1. Enrolment

1.1 Entry requirements

The Management Engineering and Product-Service System Design Double Degree is open to 20 students selected from Management Engineering Master of Science and Product-Service System Design Degree programmes (10 students from each programme).

May Apply to participate in the Double Degree Project in Engineering Management and Product-Service System Design (School of Design) within the deadlines and with the rules defined in this Call, the students of the Politecnico di Milano enrolled for the academic year 2024/2025 in the first year (and first semester regarding students Product Service System):

Applications for the Internal Double Master of Science degree may be submitted, in compliance with the rules set out in this Teaching Regulation:

https://www.design.polimi.it/en/education/internal-double-degrees

https://management-eng.polimi.it/en/master-of-science/internal-double-degrees/

Prerequisites needed only for students enrolled in the Product-Service System Design CdLM.
(School of Design) is
Successful completion of 1st Year Laboratories.
Students admitted to the Dual Degree Project who are not in good standing with the 1st year Labs as of July 2025 will not be allowed to continue in this degree program.

Hence, **students enrolled in "individual" courses (equivalent to Corsi Singoli) cannot apply to the Double Master of Science Degree in Management Engineering - Product-Service System Master of Science Design.**

Given the special nature of the course, enrolment in the PSSD&ME double degree is incompatible with enrolment in foreign double degrees or other Master's degree courses inside and outside the University.

- **1.2 Articulation of the selection process and general criteria used for students' selection**
- Students from Politecnico di Milano interested in applying for the Internal Double Master of Science degree in Management Engineering – Product-Service System Design, have to participate in the call published on the School's websites. The call is accessible through **On Line Services Applications form→ Selection procedures→ and upload the following documents:**

List of the documents required:

- A motivation letter where the candidates describes the reasons for the application in the Double Degree and the contribution that they will offer to the community of the project;

- Academic CV of the Bachelor Degree, with self-declaration of transcripts with marks and the final degree grade;

- Personal CV outlining skills and extra-bachelor experiences (portfolio of projects, work experiences, workshops and summer schools, etc.) and that highlights experience and skills acquired consistent with the second degree;

- A portfolio of projects (final thesis as well as additional projects undertaken in other courses or workshops) if the applicant is from the School of Design;

- An extended abstract of the final thesis/overview of the Business Game experience if the applicant is from the School of Engineering.

The project portfolio must not exceed 10 MB.
The extended abstract of the final thesis must not exceed 5 standard Word pages.

An evaluation Committee composed by professors appointed by the Study Course of Product Service System Design and the Study Course of Management Engineering, will be in charge of the candidates' selection process.

The Committee will make a first evaluation of the academic background, the motivation letter and the CV of the candidate and will assign up to 70 points as follows:

- Motivation letter, up to 20 points assigned;

- Academic CV of the Bachelor Degree, with self-declaration of transcripts with marks and the final degree grade, up to 20 points assigned;

- Personal CV, up to 15 points assigned;

- Project portfolio (for the Design School) or thesis (for the Industrial Engineering and IT School), up to 15 points assigned.

Candidates who are assigned **at least 60 points** will be interviewed individually.

The same Committee will do a second evaluation based on an individual interview that will assess:

- The extent to which the Double Degree is consistent with the candidate's expectations and motivations;

- The extent to which the objectives of the Double Degree are consistent with the specific skills acquired by the candidate during the Bachelor's Degree and through other curriculum experiences;

- The extent to which the candidate is motivated to acquire knowledge in the areas covered by the Double Degree in particular with respect to the second degree (evaluated via questions during the individual interview and the development of a case study).

The one-to-one interview will be assigned **a maximum of 30 points** by the Evaluation Committee

The interview is considered as passed with an assessment **of at least 20 points.**

The final score assigned of each applicant - in terms of ranking - will be equal to the sum of the two scores

In the event of a tie, the gender balance is taken into account, the minority among the candidates placed in a higher position in the same ranking prevails. In the event of a further tie, the candidate with the least seniority prevails.

