

# PHARMACY (PHARMACY)

## PHARMACY 125 – EXPLORING PHARMACY I

2 credits.

Provides opportunities to integrate and apply introductory concepts and content related to Pharmaceutical Sciences, Social Administrative Pharmacy, and Pharmacy Practice. Students also develop academic and interpersonal skills helpful for success in current and future courses.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Describe roles, responsibilities, and training of pharmacists to provide care for patients and populations in a variety of practice settings

Audience: Undergraduate

2. Explain the roles of pharmacists related to public health, health literacy and health disparities

Audience: Undergraduate

3. Explain the process of gaining admission into and matriculating through a Doctor of Pharmacy program

Audience: Undergraduate

4. Create a holistic approach for successful transition from high school to college

Audience: Undergraduate

5. Develop connections to peers, student mentors, faculty and staff

Audience: Undergraduate

6. Identify common medical terms and medication names

Audience: Undergraduate

## PHARMACY 126 – EXPLORING PHARMACY II

1 credit.

Expands upon the learning foundations provided in PHARMACY 125. Additional opportunities to develop pre-professional plans, explore unique pharmacy career opportunities and learn about pharmacy student co-curricular and professional development experiences. Prepare students to successfully participate in the pharmacy admissions process.

**Requisites:** PHARMACY 125

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Explain the pharmacy school admissions process

Audience: Undergraduate

2. Create SMART goals regarding pharmacy admissions, pre-professional development, and unique opportunities in pharmacy practice and pharmacy student co-curricular opportunities

Audience: Undergraduate

3. Create a pharmacy admissions personal statement

Audience: Undergraduate

4. Construct reflections about guest speaker presentations, job shadow experiences, a mock interview, and cultural awareness as it relates to pharmacy careers and patient care

Audience: Undergraduate

5. Analyze a pharmacy organization or pharmacy-focused event

Audience: Undergraduate

6. Revise a pre-pharmacy resume originally developed in PHARMACY 125

Audience: Undergraduate

### PHARMACY 225 – PHARMACY EXPLORATION SEMINAR

2 credits.

Provides opportunities to explore pharmacy career paths, develop pre-professional plans, learn about pharmacy student co-curricular and professional development experiences, and prepare to successfully participate in the pharmacy admissions process.

**Requisites:** Not open to students with credit for PHARMACY 125 or 126

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Describe roles, responsibilities, and training of pharmacists to provide care for patients and populations in a variety of practice settings

Audience: Undergraduate

2. Examine the roles of pharmacists related to public health, health literacy, and health disparities

Audience: Undergraduate

3. Explain the holistic student experience throughout the Doctor of Pharmacy program

Audience: Undergraduate

4. Assemble a competitive application for admission into the Doctor of Pharmacy program

Audience: Undergraduate

5. Develop connections to peers, student mentors, faculty and staff

Audience: Undergraduate

6. Identify common medical terms and medication names

Audience: Undergraduate

### PHARMACY 423 – PHARMACY INTEGRATED LEARNING LABORATORY

1 credit.

Provides an interdivisional foundation for pharmacy students to understand many aspects of pharmacy through a wide variety of activities. Delivers a broad understanding of the pharmacist's public health and patient advocacy role with opportunities to practice basic calculations related to drug formulations in the context of safety, drug stability, and patient care. Fosters development of communication skills with peers and patients and be introduced to patient counseling principles. Includes active participation in a longitudinal group experience with an assigned senior in the community to apply course content.

**Requisites:** Declared in the Doctor of Pharmacy Program with first year standing only

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Develop and enhance oral and written communication skills with patients/clients, peers, and pharmacists. (EO6)

Audience: Graduate

2. Employ interpersonal and intergroup behaviors in order to collaborate effectively in a variety of situations and reflect on teams and teamwork by: a) describing the process of team development and the roles and practices of effective teams and b) reflecting on individual and team performance for performance improvement. (EO7, IPEC TT1 & TT8)

Audience: Graduate

3. While applying the Pharmacists' Patient Care Process, discover aspects of patient-centered care by reflecting on the patient's/client's perspective on health, social, economic and psychological needs. (EO11, EO12, EO13)

Audience: Graduate

4. Apply social and behavioral principles and theories, including empathy, to patient communication. (EO8)

Audience: Graduate

5. Retrieve professional and lay literature in order to acquire information about therapeutic agents (i.e. evidence-based drug information) and to provide health information to patients and the public. (EO1)

Audience: Graduate

6. Identify the pharmacists' role in public health/health promotion activities while increasing awareness of community-based resources and identifying potential causes of health disparities. (EO12, EO13, EO14)

Audience: Graduate

7. Accurately measure and weigh drug products and complete calculations necessary for pharmaceutical preparations and pharmacy practice. (EO5)

Audience: Graduate

8. Complete drug dissolution and drug dilution activities and discuss how various drug properties (e.g. solubility, stability) can impact drug performance. (EO2)

Audience: Graduate

**PHARMACY 426 – INTRODUCTORY PHARMACY PRACTICE EXPERIENCES I**

1 credit.

Explore the role of the pharmacist and the many patient care opportunities that exist in and out of the community pharmacy practice setting. Observe pharmacists in a community pharmacy. Gain a broad understanding of the pharmacist's public health role.

