Ghana, Senegal, England, France, the Netherlands, Brazil, Haiti, Jamaica, Barbados, Guadeloupe, and the United States.

AFRI 2100. Black Transnational Feminism.

This graduate seminar brings together methodological and theoretical approaches to interpreting the significance of race, gender, sexuality and nation in the rich literature on Black transnationalism. The course will explore how Black feminist thought has informed the development of the field, placing special emphasis on foundational and emergent scholarship. The course underscores the varied ways Black feminist scholarship has been crucial for understanding the complex dynamics of Black internationalist thought and praxis. Course readings will represent a combination of primary and secondary sources that reflect the geographical breadth of the African Diaspora, including Africa, the Americas, and Europe.

AFRI 2015. Revolt and Revolution in the Black World.

From 18th Century slave revolts to the iconic Haitian Revolution, the Grenadian Revolution of 1979 and the 2019 popular uprisings in the Sudan, revolts and revolutions have undoubtedly occupied a hallowed place in the political imaginaries of the Black World. Reading narratives from a select group of instances, we will explore, against the broader theoretical work on global revolutions, the more specific meaning of revolution in Africana history and literature. The overriding question is, in the face of disappointing outcomes, tragedy and collapse, can the history of Black revolt and revolution still provide a framework for thinking about radical change in the 21st Century, or should we move beyond it?

AFRI 2020. Afro-pessimism and Its Kin.

As an intellectual project, Afro-pessimism has developed an interpretation of the unique position of black people within a world they say the transatlantic slave trade and anti-black racial solidarity has made. Through close reading, this seminar will begin by critically engaging the core texts of Afro-pessimism, move on to contextualize its central claims about black ontology, social death, civil society, and the world within its canon (e.g. Saidiya Hartman, Orlando Patterson, Hortense Spillers and so on) and critically engage an ever-expanding scholarship that takes up, expands, and contests the Afro-pessimist project (e.g. Fred Moten, Christina Sharpe and so on).

AFRI 2050. History of Black Travel.

The history of Black travel, marked by both challenges and triumphs, illuminates the complexities of broad themes in US and global history, including citizenship and belonging, freedom, power, racism and discrimination, inequality, and segregation. Drawing insights from a range of primary and secondary sources the course explores various forms travel, including fun and leisure, military service, expatriation, migration, and goodwill tours. The course begins with a discussion of the forced migration of African peoples to the Americas and concludes with contemporary Black travel tours abroad. It grapples with the varied meanings of travel and migration for people of African descent, and it brings together methodological and theoretical approaches to interpreting the role of race, gender, sexuality, class, and nation in shaping the history of Black travel. Course readings will reflect the geographical breadth of the African Diaspora.

AFRI 2100. Race and the Modern World.

Race and the Modern World is a team taught interdisciplinary graduate seminar that critically examines the intersections of ideas, institutions, ideologies, and practices that have defined race and processes of racialization in the modern era. The seminar will closely examine the theoretical and methodical issues in the critical study of race; the politics and political theories of race; the imbrications of discourses of race, culture, and public life; the political economy of race; and the intellectual history of the discourse of race with an emphasis on the university as a key site in the production of racial knowledge. Enrollment limited to 20.

AFRI 2101. Methods in Africana Studies.

This graduate seminar brings together various methodological and theoretical approaches to interpreting Africana life, culture, thought, and politics. Placing special emphasis on emergent scholarship that shapes and reshapes the discipline of Africana Studies, we examine a selection of humanistic and social scientific studies of various local, national, and international contexts. Texts demonstrate the ways in which innovative interdisciplinary methods are crucial for understanding the complexity of the Africana world. We will give attention to the strategies scholars utilize to formulate their research questions, design their methodologies, and create new ideas that contribute to the advancement of Africana Studies scholarship.

AFRI 2102. Interdisciplinary Methods and Africana Studies.

This graduate seminar focuses on interdisciplinary methodology and Africana Studies. The seminar explores how students and scholars in Africana Studies use interdisciplinary methods developed in the social sciences and the humanities in novel and innovative ways. Students will critically examine key methodological issues in Africana Studies and how and in what ways these issues are similar to and differ from such disciplines as economics, history, sociology, and literature. Prerequisite: a prior undergraduate or graduate level methods in Humanities or Social Sciences. Enrollment limited to 20.

AFRI 2104. Theorizing the Black Diaspora.

This seminar will focus on the theorization of the black diaspora as a way to explore the various articulations of colonialism, gendered racism and resistance against that racism throughout African-descendant communities. Course readings will highlight the scholarship of black women who have contributed to the internationalization of radical black vis-a-vis theories of diaspora, transnationalism, transformative politics, identity formation, and community. This course is open to upper level concentrators in Africana Studies by permission of instructor. Enrollment limited to 19.

AFRI 2105. Professionalization Seminar.

This course explores the mechanics of a doctorate degree in Africana Studies. We will explore the constitution of our field through the elaboration of exam lists and narratives, query its pedagogical application in the design of undergraduate syllabi, and begin to outline and enact our participation in the profession both within and beyond the academy. At the end of this class, students will have constructed a portfolio that will assist their progress towards a degree and provide the tools with which to chart pathways once a degree is in hand. A key component of the professionalization courses is the construction of an undergraduate syllabus by each student, which will subsequently be revised and discussed during the dissertation proposal defense, and which will be taught in either the first semester of the student's fourth or fifth year.

AFRI 2300. Black Critique: Black Critical Theory - History, Literature, Politics, the Human Sciences of Being.

This class is about re-figuring black radical thought as a field of interdisciplinary critical theory. Working with the corpus of writers like Sylvia Wynter, WEB Du Bois and Frantz Fanon the course will seek to grapple with the practices, questions and ideas of Black thinkers around questions of the human, the figure of the black fugitive, the significance of enslaved labor to the capitalism, Black internationalism, black feminism and the ways in which questions of history have been reconfigured in Black thought. The course is an reading intensive one and is open to all graduate students.

AFRI 2303. Black Feminism and the Politics of Care.

"caring for myself is not self-indulgence, it is self-preservation, and that is an act of political warfare" (Audre Lorde) This course focuses on Black feminist thought through the lens of care as both theory and lived experience from the late twentieth century to the present. Care in the context of the course is a radical epistemology and praxis that might be defined as, in the words of Aisha K. Finch "to be about the business of living with people, sharing in and amplifying their life force, recognizing their value and worth." Through the critical examination of a number of texts, the course will examine the multifaceted concept and practice of care in Black people's lives as a contest against state power and a means of survival and joy.

AFRI 2450. Exchange Scholar Program.**AFRI 2502. Race and Nation in the Spanish Caribbean.**

For five centuries, the Caribbean has stood at a crucial crossroads in the unfolding history of the Americas, Europe, and the African diaspora. This seminar engages in a comparative survey of the interwoven dynamics of race and national construction in the making of the Spanish-speaking Caribbean. The focus of the seminar will be placed on the on-going centrality of race in these island nations. Drawing on a range of readings in history, music, poetry and anthropology, this course will explore the overlapping historical contexts of Cuba, Puerto Rico, and the Dominican Republic.

AFRI 2970. Preliminary Examination Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

AFRI 2980. Graduate Level Independent Reading and Research.

A program of intensive reading and research. Section numbers may vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

AFRI 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

AFRI XLIST. Courses of Interest to Concentrators in Africana Studies.**Fall 2025**

The following courses may be taken for concentration credit. Please see the sponsoring department for the time and location of each course.

Cogut Institute for Humanities

HMAN 1300A Decolonizing Data: Approaches from Caribbean Digital Humanities and Beyond

English

ENGL 1710J Modern African Literature

ENGL 0710B African American Literature and the Legacy of Slavery

ENGL 1191B Special Topics in Nonfiction Writing: Fugitive Letters: The Prison Notebooks

ENGL 1711L Contemporary Black Women's Literature

Ethnic Studies

ETHN 1612E Black Archival Experiments

History of Art and Architecture

HIAA 2880 Architecture and the Making of Human Difference

American Studies

The Department of American Studies at Brown remains committed to the interdisciplinary study of the American experience, drawing on a range of methodologies and practices to understand American society and cultures. As one of the oldest departments of American Studies, Brown's program has an almost seventy year history of activist teaching faculty fully engaged in research; prize-winning and productive graduate students who now teach their own students around the world; and curious and exciting undergraduates who use their educations in a wide range of fields from medicine to law; from social work to library science. Faculty and students have together pioneered new avenues in transnational research, exploring the role of the United States in the world and the importance of the world in the United States, and expanded our research and teaching into digital scholarship.

For additional information, please visit the department's website: <https://www.brown.edu/academics/american-studies/>

American Studies Concentration Requirements

The concentration in American Studies seeks to understand American society and cultures as emerging from historical and contemporary processes at work in local, national, and global contexts. Concentrators study four broad themes: social structure and the practices of identity, space and place, production and consumption of culture, and science, technology, and everyday life. Study abroad is supported and encouraged.

Interested students may contact the director of undergraduate studies.

A concentrator in American Studies will be able to:

- Analyze texts, contexts, and data from multiple disciplinary and historical perspectives
- Synthesize research as verbal, visual and/or digital presentations
- Explore the theory and/or practice of the engagement of scholarship with a broader public
- Understand how American society and cultures have been and are being shaped by global flows of people, goods and ideas
- Experiment with new media as critical tools for scholarship

Concentrators have gone on to a vast variety of careers, including law, public humanities, politics, public service, academics, business, creative arts, and medicine.

Requirements for the American Studies Concentration

In consultation with the Concentration Advisor, each concentrator develops an individualized program of study of **10 courses** (or 12 courses for those completing an Honors Thesis). Three of these courses must be linked to an **individual focus** formulated by the student when the concentration is declared. The focus is the flexible core of the concentration: each student builds a coherent and dynamic interdisciplinary cluster of related courses that develops their compelling interest in some aspect of American experience.

Required concentration courses & capstone portfolio:

- **One gateway course** from the AMST 0600 "Questions" series.
- **Four seminars above the 1000-level, including a Senior Seminar.**
 - The Senior Seminar is any AMST 1900-series course taken during the senior year. Students may take as many AMST 1900 courses as they wish; however, for the course to count as the Senior Seminar it must be taken during the senior year.
 - The three other seminars may be listed in American Studies or Ethnic Studies, or in another department if linked to the student's focus area (requires concentration advisor approval; a maximum of 3 courses outside of AMST/ETHN can count toward the concentration).
- **Five additional elective courses, four of which must be above the 1000-level.** These may be seminars or lecture courses listed in American Studies or Ethnic Studies, or in another department if linked to the student's focus area (requires concentration advisor approval; a maximum of 3 courses outside of AMST/ETHN can count toward the concentration).
- **Senior Capstone ePortfolio (ungraded, detailed below).**
- **Honors Thesis (optional):** Concentrators hoping to pursue honors should take the Honors Seminar, AMST 1800, in the spring of their junior year. AMST 1800 counts as one of the four required 1000-level seminars listed above. Students pursuing honors are also required to take two independent study courses (AMST 1970) in their senior year in order to complete the honors thesis. These independent study courses raise the total number of required concentration courses to 12.

WHAT we study

American Studies at Brown is concerned with four broad themes:

- Social Structures and the Practices of Identity
- Space and Place
- Production and Consumption of Culture
- Science, Technology, and Everyday Life

HOW we study

American Studies at Brown emphasizes four intersecting approaches that are critical tools for understanding these themes:

- Cultural and Social Analysis
- Global/International Contextualization
- New Media Understandings
- Publicly Engaged Scholarship

Courses in the AMST 0600 "Questions" series introduce students to American Studies by showing how a shared set of core questions can guide the investigation of myriad topics in this interdisciplinary field. Each course in the series engages with at least 3 of the following questions:

1. How does [subject] shed light on issues of identity, place, and power in the United States?
2. How does [subject] reveal contestations over citizenship, culture, and belonging in American society?
3. How does [subject] help us understand histories and practices of social change in the United States?
4. How does [subject] illuminate the international, transnational, or imperial relations that have shaped American politics and cultural practices?

Critical Native American and Indigenous Studies Concentration Requirements

Critical Native American and Indigenous Studies (NAIS) is an interdisciplinary concentration offered through the American Studies department focused on research, teaching and engagement with the social, cultural, artistic, ancestral, heritage, legal and political aspects of Native American and Indigenous peoples in the historical and contemporary periods. It emphasizes the integrated study of indigeneity within contemporary U.S. borders, also extending across the Americas, to Oceania and to other parts of the world. This concentration builds on Brown University's strengths and history of engagement with critical theory, studies and pedagogy, and with topics of social justice, inequality, power structures and structural violence. Through courses across four breadth areas (Creative Expressions; History, Politics and Policy Issues; Language and Identity; Systems of Knowledge and Belief: Fundamentals of Indigenous Living, Society and Wellness) and including foundational and capstone courses, concentrators explore topics and research projects focused on further supporting the interests, concerns and needs of Indigenous peoples in the Western Hemisphere and globally.

This critical approach is also grounded in Indigenous-centered knowledge production, in addition to engagement with topics such as: decolonial scholarship and practices (and the further defining of those terms); Indigenous self-determination and political and social justice; Indigenous activism and sovereignty struggles; the politics of land, dispossession and heritage studies; critiques of racial capitalism and extractive economies; issues of policing, incarceration, criminalization and violence against women; environmental justice and global environmental change; health and economic disparities; structural racism; language loss; cultural and intellectual property rights; and human rights advocacy.

Prospective concentrators should visit the Native American and Indigenous Studies website ([https://www.brown.edu/academics/native-american-and-indigenous-studies/](https://www.brown.edu/academics/native-american-and-indigenous-studies/native-american-and-indigenous-studies/)) to learn more about the concentration and associated faculty, courses and affiliated staff.

To declare the Critical Native American and Indigenous Studies concentration, visit Advising Sidekick (<https://ask.brown.edu/home/>).

Contact Mack Scott (mack_scott@brown.edu) (donna_rae_gould@brown.edu) for additional information and advising. Dr. Scott serves as the CNAIS Director of Undergraduate Studies (DUS).

Requirements

ETHN 1200K	Introduction to Native American and Indigenous Studies	1
Four (4) courses at the 1000-level related to a focus area of study (determined by the student, in consultation with the NAIS DUS and faculty advisor), also serving to prepare for the capstone requirement; these courses may be from different breadth areas.		4
Four (4) Elective Courses from across the Concentration Breadth Areas		4
Concentration breadth areas are:		
1) Creative Expressions (Arts, Literature and Language)		
2) History, Politics and Policy Issues		
3) Language and Identity		
4) Systems of Knowledge and Belief: Fundamentals of Indigenous Living, Society and Wellness (Environment, Medicine, Biology, Health, Psychology, Public Health, Philosophy, Religion)		
These courses must be at the 1000-level		
At least two breadth areas must be included in the overall course of study, with a minimum of two courses in a breadth area outside of the focus area of study (if that is connected to only one breadth area); electives provide an opportunity for expansion beyond the focus area.		

No more than two Independent Study Project (ISP or GISP) courses counting towards fulfillment of the concentration.

Courses that are not NAIS designated (in the list of concentration courses) may count toward the concentration if agreed upon by the department faculty advisor and NAIS DUS and closely connected to areas of study.

NAIS 1900	Critical NAIS Capstone Course	1

Total Credits	10

Double Concentrations: Students concentrating in Critical Native American and Indigenous Studies and another discipline may count no more than two courses towards both concentrations.

Transfer credits: Credits for courses taken at other institutions may be applied to the Critical NAIS concentration following review by the department faculty advisor and the NAIS DUS. No more than four (4) transfer courses can be applied toward this A.B.

Language Study:

Through a focus on the Language and Identity Breadth Area, students may include one year (two courses) of language study (determined by the student and faculty advisor, which could be met through a DISP or a GISP course). The language may be an Indigenous one but does not need to be; rather, it should align closely with the goals and interests of the concentrator and could contribute to research and learning goals through access to records, manuscripts and other documents not in English. Students not focusing on Language and Identity may also be interested in language study and are encouraged to include that in their Concentration if it contributes to their goals and objectives.

Honors Thesis or Project (Optional):

Students may choose to complete their Critical NAIS concentration with honors by completing an honors thesis or project, in addition to other course requirements and the 10 credits needed to complete the concentration. To successfully complete Honors in the Critical NAIS concentration, a student must:

- outline a viable research project
- have the support of at least one faculty advisor
- submission and approval of a thesis or project proposal to the faculty advisor and NAIS DUS.

Thesis Requirements:

- Good academic standing at the University and in the concentration (see below)
- Completion of a thesis based on extended independent research under the guidance of a Brown University faculty advisor(s)
- Enrollment in two thesis preparation courses (with thesis advisor) over the final year of undergraduate study (in the fall and spring semesters of final year)
- Submission of an Honors Thesis/Project outline and application for honors designation within the Critical NAIS concentration (to the NAIS DUS and faculty advisor(s)) at the end of the third year of study or by Sept. 30 of the final year. A final proposal of a five-page, double-spaced project description along with a bibliography of relevant sources should be submitted following approval of the thesis/project outline.
- Completed thesis submitted to the NAIS Faculty Director and thesis faculty advisor no later than the third week of April (for May graduation) or the first Monday of December (for winter graduation).

Academic Requirements:

- At least two consecutive semesters in good academic standing at the time of application (submission of honors prospectus)
- The Honors Thesis must earn an A (or a recommendation for Honors) from two faculty readers, in addition to fulfilling all other concentration requirements.

If a student completes an honors thesis that is not conferred honors status, the two semesters of research and writing would constitute completion of the Capstone course (NAIS 1900).

Ethnic Studies Concentration Requirements

Ethnic Studies is an interdisciplinary, comparative concentration that examines the construction of race and ethnicity in social, cultural, historical, political, and economic contexts. Concentrators develop individual programs based on areas of focus in consultation with faculty advisors, drawing from courses in the humanities and social sciences. Typical areas of focus are social issues (such as inequality, education, or health), cultural production and the representation of racial groups, processes of racialization, the historical formation of transnational communities and of diaspora, and the history of particular ethnic or racial groups.

The Ethnic Studies concentration emphasizes the histories of diverse racial groups within and across the borders of the United States, including examining issues of diaspora, migration, social movements, and the political economies of social inequality and racial formation. Concentrators strive for intellectual fluency in a range of critical approaches to race and ethnicity across disciplines, and demonstrate this fluency through the composition or creation of a significant piece of original research or creative work.

Requirements

In consultation with the Concentration Advisor, each concentrator develops an individualized program of study of **10 courses** (or 12 courses for those completing an Honors Thesis). Five of these courses must be linked to an individual focus area formulated by the student.

Required courses:

- **ETHN 1000 "Introduction to Ethnic Studies"**
- **Any three courses from the ETHN 1200 "Topics in Ethnic Studies" or ETHN 1750 "Advanced Topics in Ethnic Studies" sequence**, or similar 1000-level electives listed under AMST (with approval from the concentration advisor).
- **Five additional courses** that address the student's **focus area** and prepare them for the capstone experience. These may be listed in AMST or ETHN, or in another department if linked to the student's focus area. (Outside courses require concentration advisor approval; a maximum of 3 courses outside of AMST/ETHN can count toward the concentration).
 - **Up to two** ETHN or AMST courses below the 1000-level may count toward the focus area (for instance, a first-year seminar and a sophomore seminar).
 - **Up to one** of the focus area courses may be a **Department Independent Study Project (DISP)**, undertaken with an American Studies/Ethnic Studies faculty member and offered under an ETHN course number.
 - If you intend to pursue honors, one of the focus area courses should be the **AMST 1800 Honors Seminar** (taken during the junior year).
- **ETHN 1900 "Senior Seminar in Ethnic Studies"**. In this spring semester course, senior concentrators collectively reflect on their experience in the concentration and the current state of the field, while also designing/completing a senior capstone project (or completing the honors thesis, if pursuing honors).
- **Honors Thesis (optional)**: Concentrators hoping to pursue honors should take the joint **AMST/ETHN Honors Seminar, AMST 1800, in the spring of their junior year**. Students pursuing honors are also required to take **two independent study courses (ETHN 1920)** in their senior year in order to complete the honors thesis. These independent study courses raise the total number of required concentration courses to 12.

Honors:

Students who hope to pursue Honors are encouraged to take AMST 1800 (<https://bulletin.brown.edu/search/?P=AMST%201800>), the Honors Seminar, in the Spring of their Junior year, in preparation for submitting an Honors thesis proposal. Admission to Honors candidacy requires an academic record providing evidence of the student's ability to do Honors

work. At least half of the student's grades in courses counted toward the concentration must be grades of A or "S with Distinction", and Honors proposals must include a recommendation form completed by a faculty member who has taught a class requiring a significant research paper. Students pursuing Honors are required to take two independent study courses in their senior year, in addition to the regular concentration requirements (for a total of 12 credits), in order to write their Honors thesis. Guidelines for completion and submission of the thesis are on the department website.

American Studies Graduate Program

The department of American Studies offers a graduate program leading to the Doctor of Philosophy (Ph.D.) in American Studies.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/american-studies>
(<http://www.brown.edu/academics/gradschool/programs/american-studies/>)

Courses

American Studies

AMST 0070. An Introduction to Africana Studies (AFRI 0090).
Interested students must register for AFRI 0090.

AMST 0085. The Christian Right (RELS 0085F).
Interested students must register for RELS 0085F.

AMST 0090A. 7 Hours and 55 Minutes: Sex, Work, and Migration in Global Contexts.

Diving into global debates, surround gender, sex, migration, and labor, this course considers forms of work that are inflected by race, gender, class, nation, and ability. Our course title, "7 Hours and 55 Minutes," draws its inspiration from an advocacy game developed by the Empower Foundation, Thailand's first sex worker rights organization. The game asks participants to consider Thai sex worker understandings of sex work, within the context of an 8 hour working day. It examines how the global legal and civilian regulation of gendered bodies is met with vital forms of resistance and community organizing. Each week, our seminar will explore one book, article, documentary film, cultural artifact, or the mixed media artistic productions.

AMST 0090C. Eco-Identity: Representation in Nature.

This course examines the histories and theories of visual and textual media from an ecocritical perspective, specifically focusing on how film, media, photography, literature, and visual art represent relationships between humans and nature. Beginning with settler colonialism and the frontier myth and ending with notions of queer ecology and the supercrip narrative, this course builds upon the canon of eco-arts through encompassing a range of perspectives and methodological approaches. By putting contemporary theories of nature and identity (race, gender, sexuality, disability, etc.) in conversation with art, students will gain a comprehensive view of how humans' view of nature has shifted over time and who does or does not "fit" in nature according to the American public imaginary.

AMST 0150B. Boston: A City Through Time.

This interdisciplinary seminar for first year students will examine the City of Boston from its seventeenth-century origins to the present day. Among the topics covered will be architecture, city planning, physical expansion, political leadership, urban renewal, historical preservation, park development, racial and ethnic tensions, and suburban sprawl. Includes a Boston tour. Enrollment limited to 19 first year students.

AMST 0150C. Bodies of Knowledge: Gender, Race and Science.

This course examines how science and medicine have located racial and sexual differences in the human body and gendered the natural world from the seventeenth through the twentieth centuries, with a focus on the nineteenth and twentieth centuries. We will consider historical changes in the production of scientific knowledge about gender, race, and sexuality, as well as debates about who participates in scientific work.

AMST 0150D. The West in the American Imagination.

No region has such a purchase on Americans' collective imagination as the West. No region is so drenched in misrepresentation and mythology. In this seminar, we will use fiction, film, and works of history to explore the American West as both historical reality and wellspring of collective myth. Enrollment limited to 19 first year students.

AMST 0150E. Skill: From Flint-knapping to the Maker Movement.

What does it mean to be skilled? How do mechanical and material knowledge, expertise in the use of tools, and physical ability allow us to make and repair things? How do actions, words, images and artifacts embody skills? How do skills fit into social and cultural settings? How have ideas about skills changed over time? In this course we will read the writings of skilled craftspeople, scholars, and cultural critics; observe skilled practitioners in a variety of areas; learn new skills, and write about them.

AMST 0150F. What Does A Woman Want?.

This course is an introduction to psychoanalysis and its vexed and productive relationships to women and feminism. Freud asked his famous question: "What does a woman want?" after years of clinical practice and theoretical speculation. Woman's desire remained a mystery to him, but the attempt to solve it has given rise to a rethinking of human sexuality, of gender, of social structures, and of creativity. We will read foundational texts by Freud and by feminist disciples and critics of psychoanalysis theories. The literary texts will be read as critiques of theoretical positions, as well as examples of particular historical constructions of gender. The course is broadly interdisciplinary and explores the boundaries and intersections of different disciplinary practices and frameworks. Enrollment limited to 19 first year students.

AMST 0150I. Race, Sex, and Biology: A Cultural History of Differences.

Are your race, gender, and sexual orientation biologically pre-determined? This course traces the history and cultural implications of theories of racial and sexual differences. We examine three "scientific" theories -- Darwinism, eugenics, and genetics -- in popular culture, public policies and social movements, and consider how these social constructs both empowered and disempowered women, homosexuals, and racial minorities. Enrollment limited to 19 first year students.

AMST 0150J. The Boy Problem.

Focusing on the beginning, middle, and especially concluding decades of the 20th century, this course examines the ways in which both expert and popular discourse in the US have conflated male adolescence with social pathology and have constructed an image of the teenage boy as both symptomatic of and responsible for the nation's ills. Particular attention will be paid to issues of gender, race, and class. Primary source readings and original research will be emphasized. Enrollment limited to 19 first year students.

AMST 0150K. Culture, Communities, and Change.

Studying varied organizations such as museums, community arts groups, rock bands, and dance companies, this seminar works on three levels. Students consider the role of cultural production in local, national, and international economies and lives; think about methods for studying creative communities; and write the "biographies" of Providence cultural organizations. Issues of tourism, representation, hierarchy, urban space, and social change as well as questions about who puts culture to work and the role of cultural workers will be addressed. We will consider public humanities, engaged scholarship and community organizing as methods as we explore the Providence cultural scene. Enrollment limited to 17 first year students.

AMST 0150L. Object Histories: The Material Culture of Early America (HIST 0550A).

Interested students must register for HIST 0550A.

AMST 0150M. 95 North: New York Fictions.

In this course we will consider humanity's fate in twentieth-century and postmillennial Gotham. Through a broad range of literature and film that treats New York as a destination unto itself, 95 North examines the city's representational status as our nation's de facto capital by focusing on its most undemocratic and antisocial features (e.g., widespread disaffection, racial animus, gentrification, vice, and criminality). Writers include James Weldon Johnson, Saul Bellow, LeRoi Jones, Frank O'Hara, Samuel R. Delany, Jay McInerney, Diana Son, and Teju Cole.

AMST 0150N. Color Me Cool.

This seminar is an introduction to graphic novels produced in the U.S. since 1985 and will train you in critically interpreting graphic novels. We will pay close attention to the relationship between the visual and textual components of the novels. While we will draw on many critical reading tools, we will use Scott McCloud's *Understanding Comics* to give us a shared critical vocabulary. I may use one superhero graphic novel as a point of contrast, but the course will focus on graphic novels such as Alison Bechdel's *Fun Home*, Adrian Tomine's *Shortcomings* and the like.

AMST 0150P. The Teen Age: Youth, Society and Culture in Early Cold War America.

An interdisciplinary and multimedia exploration of the experiences, culture, and representation of youth in the United States from the end of World War II through the beginning of the Vietnam War. Enrollment limited to 19.

AMST 0150R. Science in the Public Eye.

This course examines the relationship between science and popular culture in modern America. We will examine the representation of science and technology in films, museums, education, and advertising, as well as the role of political culture in scientific practice and controversies. Topics will range from the history of debates about vaccines to concerns about nuclear power. We will also consider the role of science and medicine in reinforcing as well as challenging social and racial inequalities over the past century.

AMST 0150T. Latina Popular Culture.

This first-year seminar explores Latina representation in U.S. popular culture from the 1940s to the present. We will be analyzing different "texts" ranging from film, television, music, print, and digital media in our discussions of Latina subjectivity. We will consider how media form and genre shapes the production and consumption of Latina identities. Additionally, we will focus on how issues of race, ethnicity, class, gender, sexuality, and age shape our understanding of Latina representation across time and place. How have Latinas been portrayed within mainstream popular culture? How do audiences and consumers receive/reinterpret prevailing themes and tropes? How have Latina creatives reimagined and reclaimed dominant imagery? This class is a writing-designated (WRIT) course and has no prerequisites.

AMST 0170A. American Slavery On Screen.

Since the advent of American cinema, antebellum slavery has remained an abiding topic of interest for filmmakers and theatergoers alike. From Thomas Edison's *Uncle Tom's Cabin* (1903) to Steve McQueen's *12 Years A Slave* (2013), our infatuation with the peculiar institution appears as relevant to our nation's ongoing discussions about race and civic belonging as it was to those antislavery debates that precipitated the Civil War. This course examines the various ideological ends to which cinematic slavery has been put to use.

AMST 0170C. Race, Class, and Girlhood.

This seminar provides an introduction to girlhood studies, both historically and theoretically, and positions girls at the center of popular culture analysis. In particular, this course examines the intersections of race, class, and gender in the construction of "girlhood" within the U.S. Through an analysis of different forms of popular culture, students in this course will gain an understanding of the politics of production and consumption and the diverging disclosures around what it means to "be a girl".

AMST 0170D. Musical Youth Cultures.

This sophomore seminar explores how and why young people form communities around popular music. We will discuss readings and documentary films about musical subcultures, media circulation, and how young people make music meaningful in their lives. The course requires critical engagement with a variety of popular music genres and cultures, as well as reflection on our own musical production and consumption practices. Major topics include punk, hip-hop, metal, rock, and club music; popular music and intersectional identity (including race, gender, sexuality, ethnicity, and disability); fan communities; activist musical collectives; music-sharing technologies; the politics of style; and ethnographic theory and method.

AMST 0170E. Black to the Future: Race as Science Fiction.

Charting an interdisciplinary path, this course will teach students literary and visual analysis through fiction, film, comics, and graphic novels to explore debates in the 20th and 21st century around how to read blackness. What is the relationship between the history of African Americans and the speculative genre? What tools does it afford African American writers and artists that other genres of fiction do not? How does Black science fiction in both literary and visual form, teach us how to see and read blackness otherwise? Key artists include George Schuyler, W.E.B. DuBois, N.K. Jemison, Janelle Monae, Octavia Butler, among others.

AMST 0170F. Religion, Sex, Citizenship (RELS 0842).

Interested students must register for RELS 0842.

AMST 0170G. Native American Boarding School Histories.

Native American boarding schools, whose institutional motto was: "Kill the Indian, Save the Man," were implemented as part the official US Federal Indian Policy in the late 1800s. This sophomore seminar highlights both the histories of these schools and their contemporary reverberations, especially as it has recently culminated in several organizing gains. Throughout this course students will trace the emergence of boarding schools as an integral component of settler colonialism. Students will also gain an understanding of settler colonialism as a structure that continues to dispossess Indigenous people from their lands, resources, and knowledges. As such, it is important to contextualize the boarding school system as a tool oriented toward achieving these same goals.

AMST 0170H. Brown v. Board of Education and the History of School Desegregation (EDUC 0610).

Interested students must register for EDUC 0610.

AMST 0190A. Selling Love, Selling Sex: Romance in Popular Culture.

Where do our beliefs about love and romance come from? Is it true that "sex sells"? This course examines representations of love in advertising and popular culture from the 1920s, 1950s, 1980s and the present. We'll compare texts such as *Ladie's Home Journal*, *I Love Lucy*, and *Dynasty* to *Maxim*, *Desperate Housewives*, and *Mad Men*. Enrollment limited to 17 first year students and sophomores.

AMST 0190B. Histories of Memory/Memories of History.

This course examines the role of historical narratives in popular culture and politics, using memoir, films, newspapers, political cartoons, and scholarship to think about how such narratives build and break local, national, and transnational communities, serve and interrupt different kinds of political agendas, and reform the way we orient ourselves to the way we live and to those with whom we live. How is the past made? By whom? Topics will include the Holocaust, the Vietnam War, Columbus, memorials, and holidays. Enrollment limited to 17 first year students and sophomores.

AMST 0190C. American (Mass)culinities: Sexuality, Race and Aesthetics.

This course explores masculinity in American popular cultures since 1945. Starting with theories of homosociality, racial and gender formation at the turn of the century, to modern and post-modern cultural productions that visualize or narrativize "masculinity" including novels, films, and video. Through frameworks of psychoanalytic theory, queer theory and critical race theory we think about masculinity as narrative, as a set of discourses, an epistemology, an aesthetic and privileged form of Americana. How we understand the politics of race and sexuality through images of male bodies? What it means to decouple masculinity and men? What are the relationships between gender/genre? Enrollment limited to 17 first year students and sophomores.

AMST 0190D. Popular Music and the City.

This course will examine the relationship between popular music and its sociocultural context by concentrating on three urban music forms; blues, soul, and hip hop. Readings will focus on: (1) concepts such as audiences, the music industry, cultural infrastructure, and race; (2) processes such as urbanization, demographic change, and the politicization of popular music. Enrollment limited to 17 first year students and sophomores.

AMST 0190E. It's the End of the World As We Know It: Zombie and Apocalypse Narratives in American Pop Culture.

Zombie narratives originated as part of racist colonial ideologies prevalent in Haiti and the Caribbean, and have since become a means of social and political critique. This course charts how the zombie has been re-appropriated and redeployed in American culture. Taking an interdisciplinary approach, we examine zombie and apocalypse narratives in film, literature, comics, and video games. Enrollment limited to 17 first year students and sophomores.

AMST 0190F. Beyond the Tourist Trap: The Past, Present, and Future of Asian American Urban Spaces.

Beyond the lure of the "exotic" food, cultural festivals, and distinctive architecture of Chinatowns, Little Tokyos, Filipinotowns, Koreatowns, Little Saigons, and Little Indias, Asian American spaces are at once historical remnants of an exclusionary past and the current embodiment of the diversity of ethnic communities. This class seeks to understand such spaces by considering the people involved — those within and outside of the community — and the complex relationships among community groups. Texts will include histories, maps, works by urban planners, and a field trip to Boston's Chinatown. Enrollment limited to 17 first year students and sophomores.

AMST 0190G. The Fringe is the Fabric: Anti-Immigrant Movements in the United States.

This course traces nativist anti-immigrant movements and violence in the United States. Starting in the colonial period and ending with contemporary issues, the course demonstrates how anti-immigrant movements occur across place and time and serve to police the boundaries of U.S. citizenship. The course relies on fiction, documentary films and other historical texts to highlight continuing violent conflicts. We focus on the use of "vigilante" violence and put contemporary discussions of immigration in a new frame. Enrollment limited to 17 first year students and sophomores.

AMST 0190H. Junkies, Robots, and Fight Clubs: Revisioning the "American Dream" in US Popular Culture.

From fembots to fightclubs, this course explores our obsession with revisions of the American Dream. We examine film and literary translations of three recycled stories—Rags-to-Riches, the Open Road, and Domestic Bliss—to better understand how we narrate the "American" experience and consider how these nationalizing narratives construct race, class, and gender. Films and texts include "Stepford Wives," "Easy Rider," and "Wall Street." Enrollment limited to 17 first year students and sophomores.

AMST 0190I. Re-Thinking Political Aesthetics: Beauty, Modernity, and Justice in the Americas.

The United States and the Americas have always been spaces of intertwined artistic, political, and religious expression. Yet, in the growing field of political aesthetics, works of European modernism are prized while examples from the Americas are rarely mentioned. This course examines the philosophical texts used to frame the field of political aesthetics, as well as food in the colonial diet of New Spain, painting during the Civil War, photography and the New Negro movement, jazz and the Beat generation, and other case studies of American expression that engage, complicate and re-construct the relationship between art and politics.

AMST 0190J. Four-Color Creatures: Race, Gender, and Monstrosity in American Comic Books and Popular Culture.

This course explores the relationship between race, gender, and monstrosity in American popular culture, particularly in comic books and graphic novels. Utilizing the concept of the monster as a metaphor, we examine the intersection of these discourses to interrogate how monstrosity informs our collective understanding of the other and affects the representation of race and gender in contemporary print ephemera and visual culture. To compliment our understanding of these materials, we engage with scholarship in the emerging fields of Monster Studies and Comic Studies to highlight the way that these artifacts embody larger trends within American society.

AMST 0190K. The American War/Vietnam War: Politics, Struggle, and the Construction of History in the US/Vietnam.

What Americans call the "Vietnam War," the Vietnamese remember as the "War of Resistance against the United States for National Salvation." This class seeks to explore multiple American and Vietnamese perspectives on a prolonged conflict that profoundly shaped the nations' political, social, and cultural landscapes. We focus on differences and similarities in Vietnamese and American interpretations of the origins, conduct and denouement of the war. We examine war memories through memoirs, monuments, movies, documentaries, magazines, and newspapers, as well as in foreign and domestic policies. Enrollment limited to 17 first year students and sophomores.

AMST 0190L. Cry for Justice: Asian American Literature of Social Activism.

The fact that Asian American literature has a protest tradition makes it a powerful site to highlight and re-animate Asian Americans' overlooked histories and struggles for social justice. Through reading a variety of genres including poetry, fiction, autobiography, and memoir by authors from different Asian American communities, this course will examine the hidden history of Asian immigrant radicalism, dismantle stereotypes against Asian Americans, explore solidary and sustainable activism, and assert that literature has been and remains a fundamental site for Asian Americans' active resistance to racial, class, gender and sexual oppression.

AMST 0190M. Ecological (De)colonization: North American Environmental History, Justice, and Sovereignty.

This course investigates how historical and contemporary issues of resource capitalism, environmental justice, and settler colonization in the North American context are entangled. Students will come to understand that Indigenous sovereignty, and thus decolonization, is fundamentally concerned with land and water (i.e. the other-than-human environment). Students will receive an introduction to environmental history, learn to use primary sources, develop a theoretical toolkit to approach topics concerning settler colonialism and environmental/climate justice, and explore political and environmental solutions to the problems discussed.

AMST 0190N. Health as Morality in American Life.

This course examines the many ways in which the idea of health is morally constructed in American society and culture. Students investigate health as a moral value and study how conceptions of health affect individuals, shape culture, and organize society. Taking an interdisciplinary approach, we investigate how "health" constructs norms, stigma, and the experiences and practices of day-to-day life. Choosing from such topics as addiction, diet, vaccines, cigarettes, illness, disability, genetic testing, sex, and obesity, students write analyses about how moral constructions of health shape and are shaped by media, history, capitalism, politics, race, gender, and class.

AMST 0190O. Expressway Worlds: Landscape and Life on the Margins of U.S. Highways.

This course explores the history, legacy, and material presence of U.S. highways from the mid-twentieth to the present. Bridging diverse fields and ways of knowing, from cultural history to road ecology, it endeavors to defamiliarize a ubiquitous feature of life and landscape in the contemporary United States, the federal highway system, and invites students to critically re-encounter the same.

We will practice seeing, hearing, and feeling the lively traces of human and multi-species habitation in our midst. And we will consider the effects of interstate roads across time and space; on societies, ecologies, and landscapes.

AMST 0190Q. Archival Interventions: Tracing Knowledge, Power, and Memory through the Archives.

This course will examine the ways that power, knowledge, and memory are instantiated through a variety of record keeping practices. Through an exploration of analog and digital storage media, the institutions in which they reside, and an engagement with social justice approaches, feminist theory and queer theory, this course will seek to answer the questions: how are categories formed and what are the social ramifications of these choices? How do records enter certain institutions? Who is represented, in what ways, and who is excluded? This course will include guest lectures and field trips to local archives and libraries.

AMST 0190S. Los Angeles Plays Itself: Culture and Critique in the City of Angels.

Explores the history of culture produced in and about Los Angeles during the last century, examining representations of the city in literature, film, television, music, and theory. Texts ranging from detective novels to teen dramas to hip-hop songs will reveal the ongoing conversations and conflicts among Los Angeles's diverse inhabitants that have shaped its physical, cultural, and social landscapes. Enrollment limited to 17 first year students and sophomores.

AMST 0190T. Talking Social Reform: From Populism and Progressivism to Obama and McCain.

This course argues that two broad "languages" of social reform, coming out of the Populist and Progressive Movements of the late nineteenth century, have shaped the ways in which Americans understand politics. Students consider how the possibilities for contemporary reform and change have been informed by these languages. We will examine political texts discussing the New Deal, the eugenics movement, the Cold War, liberalism, and the New Left, among others. Enrollment limited to 17 first year students and sophomores.

AMST 0190U. Sports Mediated: Athletics and the Production of Culture in 20th Century America.

When we watch sports, we're watching more than a game. Newspapers, radio, television, and the internet produce athletic spectacles within certain cultural boundaries determined by profits, as well as by race, gender and class. The course questions how sports media played a generative role in late twentieth century American culture through three case studies: Michael Jordan's rise to sports stardom; the emergence of skateboarding as an "alternative" sport; and controversies surrounding transgender and transsexual athletes. Non-sports fans are welcome and encouraged! Enrollment limited to 17 first year students and sophomores. Instructor permission required.

AMST 0190V. Reading the City: Literary Tourism in New York, Los Angeles, Santo Domingo and Manila.

What shapes our conception of a city we haven't visited? Is it the novels we read or the films we watch? How do our ideas change when we tour or live there? This course investigates New York, Los Angeles, Santo Domingo, and Manila through the various social, political and sexual experiences portrayed in novels, creative nonfiction, poetry, and film. Mindful of our own role as reader-tourists, we will compare depictions of reading, visiting, touring, and living in cities especially with regards to issues of identity and its transformation. Enrollment limited to 17 first year students and sophomores.

AMST 0190W. Displaying Activism Then and Now: Making an Exhibition for Social Justice.

We will investigate the possibilities for activism and social relevance through museum exhibitions. We will create an exhibition at the John Hay Library that displays historical and contemporary activism, based on student choices of possible movements including queer rights, animal rights, and environmental concerns. Students choose objects, write labels, and act as curators for the exhibit. Enrollment limited to 17 first year students and sophomores.

AMST 0190X. Gendered Mobility: Migrant Women Workers in a Globalized Economy.

Today's women workers migrate at a historically unprecedented rate. This class looks at Third World women who migrate for work in global cities. We examine their experiences through the intersectional lens of gender, race, class, and nationality. We also question the social, political, and economic forces that drive migration and draw women workers to specific destinations. Finally, we will look at the multiple inequalities these workers confront and the ways in which they negotiate and challenge them. Enrollment limited to 17 first year students and sophomores.

AMST 0190Y. Dead or Alive?: The American West in Popular Culture.

This course traces the imagined Western frontier as seen in television, film, photographs, museum exhibits, art, tourism, amusement parks, performance, video games, and science fiction. It explores these imagined spaces through the lenses of popular and visual culture, placing the West within the larger social, cultural, economic, and political histories of the US. Both real and imagined, these images defined and consolidated the identities of Westerners and those who wanted to be Westerners. Enrollment limited to 17 first year students and sophomores.

AMST 0190Z. Queering the Archive: History and the Politics of Identity.

How is history made? Who makes it? Who benefits from how stories of the past are told? How might we queer the making of histories and how could this influence our futures? This course follows feminists, queer theory scholars, and activists in their journeys to critically analyze historical archives and open up queer readings of the past. We will spend time with variety of cultural texts including Cheryl Dunye's film *The Watermelon Woman*, Lara Kramer's performance piece *NGS (Native Girl Syndrome)*, and Octavia Butler's novel *Kindred* to think about historical knowledge production and its relationship to identity formation.

AMST 0191B. Race and Nation in the U.S.: Belonging, Longing, and Resistance.

This course examines how representations of race continue to be critical to the formation of the American nation. We will look at cultural and historical texts that grapple with how "race" is used to (1) define who does and does not belong to the U.S., (2) configure feelings of longing for a homeland, and (3) resist dominant narratives of national inclusion through visual art, performance, and stand-up comedy. The course will use Middle Eastern Americans as its primary case study of these larger themes, and will also incorporate many readings that touch on African American and Latinx experiences.

AMST 0191C. Race and Space: Segregation, Suburbanization, and Sites of Encampment.

Through a range of historical examples from the 20th century, *Race and Space: Segregation, Suburbanization, and Sites of Encampment* examines how interconnected forms of racial and spatial difference are produced, reproduced, and transformed in various U.S. locales. This class will provide students with a unique opportunity to conduct primary-source research in a number of archives and apply the course themes to local historical issues of race and space. Students will gain exposure to a wide variety of case studies, disciplines, methodologies, and approaches in which scholars are writing, thinking, and publicly displaying issues of race and space.

AMST 0191D. Cry for Justice: Asian American Literature of Social Activism.

What insights can literary genres, including poetry, fiction, autobiography and memoir, provide into the struggle for social justice and fight for inclusion in the United States? What role can Asian American literature play in addressing and illuminating past and present injustices? With these questions in mind, through reading protest literary works by Asian American authors, this course will examine the hidden history of Asian immigrant radicalism, dismantle stereotypes against Asian Americans, and assert that literature has been and remains a fundamental site for Asian Americans' active resistance to racial, class, gender and sexual oppression.

AMST 0191E. Objects as Texts: Materializing Race, Gender, and Sexuality.

What is the relationship between objects and identity? This course analyzes how material objects reflect and produce representations of identity, which map onto the body. Alongside a survey of cultural studies, feminist theory, and critical race studies scholarship, we will use specific objects—including, sugar, milk, vibrators, and Spanx—as case studies to critically consider how material culture informs and signals identity. With an emphasis on race, gender, and sexuality, we will read objects as texts and explore how materiality shapes politics, performance, and power.

AMST 0191F. No-No Boy: Experimental Scholarship on Asian-America.

This unique course seeks to bridge artistic work and scholarship in an exploration of the Asian-American experience. In this course, Julian Saporiti's *No-No Boy*, a concert project which fuses songwriting, video editing and academic research to look at topics such as Japanese Incarceration, Vietnamese Refugees, and the Asian diaspora more broadly in the US, serves not only as a course outline, but also as a model and jumping off point for those interested in using creative practices to pursue scholarly research and reach a public audience.

AMST 0191G. TV on History: Representations of the American Past on Commercial Television.

This course explores commercial television's influence on our understanding of the American past and the way that this sense of history, in turn, helps audiences to form cultural and political identities. We will discuss foundational methods for critical analysis of television as we use this inquiry to examine some of the guiding themes of American Studies. This class, which has a significant viewing component, traces the evolution of history-based programming in many genres and considers the message and impact of programs such as Ken Burns' *Civil War*, *Roots*, *Colonial House*, and *Mad Men*. Enrollment limited to 17 first year students and sophomores.

AMST 0191H. "My Body, My Choice?": Reproductive Politics in the U.S. since *Roe v. Wade*.

From waiting periods to mandatory ultrasounds, a record number of provisions aimed at restricting women's access to abortion were enacted in 24 U.S. states in 2011. Dubbed the "war on women" by numerous observers, these legislative battles evidence the difficulty in determining reproduction's "proper" place in governmental politics. But is there more to this battle than abortion? Beginning with *Roe v. Wade*, this course explores how welfare, labor, citizenship, the family, religion, and activism alter mainstream conceptions of reproductive politics. Using a variety of sources, including films and websites, we will consider what an expansive reproductive freedom might entail. Enrollment limited to 17 first year students and sophomores.

AMST 0191I. Identities on the Move: South Asian Americans in Popular Culture.

Interdisciplinary course looks at the migration, representation and cultural productions of the South Asian diaspora in the United States. We'll examine how category of "South Asian" was created as well as the ramifications of such a label: what does it mean to be South Asian in the United States? Through the examination of academic texts, as well as literature, television and film, we'll explore how South Asian Americans navigate the United States while at the same time, maintaining (or, in some cases, disrupting) connections to countries in the South Asian subcontinent. Enrollment limited to 17.

AMST 0191J. These Are The Breaks? Rethinking Black Performance in the 20th Century.

In this course students will look critically at cabaret, documentary film, theatre, dance, popular music, and museum exhibitions, rethinking the ways that Black performances have been configured in debates about American identity in the 20th Century. Rather than try to understand Black performance, and performers, in reductive aesthetic and political frameworks, students will read and write about them as heterogeneous and complex. Enrollment limited to 17 first year students and sophomores.

AMST 0191K. New Jack(ed) Cinema: Negotiating Race, Criminality, and Place in the Hollywood Film.

This interdisciplinary course engages critically with film to examine issues of race and criminality, and to better understand our collective, spatial, and personal identities. We study a sub-genre of films, from the 1990s, and investigate how these films interact and intersect with other cultural texts and narratives of race, criminality, sexuality, gender, and the American dream. Films studied include "Colors"; "New Jack City"; "Clockers"; "Boyz 'n the Hood"; and "Menace II Society"; while readings come from film studies, sociology, history, memoir, and policy studies. Enrollment limited to 17 first-year students and sophomores.

AMST 0191L. Are You Creative?: The Rise of a Modern Virtue.

Are you creative, or, even, a "creative"? Do you plan to be an entrepreneur, a writer, or an artist? Today, "creativity" is championed by education activists, fringe artists, and corporate CEOs alike. This course gives a critical perspective by tracing the biography of an idea through various fields. We will look everywhere for signs of creativity and focus on the relationship between creativity, work, and economic development, taking of Providence, RI, the "Creative Capital" as an example. We will talk to people involved in various aspects of the city's creative strategy to observe the effects of this powerful idea. Enrollment limited to 17 first year students and sophomores.

AMST 0191M. The Vietnam War and Visual Culture.

This course examines how our understanding of one of the most mediated armed conflicts of the twentieth century has changed. Why has "Vietnam" become a metaphor for imperial wars and how has it figured in cultural production within and beyond the United States? Considering photographs, films, and personal narratives beginning during the war and continuing into the present, we recognize the fictive and flexible nature of history and how even the worst experiences are made available for collective memory and mass consumption. The course works to decenter the United States and takes into account long-range ramifications and multiple voices. Enrollment limited to 17 first year students and sophomores.

AMST 0191N. Beyond Entrepreneurs, Adoptees, and G.I. Wives: Korean American Experiences.