1.3   Main deadlines and time-frame

This year, the call for applications will follow this timeline:
- Presentation of candidate applications: by December 10th, 2025, at 12.00 p.m. (noon)
- Notification of the results of the screening stage: December 18th, 2025
- Interviews: January 8th, 2026 from 11:00 a.m.
- Publication of the final results: by January 22nd, 2026
- Acceptance by candidates: from 23rd to 30th January 2026

The deadlines of the selection process will be published on the Course websites at

https://www.design.polimi.it/en/education/internal-double-degrees

and at

https://management-eng.polimi.it/en/master-of-science/internal-double-degrees/

The duration of the Internal Double Degree programme is at least six semesters for a total of 180 CFUs

2 Withdrawals

Students must send their withdrawals to the following e-mail addresses:

- School of Design students: doppielaureeinterne-scdes@polimi.it
- Management Engineering students: management-engineering@polimi.it

Students applying to the Double Degree may apply for ASP (Alta Scuola Politecnica), the Erasmus and international mobility programmes. **However, if students are selected for both programmes, they must withdraw from one of them as per the relevant procedures and timeframes.**

Any delay in communicating withdrawal from the Double degree programme will seriously affect replacement candidates and cause administrative difficulties.

Students who undertake the Double degree programme and decide to finish their studies after completing only one of the degrees must present a new study plan detailing a change in curriculum/PSPA (previously approved study plan), within the established deadlines.

3. Admitted candidates

Starting from the A.Y. 2025/26 candidates, who have formally accepted to partecipate to the Internal Double Degree, will have to attend a compulsory study plan which cannot be changed. The list of the exams of the programs are listed on the current Educational Rules of the two programs

4. Tuition fees

Details will be published on the University websites:

https://www.polimi.it/studenti-iscritti/tasse-borse-e-agevolazioni-economiche

https://www.polimi.it/en/current-students/tuition-fees-scholarships-and-financial-aid

The pathway of the internal double degree PSSD&ME has necessarily been built with supernumerary credits to obtain the first degree and subsequently the second, the law excludes these credits from the DSU calculation, therefore students enrolled in Product Service System Design or Management engineering must only calculate the actual credits in their pathway indicated in the tables of this notice (column actual credits first degree) and the Regulation of the internal double degree PSSD&ME

Please also note that, by law, the DSU benefit may be granted for the achievement of the first degree for no more than 5 semesters, starting from the year of first enrolment in the Master's degree programme, therefore it may not be requested for the achievement of the second degree envisaged in the pathway.

5. Data Treatment

Pursuant to EU Regulation no. 679/2016, candidates are informed that the processing of personal data supplied by them during the assessment for participation in internal Double Degree projects procedure or otherwise acquired for this purpose by the Politecnico di Milano is aimed solely at carrying out the assessment activities for the assignment the activities and will be carried out by the persons in charge, including the examining commission, at the Politecnico di Milano, using also computerized procedures, in the ways and within the limits necessary to pursue the aforementioned purposes, even in the case of possible communication to third parties. The provision of such data is necessary to verify the requirements for participation and the possession of securities and their failure may include such verification. The data will be stored, in accordance with the provisions of current legislation, for a period of time not exceeding that necessary to achieve the purposes for which they are processed.

The candidates are recognized the rights referred to the third chapter of EU Regulation no. 679/2016, in particular, the right to access their personal data, to request correction, updating and cancellation, if incomplete, erroneous or collected in violation of the law, as well as to oppose their processing for legitimate reasons by addressing requests to the person responsible for the protection of personal data, contact point: privacy@polimi.it. Data controller: Politecnico di Milano –General Management, Piazza Leonardo da Vinci 32, 20133 Milan.

Milano, 27/10/2025

The Dean of the School of Industrial and Information Engineering

Prof. Lorenzo Dozio

The Dean of the School of Design

Prof. Francesco Zurlo

Professional profile

- *Why is this course important for society and business? Scenario*

In an ever-changing world, design and innovation are among the major renewal and prosperity tools. They are necessary for society to meet the challenge of sustainability in a connected and complex world and for organisations and businesses to create valuable solutions and ensure long-term continuity. They are needed for those who seek usefulness, values and meaning from their solutions.