**Requisites:** Declared in Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Identify and discuss the various roles pharmacists assume in the health care system, especially their role in managing pharmacy operations and providing patient-centered care using the Pharmacists' Patient Care Process (PPCP).

Audience: Graduate

2. Observe and participate in public health/health promotion activities in the community pharmacy setting in order to increase awareness of community-based resources.

Audience: Graduate

3. Develop and enhance oral and written communication skills with patients, pharmacists, and other healthcare providers.

Audience: Graduate

4. Retrieve professional and lay literature in order to acquire information about therapeutic agents (i.e. Top Drugs) and to provide health information to patients and the public.

Audience: Graduate

5. Develop an understanding of the pharmacist's role on the healthcare team and the complexities involved in interprofessional communication.

Audience: Graduate

6. Display professional attitudes, habits, and values in accordance with ethical and social guidelines.

Audience: Graduate

**PHARMACY 434 – PHARMACEUTICAL GENETICS AND IMMUNOLOGY**

2 credits.

Facilitates the understanding and application of the principles of pharmaceutical genetics, immunology, and biotechnology.

**Requisites:** Declared in Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Explain how genotypes relate to human disease.  
Audience: Graduate

2. Explain how model organism research underpins our knowledge of human genetic diseases.

Audience: Graduate

3. Describe how genetic/genomic technologies are used in research and can be applied to pharmacy.

Audience: Graduate

4. Explain how pharmacogenomics can identify and be used as markers for drug response.

Audience: Graduate

5. Describe how the immune system both causes and fights disease.

Audience: Graduate

6. Describe how biotechnology can be used to develop and produce drugs.

Audience: Graduate

### PHARMACY 435 – PULMONARY SCIENCE AND THERAPEUTICS

2 credits.

Integration of pharmacologic knowledge and clinical decision-making to optimize patient management of pulmonary disease states and promote and support tobacco cessation. Emphasis on patient assessment and provision of evidence-based practices through application of pharmacotherapy principles, and drug monitoring to support person-centered care. Development of skills in gathering information, identifying and resolving medication-related problems, providing patient communication and education, and completing clinical documentation.

**Requisites:** Declared in Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Assess pulmonary health conditions by evaluating diagnostic criteria, risk factors, etiology, and treatment goals

Audience: Graduate

2. Differentiate among the therapeutic drug classes based on mechanisms of action, clinical use, adverse effects, contraindications, interactions, and dosage forms used for pulmonary conditions

Audience: Graduate

3. Describe why a drug is selected for a condition or person based on its properties

Audience: Graduate

4. Design a person-centered care plan consisting of both drug and non-drug elements appropriate for an individual with pulmonary conditions using evidence-based principles and guidelines

Audience: Graduate

5. Evaluate a person-centered care plan to optimize safety and efficacy, considering patient-specific factors, to improve therapeutic outcomes for pulmonary conditions

Audience: Graduate

6. Design a person-centered communication approach utilizing effective oral and written communication strategies

Audience: Graduate

### PHARMACY 451 – MARGINALIZED POPULATIONS IN HEALTHCARE AND MEDIA

1 credit.

Provides opportunities for learning about healthcare barriers and facilitators: health disparities; and health outcomes using popular culture movies, and media that portray marginalized communities. Provides opportunities to discuss how their identities influence their view of the movie's theme and how bias may impact care provided in a healthcare setting.

**Requisites:** Declared in the Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Critique the portrayal of marginalized communities in the movies regarding health disparities and public health.

Audience: Graduate

2. Describe and differentiate how one's own identity influences the relationship to the community in the movie and how intrinsic biases may impact the care provided to marginalized communities.

Audience: Graduate

3. Analyze how the social determinants of health and systemic racism impact a character's health and wellbeing.

Audience: Graduate

4. Describe and differentiate attitudes and stereotypes concerning marginalized communities and how this may impact a person's individualized clinical and self-care.

Audience: Graduate

### PHARMACY 462 – PROFESSIONAL DEVELOPMENT AND ENGAGEMENT 1: DEVELOPING YOUR PROFESSIONAL IDENTITY

1 credit.

Explore aspects of professional identity and how to become more engaged with the pharmacy profession. Explore personal values, skills, and strengths and identify their implications for patient care and professional practice. Engage in continuing professional and interprofessional development to promote quality patient care and advocacy.

**Requisites:** Declared in Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Identify personal and professional strengths and discuss the application of these strengths within contemporary pharmacy practice.

Audience: Graduate

2. Identify professional role within an interprofessional team and demonstrate effective team communication and collaboration skills.

Audience: Graduate

3. Describe how personal identity, beliefs, attitudes, and biases may impact patient care and professional practice and how continued experiences relate to professional identity formation.

Audience: Graduate

4. Identify areas of interest related to professional engagement and patient advocacy; complete related co-curricular activities and reflect on personal and professional growth.

Audience: Graduate

5. Apply the continuing professional development cycle to reflect and plan for academic and professional growth; create two SMART learning objectives for completion during spring semester.

Audience: Graduate

### PHARMACY 490 – SELECTED TOPICS IN PHARMACY

1-2 credits.

Various topics related to the Pharmacy profession.

**Requisites:** Declared in Doctor of Pharmacy program

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2025

### PHARMACY 562 – PROFESSIONAL DEVELOPMENT & ENGAGEMENT 2: CULTIVATING LEADERSHIP AND ADVOCACY WITHIN THE PROFESSION

1 credit.