What does it mean to be Korean American? This course explores the historical and contemporary experiences of people of Korean descent in the United States. In the broader context of U.S.-Korean/Asian relations and through the lenses of race, ethnicity, class, and gender, this course will examine the connections and differences in the lives of diverse Korean populations. The composition of these populations ranges from adoptees, military wives, and entrepreneurs to secondary migrants from Latin America. Throughout the semester, students will be familiarized with the central themes in immigration and ethnic studies such as diaspora, transnationalism, racial formation, and community formation. Enrollment limited to 17 first years and sophomores.

AMST 0191O. Revolting Bodies: Aesthetics, Representation, and Popular Culture.

Our understanding of ourselves and others are formed by visual images and bodily feelings that are social in origin. They make us feel (un)comfortable, sublime, ridiculous, grotesque. In this course we will examine how the materiality of the body grounds our metaphors about identity and subject formation. This course moves between cultural studies, queer theory, disability studies, science fiction, drama and film asking how representations structure the way we "know" and "see" bodies. Ultimately we will explore how revolting bodies—bodies that disgust, repulse, signal their difference—can become bodies in revolt—bodies that resist and imagine new possibilities.

AMST 0191P. Beyond Chinatown: The Past, Present, and Future of Asian American Spaces.

Beyond the "exotic" dishes, cultural festivals, and distinct architecture of Chinatowns, Little Tokyos, Little Manilas/Filipinotowns, Koreatowns, Little Saigons, and Little Indias, Asian American spaces are both historical remnants of racial oppression and the current home of diverse ethnic communities. Using field trips, films, first person accounts and scholarly explorations, this class examines such spaces by considering the people involved—tourists and residents—and how their complex relationship creates urban and suburban ethnic spaces. Students will workshop and revise papers as well as gain a grounding in approaches to Asian American studies, urban studies, and to the study of public spaces. Enrollment limited to 17 first year students and sophomores.

AMST 0191Q. Disbelieving the Evidence: Popular Opposition to 20th Century Public Health Initiatives.

Why do Americans reject programs that make them healthier? Many of the most effective public health initiatives in the 20th century encountered deep resistance. This course explores three initiatives (vaccination, fluoride, and black lung) that continue to generate skepticism or outright opposition. Students will practice several different styles of writing intended for different audiences, including an op-ed and a Wikipedia entry. This writing-designated course will appeal to students of public health, politics, and those interested in the social impact of medical research, as well as those wanting practice in science writing. Enrollment limited to 17 first year students and sophomores.

AMST 0191R. Fat, Messy, and Late: Unregulated Bodies in American Capitalism.

This course examines disorganized bodies in 19th and 20th century US history and how slenderness, neatness, and timeliness became virtues. Through these lenses we study capitalism working upon individual bodies; the way these "moral virtues" generate forms of self-regulation; and the way these forms of self-regulation perpetuate the status quo. We draw upon history, sociology, anthropology, and critical theory, starting each section in the 19th century and moving to the present. Using our personal experiences, we examine how belief systems become internalized. This interdisciplinary course welcomes community health and biology concentrators as well as humanities and social science concentrators. Enrollment limited to 17 first year students and sophomores.

AMST 0191S. Visualizing the Middle East: From National Geographic to the Arab Spring.

American visual media remains flooded with images, inspiring and hopeful, or horrifying and terrifying, of the peoples and places of the Near East. By examining National Geographic photography, Hollywood cinema, televised news programs, and images and videos encountered online, we examine how visual culture has both reflected and actively helped shape the relationship between the U.S. and the Near East. Students will experiment with a diverse methods of visual analysis, work with a class Tumblr site, and write and revise a series of essays. Enrollment limited to 17 first year students and sophomores.

AMST 0191T. American Identities: Memoir and Autobiography in the Twentieth Century.

How do we think about our own place in history? This writing-intensive seminar examines how individual Americans have explored the relationship between their identity and historical events, and introduces the legitimacy of using individual experiences to understand history. Themes include the gendering of domestic and public space, the formation of identity within families, class alignments, societal expectations of gender/sexuality, how American exceptionalism manifests itself at the individual level, and narrative (un)reliability. Our discussions center on autobiographies, memoirs, and films from authors such as Audre Lorde, Harry Crews, Malcolm X, Alison Bechdel, and Tobias Wolff.

AMST 0191U. Imagining the American Mind.

How are theories about our minds and brains represented in American culture? We use literature and film, psychology, neuroscience, philosophy, history and sociology to investigate how we imagine our minds, and the consequences of those representations for our ideas about race and gender, for our social lives and responsibilities, for our means to communicate to one another and, even, to know ourselves. Writing in different formats, students bridge the gap between the humanities and the human sciences. Concentrators in biology and neuroscience consider the cultural history of their research while humanities/social science students explore how culture ties to science.

AMST 0191V. American Capitalism and Its Critics.

In the wake of the Great Recession, many Americans have become disenchanted with capitalism, wondering whether the market economy harms more than it helps. This course introduces students to writers, artists, and activists from the past who shared that feeling and in plays, essays, films, and photographs protested the rise of capitalism in the United States. We will explore issues of power, poverty, profit, and equality through in-class discussions and four writing assignments. Students interested in history, art, literature, and economics will learn more about class, capitalism, and the history of American politics.

AMST 0191W. American Indian Law and Legacies.

From the U.S. Constitution to MTV and Urban Outfitters, this course traces the history and legacies of American Indian law and policy. Using a case studies approach, students will read legal documents alongside film, television, literature, blogs, poetry, photography, fashion, news articles, manifestos, and Twitter to explore the ways in which American Indian law and policy manifests in the daily lives of contemporary Indian people and Native nations. All students welcome! This course will be of special interest to those studying indigenous histories and cultures, American government, representations/memory, and law.

AMST 0191X. Troubled Pasts and Visual Cultural: Comparative Models from Providence to Pretoria.

This course examines the intersections of visual culture, commemorative politics, and individual and collective memories to analyze the politics of memory. We will look at debates over formal and informal engagements with the memory of three traumatic events: the "Dirty War" in Argentina, South African apartheid, and September 11th, 2001 in the US. Looking at the past as contested ground we will explore the challenges, ethics, and controversies around representing these events across a variety of mediums including film, art, music, and memorials. This class will be of interest to students of visual culture, cultural politics, and memory studies.

AMST 0191Y. Cradle of Democracy?: Race, Childhood, and U.S. National Identity.

From Elian Gonzalez to Trayvon Martin, children play an important role in political narratives concerning domestic and international affairs. Engaging with a range of texts—including blogs, films, and online exhibits—students will consider how the idea of childhood and the bodies of children have constructed our gendered and racialized sense of self. Such ideas about difference and belonging also emerge through children's material culture, and so students will create a children's book and multimedia website as well as visit the Providence Children's Museum.

AMST 0191Z. Food and Gender in U.S. Popular Culture.

Why is salad coded as feminine and steak as masculine? This course examine how gender is constructed and performed in sites across the U.S. food system, taking in farm fields, supermarkets, home kitchens, and restaurants. We explore food production, cooking, feeding, eating, and dieting, through a variety of food texts, including cookbooks, advertisements, and the Food Network. We will engage all of our senses (especially taste!), as we explore how gender intersects with other significant cultural categories and shapes everyday food experiences in the United States.

AMST 0192A. Unsettled Things: Objects and Knowledge in Nineteenth-Century America.

This course explores the history of collecting, with a focus on local museum and university collections. College Hill is home to numerous accumulations of things, from Civil War relics to Old Master paintings and fragments of taxidermy. Where did these objects come from? Why were they collected? How have their meanings and uses changed over time? How might we reconsider them today? Students will examine objects; read about collecting and the development of natural history, anthropology, history, and fine art; write research papers that incorporate material culture methodology; and co-curate an exhibition.

AMST 0192B. Give Me Color: Performing Interraciality in Film and Literature.

Through a reading of select critical theory, literary texts, and films, students will look critically at the ways in which race has been constructed and figured in U.S. culture post-1945, through the lens of interraciality. Decentering the dominant narrative of black-white interraciality, we will give equal attention to the role that Asian bodies play in complicating this binary. We will also investigate the potentiality of texts to challenge social norms or reclaim injurious identities. Authors include Jhumpa Lahiri, Celeste Ng, and Peter Ho Davies. Visual texts range from *Guess Who's Coming to Dinner* (1967) to *"San Junipero"* (2016).

AMST 0192C. Race in the Museum.

From the Smithsonian's National Museum of African American History and Culture to Walt Disney World's EPCOT theme park, this course examines how museums and cultural institutions address issues of race and identity. We will think critically about the display of race and difference in sites of leisure and consider how such institutions can be reclaimed as spaces for dialogue and action. At the end of the course, students will propose an original exhibition plan exploring these issues. This course will be useful for students interested in public history, visual culture, and critical race studies.

AMST 0192D. Social Memory and the 60s: From Nixon to Nostalgia.

The 1960s were watershed years in the US. From the Civil Rights movement to the Vietnam War, women's liberation to Woodstock, a series of revolutions occurred during this decade. How do we remember the 1960s? How do we understand its legacies embodied in texts, images, music, memorials, and rituals? This class uses the interdisciplinary methods of memory studies to answer these questions by analyzing primary sources and learning new collaborative research methods. Students interested in sociology, anthropology, and history will find new approaches to enduring questions about how societies remember and forget crucial events and experiences.

AMST 0192E. 20th Century American Borderlands Place, Politics, and Memories of Transition.

20th Century American Borderlands: Place, Politics, and Memories of Transition interrogates the shifting relationships among constructions of borders, race, and citizenship in the United States. This course offers a comparative analysis of the ways in which many ethnic groups in the 20th century encountered—and challenged—various geographic and political borderlands. The first half of the course offers a history of the Mexican and Canadian borders; the second half considers sites of "ambiguous belonging" within the United States. Students will consider categories of the "citizen," the "refugee" and the "immigrant," and how each is represented within contemporary U.S. contexts. WRIT DIAP

AMST 0192F. Whose Land? Tracing History and Memory in the Native Northeast.

This course explores local histories of the Native Northeast to introduce relationships between land, indigeneity, and settler colonialism. Students will learn about the Native peoples of present-day New England through readings of origin stories, historical documents, material culture, documentaries, poetry, mapping projects, and academic texts. We will consider the ways history is produced and reiterated in historical writing, popular narratives, and the land itself. Students will gain proficiency in decolonizing historical research methods and learn strategies for interpreting primary and secondary source documents in multiple short writing assignments, with opportunities for revision throughout the semester.

AMST 0192G. Japanese American Incarceration: Past & Present Encounters with the Racial State.

How do we situate the history of World War II Japanese American incarceration not as an exceptional moment of wartime hysteria, but as one example of an American tradition of racialized exclusion and incarceration in the service of white supremacy? How does public memory surrounding Japanese American incarceration shape our understanding of the relationships between immigration, race, exclusion, and incarceration today? Drawing from interdisciplinary sources from photographs to literature, academic texts, films, exhibits, and poetry, this course traces the history of incarceration in the United States as a mechanism of racialized social control by focusing on Japanese American history.

AMST 0192H. Blurred and Faded: Disrupting the Color-Line Through Photography.

Blurred and Faded: Disrupting the Color-Line Through Photography explores visual and literary representations of racial mixture. Focusing on Harlem Renaissance photography, this course considers the impact that depictions of racial-mixture have had on systems of racial classification. Over the semester, we will trace the visual resonance of these historical images in our contemporary moment. Readings include Nella Larsen's *Passing* and Jessie Redman Fauset's *Plum Bun: A Novel Without a Moral*.

AMST 0192I. Mapping Desire: Queer Spaces in Contemporary Literature.

What makes a space queer? How are queer spaces mapped, remembered, and debated within queer communities but also American culture at large? And what sorts of access does literature provide us to these spaces? This introductory course in American Studies aims to engage with these questions by setting students loose in the back roads, closets, and dance clubs of queer literature. Though issues of sex and sexuality will be at the heart of this course, our readings will also explore questions of race, gender, and nation. Authors include James Baldwin, Audre Lorde, Ocean Vuong, and Maggie Nelson.

AMST 0192J. Religion, Politics, and Culture in America, 1865 - Present (HIST 0253).

Interested students must register for HIST 0253.

AMST 0192K. Rethinking Sex: Critical Approaches to Compulsory Sexuality.

This course explores nonsexual ways of being and being-in-relation, investigating the ways in which our lives are structured not just by compulsory heterosexuality, but also by compulsory sexuality. Challenging the Freudian supposition that all human beings are sexual subjects, we will think critically about naturalized assumptions regarding sex, intimacy, attraction, and desire, opening up new frameworks, orientations, and language informed by queer and feminist discourse. We will engage sex as a form of political power whose influence extends far beyond the act of heterosexual intercourse itself, pervading and organizing our everyday lives along the lines of race, gender, ability, class, and religion. Texts will draw upon queer and feminist theory, cultural studies, disability studies, feminist science and technology studies, gender and sexuality studies, and popular culture.

AMST 0192L. Making Metropolitan "Man": The Politics of Human Being in Modern Urban Space.

The modern human subject, what is often understood as Man, is not a natural evolutionary state but an historically contingent and contested idea of what it means to be a person. This course places critical theories of the human into conversation with urban and geographic studies. How have dominant concepts of Man and its Others – Black, Indigenous, femme, queer; machine, animal, environment; and so forth – been constituted and challenged through cities and space? How might urban space make possible alternative humanisms that refuse metropolitan modernity's subjecting projects? The course takes a translocal lens while focusing on the American-Atlantic World since European conquest. Theory-intensive readings draw upon cultural studies; queer, ethnic, and Black studies; geography; history; and literary/aesthetic arts.

AMST 0192M. Martinique and the Black Radical Imagination.

What is the Black Radical Imagination? What are some of its most ardent sources of inspiration? What kinds of political horizons does it animate? How is it practiced? And how is it abused or misappropriated? This course analyzes the influence of the Caribbean island Martinique on contemporary discourses concerning the "Black Radical Imagination." We will survey literature from Martinican artists and theorists such as Suzanne Césaire, Aimé Césaire, Frantz Fanon, Simone Yoyotte, Lucie Thésée & Édouard Glissant. This course will also serve as an introduction to various idioms, methodologies, and paradigms in the field of American Studies.

AMST 0192P. Black Internationalism.

What is Black Internationalism? Who are Black internationalists? What are their motivations, demands, and strategies? This course explores African descended people's global collective struggle against white supremacy, more specifically, the political, intellectual, and artistic dimensions of the struggle, with a focus on U.S.-based actors. Crucial topics that the class will study include the international aspects of the Black freedom struggle in the United States, anti-colonial movements, struggles for social justice, Black feminism, and foreign policy. Class discussion will be framed around questions of gender, class, nation, and empire as well as the production of historical narratives. Students will engage with scholarly texts, most of them historical, as well as a wide range of primary sources produced by Black internationalists, including essays, speeches, and plays.

AMST 0192Q. Adjustment Dis-order: Social Science, the State, and Culture in 20th-Century America.

What do the social sciences claim to tell us about "us?" This course examines the history and politics of social scientific knowledge in the United States. We consider the emergence and deployment of ideas such as objectivity, rationality/rationalization, control, therapeutics, and privacy. What is the relationship between social science and social order? How has what is understood as "normal" served as description, prescription, and a locus of power? What role have the social sciences played in defining the ideal life in America? This course uses approaches from the disciplines of history, science and technology studies, and gender and sexuality studies to critically examine and interrogate the construction and maintenance of intersecting hierarchies of gender, class, and race, paying particular attention to their basis in material socioeconomic relations, reification in state authority, and their reflection in various forms of cultural production.

AMST 0192R. Art Writing: Politics of Viewing and Making.

In this seminar, we will examine texts in which the author writes about, toward, and to an art object. We will be interested in texts that demonstrate how writing about art reveals relations and politics. How does art orient itself toward various audiences, establishing intimacy, community, or antagonism, and how can art writing expose these triangulated relationships between the artist, art object, and audience? How do we live with art and how does it determine not only the content of our writing but our lives? Our readings will include a variety of ekphrastic texts, including poetry, memoirs, personal and lyric essays, academic essays, and theory, in addition to screening films and viewing visual art, performance, and digital media. We will connect aesthetics to theories of race, gender, decoloniality, diaspora, and queer and feminist of color critique.

AMST 0192S. Producing the Body: The Body as Performance of Power, Violence, and Possibility.

What is the relationship between bodies, violence, and liberation? When Black and brown bodies have historically been sites of colonial and gendered violence, what does it mean to center the body as a site of knowledge production? This course draws upon the emergent performance and aesthetic practices as disruptions of colonial violence; and their relationship to racialized, gendered, and sexual power dynamics. This course will deeply consider what it means to be (in)human, erotic reconfigurations of being, and fugitive practice. We will draw from frameworks in performance studies, Black feminism, women of color feminism, and queer theory to understand the body as a living archive of memory, violence, and liberation. Such attention to performance and aesthetic practices entail not only histories of conquest and genocide, but the creative and life-bearing practices that transcend these conditions of captivity and loss.

AMST 0192T. Trans*formative Ecologies.

What might be opened, invited, and made possible by thinking trans and ecological together? Trans*formative Ecologies understands trans and environmental study as co-articulate collaborators speaking to and working with each other as endeavors that unstick the fixities that organize our sociopolitical landscape, interrogate systems of power, and daringly imagine otherwise with an openness to change amid a climate of multiple urgencies. This seminar introduces students to conversations in trans studies and decolonial environmental humanities through key texts in both fields, with consideration to subaltern theories and methodologies, cultural geography, literary studies, creative practice, and visual & aesthetic culture. These approaches contribute to and diverge from canonical feminist and queer theory, and renegotiate the anthropocentric, Western framework that often dominates dialogue pertaining to environmental study. Brought together, these fields collectively scrutinize dominant modes of thinking, conventional approaches, and methods of inquiry.

AMST 0192U. What's Queer about Queer Media Now?

What makes media queer? Who does it represent? What does it do? The 21st century has seen a proliferation of LGBTQ+ representation in media through an apparently progressive political moment – from the repeal of Don't Ask, Don't Tell to federal legalization of same-sex marriage in the United States. However, these new media have also come up among increased censorship, book bans, and homo- and transphobic violence, in a reflection of the not-so-linear story of queer representation. By examining memoir, film, television, and internet cultures, we will explore these developments through a framework of queer that goes beyond sexual orientation, and consider the role of the non-normative under racial capitalism, heteropatriarchy, the carceral state, and United States empire across oceans.

AMST 0192V. The Art and Politics of Psychedelia.

This interdisciplinary, discussion-based seminar will introduce students to key concepts in cultural studies and critical theory by engaging the history, politics, and art of psychedelic drugs. We will trace the history of psychedelics and their aesthetic cultures from the mid-twentieth century to the present "psychedelic renaissance," taking up psychedelia as a cultural and aesthetic formation popularized in the 1960s that has since traveled and evolved. We will critically analyze the theoretical frames through which psychedelic drugs have been imagined and discussed in science, politics, media, and popular culture. We will think through questions of freedom, bodily autonomy, consciousness, hedonism, political radicalism, capitalism, and labor. Throughout, we will consider how artists and writers have represented the supposed ineffability of ecstatic or transcendent experiences in art, performance, literature, and media.

AMST 0253. Religion, Politics, and Culture in America (HIST 0253).

Interested students must register for HIST 0253.

AMST 0310. Theory and Practice of Engaged Scholarship (SOC 0310).

Interested students must register for SOC 0310.

AMST 0601. Health and Healing in American History.

Surveys the history of American medicine in its social and political contexts, including changing understandings of disease, treatment practices, and medical institutions. Focuses on how gender and race have informed how patients and healers have made sense out of pain and disease.

AMST 0601G. American Dilemmas: U.S. Political Culture and the Cultural History of Democracy.

This course will examine the cultural history of U.S. democracy and transformations in American political culture. It is organized around two interpretive spines, each of which follows an evolving American dilemma. One, looking at struggles over the shape of the "we" in "we the people," takes on the theme of inclusion and exclusion in the body politic. The other concerns the changing fate of American ideals of independence and self-possession in the face of a rapidly developing interdependent capitalist economy and mass culture. Students will work to understand how these themes—the "us and them" and the "me versus we"—are interconnected.

AMST 0601H. Sounding Out America.

What can popular music tell us about American history, politics, and expressive culture? How have folk/traditional genres passed on within particular communities come to shape ideas about race, ethnicity, and heritage in the U.S.? This course investigates how performers, audiences, marketers, and scholars have used music to "sound out" various cultural identities, community affiliations, and political commitments. Topics range from folk ballads and early blues to Chicago house music, Native hip-hop, Asian American taiko, and popular music icons like Little Richard and Selena. This discussion-based course is part of the American Studies "Questions" series, fulfilling an introductory-level requirement for the AMST concentration. There are no prerequisites, and no formal background in music is required.

AMST 0610A. Black Queer Life.

This course explores how Black writers and artists represent and theorize a diverse array of Black genders and sexualities. We will begin with a series of conversations on the origins of Black queer theory, and then use these conversations to anchor us in our readings of Black queer life in literary and popular culture. Reading across a range of genres, including film, music, poetry, comics, and short fiction, we will collectively consider the ways sex, gender, and sexuality work with other markers of difference and social status such as race, class, ability, and nationality to demarcate possibilities, freedoms, choices, and opportunities available to Black people. We will learn from theorists, writers, and artists including Audre Lorde, Cathy Cohen, E. Patrick Johnson, Alexis Pauline Gumbs, Danez Smith, Janelle Monae, among many others.

AMST 0610B. Fictions of Science: Time Travel in Physics and Film, in Real Life and in Literature.

This is a reading, writing, and discussion-based class about the relationship of science and fiction. It is meant for STEM students and for Humanities students alike. Focusing on close readings of popular film, novels, and scientific papers related to time travel, "Fictions of Science" considers why, despite this extraordinary relationship, we often rely on the most simplistic gizmo - that aforementioned time machine - to serve as an explanatory shortcut. And why we miss the exciting truth: that science and fiction are joined together in incredibly complicated ways, with consequences for design, imagination, and exploration. One of the goals of the class is to trouble the relationship between science and fiction, which is often reductively understood as either antagonistic or ornamental. The class emphasizes close reading, short essay writing, and critical thinking.

AMST 0610D. Introduction to Native and Indigenous Feminisms.

Settler colonialism is a structure that aims to dispossess, erase, and replace Indigenous peoples in ways that are both racialized and gendered. Throughout this course, students will become familiar with the role Indigenous Feminisms have played in responding to settler colonial policies, violence, and erasures. Students will become cognizant of the contributions Indigenous Feminists make to art, literature, theory, and organizing work. Students will trace a genealogy of Indigenous Feminisms while attending to the debates that have both punctuated and propelled its theoretical and practical application. This introductory lecture course is part of the American Studies Questions series, offering a gateway to the AMST concentration, and has no prerequisites.

AMST 0610F. American Icons.

This is a class about icons, symbols, and myths - about how they are made, how they are weaponized, and what role they play in American history and society. Why do certain American photos/novels/films become an icon? How does a person become an icon or a celebrity? What deeper work is performed by their supposed iconicity? How does celebrity intersect with race, class and gender? Why are some things and people forgotten, if they were ever even noticed? Is fame a reflection of power? A route to power? How should we analyze such things, or make sense of their place in our star obsessed world? To answer these questions, we will be studying a collection of largely US-based people, images, texts, places, and practices all while investigating the key themes of American Studies as an Interdisciplinary Field.

AMST 0800P. Uneasy Embodiments: Racial and Gender Objecthood (TAPS 0800P).

Interested students must register for TAPS 0800P.

AMST 1010. Introduction to American Studies: American Icons.

Why do certain American photos, novels, and films become 'iconic'? What does the very word 'icon' mean? Studying a collection of American images, texts, places, and practices, this course investigates the key themes of American Studies.

AMST 1090. Black Freedom Struggle Since 1945 (AFRI 1090).

Interested students must register for AFRI 1090.

AMST 1100X. Black Speculative Fiction: World-Making + Alternative Universes, Science Fiction + Fantasy (AFRI 1100X).

Interested students must register for AFRI 1100X.

AMST 1110. Race and Gender in Black Women's Speculative Fiction.

This virtual course explores narratives of black girl and womanhood through the intersections of Afrofuturism, black feminist thought, and black queer studies in speculative fiction authored by black women and gender-diverse people. This course will address how envisioning black futures is profoundly connected to the work of reimagining black pasts. Together we will explore how black women have long engaged the political practice of writing themselves into the future, even as others were writing them out of it. Students will be introduced to a range of texts—literary, cinematic, sonic, and visual—that range from Harriet Jacobs, Octavia Butler, Nalo Hopkinson, and Janelle Monae.

AMST 1200A. Scraps of the Archive: Race, Theory, Performance.

Using a variety of media including critical theory, cultural history, photographs, audio, and digital archives and collections, this course will explore the ways that the act of collecting, and various approaches to collections, have been used to produce contesting ideas of personhood. Focusing on African American collecting and archival histories and using Black Studies methodologies, the course looks to the often overlapping formations of collections and archives to approach intersecting representations of race, gender, class, citizenship, nation, memory, history, and solidarity. For our final project, we will collaborate on building a digital collection in Scalar using Brown's Special Collections.

AMST 1200B. Music, Race, and Identity.

This course is an exploration of race and culture and their influence on each other as examined through the specific cultural product of music. It is designed to introduce students to understanding the social construction of race, the social construction of music, genres, and the relationship between them. A key aspect of the course will be to further the understanding of how music, which is an important aspect of most people's lives, shapes society, identity, and social interactions. Students will be encouraged to think critically, and apply the concepts learned to a variety of music through class activities and projects.

AMST 1200C. Indians, Colonists, and Africans in New England (ANTH 1624).

Interested students must register for ANTH 1624.

AMST 1200P. Black Comics.

Moving between image and text, comics render visible how we read. As such, the comic genre is a quintessential form to not only critique power and difference but also encourage readers to reconsider their ethical and political commitments. In recent years, the comics form has been taken up as a critical medium to reconsider the visual representation of Black life. In this course, we will examine how contemporary Black comic creators use the sequential order of comics to unmoor expectations of how we read the intersections of race, gender, and sexuality. We will examine the works of comics theorists, writers, and illustrators including Deborah Elizabeth Whaley, Rebecca Wanzo, Qiana Whitted, Ta'Nehisi Coates, Rob Guillory, Eve L. Ewing, John Jennings, N.K. Jemisin, among many others.

AMST 1200X. The Art and Imagination of Josephine Baker (AFRI 1200X).

Interested students must register for AFRI 1200X.

AMST 1220. Boatbuilding: Design, Making, and Culture.

This course introduces the study of the design, work, material culture and history through the construction of a traditional workboat. As the class builds the boat we'll gain a hands-on understanding of issues of design, skill, and workmanship. At the same time, we'll do historical research and visit museums to gain insight into the history of small craft and their builders and users from the nineteenth century to the present, and also consider philosophical issues of tradition, creativity, and knowledge in engineering and making. Weekly writing assignments, including a journal, will connect hands-on work and research.

AMST 1230. Dance History: The 20th Century (TAPS 1330).

Interested students must register for TAPS 1330.

AMST 1250A. American Folk Art.

Examines material expressions of folk culture in America from the 18th century to the present. Focuses on the study of regionally idiosyncratic artifacts decorated beyond necessity and emphasizes the importance of the cultural context in which they were made and used. Visits to local burying grounds and museum collections during class and a Saturday field trip. Concludes with an original research project and final paper.

AMST 1250B. Gravestones and Burying Grounds.

Students examine gravestones and burying grounds as material evidence of American cultural history. Themes include the forms of written language and visual imagery in colonial New England, changing roles of women and minorities in society, historical craft practices, implications of stylistic change, attitudes towards death and bereavement, and the material evidence of discrete cultural traditions. Includes field trips.

AMST 1250E. The Neoclassical Ideal in America, 1775-1840.

This course examines the art, architecture, and domestic furnishing of America in the early national period. It focuses on visual culture as a reflection of the new nation's self image as a democratic and enlightened society. Includes class visits to local burying grounds and museum collections, and a Saturday Boston field trip.

AMST 1250F. Topics in Material Culture: Houses and Their Furnishings in Early America.

Old houses and the objects used to furnish them are interpreted as material evidence of domestic life in colonial and early national America. Through slide lectures and field trips, this class examines Providence's historic buildings, museum collections, and public archives as primary documents in the study of cultural history.

AMST 1250G. Topics in Material Culture Studies: The Arts and Crafts Movement in America 1880-1920.

In the 1880s an international movement to reform the design of buildings and their furnishings took hold in America. Its proponents wanted to improve visual life in America by advocating the pride and honesty of craftsmanship and by embracing the ideal of unity of design--by which means they hoped to change the way Americans lived and worked. This course examines the architecture, furniture, silver, ceramics, and printed works of the Arts & Crafts Movement in America from 1880 -1920. Understanding and interpreting material life is emphasized through local field trips and first-hand experience with the collections of the RISD Museum.

AMST 1500A. Research and Transnational Communities: Qualitative Fieldwork Methods.

This course will equip students with the skills to design and implement their own transnational American Studies or Public Humanities research project. We will consider different qualitative social science research methods including, ethnographic participant observation, formal and informal interview techniques, and survey data analysis. Students will learn how different methodologies lend unique insights into specific research questions, and will be able to identify different methodological bases for empirical findings across diverse transnational social problems. Throughout the course, we will explicitly engage the personal, public, and ethical concerns involved with conducting research with transnational communities, including researcher positionality, privilege, ethics, and responsibility.

AMST 1500B. Broadway Modern: Race, Gender, Class, and the American Musical.

What is musical theatre? What makes the Broadway musical quintessentially "American"? And what do these brightly colored, mesmerizing, beguiling spectacles reveal about the troublesome workings of race and class, gender and sex, nation and world? Searching for answers to these and other questions, students in this course will survey, critique, and theorize the complicated, strange, and often disturbing history of the genre, from its 19th century roots in minstrel performances, Shakespeare, and European opera, through the heyday of the mid-20th century, and, finally, right up to the current, provocative productions of "Hamilton" and "Shuffle Along."

AMST 1500D. Sex, Sports, and Urban Space and the 2026 World Cup in Mexico City.

When momentous events like the Olympic Games or World Cup soccer tournament arrive in a city, momentous things happen – for the better and for the worse. As the 2026 World Cup gears up to take place across the United States, Canada, and Mexico, this class considers the way cities and societies change with the arrival of international sporting events. A hybrid course—with a two-week travel learning component in Mexico City—this course uses the World Cup as a portal to understand the social, cultural, environmental, and political impacts of global sporting events. From the 1968 Mexico City Olympics to the recent World Cup competitions in Russia and Qatar, we have seen how cities transform themselves in the name of sports. They build and re-build themselves to impress visitors and attract investors. New political and cultural connections emerge as policy makers,

AMST 1510. Museum Collecting and Collections.

This course will explore and examine the methods, practices, and theory of collections management in a museum setting including collections development, museum registration methods, cataloging, collections care, and interpretation. Through readings, discussion, workshops, site visits, and exhibitions, students will explore what it means to be physically and intellectually responsible for museum objects. This course places heavy emphasis on experiential learning and will include several project-based assignments.

AMST 1516. Curatorial Praxis: Caring for and Curating Indigenous Contemporary Art (ARTS 1016).

Interested students must register for ARTS 1016.

AMST 1520. Technology and Material Culture in America: The Urban Built Environment.

A slide-illustrated lecture course that examines the development of the urban landscape. Covers American building practices and the effects of human-made structures on our culture. Examines technological and behavioral aspects of architectural design and urban development. Topics include housing, factories, commercial buildings, city plans, transportation networks, water systems, bridges, parks, and waterfronts. A companion course to AMST 1530.

AMST 1530. Technology and Material Culture in America: The Automobile in American Life.

Examines the cultural significance of the automobile. Employs materials and methodologies from various disciplines to study this machine and the changes it has produced in our society and our landscape. Slide-illustrated lectures cover such topics as the assembly line, automobile design, roadside architecture, suburbs, auto advertisements, and the car in popular culture.

AMST 1540. Public Humanities: History, Theory, Practice.

This course introduces students to the idea of the public humanities, both as a field of scholarly inquiry as well as a set of interrelated professional practices of knowledge production and dissemination around arts, cultural, museum, library, and university institutions. The course focuses on the histories of this field. It considers the field's intellectual underpinnings in conceiving of diverse "publics" and models for inclusivity; sources of authority and strategies for cultivating it; and methods of connecting, building, and engaging communities. Foundational work in understanding communities, power, and knowledge production draws on work from ethnic studies/labor history.

AMST 1550. Methods in Public Humanities.

A survey of the skills required for public humanities work. Presentations from local and national practitioners in a diverse range of public humanities topics: historic preservation, oral history, exhibition development, archival and curatorial skills, radio and television documentaries, public art, local history, and more. Enrollment limited to 50.

AMST 1560. Comparative Cultural Heritage: Hong Kong and New England.

This 8-week summer course begins with four weeks in Hong Kong, exploring the ways that private individuals, institutions, and government have preserved the city's cultural heritage, examining the conflict and negotiation of economic and political interests in urban renewal and heritage conservation and preservation. The second four weeks are in Providence, where students will explore the history and present-day philosophy and politics of preserving sites and stories from Colonial times to the present, exploring historical archaeology, historic preservation, museum exhibition, and oral history. This is a double credit course. Enrollment limited to nine Brown students and nine from Hong Kong. S/NC

AMST 1570. Site- Specific Writing in Brown's Historical Spaces.

Using on-site writing techniques, students will write, workshop, and direct research-based site-specific short plays to be performed by local actors in historic Providence mansions. Class discussion will explore local history (class includes a walking tour), performance texts, and types of site-specific work. Students will emerge having written and directed a research-based work in a National Historical Landmark. Enrollment limited to 13. S/NC

AMST 1580A. Artists and Scientists as Partners: Theory to Practice (TAPS 1281Z).

Interested students must register for TAPS 1281Z.

AMST 1596. Education Beyond the Classroom Walls: Teaching and Learning in Cultural Institutions.

Explore teaching and learning beyond classroom walls. We will focus on teaching/learning in cultural institutions (museums, historic houses, children's museums). We will begin with our own experiences with this kind of learning, then explore the pedagogical methods, underlying philosophies and learning theories, debates, and goals of informal education today. What kind of learning happens in cultural institutions? How does it compare to learning in schools? Which pedagogical methods are most common in cultural institutions today and how do they align with stated goals? What are the debates within the field and what are our visions for the future of the field?

AMST 1600B. Global China: Flows, Forces, and Friction.

This course will provide an overview of contemporary issues surrounding Global China, including the People's Republic of China, Hong Kong, and Taiwan, as well as their regional and global influence through migration, culture, multinational trade, and labor manufacturing. We will study institutions (the government, family, and education), forces of globalization (rural to urban migration, ethnicity and identity, human trafficking, diaspora communities, labor production and consumption, and cultures of resistance (underground music, human rights movements, radical internet blogging, environmental justice activism and Chinese contemporary art).

AMST 1600C. The Anti-Trafficking Savior Complex: Saints, Sinners, and Modern-Day Slavery.

How can we understand the global movement to combat human trafficking within critical frameworks on "industrial complexes"? Drawing from scholarship on the prison industrial, non-profit industrial, and white savior complexes this course examines human trafficking through the lens of race, class, gender, and national forms of power and subjectivity. Readings will problematize the so-called saints and sinners of the movement, investigating various global helping projects that exist to stop "modern day slavery."

AMST 1600D. Sports in American Society.

This course seeks to understand, analyze, and criticize sport—seen here as one of the primary institutions in the lives of Americans. Working from the basis of sporting events in the Durkheimian sense of symbolic community, we will elevate them to the status of religious and educational institutions in our everyday lives. Using the primary lenses of gender and race this class examines sports at five different levels—professional, Olympic, NCAA, scholastic, and youth—and uses the "Big 3" sports of baseball, basketball, and football to understand how athletics have impacted, and will continue to impact, American Society.

AMST 1600E. Performance, Politics, and Engagement (TAPS 1680).

Interested students must register for TAPS 1680.

AMST 1600F. Blacks and Jews in American History and Culture (JUDS 1753).

Interested students must register for JUDS 1753.

AMST 1600G. Contemporary Black Women's Literature (ENGL 1711L).

Interested students must register for ENGL 1711L.

AMST 1600H. Monsters in our Midst: The Plantation and the Woods in Trans-American Literature (ENGL 1711N).

Interested students must register for ENGL 1711N.

AMST 1600I. American Literary Naturalism: Form and Economics at the Fin de Siècle.

American naturalism was the first literary movement to consciously grapple with the cultural, political, and economic significance of the transition from a free market system to corporate capitalism. This course explores how naturalist fiction around the turn of the twentieth century responded to and shaped the organization of the economy in ways that remain highly relevant today. By placing economic forms in their cultural contexts and cultural forms in their economic contexts, students will develop tools for understanding the relationship between culture and changing forms of economic organization from the industrial corporation to financial markets.

AMST 1600J. Believe It or Not: Mediating the Unthinkable, Past and Present.

How do we respond when confronted with something that seems impossible? When Robert Ripley first invited audiences to "believe-it-or-not" at his Odditorium in 1933, many responded by fainting. However, as modern forms of media and technology perpetually shrink the scope of the implausible, the places we confront the un- (or non-) believable continue to evolve as well. From 9/11 to the #blacklivesmatter and #metoo movements, students will analyze instances that challenge established notions of the unthinkable to explore how social groups come to understand objects, ideas, and events that don't fit within their own experiences and worldview.

AMST 1600K. Memory and Forgetting in Popular Culture.

Is it always good to remember? Does forgetting always imply failure? While it is easier than ever to document and access information, the rise of ephemeral media such as Snapchat indicates a growing desire for the past to remain past, and to not become a burden on the present. This course explores the tension between remembering and forgetting as it is portrayed in film, literature, and technology, to examine what they reveal about our belief in—and anxieties towards—human memory.

AMST 1600L. Nationalizing Narratives: Race, Nationalism, and the American Novel (ENGL 1710M).

Interested students must register for ENGL 1710M.

AMST 1600M. Contemporary Black Women's Literature (ENGL 1711L).

Interested students must register for ENGL 1711L.

AMST 1600N. Caribbean Literature (ENGL 1762M).

Interested students must register for ENGL 1762M.

AMST 1601A. Migrants, Political Activism and the Racialization of Labor (POBS 1601M).

Interested students must register for POBS 1601A.

AMST 1605P. Channeling Race: Television and Race in America (MCM 1505P).

Interested students must register for MCM 1505P.

AMST 1610A. American Advertising: History and Consequences.

Traces the history of American advertising, particularly in the 20th century, to understand the role advertising plays in our culture. Topics include the rise of national advertising, the economics of the advertising industry, the relation of advertising to consumption, the depiction of advertising in fiction and film, and broadcast advertising.

AMST 1610C. American Popular Culture.

This interdisciplinary course examines the history of popular culture in the industrialized United States, drawing on methodologies from different fields, and using a variety of evidence, including minstrel song sheets, amusement parks, television, and romance novels. We look at the audience, the producers and the texts presented by American popular culture both domestically and internationally.

AMST 1610F. Asian America Since 1945.

Since the end of WWII the Asian American community has undergone radical transformations. This course will examine the shifting political and cultural status of Asians in America, the demographic revolution in Asian America ushered in with the Immigration Reform Act of 1964, Asian Americans and globalization of the US economy, and Asian Americans in contemporary US race relations.

AMST 1610G. Asian American History.

This course focuses on Asian America as a historical subject and on Asian Americans as makers of their own histories. It is loosely chronological but principally organized around the emergence of an Asian American historical voice. Films, personal accounts, and historical analyses will be read. Many of the texts feature photographs, which we will engage primarily as historical documents. Examining the material realities they represent or suggest, we will also probe their political, economic and cultural dimensions. As weapon, commodity and heirloom, photography has been integral to shaping Asian Americans' visibility and therefore their social position in the United States.

AMST 1610H. Asian Immigration to the Americas.

Asian America is an extremely diverse community including fifth generation Californians and yesterday's arrivals: Hmong from Laos, Indians from Guyana, Japanese from Brazil, native born Americans, immigrants, refugees, adoptees, doctors, garment workers, physicists, poets, and storekeepers. The patterns of migration and settlement from Asia to the Americas-U.S. and Canada, the Caribbean and Latin America over the past two hundred years are examined.

AMST 1610I. Beyond Chinatown: Asian Communities in the United States.

From Manila villages in 18th-century Louisiana, to Punjabi-Mexican families in early 20th-century California, to today's "little Saigons" and Asianam cyberspace, Asian Americans have built a diverse array of communities in the U.S. The historical circumstances, social forces, and political movements that have shaped these communities are examined. Particular attention paid to the dynamics of race, ethnicity, class, gender, and sexuality in the development of these communities.

AMST 1610J. Body and Soul: Health and Sexuality, 1860-1920.

Examines the history of women/gender in relation to discourses about sexuality (both physical and mental) in the era of the Civil War through the progressive era. It samples a variety of ideas and movements, including efforts to regulate sexuality and initiatives to advance women into the medical and "helping" professions. Specialization is given to issues of class, race and ethnicity.

AMST 1610L. Child Welfare in Twentieth-Century America.

Examines the evolution of child welfare in the United States from its origins in the late 19th century through its purported crisis in the late 20th. Specifically, will trace the history of policies and programs aimed at providing support for dependent children, and at dealing with deviant or delinquent children. Emphasis will be on understanding the social, cultural, and political contexts in which child welfare was formed and transformed during this century.

AMST 1610M. Childhood and Adolescence in American Literature and Culture.

A survey of how changing ideas of childhood and the "new" construction of the category of adolescence are mirrored in American fiction and poetry from the Puritans to the present. Among the writers considered are Anne Bradstreet, Harriet Beecher Stowe, Mark Twain, Henry James, and J. D. Salinger. Provides a comparative cultural perspective by studying works by Wordsworth, Dickens, Pater, and Kosinski.

AMST 1610N. Citizenship, Race, and National Belonging in the Americas.

What is the relationship between citizenship, national belonging, and ideologies of race in the Americas? In what ways do gender and class differences affect this relationship? Focusing on these questions, this course compares the racial and social experience of the U.S. Latinos with that of the populations in various countries in the hemisphere.

AMST 1610O. Civil Rights and the Legacy of the 1960s.

Recent mainstream interpretations of the 1960s tend to neglect the presence and participation of Chicanos and Puerto Ricans in the various movements for civil rights. Using an interdisciplinary approach and drawing on historical, autobiographical and contemporary texts, films, and documentaries, this course examines the Latino experience during the Civil Rights period and explores its legacy today in the lives of Latino and other racial minorities.

AMST 1610P. Class, Culture, and Politics.

Surveys the working class and radical movements that have challenged the ruling economic, political, and cultural systems. Major topics include the railroad uprising of 1877, the Knights of Labor, sexual utopianism and spiritualism, black nationalism, the Socialist and Communist parties, women's and gay liberation, and the modern ecology movement. Emphasizes cultures. Prerequisite: At least one semester of a college-level course in U.S. history or literature.

AMST 1610R. History of Sexuality in the United States.

This course introduces students to the history of sexuality in America from the colonial era to the present. This is not only a history of gay and lesbian communities. Rather it builds on those histories to create a portrait of how Americans, gay and straight, lived sexual lives in relationship to disciplines of knowledge, cultural and political institutions, and popular culture.

AMST 1610S. Immigration to the United States from the Sixteenth Century to the Present.

Explores 350 years of immigration to what is now the U.S. Organization is both chronological and topical. We will reconstruct and compare the major waves of immigration, consider causal theories of migration, examine U.S. immigration policy over time, debate the economic impact of immigration, and discuss the institutions and strategies that immigrants have designed to facilitate adaptation.

AMST 1610U. Introduction to Latino Studies.

A survey of the ways that aspects of the histories and cultures of the U.S. and Latin America have contributed to shape public policy issues and to differentiate the experiences of U.S. Latinos. Among the questions guiding class discussions: What are the implications of grouping nationally, racially, and socially heterogeneous populations under one term, such as *Hispanic* or *Latino*? To what extent do "ethnic labels" foster alliances among different ethnic or racial groups?

AMST 1610V. Introduction to Latino Studies II: Culture and Identity.

Explores the ways in which gender roles and intergenerational expectations-diversified by race, class, national identity, and citizenship status-shape the varied identities and cultural experiences of Latinos and Latinas in different decades of the post-World War II period in the U.S.

AMST 1610W. Latino Immigration in the 20th Century.

The purpose of this course is to examine the political, economic, cultural and social impact of Latina/o immigration in the 20th Century and on Latina/o identity formation. We examine the intimate and personal history of the United States in relation to Latin America, Central America, the Caribbean, and Mexico that established interdependent relationships between nations and its people.

AMST 1610X. Latino Popular Music and Culture.

This course explores the various forms of popular culture associated with U.S. Latino communities. It focuses on the production, dissemination, and consumption of mass mediated cultural forms, primarily music, television, film and journalism, but it also examines other cultural expressions such as vernacular art, food, festivals, and folklore. Prerequisite: At least one semester of college-level course in U.S. history or literature.

AMST 1610Y. Latinos and Film.

Examines the way Latinos have been constructed-and misrepresented-in Hollywood film from the silent era to the present, and compares these images with contemporary Latino-made films that counteract Hollywood stereotypes with more accurate and complex images of their own histories and cultures. Readings introduce students to film criticism from a Latino perspective. Weekly screenings in and outside class.

AMST 1610Z. American Popular Culture.

Popular culture is part of everyday life, but also an important site to examine how American identities have been both shaped and reflected through film, television, music, performance, and fashion. We trace American popular culture from the nineteenth century to the present, paying particular attention to the development of different media, and looking at the production and reception of popular culture, as well as the cultural texts themselves.

AMST 1611A. Making America: Twentieth-Century U.S. Immigrant/Ethnic Literature.

Examines the literature of first and second generation immigrant/ethnic writers from 1900 to the 1970's. Attempts to place the individual works (primarily novels) in their literary and sociocultural contexts, examining them as conscious works of literature written within and against American and imported literary traditions and as creative contributions to an ongoing national discourse on immigration and ethnicity.

AMST 1611C. Pacific Rim in American History.

This course is a comparative study of Filipino, Chinese, Japanese, Korean and Indian settlement in the United States. It begins in the 1700s when Filipino seamen first settled in what is now Louisiana and Texas and concludes with the end of World War II. Attention will be given to immigration from Asia and its relationship to the development of the capitalist world system, the role that Asian American labor played in class and racial formation in America the political economies of Asian American communities, and the various social movements and legislative efforts to exclude Asians from American society and Asian resistance to exclusion.

AMST 1611D. Reading New York (ENGL 1711D).

Interested students must register for ENGL 1711D.

AMST 1611E. Popular Culture in the United States.

Focusing on popular culture since industrialization, the course will examine particular forms (broadcasting, romance novels, amusement parks, sports) we will as look at the producers of, and the audiences for, those forms. Requirements include three papers based on outside readings and a final.

AMST 1611F. Race, Gender, and Community in Latina Autobiography.

Examines how Latinas chronicle their identities in transitions vis-à-vis markers of race and gender. Through autobiography, memoir, literary criticism, and theoretical readings emphasizing the negotiations of self, place and community via social and geographical locations including family, region, and the nation. Engages in critical interpretation of the socio-cultural and political worldviews of Latina self-discovery and self-authorship.

AMST 1611G. Race, Ethnicity, Religion and Community.

This course examines the intersection of religion and community for communities of color in the United States. A survey of these communities is guided by the desire to discover the collective stories and memories that socialize social and ethnic identities, and serve as a source of personal and political transformation. Out point of entry for understanding the sacred is at "ground level" perspective.

AMST 1611H. Religion and Society in the United States.

Offers a sociological perspective on theories of the relationship between religion and societies that will help us understand and analyze current religious practices and trends, both inside and outside of religious institutions. Students will conduct several observations in religious institutions and create religious rituals of their own.

AMST 1611J. Sex, Love, Race: Miscegenation, Mixed Race and Interracial Relations.

This class will explore the conditions and consequences for crossing racial boundaries in North America. We will take a multidisciplinary approach, exploring literary, anthropological, and historical writings along with several feature and documentary film treatments of the subject.

AMST 1611K. The Century of the Child? Child Welfare in Twentieth-Century America.

Examines the evolution of U.S. child welfare from its origins in the late 19th century through its purported crisis in the late 20th century. Traces the history of policies and programs aimed at: providing support for dependent children; improving infant and child survival and health; protecting children from exploitation and abuse; and dealing with deviant and delinquent children.

AMST 1611M. Trauma and the Shame of the Unspeakable: The Holocaust, American Slavery, and Childhood Sexual Abuse.

The problem of representing traumatic experience has been raised by witnesses and survivors, psychoanalysts, psychologists, sociologists, philosophers, and artists. This course compares three historical situations--The Holocaust, American slavery, and childhood sexual abuse--by reading histories, memoirs, and fictions, and analyzing material cultural artifacts such as memorials. Questions about the relation of individual trauma to collective and cultural trauma will be pursued through readings that will include Freud, Jeffrey Alexander, Judith Herman, Dominique La Capra, Primo Levi, Jill Christman, Harriet Jacobs, Toni Morrison, Gayle Jones and Art Spiegelman.

AMST 1611O. Race and Early American Film: The Birth of an Industry.

American cinema became an industry at the turn of the twentieth-century during the period of legalized racial oppression and terror known as the Jim Crow era. Each of several important technical innovations in film production was introduced in blockbuster films that re-enforced narratives of white supremacy: the development of long-form narrative in *The Birth of a Nation* (1915) by D. W. Griffith; the synchronization of sound in *The Jazz Singer* (1927); and the introduction of color film in *Gone with the Wind* (1939). African-American filmmakers such as the director Oscar Micheaux responded with films that contested these representations, e.g., *Within Our Gates* (1920) and *Body and Soul* (1925). His work and that of other directors, producers, and critics gave rise to the development of Black cinema that fought for survival as Hollywood became the dominant force in the industry.

AMST 1611Q. The Asian American Case: Race, Immigration and the Law.

The central historical themes are exclusion, citizenship rights, and equal protection. The experience of Chinese and Japanese Americans dominates the historiography but we will use that scholarship to help us think about a wider range of issues across time.