Where does innovation come from in today's world? Technology is one of the main factors. But it is no longerenough, because technologies are increasingly accessible globally and because of their increasing sophistication the focus has shifted from how technologies are developed to how they are chosen, integratedand used.

Innovation comes from an ability to capture the situation's development, grasp the sense of a complex environment, and combine the countless opportunities available, in an unprecedented vision. This vision comprises ecosystems of products, services, organisational processes, communication strategies, spaces, which are integrated into a winning strategy and business model. Today's scenario requires the ability to conceive, develop and implement new meaningful visions which have an economic value for business.

These multi-faceted skills, are based on two areas of competence:

- Design, as a set of capabilities that allow new and more meaningful possibilities for people. Ecosystem design of products, services, digital and communicative artefact spaces, which is dubbed "Product- Service-Systems Design".

- Management, as a set of capabilities to transform a new ecosystem idea into a source of economic value and growth, planning and implementing new business models.

The Double Degree in Management and Design provides these skills in a single integrated course.

- *What makes this programme unique? A pioneering approach to Management and Design*

Management and Design closely interact.

There is Design Management, i.e. the effective management of Design as a process and business

function.This was a focus, especially in the 1980s and 1990s, when major international players needed to effectively manage their design units. It is still relevant today as the management of creative processes and resources require special constantly evolving skills.

In the early 2000s there was a move in the opposite direction. Design was seen as a tool to manage.

companies in a new and more creative way. This involved the use of Design Thinking in Business Schools, as a tool to helpmanagers better understand user needs and improve creativity. This is a relevant topic that Politecnico di Milano, as the university of design, has put into practice in all its programmes, including Engineering, Design, Architecture and Management.

The uniqueness of this Double Degree in Management and Design is that it includes and surpasses previousperspectives, to face the challenges and opportunities of future scenarios. This Laurea is not the application of management to design, nor an application of design to management, but a combination of these perspectives which use designer and manager skills to develop sophisticated solutions. There is no other similar approach or school that internationally integrates Product-Service-System design and business models with this approach.

- *Why is this programme crucial for those interested in a design in-depth study? What do theyget in addition to design studies?*

Designers are no longer required to simply design products. They must design sophisticated and sustainablesystems, based on the combination of products, services, communication, spaces and digital components,all combined into innovative business models. This requires design and advanced management skills. Product-service systems are based on organisational processes and the design of business models requires a thorough understanding of strategy, economics, organisational networks, i.e. a comprehensive understanding of management.

- *Why is this programme crucial for those interested in in-depth management? What do they getin addition to management studies?*

Today leaders are no longer required to simply manage processes and organisations. They need to innovateand change processes and organisations, to capture and develop the meaning of complex market scenarios,to be empathetic to people's experiences and create new and sustainable solutions. This ability to identify new directions for people and society requires advanced design skills. Design provides the ability to have a sense of society and what people seek in life and the skills to imagine new things.

- *What are the professional profiles? The programme's skills*

By participating in this programme, students develop advanced skills to design and manage innovative ecosystems (products+services+communication+spaces+digital artefacts) and business models. Specifically,the following skills:

• Designing innovative and sustainable business models that create value for people and society

• Describe these business models so that they can be effectively shared and communicated to otherpeople in the organisation, partners, stakeholders and customers.

• Create value for business, so that the vision is positive for the organisation and its users (its stakeholders,management and all those who contribute).

• Lead the development and implementation process, involving third parties, so that your vision becomes a reality and has an impact on business and society.

The typical career opportunities of this Double Degree may include the following areas: strategy, innovation, marketing, branding, design, business development, project management with a strategic perspective.

All profit, non-profit, large or small organisations with a strategy based on innovation, including startups and the public sector are interested in this profile.