Continue to develop professional identity and engage with the pharmacy profession through leadership and professional advocacy. Explore wellness; personal values, skills, and strengths; and identify their implications for leadership and professional advocacy within pharmacy practice. Engage in career, continuing professional, and interprofessional development to promote quality patient care.

**Requisites:** PHM PRAC 462 or PHARMACY 462

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Create a professional curriculum vitae, draft a letter of intent, and explore professional online networking and job search resources.

Audience: Graduate

2. Demonstrate effective communication skills with peers, faculty, preceptors, and employers to build professional relationships.

Audience: Graduate

3. Identify strategies to manage emotional stress and compassion fatigue as a health professional.

Audience: Graduate

4. Identify areas of interest related to leadership and professional advocacy at the local, state, and national levels and complete related leadership and professional advocacy co-curricular activities, reflecting on personal and professional growth.

Audience: Graduate

5. Work with individuals from other professions to maintain a climate of mutual respect and shared values while promoting the role of the pharmacist in the healthcare system.

Audience: Graduate

**PHARMACY 563 – DRUG HISTORY: DANGEROUS DRUGS AND MAGIC BULLETS**

2 credits.

A history of medicinal substances and dangerous drugs in wider context, with a focus on gender, race, class, business, and other analytical categories. "Medicines" and "drugs" change over time -- and concepts of risk, danger, legality, and even scientific evidence are elastic. Histories of laws, regulations, and key historical actors, as well as specific drug biographies, will be provided.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Outline the key theoretical issues in history of medicine and drugs.

Audience: Graduate

2. Explain the relationship, including explanatory models of change, between specific medicines and drugs and society.

Audience: Graduate

3. Critically assess the historiographies of the history of medicine.

Audience: Graduate

4. Evaluate the reputations of specific medicines, medicinal substances and drugs.

Audience: Graduate

5. Effectively communicate conclusions regarding the history of medicines and drugs.

Audience: Graduate

6. Apply historical understandings to contemporary issues regarding drug regulation and political conflicts.

Audience: Graduate

**PHARMACY 564 – PSYCHEDELIC HISTORY: SACRED PLANTS, SCIENCE & PSYCHOTHERAPY**

3 credits.

A history of psychedelics in the U.S. and more globally. Read texts that were formative in the development of the history of psychopharmacology, pharmaceuticals, and the "war on drugs." Examine readings that represent different themes, subfields, or areas of research interest within the history of psychedelics (medicine science). Beyond biomedicine, types of analysis include: consumerism, class, ethnicity, gender, and military history. Histories of laws, regulations, and key historical actors, as well as specific drug biographies, will be provided.

**Requisites:** Declared in MS Pharmaceutical Sciences: Psychoactive Pharmaceutical Investigation

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Outline the key theoretical issues in the history and historiographical discussions relevant to psychedelics in biomedicine and society.

Audience: Graduate

2. Describe the role of the psychedelics in treatment settings and as part of indigenous and religious rituals.

Audience: Graduate

3. Analyze and present primary and lay literature; apply knowledge to present problems and situations.

Audience: Graduate

4. Critique and construct tools to help shape new understandings of psychedelic historiography

Audience: Graduate

**PHARMACY 608 – SAFETY AND QUALITY IN THE MEDICATION USE SYSTEM**

3 credits.

Addresses the problems of medication errors and quality in health care, problem resolutions, methods of assessment, and intervention implementation and quality management.

**Requisites:** Declared in Doctor of Pharmacy program with third year standing

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Recognize types, sources, and contributors to error within the medication use system.

Audience: Undergraduate

2. Explain the influence of work systems and human factors on the development of safe processes for improving safety within the medication use system.

Audience: Undergraduate

3. Apply tools for identifying, analyzing, and anticipating errors within the medication use system (e.g., error reporting systems, root cause analysis, failure modes and effects analysis) and use these to develop safer processes.

Audience: Undergraduate

4. Describe characteristics of healthcare settings that contribute to improved quality and how pharmacists can influence the characteristics.

Audience: Undergraduate

5. Explain how quality indicators are developed, measured, and monitored in the US healthcare system.

Audience: Undergraduate

6. Describe and apply economic evaluation and pharmacoeconomic principles to evaluate pharmacy programs and drug products.

Audience: Undergraduate

**PHARMACY 612 – LEGAL STRUCTURES FOR CONTROLLED SUBSTANCES**

1 credit.

Discusses federal statutes and regulations related to drug manufacturing, drug distribution, and drug use, with an emphasis on drug scheduling and controlled substances. Describes the governmental framework within which pharmaceutical development is regulated and practiced. Covers statutes and regulations protecting human subjects' privacy and autonomy in research.

**Requisites:** Declared in MS Pharmaceutical Sciences: Psychoactive Pharmaceutical Investigation or Capstone Certificate in Psychoactive Pharmaceutical Investigation

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Identify and describe the major federal statutes and regulations affecting use of controlled substances

Audience: Graduate

2. Identify potential legal problems in use and handling of controlled substances before they may occur

Audience: Graduate

3. Apply knowledge of the statutes/regulations to various research settings

Audience: Graduate

4. Locate and identify reputable sources of legal information

Audience: Graduate

**PHARMACY 621 – PHARMACOKINETICS**

3 credits.