AMST 1611R. Bourgeois Blues: Class Conflict in African American and Caribbean Literature and Film.

This course investigates class differentiation and its effects in African-diaspora novels, autobiographies, and films (such as *The Good Nigger*, *Brothers and Keepers*, *Crick Crack Monkey*, and *"Sugar Cane Alley"*). Alongside these literary works and films, we will read a wide range of critical/theoretical essays on class and class conflict and the intersection between class and race, gender, sexuality, and nationality.

AMST 1611S. US Popular Culture.

This course focuses on the relationship between popular culture, media, and society and provides an overview of social structures, content, audiences, and effects. The core mission of this class is to connect popular culture to the larger world in which it is produced and consumed. We examine the institutional and social contexts of cultural production and consumption in the United States. We will cover a variety of cultural forms (e.g. music, film, tv, and social media) and explore culture as an arena of conflict and a vehicle for social change. Other areas of focus include the meaning of aesthetics and style in daily life, cultural gatekeeping, and the role of social media platforms in shaping the production, distribution, and consumption of cultural texts/commodities.

AMST 1611T. Blacks and Jews in American History and Culture (JUDS 1753).

Interested students must register for JUDS 1753.

AMST 1611U. History of American Technology.

Technologies reflect and transform American society and culture. This course examines the invention, introduction and use of new machines and systems, with a focus on infrastructure, manufacturing, and information and communication technologies. Special attention paid to labor, business, political and cultural contexts of technological change.

AMST 1611V. Color Me Cool: A Survey of Contemporary Graphic Novels.

Surveys a variety of comic books and graphic novels, both mainstream and independent. The emphasis, however, will be on the independent graphic novel. Students will also read history and criticism to understand better the context from which the books emerge and to grasp more firmly their visual and textual aesthetics. Must attend first three lectures to be eligible for enrollment.

AMST 1611W. Asian Americans and Popular Culture.

From the Fu Manchu to Lucy Liu, Asian Americans have long been the objects of loathing, terror and desire, in American popular culture. This course looks Asian Americans in popular literature, music, theater, film and television as subjects, producers and consumers.

AMST 1611X. Narratives of Liberation.

The theme of human liberation has appeared in literary works from around the world and across centuries. This course will examine a variety of narratives that foreground the attainment of physical, spiritual, and political freedom for individuals and groups. Beginning with the Book of Exodus and traveling through African American slave narratives, British proto-feminist novels, Latin American testimonios, and contemporary films, we will examine how a wide range of writers and filmmakers have conceptualized the goal and the process of liberation in their works. Requirements for the course will include two papers/projects and a final exam.

AMST 1611Z. The Century of Immigration.

Examines in depth the period of immigration that stretched from the 1820s through the 1920s and witnessed the migration of over 36 million Europeans, Asians, Canadians, and Latin Americans to the United States. Explores causal theories of migration and settlement, examines the role of family, religion, work, politics, cultural production, and entertainment in immigrant/ethnic communities, and traces the development and impact of federal immigration policy.

AMST 1612A. Chicago and America.

This course explores the history of Chicago, but also uses the city as a way to think about issues in American history. Sources include novels, memoirs, popular histories, film, and music.

AMST 1612B. Celluloid America.

The American motion picture developed as a unique art form in the late 19th century and its enduring cultural and social significance is irrefutable. In this course, we will explore US history using cinema to explore the cultural values represented within and shaped by the medium. Topics include the invention of the moving image, the rise and fall of the Hollywood studio system, and the emergence and evolution of film genres and styles (i.e. westerns, film noir, musicals, etc.) as a means of economically appealing to the masses and cultivating viewership domestically and abroad.

AMST 1612C. Growing Up in America.

This course will consider American narratives of adolescence and coming of age from the nineteenth century to the present. We will examine the archetypal aspects of coming to grips with maturity and the world, class and gender roles, and the invention of "adolescence" as a new psychological category. International perspectives will be provided by reading some British and Japanese works. Authors covered will include Dickens, Melville, Twain, Alcott, Kerouac, Hemingway, Baldwin, Mishima and Tan, among others. Lectures, class discussions and student reports. S/NC

AMST 1612D. Cities of Sound: Place and History in American Pop Music.

This course investigates the relationship between popular music and cities. We will look at a number of case studies from the history of music in the twentieth century. We will try to tease out the ways that certain places produce or influence certain sounds and the ways that musicians reflect on the places they come from in their music. Accordingly, we will consider both the social and cultural history of particular cities and regions--New Orleans, Memphis, Chicago, New York, Washington DC, and others--and aesthetic and cultural analyses of various forms of music--including blues, jazz, punk, hip-hop, and others.

AMST 1612G. Henry James Goes to the Movies.

This course will focus on some of the novels and stories by James that have been made more than once into films or tv shows - *Washington Square*, *The Turn of the Screw*, *The Portrait of a Lady*, and *The Golden Bowl* - and study the narrative and visual choices as interpretations of James's texts. Critical readings on the art of fiction and the art of film will also be introduced.

AMST 1612K. Immigrant America and Its Children.

With a focus on the experiences of the immigrant second generation, this course seeks to expose students to the recent social science literature on contemporary immigration to the United States, including discussions on its origins, adaptation patterns, and long-term effects on American society. We will closely examine patterns of assimilation and adaptation for the children of immigrants, address the challenges they confront when trying to straddle two cultures, describe their ethnic identity formation, and interrogate the effects of their increasing presence on U.S. schools and society in general. The experiences of the second generation will be examined in various institutions including the family, labor market, schools, and community, and we situate these institutions in both national and transnational spheres. The course will consist of lectures by the instructor combined with class discussion of assigned texts. This course will also provide students with an analytic framework to address questions of multiculturalism. The course will also help students develop a better understanding of the dynamics of race, class, gender, and sexuality in society.

AMST 1612L. Eating Cultures: Food and Society.

This course will look at various ways to understand the complex role of food in society. We will look at issues of food production and consumption, and how our relationship to food contributes to the political and social structures that we live with. Our approach will be historical and pay special attention to the ways in which communities of color and immigrants have shaped, and have been shaped by, the food they cultivate, harvest, consume, and market. Field trips and readings explore how food creates ways for people to form bonds of belonging while also creating bonds of control and regimes of inequality. Enrollment limited to 20.

AMST 1612M. Children of Immigrants.

Gives an overview of the experiences of the children of contemporary immigrants in the United States. It looks at their experiences in key social institutions including schools, the family and ethnic community. The course will examine the integration of immigrant children and how factors of race, class, and gender shape their experiences. To address the integration of immigrant children, the course will look at their process of assimilation, maintenance of transnational ties, and lastly the formation of youth identity.

AMST 1612N. Political Theatre of the Americas (TAPS 1610).

Interested students must register for TAPS 1610.

AMST 1612O. 21st Century American Drama (TAPS 1650).

Interested students must register for TAPS 1650.

AMST 1612P. First Nations: the People and Cultures of Native North America to 1800 (HIST 1805).

Interested students must register for HIST 1805.

AMST 1612Q. Women / Writing / Power.

An introduction to American women's writing and to the development of feminist literary practice and theory. This course will cover a broad historical range from the colonial poets Anne Bradstreet and Phillis Wheatley to contemporary writers Toni Morrison, a Nobel Laureate, and Marilynne Robinson, a Pulitzer Prize winner. Attention to the effects of racial, class, and cultural differences will inform this course that will focus on gender and literature.

AMST 1612R. Race, Inequality, and the American City since 1945.

This course will explore the dynamics of race and class in American cities during the post-World War II period. The readings and discussions will focus on suburbanization, the decline of central cities, conflict over the use and definition of urban space, urban governance, spatial fortification, and popular dissent. The cities examined will include Buenos Aires, Chicago, Detroit, Liverpool, Los Angeles, New York City, São Paulo, and St. Louis.

AMST 1612S. Introduction to American Indian Studies (ETHN 1890H).

Interested students must register for ETHN 1890H.

AMST 1612T. Slackers and Hipsters: Urban Fictions, 1850-Present.

Slackers and Hipsters surveys the cult of the cool and disaffected in literature and film over two centuries. Beginning with Melville's "Bartleby the Scrivener," but also sampling works as varied as Chatterjee's English August and Kunkel's Indecision, we'll examine both the aesthetic and political implications of the "slacker" in his/her ironic, apathetic, and peculiarly alienated view of the world.

AMST 1612V. Sinner, Saints, and Heretics: Religion in Early America (HIST 1511).

Interested students must register for HIST 1511.

AMST 1612W. Rethinking Women's Bodies and Rights: Transnational Reproductive Politics.

This course examines the issues and debates surrounding women's reproduction in the United States and beyond. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad. Topics include: birth control, eugenics, population control, abortion, prostitution, reproductive hazards, genetic counseling, new reproductive technologies, midwifery, breastfeeding, and menstruation. Students will analyze historical and contemporary materials concerning women's reproductive roles, as well as read scholarly studies on reproductive issues in various parts of the world.

AMST 1612X. Performances in the Asias (TAPS 1270).

Interested students must register for TAPS 1270.

AMST 1612Y. Twentieth-Century Western Theatre and Performance (TAPS 1250).

Interested students must register for TAPS 1250.

AMST 1612Z. First Nations: the People and Cultures of Native North America to 1800 (HIST 1512).

Interested students must register for HIST 1512.

AMST 1613C. First Nations: The People and Cultures of Native North America to 1800 (HIST 1512).

Interested students must register for HIST 1512.

AMST 1614A. Critiques of Religion + Capitalism (RELS 1380E).

Interested students must register for RELS 1380E.

AMST 1700B. Death and Dying in America.

No description available. Open to juniors and seniors concentrating in American Studies.

AMST 1700C. Slavery in American History, Culture and Memory.

Nearly four centuries have passed since the first enslaved Africans arrived in what is today the United States. More than 140 years have passed since American slavery was abolished. Yet slavery remains a palpable presence in the United States. In this interdisciplinary course, we will examine slavery as a problem in American history, culture, and memory, exploring the institution and its legacies in such arenas as history, literature, cinema, visual arts, and heritage tourism. Open to juniors and seniors concentrating in American Studies.

AMST 1700D. Race and Remembering.

This junior seminar engages debates in Ethnic Studies, History, Gender Studies, and the Public Humanities that grapple with the relationship between historical narratives, memory, and social relations of power. Students will examine current tensions in national memory. Each year the topic of this course will change to consider racial formation through alternating social and cultural institutions. This semester we will consider the history of racial formation through encounters with the judicial system, with policing practices, with detention, and incarceration. Students will collaborate to make these histories publicly accessible using methods in public humanities.

AMST 1700F. American Publics.

Americans worry about the quality of their civic life and fear its decline. This junior seminar examines an important concept, the public sphere, in its popular and political dimensions as well as the challenges to the boundaries of American public life. Who is a citizen and thus eligible to participate? The course pays particular attention to concerns about the impact of new media—print, broadcasting, the internet. Assignments will take students into the community to think about social, cultural, and political publics. Not open to first year students or sophomores. Enrollment limited to 20.

AMST 1700I. Community Engagement with Health and the Environment.

This junior seminar explores how local community organizations are taking up issues of health and the environment in culturally relevant contexts. We will examine issues of environmental justice, health disparities and the basic tenets of community based participatory research. We will then partner with a local community organization and, depending on need, assist in the design, implementation, and/or evaluation of a program designed to improve the local environment and/or health status of the community. Enrollment limited to 20 juniors and seniors.

AMST 1700K. Race in the Americas: A Hemispheric Perspective.

This junior seminar engages debates in Ethnic Studies, Latin American Studies, sociology and history regarding the role of race in the U.S. and Latin America. Problematizing the depiction of Latin America as a harmonious racially mixed society and the U.S. as racially divided nation, students will look beyond binary frameworks to examine how racial logics are constructed historically, situationally and relationally. Readings highlight the interconnected nature of racial logics across the region, facilitated by immigration and transnational social movements in the context of a shared European colonial past, U.S. imperialism and emergent nationhood.

AMST 1700N. Public Memory: Testimony, Memorial, Ritual.

This seminar explores theories and practices of public memory by studying three related topics and media. Questions about the relation of history and memory are pursued by reading verbal testimony. Questions about commemoration are developed by looking at material objects and public spaces. Questions about embodied memory are explored by witnessing trauma, performance, and ritual. Readings will include Freud, Nora, Derrida, Halbwachs, Laub, Savage, Connerton, Taylor and Young. Rhode Island will provide our field for understanding how public memory works in verbal, material, and embodied signs of the past and present.

AMST 1700P. Making Music American: Critical Heritage Studies.

This seminar offers a critical and comparative exploration of American music genres that operate as "heritage music" or "ethnic music" in the context of American multiculturalism. We will collectively investigate how musical practice and related discourse can construct, express, perpetuate, and sometimes challenge various cultural identities, community affiliations, and political ideologies. We will particularly attend to public performance contexts, including music festivals, club dancefloors, and live-streaming/archived online performances. Case studies focus on rural Southern "folk" genres, Chicago blues and house, Asian American taiko ensembles, and norteño/tejano dance musics (from huapango to Selena). Readings draw on historical and ethnographic scholarship grounded in critical heritage studies and critical race theory. Limited to junior-year American Studies and Ethnic Studies concentrators.

AMST 1700S. Native American Identity: Public Perception and Self-Determination.

This seminar examines the issues of Native American identity, primarily in the United States. The course will begin by studying historical tribal organization and classification, and the factors that have led to contemporary stereotypes and ideas of what constitutes an "Indian," and the factors that have damaged the strength and identity of Native communities over centuries. We will discuss how misconceptions have impacted media portrayals and the American understanding of when, where, and how Native people live. The final portion of the class will discuss self-identity and self-determination through a variety of areas such as tribal enrollment, academia, and media. No prerequisites.

AMST 1700X. Global Macho: Race, Gender, and Action Movies.

Carefully sifting through an oft-overlooked but globally popular genre - the muscle-bound action film - this class asks: what sort of racial work does an action movie do? What is the role of women in this genre? How should we scrutinize these supposedly empty trifles of the global popular? How should we think critically about movies that feature - often without apology - a deep, dangerous obsession with masculinity, patriarchy, war, and lawlessness, with violence outside of civil society. In short, from Hollywood to Hong Kong to Rio to Paris to Mexico City, what makes the action movie genre tick?

AMST 1701A. Libraries (Un)Bound: From Desegregation to Book Bans and Beyond.

This seminar will look at the institution of U.S. libraries from the mid twentieth century to the present, with particular attention to race, class, gender, sexuality, disability, immigrant communities, and library services for incarcerated people and people experiencing homelessness. You will discover the realm of libraries that extends beyond books by thinking through how issues of social justice can be addressed within different library institutions writ large. You will also have an opportunity to critically analyze issues of space and place in libraries and their collections, learn about the field of librarianship, and hone your library research and critical media literacy skills. Students will discover the important role that libraries play in public access to information, vital support services, and the preservation of intellectual freedom – even in the face of bias, book bans, and other barriers.

AMST 1800. Honors Seminar.

This seminar is for second-semester junior American Studies and Ethnic Studies concentrators who are interested in writing an honors thesis in their senior year. The outcome of this course will be a proposal for the honors thesis along with a bibliography and a research plan and schedule. Topics covered will be the research methods associated with different disciplines; how to make the thesis interdisciplinary; integrating public projects and new media into a thesis. Open to juniors concentrating in American Studies and Ethnic Studies. Enrollment limited to 20. S/NC

AMST 1800A. The Cultural and Social Life of the Built Environment (URBN 1870N).

Interested students must register for URBN 1870N.

AMST 1900A. The Problem of Class in America.

Class is everywhere in American life, but rarely discussed explicitly. This course will investigate why this is. How does class operate in American life? Why is it so often obscured? What are the cultural, political and historical forces that have made it such a contested category? We will approach class from a variety of disciplines, including history, cultural studies, and sociology; study the ways class interacts with race and gender; and consider the prospects of class in America in the context of the twenty-first century's widening inequality and globalized economy.

AMST 1900B. America and the Asian Pacific: A Cultural History.

From Columbus to the present, Asia has been central to the shaping of American culture. This course will examine the role of trade, migration and cultural exchange across the Pacific in the shaping of American culture and society. Enrollment limited to 20 juniors and seniors.

AMST 1900C. Narratives of Slavery.

This course analyzes circum-Atlantic accounts of racial slavery in various forms, including the slave narrative, iconography, historiography, film, and performance. In so doing, it interrogates how factors such as form and/or genre, race, gender, power, and geography influence narrative and knowledge production regarding slavery. Key themes the course addresses include racial slavery as civil and social death, ancient and modern/colonial genealogies of slavery, gendered experiences of bondage, regionalism in U.S. historiography of slavery, and the un/spoken and un/representable nature of atrocity. The course also examines contemporary narratives that underscore the significance that racial slavery brings to bear upon the present.

AMST 1900D. America as a Trans-Pacific Culture.

From Columbus to the present, Asia has been central to the shaping of American culture. This course will examine the role of trade, migration and cultural exchange across the Pacific in the shaping of American culture and society. Enrollment limited to 20 juniors and seniors.

AMST 1900F. Transnational Popular Culture.

This course looks at popular culture as a transnational phenomenon. Taking up issues of cultural imperialism, globalization, domestication, and the economics of the culture industry, the course considers the history of cultural flows, from nineteenth century topics such as Chinese opera in the U.S. and Wild West shows in Europe to twenty-first century fast food, anime, sports, Disney, and music. We will consider both the consumers and producers of popular culture in Europe, South America, Asia and Africa, as well as those in the United States. Enrollment limited to 20 juniors and seniors.

AMST 1900G. Movements, Morals, and Markets.

This seminar will provide a theoretical and empirical overview of contemporary transnational social movements. Addressing issues ranging from fair-trade and labor exploitation, to environmental protection, to indigenous rights, and LGBTQ advocacy, social movements increasing draw from morality and the global market in order to achieve their goals. This course critically investigates the ways in which humanitarian action is celebrated, contested, and commodified through art, social enterprise, and various other formal and informal institutional arrangements.

AMST 1900H. New Media as a Tool for Social and Political Change.

This course will take a critical, theoretical, and practical approach to the examination of new media as a tool for challenging inequality and working toward goals of social justice. In addition to foundational readings on power, media, social change, network theories, and others, we will also have hands on opportunities to work in audio storytelling, utilizing the resources available at Brown. The goal is for students to leave the course with an understanding of the cultural, political, and personal possibilities and limitations of social and new media in the realms of advocacy and social justice.

AMST 1900I. Latina/o Cultural Theory.

Advanced seminar designed to familiarize students with past and present debates in Latina/o Studies. Knowledge of these critical conversations will aid students in making their own contributions to the field as they write their theses and dissertations. We will read such folks as Jose Limon, Mary Pat Brady, Frances Aparicio, and Gustavo Perez Firmat, to name but a few. Enrollment limited to 20 juniors and seniors.

AMST 1900J. Race, Immigration and Citizenship.

"Who can become an American?" is a central question in American society. This seminar examines the construction of national identity, citizenship as a legal and cultural status, and the struggle for equal protection of the law. The experience of excluded Asian and Latino immigrants are key to understanding this historical and ongoing process. Enrollment limited to 20 juniors and seniors.

AMST 1900K. China in the American Imagination.

Since Columbus, China has occupied a special place in the way America has been imagined and in the ways Americans have imagined their place in the world. This seminar will explore the relationship between China and America from Columbus to the present. While politics and diplomacy play an important role, the emphasis will be on trade, immigration and culture. Enrollment limited to 20 juniors and seniors.

AMST 1900L. Cold War Culture The American Culture in the Cold War.

This seminar will explore domestic politics, social movements, family life, sexuality, gender roles and relations, intellectual currents, and popular culture in the United States during the Cold War years. Special topics include adolescence, "conformity", and the rise of television. Sources include historical monographs, memoir, film, and fiction. Enrollment limited to 20 juniors and seniors.

AMST 1900N. Ethnicity, Identity and Culture in 20th Century New York City.

Explores the processes by which 20th-century New Yorkers created a self-consciously modern, urban, and ethnic American culture. Focuses on literary and artistic representations of life in 20th-century New York as manifested in works by five ethnic groups of New Yorkers that immigrated or migrated to the city after 1800: Jews, African Americans, Italians, Chinese, and Puerto Ricans. Enrollment limited to 20 juniors and seniors.

AMST 1900O. Filipino American Cultures.

Examines the situation of Filipinos in the U.S. Drawing from social history, cultural studies, literature, and visual culture, the readings focus on the Filipino experience in the U.S. through a study of self-representations in various forms such as literature and visual culture. Readings include Campomanes, Rafael, Bulosan, Linmark, and San Juan. Enrollment limited to 20 juniors and seniors.

AMST 1900P. Essaying Culture.

This course is interested in the essay as form. As a verb, essay means "to make an often tentative or experimental effort to perform." We will explore through reading and our own writing the poetic, gnomic, and often desultory moves the essay makes as it seeks to understand its cultural objects. Like the novel, the essay is an omnivorous form. It consists of fragments, poetry, personal reflection, lists, rational argument, and much more as it winds its way to understanding. We will be reading a range of essays, as well as theories of the form.

AMST 1900Q. From Perry to Pokemon: Japan in the United States, the United States in Japan.

This course traces the cultural interactions between Japan and the United States beginning with Matthew Perry's 1854 voyage. Topics include Japanese scrolls depicting Perry's arrival; paintings, architecture and musical forms that traveled between the two countries; the U.S. occupation of Japan after World War II; the popularity of anime and other Japanese films in the U.S.; and the importance of American popular culture in post-war Japan. Enrollment limited to 20 juniors and seniors.

AMST 1900R. Gender, Race, and Class in the United States.

Focuses on the emergent feminist scholarship that both empirically and theoretically analyzes how the intersection of race, class, gender, sexual preference, and age shapes the lives of women, men, and transgendered people in the U.S. Enrollment limited to 20 juniors and seniors.

AMST 1900S. Green Cities: Parks and Designed Landscapes in Urban America.

Examines the cultural meaning and public use of greenspace in American towns and cities. Covers city parks and metropolitan park systems; the landscaping of riverfronts, streets, cemeteries, and company property; and the contributions of landscape architects such as Frederick Law Olmstead and Warren Manning to the field of urban planning. Begins in the 17th century with the creation of Boston Common and ends by reviewing the latest greenway plans for Providence. Enrollment limited to 20 juniors and seniors.

AMST 1900T. Disability: History, Theory, and Bodily Difference.

This seminar explores the history of disability across cultural, legal, medical, and political dimensions of American life. We will consider the changing meanings of disability, the history of disability activism and communities, representations of disabilities, and the relationship between technology and the body. We will also discuss the intersections between disability and other categories of difference such as gender, race, and sexuality.

AMST 1900U. Immigrant Radicals: Asian Political Movements in the Americas 1850-1970.

Between 1854 and 1965, Asian immigrants to the United States and other countries in the Americas were barred from immigration and citizenship. Circuit of ideas and political movements evolved to resist exclusion, disenfranchisement, and discrimination. We will examine: Chinese Americans and the Chinese revolution, the Ghadar movement among Indians of the Diaspora, and the Japanese American left and Japan. Enrollment limited to 20 juniors and seniors.

AMST 1900V. Immigrants, Exiles, Refugees, and Citizens in the Americas.

Focuses on populations who leave their homelands within the Americas. Examines the meaning of categories "refugee," "exile," "citizen," and "immigrant" in the postwar period. Explores the experience and reasons of people who leave their homelands, the relations between their countries of origin and their new society, and their access to rights in both countries. Questions the extent of population movements in the Americas as redefining conceptions of citizenship, rights, nation, and national identity in the U.S. Enrollment limited to 20 juniors and seniors.

AMST 1900W. Latina Literature: The Shifting Boundaries of Identity.

Focuses on the relationship between national identity and ethnic identity in narratives by and about Mexican American, Puerto Rican, Cuban, Dominican and Central and South American women in the U.S. Texts by and about women from other ethnic and minority groups. Readings from Gloria Anzaldúa, Judith Ortiz Cofer, Dolores Prida, Cristina Garcia, Julia Alvarez, among others. Enrollment limited to 20 juniors and seniors.

AMST 1900X. Latina/o Religions: Encounters of Contestations and Transformations.

The purpose of this seminar is to survey and review the literature in the new and emerging field of Latina/o Religions. We seek to define the Latina/o religious experience and identify its unique qualities and expressions in relation to other religious movements and expressions in the Americas. Enrollment limited to 20 juniors and seniors.

AMST 1900Y. Latino New York.

The Latino population of NYC in the present generation has generated new lines of inquiry for the study of diasporas in contemporary urban settings. This course undertakes an analysis of this experience from diverse interdisciplinary perspectives, with a focus on cultural expressions and representations and with a view toward new ethnographic and historical approaches. Enrollment limited to 20 juniors and seniors.

AMST 1900Z. Latinos and Film.

Analyzes the way Latino ethnicities have been constructed and misrepresented in Hollywood films from the silent era to the present, and examines contemporary work by Latino directors, producers, screenwriters, and actors who produce films that counteract the negative stereotypes of Hollywood films with more accurate, complex, and positive images of their own histories and cultures. Weekly screenings both in and out of class and readings that introduce a new body of film criticism from a Latino perspective. Enrollment limited to 20 juniors and seniors.

AMST 1901A. Latinos in Black and White: Race, Ethnicity and Identity in the Americas.

This seminar looks critically at traditional models of "race relations" in the Americas, the historical development and expressions of "blackness," "brownness" and "whiteness" at regional, national and international levels, and their contemporary articulations and ramifications. A primary focus will be the social and political dimensions of "ethnicity" and "race" in relations between Caribbeans and African Americans in New York City. Enrollment limited to 20 juniors and seniors.

AMST 1901B. Form Matters: Contemporary Short Fiction.

Form Matters is an advanced seminar in reading contemporary short fiction, mainly centered on US writers. The class particularly focuses on socially-attuned and historically-minded neo-formalist analyses of literature. Fiction readings will be supplemented with relevant critical readings from both scholars and practicing writers. Students will be expected to engage in rigorous discussion of the material. Goals of the course include introducing you to a relevant critical vocabulary for discussing form, deepening your familiarity with contemporary US short fiction, and improving your oral and written communication skills.

AMST 1901C. Making America: The Immigrant Experience in Literature.

Examines the literature produced by immigrants and their children who came to the U.S. between 1865 and 1965. Will place literature in its sociocultural and literary contexts, considering it as a creative contribution to debates on acculturation, generational conflict, intermarriage, racism, gender politics, labor exploitation, and immigrant entrepreneurs. Will read works by authors of Chinese, Irish, Scandinavian, Japanese, Slavic, East European Jewish, Mexican, and Caribbean origin. Enrollment limited to 20 juniors and seniors.

AMST 1901D. Motherhood in Black and White.

This seminar focuses on the experience and ideology of American motherhood with respect to the different experiences of Black and white mothers from the slave era to the present.. Texts include fiction, film, history, feminist and psychoanalytic theory, e.g. "Uncle Tom's Cabin," "Incidents in the Life of a Slave Girl," "Imitation of Life," and "The Reproduction of Mothering." This seminar will be conducted online in the Fall of 2020 with both synchronous and asynchronous elements. The current syllabus is available for reference and many of the readings will remain the same, but the work will be re-organized before the semester begins and an updated syllabus posted then. Enrollment limited to 20.

AMST 1901E. Introduction to Ethnomusicology (MUSC 1900).

Interested students must register for MUSC 1900.

AMST 1901F. Orientals: The Representation of Asians in American Popular Culture.

This is a research seminar designed to explore questions relating to the cultural construction of Asians as a racial group in the United States. The seminar will interrogate the ideas of race, ideology, Orientalism and popular culture. The seminar will then analyze various moments in the formation of dominant images of Asians in American Culture. Enrollment limited to 20 juniors and seniors.

AMST 1901G. Race and Art in America.

How do art and space function as a critical practice, a tool of resistance, and a form of self-determination in racialized 20th-century America? This course will introduce students to ways of looking at and analyzing examples of visual, performance, and mixed-media artwork by African American, Asian American, and Chicano artists who resist, challenge, deform, and subvert traditional concepts of art. Enrollment limited to 20 juniors and seniors.

AMST 1901H. Race and Poststructuralism.

Poststructuralism continues to be a major preoccupation in the discourse of the academic left, but relatively few courses consider how poststructuralist interrogations of subjectivity and history can help us to think about race in a U.S. context. This seminar begins with an overview of key poststructuralist concepts, then moves to poststructuralist texts which take up race as a primary object, and finally takes up the collision between poststructuralist thought and racial identity politics. Enrollment limited to 20 juniors and seniors.

AMST 1901I. Race and Sexuality in Contemporary U.S. Film.

This course aims at producing cultural criticism about the representation of race and sexuality in U.S. films of the 1980s-90s. By examining the circulation of images and ideas about bodies in Hollywood and "independent" production, we consider how cultural norms are constructed. Texts include films, popular film criticism (print and televisual), film theory, and industrial history. Enrollment limited to 20 juniors and seniors.

AMST 1901J. Race Immigration and the Law: The Asian American Case.

From 1870 to 1943, Chinese were defined by their "race" as ineligible for citizenship and immigration. Similar prohibitions against Japanese, Filipinos, and Indians followed in the early 20th century. This seminar will examine Asian American struggles against exclusion and how they shaped American definitions of citizenship, race, and constitutional rights. Enrollment limited to 20 juniors and seniors.

AMST 1901K. Racial Formation in North America.

No description available. Enrollment limited to 20 juniors and seniors.

AMST 1901L. Reading Latina/o History through Fiction.

Examining the imaginative act of writing, the course studies the fictional portrayal of historical subjects, facts, and events. Focuses on how non-fiction is fictionally processed in contemporary Latina and Latino novels. How do "Latino" facts--molded by struggles for civil and human rights and U.S. foreign intervention--speak? How does novelist orient readers toward an understanding of social reality? Enrollment limited to 20 juniors and seniors.

AMST 1901M. American Roots Music (MUSC 1932).

Interested students must register for MUSC 1932.

AMST 1901N. Researching the History of Children and Childhood.

Explores how to research and interpret the ways that race, class, gender, and region have shaped the social organization, cultural meaning, and experiences of American children and childhood. Focus is on the possibilities and challenges posed by various types of evidence: visual and literary representations, memoirs, child rearing advice, toys and play, children's literature, clothing, and protective and restrictive laws. Enrollment limited to 20 juniors and seniors.

AMST 1901O. Rivers in the Industrial City.

Rivers promote industrial development and serve as important resources and cultural amenities for communities that have a substantial manufacturing base. This interdisciplinary seminar looks at the use and abuse of rivers in American industrial cities from the 18th century to the present. Enrollment limited to 20 juniors and seniors.

AMST 1901P. Musical Youth Cultures (MUSC 1925).

Interested students must register for MUSC 1925.

AMST 1901Q. Screening Men: Hollywood Masculinities, 1944-Present.

Surveys Hollywood representations of dominant masculinity with the aim of interrogating these representations. Considers how such representations have changed over time and how changes may be read in relation to contemporary social, economic, and political pressures. In addition, considers how these texts interact with theoretical issues of representation, identification, and spectatorship. Enrollment limited to 20 juniors and seniors.

AMST 1901R. Social Movements of the 1960s.

This course examines U.S. social movements from 1954 through 1974, concentrating on the 1960s. Drawing on primary and secondary sources, we examine such topics as the Civil Rights Movement and the emergence of Black Nationalism, the antiwar movement, the relationship between the New Left and second-wave feminism, and the movement for gay liberation. The course also pays attention to how the 'sixties' are represented in contemporary culture. Enrollment limited to 20 juniors and seniors.

AMST 1901S. Society and Identity: A Comparative Approach to the Colonial Americas.

Compares New Spain, the British North American mainland, and the Caribbean from initial colonization in the 16th century to 18th-century wars of independence. Focuses on the complex interplay of class, gender, race, and ethnicity that defined social formations and shaped identities. Reading biographies of ordinary people as well as synthetic histories, engages the past on different levels and connects individual identity and action to broader historical processes. Enrollment limited to 20 juniors and seniors.

AMST 1901U. The Charm of Anticipated Success: Varieties of the American Dream in U.S. History.

The American Dream is one of the great myths of our national history—not "myth" in the sense of a falsehood, but rather a widely-held belief whose validity cannot be definitively proved or disproved (like "all men are created equal"). Using sermons, fiction, songs, and other cultural forms, this research seminar explores the complexities of the myth from the time of the Puritans to the present. Enrollment limited to 20 juniors and seniors.

AMST 1901V. The Contested City: Urban Culture in America, 1880-1940.

Focusing on the popular culture of American cities, this course examines the evolution, commercialization, uses, and struggles over vaudeville, jazz, and early film, and leisure activities such as dancing, nightclubbing, drinking, and shopping. Consideration will be given to the gendered, class-based, and racialized nature of leisure activities and spaces, reform efforts, and the dynamics of social change. Prerequisite: At least one semester of college-level course in U.S. history or literature. Enrollment limited to 20 juniors and seniors.

AMST 1901W. The Development of Black Feminism.

Beginning with the participation of black women in the abolition movement and ranging forward to current black women novelists and feminist theorists, this course will examine the intellectual development of black feminism. We will pay particular attention to black feminism as an area of critical study, and will explore the concepts of representation, ideology, discourse, race, gender, and sexuality. Enrollment limited to 20 juniors and seniors.

AMST 1901Y. The Making of U.S. Child Welfare.

Will examine the origin and design, at the beginning of this century, of the U.S. child welfare system. The separation of child from adult welfare, the definition of a special relationship between children and the state; foster care versus institutional care; the juvenile justice system; child labor; infant and maternal welfare; aid to children in families; and school-based welfare are some of the topics to be covered. Enrollment limited to 20 juniors and seniors.

AMST 1901Z. The Old/New Immigration.

By comparing and contrasting the migration and adaptation experiences of Russian Jews and southern Italians, explores in depth the massive immigration from eastern and southern Europe that took place between 1880 and 1924. Topics include: the causes and contours of emigration, settlement patterns, adaptation and assimilation, ideologies of left and right, immigration as a gendered experience, immigrant writers and intellectuals, nativism and restriction, and the "new immigration" and national memory. Enrollment limited to 20 juniors and seniors.

AMST 1902A. The Politics of Asian American Culture.

From Bret Harte's "Heathen Chinee" to Bill Clinton's John Huang, Asian Americans have been represented as aliens in American culture. The task of Asian American cultural production has been to create a space for an Asian American citizenship. This course looks at autobiography, fiction, drama, film, and cultural criticism to understand how Asian American culture makers have sought to combat imposed stereotypes, subvert structural hegemony, and undermine self-imposed orthodoxies. Enrollment limited to 20 juniors and seniors.

AMST 1902B. Water is Life/New Currents in the Study of Land, Water and Indigeneity (ETHN 1750H).

Interested students must register for ETHN 1750H.

AMST 1902C. Indigeneity, Sustainability and Resistance in Food Politics (ETHN 1750I).

Interested students must register for ETHN 1750I.

AMST 1902D. Make a Body Riot: Laughter, Resistance, and African American Literature (GNSS 1961J).

Interested students must register for GNSS 1961J.

AMST 1902E. The Second Americans: Narratives and Images of Hispanics in the U.S. 1513-1945.

Confronts the notion of Latinos as "foreign" by demonstrating historical depth and geographic breadth of the Hispanic/Latino experience in what is now U.S. territory—from colonial Florida, California, and the Southwest, to early 20th-century Puerto Rican and Cuban communities in New York. Explores contrasting Hispanic and Anglo views of the presence of Hispanics via such diverse sources as historical chronicles and autobiographies, Hollywood films, romance novels, and popular music. Enrollment limited to 20 juniors and seniors.

AMST 1902F. Global America: Gender, Empire, and Internationalism Since 1890 (GNSS 1961I).

Interested students must register for GNSS 1961I.

AMST 1902H. Topics in Asian American History and Culture: Diasporas and Transnationalisms.

This seminar reviews the theoretical literatures on diaspora and transnationalism. We then place Asian migrations to the Americas (North America, Hawaii, the West Indies, Central and Latin America) in the context of migrations out of and within Asia in the 19th and 20th centuries. Finally, we consider transnationalism as an analytical framework for understanding the process of Asian-American community formation. Enrollment limited to 20 juniors and seniors.

AMST 1902J. Topics in Latino Studies: Racial Ideologies, National Belonging, and Citizenship in the Americas.

What is the relationship between citizenship, national belonging, and ideologies of race in the Americas? In what ways do gender and class differences affect this relationship? Focusing on these questions, the racial and social experience of U.S. Latinos are compared with that of the populations in various countries in the hemisphere. Theoretical readings and empirical examples. Enrollment limited to 20 juniors and seniors.

AMST 1902K. Collections and Colonialism.

Using a variety of media including fiction, critical theory, cultural history, photographs, audio, and digital archives and collections, this course will explore the ways that the act of collecting has been used to produce contesting ideas of personhood. Focusing on collecting and archival histories of Black and Native America, the course looks to the often overlapping formations of collections and archives to approach intersecting representations of race, gender, class, citizenship, nation, memory, history, and solidarity. For our final project, we will collaborate on building a digital collection in Scalar, working with the Center for Digital Scholarship and Brown's Special Collections.

AMST 1902N. Uncovering the Story of Latina/o Identity: Movement, Space and Culture.

This course examines the multiple ways of knowing and understanding Latina/o cultural identity and expression in the Americas. The story of a Latina/o cultural identity is mapped out as place and sentiment in both historical and contemporary periods. We utilize theory and method from both the social sciences and the humanities to uncover and better understand the story of Latina/o identity and ourselves. Enrollment limited to 20 juniors and seniors.

AMST 1902O. Urban Borderlands.

This course analyzes changing patterns of immigration from Latin America to the U.S. by comparatively examining the emergence of various Latino communities and cultures in selected cities. It explores interethnic relations among the various Latino communities, as well as Latinos' interactions with other racial and ethnic groups. The cities to be considered are Los Angeles, New York, Miami, San Antonio, Washington DC, and Providence—the last of which will be explored via student projects in the community. Enrollment limited to 20 juniors and seniors.

AMST 1902P. Women and American Modernism, 1900-1940.

No description available. Enrollment limited to 20 juniors and seniors.

AMST 1902Q. Chicano Studies Seminar.

Explores the culture and politics of Mexican people in the United States leading up to and through the 1960s and 1970s, and the post-nationalist period that continues to the present. Our approach will be interdisciplinary, including readings and films that explore the history, sexuality, art, music, labor, and gendered identities of this diverse community. Prerequisite: Introduction to America/Ethnic Studies recommended. Enrollment limited to 20 juniors and seniors.

AMST 1902R. Memory and Forgetting in Popular Culture.

Is it always good to remember? Does forgetting always imply failure? While it is easier than ever to document and access information, the rise of ephemeral media such as Snapchat indicates a growing desire for the past to remain past, and to not become a burden on the present. This course explores the tension between remembering and forgetting as it is portrayed in film, literature, and technology, to examine what they reveal about our belief in—and anxieties towards—human memory.

AMST 1902S. Dawnland Voices: Exploring Native New England.

In this course, we'll explore New England as many stories. In particular, we'll engage the connections and dissonances between the multiple stories that live with the land and its people and the central role that New England plays in the storying of the United States itself. Drawing on a range of texts including academic monographs, primary documents, poetry, and film, we will explore the stories that continue to live with New England as both a physical and incorporeal location. In doing so, we will also explore the complicated relationship that Native Studies has to the field of American Studies.

AMST 1902T. Henry James and The American Scene.

A study of James's representation of the American read in the context of the cultural changes of the late nineteenth century: Daisy Miller, *The American*, *The Portrait of a Lady*, *The Golden Bowl* and selections from his travel writings, including *The American Scene*. Writings by James's contemporaries, W. E. B. Du Bois and Thorstein Veblen will also be studied. Enrollment limited to 20 juniors and seniors.

AMST 1902U. Zombies Pirates Ghosts Witches.

Zombies, pirates, ghosts, and witches are not only characters in horror films; they are also the strange figures who either did not fit in or resulted from the many socio-racial hierarchies of the Atlantic world. Students learn about the literature and history of the Atlantic Caribbean region through its most subversive and disturbing icons. Texts include Pedro Cabiya and Sarah Lauro on zombies, Maryse Condé and Marlon James on witches, Toni Morrison and Tiya Miles on ghosts, and Michel Philip on pirates. Films include several horror classics, including *White Zombie* (1932), *Candyman* (1992), and *Get Out* (2017).

AMST 1902V. Visions of a Post-Industrial Society.

For decades people have predicted the end of industrial society: As factory work is replaced by automation or moved overseas a new society is to emerge based on pure information and creativity. In some ways these predictions have come true, but many of the utopian visions—abundant leisure time, social equality, enlightened leadership, a clean environment—have not. Through a mix of classic fiction, film, and social thought, this class will explore the ways people have imagined the possibilities and pitfalls of a post-industrial society. Who wins and who loses in these future visions and the reality they produce? WRIT

AMST 1902W. Queering Oral History: Theory and Practice of Building Alternative Archives.

In this course, students will engage the theory and practice of oral history with an emphasis on queer and trans frameworks. Students will learn about the history and importance of oral history as an alternative method, gain an understanding of LGBTQ history in the U.S., and research LGBTQ oral history projects. In practice, students will train in oral history methods and learn how to build accessible archives for oral histories. The final project of this course involves conducting oral histories with LGBTQ Providence and Brown community members to help build queer archives at Brown and in Providence.

AMST 1902X. Social Memory and the 1960s: From Nixon to Nostalgia.

From the Civil Rights movement to the Vietnam War, women's liberation to Woodstock, the 1960s were a time of political and cultural turbulence in the US. This class explores the ways in which the decade persists in American collective memory, and how its legacies have become embodied in modern day texts, images, music, memorials, and rituals. Students will use the interdisciplinary methods of memory studies to address these questions, analyzing both primary and secondary source material. Those interested in sociology, anthropology, and history will find new approaches to enduring questions about how societies remember and forget crucial events and experiences.

AMST 1902Y. The Black Female Body in American Culture.

This course on gender and representation will use the black female body as an example of the ways in which images, both verbal and visual, of women of color are utilized within American culture. Through literature, film, visual art, and popular culture, we will consider the legacy of slavery, the persistence of stereotypes, sexual violence, and black women's resistance. Enrollment limited to 20 juniors and seniors.

AMST 1902Z. Radio: From Hams to Podcasts.

This course examines the history of radio broadcasting and asks if a consideration of radio's historic flexibility can predict the future of this interesting medium. Readings will focus on the exciting new field of radio studies, emphasizing economics, structures, and listeners. Topics include radio's ability to cross borders, create racial and gender categories, and change programming possibilities. Enrollment limited to 20 juniors and seniors.

AMST 1903A. Missing: Museums, Memorials, & Gentrification.

In this seminar, we will study different strategies for representing absence in various contexts and media. Working with objects, controversial monuments, and gentrification, we will explore curatorial strategies, public art policies, and neighborhood resistance to community transformation, displacement, and change. Focusing on how the production of history also causes erasure, we will draw on memory studies, urban culture histories, and public humanities to engage with the potential problems and possibilities of exhibiting, correcting, and honoring what is absent. We will also explore how attending to what is lost or missing invites new ways of looking.

AMST 1903B. Alien-nation: Latina/o Im/migration in Comparative Perspective.

Explores how Latina/o immigration to the United States has reshaped the meaning of "America" over the last hundred years. We will study Latina/os in comparison to other im/migrants and examine how US immigration policy has created a nation partly composed of "alien" residents, some citizens, others not, who have constructed alternative notions of belonging. Enrollment limited to 20 juniors and seniors.

AMST 1903D. Health Inequality in Historical Perspective (AFRI 1920).

Interested students must register for AFRI 1920.

AMST 1903E. City of the American Century: The Culture and Politics of Urbanism in Postwar New York City.

This seminar will investigate the life, history and culture of New York City from World War II to the fiscal crisis of the mid 1970's, with a particular interest in transformations in the built environment of the city and region. We will primarily focus on the cultural representations, intellectual visions, and political struggles that arose around these transformations, but will also consider their effects on everyday life. Enrollment limited to 20 juniors, seniors, and graduate students concentrating in American Studies.

AMST 1903F. Topics in Asian American History: Migration, Race and Citizenship.

This seminar will explore the relationship between Asian Americans and the US State in three historical moments: the era of exclusion, WWII internment, and the post-civil rights era. We will look at citizenship as a cultural signifier that organizes race, gender, sexuality and class as well as a legal status. Enrollment limited to 20 juniors and seniors.

AMST 1903G. Oral History and Community Memory.

Students in this seminar will conduct oral history interviews and archival research to create an audio and visual history of one Providence neighborhood. Collected materials will be prepared for public presentation as a walking tour and web site. Enrollment limited to 20 juniors, seniors, and graduate students.

AMST 1903H. Space and Place: Geographies of the Black Atlantic.

Is the map on an iPhone representative of the space beneath our feet? Does a 'map' have to represent geographic space or can it represent something else? For centuries people have sought to make sense of the geographies of their everyday lives as well as environments out of their purview. In this course, we will engage with a number of approaches to space and place including historical, cultural, ethnographic, literary, geographic, and artistic, focusing on African diasporas and the Black Atlantic. Students will analyze texts, artworks, and web-based projects, and at the end of the course, create their own maps. Enrollment limited to 20 juniors, seniors, and graduate students.

AMST 1903I. Museum Histories.

Museums collect and display art and artifacts not only to preserve culture heritage, but also to educate, engage, and entertain. This course examines the history of museums—of art, history, anthropology, natural history, science and technology—to understand their changing goals and their changing place in American society. It also considers the changes within museums, in the work of curation, conservation, education, and social engagement. Students will read museum history and theory, engage with museum archives and other primary sources, and produce a research paper or a digital or public project.

AMST 1903J. Anthropology and Art.

Art is a historic topic of inquiry in anthropology. From the early days of collecting and displaying ethnographic relics in cabinets of curiosities to the bustling movements of art and artists in global art markets, anthropologists have sought to understand social life through art, and art through social life. Through readings, discussions, films, digital materials, and artworks, we will learn about artists, art worlds, art practice, and how anthropologists have studied the arts. Course assignments include critical responses to course material, a final research project, and participation in Providence arts events.

AMST 1903P. Please, Please Me.

This seminar will investigate theories of pleasure and its representation in a range of fictional texts. What is it that makes a text pleasing and for whom? How do we talk about pleasure and explain it to others? I am especially interested in the representation of pleasure from the 1970s on. Enrollment limited to 20 juniors and seniors.

AMST 1903Q. Out of Place: Regional Boundaries and their Transgression in Novels, Photography, Public Humanities.

This class explores the meaning of "region" in contemporary American culture. Focusing primarily on the West, we'll examine the construction and transgression of geographical and ideological regional boundaries. Questions considered include: What does crossing boundaries tell us about the stability and meaning of region? What role do race, gender, and nationality play in moving across regional lines? What do shifting regional identities tell us about the possibilities and problems in ways of transforming identity? Sources include fiction, essays, websites, and photography. We use skills and ideas built over the semester to consider the ways museums and other public sites construct regional boundaries. Enrollment limited to 20 juniors and seniors, with priority given to American Studies concentrators.

AMST 1903R. Big Business, the Bomb, and Smokey Bear: Cold War Origins of Today's Environmental Movement.

Beginning with the psychological, cultural, and environmental changes brought by the Atomic Bomb, this seminar traces Americans' growing environmental awareness and concern with corporate power. We will look at classics like Aldo Leopold's *Sand County Almanac* and Rachel Carson's *Silent Spring*, as well as films, poetry, popular texts, and histories complicating traditional notions of the origins and conduct of the contemporary environmental movement. Students will have the opportunity to explore an aspect of environmentalism or the environment in depth through a semester writing project. Enrollment limited to 20 juniors and seniors.

AMST 1903T. The Materiality of History: Material Culture Theory and Practice.

Focusing on Native American, early American, and contemporary US material culture, this course develops critical methods for analyzing historic materials, not as silent monuments to the past, but as legible research materials for scholarly work. Who studies 'things', and with what methods? From the invisible to the living to the monumental, what are the limits of "thingness"? What is the role of commodification and American consumerism? Through selected readings and site visits, we will identify 'best practices' for integrating artifacts, collectibles, and every day things with documentary research in narrating and exhibiting the past. Enrollment limited to 20 juniors and seniors.

AMST 1903V. Asian and Latino Immigration.

This seminar examines the ways in which the histories of Asian and Latino immigration parallel and intersect each other throughout US history. Capitalist development and labor migrations; wars and refugees; immigration policies and changing racial formations will be among the topics we explore. Enrollment limited to 20 juniors, seniors, and graduate students concentrating in American Studies and Ethnic Studies.

AMST 1903W. The Boy Problem: Male Adolescence as Social Pathology.

Focusing on the beginning, middle, and especially concluding decades of the 20th century, this course examines the ways in which both expert and popular discourse in the US have conflated male adolescence with social pathology and have constructed an image of the teenage boy as both symptomatic of and responsible for the nation's ills. Particular attention will be paid to issues of gender, race, and class. Primary source readings and original research will be emphasized. Enrollment limited to 20 juniors and seniors.

AMST 1903X. Style and the Man: Masculinity in Fashion and U.S. History.

This class will examine the role clothes have played in constructing notions of masculinity and manhood from the mid-19th century to the present. We will take seriously the oft-heard comment, "the clothes make the man," by studying the sartorial circumstances around the formation of men's fashion. These circumstances include class, ethnicity, race, gender, sexuality, and generation. Our study will be episodic and privilege New York and Los Angeles, though other locations will be considered comparatively. Enrollment limited to 20 juniors and seniors concentrating in American Studies.

AMST 1903Y. American Publics.

Americans worry about the quality of their civic life and fear its decline. We examine the public sphere's popular and political dimensions as well as challenges to the boundaries of American public life. Who is a citizen and thus eligible to participate? The course pays particular attention to concerns about the impact of new media—print, broadcasting, the internet. Taught simultaneously with the same course at the University of Melbourne, Australia, students will be linked digitally for discussion and collaborative writing. Enrollment limited to 20 juniors and seniors.

AMST 1903Z. Shrine, House or Home: Rethinking the House Museum Paradigm.