- *Why a Double Degree? The advantage of combined training*

These skills cannot be achieved by a programme that simply combines a little design with a little management. To think and implement sophisticated ecosystems and business models dual-specialisation is needed.

For this reason, instead of creating a programme that draws something from both schools, we providedselected, talented and motivated students an opportunity to develop each of them intelligently and effectively.

Students will attend design and management courses, and find themselves immersed in both worlds. They will come into contact with "design" and "management" students and professors. They will acquire both waysof thinking instead of a separate approach.

Since this is a programme (and not an individual course), students will experience it with as many

selectedparticipants, sharing, discussing, and creating a new culture of management and design together with other pioneers with similar interests: professors, managers and designers involved in this programme.

- **Study plan**

- **General structure of the Double Degree**

The Double Degree is based on two Laurea Magistrale (equivalent to Master of Science) programs at Politecnico di Milano: the Management Engineering program (from the School of Management) and the Product-Service Systems Design programme (from the School of Design) to which students will be enrolled. It is possible to access the Double Degree from Management or Design programmes. This allows students togo deeper into one of the areas first, then focus on the other, and finally integrate them.

The programme is organised as shown in the diagram below:

Intake Management Eng.: 180

Intake Design: 180

	Intake Management Eng.: 180	Intake Design: 180
3° year	Common Stream (22)	Common Stream (16)
	Thesis (5+10) + Internship (10)	Thesis (4+10) + Internship (15)
2° year	Design «fundaments» 36 CFU	Management Eng. «fundaments» 40 CFU
	Common Stream 35 CFU	Common Stream 27 CFU
1° year	Design fundaments *(Common Stream)* 12 CFU	Management fundaments *(Common Stream)* 11 CFU
	Management Engineering 50 CFU	Design 57 CFU
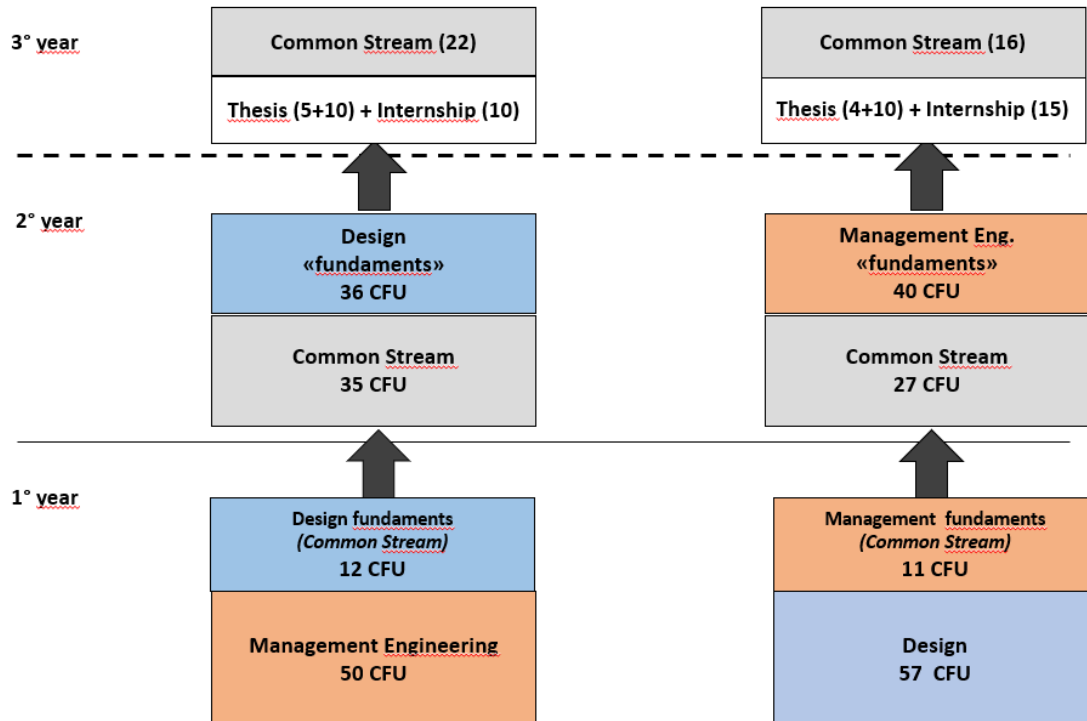