Introduction to pharmacokinetics. Fundamental principles and specific physical models are discussed. Absorption, distribution, metabolism, and excretion are thoroughly described including applications to pharmacotherapy mostly through a one body compartment model. Biopharmaceuticals and small molecule drugs are discussed based on their specific pharmacokinetics. All pharmacokinetics and pharmacodynamics principles and concepts are further described in depth in terms of their clinical applications with an emphasis on the role of the pharmacy professional.

**Requisites:** Declared in the Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Apply the one-compartment pharmacokinetic model as it relates to the IV bolus dose, extravascular dose, constant rate regimens and multiple dose regimens.

Audience: Graduate

2. Describe drug movement through membranes, drug absorption, distribution and elimination.

Audience: Graduate

3. Explain enzyme kinetics, protein binding, and blood flow influences on a drug's pharmacokinetics.

Audience: Graduate

4. Describe integration of drug kinetics with physiology.

Audience: Graduate

5. Discuss drug Pharmacodynamics and its relationship to drug pharmacokinetics.

Audience: Graduate

6. Develop a drug dosing regimen for a medication in a patient with kidney or liver impairment using only the FDA-approved labeling (prescribing information) for a medication.

Audience: Graduate

7. Apply pharmacokinetics and pharmacodynamics to drug regimen modifications based on therapeutic drug monitoring.

Audience: Graduate

**PHARMACY 630 – RURAL PHARMACY PRACTICE**

2 credits.

Explore how public health intersects with healthcare delivery in rural settings through direct engagement with rural communities, practitioners, and themes in rural practice. Apply therapeutic knowledge to fulfill unmet community needs, and thereby enhance delivery of healthcare in rural communities. Create a pharmacy-driven service with the goal of enhancing healthcare delivery in a rural area based on a community assessment, exploration of contemporary rural health care trends, and discussion with current rural health practitioners.

**Requisites:** Declared in the Doctor of Pharmacy Program with third year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Describe the importance of a community-based assessment as a method for exploring community healthcare needs.

Audience: Graduate

2. Explain the essential role that community health departments play in supporting rural communities, as well as the opportunities for pharmacists and community health departments to collaborate in improving healthcare delivery.

Audience: Graduate

3. Identify opportunities to improve rural pharmacy practice through assessment of evidence based resources and literature.

Audience: Graduate

4. Identify challenges in rural healthcare and recommend potential pharmacy practice solutions through dialogue with rural health practitioners and patients.

Audience: Graduate

5. Explore service models and opportunities for interprofessional care in rural communities.

Audience: Graduate

6. Evaluate rural hospital and community pharmacy financial models to identify strategies to remaining financially solvent.

Audience: Graduate

7. Assess pharmacists' leadership opportunities in rural practice and how effective pharmacy leaders can shape the landscape of practice and service opportunities delivered in rural communities.

Audience: Graduate

8. Examine the interplay between public health and epidemiology to design healthcare services to match community needs.

Audience: Graduate

**PHARMACY 632 – NEUROSCIENCE OF PSYCHEDELICS**

3 credits.

Learn about psychiatric disorders and the profound effects of classical psychedelics on neural processes. Assess current hypotheses on their molecular actions and coupling to cellular, network, and behavioral effects, and how they might translate into therapeutic benefit. Explore the intersection of the actions of these agents with current models of the neural basis of perception, cognition, and consciousness.

**Requisites:** PSYCH/ZOOLOGY 523, PSYCH/NEURODPT/NTP 611 or PHARMACY 770. Not open to students with credit for NTP 632.

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**PHARMACY 640 – APPROPRIATE USE OF ABUSED DRUGS**

2 credits.

Discusses the biological and pharmacological basis of dependence of substances of abuse. Teaches the skills required for best practices in prescribing agents of abuse. Drugs of abuse covered include opioids use for acute and chronic pain, in addition to other abused substances such as cannabinoids, psychedelics, amphetamines and related agents. Students will learn appropriate methods of therapeutic tapering and treatment of withdrawal, as well as the treatment of known and unknown agent overdose. Teaches skills in interpreting and responding to findings of urine drug tests and the prescription drug monitoring database.

**Requisites:** PHM SCI 521

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Demonstrate knowledge about the neuro- and psycho-pharmacology of substance dependence.

Audience: Undergraduate

2. Define and distinguish between substance use, misuse, abuse and dependence

Audience: Undergraduate

3. Explain the public health implications of substance misuse

Audience: Undergraduate

4. Identify optimal treatment of patients with chronic, malignant pain

Audience: Undergraduate

5. Describe the best practices for initiating opioids therapy for acute and chronic non-malignant pain

Audience: Undergraduate

6. Design pain medication regimens that include the selection of the appropriate opioid, dose, and titration/de-titration plan

Audience: Undergraduate

7. Describe how and why to switch from one opioid to another

Audience: Undergraduate

8. Develop a medication plan for the management of opioid use disorder in a patient

Audience: Undergraduate

9. Interpret urine drug tests and the Prescription Drug Monitoring Program, and create patient treatment plans based upon these findings

Audience: Undergraduate

10. Understand pharmacology, appropriate use and misuse of CNS stimulants and CNS depressants

Audience: Undergraduate

11. Identify the symptoms of toxicity from overdoses of abused drugs.

Audience: Undergraduate

12. Manage patients admitted with toxicity from overdoses of abused drugs.

Audience: Undergraduate

13. Anticipate the agents of misuse in specific populations as athletes and students.

Audience: Undergraduate

14. Describe alternative, opioid-sparing strategies for treating acute and chronic pain.

Audience: Undergraduate

**PHARMACY 658 – SPECIALTY PHARMACY IN A MODERN HEALTHCARE SETTING**

2 credits.