This seminar will examine historic house museums within the context of American culture from the founding of Mount Vernon in 1853 to their present decline in popularity and relevance. Utilizing sources from a variety of disciplines including literature, women's and family history, and museum and preservation theory and practice, students will re-examine the prevailing historic house museum paradigm and develop interpretation plans for house museums in the Providence area. Enrollment limited to 20. If oversubscribed, priority is given to students in the Public Humanities Programs and Department of American Civilizations. No prerequisites.

AMST 1904A. Memories, Memorials, Collections and Commemorations.

To understand how American culture thinks about the past, we will explore a range of texts including museum exhibits, historical society collections, memorials, and civic celebrations. These sites and objects, the material culture of memory, help us understand the construction of national, community and personal identity. Students will also undertake practical projects in memorialization and commemoration, among them designing the program for a new memorial to the Rhode Island slave trade. Enrollment limited to 20 juniors and seniors.

AMST 1904B. Henry James Goes to the Movies.

This course will focus on some of the novels and stories by James that have been made more than once into films or tv shows - *Washington Square*, *The Turn of the Screw*, *The Portrait of a Lady*, and *The Golden Bowl* - and study the narrative and visual choices as interpretations of James's texts. Critical readings on the art of fiction and the art of film will also be included. Enrollment limited to 20.

AMST 1904C. The Pacific Rim in American History.

Investigates the circuits of people, goods and ideas between Asia and the Americas. Although these flows have been at work for the past half millenium, this course will focus principally on three historical moments: the trading world of the 17th and 18th centuries; colonialisms and their critics in the late 19th and early 20th centuries; and the "American Century" in the late 20th century. Enrollment limited to 20 juniors and seniors.

AMST 1904D. End of the West: The Closing of the U.S. Western Frontier in Images and Narrative.

In 1893, Historian Fredrick Jackson Turner declared "the closing of the American frontier," touching off an argument among historians about the meaning and significance of European expansion and settlement in the area west of the Mississippi River. Historians, filmmakers, television producers and photographers have continued the debate in their writings, images, and drama that will be the subject of this class. We will consider the various ways The West has "ended" in popular culture and academia, and consider how these narratives shape our present perceptions of the region and the people and cultures that inhabit and border it. Enrollment limited to 20 juniors and seniors.

AMST 1904F. The American Experience: The Southeast Asian Refugees/Americans.

Explores the complexity of the American experience, the displacements and diasporas of the Vietnamese, the Cambodians, the Hmong, the Lao, and the Lu Mien in America through multiplicity of perspectives and interdisciplinary approach. Special emphases are on the reinvention of new lives in New World, the American-born generation, how the American-ness and the sense of "home" are constructed, defined, and contested through literary and cinematic works, self-representations, and cultural productions written and produced by these new Asian Americans themselves. Enrollment limited to 20.

AMST 1904G. Museums, Identities, Nationhood.

Will explore the national museum as a cultural institution in a range of contrasting contexts, revealing how these museums have been used to create a sense of national self, deal with the consequences of political change, remake difficult pasts, and confront those issues of nationalism, postcolonialism and multiculturalism which have come to the fore in national politics in recent decades. Enrollment limited to 20 juniors, seniors, and graduate students.

AMST 1904H. The Teen Age: Youth, Society and Culture in Early Cold War America.

An interdisciplinary and multimedia exploration of the experiences, culture, and representation of youth in the United States from the end of World War II through the beginning of the Vietnam War. Enrollment limited to 20 sophomores, juniors and seniors.

AMST 1904I. Art/Place.

This course surveys the many ways in which contemporary artists respond to, remake, and intervene in places, and teaches students to articulate their own creative responses to place. We will be working intensively in Providence's Jewelry District, collaborating with the nonprofit Artists in Context to create a public artwork, and developing each person's creative practice in response to the narrative and aesthetic prompts of this contested space. The course will culminate in a final exhibition of student projects curated by the students themselves. Enrollment limited to 14.

AMST 1904J. The Asian American Movement: Communities, Politics and Culture.

In 1969 students at S.F. State College invented a new social category; they called it Asian America. This seminar begins with an examination the Asian American Movement, its origins and aspirations, its ideological cross currents, its failures and enduring legacies. But the central question we will ask is, what relevance does the Asian American Movement have for struggles for social justice today? Enrollment limited to 20 juniors and seniors.

AMST 1904K. Power + Water: Material Culture and its Environmental Impact.

Students explore material culture, its impact upon the environment in the US prior to Industrial Revolution and examine the relationship of this earlier production to current issues of pollution and climate change. In the 18-19th centuries, houses, furniture, whale products were staples of American craft and ingenuity. This material culture tells the story of how gathering raw materials and converting them into usable products came at a severe cost to watersheds, forests, species, humans. These examples show that the seemingly insatiable human urge to control/transform resources into items for consumption leads to serious consequences for the earth's climate and inhabitants.

AMST 1904L. Cultural Heritage, Curation and Creativity.

The course examines current theories and practices in cultural heritage work from various international perspectives and places them in dialogue with practices, theories and critical perspectives from the contemporary arts. It offers students the opportunity to participate in a practical and creative cultural heritage project, realizing a curated experience/event/ experience within the urban environment of Providence. Questions of material and form; the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Following readings in cultural heritage theory, curatorial studies and critical theory, the course will engage students both intellectually and practically through individual and group curatorial projects. Enrollment limited to 14 juniors and seniors.

AMST 1904M. Charles Chapin and the Urban Public Health Movement.

Examines the science, politics, and programs of the 19th and early 20th century urban public health movement. Scope will be national but the focus will be on Providence, particularly during the tenure of Charles Chapin as Superintendent of Health. Will result in the mounting of an exhibit illustrating and explaining one of facet of the movement. Enrollment limited to 20 juniors and seniors.

AMST 1904N. The Korean War in Color (ENGL 1761V).

Interested students must register for ENGL 1761V.

AMST 1904O. Native American Environmental Health Movements (ETHN 1890J).

Interested students must register for ETHN 1890J.

AMST 1904P. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).

Interested students must register for ENGL 1900R.

AMST 1904Q. Engendering Empire (ETHN 1890K).

Interested students must register for ETHN 1890K.

AMST 1904R. New Narratives: New Media: New Museums.

This course explores the challenges to narrative modes, institutional patterns, and models for studies in material culture that are posed by emerging digital media practices. This course will focus on the example of the collections and resources of the Haffenreffer Museum of Anthropology. Readings in brain science and anthropology that focus on the cognitive and social mechanics of cultural capital formation to project development techniques in simulation and prototyping that derive from movie production, interaction design, game development and architecture. Students from a broad spectrum of arts and science backgrounds, including specifically those from museum curation and computer science, are welcome. Enrollment limited to 15.

AMST 1904S. Ethnic American Folklore: Continuity and the Creative Process.

The course investigates how folklore and the oral culture of diverse cultural groups have transformed within their texts and in their creative representations and meanings. It looks into the dynamics of cultural continuity and the creative process involved, from oral narratives, foodscape, family lore, the senses of place, and the senses of home. At the juncture of the oral, the written, the popular, and the high tech, what are the new cultural forms, new cultural products, communication milieu and venues negotiated and contested. Anthropological field research methods and training will be a major emphasis of the course. Enrollment limited to 20.

AMST 1904T. Women and Work in the 21st Century.

Debates about women and work seem to be everywhere in American culture, dominated by the question of whether professional women can "have it all." Simultaneously, women—especially women of color—continue to be concentrated in the lowest-level, most poorly-paid jobs. And as more families depend on women's income, the contradictions between waged work and unwaged family work grow more acute. Controversies about women and their labor—waged and unwaged—have a long history in the U.S. This course will explore current debates from historical, sociological, and theoretical perspectives, with particular attention to the impact of race and class. Enrollment limited to 20 sophomores, juniors, seniors.

AMST 1904V. Decolonizing Minds: A People's History of the World.

This seminar will explore the knowledge-production and military-financial infrastructures that maintain empires, as well as the means through which people have either resisted or embraced empire. While some attention will be made to the 19th and early 20th century colonial context, the bulk of the course will focus on the Cold War liberal era to the neoliberal regime that continues today. Possible topics include: popular culture and ideology, the Cold War university, area studies, international anti-war networks, transnational labor activism, the anti-colonial radical tradition, and the Arab Spring/ Occupy Movements. Weekly readings; evaluation based on participation and analytical essays. Enrollment limited to 20. No overrides will be given before the semester begins. Please come to the first class meeting if you are interested in taking the course.

AMST 1904W. Native American Environmental Health Movements (ETHN 1890J).

Interested students must register for ETHN 1890J.

AMST 1904X. Imagining And Depicting China In America.

Geographically remote and less-obviously intertwined politically and culturally, China's distance has fostered an active imaginary, producing rich visual and textual resources. This seminar examines narrative and visual culture over the long period Americans have been fascinated with China and the Chinese, from the 18th century to the present. Visual primary sources are our principal "texts" and include paintings, cartoons, decorative arts, photography, films, fiction, news articles, and government documents. The goal of the course is to interrogate how we envision China and the Chinese today, placing that vision within a critical historical perspective. Enrollment limited to 20.

AMST 1905A. Crises in American Capitalism.

We are now in the midst of what is commonly called the Great Recession—the biggest economic crisis since the Great Depression. This course investigates these two crises in American capitalism: how they were caused, resisted, represented, and remembered. Students will be asked to interrogate the meanings of these economic crises, and to consider their various political and cultural uses. Assigned texts will include history, fiction, journalism, film, memoir, and photography. Enrollment limited to 20 sophomores, juniors, and seniors.

AMST 1905B. Media and Modern Childhood (GNSS 1960S).

Interested students must register for GNSS 1960S.

AMST 1905C. Mainstream Journalism in America (through the prism of The New York Times).

Jefferson is supposed to have said that if he were forced to choose between a free government and a free press he would choose a free press, because without it a free government would not survive. It is certainly true that newspapers, and later the electronic media, have had major impacts on American politics and society. Now these media are in a period of convulsive change; their business model is broken and no one can fix it. This course will consider the growth, evolution, influence and future of these media, particularly The New York Times. Enrollment limited to 20.

AMST 1905D. African American Musical Theatre (MUSC 1905D).

Interested students must register for MUSC 1905D.

AMST 1905E. American Poetry II: Modernism (ENGL 1711A).

Interested students must register for ENGL 1711A.

AMST 1905G. Literature and the Problem of Poverty (ENGL 1710K).

Interested students must register for ENGL 1710K.

AMST 1905J. American Poetry I: Puritans through the Nineteenth Century (ENGL 1511O).

Interested students must register for ENGL 1511O.

AMST 1905M. Whose Heritage?: National Landmarks for Diverse Publics.

In this course students examine the commemoration of specific sites, private and public, in creating, remembering, and preserving public history. Through theoretical readings, case studies, and workshops, students explore the intersection of people—as individuals, community members, and citizens—with their built environment, historic memory, and narrative. We explore how cultural heritage gets made, who chooses the sites, and whose history gets remembered by writing a U.S. National Park Service Landmark nomination for a local Chinese American site. The course also compares American cultural heritage programs with those of other countries and provides practical experience with National Park Service processes.

AMST 1905N. War and the Mind in Modern America.

This course examines how the crucible of war has shaped modern conceptions of human nature. Moving from the Civil War to the present, we will consider questions such as changing theories of combat trauma, evolutionary and social scientific explanations for why people fight wars, and the role of memory in individual and collective understandings of violent conflicts. Students will analyze representations of war in film and literature in addition to reading historical and theoretical texts.

AMST 1905O. Reading and Righting Histories of Violence.

This seminar proposes "histories of violence" as a useful framework to interrogate the varied forms of violence that constitute Western liberal modernity. These forms include systems of state power and imperial practices; subjective violence through raced, gendered, and sexualized hierarchies; and narrative violence that prevents histories and voices from emerging through the erasure of archives and narrative silencing. Course readings consider ongoing local and transnational struggles to reckon with the violent histories of slavery, empire, colonialism, nationalism, and democracy. They offer interdisciplinary models for researching and narrating these histories. Class discussions with consider avenues for reckoning with histories of violence.

AMST 1905Q. Laboring Women: Work, Reproduction, and Leisure since Reconstruction.

This course examines US women's history from the late 19th century to the present, with a focus on labor broadly defined. It will consider how differences among women (e.g. race, ethnicity, religion, sexuality), as well as their status as women, historically shaped their experiences of work, cultural life, activism, and reproduction.

AMST 1905R. Theory and Practice of Local History (HIST 1972E).
Interested students must register for HIST 1972E.**AMST 1905S. Enslaved! Indians and Africans in an Unfree Atlantic World (HIST 1970B).**

Interested students must register for HIST 1970B.

AMST 1905T. Imagining Formosa: American Writings on Taiwan.

American accounts of Taiwan mid-nineteenth century to present are the focus of this seminar. Beginning in 1860, Euro-American merchants, diplomats, missionaries, ethnographers, and explorers began arriving in ever-increasing numbers. We will read representative texts written by these visitors during years of treaty-port imperialism, Japanese colonial rule, martial law, and later democratization, including post colonial criticism and a novel set in 1950's Taipei and a collection of short stories. The island's complex aboriginal and Chinese ethnic population is the subject matter of much of this writing, and we will explore issues of indigeneity and ethnicity.

AMST 1905V. Digital Communities.

Community and online engagement have been falsely cast in a dichotomous light -- either a cure-all or a sure failure. Working with local and online communities will shape our understanding and questions about the complexities of groups. We'll learn context, tools, and tricks for building powerful community-based campaigns. Students examine how projects can gain new participants while maintaining their focus and think about the differences in community involvement in on-line spaces and off. In a hands-on project, this class explores how to work together in digital space, to create moving media, and to build a campaign for support and growth.

AMST 1905Z. Eyes on the Prize: Literary Fiction as Cultural Capital.

In this course we will read selected novels that have won recent national prizes, including the Pulitzer Prize, the National Book Award, the Newberry Award, the Anisfield-Wolf Award, to understand how the creation and circulation of cultural capital works in the USA. Alternative modes of evaluation, such as #Booktok and Oprah's Book Club, will be explored. Students will choose what criteria will be considered for the readings in the second half of the course. Particular attention will be paid to gender, sexuality, race and class as categories of analysis in order to explore the relations between art and prestige in contemporary culture.

AMST 1906H. Beauty Pageants in American Society.

Beauty pageants are often ridiculed, and even vilified, in American society. Yet their cultural power—from "There She Is" to Toddlers + Tiaras to pageant waves—is undeniable. What accounts for the enduring power of beauty pageants? This course draws on inter-disciplinary scholarship across the social sciences and humanities to examine how and why pageantry and American femininity have become linked in the public consciousness. By the end of this course you will be able to use beauty pageants as a lens to carefully examine gender, race, age, and appearance, and apply that critical thinking to other pop culture phenomena.

AMST 1906I. Decolonizing Museums: Collecting Indigenous Culture in Taiwan and North America.

This course addresses "global indignity" in comparing ethnographic collections in Taiwan and North America. How do Anthropology museums maintain and interpret objects collected under English, US, or Japanese colonialism. In hands-on and virtual examination of museum collections, students follow ethnographic artifacts from useful circulation to glass cabinets—and ultimately to art galleries. We explore collecting and representation strategies of "ethnic" objects in relation to colonialism, decolonization, ethnic politics, and nationalism. What are strategies of the post-colonial museum and indigenous-led design?

AMST 1906J. Race, Gentrification, and the Policing of Urban Space (PLCY 1701W).

Interested students must register for PLCY 1701W.

AMST 1906K. Crimes of Gender and Sex: Producing and Imprisoning Criminals in the Age of Mass Incarceration.

Growing interest in mass incarceration has brought new attention to longstanding critiques of the criminal justice system. This course looks beyond failings such as "tough on crime" sentencing and racist policing to examine criminal justice as a system that defines and produces criminality. Specifically, we will examine criminalization as a social, political, and cultural process that not only makes certain bodies "criminal," but also reinforces dominant beliefs about gender, sexuality, and sex. We will explore theories of criminality, methods of policing and imprisonment, rehabilitation initiatives, and prison activism through an intersectional lens.

AMST 1906M. Making Knowledge in the Progressive Era: Institutions, Spaces, and Ideas.

Who makes knowledge? How is it shaped by intellectual, political, and material ambitions and constraints? These current concerns also preoccupied U.S. society at the turn of the 20th century. During the Progressive Era — a time of massive technological change, social upheavals, and racial tensions — educators, researchers, and artists charted new ways of producing and disseminating knowledge. Students will analyze American knowledge cultures by reading fictions, memoirs, and philosophical/scholarly writings by Henry Adams, Jane Addams, Willa Cather, John Dewey, and W.E.B. Du Bois and by exploring other cultural artifacts and media, including visual representations, maps, architectural plans and archives.

AMST 1906N. Whiteness, Power, and Privilege: The Invention and Persistence of the White Race.

Terms like whiteness and white privilege have entered the American mainstream in the wake of racial tensions and the rise of movements like Black Lives Matter. This course seeks to situate historically, socially, psychologically, politically, economically, and corporeally what is meant by whiteness and how it affects our daily lives in this country and at a global level. Through engagement with classic texts in critical whiteness studies and select case-studies, students will discuss the invention, development, and power of whiteness. From the advent of race-based slavery to the 2016 Presidential Election, this course explores the meaning and power of whiteness.

AMST 1906P. Food in American Society and Culture.

How do we define American food and how does food define Americans? What determines what we eat, how we eat it, and what we believe we should eat? How is food used to construct and declare ethnic, racial, regional, class, and gender identities? How have food and nutrition been employed as signifiers of social justice and injustice and as sites of political struggle? What issues inform current discussions of the economics of local, national, and global food production and consumption? What is meant by eating responsibly? This course will examine these and other related question currently animating food studies.

AMST 1906Q. The History of Children and Childhood in America.

We will examine the evolution of childhood—as both a socioculturally constructed concept and a lived experience—from the colonial period to the present. In doing so, we will explore the impact of race, gender, class, and region on those constructions and experiences and consider the interpretive possibilities and challenges offered by various types of evidence: visual and literary representations, memoirs, child rearing advice, toys and play, children's literature, clothing, and protective and restrictive laws.

AMST 1906R. Law and Transformative Social Change.

What potential does the law hold to bring about transformative social change in today's society? Relatedly, what strategies and approaches have social movement activists utilized to engage lawyers and the broader legal system? We will answer these questions through an examination of models of activist and public interest lawyering from the Civil Rights, Environment Justice, Immigrant Rights and same sex marriage movements. Readings will draw from sociological, anthropological, legal and historical texts and legal cases with a focus on exploring multiple aspects of a legal decision.

AMST 1906S. Narratives of Blackness in Latinx and Latin America (ENGL 1761B).

Interested students must register for ENGL 1761B.

AMST 1906T. Captive Voices: Atlantic Slavery in the Digital Age (HIST 1970G).

Interested students must register for HIST 1970G.

AMST 1906U. Culture as History: Making the 20th Century United States.

This interdisciplinary course explores selected currents in U.S. cultural history from the late nineteenth century to the end of the twentieth century. Thematic explorations trace the historical development of American cultural forms and practices, showing how transformations in communications, media, and consumption shaped Americans' experience of capitalism and market expansion, ideas of self and society, social conflict around questions of race, class, gender, nationalism and empire, as well as immigration, migration, and social movements of both the left and right. Our broad goal will be to understand how culture came to shape how historical change unfolded in this period.

AMST 1906V. Virtual Bodies: Play, Power, Performance.

This seminar investigates digital media practices at the intersection of virtual and embodied experience, from video games and virtual communities to viral dance videos and motion-sensing surveillance systems. How do digitally mediated play, performance, and participatory culture incorporate and/or undermine technologies of power and control? How have new interfaces and media platforms invoked and reshaped ideas about liveness, creativity, authenticity, community, and privacy? What happens when embodied techniques and repertoires are taught and learned using digital media? Readings draw on media ethnography, performance studies, interface studies, and theories of intersectional embodied identity. Class members will undertake a series of practice exercises in which they learn new skills from online sources and collectively reflect on this process. Registration permission granted based on questionnaire distributed at first class meeting.

AMST 1906Y. Bodies at Work: Disability and Capitalism (STS 1700R).

Interested students must register for STS 1700R.

AMST 1906Z. Senior Seminar in Science, Technology and Society (STS 1900).

Interested students must register for STS 1900.

AMST 1907A. Whiteness and Otherness in Opera.

This course engages with how race is portrayed in opera, through the music, libretto, programming, and casting. It is designed to give students an overview of theories of race and power as it relates to music, specifically opera, and how certain ideologies are perpetuated through cultural products. Students will be encouraged to think critically, and apply the concepts learned to a variety of types of music through class activities and projects.

AMST 1907B. Indigenous Peoples and Places: How Lines Are Drawn.

What is indigenous space? What is a traditional cultural place? What constitutes "Indian Country" today? What is the relationship between land base and sovereignty? How has space been contested? How have Natives and settler-colonists conceived land and territory over time? This course is designed to introduce students to geographies of Native America including, culture areas, the mapping of languages and politics, the history of cartography and will encourage students to think critically about colonization/decolonization.

AMST 1907C. James Baldwin (ENGL 1711S).

Interested students must register for ENGL 1711S.

AMST 1907D. Anthropology of Place.

Interested students must register for ANTH 1910B.

AMST 1907F. Queer Indigenous Studies and Two-Spirit Critique.

The structures of settler colonialism are designed to wholly dispossess, erase, and eliminate the fullness of Indigenous life. As such settler colonialism is heavily invested in both heteropatriarchy and heteronormativity as regulatory schemes oriented toward extraction and conquest. Through a series of theoretical readings, poetry, and literature, this Senior Seminar will explore the unruly "queerness" of Indigeneity. During this course students will develop a keen understanding of the ways concepts such as relationality and (in)humanness are co-constitutive of a queer Indigenous analytic, while also learning how settler colonialism has impacted contemporary understandings of gender and sexuality. Students will explore the complexities of two-spirit identity through memoirs and reflective media, while also cultivating knowledge of two-spirit organizing efforts and theoretical interventions within the field of Native American and Indigenous Studies.

AMST 1907G. Contemporary Native American Fiction.

This course examines Native American literary expression from 1968 to the contemporary. We will focus on fiction, particularly the short story and novel genres, to think about how Native Americans creatively mobilize these literary forms to combat a history of misrepresentation and erasure in the American literary canon and national imaginary. We will consider how these authors utilize fiction to express the realities of Native American life under ongoing United States settler colonial occupation.

AMST 1907H. Un/Documented Immigrants in America: Histories of Paperwork, Institutions, and Illegality.

This class explores the history of undocumented immigrants in the United States and the politics of immigration, with a focus on the late nineteenth to early twenty-first centuries and the experiences of migrants from Asia, Latin America, Africa, and the Caribbean. We focus especially on the rise of the immigration state and problem of bureaucracy in modern life in general, and how people's encounters with the state have sorted the "deserving" from "undeserving" and the "legal" from the "illegal." Readings will include works on the history of bureaucracy, immigration to the United States, and memoirs by migrants. Class will be discussion oriented and writing assignments will emphasize skills such as reading primary and secondary sources, revising drafts, and working with peer editors.

AMST 1907K. Environmental Humanities in Queer and Trans Perspective.

This course surveys queer and trans cultural production as well as theory to glean how experiences of queer and trans embodiment speak to broader ecological histories, relations and conditions. What is distinctive about queer and trans experiences of time, space, place and "the environment"? What do queer and trans perspectives reveal about shared and shifting worlds? How might the environmental humanities account for queer and trans life, and be changed by it? Course content includes narrative and theoretical work from Queer and Transgender Studies and adjacent fields, including feminist philosophy, Disability Studies, and American Studies. Readings also draw from phenomenological, Deleuzian, and new materialist schools of thought around questions of embodiment, relationality, place, and the planetary present. All interested students, regardless of concentration, are encouraged to enroll. Writing-Designated (WRIT) course, no prerequisites.

AMST 1920A. Contemporary Narratives of US Slavery.

The antebellum African American slave narrative inaugurated Black self-representation in print. Characterized by scholars as neo-slave narratives and, later, post-neo slave narratives, contemporary fictions of US slavery deploy the formal features and thematic concerns of the slave narrative to reveal Black freedom dreams of later periods. Examining recent literary, filmic, and televisual representations of US slavery, this course foregrounds racial slavery in the establishment of longstanding socioeconomic and political asymmetries across race, gender, and class in the US. And it analyzes the ways in which imaginative depictions of racial slavery seek to address and ameliorate such asymmetries. Our class will pay particular attention to how contemporary Black writers and filmmakers thematize labor, love, gender, power, pleasure, community, and resistance among the enslaved and their descendants.

AMST 1950. Pursuit of Happiness: Environmental Justice and Indigenous Rights.

Co-instructors Ron Potvin and Lorén Spears will lead exploration of indigenous cultural survival in the midst of ecological exploitation by the colonizers of Rhode Island and North America. They will address these issues with tours to native heritage sites; meetings with native experts and advocates; historical scholarship; and fiction, poetry, and song. Students will communicate their understanding of course content through writing, creative expression, and multimedia. The class will contribute content to a travelling exhibition organized by the Humanities Action Lab for its 2019 Initiative on Migration, Climate Justice, and Environmental Justice.

AMST 1970. Independent Reading and Research.

Required of all honors candidates in the senior year. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. S/NC

AMST 1971. Digital Media and Virtual Performance (MUSC 1971).

Interested students must register for MUSC 1971.

AMST 1977H. Critical Race Theory Now (HMAN 1977H).

Interested students must register for HMAN 1977H.

AMST 2010. Introduction to American Studies.

Introduction to American Studies required of all first-year graduate students in American Studies. Graduate students from other departments may enroll with the permission of the instructor.

AMST 2020E. Introduction to Interdisciplinary American Studies.

This graduate-level course offers an introduction to the discipline of American Studies through a close reading of four important texts representing different methodologies and theories within the discipline. We will also read a series of seminal articles focused on transnationalism, highlighting the significance of border-crossings to the American experience throughout the semester. The goal of the course is to familiarize students with pedagogical approaches within American Studies, through active seminar discussions, fieldtrips within the community, and work with material and visual media as well as secondary texts.

AMST 2050. History of Black Travel - AFRI 2050.

Interested students must register for AFRI 2050.

AMST 2220A. Digital Scholarship.

This course examines how the social sciences and humanities changed as a result of the information revolution. We will look at changes in museums, publishing, knowledge production, and pedagogy. Students learn digital tools and use them to create new media projects experimenting with public scholarship, digital humanities research, archival tools, and/or classroom possibilities. Digital novices welcome. Enrollment limited to 20.

AMST 2220B. Culture, Politics and the Metropolitan Built Environment.

This interdisciplinary readings seminar will provide graduate students with an introduction to recent scholarly work on 20th century and contemporary cities and suburbs. Readings are drawn from cultural, political, social, and intellectual history, American Studies, political science, sociology, and ethnography. They will investigate the interconnections between urban and suburban development and the role of ideology, class, gender, race, and globalization in shaping planning, architecture, culture, policy, politics, and social movements. This class is open to students in American Studies, History, Sociology, Political Science, Anthropology, and other disciplines who find themselves interested in multi-disciplinary approaches to the study of cities and suburbs.

AMST 2220D. Museums in Their Communities.

This seminar examines in detail aspects the internal workings of museums (of anthropology, art, history, science, etc.) and their place in their communities. Accessions, collections management, conservations, education, exhibition, marketing, research, and museum management are among the topics discussed; the focus varies from year to year. Open to graduate students only.

AMST 2220E. American Orientalism and Asian American Literary Criticism (ENGL 2760Y).

Interested students must register for ENGL 2760Y.

AMST 2220F. The Transnational Practice of U.S. Popular Culture.

This graduate seminar examines popular culture within a transnational framework, exploring both the founding texts in the field and the latest works by historians, sociologists, anthropologists and communications scholars. Topics include the economics of the culture industry, globalization/cultural imperialism/domestication, audience research, and the history of cultural flows, from circuses to Bollywood. Students can take the class as either a reading or project course. Assignments include a short theoretical paper considering definitions (popular culture v. mass media, for example) and either a research paper/project or an annotated bibliography.

AMST 2220G. Old Media New Artists: Innovation and Contingency in African American Culture.

What are the defining characteristics of newness in twentieth-century African American culture? How have black creative artists repurposed their respective disciplines in accordance with and against the shifting proclivities of African American social politics? Through an interdisciplinary focus that considers music, literature, visual arts, and interactive media, this seminar proposes several alternative epistemological frameworks for recognizing the emerging artistry of our time. Enrollment is limited to 20 graduate students.

AMST 2220I. Skin Deep: Reading Race, Reading Form.

There is a movement away from symptomatic/paranoid readings of literature. In 2009, Stephen Best/Sharon Marcus pitched this in their call for surface readings, which deals with what is manifest/present in texts, rather than the latent/concealed. I hope to get beyond politically-instrumental readings of literature/to thinking in a sustained fashion about language/form/aesthetics of race. The seminar will divide between reading histories/theories of race (obsession with physical variation as race and technologies of seeing that we use to read race)/working through a range of post-nationalist works of literature/sharpening our understanding of reading as a mean-making event. Limited to Grad Students.

AMST 2220J. Introduction to Critical Race Theory.

This graduate seminar will explore the foundations and central tenets of Critical Race Theory, from its origins in Critical Legal Studies, to current applications, debates, and evolutions, with particular attention to CRT's intersections with the field of American Studies. We will also bring in CRT "offshoots" such as TribalCrit, LatCrit, AsianCrit, and DisCrit. CRT posits that racism is endemic to society, but that we must also remain committed to social justice and praxis. How do we navigate these tensions, use CRT to provide a toolkit for navigating scholarship, and work toward social change in the realms of race and racism?

AMST 2220K. The Body (HIST 2981J).

Interested students must register for HIST 2981J.

AMST 2220R. Popular Music Studies.

This graduate seminar offers a critical exploration of interdisciplinary scholarship on popular music and related cultural formations. Class readings emphasize ethnographic approaches grounded in American Studies, media studies, and ethnomusicology, alongside relevant bodies of critical theory. We will consider production, circulation, and reception practices, as well as the erosion of the barriers separating these domains. Case studies foreground popular music scenes in the Americas and the United Kingdom—especially Afro-diasporic and Latinx genres and practices—but readings, discussions and student projects will range beyond these areas. Major topics include musical subcultures; transnational circulation; club/dance music; listening practices; and genre studies focusing on hip-hop, reggaetón, and K-pop. Registration permission granted based on questionnaire distributed at first class meeting.

AMST 2220S. Diaspora, Displacement, Transnationalism (HIST 2971P).

Interested students must register for HIST 2971P.

AMST 2220Y. Aesthetics of Relation: Minoritarian Gestures in the Visual Realm.

Focusing on recent scholarship, this course explores the use of aesthetics among minoritarian subjects to elaborate a politics of relation. Exploring origins in women of color, black radical, and queer of color scholarly traditions, alongside methodologies from cultural studies and visual culture studies, we will read diagnoses of and responses to power as well as imaginings of alternate social formations. In addition to recent scholarship, we will also consider recent exhibitions and artist talks.

AMST 2220Z. Currents in Popular Music: Race & Sound.

Race and sound have a material relationship marked by imagination, fantasy, and deceit. Race is both social construct and lived reality; it changes across time, space, and modes of expression. Music, (or here, sound), can both express creative insurgency and reproduce cultural hegemony. In this seminar, we will read for the duality of racing sound – declaring particular racial identities at particular times by ascribing those identities to sonic markers – and sounding race; making racial identity audible through listening and performance practices. We will also engage contemporary discourses of popular music and sound studies by reading popular music books published in the last 5 years. By focusing on the ways that these texts are constructed and examining continuities and disjunctions across monographs, we'll work to understand the current landscape of popular music studies and enter into that discourse ourselves.

AMST 2221A. Accessioning, Archiving, and Antiracism: Critical and Creative Approaches.

This course challenges artists, practitioners, and scholars to push the hermeneutic limits of archives. The course presents a series of critical essays, case studies, and workshops to support students as they develop theoretical expertise, creative thinking patterns, and practicable skills. Students will develop finding aids that support enhanced accessibility, and analyze systematic research practices that build toward equity. Ultimately they will develop acquisition plans in alignment with the Brown Libraries new acquisition plan.

Beginning with an overview of what constitutes an archive, this syllabus attempts to guide learners through the acquisition process. It foregrounds the ways that anti-racist activists and artists work in and against archives, exploring how collecting professionals and amateurs alike can use the acquisition process to challenge dominant white supremacist narratives and hierarchies of knowledge in the service of more equitable and just institutional development.

AMST 2221B. Immigration and the Borders of US Empire.

Since the founding of the United States, we have debated and struggled over the boundaries of American nationhood, who may claim the rights and protections provided by the state, and where the lines of inclusion/exclusion are drawn. This course will focus on two interrelated themes. The first is the implementation of immigration and nationality controls designed to manage cross-border traffic and restrict membership in the national community. The second is to explore how the projection of US power beyond its territorial borders (e.g. US empire) has fueled cross-border movement between metropole and colonial/postcolonial zones. We will highlight the ways in which the US's encroachment of borders outside its territorial domain raises important questions about the meaning and legitimacy of national sovereignty and the fashioning of immigrant "illegality."

AMST 2221C. Afro-Asian America: Intraminority Relations in Historical Perspective.

In this graduate course, we explore the subject of Asian-Black relations in the United States, domestically and internationally, toward a deepened understanding of how intraminority relations inform U.S. race relations and racial formations. Topics include shared and overlapping struggles against colonialism, interracial solidarity and the Third World Left, the theory of racial triangulation, social and sexual intimacy across race, and the so-called "Black-Korean conflict" of the 1980s and 1990s. Readings will chart how the study of Asian-Black relations have changed over time and illuminate why the subject remains salient while drawing from a range of discipline-based and interdisciplinary approaches. History and historical approaches will be especially foregrounded, though the class also includes attention to approaches from interdisciplinary and other discipline-based fields.

AMST 2221D. Tracked: Critical Surveillance Studies.

This graduate seminar investigates historical and contemporary technologies and practices of surveillance, drawing on the established field of Surveillance Studies as well as relevant literature in performance studies, media ethnography, software/platform studies, sociology of labor, and history of science. We will address confluences of moving bodies, disciplining technologies, and state power: for example, motion-sensing systems operating at scales ranging from individual fitness trackers to drone monitoring of refugee movements. Key topics include sousveillance, dataveillance/data bodies, racialized surveillance, algorithmic bias, surveillance art, and surveillance capitalism.

AMST 2221E. Sensing Sovereignty: Theorizing Indigenous & Minoritarian Aesthetics.

This graduate seminar explores the rich textures of Indigenous aesthetics by drawing on the fields of Native feminisms, performance studies, queer of color critique, and Indigenous theory. Students will consider Indigenous peoples' engagement with aesthetics as integral to the persistence of Indigenous paradigms. We will ask: How are aesthetics a critical site of both colonization and decolonial refusal? How can we collectively explore the relational capacities and overtones imbued within Indigenous and minoritarian aesthetics? How do activists, artists, writers, etc. employ aesthetics as the conduit to building anticolonial solidarities across diverse contexts? We will explore the sensory paradigms framing aesthetics asking how these register within the body and the environment to build, sustain, and live in otherwise worlds. Simultaneously, students will explore the way Indigenous and minoritarian uses of media challenge settler colonial and carceral regimes of white supremacist power.

AMST 2221F. Native American Structures of Feeling: Affect, Subjectivity, and Indigeneity in America.

This graduate seminar stages a meeting between the field of Native American and Indigenous Studies and the capacious network of affect theory to attend to the experiences of Native Americans living amidst ongoing U.S. occupation of their lives and lands. Taking our cue from Driftpile Cree poet Billy-Ray Belcourt, we will question the ways in which the "grammar of Indigenous Studies misapprehends the tumult of everyday life" through the field's emphasis on sovereignty and political recognition. We will trace a colonial history that has made categories such as "the human" and "the subject" unavailable to Native people, and consider the affective conditions created for individuals living within a state made possible only through their elimination. What lives do Native people forge despite the confines that settler colonialism carves for them? How might we better understand these lives through Native literature?

AMST 2221G. Antidisciplinarity and Black Study.

How do disciplines discipline us? What would it take to refuse the order of the world as it is? At this current turn of intersecting crisis, what then does Blackness mean at the end of the world as we know it? This graduate course considers the critical juncture between Black subjection and insurgency at the end of the world by tracing how Black scholars and creatives have critiqued and reimagined knowledge production. Following the insurgent grounds of Black study, we will engage the work of thinkers such as Christina Sharpe, Zakiyyah Iman Jackson, Hortense Spillers, and Fred Moten alongside Black literary and cultural artists that stage figurations of and beyond the Human as a site of possibility.

AMST 2221J. Advanced Projects in Public Humanities.

This course serves as an advanced project- or research-based course for graduate students working in the public humanities. We will be guided by the topical interests of each cohort, focusing on the strengths of research clusters in Brown's Simmons Center for the Study of Slavery and Justice. Final projects will take various forms including: Master's degree theses, public exhibitions, collaborative curatorial projects, and/or public education initiatives.

AMST 2221K. Sovereignty and Social Death: Between Black and Native Studies.

This graduate seminar serves as an introduction to the fields of Black Studies and Native American Studies and considers their intersections. We will interrogate America as a project of colonization that is materially and ideologically premised upon the enslavement and accumulation of Black people and the elimination of Native people. Given this structural foundation, we will think about the differential modes of racialization experienced by each of these populations while we consider the way that race is integral for formulations of capital, coloniality, whiteness, and the national fantasy of America. We will read and discuss key theories of personhood, subjectivity, and race, in addition to histories of racial capitalism and settler colonialism. This seminar ends by engaging with theories and practices of decolonization and abolition to consider refutations of enduring racial violence in America.

AMST 2450. Exchange Scholar Program.**AMST 2500. Museum Interpretation of the American Experience.**

A seminar examining methods of museum interpretation, the ways that museums convey information to the public with exhibits, tours, demonstrations, films, video tapes, slide shows, interactive computer programs, publications, and other techniques. We will visit museums that have an historical or anthropological focus and read theoretical and critical writings on the public interpretation of American material culture.

AMST 2500A. History Curatorship.

This seminar on curatorial practice considers collecting as well as exhibitions and other forms of interpretation. We will visit museums, read historical, theoretical, and critical writings on collecting and presenting culture, and work on museum projects.

AMST 2510. Industrial Archaeology.

No description available. S/NC

AMST 2520. American Studies: Professional Issues in American Studies.

This course explores the mechanics of a doctorate degree in American Studies. We will explore the constitution of our field through the elaboration of field exam lists and narratives, query its pedagogical application in the design of undergraduate syllabi, and begin to outline and enact our participation in the profession both within and beyond the academy. At the end of this class, students will have constructed a portfolio that will assist their progress towards a degree and provide the tools with which to chart pathways once a degree is in hand. S/NC

AMST 2525. American Studies MA Capstone.

This course is required for all Masters students in American Studies who are in their final semester. Enrolled students will work with American Studies faculty to complete an interdisciplinary research paper or project of their choice.

AMST 2540. Methods in Public Humanities.

This course surveys public humanities work, including cultural heritage preservation and interpretation, museum collecting and exhibition, informal education, and cultural development. It also provides an overview of the contexts of that work in nonprofit organizations, including governance, management, and development.

AMST 2550A. Asian American Political Movements to 1970.

This research seminar will examine political movements in Asian immigrant communities in the United States and the Caribbean before the emergence of "Asian America" in the late 1960s.

AMST 2550B. The Japanese in the Americas.

A research seminar on the comparative historical experience of Japanese in Hawaii, mainland U.S., Brazil, and Peru. Open to undergraduates with permission of instructor.

AMST 2550C. Advanced Seminar on Asian American History.

Advanced seminar on Asian-American history, diaspora studies and globalization.

AMST 2580. Managing and Evaluating Arts and Culture Institutions.

Cultural and arts organizations are re-assessing why they exist, who they serve and how they should be structured and supported to do their best work. This course explores how current and emerging field leaders, practicing artists and educators; trustees and donors, philanthropists and public officials answer these questions. Students will investigate how a particular institution is adapting (or not) to new conditions. Students will formulate responses to real world dilemmas from the perspective of Executive Directors, program officers, practicing artists, educators, and community members.

AMST 2590. Creativity, Community and Controversy in Cultural Policy.

The art of making good policy lies in making tough choices between competing options to maximize public good. Governments perceive the arts/arts-education as amenities and slash their budgets. However, creative placemaking initiatives, the expansion of the creative economy, the rise of design thinking suggest new ways for policy makers to constructively resolve apparent dilemmas to advance arts policy goals. The course explores public policies that stimulate the arts; how arts advocates make their case to public officials; the benefits of the arts to the communities; and how policy makers in many sectors in the US and internationally leverage/exploit, arts-based solutions.

AMST 2600. Intro to Digital Humanities.

The humanities value nuance, while computers process precisely formatted information and structured data. How do we use computers to do humanities work? What are the benefits and the limitations? Students in the course will examine these questions and learn how to use and experiment with a variety of digital methodologies for humanistic research (e.g. text mining, working with structured data, creating data visualizations). The course will also engage students in analyzing the potential intrinsic bias of source texts in datasets and the algorithms that researchers regularly use for text analysis projects, such as topic modeling. Undergraduates by permission of instructor.

AMST 2631. Public Humanities on Lockdown: Considerations on the role + design of humanities programs in prisons.

This course examines the role of education programs in prisons and jails, as well as how other humanities organizations have interacted with the prison-industrial complex. Students will learn about the history of incarceration in the United States, the current state of mass incarceration, and the prison abolition movement. They will also examine different approaches, challenges and ethical considerations in building humanities programs for incarcerated populations. Case studies of prison education and humanities programs and program design and evaluation will be examined throughout the course.

AMST 2640. Mechanics of Cultural Policy in America.

This seminar presents and analyzes contemporary institutional initiatives and policies relating to culture, including public art, tourism, historic preservation, and museums. It demonstrates how political, social, cultural, advocacy, and media organizations from the local to international level shape policies designed to protect and present cultural sites and activities in society. Enrollment limited to 10 graduate students.

AMST 2650. Introduction to Public Humanities.

This class, a foundational course for the MA in Public Humanities with preference given to American Studies graduate students, will address the theoretical bases of the public humanities, including topics of history and memory, museums and memorials, the roles of expertise and experience, community cultural development, and material culture. Enrollment limited to 20 graduate students.

AMST 2651. The Responsive Museum.

This course considers the many kinds of experiences available to people in art museums. Although art museums have tended to embrace the values of art history, visitors use them in surprising, personally meaningful, powerful ways. Among the topics we will activate: building community, stimulating creativity, evoking memory and associations, learning about the self and others, healing, and crossing cultural boundaries. Enrollment limited to 15 graduate students.

AMST 2652. Community Documentary and Storytelling.

This class focuses on ways that documentary methodologies and storytelling help individuals articulate and negotiate issues of race, ethnicity, gender and social class in local and regional communities. Through readings, discussions, and presentations by guest speakers, students will examine written, digital, visual, video/film, and oral presentations and performances as ways to express community stories. We will also consider how such projects can facilitate civic engagement. The class will involve participation in a community documentary project. Enrollment limited to 15 graduate students.

AMST 2653. Public Art: History, Theory, and Practice.

The course offers an opportunity for RISD and Brown students to work together to understand the growing interdisciplinary field of public art. We will explore the potential of working in the public realm as artists and/or arts administrators. Topics include: pivotal events and artworks that formed the history of public art from the early 20th century to the present; approaches to site-specificity; ideas of community and audience; current debates around defining the public and public space; temporary vs. permanent work; controversies in public art; memorials, monuments, and anti-monuments; case studies; public art administration models, among others.

AMST 2654. Designing Heritages: From Archaeological Sensibilities to Relational Heritages.

Do you believe in the past? This course takes as its starting assumption that pasts are not temporally distant from today. They are contemporary experiences whose structure and mediation impact how we live in our shared world. This course will explore the intellectual history of archaeological thought and the development of heritage theory. While simultaneously exploring practical design skills, it will provide context to contemporary synergies between art, archaeology and heritage studies through interdisciplinary studies of architecture, art history, cultural criticism, heritage studies and archaeological theory. Enrollment limited to 18 seniors and graduate students.

AMST 2655. Against Invisibility: Asian America/s, Collective Memory and the Public Humanities.

Asians have been living in North America since the 1600's but four centuries later Asian Americans are still virtually invisible in the narratives that define the nation. What spaces are available to resist invisibility? The seminar will focus on ways in which Asian Americans have used vernacular photography to archive collective memory, resist state surveillances, assert subjectivity, and narrate alternate histories. We will learn to read photographs in their shifting contexts produced in the internment or refugee camp, collected in a family album or used to prove immigration status) and think about the politics of photography in Asian American narratives.

AMST 2656. Cultural Policy Planning.

Cultural policy is the aggregate of governmental activities in the arts, humanities, and heritage. This seminar explores its history and public/private context and offers practical insights about how to influence cultural policy design, especially methods to achieve public consensus through planning. Students discuss contemporary issues, examine policy planning principles, and learn practical methods through case study to develop policy recommendations. Enrollment limited to 20 seniors and graduate students.

AMST 2657. Museum Interpretation Practices.

Examines current interpretive practices and offers students the opportunity to participate in creating gallery interpretation for the museum context. Questions of material and form; models of attention and perception, the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Throughout the semester students will develop an interpretive practice through a series of workshops, exercises, site visits and critical discussions. Enrollment limited to 14: seven seniors and graduate students, along with seven RISD students.

AMST 2658. Releasing the Imagination in Public Humanities Practice.

Designed to stimulate and nourish creative approaches to work in museums and other venues of public humanities practice. Students will be invited into a series of creative adventures drawing on essential skills of close looking, deep listening, persuasive writing, and creative production. Essays from Maxine Greene's "Landscapes of Learning" and "Releasing the Imagination," as well as an array of personal essays, exhibition catalogues, fiction, and research from the fields of education, sociology, and psychology. Enrollment limited to 15 graduate students; undergraduates may be admitted with instructor permission.

AMST 2659. "Paradigm Dramas" Revisited: American Studies in Historical Perspective.

The course offers an in-depth exploration of the radical roots and continual transformations of the academic discipline of American Studies within particular historical contexts, beginning in the early 20th century into the present. We will read seminal texts responsible for the formation of defining moments in the discipline's history, including the "myth & symbol school," "American exceptionalism," multiculturalism, post-nationalism and transnational American Studies. Students will produce reviews of current texts and reflect on future possibilities for a mature and globalized American Studies. Enrollment limited to 20 graduate students.

AMST 2660. Projects in Public Humanities.

Devoted to one or more advanced projects in Public Humanities not covered in detail by the regular courses. Projects in public humanities provide practical, hands-on project and group project management experience that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty advisor to project completion. Written permission and topic description required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. This course is repeatable for credit. Prerequisite: AMCV 2650 or demonstrated ability of equivalent experience. Instructor permission required.

AMST 2670. Summer Practicum in Public Humanities.

Practicums in public humanities provide practical, hands-on training that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty to find appropriate placements and negotiate a semester's or summer work, in general a specific project. Available only to students in the Public Humanities M.A. program.

AMST 2680. Semester Practicum in Public Humanities.

Practicums in public humanities provide practical, hands-on training that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty to find appropriate placements and negotiate a semester's or summer work, in general a specific project. Available only to students in the Public Humanities M.A. program.

AMST 2686. Creating a 21st Century Art and Design Museum: A Seminar and Laboratory.

This graduate course could be an essential component of preparing yourself to advance your museum career. It combines a research seminar with travel to meet current museum leaders and a laboratory to shape the program of an emerging museum in a nearby community. By applying your previous experience you can help form the future of museums in this laboratory. This course examines the relevance of the museum concept, its history and current pressure/opportunities for museums to become even more appropriate to promoting scientific and cultural knowledge, understanding the human condition, our environment, and to become places of inspiration for all.

AMST 2687. History & Heritage Organizations: Collaboration & Critique.

In this course each student will engage closely with one cultural organization in the state of Rhode Island which has both a public mission and maintains collections related to history and heritage. Each student will write a profile of his/her chosen organization (history, collections, operations, etc.) through interviews and research; s/he will then collaborate with one or more other students to create an online exhibition using combined resources from their respective organizations; finally, s/he will critique the ways in which the organization fulfills or does not fulfill its stated mission in terms of current American Studies and public history frameworks.

AMST 2688. Digital Archives and Digital Publics.

This course considers the (perhaps surprisingly) long history of digital archives in the late twentieth and early twenty-first century, surveying various efforts of academic institutions, community organizers, activists, amateurs, and anarchists, examining digitized and "born-digital" materials, reflecting on relationships between ideas of cultural value and forms of materiality, technology, access, and dissemination. Particular attention will be paid to imagined audiences and uses of digital archives: scholarly, political, speculative, creative, memetic, and otherwise. This course provides students with opportunities to learn from archivists (and to visit local special collections on/off-campus) and to develop projects informed by best practices in digital public humanities.

AMST 2689. Show Me the Money: Philanthropy and Civil Society.

This course will engage students in the history, policy, practice of philanthropy as a significant dimension of American society/public humanities. A core theme: the relationship between philanthropy and the idea of civil society as the arena in which individuals and organizations contribute to the common good and address civic challenges. The course will: explore the impact and influence of philanthropy over time, examine the dynamics of difference, power, equity; will conclude with an investigation of changing values, trends in philanthropy, including critiques of inequality+practices of impact investing; focus on examples of relevance to public humanities and highlight the RI context.

AMST 2690. Management of Cultural Institutions.

This course explores public humanities institutions as an organizational system interacting with broader community systems. Students gain an understanding of the managerial, governance and financial structures of public humanities organizations and how those structures relate to mission, programming and audience. The course is designed to help those who work on the program side of public humanities and cultural non-profits (as educators, librarians, curators, interpreters, exhibit designers, public programming coordinators, and/or grant makers) engage more strategically with planning, organizational behavior, revenue generation, finance, marketing, and governance.

AMST 2691. Poetry in Service to Schools and the Community.