Starting the programme from Management, the student will:

- develop management skills and approaches using basic courses from the School of Management, including Strategy & Marketing, Leadership & Innovation, Business and Industrial Economics of Innovation, Strategic Innovation, Operations Management, Logistics Management, Accounting, Finance & Control.

- integrate design into management, using dedicated courses: Design Thinking for Business, Future Making, Agile Innovation, Branding & Communication, Digital Business, Design and Corporate Economics.

- acquire Product-Service-System Design skills, with courses from the School of Design, including Design & Research Methods, Product Service System Studio, Product Service System Design for Sustainability, Service Design and Innovation, Public and Social Change, Data and service design e Design Seminar.

- Conclude the course with activities where the concepts learned during the programme are integrated: Business Design and Transformation Lab, Professional Workshop, Internship e Tesi.

Starting the programme from Design, the student will:

- develop design skills and approach, using basic courses from the School of Design, including Teambuilding, Innovation Studio, Product Service System Design Studio, Design & Research Methods, Ux- Design, Services Design and Innovation, Data and Service Design, Leadership & Innovation Strategy/ Leadership & Strategie di Innovazione and Design Seminars.
- Integrate management into design, with dedicated courses: Design Thinking for Business, Future Making, Agile Innovation, Branding & Communication, Digital Business;
- acquire management skills, using courses from the School of Management, including Strategy & Marketing, Leadership and Innovation, Strategic Innovation, Operations Management, Logistics Management, Accounting Finance and Control, Business & Industrial economics, Supply Chain Innovation;.
- Conclude the course with activities where the concepts learned during the programme are integrated: Business Design and Transformation Lab, Internship and Thesis.

A prerequisite for admission to the pathway, only for students enrolled in the Product-Service System Design degree program (School of Design), is successful completion of the 1st-year Labs
Students admitted to the Double Degree project who fail to pass the 1st year Labs in July 2026 will not be allowed to continue in this course.

MOOC

For students enrolled in the CdLM Product Service System:

Before taking the exam for the courses of the Laurea Magistrale (equivalent to Master of Science) in Management Engineering, you must pass the following **three** MOOCs by the February 2027 (first examination session of the 2nd year of enrolment at the Politecnico di Milano)
- Fundamentals of Financial and Management Accounting (only if the study plan includes the Accounting, Finance and Control course)
- Fundamentals of Organisation
- Fundamentals of Economics

Students who do not have the Accounting, Finance and Control course in their plan may choose one of these two MOOCs instead of Fundamentals of Financial and Management Accounting.

- Fundamentals of Operation
- Fundamentals of Strategy

For students enrolled in CdLM Management Engineering:

Applicants must refer to the Educational Rules - Regulations of the Laurea Magistrale (equivalent toMaster of Science) in Management Engineering.

For students of both courses, MOOCs from the "Introduction to Management Engineering Series" library areprovided free of charge via the Polimi Open Knowledge (POLIMI POK) platform:
https://www.pok.polimi.it/

The pathway of the internal double degree PSSD&ME has necessarily been built with supernumerary credits to obtain the first degree and subsequently the second, the law excludes these credits from the DSU calculation, therefore students enrolled in Product Service System Design or Management engineering must only calculate the actual credits in their pathway indicated in the tables of this notice (column actual credits first degree) and the Regulation of the internal double degree PSSD&ME Please also note that, by law, the DSU benefit may be granted for the achievement of the first degree for no more than 5 semesters, starting from the year of first enrolment in the master's degree programme, therefore it may not be requested for the achievement of the second degree envisaged in the pathway

Detailed description of the study programme for the Intake Management (PSPA)