Introduction to specialty pharmacy, a growing and important segment of the pharmaceutical marketplace. Importance of economic, business and management principles to develop, implement and evaluate specialty pharmacy services within health systems. Modern health system cases about implementation of specialty pharmacy services in clinic and in pharmacy departments to improve patient outcomes from specialty medications and increase volume of specialty medications dispensed.

**Requisites:** Declared in Doctor of Pharmacy program with third year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the core fundamentals of specialty pharmacy including economics, market trends, contracting, and specialty pharmaceutical reimbursement

Audience: Graduate

2. Analyze data demonstrating the impact that specialty pharmacy has on health systems and patient outcomes

Audience: Graduate

3. Analyze case studies of specialty pharmacy topics in modern health care systems

Audience: Graduate

4. Describe current specialty pharmacy accreditation regulations and the application for accreditation status process

Audience: Graduate

5. Describe and analyze the process related to starting a specialty pharmacy program within a health system and the associated considerations

Audience: Graduate

**PHARMACY 662 – PROFESSIONAL DEVELOPMENT AND ENGAGEMENT 3: EMBRACING CONTINUING PROFESSIONAL DEVELOPMENT**

1 credit.

Become more engaged with the pharmacy profession through further development and refinement of professional identity and continuing professional development. Use appropriate published evidence to answer clinical questions and complete orientations to understand expectations and prepare for advanced pharmacy practice field experiences.

**Requisites:** PHM PRAC 464 or PHARMACY 562

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Retrieve and interpret primary, secondary, and tertiary sources to answer a clinical question.

Audience: Graduate

2. Identify areas of interest and complete co-curricular activities for continuing professional development and professional identity formation

Audience: Graduate

3. Reflect on your professional identity and create a professional philosophy statement.

Audience: Graduate

4. Demonstrate reflective behaviors and goal settings for academic and professional growth.

Audience: Graduate

5. Describe experiential requirements and course policies in preparation for advanced pharmacy practice experiences.

Audience: Graduate

**PHARMACY 670 – VETERINARY THERAPEUTICS**

1 credit.

Presentation and discussion of topics that involve the therapeutic management of disease states of companion, food, and exotic animals. Emphasis is placed upon the principles of drug regulations, drug therapy, toxicology, and available commercial products.

**Requisites:** Declared in Doctor of Pharmacy program with second year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Identify resources where accurate and reliable information can be found

Audience: Graduate

2. Identify laws and regulations affecting the practice of pharmacy (dispensing and compounding products)

Audience: Graduate

3. Identify state and federal laws affecting dispensing, filling, and compounding for animal patients

Audience: Graduate

4. Identify toxic/poisonous substances to cats and dogs

Audience: Graduate

5. Compare and contrast disease states in cats vs. dogs vs. humans

Audience: Graduate

6. Identify treatment options for each disease/disorder and the current accepted treatments

Audience: Graduate

7. Identify key counseling points, side effects, and clinical pearls for drugs commonly dispensed to pets

Audience: Graduate

8. Calculate the dose of a drug for an animal patient

Audience: Graduate

**PHARMACY 671 – PSYCHEDELIC DRUGS IN SCIENCE AND SOCIETY**

2 credits.

Overview of the science behind therapeutic use of psychedelic drugs such as psilocybin and LSD; basic medicinal chemistry of the tryptamine and phenethylamine psychedelics, as well as the neurochemistry and neuropharmacology of their action. Fundamentals of drug development and FDA approval process; Standards of screening and guiding individuals before and during a therapeutic psychedelic session contrasted with the recreational use of these drugs; Appraisal of current clinical research including an objective analysis of risk/benefit for indications such as depression and addiction. History of traditional, ceremonial use of psychedelics, as well as the relationship between recreational use and attempts to regulate and restrict their use. Role of psychedelics in indigenous cultures, impacts of psychedelic tourism and wild-crafting of plants and animals on indigenous peoples. Contrasts in psychedelic treatments to other therapeutic interventions such as mindfulness and meditation.

**Requisites:** Declared in MS Pharmaceutical Sciences: Psychoactive Pharmaceutical Investigation or Capstone Certificate in Psychoactive Pharmaceutical Investigation

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Describe the roles of psychedelic compounds in the traditional rituals of indigenous peoples, and the impact of psychedelic tourism upon these native societies and their environment.

Audience: Graduate

2. Describe the history and rationale for the regulation and prohibition of these compounds in the past century.

Audience: Graduate

3. Describe the similarities between efforts to decriminalize cannabis and psychedelics, including pros and cons for each position.

Audience: Graduate

4. Describe the path by which psychedelic drugs may be proposed to the FDA for approval drugs, and rescheduled by the DEA.

Audience: Graduate

5. Identify the basic chemical structures of the most common psychedelic tryptamines and phenethylamines, and their usual pharmacologic targets in the brain.