Poetry in service to the community honors a connection between poetry and wisdom, assumes that poetry is a wisdom medium (vehicle, vessel, conveyance) toward more enlightened thinking and practice. In this way, it is also an ideal medium for extending our study and practice beyond Brown, conducting workshops in schools, community centers, youth detention facilities and elsewhere. The class emphasizes community building, in teaching pairs and classes and workshops throughout Providence, in Renga and workshop groups. Poetry is the connective tissue; building relationships is at the heart of the practice. Students will write and teach. Enrollment limited to 16.

AMST 2692. Digital Public Humanities.

What is "digital humanities" and how does it impact and intersect with the field of public humanities? Digital humanities work involves new approaches to reading, writing, research, publication, and curation: digital tools help us examine digital and non-digital material in innovative ways, and digital modes of communication help us reach new and wider ranges of audiences. This course provides students with the opportunity to create digital projects and utilize digital tools to further their academic and professional interests.

AMST 2693. Community Arts with Young People.

Blurring the boundaries between artist and audience, practitioners of community arts have engaged underrepresented audiences who have traditionally relegated to more passive forms of participation, including young people with little access to arts education. This class provides students the opportunity to research and/or to conduct their own community arts projects with young people in Providence. Students will develop a deeper and more critical understanding of theorizing and implementing community arts projects with youth; will examine how to create pedagogic conditions with youth through the arts and humanities, as well as ways to systematically observe, document, and analyze these pedagogies. Enrollment limited to 15.

AMST 2694. UnSettling Public Humanities.

This course will decenter experiences and cultural expectations attendant to whiteness, cis-maleness, able-bodiedness, heterosexuality, and middle/upper-classness in the public humanities, and thereby explore the contemporary problems and possibilities of intersectional approaches in the field. What do contemporary paradigms of "diversity," "public engagement," and "cultural organizing" have to teach us about effective and ethical public humanities approaches? Do different, multiply marginalized communities of affinity practice entirely different public humanities? How are cultural interventions changing to accommodate the demands of an increasingly segmented public sphere?

AMST 2695. Museum as Idea.

What should museums be in the 21st ce? Are museums of today relevant to cultural historical, scientific, artistic, political and educational purposes? How can they provide more meaningful encounters with objects to inspire curiosity and to honor their creators? How can museums relate to their diverse communities today? Must they own objects to be museums? Growing from the historical basis for museum theory, We'll suggest alternative directions, create platforms for new perspectives. We'll rely on readings, discussion, and meetings with museum leaders, and on independent creative research. All will be challenged to invent their own concept of "museum". Enrollment limited to 12.

AMST 2696. The Promise of Informal Learning.

The course will take as its focus "Facilitated informal learning" - learning that happens outside of formal learning environments but is facilitated by an educator. It will explore facilitated informal learning within cultural institutions - museums, historic houses, zoos, libraries, science centers, children's museums. The course will explore the pedagogical methods, underlying philosophies and learning theories, audience, debates, and goals of facilitated informal learning today.

AMST 2697. Museum Interpretation Practices.

This course examines current interpretive practices and offers students the opportunity to participate in creating gallery interpretation for the museum context. Questions of material and form; models of attention and perception, the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Throughout the semester students will develop their interpretive practice through a series of workshops, exercises, site visits, and critical discussions. Enrollment limited to 15.

AMST 2698. Critical Perspectives in Informal Learning.

This course explores informal learning in multiple settings including art museums, historic houses, children's museums, and science centers. Students will consider definitions of, and goals for informal learning. Together we will investigate questions regarding the possibilities and challenges of informal learning and examine philosophical and practical questions such as: what are our goals – programmatic and pedagogic – as educators? How do we meet the needs of diverse audiences? How do we develop inclusive audience practices? This course will give students a firm grounding in the history and philosophy of informal learning as well as explore contemporary issues in the field.

AMST 2699. Digital Storytelling.

This course surveys the current state of digital storytelling, examining topics ranging from digital curation to data journalism to social media activism (and beyond). We will consider the narrative conventions, multimodal dimensions, and mechanics of a wide range of digital stories, carefully examining both the tools available to creators and the theoretical perspectives that motivate their authors. Students will determine best practices for digital storytelling projects through their engagement with course readings, their participation in in-class workshop sessions where we experiment with particular tools and publishing platforms, and their implementation of a digital storytelling project. Enrollment limited to 15.

AMST 2760Z. African American Literature After 1965: Nationalism and Dissent (ENGL 2760Z).

Interested students must register for ENGL 2760Z.

AMST 2920. Independent Reading and Research.

Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2921. Independent Reading and Research.

Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2922. Independent Reading and Research.

Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2923. Independent Reading and Research.

Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2950. Independent Reading and Research in Public Humanities.

For MA in Public Humanities Students who wish to do independent reading and research.

AMST 2970C. Rethinking the Civil Rights Movement (HIST 2970C).

Interested students must register for HIST 2970C.

AMST 2990. Thesis Preparation.

For graduate students who have met the residency requirement and are continuing research on a full time basis.

Ethnic Studies**ETHN 0066L. Beyond World Music: Singing and Language (ANTH 0066L).**

Interested students must register for ANTH 0066L.

ETHN 0070. An Introduction to Africana Studies (AFRI 0090).

Interested students must register for AFRI 0090.

ETHN 0090A. The Border/La Frontera.

We will examine the historical formation, contemporary reality and popular representation of the U.S.-Mexico border from a bilingual (English-Spanish), multicultural (U.S., Mexican, and Latino), and transnational perspective within the framework of globalization. We will explore the construction of border communities, lives and identities on both sides of the international divide, and pay particular attention to the movement of peoples in both directions. We will read materials, watch films, and conduct class discussions in English and Spanish. Comfort and reasonable proficiency in Spanish is required, but native command is not necessary. Enrollment limited to 19 first year students.

ETHN 0090B. Critical Mixed Race Studies in the Twenty-First Century.

This course will guide students through an understanding of the historical, contemporary, and ideological rationale behind the constructions of mixed race, and how mixed race theory plays out in history, art, and contemporary media. This course aims to expand the conversations of mixed race beyond the stereotypes of tragic mulattos and happy hapas, instead interrogating what mixed race looks like in the twenty-first century and what historical precedents can explain current phenomena.

ETHN 0090C. Latinx Art.

This in-person, discussion-based seminar serves as an introduction to contemporary US Latinx Art. How do we understand the category "Latinx Art" and its history? How have the expressive iterations of different communities reflected on community dynamics and politics? How do contemporary curatorial projects provide platforms to envision Latinx futures? Departing from the cultural expressions linked to US Latinx civil rights movements of the 1960s and 1970s, this class will dwell on diverse formal and thematic approaches and foci in contemporary US Latinx Art to reflect more broadly on the ideological impact of expressive culture. We will do so by studying the expressive culture of artists in the United States of Latin American descent as well as the interdisciplinary critical scholarship of art history and visual culture scholars. Attendance to relevant local exhibitions and artist talks will be encouraged.

ETHN 0090D. Native American Literature: An Introduction.

This course will serve as an introduction to Native American literature. We will center Native American voices and stories to resist and reject the tradition of U.S. origin stories that perpetuate Native absence in order to produce American national fantasies of democracy, civilization, and progress. Native American novels, short stories, and poetry will be our scenes to reflect on, critique, and contest the ongoing project of settler colonialism in the United States. Our goal is to attend to individual and tribal experiences of life under settler colonialism, and consider the political, social, and psychological conditions that this structure produces. By the end of the course, students will have gained an understanding of Native American history and federal Indian policy, the Native American literary canon, and key debates in the field of Native American Studies.

ETHN 0091. An Introduction to Africana Studies (AFRI 0090).

Interested students must register for AFRI 0090.

ETHN 0100. Introduction to Cultural Anthropology (ANTH 0100).

Interested students must register for ANTH 0100.

ETHN 0100V. Inventing Asian American Literature (ENGL 0100V).

Interested students must register for ENGL 0100V.

ETHN 0130. American Heritage: Democracy, Inequality, and Public Policy (SOC 0130).

Interested students must register for SOC 0130.

ETHN 0190A. Islands of Empire: Sounds and Silences.

A mural painted on a cement wall in Old San Juan, Puerto Rico greets you with, "Welcome to the oldest colony." In five words, this small portion of the mural speaks to a legacy of empire and colonialism. This course brings Puerto Rico in dialogue with other past/present U.S. colonies and neocolonies such as Cuba, Dominican Republic, Guam, Philippines, and Hawai'i and their diasporas. Listening to spoken word, murals, music, oral histories, podcasts, and other mediums of sound and silence, we examine themes of race, sovereignty, colonialism, and empire across new geographic re-imaginings.

ETHN 0190B. Bad Capital: Race, Technology, and Asian/America.

How do representations of Asians and Asian Americans reinforce systems of Orientalism, capitalism, and colonialism in the U.S. and beyond? Through film, literature, and theory, this course aims to examine representations of Asian/American labor, capital, and consumption against the historical backdrop of the evolving U.S. political economy. Tracing historical representations of post-Emancipation Asian "coolie" laborers to contemporary anxieties surrounding Chinese surveillance, Indian tech outsourcing, and Japanese manufacturing, this course aims to unpack cultural representations of Asian/Americans at the intersections of Orientalism, capitalism, and technology. This course is designated under the DIAP and WRIT curricular programs.

ETHN 0190C. American (Mass)culinities: Sexuality, Race and Aesthetics (AMST 0190C).

Interested students must register for AMST 0190C.

ETHN 0190D. Centering Central America.

This course explores the histories, cultures, and political contexts of Central America and the experiences of Central Americans across the Americas. Drawing from cultural productions alongside historical analyses and ethnographic case studies, this course assumes a hemispheric approach to decenter the United States from our conversations of (im)migration and transnationalism and, in turn, center Central America. Each country will have its own week, followed by a conversation on (im)migration and Central Americans in the contemporary moment. Our key question here is: what are the defining moments in Central America's history that have shaped the region and Central American lives? WRIT

ETHN 0190E. It's the End of the World As We Know It: Zombie and Apocalypse Narratives in Pop Culture (AMST0190E).

Interested students must register for AMST 0190E.

ETHN 0190F. Beyond the Tourist Trap: The Past, Present, and Future of Asian American Urban Spaces (AMST 0190F).

Interested students must register for AMST 0190F.

ETHN 0190G. The Fringe is the Fabric: Anti-Immigrant Movements in the United States (AMST 0190G).

Interested students must register for AMST 0190G.

ETHN 0190H. Indigenous Resurgence: Roots, Reclamations, and Relations.

This interdisciplinary survey course in Native American and Indigenous Studies will prepare students to identify, contextualize, and complicate contemporary Indigenous movements for justice. Three organizing sections of readings and writing assignments: roots, reclamations, and relations, make up the thematic trajectory of the course. Students will think through Indigenous projects to recover lost knowledges and ways of being (roots), reclaim self-determination from settler institutions (reclamations), and reorient social movements in solidarity with other struggles for justice (relations).

ETHN 0190X. Gendered Mobility: Migrant Women Workers in a Globalized Economy (AMST 0190X).

Interested students must register for AMST 0190X.

ETHN 0191P. Beyond Chinatown: The Past, Present, and Future of Asian American Spaces (AMST 0191P).

Interested students must register for AMST 0191P.

ETHN 0201G. Killing them Softly: Satire and Stereotype in African-American Literature (ENGL 0201G).

Interested students must register for ENGL 0201G.

ETHN 0210. Blacks in Latin American History and Society (AFRI 0210).

Interested students must register for AFRI 0210.

ETHN 0271. Introduction to Latinx History (HIST 0256).

Interested students must register for HIST 0256.

ETHN 0290D. Women, Sex and Gender in Islam (RELS 0290D).

Interested students must register for RELS 0290D.

ETHN 0300. Ethnic Writing.

This course will explore the idea of "ethnic writing" in both theory and practice. Students will examine how writers draw upon race and ethnicity (not always their own) to produce creative works and will then put these ideas in practice in their own writing, including but not limited to fiction, poetry, memoir, and inter-genre work. Interested students should attend the first session prepared for an in-class exercise that will determine attendance. Enrollment limited to 17. Instructor permission required. S/NC.

ETHN 0301. Culture and Health (ANTH 0300).

Interested students must register for ANTH 0300.

ETHN 0310. Theory and Practice of Engaged Scholarship (SOC 0310).

Interested students must register for SOC 0310.

ETHN 0510F. Che Guevara, The Man and the Myths (COLT 0510F).

Interested students must register for COLT 0510F.

ETHN 0577B. The US-Mexico Border and Borderlands (HIST 0577B).

Interested students must register for HIST 0577B.

ETHN 0600. Introduction to Native and Indigenous Literatures (ENGL 0511G).

Interested students must register for ENGL 0511G.

ETHN 0601A. Introduction to Asian American History.

This course provides an introduction to the histories of people of Asian descent in the United States from the late 18th century to the present. We will focus on the experiences of people with ancestries in East Asia, Southeast Asia, South Asia, and Central Asia, considering commonalities and differences by nationality, class, gender, religion, place, and other factors. Topics include orientalism in U.S. culture, immigration and exclusion, Asian American civil rights struggles, and the "model minority." We eschew any claim that an "authentic" or "typical" Asian American experience exists, instead working from the idea that Asian Americans and their lives are multifaceted, complex, and dynamic. Course materials will include primary and secondary sources and incorporate interdisciplinary scholarship and approaches while being anchored in history.

ETHN 0610. Black Student Protest from Jim Crow to the Present (AFRI 0610).

Interested students must register for AFRI 0610.

ETHN 0700E. Postcolonial Literature (ENGL 0700E).

Interested students must register for ENGL 0700E.

ETHN 0710B. Ethics of Black Power (AFRI 0710B).

Interested students must register for AFRI 0710B.

ETHN 0710F. Being There: Bearing Witness in Modern Times (ENGL 0710F).

Interested students must register for ENGL 0710F.

ETHN 0710J. Introduction to Asian American Literature (ENGL 0710J).

Interested students must register for ENGL 0710J.

ETHN 0750B. Hispanics in the United States (HISP 0750B).

Interested students must register for HISP 0750B.

ETHN 0790B. Native Americans and the Media.

This course explores the ways in which Indigenous Americans have been constructed in the White American imagination and through self-representation from Frontier phase of American history, through contemporary images in American popular culture and media. Through films created about, and later by, Native people we will explore the evolution of the image of Native American in America culture.

ETHN 0790C. Theory Into Practice: Service Learning at a Dual Language Charter School.

Students will explore Dual Language (Two-Way Immersion; Bilingual) education through a variety of activities, using the service-learning model. Students will contribute at least 2 hours per week at the International Charter School (K-5), and another two hours in seminar at Brown University in conversation about readings, service, and politics pertaining to Two-Way Immersion education.

ETHN 0790D. Race and Remembering.

This course will explore struggles for power over narrating history and engages current tensions in public history and national memory. Together students will consider ongoing struggles to reckon with the violent histories of slavery, empire, colonialism, nationalism, and democracy in the US. Students will engage questions regarding remembering, forgetting, memorializing, and reckoning with histories of racial formation and violence. What are the methodological and narrative pitfalls of representing these histories? What are the possibilities for reckoning with violent histories? This course will be concentrated on the Americas, but will also incorporate global understanding of legacies of narrative and memory.

ETHN 0810. Belonging and Displacement: Cross-Cultural Identities (POBS 0810).

Interested students must register for POBS 0810.

ETHN 0820G. Race and Political Representation (POLS 0820G).

Interested students must register for POLS 0820G.

ETHN 0880. Hip Hop Music and Cultures.

Interested students must register for AFRI 0880 S01 (CRN 27044).

ETHN 0900. Introduction to Deaf Studies (SIGN 0900).

Interested students must register for SIGN 0900.

ETHN 0901I. Body Count: Technologies of Life and Death (MCM 0901I).

Interested students must register for MCM 0901I.

ETHN 0901L. African American Media Visibility: Image, Culture, Crisis (MCM 0901L).

Interested students must register for MCM 0901L.

ETHN 0980. The Research Process: Qualitative and Ethnographic Methods.

Paying attention to methodology and research design can enhance the capacity of research in any field and contribute to knowledge production. The purpose of this seminar is to introduce students to a variety of social science research methods with an emphasis on ethnographic, mixed-methods research (research-design, data-collection, and data analysis). Social science research is a craft, and like any other craft, it takes practice to do it well. This seminar emphasizes a "hands-on," "applied," and/or practical approach to learning. The course is suited to students who have an on-going research project they plan to pursue throughout the semester. Enrollment limited to 20.

ETHN 0990. Black Lavender: Black Gay/Lesbian Plays/Dramatic Constructions in the American Theatre (AFRI 0990).

Interested students must register for AFRI 0990.

ETHN 1000. Introduction to Ethnic Studies.

Considers the U.S. as a society whose unifying identity is rooted in ethnic and racial diversity. Explores the historical and contemporary experiences of racial and ethnic groups in this country and analyzes different forms of representation of those experiences, as well as representations of the racial and ethnic stratification in the U.S. imagination.

ETHN 1020. Race and Language in the United States.

This course will examine the role of language in the social construction of race, racism and racial identity. We will address the different language issues facing African Americans, Latinos/as, Asian Americans, Native Americans, and speakers of "accented" English. We will explore current issues such as the Oakland Ebonics case, English- Only legislation, bilingualism, and hate speech vs. free speech.

ETHN 1020C. The Afro-Luso-Brazilian Triangle (AFRI 1020C).

Interested students must register for AFRI 1020C.

ETHN 1050. Race in the Americas.

This class will explore issues of race, racial identity construction, and racism throughout Central and Latin America (including the Caribbean). This is a class in comparative race relations that covers peoples of African, Asian, Native, and European descent. Topics covered include: miscegenation, diaspora, space, socioeconomic inequality, and nation building. Previous coursework in Ethnic Studies or similar suggested.

ETHN 1051. History of African-American Education (EDUC 1050).

Interested students must register for EDUC 1050.

ETHN 1060E. West African Writers and Political Kingdom (AFRI 1060E).

Interested students must register for AFRI 1060E.

ETHN 1060I. Africana Philosophy of Religion (AFRI 1060I).

Interested students must register for AFRI 1060I.

ETHN 1070. Ethnic Studies Practicum: Strategy, Tactics and Tools for Social Change.

This is an academic and reflective practicum on the politics and processes of social justice organizing. Students will learn about the historical and political evolution of organizing, the connection between organizing and ideology/vision, concrete tools and tactics used in the strategies of social justice organizing, and elements of running non-profit organizations. This course will require, equally, academic vigor, personal leadership and involvement, and introspective analysis. Students will be required to intern at a local organization in Providence, and reflect on their involvement utilizing the theories and discussions gained through the classroom. This course will also explore connections between local, national, and international movement-building. In keeping with this course's commitment to real-life organizing examples and experience, course instructors and guest speakers are themselves experienced organizers and Executive Directors of social change organizations. This will be a small class with preference given to students with some experience in community, student/youth, and/or labor organizing. Permission of instructors required: contact sara@daretowin.org or koheiishihara@gmail.com.

ETHN 1071. China Modern: An Introduction to the Literature of Twentieth-Century China (EAST 1070).

Interested students must register for EAST 1070.

ETHN 1090. Black Freedom Struggle Since 1945 (AFRI 1090).

Interested students must register for AFRI 1090.

ETHN 1100. Korean Culture and Film (EAST 1100).

Interested students must register for EAST 1100.

ETHN 1110. Voices Beneath the Veil (AFRI 1110).

Interested students must register for AFRI 1110.

ETHN 1111. African Issues in Anthropological Perspective (ANTH 1110).

Interested students must register for ANTH 1110.

ETHN 1123. Native North Americans in the Twenty-first Century (ANTH 1123).

Interested students must register for ANTH 1123.

ETHN 1133. Ethnonationalism- The Asian Arena (ANTH 1133).

Interested students must register for ANTH 1133.

ETHN 1170. African American Women's History (AFRI 1170).

Interested students must register for AFRI 1170.

ETHN 1200B. Contemporary Indigenous Education in North America.

In the past, formalized schooling in Indigenous communities was a tool of colonization and cultural genocide, forcing Native peoples to assimilate to western norms, values, and knowledge. However, contemporary Indigenous communities have managed to reclaim and reshape education for Native youth, utilizing innovative methods and technologies, as well as drawing upon generations of traditional and indigenous knowledges to create environments that promote academic achievement alongside culture. In this course we will focus on the ways Native communities are asserting their educational sovereignty, through culturally-relevant/responsive curriculums, language immersion schools, indigenous charter schools, traditional ecological and scientific knowledges, and more.

ETHN 1200C. Introduction to Asian American Studies.

This course provides an introduction to formative historical moments and major issues in the field of Asian American Studies. Course readings are highly interdisciplinary drawing from scholarship in history, sociology, political science, and media studies. This course covers a period beginning in the mid-1800s and continuing through the present. Topics discussed include Asian immigrant exclusion, Japanese American incarceration, the movement for Asian American Studies, the construction of an Asian American pan-ethnic identity, community political mobilization, refugee resettlement, Asian settler colonialism, and ongoing efforts to combat anti-Asian violence.

ETHN 1200D. Latinx Literature.

This course will introduce students to a broad array of Latinx literature. While there is a long tradition of Latinx literature in the United States, we will focus primarily on a period from 1985 to the present. Aimed to familiarize students with debates in the field, the readings will also include critical essays. Enrollment limited to 15.

ETHN 1200F. The Mexican Revolution (HIST 1333).

Interested students must register for HIST 1333.

ETHN 1200G. Introduction to Latina/o/x Cultural Studies.

This course serves as an introduction to the many discourses that structure and challenge what it means to be Latina/o/x in the United States. Through historically situated critical analysis of Latina/o/x cultural production, including theoretical essays, literature, and film, we will meditate on the major issues that shape the Latina/o/x experience. We will study how Latinidad—the sense of being Latina/o/x—is constructed as an identity and how that identity varies across origin, place, and time. Major themes we will explore include the legacies of U.S. colonialism; cultural nationalism, citizenship, immigration and exile; labor and class; race and ethnicity; and gender and sexuality.

ETHN 1200H. Race, Class, and Ethnicity in the Modern World (SOC 1270).

Interested students must register for SOC 1270.

ETHN 1200I. History and Resistance in Representations of Native Peoples.

Throughout history, Native peoples have been portrayed through a stock set of stereotypes such as savage warriors, Indian princesses, or mystical shamans. These images surround us in advertising, news media, Hollywood, sports mascots, and Halloween costumes. This course will examine the foundations of these representations and their connections to colonization, with a focus on contemporary and ongoing examples, from Johnny Depp's Tonto, Urban Outfitters' "Navajo" products, to JK Rowling's "History of Magic in North America," with a focus on the ways Native peoples are taking back and reshaping Native representations through activism, social media, art, design, film, and more.

ETHN 1200J. Asian Americans and the Struggle for Social Justice.

In 1868, in the largest strike that America had ever seen, ten thousand Chinese workers struck Central Pacific Railroad. One hundred and fifty years later, Asian Americans, now stereotyped as the "model minority," are rendered invisible in current struggles for social justice. Yet as railroad workers, laundrymen, farmworkers, draft resisters, sewing women and nurses, Asian Americans have left us a rich legacy of legal, social and political activism. Particular attention will be paid to solidarities across racial, gender, and national boundaries.

ETHN 1200K. Introduction to Native American and Indigenous Studies.

This class examines and introduces the politics, cultures, histories, representations, and studies of the Native peoples of North America, with a primary focus on the United States, and helps students to develop critical thinking, reading, and writing skills regarding Native American and Indigenous Studies. Although broad in cultural and geographic scope, the course does not attempt to summarize the diverse cultures of the hundreds of Native American tribes across the continent or Indigenous peoples globally. Instead, it focuses on several key issues in the lives of, and scholarship about, American Indian/Native American/First Nations/Indigenous peoples in the US (and beyond).

ETHN 1200L. Introduction to Latinx History.

The Latinx population in the United States continues to be mischaracterized in popular culture, political debates, and in the media. How can one discuss a group as diverse as Mexican Americans, Dominican Americans, Cuban Americans, Puerto Ricans, and, most recently, Americans from Central America? Students will explore key moments of racial formation and state policies, social phenomena, and social revolutions that influence the daily life of Latinx communities in the US and in US territories. Students will analyze cultural texts and social policies and will develop a facility with key concepts in the field.

ETHN 1200M. Latinx in Graphic Detail.

This course centers graphic narratives in an exploration of Latinx becoming. With analytic attention to the interplay of narrative and illustration, assigned texts will provoke thematic conversations on gender and sexuality, migration and exile, racial hierarchies and national belonging, as well as feminist and queer utopian ideation. Formally, we will study comics, biography, memoirs, bildungsroman narratives, political projects, and consider the invocation of other artforms including punk music, site specific installation, performance, sculpture, and photography.

ETHN 1200X. Black Speculative Fiction: World-Making + Alternative Universes, Science Fiction + Fantasy (AFRI 1100X).

Interested students must register for AFRI 1100X.

ETHN 1200Y. The Art and Imagination of Josephine Baker (AFRI 1200X).

Interested students must register for AFRI 1200X.

ETHN 1201C. Imagined Networks, Glocal Connections (MCM 1201C).

Interested students must register for MCM 1201C.

ETHN 1201D. Blacks and Jews in American History and Culture (JUDS 1753).

Interested students must register for JUDS 1753.

ETHN 1201E. US Popular Culture (AMST 1611S).

Interested students must register for AMST 1611S.

ETHN 1208. Language Revitalization & Reclamation (NAIS 1208).

Interested students must register for NAIS 1208.

ETHN 1210. Afro-Brazilians and the Brazilian Polity (AFRI 1210).

Interested students must register for AFRI 1210.

ETHN 1216. Curatorial Praxis: Caring for and Curating Indigenous Contemporary Art (ARTS 1016).

Interested students must register for ARTS 1016.

ETHN 1250. Twentieth-Century Western Theatre and Performance (TAPS 1250).

Interested students must register for TAPS 1250.

ETHN 1251. Violence and the Media (ANTH 1251).

Interested students must register for ANTH 1251.

ETHN 1255. Anthropology of Disasters (ANTH 1255).

Interested students must register for ANTH 1255.

ETHN 1260. The Organizing Tradition of the Southern Civil Rights Movement (AFRI 1260).

Interested students must register for AFRI 1260.

ETHN 1270. Race, Class, and Ethnicity in the Modern World (SOC 1270).

Interested students must register for SOC 1270.

ETHN 1271. Performances in the Asias (TAPS 1270).

Interested students must register for TAPS 1270.

ETHN 1310. African American Politics (POLS 1310).

Interested students must register for POLS 1310.

ETHN 1311. International Health: Anthropological Perspectives (ANTH 1310).

Interested students must register for ANTH 1310.

ETHN 1320. Anthropology and International Development: Ethnographic Perspectives on Poverty/Progress (ANTH 1320).

Interested students must register for ANTH 1320.

ETHN 1360. Africana Studies: Knowledge, Texts and Methodology (AFRI 1360).

Interested students must register for AFRI 1360.

ETHN 1411. Nations within States (ANTH 1411).

Interested students must register for ANTH 1411.

ETHN 1421. Ethnic American Folklore: Continuity and the Creative Process (ANTH 1421).

Interested students must register for ANTH 1421.

ETHN 1430. The Psychology of Race, Class, and Gender (EDUC 1430).

Interested students must register for EDUC 1430.

ETHN 1440. Theorizing the Black Diaspora (AFRI 1440).

Interested students must register for AFRI 1440.

ETHN 1500. Mellon Mays Research Seminar.

This seminar is a required course for Mellon Mays Fellows with Junior standing. Topics will include research methods; health and wellness in the pursuit of scholarship; barriers to success; and cohort peer review. The outcome of this course will be a completed research plan, literature review and thesis proposal. Open to juniors who have already been accepted into the MMUF program. Instructor permission. Grade option S/NC.

ETHN 1600C. Cross-Cultural Perspectives on Education: Education and the Portuguese-Speaking World (POBS 1600C).

Interested students must register for POBS 1600C.

ETHN 1611M. Trauma and the Shame of the Unspeakable: The Holocaust, Slavery, Childhood Sexual Abuse (AMST 1611M).

Interested students must register for AMST 1611M.

ETHN 1611W. Asian Americans and Popular Culture (AMST 1611W).

Interested students must register for AMST 1611W.

ETHN 1611Z. The Century of Immigration (AMST 1611Z).

Interested students must register for AMST 1611Z.

ETHN 1612E. Black Archival Experiments.

This course examines the political and cultural significance of the archival turn in Black Studies. Considering the fraught nature of historical documents that narrate the history of the United States, Black Studies scholars and creatives have developed experimental and interdisciplinary methodologies to remember and archive the stories, histories, and narratives of Black communities. In this class, we will engage two key questions: How do Black scholars and artists use and imagine the archives to tell alternative stories of Black life? What is the relationship between speculation and archival practice in Black culture? Students will engage the work of scholars and artists such as Saidiya Hartman, Christina Sharpe, Alexis Pauline Gumbs, Hortense Spillers, Octavia Butler, among many others. Alongside course materials, students will also experiment and engage with the Black Feminist Theory Collections at the John Hay library.

ETHN 1623. Archaeology of Death (ANTH 1623).

Interested students must register for ANTH 1623.

ETHN 1624. Indians, Colonists, and Africans in New England (ANTH 1624).

Interested students must register for ANTH 1624.

ETHN 1625. Questions of Remembrance: Archaeological Perspectives on Slavery in the New World (ANTH 1625).

Interested students must register for ANTH 1625.

ETHN 1630. Performativity and the Body: Staging Gender, Staging Race (TAPS 1630).

Interested students must register for TAPS 1630.

ETHN 1650B. Asian Americans and the Racial State.

This seminar is animated by the resurgence of anti-Asian hatred in American society. First, we look at the long history of racial violence against Asians in America. Second, we ask how Asians have come to be racialized as the permanent alien in American society and the implications of that formation. Second, we ask how Asians in America have organized their resistances to this racialization. This is a collaborative project based course that combines discussions of readings, lectures and videos with workshops that will focus on building a publicly facing project.

ETHN 1650C. Fictions of Queer Race.

What fictions do we tell ourselves about sexuality and race? Through literature and film, this course introduces students to queer of color critique, a mode of queer theory emphasizing diverse experiences, geographies, and epistemologies that also foregrounds the intersection of sexual and racial constructs. The course highlights important questions about the representational politics and social dynamics of the intersection of sexuality, gender, race, and nationality. What is "queer" art? How can we queer ethnic literature? What is a queer diaspora? How should we articulate coalition building?

ETHN 1650D. Research and Transnational Communities: Qualitative Fieldwork Methods (AMST 1500A).

Interested students must register for AMST 1500A.

ETHN 1650F. Mapping Violence.

Mapping Violence is a research project that aims to expose interconnected histories of violence, the legacies of colonization, slavery, and genocide that intersect in Texas in the early twentieth century. Although often segregated in academic studies, these histories coalesced geographically and temporally. Students in this course will learn interdisciplinary methods combining ethnic studies, history, public humanities and the digital humanities to rethink the limits of archival research, historical narrative, and methods for presenting findings to public audiences. This research intensive seminar will allow students to develop historical research skills and to contribute original research to the Mapping Violence project.

ETHN 1670. Latino/a Theatre and Performance (TAPS 1670).

Interested students must register for TAPS 1670.

ETHN 1700. The Asian American Experience in Higher Education (EDUC 1700).

Interested students must register for EDUC 1700.

ETHN 1710I. Harlem Renaissance: The Politics of Culture (ENGL 1710I).

Interested students must register for ENGL 1710I.

ETHN 1710J. African Literature in Globalization Time (ENGL 1710J).

Interested students must register for ENGL 1710J.

ETHN 1710M. Nationalizing Narratives: Race, Nationalism, and the 20th-C. American Novel (ENGL 1710M).

Interested students must register for ENGL 1710M.

ETHN 1750A. Immigrant Social Movements: Bridging Theory and Practice.

What is the impact of legal status on the potential for undocumented individuals' participation in a social movement? Relatedly, how is the heterogeneity of movement participants represented in campaigns and political protest? In this course we will examine the undocumented immigrant movement in the United States today through readings, films and guest lectures from local immigrant rights activists. As part of the course students will be partnered with local community based organizations where they will complete a semester-long internship.

ETHN 1750B. Treaty Rights and Food Fights: Eating Local in Indian Country.

In many Native American communities the push to "eat local" is often based on reviving a traditional food culture as well as a way of promoting better health. This class explores the disparate health conditions faced by Native communities, and the efforts by many groups to address these health problems through increasing community access to traditional foods, whether by gardening projects or a revival of hunting and fishing traditions. We will examine the ways in which Native food movements have converged and diverged from general American local food movements, and the struggles they often face in reviving treaty-guaranteed food ways.

ETHN 1750D. Transpacific Asian American Studies.

This is an advanced undergraduate seminar that is also open to American Studies and other graduate students for graduate credit. It is designed to help us think about the Pacific as a historical space where the Asian American formation is constructed, as goods, people and ideas circulate across the Pacific. We will explore ways which these historical circuits and exchanges have shaped questions of identity and belonging, taking China and the Americas as our principal points of connection. We will read across a number of fields, including: Asian Studies, American Studies, Asian American Studies, Latin American and Caribbean Studies.

ETHN 1750E. Transpacific Popular Culture.

In this seminar we will look at the relationship between American wars of empire, urban uprising, martial arts, and hip hop to illuminate the deep circuits of race, migration, labor and popular culture across the Pacific.

ETHN 1750G. Introduction to Ethnomusicology (MUSC 1900).

Interested students must register for MUSC 1900.

ETHN 1750H. Water is Life/New currents in the Study of Land, Water, and Indigeneity.

In this course, we'll think conceptually about water. We'll look to work in Native and Indigenous Studies, Pacific Studies, and American Studies to see how reframing popular understandings of water and space can radically alter our engagement with questions of geography, imperialism, colonialism, and globalization. For instance, how is our understanding of settler colonialism limited through a land-focused approach? How might our vision of the global world change when we center island nations? Using literary, theoretical, and historical texts we'll use a focus on water to upend common approaches to space and see what emerges. Registration permission granted based on questionnaire distributed at first class meeting.

ETHN 1750I. Indigeneity, Sustainability and Resistance in Food Politics.

This course explores Western and Indigenous understandings of food security/sovereignty, with particular attention to the politics of food and sustainability. In this course, we will study food security from its origins, policy making, to current debates about alternative Indigenous food systems, drawing on many examples and using New Zealand, Peru, and the U.S.A as case studies. The course intends to ground discussion about the contemporary context of food security, including debates over the existing food regimes (neoliberal and capitalism), agrarian/food sovereignty movements, and implications of the right to food from both human and cultural right perspectives.

ETHN 1750J. American Roots Music (MUSC 1932).

Interested students must register for MUSC 1932.

ETHN 1750K. U.S.-Mexico Borderlands (INTL 1803S).

Interested students must register for INTL 1803S.

ETHN 1750L. Latina Feminisms.

This course will serve as a focused and rigorous exploration of Latina feminist cultural production. Our analysis driven seminar discussions will include critical consideration of novels, short stories, film, and performance and visual art largely by and about Latina women. Their work will address topics that include: gendered expectations, non-normative sexuality, race hierarchies, labor, reproductive justice, and gendered violence. Together we will query how cultural objects come to function as salient social and political texts in order to ascertain the contributions and challenges that Latina feminists bring to dominant discourses of race, gender, sexuality, and nationalism, among others.

ETHN 1750M. Extravagant Texts: Reading the World Through Asian American Literature.

In this course we study a body of writings that self-consciously move beyond the topics and genres with which Asian American literature has traditionally been associated—that are, in Maxine Hong's Kingston's formulation, "extravagant." We explore works that adopt a transnational or diasporic perspective and that are written in such genres as magical realism, speculative fiction, experimental poetry, and plays. In addition to more conventional concerns like racism or immigration, these works also address such issues as empire, war, environmentalism mixed-race identity, adoption, and sexuality.

ETHN 1750N. Musical Youth Cultures (MUSC 1925).

Interested students must register for MUSC 1925.

ETHN 1750P. Art for an Undivided Earth / Transnational Approaches to Indigenous Art and Activism(ENGL 1711J).

Interested students must register for ENGL 1711J.

ETHN 1750Q. The African Atlantic Diaspora: Race, Memory, Identity, and Belonging.

This course will examine conceptual frameworks on notions of 'Blackness' across the African Atlantic Diaspora. We will examine the ways in which blackness is viewed individually and collectively by groups. In the beginning of the course students will read academic texts, view documentaries and engage in discussions that focus on concepts of race, memory, identity formation and belonging. The course consists of a travel component to Ghana in West Africa. In Ghana students will explore parts of the history that has shaped the present day diasporan community through a series of faculty led workshops, tours and meetings with local organizations.

ETHN 1750R. Latina/o Cultural Theory (AMST 1900I).

Interested students must register for AMST 1900I.

ETHN 1750S. Extravagant Texts: Reading the World Through Asian American Literature.

In this course we study a body of writings that self-consciously move beyond the topics and genres with which Asian American literature has traditionally been associated—that are, in Maxine Hong's Kingston's formulation, "extravagant." We explore works that adopt a transnational or diasporic perspective and that are written in such genres as magical realism, speculative fiction, and poetry. In addition to more conventional concerns like racism or immigration, these works also address such issues as empire, war, mixed-race identity, environmentalism, adoption, and sexuality.

ETHN 1750T. U.S.-Mexico Borderlands (INTL 1803S).

Interested students must register for INTL 1803S.

ETHN 1750U. The U.S.-Mexico Border and Borderlands: Experiential Learning on the Ground and in the Field.

In an intensive three week study, in the classroom and most of all, on the ground and in the field, we will attempt to achieve a real and realistic understanding of what exactly is the U.S.-Mexico border and the regions along the border on both sides, the borderlands, stretching from the Pacific to the Atlantic. Focus on Mexicans and Mexican descendants on the border, but also on original native peoples and immigrants from elsewhere (Chinese, Haitians, Iraqis). Preference to upperclass students with no prior encounter with the border. Knowledge of Spanish is desirable but not required. Students in this intensive wintertime course will have pre-course assignments in Dec. and must arrive on campus no later than 1/2 at noon, as the course will begin with dinner on 1/2 and class will begin at 9am on 1/3. Students will leave from Pvd to San Diego on 1/6, and depart late on the 16th. Class will be held in Pvd from noon 1/17 to 5pm on 1/18.

ETHN 1750V. Ethnic Studies & Education (EDUC 1520).

Interested students must register for EDUC 1520.

ETHN 1750W. The Korean War in Color (ENGL 1761V).

Interested students must register for ENGL 1761V.

ETHN 1750X. Native American Language Loss, Revitalization, and Resiliency.

This class examines the issues of Native languages, primarily in the United States. The course will study the variety of languages in North America, the factors that have negatively affected the strength and use of native languages in many tribes, the impact of such loss on communities, and the ways in which those communities have worked hard to maintain, revitalize, or reclaim their languages.

ETHN 1750Z. Whites, White Jews and Us: Radical Black, Arab & Jewish Thinkers (COLT 1610W).

Interested students must register for COLT 1610W.

ETHN 1751A. Indigenous Laws, Environmental Racism, and LandBack.

This class is an introductory course about the laws that affect Indigenous Peoples (federal, state, tribal, traditional, and international). It will center around historic and current cases involving the extension of jurisdiction into Indigenous lands, property, and ways of life, and further discuss the normalization of environmental racism and environmental injustice against Indigenous Peoples. The class will be in regular communication with Indigenous Peoples around the United States, Canada, Australia, and New Zealand about Indigenous Movements to protect sacred lands, obtain #LandBack, and assert cultural, individual, and civil rights. DIAP

ETHN 1751B. Feeling Minor: Race, Affect, and Asian America.

How have writers and theorists conceptualized the affective structures of race that have shaped Asian Americans? How do literary explorations of such concerns negotiate the prevailing black-white binary and influential theorizations of blackness and brownness in charting the contours of Asian American psychic life. What modalities of psychoanalysis and affect theory offer the most generative resources for these inquiries. We address these and other related questions by looking at writings by Sara Ahmed, Anne Cheng, Franz Fanon, Sigmund Freud, Cathy Park Hong, Chang-rae Lee, Ling Ma, José Muñoz, Sianne Ngai, and Ocean Vuong among others.

ETHN 1751C. Sexy Good Medicine: Sex, Gender, and Indigeneity in (the) America(s).

In this course, we will immerse ourselves in the academic field of Indigenous Gender and Sexuality Studies. While in Western societies gender and sexuality have traditionally been employed as tools of population control—becoming associated with ideas like sin, shame, and the private—in this course we will approach them as good medicine. Inspired by the groundbreaking work of Indigenous scholars, artists, and activists, we will explore the healing power of gender and sexual diversity. All throughout the course, we will also learn about the fight of Indigenous peoples to reclaim sovereignty over their own bodies. In this sense, we will approach Indigenous gender and sexuality as active tools for decolonization. While the course's primary geographic focus is Anglo-North America—with a specific emphasis in the United States—it aims to be hemispheric (and global) in its approach.

ETHN 1751D. Race, Gender, and Sexuality in Hispanophone Caribbean Literature (HISP 1331M).

Interested students must register for HISP 1331M.

ETHN 1751E. Health Inequality in Historical Perspective (AFRI 1920).

Interested students must register for AFRI 1920.

ETHN 1751F. Race in U.S. Cities and Suburbs.

This undergraduate seminar explores U.S. urban and suburban histories during the twentieth and early twenty-first centuries, through the concerns of race and ethnicity. We seek to understand how dilemmas over and struggles for belonging and equality in the United States have played out in and over urban and suburban spaces. We will pay particular attention to the histories of segregation, housing discrimination, urban unrest, suburban integration, the rise of "ethnoburbs," and gentrification. Readings represent foundational texts and new directions in scholarship and provide in-depth examinations of particular urban and suburban communities. Topics include the simultaneous erasure and appropriation of Indigenous peoples in the development of Pacific Northwest cities; the Asian American "model minority" and integration of all-white suburbs; minority grassroots activism and resistance against redevelopment; racism and neoliberal urban governance in the 21st century. RPP

ETHN 1751G. James Baldwin (ENGL 1711S).

Interested students must register for ENGL 1711S.

ETHN 1751H. Anthropology of Place (ANTH 1910B).

Interested students must register for ANTH 1910B.

ETHN 1751J. Education as Freedom?: Educational Access and Immigration Activism in the US South (EDUC 1350).

Interested students must register for EDUC 1350

ETHN 1760P. "Extravagant" Texts: Experiments in Asian American Writing (ENGL 1760P).

Interested students must register for ENGL 1760P.

ETHN 1761F. Toni Morrison (ENGL 1761F).

Interested students must register for ENGL 1761F.

ETHN 1761V. The Korean War in Color (ENGL 1761V).

Interested students must register for ENGL 1761V.

ETHN 1761W. Black Freedom Struggle Since 1945 (AFRI 1090).

Interested students must register for AFRI 1090.

ETHN 1800. Honors Seminar (AMST 1800).

Interested students must register for AMST 1800.

ETHN 1805. First Nations: the People and Cultures of Native North America to 1800 (HIST 1805).

Interested students must register for HIST 1805.

ETHN 1806. First Nations: The People and Cultures of Native North America to 1800 (HIST 1512).

Interested students must register for HIST 1512.

ETHN 1810. Language and Power (ANTH 1810).

Interested students must register for ANTH 1810.

ETHN 1810G. Fiction and History (COLT 1810G).

Interested students must register for COLT 1810G.

ETHN 1811D. Reading Revolution, Representations of Cuba, 1959-The Present (COLT 1811D).

Interested students must register for COLT 1811D.

ETHN 1812V. War, Anti-War, Postwar: Culture and Contestation in the Americas (COLT 1812V).

Interested students must register for COLT 1812V.

ETHN 1870A. Ethnic Los Angeles.

This course will focus on the historical and contemporary struggles of people of color in Los Angeles, California, throughout the twentieth century. We will take an interdisciplinary approach, examining films, literature, and history pertaining to the city. There are no prerequisites. Enrollment limited to 20.

ETHN 1870B. Latino/a Communities Seminar.

This seminar's first goal is to introduce students to the social and economic issues that affect contemporary Latino communities. The second goal is to train the students in empirical fieldwork research methods in Ethnic Studies. The seminar searches for ways to link the academy and communities through empirical research that addresses the needs and demands of Latino/a urban communities.

ETHN 1870C. Native North Americans in the Media: Representations and Self Representations in Film.

How have Native North American peoples been represented and self-represented in film from the early 1900s to today? Filmmaking is employed to explore the construction and stereotyping of Indigenous peoples of North America in American popular culture, as well as the recent (re)construction of Native identities by American Indian peoples. Specific topics including identity, race, gender, violence, religion and spirituality, cultural appropriation, and Native humor frame the analysis and comparison of American popular and Native representations of Native Americans. The course centers on the screening and discussion of selected movies, complemented by academic and non-academic literature in the form of books, articles, reviews, and other media materials. Completion of introductory courses on Native American peoples and cultures is strongly recommended.

ETHN 1870D. Chicana/o Fiction.

This course is a survey of Chicana/o fiction from the 1950s to the present. We will be reading novels as well as stories, with the occasional inclusion of poetry. Our literary texts will be supplemented with secondary sources—history, literary criticism, cultural studies, and the like. The course will also ask students to consider the relationship between Chicana/o literature and other writing in the Americas.

ETHN 1870E. Queer Latina/o Literature and Theory.

Enrollment limited to 20.

ETHN 1870F. Eating Cultures.

Enrollment limited to 20.

ETHN 1870G. Reading Race: Advanced Seminar in Critical Race Theory.

Enrollment limited to 20.

ETHN 1890A. Seminar on Latino Politics in the United States.

Advanced seminar on the politics of Latino communities in the United States. Considers the history of Latino politics; participation, partisanship and office-holding; immigration and citizenship; social movements; public policy; gender and race; and pan-ethnic identity. Advanced undergraduate and graduate students. Includes optional community research project. Some familiarity with Latino studies, U.S. politics, Latin American politics, or ethnic studies would be helpful.

ETHN 1890B. Native American and European Contact in Early North America, ca. 1600-1750.

This course will consider contact between Native Americans and Europeans in the early Americas with particular attention to interactions in the greater New England area. Readings stress the diversity of Native lifeways and how contact changed both Natives and Europeans. An equally important theme is to examine the ways in which the history of Native peoples has often been ignored, changed, appropriated, and distorted, as well as reclaimed and re-evaluated over time. Therefore, while the focus is on the seventeenth and eighteenth centuries, the class will also consider how the histories of that time have been told and retold in later eras, including our own. We will also pay attention to the way in which different historians undertake the study of the past. This seminar has no prerequisites, but please be advised that the workload is substantial. If the class is oversubscribed, preference will be given to Ethnic Studies concentrators.

ETHN 1890C. Business, Culture, and Globalization: An Ethnographic Perspective.

The exchange of goods, resources, or commodities is commonly understood as business transactions. Business transactions have always been global, but in the new information age, it seems that many can take part in this exchange system. What is termed as "globalization" has become increasingly popular, yet efforts to clearly define what the term actually means continue to change. This course aims at complicating, rather than simplifying, the term and to understand how business transactions unfold in a "global" economy.

ETHN 1890D. Indigenous Music of the Americas.

Introduces students to music of indigenous communities in North, Central, and South America, with particular attention to the relation between performance, cultural identity, and social change. We will focus especially on indigenous societies in the Andes, Brazil, and the United States and Canada. The course is designed to explore common links between indigenous history, worldview, and performance throughout the hemisphere, while simultaneously illuminating how distinct experiences of colonization and recovery have fostered unique musical practices.

ETHN 1890E. Johnny, Are You Queer: Narratives of Race and Sexuality.

This course is intended as a wide-ranging romp through the fields of queer theory and narratives of race and sexuality. It will move from the 1980s through the present looking at representations of queerness and race in poetry, fiction, creative non-fiction, music, etc. We will investigate the convergences and divergences in the discourses of race and sexuality.

ETHN 1890F. Bad Boys and Bad Girls in Asian American Literature and Culture.

From the angry Asian men of the "Aiiieeeee!" anthologies to Margaret Cho's raucous comedy acts, bad boys and bad girls in Asian American literature and culture have been interpreted as helping to shatter the model minority stereotype. This course examines bad subjects, especially in their relations to popular culture, gender, and sexuality. We will investigate what puts the "bad" in bad boys and bad girls, how ideas of "bad" change, and what the bad subject does for readers and writers. Readings and viewings to include Frank Chin, John Okada, Gish Jen, Margaret Cho, *Harold & Kumar Go to White Castle*, *Better Luck Tomorrow*. Enrollment limited to 20.

ETHN 1890G. Native Americans in the Media: Representation and Self-Representation on Film.

How have Native North American peoples been represented and self-represented in film? Specific topics include identity, race, gender, violence, religion and spirituality, cultural appropriation, and Native humor frame the analysis and comparison of American popular and Native representations of Native Americans. The course centers on screening and discussing selected movies, complemented by academic and non-academic literature such as books, articles, and reviews. Completion of introductory courses on Native American cultures is recommended, but not necessary. All students are welcome. Enrollment limited to 20.

ETHN 1890J. Native American Environmental Health Movements.

American Indian reservations are home to countless sources of environmental contamination, which impact residents' health and ability to maintain cultural practices. In response to this assault, and the numerous scientific studies that often follow, Native communities are taking charge of the research process, and partnering with scientists to explore health affects and remediation possibilities. Through case studies, we will examine how Native communities are pushing to "indigenize" the research process. This class is broadly interdisciplinary, and will be useful for students interested in contemporary issues in Native American communities, and students intending to conduct scientific research in minority communities. Enrollment limited to 20.

ETHN 1890K. Engendering Empire.

This class studies the ways in which empire is a gendered construct. We will also keep in mind that gender never exists in isolation, but on the contrary is always on the crossroads with race, class, and ethnicity. How have brown and black women's bodies borne the mark of empire? This class will closely examine the relationship between empire and gender, specifically this class will discuss this relationship as it has developed in the Americas.

ETHN 1890L. (De)Colonizing Women: Writing the Third Space.

As women of color, we are in the intersections of race, gender, and class. A feminist movement that does not incorporate analyses of race and class cannot meet our needs. A civil rights movement that does not address gender cannot meet our needs; therefore, we create our own space -- a third space. This course reads the literature, poetry, film and theory of third space feminism in the United States. Enrollment limited to 20.