Audience: Graduate

6. Describe and critique examples of the research literature on the human use of psilocybin and LSD for the treatment of diseases such as depression and substance abuse disorders, including proposed metrics of effect.

Audience: Graduate

7. Describe the usual screening, preparation, and care of a subject receiving psilocybin, and the expected skills, training, and role of the attending clinicians.

Audience: Graduate

8. Describe the relationship of psychedelic treatment to other methods of care such as meditation, mindfulness, and cognitive behavioral therapy.

Audience: Graduate

### **PHARMACY 674 – CANNABINOIDS IN SCIENCE AND SOCIETY**

2 credits.

Provides an overview of the history, botany, and legal policies of cannabis and examines cannabinoid pharmacology and the most common therapeutic applications. Assessment of cannabinoid therapy with an emphasis on evaluating the risks and benefits of cannabinoid therapy for these conditions, product and dose regimen selection, monitoring and titration.

**Requisites:** Graduate/professional standing or declared in Psychoactive Pharmaceutical Investigation Capstone Certificate

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Describe the role of the endocannabinoid system in human disease.

Audience: Graduate

2. Identify appropriate cannabinoid use in various disease states.

Audience: Graduate

3. Describe the mechanism of action of THC and CBD on several body systems and disease states.

Audience: Graduate

4. Explain the pharmacology of THC and CBD.

Audience: Graduate

5. Describe common / serious drug interactions and adverse effects of cannabis therapies and methods for preventing or minimizing their occurrence.

Audience: Graduate

6. Analyze and present primary and lay literature regarding cannabinoid therapy.

Audience: Graduate

### **PHARMACY 699 – ADVANCED INDEPENDENT STUDY**

1-3 credits.

Individually mentored learning experiences as arranged with a faculty member.

**Requisites:** Declared in Doctor of Pharmacy program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Develop and apply a pharmacy practice-based, drug discovery, or drug development project that demonstrates initiative, problem-solving, and professional judgment

Audience: Graduate

2. Critically evaluate current literature and evidence-based guidelines to inform decision-making and support the development of a hypothesis-driven solution

Audience: Graduate

3. Communicate project findings effectively to diverse audiences that may include healthcare professionals, patients, and stakeholders

Audience: Graduate

### PHARMACY 740 – ACUTE CARE ADVANCED PHARMACY PRACTICE EXPERIENCE

1-6 credits.

Integrate into the acute care pharmacy practice site to build knowledge and skills related to hospital pharmacy. Apply principles of the Pharmacists' Patient Care Process to perform direct patient care activities (patient profile review, documentation, medication histories, medication consults, pharmacokinetic drug monitoring, renal dosing, drug information). Develop critical thinking, communication, and interprofessional teamwork skills.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Construct individualized plans using the Pharmacists' Patient Care Process (PPCP) for patients in the acute care setting.

Audience: Graduate

2. Prioritize patients' drug and medical-related problems.

Audience: Graduate

3. Actively participate in the interprofessional healthcare team in evidence-based therapeutic decision-making.

Audience: Graduate

4. Present a comprehensive overview of a disease state and associated pharmacotherapy occurring in the acute care setting.

Audience: Graduate

5. Analyze, interpret, and apply literature in the acute care setting.

Audience: Graduate

6. Assemble a comprehensive medication history to include prescription and non-prescription medications for patients in the acute care setting.

Audience: Graduate

7. Educate patients and caregivers on safe and effective use of medications in the acute care setting.

Audience: Graduate

8. Develop and modify medication dosage regimens based on pharmacokinetic data, plasma concentrations, and patient-specific factors.

Audience: Graduate

9. Apply clinical knowledge and institutional practices to ensure safe and accurate medication use.

Audience: Graduate

### PHARMACY 741 – AMBULATORY CARE ADVANCED PHARMACY PRACTICE EXPERIENCE

1-6 credits.

Provide patient-centered care, manage medication use systems, promote health and wellness, and describe the influence of population-based care on patient-centered care. Solve problems, communicate with and advocate for patients, collaborate with others and practice cultural humility.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Construct individualized plans using the Pharmacists' Patient Care Process (PPCP) for ambulatory patients.

Audience: Graduate

2. Prioritize patients' drug and medical-related problems.

Audience: Graduate

3. Actively participate in the interprofessional healthcare team in evidence-based therapeutic decision-making.

Audience: Graduate

4. Provide equitable and quality care to a diverse patient population.

Audience: Graduate

5. Assemble a comprehensive medication history to include prescription and non-prescription medications for ambulatory patients.

Audience: Graduate

6. Perform medication teaching for ambulatory patients.

Audience: Graduate

7. Analyze, interpret, and apply literature to ambulatory patients.

Audience: Graduate

8. Present a comprehensive overview of a disease state and associated pharmacotherapy occurring in the acute care setting.

Audience: Graduate

**PHARMACY 742 – HEALTH-SYSTEM ADVANCED PHARMACY PRACTICE EXPERIENCE**

1-6 credits.

Integrate into the health-system pharmacy practice site to build knowledge and skills related to health-system pharmacy. Gain experience with pharmacy clinical support and administrative activities, and central pharmacy operations needed to support patient care. Develop critical thinking, communication, and project management skills.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Comprehensively review key elements of the medication-use system in the hospital setting.

Audience: Graduate

2. Assess and actively participate in the safe and effective dispensing and distribution of medications in the hospital setting.

Audience: Graduate

3. Demonstrate project management, analytical, and communication skills to improve medication processes and patient care.

Audience: Graduate

4. Develop health-system pharmacy management and leadership skills.

Audience: Graduate

**PHARMACY 743 – COMMUNITY ADVANCED PHARMACY PRACTICE EXPERIENCE**

1-6 credits.

Provide patient-centered care, manage medication use systems, promote health and wellness, and describe the influence of population-based care on patient-centered care. Solve problems, communicate with and advocate for patients, collaborate with others and practice cultural humility.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Evaluate the key elements of the medication-use system.

Audience: Graduate

2. Evaluate the dispensing and drug distribution systems.

Audience: Graduate

3. Examine the use of technologies to distribute and safely administer medications to patients.

Audience: Graduate

4. Provide medication counseling for prescription and over-the-counter medications.

Audience: Graduate

5. Triage patients requesting self-care help.

Audience: Graduate

6. Use state and national assessments to analyze and evaluate pharmacy operations.

Audience: Graduate

**PHARMACY/NURSING/PHY ASST/PHY THER/PUBLHLTH 758 – INTERPROFESSIONAL PUBLIC HEALTH LEADERSHIP**

1 credit.

Build skills in collaboration, problem solving, and reflection to approach complex community-based public health problems contribute to becoming a public leader. Explore the six levels of public health leadership through the practices of current and past public health leaders, case studies, and personal experience.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**Learning Outcomes:** 1. Describe the roles and responsibilities of their profession with all participating health professional students, while examining the roles and responsibilities of all other health professions.

Audience: Graduate

2. Compare and contrast the diversity of expertise among participating health professions.

Audience: Graduate

3. Apply their profession's roles and responsibilities to case studies that address complex public health issues.

Audience: Graduate

4. Describe what it means to be part of an interprofessional team and illustrate how the different professions and systems can complement and facilitate one another in addressing public health issues.

Audience: Graduate

5. Apply the principles of public health leadership via reflective exercises, case studies and facilitated discussion.

Audience: Graduate

6. Promote a public health cause or principle through legislative advocacy.

Audience: Graduate

7. Elucidate the importance of reflection as a life-long learning and leadership tool.

Audience: Graduate

**PHARMACY 760 – ELECTIVE ADVANCED PHARMACY PRACTICE EXPERIENCE**

1-6 credits.

Integrate into various pharmacy practice sites to explore career paths. Perform direct and indirect patient care activities (direct patient care, drug information, policy development, administrative support, research, teaching). Develop communication and project management skills.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Provide patient care in cooperation with patients and members of an interprofessional health care team based on sound therapeutic principles and evidence-based data, considering legal, ethical, social, cultural, economic and professional issues, emerging technologies and evolving biomedical, pharmaceutical, social/behavioral/administrative and clinical sciences that may impact therapeutic outcomes

Audience: Graduate

2. Manage and use resources of the health care system, in cooperation with patients, prescribers, other health care providers, and administrative and supportive personnel, to promote health; to provide, assess, and coordinate safe, accurate, and time-sensitive medication distribution; and to improve therapeutic outcomes of medication use

Audience: Graduate

3. Promote health improvement, wellness, and disease prevention in cooperation with patients, communities, at-risk populations, and other members of an interprofessional team

Audience: Graduate

**PHARMACY 761 – INTERNATIONAL ADVANCED PHARMACY PRACTICE EXPERIENCE**

1-6 credits.

Gain immersive pharmacy practice experience in a different country. Learn about global health, medication use, health systems, and pharmacy practice with a health equity lens.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 3 number of completions

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Describe social, political, environmental, and economic factors that may contribute to health and the burden of disease in the country the student is visiting (host country).

Audience: Graduate

2. Describe the prevalence of communicable and noncommunicable diseases in the host country and health disparities within the host country.

Audience: Graduate

3. Explain the medication-use system in the host country.

Audience: Graduate

4. Identify similarities and differences in pharmacy patient care services, interprofessional collaboration, and drug information resources in the host country compared to student's home country.

Audience: Graduate

5. Compare and contrast public (government) and private health systems and funding sources in the host country.

Audience: Graduate

6. Assess the strengths and opportunities for pharmacy patient care services in the host country.

Audience: Graduate

**PHARMACY 764 – VETERINARY ADVANCED PHARMACY PRACTICE EXPERIENCE**

1-6 credits.

Practical experience in a veterinary medicine environment with emphasis on the drug treatment of diseases in animals.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**PHARMACY 769 – CLINICAL RESEARCH AND PHARMACY INVESTIGATION ADVANCED PHARMACY PRACTICE EXPERIENCE**

1-6 credits.

Gain research experience in a mentored situation. Learn study design, laboratory techniques, statistical analysis, manuscript preparation, and ethical principles of research.

**Requisites:** Declared in Doctor of Pharmacy program with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**PHARMACY 770 – CNS DRUG DESIGNS, ACTIONS, AND APPLICATIONS I**

2 credits.

Provides a foundational understanding of how chemical features can influence the biological activity of a molecule on molecular targets within the central nervous system (CNS), how alteration of signaling through these targets occurs and leads to physiologically relevant changes, and how major classes of pharmaceuticals acting on the central nervous system are applied in healthcare settings to improve patient outcomes. Integration between concepts arising at the chemical, molecular, cellular, systems, organism, and societal levels will be explored.