ETHN 1890N. Thawing the "Frozen Indian"; American Indian Museum Representation.

This course examines the role of museums as sites where issues of identity, memory, place, and power intersect. We will review the histories, theories and paradigms that have influenced collecting processes and exhibitions, focusing on representations of Native American Indian peoples. We will explore the ways in which Native people have spoken out against conventional museum practice and have sought to reshape it as a means of decolonizing their history, as well as utilizing museums to their benefit to both preserve and promote Native art and culture. How can non-Native scholars and museum professionals contribute to this effort? Enrollment limited to 15.

ETHN 1890P. Introduction to Native American Literature.

This survey course introduces several prominent genres of Native American literary production, including oral traditions, nonfiction essay, novel, short story, and stand-up comedy/performance. Selections are drawn primarily from Native American/Aboriginal writers and performers in the United States and Canada from the nineteenth century to present, including indigenous women from Pacific Islander communities. In addition to genre considerations, particular attention will be given to the social, cultural, and political contexts in which these works were produced.

ETHN 1890Q. The Hispanic Caribbean and its Diasporas.

The purpose of this course is to examine the history and cultures of the Hispanic Caribbean. An enduring feature of the region as a whole is its cultural diversity and vitality. Perhaps to a degree unsurpassed among world regions, the Caribbean is a set of immigrant societies, shaped by successive waves of European, Africa and Asian settlers. Through art, music, and literature Caribbean people have not just borrowed from but added to Western civilization and the pan-African heritage. Increasingly, Hispanic Caribbean people are making their voices heard as immigrants in the U.S. and the former colonial metropolises of Europe.

ETHN 1890S. Youth, Art, Engagement and Social Justice.

This course is designed for students concerned with the challenges, theoretical models, and best practices of academic research and advocacy relationships. The goals of this course are to navigate the challenges of bridging the gap between the academy, community-based organizations, and social justice research and to accrue experience forging these partnerships. This course has a practice component where students develop a project with a non-profit organization and a portion of each course session is devoted to discussion about progress and challenges of each students project.

ETHN 1890T. Writing Latinx Lives: The Memoir.

Writing Latinx Lives examines the boom over the last couple decades in Latinx memoirs. The course is interested in the rigorous analysis of life writing. What gets written? Who is writing it? What social, political, cultural trends are the writers in dialogue with? And so forth. We will read these memoirs along with critical analyses of the genre, so as to enhance our craft of reading and writing about memoir. I don't want us, that is, to simply get lost in the stories these memoirs tell, but rather I want us to understand how those stories work and why they matter.

ETHN 1890W. Wise Latinas: Women, Gender, and Biography in Latinx History (HIST 1979E).

Interested students must register for HIST 1979E.

ETHN 1891A. Introduction to Native and Indigenous Studies.

This course explores international Indigenous perspectives, experiences and historical impacts of Indigenous peoples around the world in a contemporary global environment. We will examine the complex intercultural dynamics of colonial and post-colonial societies, placing the experience of Native peoples of North America in the larger context of other Indigenous peoples living in settler colonial societies, for example, Maori of Aotearoa – New Zealand and Quechua people of Peru. We will examine Indigenous peoples' connections with territories, resources, and efforts to protect their knowledge systems and sovereignty. Also, through a comparative approach, we will study Indigenous and Western research paradigms.

ETHN 1892. Race, Class and Gender in Latino Communities.

Examines the roles of racial, class, and gender identities, in the emergence and consolidation of Latino political power in the United States. We look at Latino racial attitudes and racial hierarchies, as "inherited" from Latin American social systems, and as developed here in the U.S. We explore class politics as they shape Latino social movements, economic conditions, and communities, and we analyze the impact of Latino immigration and union membership on organized labor. We consider gender roles and patriarchy in Latino families, and the roles of intersectionality and feminism in Latino politics. Enrollment limited to 40.

ETHN 1900A. Alien Nation: US Immigration in Comparative Perspectives.

Latina/o immigration to the United States has reshaped the meaning of "America" over the last hundred years. We will study Latina/os in comparison to other immigrants and examine how US immigration policy has created a nation partly composed of "alien" residents—some citizens, others not—who have constructed alternative notions of belonging.

ETHN 1900B. Community, Language and Literacy: A Practicum.

This course examines adult language and literacy learning and approaches to teaching in community settings. It is designed to support students' work teaching language and literacy to immigrant adults. Working with the Swearer Center and its community partners students will explore theories informing educational practice, and will gain skills and practice in providing language and literacy instruction to adult learners in the community. This practicum specifically addresses issues of language acquisition, acculturation, and broader contexts framing adult education. Enrollment limited to 20.

ETHN 1900C. Contemporary Latino/a Education in the United States.

Latino/as are now the second largest group of students in United States schools and, in aggregate, among the most troubled as measured by drop-out rates and grade-level retentions. Yet Latino/a students also perform well in some settings. This course reviews contemporary Latino/a education, focusing on the multiple educational contexts Latino/as encounter, including how non-Latino/a educators regard Latino/a students.

ETHN 1900D. Latino Communities Seminar.

Enrollment limited to: 20.

ETHN 1900E. Senior Seminar in Ethnic Studies.

No description available.

ETHN 1900F. Theory, Creativity, Activism.

This class will bring together much of the literature and discussions conducted throughout your education as an Ethnic Studies major and prepare you for the application of Ethnic Studies in your post-graduate life. I have chosen to emphasize three themes that have been dominant in your Ethnic Studies curriculum: Theory, Creativity, and Activism. We will begin by critically exploring the democratic principles and imperial practices that underlie the "American system" and the political formation of The Third World. Our discussions and readings will include an examination of the contributions and limitations of multiculturalism, postmodernism, anti-colonialism and feminism, and the relevance of (ethnic) "experience" in interpreting and addressing the problems we face as a planetary civil society. The majority of the class will be dedicated to the praxis of Ethnic Studies as a creative and political force within our world today. We will read fiction and non-fiction and view films that articulate the complexities of life in North America and beyond.

ETHN 1900G. Race and Immigration in the Americas.

Enrollment limited to: 20.

ETHN 1900H. What is Ethnic Studies?.

No description available. Enrollment limited to 20 seniors and graduate students.

ETHN 1900I. To Be Determined.

Enrollment limited to 20.

ETHN 1901. American Empire Since 1890 (HIST 1900).

Interested students must register for HIST 1900.

ETHN 1903G. Oral History and Community Memory (AMST 1903G).

Interested students must register for AMST 1903G.

ETHN 1903P. Please, Please Me (AMST 1903P).

Interested students must register for AMST 1903P.

ETHN 1903V. Asian and Latino Immigration (AMST 1903V).

Interested students must register for AMST 1903V.

ETHN 1903X. Style and the Man: Masculinity in Fashion and U.S. History (AMST 1903X).

Interested students must register for AMST 1903X.

ETHN 1904J. The Asian American Movement: Communities, Politics and Culture (AMST 1904J).

Interested students must register for AMST 1904J.

ETHN 1910. Independent Study.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ETHN 1910D. Faces of Culture (ANTH 1910D).

Interested students must register for ANTH 1910D.

ETHN 1920. Senior Thesis.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ETHN 1940. Ethnographic Research Methods (ANTH 1940).

Interested students must register for ANTH 1940.

ETHN 1950G. Contemporary Chinese Culture and Media (EAST 1950G).

Interested students must register for EAST 1950G.

ETHN 1960D. Feminist Theory/Feminist Activism (GNSS 1960D).

Interested students must register for GNSS 1960D.

ETHN 1981C. Minority News: Radical Reporting and Reading (HMAN 1970L).

Interested students must register for HMAN 1970L.

ETHN 2070. Music and Identity (MUSC 2070).

Interested students must register for MUSC 2070.

ETHN 2220. Urban Politics (POLS 2220).

Interested students must register for POLS 2220.

ETHN 2340. Human Development and Urban Education (EDUC 2340).

Interested students must register for EDUC 2340.

ETHN 2970C. Rethinking the Civil Rights Movement (HIST 2970C).

Interested students must register for HIST 2970C.

Native American and Indigenous Studies

NAIS 0105. This Land is (?) Land: A Study of the Long Struggle for the Northeastern Atlantic Coast.

In 1616, John Smith of Pocahontas fame published "A Description of New England," literally remaining and ostensibly claiming a "placeworld" Native peoples call the Dawnland. In this first-year seminar, students will utilize Native American and Indigenous Studies (NAIS) methodologies to examine and appraise the circumstances and legacies of settler colonialism and the long struggle to remake and redefine the Northeastern Atlantic coast. Students will engage with traditional historical sources, literature, oral histories, and evidence found in popular culture to understand better the genesis and durability of the struggle for this contested landscape.

NAIS 1000A. Learning our Native Languages: Addressing Legacies of Destruction.

The purpose of this course is to support learning Indigenous languages. Course content is differentiated to each student according to their needs, with guiding questions: How will you learn your language? What aspects of your language (reading, writing, listening, speaking, cultural context) will you focus on, and why? What resources will be most helpful and what challenges of learning your language exist? How will they benefit your academic study and professional trajectory? The scholarly context of this course emerges from a need to address the legacies of destruction to Indigenous peoples. Given the history of cultural and linguistic genocide, Native voices and ways of knowing will be centered, using community resources, oral histories, and Native scholars as a support network for study, guided by principles such as relationships to heritage languages, Indigenous epistemologies, land relations, music, and gender.

NAIS 1100. Federal Indian Law: Native Nations, Resistance, and Indigenous Rights.

This class is an introductory course to Federal Indian Law and the history of Nations Nations and their advocacy for Indigenous Rights. It will provide a multi-century overview of cases brought by Native Nations and Indigenous people in federal courts, including the history that led to these cases. It will center around specific time periods and topics of Indigenous resistance and federal policies that shape the landscape of federal laws and legal precedent that affect Nations Nations and their Indigenous people today. The class will hear from a variety of speakers in federal Indian law involved in Supreme Court cases over the past 40 years.

NAIS 1201. Native American Languages.

This course surveys Native American and Indigenous languages in the western hemisphere and the communities that speak them, focusing on a representative sample for closer study. The role of language in maintaining cultural identity is examined, and prospects for the future of Native American languages are assessed.

NAIS 1202. Language, Race, and Indigeneity.

This course will survey historical and contemporary theories of language, race and nation throughout the expansion of western civilization from the ancient Mediterranean to the present. Students will examine how science, religion, and law have contributed to contemporary understandings of race and indigeneity. Special attention will be given to the establishment and reproduction of overarching categories such as "Indian" and "Indigenous". Students will also compare national and racial contexts, including their own, to better understand the processes of social movements where language serves as a fundamental category for group work.

NAIS 1203. Community-centered Language Documentation.

Have you ever run to a dictionary to "prove" something is a word and found yourself surprised it's not there? Or maybe you've seen the incredible work of the Wampanoak tribe on reawakening and teaching their language? In this class we will talk about the multi-disciplinary field of language documentation and the why, how, and who of how language documentation material is made and shared. You will be encouraged to connect what you learn back to your own concentrations and experiences and to critically engage with the impacts of how this information is shared on perceptions of knowledge and power.

NAIS 1204. Indigenous Women and the Power of Rematriation.

This class is a survey course on Indigenous women and the power of rematriation. It will provide an intergenerational view of Indigenous women and the influences they have in their communities, within Indigenous movements, and among each other in a variety of contexts, including leadership, seed sovereignty, repatriation, sacred places protection, Indigenous knowledge movements, community work, language, and teaching the next generation. Each class is specifically designed to centralize the interconnectedness and relationships of Indigenous women among their Indigenous nations and communities, and the intergenerational nature of their life works. The class will hear from a variety of speakers who will offer important insight into rematriation and their struggles against colonialism, the commodification of Indigenous peoples and Indigenous lands, and the diminishment of Indigenous rights, that have lead to the movements they established.

NAIS 1205. Indigenous Human Rights.

This course focuses upon Indigenous human rights and will investigate the frameworks established by Indigenous nations and Indigenous peoples, countries (nation-states), and the United Nations through which Indigenous peoples may advocate. Students will learn about individual and collective human rights, Indigenous intellectual property rights, and formulating statements/interventions centered around the sovereignty of Native nations and issues facing Indigenous communities. Throughout the course, students will hear from speakers who have advocated around the world for the human rights of Indigenous peoples. Students will also have the opportunity to learn about the structure of the United Nations, the UN process of advocacy, and how to research and create documentation at the UN. This course will invite local tribal communities in for intergenerational learning opportunities and community-based learning.

NAIS 1206. Research Design & Methodologies.

This course introduces students to theory and concepts in research design and methodology with special attention to participatory action research and Indigenous research methods. Students will be prepared to articulate a theoretical justification for the use of participatory action research and Indigenous research methods. By the end of the semester students will apply participatory action research and/or Indigenous research methods in their own projects.

NAIS 1207. Linguistics of an Indigenous Language.

This course surveys the grammar of maqlaqsyls 'the language of the People' that was one of the major spoken languages in northeast California, southern Oregon, and the northern Great Basin. This language continues to be used by at least two tribal governments and their dispersed maqlaqs (Klamath-Modoc) communities throughout the United States. Students will learn about the history of the language and then learn to use maqlaqsyls and describe its structures.

NAIS 1208. Language Revitalization & Reclamation.

This course introduces fundamental themes in the investigation, evaluation, and theorization of revitalization movements with particular focus on those groups where language represents a fundamental category for group and collective action. This course operates under the assumption that language shift occurs in particular social-political contexts and students will consider relations between individual and community, people and polity, methods and commitments, as well as forms of violence and alienation in daily practice. Case studies will engage community projects, sociolinguistic behaviors, and other symbolic practices.

NAIS 1900. Critical NAIS Capstone Course.

This seminar serves as the capstone course for the Critical NAIS concentration, providing seniors the opportunity to share their research; reflect on what the field of NAIS is (and is) becoming; and consider how their work relates to the field as a whole. This seminar is not intended to develop a monolithic understanding of the field, but to explore the range of problems, methodologies, trajectories of inquiry and political aims across different kinds of NAIS scholarship. To gain a specific sense of these various approaches, we focus on scholarship-in-progress, building the syllabus based on areas of interest and expertise, finalized in a capstone project, practicum, internship or thesis. As the culmination of the concentration, the capstone may take the form of a research paper, project, and/or engaged experience or internship accompanied by a write up (thesis, report, digital product)

NAIS XLIST. Courses of Interest to Concentrators in Native American and Indigenous Studies.**Fall 2025**

The following courses include a focus or significant content on Native American and Indigenous studies. They may count toward the concentration in Critical Native American and Indigenous Studies offered through the Department of American Studies. Please check the Native American and Indigenous Studies Initiative website for any changes in times, locations, instructors or additional courses that may count toward this concentration

Comparative Literature

AMST 0170G Native American Boarding School Histories
AMST 1907F Queer Indigenous Studies and Two-Spirit Critique

Brown Arts

ARTS 1016 Curatorial Praxis: Caring for and Curating Indigenous Contemporary Art

Earth, Environmental and Planetary Sciences/Environmental Studies

EEPS/ENVS 1615 Climate Change, Human Rights, and the Policy Process

Ethnic Studies

ETHN 1200K Introduction to Native American and Indigenous Studies
ETHN 1750X Native American Language Loss, Revitalization, and Resiliency

Hispanic Studies

HISP 1331V First Person Pluralities: Indigenous Literatures of Abya Yala

History

HIST 1512 First Nations: The People and Cultures of Native North America to 1800a

HIST 1553 Empires in America to 1890

HIST 1950A The Indigenous Worlds of the American Revolution

HIST 1958D Combating Colonialism: Comics and Indigenous Storytelling

HIST 1960H Colonization and Southern Africa's First Peoples

History of Art and Architecture

From Turtle Island to Abya Yala: Art of the Indigenous Americas

Religious Studies

RELS 0090B Indigenous Ecologies

Public Humanities**PHUM 1805. Making the Invisible Visible: Global Urban Typologies in the 20th and 21st Century.**

This seminar presents tools for urban analysis and introduces the students to the process of knowledge distribution via book publishing today. Urban typologies as a tool to analyze, clarify, compare and provide solutions have become more important than ever. The urbanization process of the industrial era has set into motion a dramatic change of human life on planet earth. On the edge of the 20th to the 21st century, agglomerations have evolved into mega cities, whose number of inhabitants equals that of states elsewhere. By 2050, major cities in sub-Saharan Africa will have doubled the number of their citizens. Which analytical and prognostic tools will help to provide a sustainable and prosperous future for them? The course will introduce students to the process of researching, analyzing, selecting, writing about global urban environments, and reviewing academic books.

PHUM 1903. Shrine, House or Home: Rethinking the House Museum Paradigm.

This seminar will examine historic house museums within the context of American culture from the founding of Mount Vernon in 1853 to their present decline in popularity and relevance. Utilizing sources from a variety of disciplines including literature, women's and family history, and museum and preservation theory and practice, students will re-examine the prevailing historic house museum paradigm and develop interpretation plans for house museums in the Providence area.

PHUM 1904. Power + Water: Material Culture and its Environmental Impact.

Students explore material culture, its impact upon the environment in the US prior to Industrial Revolution and examine the relationship of this earlier production to current issues of pollution and climate change. In the 18-19th centuries, houses, furniture, whale products were staples of American craft and ingenuity. This material culture tells the story of how gathering raw materials and converting them into usable products came at a severe cost to watersheds, forests, species, humans. These examples show that the seemingly insatiable human urge to control/transform resources into items for consumption leads to serious consequences for the earth's climate and inhabitants.

PHUM 2004. Critical Approaches to Preservation and Cultural Heritage.

This course examines the modern fields of preservation and cultural heritage from a historical and critical point of view to better understand their formation, evolution, current condition and the issues integral to their future. We explore such thorny topics as the "invention" of tradition and the relationship between heritage programs and nationalism, the evolution of the global cultural heritage industry, the story of preservation institutions in the United States and abroad, the rise of cultural heritage crimes in conflict zones, public history and memorials at "sites of conscience," and the emergence of digital preservation and "experimental preservation."

PHUM 2010. Introduction to Public Humanities.

This class, a foundational course for the MA in Public Humanities with preference given to graduate students enrolled in MA in Public Humanities, will address the theoretical bases of the public humanities, including topics of history and memory, museums and memorials, the roles of expertise and experience, community cultural development, and material culture. Enrollment limited to 20 graduate students.

PHUM 2011. Curatorial Practice and Change.

This course engages in theoretical and practical aspects of engaging in public histories and curating exhibitions. We will explore various methodologies for creating exhibitions and engage in institutional critique. We will also look at community practice, and museum and historical projects in public contexts. Through readings, discussion, assignments, museum trips, public history tours, and guest lectures, we will critically analyze the role of curators and curatorial practice.

PHUM 2013. Management of Cultural Institutions.

This course explores public humanities institutions as an organizational system interacting with broader community systems. Students gain an understanding of the managerial, governance and financial structures of public humanities organizations and how those structures relate to mission, programming and audience. The course is designed to help those who work on the program side of public humanities and cultural non-profits (as educators, librarians, curators, interpreters, exhibit designers, public programming coordinators, and/or grant makers) engage more strategically with planning, organizational behavior, revenue generation, finance, marketing, and governance.

PHUM 2014. Museum Interpretation Practices.

This course examines current interpretive practices and offers students the opportunity to participate in creating gallery interpretation for the museum context. Questions of material and form; models of attention and perception, the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Throughout the semester students will develop their interpretive practice through a series of workshops, exercises, site visits, and critical discussions. Enrollment limited to 15.

PHUM 2015. Public Art: History, Theory, and Practice.

The course offers an opportunity for RISD and Brown students to work together to understand the growing interdisciplinary field of public art. We will explore the potential of working in the public realm as artists and/or arts administrators. Topics include: pivotal events and artworks that formed the history of public art from the early 20th century to the present; approaches to site-specificity; ideas of community and audience; current debates around defining the public and public space; temporary vs. permanent work; controversies in public art; memorials, monuments, and anti-monuments; case studies; public art administration models, among others. It is both a seminar and a studio; students work individually and together on research, presentations, proposals and public projects. Enrollment limited to 12 seniors and graduate students. Instructor permission required.

PHUM 2016. Creative & Cultural Entrepreneurship in the Commons.

This seminar surveys entrepreneurship within the art-industrial complex, emphasizing the roles of artists as innovators, the commons as laboratory, and cultural institutions as incubators. An inquiry-based course, our collective research works from the premise that entrepreneurship is the creation of social, cultural and financial value, which are inextricably linked under the umbrellas of capitalism and philanthropy. Students will investigate the infrastructures, policies, practices upon which the arts/culture ecosystem is built; engage in fieldwork that surveys the diverse entry points to the field; translate what they've learned into an actionable, individualized toolkit, empowering them to opt into (or out of) the art market economy with strategy and confidence. With a focus on personal and professional development, this course equips students with skills, tools and vocabularies vital to actualizing the impact they want to have through their creative practice, projects or ventures.

PHUM 2020. Methods in Public Humanities.

This course surveys public humanities work, including cultural heritage preservation and interpretation, museum collecting and exhibition, informal education, and cultural development. It also provides an overview of the contexts of that work in nonprofit organizations, including governance, management, and development.

PHUM 2021. Public Amnesias and Their Discontents: Theories and Practices of Remembering.

This course considers the consequences of forgetting as one of the challenges and provocations to the work of public humanities. By extending the histories of memory into discourses of "amnesia," we will identify origins, effects, and the possibility of a return for material that has become forgotten or, more significant for us, made forgettable. This class is not about memory loss as an individual neurological condition, but as cultural and civic phenomena: specifically, how material objects in the public sphere become lost from view.

PHUM 2022. Public in Persons: Along Humanities' Ethical Edges.

This course will offer a challenge and a potential to Public Humanities practices and theorizing: to place the irreducibility of individual human experiences as one of its most compelling and profound principles. This consideration differs from forms of "ethics" as they shaped traditional Western philosophy, where the focus was on the ways to lead "a good life" for a very specific, and small, part of the population. But recent ethical responses globally to racisms, genocides, and dispossessions now are frequently spoken in terms of responsibility, radical difference, vulnerability, and hospitality. This course will introduce students to how such ideas might inform "ethical praxis" in Public Humanities, offering case studies and guest presentations alongside writings addressing these four areas of interaction.

PHUM 2023. Decolonization of Museums: Nations, Museums, Anti Colonialism and the Contemporary Moment.

Museums are spaces of collection and representation. They are also keepers of knowledge. Museum collections and knowledge are constructed through distinctive power relations. There are of course different kinds of museums but the ethnographic museum has been one center piece of colonial collections. This course will examine how the collections of many museums were established. After this historical collection working through an genealogical method the course will then pay attention to the contemporary debates and practices of various attempts to decolonize various museums. In this regard we will pay attention to four museums: the Tropen Museum in Amsterdam; the British museum, Boston Museum of Fine Arts and to the National Art Gallery of South Africa.

PHUM 2025. Semester Practicum in Public Humanities.

Practicums in public humanities provide practical, hands-on training that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty to find appropriate placements and negotiate a semester's or summer work, in general a specific project. Available only to students in the Public Humanities M.A. program.

PHUM 2060. Projects in Public Humanities.

Devoted to one or more advanced projects in Public Humanities not covered in detail by the regular courses. Projects in public humanities provide practical, hands-on project and group project management experience that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty advisor to project completion. Written permission and topic description required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. This course is repeatable for credit. Prerequisite: AMST2650 or PHUM2010 or demonstrated ability of equivalent experience. Instructor permission required.

PHUM 2065. Independent Reading and Research in Public Humanities.

For MA in Public Humanities Students who wish to do independent reading and research.

PHUM XLIST. Courses of Interest for Public Humanities Electives. Fall 2025

The following courses have a public humanities component and are recommended as electives to students in the Public Humanities MA program and will count toward degree completion. Please refer to the primary department for registration details.

Anthropology

ANTH 2590 Space, Power and Politics

Arts

ARTS 1016 Curatorial Praxis: Caring for and Curating Indigenous Contemporary Art

Annenberg Institute for School Reform

The Annenberg Institute for School Reform (AISR) is a national policy research and reform-support organization, headquartered at Brown University, that conducts research and collaborates with school districts, communities, and other education stakeholders to improve the conditions and outcomes of urban public schools.

Established in 1993 by education reform leader Theodore (Ted)Sizer, the founder and chair of the then-Brown University-based Coalition for Essential Schools, the organization was renamed shortly thereafter to honor philanthropist, former diplomat, and publisher Walter H. Annenberg, following the Annenberg Foundation's \$50-million gift to endow AISR. A University Corporation-appointed Board of Overseers, chaired by Brown's president, governs the organization.

AISR is currently in a period of transition and refocusing of its mission, which reflects Brown's strategic plan, *Building on Distinction*. Susanna Loeb, an expert in education policy and a professor of education at Stanford University, has been appointed the next director, starting July 1, 2018. Michael Grady currently serves as the Institute's interim executive director.

Several former AISR programs are continuing their work in new organizational homes. On September 1, 2017, Research and Policy and New York-based Community Organizing and Engagement moved to the Metropolitan Center for Research on Equity and the Transformation of Schools at New York University's Steinhardt School of Culture, Education, and Human Development. On November 13, 2017, New England-Based Community Organizing & Engagement and District & Systems Transformation moved to Roger Williams University's School of Continuing Studies.

AISR's programs and structure under Dr. Loeb's leadership will emphasize closer integration with the University's research and teaching mission and create a hub of scholarship and policy work that engages faculty, students, and practitioner experts addressing the causes, consequences, and mitigation of educational inequality.

In collaboration with Brown's Education Department, AISR established a Master's Program in Urban Policy (UEP) in 2006. The tightly focused, 12-month academic curriculum, integrated with a 9-month internship, is

designed to impart a set of core skills and competencies necessary for successful careers in urban education policy. To date, degrees have been conferred on close to 300 graduates. In 2012, AISR's Board of Overseers established the Ruth J. Simmons Urban Education Policy Scholarship, a permanent annual award for UEP Master's degree candidates that honors the University's retired president and former AISR board chair.

AISR also serves as a bridge from Brown to Providence and the state, providing support for the Providence Public School District, the R.I. Department of Education, and the Central Falls School District, and it hosted the Providence Children & Youth Cabinet from 2012 to 2017. In 2008-09, AISR supported the Governor's Urban Education Task Force, a key factor in Rhode Island's successful Race to the Top application. Furthermore, in partnership with the Rhode Island Foundation, AISR sponsored a series of eight forums in 2011-14 focused on "Building a 21st Century Education System" in the Ocean State.

Additional information can be found at: <http://www.annenberginstitute.org/>

Anthropology

The Department of Anthropology is home to a vibrant community of faculty, students, and staff broadly interested in the study of humanity, past and present. Brown's socio-cultural and linguistic anthropologists are engaged in ethnography across the globe. The department's anthropological archaeologists focus on the study of the material remains of the ancient, historic, and modern Americas. Current faculty and students are especially engaged in research related to issues of power, violence, politics, health, and population.

For additional information, please visit the department's website: <https://www.brown.edu/academics/anthropology/>

Anthropology Concentration Requirements

Anthropology is the study of human beings from all times and all places, offering a holistic, comparative, international, and humanistic perspective. In studying and interpreting the vast range of similarities and differences in human societies and cultures, anthropologists also seek to understand how people themselves make sense of the world in which they live. The Department of Anthropology at Brown is a vibrant, award-winning group of scholars working primarily in the subfields of cultural anthropology, archaeology, and anthropological linguistics. Anthropology is a varied discipline and the Concentration at Brown University reflects that diversity. Students concentrating in Anthropology must declare one of six possible concentration tracks: sociocultural anthropology, archaeology, anthropological linguistics, biological anthropology, medical anthropology, or general anthropology.

The department also supports students involved in Engaged Scholarship through the Swearer Center, through which students may pursue an Engaged Scholarship Certificate. Study abroad is also supported and encouraged. Interested students may contact the director of undergraduate studies.

Students who declared a concentration prior to fall 2019 can refer to concentration requirements here: (<https://bulletin.brown.edu/archive/2018-19/>)<https://bulletin.brown.edu/archive/2018-19/the-college/concentrations/anth/>

General Anthropology Track

Choose one foundational course in sociocultural, linguistic anthropology, or medical anthropology:

ANTH 0100	Introduction to Cultural Anthropology	1
ANTH 0300	Culture and Health	
ANTH 0800	Sound and Symbols: Introduction to Linguistic Anthropology	

Choose one foundational course in archaeology or biological anthropology:

ANTH 0310	Human Evolution	1

ANTH 0500	Past Forward: Discovering Anthropological Archaeology	
Choose one of the following courses in anthropological methodology, to prepare students for further research:		1
ANTH 1201	Introduction to Geographic Information Systems and Spatial Analysis	
ANTH 1621	Material Culture Practicum	
ANTH 1720	The Human Skeleton	
ARCH 1900	The Archaeology of College Hill	
ANTH 1940	Ethnographic Research Methods	
ANTH 1740	Paleoethnobotany: Ancient Agriculture to Criminal Investigations	
Five additional courses in anthropology of the student's choosing. At least three of these electives will need to be at the 1000-level to meet the requirements of the concentration.		5
Senior Seminar		1
ANTH 1990	Senior Seminar: (Re)Making Anthropology (Senior Seminar)	
Total Credits		9

Medical Anthropology Track

Foundation course		1
ANTH 0300	Culture and Health	
Two courses in at least two of the four major subfields of anthropology:		2
Choose one:		
ANTH 0310	Human Evolution	
ANTH 0500	Past Forward: Discovering Anthropological Archaeology	
Choose any one 0000 or 1000-level course in socio-cultural anthropology or linguistic anthropology such as:		
ANTH 0100	Introduction to Cultural Anthropology	
ANTH 0800	Sound and Symbols: Introduction to Linguistic Anthropology	
ANTH 1111	Anthropology of China	
ANTH 1150	Middle East in Anthropological Perspective	
ANTH 1255	Anthropology of Disasters	
ANTH 1320	Anthropology and International Development: Ethnographic Perspectives on Poverty and Progress	
ANTH 1848	Ethnography + Social Critique	
Methods Course		1
ANTH 1940	Ethnographic Research Methods	
At least one 1000-level course in medical anthropology such as:		1
ANTH 1242	Bioethics and Culture	
ANTH 1300	Anthropology of Addictions and Recovery	
ANTH 1301	Anthropology of Homelessness	
ANTH 1310	Global Health: Anthropological Perspectives	
An additional three anthropology courses of the student's choosing. At least two of the electives must be at the 1000-level to meet the general requirements of the concentration.		3
At least one non-anthropology course in the natural sciences, public health, or psychology that focuses on human health to give students basic exposure to the science of human physical and/or mental health. This course is in addition to the nine courses required in ANTH. ²		1
Senior Seminar		1
ANTH 1990	Senior Seminar: (Re)Making Anthropology	
Total Credits		10

- ¹ Other appropriate anthropology courses may be used to fulfill this requirement with DUS approval
- ² Most qualifying courses will bear a BIOL, PHP, or CLPS designation but students can choose any appropriate course to fulfill this requirement with DUS approval.

Socio-Cultural Anthropology Track

Foundation course		1
ANTH 0100	Introduction to Cultural Anthropology	
One course in archaeology or biological anthropology:		1
ANTH 0310	Human Evolution	
ANTH 0500	Past Forward: Discovering Anthropological Archaeology	
Research methods		1
ANTH 1940	Ethnographic Research Methods	
At least two 1000-level courses that focus on specific aspects of sociocultural methods or theories, or in a particular region, such as:		2
ANTH 1111	Anthropology of China	
ANTH 1150	Middle East in Anthropological Perspective	
ANTH 1240	Religion and Culture	
ANTH 1242	Bioethics and Culture	
ANTH 1255	Anthropology of Disasters	
ANTH 1300	Anthropology of Addictions and Recovery	
ANTH 1301	Anthropology of Homelessness	
ANTH 1310	Global Health: Anthropological Perspectives	
ANTH 1320	Anthropology and International Development: Ethnographic Perspectives on Poverty and Progress	
ANTH 1515	Anthropology of Mental Health	
ANTH 1848	Ethnography + Social Critique	
ANTH 1911	Gender and Sexuality in the Middle East	
An additional three anthropology courses of the student's choosing. At least one of the electives must be at the 1000-level to meet the general requirements of the concentration.		3
Senior Seminar		1
ANTH 1990	Senior Seminar: (Re)Making Anthropology	
Total Credits		9

Linguistic Anthropology Track

Foundation course		1
ANTH 0800	Sound and Symbols: Introduction to Linguistic Anthropology	
One additional course in linguistic anthropology from the following:		1
ANTH 0805	Language and Migration	
ANTH 1311	Language and Medicine in Practice	
ANTH 1810	Language and Power	
Two other foundational courses in anthropology:		2
Choose one:		
ANTH 0100	Introduction to Cultural Anthropology	
ANTH 0300	Culture and Health	
Choose one:		
ANTH 0310	Human Evolution	
ANTH 0500	Past Forward: Discovering Anthropological Archaeology	
Research methods		1
ANTH 1940	Ethnographic Research Methods	

Senior Seminar	1
ANTH 1990 Senior Seminar: (Re)Making Anthropology	
An additional three anthropology courses of the student's choosing. At least two of the electives must be at the 1000-level to meet the requirements of the concentration.	3
At least one general course focusing on aspects of linguistic structure. ¹	1
At least one language course (one semester) in any language other than English. ²	1
Total Credits	11

- ¹ This course is in addition to the nine courses required in ANTH. Given the teaching commitments of departmental faculty, eligible courses will generally be offered only in departments other than Anthropology. Recommended courses include Introduction to Linguistics (LING 0100) or Sociolinguistics (SLAV 1300). Students may also choose another appropriate course to fulfill this requirement with DUS approval.
- ² This course is in addition to the nine courses required in ANTH. Students interested in studying a language not offered at Brown should consult with Linguistic Anthropology faculty and the DUS.

Anthropological Archaeology Track

Foundation course in anthropological archaeology	1
ANTH 0500 Past Forward: Discovering Anthropological Archaeology	
Foundation course in socio-cultural anthropology	1
ANTH 0100 Introduction to Cultural Anthropology	
Choose one course in anthropological archaeology methodology:	1
ANTH 1201 Introduction to Geographic Information Systems and Spatial Analysis	
ANTH 1621 Material Culture Practicum	
ARCH 1900 The Archaeology of College Hill	
ANTH 1740 Paleoethnobotany: Ancient Agriculture to Criminal Investigations	
Choose one course that involves detailed archaeological investigation of a geographic region: ²	1
ANTH 1031 Classic Mayan Civilization	
ANTH 1126 Ethnographies of Heritage: Community and Landscape of the Mediterranean and Beyond	
ANTH 1505 Vertical Civilization: South American Archaeology from Monte Verde to the Inkas	
ANTH 1624 Indians, Colonists, and Africans in New England	
ANTH 1640 Maize Gods and Feathered Serpents: Mexico and Central America in Antiquity	
ANTH 1650 Ancient Maya Writing	
ANTH 1692 Southwestern Archaeology	
One 1000-level course in anthropology with significant archaeological, material culture, and/or museum studies component. A second geographic area course from the list above may be used to meet this requirement. Other regularly offered courses that meet this requirement include: ³	1
ANTH 1125 Indigenous Archaeologies	
ANTH 1620 Global Historical Archaeology	
ANTH 1623 Archaeology of Death	
ANTH 1820 Lost Languages: The Decipherment and Study of Ancient Writing Systems	

Three anthropology courses of the student's choosing. At least one of the electives must be at the 1000-level to meet the general requirements of the concentration.

Senior Seminar	1
ANTH 1990 Senior Seminar: (Re)Making Anthropology	
Total Credits	9

- ¹ This requirement will be waived for students who have completed an archaeological field school. The field school must be approved in advance of its completion for the requirement to be waived. Per the broader requirements of the concentration, students must still complete nine anthropology credits at Brown or via transfer credits. Note that many field schools do not carry credit.
- ² Other anthropological archaeology courses with significant geographic focus may be used to fulfill this requirement with DUS approval.
- ³ Other anthropology courses with significant archaeological, material culture, or museum studies focus may be used to fulfill this requirement with DUS approval.

Biological Anthropology Track

Foundation course in biological anthropology	1
ANTH 0310 Human Evolution	
Choose one foundational course in cultural anthropology, medical anthropology, or linguistic anthropology:	1
ANTH 0100 Introduction to Cultural Anthropology	
ANTH 0300 Culture and Health	
ANTH 0800 Sound and Symbols: Introduction to Linguistic Anthropology	
Biological anthropology methodology	1
ANTH 1720 The Human Skeleton	
Five anthropology courses of the student's choosing. At least three of the electives must be at the 1000-level to meet the requirements of the concentration.	5
At least one non-anthropology course with a biological focus. Any course with a BIOL subject code can be used to fulfill this requirement. Students are especially encouraged to consider a course with a significant content devoted to genetics and/or evolutionary theory. This course is in addition to the nine courses required in ANTH.	1
Choose at least one course in statistics. This course is in addition to the nine courses required in ANTH. Possible courses include: ¹	1
APMA 0650 Introduction to Probability and Statistics	
BIOL 0495 Statistical Analysis of Biological Data	
CPSY 0900 Statistical Methods	
SOC 1100 Introductory Statistics for Social Research	
PHP 1501 Essentials of Data Analysis	
Senior Seminar	1
ANTH 1990 Senior Seminar: (Re)Making Anthropology	
Total Credits	11

- ¹ Other courses may be substituted to meet this requirement with the permission of the DUS.

Research Opportunities and Engaged Scholarship

Training in anthropology is not limited to the classroom. Students are urged to seek out extracurricular opportunities that will round out their anthropological studies. Such experiences might include internships, study abroad, field schools, faculty research apprenticeships, and independent projects. Interested students may contact the director of undergraduate studies.

Anthropology concentrators who are especially interested in making deeper connections between their concentration curriculum and long-term engagement with local communities in Providence and beyond

may choose to pursue an Engaged Scholarship designation through the Swearer Center. Engaged scholars combine hands-on experiences such as internships, public service, humanitarian and development work with their academic learning in order to develop a deeper understanding of, and appreciation for, social engagement. While most anthropology courses have some sort of 'engaged' element, being an Engaged Scholar in Anthropology means making a commitment to engaging more actively and intensively with the communities in which a student is living.

All Anthropology tracks are compatible with the Engaged Scholarship Certificate.

Honors

Honors

Candidates for honors should apply to the concentration advisor by the end of their 6th semester, but no later than the 4th week of the 7th semester. An application consists of a thesis proposal of 2-3 pages, describing the major research questions and methods to be used. Candidates will prepare their proposals in close consultation with their primary advisor. Candidates for honors are required to:

1. Fulfill the standard concentration requirements.
2. Have completed at least two thirds of the concentration requirements by the end of the sixth semester.
3. Be in good standing
4. Have earned a majority of "A" grades in the concentration. Classes taken S/NC will count as qualifying towards that majority if they are marked "S" with distinction" indicating that had the student taken the course for a grade, the grade would have been an "A."

Honors candidates will:

1. Take two half-credit Anthropology Thesis Workshop courses (ANTH 1930) and at least one additional independent study course (ANTH 1970) with the thesis advisor, usually in the student's final semester.
2. In consultation with the primary thesis advisor, identify a second reader by the start of the seventh semester.
3. Submit an approved honors thesis by the deadline stipulated each year.
4. Present the thesis in the Honors Theses Symposium in the Anthropology department.

More information on honors is available here: <https://www.brown.edu/academics/anthropology/honors> (<https://www.brown.edu/academics/anthropology/honors/>)

Anthropology Graduate Program

The department of Anthropology offers a graduate program leading to the Ph.D. in Anthropology.

For more information on admission and program requirements, please visit the following website:

<http://www.brown.edu/academics/gradschool/programs/anthropology>
(<http://www.brown.edu/academics/gradschool/programs/anthropology/>)

Courses

ANTH 0001. Anthropology of Stuff.

Our lives are surrounded by objects we make, gift, sell and buy. What can these objects tell us about who we are as humans? This course will introduce students to material anthropology, exploring what objects can tell us about culture, society and experience. We will talk about gifts, commodities, counterfeits, and copyrights. Students will learn how people make objects, how objects make people, and how the circulation of objects has connected people historically and in the present. Students will also have the opportunity to learn some ethnographic methods to talk about the meaning of objects in the world around them.

ANTH 0066A. Politics of Race and Culture.

Addressing the subjects of race, culture and ethnicity, focusing on minority groups in the U.S. Seeks to clarify the philosophical and theoretical issues in contemporary America using a cross-disciplinary approach.

ANTH 0066B. Mythscapes.

An experimental seminar that will combine classroom discussion with visits to field sites within walking distance of the Brown campus. The aim will be to acquaint students with some fundamentals of symbolic analysis and to apply these fundamentals to interpreting the moral and historical messages suffused in the landscapes around us. Readings will include sources on the anthropological interpretation of myth combined with historical sources on Brown and its neighboring communities and institutions. Students will acquire a deeper sense of the mythic qualities of this place and some analytical tools for understanding mythscapes elsewhere. Enrollment limited to 19 first year students.

ANTH 0066C. Population and Culture.

This seminar for first year students examines the relationship between individuals and population and the impact of culture on population. How do the lives and actions of individuals cumulate to the characteristics of a population? How do the characteristics of a population affect the lives of the people in it? For first year students only.

ANTH 0066D. Who Owns the Past?

Examines the role of the past in the present. Using examples from the U.S. and other parts of the world, we will look at how archaeological evidence is implicated in contemporary cultural and political issues. Students will learn that the past is not just the focus of archaeologists' interest and scientific inquiries, but is also a subject romanticized by antiquarians, mobilized in nation-building, marketed for profit, re-enacted as entertainment, consumed by tourists, and glorified in commemoration. Understanding these different and competing valuations, claims, and uses of the archaeological past will provide an introduction to why the past matters in the present and to the future. Enrollment limited to 19 first year students.

ANTH 0066E. Colonial Cities.

This course attempts to understand the nature of colonialism in Africa and India. Comparative methodological approach to the study of colonial cities introduces the students to a multiple and interlocking idea and symbols used by colonial power to create in their images, cities which reflect their own image. For first year students only.

ANTH 0066F. Families and Households.

This course explores the diversity of families and households, both between cultures and within cultures; changes in family forms over time, changing experiences of family over the life course, the diverse meanings, metaphors, and values of "family"; and current controversies about what families are and what they should be. Enrollment limited to 19 first year students. Instructor permission required.

ANTH 0066G. Explorers and Cultural Encounters.

Looks at famous land and sea expeditions, including Marco Polo, Cheng Ho, James Cook, Samuel Hearne, Elisha Kane, Ernest Shackleton and others. Whether the voyage was inspired by a specific intellectual inquiry, mapping, exploration of a new land, establishing a new trade route, friendly alliance, or a colonial expansion, these expeditions changed the views people had about the world, peoples, and places.

ANTH 0066I. Human Trafficking.

We will retrace the development and impact of the 2000 UN Protocol to Prevent, Suppress, and Punish Human Trafficking, especially women and children. This set of norms was created as a supplement to the UN Convention against International Organized Crime. This course will deal with the protocol as both a legal as a living document, with a history and ongoing political relevance.

ANTH 0066J. So You Want to Change the World?

Examines from an anthropological perspective efforts to address global poverty that are typically labeled as "development." The enterprise of development is considered critically, both with regard to the intentions and purposes that underlie the actions of wealthy countries, donor organizations, and expatriate development workers and with regard to the outcomes for the people who are the intended beneficiaries. Privileging the perspectives of ordinary people in developing countries, but also looking carefully at the institutions involved in development, the course relies heavily on ethnographic case studies that will draw students into the complexity of one of the greatest contemporary global problems: social inequality. Enrollment limited to 19 first year students.

ANTH 0066K. International Perspectives of Women's Agency and Society.

This course is designed to address the postcolonial identities and the cross cultural issues of women through anthropology and women's writings. Identifying select cases from Africa and Asia. We will analyze the cross-cultural issues and meaning of gender, the cultural construction of gender, the significant ideology that defines the paradigm through which we come to understand a woman's domain, agency and empowerment, and the modes of behavior in the spheres of everyday life. S/NC only. Reserved for First Year students. Enrollment limited to 19.

ANTH 0066L. Beyond World Music: Singing and Language.

An introduction to music and language in cultural context. Drawing on case studies from around the world, we consider how music and language are intimately connected. Topics covered include cannibals' singing in colonial Brazil, music and electoral politics in Texas, working class culture and country music, singing and society in the Amazon, whistle speech and songwriting in indigenous Mexico, Apache identity and popular music, modernity and classical Indian music, music and mass advertising in the United States, and the politics of Zulu music production in South Africa. Reserved for First Year students. Enrollment limited to 19.

ANTH 0066M. Holy Wars.

No description available.

ANTH 0066N. Peoples and Cultures of Greater Mexico.

This course will focus on the cultural area known as Greater Mexico, incorporating Mexicans resident south of the Rio Grande, as well as the approximately 25 million Mexicans living permanently or for at a time in the United States. Specific topics to be covered in the class include: urban peasants and rural proletarians, recent challenges to gender conventions, national and international migration, nationalism and the changing meanings of the Conquest and colonial periods, land and indigenous rights, everyday violence, machismo, popular culture, and protest and rebellion. Limited to first-year students.

ANTH 0066O. How to do Things With Gifts: Charity, Corruption and Friendship Across Cultures.

In all human societies, people exchange goods and services. From Adam Smith onwards, economists have emphasized the central importance of the "free" market, where self-interested individuals strike bargains, and simultaneously expand humanity's "common stock." Yet costly practices-expensive weddings, charitable donations, corporate hospitality-still flourish, which appear designed to build human relationships rather than generate hard profits. And in today's global economy, personal gifts remain an essential part of doing business in places like China, Japan, Nigeria and Saudi Arabia. Where mainstream economic analysis sees inefficiency or corruption, this course explores classic and contemporary alternative understandings of gift-giving's cultural significance.

ANTH 0066P. Transnational Lives: Anthropology of Migration and Mobilities.

In an era characterized by globalization, by the increasing and rapid flows of ideologies, information, money, goods, and people across national borders, how do individuals, families, and communities grapple with the new forms of existence brought forth by migration? This course will go beyond macro-economic explanations of why migration happens to explore what migration does: the effects of mobility on a range of practices that include parenting, health, gender roles, marriage, politics, and anthropological research itself. Enrollment limited to 19 first year students.

ANTH 0066Q. Crisis of Identities in the Global Order.

The seminar is intended to engage first-year students in discussion and analysis of one of the perplexing questions of the modern age. Why, with globalization and an attendant world-view shaped by the technological revolutions of communication that appeal to commonalities, we find more emphasis on local differences, more conflicts related to identities determined by opposition to "the other"? A concordant question will be: how do different disciplines address the concept of identity? Enrollment limited to 19 first year students.

ANTH 0066R. Child and Youth Cultures.

This first year seminar addresses childhood from two linked but distinctive theoretical perspectives. First, what is childhood? Rather than assuming it is a universal category, we will explore how childhood has been constructed differently through history and across cultures, in opposition to infancy, youth, and adulthood. Second, who are children? In contrast to conventional representations of young people as passive objects of socialization, we will review anthropological conceptions of children and youth as social actors with respect to identity formation, cultural expression, and political economy. Enrollment limited to 19 first year students.

ANTH 0066S. Contemporary Egypt in Revolution.

On January 25, 2011 protestors in Egypt amassed in Tahrir Square in Cairo with basic demands: Bread, Freedom, Social Equality, and Human Dignity. After hundreds of peaceful protestors were killed at the hands of riot police and hired thugs, eighteen days later, President Hosni Mubarak resigned. Yet since then, hundreds more have been killed, Egypt's revolution continues, and the basic demands are as crucial today as they were at its inception. We will read contemporary Egypt from the perspectives of anthropologists and social historians, and discuss the value of social theory and analysis for understanding current political turmoil. Enrollment limited to 19 first year students. S/NC

ANTH 0066T. Postcolonial Matters: Material Culture between Colonialism and Globalization.

This course is about things - 'stuff' - as it is about people past and present and their entanglements in and through colonial situations. It explores colonialism past and present through the combined lenses of postcolonial theory and material culture - the emphasis is thus not so much on literary and figurative representations of colonial conflicts and engagements but rather on the material surroundings of people living those colonial worlds. In other words, this course is about what people did and about the things they used to construct their daily lives in colonial situations across the globe and through time. Enrollment limited to 19 first year students.

ANTH 0066U. An Archaeology of Native American Art.

This seminar is an introduction to the art and material culture of the indigenous peoples of North America. The regional coverage includes the continental United States and Canada, focusing on the peoples of Northeast, Midwest, Southwest, Plains, Pacific Northwest, and the Arctic and Subarctic. Topics addressed include art and artifact, function and symbol, innovation and tradition, and museums and representational practices, ethics and repatriation. Special attention will be given to the changing relations between museums and contemporary Native peoples. The seminar will make extensive use of the archaeological and ethnographic collections of the Haffenreffer Museum of Anthropology.

ANTH 0066V. The Anthropology of Children and Childhood.

This first year seminar explores childhood and children from an anthropological perspective. First, we will examine the concept of childhood both historically and cross-culturally. Second, we look at the development pathways that cultural communities provide for the children. These pathways are shaped by cultural ecology and history and by the goals of parents, communities and children themselves. Finally, we will review anthropological conceptions of children as social actors who shape their cultures and lives.

ANTH 0066X. Politics and Symbols.

It is impossible to understand politics without grasping the key role played by symbols, myth, and ritual. This first-year seminar examines how political actors manipulate symbols and how they devise and utilize myths and rituals to win support. Through such symbolic activities, political reality is created, and political groups and identities formed. We look at examples throughout the world and throughout history, but pay special attention to the powerful symbols, myths, and rites employed in U.S. political life, from Make America Great Again to Black Lives Matter.

ANTH 0066Y. Borderlands.

This course explores the creation and maintenance of international borders and the communities that develop in response to them. We will examine a particular collection of borders and borderlands that includes a range of structural, managerial, and geographical variation. Through a combination of scholarly texts, ethnographic accounts, films, and research on GOs and NGOs, we will study legal and illegal crossings, border communities, and border patrol organizations that seek to protect the integrity of national boundaries. (Note: While the case study texts focus on the Mediterranean/Middle East, students will be required to investigate and share research on other areas of the world.) By the end of this course, you will have a comprehensive understanding of how international borders are created, how they are maintained, and how people and organizations navigate them.

ANTH 0066Z. Many Faces of Culture, Contemporary Meanings and Uses.

Focusing on a key anthropological understanding, the meaning of culture, we will proceed to critically explore the multifarious uses of this concept throughout the seminar. Examining the indiscriminate uses of the concept of culture across disciplines we will endeavor to concentrate on its multiple meanings exclusive to and beyond anthropological discourse. In our effort to analyze how the idea and meaning of culture have been appropriated by other disciplines, we will probe issues of gender and identity, philosophy, literature, politics, race, and ethnicity as well as politics and representation. These are a few of the suggested themes/topics that we will attempt to cover during the semester. Our task is to comprehend the changing meaning of culture, a cornerstone of anthropology, within and outside our discipline. How central is the idea of culture today to our discipline?

ANTH 0077A. Visual Anthropology.

This course immerses students in the study and practice of visual anthropology, at the intersection of human perception and imagination, aesthetic experience, and emergent forms of media and meaning-making. Students explore the foundations of visual anthropology, with a primary focus on ethnographic film and photography. Understanding the problems of authority that accompany this work, the course foregrounds Indigenous and activist film and media. Students also discuss the limits of visual experience and representation, exploring new media ecologies and alternative registers of being and knowing. Tracing the shift from visual to multimodal anthropology, the course concludes by considering what such frameworks offer and invite, at the limits as well as the horizons of critical social inquiry. Students engage in a range of activities including lectures, close reading, viewing/analysis of films and other media, class discussion, methods workshops, and independent research.

ANTH 0077N. The Anthropology of Gender and Science.

This seminar examines topics including genetics, reproduction, and evolution, all through the lens of gender/sex systems. The themes of social justice, identity, and difference are central to the course. We will explore: How epidemiology and engendered social justice are often in conflict in the fight against AIDS in Africa; to learn about difference, anthropomorphism, gender, and primatologists' comparisons between humans, bonobos, and chimpanzees; efforts to scare men in the United States about "Low Testosterone," and how they reflect shifting identities as much as reduced hormone levels; and the relationship between gender, Traditional Chinese Medicine, and Western Biomedicine in China.

ANTH 0100. Introduction to Cultural Anthropology.

This course provides an introduction to cultural anthropology, surveying its defining questions, methods, and findings. We will examine the history and utility of anthropology's hallmark method, ethnography, the long-term immersion of the researcher in the culture under study. We will compare cultural anthropology's findings and comportment in other cultures to its conclusions and conduct in our own. No prerequisites.

ANTH 0110. Anthropology and Global Social Problems: Environment, Development, and Governance.

This course offers students an opportunity to examine and analyze a range of contemporary global social problems from an anthropological perspective. We will explore human-environment entanglements with particular attention to intersecting issues of capitalism, international development, and state and non-state governance. Course materials will look at various kinds of work in, on, and with the environment, asking questions about the possibilities of over-working our landscapes, while addressing the potentials for social and environment justice and sustainability.

ANTH 0112. Anthropology for Global Leaders.

This course makes the case that global leaders have much to gain from anthropology, the study of human diversity across geographic and historical contexts. Readings and lectures will introduce students to anthropological thinking about significant global challenges - namely climate change, the internet, and international migration. We will discuss appropriate methods of translating academic knowledge into policy and action. The course will also use anthropological literature to explore what constitutes effective and ethical leadership in a global context. Assignments will encourage students to develop and practice their own leadership skills, including skills of analysis, communication, and group organization.

ANTH 0125. Violence and the State.

This course allows students the opportunity to interrogate the relation between violence and the state. Students will be introduced to a variety of analytical frames through which to understand both the concept of violence and that of the state from an anthropological perspective. Through diverse case studies we will consider topics such as what it means to see and be seen by the state, the rationalization of "exceptional" violence, and domination through symbolic violence. The course has no prerequisites, but a foundational course in the social sciences is recommended.

ANTH 0130. Myths Alive.

Myth is an important part of the architecture that sustains human culture and society. This course begins w/an account of the principal theoretical positions that've shaped anthropological understandings of myth as a living and guiding force in human communities in ancient times and in the present day. We'll examine the expressions of myth in senses of place, social harmony, inequality, conflict, religious experience, and radical social change in a wide variety of historical and ethnographic settings. We'll draw upon objects from Brown's Haffenreffer Museum to recognize them as materialized representations from mythical worlds.

ANTH 0150. Practicing Anthropology.

Practicing Anthropology offers students the opportunity to explore how contemporary anthropologists around the globe use theories, insights and methods to address real-world problems and develop solutions to complex issues and challenges. We will encounter anthropologists working in-house in a variety of fields such as business, technology, design, public health, policy, and civil society. We will also explore the paths chosen by anthropologists who work as independent consultants. Students will develop a clear understanding of how anthropologists practice their craft within and across sectors, bringing anthropological perspective and expertise to a wide variety of domains.

ANTH 0200. Culture and Human Behavior.

The goal is to challenge our beliefs about some taken for granted assumptions about human behavior and psyche by examining cultures with different conceptions of self and cognition. We will examine the issues of the role of nature and nurture in development, the nature of intelligence, coming of age, the association of psychological characteristics with gender and the naturalness of emotions.

ANTH 0205. Racial Politics of Culture: Race and Indigeneity in Anthropology.

Taking its title from Lee D. Baker's *Anthropology and the Racial Politics of Culture*, this course aims to understand anthropological approaches to race and indigeneity. We'll focus on ethnographic work from a range of ethnographic contexts in order to consider the complexities of race and indigeneity as both analytical concepts and ethnographic facts. We will consider how race and indigeneity are situated in the anthropological project. We will look at such issues as race and science, colonialism, race and culture, structural racism, ethnicity, and whiteness.

ANTH 0249. Re-Learning Native America: Popular Imagination Versus Diverse Realities.

Native American individuals are often consigned to the extinct past, portrayed as existing in peace with nature, or used to promote Halloween trends. But, what do we actually know about the 573 Native communities in the US? This anthropology course uses linguistics, culture, archaeology, and biology to explore myths of Native America in popular culture by comparing fantasy to contemporary experiences. Consisting of Indigenous authors, our syllabus challenges historical representations related to Native America by engaging with subversive literature and radical thinkers. Field trips and guest speakers assist us in understanding how tribes define the meaning of "NDN" in modern America.

ANTH 0250. Gold: The Culture of a "Barbarous Relic".

An object of obsession for millennia, gold has recently witnessed a polarizing cultural politics. In congressional testimony former Fed Chair Ben Bernanke labeled it a "barbarous relic." Meanwhile a growing minority clamor for a return to the gold standard. Whether among medieval alchemists or modern financial wizards, whether in the eyes of Egyptian Pharaohs or Indian peasants, gold's special qualities have shaped cultural practice. This course explores the shiny yellow metal's cultural history, from its emergence as an object of desire, to the contemporary rejection of its role as the store of wealth resulting in its demotion to just another commodity.

ANTH 0300. Culture and Health.

An introduction to the field of Medical Anthropology. Lecture reading and discussion will examine the social context of health and illness, looking at the diverse ways in which humans use cultural resources to cope with disease and develop medical systems. The course will provide an introduction to the overall theoretical frameworks that guide anthropological approaches to studying human health related behavior. Medical anthropology offers a unique and revealing perspective on the cultural diversity that characterizes human experiences of sexuality, disease, aging, mental illness, disability, inequality and death.

ANTH 0301. Gender and Politics.

In this course we will focus on how gender and sexuality relate to people's involvement in political processes at a transnational scale—closely examining their intimacy with areas of difference like race, ethnicity, religion, class, and nation. Using a broad understanding of politics, we will examine how arrangements of power become naturalized through culture, and how people differently sustain, reproduce, resist, and contest these dynamics. With a particular focus on social movements, we will examine the circumstances under which people politically mobilize understandings of gender and sexuality, and how these mobilizations relate to issues like marginalization, migration, colonialism, and capitalism. Our broader aim will be to grasp how gender and sexuality-based inequalities produce—and are produced by—forms of political exclusion, as well as the diverse ways people work to engage, and even transform, existing structures of power.

ANTH 0302. Anthropology of Gender and Globalization.

We live in a global world in which the movements of people, goods, and ideas cause productive frictions, transforming the prevailing formations of gender and sexuality. This course examines the intersections of gender and globalization by looking at how globalization shapes cultural constructions and political configurations of gender, and exploring how an ethnographic focus on gender sheds light on various aspects of globalization. Topics covered include anthropological theory of gender and sexuality, gender and global capital, gender and the (colonial) state, and gender and global politics (including gender activism, human rights, and development). Open to undergraduates only.

ANTH 0303. Whiteness in the World (SOC 0300W).

Interested students must register for SOC 0300W.

ANTH 0310. Human Evolution.

Examination of theory and evidence on human evolution in the past, present and future. Topics include evolution and adaptation, biocultural adaptation, fossil evidence, behavioral evolution in primates, human genetic variation and contemporary human biological variation.

ANTH 0315. Intl Migration (SOC 0315).

Interested students must register for SOC 0315.

ANTH 0350. Suffering and Compassion.

One might say that to be human is to suffer, but what is suffering? Is it to be avoided or embraced? To what ends? The answers to these questions are not just personal or psychological. Rather, they are deeply sociocultural and historical. Orientations toward suffering shape major aspects of life, such as religion, politics, humanitarianism, and medicine. This course explores different ways that society and culture create suffering, and ways that suffering shapes society and culture. This happens not just in suffering itself but also in ways that people try to overcome suffering. Therefore, we also consider the relationship of compassion, empathy and sympathy, and other forms of care to suffering, always paying close attention to questions of the unequal distributions of both suffering and compassion to different groups of people.

ANTH 0400. Growing Up Ethnic and Multicultural.

Explores the complex issues of growing up as an ethnic, bicultural, or a multicultural person and how these dual or multiple identities affect or interact with individual behavior, priorities, the sense of self, and how individual identity is formulated and defined. Cross-cultural and interdisciplinary approaches combining anthropology, comparative human development, interethnic communication, life history, and literary works are used. Instructor permission required.

ANTH 0450. Inequality, Sustainability, and Mobility in a Car-Clogged World.

The global car population is predicted to reach two billion by the year 2020. The social, political, health, and environmental consequences are immense. These, as well as the cultural and political economic explanations for the car population explosion, will be explored in this class, as will alternative futures for transit.

ANTH 0500. Past Forward: Discovering Anthropological Archaeology.

This course offers a broad journey through the human past, from material culture crafted by our evolutionary ancestors to the remnants of the recent historic past. To facilitate this journey, the class explores the methods, concepts, and theories that anthropologists employ in the study of past peoples, places, and things. Case studies stretch across the globe. As a hands-on endeavor, archaeology focuses on tangible evidence. In this course, small-group discussion, laboratory, and field exercises will complement lectures, leading to an understanding of how anthropologists study the past and how that knowledge affects the present.

ANTH 0510. Who Owns the Past?

This class examines the relationship between the Western world and African indigenous cultures, heritage, and ideas of the past. By looking at the history of science in reference to the treatment of Africans and African material culture, we will question who owns the rights to an indigenous past.

ANTH 0515. Pirates! Archaeologies of Piracy in the Atlantic World.

The figure of the pirate is an all-time favorite in Western imagination. It has inspired some of the most popular narratives of the past, solidly grounded in classic literature and contemporary visual culture. Focusing on the mid-17th century, the golden age of piracy in the Atlantic World, this course will use historical and archaeological data to investigate the way in which the image of the pirate has been constructed in the West, as an embodiment of cultural, legal, moral and sexual transgression, and as an object of both fascination and fear which is still current in the contemporary, global world.

ANTH 0530. Archaeology of Psychoactive Substances.

This course examines the varying roles of psychoactive substances and altered states of consciousness in both past and present cultural practice. Together, we will critically engage with current archaeological and anthropological research to gain an understanding of how psychoactive substance production and consumption has operated within a myriad of social, ideational, religious, medical, and recreational contexts. Class discussions will cover a diverse range of topics including the use of psychoactive substances in ritual practices; power relations and control over production, distribution, and use; the practical, quotidian applications of psychoactive plants; medicinal applications; and the use of psychoactive substances in social settings. Class discussions will also draw connections to important current issues and topics including addiction & the opioid crisis, recent medical studies & research findings, prohibition & controlled substance classifications, and global legalization movements.

ANTH 0600. Of Beauty and Violence.

What is the place of beauty in human experience and how does it find articulation in words? Using an interdisciplinary approach, this course explores the unexpected expressions and uses of beauty in a variety of social and ethnographic contexts marked by violence. We trace the potential of beauty to act at times as a counterweight to violence, sociopolitical crises, and marginalization, but also how it may be used to deepen already existing power structures. This is a writing-intensive course aimed at developing students' ethnographic writing skills. No prerequisites.

ANTH 0680. Anthropology of Food.

An exploration of the human experience of food and nutrition from evolutionary, archaeological, and cross-cultural perspectives. The course will review the various approaches employed by anthropologists and archaeologists to understand diet and subsistence in the past and present. Starting with the evolutionary roots of the human diet in Plio-Pleistocene Africa, we will trace patterns of human subsistence to the present, including the social and health implications of the agricultural revolution. We will then explore modern foodways in cross-cultural perspective, focusing on the interplay of ecology, politics, technology, and cultural beliefs.

ANTH 0700. Introduction to Modern South Asia.

Students will be introduced to the social, political, cultural, and religious lives of people from the region known as 'South Asia'. Course lectures and materials will draw from a broad range of material covering Bangladesh, Bhutan, India, the Maldives, Nepal, Pakistan, and Sri Lanka. This course is designed to get students to think broadly about themes related to social inclusion, state formation, discrimination, ethnic and social conflict, identity politics, and a host of other issues that have defined the region. This course will help students think about how themes, conversations, and course material can connect to their own research interests.

ANTH 0800. Sound and Symbols: Introduction to Linguistic Anthropology.

This introduction to the study of language and culture considers how language not only reflects social reality but also creates it. We'll examine specific cases of broad current relevance, in the process learning how an analytical anthropological approach to language use lays bare its often hidden power. We'll consider how language creates and reinforces social inequality and difference, how language promotes and resists globalization, and how language is used creatively in performance, literature, film, advertising, and mass media. We will also consider how language does important social work in specific contexts, such as classrooms, courtrooms, medical settings, and political campaigns.

ANTH 0805. Language and Migration.

This course is part of the Engaged Scholars Program and explores the interconnections between language and migration. We will examine talk about migration – in the form of immigration policy and media representations – as well as talk in contexts of migration including experiences such as border crossing, settlement, and schooling. Given the current context of increasing anti-immigrant rhetoric and an escalation of immigration enforcement, this course raises the timely and important question of how experiences of migration and the politics of mobility are shaped by language. Our investigation will combine engaged anthropological approaches with linguistic anthropological theories and methods.

ANTH 0810. Whiteness and Language.

How has whiteness shaped language—not specific languages or sub-varieties of languages, but the very idea of language itself? This class will not presume either whiteness or language as stable or self-evident categories. Instead, we will explore how both have emerged together in and through projects of (racial, ethnic, gendered, sexual, classed, religious, etc.) colonial modernity. The class will introduce students to a critical interdisciplinary toolkit that they will collaboratively apply to a selection of case studies drawn from global colonial situations, culminating in an original mini-research project.

ANTH 0825. Adolescence in Social Context (EDUC 0825).

Interested students must register for EDUC 0825.

ANTH 0850. Language, Oppression, and Empowerment.

Language is a site of struggle. What we say, how we say it, and to whom matters. How we hear matters. It can make the difference between life and death.

When you hear the news or a teacher talking, do you feel directly addressed? Do you feel like you are a “they” in your classes and in popular discourse? We feel when we are being talked to, talked with, or talked about, and that makes a difference in how we relate to ourselves and each other.

In this class, we talk together. We make language and we make space. This class is an experiment in empowerment that comes from using reading in linguistic anthropology to analyze linguistic oppression, appropriation, and exploitation.

ANTH 0901. Farm to Table: Foodways and Gastro-Politics in the Ancient Near East (ARCH 0775).

Interested students must register for ARCH 0775.

ANTH 1013. Intersectional Anthropology.

Our lived experiences are complex, and always in the process of becoming. Rather than looking at one particular social dimension of life—like race, gender, class, sexuality, belief system, ability—as additive experiences, we will explore how these always emergent categories are always in relationship with one another in profound and complex ways. This course will focus on anthropological applications of intersectionality [in all four fields] but is necessarily interdisciplinary. “Intersectionality” has become a term often used in critical feminist inquiry, and a powerful tool for feminist social critique and activism. We will explore the history of “Intersectionality” as originally defined, and how the theory has changed to today, and contributions beyond U.S. borders. Together, we will discuss anthropological works that uses intersectional theory and method, and importantly we will connect theory with practice—understanding how to do intersectional research in anthropology.

ANTH 1020. AIDS in Global Perspective.

Communities around the world are affected in different ways by the HIV-AIDS pandemic. This course is concerned with cross-cultural variation in knowledge, perception, and treatment of AIDS in a global context. Twenty-five years into the global epidemic, how does social and cultural variation influence the continued spread or management of the disease? In addition to reading significant anthropological works related to the meaning of AIDS in cultural context, the course will address major public health initiatives related to the global AIDS pandemic, and offer an anthropological critique of their design, implementation and success. Enrollment limited to 40.

ANTH 1030. Pre-Columbian Art and Architecture: A World That Matters.

Survey of ancient art and building in ancient America, with a focus on Mexico, Central America, and the Andes. Underlying concepts include: meaning and method, cosmos and kingship, narrative and symbol, personality and authorship, empire and royal court.

ANTH 1031. Classic Mayan Civilization.

Examines the history, culture, and society of the Classic Maya, with special emphasis on Preclassic precursors, dynasties, environmental adaptation, imagery, architecture, urban form, and the Maya Collapse.

ANTH 1050. Global Sport: Anthropological Perspectives.

Sport operates within vast networks of political, economic, and social investment. But who controls sport, and how? In this course, we approach sport as a set of labor practices. Modern sport is inseparable from the history of British and European industrialization. With an emphasis on the power of institutions, we analyze why sport has taken certain technical forms and social significances. We investigate the historical and cultural constraints through which the body is disciplined. Students will undertake writing projects about sport and that enable them to experience the challenges and opportunities of transforming athletics into text.

ANTH 1100. Circumpolar Ethnography.

An examination of the traditional and modern lifeways of native peoples across the Arctic and subarctic from European Lapland through Siberia, Alaska, Canada, and Greenland. Topics covered are society; ethnic relations; religion (Shamanism); art; and politics, including issues of land claims and home rule.

ANTH 1110. African Issues in Anthropological Perspective.

In this course we engage with anthropological literature and films on the diverse ethnicities, cultures, and "traditions" of sub-Saharan Africa. We trace the histories and the processes of cultural, social, and political change, beginning with colonialism and ending with the contemporary period. We will deconstruct and debunk dominant Western ideas of Africa that present it as primitive and characterized by poverty, AIDS, famine, and violence. We will learn about how Africans see and represent themselves through reading ethnographies, engaging with African popular culture, and watching documentary films.

ANTH 1111. Anthropology of China.

This course introduces students to contemporary Chinese culture and society, w/a focus on the rapid changes that have taken place during the post-Mao reform era in the People's Republic of China (1978- present). Emphasis will be placed on the importance of historical and global context in developing an understanding of contemporary Chinese culture. Readings and lectures will draw primarily upon recent ethnographic work conducted in the PRC, but readings from the disciplines of history, political science, public health, and contemporary Chinese literature (in translation) will also be incorporated. Topics: family life, urbanization, housing, migration, gender, health/disease, labor, globalization, and cyberculture.

ANTH 1112. Anthropology of Climate Change.

Contemporary climate change is a profoundly human issue. This course disaggregates "the human" in climate change, employing an anthropological perspective to ask how people experience changing climates in different ways throughout the world. From receding glaciers to rising seas to unpredictable seasons and periods of drought, the ways people understand, respond to, and experience climate change are shaped by diverse cultures and histories. Topics include environmental change, capitalism, energy, climate justice in indigenous communities, green economies, tropical forests, denial and skepticism, and the visibility of climate change. Articles and ethnographies cover the Global North as well as the Global South.

ANTH 1115. Anthropology of the Chinese Diaspora.

The anthropological study of the Chinese diaspora is a growing field against the backdrop of the latest wave of global anti-Chinese racism. This has been fueled by the rise of China and the COVID-19 pandemic. This course will provide an anthropological perspective into understanding the Chinese diaspora worldwide. Instead of treating each geographically distributed overseas Chinese community as an independent unit of analysis, we will investigate diasporic Chinese with their own sets of identities, experiences and practices within a holistic framework that takes into consideration complex historical, economic, socio-political, and cultural contexts. We will reflect on concepts such as what it means to be Chinese and the very idea of being diasporic. The course is aimed at engaging with broader contemporary themes and debates including identity politics, race and ethnicity, gender, nationalism and transnationalism, colonialism, capitalism, and globalization.

ANTH 1118. Context Research for Innovation (SOC 1118).

Interested students must register for SOC 1118.

ANTH 1119. Andean Anthropology.

The area studies paradigm continues to provide solid information about "culture areas," and the rich ethnography and archaeology of Andean societies is no exception. Particular strengths emerging from this literature include studies of land use, religious syncretism, textiles, and collateral themes: continuities and recognizable features of "Andean culture" (*lo andino*), gender relations, migration, and politics. Throughout, we will analyze the ways that history, ecology, and the broad notion of reciprocity (*ayni*) cross-cut each of these. The result will be a close and in-depth study of cultural practices within three Andean countries (Peru, Ecuador, and Bolivia), the majority populations of which continue to be indigenous (predominantly Quechua- and Aymara-speaking). These are countries within which recent political and social changes have produced far-reaching transformations. Prerequisite: one course in either Anthropology or Classics.

ANTH 1120. Peoples and the Cultures of the Americas.

Examines the diverse cultures and history of the Americas - especially Brazil, Peru, Mexico, and the Caribbean. Topics include the organization of labor, cultural and artistic practices, changing conventions of gender and family, international migration, national and local identities, indigenous rights, and protest and rebellion.

ANTH 1121. From Coyote to Casinos: Native North American Peoples and Cultures.

An anthropological overview on the history and cultures of Native North American peoples from the prehistoric times to the present. Where did Native North Americans come from? What were their traditional lives like? What was their relationship with newcomers of European extraction, including anthropologists? What challenges do they face today? Indigenous and anthropological insights will be brought to bear on these and other questions.

ANTH 1122. American Indian Art and Artifacts.

Drawing on the rich North American Indian collections of the Haffenreffer Museum of Anthropology, the goal of this course is to examine theoretical approaches to the artifacts of indigenous people and analytical strategies for their research and interpretation. Insights from anthropology, art history, American Indian perspectives, and conservation are explored. Meets at the museum.

ANTH 1123. Native North Americans in the Twenty-first Century.

An examination of the process of land alienation of Native Americans through the enactment of federal laws to settle the frontiers and protect the wilderness. Through the use of oral history, ethnographies, film, historical documents, and the public record, the course compares Native American and Euro-American perspectives on the ownership of land and rights to resources.

ANTH 1124. United States Culture.

The United States is often described as "multi-cultural". This course examines dominant cultural values such as equality, choice, privacy, and responsibility. It also investigates aspects of the social structure of the United States such as inequality, power, race/ethnicity, kinship, and gender. Individual lives illustrate the ways that people living in the United States negotiate cultural values and confront social institutions. Enrollment limited to 40. Instructor permission required.

ANTH 1125. Indigenous Archaeologies.

This course is an introduction to Indigenous archaeologies, sometimes defined as archaeology "by, for and with Indigenous peoples." These approaches typically combine the study of the past with contemporary tribal needs. In addition, they seek to contribute to a more accurate understanding of archaeological record by broadening science through a consideration of Indigenous epistemologies. This course covers topics as the history of anthropological archaeology, Indigenous knowledge and science, decolonizing methodologies, representational practices, and NAGPRA.

ANTH 1126. Ethnographies of Heritage: Community and Landscape of the Mediterranean and Beyond.

Archaeologists study objects and (socio-cultural) anthropologists investigate culture is how stereotype and conventions have long had it. As material culture studies have increasingly blurred these boundaries, the distinction is entirely meaningless when it comes to archaeological heritage. Taking its cue from material culture studies, this course explores how local communities experience the material remains from the past and (re)incorporate them into their contemporary lives.

ANTH 1130. Peoples and Cultures of Southeast Asia.

An introduction to the anthropological study of Southeast Asia. Emphasis is placed on understanding the diversity of cultures and societies through both space and time.

ANTH 1131. Indian Issues in Anthropological Perspective.

From its role as an emerging economic power, to characterization of outsourcing global media, political discourses, and worldwide popularity of Bollywood, India is undergoing rapid changes, global imagination, and importantly in how Indians think about themselves in an era of globalization. We cover anthropological issues of contemporary India, including Hinduism and Islam, caste, social structure and forms of social relations using ethnographic texts. We will focus on postcolonial India, particularly two decades since liberalization in 1991. We will consider how history, cultural practices and existing social norms continue to shape and change contemporary Indian society and its relation to the world.

ANTH 1133. Ethnonationalism- The Asian Arena.

Three Asian countries-China, Thailand, and Myanmar-are unique national arenas to examine and compare specific definitions, representations, and contentions among nationalistic discourse, ethnic legitimization, and ethnonationalism as they are played out in response to cultural politics, national ideology, European colonial expansion, religious identity, and ethnic identity. Nationalistic movements, ethnic nationalism, and transnational politics are explored.

ANTH 1140. European Ethnography.

Familiarizes students with the societies and cultures of Europe from an anthropological perspective. Historical material provides for the understanding of current cultural, linguistic, religious, and ethnic variation. Major emphasis on the analysis of a range of contemporary communities from peasant to urban, from East to West, and from North to South.

ANTH 1145. Barbarians and Bandits: Exploring Subaltern Resilience and State Power.

In the imaginations of ancient Greeks and Romans, the urban centers of 'civilization' were surrounded by wild lands where barbarians roamed. Even now, mountains, marshes, forests, and deserts are the realms of bandits, primitive tribes, warlords, and terrorists. From 'shepherd-bandits' in highland Sardinia and 'red-faced Gauls' in Roman France to 'marginal tribes' in the Kabyle mountains and the 'wild people' of the Ethiopian borderlands, this course explores peripheral lands through time and across the globe. We will critically examine such stereotypical representations, to understand how their inhabitants carved out their own spaces in the interstices of ancient and modern states.

ANTH 1150. Middle East in Anthropological Perspective.

A seminar focusing on anthropological methods of analyzing and interpreting Middle Eastern cultures and societies. Emphasizes the study of kinship, tribal structure, social organization and gender relations, ethnic groups relations, and urban-rural distinctions. Draws upon insights from these topics as a basis for understanding contemporary social, economic, and political dynamics in the region.

ANTH 1151. Ethnographies of the Muslim Middle East.

An introduction to ethnographic studies of Middle East, focus on: religion, language, modernity, gender, and political culture. Students will engage in critical examination which anthropologists sought to capture Middle Eastern life, and problems that have pervaded anthropological representation, methodologically and theoretically. You will learn, through the ways anthropologists approach the peoples, ideas, and cultures of the region in ways that complement and contradict the knowledge production of other disciplines, the processes we come to understand cultural difference, and ways this encounter sheds light on our selves and practices. Previous course in Anthropology/ Middle East studies is suggested. Enrollment limited to 25.

ANTH 1201. Introduction to Geographic Information Systems and Spatial Analysis.

This course offers an introduction to the concepts and techniques of Geographic Information Systems (GIS). Through weekly lab assignments and work on independent projects, students develop skills in cartography and coordinate systems, spatial database design, image processing, basic spatial analysis, hydrological modeling, and three-dimensional modeling. Discussions and case material draw primarily from the application of GIS in archaeology, anthropology, and cultural geography, including the study of archival materials and the ethics of geographic representation. Provides foundation for upper division coursework in spatial analysis. Software focuses on ESRI products (ArcMap, ArcScene, ArcCatalog, ArcGIS Pro).

ANTH 1210. Culture and Cognition.

Are there cultural differences in thought and perception? If so, what are these differences and to what are they attributable? Reviews the history of the controversy on "primitive thought," the influence of culture and environment on perception and concept formation, the development of cognitive operations, and differences in logical processes and decision making in other cultural contexts.

ANTH 1211. Cross Cultural Perspectives on Children.

Explores how the behavior and psychological functioning of children are shaped by culture and how different cultures tend to produce children with characteristic personalities, selves, thought patterns and behaviors. Every cultural community provides developmental pathways for children. These pathways are shaped by history and by the goals of parents, communities and children themselves. The course will focus on how human knowledge is transmitted through multiple cultural channels in both informal and formal contexts. **This is a service-learning course** in which students provide a needed service: Mentoring and tutoring Liberian young people in a literacy program. This will serve as a basis for conducting research on this refugee population and the final paper will be the recording of oral histories from teenagers. Enrollment limited to 30.

ANTH 1212. The Anthropology of Play.

Play enters all fields, from physics to human development, art to scientific experimentation. In all cultures, play figures centrally in rites of passage, child development, learning, and times of celebration. Central to this course is an understanding of the rules of play, its intentions in work, functions throughout human history, and role in formal education.

ANTH 1215. The Anthropology of Aging.

In a recent article entitled "Aging is the Real Population Bomb", Bloom and Zucker describe a world that is being disrupted by the changing shape of the population pyramid. By 2050, it is estimated that one in six people worldwide will be over 65, up from just one in eleven in 2019. This shift is reshaping everything—from healthcare demands and pension systems to labor markets and technological innovation. In this course we will examine the experiences of growing old. We will explore what it means to grow old within societies, families, workplaces, and social networks. We will examine prevalent attitudes and stereotypes about age and aging that shape interpersonal and institutional practices. Through an examination of lived experiences, cultural beliefs, and social practices, we will develop a clear understanding of the experience of aging.

ANTH 1220. Comparative Sex Roles.

Covers specific cross-cultural issues of gender, cultural roles, the status of women, and their structural position in society. Themes of gender representations in the field of economics, ritual, and politics underline the concerns of the course. Though African and Asian communities are the primary focus, aspects of American society are drawn into consideration when relevant.

ANTH 1221. Anthropology of Masculinity.

Contemporary anthropological and historical study of masculine identities and practices throughout the world, focusing on topics such as the cultural economies of masculinity, cultural regions and images of manhood, male friendship, machismo, embodied masculinity, violence, power, and sexual fault lines.

Prerequisite: Prior course in Social Science or instructor's permission required.

ANTH 1222. Kinships Compared: Relations, Families, and Connections.

In all cultures people see themselves as related more closely to some people than to others and they usually experience that relation in terms of some shared substance such as blood. Beyond these generalizations there is an enormous variety of ways in which people live in, build, and maintain connections with others - in nuclear and extended families, peer groups, friends, ethnic groups, and so on. This course is about kinship as an idea, as an experience, and as an institution.

In the midst of divorce and blended families, new reproductive technologies, and adoption we will investigate kinship and connection in our own lives, in a range of other cultures, and within the discipline of Anthropology.

ANTH 1223. Gender, Nature, the Body.

This course is an interrogation of the ways in which gender difference comes to be conceived of as "natural" in modern science and different cultures. What is the connection between the science of gender difference and the colonial encounter? What are some different ways of imagining gender difference? How are gender inequalities structured and perpetuated by science and political economy? Through careful reading of historical and anthropological texts, we will learn about various ways in which gender systems are constructed and resisted, how science is used to construct gender, and how gender politics influence scientific outcomes and practices.

ANTH 1224. Human Trafficking, Transnationalism, and the Law.

Designed to give students an opportunity to engage in transnational research on social issues through an extended case study of a new generation of international norms that identify and combat "human trafficking." The course format combines seminar discussions, lectures, and small group exercises. Students will learn by doing. As we consider legal instruments, UN and U.S. documentary archives, anti-trafficking media such as films and websites, and the prosecution of criminal networks, we will experiment with alternative methodologies for analyzing them. We will study the relation of texts to the social and political contexts of their production and circulation. Enrollment limited to 30.

ANTH 1225. Gendering Migration and Diasporas.

This course will employ a decolonial and transnational feminist approach to explore gender and sexuality as central lenses in our understanding of different forms of migration and diasporas. We will address the various ways that experiences, processes and consequences linked to different migrations are gendered. The course will introduce a range of geographical contexts and empirical examples/case studies with the aim to challenge the US centrism existent in many academic debates. We will analyze relevant power relations and forms of oppression, as well as resistance strategies by migrants, asylum seekers and refugees. The course will use an intersectional lens to explore the way different power configurations interplay in specific contexts, paying particular attention to patriarchy, heteronormativity, nationalism, racism, Islamophobia and class-based inequalities. We will engage economic, political, social and cultural dimensions, but also the politics of non/belonging, and cultural productions.

ANTH 1227. Science, Activism, and Politics of Gender.

How did much of the world agree that female genital cutting should be ended? This course explores grassroots and international campaigns in Africa and the West, effects of asylum and criminal laws, and international organizations' attempts to create evidence-based, scientific governance to end cutting. We will focus on ethnographies that problematize these interventions by analyzing their histories, cultural politics, contradictory effects on local communities, and global political ramifications. By examining interventions against cutting, this course offers a methodological and conceptual blueprint for researching local-global production of human rights crises and efforts to resolve them. Enrollment limited to 20. Not open to first year students.

ANTH 1228. Subjects of Sexuality: Bodies, Cultures, Psyches (GNSS 1551).

Interested students must register for GNSS 1551.

ANTH 1229. Democracy and Difference: Political Anthropology, Citizenship and Multiculturalism.

In seemingly endless contexts, the term "democracy" is employed toward a wide range of political and social goals. This course examines the question of cultural citizenship - the right to be different while remaining part of the national community - as observable in places where liberal democracy's focus on the individual citizen clashes with communal wishes for collective representations of difference. By reading case studies from multiple locales, this course examines the attempts of democratic regimes to govern varied populations through the lens of political anthropology.

ANTH 1230. Political Anthropology.

Anthropological perspectives on politics, ranging from political processes in small-scale nonliterate societies to those in industrialized states. Special attention is given to the uses of symbolism and ritual in politics. Topics include: how is political legitimacy established and maintained? how are certain political views of the world created? what is the relationship between political change and the reinterpretation of history?

ANTH 1231. Kings, Courts, and Aristocracy.

Explores the nature and variety of kingship, royal courts, and aristocracy through comparative evidence, with strong emphasis on historical data, architecture, and archaeology. Test cases will be examined in Mesoamerica, Europe, Africa, and Asia.

ANTH 1232. War and Society.

Cross-cultural and historical perspectives on war and its larger social context. Course readings and lectures use political economic, cultural, and feminist approaches to understanding war and its effects on human communities. Case studies will be drawn from several eras and areas of the globe, including wars and post-wars in Guatemala, Sri Lanka, Mozambique, and the current global war on terror.

ANTH 1233. Ethnographies of Global Connection: Politics, Culture and International Relations.

Historically, IR and Anthropology examined interactions within and among bounded objects, whether sovereign states or small-scale societies. Increasingly, through, they explore flows, circulations and exchanges across borders, and their impact on different societies. Through case-studies, the course will analyze evolving understandings of "globalization" and "culture," and explore how effectively different genres of research and representation capture their complex interactions.

ANTH 1234. Anthropology and Utopia.

Utopia: designs for good societies and efforts to create them; and Anthropology: observation and description of societies. A wide-ranging reading and discussion class that will address such questions as: Does Anthropological description contribute to the design of good societies? Have Anthropologists been looking for Utopia? What does Anthropology suggest is wrong with existing societies? Whose job is it to judge societies? How would Utopias be like to live in? How have people tried to build Utopias? Have they failed completely? Is failure inevitable? Is a better world possible? What would it look like? How would we get there?

ANTH 1236. Urban Life: Anthropology in and of the City.

This course examines how anthropologists have worked in the city -- to understand dwelling and lived experience from the center to the margins of society; as well as how anthropologists have contributed to the study of the city -- conceptualizing the city itself in relation to its inhabitants, and working to understand how cities develop, decline, or are sustained. Anchored in key theory, classic texts, and contemporary ethnography, the course traces also the history, present, and possible futures of the discipline. Students learn the methods of urban ethnography, and gain hands-on experience through local field exercises and related writing assignments.

ANTH 1237. The Just City: Installment I, Comparative Perspectives on Juvenile Justice Reform (URBN 1932).

Interested students must register for URBN 1932.

ANTH 1240. Religion and Culture.

Global events in recent years seem to defy the commonsensical idea that religious traditions would decline or disappear in the modern epoch. We examine classic theories and methods in the study of religion to understand the continuing vitality of spiritual contemplation, asceticism, myths, rituals, magic, witchcraft, experiences of healing, and other ways of thinking and acting that are typically associated with (or against) the concept of religion.

ANTH 1241. Science and Culture.

This course is an introduction to methods and topics in the anthropology of science and technology, including: social inequalities in science, race, gender, post-coloniality, and the globalization of bio-technologies. The course will focus on ethnographies and films about science and culture, covering topics such as the social implications of genetic testing, bio-prospecting and the environment, the development of pharmaceuticals, and repercussions of nuclear technologies.

ANTH 1242. Bioethics and Culture.

This course examines bioethics from an ethnographic point of view. Topics include pregnancy, death, suicide, disability, medical research, organ transplantation, and population control. We will distinguish between the moral experiences of people faced with difficult choices, and the ethical ideals to which they aspire. We will then ask: how can these perspectives be reconciled? When trying to reconcile these perspectives, how can we account for powerful dynamics of race, gender, class, religion, and cultural difference? Finally, how can we develop a code of ethics that takes these issues into account and also is fundamentally connected to everyday life?

ANTH 1244. Religion and Secularism: Affinities and Antagonisms.

Global events in recent years seem to defy simple ideas of the confinements of religion to a wholly private, non-modern or otherworldly domain, in ways that compels scholars across a range of disciplines in the social sciences, critical theory and philosophy to rethink the category of secularism, and the relationship between religion and politics. Is secularism a failed ideal? In what ways are ideas of the secular being contested and reformulated in different global contexts? This course seeks to familiarize students with recent debates on secularism, working towards a more nuanced understanding of the relationship between religion and politics.

ANTH 1250. Film and Anthropology: Identity and Images of Indian Societies.

The course examines representation of Indian society in film and anthropological literature. We compare how gender, national identity, religious practices, and historical events are portrayed in films and anthropological literature. We will explore the relationship between visual and textual, showing how film reflect and make comprehensible anthropological concepts of Indian culture, and creates different images of the society.

ANTH 1251. Violence and the Media.

The role of media in shaping perceptions of violent conflict. Analysis of constructions of the "violent other", "victims", and "suffering", the use of culture, ethnicity, and psychopathology as tropes for articulating the motivations of violent perpetrators. Multiple subject positions and political interests will be considered. Case studies include the Cold War, conflicts, insurgencies urban riots, the genocide, and terrorism. Pre-requisite: a previous course in Anthropology, or permission of the instructor.

ANTH 1252. Kill Assessment: An Investigation into Death, Genocide and Other Forms of Violence.

Is violence best understood as a set of "random acts" marginal to society? Or, do societies need violence to make culture systematic and functional? We will address two major issues throughout this course. First, we will discuss different types of violence: physical, material, structural and symbolic violence. Second, we will become familiar with ways that social groups turn violence into an aesthetic object and an artistic project.

ANTH 1253. The Visual and the Written in Anthropology: Fruzzetti's Documentary Films and Ethnographic Research.

A seminar that analyses the making of films in the light of ethnographic research in rural India. The course addresses fifty years of research covering the journey of an anthropologist's work in a rural Bengali town, documenting the voices and narratives of women. The research is immersed in traditional anthropological fieldwork, followed by the publication of books and articles that complement Fruzzetti's films. Documentary films and texts will demonstrate a continuity between visual and written works. Do films inform or deviate from our understanding of written ethnography (and vice versa)? What distinguishes early documentary films from later ethnographic ones? Do films record "reality" or interpret just as written works do? Should ethnographic study come before the making of documentary films? Can anthropological theory develop in relation to or separate from ethnographic films?

ANTH 1255. Anthropology of Disasters.

This course examines disasters from an anthropological perspective. We focus on how disasters have been defined and understood, and work more broadly to see what they tell us about human conditions, vulnerabilities, and capacities for resilience building, survival, and long-term sustainability. Drawing on and comparing case studies from around the world, we also examine the nature of destructive agents; degrees of impact and injury; rescue, relief, and humanitarian responses; and the often slow and uneven process of recovery and resilience building.

ANTH 1260. Indigenous People and Nature: Birds.

An exploration of intersections of indigenous peoples with the natural world; this semester with the avian world. Through a sustained focus on one class of living things, the hope is to gain access to a range of issues concerning the relationship between people and the environment.

ANTH 1300. Anthropology of Addictions and Recovery.

The purpose of this course is to consider the uses and misuses alcohol, tobacco and drugs, and approaches to recovery from addictions. We will read some of the major cross cultural, ethnographic, linguistic, and social-political works on addictions. Students will conduct their own anthropological interviews regarding substance misuse and recovery as well as observe a local 12 step recovery meeting in the community. Students will engage in discussions of recovery with community partners. Enrollment limited to 20.

ANTH 1301. Anthropology of Homelessness.

Homelessness emerged as a public concern in the United States and in other industrialized countries in the late 1970s as people began encountering people living on the streets, a way of life formerly confined to the skid rows of large cities. In this course, through readings, readings, discussion, and hands on experiences with individuals and families experiencing homelessness, we will uncover the causes, conditions, and responses to homelessness. Each student will spend at least two hours per week in a local homeless-serving community partners in order to gain face to face experiences. The field placements will be facilitated by the professor.

ANTH 1305. Medical Humanities: Critical Perspectives on Illness, Healing, and Culture.

Medicine is arguably the most humanistic of the hard sciences, one that strives to ensure the basic dignity of individuals. In our increasingly globalized world, access to medical care is recognized as a fundamental human right. However, there continues to be considerable debate over the "best" ways to provide medical services to economically and culturally diverse communities across the globe, given the complex ways that people prioritize and perpetuate their health. This seminar explores the multifaceted relationships between biomedicine and cultural understandings of illness, both in the US and worldwide. Instructor permission required. Enrollment limit 25 juniors and seniors.

ANTH 1310. Global Health: Anthropological Perspectives.

This course explores the distinctive contribution that a critical approach—primarily that of medical anthropology—can make to the rapidly changing field of global health. The course takes a problem-based approach and focuses on "grand challenges," such as those posed by global pandemics, humanitarian crisis, or the limited reach of child and maternal health programs in "resource-poor" locations. Through ethnographic case studies, we will examine how the concepts and practices associated with global health interventions travel to different parts of the world and interact with local agendas.

ANTH 1311. Language and Medicine in Practice.

This Community-Based Research and Learning course (CBLR) provides students with a foundation for thinking about how the ways people use language shape and are shaped by the medical sphere. Team taught by a linguistic anthropologist (P. Faudree) and medical anthropologist (K. Mason), this course explores the intersections of language, medicine and health, culture, and society. The course also has a strong applied dimension: students will engage in volunteer work and/or participant observation in clinical settings as part of their coursework. Throughout the course, students will bring their insights and observations of healthcare practice into dialogue with anthropological analysis. The course is limited to 20 students, admitted to the class via an application process. Priority will be given to senior anthropology concentrators and Engaged Scholarship Certificate students.

ANTH 1314. Toxic: Health, Environment, and Life after Harm.

What does it mean to live amidst toxicity? This course explores the environmental and health problems associated with exposure, contamination, and detoxification through a social and cultural perspective. It provides students with an interdisciplinary introduction to the complex relationship between society and the environment using theoretical interventions from medical anthropology, science and technology studies, political ecology, and decolonial studies. From oil spills to asthma, this course draws on readings and in-class activities to explore how contemporary environmental and health problems are shaping—and being shaped by—the politics of race, gender, and class.

ANTH 1315. Race, Racialization, and Health.

This course is an introduction to conceptualizations of race and racialization in health and anthropological thought on the study of medicine practices, with particular attention to the ways that disease burden and differential access to healthcare are shaped by broader histories of colonialism, imperialism, and development. We begin with a focus on the invention of racial categories in North America as a means of justifying slavery, Indigenous land dispossession, and the accumulation of property by those settlers deemed "white". From this foundation, we will interrogate the ways that "race as biology" becomes mobilized in scientific and clinical discourses to justify and explain health disparities. In examining health disparities, we will engage with studies of race science, medical racism, medical experimentation, and structural violence in/of health care to understand how intersections of oppressed identities impact peoples' ability to live and live well.

ANTH 1320. Anthropology and International Development: Ethnographic Perspectives on Poverty and Progress.

Examines international development from an ethnographic perspective, looking critically at issues of poverty and progress from local points of view. Course is organized around the premise that culture is central to understanding processes of development. Broad development themes such as public health, agriculture, democracy, and the environment will be explored through readings representing a wide range of regions and cultures.

ANTH 1321. Impact on Colonialism: Gender and Nationalism in India.

This course is designed to look into colonial and post-colonial identities within the disciplines of history of literary studies. We will adopt an anthropological approach to those subjects, taking the cultural anthropology and construction of gender as the guideline for the analysis. Topics will include: orientalism, and gender; nationalism and religion.

ANTH 1322. Human Rights, Social Justice, and Humanitarian Intervention: The Anthropology of Global Aid.

From child soldiers to starving refugees, Americans are inundated with media images of violent suffering in the developing world. Our politicians frequently present international humanitarian intervention as an unequivocal good, without examining the actual outcomes of aid initiatives. This course uses tools from anthropology to explore the motivations for global aid, along with the concrete—and often unexpected—effects it produces on the ground. Foregrounding an ethnographic approach, we seek to understand the enduring influence of the concept of "rights," the ways that local populations both welcome and resent humanitarian work, and the successes and failures of international charitable organizations. First-year students require an instructor override to register.

ANTH 1323. The Culture and Politics of Colonial Cities: Migration, Markets and the Diaspora.

Two colonial powers (British Empire and Portuguese) form the basis for this comparative approach to unravel and comprehend how colonial policies differed in two regions. Colonial cities have a special mystique, and studying them in the present unravels socio-historical and political connections make the present more meaningful. For post-colonialism, we address migration and Diaspora, the participation of groups under analysis in transnational economy and local and global markets. Focusing on the Diaspora, we seek to tie history and cultural development to the wider issue of Diaspora and the displacement of people, the search for opportunities, migration and the global markets.

ANTH 1324. Money, Work, and Power: Culture and Economics.

Economic activities take place within cultural contexts which define appropriate values and goals, and in societies varying in scale, technology, and organization. Looking cross-culturally, and at economic activities in societies such as the United States, this course examines the production, distribution, and consumption of material goods, analyzing these as essentially social activities - properly understood only when we take account of social relations and cultural values. Consequently, the course also investigates the extent to which the words commonly used to describe economic life, such as "market", "wealth", "price", "profit", "work", and "money", are culturally specific rather than universally applicable. At least one previous course in Anthropology or another social science is strongly recommended.

ANTH 1325. Business and Entrepreneurship in Global Perspective.

In a world of free trade, government downsizing, and the rapid movement of people and ideas, business and entrepreneurialism have become central to many peoples' economic livelihoods and social identities. Anthropologists have most often treated business and entrepreneurship as reflections of culture and social life, rather than sites of production in their own rights. Corporate workplaces, small businesses, and trade encounters are starting points for understanding myriad different social outcomes: novel forms of intercultural communication, new patterns of transnational labor migration, changing class configurations, and forums through which socially marginalized groups participate in society.

ANTH 1326. The New Economic Anthropology.

This course introduces students to the new economic anthropology of capitalism and situates it within the historical development of economic anthropology since the late 19th century. The course begins by introducing students to basic notions of 'economy' as understood in the ancient Mediterranean up through to the present. The course covers early anthropological research into forms of personhood and sociocultural organization that contrasts sharply with the assumed universality of homo economicus. The course focuses on key debates within economic anthropology over the possibility of using 'western' economic categories for analysis and explores some of the alternative frameworks developed by anthropologists.

ANTH 1327. Ethnography in Organizations.

This course explores how ethnographers study organizations. You will explore ethnographic case studies of different types of organizations, from private companies to governmental agencies. You will also have the opportunity to practice methods by conducting a semester-long ethnographic study of an organization on campus. This course will give students a strong grounding in the theories and methods that define ethnographic studies of organizations.

ANTH 1328. The Anthropology of Capitalism: Gender, Race, Kinship.

In this course, we will focus on how large scale economic and demographic transformations relate to race, gender, sexuality. Our class will begin from the premise that politics of social difference are central, rather than peripheral, to transnational capitalism, and we will challenge the idea of the "economic" as a bounded and predetermined domain. Throughout our class, we will examine how race, gender, and sexuality connect to economic and demographic change through topics such as kinship, care, health, labor and exchange across contexts like the US, South Korea, Chile, Kenya and elsewhere. Looking to ethnographic scholarship and media, we will ask not only how market reforms shape subjectivities, desires, and everyday life but also how people work to resist and reimagine these conditions in return. There are no prerequisites to this course.

ANTH 1330. Women in Socialist and Developing Countries.

A seminar, jointly taught by a sociologist and an anthropologist, exploring the changing role of women in the former socialist countries of Eastern Europe and developing countries in Africa and Asia. Includes women's position, ideologies, and choices within these societies, and the transitions that are taking place. Contributes to a better understanding of the role of women in our own society.

ANTH 1360. Education as Freedom?: Educational Access and Immigration Activism in the US South (EDUC 1350).

Interested students must register for EDUC 1350.

ANTH 1400. Race, Culture, and Ethnic Politics.

A seminar addressing the subjects of race, culture, and ethnicity, focusing on minority groups in the U.S. Seeks to clarify the philosophical and theoretical issues in contemporary America using a cross-disciplinary approach.