**Requisites:** Declared in MS Pharmaceutical Sciences

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** 1. Identify CNS active drug classes and origins of cholinergic and glutamatergic drugs based in part on structural aspects of the molecule

Audience: Graduate

2. List physicochemical properties of drugs that influence their ability to access the CNS

Audience: Graduate

3. Recall anatomical structures and molecular machinery that influences drug access to and efflux from the CNS

Audience: Graduate

4. Describe the major neurotransmitters of the central nervous system, including their physiologic role, distribution, synthesis, storage, and release

Audience: Graduate

5. Recall the principal mechanisms by which receptors affect cellular signaling in the Central Nervous System

Audience: Graduate

6. Compare and contrast the actions of psychoactive pharmaceuticals on cholinergic and glutamatergic signaling within the Central Nervous System

Audience: Graduate

7. Recognize the psychiatric conditions and target symptoms of these conditions that are commonly treated with cholinergic and glutamatergic pharmaceuticals

Audience: Graduate

8. Explain how the use of cholinergic and glutamatergic pharmaceuticals fits in with other non-pharmacologic approaches to clinical care for psychiatric conditions

Audience: Graduate

9. Describe common / serious adverse effects of cholinergic and glutamatergic pharmaceuticals and methods for preventing or minimizing their occurrence

Audience: Graduate

10. Match cholinergic and glutamatergic pharmaceutical agents to the psychiatric conditions they are commonly used to treat

Audience: Graduate

**PHARMACY 771 – CNS DRUG DESIGNS, ACTIONS, AND APPLICATIONS II**

2 credits.

Gain additional understanding of how chemical features can influence the biological activity of a molecule on molecular targets within the central nervous system, how alteration of signaling through these targets occurs and leads to physiologically relevant changes, and how major classes of pharmaceuticals acting on the central nervous system are applied in healthcare settings to improve patient outcomes. Integration between concepts arising at the chemical, molecular, cellular, systems, organism, and societal levels will be explored.

**Requisites:** PHARMACY 770

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Identify GABAergic, adrenergic, dopaminergic, serotonergic, and opioid drug classes and drug origins based in part on structural aspects of the molecule

Audience: Graduate

2. Compare and contrast the actions of GABAergic, adrenergic, dopaminergic, serotonergic, and opioid pharmaceuticals on chemical and electrical signaling within the Central Nervous System

Audience: Graduate

3. Recognize the psychiatric conditions and target symptoms of these conditions that are commonly treated with GABAergic, adrenergic, dopaminergic, serotonergic, and opioid pharmaceuticals

Audience: Graduate

4. Describe common / serious adverse effects of GABAergic, adrenergic, dopaminergic, serotonergic, and opioid pharmaceuticals and methods for preventing or minimizing their occurrence

Audience: Graduate

5. Match GABAergic, adrenergic, dopaminergic, serotonergic, and opioid pharmaceutical agents to the psychiatric conditions they are commonly used to treat

Audience: Graduate

6. Assess challenges to development and use of psychoactive pharmaceuticals that are either shared across major neurotransmitter systems or unique to specific classes of drugs

Audience: Graduate

**PHARMACY 800 – RESEARCH ETHICS: SCIENTIFIC INTEGRITY AND THE RESPONSIBLE CONDUCT OF RESEARCH**

2 credits.

Familiarizes graduate students with basic ethical issues associated with biomedical science research, taught via a case study approach. Content structured to meet NIH and NSF requirements for Responsible Conduct of Research (RCR) training. Students declared in the Pharmacology and Toxicology undergraduate program may enroll via consent of instructor.

**Requisites:** Declared in the Pharmaceutical Sciences PhD, Social and Administrative Sciences in Pharmacy PhD, or in the Pharmacy Master's program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2025

**Learning Outcomes:** . Identify, analyze, and explain basic ethical issues and the responsible conduct of biomedical clinical and translational research on topics including but not limited to NIH mandated subjects

Audience: Graduate

. Communicate knowledge about ethical principles in scientific research effectively to a range of audiences

Audience: Graduate

**PHARMACY 801 – BIOETHICS AND SCIENTIFIC INTEGRITY**

2 credits.

Explores basic ethical issues associated with biomedical science research, particularly as pertains to the development of drugs and emergent pharmaceutical therapies, such as psychoactive-assisted therapies.

**Requisites:** Declared in MS Pharmaceutical Sciences: Psychoactive Pharmaceutical Investigation or Capstone Certificate in Psychoactive Pharmaceutical Investigation

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2026

**Learning Outcomes:** 1. Describe elements of proper scientific conduct and the institutional oversight that regulates scientific conduct

Audience: Graduate

2. Explain how socially responsible scientific practices can be used in scientific and medical research, scientific communication, and intellectual property

Audience: Graduate

3. Identify best practices for clinical research and the necessary elements to ensure patient safety, reliable data, and public benefit

Audience: Graduate

4. Define the different types of intellectual property and how it can both enable and stifle innovation

Audience: Graduate

5. Explain the elements of misconduct in scientific literature and publishing. Give examples of how this misconduct causes harm to both scientific reputations and public health

Audience: Graduate

6. Critique peer reviewed research from the psychedelic field using the ethical issues named in the above outcomes

Audience: Graduate