ANTH 1405. Race, Rights and Rebellion (AFRI 1020D).

Interested students must register for AFRI 1020D.

ANTH 1410. Reconstructing Multiraciality.

An examination of, first, the racial and social history of interracial and interethnic relations in the U.S. and different parts of the world, then, the contemporary American situation and changing trends in these cross-group relationships. Exploratory and interdisciplinary-intended to open a dialogue on multiple issues involved, diachronically as well as synchronically.

ANTH 1411. Nations within States.

Examines the interactions between small-scale indigenous societies (often referred to as Fourth World Nations) and the modern states within which they now exist. The relationship is obviously asymmetrical, yet these ethnic or "racial" minorities have the support of world opinion and international organizations. The sociocultural, economic, and political structure of these nations within states is the focus of the course.

ANTH 1412. Anthropology of State Power and Powerlessness.

How do we conceptualize state power? Is Power primarily a capacity for force and coercion or a source of welfare and social cohesion? States the world over often do not manage to provide adequate welfare or to maintain a monopoly on violence. How then might we understand state power not only as a capacity but also in its incapacities and vulnerabilities? We engage these paradoxes of state power through classic texts of anthropology and political theory including Foucault, Weber, Hobbes, Locke and Rousseau, in tandem with lively ethnographic analyses of state power in its capacities and incapacities.

ANTH 1420. Ethnicity, Race, and Gender in the Americas.

The historical and contemporary ethnography of ethnicity, race, and gender in the Americas. Topics include racism, multiculturalism, affirmative action, immigration, nationalism, acculturation, cultural autonomy, slavery, colonialism, and genocide.

ANTH 1421. Ethnic American Folklore: Continuity and the Creative Process.

An investigation of the dynamics of cultural continuity and the creative process involved in ethnic American folklore from oral narratives, life history, to foodways, and the senses of place. How do these cultural forms intersect with ethnicity, gender, group activism, and transnational contacts and exchanges? What are the new cultural forms, communication milieus, and venues negotiated or contested in contemporary America?

ANTH 1422. The American Experience-Southeast Asian Refugees/Americans.

Explores the diaspora of the Cambodian, the Hmong, the Lao, and the Vietnamese American from their initial exodus from their war-torn countries to their strategies for reconstructing new lives. Topics include socioeconomic changes, changing family life, gender roles, life choices, and the growing American generation. Materials used include films, songs, and autobiographies written by the refugees/Americans themselves.

ANTH 1423. Migrants, Political Activism and the Racialization of Labor (POBS 1601M).

Interested students must register for POBS 1601M.

ANTH 1450. Living with Conflict.

Exploration into ways in which cultural groups perceive and approach situations of conflict and how these situations in turn shape cultural practices, beliefs, and norms within the group. Examples are taken from ethnographies of different parts of the world and include a discussion of customs that help mitigate conflict among members of the group as well as conflict between groups.

ANTH 1470. Illustrating and Interpreting the Past: Visual Representation in Archaeology.

Archaeologists investigate culture using material artifacts as evidence about the past, but in order to communicate and compare that evidence, they must turn to technologies of reproduction and representation. This course traces the evolution of archaeological illustration, and its contributions to our knowledge of the past, in the context of technological and intellectual change over time. It explores the most up-to-date methods of archaeological illustration and their current place and future directions in the digital humanities. Working with objects from the Haffenreffer Museum of Anthropology, students will acquire experience in traditional and cutting-edge illustration techniques.

ANTH 1500A. Ethnographic Research Methods (IAPA 1500A).

Interested students must register for IAPA 1500A.

ANTH 1504. The Amazon, Climate Change, and Conservation (LACA 1504P).

Interested students must register for LACA 1504P.

ANTH 1505. Vertical Civilization: South American Archaeology from Monte Verde to the Inkas.

This course offers an introduction to the archaeology of indigenous south American Civilizations, from the peopling of the continent around 13,000 years ago, to the Spanish Invasion of the 16th Century C.E. Throughout, we seek to understand the often unique solutions that South America indigenous peoples developed to deal with risk and to make sense of the world around them. Course lectures and discussions focus on recent research and major debates. Weekly sections draw on viewings of artifacts and manuscripts from the Haffenreffer Museum and the John Carter Brown Library.

ANTH 1510A. Theorizing Reproductive In/Justice.

Reproductive Justice, a theoretical paradigm and activist praxis developed by Black feminist organizers, provides us with an essential means of understanding our world. In this course, students will learn to use the lens of reproductive justice to interrogate how some of our most pressing contemporary crises are rooted in long-standing histories of white supremacy and capitalism and are intimately related to reproduction and constraints against reproductive freedom. By taking up the RJ movement's primary three principles, 1) the right not to have a child, 2) the right to have a child, and 3) the right to parent children in safe and healthy environments, this course welcomes junior scholars into an interdisciplinary space for thinking through the historical and continued role of the US and Canadian governments in controlling reproduction, and reproduction's impact and reliance on seemingly disparate aspects of life.

ANTH 1515. Anthropology of Mental Health.

Mental illness and wellbeing have been defined and treated in dramatically different ways across cultures and historical epochs. In this course we engage with religious and secular healing traditions including biomedicine, and the ways in which these shape the experience and understanding of "madness", of common mental disorders (such as depression and anxiety), and changing perceptions of the normal and the pathological. Drawing on anthropology, psychiatry, philosophy, literature and cinema, we follow the emergence, translation and critique of diagnostic categories across different parts of the contemporary world. Key authors include Foucault, Deleuze and Guattari, Kleinman, Good, Veena Das, and others.

ANTH 1520.**How to Do Things with Maps: Cartography, Power, and Political Imagination.**

Maps do not merely represent reality; they both create and exceed it. This course critically examines the history and future of cartography, devoting particular attention to the role that maps and map making have played in the emergence and persistence of social power and political imagination. Among other topics, we consider how maps have shaped property and class relations; state sovereignty and royal authority; colonialism and imperialism; national and ethnic identities; migration and citizenship; and the relationship between humankind and nature, earth and the cosmos. Classes include visits to historic map collections and experimentation with critical mapping techniques. Creative final project.

ANTH 1530. American Indian Archaeology.

Traces the development of North American Indian cultures through the comparative study of prehistoric archaeological remains. Topics include the origins of Native Americans, Native American hunting-gathering lifeways, and the rise of the Native American agricultural societies. Emphasizes analyses of subsistence modes, settlement patterns, and symbolic systems.

ANTH 1540. Power, Profit, and Pillage: The Rise and Fall of Trading Kingdoms in Asia.

A course survey of the pre- and protohistoric archaeology of the eastern half of Asia. Topics include the origins and evolution of agricultural societies, the emergence of village and urban life, and the rise of states and kingdoms. The early states were often characterized and even reinforced by elaborate symbolic and religious systems expressed through ritual, art, and architecture-topics also covered by the course.

ANTH 1550. Ancient Environments.

This course teaches students how scientists investigate ancient environments and climate change and how these are related to ancient people and culture history. Students will learn about methods ranging from pollen and soil analysis to climate reconstruction and ecology. The class will look at a number of archaeological case studies in which climate or environment are believed to have been integral in past cultural developments. Case studies include the Levant, Mesopotamia, Polynesia, the American Southwest, and the Maya area. Students will be evaluated on class participation, weekly writing assignments, and final research papers. Prerequisite: ANTH 0500 or instructor permission.

ANTH 1550A. Queer Asias(GNSS 1550).

Interested students must register for GNSS 1550.

ANTH 1551. Techno-Ecologies: Health, Environment and Culture in the Digital Age.

This course examines how people's health and lived experiences are impacted today by global environments in flux—and how these interconnected ecologies are deeply shaped and scrutinized in turn through various networks of technoscience. Topics will include food and nutrition in post-industrial economies; "conservation medicine" and the health of animals; energy and art; the global health implications of climate change; representations of race and indigeneity amid the "politics of nature"; society and microbiome; oil leaks and water wars; chemical exposures and disease; hybridity and nano-technology; and debates surrounding corporate social responsibility in practice.

ANTH 1552. Environmental Change: Ethnographic Perspectives.

What can anthropology's concepts and methods help us understand about the ways people unevenly experience, govern, fuel or contest global environmental changes today? Focusing on sociocultural accounts and ethnographic films, we will examine contemporary realities such as global warming and the anthropology of hydrocarbons; water politics and privatization of nature; pollution and its governance; agricultural change and human health; nuclear disaster; biodiversity and deforestation; the microbiome and society; and the ways environmental science is being produced alongside its emerging markets. Students will learn to put debates about ecological change in dialogue with anthropological thought and tools from the environmental humanities.

ANTH 1554. The Anthropology of Violence.

What does it mean to "do" or to "commit" violence? How do we recognize it when it is so ubiquitous? Be it through war, ethnic cleansing, social conflict, revolution, or various forms of interaction, the topic of violence has figured prominently in anthropological scholarship as well as social thought throughout history. This course will explore major theories of violence through engagement with social theory, ethnography, and media. We will use a range of perspectives including biopolitics, feminist critique, and queer theory, and host of examples ranging from communal violence to warfare to sexual violence to explore violence in-depth.

ANTH 1555. Environmental Anthropology.

This course is an overview of cultural anthropological approaches to the complex relationship between environment and society. It introduces students to key concepts in social studies of the environment, such as contamination, embodiment, perspectivism, dispossession, and structural violence. The course focuses on developing theoretical and methodological resources for analyzing contemporary environmental issues through a cross-cultural perspective, including: plantation agriculture, epigenetics, nuclear fallout, climate change, and invasive species management. Students will acquire the research skills to trace links between issues like industrial pesticide use and diet culture; oil spills and colonialism; access to clean water and urbanization. From fossil fuels to animal rights, this course explores how contemporary environmental dilemmas related to consumption, production, and destruction play out in our everyday lives, and asks: can we do anything about it?

ANTH 1556. Environmentalism and the Politics of Nature.

This seminar covers fundamental themes and advanced topics in the field of environmental anthropology. Over the course of the semester, we examine the relationship between environmentalism, conservation, and globalization. The geographic focus is the Global South; articles and ethnographies cover cases in Africa, Asia, and Latin America. Topics include indigeneity, wilderness, parks and protected areas, politics of space, development, and ideas of native and invasive species.

ANTH 1557. Sex, Gender, and Subversion: An Introduction to Queer Anthropology.

From sex between straight men in fraternities to young girls dedicated to and raised as 'husbands' of a goddess, we will explore practices of gender and sexuality that run counter to heterosexual and cisgender norms. Through ethnographies, media, and lively class discussions, this course offers an introduction to issues of gender and sexual subversion globally as well as basic concepts that animate discussions of queer anthropology/theory. Course materials will impart an understanding of how sexuality and gender intersect with questions regarding race, class, caste, disability, religion, neoliberalism, (post)colonialism, power, and other thematic issues. There are no prerequisites to this course.

ANTH 1558. Wet Ethnographies (HMAN 1977P).

Interested students must register for HMAN 1977P.

ANTH 1559. Wet Ethnographies (GNSS 1962E).

Interested students must register for GNSS 1962E.

ANTH 1560. Environmental Archaeology: Sustainability, Catastrophe, and Resilience.

How did people in the past respond to environmental crisis? How did they modify their environments to suit their needs - sometimes to long-term detriment? How did they engage in sustainable practices, and build resilience into their local ecologies? In this course you will learn how archaeologists reconstruct paleoenvironments using multidisciplinary approaches, including botanical analyses, soil studies, and GIS modeling. You will learn how archaeologists tackle the problem of identifying ethnoecological relationships in the deep past, and how they track the impacts of these relationships on human history and the environment. Key case studies will be drawn from ancient societies in the Mesopotamia, Polynesia, West Africa, the American Southwest, Western China, the North Atlantic, and the Maya area.

ANTH 1561. Environmental Amnesia: How to navigate losses in nature by looking at the past (ENVS 1879).

Interested students must register for ENVS 1879.

ANTH 1562. Reimagining Climate Change (ENVS 1601).

Interested students must register for ENVS 1601.

ANTH 1570. American Indian Archaeology.

This course traces the development of North American Indians and culture through a comparative study of prehistoric archaeological remains. Some of the questions addressed will be: When where and why did people first migrate into North America? Were these people responsible for the mass animal extinction at the end of the last Ice Age? What accounts for the similarities and differences in the politics and adaptations of Native Americans?

ANTH 1580. ISIS, NAGPRA, and the Academy: Archaeology and Global Issues in Cultural Heritage.

These days cultural heritage is all over the news. The wars in Syria, Iraq, Afghanistan, Yemen, and Libya have led to the destruction of countless sites and museums, and the looting of artifacts on a massive scale. Cultural heritage is a broad term however, and there are people and institutions around the world that have stakes in how it is defined and managed. How then do archaeologists, museum specialists, and others in the academy define, work with, and protect cultural heritage? This course will explore current themes in cultural heritage with an eye to material culture and ethical action.

ANTH 1590. Archaeology of the Ancient Near East.

A survey of archaeological sites in the ancient Near East from the Neolithic period to the early Roman Empire. Archaeology allows us to explore the development of agriculture, cities, and urban-based culture, as well as to make comparisons between cultures and examine issues of trade and commerce. We evaluate sites in relation to theoretical and methodological issues in anthropological archaeology.

ANTH 1599. Politics of Indigeneity in Brazil (LACA 1503Q).

Interested students must register for LACA 1503Q.

ANTH 1600. Hunter-Gatherer Adaptations.

Addresses the question: to what extent can the concept of the ecosystem, as developed in evolutionary biology, explain variability in human behavior? Examines the literature on contemporary hunting and gathering societies, both human and nonhuman, as well as relevant findings in archaeology and human biology. Background in general biology and anthropology is helpful, but not required.

ANTH 1620. Global Historical Archaeology.

The course examines historical archaeology as a multidisciplinary approach to the study of the historic past. Draws in recent research from different parts of the world, including North America, South Africa, Australia, the Caribbean, and South America, to illustrate historical archaeology's contributions to interpreting peoples' everyday lives and the diversity of their experiences in the post-1500 era.

ANTH 1621. Material Culture Practicum.

The course explores the ways that archaeologists think about and interpret material culture and provides an opportunity to study the artifacts of everyday life found at historical archaeological sites in the Atlantic World firsthand. Focusing on an assemblage from a site that was a place of intercultural trade, conflict, and enslavement, students will learn how material evidence reveals the entanglements of Indigenous, European, and African people.

ANTH 1622. Archaeology of Settler Colonialism.

The course uses settler colonialism as a framework for understanding how European colonists attempted to displace and eliminate Indigenous peoples beginning in the 15th century and its historical implications for structural inequalities of race and gender. We will look at how settler colonialism is different from colonialism, and more importantly, at resistances challenging its ambitions. Case studies from North America mostly, but also Australia, South Africa, and other settler colonial societies will focus on historical archaeology's contributions to illuminating settler colonialist strategies for establishing and maintaining settler sovereignty in light of concerns for decolonizing archaeological practices. We will give special attention to the insights gained about the experiences of dispossessed, enslaved, and marginalized peoples and their descendants, and the many ways their actions critiqued settler colonialism and imagined different futures.

ANTH 1623. Archaeology of Death.

Examines death, burial, and memorials using comparative archaeological evidence from prehistory and historical periods. The course asks: What insight does burial give us about the human condition? How do human remains illuminate the lives of people in the past? What can mortuary artifacts tell us about personal identities and social relations? What do gravestones and monuments reveal about beliefs and emotions? Current cultural and legal challenges to the excavation and study of the dead are foregrounded.

ANTH 1624. Indians, Colonists, and Africans in New England.

The course explores the colonial and capitalist transformation of New England's social and cultural landscapes following European contact. Using archaeology as critical evidence, we will examine claims about conquest, Indian Extinction, and class, gender and race relations by studying the daily lives and interactions of the area's diverse Native American, African American, and European peoples.

ANTH 1625. Questions of Remembrance: Archaeological Perspectives on Slavery in the New World.

Archaeology of slavery, and particularly that of enslaved African-American communities in what came to be the United States, has been one of the fastest growing areas of archaeological research in the last few decades. This course will look into both classic and current literature on the archaeology of Atlantic slavery in order to understand the development of this archaeological subfield, from an initial focus on the living conditions of slaves on plantation sites to later interests in the processes of consolidation of African-American ethnicities. What are current challenges faced by those investigating the material constitution of African Diaspora through time?

ANTH 1630. The City, the Maroon and the Mass Grave.

How has archaeology contributed to our understanding of the past in the former Spanish colonies? How has this knowledge been presented and made socially relevant in present-day Latin America? This course proposes a critical insight into the achievements and future challenges of historical archaeology in Spanish speaking America, exploring the diverging trajectories that the discipline has had in different countries of the region, and the way in which archaeological knowledge about the colonial, republican, and contemporary periods has been either ignored or assimilated into the development of specific politics of cultural heritage at the local level.

ANTH 1640. Maize Gods and Feathered Serpents: Mexico and Central America in Antiquity.

Mexico and Central America are the cradles of one of the world's most enduring cultural traditions. The modern identity of the region was forged in these ancient traditions and their influence is apparent the world over, particularly in the area of agricultural domesticates (corn, chocolate, and chilies). Their cities (Teotihuacan, Monte Alban, Chichen Itza, etc.) rank among the greatest of the ancient world. This course offers a survey of Pre-Columbian Mexico and Central America, from the early monumental centers of the Olmec to the great Aztec city of Tenochtitlan, and explores how anthropologists and archaeologists investigate Middle America's indigenous past.

ANTH 1650. Ancient Maya Writing.

Nature and content of Mayan hieroglyphic writing, from 100 to 1600 CE. Methods of decipherment, introduction to textual study, and application to interpretations of Mayan language, imagery, world view, and society. Literacy and Mesoamerican background of script.

ANTH 1660. The Ancient Body: Past Ideas about Human Physicality.

Course addresses the burgeoning literature on the human body, especially the meanings attached to it through time and across cultures. Anthropology, history, and archaeology offer the principal sources of evidence for this introduction to past ideas about the body.

ANTH 1670. Global Origins of Plant and Animal Domestication.

A seminar providing the basic information on the prehistory of the Circum Arctic of Northern Fennoscandia, Russia, and North America. Not open to first year students.

ANTH 1671. Juveniles for Justice: Youth Civic Engagement and Activism (EDUC 1670)..

Interested students must register for EDUC1670.

ANTH 1681. Treaty Rights and Food Fights: Eating Local in Indian Country (ETHN 1750B).

Interested students must register for ETHN 1750B.

ANTH 1692. Southwestern Archaeology.

This course is an introduction to the archaeology of the native peoples of the Southwestern United States and Northern Mexico. It discusses the history of the field and examines how it is currently re-engaging with contemporary native peoples. It emphasizes past and present cultural diversity and traces out long-term continuities in beliefs and practices. Special attention is given to comparing and contrasting three formative cultural systems - Chaco, Hohokam, and Paquimé - that linked the Southwest into a series of broad social, political, and ideological networks. Students will be introduced to the Southwestern collections of the Haffenreffer Museum of Anthropology.

ANTH 1700. Evolutionary Theory and Human Behavior.

An introduction to the field of human behavioral ecology, the course provides an overview of the application of the theory of natural selection to the study of behavior in an ecological setting. Focus is on anthropological topics related to reproduction such as issues of mating and parenting, sex ratios and sex preferences, and timing of life histories events.

ANTH 1706. Transnational Feminist Knowledge Production/ Practices: Perspectives from East and West Asia(EAST1706).

Interested students must register for EAST 1706.

ANTH 1710. Biological Issues in Human Origins and Variability.

This course examines the fossil record of human ancestors and evidence for cultural origins in relation to evolutionary theory in biology. We will review studies of living primates as well as modern genetic and DNA research for measures of contemporary human variability. Finally, we will explore forensic applications and case studies.

ANTH 1720. The Human Skeleton.

More than simply a tissue within our bodies, the human skeleton is a gateway into narratives of the past—from the evolution of our species to the biography of individual past lives. Through lecture and hands-on laboratory, students will learn the complete anatomy of the human skeleton, with an emphasis on the human skeleton in functional and evolutionary perspective. We'll also explore forensic and bioarchaeological approaches to the skeleton. By the course conclusion, students will be able to conduct basic skeletal analysis and will be prepared for more advanced studies of the skeleton from medical, forensic, archaeological, and evolutionary perspectives.

ANTH 1725. The Archaeology of College Hill (ARCH 1900).

Interested students must register for ARCH 1900.

ANTH 1740. Paleoethnobotany: Ancient Agriculture to Criminal Investigations.

How can we use botanical evidence to understand the past, from cold cases to VERY cold cases? Which roles did plants play in ancient communities? What happens to plant remains after they become incorporated into the archaeological record, and what are the methods used to study these "ecofacts"? How do paleoethnobotanical interpretations contribute to our understanding of history and structure our public policy? How is botanical forensic evidence used in law enforcement investigations? This course trains students in laboratory methods and interpretations of botanical evidence through hands-on practice. We explore the major classes of plant remains likely to be encountered in forensic cases and archaeological sites; identify botanical residues and organize the data to make interpretable results; and address major issues within the discipline.

ANTH 1750. Bioarchaeology and Forensic Anthropology.

Bioarchaeology and forensic anthropology have common methodological roots (human osteology) but are oriented to answer very different questions. Both are grounded in the anthropological sub-disciplines of biological anthropology and archaeology. The focus in bioarchaeology is advancing our understanding of the human experience in the past. Bioarchaeologists study a range of topics including health, violence, migration, and embodiment. Forensic anthropology is a form of applied anthropology that is employed to document and interpret human remains in medico-legal contexts. The course will survey both fields while instructing in the methodologies and approaches of each. The course complements The Human Skeleton (ANTH 1720).

ANTH 1760. Disability and Culture in the Past and Present.

Like gender and race, disability is a cultural and social formation that identifies particular bodies and minds as different, regularly as undesirable, and rarely as extraordinary. This course introduces the theoretical, cultural, and political models of disability and explores the lived experiences of persons with disabilities across time and within different social contexts. Through a discussion of scholarly readings, literature, film, photography, art, and archaeology, this seminar considers disability in relation to: identity; impairment; stigma; monstrosity; marginalization; discrimination; beauty; power; media representations; activism; intersectionality; and gender and sexuality.

ANTH 1764. Campus Culture.

This course presents an anthropological perspective on American colleges and universities from the past to present. In particular, it will address the emerging relationships between curriculum, governance, funding sources, academic values, and campus life. Readings will include theoretical sources on higher education, historical and ethnographic accounts of particular institutions, and recent essays regarding the purpose, practices and criticism of contemporary colleges and universities.

ANTH 1800. Sociolinguistics, Discourse and Dialogue.

An investigation of the study of language and language behavior. Centers on the study of variation in language as seen in the social and cultural context of language use. This course will feature practice in writing fictional and dramatic dialogue based on real-life discourse. Presupposes some familiarity with basic linguistics (ANTH 0800, CLPS 0030, or equivalent).

ANTH 1805. Language and Desire.

Language and desire have a complicated relationship to one another. Sometimes, they are understood as co-constitutive; others, as opposing or incommensurate. This class will explore how language and desire have shaped, upheld, complicated, or contradicted one another across times, spaces, cultures, and societies. Drawing on interdisciplinary work from anthropology, psychoanalysis, queer studies, and more, this class will neither prematurely nor simplistically resolve the relationships between language, desire, and other categories. Instead, we will critically interrogate various perspectives on mind and body, individual and group, and symbolic and material forces that impact what we strive toward, wish for, or find (dis)pleasurable.

ANTH 1810. Language and Power.

This course considers how language and power relate to each other in social life. We first consider theoretical approaches to the politics of language use, such as Foucault on discursive formations, Bourdieu on language as social capital, and Bakhtin on the oppression inherent in standard languages. We then consider specific issues, including joking as linguistic resistance, language death and revitalization, the cochlear implant debate, and racializing discourses. We end with language use in the U.S. "culture wars," covering such topics as the Ebonics controversy, language and electoral politics, hate speech, and English language legislation.

ANTH 1815. Listening and Society.

Politics, power, and even a sense of self are frequently identified with having a voice. Creating such a voice, however, is not solely up to speakers. Listeners also play an important role in determining who is heard and in what ways. The same could be said for personal relationships and care. We seem to pay more attention to how we can speak and what we can say to care for someone than to specific ways we can improve our listening skills. In this class, we will consider different ways that listening shapes our relationships with other people and the broad social effects of different ways of listening. We will consider listening in a wide range of settings, including cities, deaf communities, places of suffering, legal hearings, and prisons.

ANTH 1820. Lost Languages: The Decipherment and Study of Ancient Writing Systems.

Humans make many marks, but it is writing that records, in tangible form, the sounds and meanings of language. Creating scripts is momentous; writing facilitates complex society and is a crucial means of cultural expression. This course addresses the nature of writing in past times. Topics include: the technology of script; its precursors and parallel notations; its emergence, use, and "death"; its change over time, especially in moments of cultural contact and colonialism; writing as a physical object or thing; code-breaking and decipherment, including scripts not yet deciphered; and the nature of non-writing or pseudo- or crypto-scripts.

ANTH 1830. The Pictured Text.

Writing makes language visible, and thus concerns images. Language also delimits the legibility of imagery. Turning words into images and images into words occurs at great speed around us. This course explores the relation of text and image across world traditions—Chinese, Mayan, Egyptian, Islamic, Greco-Roman, and others, extending up to the present. Topics include: calligraphy, context, scribal practice, the form and shape of writing, including typography, hidden or pseudo-writing, graffiti, and contemporary art.

ANTH 1848. Ethnography + Social Critique.

What is ethnography, as a mode of witnessing, a method of research, a form of storytelling? How is it distinct from other ways of producing knowledge about human experience? How do ethnographers understand and engage with the ethics and politics of fieldwork and writing? This seminar raises these and other questions underlying the practice and genre of ethnography. It delves into the issues of participation, power, and perspective; the nature of evidence and its use in social critique; the reliability of representation; the relation between description and interpretation and between narrative and theory; and the role of different viewpoints and of the author's voice. Throughout the semester, students will read and discuss ethnographic texts (paying particular attention to epistemology, ethics, politics, and poetics) and complete a series of written assignments (ethnographic journaling).

ANTH 1870A. Reproductive Health and Sexuality.

No description available.

ANTH 1871A. Heritage in the Metropolis: Remembering and Preserving the Urban Past (URBN 1871A).

Interested students must register for URBN 1871A.

ANTH 1880. From Magic Mushrooms to Big Pharma: Anthropology of Drugs.

This course considers the social, political, and medical issues associated with illegal and pharmaceutical drugs. Some of the topics we consider are debates over the commercialization and criminalization of hallucinogenic plants such as marijuana, the politics of antiretroviral distribution, the ethics of medical and ethnic tourism, the legacies of colonialism and botanical migrations, "biopiracy" and indigenous knowledge, and critiques of modern food production, including the "locavore movement" and opposition to genetically modified foods. Through it all, we consider how the ways people talk and write about these issues affect concrete realities in daily life. Enrollment limited to 20 juniors and seniors.

ANTH 1900. History of Anthropology: Anthropological Theories.

Looks at the way anthropological methods and theories have interlaced through history to understand the dominant concerns in present-day anthropology. What were the important issues that influenced the discipline's history? Who were the significant, and not so well known, historic personalities who shaped anthropological practice and gave it its identity? Enrollment limited to 20.

ANTH 1901. Anthropology in/of the Museum.

This course provides an introduction to museums from an anthropological perspective. Topics include politics of representation and the construction of the "Other"; objects, identity, and meaning; collecting and cultural property; and collaboration, community engagement, and indigenous self-representation. Assignments involve work with the Haffenreffer Museum of Anthropology's exhibitions and collections. The course focuses on museums dedicated to natural and cultural history, but establishes theoretical and practical grounding for thinking about and working in other disciplines and other kinds of display institutions. It is suitable for both undergraduate and graduate students. There are no prerequisites; but familiarity with anthropology is presumed.

ANTH 1910A. Anthropological Approaches to World Issues.

Capstone seminar for Anthropology concentrators that explores how anthropology can challenge conventional or dominant wisdom about global social problems. Original research project required.

ANTH 1910B. Anthropology of Place.

Place is at the core of anthropology's study of people and their cultures and serves as a unifying theme that bridges its social, archaeological, and linguistic subfields. Through reading the works of anthropologists, geographers, and historians and discussion, students will learn how place is theorized, studied, perceived, lived, imagined, and contested. Among the topics examined are the relationship of place to power and surveillance, identity, memory, utopia, diaspora, and mobility. One prior course in Anthropology or related to the topic is strongly advised. Enrollment limited to 20.

ANTH 1910C. Campus Culture.

Colleges and universities are normative microcosms of the societies they serve. They create, partition, validate and communicate knowledge to rising generations. Their architectures, landscapes, daily routines, yearly cycles, and centennial celebrations are infused with symbolic meanings. Degree awarding ceremonies are among the most attended pilgrimages in our culture. Colleges and universities are gateways to society's essential professions and portals to a succession of alumni/ae bound by tradition. We will look at these institutions, their values, symbols, communities, governance, financial sources, academic structures, tensions, and adaptive strategies through the seeing eye of anthropology. Enrollment limited to 20.

ANTH 1910D. Faces of Culture.

The seminar is designed to allow you as anthropology majors to question to debate and examine some of the assumptions of the discipline, and critically explore the multifarious uses of the concept. We will contextualize the study of culture with the history of anthropology and across other disciplines in the humanities and the social sciences. Limited to 20. Prerequisite: ANTH1900

ANTH 1910E. Media and the Middle East.

Media anthropology is a reinvented field within the discipline, emerging from critical engagements with ethnographic film and the crisis of representation of the 1980s. We'll explore the development of an anthropological approach to mass media studies by focusing on research conducted and theories derived from a particular region: the Middle East. Enrollment limited to 20 senior Anthropology concentrators. Prerequisite: ANTH 1621, 1900, 1940, or 1950.

ANTH 1910F. Social Construction.

No description available. Enrollment limited to 20.

ANTH 1910G. Senior Seminar: Politics and Symbols.

Examination of the key role played by symbols in politics. We examine symbols, myths, and rituals used to win support, create political reality, and form political groups, whether in defense of the status quo or creating movements seeking to overthrow it. The 2016 U.S. presidential, congressional, state, and local political campaigns receive attention. Students, in part working in groups, will engage in original research both on the 2016 American elections and a wide variety of historical and contemporary political developments, from ISIS and the Arab Spring to the American anti-abortion movement. Prerequisites: two previous courses in anthropology.

ANTH 1910H. Anthropological Approaches to World Issues: Locating Migration.

Migration is a main way that not only populations change, but also economies, landscapes, cultures, and identities. Drawing on cases from across the globe and through time, we will examine migration through both the global flows of capital and culture and through migrants' lives as they build families, fight for belonging, and transform the built environment. This capstone seminar is designed to further concentrators' engagement with anthropology, its methods, subfields, and its contributions to our knowledge of human experience. Particular emphasis will be on how anthropology aids in understanding the interrelation of global political and economic systems and local experiences.

ANTH 1911. Gender and Sexuality in the Middle East.

The aim of this course is to offer an overview of the key issues in the study of gender and sexuality with reference to the Middle East. It will provide a gendered understanding of prevailing structures, ideologies, social practices and trends for those students interested in Middle East societies, cultures and politics, as well as those interested in women and gender studies. While the course focuses on anthropological approaches, it is interdisciplinary in scope, with readings and theoretical underpinnings ranging from anthropology to history, sociology, political science, to cultural studies.

ANTH 1930. Anthropology Thesis Workshop.

This course is a year long two-semester workshop (offered in the fall and spring semesters) for students who are researching and writing an honors or senior thesis in Anthropology or a closely related field. Supplementing advisor support, the course will introduce students to best practices, shoring up essential skills in research design, methods, data interpretation, and written and oral presentation. Students will also participate in peer review, offering and responding to substantive and supportive feedback on their work in progress. The workshop, which meets every other week, is structured so that students can make substantial progress, following a recommended schedule to ensure the successful and timely completion of the thesis in the spring.

ANTH 1940. Ethnographic Research Methods.

To understand the different theoretical assumptions that shape research efforts; to examine how hypotheses and research questions are formulated; and to appreciate the ethical and scientific dimensions of research by hands-on experience in fieldwork projects. Prerequisite: One Anthropology course.

ANTH 1941. Context Research for Innovation.

This course brings design thinking into conversation with anthropological research methods, examining the elements of a comprehensive perspective of context. It introduces students to design research methods, ethnographic methods, and how they work together. Students will learn how to use these methods to identify and engage in 'deep hanging out' with the problem, gap or inefficiency in question. They will then move on to patient, contextualized opportunity identification for meaningful innovation. By the end of the course, students will have developed a process for effective context analysis. This course is relevant for designers of products, services, organizations, and experiences. Enrollment limited to 40.

ANTH 1950. Archaeological Field Work.

Training in archaeological lab and field techniques for archaeologists. Topics include the nature of field archaeology, tools of the trade, interdisciplinary field techniques, ethics, excavations methodology, survey and GIS, systematic vs. ad hoc excavation, artifact analysis, site and artifact preservation. Students gain experience as practicing archaeologists through the active investigation of local historical and archaeological sites in the College Hill area.

ANTH 1960. Anthropology of Infrastructure: Comparative Ethnographic Perspectives.

Basic infrastructure – e.g., electricity grids, water supply systems, transportation networks, telecommunications, and pipelines – is commonly seen as a foundational requirement for and visible manifestation of modern human life. Yet inequalities in infrastructure are both causes and consequences of the profound disparities that characterize the contemporary world. This course aims at deciphering the complex interaction between infrastructure, society, politics, and human experience. Taking a comparative ethnographic approach, students will ask whether technology has produced a better world, and for whom. From economics and governance to ethics and sociality, students will explore humans' relationship to infrastructure.

ANTH 1970. Individual Research Project.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ANTH 1977D. Settler Colonial Cities: Indigenous Histories, Presents, and Futures (HMAN 1977D).

Interested students must register for HMAN 1977D.

ANTH 1977G. Archival Activism and Digital Worlds (HMAN 1977G).
Interested students must register for HMAN 1977G.

ANTH 1990. Senior Seminar: (Re)Making Anthropology.

This Senior Seminar capstone course is a critical look at the past, present, future of anthropology. The class proceeds from the premise that we must know the history of our field in order to build a stronger discipline. It examines the contributions and missteps of past anthropologists. Among the key questions to address: What are the discipline's aims and contributions in the 21st century? Has the field successfully integrated diverse voices and perspectives? Are their central theories and methods that have (and continue to) define the field? What does it mean to be an anthropologist?

ANTH 2000. History of Ethnological Theory.

An examination of the intellectual roots and the development of theory and method in anthropology, from the discipline's origins in the nineteenth century to 1940, with an emphasis on sociocultural anthropology.

ANTH 2010. Principles of Cultural Anthropology.

A seminar exploring fundamental theoretical and ethnographic currents in 20th- and 21st-century cultural anthropology.

ANTH 2015. Cosmopolitan Ethnography.

Contributes to anthropological understandings of globalism, political and urban anthropology, with a focus on one particular theoretical orientation that may guide research design and/or analysis. In addition to studying this particular philosophy through which they might understand culture, this course offers a model for the adoption of any given theoretical lens that might be taken up, critiqued, and otherwise put to use in cultural analysis.

ANTH 2020. Methods of Anthropological Research.

A seminar on the methodological problems associated with field research in social and cultural anthropology. Designed to help students prepare for both summer and dissertation research.

ANTH 2025. Research Design and Ethnographic Methods in Anthropology.

The purpose of this seminar is to help graduate students conceptualize ethnographic research, formulate a research problem, develop a research design, consider its ethical implications, design appropriate methodologies and prepared the proposal for IRB approval. The methodologies will be discussed with a view to arriving at a critical understanding of the ethical, political and theoretical issues embedded in them and the way in which they fit into our conception of anthropological practice.

ANTH 2030. Advanced Field Methods.

A seminar for advanced graduate students returning from field research or preparing for dissertation field work. Case studies are used for a critical examination of research design and data analysis.

ANTH 2035. Professional Preparation for Anthropologists.

This course covers research ethics and politics, writing of proposals, theses, and articles, publishing, public speaking, CVs and resumes, and the job search.

ANTH 2040. Advanced Social Theory.

This seminar is for graduate students who have taken ANTH 2000 and ANTH 2010 or equivalent graduate introductory courses in anthropological theory. Topics to be explored in this seminar include contemporary theories of globalization, hybridity, the politics of identity, class, cultural citizenship, democracy, social suffering, structural violence, agency, human rights, militarization, the body, multisited ethnography, and writing culture.

ANTH 2045. Proposal Writing Workshop for Anthropological Fieldwork.

This course is designed for third-year graduate students in any subfield of anthropology or closely related fields who are writing grant proposals for dissertation research. Student grant proposals will be pre-circulated and workshopped. Students will gain familiarity with the format for writing successful proposals, with the strategies needed to operationalize them, and with the everyday academic labor of both offering and responding to substantive feedback.

ANTH 2050. Ethnography.

Each week this class will study classic and contemporary ethnographies - as well as studies from sociology, journalism, and history - that achieve ethnographic results, but will require discussion to determine what they "are". We will carefully examine the methods involved in research for the books and how the ethnographies were written. Ethnographies will be chosen for their importance in anthropology and other fields, and will cover a broad range of topical and geographic contexts.

ANTH 2055. Infrastructure, Inequality and Ignorance.

This seminar provides an introduction to three literatures: those on infrastructure, inequality, and knowledge/ignorance. We will examine the concepts as distinct ones as well as in relation to their overlapping concerns. Cases are drawn from a wide variety of mainly contemporary settings around the world. The emphasis will be on ethnographic and textual approaches to the issues. Appropriate for graduate students from across the social sciences.

ANTH 2060. Anthropology Dissertators' Seminar.

This seminar is for post-field graduate students in residence at Brown who are at any stage of writing their dissertations. It is intended to support dissertators by providing a structured community, providing a setting for sharing goals, and workshopping writing.

ANTH 2100A. Contemporary Ethnography on Latin America and Beyond.

This graduate seminar addresses contentious and creative issues in anthropology by focusing on the science and art of ethnography. Readings feature new transnational ethnographic writers. Topics: alternative research framing, the relation of field research to writing, representing violence and porous borders in practice.

ANTH 2100B. People of the Andes.

No description available.

ANTH 2110. Critical Perspective: Social and Cultural Issues in Africa.

Focuses on debates over significant social and cultural issues in Africa. Historical and cultural continuities are premised as a way of understanding political, economic, and religious complexities in present-day Africa.

ANTH 2120. Critical Locations in the Anthropology of the United States.

This graduate seminar locates and explores the anthropology of the United States. Students first work to understand the social history of anthropology in the U.S., including its theoretical and methodological contributions, and the range of approaches and examples. The course is then organized thematically as students explore key moments along this trajectory, through a close reading of ethnographic work in various settings. The course places a particular emphasis on scholars, topics, and populations that have been historically understudied and sidelined within the larger inquiry, but that are nonetheless critical for the expanded contribution of anthropological work in this field.

ANTH 2130. Biopolitics.

Foucault's concept of biopolitics transformed how anthropologists understand power, agency, modernity, and, more broadly, life itself. As a theoretical tool, it has informed a range of contemporary social science—from intersectional research on reproductive health to theories of the postcolonial state to ethnographies on consumerism. This course will introduce graduate students to the core components and theoretical lineages of biopolitics, and recent ethnographic and archival work that builds on and challenges Foucault's seminal texts. We will highlight the work of Black, indigenous, women, and queer scholars who have sharpened our discipline's apprehension of biopolitics through intersectional, postcolonial, and anti-racist perspectives.

ANTH 2140. Ethnographic Encounters with the Environment.

Environmental anthropology is rooted in a classic dialectical conundrum: in order to trouble the specious line between nature and culture, you need to take that line seriously. Ethnography is a powerful medium for navigating this conundrum; ethnographic monographs render nature as a legible category that emerges through humans' everyday lives, political systems, and cultural infrastructures. Ethnographic monographs position the environment as a conceptual genre for understanding nature/culture "intra-actions." We will examine the writing conventions, theoretical paradigms, and qualitative data of full-length ethnographies on environmental conservation, forests, flooding, human/animal relations, energy, extractivism, soil, and waste, considering these texts as media for negotiating the nature/culture divide. This course will focus both on foundational monographs in environmental anthropology and recent monographs published over the last decade. The course will illuminate how the ethnographic genre of the environment took form and has evolved.

ANTH 2200A. International Health.

This graduate seminar (upper-class undergraduates may seek permission from the instructor) focuses on the social and cultural complexity of health problems in developing nations, exploring anthropological approaches to public health. International health issues will be investigated using historical, ecological, epidemiological, political-economic, and ethnomedical perspectives, and the role of "applied" anthropology will be explored.

ANTH 2210. Anthropology of Kinship.

This course will discuss the analysis of kinship and the construction of the person cross-culturally.

ANTH 2230. Medical Anthropology.

This graduate seminar provides a theoretical, methodological, and ethnographic foundation in medical anthropology. The focus will be on sociocultural approaches to the study of the suffering, illness and the body, though the course will also engage with key issues in biocultural approaches to understanding disease processes. Topics will include: social suffering, religion and medicine, local biologies, gender and the body, biotechnology, bioethics, caregiving and doctoring, and the global burden of disease.

ANTH 2240. Anthropological Approaches to the Body.

This course is an in-depth exploration of theoretical and analytical approaches to the body in socio-cultural anthropology. Topics covered include: the body as site and sign of the social order; theories of embodiment and the cultivation of the self; bodily order and social ritual; the senses; the relationship between bodily epistemology and socio-political structures; the commodification of the body; technological intervention in the body; the visualization of the bodily interior; and state interventions and regulations of bodily processes.

ANTH 2250A. Psychology of Gender.

This course critically examines the role of gender in development and maturation, or the psychological differentiation of males and females, in the context of their socio-cultural environment.

ANTH 2251. Anthropology of Gender and Sexuality.

In this course we will engage scholarship in the social sciences focused on gender, sexuality, and culture. While primarily focused on ethnography, our class will also engage other writing in the humanities and social sciences including history and sociology, given the multiple and interdisciplinary underpinnings of queer and trans anthropological inquiry. Through our readings, we will examine how gender and sexuality relate to an array of pressing topics including—but not limited to— race, ethnicity, religion, kinship, labor, sexual exchange, activism, coloniality, medicine, migration, and neoliberalism. We will extensively focus on transnational contexts beyond the United States and North America, with readings centering the politics of gender and sexuality in locations like Palestine, Taiwan, Canada, Pakistan, the Dominican Republic, Kenya, Armenia and elsewhere. Those without a background or research focus on queer and trans anthropology are welcome to take this course.

ANTH 2252. Decolonizing Feminist Anthropology: Theory and Method.

This course will build upon the momentum gained from the work and engagement of critical, and radical scholars of postcolonialism, feminism, race, cultural studies, sexuality studies, and indigeneous studies in revealing multiple blind spots and various forms of violence associated with the privileging of Eurocentric, liberal, secular, enlightenment, and rationalist ways of seeing the world.

ANTH 2253. Transnational Feminist Politics and Knowledge Production.

This interdisciplinary graduate seminar aims to de-center and decolonize discussions about feminism(s) by focusing on transnational feminist politics and knowledge production. Course readings and discussions will engage theoretical and methodological tools associated with transnational feminist politics and decolonizing knowledge. At the same time, the course will provide concrete empirical examples of struggles, strategies and forms of feminist resistances emanating from the Middle East, Latin America, Africa and South Asia. The course will encourage students to ask questions about transnational feminist solidarities and knowledge productions as well as power imbalances, tensions and conflicts within and between feminist groups and initiatives.

ANTH 2255. Gender, Liberalism, and Postcolonial Theory.

What makes the concept of gender useful to think with, both within academia and beyond? How does gender relate to the political projects of feminism and liberalism? What explanatory potential do gender and liberalism hold for addressing (or obfuscating) social inequalities, racism, and other forms of oppression? Drawing on multiple disciplines in the social sciences, this course offers students analytical tools to theorize gender, sexuality, and liberalism in the contemporary world. Building on critical interventions of post-colonial theorists, we will explore anthropological contributions to the study of gender, sexuality and liberalism through ethnographic writings. Open to graduate students and seniors.

ANTH 2260. Politics and Symbolism: At the Interface of Anthropology and History.

An examination of the theoretical roots of the symbolic analysis of politics and the application of these perspectives to both contemporary and historical study of political life.

ANTH 2261. Globalisms: Empires and Social Movements.

This seminar explores globalism in two of its contemporary forms, including empires and global networks of social movements. Focuses on theories of empire and on their implications for anti-war and anti- corporate movements in particular.

ANTH 2262. Social Analysis, Public Goods and Social Movements.

This seminar explores some of the political, ethical, and social issues and dilemmas involved in using social analysis to advance public interests.

ANTH 2263. Colonialism and Neocolonialism.

A seminar addressing the concepts of colonialism, postcolonialism, and nationalism. The nature of colonial "rule of law," the stages of the dissolution and formation of "African" native states, and the notion of "traditional" power are all examined in a comparative context using Francophone and Anglophone case studies in Africa.

ANTH 2264. Ethnicity, Race, and Nationalism.

Study of key issues debated by anthropologists regarding ethnicity, race, and nationalism, with examination of concepts such as identity, cultural citizenship, transnationalism-globalization, gender, home, and acculturation-hybridity.

ANTH 2270. Ethnography and Women's Literature of Non-Western Societies.

Interdisciplinary and cross-cultural exploration of representation in ethnographic and literary texts. Confronts the apparent analytical opposition of objectivity and subjectivity and addresses the challenge in the academy of "writing culture." Encourages connections between women writers in the Third World and American minority discourse to deepen understanding of global politics and the poetics of culture.

ANTH 2271. Fiction / Ethnography (+ the space between).

What is the relationship between fiction and ethnography, story and fact, creativity and objectivity? This course will consider how fiction and ethnography can each inform yet trouble the other, beginning from the premise that both involve a kind of magic. Using the same building blocks – seemingly humble and ostensibly available to all – writers of fiction and ethnography alike create what one contemporary author has called “language-made hallucinations, fabrications that persuade us to believe in them.” Yet these “fabrications” often have different stakes and use different methods for revealing human “truths.” We’ll explore such divergences and alignments by seeing what is provoked when juxtaposing fiction, ethnography, and even other genres of writing (poetry, journalism, creative non-fiction, etc.). Writing assignments for the course, as befits the content, are flexible with respect to genre.

ANTH 2300. Anthropological Demography.

A seminar devoted to the investigation of the interface of anthropology (especially sociocultural anthropology) and demography. A wide variety of demographic topics—fertility, mortality, marriage, migration—are considered, and the links between anthropological and demographic writings on and approaches to these areas are examined.

ANTH 2301. Interdisciplinary Perspectives on Population.

Brown University’s 10 year of excavations has created a lens through which to examine the complexities of the Nabataeans and their culture. The main information about the Nabataeans comes primarily from their extant monuments. There are also literary and epigraphic sources. This seminar will create a constellation of readable ideas, although we will still be left with many open questions about these people.

ANTH 2302. Field Methods for Anthropological Demography.

Concentrates on methods for collecting or producing data that bear on demographic issues and that are suitable for demographic analyses. Topics include: fertility histories, life histories, genealogies, household surveys, networks, and social units. Particular emphasis on the social contexts of data production, local meanings, and discovering appropriate categories and units of analysis.

ANTH 2303. Anthropology of Fertility and Reproduction.

A seminar examining the social significance and cultural meanings of human fertility and reproduction, including the social and cultural consequences of different fertility levels, the variety of people involved in decisions about reproduction, the allocation of responsibility for parenthood, and the political implications of contemporary debates about the meanings of biological and social reproduction.

ANTH 2304. Issues in Anthropology and Population.

This seminar is intended for graduate students and postdoctoral fellows interested in anthropological approaches to population issues. The overarching theme of the seminar is the contributions that sociocultural anthropology can make to the understanding of population processes.

ANTH 2310A. Law and Violence.

This graduate seminar draws on ethnographic studies and social theory to examine the disturbing, but not paradoxical entanglement between law and violence. Building on Charles Tilly’s comparison between state-making and organized crime and Walter Benjamin’s concepts of law-making and law-preserving violence, we will explore how different modes of violence – from brutal force to more nuanced structural and symbolic forms of oppression – intersect with policies and practices of governance. Anthropological approaches will be used to analyze questions of sovereignty, security, and justice, as we will trace their meanings across disjunctive cultural and legal terrains.

ANTH 2315. Anthropology of State Power and Powerlessness.

How do we conceptualize state power? Is sovereign power primarily a capacity for force and coercion or a source of welfare and social cohesion? States the world over often do not manage to provide adequate welfare or to maintain a monopoly on violence. How then might we understand state power not only as a capacity but also in its incapacities and vulnerabilities? We engage these paradoxes of power through classic texts of anthropology and political theory including Foucault, Deleuze, Weber, Hobbes, and Rousseau, in tandem with lively ethnographic analyses of state power in its capacities and incapacities.

ANTH 2320. Anthropology and Development: Critical Ethnographic Perspectives.

This course examines international development from a comparative ethnographic perspective. The class is organized around the premise that the intertwining of political, economic, and cultural processes is central to explaining the emergence and influence of the very concept of “development,” the extent of popular aspirations for and dissatisfaction with development, and the successes and failures of development programs. The syllabus is structured around a number of broad development themes, such as population, public health, gender, governance, inequality, and humanitarian and refugee issues, with readings selected to represent a wide range of regions and cases. In addition, the anthropological lens is turned back on development institutions, as students will also read ethnographic accounts of Western development agencies.

ANTH 2321. Coming to Terms with India: Anthropology of Colonialism and Nationalism.

This course is designed to look into the impact of colonialism, nationalism and the postcolonial identities of the person in India. In addition to the primacy of the anthropological focus, the seminar will also draw from cultural studies and history. Our engagement will be with topics of nationalism, religion, and caste and class formation during colonial and post colonial rule. Additional topics using the anthropological approach will include orientalism and gender; the location of national minorities within the Indian democracy and the future of fundamentalism; post-colonialism and the emerging new person.

ANTH 2325. The State and the Circulation of Meaning.
